THE CENTRAL BANK OF INDIA LTD.

(Established - December, 1911)

Head Office:—MAHATMA GANDHI ROAD, FORT, BOMBAY—1.

Authorised Capital	...	Rs.	6,30,00,000
Subscribed Capital	...	Rs.	5,77,50,000
Paid-up Capital	...	Rs.	3,15,00,000
Reserve Fund & other Reserves	...	Rs.	4,13,08,635
Deposits as at 31-12-1961	...	Rs.	2,20,63,08,954

DIRECTORS:

Sir Homi Mody, K. B. E. (Chairman)
Cooverji Hormusji Bhabha, Esq. (Vice-Chairman)
Dharamsey Mulraj Khatau, Esq.,
Chimanlal Bapalal Parikh, Esq.,
Sir Jamsetjee Jejeebhoy Bart.,
Nawab Prince Mukarram Jah Bahadur.
Jaykrishna Harivallabhdas, Esq.,
Shiavax Sorabji Khambata, Esq.,
Nani Ardeshir Palkhivala, Esq.,
Nityanand Mangesh Wagle, Esq.,
Mr. N. K. Karanjia, Managing Director.

Branches and pay Offices in all important Commercial Centres of India, Pakistan and Burma.

LONDON BRANCH: 159, Fenchurch Street, London, E.C.3.

NEW YORK AGENTS—Morgan Guaranty Trust Company of New York,
The Chase Manhattan Bank.

Now offers you added encouragement to save more; the rate of interest on Savings Bank Account is 3%. Term Deposits accepted at 3% to 5% interest upto 5 years, interest paid every half year. Current accounts opened and transfer of funds and all other Banking services offered at our offices numbering over 300 throughout the country. Foreign Exchange Business entertained. Travellers Rupee Cheques issued and credits established.

Calcutta Main Office—33, Netaji Subhas Road

Local Branches at—College Street, Ballygunge, Barabazar, Bhowanipur, Brabourne Road, Hatkhola, Howrah, Kidderpore, New Market & Shambazar.

B. C. SARBADHIKARI,

If you're flying to the U.S.A.
this summer, remember:

It all started here
100,000
Atlantic crossings ago
on the World's Most
Experienced Airline

Since the Dixie Clipper's historic flight to Marseilles, Pan Am has made 100,000 Atlantic crossings—more than the next two airlines combined.

On June 28, 1939 Pan American's Dixie Clipper took off from the U.S.A. for Marseilles, France, and achieved a place in aviation history...the first scheduled flight across the Atlantic by a passenger airliner. The total elapsed time to Marseilles was nearly 44 hours.

Today's mighty Pan Am Jet Clippers whisk you to New York from London nonstop in only 7½ hours...from Paris nonstop in 8 hours...all the way from Rome nonstop in 9½ hours! In all, Pan Am Clippers serve 14 cities in the U.S.A. direct from Europe...depart from 21 European cities...and there are 92 Jet transatlantic flights a week this summer.

On July 2, when Pan Am 'Round-the-World Flight 2 left New York International Airport it represented Pan Am's 100,000th Atlantic crossing since the flight of the Dixie Clipper. Pan American has flown almost four million travellers across the Atlantic...and since 1958, one million of them by Jet!

It's easy to see why Pan Am is the World's Most Experienced Airline! Pan Am's experience is the priceless extra that makes you a relaxed, carefree traveller.

For reservations, call your Travel Agent or Pan Am in:

Calcutta: 42 Chowringhee, Tel. 44-3251 (5 lines)
New Delhi: Imperial Hotel, Tel. 48172, 48117
Bombay: Taj Mahal Hotel, Tel. 211063, 211064

Clipper, Trade-Mark, Reg. U.S. Pat. Off.

Enjoy the Priceless Extra of Experience
on the World's Most Experienced Airline

FIRST ON THE ATLANTIC... FIRST ON THE PACIFIC... FIRST IN LATIN AMERICA... FIRST 'ROUND THE WORLD

Bidhan Chandra Roy

DEATH was the last thing one associated with Dr B. C. Roy—he seemed so indestructible. Illness too was such a stranger to his person that the public and—with probably less excuse—he, took his last illness less seriously than they ought to have done. Subsequent reports indicate that he gravely underestimated his condition, a lapse unthinkable had someone else been the patient. In his impatience to get on with his work, he is reported to have repeatedly disregarded medical advice—which in any case would hardly have dared overrule him in such a matter. It is hard to escape the harrowing feeling that if he had been a little more careful and not driven himself as hard as he did, he may have been still with us.

It is probably a little difficult for outsiders to understand the sense of being orphaned that Bengal feels at the passing away of Dr Roy. No ordinary leader at any time, in the last ten years, Dr Roy had emerged as a father figure. Indeed, in the last three or four years, even political opponents had come to look up to him for the solution of Bengal's problems and he was the recipient of much affectionate love from his people. Felicitating Dr Roy on his becoming a Bharat Ratna, we wrote last year, "Leadership in Bengal, especially in the last ten years, could hardly be considered a sinecure. Only idealism of a high order could have seen in it an opportunity and only an innate strength of character could have withstood the pressure on it, some of it insidiously corrosive and others volcanically eruptive. West Bengal's ills are chronic and intractable and incapable of ministrations merely by an engaging bedside manner." All-India Leadership, was quite relieved to let Dr Roy weather the storms that broke loose in this "problem state" from time to time and never was confidence more amply justified.

The partition that none in Bengal wanted brought in its wake problems that would have intimidated a less energetic and single-minded leader. Successive waves of refugees bringing with them problems of rehabilitation that were peculiarly intractable, much middle-class and lower middle-class misery brought about by inflation and unemployment were easily channelised into agitational politics. The tasks of constructive leadership were further complicated in the early years of the Republic by the then communist thesis that doubted the reality of Indian Independence and held that its substance still remained to be won by violent means. Dr Roy rode the whirlwinds let loose by these and other challenges with impetuous calm and determination. Step by step, he was able to win for constructive endeavour the acquiescence and co-operation of his people. The era of planned development found in him an enthusiastic and far-seeing agency. Dr Roy was bubbling with ideas for the rapid advancement of the State and the bringing into active use the vast resources of the region. The Durgapur industrial complex is a standing monument to his energy and drive and there was hardly any aspect of the life of the State in which he

had not left his impress. The social and economic problems of Calcutta absorbed his attention in more recent years and he was full of schemes and plans for solving them. He has communicated to those around him his sense of urgency and hopeful beginnings have been made.

Dr Roy's life covered a vast span and he lived to see some of his dearest aspirations translated into reality. It is a little hard to visualise that he was only twenty years or so younger than Rabindranath. Though these two differed in many respects, they shared the spacious humanism of the milieu to which they were born and the poet's vision of joy in the widest commonality spread was, in less exalted terms, the practical vocation of the younger man. Dr Roy's determined efforts and brilliant successes as a medical student and his equally amazing subsequent professional career bespeak a person out of the ordinary. Dr Roy brought to much of his latter day efforts on behalf of Bengal and India much the same spirit of grit, determination and optimism that made him set out for joining St. Bartholomew with about Rs 1200 and wear down the Dean's resistance by applying about thirty times. His sensational defeat of Surendranath Banerjee and his subsequent career in the politics of the times show that there was in the comparatively untried politician—all his life, he never smelt of politics—a remarkable ability for public service. But it was only in the years after independence that Dr Roy's best opportunities came. The constructive aspect of his character blossomed forth fully only when he became the Chief Minister of Bengal. Dr Roy could easily have gone to the Centre but he chose to stay at the helm at the State level. But there was hardly a decision of importance on which it was possible for the Centre to impose its will on the State without his acquiescing in it. He was also probably among the very few leaders who stood up against sundry attempts at corroding the substance of the States' authority. It was not that he was always justified in the stands he took, but he knew his mind and there was no question of anyone imposing any solution against his considered views. His brushes with the Planning Commission are well known and his recent wrestling from the Centre of the right to mine in the coal-bearing lands that reverted to the State on abolition of Zamindari is also testimony to this fact.

This is not to say that there was anything narrow parochial about his patriotism. Indeed, the cosmopolitanism of Calcutta, despite sundry insidious pressures on it is largely due to Dr Roy's wider vision. The best evidence of this is the ill-fated Bihar-Bengal merger he sponsored. Impractical in many ways, it was inspired by a larger loyalty and a deeper sense of responsibility to the nation at large than many are capable of in these days of narrow affiliations. A great Indian has disappeared from the scene and Indian leadership has been greatly impoverished in consequence.

Banking in 1961

THAT 1961 was a comfortable year for the banking system is a widely enough known fact; but there are certain aspects of the banking year which are vouchsafed in the latest issue of Trend and Progress of Banking in India which are not within normal public ken but which at the same time are profoundly interesting. The largest ever rise in Deposits at Rs 180 crores, or 11 per cent, was recorded in 1961—omitting, of course, all Public Law 480 transactions. The previous best was in 1959 when an increase of Rs 163 crores in Deposits was experienced. Various factors are cited as having contributed to the startling contrast between 1960 and 1961, chief of which is the restoration of public confidence in banking with the introduction of the scheme for the insurance of bank Deposits. In 1960, increase in Deposit resources at Rs 102 crores fell far short of the expansion in credit of Rs 208 crores. Consequently banks were compelled to disinvest in gilt-edged for Rs 109 crores and besides to borrow Rs 50 crores more from the Reserve Bank. In contrast, in the latest year under review, the increase in Deposits at Rs 180 crores exceeded the expansion in Advances of Rs 113 crores. Thus, banks were enabled to reduce indebtedness to the Reserve Bank by Rs 43 crores and to augment their gilt-edged portfolio by Rs 50 crores.

So far so good, and the figures given for the last decade are also most heartening. The rate of growth in Deposits was at 3 per cent per annum in the period roughly corresponding to the First Plan, and improved sharply to 12 per cent per annum over the Second Plan period—again exclusive of PL 480 transactions. But Trend and Progress makes the following claim: "The substantial growth of Deposits is the result both of an expanded stream of savings flowing from the progressively increasing incomes generated in the two Plan periods and the spread of banking habit geographically over a wider area and more strata of the population assisted by the branch expansion programmes, notably that of the State Bank of India." It is, we may state, with the last eight words that we would join issue. That the spread of the banking habit has in no mean measure been responsible is borne out by the fact that personal Deposit accounts rose in number by 7.1 lakhs against the total of 7.5 lakhs under all Deposit heads. But it is an incontrovertible fact that, despite its branch expansion programme, the rate of growth of Deposits of the State Bank has been much slower than in the case of other Scheduled Banks.

Much is made of the change in the structure of Deposits, in that where once upon a time current accounts used to predominate it is today Time Liabilities which account for something like 63 per cent of Deposits. No reasons are adduced for this switch-over, for switch-over it has considerably been. According to Trend and Progress of Banking, Demand Deposits accounted for 57 per cent of the total at the end of 1950; and we are further informed that Demand Deposits were reduced in relative importance to 36 per cent of the total by October 1960. Now, as recently as at the end of 1956, Demand Deposits accounted for 58.5 per cent of the total. So the disproportionate gain of Time Deposits has occurred since. And the reason is patently clear: in the wake of the Deposits war following upon the extremely stringent 1956-57 busy season, rates for Time Deposits were put

up by the banks. There was in the large part of 1957 an almost week-by-week switch-over to Time Deposits. New accruals increasingly were under the head of the higher interest bearing accounts. We would like to suggest that Deposits did grow as a result of "an expanded stream of savings flowing" from planned expenditure—and that the increase occurred mainly under Time Deposits was due to the banks' own decision to raise interest rates.

Borrowings from the Reserve Bank rose to a peak of Rs 94.5 crores in March 1961; and it is claimed that, "possibly owing to the operation of the penal rates for borrowing, banks showed distinct signs of reluctance to remain indebted to the Reserve Bank for a long period." The correct perspective for assessing this fact is as follows: despite a 6 per cent penal rate, banks borrowed hugely from the Reserve Bank; the rate did not deter borrowings; but the moment Deposits began to accrue—and Advances began to fall slightly—naturally the penal interest debt was repaid. Thus, the suggestion, in Trend and Progress, that the penal interest under the three-tier bank Rate discouraged banks from borrowing from the central banking institution is not, we are afraid, tenable.

The 1961 slack season, in comparison with its predecessor, was pronounced; also, the rise in bank credit in the first four months of the year was rather smaller than in the corresponding period of 1960. Bank Advances rose by Rs 133 crores in January-April 1961 as compared with Rs 164 crores in January-April 1960; and fell by Rs 74 crores in the 1961 slack season as compared with a contraction of just Rs 26 crores in the previous slack season. On the face of it the inference is that the return of seasonal finance was much larger in 1961. But clearly there has not been much variation in the two years. What, particularly since the beginning of the Second Plan, has been obscuring or distorting slack season figures is the magnitude of industrial Advances. Thus, in the year to October 1960, industrial credit rose by Rs 144 crores—and so, in the slack season in that year the return of seasonal finance was considerably offset by increase in industrial Advances. On the other hand, in the year to October 1961, with a slackening in the rate growth of industrial production, industrial Advances expanded only by Rs 103 crores—and so a larger contraction in Scheduled Bank credit was registered in the 1961 slack season.

Reversal in monetary policy (to which reference is made in World of Finance this week) appears to have been decided upon even while Trend and Progress was in the press: for there is in this publication no reference to the "two-pronged" objectives of the Reserve Bank: to deny bank finance for speculative purposes and to make it available for augmenting industrial production; these objectives, it may be mentioned, have in recent years been repetitively underlined in Trend and Progress, in the report on Currency and Finance and in the report of the Central Board of Directors of the Reserve Bank. The latest Trend and Progress states: "The objective of the (Reserve) Bank was to prune less urgent demands and generally restrain borrowing." Gone, thus, is the anxiety to ensure finance for productive industry. An indication in this regard was possibly given by the Finance Minister in April this year, when he suggested in Bombay to industrialists that they should have a care for their debt-equity ratios, and that they ought to rely less on bank finance.

Indian Finance

We have one final remark to make: Why has the final chapter, which in the form of prospects tried to peer ahead as to the future of the banking industry, been altogether omitted? We trust that the implication is surely not the obvious one.

Coal: Targets and Production

The main topic on the agenda of the last meeting of the Coal Council was the disconcerting fact that coal production since April 1961 has been running not only below prescribed targets, but has also been showing a declining trend. Against the target of 60 million tons set for the last year of the Second Plan, the actual production in 1960-61 was only 54.84 million tons. But it has been explained that the target set was the attainment of an annual rate of production of 60 million tons and that this rate was slightly exceeded. Some eyebrows were raised at the switch from 'production' to 'rate of production' to claim the credit of achievement of the second plan target. It is not now worthwhile to examine how far the substitution was justified. For, unfortunately, it has not been possible in the subsequent months even to maintain the rate of production achieved in the last quarter of 1960-61 and, as a result, production far from improving has slid back below the level achieved in that year. Against actual production of 54.84 million tons in 1961-62, during 1961-62, when the previous year's shortfall was expected to be made good, actual production was only 54.35 million tons, nearly half a million tons less than in the previous year.

The sectorwise break-up of the second plan targets and the production during 1960-61 and 1961-62, that is, the last year of the Second

July 7, 1962

Plan and the first year of the Third, is illuminating. The relevant figures are given below:

(million tons)			
	Second Plan Target	1960-61	1961-62
Private Sector	43.85	44.39	45.62
Public Sector	13.50	7.92	5.95
N.C.D.C.	2.65	2.53	2.78
Singareni	60.00	54.84	54.35

From the above table it is clear that the private sector not only exceeded, its second plan target, but has maintained a steady, though not spectacular, increase during the first year of the Third Plan. But on the other hand, there is a serious setback in the production of the public sector, the actual production in 1961-62 being hardly more than half the second plan target. It will also be seen that the shortfall has occurred in respect of the NCDC. Singareni just managing to scrape along.

The second plan target for NCDC was 13.5 million tons. Though production during 1960-61 was only 7.92 million tons, it is claimed that a rate of production of 13.5 million tons a year was not only achieved but was slightly exceeded during the last quarter of the year. After this desperate exercise in target-manship, the NCDC, it appears, has been obliged to take a prolonged rest. Production slid down to 5.95 million tons in the first year of the Third Plan from the level of 7.92 million tons in the previous year.

The outlook for the current year does not appear to be any better. Production during the first four months of the year has been slightly less than during the corresponding period last year, as can be seen from the following figures.

(million tons)			
	Four Months January to April		
	1961	1962	
Private Sector	15.444	16.348	
Public Sector	4.661	3.345	
Total	20.105	19.693	

According to the phased programme of production during the Third Plan, the target for 1962-63 is 63.49 million tons of which 48.55 million tons have to be raised in the private sector and 14.94 million tons in the public sector. While it appears from the above table that the sector should be able to raise the quantity it is expected to do, there may be a serious shortage in the public sector of about 5 million tons, unless the rate of production is pushed up to an adequate extent during subsequent months, to make up for the shortfall in the first four months of the year. But it remains to be seen how far it will be practicable to raise the average rate for the year, for production usually slows down during the monsoon and starts picking up only in the winter.

The shortfalls of production in this as in the previous years has been attributed to shortage of transport. On the other hand, the Railway Board and its spokesmen have been insisting all along that the Railways have carried out all the tasks that have been assigned them and should not, in fairness, be saddled with the responsibility for the coal shortage. The inevitable conclusion points to lack of co-ordination in the implementation of the plans for production and transport of coal, for it does not stand to reason that the authorities were planning for shortfalls in both coal production and rail transport. This lack of co-ordination, it seems, has been brought about by shortfalls in other important sectors. For instance, the former

Minister for Steel, Mine and Fuel who is now in charge of Railways, recently stated that shortfalls in steel production were responsible for shortfalls in the quantity of coal and other commodities transported by the Railways, for while the transport capacity created for meeting the needs of the steel plants, which had rightly been assigned the highest priority, remained unutilised, it could not be transferred to cater to the requirements of other traffic. Is there any guarantee that the same experience will not be repeated in the Third Plan?

Beside inadequacy of transport, attention has also been focussed on the shortage of explosives. The shortage of power, it has been reported, came in for consideration at the last meeting of the Coal Council. But it appears from the conclusions that have been announced that the authorities are not yet ready to come to grips with the problem. A study team set up by the Ministry of Irrigation and Power has already assessed the requirements of power for increased production of coal in the Third Plan and recommended a number of measures for immediate adoption. But apparently the Council has returned the question to the Ministry of Mine and Fuel for further study in consultation with the Ministry of Irrigation and Power and the Planning Commission.

The same impression of a leisurely approach to an urgent problem is conveyed by a number of other items that lend distinction to the agenda of the Coal Council, such as 'underground gasification of coal' and 'transport of coal by pipeline.' The proposal for transport of coal by road-cum-river route also falls under this category. While these schemes bespeak vision, what is required now is not so much the distant vision as the insight into the intricacies of co-ordinating coal production and transport.

How to Break the Deadlock

By Paul Einzig

The contrast between cost inflation on the one hand and stagnant demand, declining commodity prices and profit deflation on the other, is causing much concern and is largely responsible for the pessimistic views taken in many quarters about trade prospects. Any solution of the existing stalemate must be based on a realisation of this contrast. Conventional deflationary measures, such as lower Bank rate, credit expansion, removal of restrictions on hire-purchase, reduction of taxes etc, would not solve the problem because, while stimulating demand they would further exaggerate cost inflation as a result of a strengthening of the bargaining power of trade unions. The correct solution must aim at stimulating consumer demand and capital expenditure without however, accentuating the pressure for higher wages.

Such a formula could only be operated with the consent of the trade unions. The British Government's effort to obtain their acceptance of the wage restraint has failed almost completely, because it largely depended on the response to exhortation. If the Government had told them plainly some months ago that the Bank rate would remain at 7 per cent and credit restrictions and hire purchase restrictions would be fully maintained unless and until the principle of the wages restraint is accepted, the result would have been much more satisfactory. A formula should be worked out under which each substantial

wage increase in excess of 2½ per cent would result in an immediate restoration of an appropriate degree of disinflationary measures and a cut in public expenditure on capital investment and social services.

Now that the undertone of the economy threatens to become deflationary it would be clearly too late to try to apply that formula since it would aggravate the recession at a time when the general trend calls for measures to stimulate demand. Since it is impossible to apply the "stick" the Government could and should apply the "carrot" in the form of offering inducements to the trade unions in return for their willingness to accept the wage restraint. To give an example, the Government could offer a substantial increase of old age pensions. It must be made plain however, that any such benefit would be reversed as soon as any substantial wage increase in excess of the 2½ per cent limit is enforced. This would mobilise public opinion against the greedy trade unions and would be much more effective than mere exhortation.

In connection with the Festival of Labour which has been organised by the Labour movement in London, there is a display arranged by the major trade unions, in an attempt to publicise their usefulness to the community. Evidently they are aware of the need for justifying themselves, in view of the growing public opinion against them. Should the Government adopt the formula suggested above it would take more than such displays to pacify those old age pensioners and other beneficiaries of other Government measures who as a result of excessive wage demands would have to put up with the cancellation of the additional benefits. Pressure of public opinion to induce the unions to become more moderate would then be much more effective.

—“Copyright.”

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOANS

Toward Dearer Money

THE new loan announcement indicates that there has been a thorough reversal of monetary policy; and we wish to make plain at the outset that we consider the deviation to be a retrograde step. At a time when the 3½ per cent 1968 and the 4 per cent 1972 were quoted at Rs 99.95 and Rs 100.25 respectively, the issue prices for both have been fixed at Rs 99.20. The implication is that Government considers either that gilt-edged yields are out of line with other interest rates, or that an increase was necessary in order to secure greater support for its new loans. We believe that both assumptions are misfounded. In fact, some semblance of orderliness was just in process of being achieved in the structure of interest rates, and the terms of the new loan merely serve to restore chaos; and, in loan merely serve to restore chaos; and, in the second place, in the light of the very easy money conditions (call money unlendable at 1½ per cent) the availability of a six-year loan will have sufficed to ensure banks' support; what is certain is that the issue prices being lower vis-a-vis current quotations will result in reducing the magnitude of banks' purchase of the new loans.

Naturally prices of existing securities will undergo a process of readjustment, so that yields thereon will conform to the new pattern postulated by the new loan announcement. The money market is still, we fear, somewhat dazed, and the price revisions have consequently been delayed. But tens of crores (at the most conservative estimate) of value of the Government's outstanding rupee debt will have been erased within a matter of days. Is this the formula for a successful borrowing programme?

We have simultaneously the announcement that the three-tier bank rate has been reconsidered; to such effect, indeed, that a fourth tier has been added. Now, it is extremely unlikely that for the present and for the next four months banks will need to borrow from the Reserve Bank at the penal rates. Was this announcement vitally necessary to be made—precisely when banks were expected to demonstrate their trust and confidence in a strong gilt-edged market?

We have in prospect the considerable amendment of the Banking Companies Act. The raising of the liquidity ratio looms large on the horizon—and various provisions will make banking difficult, particularly for exchange banks. Why then add to the troubles of the banking system, which is exactly what is in prospect by way of depreciation in gilt-edged values?

It was just on three months ago that bankers were given the implicit assurance that the Reserve Bank believes in getting things done by convention rather than by compulsion. That convention has gone by the board. Compulsion is explicit in the revision of bank-

king law; and it is implicit in the four-tier bank rate with its introduction of a higher penalty bearing fourth tier.

At the bankers' meeting with the monetary authorities in April last, again, there was the indication that the interest rate on Government borrowings would not be tampered with—that it was sacrosanct—because of the deleterious effects that an increase in the coupon would have on existing gilt-edged prices. Have conditions so changed in the brief space of three months, that that principle has been jettisoned?

We fear that monetary policy no longer appears to have as its objective the two-fold aims of withholding banking finance from speculative use thereof and of making funds available for augmenting industrial production. Quantitative checks are being imposed, and industrial production, whose growth is already being hampered by lack of foreign exchange, power and transport, now faces an additional hindrance in the form of unavailability of banking finance.

The one silver lining, if it can be so called, is that Government has been persuaded to issue a second tranche of the 3½ per cent 1968: a six-year loan will be greatly acceptable to the banks, which for some years now, at any rate at new loan time, have been starved of short-terms. But we repeat that the gratification felt at Government's acquiescence in this regard will have more or less been nullified by the decision to peg the issue price fully 75nP below the market quotation.

An avowed purpose of the stiffer penal rates for borrowings from the Reserve Bank is to encourage banks to rely "to the maximum extent on their own Deposits and other resources"; and the efforts of the banking system are thus sought to be "reinforced" for meeting the growing needs not only of the private sector but also of the public sector. It is true, the higher cost of central banking credit will induce consumer-resistance in this regard; but it is by no means certain that as a consequence banks will set about a branch expansion programme (which mainly can contribute to the mopping up of new resources). For, the cost of bank labour has been steadily on the rise—with no corresponding improvement in the output of work; and the establishment of new branches inevitably entails some element of loss in the first stages. Thus, all that banks may be provoked to do is to compete more intensively for Deposits—that is, a Deposits war that will merely raise the cost of Deposits for the banking system as a whole. However, we may add that banks could feel compelled to enhance the charges for Advances and reduce the rates of interest on Deposits in order to make up for the loss in earnings arising from the higher liquidity ratio. If so, some good will have resulted from the latest monetary measures—though we doubt that such was the objective.

A few more features of the new loans may now be studied. Government has this year issued the longest dated issue ever—maturity occurring 23 years hence; but at the same time the interest coupon has been raised to 4½ per cent, as against the 4 per cent 20-year

series that we had till last year. This long-term series is primarily meant for the Life Insurance Corporation—and, perhaps, for the provident fund societies, though the latter have in recent years shown preference for the 4½ per cent series of State Governments. Where, then, the need for a medium term in the form of a second tranche of the 4 per cent 1972? By no means will banks convert their holdings to the medium-term, when the 3½ per cent 1968 is available. The new loan could quite as easily have been a two-tier issue: the middle tier has hardly any attraction. Conversion applications can be made in respect of both maturing securities, the 2½ per cent 1962 and the 3½ per cent 1962. Maturities add up to a high figure, but in as much as the monetary authorities are certain to have the bulk of the securities in question, conversion is a foregone success. Nevertheless cash subscriptions for about Rs 100 crores need to be made, and but for Government's borrowing from weakness we would have been confident of such a sum being realised. The State Bank has considerable free resources for investment in the new loan (Other Assets are at a record high figure), and so the success or otherwise of Government's borrowing this year will depend upon the magnitude of support secured from other Scheduled Banks. Earlier this year we had expected that the banking system as a whole be able to muster something like Rs 50 crores; and we do not see any reason for revising that figure.

IMF

Will We Get \$100 Million?

The approach to the International Monetary Fund for a standby credit of \$100 million was, in the light of the continuing decline in India's foreign exchange reserves and the delay in securing untied foreign loans, a foregone and inevitable conclusion. Indeed some weeks ago we had stated that we would probably ask for \$150 million, thus utilising two-thirds of our quota with the IMF. It was as predictable, with the great uncertainty that shrouds our prospects of foreign assistance, that a controversy would arise whether or no India was entitled to a further drawing, and whether or no the IMF authorities would approve.

The facts of the matter are as follows: as a rule the IMF freely permits a member country to make purchase of currencies up to 25 per cent of its quota plus what is known as the "gold" tranche, or subscriptions in gold and convertible currencies. In India's case, before the raising of quotas, our subscription totalled the equivalent of \$400 million, of which \$27.5 million represented the gold tranche. Subsequently the Indian quota has been raised to \$600 million, and to the best of our recollection toward this increase India has subscribed \$50 million in gold and convertible currencies. On this basis the first tranche of assistance that we could almost without question obtain from the IMF was placed at \$227.5 million (made up of \$150 million representing the gold tranche). But the fact that we have already purchased \$250 million of currencies from the IMF means that we cannot automatically expect further assistance from this source.

Normally second and other tranches of assistance have to be negotiated with the IMF up to a limit of the IMF holding 200 per

cent of the quota of a member's currency; normally also the IMF is quite sticky about second and further tranches of aid. It has to be proved that a temporary imbalance in trade is the cause of the foreign exchange difficulty, and that moreover re-purchase can be effected with in three to five years. It has sometimes happened, it may be added, that the IMF seeks to "advise" member countries of monetary or fiscal measures that need to be introduced.

India has so far had recourse to the IMF three times. The first transaction, involving \$100 million, was soon after independence, and the re-purchase was completed in due course. The second was in 1957 when the first tranche (\$100 million, being 25 per cent of quota, plus \$27.5 million as gold subscription) was utilised together with a standby credit for \$72.5 million, which was also drawn on. Re-purchase was fully effected in 1961, but the proceeds of the third transaction (for \$250 million) had to be used partly for this purpose. The commitment to re-purchase this element of \$250 million is still two to four years away.

It is against this background that the IMF will consider the new request for purchase of \$100 million of currencies. On the credit side is the fact that in respect of both earlier transactions we have kept commitments. On the debit side is the fact that for effecting re-purchase last year we had to use the new purchase last year we had to use the new drawings. On the credit side also is the fact that in 1957 we were permitted (together with the standby arrangement) to purchase up to 50 per cent of our quota. On the debit side we have to remember that the fresh application for standby arrangements will make Indian drawings exceed 50 per cent of our quota.

Then, if the experience of other countries is any guide, not unoften has the IMF seen fit to let a member purchase up to 100 per cent of quota. Furthermore there is already the distinct feeling that the IMF's facilities are more easily available to industrialised countries; and the IMF we may be sure will be anxious to refute this charge. So, taking an over-all view, we would state that before the end of July the IMF will almost certainly approve the Indian request for \$100 million by way of standby credit—and perhaps by the end of August India will also have drawn upon that assistance.

BANK RETURNS

Large Windfall for States

While, as was to be expected, the latest banking statements bear evidence of the further progress of the 1962 slack season, there is piquancy in the extraordinary magnitude of payments received by the States presumably from the Centre; and for this purpose recourse has been had to deficit financing in very large fashion indeed.

Active Note Circulation has, according to the returns of the Reserve Bank for 29 June, contracted further by Rs 20.35 crores to Rs 2,076.68 crores, and there has besides been inflow of Rupee Coin for Rs 1.80 crores. While a transfer of Rs 1 crore has been effected from Foreign Securities (for bolstering the dwindling Balances Held Abroad), reduced holdings in the Issue Department to

Rs 91.68 crores, currency has contracted against Rupee Securities (now lower at Rs 1,794.31 crores) for Rs 19 crores by transfer to the Banking Department. As a result the Reserve Bank's cash in the till is slightly higher by Rs 2.24 crores at Rs 43.31 crores.

Investments in the Banking Department are higher by about Rs 88 crores at Rs 282.27 crores; this includes a transfer of Rs 19 crores from Rupee Securities but we have to take account of the purchase of Rs 17 crores of gilt-edged by the State Bank in the relevant week. If, as has happened in recent weeks, the other Scheduled Banks have also bought from the Reserve Bank tap, the magnitude of deficit financing can be seen to have been a minimum of Rs 90 crores. The States have been the beneficiaries: their indebtedness to the Reserve Bank has been reduced spectacularly by Rs 89.61 crores to Rs 34.89 crores, and their Deposits have recorded an increase of Rs 20.78 crores to Rs 25.49 crores. The Centre has not only fully utilised the proceeds of the deficit financing but has also run down its balances by Rs 16.41 crores to Rs 53.36 crores.

Another intriguing change is the rise of Rs 12.81 crores to Rs 134.93 crores in the Other Loans and Advances of the Reserve Bank: the slack season's progress clearly rules out increased accommodation taken by Scheduled Banks, and so the implication is that other entities entitled to borrow from the Reserve Bank have done so. Other Liabilities, owing perhaps to receipt of interest on the holdings of securities of the Reserve Bank, have risen again by about Rs 4 crores to Rs 75.22 crores. It may be recalled that last year the accrued profit of the Reserve Bank, as shown under Other Liabilities, was disposed of as to Rs 11 crores by transfer to the two agricultural funds, as against the normal practice of effecting transfer in the first statement for July. Indeed the balance was also taken out of the purview of Other Liabilities. It is possible that the agricultural funds will be strengthened by larger transfers, and that the remnant profit will also be higher.

Lastly outgo of foreign assets has added up to Rs 5.01 crores; Balances Held Abroad have declined to Rs 5.64 crores.

The return of the State Bank for 29 June shows that, after over a month of steady decline, Deposit resources have, in the week under review, picked up by Rs 5.19 crores to Rs 571.48 crores. After drawing down Other Assets (still unusually high at Rs 40.20 crores) by Rs 11 crores, Rs 17 crores' worth of gilt-edged has been purchased from the Reserve Bank. The total of Advances has receded but slightly by Rs 0.87 crore to Rs 288.84 crores, and the consequence is a fractional rise of Rs

0.17 crore to Rs 26.53 crores in cash balances, including money at call and short notice.

The statutory statement of Scheduled Banks for 22 June records another substantial gain to resources. On the one hand, both net Demand Deposits (up by Rs 6.58 crores to Rs 881.88 crores) and net Time Deposits (higher by Rs 5.76 crores at Rs 1,260.02 crores) have recorded considerable increases aggregating Rs 11.34 crores, to which has to be added, in order to discover the extent of gain of other Scheduled Banks the decline of Rs 2.47 crores in Deposits reported by the State Bank in the relevant week. On the other hand, the total of Advances has contracted by Rs 13.32 crores to Rs 1,423.98 crores; and the State Bank accounts for Rs 3.31 crores of the fall. This two-fold improvement in the resources situation has enabled the banks (a) to reduce borrowing from the Reserve Bank by Rs 5.53 crores to Rs 2.59 crores; (b) to add Rs 2.28 crores to cash balances, now up at Rs 214.08 crores; and (c) to make a slack season purchase of Rs 8.35 crores of gilt-edged, holdings in which have now risen to Rs 583.36 crores. The further sale of intermediate Treasury Bills would suggest that banks in the week ended 22 June have experienced a further freeing of resources, which has enabled another accretion to gilt-edged investments.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 3 July, 1962. Total amount offered was Rs 4,10,00,000. Tenders at Rs 99.450 per cent were accepted in full and those at Rs 99.405 per cent were allotted approximately 63 per cent. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,371 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 16 July, 1962. Successful tenderers should make payment on Friday, 20 July, 1962 at all centres. Other conditions are as usual.

During the week ended 29 June, 1962, Government of India Treasury Bills for Rs 2,42,32,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 4 to 14 July, 1962 at Rs 99.421 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 27 to 29 June, 1962 amounted to Rs 7,10,00,000.

Notes

NATIONAL INCOME

Lagging Behind

In the recent discussions in the Lok Sabha, Mr G. L. Nanda, Union Minister for Planning and Labour expressed dissatisfaction with the rate of growth in national income registered in the first year of the Third Plan. According to preliminary figures, national income at current prices was Rs 14,690 crores for 1961-62 as against Rs 14,200 crores for the previous year. The rate of growth on this basis works out to about 3.5 per cent which is considerably short of the 6 per cent annual increase that was postulated by the Third Plan. Reflecting the lower than postulated increase in the national income during 1961-62 is the fall in the rate of growth in agricultural production in the same year. Food-grain production it may be noted showed very meagre improvement from 79.00 million tons in 1960-61 to about 80 million tons. As Mr Nanda has explained, the increase in national income is directly linked with the increase in agricultural production. It is no mere coincidence that the target for agricultural production in the Third Plan has been fixed at 39 per cent over the production level at the beginning of the Plan and that the target for the growth of national income should also be

fixed at the same proportion. Agriculture contributing more than 50 per cent of the total national income is the largest source of national income. The dampening effect on the growth national income of the fall in the rate of production in the agricultural sector should also have been further aggravated by the slackening tempo in the industrial production which was impeded by bottleneck in transport and shortage of coal and electricity.

The rate of growth must needs be stepped up in the remaining four years to reach The Third Plan target of an overall 30 per cent rise. In this context, the fixing of the foodgrain production target at 84 million tons for the next year should allow the national income growth rate to be proportionately increased. An important element in the improvement in welfare as reflected in the national income is constituted by the behaviour of prices. It is essential that for the rise in national income to be accompanied by rise in real income the price line should be held up at reasonable levels. The experience during 1961-62 has been very satisfactory in as much as there was a decline in the index of wholesale prices in that year and to this extent the actual growth rate of national income was greater than what was indicated by the preliminary figures. This however has not been reflected in the per capita growth rate owing to the fact that the rate of population growth for the year remained at a high level of more than 2 per cent. It is imperative in the face of this alarming rate of growth in population that concerted measures should be taken to implement the development programmes in agriculture and strategic sectors of industry like coal, power, steel etc, so that the growth in the per capita national income will not lag behind the growth in total income.

FERTILISERS

Consumption Pattern in India

An article in the Agricultural Situation in India for April examines in detail the benefits to agricultural production that will be obtained by greater use of chemical fertilisers and also the scope for such increased use in the context of current consumption and the needs of the country as estimated in the Third Plan. Application of chemical fertilisers

which was negligible before the Second War, had under the stimulus of the Grow More Food campaign instituted during the War years and the two Five Year Plans increased substantially and with the accent in the national economic planning on increasing the agricultural production, a fertiliser policy has crystallised in clear outlines which aims at correcting the deficiencies in the intake of plant food by the important agricultural crops.

The major deficiency is in respect of nitrogen which is essential as the "motive power" of plant growth and for building up the indispensable plant proteins. Research in regard to responses of agricultural crops to application of nitrogen has shown remarkable results, though it has been found that these responses vary with the extent of irrigation and also the type and quality of soil. As between irrigated and non-irrigated land, it has been established beyond any doubt that the benefits are substantially greater when it is applied to irrigated area than to non-irrigated land. In respect of types of soil, the author of the article, has given figures which point to superior results obtained in the non-alluvial soil as compared with alluvial soil.

The consumption of ammonium sulphate which is the most popular of the nitrogenous fertilisers in the country has increased substantially from 346,000 tons in 1950 to 550,000 tons in 1959. However there are hindrances to further increased application of nitrogenous fertilisers constituted mainly by the inadequate level of indigenous production on the one hand and their relatively high price on the other. Apart from a reduction in prices, an increase in indigenous production of a substantial order is also required for meeting the fertiliser needs of the country. Total requirements of nitrogen for all crops grown in the country have been estimated at slightly more than 2 million tons per annum, which expressed in terms of ammonium sulphate will be more than 10 million tons. Compared to this, the requirements estimated in the Third Plan at 5 lakh tons are moderate while actual production target fixed at 4 lakh tons will leave a gap of one lakh tons.

In common with nitrogenous fertilisers, consumption of phosphatic fertilisers has also increased considerably in recent years, mainly under the stimulus of the subsidy of 50 per cent subsequently reduced to 25 per cent given by the Government. Estimated consumption in 1950 was only 3,600 tons and this has increased to 38,900 tons in 1959. In respect of phosphatic fertilisers which are consumed mainly in the form of superphosphate, indigenous production is slightly in excess of demand. At the end of the Third Plan production is envisaged to be stepped up to about 2,400,000 tons.

Indian Finance

Consumption of potash fertilisers is also shown to be relatively low as compared with requirements. The States lagging most in the utilisation of this fertiliser are Orissa, Delhi, Punjab and Other Union Territories. Production in Bihar, UP and other areas is not sufficient to meet the demand and there are definite advantages to be reaped by organising additional production on cottage scale basis by cooperatives.

The Third Plan has laid considerable emphasis on increased application of fertilisers for increasing agricultural production. Considerable research has already been done in respect of the right proportions in which fertilisers should be applied to different crops and in relation to the types of soil on which they are grown. Special mention may be made of the project for determination of soil fertility and fertiliser use which was sponsored by the Indo-US Technical Cooperation Programme, 1952. The project undertakes to provide effective technical assistance and equipment for determining the fertility status of Indian soils, to evaluate the performance of various fertilisers on Indian soils and to develop a soil testing service for the farmers and agriculturists.

In the use of chemical fertilisers a proper balance has to be struck between the three important ones namely nitrogenous fertilisers, phosphatic fertilisers and potash. In this light the bias in favour of nitrogen at the expense of other two fertilisers should be corrected. It is heartening that the Third Five Year Plan envisages substantial expansion in the production and consumption of all these three fertilisers. The production sche-

July 7, 1962

dule envisages increase in production of nitrogenous fertilisers from 230,000 tons to 1 million tons, of phosphatic fertilisers from 70,000 tons to 4 lakh tons and of potassic fertilisers from 25,000 tons to 2 lakh tons. Along with production, measures have also to be taken to educate the cultivators in the benefits of increased application of fertilisers. The UN Fertiliser Mission stressed the need for educational work with the small farmer for extensive soil tests to determine the kinds and quantities of fertilisers needed under different conditions and for continuous research into the use of fertilisers.

AGRICULTURAL WAGES

World Trends

Statistics of employment and wages in agriculture for different countries as a whole show different trends in respect of employment, while in respect of wages, the general trend has been toward an increase in all the countries. The rate of increase in regard to wages has however varied markedly. The greatest increase between 1953-60 has been recorded by some European countries like France, Germany and the UK. In France, the monthly earnings of the male worker are shown to have gone up from 9,930 francs to 18,850 while the female workers improved their earnings from 7,870 to 15,195 francs. In Germany the minimum monthly wage rate for the male farm worker rose even more sharply from 97 Marks to 188 Marks while for the female worker it rose from 73 to 148 Marks. UK registered a lower rate of increase, the increase in wages on weekly basis for males being from 142s 6d to 199s 7d while for the females it rose from 94s 6d to 128s 1d. In Denmark, the corresponding figures are 3,815 Kroner for males in 1953 and 4,911 in 1960 and for females 2,171 and 2,526 Kroner. In the United States, the hourly rates for all farm workers rose from 0.6 dollars to 0.81 dollars over the same period. In contrast, wages for some other countries show substantially lower rate of increase. In Ceylon the daily earnings of male workers in tea plantations increased from Rs 2.48 in 1953 to Rs 2.59 in 1960 and for female workers it increased from Rs 1.96 to Rs 2.14.

The trend in regard to employment shows no uniformity for the countries. In some countries, employment in agriculture has expanded though not exactly in proportion to the rise total employment. In some other countries, employment in agriculture has shrunk in spite of an increase in total employment. Some African countries like Ghana, Nigeria and Kenya have registered a rate of expansion in agricultural employment which exceeded the rate of increase in total employment. In

Northern Rhodesia while total employment increased, employment in agriculture declined. In Tanganyika, there was a fall in both total employment and employment in agriculture. In the US, Canada, Austria, Belgium, Czechoslovakia and Germany there was a substantial fall in the volume of agricultural employment in the face of rising trend in total employment.

MADRAS BUDGET

Additional Taxes

It was not unexpected that the Madras Budget for 1962-63 would contain new tax proposals. But few would have thought that Mr M. Bhaktavatsalam would have been obliged to make his first Budget as harsh as it has turned out to be. He has placed the estimates of revenue receipts for the year 1962-63 at Rs. 106.5 crores and the expenditure at Rs. 116.01

crores leaving a deficit of Rs. 9.51 crores. The new taxation proposals are expected to yield an additional revenue of Rs. 7.15 crores in the current year. Even after such a heavy dose of taxation there has remained an uncovered deficit of Rs. 2.83 crores. The new proposals will net in a full year much more and so the uncovered gap may not cause much difficulty. Additional taxation envisages fresh levies on passenger buses and goods vehicles on a slab rate basis, tax on consumption of electricity by high tension and low tension consumers, fifty per cent increase on stamp duties, enhancement of wet assessments and water rates except in certain areas, taxation on urban land including Madras city and other municipalities, an increase in the levies under the Betting tax and increase in the cess levied on sugarcane entering specific local areas. Another important feature of the Budget is the amelioration of the condition

of low income receiving government servants. Mr Bhaktavatsalam has announced an increase in the rate of dearness allowance from Rs. 10 to Rs. 15 to all Government employees receiving a pay of below Rs. 150. Teachers serving under all agencies and employees of local bodies will also get similar benefits.

Tax payers in Madras State will have less cause for complaint than people in some other States, because they have the satisfaction of seeing the resources contributed by them put to productive uses, a large number of which have already begun to yield good results. Food production increased during the Second Five-year Plan by 9 lakh tons, total production being 53 lakh tons. A target of 70 lakh tons has been set for the Third Plan and there is every hope that this will be achieved because active steps have been taken to increase the supply of fertilizers, good seeds and addi-

tional irrigation facilities. It is a tribute to the enthusiasm of cultivators in the State that they have utilised almost to the full the additional irrigation facilities created. During the Second Plan period the target for irrigated area was 2.92 lakhs acres and achievement was 2.62 lakhs acres. In the current year a provision of Rs. 453 lakhs has been made for irrigation.

It is in the fitness of things that the State has placed great emphasis in its Third Plan on development of power. There is great enthusiasm in the State for rapid industrial progress and hence the outlay of Rs 100 crores out of its total proposed outlay of Rs. 290.89 crores for the entire Third Plan becomes intelligible. Already remarkable progress has been made as the installed capacity of the States electricity system has quadrupled during the past decade. Even so, the State is handicapped because of its continued dependence to a large extent on hydel power for the generation of electricity. How precarious the position can suddenly become is currently witnessed as power supply has been cut first by 50 per cent and then by 62½ per cent with the possibility that the cut may go up to 75 per cent if no rain is received in the next few days in the catchment areas of the reservoirs in the State. If the yearly uncertainty of power supply is to be minimised and if industrialisation of the State is to proceed apace, urgent steps have to be taken to increase the States power supply. It would appear that Madras has a strong case for the establishment of an atomic power plant in its region.

It cannot be denied that some of the new levies will be unpopular. The enhancement of wet assessments and water levies may be quite logical in view of the improved economic position of agriculturists in the State but when some other political parties are advocating abolition of land revenue, an additional levy on the agriculturist can be made to appear as quite harsh. If the Railway Minister can enhance fares and freights, why should a State Finance Minister be blamed if he increased tax on passenger buses and goods vehicles? It has been officially announced that the State Transport will not enhance fares as it will be able to absorb the additional levy. It is doubtful if the private road operators can emulate the example of the State Road Transport. Anyway the new levies will increase cost of road haulage of goods and passenger traffic.

GUJARAT BUDGET Several New Taxes

The Budget for 1962-63 presented by Dr Jivaraj Mehta, Chief Minister of Gujarat, early this week, to the State Legislature,

shows a revenue deficit of Rs 2.74 crores, which is likely to go up to Rs 2.95 crores because of additional provision made for some of the existing schemes. Expenditure for the current year is estimated at Rs 72.14 crores and the receipts at Rs 69.40 crores. Among the new taxation proposals are a tax on cash crops, in addition to land revenue, a tax on goods carried by motor vehicles, increased duty on electricity consumed by non-residential and office premises, tax on sale of motor spirits, diesel oil, aviation spirit and vapourising oil, and sales tax on a number of consumer articles hitherto exempt from this levy. As some taxation had already been imposed in the interim budget for the first three months of the current financial year, the total yield from new taxation in 1962-63 is estimated at Rs 3.82 crores.

A redeeming feature of the new taxation proposals is that the additional levies are to be borne by almost all sections of the people. Like his counterparts in other States, Dr Jivaraj Mehta too has chosen to tax agriculture. Another point of similarity is the additional tax on goods moving by motor vehicles. Some of the new taxes may in their incidence adversely affect the economic condition of the poorer sections of the community. But Dr Jivaraj Mehta has tried to ensure that the additional levies do not retard the pace of industrialisation of the State. The additional electricity duty does not take away the exemptions given at present to new industrial undertakings and to those generating electricity for their own use. Similarly in imposing levy of a surcharge on non-agricultural lands consideration will be given to the use to which such lands are to be put while fixing the surcharge.

Considering the fact that the State has decided to have a plan involving an outlay of Rs 235 crores, it would be idle to assume that adequate resources for the implementation of such a big plan could be found without inconveniencing the people. It is true that the major portion of the outlay is to be contributed by the Central Government, but the State too, has to raise Rs 29 crores as its share.

There will be general satisfaction however at the progress of the State's Third Plan. As against an allocation of Rs 33.19 crores for the first year of the plan, the actual expenditure on plan projects during the year is likely to go up to Rs 36 crores. During the current year the Plan outlay is placed at Rs 42.26 crores. Considerable progress has already been achieved in industrial development. According to the Chief Minister 31 new industries had been set up while 37 others had expanded their activities. In the sphere of small scale industry also commendable headway has been made as nearly 800 small units

had been started in the past two years. During the Third Plan, three major multi-purpose projects would be taken up as the Planning Commission had given its approval. Progress may still be retarded if it is not ensured that power generation is well ahead of demand. Dr Mehta has outlined in his Budget speech the measures taken to augment power supply, but the fact remains that some of the power projects so far have been only hastening slowly.

SUGARCANE PRICES

Linking with Yield

At long last the Union Government has announced its decision to link the sugarcane price with the recovery percentage of sugar. This represents the outcome of the recent discussions between the spokesmen of the Food and Agriculture Ministry with the members of the Indian Sugar Mills' Association in the course of the last month. Fixation of a minimum price for sugarcane at a high level without relation to the quality of sugarcane and its sucrose content, has been one of the anomalies of the sugar industry. From 4.8 million acres in 1958-59, the acreage under sugarcane had gone up to 5.22 million acres in 1959-60, 5.73 million acres in 1960-61 and the estimated acreage under sugarcane for 1961-62 showed a further increase to 6.0 million acres. This stimulus for such a continuous increase in sugarcane acreage which would have entailed diversion of land from other important uses, has been derived mainly from the high price of sugarcane at Rs 1.62 per maund. At this price, the return for the sugarcane grower was considerably higher than what he would have got from alternative uses of land or even of sugarcane in the production of gur and khandasari. The 10 per cent cut in sugar production announced by the Government for the 1962-63 season was but an emergency measure which had only served to highlight the absence of a rational policy of price fixation for sugarcane.

The details of the scheme that has now been announced by the Government depart from those recommended by the Indian Sugar Mills' Association in one important respect. The ISMA had in their proposals urged that the present minimum price of Rs 1.62 per maund should be linked with an average recovery rate of 10 per cent for sugar produced by the factories, and that for a variation of 0.1 per cent in the recovery rate either way, sugarcane prices should rise or fall by 1.2 nP. This was a reasonable proposal having regard to the present high level of sugarcane prices at Rs 1.62 per maund and the generally low recovery rate reported by sugar fac-

ories particularly in the UP and Bihar. The Union Government has however chosen to fix the sugarcane price at Rs 1.62 per maund and to link it to a lower recovery percentage at 9.8 per cent. But for variation of the recovery percentage by 0.1 per cent either way, the premium or discount in the price for sugarcane as the case may be has been fixed at a higher figure of 1.5 nP as compared with 1.2 nP as proposed by the ISMA. The Government proposal also fixes a minimum price payable for sugarcane irrespective of sugar recovery at Rs 1.50 per maund.

Linking of the sugarcane price with the recovery percentage is no doubt an important step to stimulate the cultivation of better quality cane in the country. Hitherto the sugarcane cultivators under the smug confidence induced by bulk payment for cane had felt no incentive for improvement of quality. And even development work for sugarcane launched in important sugarcane growing States like UP and Bihar had not been very effective in showing better results in quality of sugarcane grown. But from the point of view of reducing the presently huge acreage under sugarcane, the proposals contained in the Government scheme are of doubtful value. Most importantly, it has failed to see the reasonableness of the ISMA's proposal for linking the cane price of Rs 1.62 per maund with the recovery rate of 10 per cent and had instead related it to a recovery rate of 9.8 per cent. Considering that the average recovery rate for sugarcane supplied to factories in UP and Bihar had hovered around this rate in recent years, it is doubtful whether reduction of cane acreage of a substantial order can be induced by the latest proposals embodied in the Government's scheme for linking cane price with sucrose content.

NON-FERROUS METALS

Raw Material Shortage

Despite a number of handicaps, the severest of which is the inadequate supply of raw materials, the non-ferrous metals industry has made satisfactory progress during the past few years. A section of the industry is enjoying tariff protection for a number of years and it has asked for the continuance of protection beyond 31 December 1962 when the current period of protection is due to expire. The items of semi-manufactures of non-ferrous metals and alloys enjoying protection are lead sheets, (other than sheets for tea-chests), zinc sheets, zinc strips, copper rods other than electrolytic copper rods, copper pipes and tubes, brass rods and brass pipes and tubes. There are

now nine units in the industry manufacturing one or more of the protected items and their aggregate capacity on single shift is 4156 tonnes for copper/brass rods 4121 tonnes for copper/brass pipes and tubes 3840 tonnes for lead sheets and 2650 tonnes for zinc sheets/strips. These units however do not represent the entire capacity in the country as a whole. The above estimates do not include the capacities in ordnance factories, railway workshops and other establishments and twentyeight small scale units. The organised section of the industry has also made some progress in the diversification of the range of production. Some of the new items whose production has just commenced or is to commence shortly are highly polished zinc sheets, lead sheets for chemical industries, seamless copper and brass pipes and tubes and tubes of small diameters for refrigeration and internal combustion engines.

In connection with its present enquiry, the Tariff Commission has received various estimates of current and future demand for the items of non-ferrous manufactures now enjoying protection. It can be safely assumed that the trend of demand for the various items in the coming years will be upward what with the rapid progress of industrialisation. One or more of these items will be required by almost all industries and it is necessary to make provision in our plans for the supply of these items in increasing quantity. But a serious limiting factor to a rapid expansion of the non-ferrous metals industry in our country is the inadequate availability of the various non-ferrous metals indigenously. According to the information available with the Tariff Commission indigenous production of the three non-ferrous metals in 1961 was as follows: copper 8336 tonnes, lead 3,664 tonnes, and zinc concentrates 9,253 tonnes. With the setting up of a zinc copper plant in Rajasthan, a zinc smelter at Udaipur and increased mining of lead, production of virgin metals is expected to reach by 1965-66, 32,000 tonnes of copper, 18,000 tonnes of zinc and 8000 tonnes of lead. Even with this increase in production, it is expected that there will be need for importing substantial quantities of these metals as domestic demand is running far ahead of indigenous supply. It is no wonder therefore that the non-ferrous manufacturing industry is not able to obtain its requirements of metal even to work single shift capacity. But as the manufacturers have pointed out, it should be the endeavour of Authority to utilise indigenous capacity to the maximum extent possible by allowing an increase in the import of virgin metals especially since imports are permitted of semi-manufactures produced in the country. The fact

that some of the products of the industry are being exported, albeit in small quantities, should also be taken into consideration in allotting the quantum of imports of virgin metal for the industry.

US A Letter from Washington

The Federal Reserve Bank of New York has disclosed that for the fifth consecutive week now, no US dollars have been exchanged internationally for gold. This is the first time in nearly a decade that the gold supply has remained constant for a period of this length.

This news, coming in the wake of reports of continued improvement in the US balance of payments position, can be interpreted as evidence of international confidence in the dollar. While the United States continues to run a deficit in its transactions with the rest of the world, other nations evidently are not rushing to convert their dollars into gold. This stability in the US gold reserve also may reflect the co-operative steps being taken by the United States and other free nations to strengthen world financial mechanisms.

The latest official balance of payments report, issued by the US Department of Commerce last week, shows that foreign dealings of the United States during the first quarter of 1962 resulted in a deficit of about \$475 million, after adjustment for seasonal factors. This agrees closely with information revealed earlier on the basis of preliminary data.

It represents a considerable improvement, not only from the exceptionally adverse balance of \$1,400 million in the last quarter of 1961, but also from the \$600 million quarterly average for 1961 as a whole. The balance of payments is the relationship between total payments to foreigners, and total receipts from foreigners.

As usual, the United States ran a substantial surplus on its trading account—its exports as against its imports of goods and services. But this surplus was more than offset—also as usual—by the continued large outflow of US Government grants and credits, mostly for economic assistance abroad, as well as of private investment and other types of capital.

The first quarter's deficit figures out at an annual rate of about \$1,900 million. While definitive figures of a more recent vintage are not yet available, US Treasury Department officials estimate that the balance of payments deficit currently is running at an annual rate of \$1,500 million or less, indicative of further improvement. By way of comparison, the deficit was \$2,500 million in 1961 and \$3,900 million in 1960. It also fell

in the \$3,500 million-\$4,000 million range in 1958 and 1959.

Reflecting the strengthening of the balance of payments position, Under Secretary of the Treasury Robert V. Rossa expressed the view last week, in an appearance before the Senate Banking Committee, that the drain on US gold reserves in 1962 will be less than the \$1,000 million estimated earlier this year, and might be as low as \$750 million. Last year the gold loss was \$1,200 million, and in 1960 it was about \$1,700 million. So far in 1962, which means for nearly half the year, the US gold loss comes to about \$450 million, according to Mr Rossa.

The US gold supply, which is a major support for the world's financial system, stands today at a sizeable \$16,400 million. While it has been drawn down considerably in the post-war period, as US reserves have gone abroad to help support the economic progress and national security efforts of other countries, it still represents 40 per cent of the non-communist world's holdings. In the view of leading bankers, this gold stock will continue to provide adequate support for the dollar while the United States is bringing its balance of payments closer to equilibrium.

Another reason being advanced for the stability of the US gold stock is the financial co-operation being worked out internationally. Some time back, for instance the Federal Reserve Bank of New York, acting for the US Treasury and all 12 reserve banks in the US Federal Reserve System, announced a reciprocal agreement with the National Bank of Belgium designed to protect each country's currency against undue pressure in the foreign exchange market. Similar agreements have been worked out with the Central Bank of Britain, France, and the Netherlands, and officials have indicated that other such agreements are under consideration.

In these agreements, the New York Federal Reserve Bank has put \$50 million to the credit of the other Central Bank, and in exchange has been credited with the equivalent of \$50 million in the other country's currency. Then, if the dollar weakens, the Federal Reserve Bank can use its foreign funds to buy dollars and bid the price up. Conversely, the co-operating foreign bank can buy its own currency with its dollars if that currency declines in the market.

Another significant move was the authorization, approved by Congress and signed by President Kennedy recently, for the United States to lend up to an additional \$2,000 million to the International Monetary Fund (IMF) as part of a 10-nation plan to help stabilize international currency markets. All that remains is for Congress to vote the appropriation, although

actual use of the money may not be required.

Under the plan, the 10 nations, which include leading industrial countries, would pledge a total of \$6,000 million, over and above their regular subscriptions, to be made available to the IMF if and when needed by any of them. The IMF is a \$15,000 million pool of gold and currencies of its 76 member nations, upon which these nations can draw in time of financial need. Though its resources are large, it has only limited supplies of some of the major currencies that might be needed to handle an emergency situation.

PAPER

Problems on a Wide Front

In common with many other industries, the paper industry is also going through a difficult period with problems which it has to encounter on a wide front. Attention has been drawn to these by Mr N. D. Bangur, Chairman of the Bengal Paper Mill in his address to the 138th annual general meeting of the Company held in Calcutta last week. These problems which afflict the paper industry arise in respect of transport, raw material supply and the absence of incentive element in the price fixed by the Tariff Commission for the industry. According to Mr Bangur, "the deficiency of railway transport remains the biggest hurdle in spite of the best effort of the railway authorities". This bottleneck in transport has led to accumulation of large stocks of raw materials at the up-country despatching stations which could not be moved because of inadequacy of wagon supply.

Shortage of bamboo and sabai grass which are the most important raw materials for paper production is also a problem for the paper industry. Utilisation of bagasse and jute stricks as alternative raw materials is not yet widespread and further, availability of bagasse is dependent on ensuring of alternative fuel to the sugar industry and also the comparative costs of a switchover to coal by the sugar industry. For many years to come bamboo will remain the main raw material for the paper industry and it is therefore necessary that the paper industry should be assured of sufficient supply of bamboo by long term leases of forests to foster bamboo development. Such a step has the sanction of the Tariff Commission also, but it is regrettable that nothing has been done so far to implement this recommendation of the Tariff Commission.

Mr Bangur has also referred to the problem created for the paper industry by the competition in internal market posed by the State

Trading Corporation which imports substantial quantities of offset printing, manifold and air-mail paper. In view of the fact that the Indian paper industry is making all these varieties of paper within the country itself the sales by the STC of the imported varieties have only served to aggravate the marketing problem for the indigenous industry. Assessment of excise duty by the Excise authorities without regard to correct specifications and prescriptions laid down in this behalf is another source of hardship for the paper industry.

It is the price factor for the paper industry which has intensely exercised the industry in recent years. The recommendations of the Tariff Commission in 1960 fixing the prices for various grades of paper have not been acceptable to the industry for the reason that Tariff Commission failed to take into account the actual production costs and also the need for reasonable margin of profit. Since the recommendations of the Tariff Commission the profits of the industry have been substantially squeezed under the impact of rising raw material costs, and rise in the freight rate for transport and power, and prices

now bear no relation to actual costs of production. Most significantly the increase in the corporate tax from 45 per cent to 50 per cent in the latest budget has rendered the 12 per cent return recommended by the Tariff Commission in 1960 inequitable in the present context. The recent decision of the Government allowing an increase in price by 6 nP per kg is no doubt welcome, but is not enough to compensate for the rise in cost of production.

For the rest, Mr Bangur's speech was devoted to describing the progress made by the company in its expansion plan. He has stated that the expansion and modernisation schemes of the company are progressing satisfactorily. The work on the new paper machine house, finishing house and multi-stage bleaching plant building is also stated to be progressing according to schedule. To finance the expansion scheme, the company has raised Rs 69.60 lakhs by the issue of equity capital and convertible loan stock. Progress in respect of production and profit during the last year has been satisfactory. Production was higher at 19,627 metric tons as against 18,395 metric tons in 1960. The gross profit at Rs 55,04,970 showed

an increase of Rs 4,21877 as compared with 1960.

METAL BOX

Diversification

The demand for containers is expected to increase considerably during the next few years as the Third Plan has set high targets for the production of various consumer goods. Suitable containers will become a prerequisite for some of them. It is essential therefore that sufficient capacity in the container industry is attained well in advance if the productive capacity built up in consumer industries is not to remain idle for want of suitable containers to market them in convenient quantities. In his Chairman's review of the working during last year of the Metal Box Company of India Limited, Mr K. C. Mahindra, is rather doubtful if the required number of containers will become available. His pessimism stems from the fact that Government's policy over the licensing as regards the tin container industry does not favour expansion of existing units like Metal Box which by virtue of its high technical development and continued research is able to ensure a high quality and competitive price for its products.

The ceiling on expansion of its tin container department however has not stood in the way of the company extending its activities in other directions and on diversifying its production. Metal Box has recently received permission from the Government for the manufacture of treated and laminated papers and boards and containers made therefrom. At the company's Calcutta factories new equipment has been installed and the unit for the manufacture of heat-sealing laminates, extrusion-coated products and moulded bottles is expected to go into regular production shortly. Steady progress has been maintained in machinery building and some 10 per cent of these machines has been exported. The company proposes to put up a second factory in Bombay and for this purpose some 12 acres of land have been purchased.

That the company continues to work satisfactorily will be evident from the fact that sales in 1961-62 were Rs 1350 lakhs as compared with Rs 970 in the previous accounting period. A significant factor is the steady growth of the company's exports. Metal Box ranks five among exporters of engineering goods and its exports were 36 per cent higher than in the previous year. Its contribution in the export field is quite considerable indirectly also as successful export markets have been built up by many a product by using the packaging materials supplied by Metal Box. In this regard it may be noted that Metal Box containers have been responsible in a large measure to the

expansion of India's prawn exports. Further steps have been taken by the company for providing greater facilities to prawn exporters.

IDA

\$15 Million Loan for Sone Project

The International Development Association (IDA), an affiliate of the World Bank has extended a development credit equivalent to \$15 million to India. The credit is intended to assist in financing a project to improve and extend the Sone irrigation system in West Bihar. This brings the total number of loans provided by the IDA to India to 7 and the total credit to \$122 million. The earlier credits were meant for assisting in the development of national highways and various projects for irrigation, drainage and flood protection.

The Sone project area is located west of the city of Patna on the Sone River, a tributary of the Ganges. The primary reason for the project is the difficulties caused by heavy siltation from loss of water. The new project is aimed at building up a new diversion barrage and remodelling of the canal system now comprising 427 miles of canals on one side of the river and 1,235 miles on the other.

The project is being constructed by the River Valley Projects Department of Bihar State and will be operated and maintained by the State's Irrigation Department. The State Government in conjunction with the Ford Foundation is already carrying out an intensive programme of agricultural services in part of the project areas. The project was approved under the Second Plan, but will be completed only during the Third Plan. When the waters of the new irrigation system in the project are fully utilised, there will be a doubling of the annual gross value of production from the present level of Rs 20.7 crores.

The total cost of the project has been estimated at the equivalent of \$30 million. The Union Government is committed to meet 60 per cent of the cost while the balance will fall on the State Government. The IDA credit of \$15 million will form part of the Central Government's contribution. Like earlier credits extended by the IDA, the latest credit is also on extremely easy terms. It is free of interest and the period of repayment is 50 years. Repayment of principal will start from 1 January 1973, from whence 1 per cent of the principal will be repayable annually for 10 years and 3 per cent annually for the final 30 years. A service charge of 3/4 of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet the IDA's administrative costs.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Bidhan Chandra Roy became a doctor by the merest accident: he might have become an engineer but for the probability of the despatch clerk at the Medical College being more energetic than his opposite number in the Engineering college. The moral that on such slender threads is one's future predicated would be shallow at all times. In Dr Roy's case it sounds grotesque. A brilliant diagnostician and one who otherwise too made medical history even as a student—it is said that his is the unique case of one who passed both his FRCS and LRCP examinations in one and the same year—his restless energy found a dozen channels besides what his formal training had prepared him for. Social engineering is a vogue-word spawned by planning literature and stands for those comprehensive attempts at arranging human happiness that have become the major preoccupation of our times. Dr. Roy was a social engineer, if ever there was one. But he was no grim technocrat to whom human beings were statistical quanta and human happiness a technical problem to be plotted on graphs and drawing boards and translated into action by an impersonal bureaucracy. Dr. Roy has been called, not always kindly, Napoleonic in his schemes; that he was, because he shared not that he was, because he shared not the Corsican's gigantism, but also his unsentimental humanity that informed the most grandiose of his plans. Human considerations were never absent in anything he did and often he let them override the cruel dictates of planning in the vacuum. How often have we not heard impatient people, mostly from other States, talk with irritating insensitiveness of the feckless obstinacy of the displaced persons from East Pakistan who refuse to be rehabilitated? Dr Roy never made a secret of his conviction that it was impossible that these unfortunate people could be accommodated in West Bengal itself but that never prevented him from dealing with the problems arising from their continuing to stay here in misery with compassion and understanding. There is then the way he dealt with agitations and protests: It used to be said that the police in Bombay and the police in Calcutta had two different theories on the best way of dealing with these. Bombay is supposed to favour the quick and deci-

sive breaking of the back of the agitation by peremptory violence whereas West Bengal deals with the situation by making it a war of attrition. This is Dr. Roy's strategy in the main. How often have we not seen the processionists sitting just beyond the prohibited area and the game of getting arrested by formal defiance of ban being played with good humour, the rules of the game being well understood! Of course, it did cause a lot of inconvenience and sometimes these protests turned ugly but there never was a time when Dr. Roy would not listen to the grievances of these processionists provided they took note of decorum and convenience. It was typical of him that nothing was too trivial for his willing good offices. From settling disputes between management and actors in a professional theatre and making medical students see the unreasonableness of their conduct to making West Bengal's case heard at the Centre he never ceased to be useful. No wonder the State feels so inconsolably forlorn.

I rather fear that a number of irrelevances are muddying the arguments about the kind of Hindi that the All India Radio should employ in its news broadcasts. Mr Nehru's well-known objections to it are attractively democratic but the issues are not so simple. His cry has been taken up by others who have other axes of their own to grind. There are, for example, those who see in this welcome ammunition for their campaign against Hindi's rather ill-founded aspirations for the status of the National Language. And then there are those who see in this an opportunity for rehabilitating the claims of Hindustani. Obviously the achieving of what Coleridge called in a different context the "neutral style"—viz, a style that is admirably suited to formal civilized discussion without either the slovenliness of the common speech or the self-conscious preciosity of the academy,—is not easy. The trend towards the "Sanskritisation" of the AIR Hindi has no single motivation behind it. All India Radio's Hindi unit probably has its share of purists and pedants trying to smuggle Sanskrit in by the backdoor. It has also probably its quota of communalists who want Hindi cleansed of its Urdu contamination, on the unfounded

assumption that Urdu is Muslim. But having said this, it is necessary to add that the case against using expressions of Sanskrit origin is not as self-evident as many seem to imagine. Indeed, if intelligibility were the criterion, as it should be, it may well be that many non-Hindi people may prefer Sanskrit expressions to the native Hindi for Sanskrit has a more diffused provenance and currency, despite its being a dead language in the conventional sense. In my early days in Calcutta, I once amazed a Bengali friend by my extensive knowledge of Bengali simply because he tested me with polysyllabic words of Sanskrit origin. If he had asked me to name the personal pronouns, he would have had me stumped. I therefore see no reason why the All India Radio should not refer to the Security Council as "Suraksha Samiti" unless of course it were to use the English expression itself. What would leave me baffled is a common Hindi equivalent to it which might be intelligible to the Lucknowite. I would strongly advise all Indian languages to adopt wholesale the current English political and scientific terms: failing that, the chances of my understanding a Hindi news bulletin are considerably greater if the words were of Sanskrit origin rather than otherwise.

The Central Executive of the Communist Party of India has once again passed the buck to the National Council of the party scheduled to meet in Hyderabad next month. The Delhi discussions lasting ten days have concluded without the resolution adopted at the end being released to the public. The trouble seems to be that the party is definitely split on the larger ideological question that has split world communism into two. A further complicating factor is the uncertainty about the precise nature of the present relationship between China and the Soviet Union. The zig and zags of Communist thinking confuse not only the disinterested onlooker but also those who have to thread their ways through it. It would seem that a visit to Moscow—ostensibly for the conference on Disarmament—would provide the opportunity to get some guidance. Meanwhile, the party executive has to reconcile to its satisfaction and to that of the rank and file the two reports that the Indian delegation to the 22nd Congress of the Soviet Communist Party last year has produced. The consideration of these was put off till after the elections and time hasn't helped to make the task easier. The differences are along familiar lines. The Stalinist faction was also

understandably angry with the rather silly attempts to erase Stalin from history in the Soviet Union. Indeed the removal of Stalin's body from the mausoleum in Red Square seems to have been a major issue in the discussions. There are, of course, other contradictions in the situation. One of the complaints of those who quarrel with Mr Khrushchev would appear to be that the displacement of the personality cult by collective leadership in the Soviet Union has not led to the extension of the principle to collective global leadership to determine communist policy. Arguable as these points are, what makes it difficult for those in the Indian party that disagree with Mr Khrushchev is the attitude of China to India and even to the Indian Communist Party. This may well force the Indian party, willy nilly, to toe the Moscow rather than the Peking line.

I was delighted to read in the papers that John Henry Faulk has won his action against sundry defendants who in concert deprived him of his livelihood as a television artist in 1956. Mr Faulk, a comedian and folk-lorist from Texas was falsely accused of communist leanings and literally hounded out of his television career by a combination of intimidation and pressure on sponsors of programmes and advertising executives. One Lawrence Johnson, owner of a supermarket was reportedly the chosen instrument of the dictates of an association calling itself AWARE—"an organisation to combat the Communist conspiracy in entertainment." In 1956, Faulk was described as pro-communist in a circular distributed by AWARE to a number of people including a number of advertising agencies using Faulk in the programmes sponsored by their clients. At least one account executive testified to the fact that he was peremptorily asked over the phone by a man who described himself as Larry Johnson to drop Faulk from the programme sponsored by a client whose account he handled. The client, Hofmann Beverages, was a manufacturer of flavoured drinks and was peculiarly vulnerable to attacks by supermarket owners, who could "kill" the product by denying display space in their supermarkets. But Murray, the accounts executive, was a man of spirit—"he made me pretty sore. I didn't want a grocer calling me and telling me somebody was a communist"—and refused to submit to Johnson's threats. However, some months later Faulk was dropped from the programme probably by other pressures brought on the company. An unsavoury business on the whole, which has the redeeming feature of having belated amends made by the judicial process.

(From Our New Delhi Correspondent)

Reorganisation of HSL

THE scheme for the reorganisation of the functions of Hindustan Steel Ltd., which came into effect from July 1, was explained by Mr C. Subramaniam, Union Minister for Steel & Heavy Industries, at a press conference last Monday. The present scheme of reorganisation is confined to the operational side. The Minister indicated that the question of labour relations, which has a vital bearing on the efficient functioning of the plants, will be taken up in a fortnight.

Under the scheme of reorganisation the General Managers of Steel Plants have been given the necessary powers and authority to discharge the responsibility cast on them for efficient operation. They will have almost full powers within the budget which is allotted to them so that 'itemised control' from the Head Office should disappear. Hindustan Steel will remain as a planning and policy making body. The responsibility of the Board of Directors will be limited to general policies, supervision, planning and coordination.

The main responsibilities of the Board of Directors will be exercised through control over the budget, through a system of reports and returns and through inspections. While the Board of Hindustan Steel have been relieved of detailed administrative responsibilities, more powers have been delegated to them in regard to appointments and expenditure. The salary limit of the appointments which could be made by HSL without reference to Gov-

ernment has been raised from Rs 2000 to Rs 2500 a month. It will no longer be necessary for the HSL to get Government's detailed approval of all expenditure above Rs 40 lakhs or of marginal variation in expenditure already sanctioned. It has been provided that, where a proposal regarding capital expenditure has already been accepted by Government in its broad details, it will no longer be necessary for HSL to refer to Government for approval of any components of the project, even though these components may cost over Rs 40 lakhs. No limit is being placed on this amount, the only limitation imposed being that if the cost of the components exceeds the original estimate by more than 10 per cent, revised approval of Government will be necessary. For other schemes which have not been approved by Government, the powers of HSL to incur capital expenditure have been raised to Rs 50 lakhs from Rs 40 lakhs. It has also been decided that the provision in the Articles of Association that a Director may reserve for the approval of the President any matter which he considered important enough to be so reserved should be so reserved should be removed. While this takes away the veto powers of the Directors, the Chairman may reserve important matters for Government's approval if he considers this necessary.

The delegation of powers will be carried further in the plants, the General Manager in turn subdelegating their powers to appropriate officers. At the plant level the relations between the General Managers and their Financial advisers will be rationalised. The General

Managers have been asked to lay down their own rules of business regarding matters on which they may consult the Financial Advisers and submit their proposals within a month. On personnel matters, practically full powers have been given to the General Managers except in regard to appointment and promotion to the grade of Assistant Superintendent and above, which will still require a reference to the Board of Directors. This is considered necessary to ensure that, in promotion to these higher grades, the claims of suitable persons in all the three plants are duly considered. A standard force has been laid for each plant, and the General Manager will normally be expected to work within the standard force laid down. The General Managers will also be fully responsible for their expansion programme on the construction side.

For purchase, it is proposed to have a Central Wing to deal with certain important raw materials, such as iron ore, coal, limestone, manganese, dolomite and refractories on which a common purchase policy is necessary. For other purchases, the responsibility will be that of the plants. But there will be only one Chief Controller of Purchase, in charge both of the Central Wing and the three separate wings. In respect of the Central Wing the Chief Controller will act under the Board of Directors of HSL and in respect of the separate wings he will act as the agent of the General Managers and take instructions from them.

The Minister stated that, as a result of the reorganisation, some reduction of the size of the Head Office organisation may become necessary, but he felt that there was no case for increase in staff at plant level, for they are already doing the work which is also gone over in detail at the Head Office. But the objective will be to see that the redundant staff at the Head Office are absorbed in suitable vacancies either at the plants or in other companies and corporations. The change in the character of the functions of the Head Office from detailed administration to planning and policy making may also lead, later, to a change in the composition of the Board. But no change is contemplated for the time being. The Minister was confident that the impact of the reorganisation on the working of the steel plants would be apparent almost immediately. He was equally positive when asked about the prospects of a steel plant in the South and of the Bokaro Project.

US Steel Team

The nine-man team which arrived on June 21 to make a techno-economic survey of the Bokaro project has divided into three working groups to study different aspects of the project. The first group consisting of experts in production and design has already left for Calcutta. After visiting Durgapur, Burnpur, Tatanagar, Rourkela and Bhilai the group will be back in Calcutta on the 19th. The second group which is concerned with the economics of the project is leaving on the 15th for Madras and will visit Bangalore,

Bhadravati, Poona and Bombay and will reach Calcutta on the 25th. The third group, of experts in accounting and financial matters, is leaving on 12th for Calcutta and after visiting Tatanagar and Durgapur will join the others in Calcutta. During their stay in Delhi, the team had prolonged discussions with the officials of the Ministry of Steel and it is now expected that the finalisation of their report should not take longer than seven months as indicated earlier.

Power for Coal Mines

The Study Team which was set up by the Ministry of Irrigation and Power to assess the additional requirements of power in the coal-fields has recommended that DVC should review all the existing demands and allocate maximum possible power supply to the coal mining industry in the Bengal Bihar area.

The team has estimated the firm available capacity in the Bengal Bihar region at 755 MW in 1961-62. This will increase to 1822 MW in 1965-66. During this period the overall demand is also expected to increase from 1051 MW to 2024 Megawatt. There will be an overall shortage of 202 MW in the last year of the Plan. But the shortage will be particularly severe in 1962-63 and in 1963-64, when it will be of the order of 413 and 464 MW respectively. The estimated additional demand in respect of the coal mining industry alone, estimated at 7.37 MW in 1961-62, will increase to 89.83 MW in the last year of the Plan. The Team has suggested that the requirements of coal mining industry should be met as follows:

- (1) Release of 30 MW from DVC to the collieries by corresponding diversion to the Bihar Grid of 74 MW of peaking capacity or 30 MW at 50 per cent load factor from Rihand project. (In this connexion it may be recalled that against the installed capacity of 250 MW from five generating sets at Rihand, the load on the system is only 40 MW supplied by one of the generating units).
- (2) Diversion to Bihar Grid of the surplus power from Hirakud Grid for the next two to three years till load on the completed Hirakud system materialises.
- (3) Diversion of surplus power from the Durgapur Coke Oven Plant Power Station till such time as the loads anticipated in the Durgapur industrial belt materialises.
- (4) Installation in next 24 months of six 1.5 MW sets in the areas served by the Dishergarh and Associated Power Supply Companies in West Bengal.

The Team has also assessed the requirements in Madhya Pradesh, where also the overall shortage will be most severe during this year and the next, but installed capacity and overall demand are expected to be almost balanced, except for a small shortage of 30 MW by 1965-66. But the additional requirements of the coal mining industry, estimated at 9.72 MW this year, will progressively increase to 32.18 MW in 1965-66 as

July 7, 1962

production programmes in the Central India fields get under way. It has been suggested that the Governments of Uttar Pradesh and Madhya Pradesh should take up immediately the construction of their respective portions of the transmission line to link up Rihand Power Station with Jhilmilli in Madhya Pradesh and also to make power available to the Singrauli Coalfields from the Rihand Station. It has also been suggested that the Madhya Pradesh Government should release additional quantum of power for the collieries of the Korba Rewa region from the 10,000 KW generating set being installed in the Korba Power Station of the Madhya Pradesh State Electricity Board.

These recommendations were considered by the Coal Council at its meeting last week and it was decided that they should be studied by the Ministry of Mines and Fuel jointly with the Ministry of Irrigation and Power and the Planning Commission.

Board of Trade

The Board of Trade beginning its second session in Calcutta on July 7 (the Board held its inaugural meeting in New Delhi on June 9) has a heavy agenda to dispose of. Apart from items held over from the last meeting, the Calcutta meeting of the Board is expected to consider the export possibilities of Tea, Jute and Cotton Textiles, the working of the Commercial Sections of Indian Embassies abroad, the constitution of an Indian Fair and Exhibition Society, the establishment of one or more Free Trade Zones. Regarding the last item Government has received representations from various trade associations for setting up free trade zones in Cochin, Goa, on the West Coast and Pondicherry, Karaikal, Nagapattinam, Vishakapatnam and Paradeep on the East Coast. In this connexion the Board will be called upon to consider the criteria that should govern the selection of the sites, the number of zones and their location.

In regard to Fairs and Exhibitions, Government's policy now is to select every year a limited number of established industrial fairs for participation and a smaller number of countries to hold exclusive Indian exhibitions where International Trade fairs are not available, but there is scope for building up exports. In these matters the Exhibition Directorate of the Ministry is now assisted by an Advisory Committee. As far as possible, selection of fairs and countries is done with a view to covering as wide a field as possible within a given period of three to four years and to obtain the maximum publicity out of the limited resources available for participation in fairs and exhibitions. On account of the limitation of resources, only about 10 to 12 fairs out of the 300 annual programme are held every year. The publicity held every year through fairs and exhibitions also suffers from several handicaps. There is no continuity of operations and there has been no machinery to follow up a fair. It has not also been found possible to enlist the full

co-operation of the business community. The Government system of accounting and auditing also acts as a barrier to speedy action which is necessary if participation in fairs is to be really effective. To remedy the deficiencies, Government has under consideration proposals to establish an Indian Society of Fairs and Exhibitions and also to establish depots in important trading ports abroad, where either free port or foreign trade zone facilities are available, such as Antwerp, Hamburg, Trieste, Genoa, Beirut, New York, New Orleans, Chicago, San Francisco, Hongkong, Singapore, etc. The Depot is expected to keep stocks of consignments of samples of exportable goods in adequate quantities, test shipments of goods in new lines of production, specific stores in prescribed quantities on consignment basis and, if required, a minimum stock of different categories of goods for ex-Depot supplies to meet urgent requirements of buyers. The Depots will enable effective participation in a large number of fairs held in the region. They will not only help to organise display and but could also canvass and trade on the spot through the Marketing Officers attached to the depots and also render after-sale service. The establishment of a Bureau of International Trade is also proposed to train an adequate number of salesmen, including officers of Government of India, who are concerned with trade promotion. Besides the other topics, the meeting of the Board of Trade at Calcutta is also expected to consider how far the creation of a new order of "Vanijya Nipunas" will be helpful in promoting the country's exports.

Fertilisers

The Food and Agriculture Organisation has forecast a general trend towards increased output and consumption of fertilisers in the world. The FAO projections are based on the establishment of fertiliser industries in more countries, the trend toward production of concentrated fertilisers, and expansion in the volume of trade in all fertilisers. The FAO study states that even in countries where the application of fertilisers is well advanced, their optimum use has not yet been attained. Further world production and consumption of fertilisers of all kinds have been going up every year at varying rates. In 1959-60, the total world output of nitrogen, phosphatic acid and potash stood at 28.1 million metric tons representing an increase of 5.3 per cent over 1958-59. In the same year world consumption of fertilisers increased by 4.9 per cent to 27.1 million tons.

The pattern of consumption in different countries shows variations. Asia where rice is the major foodgrain crop consumes more nitrogen than other chemical fertilisers, while phosphates are in greater demand in Oceania. The general trend is however toward a more balanced intake of all the fertilisers.

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE FOLLOWING POSTS IN THE BANK

(A) POSTS AND SCALES OF PAY:

- (i) Probationary Assistants on the General Side:
Rs. 250-25-450 EB 25-650
- (ii) Economic Assistants in the Economic Department:
Rs. 175-12.50-300 EB 20-440.

Note: Candidates for the Probationary Assistants' posts possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) QUALIFICATIONS:

- (i) Probationary Assistants: Applicants should have a good academic record and a first or high second class Master's degree of a recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject and should also have some proficiency in drafting. The educational qualifications may be slightly relaxed in the case of candidates who possess a good degree in law. Preference may be given to those who have passed the Institute of Bankers' Examinations.
- (ii) Economic Assistants: Applicants should possess a first or high second class M.A. or M.Com. degree in Economics or Commerce of a recognised University, as also a thorough knowledge of economic analysis and have specialised in Economics. Preference will be given to those who have practical experience of research in Economics.

(C) AGE LIMITS AS ON 1st JULY 1962:

- (i) Probationary Assistants: Between 21 and 25 years.
 - (ii) Economic Assistants: Between 18 and 24 years.
- The maximum age limit is relaxable but not beyond 30 years in the case of:
- (i) candidates possessing special qualifications and experience of value to the Bank;
 - (ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;
 - (iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and
 - (iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post for which they have applied.

3. Applicants for the posts of Probationary Assistants must remit with their applications a fee of Rs. 7.50 by cheque or Bank Draft on a Scheduled Bank or by Postal Order, payable at Bombay. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. The application fee is in no case refundable. Bonafide refugee candidates not in employment applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed form obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Hyderabad, Trivandrum and Patna accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-Graduate degree examinations and copies of at least two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 31st July 1962.

5. Candidates already in service will be required to produce a proper discharge certificate from their employer in the event of their being selected, at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

8. Selected candidates for Probationary Assistants' posts will have to appear for interview/s before the Selection Board at any of the Bank's offices. Selected candidates for the Economic Assistants' posts will be required to appear for a written test which will be held at the abovementioned offices of the Bank. Candidates should clearly state on the top of their applications, the office of the Reserve Bank at which they desire to appear for the test, if called. Those successful in the test will have to appear for an interview at Bombay.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post-Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing will be regarded as a disqualification.

THE INDIAN OVERSEAS BANK LIMITED

Central Office: 151 Mount Road, Madras-2

1/WT/IOB-1962

Oil India Limited

Speech of the Chairman, Shri Khandubhai K. Desai

The following is the speech of the Chairman, Shri Khandubhai K. Desai, M.P., delivered at the 3rd Annual General Meeting of the Company held at Duliajan Assam, on June 22, 1962.

Gentlemen,

The report of the Board of Directors gives you an idea of the financial position of your company and explains in some detail the extent of its operations during the year 1961. I shall refer briefly to some of the salient features in this report later, but I think it is important in the first place for us to realise their context against a more general background.

CONSUMPTION

The consumption of petroleum products in a developing economy like India is bound to grow at a rate faster than what has been generally estimated in the past. We are at the present moment still dependent to a very considerable degree on imports both of crude oil and of products and this is again dependent on the availability of foreign exchange for such imports. This is of particular relevance at a time like this, when all else is overshadowed by the continuing foreign exchange crisis with which this country is faced. At present we are spending about Rs. 80 crores every year in foreign exchange on imports of crude oil and petroleum products. It is well to remember this fact when considering or discussing the large scale programme of oil exploration that has been launched during the last few years by the Government of India. In the public sector the Oil and Natural Gas Commission propose to spend about Rs. 200 crores on exploration and production operations, and they aim to achieve a production target of about 3.5 million tons per year during the final year of the Third Five-Year Plan. I would like to take this opportunity to congratulate the Oil and Natural Gas Commission on the signal successes they have already achieved in the Gujarat Region, and to pay our tribute to the dedicated and unremitting efforts they are making to increase India's oil potential.

3 MILLION TONS OF CRUDE OIL BY 1963

As far as the programmes of your own Company are concerned Oil India's reserves stand at about 45 million tons of oil and 720,000 million cu. ft. of gas at present and with the existing number of wells drilled by Oil India so far and those to be completed by the end of 1963, Oil India would be in a position to meet its commitments of supplying nearly 3 million tons a year to the Refineries at Gauhati and Barauni and the Assam Oil Company Refinery at Digboi. This total production of 3 million tons would mean a foreign exchange

saving of more than Rs. 20 crores a year. If we are fortunate to discover oil in the new concession areas in respect of which an exploration licence is pending with the Assam Government, this in turn would greatly assist not only in saving on further imports of crude, but in further expansion of the Refineries at Gauhati and Barauni. This is a matter therefore which should have priority specially as Oil India's prospecting programme does not involve any foreign exchange expense as the latter has already been underwritten by The Burmah Oil Company, Government's partner in Oil India. We had originally planned to start work in the new area in October 1961. Unless the exploration licence is granted promptly it would not be possible to start the work even in the coming cold weather and any further delay would seriously impede progress in the vital field of oil exploration and development.

Our Annual Report gives you some idea of the facts and figures of oil drilling and operations during the year 1961.

TRANSPORT OF CRUDE OIL THROUGH PIPELINE

While the achievement of our production target is all important special mention should also be made of the transport problem, viz, the construction of the 723-mile long Oil India pipe-line from Nahorkatiya to Barauni. The completion of the first stage of this pipeline to Gauhati was delayed due to abnormally heavy rains in the middle of 1961 which led to the suspension of work. However as soon as this was foreseen arrangements were made to build up stocks of crude at Gauhati Refinery by means of railway tank-wagons to enable the Refinery to commence operations as scheduled on 1st January 1962. The first stage of the pipeline was actually completed by the beginning of March and pumping of crude oil to the Refinery had commenced. We take this opportunity to congratulate The Burmah Oil Company (Pipe Lines) Limited and the contractors for having done a good job under difficult circumstances. Progress on the second stage from Gauhati to Barauni is satisfactory and we are hopeful that the whole line will be ready when the Barauni Refinery goes on stream early in 1963. This pipeline system traversing a difficult terrain, cutting across three state boundaries is the second longest in the East (including the Middle East) and will be one of the most modern and automatic.

ORGANISATION TAKES SHAPE

The year 1961 as you would see has been a momentous one in the history of this young organisation. The Second Supplemental

Agreement brought Government's shareholding on a par with that of the Burmah Oil Company, thus giving it parity on the Board of Directors. The first task to which the newly reconstituted Board addressed itself was the setting up of a separate organisation for Oil India.

As from 1st January 1962 we took over on Oil India's payroll all the staff required—executive, clerical and labour—engaged on Oil India's work who had hitherto been employees of the Assam Oil Company. The organisational set-up, provision for future recruitment, the devolution of powers and duties to the Managing Director and to the officers in the field and other allied matters have been charted out and are now in actual operative effect. This transition I am glad to say has been effected without any friction, and I would like to take this opportunity to convey our grateful thanks for managing Oil India's affairs to Assam Oil Company and for their co-operation since then.

Like any other industrial undertaking however, Oil India has had its own share of difficulties during the year. The new Board was faced almost immediately with a strike by the contractors' labour, but this was fortunately settled in a brief time.

LAND ACQUISITION

Another serious problem that arose was the question of land acquisition for further drilling in our existing concession areas. It is not always possible to acquire land under the Land Acquisition Act 1894 or Rule 119 of the Assam Land & Revenue Regulations. Therefore, we had to resort to private negotiations in certain cases. We were however, caught on the horns of a dilemma, as we found that adherence to existing procedure for acquisition of land entailed much time and uneconomical use of drilling outfits; although land could be obtained more quickly by private negotiation, prices spiralled and our continuing to pay high prices became impossible not only because of the excessive cost to the Company but also because of the overall effect on land prices for other industrial ventures within the State. We have sought the co-operation of both the Government of India and the Government of Assam in this regard and we trust that with their assistance some solution can be found to this problem.

UTILISATION OF NATURAL GAS

The utilisation of natural gas produced along with oil and by itself has presented problems of planning. The Assam Government have now set up a Committee on which Oil India is represented, which would go into these questions regarding market availability of gas, the demands from various consumers, the capital costs involved in storage equipment, the price at which the gas

is to be sold etc. It is gratifying to note that the Assam Government is very keen on fostering and developing gas-based industries in the State.

ROYALTY

Another important matter to which I would like to refer is the Royalty question. I earnestly trust that there would be an early settlement of this question as this would enable us to proceed more expeditiously with our development programmes.

FINANCIAL POSITION

As far as our financial position is concerned, I do not think it is necessary for me to go into this if any detail as this is fully set out in the report before you. As you would see the financial picture shows that the net surplus after providing for depreciation, taxation and development rebate amounts to Rs. 1.15 crores which is being transferred to the general reserve. Taking into account that we are still in the development stage and our sales in 1961 were limited to about 300,000 tons I think this can be considered reasonably satisfactory.

In conclusion I would like particularly to thank my colleagues from the Board for their co-operation and assistance. From the very beginning it was realised by both partners in Oil India (the Government of India and the Burmah Oil Co.) that the successful working of Oil India with two equal shareholders would depend primarily on a basis of understanding and agreement on matters concerning the formulation of policy at the Board level combined with a certain amount of give and take on both sides. I am glad to say that this system has worked smoothly and successfully. The Board has functioned as a homogenous team and I trust it would continue to function on the same lines in future. This has been due to the spirit of co-operation shown by both the partners and to their understanding of the common objective—namely, to make this new venture a success.

Finally, I would like, on behalf of your Company to express my appreciation to the staff and workers of Oil India who have given their full loyalty to this new organisation and who have spared no pains to contribute to its successful working. In this connection I must pay here a tribute to Shri M. J. Condon, the previous Managing Director of Oil India, who was instrumental in evolving a basis for the Government and the Burmah Oil Company to work together and in making the transition smooth. I would also like to place on record my appreciation of the excellent team work done by our present Managing Director, Shri J. C. Finlay and the Financial Director, Shri Govindan Nair, which has rendered possible the setting up of Oil India on its feet.

Bengal Paper Mills Company Limited

Satisfactory Progress in Expansion Scheme

Shri N. D. Bangur, the Chairman, on Price Policy

Presiding at the 138th Ordinary General Meeting of the shareholders of the Bengal Paper Mill Co. Ltd., held in Calcutta on the 29th June, 1962, Shri N. D. Bangur, the Chairman said:—

Gentlemen,

I have great pleasure to welcome you to this Annual General Meeting, being the 138th Ordinary General Meeting of the Shareholders of the Bengal Paper Mill Co., Ltd.

The Directors' report, the balance sheet and the audited accounts for the year ended 31st December, 1961, have been in your hands and with your permission I take them as read. During the year the gross profit of your Company increased to Rs 55,04,970/- as against Rs 50,83,093 in the previous year. Production of 19,627 metric tons in the year 1961 compares favourably with 18,295 metric tons in 1960. Thus the progress of the working of your Mill can be considered satisfactory.

PRICE POLICY AND COST OF PRODUCTION

The selling prices of the paper and board, which were adopted in January, 1960, by the Government of India, on the recommendation of the Tariff Commission were found to be less remunerative over the three years which have passed since the Tariff Commission made their recommendations.

I am, however, glad to inform you that after long persuasion and representations, Government of India has considered the joint memorandum of Indian Paper Makers' Association and Indian Paper Mills Association and has recently given an ad-hoc increase of 6 p per kilogramme for all varieties of paper and board and reel rebate of 4 p per kilogramme which was allowed by the industry has been abolished with effect from 21st June, 1962. I welcome this move of the Government and hope that the Industry's case will be further considered more sympathetically.

There has been a further substantial increase in the cost of production due to fresh levies of excise on chemicals, packing materials and miscellaneous items, and increase in the railway freight. The recent rise in the price of coal will also adversely affect the industry. I will emphasize again that the Government should evolve a formula so that an increase in the cost of production does not lead to the industry's

control is allowed to the industry to be added to its selling prices.

In my last year's speech I outlined reasons for considering the Tariff Commission's formula of allowing 12 per cent return on employed capital, as inadequate. The inadequacy of this formula is more valid today due to increase in corporate tax from 45 per cent to 50 per cent and increase in the rate of interest on borrowings. In view of these changed circumstances the formula allowing return of 12 per cent needs suitable upward provision so that the industry could meet all its liabilities, provide for large scale expansion, modernisation and rehabilitation.

TRANSPORT

The day-to-day running of our Mill is affected due to the inadequate supply of wagons for the movement of raw materials and finished goods. The deficiency of railway transport remains the biggest hurdle in spite of the best effort of the railway authorities, who, with the limited supplies of wagons at their disposal, have done everything possible to help us. Large stocks of raw materials at the upcountry despatching stations cannot be moved to the Mills due to inadequacy of wagon supply. You will notice from the accounts presented to you that the stock of finished goods has increased.

RAW MATERIAL

Due to shortage of bamboo and sabai grass, the paper industry is exploring the possibility of making use of new raw materials. Bagasse and Jute sticks are the most important substitutes introduced during the past few years. However, sufficient quantity of bagasse will not be available until the sugar industry is provided alternative fuel.

The Tariff Commission, in their report to the Government of India, recommended for granting long term leases of the forests to paper mills with a view to foster both plant development and scientific exploitation, but I regret no concrete steps in this regard have yet been taken. To ensure adequate supplies of bamboos, paper industry is prepared to play its full part in this development work. Besides this, the establishment of extensive plantations with fast growing species of timber is of particular importance and unless vigorous steps are taken on these lines there will, no doubt, be continued shortage of raw materials in the years to come.

Important chemicals like Caustic Soda and Sodium Sulphate are also in short supply and the indigenous production is below the country's requirement. The Government in wider interests, should help the industry in obtaining long term leases of the forests and allow import of Caustic Soda and Sodium Sulphate to make up for these shortfalls.

SALES

Your Company is manufacturing special quality paper of different varieties which have been found quite popular with the consumers. The Company is now directing its attention to manufacture industrial conversion paper and you will be glad to know that cable insulating paper has been successfully made in your mill.

In the budget for 1961-62, substantial increase in the excise duty payable on certain qualities of paper and board has been made. The Industry is having constant difficulty regarding the identification and classification of paper in accordance with the descriptions contained in the excise tariff. In some instances the excise authorities are assessing certain types of paper for duty at rates which are higher than those prescribed. The difficulty is all the more greater when payment of additional excise is demanded with retrospective effect which we are unable to adjust. The Indian Paper Makers Association have submitted a memorandum to the Central Board of Revenue pointing out these anomalies and I hope that the Government will clarify the position suitably and in the near future.

There is another aspect of the problem connected with sale of indigenously produced paper on which I would like to draw your attention. This aspect concerns the import of substantial quantities of offset-printing, manifold and Air-Mail papers by the State Trading Corporation. The Indian paper industry is making all these varieties which in view of imports by the State Trading Corporation, it finds difficult to dispose of. I feel that the Government should ban the import of qualities which are indigenously manufactured, whether on Rupee payment or otherwise, and such a step will not only help the industry but also conserve the available limited foreign exchange.

You will agree that there is a vital need to increase the country's exports and it becomes the duty of paper industry to play its part. The cost of production of

paper in India is much higher than in other established paper exporting countries. I am glad to report that your Company is trying to develop export market for its products, although, as said earlier, the price factor is the major obstacle. The Development Council for Paper and Allied Industry has already appointed a special subcommittee to carefully examine this matter and I hope that their proposals will enable the industry to participate actively in exports.

EXPANSION

The expansion and modernisation schemes of your Company are progressing satisfactorily. Shipments of the new paper machine and auxiliary equipments are expected to commence from August, 1962.

Placement of orders for Machinery from the United States were delayed due to factors beyond the control of your Company. We have finalised and signed an agreement for a Dollar Loan with the Industrial Finance Corporation of India and steps have already been taken to open Letters of Credit in favour of our US suppliers with whom orders have now been placed.

The work on the new paper machine house, finishing house and multi-stage bleaching plant building is progressing as per schedule and the expansion scheme is likely to be completed by the second half of 1963.

As you are aware, the shareholders at their meeting held on 26th February, 1962 accorded approval for the increase in Authorised Capital from Rupees 1 Crore to Rupees 3 Crores and issue of Rupees 30 Lacs Convertible Loan Stock. Subsequently, the equity share of Rs 25 paid up of your Company has been sub-divided and consolidated into share of Rs 10 paid up. In pursuance of that resolution Rs 69.60 lacs have been raised by the issue of Equity Capital and Convertible Loan Stock to finance our expansion scheme.

FUTURE PROSPECTS

The present capacity of the paper industry in India is 4,10,000 tons. Licences have been granted by the Government for an additional capacity of 8,04,000 tons, bringing the total licensed capacity to 12,14,000 tons. Thus, to ensure fulfilment of the plan target of 8,20,000 tons, Government has given itself a margin of 50 per cent as provision against non-implementation of some of the

schemes. Three large and seven small units are likely to come into production during this year. With the rapid industrial development taking place in the country and increase in literacy, we look forward to a better future.

The programme for training technical personnel both in India and abroad has also been launched. The relation with staff and

workers continue to be cordial and I would, on your and on my own behalf, like to express our appreciation of the sincere services rendered to the Company by all of them.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE Setback to Gunny Exports

The jute goods market ruled somewhat quiet in earlier dealings mainly as a result of profit-taking after last week's hectic rise in prices. But the firm trend has again returned to the market toward the close of the week on the report that jute mills are now faced with a powercut. It is reported that the Calcutta Electric Supply Corporation has already informed jute mills in the Calcutta area that their power supply has been cut by 15 per cent. The news has come as a surprise because far from expecting a cut in supply of power to the jute mills the trade was thinking in terms of an increase. It was believed that the representation of the jute industry to the Union Minister for International Trade when he was in Calcutta last that provided power supply could be increased proportionately, had been favourably received by Authority. It is said that the present cut is due to failure of the DVC to maintain its supply to the CESC. The power cut will

seriously curtail production and hence exports will suffer. It is unfortunate that this has happened at a time when Indian jute goods are having good foreign enquiries. During the past few weeks many foreign countries have entered the Calcutta market for their requirements which have proved to be substantial. This coupled with the entry of Russia in the market together and the sizable purchase by East Africa has enlivened proceedings in the gunny market with prices in both the principal sections making considerable headway. While enquiries for heavy goods continue to be received hessian also is in good demand. Evidently the possibility of a power cut has not been taken into account as forward contracts have been entered into by many a party. This will be a serious blow to export promotion in jute goods and it is estimated that the loss may go up to Rs 25 crores as a result of the power cut.

It is reported that in view of the serious repercussions that will flow from a 15 per cent power cut, the industry is making representation to the Central and State Governments that the jute industry be exempted from the imposition of the power cut. Authority however

need not wait for special representation from the industry to advise the CESC to grant exemption to the jute industry if such an arrangement can be managed without further worsening the situation. It is to be noted that the CESC has pointed out in its circular letter announcing the 15 per cent power cut that such a step has been decided upon with a view to avoiding intermittent power failures.

★

The jute goods market opened the week on a firm note but the undertone weakened in later dealings mainly in sympathy with the futures market where the closing rate for B Twills August was full two points easier. In the spot market, however, prices were well held following reports of a number of overseas enquiries. The trend continued unchanged for some time in the absence of fresh buying interest. When the market opened on Tuesday after three days of no trading sentiment was firm presumably on the report that a power cut of 15 per cent had been imposed on jute mills in the Calcutta industrial region. In the futures market Twills August regained lost ground completely. The undertone however turned somewhat quiet in subsequent trading and by close on Thursday B Twills August in the futures market was sharply down at Rs 128.80 on selling pressure. The reactionary trend is attributed to rumours that some of the foreign orders both for hessian and sacking earlier thought to be certain are not likely to materialise in view of adverse developments in the importing countries. The lack of support in the futures market would appear to be partly due to the expectation that the power cut may not be imposed on jute mills in view of the strong representation of the industry to the Central and State Governments.

The raw jute market opened steady and after ruling quiet for some time in sympathy with the goods section again became steady. Reports of floods in Assam had a steadying influence on sentiment. Though latest crop reports suggest that the floods had not damaged the crop to any great extent, there is however the belief that the floods would have seriously affected the quality of jute. Further there is no general agreement on the size of the new crop. While many believe it will be quite large, there are some who think it is too early to make an assessment because crop reports from the growing regions are not uniformly favourable.

★

TEA Rise in Exports

ACCORDING to the provisional figures, total exports of North-Indian tea have increased to 90.79 million pounds in the first five months of the current year from 89.85 million pounds in the corresponding period of last year. While exports to the UK have fallen from 48.99 million pounds in January/

May 1961 to 44.67 million pounds in the period under review, those to other countries have risen from 42.86 million pounds to 46.12 million pounds.

The Board of Trade, London, states that the total imports of tea into the UK, in the first four months of the current year, are lower at 195.47 million pounds as compared to 205.38 million pounds in the corresponding period of 1961. While tea supplies to the UK from Ceylon and Africa have risen from 51.92 million and 21.83 million to 53.33 million and 29.05 million respectively in the period under review, imports from India and other sources have fallen from 109.97 million and 21.66 million to 97.29 million and 15.8 million respectively.

Total imports into the USA, in the first four months of the current year are, however, higher at 40.72 million pounds as against 37.73 million pounds in the corresponding period of last year. Imports from India and Indonesia in January/April 1962 amounted to 10.09 million pounds and 4.09 million pounds as against 10.05 million pounds and 5.58 million pounds respectively in the similar 1961 period.

Meanwhile, it is learnt that the tea interests in Calcutta have unanimously opposed the proposed tea auctions at Pandu or Gauhati. They have urged the Central Government to dissuade the Assam Government from proceeding with the proposed auctions at Pandu or Gauhati. They are afraid that, if the auctions take place in Pandu or Gauhati, a larger proportion of Assam teas, which enjoy a good export demand, may be diverted to internal consumption and thereby deprive the Government valuable foreign exchange. The Government of India is, therefore, examining the representations made by the Calcutta tea interests.

The Government views with great concern the growing consumption of tea in the country. While tea production in the country is increasing only by 3 per cent per annum, the internal consumption is going up by 10 per cent. If production is not adequately stepped up, on home consumption curtailed, exports will go down in the long run. Steps to increase not only tea production but also exports of tea, jute and cotton textiles will be considered by the Board of Trade at its forthcoming meeting on 8 July.

When the last Budget was announced, the Finance Minister explained that the higher excise duty was levied with a view to inhibiting internal consumption and releasing larger quantities for exports. It is, however, pointed out by the estate-owners that conditions in the international markets have changed vastly since the middle of last year. With an increase in the output in every major country, buyers are now able to dictate their terms.

With a larger quantity of Common teas available for sale, there is a feeling that the industry will not be able to operate on a reasonably profitable basis if the export duty is not removed altogether and the

July 7, 1962

obstacles in the way of an increase in internal consumption are not also eliminated. It is emphatically asserted that the difficulty in the coming years will not relate so much to the achievement of the target for production as the one for exports.

No export sale was held in Calcutta. In the Internal Sale, offerings consisted of 23,204 packages of Dusts. There was a good demand for CTC teas. Medium varieties were sold well, but at irregular rates with the poorer liquoring descriptions receiving less support than brighter teas which were sold at about valuations. Good CTC teas were much sought after and were dearer.

Orthodox and legg-cut varieties met with a restricted demand and were sold at about 30 nP below brokers' expectations. There were some withdrawals, particularly in the some latter category. There were a few brighter lines, which received satisfactory prices. Darjeeling teas were the strongest feature and met with useful enquiry at much dearer rates. Following rates were quoted: Plain Orthodox Dust Rs 3.70 to Rs 4.00; Medium Assam Dust unquoted; Legg-cut Dust Rs 4.10 to Rs 4.50; Medium Assam CTC Dust Rs 5.60 to Rs 6.10 and Good Assam CTC Dust Rs 6.40 to Rs 7.00.

Production of tea in South India is estimated to be higher at 22.9 million pounds in May as compared to 19.7 million pounds in the previous month and 22 million pounds in May last year. In the first five months of the current year also, the South Indian tea outturn is placed higher at 76.1 million pounds as against 75.3 million pounds in January-May 1961.

In the Colombo market, offerings were 8,053,398 pounds. There was a slight improvement in quality, while teas from Western districts were often a little brighter. At the often a little brighter. At the opening, there was a strong demand for better liquoring BOPs from western districts and prices advanced by about 30 to 40 cents per pound. Those below the best were generally dearer except for plainest sorts.

In Mincing Lane, offerings were 20,306 packages. There was a good general demand for the North Indian teas and the few invoices of new season's Dooars, on offer, were sold well. African teas came to a good market. Useful coloury descriptions were firm; but prices for all others, where changed, were in buyers' favour. The next sale will be held on 9 July.

Tea stocks in London, as on 22 June, totalled 121.73 million pounds as against 123.62 million pounds in the previous week. The pounds in the previous week. The total amount to be landed on the same date was 8.78 million pounds and deliveries totalled 9.22 million pounds. Total afloat was 18.93 million pounds including from Calcutta 2.45 million pounds; from Chittagong nil; from Ceylon 13.71 million pounds; from other Ports 1.54 million pounds.

COTTON Prices Firm on Weather Reports

PRICES in the Bombay Cotton futures market displayed generally a firmer tendency. Sentiment was aided by the continued absence of rains in the cotton-growing areas, particularly Khandesh and Berar and the delay in monsoon all over the country. Keen support from the bulls, on expectations of increased consumption following the rise in domestic production of cloth and yarn in May, was also a contributory factor. After touching a low of Rs 710.50, Jharilla March contract spurred at one time to Rs 725.75 before finishing at Rs 724.

According to the latest report, sowing of the new crop has been completed in the Punjab, Uttar Pradesh and Rajasthan. In Khandesh and Berar, sowings have not begun, while Gujarat and Saurashtra need good rains to complete sowings. Sentiment in the market will, therefore, be influenced by the weather reports during the next two months.

In the Spot section, the trend remained steady. Routine activity continued in usual varieties like Kalyan, Wagad, Vijay, Digvijay, Surti, CO2 and 197/3 prices of which were well maintained.

The consumption of Indian cotton, during the first eight months of the current cotton season (September to April) amounts to 30.92 lakh metric bales as against 27.18 lakh metric bales in the corresponding period of the previous season. Foreign cotton consumption was 7.01 lakh and 7.83 lakh bales respectively in the period mentioned.

Importers and spinners have not been with relief the clarification issued by the Joint Controller of Imports and Exports that there has been no hold-up whatsoever in the issue of import licences for raw cotton which, he has pointed out, are being regularly issued. From this clarification, it is evident that the general cut of 50 per cent, announced very recently in the overall imports, is not sought to be made applicable to raw cotton.

In the import section, Pakistani and Sudanese cottons were in demand. This apart, moderate interest also continued in American and East African cottons.

An interesting feature of the week's trading was the revival of demand for Bengal Deshi cotton from Japan. This destination, after having kept quiet for a long time, was said to be renewing its interest in this growth. Consequently, this has led to a marked improvement in the registration of export sales.

The unutilised balance out of the shippers' share of 66,500 bales was understood to have been around 6,000 bales at the end of the week. Japan seems to be interested in securing this cotton for October to December delivery. A section of the trade, therefore, believes that, if a further export quota of 76,000

bales of this cotton, as recommended by the trade associations earlier, were issued now, valid for shipment up to December 1962, it may help to satisfy the demand of this traditionally large buyer, apart from earning valuable foreign exchange which can be utilised for importing desirable qualities of foreign cotton.

Piecegoods:

The production of cloth in May was estimated at 423 million yards compared to 413 million yards in the previous month. The overall production, in the first five months of the current year, is, however, at 2,085 million yards as against 2,118 million yards in the corresponding period of 1961.

The production of yarn was higher at 157 million pounds as against 154 million pounds in the previous month and 152 million pounds in May 1961. The overall yarn production, in the first five months of 1962, at 788 million pounds, was ahead of that in the corresponding period of last year by 3 million pounds.

★

Pepper Crop Estimates Revised

WHERE are indications that the Pepper crop in India, this season, will be larger than the original estimate. The recent sharp break in prices, both in Malabar and at the consuming centres like Bombay, has been induced by the prospects of an upward revision of the crop.

According to initial estimates, the crop was expected to be about 28,000 tons. But the recent pressure of offerings has induced the trade to revise its earlier estimate. It is now felt that the crop may turn out to be around 32,000 tons.

So far, 15,000 tons have been shipped and there are possibilities that 2,000 tons more will be exported before the season ends in October. There was demand for ready garbled and ungabbed varieties in fulfilment of commitments on enquiries from Russia.

In the Cochin market, the rate is quoted around Rs 370 per quintal for the ready position. Advices from America, however, continue to be discouraging. Shippers have, therefore, refrained from entering into fresh commitments.

Exports of black pepper from India have fared well this season with shipments from November, 1961 to April 1962 amounting to 15,047 tonnes against 11,456 tonnes in the corresponding period of last season. There are still four months to go before the current season ends. It is likely that India will export 3,000 tonnes more, bringing the total export of black pepper to more than 20,000 tonnes.

★

RUBBER

The Chairman of the Rubber Board has stated that synthetic rubber production in India will not pose a threat to natural Rubber and expressed confidence in the future of natural rubber, provided it is given time to rehabilitate itself.

The capacity of the Bareilly Synthetic Rubber factory, which is expected to start production by December this year, will be only 30,000 tonnes. Even when the expansion is completed, the production will not be sufficient enough for meeting the gap between present production and the demand for natural rubber. He adds that, as the demand for rubber is increasing at a fast rate, the demand for rubber is not likely to be affected in the foreseeable future by synthetic production.

GOVERNMENT OF INDIA

3½ per cent. National Plan Bonds—Fifth Series (3½ per cent. 1968)
Issue Price Rs. 99.20 Per Rs. 100 (Nominal). Repayable on 12th May 1968.

4 per cent. Loan 1972 Issue Price Rs. 99.20 Per Rs. 100 (Nominal).
Repayable on 1st August 1972.

4½ per cent. Loan 1985 Issue Price Rs. 100 Per Rs. 100 (Nominal).
Repayable on 12th July 1985.

Subscriptions to the above bonds and loans will be received simultaneously and will be limited to a total of Rs. 250 crores (approximately). Subscriptions may be in the form of (i) Cash/cheque or (ii) securities of the 2½ per cent. Loan 1962 or 3½ per cent. Bonds 1962 which will be accepted for conversion at Rs. 99.50 and Rs. 100 per Rs 100 (Nominal) respectively.

Interest on 2½ per cent. Loan 1962 tendered for conversion will be paid upto 11th July, 1962. Interest on 3½ per cent. Bonds 1962 tendered for conversion will be paid for the full half-year ending 15th July, 1962.

Interest on the new bonds and loans will accrue from 12th July, 1962. Interest on the 3½ per cent. National Plan Bonds—Fifth Series (3½ per cent. 1968) will be paid on the 12th November, 1962 for the period 12th July to 11th November, 1962 and thereafter half-yearly on 12th May and 12th November. Interest on the 4 per cent. Loan 1972 will be paid on the 1st August, 1962 for the period 12th to 31st July, 1962 and thereafter half-yearly on the 1st February and 1st August. In the case of 4½ per cent. Loan 1985 interest will be paid half-yearly on 12th January and 12th July.

Subscription lists will open on 12th July 1962 and close on 14th July, 1962 or earlier without notice.

Applications for the bonds and loans will be received at:

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;

(b) Branches of the Subsidiary Banks of the State Bank of India conducting Government business; and

(c) Branches of the State Bank of India at other places in India.

For full particulars apply to any of these offices or branches.

The production of natural rubber can be increased by more than 70,000 tonnes by 1975 by replanting the existing areas under unselected seedlings in the next ten years. Referring to the impact of synthetic rubber on the production of natural rubber in India, he has emphasised the need to improve processing, grading and packing of natural rubber. He says that the natural rubber industry will have to find an answer to the high power salesmanship backed by first rate technical service for which synthetic rubber is reputed.

CASHEW

The question as to how far the State Trading Corporation can be of assistance to the Cashew industry in the matter of ensuring good quality raw cashewnuts at reasonable prices from Africa and better prices for exports of processed cashewnuts has been discussed. Spoken of the industry have suggested that the STC should provide facilities for a buffer stocks of both raw and processed cashewnuts which can be released for processing or for exports as the case may be, with a view to stabilising the industry and earning more foreign exchange for the country.

As a sequel to the discussions between the STC and the members of the Cashew Export Promotion Council towards the end of last week, the STC is likely to import initially cashewnuts to the tune of Rs 3 crores. Meanwhile, the import trade with Portuguese East Africa has reached a critical stage. An uncertainty has been created by the order of the Portuguese Government that all-Indian nationals in the territory should quit before 11 August. The order denies importers here the facility to have Indian representatives in Portuguese territory.

NON-FERROUS METALS

The Government of India has removed one of the conditions for the grant of import licences for Non-ferrous metals under the aid granted by the Agency for Internal Development of the USA. (This condition is that the supplier is not more than 49 per cent owned by stock-holders who are not citizens of the United States. Importers, who have received or who may receive licences as established importers and actual users

The proprietors of Indian Patent No. 43263 "Fire Extinguishers" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered Patent.

Anyone interested should apply to Box:

K/IF. 1962.

C/o. Indian Finance
116A, Lower Circular Road.
Calcutta-14.

under non-project loans, granted by the Agency for International Development, should now only obtain a certificate from their USA suppliers that the commodities listed on the invoice were processed in the United States into the commercial products sold to the importer and that the supplier is a United States citizen or a Corporation, partnership or other association created under the laws of the United States.

There is a delay in the imports of non-ferrous metals—mainly Copper and Zinc—under DLF arrangements. Even though, the shipments have been effected, their pace is very slow and there has always been a time-lag between two shipments. One of the major difficulties arises from the condition laid down by the US authorities for utilising the DLF loans. Another difficulty concerns the customs authorities in Bombay. The customs authorities, it is stated, do not accept the weight of the imported material mentioned in the invoice and Bill of Lading. They insist on the total weight of the goods. This causes considerable delay and raises the cost of demurrage to the importer.

In the Bombay market, Copper started the week on an easy note owing to some arrivals from mofussil centres. But, in the absence of offerings, there was a substantial buying enquiry towards the close of the week. Zinc followed copper. It hardened noticeably due to sustained support from actual consumers.

Tin crossed Rs 200 mark on excellent support from the actual users. Supplies were limited and could not cope with the growing demand, while the reports from the London market were also encouraging.

A final decision about sales of Tin from the US strategic stockpile now seems likely in the near future. Talks have been going on between the US Government and producing and consuming interests about the price at which sales should take place. Producers are still hoping that the USA will agree to fix a minimum level below which sales will not be made and that this will be well above the present market figure.

SUGAR

Thanks to the easy supply position, Sugar markets have continued to rule quiet.

The Senate-House Conference Committee on the Sugar Act has reached agreement on a compromise Bill that will permit 21 foreign countries to ship sugar to the United States at a reduction in the US premium price of 10 per cent each year for 1962, 1963 and 1964. Most countries, that had been provided with permanent quotas in the House Bill, get quotas under the compromise version; but some quotas have been cut. The quota for India is fixed at 20,000 tons against 30,000 tons provided for in the House Bill.

CHEMICALS & DYES

The State Trading Corporation is understood to have secured licences for importing menthol crystals, acetic acid, and carbon black. These commodities will be imported from the countries behind the iron curtain and

the validity of the licences will extend upto the end of March 1963. As revealed by the Chief Controller of Import and Export menthol crystals worth approximately Rs 2.5 lakhs will be imported from Bulgaria while menthol crystal BP valued over Rs 2.5 lakhs will also be obtained from the same source.

Apart from this, the Corporation has obtained licences for the import of construction equipment from the Soviet Union. The value of these licences total about Rs 59 lakhs.

GOLD & SILVER

On the Bombay Bullion Exchange, the Silver section, displayed a steady tendency. Sentiment was favourably influenced by a sharp rise in the US price of silver, the uncertain political situation and the lack of effective selling. Bulls, therefore, dominated the market and manipulated the prices to their advantage.

Advices from London state that, with consumer stocks now replenished, the silver market should be fairly quiet during summer. Very little is known with regard to future Chinese intentions; but several shipments of Chinese metal are expected in the next few weeks and these should also help to keep prices steady. But, if more industrial orders come forward in the autumn and there is an increase in the volume of supplies, then this may be only a temporary respite.

The Gold section, though steady, was much less active. Political uncertainties and the revival of rumours regarding the revaluation of gold in the USA caused prices to move up though the improvement was rather slow due to reports of arrivals.

OILS & OILSEEDS

The Bombay Oilseeds Exchange presented a firm front. In the Groundnut section, trading was featured by sustained bull support, inspired by the persisting tightness in the supply position. It should, however, be said that the market derived its strength from the improbability of the tenders being issued against the maturing July contract. With spot prices remaining substantially higher than the July contract, the tenders were expected to be confined to 4,000 or 5,000 candel of mixed supplies.

In the Castorseed section, trading was devoid of any fresh influences; but the overall tendency was upward on account of the strength of groundnut and the hopes of the revival of enquiries for castor oil from certain Communist countries. The export trade was confined to sales of about 175 tons of commercial castor oil to Britain at £106 to £107 per ton. Operators were found to be cautious at the lower levels in the context of the overall firmness of the market.

In the Linseed section, prices displayed a firmer tendency due to meagre offerings against the maturing contract, the firmness of groundnut and higher rapeseed advices from North India.

Argentina, India's competitor in linseed oil exports, has been lagging

behind in her performance this year. It has suffered a severe setback in linseed, hardly exporting one-tenth of last year's export. From January to April this year, Argentina exported 85,000 tons of linseed oil as against more than 100,000 tons in the corresponding period of last year. Linseed export, during the same period, has been about 6,000 tons against the substantial quantity of 60,000 tons.

BURN AND COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting (being the sixty-eighth Ordinary General Meeting) of the Company will be held on Monday, the 30th July, 1962, at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:

- To receive and adopt the audited accounts for the year ended 30th April, 1962 and the Directors' and Auditors' Reports thereon.
- To declare a dividend on the Ordinary Shares. The dividend, if declared, will be paid on or after the 1st August, 1962, to the Shareholders whose names are on the Company's Register of Members for Ordinary Shares on the 30th July, 1962, or to their mandatees.
- To appoint a Director in place of the retiring Director. In this connection notice is hereby given that Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 261 of that Act to move the following resolution as a Special Resolution: "That Mr. K. L. Ganguly, the Director retiring by rotation, who is an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company."
- To appoint auditors and fix their remuneration.

The Ordinary Share Register and Transfer Books of the Company will be closed from the 21st July, 1962, to the 30th July, 1962, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board
MARTIN BURN LIMITED
ROMEN MOOKERJEE
Director
Managing Agents
Registered Office
12, Mission Row
Calcutta-1
4th July, 1962

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

NEW ISSUE NOTES

Arlabs

Arlabs (Private), Limited, Bombay, proposed to be converted into a public company, is to issue capital of Rs 20 lakhs divided into 20,000 equity shares of Rs 100 each at a premium of Rs 50 per share. The proceeds of the issue will be utilised for repayment of loans.

Manganese

Manganese Ore (India) Limited, Nagpur, a Government company, proposed to be floated in collaboration with the Central Province Ore Company (a sterling company) for carrying on the business of mining manganese ore, is raising capital of Rs 250 lakhs, divided into equity of Rs 180 lakhs and preference shares of Rs 70 lakhs carrying dividend of 74 per cent (gross). Of the capital, equity shares worth Rs 70 lakhs and preference shares of Rs 35 lakhs will be issued to CPOC for consideration other than cash in satisfaction of the purchase price of the assets and stores to be transferred and the balance for cash, at par, equally amongst the Central Government of Maharashtra and Madhya Pradesh.

Coimbatore Pioneer Fertilizers

Coimbatore Pioneer Fertilizers Limited, Madras, issuing capital of

Rs 50 lakhs consisting of equity shares worth Rs 40 lakhs and 9 per cent preference shares of the value of Rs 10 lakhs. The proceeds will be utilised for the manufacture of sulphuric acid, super phosphates, etc.

Glass Carboys

Glass Carboys and Pressedware Limited, Bombay, a new company, is issuing capital of Rs 25 lakhs for cash, at par, divided into Rs 20 lakhs in equity and Rs 5 lakhs in preference capital. The proceeds of the issue will be utilised for the manufacture of glass carboys and glass pressedwares.

Premier Cotton

Premier Cotton Spinning Mills Limited, Kerala, is issuing capital of Rs 25 lakhs in equity shares for cash, at par, for setting up a cotton spinning mill.

Prestolite of India

Prestolite of India Limited, Delhi, is issuing share capital of Rs 40 lakhs in equity shares of Rs 10 each, at par. Out of this, shares of the value of Rs 17.5 lakhs will be offered to Messrs Electric Autolite Company of USA against supply of plant and machinery and the balance to Indian nationals for cash. The proceeds will be used for the manufacture of automobile electric equipment.

July 7, 1962

Elpro International

Elpro International Limited, Bombay, a new company, is issuing capital of Rs 85 lakhs in equity shares of Rs 100 each for cash at par. This will be subscribed as to Rs 42,50,000 by Messrs General Electric Company, USA; Rs 8.5 lakhs by the Indian employees of GEC of (India) Limited; Rs 12.75 lakhs by Investment Corporation of India Limited, its friends and associates and the balance of Rs 21.25 lakhs by the Indian public through prospectus. The proceeds of the issue will be utilised for the manufacture of fighting arresters, magnets, heating elements, X-Ray equipment, etc.

Madura Mills

The Madura Mills Company Ltd., Madurai, is to issue Debentures of the value of Rs 125 lakhs for cash, at par. The Debentures will carry a rate of interest not exceeding 6 per cent. The proceeds will be utilised on a comprehensive scheme of modernisation and expansion.

Commercial Ahmedabad Mills

The Commercial Ahmedabad Mills Limited, Ahmedabad, is to issue bonus capital of Rs 5,77,500 (in 2,310 equity shares of Rs 250 each) in the ratio of one bonus share for every six shares held, on capitalisation of company's reserves to a like extent.

Nanubhai Industries

Nanubhai Industries (Private), Limited is issuing Rs 1 crore capital in equity shares of Rs 100 each, to be offered to the public for cash, at par. The proceeds will be utilised in the existing plant for the manufacture of nylon.

Kalpetta Estates

Kalpetta Estates Limited, Madras, has proposed to issue 40,000 equity shares of Rs 10 each, at par, to the holders as on 30 July 1962, in the ratio of one new share for every two shares held. A sum of Rs 2 lakhs is payable on acceptance of the application and the balance within 30 days of allotment.

Indian Rayon Corporation

The Indian Rayon Corporation Limited has made the second and final call of Rs 25 per share on the new equity shares, payable by 10 August, 1962.

Jagajit Cotton

Jagajit Cotton Textile Mills Limited has decided to raise its authorised capital from Rs 75 lakhs to Rs 1.20 crores by the creation of 4,50,000 new equity shares of Rs 10 each. The new share capital will comprise 20,000-5 per cent cumulative participating preference shares of Rs 100 each and 10,00,000 equity shares of Rs 10 each. This new

issue of equity shares shall rank pari passu in all respects with the existing equity shares excepting that they shall not be entitled to any dividend that may be declared in respect of the company's financial year ended 31 January, 1963.

Sandvik Asia

Sandvik Asia Limited, a subsidiary of Sandvikens Jernverks Aktiebolag of Sweden, is entering the market with a public issue this month. The company has an authorised capital of Rs 1 crore divided into 100,000 equity shares of Rs 100 each. The paid-up capital is Rs 60 lakhs of which Rs 36 lakhs are held by Sandvikens Jernverks Aktiebolag and Rs 12 lakhs by the directors and their friends. The balance of Rs 12 lakhs is being offered to the public at par. The factory has already been set up in Poonna for the manufacture of rock drill steel used in mining, dam and road construction. It will also manufacture tungsten carbide tips for cutting tools.

INVESTMENT NOTES
Tata Chemicals

Tata Chemicals Limited has decided not to pursue the scheme of acquisition and merger with the Bombay Mineral Supply Company Private Limited about which an announcement was made by the company as far back as November 4 last year.

IISCO

The figures, released by the Indian Iron and Steel Company, Limited for June 1962, show an all-round decline in production as compared to the previous month. The output of Pig Iron has fallen to 87,639 metric tonnes from 112,269 tonnes in May; Steel ingots to 77,029 tonnes from 85,135 tonnes and Saleable Steel to 56,938 tonnes from 68,574 tonnes. In this connection, it is stated that the low production is due to one Blast Furnace being off for relining during the month under review. Despatches are, however, higher at 60,856 tonnes against 51,033 tonnes; but these would have been still higher, but for the fact that 4,000 tonnes of finished materials could not be despatched due to railway's failure to provide the necessary wagons.

TISCO

The production figures, released by the Tata Iron and Steel Company Limited, for June 1962, are also not encouraging. The output of Saleable Steel have declined markedly from 115,600 tonnes in May to 106,900 tonnes. This fall is attributed to the introduction of the wet screening process, which has caused some dislocation. This comprises a fall of 3,400 tonnes to 33,600 tonnes in semi-finished steel and of 5,300 tons to 73,300 tonnes in finished steel. The output of Steel Ingots has come down by 7,700 tonnes to 137,900 tonnes and

Pig Iron by 7,400 tonnes to 139,000 tonnes. Compared to June 1961 the Steel Ingot production is higher by 13,200 tonnes and Pig Iron production by 7,200 tonnes.

BALANCE-SHEET BRIEFS

The DENA Bank Limited has reported a profit, subject to audit, of Rs 17.11 lakhs for the half-year ended 30 June 1962, showing an increase of Rs 2.01 lakhs over that in the corresponding period of 1961. The dividend for the half-year is however, maintained at Rs 2 per share.

The working of the Coorg Tea Company has resulted in a decline in the net profit from Rs 2.60 lakhs to Rs 1.75 lakhs for the year ended 31 March 1962.

The net profit of the Balanor Tea and Rubber Company is also lower at Rs 3.72 lakhs for the same period as against Rs 4.17 lakhs. The dividend is maintained at 12 per cent, less tax.

Subject to the approval of the Industrial Finance Corporation, Western India Plywoods Limited has proposed to pay a taxable dividend of 14 per cent for the year ended 31 March 1962 as against 12 per cent, taxable, for the preceding year.

STOCK EXCHANGES
Subdued Trading

Watch-Dog Writes: SENTIMENT (in stock markets remains generally depressed. While support from institutional investors is conspicuous by its absence the delay in the announcement of revised steel retention prices has provided further reason for the absence of speculative interest. The political and economic background has not also been conducive to the return of stability to the stock markets. Even the mild recovery in prices, that was noticed on Friday, proved to be short-lived.

Conditions on the Calcutta Stock Exchange continued to remain subdued and prices displayed a downward trend to renewed liquidation. The Bombay Stock Exchange slumped further due to heavy bull liquidation although some bear-covering was noticed at the lower levels.

The power-cut in the State had already having its effect on the Madras Stock exchange where prices weakened further due to selling pressure. Although conditions on the London Stock Exchange were brighter, business remained at a low level. Price movements on Wall Street were mixed with rises just in the majority.

Friday Evening
A state of uncertainty prevailed on the local stock market during the past week, Leading operators were

reluctant to extend their commitments in view of uncertain economic and political situation. Prices, therefore, displayed a downward trend due to renewed liquidation by the weak holders. Thanks to some bear-covering, there was a reversal in the trend although the recovery in prices was only mild.

In general, the market opened without any show of promise and conditions become more subdued as the week progressed due to various adverse factors. First, the Reserve Bank's decision to tighten credit to scheduled banks and the raising of the maximum penal rate of interest on borrowings from 6 to 64 per cent had a depressing effect on sentiment. Secondly, the news of the power-cut to the extent of 15 per cent led to fears that industrial production might be affected, especially when the flow of corporate news still emphasised the problems facing the industries, such as shortage of coal, raw materials and transport. Fifthly, the separate foreign exchange situation and the fears of company profits coming under greater pressure induced some caution. Finally it was felt that the supply of investible funds in the country was not as large as had been thought of earlier.

Even the announcement of the terms of borrowing by the Central Government had no material effect on prices, though the terms were considered to be quite favourable for the lenders. Favourable weather forecasts and the onset of the monsoon in certain States had also no effect on trading. With the prospective buyers loath to commit themselves, even small offerings were found to be enough to depress the price levels. The market finished around the lowest levels for the week.

The reaction to the terms of the new loans was somewhat bearish in the Gilt-edged section. It was thought that, as the yields on the new loans were much higher than on existing comparable securities, the prices of the latter might move down in order to align themselves with the new loans. Enquiry was confined to only a couple of short-dated securities indicating that the banks preferred to cash their holdings in the maturing loans and reinvest in shorter maturities instead of converting them into new loans. State Loans remained almost unchanged.

Jute shares came in for a good deal of profit-taking at the recent high levels as operators seemed to be worried over the cut in power supply to the mills. Birlas were marked down at one time to Rs 33.56 from Rs 34.12 (Rs 33.69); Howrah to Rs 21.62 from Rs 22 (Rs 21.69); New Central to Rs 15.69 from Rs 15.81 (Rs 15.75) and Meghna to Rs 13.06 from Rs 13.44 (Rs 13.06); Barnagore were, however, a steady feature at Rs 186.

Coal shares were listless due to the price increase sanctioned by the Government being far short of what was claimed by the industry. New Beerhoom were on offer at Rs 22.50 against Rs 22.69, while Central

For the Investor

INVESTMENT GOSSIP
Uncertain
Outlook

Though sentiment in Lyons Range on Friday has been slightly better, the undertone continues to be hesitant with most shares still showing sizable losses over the week's trading. Both operators and investors are reluctant to extend commitments despite the fact that many shares are now quoting at attractively low levels. Buyers have been discouraged because the outlook for equities is not considered to be bright what with reports of power shortage in a number of States and continued coal and transport shortage. In the meantime, latest indications regarding prospects of foreign aid for the Third Plan are not very encouraging. The fact that the spokesmen of the Government in India have pointed out that the work on Third Plan projects will go on has not inspired much confidence. The Reserve Bank's decision to

raise the penal rate for borrowings by Schedule Banks has been interpreted bearishly. As against the three-tier system that has been in vogue till now hereafter there will be four-tiers. It is argued that since banks have to pay a higher rate of interest for their borrowings from the Reserve Bank, there will be a corresponding increase in the cost of bank credit for industry.

Investors are also worried over the possibility of industrial production being adversely affected by power shortage. In West Bengal a serious setback to jute goods production has come as electric supply to jute mills has been cut by 15 per cent. Speculative support has declined because of the continued delay in the announcement of the steel retention price. While rumour had it last week that an announcement was imminent, reports from New Delhi indicate that Government has not yet concluded consideration of the Tariff Commission's report.

India and Western Bengal moved narrowly around Rs 11.31 and Rs 10.28 respectively. East India rule comparatively steady at Rs 50.50.

The predominance of sellers was reflected in the Textiles section. Operators seemed to be getting worried over the growing shortage of raw cotton and the rising production costs. Jay Shree were on offer at Rs 14.94 against Rs 15.50 and Cawnpore at Rs 7.37 against Rs 7.50. Kesoram touched a low of Rs 27.56 from Rs 28.31 and J. K. Cotton Rs 19.19 from Rs 19.55.

Trading in the Tea section remained subdued in view of the uncertain marketing outlook for the commodity. Bor Pukhuri changed hands at Rs 9.37 to Rs 9.50; Dhunseri at Rs 15.75 to Rs 16; Naga Hills at Rs 20 to Rs 20.25 and Tezpor at Rs 15.25 to Rs 15.44.

Sugar shares were freely offered in the absence of any incentive. Cawnpore had sellers at Rs 12.37 to Rs 13.25 and SKG at Rs 8.94 to Rs 9.19.

Bank shares were fairly steady with Punjab National quoting Rs 20.56.

Engineering shares developed a sagging tendency early in the week

under the lead of Indian Irons due to lower Bombay advices. After opening at Rs 25.74 and improving to Rs 25.80, Indian Irons receded gradually to Rs 25.38 before finishing the week at Rs 25.76. The shares were changing hands on the cum-dividend basis with effect from Thursday. The release of the production figures by the company for last month seemed to have no effect on sentiment.

After moving between Rs 24.15 and Rs 24.55, TEXMACO turned

ex-dividend and were quoted lower at Rs 23.00 at the close. Guest, Keen, Williams met with business at Rs 38.87 to Rs 39.75; Jessop at Rs 23.06 to Rs 23.50; Indian Standard Wagon at Rs 37.75 to Rs 38.62 ex-bonus; J. K. Steel at Rs 17.50 to Rs 18.06 and Dalmia Iron at Rs 11.50 to Rs 11.62. There was an allround decline in the prices of Miscellaneous shares. Figures shown within brackets were the closing rates for the week. Following were the price trends of a few selected shares.

	Week's High	Week's Low	Week's Closing

Springs & Spring Balances

With the establishment of George Salter India (Private), Limited, the dependence on imports for quality springs and spring balances can be expected to be sizably reduced. The Company is the outcome of the collaboration of George Salter & Co., Ltd., UK and Bird & Company (Private), Ltd., Calcutta. The firm of George Salter & Co., Ltd. is one of the oldest engineering firms in the UK engaged in the manufacture of self-indicating weighing machines and springs. It is a happy augury that these two firms which have long experience in the production and distribution of industrial materials have pooled their resources to establish George Salter India (Private), Limited. The factory which is situated in Mitaghur, West Bengal, will manufacture various kinds of springs required by the automobile, aeronautical, telephone, light electrical, typewriter, cycle and many other industries and spring balances used by dairy farms, tea, cotton and various other industries. It is estimated that when in full production the company will help the country save nearly Rs 50 lakhs in foreign exchange.

July 7, 1962

Company Reports

Chamong Tea Pays 10% Against Nil

Thanks to the increase in the crop outturn from 82,007 kgs to 82,803 kgs and in the average price realised from Rs 7.75 to Rs 8.66 per kg, the Chamong Tea Company in Williamson Magor & Co., Ltd. has been able to report a higher net profit of Rs 1.22 lakhs for 1961 as against Rs 83,674 for the preceding year.

Apart from providing Rs 5,000 for Development Reserve, the Depreciation amount is raised to Rs 8,857 from Rs 7,874 and Taxation raised to Rs 44,000 from Rs 24,000. The directors have recommended a taxable dividend of 10 per cent for the year as against nil for 1960.

The working of the Gohpur Tea Company Limited has resulted in a slightly higher net profit of Rs 1.51 lakhs against Rs 1.38 lakhs. In respect of allocations, a sum of Rs 25,000 is provided for Repairs & Renewals Reserve. Depreciation is reduced to Rs 60,962 from Rs 65,642, while taxation provision is doubled to Rs 30,000. The directors have proposed a taxable dividend of 5 per cent as against nil.

The crop outturn is shown at 254,919 kgs. against 220,227 kgs and the average price at Rs 5.81 against Rs 6.19 per kg.

East India Tea Skips Again

Despite a net profit of Rs 2.57 lakhs against a loss of Rs 96,930 incurred in the preceding year, the East India Tea Company has passed over the dividend against for 1961. A sum of Rs 90,594 (Rs 91,736) is provided for Depreciation.

The improvement in earnings is mainly due to the increase in the crop outturn from 366,144 kgs to 525,798 kgs and in the average price realised from Rs 5.68 to Rs 5.76 per kg.

Nagri Farm Pays Less Despite Higher Profits

Thanks to the rise in the crop outturn from 216,638 kgs to 220,390 kgs as well as in the average price from Rs 6.80 to Rs 7.14, the Nagri Farm Tea Company Limited has been able to report a higher net profit of Rs 3.17 lakhs against Rs 2.90 lakhs.

Apart from providing Rs 25,000 for Repairs and Renewals Reserve and maintaining Building Reserve at Rs 25,000, the depreciation amount is raised to Rs 25,904 from Rs 23,108 and Taxation to Rs 1.20 lakhs from Rs 1.00 lakh. The provision for Development Rebate Reserve is reduced to Rs 3,500 from Rs 11,000. The directors have, however, recommended a taxable dividend of only 25 per cent against a taxable dividend of 30 per cent for 1960.

The Third Five Year Plan
Bird-Heilgers' part in it...

Rs. 50 CRORES

TO CONFER THE BENEFITS OF SCIENCE ON THE MAN IN THE STREET

Research...to make Indian products compete in world markets, to explore new avenues of creative thinking, to confer the benefits of science on the man in the street. The Third Plan has earmarked Rs. 50 crores for research. An extensive programme will strengthen and expand existing research units, widen their range of activities, train new personnel and provide an adequate number of research scholarships and fellowships. The ultimate aim is best summed up by the Planning Commission—"to carry the application of science into the everyday life of the community".

Research makes good products better

Bird-Heilgers recognises that national research is closely linked to national development. The group's own research and quality control centre is expanding to meet increasing demands. Bird-Heilgers applies the results of research to production techniques. The rich dividend: products of a uniformly high standard, economies in the use of by-products and raw materials, development of new products, quick, easier manufacturing processes...The group translates research into results which benefit India's new and growing industries and, ultimately, the man in the street.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...Intensify its use of research...join the national drive to economic independence.

Equities were generally depressed during June, sentiment having been adversely affected by the several uncertainties in the investment situation. There had at times however been attempts at rally but they were so weak that the undertone continued to be quiet. In Calcutta the month opened on a reactionary note in the absence of buying support. The continued uncertainty as regards quantum of foreign aid for the Third Plan gave rise to the apprehension that adequate industrial raw materials could not be obtained. The reported drastic cut in imports and the renewed weakness of Wall Street were other restraining influences in earlier dealings. Stock market sentiment had also been disturbed by the stringency of money coupled with apprehensions about policy changes consequent on the inclusion of the Mr T. T. Krishnamachari in the Central Cabinet. But the immediate reaction to the announcement of the appointment of Mr Krishnamachari as a Cabinet Minister was one of steadiness. It would appear that market men were relieved to find that contrary to earlier apprehensions there was no major change in the Central Cabinet. In view of the reports that Mr Krishnamachari would be entrusted with the task of coordinating the work of the various ministries, it was believed that the outcome would be beneficial to the private sector in as much as such coordination would minimise the retarding effects of transport bottlenecks and similar handicaps. However, such optimistic appraisal soon gave place to misgivings as regards the possible effect on Government policy toward private enterprise as a result of the re-entry of the former Finance Minister into the Central Cabinet. Operators were far from convinced that there would not be any sudden unfavourable turn in Government's attitude to private enterprise.

The lack of interest stemmed from the general anxiety that what with the gloomy prospect for foreign aid and the drastic cut in imports, the outlook for equities atleast in the short term is not very bright. While it was noted that Authority had made it clear that the import cuts would not be operated in such a manner that industrial production received a setback, the apprehension persisted that despite the assurance many an industry would be obliged to keep a sizable portion of its capacity idle for want of sufficient raw materials as the import cuts were drastic. Raw materials shortage apart, it was not considered improbable that industry would be faced with a serious power shortage before long. Reports from some States indicated that their power pro-

gramme had been adversely affected by inadequate allotment of foreign exchange and in view of the ever increasing demand for power in the country and the rather slow progress of power projects it would not be surprising if supply was found to be lagging behind demand. Similar inadequacies continued to be met with in regard to coal and transport. The fact that Government had not accepted the view point of the

industry in granting an increase in the selling price of the commodity was considered a bearish factor because it was believed that with an equitable increase in the selling price, the industry would be enabled to fulfill its Third Plan target easily so that it could considerably exceed it. But the increase in coal prices sanctioned is not considered to be adequate as it has been pointed out by the industry that cost of production is

the same for all grades of coal. It is pointed out that the small increase now allowed will not enable collieries to plough back sufficient funds for expansion and rehabilitation essential if Third Plan coal target is to be reached.

The continued uncertainty about foreign aid was a strong restraining influence. The continued hesitancy of friendly foreign countries to find the required quantum of aid for the Second Year of the Third Plan. From press reports it was difficult to feel optimistic as indications were the US might not show much enthusiasm in persuading other members of the Aid-India Club to increase their contribution. The reluctance of the US to support India's case for sufficient foreign assistance was traced to certain developments including the UN Security Council debate on Kashmir. The reported concern of the US about the Indian proposal to buy jet planes from Russia was also not conducive to improving Indo-US relations. It was argued that if foreign aid was not forthcoming even for the second year of the Third Plan, there would be no knowing what would happen to the various projects included in the Plan and which are leaning heavily on foreign exchange. This line of reasoning led to the apprehension that the Third Plan might be faced with serious setback. Another reason for the belief that US aid itself might be reduced was the irregular trend on Wall Street. The inference that had been drawn from the behaviour of Wall Street was that economic growth in US had become slow. The argument was that faced with serious problems of its own, the US might find it increasingly difficult to divert funds for the assistance of under developed countries.

Sectionwise, jute shares were selectively supported in earlier dealings but toward the close a quiet trend prevailed in the section.

Coal shares which were buoyant in the previous month were rather subdued in June as sentiment had been adversely affected by Government's decision to fix ceiling prices for the commodity. The new prices which came into force from 13 June did not satisfy the industry as they were said to be too meagre to leave adequate funds to be ploughed back into the business.

An easy trend prevailed in cotton textile shares as the industry was disappointed by the meagre relief given in excise duty. The cost of production of the industry was continuously rising due to higher wages for labour, increased cost of stores and raw cotton while selling price was kept stagnant.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After transferring Rs 2,656,522 from General Reserve.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 1,066,546 from General Reserve No. 1.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 119,825 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) After transferring Rs 250,000 from General Reserve.

(s) After transferring Rs 1,207,838 from General Reserve.

(t) After writing back Rs 289,747 being provisions made in previous year.

(u) After transferring Rs 200,000 from General Reserve.

(w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 380,580 from General Reserve.

(al) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 14,72,855 from General Reserve

(a4) After transferring Rs 300,000 from General Reserve.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a8) After transferring Rs 371,942 from General Reserve.

At the day's end, long tired queues await the journey home. Among them are *your own employees*, men and women who travel to and from your office in crowded buses, trams and trains. People whose loyalty you value and whose lot you want to make happier.

HOMEWARD EMPLOYEE

The Life Insurance Corporation has two Schemes which every employer will do well to know:

GROUP INSURANCE SCHEME offers low-cost Life Insurance protection to your staff under one Master Policy.

SUPERANNUATION SCHEME is the cheapest method of providing retirement pension, with or without life insurance benefit.

MORE ABOUT THESE SCHEMES:

- For tax purposes premiums on both Schemes are treated as normal business expenses
- Under certain Schemes attractive tax-relief is allowed to the employees
- Employees get the benefits of these Schemes at lower cost
- They can often be instituted at no extra cost to the employer
- Administratively, they do not involve your office in anything but minor clerical work
- It is being increasingly realised that these Schemes go a long way to increasing staff productivity and length of service

When next an Insurance man calls on you about these Schemes, give him a few minutes of your time—with no commitments of course.

The Desai Award

THE Desai Award on the revision of wages for bank labour, published last week, has had a long period of gestation—some fifteen months; and as befitting such period of gestation the end product is both hefty and well-made—running to 342 pages. So detailed indeed is the coverage that it may be some many months before the banks themselves discover what the additional costs postulated by the Award are going to add up to; but objections and expressions of disappointment have not been slow from the side of bank employees. The attitude of the employees is understandable; their demands if granted would have resulted, in the case of clerical staff of 11 A Class banks, in an increase varying from 102 per cent to 168 per cent. and such was the plea for higher wages put forward by the All India Bank Employees Federation that the Honourable Mr Justice Desai, in his Award, points out that "the demands of the All India Bank Employees Federation are still more extravagant", and has added that "the demands made cannot but be characterised as exorbitant, and the banks would be justified in refusing the demands in toto."

But the Hon. Mr Justice Desai had as his task this precise duty of discovering for himself where the employees were baying for the moon, and where the banks, for their part, had the capacity to suffer some element of increase in wages and other facilities. While he has gone into the details, what emerges by and large is a series of simplifications. There will be three kinds of banks instead of four as hitherto; and the number of effective areas will also, after allowing for time for the changeover, be reduced from four to three. The wage scales have been so drawn up that the additional burden will not drive a reasonably efficient bank out of business.

In recent years banking activity—and profits—have both greatly increased. So on the face of it the case for increased wages could not be rebutted by a counter-claim of incapacity to pay; and yet but for the Exchange Banks this very claim was pressed. What was brought out before the Tribunal was that the banks had other, more pressing demands upon their higher earnings. In the first place the Reserve Bank has now called for banks to transfer 20 per cent of their profit to published reserve until (a) the reserves reach parity with capital and (b) in any case until the aggregate of reserves and capital works out to 6 per cent of Deposit resources. In the second place there is besides the need to augment inner reserves, an imperative need since with diversification of banking business into such activities as the financing of small industries there is always the greater risk of a loss experience; and this requirement will also cut into the available profit. In the third place with the introduction of the insurance of Bank Deposits a fairly heavy charge—details of which have been published in the Award—has been created. In the fourth place in order that banks may be able to cope with the greater demand from industry it is necessary that they seek out and obtain new resources. A branch expansion programme

is therefore vital for the mobilisation of fresh Deposits. But new branches cost money.

There are certain interesting points that Hon. Mr Justice Desai makes. He apparently has dismissed as unimportant the banks' contention that their available surplus gets reduced by virtue of the increase in the rate of corporate taxation from 45 per cent to 50 per cent; and, in any case, he argues that, in the result, "any increase in the establishment charges will be offset by reduction of taxes to the extent of about 50 per cent of the increase"—the implication being that Government foots the bill for half of any increase in wages. His revised formula for wages is based on this belief: "As far as it is humanly possible to foresee the future, apart from any major calamities that may occur, the future of banking and of banks, except of a few small units, is bright." But let it be noted that such a hopeful future can be assured only with expansion in activity, and increased business is predicated upon new Deposits being mopped up by a branch expansion programme.

There is a large difference between the salaries payable in Area IV (now abolished) and in Area III. Accordingly the Hon. Mr Justice Desai considers that the additional burden "should not fall upon the banks all of a sudden but should fall gradually." He has therefore provided a transitional period during which workmen in Area IV (and this would include new recruits for branches falling under Area IV) would have their wages raised year by year so that, by 1965, the Area III standards are achieved in the case of all erstwhile Area IV employees. This was a very necessary bit of relief. But in directing that banks pay to new recruits in the old Area IV under the "concessional" formula of phased increase to Area III rates of payment, the Hon. Mr Justice Desai goes on to suggest that "this relief will also provide an incentive to banks in erstwhile Area IV during the Third Five Year Plan period." On paper this is true enough; or at least to the extent that bank labour in new branches in the old Area IV will be less dear in its cost for a few years more; and it is also true that the former Area IV stood most in need of the introduction of banking services.

Unfortunately banks are not convinced that the opening of branches in unbanked and virgin territory is a paying proposition. If anything the Award will have the effect of making banks even more reluctant about the establishment of new offices in the old Area IV. They would sooner concentrate their efforts in the other Areas, which by reason of the opportunities they offer for remunerative use of bank resources—i.e., greater demand for Advances—are much more the attractive despite the higher cost therein of bank labour.

To conclude we would suggest that as far as it goes, and without certain knowledge of what the burden on the banks will be, the Award appears to be a reasonable one; but in order to foster the spread of the banking habit Government might consider some sort of relief or concession in respect of losses in erstwhile Area IV.

Slump at the Close of the Half-Year

EXCEPT for a reactionary tendency in prices which developed from the beginning of June due to certain unfavourable developments, stock markets presented a more or less cheerful appearance during the first half of the current year. The appreciable improvement in industrial production during the past year inspired the hope that it would continue in 1962, provided concrete measures were taken to relieve the shortage of transport, electric power and raw materials. There was also a general feeling that, as imports would be seriously curtailed in view of the tight foreign exchange position, it might become imperative to set up indigenous production vigorously.

While the speculators were largely responsible for a spurt in selected shares, investors, too, were inclined to pick up growth stocks with a favourable statistical and fundamental position. Thus, almost all popular shares tried to establish new peak levels in the middle of May. But most of the gains were steadily wiped out during the closing month of the period when operators were reluctant to enter into commitments and inclined to book profits. In a market in which support was conspicuous by its absence, even small selling caused share prices to decline out of proportion. The price trends of a few selected shares in each counter are shown in Table I.

An encouraging feature of trading during the period was the improvement noticed in the investment climate. This was reflected in the new issue market which continued to remain as active as ever with a good response to a number of new floatations and over-subscriptions in a number of cases. There was a general anxiety to take advantage of the lively conditions in the capital market. It had been earlier feared that the Budget proposals for 1962-63 might have a depressing effect on the stock markets and that there might be need for even postponing some of the bigger floatations. But the behaviour of the stock markets had been so encouraging that it was considered advisable to come on the market with the new propositions while the going was good. Moreover, investors found it comparatively cheap to invest their funds in good new shares, especially when companies offering new issues often had an assured demand due, among other things, to the incidence of import restrictions. Table II.

But the main factor contributing to their apathy during the closing month of the period was, that the growth prospects of several industries were being reassessed in the light of the present difficulties. They thought that, if the shortages of transport, raw materials and equipment continued, industrial growth was bound to be restricted. Fears with regard to the disproportionate growth of industries in certain sectors, particularly those relying more on imported machinery and raw materials, prompted further thought on the extent of idle capacity that would result from the scarcity of foreign exchange.

Professional operators, on their part, seemed to be reluctant to go in for any commitments till the various uncertainties were cleared. They thought that the move by the UK and the USA to give India united credits out of the foreign aid might have only a temporary effect. It was also felt that, if India could not earn foreign exchange by raising exports, she would find it difficult to finance the main-

Company.	Type of Issue.	Issue Price	Details of Issue
1. Universal Electrics.	Offered to public.	Ord. Rs 10 Pref. Rs 100	Issued 3,30,000 ordinary and 8,197-611 tax-free Cum. non-redeemable preference shares. The preference shares are allotted to the foreign collaborators. The directors and their friends have subscribed for 8,000 ordinary shares. The remaining 2,50,000 ordinary shares are offered to the public. The entire public issue has been underwritten.
2. Star Paper.	Rights ordinary as well as for public subscription.	Rs 10 at par	Issued 5,00,000 equity shares. The shareholders took up 2,22,117 shares and the balance of 2,77,883 shares are offered to the public.
3. Electro-Equipment Corporation.	-do-	Rs 10 each	Out of the issued capital of Rs 35 lakhs, the shareholders subscribed for 1,00,029 shares and the directors for 78,480 shares. The balance of 1,71,500 shares are offered to the public. The entire public issue has been underwritten by the leading brokers.
4. Modella Woollens.	Offered to public	Rs 10 each	The issue is 3,05,000 equity shares. The entire public issue has been underwritten.
5. KFC Bonds.	-do-	Rs 100 at par	Issued Bonds for Rs 50 lakhs carrying interest at 4½%, redeemable in 12 years.
6. Antifriction Bearings.	Offered to public	Rs 10 each	Out of the total issue of Rs 60 lakhs, the promoters have taken up Rs 22.50 lakhs; foreign collaborators Rs 5 lakhs and the LIC Rs 5 lakhs. The balance of Rs 27.50 lakhs was offered to the public.
7. Kerala Premo-Pipe.	-do-	Rs 1000 at par	Issued Rs 12.50 lakhs in equity shares.
8. Northern India Motor.	Rights Ordinary	Rs 100 at par	Issued additional capital of Rs 2,62,500.
9. Malabar Bank.	Offered to public	Rs 100 at par	Issued capital of Rs 2 lakhs.
10. Martandam Commercial Bank.	-do-	Rs 25 at par	Issued Rs 22,200 in 888 ordinary shares.
11. Chittaranjan Cotton.	-do-	Ord. Rs 10 Pref. Rs 100	Issued Rs 18 lakhs in 1,00,000 equity shares and 6,000 cumulative redeemable preference shares.
12. Indian Overseas Bank.	Rights Ordinary	Rs 100 at par Rs 10 prem.	Issued further capital of Rs 25 lakhs.
13. Seshasayee Industries.	Offered to public	Rs 10 each	Issued 4,00,000 equity shares. The entire issue has been underwritten.
14. Speciality Papers.	-do-	Rs 10 each	Issued Rs 10 lakhs in equity shares. The issue is over-subscribed by two times.
15. R. R. Engineering.	-do-	...	Of the issued capital of Rs 40 lakhs, the promoters have taken up Rs 9 lakhs. Out of the balance, shares to the value of Rs 15 lakhs are offered to public.
16. India Cements.	Rights Ordinary	Rs 5 at par	Issued further capital of Rs 1,25,55,250.
17. Associated Bearing.	Offered to public	Rs 100 at par	Of the issued capital of Rs. 4 crores in equity shares, 60 per cent will be subscribed by the foreign collaborators.
18. W. S. Insulators.	-do-	...	Issued a capital of Rs. 1 crore—Rs. 80 lakhs in equity shares and Rs 20 lakhs in ½ per cent preference shares.
19. Struthers Wells.	-do-	Rs 10 at par	Issued capital of Rs. 1 crore. Shares of the value of Rs. 28 lakhs are issued to foreign collaborators.
20. Ganesh Flour.	Rights Ordinary	Rs 12.50 at a prem. of Re 1	Issued additional capital of Rs. 25 lakhs in equity shares.
21. Sardesai Brothers.	Offered to public	Rs 100 each	Offered 40,000 equity shares. The directors and their friends have taken up 22,500 shares to the public.
22. Film Finance.	Offered to public	Rs 1000 at par	Issued further capital of Rs. 24 lakhs in equity shares. All the shares are taken up by the Central Government.
23. Lepetit Ranbaxy.	Offered to public	Rs 100 each	Issued Rs. 35 lakhs in equity shares to the foreign collaborators and Indian nationals in the ratio of Rs. 50 : 50.
24. Globe Motors.	Offered to public	Rs 100 at par	Issued Rs. 25 lakhs in equity shares.
25. Hindustan Oxygen.	Offered to public	Rs 100 each	Issued Rs. 30 lakhs in equity shares. The actual offer to the public was 19,000 equity shares and the directors have taken up 11,000 shares.
26. Kanoria Chemicals.	Offered to public	Ord. Rs 10 Pref. Rs 100	Issued Rs. 1 crore in 8,00,000 equity shares and 20,000 cumulative redeemable preference shares.
27. Hindustan Machine.	Rights Ordinary	Rs 1000 each	Issued further capital of Rs. 1 crore in equity shares. The Government of India has taken up the entire issue.
28. Eastern Investments.	Rights Ordinary	Rs 100 at a prem. of Rs 10	Issued 25.63 lakhs in equity shares in the ratio of 1 : 2.
29. Victor Gaskets.	Offered to public	Rs 100 each	Issued Rs. 15 lakhs. Out of this, Rs. 9 lakhs are issued to the foreign collaborators and the balance to the Indian nationals.
30. Food Specialties.	Offered to public	Rs 100 each	Issued further capital of Rs. 50 lakhs in equity shares to the foreign collaborators and the Indian nationals in the ratio of 75 : 25.

XB=Ex-Bonus.

tenance imports. Again, the prospects of increasing exports were not too bright, especially when the industries were not given positive incentives for promoting exports. There was again a shortage of funds in view of the lack of support from banks. On the political side too, there was no sign of any improvement in relations with Pakistan, while the Chinese attitude continued to be as aggressive as before. Leading operators were, therefore, inclined to lighten their commitments before making a reappraisal of the investment and economic outlook.

Although the turn of the year presented a cheerful appearance, the mood of caution was in evidence. There was considerable nervousness amongst a section of the operators due to the approach of the conjunction of the eight planets. Moreover, the news that Mr T. T. Krishnamachari had been elected unopposed to the Lok Sabha gave rise to a fear that he might be given the finance portfolio and his return might herald in heavier and fresh tax burdens.

But the market put up a brave front from the commencement of February due to the

quiet passing of the astagraha period with no untoward incidents. Sentiment was also influenced by the flow of encouraging corporate news and the reports of the Government proposal to provide tax relief to the industries engaged in exports. Again, the announcement of bonus or right issues by certain companies led to a feeling that many more companies might hurry up with their bonus issue proposals on the fear that the bonus issue tax might be raised in the new budget.

At the beginning of March, there was a marked hesitancy to go too far ahead in view of the uncertain outlook over the near-term. With the election results announced, the uncertainty about the shape of the coming budget was a cause for worry. When the interim budget was announced, it was freely discussed that a serious attempt would be made to cover as much as possible of the whole deficit of Rs 147 crores. But, on second thoughts, it was felt that the Finance Minister might try to make up the budget deficit mainly from indirect taxation, as direct taxation could not be increased further without hampering the investment climate. As a matter of fact, operators were even in a mood to accept the prospect of a fresh taxation as inescapable whoever became the Finance Minister in the new Cabinet.

Contrary to expectations, the market did not react significantly to the news of the formation of the new Central Cabinet. Operators were pleased with the continuing of Mr Morarji Desai as the Finance Minister; but support to the market, during the month of April, had declined to a trickle. They seemed to be getting anxious more with the proximity of the budget than with the Cabinet formation. For, the proposals to increase fares and freights under the Railway Budget supported their belief that the Central Budget might be stiff. Although the initial reaction to the 1962-63 Budget was an appreciable rise in equity prices, operators were inclined to be less jubilant when they began to make a close scrutiny of the taxation proposals. It was felt that the new proposals, relating to direct and indirect taxes, were far reaching in character.

It was thought that the increased corporation tax would hit companies hard at a time when they needed to plough back resources into the business for expansion and modernisation and when their operations were being hampered by the shortages of transport, power, raw materials and coal. It was also feared that many companies might make a cut in dividends, especially when some of them had already increased their share capital by the issue of right or bonus shares. Again, it was thought that the withdrawal of exemption from wealth tax of the shares of new companies might be reflected in less enthusiastic response to new flotations. The relief in respect of income tax on export earnings was regarded as rather negative in character, as no specific incentive was provided and the Mudaliar Committee's recommendations were not accepted in the real spirit.

It was, however, encouraging to note that the above adverse factors did not prevent the sustained interest being shown in selected shares. In fact, near-buoyant conditions prevailed from the beginning of May when the buying support was extended even to several non-speculative shares—a development which caused some surprise to market observers. On second thoughts, the view was held that industry would be able to take the new tax burden in its stride, as the expansion and diversification of companies, already achieved

Indian Finance

TABLE II—Contd.

Company.	Types of Issue.	Issue Price.	Details of Issue.
64. Jehlum Spinning.	Offered to public	Rs 100 Ord. Rs 100 Pref.	Issued Rs. 35 lakhs in 2,50,000 equity and 10,000 Cum. Preference shares.
65. Parur Central Bank.	Rights Ordinary	Rs 10 at par	Issued capital of Rs. 50,000 in 5,000 shares.
66. Moolankughi Union Bank.	Rights Ordinary	Rs 50 at par	Issued Rs. 67,000 in 1,342 "B" equity shares.
67. Shreenivas Cotton.	Rights Ordinary	At par	Raised the ordinary capital from Rs. 90 lakhs to Rs. 1 crore by a right issue in the ratio of one for every nine shares held.
68. Auto Products.	Rights Ordinary	Rs 10 at par	Issued Rs. 25 lakhs.
69. Andhra Pradesh Mining Corpn.	Rights Ordinary	Rs 1000 at par	Issued Rs. 10 lakhs to the Andhra Pradesh Government.
70. Hindustan Kokoku.	Offered to public	Pref. Rs 100 each	Offered 9,985-9.3 per cent tax-free cumulative preference shares. The issue is underwritten. The actual offer to the public is 5,485 shares.
71. Lodna Colliery.	Offered to public	Rs 10 at a prem. of Rs 7.50	Offered 2,30,000 equity shares.
72. Sardesai Brothers.	Offered to public	Rs 100 each	Offered 40,000 equity shares. The directors and their friends have taken up 22,500 shares and the balance is offered to the public.
73. Chase Bright Steel.	Rights Preference	Rs 10 at par	Issued 1,00,000-9.2/7 per cent Redeemable Cum. Pref. shares in the ratio of 1 : 5.
74. Electrical Instruments.	Offered to public.	Rs 100 each	Out of the issued capital of Rs 35 lakhs, the directors and their friends have taken up Rs 15 lakhs.
75. Synthetics & Chemicals.	Rights Ord.	Rs 100 at a premium of Rs 20	Issued further capital of Rs 1.25 crores divided into 1,25,000 equity shares.
76. Aditya Mills.	Offered to public.	Ord. Rs 10 Pref. Rs 100	Issued Rs 30 lakhs—Rs 25 lakhs in equity shares and Rs 5 lakhs in preference shares.
77. Zenith Lamps.	-do-	Ord. Rs 10 Pref. Rs 10	Out of the issued capital of Rs 25 lakhs (Rs 20 lakhs in Ordinary and Rs 5 lakhs in Preference shares) Rs 10 lakhs were taken up by the directors and their friends.
78. Kanoria Chemicals.	-do-	Ord. Rs 10 Pref. Rs 100	Offered Rs 70 lakhs—Rs 50 lakhs in equity and Rs 20 lakhs in preference shares. The directors and their friends have taken up Rs 30 lakhs in equity shares. The balance was offered to the public.
79. Pyrotenax India.	-do-		Issued Rs 35 lakhs. Of this, Rs 27.50 lakhs was offered to the public.
80. Larsen & Toubro	Rights Ord.	Rs 10 at a premium of Rs 8	Raised Rs 55 lakhs in equity shares.
81. Tanjore Permanent Bank.	-do-	Rs 25 at par Rs 15 called-up	Issued 16,938 equity shares.
82. DENA Bank.	-do-	Rs 50 at a premium of Rs 2	Issued further 1,00,000 equity shares.
83. Jaipur Metals	-do-	Rs 100 at a premium of Rs 15	Issued fresh capital of Rs 25 lakhs.
84. West India Steel.	Offered to public.	Rs 1,000 at par	Issued Rs 10 lakhs in equity shares.
85. Asian Refractories.	-do-	Ord. Rs 10 Pref. Rs 100	Issued Rs 40 lakhs in 3,30,000 equity and 7,000 preference shares.
86. Asiatic Oxygen.	-do-	Rs 10 each	Out of the issue of 15,99,993 equity shares, the public is offered 6,70,000 shares.
87. Jagajit Cotton	Rights Ord.	Rs 10 at a premium of Rs 5	Issued further capital of Rs 41,63,640 in equity shares in the ratio of one for one.
88. Air Control & Chemical.	-do-	Rs 100 at par	Issued Rs 1 crore in equity shares of which Rs 5.50 lakhs is subscribed by two US companies.
89. Mopeds India	Offered to public.		Issued Rs 35 lakhs out of which Rs 2 lakhs has been taken by foreign collaborators.
90. Formica India.	Privately subscribed.	Rs 10	Issued Rs 1.5 crores in equity share at par. Of this, Rs 75 lakhs is offered to the UK collaborators.
91. Geo Salter.		Rs 10	Issued Rs 21 lakhs in equity shares. 50 per cent of this is subscribed by the UK collaborators.
92. Bharat Steel		Ord. Rs 10 Pref. Rs 100	Issued Rs 12 lakhs into 1,00,000 ordinary and 2,000 Cum Pref. shares.
93. New Standard Engineering.	Rights Ord.	Rs 100 at a premium of Rs 20	Issued 23,000 shares in the ratio of one for two shares.
94. Textool Co	-do-	Rs 100 at a premium of Rs 10	Issued Rs 20 lakhs in equity shares of Rs 100 each.
95. Simco Meters.	Offered to public.	Ord. Rs 10 Pref. Rs 100	Out of the equity capital, the public is offered Rs 13,88,000. Out of the preference capital, the public is offered Rs 1,50 lakhs.

107. Special Steels		At par	Issued Rs 20 lakhs.
108. Brakes India	Rights Ord.	Rs 100 at a premium of Rs 5	Raised equity capital of Rs 1.50 crores.
109. Structural Engineering.	Private Issue.	Rs 10 each	Issued 45,000 shares in the ratio of one for one share.
110. Hindustan Gum and Chemical.		Rs 100 at par	Issued Rs 30 lakhs out of which 50 per cent will be subscribed by the foreign collaborators.
111. Central India Spinning.	Rights Ord.	Rs 100 at par	Issued further 46,875 equity shares in the ratio of one for one.
112. Tata Robins-Fraser.	Private Issue.	-do-	Issued Rs 60 lakhs. 49 per cent is subscribed by the collaborators and 51 per cent by the TISCO and ACC.
113. Sikands.		Ord. Rs 10 Pref. Rs 100	Issued capital of Rs 30 lakhs.
114. Hindustan Dowlat Tools.		Rs 1,000	Issued Rs 30 lakhs in 2,50,000 equity and 5,000-9½ per cent cum. pref. shares.
115. Kersons Manufacturing.		Rs 20 at par	Equity shares worth Rs 6.5 lakhs are allotted to the foreign collaborators.
116. India Cycle Mfg. Co.		Rs 100 (Rs 50 to be called-up)	Issuer Rs 15,51,000 in equity shares. Shares worth Rs 12 lakhs are issued to the foreign collaborators.
117. Bank of Karad.		Rs 10 at par	Issued 25,000 equity shares for repayment of loans and for working capital.
118. Assam Sillimanite.	Offered to public.	Ord. Rs 10 at par	Issued Rs 6,50,000.
119. Herdilla Chemicals.		Rs 100 at a premium of Rs 10	Out of the issued capital of Rs 4.40 crores, shares worth Rs 180 lakhs are issued to three non-resident companies.
120. Hukumchand Mills.	Rights Ord.	Rs 100 at a premium of Rs 10	Issued Rs 30,22,500 in equity shares.
121. South Indian Bank.	-do-	Rs 100 at par	Issued a further capital of Rs 9 lakhs.
122. Glass Lined Equipment.		Ord. Rs 10 Pref. Rs 10	Issued 100,000 in equity shares and 20,000-9½ per cent preference shares. Shares worth Rs 2 lakhs are offered to the foreign collaborators.
123. Lakshmi-Reiter Machine.	Offered to public.		Out of the issued equity capital of Rs 250 lakhs, shares not exceeding Rs 18 lakhs are offered to the foreign collaborators. Out of the balance, 10 per cent is subscribed by the promoters and the remaining by the public.
124. Tata Oil.	Rights Ord.	Rs 25 at a premium of Rs 15	Issued 1,40,150 equity shares in the ratio of one for two shares held.

these were ignored. Sentiment was aided by some short-term encouraging factors. These related mainly to hopes of price rises being sanctioned for steel, coal and paper.

The period, beginning from the last week of May to end of the period under review, was, however, a memorable one. This left behind a disastrous period of trading. The unexpected and dramatic slump in Wall Street, closely followed by panic in London and other Continental bourses, had its impact on Indian stock markets as well. Doubts were even expressed in certain quarters, despite official indications to the contrary, whether there would be at all a recovery in Wall Street and whether the pattern of the 1929 events would be repeated.

Although the reaction of the UK and the USA to the proposed purchases of Russian military aircraft and India's strained relations with Pakistan and China over the border questions became matters of great anxiety,

and those contemplated in the near future, were impressive. Another factor contributing to the sudden change in sentiment was a virtual shortage of shares of well-established companies as would be evident from the increasing switch-over of investment activity to the new companies. Again, the changes in the Capital Gains Tax gave rise to a feeling that holders were unlikely to sell away, not only because of the stiff tax they would have to pay, but also because they were unlikely to find suitable shares for replacement buying.

Apart from these uncertainties, sentiment was affected by the postponement of the Washington meeting of the Aid India Club without taking any decision on India's foreign exchange needs. Although efforts were being made to secure stand-by credits for meeting immediate needs, there was concern over the future of the Third Plan itself if the target of foreign aid failed to be achieved. There was also concern over the indications that the ECM countries would not make the necessary adjustments in their negotiations with the UK to permit countries like India to expand their trade on favourable terms. Again, there was a fear that, despite the assurance given to actual users, the output of particular industries, which were dependent to a great extent on imported raw materials, might be affected.

There were also other factors contributing to a cautious attitude adopted by the professional operators as well as investors. It looked as if the market was facing a shortage of funds during the closing weeks of the period under review. While there was a tying up of large sums in a number of new issues, the ground was being prepared by the Government for entering the capital market with its own loan programme. Again, when reports poured in that the revised steel retention prices would not be announced before the middle of August and the size of the increase in paper prices, sanctioned by the Government, was said to have fallen short of expectations, the market succumbed to heavy selling pressure, resulting in most of the top levels, that were reached in the third week of May, being wiped out. It was but natural that the market was in the grip of a weak spell at the close of the period under review.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BOARD OF TRADE

A Programme of Cost Reduction

The Board of Trade is buckling down to its onerous task of exploring the possibilities for boosting our exports of both industrial and agricultural products by eliminating the various impediments that prevent any appreciable performance on the export front and chalking out definite and clearcut policies for individual industries vis-a-vis their export potential. As these spheres remain more or less uncharted it was but natural that the Board's meeting convened in Calcutta last week was addressed to discussions which were of a general nature, though the problems of tea, jute and cotton industries were examined at greater lengths. It is true that the demands and grievances of the industries are many and varied. And to pay immediate attention to all of them all on a sudden will undoubtedly be trying to put the cart before the horse. There was general unanimity of opinion at the Calcutta deliberations in adopting modern methods of production, productivity technique and remedial measures to keep down the cost of production of export goods and extension of rupee finance and the provision of

foreign exchange facilities to the exporters. Certainly the translation of these principles into industrial practices forms one of the fundamental prerequisites for a sound export policy. But there are other factors that await urgent tackling. The difficulties experienced by the industries in securing adequate and uninterrupted supply of raw materials, the non-availability of enough means for transporting them from the source of supply to the manufacturing places, and the transportation of the finished products to the ports, the comparative high level of freight charges and the levies imposed on the industries from time to time at various stages, are problems of a serious nature that the industries are grappling with at present. A realistic approach to all these problems and a practical solution will definitely assist boosting our exports. Even tax concessions of one form or another to such industries will be widely welcomed.

Any approach to the reduction of cost of production must be of a pragmatic nature, which the Board also stressed, and easy implementation by the common run of industry and agriculturist. The decision to set up "committee for studies of cost-reduction programmes" in cooperation with institution like the National Productivity Council, the Tariff Commission and other organisations is praiseworthy. To begin with are listed sugar, cotton textiles, vegetable oil, oil cake, raw cotton, coir manufacturers, pig iron, manganese ore and ferro-manganese though the Committee will have the final option to choose which ever commodities or industries it considers most feasible.

The Board's rejection of the institution of awards like Vanijya Nipuna is not surprising. Nevertheless, the outstanding performance of any merchant-exporter or manufacture exporter will not go unrecognised. A small sub-committee will be constituted which will after meeting the various representatives of the industry, trade and exporters evolve a practical scheme for public recognition of such efforts.

Another important decision which is of far reaching consequence is the one relating to the establishment of an Institute of International Trade at an early date, for training adequate personnel for manning the international trade. "The institute will serve as a co-ordinating point to widen the sphere of applied training in the field of foreign trade

with other schools of economics, business management institutions, universities and educational organisations in the country". Offers of assistance in this task from foreign countries have already been received.

No final decision has been taken with regard to the developing free trade port and free trade zones so far. The Kandla experiment has not been conspicuously successful. There are both advantages and disadvantages inherent in the proposal, and the Board has counselled a probe into the pros and cons of the matter for which a committee has been set up.

TRANSPORT Logic of Comparative Cost

In a recent memorandum submitted in response to a request from the Neogi Committee, the Indian Road Transport Development Association has pleaded for a rational allocation of traffic among the various instruments of transport. Such a rational allocation in the framework of future growth of demand, would according to the memorandum call for a substantial diversion of the long distance originating traffic which is now monopolised by the railways to road transport. But such diversion, the memorandum considers would be in the best interests of the country having regard to the rate of traffic growth in the next twenty years and the comparative costs of developing road and railway transport. On this basis, the IRTDA has suggested proposals for a long term plan for road development embracing the development of not only the National Highways, but also other local and feeder roads which provide the only means of transport for large areas in the country.

The proposals contained in the memorandum are based on the traffic estimates made in the Chief Engineers' Report on the Road Development Plan for India 1961-81. According to these estimates originating traffic likely to require long haulage over long distances at the end of 1980-81 will be 800 million tons while the quantum of feeder and local traffic combined is placed at 596 million tons. At present, the quantum of originating long distance traffic is slightly more than 90 million tons which means that traffic of nearly 710 million tons will be generated in the course of the next 20 years. The possibility of carrying such a large volume of long distance by the railways alone has to be ruled out in view of the limitations of railway transport. On the contrary, there are definite advantages to be reaped by diverting a substantial portion of this transport to road transport. A decisive factor should be the

comparative costs of developing road and railway transport. The estimates made by the Chief Engineers in this connection are revealing. For an originating traffic of about 415 million tons, which is the estimated long distance traffic for roads at the end of 1980-81, total cost of development has been estimated at Rs 1,000 crores which works out to Rs 2.5 crores per million tons of goods. Against this, the Third Plan figures of provision for railway tracks to carry about 91 million tons of extra traffic is about Rs 450 crores which works out to Rs 5 crores per million tons of goods over a period of 5 years. The cost of road transport development on the basis of these estimates works out to only one-half of that entailed in railway development. The case for road transport development to carry an originating traffic of 416 million tons at the end of 1980-81 is fortified by other considerations also. For instance it is stated that when the national highway system is developed to cover 32,000 miles by 1980-81 nearly half of the originating traffic will be able to move about thrice as fast as the railways and that this will enable substantial saving of expenditure that will otherwise be entailed by the need to hold stock and providing for storage for them. Another important consideration is the gain to national exchequer by way of substantially enhanced contribution from road transport. In this connection the memorandum draws attention to the fact that during 1960-61, the contribution to the general revenues after paying interest and other service charges was Rs 19 crores by personal and Rs 42 crores by commercial

Indian Finance

14 July 1962

cial transport against Rs 10.5 crores by railways. Further the memorandum points to the scope for cheapening the cost of road transportation by the use of track-trailers and semi-trailers and to the possibilities of reducing the burden of low-rated traffic on the railways which would be attracted to road transport and which would also enable the Railways to reduce the rates on high-rated traffic.

For developing traffic on the national highways, the IRDTA suggests the formation of a Road Board on the lines of the present Railway Board. The Board as envisaged in the memorandum will be responsible for policy, direction, and control of the construction and maintenance of the national highways, strategic roads and such other roads as may be found necessary for the development of the country, enunciation of the principles of taxation on road transport, coordination of the plans for road development and production of vehicles, promotion of road and road transport research and arrangements for the training of personnel, etc. The memorandum also urges that like the railway finance, road finance should also be separated from the general finance and that there should be a separate budget for road and transport.

On the important question of coordination between road and railway transport, the memorandum expresses the view that this question will be rendered irrelevant if the principle of allocation of traffic on a rational basis, and the public preference therein are accepted. Cases may arise requiring adjustments within the traffic allotted to particular sections of either the rail tracks or the national highways, which can be settled mutually between the Railway and Road Boards both of them being responsible bodies belonging to the Centre.

OIL ROYALTIES Last Phase of Dispute

The dispute between the Assam Government and the Centre over the royalty rate to be paid for the crude oil produced in the State has moved into what probably seems its last phase. For, it has been learnt that the Assam Government had decided to accept arbitration by the Union Finance Minister. This is to be welcomed considering that the dispute has been needlessly prolonged and the country has been paying a heavy price by allowing it to remain unresolved. For, since it joined issue with the Centre on this question, the Assam Government has refused licences to the Assam Oil Company for exploration for oil fields. This was an extreme step having regard to the

top priority which has been accorded to oil exploration programme in the Third Plan and the importance of stepping up internal production of crude oil in the context of growing demand in the country. It has been estimated that for every one million tons of oil imported, the country has to part with foreign exchange of the order of about Rs 7 crores while internal production is able to meet only a small portion of the total demand. Leaving aside the constitutional implications of the dispute, it has been evident that the Assam Government was but taking a narrow view of the loss in revenue that will be suffered by the State without regard to the overall benefits that will accrue from the development of the oil industry. The reduction in the well-head price which led the Assam Government to demand higher royalty was inescapable having regard to the level of posted price in the free market with which the oil price quoted by the Assam Oil Company was far out of alignment. Another reason which prompted the Government to reduce the well head price was the highly capitalised structure of the Barauni refinery which meant that on the basis of the old price level, production costs would have been substantially higher than in the private sector refineries.

Even the loss in revenue from royalty rates on a reduced well head price would have been only temporary in view of the reason that crude oil production is slated for a substantial expansion to a level of nearly 4 million tons at the end of the Third Plan. This would only have meant that the Assam Government would have to forego the additional revenues that it would have secured from royalty rates calculated on the basis of the old well-head prices. This hypothetical loss has been estimated at about Rs 2 crores. But against this there are other important advantages which the State Government had failed to take into account in its calculation of benefits from the development of the oil industry. Most importantly, the investment of the Government of India and the Burma Oil Company in the development of oil in Assam is of a substantial order and the benefits from these investments go entirely to Assam. Further the development of oil and natural gas resources of the State has thrown up fresh opportunities for industrial development. Already a cement plant and another fertiliser plant have been projected for being set up in the State on the basis of utilising the natural gas available in the State. It is also noteworthy that the Oil India at the instance of the Government of India has agreed to sell natural gas to the Assam Government at half of the current field price at Nahorkatiya, a gesture which is in marked contrast with the inflexible stand that

Assam Government has so long taken on the question of royalty rate. On consideration of all these, it becomes indubitably clear that an early settlement of the dispute will be in the best interests of the Assam Government itself. That the Assam Government has plumped for arbitration by the Finance Minister is heartening since the dispute appeared beyond solution by any other means. At one time reference to supreme court was being mentioned as a probable way out, but the Assam Government seemed to have doubts about the competence of the Supreme Court to give a verdict on whether or not the Centre has a constitutional right to fix rates of royalty without the concurrence of the State Government concerned. In this context arbitration seemed the only way out and Mr Desai's award will therefore be awaited with eagerness and relief.

COMPANY LAW The Jenkins Report

The report of the Jenkins Committee which was set up in Britain at the end of 1959 with the purpose of suggesting improvements to British Company Law, was recently released to the public. At the time the Committee was constituted, there was widespread feeling in Britain that the company law as it then obtained left, despite continuous legislative and administrative vigilance, many loop-holes and that this had encouraged undesirable tendencies in the working of the corporate enterprise in that country. The British Aluminium take-over and the Grunwald scandals with which people were genuinely exercised seemed to the public to give substance to their suspicions in respect of the attitude of the company managements to shareholders. Naturally it was to this aspect of the relationship between the company management and shareholders that the Jenkins Committee had to direct most attention.

The Committee in its study of the working of companies in Britain has, however, found no evidence to support the exaggerated fears of the public about the irresponsible behaviour of the managements. On the contrary, it has found that the directors have sought to exercise their powers in the best interests of the company and on matters of fundamental importance after due consultations with shareholders. All the same, it has made three important proposals for making managements more responsible to the shareholders. The first requires that the managements should present fuller account of the company's activities and affairs in the directors' report or chairman's statement.

Secondly, the committee wants the managements to make the disposal of "the whole or substantially the whole" of the assets of a company by its directors subject to the approval of the shareholders in general meeting for new issue of shares, either in the form of a specific consent to a particular issue or by a general mandate. If these proposals of the committee are to be given effect, the position of the shareholders would be considerably strengthened vis-a-vis the powers of company directors.

The Committee has been exercised about the mushroom growth of one-man companies and the abuse of the advantages conferred by incorporation. To serve as checks on such unhealthy tendencies the Committee has proposed an initial registration fee of £25 (instead of the present £2) and an additional annual fee of £5. More importantly it prescribed filing of accounts by all companies and sees no reason for continuing the exemption to private companies. The view of the Committee in this regard is unequivocal. Such disadvantages as may be entailed by filing of accounts should, according to it be accepted because "disclosure is right in principle and necessary to protect those who trade with and extend credit to limited companies". Such disclosure is also considered necessary in respect of turnover with group turnover in group accounts.

For reasons which are somewhat controversial the Committee has thought it fit to exempt banking companies from the requirement to submit accounts in the same manner as other companies. According to the London Economist, there are 107 British and other banks and discount companies that enjoy exemption allowing them "to make undisclosed profits, to conceal their tax charges, to lump reserves, provisions and liabilities together in their balance-sheets, to conceal the market value of their investments, and not to disclose the basis for valuing their fixed assets". It is noteworthy, that on this subject of the treatment of banking companies, a strong note of dissent has been appended by 5 members of the Committee. Insurance companies which have been enjoying exemptions similar to those enjoyed by banks have, however, not been let off in the same manner. The Committee has recommended that the insurance companies should circulate to shareholders the statutory accounts which they have been so far submitting only to the Board of Trade. The insurance companies are also required to give more information in their accounts about income received from different classes of assets, but the Committee favours continuance of the exemption from disclosure of the value of their investments. The case of the ship-

ping companies for exemption from disclosure of information on the ground of possible harmful national effects has been rejected.

The Committee's report also embraces other aspects of corporate working like non-voting shares nominee shareholdings, takeover bids and protection of minorities. In respect of non-voting shares, it is the view of the Committee that companies should give wide publicity through the press and investment circulars to any lack or restriction of voting rights attaching to particular shares. In respect of nominee shareholdings, it has recommended that beneficial owners of 10 per cent or more of the equity capital of a company should be required to notify their interest and that this should be registered by the company. For affording protection to minorities, the Committee recommends extension of section 210 of the Companies Act so that it would cover cases where the affairs of the company are being conducted in

a manner unfairly prejudicial to the interests of some part of the members and not merely in an "oppressive manner". The attitude to take-over bids is refreshingly free from bias and they are not considered prejudicial to interests of economic growth and development.

The report seems to have been well received in commercial and financial circles in Britain. In the opinion of the London Economist "the Jenkins report seems to provide most of what any fair-minded critic of the British company system of law could have expected." Contrary to rather wishful expectations in some quarters, the Committee has resisted the temptation of sweeping restrictive recommendations to meet possible but rare skulduggery. There is much in the report of relevance for Indian Company law practice and administration. A study in detail by Indian students of the subject should prove rewarding.

INCOME-TAX Statistics for 1960-61

The all-India income-tax revenue statistics for 1960-61 compiled by the Central Board of Revenue, brings to light in the usual fashion, the important facts regarding income assessed to tax and the tax collections realised. The most significant part of the statistics is that relating to the group-wise income assessed to tax and the tax payments contributed by these major groups. The statistics for 1960-61 shows some interesting features in this regard. Total income assessed to tax during 1960-61 is shown to have aggregated Rs 1,274.9 crores marking an increase of Rs 83 crores over the previous year. There is a corresponding increase in the total number of income tax payers by 31,004 to 12,73,681. The

major part of the rise in total taxable income was accounted for by business and professional income the relevant share of this group having shown a spectacular rise of Rs 57 crores to Rs 734 crores. The tax assessed on this group was also higher at Rs 203 crores against Rs 188 crores during 1959-60. Within the professional and business income group, the largest income and tax were accounted for by the group commerce, transport and communications, the income and tax assessed thereon being Rs 400 crores and Rs 64 crores respectively. Next in importance come the assesses engaged in processing and manufacturing, the figures of income and tax being Rs 65 crores and Rs 37 crores respectively.

The most noteworthy fact revealed by the latest statistics is the decline in the dividend income received by individual investors during 1960-61. Income from dividends assessed to tax is placed at Rs 63.8 crores and the tax thereon at Rs 30.5 crores. Of this companies accounted for Rs 22.3 crores and individuals Rs 35.3 crores.

Income from salary assessed to tax is shown to have gone up from Rs 272.8 crores to Rs 291.1 crores and the tax demand from Rs 27.4 crores to Rs 29.7 crores. Reflecting this rise in total income from salary assessed to tax is the rise in the number of salary earners assessed to tax to 393,051 from 356,692 in 1959-60.

Facts regarding income from property and the number of assesses are also interesting. The number of assesses having income from property is placed at 228,149, the income earned and the tax thereon being estimated at Rs 37.3 crores and Rs 7.1 crores respectively. The largest share of income from property at Rs 26.1 crores was accounted for by individuals the tax thereon being Rs 3.9 crores. Companies account for the major share of income assessed from interest on securities. The relevant income and tax thereon were Rs 7.9 crores and Rs 5.8 crores respectively. There was an improvement in the income from capital gains assessed to tax and the tax demand to Rs 3.6 crores and Rs 0.8 crore from Rs 2.7 crores and Rs 0.6 crore respectively.

The slight increase in the number of assesses in the top tax bracket can be taken (with caution) as evidence that there has been no aggravation of income concentration. The bulk of the assesses forming about 90 per cent of the total fell in the income category of below Rs 20,000. The tax contribution amounted to 10 per cent of the total. Assesses with income between Rs 20,000 and Rs 50,000 and Rs 50,000 and Rs 1,00,000 accounted for a share of 18 per cent and 12 per cent respectively of the total tax pay-

Indian Finance

14 July 1962

ments. In the highest income-bracket individual assesses having income of more than Rs 5 lakhs numbered 74, while the total number of assesses with income over Rs 5 lakhs stood at 994 accounting for a total tax of Rs 106.6 crores. The number of assesses having an income of over Rs 1 lakh was higher at 7,601 in 1960-61 against 7,116 in the previous year.

IIC

A Fruitful Year

The year ended 31 March 1962 can be looked upon by the Indian Investment Centre as a period of fruitful operations. Thanks to the services rendered by the Centre three proposals from the Indian businessmen for collaboration with foreign firms in establishing co-operative ventures and one proposal from a foreign firm for a joint-undertaking with a local partner have matured. About eight similar cases have reached an advanced stage and other enquiries were given proper attention which were followed up by visits of representatives of prospective investor-corporations who held detailed discussions with the officers of the Centre. Apart from these, the interest generated by the Centre in foreign countries is a creditable performance and there had been a steady flow of enquiries from prospective investors. The number of such enquiries will, no doubt, increase as the industrial structure in India is being rapidly diversified which will throw up new vistas in which the services of consultancy firms for construction and engineering work become essential.

The main function of the Centre is to assist the entrepreneurs, both foreign and Indian, in the formulation of their proposals for new industrial undertakings on a joint basis. The method pursued by the Centre in dealing with the enquiries is simple. After receiving detailed particulars in the form of a check-list sent to the Indian businessmen by the Centre, the project is examined by the technical advisers and foreign experts for assessing the technical soundness and financial viability of a proposal with special emphasis laid on its size, sources of finance and estimates of cost of production and margin of profit. After this process it will be forwarded to foreign countries. The effectiveness of this method is reflected in the ready response from foreign firms in much shorter period.

Another useful purpose of the Centre is the creation of congenial climate for investment in India in the capital-exporting countries and to generate interest among the foreign firms and corporations on the basis of specific investment opportunities. For this the Centre has already prepared some brochures and booklets containing up-to-date and authentic information on the investment climate particularly on specific matters bearing on investment. These and other booklets which are proposed to be made will be available from different banking organisations.

However, as conceded by Mr G. L. Mehta, the Chairman of the Centre, it cannot be credited with spectacular success. The fact that the very existence of the Centre in different parts of the country and abroad is unknown is a pointer to the lack of adequate publicity given to it. The assurance given by the Chairman to establish personal contact with businessmen by meeting various chambers of commerce and to keep constant touch with foreign firms, if properly carried out, can plug this loop hole. Surveys and studies undertaken in co-operation with competent organisations should also be encouraged.

SFC

Enlarged Scope

Even after seven years of working, the Madhya Pradesh Financial Corporation has to lean heavily on State Government subvention to meet its guaranteed dividend to its shareholders. Though during the year ended 31 March 1962, the Corporation had made an increased net profit of Rs 4,11,447.97 as compared with the previous year's net profit of Rs 3,90,532.13, the balance available for meeting dividend was only Rs 1,64,000 as against a sum of Rs 3,50,000 required. The State Government is therefore to give as subvention the balance of Rs 1,86,000. The percentage of subvention to total dividend, however has been sizably reduced in the course of the past few years but the pattern is rather irregular. For in 1959-60, the subvention stood reduced to 35.7 per cent but in the next two years, it has steadily increased to be placed at 53.1 per cent in 1961-62.

It is time the corporation took concerted measures to reduce substantially its dependence on the subsidy from the State Government. It is however gratifying to note that during the past year the work of the Corporation had been markedly speeded up. During 1961-62, 127 applications were received as against 54 in the previous year. With the applications pending from the previous year, the Corporation had to handle 149 applications during 1961-62 involving a loan amount of Rs 2,25,67,000 as against only 72 applications for an amount of Rs 1,19,57,400 in the previous year. Of these 95 applications were disposed of and 72 applications were sanctioned. The corresponding figures for the previous year were 50 and 32.

That the role of the Corporation as an institution providing credit for small and medium scale industries is better appreciated than in previous years is evident from the fact that applications were received from all over the State including rural areas. The loans granted by the Corporation cover a wide range of industries such as textile mills, straw board factories, foundries, re-rolling, cold-storage, manufacture of cycles and cycle parts, roller chains, steel tubes, automobile dynamos, gelatine, plastic cane, rice bran oil, refractories, cement tiles, sanitary pip works, bricks, refined oil etc. Another indication that work is being speeded up is the increase in the disbursements to Rs 33,62,800 from Rs 7,22,500 in the previous year. The activities of the Corporation are likely to increase sizably further in coming years because the minimum limit for loans has been reduced to Rs 10,000 from Rs 20,000 while the margin of security has been reduced from 50 per cent to 40 per cent and to 25 per cent in the case of small scale industries. Yet another step in the direction of affording easy credit facilities to would be entrepreneurs is the step taken to reduce considerably procedural delay. In this regard it is pointed out that a number of applicants have been able to get sanction within three months of the date of their applications. The Corporation has now the added advantage of additional working funds—Rs 55 lakhs were raised in March this year by the issue of 4½ per cent Bonds 1974. State Finance Corporations have a vital role to play in meeting the financial needs of a wide variety of entrepreneurs, both small and medium. They have been empowered now to increase the limit of loans to public limited companies from Rs 10 lakhs to Rs 20 lakhs. The Madhya Pradesh Financial Corporation has a busy time ahead of it as the State Government is taking active steps to foster the growth of industry by affording various concessions to new industrial enterprises.

Good Progress by GSFC

The Gujarat State Financial Corporation is another institution that has been obliged to ask for a subvention from the State Government to meet the guaranteed minimum dividend liability to its shareholders. The net earnings of the Corporation for the year ended March 1962 were Rs 3,13,477.91. Taxation provision absorbs Rs 1,41,273.97 while the allocation to the Special Reserve Fund is Rs 31,151. Thus the balance available for distribution in respect of dividend is Rs 1,41,052.94. But the guaranteed dividend at the rate of 3½ per cent will require Rs 2,62,500. The shortfall of Rs 1,21,447.06 is there-

fore to come from the State Government in the shape of subvention. But considering the fact that the Gujarat State Financial Corporation is comparatively young as it was constituted only two years ago, subvention is perhaps inevitable in the initial years. But it should not be difficult for the Corporation to reduce sizably its dependence on the State Government as its activities have already considerably increased. During the short period of its existence it has afforded financial assistance to a large number of industries to the tune of Rs 53,90,500 by way of actual disbursements of loan under its own rules and Rs 12,52,200 by way of loans disbursed under the provisions of State Aid to Small-scale and Cottage Industries Rules, 1935, as agents of the State Government. Indicative of the fact that delay in processing, sanctioning and disbursement of loans is reduced to the minimum is that in the first quarter of the current accounting year loans amounting to Rs 2,53,000 have been sanctioned and an amount of Rs 12,70,000 has been disbursed.

The expectation that the activities of the Corporation are likely to increase sizably is based on the fact that the area of operations of State Financial Corporations has been enlarged. As has been noted by Mr Amritlal Hargovandas, Chairman of the Gujarat State Financial Corporation, with the amendment of the State Finance Corporation Act, State Finance Corporations have come to occupy a pivotal position in meeting the credit needs of medium and small scale industries. Now these institutions can extend financial assistance to hotel and transport industries as also to some types of industrial estates. While on the one hand these institutions are given liberal facilities for borrowing from the Reserve Bank, they are also enabled to augment their financial resources from market borrowings as well.

US A Letter from Washington

Passage of President Kennedy's trade expansion bill by the House of Representatives calls attention to a significant trend in US economic policy making.

In matters of international concern, there usually is a much closer meeting of the minds between Congress and the executive, and between the two major political parties, than is the case with purely domestic matters. This is particularly true of important trade liberalization proposals, which have commanded wide bipartisan support ever since the adoption of the original Recipro-

cal Trade Agreements Program back in 1934.

The new trade bill, one of the most important administration proposals to be considered by Congress this year, not only passed the House, but did so by a substantial margin. In the process, the House dealt a resounding defeat to a protectionist move that would have substituted for the new bill a simple one-year extension of the old trade agreements act which expired June 30. Most of the tariff-cutting authority in the old legislation has been used up, and it generally is regarded as no longer adequate to meet the world's new trade challenges and opportunities.

The trade measure is still to be taken up by the Senate, of course, and this may be some weeks away. But most observers see the way clear now for final congressional approval of the measure, and in pretty much the same form as it passed the House.

That form is highly significant, as it follows closely the outlines presented in President Kennedy's trade message to Congress last January. The message called for a number of advances in US tariff policy, some of them quite revolutionary in character.

As requested by Mr Kennedy and approved by the House, the measure delegates authority to the President to cut tariffs generally by as much as 50 per cent over a five-year period, with the reductions to be made on broad categories of goods instead of the product-by-product basis incorporated in the old law. In negotiations with the European Common Market, the President would be empowered to cut tariffs even more deeply, and even to eliminate them entirely, on categories of goods where the United States and the Common Market jointly account for 80 per cent of world trade.

Another major provision gives the President authority to eliminate completely all duties set at five per cent or less as of July 1.

The bill still contains modified versions of the troublesome peril point and escape clauses—the former authorizing the Tariff Commission to recommend level below which tariffs should not be cut, the latter permitting tariff rises to help import-affected American industries under extreme hardship conditions. While the House of Representatives incorporated an escape clause somewhat more restrictive than the revised version recommended by Mr Kennedy, it still will be a very difficult procedure for a tariff increase to gain final approval.

Despite the publicity the escape clause has received, moreover, actions consummated under it have been few and far between. And if this is a price to be paid for passage of the entire trade expansion bill, it is a small price.

The effectiveness of these clauses will be further vitiated by inclusion in the bill, for the first time in US history, of other types of Government assistance to American workers and businesses hurt by imports—assistance that is likely to take administrative procedure over tariff increase actions. This assistance specifically eschews resort to trade restriction, and instead concentrates on loans, technical assistance and tax relief for affected companies, and on cash payments and retraining for workers forced out of their jobs by imports.

The Kennedy administration appears well pleased by the House version of the trade bill. House acceptance for the new measure reflects not only a vigorous administration campaign on its behalf, but also able congressional leadership, and widespread public support, including strong endorsements by major business and labour groups.

★ WORLD ECONOMY IN 1961 UN Findings

The World Economic Survey, 1961, published by the United Nations, discloses a general advance in the world production during the year under review, though the "vigour of its upward thrust" was not altogether encouraging. The Survey, prepared by the UN Secretariat in connection with the summer session of the Economic and Social Council, contains a comprehensive review of the industrial growth of the advanced countries of the world, the developing countries and the centrally planned economies and examines broadly the general outlook for the current year.

Analysing the world economic situation in 1961, the Survey deals with the "mixed" economic trends in the various industrial nations. The recovery from the recession in North America which started toward the end of March 1961 failed to provide the requisite fillip for enhancing the throughput for the year as a whole much above the previous year's level. The rate of increase in Japan and Western Europe was substantially at a low level in comparison with that of 1960. Mainly due to the mixed trends obtained in the industrialised countries, the exports of primary producing countries recorded only a nominal increase and the prices of primary commodities underwent a further deterioration.

Though the aggregate production in the centrally planned economies in Europe continued to maintain the uptrend there was a perceptible slackening in the pace of advance. Further, industrial production looked up only at a somewhat lower pace while the performance on the agricultural sphere

was obscured by the adverse impact of unpropitious climatic conditions. In the mainland of China, for example, the agricultural production which had fallen to a low level did not recover to any appreciable extent, and the industrial expansion was ground to a halt on account of the adverse agricultural situation.

The outlook for the current year does not appear to be too promising. Contrary to the earlier calculation of a great spurt in production in the highly industrialised countries, there was actually a downward revision in the estimates. As the Survey indicates, the production in the United States during the first three months of the current year moved up only marginally as compared to the last quarter of 1960. Fixed investments slipped downward in the first quarter of 1961, though there is a prediction of a smart rally in the later months of the year. Furthermore, the rate of growth in Japan and Western Europe will, according to the prevailing trend, remain rather weak due mainly to the slackening in business expenditures on equipment and plant. For the primary producing countries the year will prove to be one of limited expansion on the export front. But the Survey is optimistic of a favourable response to the sustained recovery in the US in the form of larger exports from the primary producing countries of North America, though slight drop in the rate of expansion of exports directed to Western Europe and Japan is predicted.

The Survey has also highlighted the significance of accelerating the industrial tempo in the developing nations whose low per capita incomes place them at a distinctly disadvantageous position from the industrially advanced countries of the globe. Only a speedy narrowing of the yawning gap can assist them to diversify their economies. As rightly pointed out in the Survey, concerted attention should be paid for increasing the indigenous supply of capital goods which are prerequisites for improving the level of manufacturing investment.

★ PATENTS Poor Indian Show

The number of applications for patent received by the Patent Office increased to 5289 in 1961 from 4503 in 1960. There has been a steady increase in the number of patent applications in the past few years. The uptrend is unbroken since 1954 when applications totalled 2497. A large proportion of the total is however made up by applications made by foreigners. Of the 1961 total of 5289, as many as 4515 applications

have been made by foreigners, 68 by residents other than Indian and 706 by Indians.

As is to be expected, there is a strong connection between applications for patent and the industrially advanced regions in the country. For the States of Maharashtra and West Bengal together contributed more than 57 per cent of the indigenous applications. For out of the 774 applications originating from India, as many as 262 were contributed by Maharashtra while West Bengal had to its credit 181. The Third in the list Delhi contributed only 87. The next nine places were taken by Uttar Pradesh, Madras, Gujarat, Mysore, Punjab, Kerala, Bihar, Andhra Pradesh which have respectively contributed 44, 43, 33, 24, 23, 19, 17 and 10 applications. As compared with the previous year, there was an appreciable increase in the number of applications originating from India. Patent application from Indian have sizably increased over the past few years. There were only 266 applications in 1946 but in the next five years, the number steadily increased till it reached 472 in 1952. In next three years there had been setback as the number fell to 403 in 1955. The uptrend was resumed from 1956 till the number reached 671 in 1959. There was again a setback in 1960 with the total number reduced to 663 but in 1961 the number of applications increased to 706.

Although the inventions forming the subjects of the patent applications covered almost all fields of industry and technology, chemical industries again contributed the largest number of applications. Next to chemical industries, mechanical engineering industries accounted for the largest number of inventions. But a very larger proportion of these originated from abroad. An appreciable number of applications related to inventions pertaining to textile fibre treating, spinning and weaving machinery and processes and sewing machines and knitting machines as also to inventions relating to preparations of various types of antibiotic medical preparations, vaccines, and insecticides and fungicidal compositions. In the second category of inventions Indian inventors showed conspicuous interest. Indian inventors' contribution in respect of miscellaneous articles which was quite appreciable, was largely confined to inventions relating to footwear, bottles, boxes, clocks, cutlery, furniture, games, toys, stoppers for containers, and locks.

It is not surprising that the number of applications for patents from Indians is small compared to the total number of applications. For, incentive for invention is to come from a ready demand for patents. This is possible only when there is intense industrial activity in the country.

Indian Finance

14 July 1962

THE DESAI AWARD

Summary of Recommendation

A national industrial tribunal with Mr. K. T. Desai, Chief Justice of the Gujarat High Court, was set up in March, 1960, to adjudicate the dispute between banks and their workmen. Twenty-two issues concerning 84 banks were referred for adjudication to the tribunal. The 84 banks include the State Bank of India and its subsidiaries. The following is a summary of the principal recommendations.

THREE CLASSES OF BANKS

While the Sastri Tribunal classified the banks into four categories according to their working funds the Desai tribunal, on the same basis, has classified them into three classes.

Class A banks are those with working funds amounting to Rs 25 crores and above and all exchange banks. Class B banks are those with working funds amounting to Rs 7.5 crores and above but less than Rs 25 crores. Class C banks are those with working funds below Rs 7.5 crores. The Desai tribunal has placed six banks under what is called the "excepted list" for whom separate scales of pay have been recommended as it is felt that they cannot pay the scales recommended for Class C banks.

Twenty-three banks, come under Class A. Thirteen banks come under Class B. Twenty-six banks come under Class C.

Six small banks are placed under the excepted list.

The demand of the workmen for putting the State Bank in a separate class has been rejected by the tribunal.

THREE CLASSES OF AREAS

Under the award, the country has been classified into three areas, and scales of pay have been recommended according to the class of bank and the area.

Under the award, "Area I" comprises (1) the city of Bombay, including Greater Bombay, (2) the city of Calcutta, including Howrah, Barrackpore, Behala, Alipore, Cossipore, Garden Reach, Baranagore, Kaliganj, the south suburban municipal area and Dum Dum, (3) the city of Delhi, including New and Old Delhi and Delhi Shahdara, (4) the city of Madras, (5) the city of Ahmedabad, (6) the city of Hyderabad, comprising areas falling within the Hyderabad municipal limits, Secunderabad and the outlying urban units, (7) Bangalore, comprising areas within the Bangalore Corporation limits, the area notified under the Bangalore City Improvement Trust Board Act, excluding satellite towns and townships, (8) Kalyan, (9) Thana, (10) Uttar Para and all places having a population of more than 12 lakhs.

"Area II" comprises all cities other than those included in Area I which have a population of one lakh or more, and Bhivandi, Channagore, Chandigarh, Chinsurah, Cochin, Dombivli, Ferozepore, Kakinada, Nasik, Pimpri, Pondicherry, Rajpur, Shillong, Tirunelveli and Tuticorin.

"Area III" comprises all places not included in I and II.

For the purpose of the classification of areas, the tribunal has directed that the latest available all-India census figures should be taken into account. Until the final population figures of the 1961 census are available, provisional figures as finally published are to be adopted.

The Desai tribunal has abolished the Class IV area created by the Government. Justifying the abolition, the award says that the inducement offered by the creation of Area IV and the lower scales of pay fixed for workmen in this area have not resulted in providing any appreciable incentives to the commercial banks in opening branches in such area.

The tribunal has, however, observed that the change consequent on the abolition of Area IV should be gradual.

PAY STRUCTURE

While recommending higher scales of pay for bankmen, the award says that the future of banking and of banks except a few smaller units is bright and that the banks should be able to bear the additional burden.

Under the award, the minimum basic salary of a bankman employed in "A" class bank in Area I will be increased from Rs. 85 to Rs. 140. The maximum for the same employee has been increased from Rs. 280 to Rs. 405.

The tribunal has also recommended a formula by which bankmen should be fitted into the new scales.

The following are the new scales of pay recommended for workmen other than those belonging to the subordinate staff, with reference to the base year 1949:

"A" CLASS BANKS

Area I: Rs. 140—6—182—11—281—13—307—15—322—E.B.—15—337—16—369—18—405.
Area II: Rs. 130—5—140—6—182—11—281—13—294—E.B.—13—307—15—337—16—369.
Area III: Rs. 120—5—140—6—182—11—270—E.B.—11—281—13—307—15—337.

"B" CLASS BANKS

Area I: Rs. 130—5—140—6—182—11—281—13—294—E.B.—13—307—15—337—16—369.
Area II: Rs. 120—5—140—6—182—11—279—E.B.—11—281—13—307—15—337.
Area III: Rs. 112—4—120—5—140—6—182—11—226—E.B.—11—281.

140—6—182—11—248—E. B.—11—281—13—307.

"C" CLASS BANKS

Banks in the excepted list are excluded.

Area I: Rs. 120—5—140—6—182—11—270—E.B.—11—281—13—307—15—337.
Area II: Rs. 112—4—120—5—140—6—182—11—248—E.B.—11—281—13—307.
Area III: Rs. 104—4—120—5—140—6—182—11—226—E.B.—11—281.

(The combined running scale will, therefore, be as follows: Rs. 104—108—112—116—120—125—130—135—140—146—152—158—164—170—176—182—193—204—215—226—237—248—259—270—281—294—307—322—337—353—369—387—405.)

BANKS IN THE EXCEPTED LIST

Area I: Rs. 96—4—120—5—140—6—182—11—204—E.B.—11—259.
Area II: Rs. 88—4—120—5—140—6—182—E.B.—11—237.
Area III: Rs. 80—4—120—5—140—6—170—E.B.—6—182—11—215.

The following are the pay scales for members of the subordinate staff with reference to the base year 1949:

"A" CLASS BANKS

Area I: Rs. 86—1—105—E.B.—1—108—2—112.
Area II: Rs. 80—2—86—1—102—E.B.—1—107.
Area III: Rs. 74—2—86—1—99—E.B.—1—104.

Valuable Protection for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

STATE BANK OF INDIA INDIA'S LEADING BANK

Area II: Rs. 74—2—86—1—99—
—E. B.—1—104.

Area III: Rs. 68—2—86—1—96—
—E. B.—1—101.

"C" CLASS BANKS

Banks in the excepted list are excluded.

Area I: Rs. 74—2—86—1—99—
—E. B.—1—104.

Area II: Rs. 68—2—86—1—96—
—E. B.—1—101.

Area III: Rs. 62—2—86—1—93—
—E. B.—1—98.

(The combined running scale will, therefore, be as follows: Rs. 62—64—66—68 — 70—72—74—76 — 78—80—82 — 84—86 — 87—88 — 89—90—91 — 92—93 — 94—95 — 96—97—98—99 — 100—101—102 — 103—104—105 — 106—107—108 — 110—112.)

Area I: Rs. 50—1—69—E.B.—
1—74.

Area II: Rs. 46—2—50—1—67—
—E. B.—1—72.

Area III: Rs. 42—2—50—1—65—
—E. B.—1—70.

As regards the objection of the banks to the merger of any part of the dearness allowance with the basic pay on the ground of the increase in the burden in regard to provident fund and gratuity, the tribunal has stated that this can be met by suitable provisions which may prevent increases therein except to the extent intended (actually, the tribunal has made suitable provisions in connection with issues relating to gratuity, provident fund and pension).

APPRENTICES EXCLUDED

The scales of pay provided by the award are not applicable to apprentices. But they will be applicable to probationers.

The tribunal has rejected the demand of the employees that separate scales of pay should be fixed for those doing supervisory work. However, it has fixed special allowances for employees doing supervisory duties as was done by the Sastri tribunal after applying to them the scales of pay provided for the clerical staff. It has increased the special allowance for different classes of banks.

For supervisors, superintendents, sub-accountants, accountants and men in charge of departments the allowance has been increased in the case of A class banks from Rs. 50 to Rs. 65 in the case of B class banks from Rs. 45 to Rs. 60, and in the case of C class banks from Rs. 40 to Rs. 55.

SPERVISORY ALLOWANCE

In deciding whether a workman is entitled to supervisory allowance, the designation of the "workman" would not be decisive, but the nature of duties and functions assigned to him would determine whether he would be entitled to a special allowance. The banks have been given dis-

cretion to give higher allowances or separate grades for supervisory staff if they so desire.

The tribunal has also enhanced to a certain extent the special allowances payable at present to the clerical staff. Special allowances have also been provided for certain new categories of employees such as compositors, pressmen in the State Bank of India, cyclo-style machine operators, hundi presenters etc.

For the purposes of fitting the employees in the new scales of pay which will come into operation on January 1, 1962, the tribunal has classified the employees into two groups: (1) consisting of workmen who were drawing pay on 1-1-62, according to the scales of pay provided by the Sastri award, and (2) consisting of working who, on 1-1-62, were employed in banks not governed by the Sastri award and were not drawing pay on the footing of scales of pay provided in the Sastri award.

FIRST GROUP—FITMENT

So far as the persons falling in the first group are concerned, the tribunal has directed that the employees should be fitted in the new scales of pay from 1-1-62 on a stage-to-stage basis, that is, a workman who was drawing a basic pay at a particular stage in the time scales provided by the Sastri award will draw at the same stage in the new scale applicable to him under this award. Whatever may be the stage which he may have reached in the existing scale in the Sastri award as on 1-1-62 will be the stage in the new scale of pay in which he will be fitted.

For instance, a clerk employed in a "A" class bank in area I who was entitled on 1-1-62 to a basic pay of Rs. 140, which is at the tenth stage of the existing scale of pay, will be entitled on 1-1-62 to a basic pay of Rs. 204 which is at the tenth stage in the new scale of pay applicable to him. Increments in the new scale will generally fall due on the same date on which the increment would have fallen due in the existing scale.

SECOND GROUP—FITMENT

As regards employees falling under the second group, that is, those who are not governed by the provisions of the Sastri award they will, on 1-1-62, be first fitted in the appropriate scales of pay provided under the Sastri award for the appropriate class and area. After the employees have been so fitted notionally, they will again be refitted into the new scale of pay provided in this award on the basis of the provisions applicable to workmen in the first group. For the purpose of fitting these workmen into the scale of pay under the Sastri award, the tribunal has given directions similar to those given by the Sastri award with certain changes.

As a result of the adjustment as given in the award, if the total

emoluments (basic pay, D.A., special allowance and house rent allowance) fall short of the total emoluments as on 1-1-62, the difference shall be given by way of an additional allowance to be called the temporary adjustment allowance until such time the difference is fully absorbed by future increments in the new scale of pay.

For the purpose of making the requisite adjustment for making payments, the banks have been given a maximum period of five months' time from the date the award becomes enforceable.

"D" CLASS BECOMES "C" CLASS

Banks now classified as "D" class will become "C" class as from 1-1-62 except those put under the "excepted list."

With the abolition of Area IV, the tribunal says there would be a sudden rise in the burden which the banks in this area would have to bear under the award. To lighten the burden, the tribunal has recommended that the new scales should be implemented gradually. It considers that the relief it has provided will be an incentive for banks to open branches in Area IV within the Third Plan period.

A special concession has also been given to certain banks in the old "D" category. The increase in total emoluments to the employees of these banks will be paid on a gradual basis.

The final index figures as published in The Indian Labour Journal should be the basis for calculating the new D.A.

The tribunal has also recommended slightly higher house rent allowances.

Under the Sastri award in Calcutta and Bombay an employee whose pay does not exceed Rs 100 gets Rs 8 as house rent allowance. Under the present award, an employee whose pay does not exceed Rs 150 per month in Bombay, Calcutta and Delhi will get Rs 12 as house rent allowance.

The subordinate staff will also get house rent allowance.

The tribunal has rejected the demand for children allowance, city compensatory and local allowances. However, in the case of employees of "A" class banks, it has recommended leave fare concession once in three years. Such employees should be paid the actual railway fare or steamer fare incurred by him for himself and members of his family up to a distance of 800 kilometres.

LIBERAL GRATUITY BENEFITS

The award recommends liberalised gratuity benefits.

Under the award, gratuity will become payable on the death of an employee while in the service of the bank—on an employee becoming physically or mentally in-

capable of further service or on his termination of service by the employer—on voluntary retirement or resignation after ten years of continuous service, the amount of gratuity in "A" class banks shall be equal to one month's pay for each year of service subject to a maximum of 15 months' pay. In the case of "B" and "C" class banks, including the banks in the excepted list, the maximum is 12 months' and nine months' pay respectively. In the case of workmen, who have put in over 30 years of service, an extra amount by way of additional gratuity at the rate of a half month's pay for each completed year of service beyond 30 years will become payable.

For the purpose of calculation of gratuity, basic pay for all classes of banks, except banks in excepted list, shall be deemed to be 80 per cent. of that provided under the award for the clerical staff and 75 per cent. for the subordinate staff.

PENSION SCHEME

Where there is a pension scheme in existence already, the employees will have to choose between gratuity under this award and banks' pension scheme unless any bank desires to give the benefit of both to a workman.

The leave rules have been slightly liberalised, particularly in respect of sick leave and extraordinary leave.

There is no material change in the hours of work.

For the subordinate staff, the tribunal has directed that at least two sets of cotton uniform should be supplied by banks every year and one set of woollen uniform once in three years.

RETIREMENT AGE, 58

The age of retirement has been fixed at 58.

The tribunal has given option to the employees to retain the present terms and conditions of service if they find the award is unfavourable, but the tribunal opines that the award is, by and large, very favourable to bank employees. It has directed that all employees in banks on the date when this award becomes enforceable will have the right to exercise option in respect of matters set out in each of the following groups within four months from the said date:—

(1) The scales of pay, D.A., the special allowance, the house rent allowance, the officiating allowance, the hill allowance, the fuel allowance, and the P.F., (2) leave rules, and (3) gratuity and pension. On failure to exercise the option in respect of any group of matters within the specified time, the employees would be deemed to have chosen the totality of the provisions contained in this award in connection with such groups of matters.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

BEFORE Mr P. C. Sen's election as the leader of the Congress Legislative Party in West Bengal, many took time off their grief at Dr Roy's passing away to speculate how the pulls within the party will decide the question of Dr Roy's successor. The nature of such intra-party stresses was not exactly a secret even during Dr Roy's time, but Mr Sen's election has confounded some rash prophecies. To succeed Dr Roy has its challenges, but by all accounts Mr Sen has the equipment to face them. He is also entitled on his own right to the confidence and affection of his people. I have seen snide suggestions that West Bengal's case will have a less ready ear in New Delhi now that Dr Roy's authoritative voice has been stilled. These are unfair. Both to the Centre and Mr Sen, in any event, Mr Sen has real problems nearer home more clamant for his attention than imaginary ones at Delhi. Calcutta has to be saved from its Corporation, a task that even Dr Roy handled gingerly. Dandakaranya is to be freed from legendary demons so that more displaced persons may go there more readily. Food is giving some uneasy signs of turning into a difficult problem but then it has been Mr Sen's speciality for a long time now. Much goodwill accompanies Mr P. C. Sen's assumption of office as the Chief Minister of West Bengal. With party loyalty assured, he should be able to continue Dr Roy's good work. And here is wishing more power to his elbow.

One must be extraordinarily naive to imagine that everything is lovely in the Kerala garden now that Mr Lal Bahadur Shastri has had "ninety per cent" success in salvaging the coalition. In political marriages of convenience, it is not necessarily grotesque to talk of ninety per cent fidelity. It is something that congressmen who were till two days ago openly clamouring for divorce should now have agreed to try again to make a go of it. But even so unflappable a marriage counsellor as Mr Shastri had to confess that all that he can claim to have done is to have "eased the situation" for the present. Mr Shastri is, as we all know, a much canner trouble-shooter than what the obviously padded version of his efforts would suggest and he must have good

reasons (from his, his party's and even his country's point of view) for asking for the continuation of the uneasy partnership. Mr Shastri has made sundry suggestions for the immediate future. One of them is that ministers should show less celerity in rushing to the press with statements about their colleagues. This is an advice that, apart from its immediate relevance, the ministers will do well to take to heart. Another is the creation of a Board to advise the ministers, a suggestion that Shastri himself considered "not very germane to the issue", as well he might. God knows what this Board will advise the government about and in any case lack of advice is not one of the coalition's embarrassments. Where Mr Shastri's statement touches the core of the problem, it is tersely reticent. For example, Mr Shastri mentions that he discussed with the Chief Minister the reallocation of certain portfolios but he does not elaborate. It is probable that more time was spent on this than on the "brains trust" idea which probably was agreed to eagerly and even impatiently, (though, as a source of patronage, a committee is nothing to be sniffed at.) How long this patched-up coalition will last is anybody's guess especially when the Congress itself is riven by factions. (These too, under the benign eyes of Mr Shastri have kissed and made up, at least for the present.) After all, if Mr Shastri and Mannath Padmanabhan want the coalition to continue, nothing that lesser men in Kerala want has much chance of upsetting it. Meantime the problems about which Mr Shastri expressed decorous concern, caste-politics and corruption continue. It is barely possible that the squabbling politicians may now have a moment to spare to think of these. If this is too much to ask, they may at least recall the provisions in the Constitution about quinquennial elections.

The rather predicatable reaction to the "Prayer Ruling" of the US Supreme Court from Alabama—"They put the Negroes in schools and now they have driven God out"—is a disingenuous attempt to settle old scores with an old enemy. The facts of the case are simple. The New York State prescribed a particular prayer to be said by teachers and

pupils every day before lessons began in all the public schools in the State. It was admittedly non-denominational and involved no dogma other than faith in "Almighty God". The prayer was not compulsory and parents could even keep their children away from it if they wished. Even so, the Court found that the prescription of an officially drafted prayer as part of the school routine offended the first amendment to the Constitution which says that "Congress shall make no law respecting the establishment of a religion..." The most important word is "establishment" and has given trouble in the past. From the short judicial history the New York Times has given, I find that the same issue arose in a sharper form in a New Jersey case in which reading verses from the Bible in public schools was challenged. But the case was dismissed on procedural grounds. The present decision holds that a prayer officially sponsored and imposed on the public schools constitutes "religious activity" and amounts to the "establishment" of religion by a Government. It is therefore perfectly clear that if the prayer had not been written and officially imposed by the State, the court would have found no ground for interference. If, for example, a student were to write a non-denominational prayer, there should apparently be no objection to its being recited. In other words, far from presuming to drive God from schools, all that the majority judgment has held is that hymn-writing is no part of the Government's proper business or as Justice Black put it, "Government must stay out of the business of writing and sanctioning official prayers".

But, though lawyers may be loath to cross legal bridges until they come to them, others may worry. For instance, if Mr Justice Douglas is right, many a hallowed US institution may conceivably face judicial challenge. Unlike India, where secularism was an expedient of the politics from which the republic was born, the United States has a lively religious streak. God is rarely absent in US documents of State and never far away from any formal occasion or act. Though the Constitution itself does not mention God, the Declaration of Independence invokes the "Laws of Nature" and (rather equivocally) "Nature's God" in asserting equality among the nations of the world. It is even more forthright about equality among men and their inalienable rights being conferred by a "Creator". The Virginia Statute of Religious Liberty makes no

bones about "Almighty God having created the mind free." All formal occasions from the installation of the President, to the daily session of the Congress and the Supreme Court invoke God. What is the constitutional validity of such acts of piety? Some distinction was sought to be made between such formal and ceremonial invocation of God and the school prayers by saying that there was an element of coercion in the latter. Mr Justice Douglas rejected this categorically. He said, "It is said that the element of coercion is inherent in the giving of this prayer. If that is true here, it is also true of the prayer with which this court is convened and those that open the Congress." (This point was neatly hit off in the cartoon in which a wide-eyed boy listening to the marshall of the Court invoking God at the commencement of proceedings tells his mother: "But mommy, isn't that unconstitutional?") Militant atheism is sure to get ideas from Mr Justice Douglas' asides.

Bangalore is a city I love and it saddens my heart to see its great cosmopolitan tradition being tarnished by sundry acts of linguistic intolerance by its citizenry. Some time ago, an unruly crowd made it impossible for Srimathi M. S. Subbalakshmi to continue with her concert in Bangalore, on the alleged ground that it wanted to encourage only Kannadigas. The loss was certainly not hers. Tamil and Telugu films (and films from these regions dubbed in Kannada) have also been targets of destructive fury. These gestures have probably economic overtones though this circumstance does not extenuate the incendiary manifestations. More recently a mob is reported to have truculently asked for the withdrawal of an award-winning English film to the accompaniment of imprecations on the English language. A window or two were broken before the police intervened. But the most outrageous instance is that recently quoted by Mysindia. A musician was asked (by a letter in English) to call at the Bangalore studios of All India Radio for an audition. When he arrived and met the clerk at the reception desk, he was asked a question in Kannada to which he, not knowing Kannada, replied in Tamil. The clerk who knew English, Tamil and Kannada refused to deal with the artist except in Kannada on the ground that none who didn't know Kannada had any business at the Bangalore station of AIR. I know it is not fair to blame the AIR for the presumptuousness of a petty jack-in-office but I do hope that the (presumably) young fool will be taught some sense and civility in not too painful a way. For he is probably only a deluded victim of others who deserve to be visited more harshly, but who, alas, won't.

(From Our New Delhi Correspondent)

PLAN PROSPECTS SOGGY

IN the course of an informal talk with reporters last week, Mr Guizari-lal Nanda, Deputy Chairman of the Planning Commission, made a reassuring assessment of Third Plan prospects. If the shortfalls in achievement during the first year, to which he had himself drawn pointed attention at his first meeting with members of the Informal Consultative Committee of Parliament, are viewed in perspective, i.e. will be seen that there will be no justification for alarm, or for panicky demands for pruning of plan targets. The rate of growth of the economy is determined by the planned level of investment and the quantum of investment is not equally distributed over the five years of the Plan. During the first year, the investment starts at a low level and increases progressively in subsequent years. During 1961-62, the investment amounted to only about 14 per cent of the total envisaged for the Plan. Mr Nanda also pointed out that shortfalls of the Second Plan, especially in regard to power, coal and transport, continued to cast their shadow during last year, but he added these were being rapidly made good. The main reason for the small increase in national income-3.5 per cent according to provisional estimates—he explained, was the stagnation in agricultural production. The estimate of the total output of food grains shows only a marginal increase over the previous year. More serious is the shortfall in cotton production. The slow growth of agricultural production points to the need for a comprehensive review of agricultural programmes and the adoption of measures which are practicable in relation to available resources and limitations. The shortage of chemical fertilisers, which has been widely discussed, should not be allowed to paralyse efforts to push through programmes for increasing output which are both effective and inexpensive. Attention may be drawn in this context to the results of experiments conducted at the Central Rice Research Institute, Cuttack, on the utility of green manures in building up the fertility of the soil with or without chemical fertilisers. Another problem that claims immediate attention in the context of efforts to increase agricultural output is that of waterlogging in the Punjab.

Water Logging in Punjab

It has been estimated that the area affected by waterlogging in the Punjab has increased over the two

plan periods from 8 lakh acres to over 3.2 million acres. With the development of canal irrigation there has been a steady rise in the water table in areas irrigated under most of the canals and, in recent years, the rise has been more rapid. Adoption of effective measures to deal with water-logging can make a powerful impact on agricultural output, especially of long staple cotton which is now very much in short supply.

Punjab is an important cotton growing State, and with its large irrigated area is eminently fitted to raise long staple varieties. The Third Plan target for cotton production in the State has been set at 1.2 million bales. But recent trends, both in regard to total production and the proportion of long stapled American cotton and the short stapled Desi variety, is disquieting. According to the trade estimates, the total production of cotton had declined from 791,000 bales in 1957-58 to 555,000 bales in 1960-61. During the same period production of American cotton had declined from 554,000 bales to 293,000 bales in 1960-61. Even according to official estimates, production of cotton, and particularly of long-stapled varieties, in the last year of the Second Plan was well below the level reached in 1956-57.

The total production in that year was 800,000 bales consisting of 620,000 bales American and 180,000 bales Desi. In 1960-61 the total output had declined to 788,000 bales made up of 461,000 bales American and 327,000 bales Desi. There is evidently steady trend for the replacement of long stapled varieties by the short stapled Desi variety. This is attributed to the rapid extension of the area affected by water-logging, for the Desi cotton is able to withstand adverse soil conditions better than American cotton.

The problem of waterlogging has been under study since 1955 when the State Government set up an 'Action Committee'. Based on the recommendations of this Committee, two Master Plans have been drawn up. The first of these is for improving surface drainage through construction of channels and embankments at a cost of Rs 28.44 crores. The second and more costly one is a Rs 61-crore project for lining 1260 miles of canals and distributaries, installation of 5000 pumpsets in as many shallow wells and construction of 5000 miles of seepage drains. Both the schemes have been approved. But according to experts who have studied the subject, it is doubtful if these measures would provide an effective remedy. Surface drains may help to drain storm water accumulations, but their utility as an anti-waterlogging measure is limited by the

clayey texture of the soil. The top crust in a large part of the affected tract, up to a depth of ten to twelve feet, consists of heavy soils which will not be dug to the aquifer lying immediately below the clay and this will be a far more costly undertaking. The project for lining the canals and pumping out water from the fields from shallow wells appears to be even less effective. Lining may reduce seepage from the canals, but cannot prevent seepage from the much larger area of irrigated land. Pumping will be very expensive and may have to be continued indefinitely. Moreover it may not effect any improvement unless the water is led out through lined canals outside the affected region.

Mr. M. S. Sivaraman

It is however learnt that an easy and relatively inexpensive method for dewatering the waterlogged areas has been suggested in a report to the Planning Commission prepared by Mr M. S. Sivaraman, ICS, Adviser (Programme Administration). This Plan is based on the peculiar topography of the region. Observations made by the Irrigation Research Institute, Amritsar, indicate the existence of a continuous sub-sol obstruction approximately running from Fazilka to Faridkot and, thereafter, in a southeasterly direction to Rohtak. The waterlogged area lies to the north and northeast to this ridge, while to the south and southeast there is an extensive dry area in need of water for irrigation. The water table at places immediately north of the ridge is less than five feet from the surface, while within a distance of five miles on the other side of the ridge, it drops eighty feet from the ground. It has been suggested that if a number of drains are dug on the northern side of the ridge down to the sandy aquifer and continued across the ridge for a few furlongs, the water from the waterlogged areas would flow continuously to the areas in the south to the benefit of agriculture in this dry region. According to Mr Sivaraman, the construction of these drains should not cost more than a few lakhs of rupees.

It has also been suggested that soaking pits—an adaptation of the percolation well at Sultanpur devised by Mr M. A. T. Iyengar, ICS—dug in the shallow surface drains of even five feet depth, and going down to the aquifer may help to dewater the area, provided there is sufficient hydraulic pressure in the top crust which allows the water level to rise within five feet of the ground.

According to Mr Sivaraman there is also the possibility of dewatering the upper strata by vertical drainage to the drier strata below. It appears that waterlogging is the result of the existence of some impermeable strata below the levels to which tubewells have been dug so far. Exploratory borings may help to locate the impermeable strata, and if they also indicate the existence of relatively dry strata below, which can absorb the accumulated water from the upper layers, it may be possible to dewater the upper strata cheaply

and effectively by piercing the impermeable layer at a number of places. The feasibility of vertical drainage, however, will have to be established by further investigations.

Development of Rural Industries

The scheme for the development of rural industries drawn up by the Rural Industries Planning Committee will be considered at a conference of the Planning Commission and the representatives of State Governments which will be held in New Delhi on July 21 and 22. The scheme, which is to be taken up immediately, also at the intensive development of all kinds of small industries as well as processing industries based on agriculture. The Committee in its report had recommended that projects for development of small industries should be taken up in selected rural areas so that they may illustrate how different kinds of industries could be best integrated and varying levels of techniques developed together in the overall interest of the economy of the selected areas. In the first series such projects are proposed to be taken up in 40 selected areas. It is envisaged that each selected area in the first series should have a population of three to four lakhs consisting of complete development blocks, all of which should be situated within the same district. While the plans will be prepared for the selected area as a whole for implementing the schemes and preparing proposals, the block will serve as the effective unit. For subsequent series the possibility of covering an entire district will be kept in view.

In a communication to the State Chief Ministers, the Planning Commission have held out the assurance that additional funds would be provided by the Central Government to the extent of Rs 15 crores which would be over and above Central assistance for the State Plans. In addition to the funds available from the State plans and the all-India Boards according to their respective programmes for each selected area and loans credits from financial and co-operative institutions and under the State Aid to Industries Act, as a nucleus to start with, an assured minimum provision of Rs 20 lakhs will be given for each selected area to cover the four-year period 1962-66 over and above the present allocation under the Third Plan. Further provision will also be made according to need. The extra provision for the nucleus fund will work out to Rs 8 crores for the 40 selected areas in the first series. In addition there will be a Contingent Fund of Rs 7 crores. The provision for the current year (1962-63) will be Rs 1 crore.

The States have been informed that the projects are to be implemented as part of a wider and well-co-ordinated plan of area or regional development, providing for an all round development of agriculture, irrigation, communications, industries, social services, etc. Depending on its readiness to initiate this programme and to ensure the necessary conditions for effective implementation, each State can take up two to

14 July 1962

four projects during the current year. Additional projects are proposed to be taken up in the subsequent years of the Plan.

For providing continuous guidance in the implementation of the programme, the Rural Industries Planning Committee of the Planning Commission has set up a standing committee with Mr Anna Saheb Sahasrabudhe as Chairman and Mr J. P. Narain and representatives of All-India Boards and the Ministries concerned, as members. It is also proposed that in each State the Chief Minister may set up a high level committee for rural industries which may include among others, the Chairman of the State Khadi and Village Industries Board. There will also be project committee in each selected area.

The Rural Industries Planning Committee in its report has drawn attention to the principal lessons to be drawn from earlier experiments. In recent years surveys of existing village and small industries have been undertaken in several States, and these should be of special value both in the selection of area and in developing suitable programmes. It has been emphasised that the programme for industries to be developed in a selected area should be based on a careful survey of the needs, resources and possibilities of the area, the survey being undertaken before formulating the programme and commencing its execution. Besides stressing the need for training of personnel and for enlist-

ing the co-operation of experienced non-official workers, the report also points out that necessary measures should be taken to avoid the difficulties of marketing of products of small industries vis-a-vis those of large industries.

While the final selection of the areas for development will be made by the State Governments after considering all relevant factors, the Committee has suggested that the following areas may be taken up in the first series: North Lakhimpur (Assam); Kakinada (Andhra Pradesh); Bihar Sharif, Pusa and Sokhadeva (Bihar); Minister and Deogarh Baria (Gujarat); Valod and Srinagara Valley (Jammu and Kashmir); Neyyattinkara (Kerala); Madurai, Erode, Area near Ramakrishna Mission, Coimbatore Tiruchengode (Madras); Sarguja and Tanjore (Madhya Pradesh); Ramanagram and Chelakunda (Mysore); Murud, Wardha, Amravati, Erandol and Akrani (Maharashtra); Ganjam, Russalkonda and Koraput (Orissa); Malerkotli (Punjab); Pali (Rajasthan); Chandauli, Pukhrayan, Deoband, Dhanaura and Moradabad (Uttar Pradesh); Chamba (Himachal Pradesh); Manipur and Tripura.

The Committee has also suggested that the following categories of industries may be taken up for intensive development in the selected areas:

1. Traditional Village Industries.
2. Handicrafts.
3. Khadi.
4. Handloom and Powerloom.
5. Sericulture.

6. Agricultural Processing Industries.
7. Industries using local raw material, such as Tanning, Leather Ropes and Twines, Bonemeal, Fruit and Vegetable Preservation.
8. Industries meeting local needs such as, Agricultural Implements, Persian Wheels, Buckets, etc., Roofing Tiles, Brick Kilns, Construction of Doors, Windows etc., Domestic Utensils, Hosiery, Soap.
9. Small-scale industries to be developed in association with large-scale industries, or independently, with common service and marketing facilities, for example, Sports Goods, Bicycles and Parts, Leather Footwear, Hand Tools, Surgical Instruments, Scientific Glass Apparatus, Leather Goods Industry, Electric Motors, Diesel Engines, Plastic Goods Industry, Cutlery, Paints, Varnish and Lacquer, Fountain Pens and Nibs, Domestic Electric Appliances and Accessories, Machine Tools, Builders' Hardware, Assembly Industries of various kinds, Forge Shops, and Machine Shops.

The "action projects", formulated by the Indian National Committee of FAC's Freedom from Hunger Campaign, were announced by Dr Ram Subhag Singh, Union Minister for Agriculture, at a press conference last Tuesday. These projects provide,

among other things, for popularisation of Japanese agricultural implements and training of Indian farmers in their use; development of poultry and piggery to supply protein-rich food; improvement of fruit and vegetable production; upgrading of sheep; intensification of plant protection measures; promotion of nutritional diet; application of science and technology to the conservation and effective utilisation of food. These are expected to cost over Rs 2 crores inclusive of foreign assistance in the shape of equipment and materials. Several other programmes aiming at furthering the objectives of the Campaign are also under consideration. The Campaign, which was launched in India by the President on July 1, 1960 is to last for five years.

The Minister was not prepared to hazard a guess whether it would be possible to stop food imports by the end of the Third Plan. There were so many imponderable factors. Growth of population for instance could upset all calculation. But he expressed guarded optimism when asked whether the Third Plan targets of food production would be achieved. He said it should not be difficult to reach the target provided the requisites such as irrigation, fertilisers, implements etc were made available to the extent required. In this context he drew attention to the shortages in many of these items and pointed out that most of these matters were outside the control of the Ministry of Food & Agriculture.

JUTE Maximum Production to Continue

CONDITIONS in the jute goods turned easy during the second half of the past week with prices especially in the heavy goods section recording sizable losses. The reactionary tendency stemmed from the growing belief that concerted efforts would continue to be taken to maintain the supply of manufactures at as high a level as practicable. At its meeting on 10 July the Committee of the Indian Jute Mills Association considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of June and decided that, subject to the availability of electric power, the present maximum level of production should be extended for a further period of one month from the end of July to the end of August, 1962. Indications are that the 15 per cent power cut imposed on the Jute industry by the Calcutta Electric Supply Corporation will not be enforced as a result of the intervention of the Board of Trade. At its meeting in Calcutta last week the Board is reported to have requested both the Central and State Governments to exempt the jute industry from the power cut in view of the importance of jute exports to the national economy.

The Board of Trade which considered the problems of jute industry in some detail has rightly pointed out that exports of jute goods can be stepped up sizably. In order to achieve large exports however the Indian jute goods industry has to diversify its production. Overseas demand from the carpet industry for a particular size of hessian has greatly increased in recent years. As yet the Indian industry has been able to meet only a small proportion of this new demand despite the installation of more wide looms. The Board has also noted that if jute goods exports are to be maximised there is imperative need for reducing the cost of production and increase productivity. It has been pointed out by the industry that competition from Pakistan is increasing and compared with Pakistani jute goods, Indian jute goods are in a disadvantageous position. The Pakistani industry is not only getting better quality jute but the price they pay for their raw material is much lower than what Indian jute mills are paying for comparable quality of raw jute. Moreover, the export bonus scheme enables Pakistani mills to underquote India in overseas markets with the result that they secure almost all initial orders. As the Pakistani jute industry is ex-

panding fast, it is to be expected that the share of Pakistan's overseas business in jute goods will also increase to the detriment of the jute goods exports from India.

The supply position in jute goods continues to be tight as will be evident from the figures pertaining to jute goods stocks with mills at the end of June 1962, when total stocks at 80,300 tonnes were 3,800 tonnes lower than at the corresponding date of the previous month. Stocks of hessian at 25,000 tonnes are lower by 2,100 tonnes while those of other varieties at 16,400 tonnes are lower by 3,300 tonnes. Stocks of sacking however at 38,900 tonnes show a rise of 1600 tonnes.

The jute goods market opened the week on a steady note as there were reports of fresh foreign enquiries both in hessian and sacking. In the case of the latter Australia, Burma, and the Middle East evinced some interest in the earlier part of the week. Hessian was rather subdued because of the withdrawal of Argentine from the market in the previous week. Although during the week under review there was a revival of interest from Argentina, the quantities involved were too meagre to influence the market. Although sentiment slightly improved on the publication of the stock figures as at the end of June, the undertone turned easier in the second half of the week presumably on the news that the power cut is unlikely to be enforced coupled with the fact that

the IJMA has decided to extend the period of maximum working of mills by another month up to the end of August.

The raw jute market however continued to rule steady throughout the week. The decision to work mills for another month to full capacity and the indication that the industry would be exempted from the proposed power cut imparted a bullish trend. It would however appear that news of floods in Assam was the principal deciding factor. Reports have it that some damage had already been sustained by the jute crop in Assam and as the monsoon is yet to gather its full force in West Bengal, Orissa and other jute growing areas it is apprehended that the new crop may turn out to be smaller than earlier anticipated. The flood news encouraged bulls in the futures market and in the spot market prices were marked up by half a point. Though mills continued to be reluctant to follow the rise, sellers were reserved and only small offerings were made even at the enhanced price level.

It has been officially announced that shipments of jute will be allowed in August also. Government decided early in May to resume exports of raw jute in limited quantities to East European countries, and some two or three weeks later exports were permitted to all countries. Total quantity allowed was 2 lakh bales. These shipments were restricted to lower grades of the old jute crop and were initially permitted till the end of July only. Now it has been decided to allow shipments in August also. Detailed proposals for exports have to be submitted to the Jute Commissioner for approval.

TEA Good Demand for Export

IN the Export Sale held in Calcutta this week, offerings amounted to 41,558 packages. There was a good general demand. Plain and low medium teas were sold readily at or about valuations, while the better liquoring orthodox kinds and those with good leaf appearance were dearer. Legg-cut varieties were a little irregular; but the better types were sold well.

Medium CTC types were generally sold well, but were irregular. Although the bright liquoring lines were firm to dearer, the more ordinary types were easier. The better liquoring CTCs were a strong feature and were keenly sought after at enhanced prices. There was a very fair enquiry for the best flavour Darjeelings and they attracted keen competition, realising some useful prices; but the remainder received a very selective enquiry and were generally easier with some withdrawals.

The low-priced whole Leaf grades were sold well. Tippy sorts received a limited demand and there were some withdrawals. Following rates were quoted:—Clean Plain Pekoe Rs 4.60 to Rs 4.80; Plain BP Rs 4.00 to Rs 4.20; Plain Fannings Rs 4.10 to Rs 4.40; Medium Assam CTC BP Rs 5.80 to Rs 6.20; Medium Assam CTC Fannings Rs 5.60 to Rs 6.00; Best Assam CTC BP Rs 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 8.00.

In the Internal Sale, offerings consisted of 16,242 packages of Dusts. Demand was selective. CTC dusts were keenly sought after and sold well at much dearer rates, particularly the small powdery types and the bright liquoring descriptions. Plain orthodox varieties, however, met with a restricted enquiry and were generally easier. Apart from a few bright liquoring teas, the Assam dusts proved difficult of sale.

Legg-cuts met with an irregular market. The clean teas with bright liquors were generally dearer, while the poorer sorts were easier by up to 20 nP. Following rates were quoted:—Plain Orthodox Dust Rs not quotable; Legg-cut Dust Rs 4.00 to Rs 3.90; Medium Assam Dust to Rs 4.50; Medium Assam CTC Dust Rs 5.80 to Rs 6.30 and Good Assam CTC Dust Rs 6.50 to Rs 7.10.

14 July 1962

In the Cochin market, a total quantity of 500,000 kgs of Dusts was offered. There was less general demand at lower rates towards the close. A number of teas were withdrawn. Low Mediums and Mediums met with fair support; but prices were irregularly easy and declined by 15 nP per kilo. Good Mediums followed a similar tendency. High-grown encountered good enquiry. Better kinds were quoted steady, while others were easier. There was better support for unorthodox descriptions even though these were sold at lower rates. Clean Black Leaf varieties also shared in the downward trend.

According to trade sources at Cochin, exports of tea from South India rose sharply to 8.4 million pounds in May from 4.9 million pounds in the previous month and 5.09 million pounds in the corresponding month of last year. This put the total exports of tea in April-May 1962 higher at 12.61 million pounds as compared to 10.93 million pounds in the corresponding period of 1961. Exports to the UK, the largest buyer of South Indian tea fell from 6.41 million pounds in April-May 1961 to 5.34 million pounds in the period under review, as did those to the USA from 1.73 to 1.09 million pounds.

In Mincing Lane, London, 21,017 packages, including 1,285 packages from North India, were offered. New season's Dooars tea was in fair demand at prices a little below last week's rates. The remainder of the week's sale, consisting mainly of African teas, was distinctly easier with prices declining by one penny to pence per pound.

Meanwhile, the US Department of Agriculture forecast the 1962 world tea crop at 2,254.7 million pounds. This output will be 2.5 per cent higher than the 1961 production of 2,120 million pounds. This is a continuation of recent trends in production and is accompanied by increased trade and consumption. Latin American production continues to rise, especially in Argentina, to India and Ceylon are among the leaders in the export rise and most of the African and Latin American tea producing countries are continuing to expand their exports.

It is learnt that the US Government has decided to push ahead with its declared policy of reducing the size of the US strategic commodity stockpile, which is now thought to be too big in the light of modern defence requirements. Fortunately, tea—India's leading commodity—will not be affected whatever happens to the US stockpile. A more important factor for it is what arrangements are made if the UK joins the European Common Market which still seems likely.

COTTON Futures Firm

THE prospects of an early release of export quota for Bengal Deshi and the recommendation of the Indian Cotton Mills Federation to the Government of India to scrap the

prevailing system of variety-wise distribution of cotton during the remaining period of the current season helped the sentiment in the cotton futures market in Bombay to rule firm.

The proposed meeting of the Cotton Advisory Board this week revived the hopes for an additional quota for Bengal Deshi, Japan's keenness to enter the market for this growth on a "big way" for September-October delivery generated an optimistic outlook among the export trade according to which a quota for 50,000 bales would be most timely and can be fulfilled within a very short period.

The insufficient rain, which is quite unusual at this period, has left loose a rising trend in the cotton futures market and the Jarilla March contract continued to display a firm trend during the early part of the week. But thanks to the outbreak of the monsoon in the second half the uptrend was arrested. Business transaction was on the whole very restricted. The uncertainty of the weather earlier has compelled the

operators to adopt a wait and watch policy and they were reluctant to extend their commitment during the week under review. The closure of the market on Monday as well as Wednesday further curtailed the business activity.

The ruling contract, which opened about four points higher than the previous close of Rs 728.00, fluctuated in a narrow groove and finally closed at Rs 729.00. According to the consensus, in view of the paucity of stocks in the ready section and the good prospects of an additional export quota in the immediate future, the outlook in the cotton futures market will remain bullish in the near future.

Activity in the spot market at Sewri was featureless. Trading was confined only to a few varieties of which Laxmi, Digvijay, Kalyan and 197/3 were in the limelight. On account of the absence of any indication of improvement in the supply position the prices ruled firm.

Demand for Bengal Deshi in the export section slackened a bit toward

the end of the past week. But demand is likely to pick-up soon when the quota for export will be released.

In the meanwhile, the decline in cotton production has been viewed by the Centre with grave concern and has decided to adopt all measures to cry a halt to this downward trend. The latest available estimates reveal a sharp fall in output of nearly 9.4 lakh bales from the previous year's total of 53.94 lakh bales. The official version state that this downturn was largely due to the "snags and defects" in the implementation of schemes for the distribution of quality seeds, fertilisers and the lethargic approach to ward off the attack of pests and diseases to the cotton crop. It is a well known fact that despite the accent on improved methods of cultivation the response from many of the cotton growing centres was far from encouraging. The prevailing practice of purchasing seeds from the open market without any guarantee to the quality of seeds leaves the

Look what you get with HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes. You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system. You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

1962-1963

farmers to the mercy of the traders. Even the arrangements for the distribution of fertilisers and insecticides offer much room for improvement. Unless appropriate correctives are provided the position will continue to be alarming. Viewed in this background the Government of India's efforts to rectify this anomaly are to be welcomed. The Government has programmed to extend financial assistance to the cotton farmers by way of enhanced subsidies and grants for the distribution of improved seeds, fertilisers and establishing aerial units to intensify the anti-pest operations. The State Governments were also instructed to concentrate more on these problems so as to raise the per acre yield in their respective cotton growing tracts.

An equally import suggestion that requires special mention is the proposal to introduce the early maturing variety of American cotton on rice fallows. According to the recent experiments this variety can be successfully introduced in the deltaic regions of Orissa, Madras and Andhra provided irrigation facilities are improved. The implementation of these measures is essential to step up the cotton production in the country. Consumption of cotton by the Indian mills from 1 September to 31 March looked upto 3,335,344 bales of 180 kilograms from 3,079,080 bales in the same period in 1960-61.

Linking Sugarcane Prices with Recovery

THE Union Government's decision to link the price of Sugarcane with recovery for the sugar season 1962-63 has been generally welcomed. This policy is based on two main considerations, viz., ensuring uniformity throughout the country in sugarcane prices and providing an incentive to production of quality cane. It is understood that one of the main reasons why the announcement has been made in advance is, that in some areas of the country sowing of sugarcane crops starts in July/August. Further, the Government desires that growers all over the country should know in advance, before the commencement of the sugar season in November next, of the benefits they will get by the production of quality cane.

The Government has maintained the price to be paid for sugarcane at the current level of Rs 1.62 a maund; but the price is linked to a sucrose content of 9.8 per cent which is perhaps somewhat below the expectations of the industry. The industry pitched its claim on a slab basis between the limits of 8.5 to 11 per cent, subject to a minimum of Rs 1.44 a maund of cane. The Government has rejected the suggestion of the industry and has fixed a minimum rate of Rs 1.50 a maund for a recovery of 9 per cent or less, but at the same time has offered a discount on a premium, as the case may be, on this price at the rate of 1.5 nP for every 0.1 per cent rise or fall in the average certified recovery.

The new policy, it is claimed, is realistic in its approach to India's sugar problem. It will apply equally to Maharashtra and Gujarat where yields are good and to South India and the major Northern States of Uttar Pradesh and Bihar. The ultimate aim of the policy is that individual growers should receive adequate compensation for their efforts to improve the quality of cane. With the introduction of the new price linking formula for payment to the cultivators, it remains to be seen whether the supplies offered to the mills will be affected significantly.

The industry has still a problem of disposing of accumulated stocks even though it is now estimated that the output for the current season may not be very much more than 2,700,000 tons. The prospects for stepping up exports are also not bright as the modified US Sugar Bills provides for only a reduced guaranteed quota of 20,000 short tons. There will also be no freedom for reallocation of the Cuban quota, as purchases will have to be made on a first-come-first-served basis at competitive prices. India can, therefore, expect to export large quantities only if tenders can be made at competitive prices. Under the circumstances, the outlook for the industry is considered to be uncertain.

Meanwhile, production of sugar in the world is estimated to be lower

at 53.39 million tons during 1961-62 as against 57.95 million tons in the previous season. Despite a decline of more than 4.5 million tons, production in 1961-62 will still be the second highest on record. Out of the total production, the share of beet sugar and cane sugar is estimated at 21.83 million tons and 31.56 million tons in 1961-62 as against 24.83 million and 33.12 million tons respectively in the previous season.

FOODGRAINS

Despite reports of rainfall, the prices of Foodgrains ruled very steady in the Hapur market. While wheat superior varieties were sluggish at Rs 41.53 to Rs 45.45 quintal, the average and red qualities advanced by 67 nP to Rs 1.34, to be quoted at Rs 38.85 to Rs 39.52 and Rs 37.51 respectively. Gram prices showed a rising trend on good support from Madras. The market for Rice, however, remained unchanged on reports of smaller arrivals.

Wheat production in the country, in the crop year which ended on 30 June, is likely to reach a new high, exceeding even last year's record. Although the exact final estimates have not yet been worked out, it is expected that wheat production will reach 11 million tons for 1961-62. The previous year's production was estimated at 10.6 million tons—a record at the time.

Production of certain other foodgrains like rice, bajra and jowar is expected to show a slight fall over the previous year's figures. But, the general foodgrains production has improved and is expected to reach a new peak, exceeding by about a million tons over last year's level of 79.3 million tons. Production figures are now coming in from the States and the final estimates are expected to be ready in a few days.

SHELLAC

Dealers on the London Shellac market have been disappointed that the Indian price control on shellac exports (controlled by authorities at a constant level since October 1961) has not been lifted. They state that this control accounts for lifelessness on the London terminal markets.

Turnover is very small. No major new use for the commodity has been found since gramophone manufacturers have switched over to synthetics for long-playing records. In this connection, dealers have pointed out that the main reason for keeping the London market in existence is the possibility that India may cease to control export prices so closely.

It had been thought that reductions might take place a few months ago when the difference between the price of shellac on the Indian domestic market and the export price widened to 50sh per cwt, while it was also clear that the main By-sakh, crop was well up to the average.

COFFEE

The US Department of Agriculture has predicted a smaller Coffee crop in 1962-63—67,257,000 bags, ex-

portable production standing at 53,249,000 bags. The first forecast made by the Department said that decreases in production were expected for both North and South America, while increases were expected for Africa, Asia and Oceania. The estimate compared with a production in 1961-62 of 72,177,000 bags and exportable production of 58,278,000 bags.

The following were the forecasts of coffee production for different areas of the world and for some of the main producing nations for 1962-63 as compared with 1961-62 (figures in bags):—North America total 10,030,000 against 10,227,000; South America total 40,442,000 against 46,242,000; Africa total 13,310,000 against 12,488,000 and Asia total 3,475,000 against 3,220,000.

YARN

Reports that Mr T. T. Krishnamachari has suggested a further cut in Art Silk Yarn imports have caused serious concern in the Bombay Yarn market. The recent cut of 50 per cent in established importers' quota has already reduced imports in art silk yarn to only Rs 67 lakhs. Total imports in art silk yarn is estimated at about Rs 5 crores as against Rs 13 crores last year.

The supply conditions are expected to deteriorate further with the power-cut. It is feared that most of the silk yarn fabric manufacturers will have either to close down their units or switch over to staple-fibre yarn, which is produced indigenously.

Meanwhile, prices of imported as well as indigenous art silk yarn have shot up. Bright Cones National Rayon 150A, which was quoted around Rs 4.87 per pound in January 25, has spurted to Rs 6.75. Bright cones of South India Viscose 150A have advanced by a rupee to Rs 6.60 in a month.

It is learnt that two European spinners of rayon yarn have agreed to supply art silk yarn in accordance with the proposals of the Government of India. The Government has prepared a scheme under which the overseas suppliers will maintain stock of art silk yarn at important Indian ports and supply the same to the weavers against the entitlements earned by them on exports of rayon fabrics.

WOOL

Prices of Raw Wool have tended to ease during the last few days. The easiness is attributed to the determination of buyers to withhold purchases at higher levels. The supply position is, however, far from comfortable. Ready stocks in Bombay are estimated at about 2,000 bales only, while shipments to Russia continue to take place regularly.

It is learnt that Russia has already made commitments for about 35,000 bales out of which about 12,000 bales are stated to have been shipped so far. Business with the UK and the Continent has remained slack although good enquiries for finer qualities have been reported.

Indian Finance

14 July 1962

Exports of raw wool from India, in the fourth quarter of 1961, aggregated 9 million pounds - 2 per cent lower than that in the previous quarter. Total exports aggregated 31.5 million pounds in 1961 - 3 per cent higher than in the previous year. Shipments to the Soviet Russia were 68 per cent higher at 13 million pounds; but those to the UK and USA fell by 11 and 20 per cent respectively.

GOLD & SILVER

On the Bombay Bullion Exchange, the Silver section maintained a steady front. Despite more supplies, prices moved ahead due to persistent bull support and nervous bear-governing, prompted by favourable advices from Calcutta. Arrivals amounted to as much as 62 bars as against an offtake of only 15 bars. Spot Silver (below .996) changed hands at Rs 215.55 to Rs 216.10.

In the Gold section, too, prices displayed a firmer tendency due to bull manipulation, thanks to the demand in the spot section. Arrivals amounted to 3,000 tolas; but the off-take was better at 4,000 tolas. Ready changed hands at Rs 126.25 to Rs 126.55, while Sovereign was quoted around Rs 98.

OILS & OLSEEDS

Prices on the Bombay Oilseeds Exchange displayed a slightly reactionary tendency from the recent high levels due to bull liquidation on reports of fair weather in the producing areas.

With the onset of the regular monsoon, it was felt that supplies of groundnut, hoarded by farmers and terminal traders, would come to the market. Reports, that Surashtra was nursing a large supply and groundnut oil, were also contributory factors to the easier trend in prices.

Ready Bold was quoted at Rs 45.50 and Groundnut Oil at Rs 18.85.

The State Trading Corporation has not been able to procure bulk quantities of groundnut oil to meet its export commitments, because of the fragmentation of the crushing industry. To take advantage of the compounded levy of excise duty, there has been an increasing tendency for most units to become fragmented. Since the Corporation entered the export business of groundnut oil, it has tended to buy more from the Co-operatives. But, when the Co-operatives failed to supply the requirements, the STC started making purchases from the open market. It now appears that the Corporation has not been able to get its supplies even from the open market.

Trading in the Castorseed section was devoid of any interest. A section of the trade claimed business for about 500 tons of castor oil with some Communist buyers; but no details of the prices and shipments were available. There was hardly any business with the UK. Castor ready was quoted at Rs 32.25 and Castor Oil, commercial quality, at Rs 12.25.

Prices in the Linseed section ruled very steady due to tight supply position. Ready was quoted at Rs 39.25 and Linseed Oil at Re 16.00.

This state of affairs has been brought about by the continuance of the present system of excise duty. To facilitate India's export trade of vegetable oils, it is necessary to maximise the production by efficient units and this can be achieved only by extending the compounded levy of excise scheme to all units irrespective of the number of crushing equipments.

Throughout last week there was a firmer trend in the Madras groundnut oil market, but latterly the nut oil market, but latterly the tendency was rather subdued. Towards the beginning of this week

prices at lower levels have been maintained. Due to power cut, which is expected to be restored within a few days, the prices of oil is being kept at a higher level. Even though some relief was forthcoming by the onset of the South West monsoon, latterly this disappeared due to possible power cuts both in Bombay and Calcutta. As it is, the groundnut oil and groundnut kernel prices did not go down and operators had been free to buy as they liked without recourse to extraneous influences such as the power cut here or elsewhere.

Both last and this week local arrivals of groundnut kernels were small and Madras it was only around 50/60 tons. About 55/60 per cent of the usual 500 tons of kernels arrivals were reported in North Arcot market centres. The price of nut here had gone up by a rupee or so per 80 kgs, and otherwise there is no hurry to buy on the part of dealers with commitments outside.

While last week Calcutta interests absorbed the groundnut oil offered in the market, they kept a watch this week. Due to power cut affecting crushing, bazar interests also competed with Calcutta buyers in buying up supplies and price slightly rose up.

In forward positions only July vaida attracted some operations either by way of a squaring up nature or switching over the commitments from May deliveries to later deliveries. August vaida maintained a level at Rs 182 per quintal.

The price of groundnut oil ready last Wednesday was quoted at Rs 181. There was dullness in the market during the next few days with the result that the price of groundnut oil declined to Rs 180.50. On Friday and Saturday last week the spot oil price stabilised at Rs 180 per quintal. On Monday there was optimism with prospects of power cut being restored and so there was

some buying and the price gained a little at Rs 180.25. July vaida was also nominal at Rs 182 on Wednesday last. It declined to Rs 181 for the next two days and further down to Rs 179 on Saturday. On Monday this week it went up to Rs 180 per quintal. The August vaida maintained its firmness from Wednesday last. It was at Rs 183 then, and declined by a rupee the next day. Again it went up to Rs 183 and declined to Rs 182 by week-end. On Monday the price of August position opened at Rs 182 and closed today at the same rate. Coromandel variety of peanut came to be sold only early this week.

The kernels position was stable because there was not much of speculation in this commodity. Therefore it sold steadily at a rate which did not change much the entire week. The summer crop was at Rs 68/69 per bag of 80 kgs. On Monday it gained a rupee but the price reached the original level by Tuesday.

The summer crop centers in southern areas commanded good arrivals through last week. Sowings of winter crop are reported to have started on a small scale in portions of South and North Arcot districts where rains had begun. Rains received in Pollachi/Coimbatore, it is reported, would not do much good to the standing crop.

HIDES & SKINS

Arrivals of tanned cow hides were moderate. Demand from UK was not much this week. The market quality hides was sold at 64d, 54d and 50d respectively for 5/5½ lb and 44d, 42d and 40d for 8/8½ lb, and 40d, 38d and 36d for 10/12 lb.

The semi-premium run and fourth was quoted at 74d and 64d respectively. In tanned cow calf also there was no change.

INVESTMENT GOSSIP

Fresh Interest Lacking

BOTH operators and investors have received little encouragement this week to extend commitments. In the absence of fresh buying, even small offerings have produced an exaggerated impact on price levels. It would appear that earlier ideas about the prospects for equities at least in the near-term are being revised in the light of the various difficulties that have come to beset corporate enterprise. In this connection an agonising reappraisal of the Central Budget also seems to have been undertaken. At the time of the Budget some of the current difficulties were not even anticipated and therefore assessments were made on the tacit assumption that industrial production would proceed unhampered. It is now seen that such an assumption is no longer valid because conditions conducive to plants working to full installed capacity no longer obtain. The extreme stringency of foreign exchange now being experienced has already resulted in a drastic cut in imports of even essential raw materials and spares. Even so, indications are that an intensive search is afoot further to minimise the outgo of foreign exchange. In this regard it is believed that even maintenance imports will suffer a cut.

Already there is idle capacity in many an enterprise and further import restrictions are bound to hamper industrial production. Such a state of affairs will lead to reduced corporate earnings. Although the foreign exchange shortage is temporarily met by the agreement for a standby credit from the International Monetary Fund and the timely sanction of aid by US and UK, there is no denying the continued uncertainty as regards obtaining adequate foreign exchange for the Third Plan. It is admitted that the US Administration is in favour of granting the full amount of aid earlier indicated but public opinion in US has of late begun to examine aid sanctions with a critical eye. Marketmen therefore are likely to await the outcome of Mr Morarji Desai's Mission before making a move either way.

Last week's anxiety over widespread shortage of power has considerably lessened now with the likely restoration of the cuts in Madras and the announcement that power cuts will not be enforced in Maharashtra as water level in the hydel reservoirs has

risen thanks to the onset of the monsoon. In West Bengal too a serious threat to jute goods production by a 15 per cent power cut seems to have been averted through the intervention of the Board of Trade. But the main problem of increased supply of power that will be required during the current five year plan period will continue to dog the steps of industry as some of the power projects are likely to be delayed due to paucity of foreign exchange. Yet another factor that has entered into the calculation of investors in equities is what appears to be a change in Government's monetary policy. The higher interest offered on Central Government loans has made them quite attractive investment and prospects of equities will be assessed in the light of Government's dear money policy. Concern over the fresh incursions by the Chinese in Ladakh is also partly responsible for the lack of interest.

NEW ISSUE NOTES

Allahabad Bank

THE Allahabad Bank Limited has announced that consent for the issue of 22,500 new ordinary shares of Rs 100 each, at a premium of Rs 50 per share, has been obtained and that the new shares will be offered to the shareholders in the proportion of one share for every two ordinary shares held.

Associated Bearing

The Associated Bearing Company Limited has announced details of allotment of its recent public issue. In response to its offer for public subscription of 80,500 equity shares of Rs 100 each, the company has received over 62,000 applications for 11,52,300 shares. In view of the heavy over-subscription, the directors, in consultation with the authorities of Bombay Stock Exchange, have decided to allot shares as follows:—One in ten applicants for 5 shares will get 5 shares; one in five applicants for 10 shares five; one in four applicants for 15 to 20 shares five; one in two applicants for 25 to 30 shares five; three in four applicants for 35 to 60 shares five; each applicant for 65 to 125 shares five; each applicant for 130 to 250 shares ten; each applicant for 255 to 300 shares fifteen; each applicant for 305 to 500 shares twenty; each applicant for 505 to 600 twentyfive; each applicant for 605 to 1,000 thirty; each applicant 1,005 to 1,400 forty; each applicant 1,005 to 1,400 forty; fifty; each applicant for 2,000 to 5,000 will get 175 shares and each applicant for 5,000 and over will get 200 shares.

Tata Electric Group

The Tata Power Company Limited has proposed to issue to the public, at par, 6½ per cent Debentures for Rs 85 lakhs. The Tata Hydro Electric Power Supply Company Limited has also proposed to issue 6½ per cent Debentures for Rs 1 crore, at par. Applications are pending with the Controller of Capital Issues.

Modella Woollens

The first call of Rs 2.50 is payable on or before 21 August. Share transfer books will remain closed from 23 to 27 July, both days inclusive.

BBJ

Braithwaite, Burn & Jessop Construction Company Limited, Calcutta, engaged in business as engineering contractors, is to issue 35,500 bonus shares of Rs 100/- each on capitalisation of its free Reserves. The existing paid-up capital of the company is Rs 21.30 lakhs.

Modi Theatres

Consolidated Modi Theatres Limited, Bombay, a new company, is to issue capital of Rs 160 lakhs in equity shares of Rs 100/- each, at par, of which Rs 70 lakhs shall be for consideration other than cash and the remaining Rs 90 lakhs for cash. The new company would take over the various theatres and studios owned by the Western India Theatres Limited, Bombay, and would purchase additional theatres in important cities in India and renovate the same.

NBCC

National Buildings Construction Corporation Limited, Delhi, a Central Government undertaking, having a paid-up capital of Rs 34 lakhs, is issuing further capital of Rs 22 lakhs, divided into 2,200 equity shares of Rs 1,000/- each, for cash, at par.

Jay Shree Tea

Jay Shree Tea & Industries Limited, Calcutta, is to issue (i) 2,91,558 equity shares and (ii) 29,156 cumulative redeemable preference shares of Rs 100/- each carrying dividend at 9.5% per annum. The capital is required for modernisation of plant and machinery and for working capital. The existing capital of the company is Rs 90.92 lakhs.

Krishna Sugar

Krishna Sugar Mills Limited, Mysore, is raising capital of Rs 20.50 lakhs, divided into 2,50,000 cumulative redeemable preference shares of Rs 5/- each carrying dividend not exceeding 6% (subject to deducting company's and all taxes) to be issued for other than cash to the existing constituents of the company in terms of the Mysore High Court's Order sanctioning reconstruction and 8000 equity shares of Rs 100/- each for cash at par.

Saraswati Sugar

The Saraswati Sugar Syndicate Limited, Yamuna Nagar, (Punjab), having a paid-up capital of Rs 42.17 lakhs, is to issue second mortgage debentures of the value of Rs 25 lakh carrying interest @ not exceeding 7% per annum and redeemable in annual instalment of Rs 5 lakhs beginning from 1965, for cash at par. The proceeds of the issue will be utilized for reducing liabilities of the company.

Wyman-Gordon India

The newly established Wyman-Gordon India Limited has already started the production of foreigners for the Indian automotive and agricultural industries. The plant capacity is gradually being increased to help the company undertake the manufacture of mechanite gray iron castings for a variety of other industries.

Wyman-Gordon India Limited is a subsidiary of Wyman-Gordon Company, a leading world producer of foreign for missiles, rockets, space-vehicles, aircraft, automotive and farm equipment. It has been undertaken in co-operation with Almag Forgo & Foundry Private Limited. Its foundry is established on a 30-acre tract in the Bombay suburb of Thana.

Forging technology and equipment are being supplied by Wyman-Gordon and plant operations will be performed by an all-Indian operating force which is expected eventually to number 1,000.

INVESTMENT NOTES

Dyer Meakin

Dyer Meakin Breweries have announced their decision to offer bonus shares in the ratio of one for one by capitalising a sum of Rs 28 lakhs from Reserves, thus doubling the paid-up capital of the company to Rs 56 lakhs.

Tata-Ebasco

The Tata group of electricity companies has proposed to enter the field of consulting engineering. A new company, which will be known as Tata-Ebasco Consulting Engineering Services, will be formed shortly to provide consulting engineering service in the field of power engineering. Its working capital, which is estimated at about Rs 25 lakhs, will be contributed as required in equal proportion by the three companies and by Ebasco India Limited, a wholly-owned subsidiary of Ebasco Services Inc. USA, which is participating in the venture. The foreign exchange component of the scheme is expected to be relatively small, as the maximum possible work will be done in India by Indian engineers under the supervision of the foreign partners.

New Asiatic Insurance

The New Asiatic Insurance Company Limited has still not received permission from the Controller of Insurance to start other business.

14 July 1962

The company stopped accepting fresh business for the past two years and paid most of the liabilities. Those, which have not been paid, have been provided for.

Print Roll Factory

A new non-ferrous fabricating plant will be set up at Kotan (Rajasthan) in collaboration with an American firm. The plant will produce copper and brass tubes and rods and copper print rolls. The factory is expected to go into production in the later half of 1963. The total capital cost of the project will be over Rs 1.25 crores and a part of it will be offered for public subscription. The new firm, it is stated, will be first producer in India of print rolls used by the textile industry, which are presently imported from foreign sources.

IN BRIEFS

The entire profit of the Andhra Cement Company Limited, for the year 1961, is exempted from both income-tax and super-tax under Sections 85 and 101 of the Income-Tax Act 1961.

The Mysore Machinery Manufacturers Limited has reduced the dividend from 14 to 10 per cent, taxable, for 1961.

India Cements Limited has proposed to pay a final dividend of 6 per cent, making a total of 12 per cent, taxable, for the year ended 31 March 1962, same as previously.

STOCK EXCHANGES

Quiet Front

Watch-Dog Writes:

ONCE again, stock markets have experienced a very dull session this week. Earlier hopes of the market improving due to the encouraging news like additional credit from International Monetary Fund, encouraging statement by Mr Dean Rusk and the decision to postpone the power-cut, have not materialised. On the other hand, leading equities have collapsed and sought new low levels of the year following the disturbing reports from the Chinese border and the inordinate delay in the announcement of the steel retention prices.

Except for a slight recovery in Indian Irons on rumours of an early announcement of an increase in the retention price of steel, conditions in other counters on the Calcutta Stock Exchange remained dull and featureless.

The Bombay Stock Exchange continued to remain depressed owing to a lack of support and stale liquidation.

With scattered business and meagre enquiries, the Madras Stock Exchange presented a quiet front.

After a sharply higher opening, Wall Street was subjected to persistent selling pressure which cut deep into the initial advance.

On the London Stock Exchange, conditions were almost identical to those experienced last week.

CALCUTTA

Friday Evening

IT was a depressing week for Lyons Range with equities recording fresh lower levels on a wide front. Although the market opened the week on a steady note being helped by the decision to postpone the power-cut in the Calcutta and industrial areas and the statement of Mr Dean Rusk supporting full assistance to India in its Third Five-Year Plan, there was renewed selling pressure in subsequent dealings being influenced by a number of bearish developments.

First, there were reports indicating little possibility of any relaxation in the import and foreign exchange curbs. The second factor were the reports of Chinese troops encircling the Indian outpost in Ladakh. Finally, the outlook for exports was considered to be not too bright. In this respect, there was a disposition to await the final outcome of Mr Morarji Desai's mission to the ECM countries.

Again, there was disappointment that the Government could not come to a quick decision on the question of steel retention prices. As a matter of fact, there is still much speculation over the recent report that a differential system of retention prices may be decided on for the private and public sectors. It was also feared that the imported raw materials, which were already getting costlier, might likely look up further following the suggestion by Mr T. T. Krishnamachariar to cut down the import plan drastically.

For obvious reasons, operators preferred to proceed with caution and were inclined to book profits at any slight rise in price. Although selling pressure was not heavy, even small offerings were found to be sufficient enough to depress the price levels in a market which was devoid of any interest.

Conditions in the Giltedged section turned quiet. Prices of long and medium-dated loans declined considerably as they were being adjusted in line with the terms and conditions of the new Central loans. Business was restricted as institutional investors seemed to be conserving their funds for subscribing to the new loans. 3 per cent 1986 Conversion Loan, which was quoted up to Rs 70.95 at the end of last week, was marked down to Rs 70 at the end of this week.

Bank shares were also quiet with Punjab National being done at Rs 20.37 to Rs 20.62. United Commercial came in for some enquiry at Rs 83.50.

After ruling initially firm on reports that there would be no power cut, Jute shares turned quiet in

view of the slackening of enquiries for jute goods from overseas buyers. Birlas came in for offer at one time as low as Rs 32.87 from Rs 33.81 (Rs 33.06); Howrah at Rs 21.62 from Rs 22 (Rs 21.75); Ganges at Rs 14 from Rs 14.37 (Rs 14.06) and New Central at Rs 15.25 from Rs 15.75 (Rs 15.62).

Coal shares were listless in the absence of any incentive. The only scrip, which had been ruling comparatively steady, was East Indian having changed hands at Rs 50 to Rs 50.12. Central India were done Rs 11.06 to Rs 11.37; Western Bengal at Rs 10 to Rs 10.19 and New Beerhoom at Rs 22.19 to Rs 22.25. Burrakur were a narrow market, moving idly around Rs 17.81.

Uncertainties about the marketing outlook for the commodity were mainly responsible for the predominance of sellers in the Tea section. Jay Shree came in for offer at as low as Rs 17.12 against Rs 17.50 and Kilcoff at Rs 17.12 against Rs 17.75.

Sugar shares were practically neglected; but prices remained unchanged with Cawnpore quoting Rs 13; Ramnugger Cane at Rs 28.50 and Belsund Rs 10.06.

Textile shares were no exception to the general trend of the market. Cawtex were offered at Rs 7.12 against Rs 7.25; Bowreah at Rs 24.87 against Rs 25.75 and J. K. Rayon at Rs 19 against Rs 19.37. Elgins were a steady feature at Rs 19.44 and so also Jay Shree at Rs 14.94.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. After opening steady at Rs 25.68, Indian Irons touched a high of Rs 25.90 and a low of Rs 25.52 before finishing the week at Rs 25.76. In sympathy, TEXMACO moved down at one time to Rs 22.95 from a high of Rs 23.50 and Guest, Keen, Williams to Rs 39.12 from Rs 39.81, to close finally at Rs 23.00 and Rs 39.25 respectively. Jessop were on offer at Rs 22.44 against Rs 22.94 and also J. K. Steel at Rs 16.75 against Rs 17.12. Jay Engineering were, however, a steady feature at Rs 27.62 with Burn shedding Rs at Rs 646.

Heavy selling pressure was reflected in the Miscellaneous section, although short-covering coupled with some replacement buying caused a mild recovery towards the close. Figures shown within brackets were the closing rates for week. Following were the price trends of a few selected shares:—

	As on 7 July	Low-est	As on 13 July
	Rs	Rs	Rs
Orient Paper	41.55	40.70	41.00

Branches: Over 135 branches in India and also in East Pakistan, London, British East Africa and Fiji Islands.

THE BIG HURRY IN THE WORLD OF ELECTRONICS

Diagnosing diseases, composing harmonious music, translating simultaneously in a dozen languages, solving complex engineering problems or playing an expert game of chess, electronic computers are the miracle child of the present century. ■ Reading, writing and calculating at the speed of light, with 'memories' that learn by experience, these giant minds are freeing expert technicians from time-consuming mental drudgery, for more creative planning, making possible whole new industries and products, which assure greater employment and prosperity. ■ In making the electronic tubes that keep these computers twinkling, a highly specialised knowledge of gases is required. ■ It is this specialised knowledge of industrial gases and their diverse applications that Indian Oxygen affords Indian industry.

Agriculture: Wanted A Programme of Action

THE experience of the first year of the Plan is a timely reminder of the weighty contribution that agricultural production could make to either side of national accounts. Since estimates of agricultural production in 1961-62 show only a marginal increase over the previous year, the rise in national income for the year is also disappointingly low. The achievement of Third Plan targets in regard to growth of national income depend more than anything else on the steady improvement of the productive capacity of the agricultural sector. Though this is formally avowed—the Deputy Chairman of the Planning Commission did it recently—one still looks in vain for evidence of a practical and purposive approach to the problem of raising the levels of agricultural output. Spokesmen of the Ministry of Food and Agriculture seem to be more anxious to distribute the responsibility for achieving increased production, than ready to devise and push through alternative programmes when it has become clear that expectations in regard to some important elements of the original programme are not likely to be fulfilled.

Attention has been repeatedly drawn to the fact that the attainment of the levels of output envisaged in the Plan will depend on the progress of irrigation and the availability of chemical fertilisers. In respect of both, the outlook, to judge by past experience, is not particularly encouraging. Utilisation of irrigation potential has no doubt improved over the Second Plan period, from 48 per cent at the beginning to 70 per cent in the last year. But it will be a long time before sufficient irrigation facilities are created and utilised to the full extent. Against the Third Plan target of 12.80 million acres of minor irrigation potential, achievement in 1961-62 is estimated at only 1.67 millions. In regard to major and medium irrigation works, utilisation during the year is estimated at 1.84 million acres against the Third Plan target of 13.64 million acres.

In regard to production of fertilisers the Third Plan had to start with the heavy backlog of the Second. In a written answer to a question in Rajya Sabha on June 21, the Minister of Food and Agriculture had given details of the requirements and availability of fertilisers of different kinds. He also stated that, owing to foreign exchange difficulties, it would not be possible to arrange imports of nitrogenous and potassic fertilisers to bridge the gap between demand and supply to the fullest extent. The requirements of nitrogenous fertilisers for 1962-63 are estimated at 5,89,000 tonnes in terms of Nitrogen, whereas indigenous production is expected to be of the order of 2,02,000 tonnes and imports are estimated at 2,15,000 tonnes, leaving a shortfall of 1,72,000 tonnes (N). Achievement of agricultural production targets in these circumstances will owe more to the bounty of nature than to the development programmes to which the targets are related.

The question now is whether authority has any feasible alternative make up for the deficiency of plant nutrients and thus ensure the achievement of the production targets. The experience of the Madras State which,

during the period 1953 to 1958 was able to increase the output of rice by 7 lakh tons is relevant in this context. During this period, the per acre yield in terms of rice had also steadily increased from 1122 lbs in 1953-54 to 1149 lbs in 1954-55, 1209 lbs in 1955-56, 1255 lbs in 1956-57 and 1294 lbs in 1957-58. On the other hand, the use of chemical fertilisers in the State during this period had gone up only to a very small extent 16,500 tons of ammonium sulphate and could account for only a very small part of the increased output of 7 lakh tons.

The main feature of the scheme* which paid off in Madras was the programme for "self sufficiency in manures." A method was devised and popularised among the cultivators all over the State through which each cultivator could grow enough green manure on his own field without interfering with the seasonal crops and without incurring extra financial outlay. The scheme, once started, is self-perpetuating. A packet of green manure seed costing five naye paise would enable a cultivator to produce in one season, by sowing along the borders of his field, enough seed to raise sufficient organic manure for one acre during a period of four to six weeks in the subsequent season. The experience of Madras and, more recently, of Orissa has shown that the practice of green manuring can be extended over very large areas in a short period and at very little extra cost, through the normal extension agencies. The secret of the success of the scheme, in the areas where it has been introduced, is that the cultivator has to pay nothing for the manure or for its transport to his fields.

The experiments conducted at the Central Rice Research Station at Cuttack have shown that green manure is more efficient than ammonium sulphate—the response of 20 lbs of nitrogen as green manure is similar to that of 30 lbs of ammonium sulphate. It is not, however, necessary to enter into the rival merits of green manure and chemical fertilisers to establish the point that a determined programme to spread the practice of green manures can usefully fill the gap while we wait for the targeted fertiliser capacity to become effective. The work done in the composite Madras State has shown that on every holding, irrespective of its size, it is possible to produce without affecting the usual crops the complete requirements of organic manure by way of composts for use on dry and garden lands and green manure for use on irrigated lands. Therefore the extension of the programme to other parts of the country is merely a matter of conviction and will succeed. The trouble seems to be that since the green manure programme costs practically nothing, the tendency has been to regard it as of little significance and to assign it a very low order of priority in the promotional activities of the administration. This is planning at its worst, a psychology of gigantism and expense-oriented target-shooting doing duty for hard-thinking and hard-working.

THE STOCK MARKET Section-wise Behaviour

IN last week's issue, the general trends in the stock markets were reviewed with emphasis on the more prominent features. A section-wise analysis will show the developments that had taken place in the major groups of industries during the half-year just ended.

Broadly speaking, almost all poular shares tried to establish new peak levels in the middle of May; but the downward trend in the values of these shares during the closing month of the period created a feeling of gloom in other counters where prices backed away in sympathy. Apart from the political factors which were not quite in favour of the market, domestic economy, was also not without its headache. Adverse balance of trade persisted; conditions in the money market remained tight at times; and the fuel, power and transport difficulties showed no signs of alleviation.

Again, it is a known fact that investor-interest is keen in industries like jute, tea, coal, textile, sugar and engineering which earn a substantial portion of their incomes from exports. During the past few years, the working of some of these industries has been hampered by the shortage of imported raw materials. For this and other reasons, a portion of the installed capacity has often remained idle. Raw materials apart, some of the export industries are handicapped because they cannot modernise their equipment due to shortage of foreign exchange. An important factor contributing to the uncompetitive character of Indian goods in foreign markets is, that their production costs are high owing to the equipment being out of date.

Developments in the corporate sector, during the period, were not entirely encouraging. While sales have generally gone up substantially, profits have not correspondingly risen. In most cases, dividends could only be maintained and, in some cases, only with much difficulty. A relieving feature, however, was the fact that here and there the corporate horizon was brightened by bonus and right issue announcements (A detailed study of the trend of profits in the corporate sector will be attempted separately next week)

Section-wise, Engineering shares came in for a good deal of attention earlier in the year as the order books were reported to be well-filled for a long time ahead. There was, however, an appreciable fall in prices during the general shake-out during the month of June, not to speak of the fact that investors became cautious in view of the outlook for the industry being considered uncertain, because the working of the engineering industry was being hampered by the shortage of raw materials, coal and transport.

Jute shares behaved exceedingly well during most part of the period as the outlook for the industry was much brighter than what it was for some time past in view of the abundant supply of the fibre. But the doubts expressed in certain quarters about the industry's economic working in the coming season led to some profit-taking at the close.

Although a mild flurry was witnessed in the Coal section early in the year following the news of the grant of a World Bank loan of about Rs 17 crores for expansion and the increase in the production target, turnover

declined considerably in subsequent dealings. Operators were inclined to attach only academic significance to the high output target under the Third Plan owing to a doubt whether the necessary transport would be available to move coal from the producing areas. There was also no disposition to take a hopeful view about the outlook for the industry, as the price at which collieries were obliged to sell their coal had been statutorily fixed at an uneconomic level. Hopes were, however, entertained that the selling price of the commodity might be raised to meet the high production costs resulting from increases in labour remuneration and royalty. When the actual announcement was made, the section failed to evoke any interest as the price increase, sanctioned by the Government, was considered to be inadequate even to compensate for the increased production costs, apart from providing finance for expansion.

Except for a few selected shares which met with good enquiry during the first quarter in the hope of bonus issues, trading in the Tea section was generally restricted. Apart from the uncertain marketing outlook for the commodity, there was a general feeling that the relief given to the industry in the shape of a reduction in export duty was not sufficient to meet the increased competition, the difficulty in selling Common grades in foreign markets and the fear of a decline in internal consumption by the higher excise duty on loose tea. It was also thought that, as the increase in company tax would reduce the profit, the tea gardens would have less finance to plough back into the business for expansion and development. Above all, it was feared that, even assuming the imports of Indian tea into Britain would be permitted on a duty-free basis, some of the African countries would have an advantage over India in the ECM countries as they get the concession of a associated territory. There was, therefore, an anxiety to know how the trend of exports would be affected by the recent developments and how it would be possible for the Indian industry to continue to make satisfactory progress.

After initial firmness on reports of higher profits being made by the companies for 1961, the issue of bonus or right shares by some companies and the diversification of activities by certain others, Textile shares displayed an easier tendency during the last few months of the period following the cautious attitude adopted by the operators. Apart from the persisting shortage of raw cotton and rising production costs, it was feared that the prices of Indian piecegoods would become more uncompetitive in foreign markets unless the prices of raw cotton was held down.

Adding considerably to the uncertain outlook for textiles, were the vagaries of Britain's negotiations with the EEC for her becoming a member. It was reported that Britain has suggested that the EEC common external tariff should be made applicable to textile imported from India into the UK. Lancashire interests were also clamouring for restrictions on British imports of Indian textiles. The eventual outcome of the current talks at Brussels and of India's case as presented there is very much open. This has clouded the outlook for Indian exports, particularly cotton textiles.

Except for the consistent support lent to Ramnugger Cane and Dyer Masakin Brevities, the Sugar section was practically neglected in view of the obscure outlook for the industry. First, the finances of the sugar mills had been strained greatly owing to the large accumulation of stocks and substantial losses had been incurred on exports, the prospects for which were not bright. Secondly, the

operators were disappointed that the excise duty on sugar had not been removed. They seemed to be taking a gloomy view about the working during the current season.

Generally, speaking, Miscellaneous issues received constant attention, although profit-taking wiped out extreme gains towards the close of the period. There was, however, a general belief that the companies, which were engaged in the newer lines of production, were doing well.

Bank shares, which were generally steady till the end of May, turned rather quiet due to the large flow of funds into new shares. Sentiment was affected by the Reserve Bank's proposals to tighten liquidity requirements and the desire of Government (reportedly conveyed by Mr Deval in his Bombay meeting with the bankers some time ago) for greater use of deposit resources for purchasing gilt-edged securities. It was feared that the profits of banks might be squeezed in view of the fact that the yield on the gilt-edged securities was not comparable to the income from other uses of their resources.

Industries in Rural Areas

PROVISION of remunerative employment to the unemployed and the underemployed in rural areas remains the most intricate and intractable problems of economic development in our country. The industrialisation that has so far taken place in the large scale or small scale sector is confined to the urban areas, so that the rural population has not shared in the benefits to any significant extent. On the other hand, it has served to weaken the rural areas by draining away the more enterprising sections of the population to the urban areas where industrial development is mostly concentrated. The gravity of the problem has been long evident, though the remedies are not equally clear. The Third Plan includes provision for a rural works programme which aims to provide work for 100 days in the year to 2.5 million persons the close of the Second Plan has been extended. During the slack agricultural season of the current year, 200 projects under this programme are expected to be taken up in different States. These projects include schemes for irrigation, afforestation, soil conservation, drainage, land reclamation, improvement of communications etc which will serve to strengthen the agricultural base of the rural economy, and also ensure fuller employment of manpower besides providing some additional wage employment. Such projects, however, could provide additional employment on a continuous basis only to a limited extent. A lasting solution of the problem of unemployment and underemployment will not be possible unless the agricultural economy is reinforced by the development of a complementary sector of rural industries. Though the programme for the development of small industries attaches great importance to rural industrialisation, development so far has taken place mostly in urban areas. On the other hand, the organisations that have been set up specifically to develop village industries have not been able to make much headway owing to the inherent limitations of their approach. Keeping the existing industries going at a low level of productivity was the utmost that these organisations could achieve. The question of rural industrialisation has to be tackled on a more comprehensive basis which will allow for co-ordinating the activities of the different agencies in the field.

In order to identify the problems of rural industrialisation and to suggest measures for speeding up the pace of development, the Rural Industries Planning Committee was constituted by the Government of India in April 1962. It is gratifying to find that the Committee has within two months, worked out a scheme for the intensive development of small industries in rural areas. The proposals will be considered at a conference of the Planning Commission and representatives of the State Governments which will be held in New Delhi on July 21 and 22. The programme is to be taken up for implementation in 40 selected areas and each State may take up two to four projects during the current year and additional projects may be taken up in subsequent years of the Third Plan. The State Governments have also been assured of funds for the implementation of this programme, which will be over and above the central assistance indicated for the State Plans. The additional provision is intended to cover

the cost of extra staff, training and extension facilities required for the programme. The projects will also draw funds from the State Plans and the All India Boards, as well as from financial and co-operative credit institutions. The funds required could be provided without much difficulty as the rural industries projects are not likely to involve any expenditure of foreign exchange. Their speedy implementation would be of valuable assistance in maintaining the tempo of development at the present stage of the Third Plan and could compensate, to some extent, for the slowing down in other sectors which is likely if foreign assistance is not available in time and on the scale required.

The scheme drawn up by the Committee is for the development of small industries of different kinds including village industries and, especially, of processing industries based on agriculture. Where large industries are already established in the neighbourhood, it will also be possible to develop the small industries as ancillaries supplying the requirements of the large units. Besides indicating the general scope of the scheme and its objectives, the Rural Industries Committee has also drawn up a tentative list of areas that may be taken up for the proposed projects as also an illustrative list of nine categories of industries that may be taken up for intensive development.

In view of the categorical assurance of extra financial assistance by the Planning Commission, the implementation of the scheme should not be hampered by shortage of funds. The success of the projects will depend more than anything else on the viability of the industries that are taken up for development. Useful lessons can be drawn in this respect from the experience of earlier pilot projects for village and small industries undertaken in 26 Community Project areas of the 1952-53 series as well as of the Intensive Areas Scheme if the Khadi and Village Industries Commission.

The Committee has stressed that the programme for the industries to be developed in the selected area should be based on a careful survey of the needs, resources and possibilities of the area. To this may be added a footnote that the industries chosen for development should be based on the resources of material and skill which are locally available or could be easily developed in a short period. The very purpose of the scheme, which is to relieve unemployment in the region, will be defeated if workers have to be brought in from outside the area. And economic operation may not be possible if a substantial proportion of the raw materials have to be brought from a distance. Great care, therefore, will have to be exercised before encouraging the setting up of metal fabricating industries, especially in view of the current shortages which hamper production in the organised sector as well as in the sector of small industries that have been established in urban areas and in the industrial estates. The new rural industries will be severely handicapped at the very start if they have to stand in queue to get permit for scarce materials. Above all, the industries selected and the techniques employed should be such that the products could find their own markets either in the locality or elsewhere. If sentimental or ideological considerations are not allowed to interfere with the selection of the candidate industries solely on economic grounds, marketing should not become the serious problem that it is in some other promotional enterprises. An element of subsidy may be necessary in the initial stages, but there will be no point in encouraging the establishment of industries which can be kept

going only with the help of costly subsidies. From the illustrative list of candidate industries drawn up by the Committee, it is not clear whether sufficient attention has been paid to these considerations.

EXPORTS

American Vistas

CONSIDERABLE prospects for the expansion of the country's engineering goods to the Latin American countries have been indicated by the Engineering Export Promotion Council. The conclusions of the Council in this regard are based on the report of the trade delegation it sponsored to the Latin American countries some two months ago. The 7 member delegation visited not only the Latin American countries, but also the USA for exploring scope for export of engineering goods. The visit has been characterised in the report as an "outstanding success" in as much as the delegation could establish contacts with the Government departments, particularly the purchase authorities in railways, electric supply, power and irrigation, chambers of commerce and private businessmen.

In its report the delegation has enumerated the items which could find export market in the individual countries. This study of the prospective items has been projected against the background of the current economic developments and also the impact of the policies taken on the domestic plane and the formation of the Latin American Free Trade Association. Though Latin America is presently predominantly agricultural, Governments in individual countries have been bestirring themselves in the direction of freater industrialisation. This process is being helped in a substantial way by the inflow of foreign private capital funds and also of international funds channelled by the International financing bodies like the World Bank, the International Development Association, the International Finance Corporation etc. A noteworthy suggestion made in the report is the value of exploring scope for channelling Indian engineering exports as part of the aid being provided by the International bodies.

The fairly high rate of growth of the gross national product would also seem to indicate prospects for pushing up export of Indian engineering goods. Trade policies are comparatively liberal, there being practically no prohibition on imports in any of the countries. Some countries like Argentina operate a system of high excise duties which tend to restrict too liberal a volume of imports. In Brazil, such restrictions on imports are being operated through a system of foreign exchange auction. But a feature of the foreign trade of all the countries is the fairly high proportion of imports of capital and producer goods. In this connection, the report draws attention to the trend that has lately been discernible for the Latin American Governments to encourage foreign private capital to establish manufacturing units through a system of collaboration. Though this may be a pointer to India, the ability to match foreign private enterprise coming from other countries is definitely limited as far as India is concerned. All the same the report points to the desirability of setting up assembly units wherever it may be feasible.

The continuing balance of payments deficit of the Latin American countries is a factor that limits the scope for imports on a liberal scale. Among the countries in this continent, only Chile has been having a comparatively better balance in its payments position. Trade

The report has listed a wide range of engineering items which could be exported to the various Latin American countries. These include both light engineering and heavy engineering goods. Among engineering items, consumer goods are noted to have somewhat limited scope as compared with producer goods and machinery. As a whole the Latin American market is essentially one for industrial raw materials, semi/manufactured goods and capital goods for the industry, agricultural and transport services. On this consideration, most prospective items are textile machinery, chemical and pharmaceutical machinery, sugar machinery, machine tools, oil mill machinery, tea machinery and railway rolling stock and track materials etc.

While taking cognisance of the market offered by the Latin American countries for these widening engineering items, the report also draws attention to the material handicaps to which Indian exports are subject at present. These include absence of regular shipping from Indian ports to ports on the Atlantic Coast of Latin America and high shipping freight from Indian ports to Latin American coasts, high tariffs and surcharges, absence of credit facilities on which the Latin American importers attach considerable importance, and absence of trade agreements. Expansion in exports will necessarily be contingent on measures that will be taken to set right these deficiencies. The report has made proper recommendations along which action has to be taken by the Government to create the prerequisites of a successful export drive for engineering goods to the Latin American countries.

The potentials of the American market for import of Indian engineering goods have also been emphasised in the report. Unlimited scope is particularly indicated for castings of all kinds, since domestic industry in the US has failed to satisfy consumer specifications. Scope is also indicated for all kinds of fittings, a wide range of electrical products, small tools, bicycles and accessories, railways stores etc. An important requirement for successful export promotion to the US is improvement of marketing techniques and packing methods. Referring to the immense prospects offered by the US, the report makes the interesting observation that "in the crucial period ahead, the USA will offer a more solid footing for India's manufactured and semi-manufactured

dishonour an agreement on such a minor
matter?

Now would be the time for the Commonwealth Governments to exploit this advantage by making gestures to show that Britain could depend on Commonwealth countries. Unfortunately there are no indications of any such attitude. Indeed, day after day measures are adopted to show that Britain stands to gain nothing by adhering to her close association with the Commonwealth. It is understandable if Canada or India, beset as they are with exchange difficulties, should adopt defensive measures. But it is felt in London that they have gone out of their way to differentiate in favour of Britain in the application of the necessary measures. There was also the question of the Indian Mig-jets. And now Nigeria has adopted exchange restrictions which apply indiscriminately against all currencies, including sterling.

It would be a mistake for Commonwealth Governments to rely on the difficulties encountered at the Brussels talks and to trust that those talks would break down. That might well happen, but it very often happens at international discussions that a formula is found at the last moment to avert a breakdown. If the Commonwealth Governments want Britain to hold out for better terms they are in a position to stiffen her attitude by showing that they are prepared to make it worth her while to risk a breakdown of the talks. This is the right psychological moment for making a gesture. Above all, Commonwealth Governments should refrain at this stage from making further moves that would lead official opinion and public opinion in Britain to the conclusion that it is not worth while to hold firm for the sake of safeguarding Commonwealth interests.

By Paul Einzиг

THE prospects of an agreement between Britain and the Common Market are now viewed with much less optimism than they were a few weeks ago. It now seems unlikely that the Brussels talks will be concluded in a matter of weeks, and it seems even less certain whether they will be concluded at all. The deadlock over satisfying British demands on agriculture and on the Commonwealth continues. Moreover, sentiment in Britain seems to have changed somewhat against joining the Common Market, partly because British exports to West Germany and other countries of the E.E.C. seem to have been doing quite well lately in spite of the handicap of the preferential tariff within the E.E.C., and partly because of the indignation over the fact that France has violated the Eurovision agreement over transatlantic television relays. Small as this matter may appear, it is calculated to arouse the old insular prejudice against continentals. How can be trusted, it is asked, on matters of vital importance if they cheerfully

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Reserved Support From Banks?

After being fully subscribed the lists for the new loan were closed as expected on the second day; conversion applications predominated, but new cash brought in was at the satisfactory figure of over Rs 100 crores. No details are available as to the magnitude of conversion applications in respect of each of the maturing loans. But the conversion applications at Rs 153.67 crores compare with the total outstandings of the 2½ per cent 1962 and the 3½ per cent 1962 at Rs 183.14 crores. Thus apparently the net borrowing this year will stand reduced by the liability of cash repayment of the maturing loans in a sum of Rs 29.47 crores. The general view of the money market seems to be that there will not be a second tranche of the new loan later in the year.

In any event interest is concentrated on the forthcoming State loans. If the terms and conditions of the Centre's borrowing programme of early this month are any guide, we may expect a 4½ per cent 12 year series. With the usual two exceptions the issue prices will, we may be sure, be at a discount. It is possible that the States turn somewhat modest as to their targets. For the clear indication has been given to the banks that the Reserve Bank is not to be expected to finance their subscriptions to gilt-edged—whether Central or State. It is indeed this injunction upon banks which accounts for the behaviour of the call money market on the two days that the subscription lists for the Central loans were open. On the first day call money continued to be distinctly easy; banks, we may presume, did not put in their own applications; instead they bided their time, to discover the extent of draws on them by such entities as the Life Insurance Corporation. The LIC, incidentally, is thought to have put in anywhere between Rs 15 crores and Rs 20 crores; and the banks would surely have experienced a corresponding reduction in their Deposit resources. But the Scheduled Banks' return for 13 July will not necessarily disclose a fall of such magnitude: for Deposit growth is now recognisable as being sustained and week-by-week. Hence while the new

and week-by-week. Hence while the loan applications of entities other than banks will be reflected in a fall in Deposits, the magnitude of such subscriptions is bound to have exceeded the size of the decline. Then, on the second day, when banks were more or less in a position to gauge the draws on Deposits, they would have ascertained how much of resources they had to spare for their own new loan subscriptions. Recourse to additional borrowings from the Reserve Bank would have been minimal—the exchange banks perhaps did avail themselves of the Reserve Bank's facilities. As a consequence it is likely that bank subscriptions (in cash) may not have been substantial. On the other hand if the slack season persists in creating an embarras de richesse for the banks (and

There is a qualification to the last sentence. We believe that emboldened by the plethora of funds with the banking system the Government will decide upon a second tranche of borrowing some time, say, in September. Since it will be directed at the banking system, the loan would presumably be a re-issue of the 3½ per cent 1968. However, we have to bear in mind the fact that the Reserve Bank's holding of this loan must by now be very considerable. So, a second tranche will also depend on the magnitude of the Reserve Bank's holdings of the 3½ per cent 1968 in September.

It remains to add that predictably the smallest quantum of support went to the 4 per cent 1972, which brought in Rs 80.59 crores. Applications for the 3½ per cent 1968 amounted to Rs 93.25 crores, and apart from conversions, banks' new cash would have been directed at this loan. The long-term 4½ per cent 1955 realised Rs 84.03 crores, of which we fancy about a quarter came from the Life Insurance Corporation and other institutional investors. Subscriptions to the 4 per cent 1972, we believe, emanated mainly in the form of the conversion applications of the Reserve Bank.

Tracing New Loan Subscriptions

The returns of the Reserve Bank for 13 July do not easily yield up the secret of where the new loan subscriptions came from, and where they disappeared to. And finally, when there is a glimmer of light, the inference is hard to believe. For, if our analysis and interpretation are correct, the Scheduled Banks outside of the State Bank mustered up between them less than Rs 7 crores for cash subscription. This is the manner of our analysis: cash subscriptions totalled Rs 103 crores; this would normally be reflected in a rise in the Centre's Deposits, but it is equally traditional for the Centre not to have so much of spare cash and therefore we usually have reverse ad hocs—that is, cancellation of ad hoc Treasury Bills before maturity. Since the Centre's Deposits are up only by Rs 5 crores, we may take it that reverse ad hocs have been instituted for around the figure of Rs 100 crores. In the main such cancellation would

Why the Discrepancy?

With the returns for the first Friday in July the Reserve Bank in its weekly statement sought to correct certain distortions in the figures of Scheduled Banks by giving break-downs of two heads, Banks' Deposits and Other Loans and Advances. In respect of the first, the statutory balances of banks were split into those of (i) Scheduled Banks; (ii) State Co-operative Banks; and (iii) Other Banks. The "Other" was dropped from the head of Other Loans and Advances, and the outstandings of each of the following three categories were given: (i) Scheduled Banks, with a footnote indicating that the amount included advances against usance bills; (ii) State Co-operative Banks, with another footnote to the effect that the amount excluded advances from the Operations and Stabilisation Funds; and (iii) a remnant category of "Others"

The statutory statement of Scheduled Banks includes (a) the figure of borrowings from the Reserve Bank and (b) the figure relating to balances with the Reserve Bank. There is scarcely any doubt that these two figures in the statutory statement of Scheduled Banks should tally with the relevant figures in the Reserve Bank returns. But we find that, whereas the Reserve Bank indicated Scheduled Banks' borrowings at Rs 2.41 crores in the return for 6 July, the statutory statement of Scheduled Banks for the same date places outstandings at Rs 1.48 crores. Again, the Reserve Bank puts Scheduled Banks' Deposits at Rs 105.56 crores in the return for 6 July, while the statement of Scheduled Banks gives out the information that balances with the Reserve Bank, as on the same date, are at Rs 108.52 crores.

Why the discrepancies? The student of the money market would be beholden for an explanation from the Reserve Bank.

be mirrored by a decline in the rupee investments of the Reserve Bank—but offset and distorted to the extent of the Reserve Bank's own cash subscriptions. Rupee Securities are lower by Rs 14 crores, and investments have declined by Rs 27 crores. Thus the aggregate fall is Rs 41 crores against which the notional decline arising from cancellation of ad hoc would have amounted to Rs 100 crores. So the first conclusion we can come to is that the difference between the two figures—or Rs 59 crores—roughly represents the cash subscriptions of the Reserve Bank. We have next to turn to the State Bank return for the same week, which discloses a fall of about Rs 26 crores in its gilt-edged portfolio and a rise of like amount in Other Assets. With this is linked the rise of some Rs 16 crores in Treasury Bills Purchased and Discounted by the Reserve Bank. We are to infer that the State Bank has discounted Treasury Bills for Rs 29 crores, and tendered the proceeds for cash subscription to the new loan; but the purchase in the new loan has not yet been incorporated, and so Other Assets have correspondingly been shown higher. However, the second conclusion is that the State Bank has put in Rs 20 crores in cash. The next step is

to note that the Reserve Balances of Scheduled Banks have been marked down by Rs 17 crores, and that in the same week the State Bank has not reported any fall in its cash in hand and with Reserve Bank. So, the implication is that the decline relates wholly to other Scheduled Banks. Again, the Scheduled Banks did not feel such pressure as would have necessitated their borrowing more from the Reserve Bank: the latter's loans and advances to Scheduled Banks are actually lower fractionally. Drawals on their Deposits would have compelled the Scheduled Banks to run down their cash balances; and we may conclude, thirdly, that subscriptions of such entities as the Life Insurance Corporation, provident funds, etc., amounted to roughly Rs 20 crores, which fact being mirrored in the reduction in Reserve Balances. By elimination we come to the fourth—and somewhat disquieting—conclusion. The cash subscriptions of the Reserve Bank, State Bank and LIC, etc., add up to Rs 99 crores; the other Scheduled Banks therefore put in no more than Rs 5 crores.

The other changes in bank returns are: Notes in Circulation declined by Rs 4.46 crores, and there was inflow of Rupee Coin for Rs 0.91 crore. A transfer of Rs 0.68 crore was made from Foreign Securities to bolster Balances Held Abroad. Currency was contracted against Rupee Securities for Rs 1.4 crores, and the net result was a decline of Rs 9.62 crores in the Reserve Bank's cash in the till. In the return for the Banking Department we note that the Centre's Deposits are up by Rs 5.11 crores at Rs 53.27 crores, while those of State Governments have been drawn on to the tune of Rs 7.73 crores to be placed at Rs 17.46 crores. States' borrowings from the Reserve Bank are fractionally higher at Rs 14.14 crores. Loans and Advances from the Operations Fund to the State Co-operative Banks rose by Rs 0.31 crore to Rs 11.95 crores, and from the same resources investment in Central Land Mortgage Bank Debentures has also increased by Rs 0.61 crore to Rs 2.70 crores. However, the State Co-operative Banks have reduced their other borrowings from the Reserve Bank by Rs 1.59 crores to Rs 117.95 crores. Also, the Reserve Bank's remnant category of loans and advances, to "Others", which was at nil balance last week, is now shown at Rs 0.93 crore. Despite the transfer from the Issue Department, Balances Held Abroad have been marked down by Rs 1.41 crores to Rs 5.37 crores; the foreign exchange loss exceeded Rs 2 crores in the week under review, and assets held by the Reserve Bank now have fallen to Rs 91.46 crores.

The return of the State Bank for 13 July reveals a fall of Rs 20 crores in the gilt-edged portfolio, a rise of like size in Other Assets.

a small increase of Rs 1.15 crores to Rs 30.99 crores in cash balances, and fractional falls of Rs 0.46 crore and Rs 0.33 crore to Rs 571.74 crores and Rs 289.78 crores in Deposits and Advances respectively.

Handsomeness accretions to Deposit resources have been recorded in the return of Scheduled Banks for 6 July. Net Demand Deposits are up by Rs 7.46 crores to Rs 884.80 crores, and net Time Deposits have increased even more significantly by Rs 9.57 crores to Rs 1,277.16 crores. Borrowings from the State Bank are slightly higher by Rs 0.62 crore at Rs 16.96 crores, but indebtedness to the Reserve Bank is a shade lower at Rs 1.48 crores. There is disinvestment in gilt-edged for Rs 8.35 crores, but this is wholly on account of the State Bank. Net Advances have receded slightly by Rs 1.67 crores to Rs 1,417.67 crores. The end result is an increase of Rs 6.72 crores to Rs 229.84 crores in cash balances, including money at call and short notice.

New US Depreciation Rules

With the publication of its new depreciation rules, the US Treasury has taken a long-awaited action to stimulate business investment in new plant and equipment. The new rules represent a significant modernization of the 20-year-old formulas for calculating how much of a tax deduction any business can take each year in recovering the cost of its productive equipment.

This kind of equipment is generally expensive to buy and instal, and has a limited life, being subject to normal wear and tear—or depreciation—over the years. Hence, an increased tax allowance to cover this depreciation would serve as an inducement for rapid and more extensive replacement of existing facilities.

This objective would be obtained, under the new rules, largely by reducing the estimated useful lives of new equipment in the tax calculations of American business. According to the Treasury, the new schedules promise to save American industry as a whole as much as \$1,500 million in taxes a year.

The new depreciation move can have several important results. For one by stimulating business investment, it will tend to prop up the economy in the months and years ahead. Business spending on plant and equipment can be a significant source of strength for the economy generally, in the people it employs and the materials supplies and services it utilizes.

However, American business often is impeded in this effort by facilities which to too great a degree and in too many industries are obsolescent by modern standards, particularly when compared with those existing in many other industrial

countries. An irony of this situation is that much of the modern productive equipment in place abroad has been purchased and installed during the postwar period with the help of aid funds supplied by the United States.

BANK PROFITS

Dena Bank

The net profit of Devkaran Nanjee Banking Company Limited for the half-year ended 30th June 1962 including the sum of Rs 13,51,096.09 brought forward from the last year's account, amounts, subject to audit, to Rs 30,61,746.11 which the Directors have resolved to dispose of as follows:—

	Rs
To Pay an Ad-Interim Dividend at Rs 2-00 per share (Subject to deduction of tax) for the half-year ended 30th June 1962	2,00,000.00
&	
To Carry Forward to next half year's account	28,61,746.11
Total	30,61,746.11

Punjab National

The working of the Punjab National Bank Ltd. for the half year ended 30th June, 1962 shows that the Bank has made satisfactory progress.

Subject to audit, the net profit of the Bank for the half year ended 30th June, 1962 after providing for tax and making other necessary provisions amounts to Rs 59.93 lakhs (Including Rs 10.38 lakhs carried forward) against Rs 80.29 lakhs (Including Rs 4.23 lakhs brought forward) subject to tax for the corresponding half year in 1961.

The Directors have decided to pay an ad-interim dividend for the current year at the rate of Re 1/- gross per share amounting to Rs 20 lakhs leaving a balance of Rs 39.93 lakhs to be carried forward to the next half year's account.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 17 July, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.400 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.390 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 23 July, 1962. Successful tenderers should make payment on Friday, 27 July, 1962 at all centres. Other conditions are as usual.

During the week ended 13 July, 1962, Government of India Treasury Bills for Rs 176,08,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 18 to 21 July, 1962 at Rs 99.421 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 9 to 14 July, 1962 amounted to Rs 10,00,000.

Notes

UN

Technical Assistance in 1961

In his recent report to the General Assembly, U. Thant, the Secretary-General of the United Nations, called upon the industrially advanced nations of the world to take more concerted efforts to accelerate the rate of economic growth in the developing countries. Underlying this appeal was the responsibility which the United Nations has assumed to bridge the gap in development between the developed and underdeveloped countries. In fact, the UN's role in this behalf has tended to become more effective and telling in recent years, and has found expression in the intensification and diversification of the activities undertaken by its subsidiary bodies specifically in charge of various projects and schemes. The latest report on the "Technical Assistance of the United Nations" bears testimony to this increasing interest being evidenced by the UN for promoting the Economic development of the backward countries and regions.

The more significant features of the UN technical assistance activities during 1961 were the expansion in work for UN Special Fund, as also of the services of experts

and fellowships provided, and the record level of expenditure reached. Aid to less developed countries provided through the United Nations through projects administered by its Bureau of Technical Assistance operations rose by 20 per cent to a record figure of \$12.1 million. Also remarkable was the fact the projects carried out by the United Nations on behalf of the Special Fund almost doubled amounting to \$1.7 million. In respect of technical experts working under the UN technical assistance programme, it is shown that their number increased to 1,032 in 1961 from 924 in the previous year while the number of fellowships awarded rose from 928 to 1,107. The newly independent and emerging countries claimed a substantial share of the UN's expanded assistance during 1961 and it has been revealed that the volume of assistance to Africa alone increased by about \$1 million to \$1.4 million.

Under the Special Fund, the UN has assumed responsibility for an increasing number of projects. As of January 1962, the UN has been designed as the executive agency for 32 Special Fund projects 24 of which are for the development of natural resources and the remainder mainly for industrial development, economic planning and public administration. Disbursements for Special Fund activities showed a spectacular increase to \$1,709,552 as against \$906,367 in 1960. Reflecting the progress being made by the UN in these activities is the fact that it has been possible for it to effect a shift from preparatory studies to the execution of operations. In this connection, the report observes that the "growing involvement of the substantive staff at Headquarters and in the regional secretariats in technical assistance operational activities has been an important development in recent years."

The report also records other important developments initiated by the UN. These include the increasing contribution of the regional economic commissions to the UN programmes of technical cooperation, arrangements made for decentralisation of economic and social activities of the UN efforts being made for relating projects more intimately to national development plans. The report also draws attention to the emphasis put on aid for the development of natural resource. It is shown that the UN assistance activities undertaken in this field on behalf of the Special Fund increased from \$288,000 to \$1,147,000 and under the UN Regular Pro-

gramme from \$149,000 to \$365,000. It is also noteworthy that of the total cost of projects undertaken by the UN under the Regular Programme and on behalf of the Special Fund, amounting to \$12.1 million in 1961, the largest amount—\$2.6 million—was spent on projects for the development of natural resources.

COAL

Subsidy for Difficult Mining

Important decisions affecting the coal industry seem to be under way and have been indicated by Mr K. D. Malaviya, in his talk with pressmen in Nagpur. These include the reorganisation of the NCDC, and the provision of a subsidy for grade III coal in the outlying fields. The measures which are obviously designed to galvanise production which contrary to Third Plan schedules has been in serious shortfalls, have relevance mainly to production in the outlying fields. It is in these fields that production has been greatly lagging behind. Apart from the incentive subsidy, Mr Malaviya has also proposed action against mine-owners who allow the mines to remain idle with a view to making profits out of the transfer of mining leases. Production in the outlying fields should prove responsive to these measures in as much as transport bottleneck which has hindered production in the Bengal Bihar areas is not as acute in the outlying fields. At the recent meeting of the coal advisory council, the Railway representative has observed that the railways are fully equipped to meet the transport requirements emanating from the outlying areas. Further production in the coal fields operated by the National Coal Development Corporation must also needs to be stepped up further substantially since the shortfalls in production at the end of the Second Plan and the first year of the Third Plan reflected mainly the inability of the NCDC to raise production to its targeted schedules. Reorganisation of the NCDC in the direction of greater decentralisation of authority may help this to some extent.

As part of the reorganisation of the NCDC, the creation of a new organisation within the Corporation itself with exclusive responsibility for sale and movement of coal has been suggested. The rationale for such an organisation is the heavy capital cost that will be entailed by operating coal traffic on a large scale by road and river. A central organisation operating on a largescale and putting into service steel barges and 24-ton trucks for coal movement, it is reckoned, can reduce the cost of transportation substantially. The practicability of the scheme is however open to doubt in view of the limited availability of the re-

quisite number of barges etc to move coal on a substantial scale.

While considerable concern is felt in official circles at the gaps in coal production, it is a curious anomaly that collieries in the Bengal Bihar fields should be considered on a different footing in the matter of payment of subsidy. It has been stated by Malaviya that the increase in coal subsidy for difficult mining in the West Bengal and Bihar fields will not be available for grades II and III coal. For grade I coal, a 50 per cent increase in subsidy is however being considered. It is difficult to understand the reasons for the exclusion of grade II and III coal from the benefit. For, poorer grades coal mined under difficult conditions are as expensive as the higher ones. By denying the benefit of an increase in subsidy for the lower grades, the Government would only be aiding an aggravation of pressure on the better grades. Even for the better grades the problems of finance will be far from solved by the announcement of the new subsidy. The increase in price announced as part of the first instalment of measures announced by Mr Malaviya immediately after he assumed his office in the new Cabinet, to stimulate coal production was inadequate compared with the rise in cost of production that has occurred and the extremely narrow margin of profit within which the industry was operating. Immediately the private sector has to find out Rs 30 crores as borrowings for financing its projects for expansion. Precious time has already been lost by the delay in the screening of the applications for the world bank loan by the Government. The assurance given by Mr Malaviya about the Gov-

The international coffee meeting now being held has set the stage for a new agreement on coffee. The current agreement governing coffee marketing is expected to expire on September next and with the prospects for coffee prices being far from favourable, the need for another agreement to ensure reasonable prices for coffee is indispensable. Production in the last few years has tended to outstrip consumption and the consequent slump in prices has hit countries depending on coffee exports mostly, particularly hard. The FAO forecast of production

and consumption in the next decade has also emphasised the widening gap between production and consumption. The greatest threat of a disruption of world market in coffee comes from Brazil which is the world's largest producer of coffee. In this background, regulation of exports on the basis of quotas for member countries points to the only way to reasonable stable prices for the coffee producing countries. The present meeting which is being attended by representatives of about 51 countries is expected to be a long drawn-out affair, but the opening speeches of the representatives of the important consuming countries like USA, UK, USSR, and Italy have given the hope that consistent with the interests of the producing countries a mutually acceptable agreement will be arrived at. At the meeting special attention has been drawn to the problems that will

be faced by the smaller Latin American producing countries. Some aspects of the agreement that will finally be endorsed have already become known. For instance, the agreement will embrace not only the producing countries but also the major consuming countries and in the interests of the producing countries, a proposal for the creation of an international coffee fund has also been suggested to enable countries to undertake diversification of agriculture.

India's position as an exporter of coffee is not comparable with that of the more important exporters like Brazil. The country's total exports constitute only about 2 per cent of total world exports. In this context, the value of an agreement regulating exports is not as great to us as it is to the other countries which depend on coffee alone for a major part of their export earnings. The Gov-

ernment of India is still undecided about joining the agreement, though the Coffee Board has urged the advisability of joining it. If the agreement would entail curtailment of production of coffee, there is hardly any benefit which we can expect from it. In his address to the International meeting Mr H. Sitarama Reddi, the Indian delegate, has urged exemption from any production cut for India in view of the harmful consequences that would be spelt on foreign exchange earnings. An increase in coffee production to the level of about 80,000 tons has been written into the Third Plan. This takes into account not only the need for greater exports but also the growing consumption requirements within the country.

The report of the team deputed by the Central Small Scale Industries Organisation at the behest of the Goa Administration to undertake a study of the economic as well as agricultural potentialities of the erstwhile Portuguese pockets in India contain various useful suggestions for the economic integration of them with the rest of the mainland. It should be remembered that ever since the take over of these pockets this topic was one of the major preoccupations with the authorities and the report paves the way for an integrated approach to the entire problem. Though several attempts were made prior to the deputation of this team to gather authentic and up-to-date informations covering the wide field of Goan economy and chalk out policies which will accelerate the development the report provides a correct appraisal of the nature of the economy which can be utilised as a base on which the entire planned programmes can be oriented.

Among the various measures suggested are the establishment of large as well as small sized industries, development of agriculture, tourism and the provision of adequate industrial finance and banking facilities which are essentially required for the construction of a sound economic base. These suggestions are sound and useful enough to gain easy acceptance. There is no gainsaying that only a comprehensive plan can erase the economic malaise of this region. The entire economy was till recently geared to ore-export purposes and the lack of adequate power supply, conspicuous absence of skilled technicians and the like were serious impediments to industrial development. The team has recommended the setting up of a department of industries in Goa and the establishment of a technical institute

at Margo to impart proper instructions in the engineering and technical subjects.

technical subjects. The paucity of electricity is sought to be made good by the extension of power supply from the Koyna project and also by harnessing the power potential of Dudsagar and Eravalem falls. Among the names suggested for the development of large scale undertakings fall pig iron furnace, manufacture of industrial chains, welding electrodes and chemicals. The list of small units that are proposed to be developed include the production of clocks, mechanical toys, machine tools, electrical accessories and boat building and repairing. The suggestion for setting up a unit of Geological Survey of India and the Bureau of Mines is equally important for the organisation of a sound mining industry. The development of the port should also be accorded top priority for enhancing transport and other communications. Considering the present backwardness of the region, the speedy implementation of the recommendations should be taken up seriously.

The latest economic surveys point to continued confidence among American businessmen and consumers. These results appear to augur well for the future, since these private sectors together account for the bulk—some 80 per cent—of US economic activity.

Lending more than passing significance to these developments, moreover, is the fact that they have come to the fore in the face of several unsettling developments: The sharp stock market dip, the furore and inventory liquidation in the steel industry, and the mounting speculation about a faltering of the current economic expansion.

On the business side, a special survey by the McGraw-Hill Company, conducted in the latter part of June, has uncovered no significant change from earlier plans to spend a record \$38,000 million on new plant and equipment this year. Fully 80 per cent of the companies polled indicate no change in their investment plans, while 10 per cent apparently will be spending less and 10 per cent will be spending more.

Interestingly enough, the survey discloses little evidence of any real economic difficulties. Instead, the reasons given for planned investment cutbacks invariably refer to snags in technological or construction schedules.

On the other hand, most companies cite the need to remain competitive as an overriding reason to carry out or increase their expansion and moderniza-

tion programs. In general, they note that more efficient facilities will help them pare costs and hold on to or enlarge their markets.

As for consumer attitudes and behaviour, these are described as "stable" in the latest regular poll by the survey research center of the University of Michigan. Any shifts in the way consumers feel about their personal finances and economy in general are considered too negligible to have any real significance.

On the plus side, the American people apparently feel better about their own finances and financial prospects than they did in a similar survey earlier this year. Also, they like the way prices have remained steady.

While there seems to have been a rise in the number of people who expect unfavourable business developments, the great majority—some 65 per cent—still are looking forward to a generally

prosperous economy in the year ahead. All in all, the picture is one of a consumer who is basically confident and prepared to spend, but who also is somewhat more cautious than before.

A thorny question still to be faced is whether these business and consumer plans and attitudes, as they are translated into actual buying and investing activity, will really be good enough to move the economy along at an adequate rate, or whether additional government stimulants will be needed. At the moment, the economy is moving along without serious malfunction or maladjustment. Admittedly, however, it is not making the headway that was anticipated and that was in evidence earlier this year. Complicating the situation is the normal summer seasonal lull in activity.

As President Kennedy has stated on several occasions, and reiterated at his news conference some

time ago his administration is watching developments closely and will be ready to act if necessary at the appropriate time. So far, the business news apparently is not such as to warrant any special government action, which could turn out to be premature if the current slowdown in what has been a vigorous economic advance turns out to be merely seasonal or just a brief and passing letdown.

Mentioned as a possible stimulant if one should be needed is a cut in taxes on both business and personal income. The administration has already planned for such a cut to be effective early next year as part of a comprehensive tax reform measure, in line with its program to accelerate the nation's long-term economic growth. Whether this schedule will be moved up or not will be determined by the economy's performance in the next few months.

COTTON TEXTILES

Decline in Exports

A supplement to Texprocil Bulletin—a publication of the Textile Export Promotion Council—gives valuable information about exports of cotton textiles in the world during 1961 with particular reference to India. The performance of Indian cotton textiles as revealed in this publication is indeed quite unsatisfactory, if not actually alarming. It is true that 1961 has been an unfavourable year for export of cotton textiles, for the expansion in the exports of cotton textiles by the major non-communist countries of the world was reversed during the year. Exports of major non-communist countries of the world during 1961 are estimated to aggregate to 5,283 million yards as against 5,641 million yards during the previous year—a decline of 6.3 per cent. The decline is accounted for mainly by the Asian and West European exporters. Exports from American countries show a slight expansion while those from African countries are expected to show a slight decline.

Most of the countries have recorded a decline in the offtake of cotton manufactures for export purposes. In the entire list, barely four have bettered their previous record. The US records 472 million yards as against 434

million yards in the previous year. The second place is taken by Hongkong with a figure of 359 million yards against 312 in the previous year. West Germany accounts for 288 million yards as against 285 million yards in the previous year and Mexico shows 40 million yards as compared with 19 million yards in 1960. Among the large number of countries whose exports have declined figure the two important exporters, India and Japan. India's exports of cotton textiles (including handlooms) have declined in 1961 to 603 million yards from 724 million yards in 1960. The magnitude of the decline will be evident if it is noted that exports in 1959 aggregated to 850 million yards. It may also be noted that the figure for 1961 was the lowest in the past nine years. Exports of Japan too have declined as compared with the previous year from 1426 million yards in 1960 to 1412 million yards in 1961. But the decline is about 1 per cent only and exports of this country in 1960 had recorded a sizable increase over those of 1959 when exports aggregated 1263 million yards. The reasons for the sharp decline in exports of Indian piecegoods are familiar enough: shortage of raw cotton, increasing shift

in overseas markets for finished goods the credit squeeze and foreign exchange shortage prevailing in certain markets, low purchasing power of the people in some of the African markets, disturbed political conditions in some of Asian and African countries, and the lower offtake of Indian cotton piecegoods by UK, India's major customer. Indian cotton textile exports received a set back last year in almost all their traditional zones. Except Africa which took slightly higher, all other zones have reduced their offtake, the decline being sizable in some cases.

But most if not all, of the difficulties faced by the Indian cotton textile industry had also beset the Japanese industry and yet it has managed to maintain its exports at a high level. Japanese cotton textiles continue to have a good market in Asia where their absorption in 1961 was 623 million yards as compared with India's 156 million yards. In the African Zone, Japanese cotton textiles, like those from India, have made further headway. In the European Zone while India's share has declined from 218 million yards in 1960 to 161 million yards in 1961, Japan's share increased to 190 million yards from 185 million yards. The success of Japanese Cotton exports to Asian countries has been due to the quick and varied steps taken by Japan to meet the needs of the situation keeping always in view the objective of maintaining the level of exports. It has been noted that last year Japan has reduced the price of its goods in some of the Asian markets by as much as 30 per cent. There have been further reductions during the current year with the result the total reduction since last year comes to about 45 per cent. The resourcefulness of the Japanese is again evident in their grasp of the needs of particular situations and the quickness with which they apply remedies. To quote one instance, Japan has been attempting to stock its textiles in the free port of Rotterdam with a view to effecting quick delivery of goods to European markets.

The setback to Indian cotton textile exports is partly due to their excessive dependence on a few markets. In 1961, UK alone accounted for 23 per cent of the total exports of Indian cotton manufactures while Sudan and East Africa together accounted for a little over 20 per cent. This concentration in two or three markets is itself a drawback because if for some reason the offtake by one or all these countries falls, a certain setback in total exports results. Japan on the other hand has developed export markets in as wide a field as possible. The Texprocil has pointed out that whereas 85 per cent of Indian cotton piecegoods exports is accounted for by 15 markets, in the case of Japanese cotton tex-

tile exports, 25 markets go to make up the 85 per cent. Almost half of the total decline in Indian Cotton piecegoods exports is accounted for by the decline in the offtake by the UK which took nearly 60 million yards less in 1961 than in the previous year.

The poor performance of Indian cotton textiles in 1961 in world markets is not a sudden development. The setback has been developing for some years now. There is a buyers' market in cotton textiles and all importers are not as ready as before to admit goods from outside. Lancashire has sought to restrict the quantum of Indian cotton textile imports into UK while the US has limited the exports of 8 categories from Hongkong. Even so Japan has not been too adversely affected. Its exports have been well maintained even in the difficult trading conditions of last year. But Indian textiles however have found the difficulties too overwhelming. It stands to reason that while a comparatively smaller Japanese cotton textile industry (production of Indian cotton textile industry is of the order of 7728 million yards in 1961 while that of Japan is 4047 million yards) is able to take the first place in world cotton exports even under difficult conditions, it should not be too difficult for the second largest producer of cotton textiles in the world to increase its exports. Exports of cotton textiles assume great importance at the present juncture when the country is going through a severe foreign exchange crisis. It is time that the whole question of cotton textile exports was examined thoroughly with a view to creating conditions for maximising their exports. The continuous decline in exports during the past three years is enough evidence that our goods lack some of the more important advantages that overseas consumers look for in cotton textiles they buy. The Texprocil Supplement analysis indicates on what lines action could be taken to improve the prospects of our textiles in overseas markets. It is clear that one of the main requirements for increased textile exports is competitive price. It has been noted that an important reason for the decline of our exports in some of the markets such as America is the uncompetitive price of our goods. Another point that emerges is that if there is to be expansion in our exports, increased attention is to be paid to producing finished goods. In recent years production in the department has been increasing but it would appear our industry is yet to attain economic production. This raises the important question of modernisation of the industry which in turn needs foreign exchange. But this and other problems facing the industry will brook no delay if the downward trend in our cotton textile exports is to be reversed.

W. GERMANY

The Little Man as Investor

Millions of West Germans in the lower and middle-income groups have been successfully aided and encouraged by the Federal Government to save and to acquire property.

What sort of property? That depends on individual wishes. Private assets in the Federal Republic take many forms. People build homes, buy life insurance, invest in securities or put their money into savings accounts. In many cases, the Government helps by providing grants and easy-term credits, tax relief, premiums, bonuses and "people's shares" of securities at preferred rates.

HOME-BUILDING BOOM

High among the forms of property acquisition among the people of the Federal Republic is the building of family homes. Since 1949, about 1,700,000 owner-occupied homes have been built in the Federal Republic of Germany, many of them with direct or indirect Government assistance. Of each 100 new private houses, it is estimated that more than 50 are built by wage and salary-earners.

By and large, family homes—owner-occupied homes—now account for about one-third of total house-building activity.

Government assistance to people willing to build a house is granted before, during and after the construction. Some types of Government assistance benefit all prospective home-owners irrespective of income. Other forms of aid, and major ones, benefit low and middle-income earners only, with emphasis upon help for families with many children.

Government assistance before the house is built mainly consists of facilitating the process of accumulating the necessary funds. The prospective house-owner's contributions to building and loan associations are either tax-deductible or eligible to be augmented by premiums paid out of the Federal treasury. These premiums are intended especially for low and middle-income earners who would not be able to benefit from tax deductions because they pay only a few Deutsche Marks of income tax or no income tax at all. Premiums range from 25 to 35 per cent of the amount saved annually, provided the laid-away amount is paid into a building society fund. In this way, for example, a family with three children is entitled to a premium of DM 30 for each DM 100 put aside. The maximum annual premium is DM 400.

Other Government help for lower and middle-income groups includes an imposing array of outright grants, subsidies and easy-term credits given by community, Land (state) and Federal authorities in order to secure the finan-

cing of the home-building project and/or to ease the burden of carrying the mortgage, by lowering the interest charge.

Once a home is built, the chief form of Government help is the granting of tax privileges for special write-offs.

POPULAR OWNERSHIP OF SECURITIES

The Government has also made successful efforts to spread the ownership of securities throughout the population. This phase of "spreading the property" has included two major moves to denationalise Government held property and sell it in the form of "people's shares". Beneficiaries have been a multitude of low and middle-income earners.

In 1959, the Federal Government sold the state-owned Preussag, a coal and ore-mining and processing company, to some 200,000 individual Germans. Many of them thus came into possession of industrial shares for the first time in their life.

Last year the Government sold 60 per cent of the capital stock of the Volkswagen works to some 1,500,000 persons—who had to show that their annual income did not exceed DM 8,000, for single persons, and DM 16,000 for married couples.

These two moves alone, with Preussag and Volkswagen, have immensely increased the number of stockholders in Germany. The holders of "people's shares" plus the investors in other securities and mutual funds now total an estimated 2,500,000 persons.

NEW ATTITUDE TOWARDS INVESTING

Is the German public growing up in its attitude towards investments? Indications are that the tradition of past generations—to "salt away" savings in a tin can and consequently to dread even a moderate inflationary trend like the plague—has undergone a modification since the birth of the Federal Republic in 1949.

For example, although the German stock exchanges, like those in New York and London, have gone through some rather stormy weather recently, investors as a whole have refused to panic. Most of the Preussag and Volkswagen stockholders—"little people" who might be expected to be frightened by the dip in the market—have held on to their shares. Economic indication of a growing common sense and maturity among large groups of the population which until a few years ago had never had anything to do with stock-exchange dealings.

"LITTLE MAN" AS AN OWNER
The more widespread ownership of shares in stocks was illuminated

by a recent survey. The study brought out that in 1961 about 33 per cent of all stockholders in the Federal Republic of Germany were salaried employees, 24 per cent were wage-earners, 20 per cent businessmen, 11 per cent civil service employees, 6 per cent professional people and 5 per cent farmers.

In order to get an accurate picture, of course, one must bear in mind that this breakdown shows nothing about how many shares each individual or each group of the population owns. While it is true, for instance, that businessmen account for only one fifth of the total number of stockholders, it is quite certain that businessmen as a group own much more than one-fifth of the total capital stock in Germany, and while wage-earners account for 24 per cent of the stockholders, the survey also shows that up to now only 3 per cent of all German workers own shares.

Nevertheless, there is a clear trend towards broader ownership of shares. In 1953, when a similar survey was made, only 1 per cent of all German wage-earners held stock. By 1961, about 11 per cent of civil servants owned stock, compared with 2 per cent in 1953.

In Germany as elsewhere, farmers turn out to be one of the most conservative groups. In 1953, about 3 per cent of farmers owned securities, and by 1961 the percentage had risen only one point. By contrast, the percentage of businessmen and of professional people who hold securities had doubled by 1961.

BONUSES FOR INVESTORS

Aside from granting lower-income earners and large families special rebates on the price of the above mentioned "people's shares", the Government has also held out another inducement to encourage the "little man" to buy any shares he chooses. Anybody who agrees to have his securities "frozen" for five years—that is, agrees not to part with them except in an emergency—receives a bonus or premium from the Federal treasury. A major motive behind this offer is to encourage broad sectors of the public to become accustomed to ownership of securities, and thus, in a sense, to become owners of a slice of the national wealth. The bonuses amount to 20 per cent of the money laid away in the form of shares. Ceilings on amounts for which a bonus will be paid range from DM 600 to DM 1,800 a year, according to family status.

Not only securities, but other forms of investment and long-term savings are rewarded with Government bonuses. The Federal treasury pays similar premiums for small-scale accumulation of assets in the form of, for example, bonds or interest-bearing and "frozen" savings accounts.

Up to now, about 2,000,000 German men and women have taken

advantage of this Government help in accumulating assets.

Investment certificates, which are also eligible under the savings-bonus plan, are another form of property accumulation that has spread rapidly in recent years. In 1956, the eight investment or mutual funds then operating in the Federal Republic had issued units to a total value of DM 108,000,000. In 1961, the number of funds had grown to 19, and their certificates were worth well over DM 3,000,000,000.

Here too, the lower income groups are significant sharers in ownership of the national product. Many of the investment funds report that between 50 and 60 per cent of the owners of their certificates are wage and salary earners, housewives and pensioners.

EMPLOYERS ENCOURAGE THE TREND

The Government's efforts to promote the widespread ownership of property are supported in various ways by business enterprises and employers. Many firms give specific encouragement to the savings and investment activities of their employees. Such assistance ranges from expert counselling on financial opportunities to company grants and loans to individual employees.

A number of large corporations are regularly offering stock in the company to their employees at preferred rates. It is estimated that at present there are about 100,000 employee stockholders in the Federal Republic.

In turn, employers receive encouragement from the Government in their encouragement of employees to acquire property. A law enacted last year makes it easier for business enterprises to offer their employees help with savings and ownership programmes. The plan works this way.

The Government is willing to forego part of the payroll tax and all of the social-security contributions and have these amounts credited to the employee instead, up to DM 312 per employee provided the employee who receives this extra payment from his company agrees to have it invested and 'frozen' for five years. The beneficiary can freely choose among a variety of investment possibilities. He may ask his company to buy securities for him, including, if he wishes, stock in his own company. He may have his extra pay sent to a building society. He may open a savings account with a bank. Or he may even choose to grant his own employer a loan!

Does the intriguing new plan work? Employers are now in the process of finding out. The Confederation of German Employers Associations is conducting a survey among its members to see how employers and employees made use of the law during its first year in force.

SEINDIA SHIPS SERVE INDIA'S NEEDS

JENSON & NICHOLSON-1962

The Name : JENSON & NICHOLSON
The Year : 1922
The Place : NAIHATI, NEAR CALCUTTA

AND THE RESULT : Forty years of dedicated service to India's homes and industries by Jenson & Nicholson—the country's leading manufacturer of decorative finishes and industrial coatings. The J & N factory is now the focal point of a farflung distribution service. J & N paints are used in places as distant as Patiala and Pondicherry and for purposes as widely separate as interior decoration and industrial coating.

'JAPAN BLACK' FOR MILADY'S GIG

The firm now known all over the world as Jenson & Nicholson was founded in London in 1821. Its sole product: a varnish imaginatively called 'Japan Black'. It was used to paint 'society' carriages—the status symbol of the day. Japan Black was a fine varnish—a rich, glossy black—blended with infinite care. It was, as the phrase goes, 'a quality product'. Today, as in the past, quality is still the keynote...

DECORATION OR DONKEY WORK—J & N HAS A PAINT FOR IT

Plastic emulsion for a penthouse flat; anticorrosive composition for a lockgate; rivalling enamels for typewriters; porcelain lacquer for bathroom fittings...orders like these are all in the day's work to J & N. Whether it's a paint to make a place look pretty, or a coating to prevent a termite attack, J & N can supply it. J & N decorative finishes are to be found in such landmarks as the Taj Mahal Hotel, Bombay, and Raj Bhavan, Calcutta, while J & N industrial coatings are used on everything from domestic appliances to railway rolling stock.

'GO OUT AND SELL PAINT'

A traditional order at J & N, where production is matched in importance by selling. Comprehensive distribution covers the subcontinent. J & N has established paint depots at Calcutta, Delhi, Bombay, Madras, Coimbatore, Gauhati, Kanpur and Siliguri, and from these depots paints are supplied to a network of stockists strateg-

ically located so as to cover even the smallest villages. Distribution is backed by a vigorous selling force. You can always get a J & N paint when you want it, where you want it.

FROM SUNFLOWER SEEDS TO 'BATTLESHIP GREY'

Sunflower Seeds, Castor and Soya Beans, even fish, are used in the manufacture of paint. The metamorphosis takes place daily in the J & N factory. The most advanced paint factory in India, it is now expanding under a phased programme. In this busy complex of men and machines, raw materials are converted to paints like Robbialac Super Gloss Enamel and Jensonlac Stoving—leaders in their fields. Precision control is the keynote in every department of the factory. From the 'varnish kitchen' where gums are 'cooked' with oils to the dry-distemper department, there is an emphasis on quality and an endless striving for improvement.

CAVE PAINTS AND CHEMISTRY

We've come a long way from the days of our cave forebears, when colouring matter came from natural pigment scooped out of the ground. Today the production of paint is a science and an art. At the J & N factory, the chemistry of paint is vitally important. A fully-equipped laboratory, staffed with skilled chemists, pursues an unceasing programme of research, development and testing.

J & N PAINTS RUN THE GAUNTLET

Testing is exhaustive. The quality of pigments must meet rigid standards of purity, colour strength and correctness of shade.

Raw materials are tested for stability and durability. On the laboratory terrace, surface coatings are exposed to the full force of sun, wind and rain. Each batch of paint is tested to precise standards before leaving the factory. So far is attention to detail carried that the laboratory even contains a miniature production plant—a duplicate of the actual factory machinery. Here new formulations are evolved and existing paints improved. The result of all this care: you take quality for granted in a J & N paint.

TEAM WELFARE AT J & N

J & N believes in teamwork and team welfare. Much thought is given to the well-being and happiness of factory employees. Labour quarters, medical facilities and other employee benefits are provided. Team welfare leads to better teamwork. At the J & N factory, where India's leading paints are produced, this policy speaks for itself.

Do you see PINK ELEPHANTS?
In which of J & N's shades of pink?

In September 1960 two of the world's largest paint groups, Lewis Berger & Sons Ltd., and Jenson & Nicholson Group Ltd., pooled their resources by amalgamation to form Berger, Jenson & Nicholson Ltd. Paints manufactured by J & N in India are backed by the joint technical knowledge and experience of this international organisation.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THINGS could have ended far differently and even now we are not entirely free from the danger of a conflict, but as of now the situation in the Galwan Valley is a matter for relief and a modest amount of pride. The thirty odd courageous men of the Indian army manning the post have given China a great deal to think about. Though vastly outnumbered by about four hundred Chinese troops who deliberately moved as near as fifteen yards, our men with their fingers on the trigger saved the post without firing a single shot. This is courage of a very high order and the nation is profoundly heartened by knowledge of its existence under such dramatic circumstances. The full facts of how the situation developed to such alarming lengths are not yet known. Particularly obscure is how the Chinese were able to bring such large numbers in such quick time. Considering the terrain, this bespeaks a state of communications and mobility on the other side that is disturbing. Our own preparedness for such contingencies has since been improved but in the foreseeable future it is unlikely that we shall be left alone in the Himalayan border. More probes of the sort attempted at Galwan will have to be expected and one never knows when a conflict may not be precipitated. Meantime, at the political level, the dreary traffic in protest notes continues and the Chinese language is getting noticeably less civilised. Expressions like "lie", "fraud", and "cheating" in diplomatic exchanges would make eyebrows rise even in these days of international bad manners. China would appear, on the latest evidence, to have given up any hopes of a peaceful settlement of the border issue, thus blasting the bud the somewhat nebulous "hunch" to the contrary that Mr Nehru expressed sometime ago.

When I predicted last week that Mr P. C. Sen will find saving Calcutta from this Corporation a Herculean task—an overworked allusion but remembering the Augean stables, more accurate in this than in other contexts—I didn't expect that he will meet his first defeat so soon. The Government has ignobly buckled under pressure and brave words like 'ultimatum' and section 46 of the Municipal Act have died even before they were properly uttered.

For a week we were fed with hopes of something really happening at last and even as Mr. P. K. Sen was getting all set to go, he has been delivered up to the tender mercies of the Corporation's whims. The "free hand" that was promised him is still nominally his, but his feet have been firmly tied to the Corporation's amour propre, which in the circumstances may take the most obstructionist forms, despite avowals to the contrary. In the event, handing over a hundred lorries, a thousand NVC volunteers and a senior police officer for a month is all there is to it. In retrospect it is a remarkable amount of fuss to have made about such a whimper of a solution. The yielding has been the result of a concerted howl from the Corporation which took the form, in the words of one Councillor, of a preference of submission to this "intolerable interference". The political courage to take this protestation seriously and act on it hasn't been around here for a long time now. If such is the fate of a simple effort to remove rotting filth from the highways, what future is there for a statutory Metropolitan Board that is to relieve even greater responsibilities from the Corporation's incompetent hands?

Now that the French National Assembly has ratified the de jure transfer to India of the former French settlements in India, congratulation and even thanks wouldn't come amiss. The Algerian preoccupation was no idle excuse for the delay in the formalisation of a factual position agreed to as early as 1954, for the ratification has come close on the heels of the Algerian settlement. Of course, parting with Pondicherry was no wrench, for the French were not emotionally involved in their former Indian colonies as they were in Indo-China and to an even greater extent in Algeria. Pondicherry did not produce a Camus nor did it throw out a Challe or Salan. The French army in particular had made no "emotional investment" in India and no "collapse of the soldierly ideal" was involved in giving up Chandernagore. I don't suppose that any Frenchman feels about these places as a character in Jean Lartey's novel, The Centurions feels about Algeria: "It is the ball and chain attaching France to her great power role and forcing her to behave with more

greatness and generosity than a Switzerland of today, a nation of merchants and fat bourgeois." As revealed in the debate, the opponents to the transfer were "mainly a handful of veterans, merchants, officials and pensioners" more worried about their immediate future in a different set-up than riven by basic conflicts of loyalty. Even so, there was a certain amount of obviously half-hearted opposition to the transfer during the debate. The official rapporteur, M. Boscher was extremely persuasive, and used all the tricks in the bag: Arguments, blandishments, and even mild blackmail. The issue was settled and the situation created by the 1954 accord was irreversible and an attempt to resile now may well lead to another Goa: India was a great neutral country of Asia "constituting a pole of attraction" and France had no "right to be estranged from her." India represents quite a considerable market for French products. And most interestingly, Mr Boscher pressed into service the fact that India did not embarrass France by rushing to recognise the exiled Algerian regime till after its legalisation. India has thus cause for satisfaction that her forbearance all these years has paid off. One cannot help feeling sad that Goa had to be settled so differently.

Mr Jo Grimmond's characterisation of Mr Macmillan's cabinet reshuffle as a Stalinist purge is a trifle exaggerated if only for the reason that Stalin's jettisoning of his colleagues was far more sanguinary. The heads that rolled in Russia in the old days were hardly metaphorical. Even so, for British politics, Mr Macmillan cutting his losses was a pretty savage spectacle. Among the images dissolved by the operation was that of the unflappable Mac, who now gives the appearance of a man badly rattled. Bye-election reverses have been steadily eroding party morale and elsewhere the never-had-it-so-good-electioneering has returned to plague the inventor. You cannot bribe an electorate with visions of perpetual affluence and then start applying the squeeze the moment you are safely in office. It was therefore evident for sometime that Mr Selwyn Lloyd had it coming to him. The pretence that his policies will be continued though he has been expended wears rather thin. Mr Watkinson's goose was cooked when about a month or so ago, Mr Macnamara, the American Secretary for Defence tore to shreds Mr Watkinson's thesis on nuclear deterrence. An interesting consequence of the reshuffle is the change in Mr Butler's fortunes. He is now the

Deputy Prime Minister, an office newly created. Even if the unkind reasons bruited for this elevation are discounted, Mr Butler has had hopes of various sorts deferred so often in the past that he is unlikely to feel elated. But he has always sensibly (and let it be said to his credit, loyally) settled for whatever was given, beginning with "education" which Winston Churchill offered him (as an "insult" as an apocryphal story puts it.) It is barely possible that Mr Macmillan's hopes of winning another term for the Tories by these desperate devices will succeed: in that case Mr Butler may yet be a British Prime Minister.

I wouldn't presume to teach Dr Verwoerd his business, but I think that even from his point of view, he is making a big mistake in proscribing Othello from South African schools. At the mental level at which Apartheid gets accepted, the alleged purpose of the ban will be achieved better by skilful editing of the play than by a blanket ban. You know the notorious consequences of banning a book: you create a black-market in it and children forego their pocket money to get it and when they read it without the alert guidance of Dr Verwoerd, they get all kinds of ideas. Shakespeare has in the centuries since he died been called all kinds of things from a flat-earther to a Seventh Day Adventist: and it is not entirely beyond the resources of South African scholarship—after all it has successfully imposed a bogus racial theory against the weight of all evidence—to prove that Shakespeare believed in herenvolk. The redoubtable Rhyme, whom Macaulay called the "worst critic that ever lived", distilled the moral of Othello in these deathless words: "The Moral, sure, of this Fable is very instructive: First, this may be a caution to all Maidens of Quality, how, without their parents' consent, they run away with blackamoors." Could not this angle be stressed and the young in South Africa warned that violent death is the consequence of offending the "Immorality Act?" (Of course, it would be rather like Wedehouse's cautionary tale about the dangers of totalitarianism: the abstemious man stepped out of his club and was run over by a car.) A skilful bowdlerisation of the play with only the portions where Desdemona's father laments her marriage with Othello should prove very effective. Students can then be warned of the horrors of the "gross clasps of a lascivious moor". They may be asked to comment witheringly on lines such as: "thou hath enchanted her: If she in chains of magic were not bound would [she] ever have run from her guardage to the sooty bosom of such a thing as thou?" and so on. The possibilities are endless.

CONSUMER PRICE INDEX New Series

THE new series of Consumer Price Index numbers are expected to be ready for publication by March 1963. The calendar year 1960 has been chosen as the base period for the new series which will cover 50 important industrial centres in the country. A new series of the All-India Index for industrial workers on base 1960=100, replacing the existing series on base 1949=100, will also be compiled on the basis of the new series for each of the 50 industrial centres. The technical details of the all-India series will be finalised after the individual series have been prepared and it is expected that the new All India series will be published by June 1963.

The Labour Bureau has already compiled new indices for 27 centres for the months of 1961. These have been forwarded to the Central Statistical Organisation and the State authorities concerned for their comments on technical details. The indices for another 13 centres are expected to be ready early next month and for the last batch of 10 centres in September 1962. The Technical Advisory Committee on Cost of Living Index Numbers, set up by the Government of India, is expected to finalise the new series in January 1963 so that they would be ready for publication in March 1963. The Committee has already discussed and approved the technical details for the preparation of the new series.

The revision of consumer price indices is a matter of considerable interest and importance to employers and workers alike, as the amounts of dearness allowances under wage agreements and awards are linked to the cost of living indices at different centres. Spokesmen of Industry, especially of the textile industry in Bombay, have repeatedly urged the need for revision of the existing series of indices. These indices are not only out of date, but are based on cost of living surveys conducted at different times by different authorities using different criteria. The need for compiling new series on a uniform basis was recognised in the Second Plan which recommended that family budget enquiries at important centres should be carried out for compiling an up-to-date and reliable series of consumer price indices on a uniform basis. In accordance with this recommendation, surveys were launched in 50 centres during August-September 1958 and these were completed in August-September 1959. The centres for the surveys were selected in consultation with the State Governments. The field work was carried out by the National Sample Survey,

while the agencies of the State Governments, under the direction of the Labour Bureau, look after the regular collection of retail prices. The tabulation of data relating to Family Budgets was entrusted to the Indian Statistical Institute and of cost of living and retail prices to the Labour Bureau. On the basis of data so far received, the Bureau has taken up the work of compiling the new series of index numbers and, as mentioned above, has prepared the indices for 27 centres. Uniform methods of construction and maintenance are being adopted for all the fifty series. The weighting system that is adopted will be determined by the pattern of expenditure revealed by the family budget surveys.

The different items of consumer expenditure have been classified in six broad groups, namely, (1) Food including non-alcoholic beverages; (2) Tobacco, Pansupari and Intoxicants; (3) Fuel & Lighting; (4) Housing; (5) Clothing, Bedding and Footwear; and (6) Miscellaneous. The first item, Food, has been subdivided into eight sub-groups. The Miscellaneous group includes Medical care, education, recreation and amusement, transport and communication, personal care and personal effects.

In preparing the new series an effort is being made to increase the item-content and coverage to the extent possible. An attempt will also be made to give due representation to seasonal variations in consumption as well as in the prices of fresh fruits and vegetables. For this purpose a special technical method has been evolved by the Technical Advisory Committee. The new index will also take into account changes in house rent through periodical rent survey which will yield information regarding changes in house rent at intervals of six months. The rent surveys are being conducted through the agency of the National Sample Survey. The coverage of the price data for the new series has been enlarged and price collection techniques have been organised on scientific lines.

Simultaneously with the new series it is also proposed to publish a "linking factor" for estimating index numbers on the basis of the old series so that payments of dearness allowance could be made under the existing arrangements till such time as it becomes possible to effect change-over to the new system.

Indian Labour Conference

The position regarding preparation of the series of consumer price indices, and the progress achieved so far, may come up before the 20th Session of the Indian Labour Conference, if it is found possible to

go through the items on the main agenda in time. Questions relating to labour-management relations in the public sector undertakings are expected to figure prominently in the discussions of the Labour Conference which will hold a three-day session in New Delhi from August 7 to 9. This will be preceded by a meeting, on July 28, of the Union Minister of Labour & Employment with the heads of public sector undertakings or their representatives. This meeting is expected to discuss the problems of Labour-Management relations in the public sector, and to iron out any differences in approach between the Union Ministry of Labour on the one hand and the Industrial Ministries and the State undertakings on the other.

Proposals for Amendment of Sections 79 and 80 of the Factories Act are also likely to come up before the Labour Conference. These provisions relate to grant of annual leave with wages and the basis for reckoning wages for the leave period. Under Section 79 a worker may at any time apply in writing to the manager of a factory, thirty days before the leave is to begin in the case of public utilities, and 15 days in the case of other undertakings. It is also provided that a worker could take leave not more than three times during a year. The grant of leave is to be regulated for the purpose of ensuring continuity of work, in accordance with a scheme to be framed by the management in agreement with the works committees.

Section 80 provides that a worker shall be paid at a rate equal to the average of his total full-time earnings for the days on which he worked during the month immediately preceding his leave, exclusive of any overtime and bonus, but inclusive of dearness allowance and the cash equivalent of the advantage accruing through the concessional sale to the worker of food-grains and other articles.

Employers' representatives have drawn attention to anomalous situations that sometimes arise in applying these provisions. For instance, if a worker works as a substitute on a job carrying a higher rate of pay than his permanent job, and then goes on leave he will be entitled to get paid during the leave period at the higher rate of the substitute job. It is said that a practice has grown in some textile mills where the workers take full advantage of this situation. When they get the chance to work as substitutes on a higher paid job, they promptly apply for leave to get the benefit of higher pay during the leave period. On the other hand, if the provisions of the section are strictly followed, a worker proceeding on leave after a period of lay-off would actually receive much less than his normal wages. It is also said that considerable difficulty is experienced in framing leave schemes in accordance with the provisions of Section 79 for the purpose of ensuring continuity of work when a worker goes on leave. The All India Organisation of Industrial Employers, it is learnt, has suggest-

ed that sections 79 and 80 of the Factories Act should be amended as follows:

- (1) Section 79(8) be amended so as to provide that the management of a factory may formulate a scheme for purpose of ensuring continuity of work in the factory with the approval of the Chief Inspector of Factories and
- (2) Section 80(1) be amended to provide for the payment for the leave period according to the wages of the normal post held by the worker.

Supply and Offtake of Fertilisers in Package Districts

Programmes for increased agricultural output are based on the assumption that increased use of fertiliser is the one single factor which would make the largest contribution in stepping up food production within a short period. Attention has been drawn in these columns to the insignificant increase in the use of fertilisers in the Tanjore district where the Package Programme was started two years ago. Though use of fertilisers has increased to a greater extent in the other districts selected for the Intensive Agricultural programme, authorities are perturbed by the fact that actual consumption is much less than the quantities allocated and received in these districts. The position was considered in detail at a recent conference of State Agricultural Secretaries which reviewed the progress of the Intensive Agricultural Programme. Except in the case of Tanjore and Aligarh, offtake of fertiliser, especially phosphate, has increased to a marked extent as compared with the position before the programme was introduced. Taking the seven districts together, offtake of nitrogenous fertiliser has increased from 53,621 tons in terms of ammonium sulphate before the programme was introduced to 89,953 tons in 1961-62. Offtake of phosphates has increased from 2,710 tons in terms of super-phosphate to 29,897 tons. But the consumption in all the districts has lagged behind the quantities that were made available. The position regarding nitrogenous fertilisers is shown in the following table:

District	Allotment	Offtake
West Godavari	55,669	34,463
Raipur	12,246	8,172
Tanjore	39,703	20,340
Ludhiana	16,681	11,383
Aligarh	6,511	1,790
Pali	3,415	1,150

The shortfall in consumption as compared to allotments is attributed to (1) Unrealistic assessment of requirements; (2) delay in sending despatch instructions by the States to the suppliers, resulting in supplies not reaching the districts in time; (3) Defects in the distribution mechanism and (4) Resistance on the part of the cultivators to use new types of nitrogenous fertilisers.

Indian Finance

21 July 1962

The reluctance on the part of cultivators to use fertilisers other than ammonium sulphate is a matter for concern because ammonium sulphate accounts for only a small fraction of the increased output of fertilisers under Third Plan programmes. The bulk of the new production will be in the form of urea, calcium ammonium nitrate, ammonium phosphate etc to which the cultivators are apparently allergic. The representatives of the States of Madras and Bihar appear

to have suggested that, if quick results were to be achieved in the Package Districts, the bulk of the requirements should be met in the form of ammonium sulphate. Though, in view of the production pattern of nitrogen fertilisers, it is necessary to popularise use of new fertilisers so as to create a balanced demand, it was agreed that a substantial part of the fertiliser allotment in the package districts should be in the form of ammonium sulphate. The package districts are

supposed to set an example to the rest of the country in the adoption of enlightened agricultural practices including use of new types of concentrated fertilisers. If they stick to ammonium sulphate, how are the farmers in other parts of the country, who do not have the benefit of the package programme, going to be persuaded to take to the new fertilisers? It is not merely the conservative farmers who are allergic to the concentrated types of nitrogenous fertilisers. The tea planters

also insist on ammonium sulphate and have been assured by the Ministry of Commerce that the entire quantity of nitrogenous fertiliser required by them would be supplied in the form of ammonium sulphate. It seems that the Ministry of Food and Agriculture, and the country as a whole, will be faced with the problem of disposing of the unwanted fertilisers if, by some miracle the Ministry of Heavy Industries starts delivering the goods as per schedule.

The Lincoln Memorial is the most visited of all the shrines in Washington, D.C.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the U.S.A.

Markets

JUTE Quiet Trend

THE jute markets ruled quiet during the week ended Wednesday. In the goods section although a number of foreign enquiries were reported, there was little actual business except purchases of B Twills by the Government of India twice during the week. As the quantity involved was much smaller than anticipated by the trade, the Government order had only a temporary steadying effect. The main reason for the depressed sentiment was the news that burlap consumption in US during June had been at a disappointing level. As against 73 million yards in May, burlap consumption in June declined by 12 million yards to be placed at 61 million yards. Burlap stocks also showed a rise of 6 million yards at 240 million yards. Though the decline in consumption in one month after an interval of several months of increasing consumption cannot be construed as an adverse factor, there is a tendency to be cautious about forecasts about future burlap offtake by the US because of fears of business recession in that country. Latest reports from that country indicate that most people agree that the economy had become stagnant though it would be wrong to describe

the condition as a recession. Even so, Wall Street had reacted with a sharp break in equity prices following a setback in industrial production last month and weakness noticeable in other economic indicators.

The jute goods market displayed a quiet trend from the very commencement and although prices even at the close were sizably lower on balance, the undertone showed some improvement in later dealings. The earlier depression was caused partly by the absence of any fresh foreign business. There were a number of enquiries but little actual business materialised. The second factor influencing the quiet trend was that production was lower in June. The decline in output during the month was mainly because mills worked for 200 hours as against 208 hours in the previous month. Total output was placed at 97,800 tonnes comprising 37,600 tonnes of hessian, 46,000 tonnes of sacking and 14,200 tonnes of other varieties. In May total production amounted 99,700 tonnes comprising 37,300 tonnes hessian, 47,000 tonnes sacking and 15,400 tonnes other varieties. Taking the two sets of figures for stocks at the end of June and production during the month, it will be seen that the decline in stocks last month is partly explained by the lower produc-

tion during the month. It had evidently been argued by operators that, with offtake showing no great improvement, the supply position would ease considerably in coming weeks especially since production is to be kept up at the highest level till the end of August as at present decided. Later in the week sentiment especially in the hessian department was depressed by the lower US burlap consumption figures for June.

The market opened on Thursday on a quiet note due to selling pressure in the futures market. Prices at the close of the day were slightly better on buying support at the lower levels. The reactionary trend was due to the pessimistic assessment of the outlook for gunnies and paucity of fresh business. However, there were many enquiries during the day. The undertone did not improve in the next two days as fresh interest continued to be conspicuous by its absence. On Monday after a quiet opening, sentiment showed some improvement on the report of a government of India tender for B Twills July-August delivery. The recovery however did not last long as before the close of the day it was found that the actual purchases were far below market expectations. Prices of sacking which went up promptly came back. During Tuesday and Wednesday, prices of sacking steadied up a little on reports of a further Government of India tender for B Twills, some fresh enquiries from Burma and reports of floods in Assam and Pakistan.

The raw jute market continued to be quiet throughout the week despite reports of floods in Assam and Pakistan received towards the close of the week. Mills showed little interest while after being reserved in the beginning, holders were keen for business as the week progressed. By midweek sizable quantity was on offer but buyers continued to be scarce despite reports of higher rates in the upcountry markets. The undertone further softened in later dealings as reports of further heavy raw jute arrivals at the up-country centres were received. Although prices in those centres continued to be quoted higher than in Calcutta the expectation was that with continued heavy arrivals in coming days prices would drop further. Holders were therefore anxious for business at discount rates but there was no evidence of a revival of mill interest.

GUNNY PRODUCTION IN JUNE

	(000 Metric Tons)		
	June 1962	May 1962	June 1961
Hessian	37.6 (37.0)	37.3 (36.7)	24.7 (24.3)
Sacking	46.0 (45.3)	47.0 (46.2)	31.2 (30.7)
Others	14.2 (14.0)	15.4 (15.2)	11.4 (11.2)
Grand Total	97.8 (96.3)	99.7 (98.1)	67.3 (66.2)
Flours worked	200.0	208.0	144.5

TEA Strong Demand

IN the Export Sale held in Calcutta this week, offerings consisted of 28,113 packages. There was a strong and general demand. The brighter liquoring orthodox teas were sold well at firm to dearer rates; but the plainer sorts tended easier. CTC types were keenly sought after and prices for the brighter liquoring kinds were often well above valuations. Plainer sorts were sometimes easier.

Legg-cut teas came in for fair support, while the better descriptions were fully firm. There was less enquiry for Whole Leaf grades. Although the cheaper varieties were sold well, the more stylish Orange Pekoes were easier and sometimes difficult of sale. Tippy sorts were irregular, but were sold in the region of valuations. The tippiest sorts realised some useful prices.

Darjeeling teas came to a strong market and were generally dearer. Once again, some useful prices were forthcoming for the best flavoury invoices. Following rates were quoted: Clean Plain Pekoe Rs 4.60 to Rs 4.80; Plain BP Rs 4.00 to Rs 4.20; Plain Fannings Rs 4.00 to Rs 4.30; Medium Assam CTC BP Rs 6.00 to Rs 6.30; Medium Assam CTC Fannings Rs 5.80 to Rs 6.20; Best Assam CTC BP Rs 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 8.00.

The production figures, released this week, reveal a decline in June. The output in Northern India amounts to 65 million pounds as compared to 68.3 million pounds in the corresponding month of last year. The crop in Assam, in particular, has been lower. Total crop, up to the end of June 1962, is, however, slightly higher at 119.3 million pounds as against 118.1 million pounds for the corresponding period of 1961.

As the weather continues to be favourable, the progress of the crop is expected to be maintained. Indications suggest that the overall crop, during the current year, will not be very different from that of 1961.

In the Cochin market, offerings were 482,444 kilogrammes of dusts for internal consumption. The market met with better general demand at irregular rates. Low Mediums and Mediums attracted useful support and were sold generally around last week's rates. Good Mediums were also sold readily; but prices realised were barely steady. Plain fibrous types were often sold at rates below last week's prices. There was useful support for high-grown; but these sorts were sold at a discount. Clean Black Leaf descriptions were generally easier. There was a strong enquiry for unorthodox descriptions, which were fully firm and sometimes dearer. The

21 July 1962

next Dust Sale will be held on 26 July.

In London auction, 24,823 packages including 1,584 packages of Northern India tea were offered. There was a good demand for Doars teas and prices ruled firm to dearer. The remainder of the sale, mostly African, showed an easier tendency.

Tea stocks in London, as on 6 July, totalled 117.86 million pounds as compared to 120.10 million pounds in the previous week. The total quantity to be landed on the same date was 13.06 million pounds. Total afloat was 20.36 million pounds including 3.26 million pounds from Calcutta; nil lion pounds from Chittagong; 429,180 pounds from Cochin; 15,500 million pounds from Ceylon and 1.18 million pounds from other Ports.

COTTON Earlier Firmness Not Maintained

The Jarilla March 1963 contract touched a new peak of its career during the past week deriving inspiration from the reports of irregular rain in many of the cotton growing areas during the early part of the week and fresh buying support from week and fresh buying support from centres like Akola and Nagpur. The sentiment was also aided by the firm advices from spot market and the mounting upcountry demand. The contract, however, met with heavy selling pressure and sustained a setback consequent on the reports of adequate rainfall and also the weakness of the share market with the result that it slipped down towards the close of the week.

The contract which opened at Rs 728.00 per three quintals rose to the new high of Rs 736.00 and subsequently drifted downward to Rs 726 before closing at Rs 729.25.

The spot market at Sewri was devoid of any fresh development during the week under report. Available varieties such as Kalyan, Laxmi, L 147, CO 2, and 197/3 met with moderate enquiry. The insufficient stocks with the traders stood in the way of any appreciable business despite the fact that several mills possessed necessary quotas for indigenous cotton.

The trade circles have again reiterated the demand for an early release of export quota for 50,000 bales of Bengal Deshi. The quota so far permitted for export during the current season totalled 278,700 bales. And the residue available for export of this growth according to the trade interests totals about 142,000 bales. Some activity in the export section was reported on account of fresh enquires from Japan for Bengal Deshi.

Grave concern expressed over the delay in receiving import licences for US cotton under the PL 480 has been subsidised. The earlier apprehension that the US would have to forgo a part of this cotton has also been belied. Cotton under the PL 480 is

expected to arrive in India by August-September. The shipment from America are to be completed before the expiry of this month. It has been reported that business for the entire quantum of 2.20 lakh bales has already been transacted. Issue of import licences was also reported. Sporadic interest was visible in Mwanza and Sudan crops.

NEW YORK

Cotton futures in the New York market exhibited a mixed trend during the week ended 15 July with the nearer months losing ground and the most distant strengthening the position. Toward the close of the week the active futures contract on the domestic cotton exchange were off 70 cents to up 50 cents from the previous week's closing.

The July 1962 contract went off the board at 33.29 cents per pound. The spot market presented a desolate picture. The new crop sold off moderately while more, distant positions moved little on account of feeble demand and few offerings. Traders were eagerly awaiting the release of the Department of Agriculture's release on its sales for export programme for the coming season. Export for the week ended Tuesday last approximated over 1 lakh bales as against 1 lakh bales a week before and 29,000 bales during the same period last year.

LIVERPOOL

Sluggish conditions prevailed in the American cotton contract futures market during the past week. Prices slipped down slightly when hedge offerings appeared in the new crop and this was owing more to the inadequacy of offtake than to the selling pressure. Though there was a revival of buying interest in October and December at somewhat lower levels the sellers showed reluctance to keep down their limits. According to latest information more than 700 bales have so far been tendered against the July delivery. Sudan features attracted no buyers and the prices remained almost unaltered.

The Sudan Gezira Board during the week under report sold approximately 8,176 bales of askal lambert cotton from the 1961/62 crop and 8,000 bales of 1960/61 crop at almost the same prices. However a slackening in the buying interest of these growths was clearly noticeable. Aided by the congenial weather conditions the Egyptian crop is reportedly registering good progress.

PIECEGOODS

The onset of the monsoon has in its wake brightened the prospects of a revival in the demand of piecegoods. The upcountry centres are expected to evince much enthusiasm in piecegoods particularly in seasonal varieties in contrast to the strikingly low level of demand during the past week.

Calcutta is reported to have extended scattered enquiries in powerloom saris and dhoties. Kanpur also accounted for a few enquiries in the seasonal varieties while Delhi was practically quiet.

Accumulation of stocks with the mills is reported to have increased

heavily. And it has been feared that consequent on this heavy accumulation the mills may be compelled to offer the goods at somewhat lower prices.

The export section during the past week was cheerful inspired by the fairly good demand. But the turnover was pretty meagre as the overseas buyers were anticipating a further decline in the prices. Moderate business was transacted with the UK in grey sheetings. Export of small quantities of mulmul printed and bleached voiles and gadlapi were reported during the week under review. The USA also accounted for a sizable intake.

Scramble for Zinc

PRICES on the Bombay Non-Ferrous Metal market have generally been displaying a firmer tendency. The price of Zinc has soared to a record high of Rs 290 per 100 kg from Rs 210 quoted in the past five weeks. This sharp rise is influenced by the

speculative manipulations of the powerful operators in Bombay and Calcutta in the June delivery. Owing to acute stringency of stocks and the limited possibility of getting supplies, there is actually a scramble for the available material in the market from all quarters.

The acute shortage of the metal caused by irregular supplies and the increasing use by the expanding industries, inspired operators to go "long". It is feared that the chances of getting zinc from the US against DLF arrangements are not bright due to its high cost and the existing difficulties of transportation. Meanwhile, actual users, who had unloaded a part of their holdings earlier on fears of substantial arrivals from abroad, are hurriedly making purchases.

Although advices from abroad have a mixed effect on the Tin section, the general sentiment is steady in view of the tight supply position against a sizable offtake.

There is hardly any change in prices of Copper and Lead. Due to

inadequate supply in the face of larger demand, prices of copper and brass scraps have moved up slightly.

SUGAR

Thanks to a better demand, Sugar prices have hardened with delivery rates advancing by 25 nP a quintal to Rs 106. Mill-delivery rates have also gained 12 nP to 50 nP following the revival of demand from Gujarat, Rajasthan and Saurashtra.

The cane-crushing season, which had to be prolonged during the year with a view to crushing all available cane, is coming to a close. Out of 71 sugar factories in the Uttar Pradesh State, 20 continued working till June. All the factories have now closed down except one. The last factory is likely to close down in a few days.

In view of the restrictions placed by the Union Government on sugar production this year due to heavy carrying from the previous season, it was feared, in the beginning, that some cane might be left uncrushed. But, as a result of adjustment of sugar quotas of various factories and diversion of surplus cane over long distances, it had been possible to have all the available cane crushed by prolonging cane-crushing operations.

India has been able to sell 2.98 lakh tons of sugar abroad uptill now as against the target set for 1962 at 5 lakh tons. Internal sales have also gone up and it is expected that the figure will reach 24 lakh tons this year as compared to 20 lakh tons in 1961.

The current season having advanced by more than half the period, the expectation of fulfilling the export target for 1962 is yet to be strengthened by substantial sales in the next two or three months. The mainstay of hope lies in competing in global tenders issued by West Asian countries. The Pakistan market is likely to come up with further orders after the initial sale of 2,200 tons of sugar is executed. The delay in commencing supply to Pakistan due to certain excise regulation is understood to have been overcome by now.

Malayan buyers are understood to have given good support to Indian sugar lately. During the past two months, 16,380 tons were shipped to Malaya against the total sale of 50,000 tons. The balance quantity is programmed for shipment in the next four months, so that, by the end of October, the whole quantity will have been shipped. Further sales are expected for Malaya for the months of November and December.

Meanwhile, the outcome of the Iran tender, which was anxiously awaited by the trade, was an encouraging feature of the world sugar market. Iran's purchase of her sugar requirements aided the improvement in the London market, where prices have moved up by 5sh to £24.75 during the past fortnight. Indonesia, which entered the market in the third week of June, with a sale of 40,000 tons of sugar around 2.65 cents, and which was, to some extent, responsible for the slight decline in prices, again figured towards the close of the week ended 2 July.

It was reported that she had offered 40,000 tons of her raw sugar to Japan and that Japan would announce its decision in the course of the next few days.

In the US market, the trade was looking to the final shape of the Sugar Bill. The market continued dull with no brisk activity. Spot values have further declined by 5 points and were placed at 6.37 cent's per pound.

YARN

The important event of last week in the Bombay Yarn market was the announcement of the ceiling of Rs 4,800 by the Bombay Yarn merchants' Association for squaring up transactions in Amilon August fixed delivery settlement. The authorities also announced their decision that fresh transactions in Amilon August will not be permitted. The measures resulted in the discontinuance of forward trading in Amilon. These measures together with the expectation of early imports under the pool scheme, had a sobering influence on the prices.

The Staple-Fibre Yarn section also suffered a sharp setback.

In the Ludhiana market, prices of staple-fibre yarn registered an increase of Rs 1 per bundle. The increase in prices was more pronounced in 40/2 counts which were in great demand due to their use for the manufacture of staple cloth intended for exports.

WOOL

In the Ludhiana market, prices of wool dwindled on account of the pressure of the anticipated deliveries of woollen yarn under the yarn distribution scheme. Allocations made by the Federation to the five associations of hosiery manufacturers are now being further split up into the allocations for individual manufacturers, who will soon receive yarn stocks.

Consumption of yarn in the local hosiery industry has now considerably increased and most of the factories are busy in manufacturing stocks to honour the huge orders received by them during the current season.

The offtake of Indian and Pakistani wool at the last Liverpool auction was reported to be unsatisfactory. Out of 3,030 bales tendered for sale, only 588 bales were sold and the rest had to be withdrawn. Bombay shippers were, therefore, disappointed with the performance as they anticipated a better demand. The activity on the export front has been small with transactions limited to shipments for Russia only. The UK and the Continent have continued to show apathy.

CASHEW

Cashew kernel export business has again come to a standstill. There has almost been no enquiry latterly from overseas buyers, especially from America. Buyers expect the prices to go down in line with the declining

tendency noticed at this time of the year during the last three years. Sellers are, however, refusing to quote lower in view of the reported crop failure abroad.

The Spices Export Promotion Council has announced that India's earnings from exports of spices have risen by Rs 1 crore during 1961-62. As against over Rs 16 crores early in 1960-61 on this account, a little over Rs 17 crores worth of spices were exported in 1961-62, thus exceeding the target of Rs 15 crores set for the first year of the Third Five-Year Plan.

There has been all-round increase in the quantity and value of exports of all spices except pepper during the past year. While the quantity of pepper exported in 1961-62 had increased, the value earned declined as compared to its export in 1960-61.

GOLD & SILVER

After initial firmness, prices on the Bombay Bullion Exchange displayed a slightly reactionary tendency due to bull liquidation.

The Silver section, gave way due to bull liquidation following heavy supplies. While the demand for the metal was said to be slack for the time of the year, stocks were increasing. Arrivals amounted to as much as 85 bars as against an offtake of only 20 bars. Ready (below 996) changed hands at Rs 213.25 to Rs 213.80.

Although the trend in the ready section was better, Gold prices also eased in sympathy with the white metal. Arrivals amounted to 3,000 tolas against an offtake of 4,000 tolas. Sovereign ruled steady at Rs 97.75.

OILS & OLSEEDS

Prices on the Bombay Oilseeds Exchange displayed a firmer tendency due to bull buying and covering purchases.

Trading in the Castorseed section was featured by a smart improvement in the latter half of the week. Although fresh business in castor oil remained difficult due to the persisting disparity between Indian and UK prices, a prominent shipper was stated to have booked freight for a substantial quantity in the hope of disposing of the supplies on an afloat basis. Sellers were few and far between even at the current high prices.

It is understood that a prominent shipper put through business to the extent of 500 tons of oil at £108 per ton. There are also enquiries from the UK for shipment of castor oil on consignment basis. Although exporters are not generally inclined to favour business on a consignment basis, it is generally felt that the British enquiries are in index to the growing demand for Indian castor oil. The reports, that some shippers have secured freight space for the export of castor oil, were also a contributory factor to the firmer tendency in prices. Ready Castor was

quoted at Rs 32.75 and Castor Oil, commercial, at Rs 12.70.

Trading in the Groundnut section, reflected the continued grip of the buyers. The main bullish inspiration was provided by the marked firmness in groundnut expeller cake and re-oiled meal. The rate for groundnut expeller shot up from Rs 390 to a new high of Rs 415, while meal advanced from Rs 360 to Rs 380 per ton.

The strength in expeller cake arose from acute shortage of supplies on the face of brisk demand for the purpose of feeding cattle. The advance in extraction cake was a sequel to the consistent support inspired by a favourable export outlook. Strong reports were also current that the Government had sanctioned a barter deal involving exports of 20,000 tons of groundnut meal. Some shippers were stated to have booked freight for 5,000 tons from a Saurashtra Port on a charter basis at relatively low freight rates. Groundnut Bold ready was quoted at Rs 46.50 and Groundnut oil at Rs 19.05.

Turnover in the Linseed section was, however, limited although prices moved up in sympathy with groundnut and castorseed. Linseed ready was quoted at Rs 39.62 and Linseed Oil at Rs 16.15.

THE RELIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Fifth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta-1, on Tuesday, the fourteenth day of August, 1962 at 11-30 a.m. for the following purposes:—

- To receive and consider the Audited Accounts for the year ended 31st March, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
- To appoint a Director in place of one retiring.
- To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 1st August to the 14th August, 1962 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,

C. EVANS
Acting Secretary,
Managing Agent.

4, Clive Row,
Calcutta-1.
6th July, 1962.

Company Reports

Indian Copper Repeats

THE increased cost of raw materials and the decline in production are reflected in the working results of the Indian Copper Corporation Limited for 1961. While sales are lower at £2.61 million against £4.01 million, the net profit, before providing for Depreciation and Taxation, amounts to only £1.15 million against £1.31 million for the preceding year.

In respect of allocations, Taxation provision is higher at £504,512 against £500,477 and Development Rebate Reserve at £56,250 against £50,625. The amount set aside for Depreciation is, however, reduced to £165,000 from £175,000 and General Reserve to £100,000 from £200,000. The dividend is, however, maintained at 27 per cent, subject to tax.

The directors state that the construction of the new Electrolytic Refinery commenced and is proceeding according to schedule. The expected date for completion is the end of 1963. The two civil suits with the Bihar Government, which were pending under appeal in the Supreme Court, were finally disposed of during the year on the basis of a compromise settlement between the company and the State of Bihar. Under the terms of compromise, the State of Bihar has granted the company a new mining lease for Kyanite over the same area as previously leased

for a period of 20 years as and from the 1 September, 1961.

Burn's New Plan

Negotiations have been concluded between Burn & Company Limited and A. Reyrolle & Limited of the UK for the manufacture and sale in India of the well-known switchgear and other electrical production which hitherto have been manufactured by Reyrolles and imported into this country.

This plan is to set up a factory in Howrah in collaboration with Reyrolles. The latter are undertaking to supply the necessary foreign equipment and technical expert assistance, while Burn is to erect the factory and use their long experience as manufacturers in India. For this project, it is proposed to form a separate limited company with an initial issued capital of Rs 30 lakhs in which Burn and Reyrolle Company will have equal holdings. The Central Government has issued the industrial licence and signified general approval of the collaboration arrangements.

Reconstruction and modernisation of the Lal-koti Works at Ranigunge and of the Gulfarbari Works continue and it is expected to complete the current schemes before the end of the current year.

21 July 1962

Meanwhile, the company's "sale and departmental orders" are shown higher at Rs 11.86 crores against Rs 10.03 crores, while the net profit, before Depreciation and Taxation, has risen to Rs 1.64 crores against Rs 1.30 crores for the previous year. All allocations have been increased:—Depreciation from Rs 23.73 lakhs to Rs 24.26 lakhs; Taxation from Rs 57.75 lakhs to Rs 92.50 lakhs and Development Rebate Reserve from Rs 2.54 lakhs to Rs 4.50 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 28.5 per share, subject to tax.

Satisfactory Results of Britannia Engineering

The Britannia Engineering Company Limited has reported a rise in sales from Rs 1.99 crores to Rs 2.72 crores for 1961, but the net profit is slightly lower at Rs 20.53 lakhs against Rs 20.61 lakhs. The working results would have been better, but for the strike and lock-out that took place during January 1961.

In respect of allocations, the Depreciation amount is increased to Rs 9.05 lakhs from Rs 7.23 lakhs, while Taxation provision is lower at Rs 4.00 lakhs against Rs 4.20 lakhs and Development Rebate Reserve at Rs 2.62 lakhs against

Rs 3.35 lakhs. The directors have, however, recommended a taxable dividend of Re 1 per share on the Ordinary shares, same as in the previous year.

The company has entered into collaboration agreements with UK firm for the production of Cone Winders, for the jute textile industry; with a Dundee firm for the manufacture of Ecco Cop Loaders; with Messrs Wadkin of Leicester for the production of Wood Working machinery and Messrs Patterson Hughes Engineering Company of Glasgow for the production of electric overhead travelling cranes. Negotiations are also concluded to start the manufacture of Single Spindle Bar Automatics.

In view of the growing demand for Steel Castings in India, as well as to satisfy the company's own requirements, it is decided to construct a Steel Foundry at Titagur.

With a view to implementing the various development projects, it was decided to raise further equal capital of Rs 50 lakhs by the issue of 5 lakh Ordinary shares of Rs 10 each. The offer was made in February 1962 and the issue has since been fully subscribed.

Total	37,210,255	33,666,562	28,228,690

In respect of allocations, the Depreciation amount is higher at Rs 16.71 lakhs against Rs 16.10 lakhs and Development Rebate Reserve at Rs 4.20 lakhs against Rs 3.00 lakhs. The provision for Taxation is, however, lower at Rs 58.10 lakhs against Rs 60 lakhs and General Reserve at Rs 10 lakhs against Rs 15 lakhs. The directors have declared a final dividend of Rs 1.60 per share, making a total of Rs 2.50 share, taxable, same as in the previous year.

The directors state that outlook for the current year is clouded by the uncertainty of production at Rourkela, which is struggling with the problems involved in starting up a major steel enterprise. They add that, with the completion of the Indian Aluminium Company's expansion programme and the commencement of production by Hindustan Aluminium during the year, it is hoped that consumers of this valuable packaging material will benefit from additional supplies at a lower price.

At Calcutta No. 1, a high-speed Open Top can-making line of the latest design has been installed to replace obsolete equipment. In the Plastics Works at Calcutta No. 2, machinery for the manufacture of heat-sealing laminates, extrusion-coated products and moulded bottles is being installed.

The company has recently received permission from the Government of India to manufacture treated and laminated papers and boards and containers made therefrom.

Walford Transport Maintains Distribution

Despite a rise in sales from Rs 2.50 crores to Rs 2.96 crores, Walford Transport Limited has reported a slight decline in the net profit from Rs 5.38 lakhs to Rs 5.25 lakhs for 1961, reflecting the increase in the company's taxation liability.

The Depreciation amount is raised to Rs 67,337 from Rs 48,392; Taxation to Rs 8.74 lakhs from Rs 7.23 lakhs and Development Rebate Reserve to Rs 5,054 from Rs 242. The dividends, both on the Ordinary and Preferred Ordinary shares, are maintained at 30 per cent and 20 per cent respectively.

The Calcutta heavy workshop is being enlarged to increase its capacity.

Duncan Brothers' Activities

In the latest report, issued by Duncan Brothers & Company Limited, the directors state that the work on the construction of Phillips Carbon Black Limited's plant has continued steadily and certain of the production units will be commissioned shortly, while the entire plant is expected to come into operation soon afterwards.

The plant operated by Isaac Holdens (India) Limited under the management of Duncan Brothers commenced production in 1961. Further machinery, now installed, has raised the capacity to 6½ million pounds, while import licences are awaited for the additional units required to achieve the full designed capacity of 10 million pounds.

In the case of Schrader-Scovill Duncan Limited, considerable progress is reported to have been made in the establishment of the plant in Bombay.

The company has entered into collaboration with the National Standard Company of Niles, Michigan, USA, one of the leading manufacturers of bead wire for automobile and cycle tyres. It is planned to establish a plant in Bombay for the manufacture of that production. It is anticipated that arrangements will shortly be made for the formation of a new company to be known as National Standard Duncan Limited.

The increasing requirements of the company's expansion into various new fields have shown that a somewhat larger addition to its capital resources would be desirable to measure a greater degree of adaptability under changing circumstances. An application is accordingly being submitted to the Controller of Capital Issues for a "right" issue of one in five, to be made in the latter part of the current year. Application is also being made for permission to offer Rs 10 lakhs of 6 per cent redeemable preference shares for subscription.

Meanwhile, the company's net profit for the year amounts to Rs 40.92 lakhs for 1961 as against Rs 43.90 lakhs for 1960. In respect of allocations, a sum of Rs 1.07 lakhs (Rs 64,815) is set apart for Depreciation; Rs 17.00 lakhs (Rs 17.50 lakhs) for Taxation; Rs 3.00 lakhs (Rs 4.00 lakhs) for General Reserve; Rs 5.50 lakhs (nil) for Contingency Reserve and Rs 20,000 (Rs 10,000) for Development Rebate Reserve. The directors have proposed a taxable dividend of Rs 14 per share on the ordinary shares, same as in the previous year.

For the Investor

INVESTMENT GOSSIP

Sentiment Depressed

There has been a further decline in equity values this week in the absence of sustained buying interest. At no time sentiment was cheerful but around midweek prices tended to stabilise around prevailing levels and at that time it appeared that prices would edge forward especially in the more speculative counters headed by Indian Irons which was expected to receive fresh support on account of the proximity of its dividend announcement. But these expectations did not materialise as a fresh wave of selling hit the market on Thursday in sympathy with Wall Street which was under severe pressure once again. Although it is still believed that the US economy is quite healthy, Wall Street seems to have concluded that there is a recession on the strength of some important economic indicators. As is to be expected the decline in Wall Street was quickly followed by a decline on the London Stock Exchange. A recession in US will have far reaching repercussions all round the world and it would further render gloomy foreign aid prospects. In the prevailing uncertainty about the state of the economy of a country such as the US, it is not surprising that operators have not been able to derive much encouragement from reports that Mr Morarji Desai's mission would be successful. As the Aid India Club is to meet at the end of the month, the general tendency is to await its outcome.

Even otherwise there is not much in the investment situation to enthuse investors. Renewed concern is expressed over the latest developments in the northern border. Although no immediate threat is apprehended, it is evident from the continued aggressive attitude of the Chinese that the northern border will require vigilant watch for a considerable time to come. Further, investors will reassess the outlook for equities in the light of Government's dear money policy. Last but not least is the growing anxiety over the large idle installed capacity resulting from a number of adverse developments in regard to coal, transport and power, as well as an inadequate supply of imported raw materials. Engineering industrial production has received a setback as a result of the power cut in the Calcutta industrial region and the shortages of coal, transport and power have become almost chronic. And adequate steps are yet to be taken to overcome these shortages. There are already reports of slow-down in production and even total suspension for short periods due to the shortage of one or more of the

three basic requirements to industry such as coal, power and transport. Even if these are made available in adequate measure, there is still the question of the supply of imported raw materials on which many new units are dependent for utilising their installed capacity in full.

★

NEW ISSUE NOTES

Jaswant Sugar

Jaswant Sugar Mills Limited, Meerut, UP, having a paid-up capital of Rs 30 lakhs, is to issue bonus shares of the value of Rs 12 lakhs on capitalisation of its reserves to a like extent.

Swastik Oil

Swastik Oil Mills Limited, Bombay, will raise 6.5% Debentures of the value Rs 20 lakhs for cash, at par. The proceeds will be utilised for redeeming the existing Debentures and for providing working capital. The present paid-up capital of Rs 30,37,500/- is in equity shares of Rs 100/- each.

Super Spinning

Super Spinning Mills, Limited, Andhra Pradesh, is raising capital of 25 lakhs, in equity shares of Rs 10/- each, for cash, at par. The proceeds will be utilised for establishing a cotton spinning mill.

Deccan Sales Corporation

Deccan Sales Corporation (P) Ltd., Bombay, having a subscribed capital of Rs 30,600/-, is issuing equity capital of the value of Rs 19,69,400/- in shares of Rs 100/- each for cash, at par. The money will be used for the manufacture of granulated compound fertilisers.

Bombay Wire Ropes

Bombay Wire Ropes Limited, Bombay, has been granted a revised consent to issue capital of Rs 60 lakhs in equity shares of Rs 10/- each for cash, at par. The proceeds of the issue will be utilised for the manufacture of wire ropes. The revised consent is valid upto December 31, 1962.

Indian Aluminium

Subject to the consent of the Controller of Capital Issues, the Indian Aluminium Company Limited has proposed to issue equity shares, including the share premium, for about Rs 2 crores and Debentures for crore. Full details are not yet released.

INVESTMENT NOTES

Goodhouse Company

Goodhouse Company Limited of Calcutta has concluded a collaboration agreement with a West German firm for the manufacture of sealed compressor units for refrigerators. The company is already manufacturing sealed units in its factory since 1960-61; but in the absence of an automatic plant, the cost has remained high. In order to eliminate the difficulties now experienced, the company has now entered into collaboration agreement. The project is estimated to cost Rs 1.25 crores and the production will begin within six months' time.

Bombay Oxygen

It is stated that the factory for the oxygen plants of the Bombay Oxygen Corporation Limited are nearing completion. The whole work is expected to be completed by the end of August. Four oxygen units from West Germany have already arrived at site. The erection of the plant and machinery is expected to be taken up shortly. The manufacture of oxygen is expected to be commenced before the end of the year, while the entire project will be completed early next year. Meanwhile, the first and final call of Rs 50 per equity share is payable by September 28, 1962.

Chemo-Pharma

Chemo-Pharma Laboratories Limited has announced that the shareholders, having their names on the company's register on 13 August 1962 will get one new ordinary share of Rs 25, at par, for every two existing ordinary shares held. Cum-right deals, done until 21 July, will be settled on 26 July

1962. Shares received against such deals will have to be transferred in time.

Hongkong Bank Group Interim Dividend

The Hongkong and Shanghai Banking Corporation has declared an interim dividend of five shillings a share on its paid-up capital of 3,161,845 shares (£4,940,383). This interim dividend is a distribution of £790,461 and is unchanged from that declared in July 1961. The Hongkong and Shanghai Banking Corporation is the parent company in a group comprising the Mercantile Bank Ltd and The British Bank of the Middle East.

IN BRIEFS

The Mettur Chemical and Industrial Corporation has proposed a final dividend of 6½ per cent, making a total of 13½ per cent, taxable, for the year ended 31 March, 1962 as against 12½ per cent, taxable, paid for the preceding year.

Badra Coffee Estates Limited has declared an ordinary dividend of 7½ per cent, taxable, for the year ended 31 May, 1962 as against a taxable dividend of 15 per cent for 1960-61.

In the case of the Premier Automobiles Limited the date for the submission of coupons has been extended up to 10 August, 1962.

United Commercial Bank Limited has announced that the Transfer Books will be closed from 13 to 18 August for the purpose of the issue of the right shares in the ratio of one for two held at a premium of Rs 25 a share. Business as from 30 July will be transacted on the ex-right basis.

Be Be Rubben Estates Limited has skipped the dividend for the year ended 31 March, 1962 as against 5

INVESTORS' GUIDE

per cent, taxable, for the previous year.

Vanguard Fire & General Insurance has passed over the dividend for 1961.

BALANCE-SHEET BRIEFS

The net profit of the Bank of India Limited, for the six months ended 30 June, 1962, amounts to Rs 47.50 lakhs against Rs 47.85 lakhs for the corresponding period of 1961. The directors have proposed an interim

HOWRAH MILLS COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Thirty-seventh Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta-1, on Tuesday, the fourteenth day of August, 1962 at 12 O'clock noon for the following purposes:—

- To receive and consider the Audited Accounts for the year ended 31st March, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
- To appoint a Director in place of one retiring.
- To appoint Auditors and to fix their remuneration.
- (As special business): To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution, viz:—

"That approval be and is hereby accorded to the sale of three Roll Formers to Kankannarrah Company, Limited (an associate of the Managing Agent as defined in section 2(3) of the Companies Act, 1956) at a price of Rs. 1,500/- each."

Notice is also given that the Share Transfer Books of the Company will be closed from the 1st August to the 14th August, 1962 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
C. EVANS

Acting Secretary,
Managing Agent
4, Clive Row,
Calcutta-1,
6th July, 1962.

Note: Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all Members.

dividend of Rs 4 per share, taxable, same as in the previous year.

The working of the Bank of Baroda Limited has resulted in a net profit of Rs 25.41 lakhs for the six months against Rs 25.11 lakhs. The interim dividend is raised from Rs 3.50 to Rs 4.00 per share, subject to tax.

STOCK EXCHANGES

Watch-Dog Writes:

Downtrend Checked

STOCK markets have witnessed near-panic conditions during the week under review. The slump on Wall Street and the growing concern over the border situation have induced offerings in the speculative shares, resulting in the prices of other shares drifting lower. Attempts at a mild recovery were made towards the close.

The Calcutta Stock Exchange was more or less in a nervous state with prices displaying a sagging tendency. The closing tone was, however, better. Equity values crashed on the Bombay Exchange under the weight of heavy nervous selling. Although lower levels attracted some replacement buying at the close.

Conditions were quiet on the Madras Stock Exchange where prices faltered under the impact of the continued obscurity of the immediate outlook.

The London Stock Exchange experienced a week of tumbling prices. The only bright spot was the Gold section where there was a steady demand.

Prices on Wall Street slumped on fears of a new recession in the USA.

CALCUTTA

Friday Evening.

THE local stock market started the week on a dull note and, with the speculative issues giving way due to sustained selling pressure, prices in all other sections moved down to fresh lower levels on nervous liquidation. Moderate recovery attempts as a result of bear-covering failed to make any impact on the price structure.

In general, Lyons Range witnessed another week of depressed conditions and no section was spared from the onslaught of liquidation. This unusual change in sentiment was due to a combination of several adverse factors.

First, the continued fall in gilt-edged prices, which carried the quotation down to Rs 68.85, had upset the morale of the market.

The second factor was the disturbing political situation at Ladakh.

Thirdly, there was a fear that industrial output might be interrupted by the shortage of power, coal and transport.

Finally, the slump on Wall Street unnerved the bulls, who came out

to unload freely on an unwilling market.

With the result, there was a complete absence of any support and the tendency was to press offerings even on the small upturns. Moreover, with the covering purchases remaining negligible even at the depressed levels, the downward movement was accelerated though it was checked, to some extent, at the close.

With the terms of the new loans attractive, the process of adjustment of the rates of the existing loans to the terms of the new issue was actively pursued in the Gilt-edged market. The loans worst affected were the 3 per cent 1986 Conversion Loan and some of the medium-dated securities. 3 per cent 1986 Loan recorded a fresh fall to Rs 68.85 from Rs 69.75 quoted at previous week-end.

Bank shares were fairly steady. Punjab National changed hands up to Rs 20.50 and United Commercial at Rs 86 to Rs 87.

June shares turned quiet in view of the anxiety over the prospective supply of raw jute during the current season. Slackening enquiries for jute goods were also a contributory factor. The only steady features were Alliance and Barnagore, quoting Rs 123 and 186 respectively. Birlas were, however, on offer at as low as Rs 31.87 against Rs 33.12; Howrah at Rs 21 against Rs 21.75; Ganges at Rs 13.62 against Rs 14.12 and Megna at Rs 14.12 against Rs 14.87. New Central shed nearly half a point at Rs 15.69.

In the absence of any incentive, Coal shares were freely offered. Burrakur came in for offer at Rs 17.19 against Rs 17.81; Bengal at Rs 345 against Rs 374 and Western Bengal at Rs 9.94 against Rs 10.19. Equitable were in some enquiry up to Rs 22.06 from Rs 27.81.

The absence of any improvement in the prices obtained at the recent auctions, especially for Common grades, was reflected in the Tea section where dealings were few and far between. Eastern Cachar moved narrowly between Rs 3.94 and Rs 4.06; Grob at Rs 8.25 and Rs 8.30 and Dauracherra between Rs 7.94 and Rs 8.00.

Except Dyer Meakins which met with sustained enquiry up to Rs 36 from Rs 54 following the recent bonus issue announcement. Sugar shares were practically neglected. Carew met with some business at Rs 12.94 to Rs 13.12 and SKG at Rs 8.81 to Rs 8.94.

Textile shares were no exception to the general trend of the market. Operators were not inclined to enter into any commitments in view of the obscure outlook for textile exports. J. K. Rayon had sellers at as low as Rs 18.44 against Rs 19.25 Elgins at Rs 19.37 against Rs 19.52 and Cavtex at Rs 7 against Rs 7.25. Jay Shree changed hands at Rs 14.75 to Rs 15.06.

Price in the Engineering section were mainly influenced by the speculative activity in Indian Irons which, in turn, suffered a sharp setback on weaker Bombay advices. After opening higher at Rs 25.94, the scrip moved down gradually to Rs 25.52 before closing finally at

Rs 25.70. In sympathy, TEXMACO was pushed down to Rs 22.40 from Rs 23.25; Jessop to Rs 22.06 from Rs 22.56 and Guest, Keen, Williams to Rs 38.75 from Rs 39.50, to close finally at Rs 22.60; Rs 22.25 and Rs 38.31 respectively. J. K. Steel were on offer at Rs 15.87 against Rs 16.53 and so also Dalmia Iron at Rs 11.31 against Rs 11.69. Burr were, however, a firm feature at Rs 680 against Rs 665, thanks to the publication of excellent working results.

Miscellaneous issues moved in sympathy with the general trend of the market. Indian Aluminium were a weak spot following the company's proposal to issue equity shares, including the share premium, for about Rs 2 crores and Debentures for Rs 1 crore. It is expected that the right shares will be issued on the basis of one share for every four shares held, at a premium of Rs 10 per share. Following were the price trends of a few selected shares:

	As on 13 July	Low 20 July	As on 13 July
	Rs	Rs	Rs
Orient Paper	41.00	40.50	40.75
Shree Gopal	25.62	25.00	23.50

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial insurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

mically to suit
your specific need—whether
it is industrial, commercial
or any other specialised
application—consult Philips
Lighting Service Bureau.

PHILIPS

quality lighting for ultimate economy

PHILIPS INDIA LIMITED

The Ring Road at Rourkela

LIGHTING BY
PHILIPS

Girdling the busy, growing steel town of Rourkela, Ring Road is the main arterial link between the township and the plant site. 16 miles long and 100 feet wide, it is flanked by footpaths and is divided into two broad avenues by a green belt. It is further designed to have two cycle tracks separate from the main carriageways.

The lighting for this splendid, vital highway was entrusted to Philips. Philips Lighting Engineers worked in close co-operation with the town planning authorities and the final lighting scheme is a fine example of streetlighting which promotes safety and efficiency.

Philips' exclusive lighting—consisting of lamps, fittings and accessories—ensures ultimate economy by providing the maximum

illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

Foreign Aid Prospects

On his return from his European tour, Mr Morarji Desai has expressed cautious optimism about the outcome of his exertions abroad. The twin purpose of his visit was to explore the possibilities of greater assurance of foreign aid for the second year of the Third Plan, and to explain to the members of the EEC the deleterious effect of a restrictionist tariff and quota policy that the community is likely to impose on exports from India. As regards the first, we shall know the extent of Mr Desai's success when the results of the meeting of the Aid-India Club Scheduled to meet on 31 July are made known. As regards the second, it is unlikely that we shall know the final shape of things until the uncertainties clouding the aspects of the negotiation between Britain and the EEC are cleared up. But press reports aver that except in West Germany, Mr Desai found a readier response to Mr Desai's arguments. But unless the details of particular provisions are negotiated nothing very definite can be said.

Reverting to the prospect of the Aid India Club making the required measure of assistance available, the omens are all encouraging. In the first place, the uncertainties that were surrounding the quantum of US aid have been removed. It now appears certain that the US will be able to commit 727 million dollars for the year 1962-63. There was some initial confusion leading to the hope that the commitment authorised by the Congress after the Joint Senate-House meeting was higher than this figure: It was thought that the ten per cent cut on the administration's request of 815 million dollars voted by the House of Representatives had been restored. It has since been authoritatively explained that no more than the actual aid committed for the year 1961-62 will be available for 1962-63. This is no doubt a set-back but considering how bleak the prospects of even this aid was sometime ago, there is no cause for serious disappointment. One important development of Mr Desai's visit has been that new members have joined the Club and some of the older members have agreed to increase the quantum of their assistance. Among the new members are Austria, Holland and Italy. When the Aid-India Club was adjourned in May, the expectation was that the drafting in of additional members would be more for the purpose of matching the US aid, the newer members providing the shortfall between the US commitment and that of the older members. Mr Desai seems confident that this will happen.

The next question that naturally arises is how much of the aid that will be forthcoming will be tied to specific projects and how much untied. During the debate in the Lok Sabha before it adjourned last month, Mr Nanda attempted to reassure the House and the country that the foreign exchange crisis was not likely to affect the Plan projects. This is true in the sense that capital projects written into the Plan have been related to specific broad commitments in respect of

foreign exchange components thereof and therefore the current balance of payments difficulties would not affect them. Even here the vagaries of political consent of the various countries may create worries, though ultimately the administrations of these friendly countries will use all their resources of persuasion to obtain the necessary legislative sanction. So, for the Plan as a whole, it can probably be assumed that the exchange needed for the capital projects would be forthcoming and unless there has been serious under-estimate of costs,—which can by no means be ruled out—we should have no anxieties on that score. But the danger to the Plan may yet arise from serious under-utilisation of capacity consequent on the drying up of essential imports which we may not, despite heroic efforts at export promotion be able to pay for. It is here that the need for a good proportion of the aid being in untied form available for miscellaneous imports of essential raw materials and intermediates is paramount.

There is then the pace of utilisation which may in an indirect and not wholly satisfactory way come to our rescue. One of the difficulties in the way of assessing the impact of foreign aid and the parlousness of our plight in this regard is the absence of clear data of the pace of utilisation of the committed aid. The stages through which agreed quantum of aid is committed to specific projects and utilised are not clearly discernible. Confusing data published from time to time which do not indicate whether they relate to agreement or authorisation or utilisation for particular project do not clarify the issue. The general feeling is that good deal of the committed aid have not been utilised. According to the useful official publication, External Assistance 1961, out of a total of Rs 2,143 crores of aid authorised upto 31 December 1961, as much as Rs 1,054 crores were still to be utilised as on 31 December 1961. Even this, does not provide the complete picture since utilisation does not appear to mean the final use of fund in the sense that it has been spent.

It would appear to be a commitment to a specific project, since a distinction has been made between funds allocated and funds drawn. For instance the amounts allocated to various projects from PL 480 rupee counterpart funds upto 31 December 1961 is given as Rs 289.61 crores and the amount drawn thereagainst is shown as Rs 123.35 crores. In one sense, therefore, there is no reason for any immediate panic in respect of the foreign exchange component of the plan, whenever the domestic political winds in donor countries turn chilly towards foreign aid. These may be allowed to spend themselves quietly and the full quantum of the aid obtained over the five year period by suitable timing of our requests. The knowledge of this circumstance is probably responsible for the difference between the popular and official response to news of Congressional peevishness over Aid. But a clearer picture of the extent of utilisation of all aid obtained will, though conceivably inconvenient from one point of view, is still worth having for the sake of clarity.

Corporate Profit Trends

IN discussing the trends in stock market behaviour in the first half of 1962 in these columns last week, we indicated that the trend of corporate profits for the latest year was not encouraging. An attempt has been made here to evaluate tentatively this trend on the basis of the data available from some of the balance sheets of companies which have been received so far. The results of 105 companies belonging to eight broad categories have been studied with a view to ascertain the performance of the corporate sector. The latest accounting year involved falls between 31 May 1961 and 31 March 1962.

The June issue of the Reserve Bank of India has attempted a study of the trends of corporate performance in 1960 on the basis of the working of 1001 companies. The present study relates to a more recent period but is more limited in scope and confines itself to the trends in profits and dividend performance. Obviously no finality is claimed for these findings and their representative character is also very qualified. Such finality cannot be obtained until all the balance sheets of the companies are available and that will take some time. Meantime, the results obtained by the study of the selected companies taken into account here appear to confirm general impressions prevalent in the stock market circles that, owing to a variety of factors, the corporate performance in profits and dividends for the latest year for which accounts are available, has not been as satisfactory as in the preceding year.

From the table given below, it will be seen that, while sales nearly tripled at Rs 949.20 crores against Rs 364.64 crores, profits, before providing for depreciation and taxation, are only slightly higher at Rs 50.89 crores against Rs 48.12 crores. This works out to a profit rate of a little less than 5.4 per cent as against 13.2 per cent on gross sales. An even more striking feature is that, after making provi-

sions for depreciation and taxation, the margin of profits is lower at Rs 21.18 crores against Rs 22.54 crores.

Apart from the necessity of allocating a larger amount for depreciation—Rs 23.27 crores against Rs 10.96 crores—in view of the equipment being out of date, the provision for taxation is also kept higher at Rs 15.93 crores against Rs 14.31 crores. Thus, the net income accruing to the shareholders, both in the form of dividends and retained profits, constitutes a lower proportion than in the previous year.

It should be said that, out of the 105 companies, cotton textile and engineering groups have accounted for the major portion of the rise in profits, the former being shown at Rs 9.18 crores against Rs 7.76 crores and the latter at Rs 3.58 crores against Rs 2.63 crores. The total profit figure of the 105 companies would have been more encouraging, but for the loss shown by the jute group and the sharp fall in the profits of the sugar and certain miscellaneous companies. Moreover, the working of some of the industries has been hampered by shortage of imported raw materials. This apart, some of the export industries were handicapped, because they could not modernise their equipment owing to foreign exchange shortage. Again, the industries, such as steel, coal, paper and cement—in which the prices are statutorily regulated—required special consideration from the government. These industries suffered because the prices fixed by the government did not take into account all items that entered into the production costs.

Naturally, shareholders have reason for worry with regard to the dividend outlook. Most of the companies have, so far, paying conservative dividends owing to the fact that resources are being saved to finance expansion and modernisation. Now that many companies have increased their share capital by issuing bonus or right shares, they will have to pay bigger sums in the form of dividends even to maintain the rate of distribution. The disappointment of the shareholders is the greater, because when the new system of company taxation was adopted two years ago

by removing the "grossing-up" privilege, the consolidated company tax was reduced from 51.5 to 45 per cent in the hope that the reduced tax rate on companies will enable them to compensate the shareholder by higher dividends. But the corporate tax has again been raised to 50 per cent, nullifying this mode of satisfying the shareholder.

Taking the jute industry first, the ten companies in the group have incurred a loss of Rs 0.26 crores as against a profit of Rs 0.47 crores, mainly due to the high prices ruling for raw jute and the absence of demand from the overseas buyers last year. In the case of the coal industry, performance was hampered by transport and other difficulties. The high output target under the Third Plan seems doubtful of attainment. The shortage of explosives affected production. The ten companies in the group have reported a slight rise in profits to Rs 1.12 crores from Rs 1.07 crores.

Although the sales of the ten tea companies have gone up from Rs 1.61 crores to Rs 1.90 crores, their profits rose only to Rs 0.36 crore from Rs 0.36 crore. It is feared that the tea gardens will have less finance to plough back into the business for expansion and development in view of the recent increase in company tax. A reduction in the shape of export duty is not sufficient to meet the increased competition in foreign markets. There is also anxiety about the trend of exports in future.

The cotton textile industry has done remarkably well during the past year, as revealed by the figures shown in the table. But caution is now reinforced by the growing shortage of cotton. Not only has been the price of domestic cotton increased substantially, the shortage is likely to be accentuated unless steps are taken to increase imports of raw cotton. The effect of the shortage has already begun to show in falling exports.

As prices of most of the items of production costs are unlikely to move down, the improvement in profits will be governed by the extent to which the operational efficiency can be raised. Increased productivity and full utilisation of capacity made possible by removal of bottlenecks can alone improve the situation.

*Year ended on dates between 31 May, 1961 and 31 March, 1962.

Jute:—The ten companies are Nelliaria, Kelvin, Alliance, Kamarhatti, Kanknarrah, Chitavalsah, Alex andaa, Gondalpara, Bengal and Budge-Budge.
Coal:—The ten companies are Selected Satgram, South Karanpura, Bhalgora, Bengal, Borra, Equitable, Katras Jherria, Rewa Coalfields, Singareni Collieries and Kamptee Collieries.
Sugar:—The ten companies are Shree Sitaram, Bhopal, Mysore, Cawnpore, Deoria, Andhra, Belsund, Darbhanga, India Sugars and Refineries and Kirlampudi.
Plantings:—The five companies are Lucky Valley, Bhimbadi Rubber, Vaikundam Rubber, Cochin Malabar and Nilambur Rubber.
Tea:—The ten companies are Coonoor, Balananoor, Coorg, Devon, Bishnauth, Bormah Jan, Dhunseri, Teloi Jan, Dibrugarh nad Patrakola.
Textiles:—The fifteen companies are Jay Shree, Elgin, Shri Ambica, Arvind, Shree Niwas, Kohinoor, Modern, Ajit, Elphinstone, Buckingham, Bangalore Woollen, Cawtex, Kothari, Textiles, Apollo Mills and Indore Malwa.
Engineering:—The ten companies are Jessop, British India Electric, Indian Standard Wagon, Bridge and Roof, Hooghly Docking, TEXMACO, Bhartia, Marshall, Brunton and Britannia.
Miscellaneous:—The thirty-five companies are Hindustan Lever, British India Corporation, National Rayon, Bengal Paper, Standard Motors, Indo-Burma Petroleum, Union Carbide, Albion Plywood, Standard Batteries, Indian Oxygen, Dunlop Rubber, Sen-Raleigh, National Rubber, Martin-Burn, Shaw Wallace, Kettiewell Bullen, Digvijay Cement, Alembic Chemical, Godfrey Phillips, National Tobacco, Balmer Lawrie, Kumardhubi Firecray, Karanpura Development, Associated Cement, W. H. Brady, Atul Products, Ceat Tyres, Colour-Chem, Straw Products, Enfield India, A. V. Thomas, Travancore Cements, Dalmia Cement, Sutra Lime, and McDowell and Company.

EXPORT FINANCE

The UK Example

A note in the June issue of Reserve Bank of India Bulletin contains some interesting information about recent developments in the facilities available to exporters in the UK. In India the matter is being currently examined by a study group headed by Mr K. P. Mathrani. Though many of the solutions attempted in the UK are far more sophisticated than is possible or necessary in this country, it is worth-while examining them.

The principal institutional agency through which exporters were enabled to get extended periods of credits and to cover possible risks is the Export Credit Guarantee Department. The competitive position of the British Exporters vis-a-vis those of certain other countries was strengthened by the ECGD stepping in to insure credit for a longer period than the exporters themselves were able to give their customers. Thus, ECGD insured credit for a part of the period leaving the exporter to extend himself for as much longer as he can. Early in 1961, the Bank of England announced its willingness to assist commercial banks who have extended credit to those exporters whom the ECGD was aiding. The modus was somewhat similar to that assigned to our Refinance Corporation in respect of longer terms loans taken by Industry, though not specifically for export purposes. (This obviously would be one example that export financing in this country can follow).

In April 1961, the ECGD itself introduced certain changes. It reduced the premium rates for a variety of risk insurance. Subject to careful examination and selection, the ECGD guaranteed loans for longer period than five years given by financial institutions in Great Britain to overseas buyers of goods for expensive capital projects. The creditworthiness of the overseas party is obviously an important consideration and the scale of the cost of the project for which the loans are to be guaranteed should be of the order of more than £2 million not including local expenditure. Another development was designed to meet the needs of small businesses with no previous export record of any significance.

Despite these improvements there were complaints. The most important of them were the high and variable interest rates in the UK and the absence of financial institutions willing to lend for terms longer than five years. As a result of further thinking on the subject and consultation with banking and insurance interests, new arrangements have been announced by the ECGD in January 1962. (Details of the new scheme are given elsewhere in this issue.) The special and stable rate of interest and the creation of a fund for export loans are expected to aid greatly exports, especially to developing countries.

Cairo Conference

THE declaration unanimously adopted at the Cairo Conference, which was in session from July 9 to 19, bears the impress of a practical approach to the problems of economic development of developing countries. When the conference was first announced, there were doubts in some quarters about its usefulness. After all, it is not as if the problems have not been already identified. Higher levels of investment and technology are the desiderata of economic progress in these regions. And, in regard to both capital for investment and modern technology, the developing countries

look to the industrial nations for help and guidance. Formation of a separate block of underdeveloped countries in these circumstances would not have been particularly helpful in achieving their basic objective. Representatives of thirty-six countries from four Continents, differing in cultural background, economic ideologies and political systems, participated in the Conference. Retarded economic development was the only common factor which brought them together on the same platform. The Conference was also subjected to divergent pulls and could have easily become the sounding board for rival ideologies. It is, therefore, a matter of satisfaction that the Conference has resisted the temptation to take up extreme positions.

The decision embodied in the declaration adopted at the Conference show a realistic appreciation of the needs and resources of the developing nations. To us in India it is, indeed, a matter of gratification that the points made in the speech of Mr Manubhai Shah, were acceptable to the Conference and have been incorporated in the declaration. Their intrinsic merit as well as the persuasive sincerity behind them made for their ready acceptance by the Conference. As in the final declaration so in the discussions, it has been made clear, that the approach was one of working within the framework of the United Nations to find a solution for the problems of accelerating the pace of economic development in the regions which are trying to catch up with the rest of the world. At the same time, attention has been focussed on the growing disparities in levels of living between the industrialised nations and the rest and the difficulties that the developing countries have to face as a result of the economic and trade policies of the advanced industrialised countries and the trend towards the formation of tighter economic groupings of the latter. No attempt was made to gloss over the fact that what is given as aid for economic development is often rendered infructuous by the trade policies adopted by the donor countries. The Conference has, therefore, appealed to the United Nations to convene a World Economic Conference to discuss and find solutions of the problems that face the countries that are trying to lift themselves out of economic stagnation. This proposal has been immediately endorsed by the Rome Session of ECOSOC which has also called for measures to sustain a rate of growth of five per cent per year in the developing countries. The Cairo Conference has also created a lively appreciation among the industrialised nations of the apprehensions of the developing countries regarding their export trade and of the need to allay these by the adoption of trade and economic policies which would provide legitimate opportunities for the expansion of their exports.

The Cairo Declaration has set out the obligations of the developing countries towards raising the standards of living of their peoples, as well as their needs, which could be adequately met only by the world as a whole. These points have also been comprehensively dealt with in the statement made at the Conference by Mr Manubhai Shah. In this context he has stressed the importance of programmes of technical training, diversification of crop patterns and increase in agricultural productivity, the creation of an adequate infra-structure to provide the basic services for rapid industrialisation and adoption of the concept of planned development.

As for the requirements of development which can only be met by the world as a whole, and particularly by the industrialised countries, the basic need is of technical and financial assistance. While recognising the

change in the climate for aid which has come about in recent times and the growth of a sense of world responsibility which has stimulated the flow of technical and financial assistance to underdeveloped countries in good measure, the conference has underlined the fact, which is not appreciated by all donor countries, that credit assistance should be made on terms which do not impose too onerous a burden on the balance of payments of the recipient countries. Industrialised countries can also contribute effectively to the economic development of the world as a whole by adopting positive policies designed to promote the exports of the developing countries through appropriate adjustments of tariffs, elimination or liberalisation of quota restrictions, and assistance in marketing. Attention has also been drawn in this connexion to the GATT Ministerial Declaration of December 1961 which provides a valuable policy statement for liberalisation of imports into industrialised countries of primary products and the simple manufactures of developing countries. The most fruitful form of assistance that industrial countries can render is to implement this Ministerial Declaration without reservations.

While drawing attention to the need for external assistance, the Conference has also recognised that the momentum of development has to be sustained by self-help and mutual co-operation in trade and economic policies. The Conference has decided, and rightly, not to set up any separate institutional pattern for its deliberations. But it has been stated that the countries concerned will remain in constant touch to deal with problems of mutual interest as they arise. The contacts established among the developing nations at Cairo should be strengthened if the objective of increasing mutual trade is to be achieved.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK SEMINAR

1,400 New Branches

On the inaugural day of the three-day Seminar sponsored by the Indian Banks' Association and held in Bombay last week, the prospect seemed to be anything but bright. We had, on the one hand, the view expressed by Mr T. D. Kansara, the Vice-Chairman of the IBA, that banks were unlikely to be able to attract that quantum of new Deposits that would be necessary in order that the expanding demand for Advances could be met. For, in his inaugural speech, the IBA Chairman, Mr Tulsidas Kilachand, had said that, on the basis of a 70 per cent credit ratio, the banking system would have to acquire Rs 1,850 crores in new Deposits so that it could finance some Rs 1,300 crores of industrial Advances by the end of the Third Plan period; and Mr Kansara plainly doubted that the 20 per cent annual increase in Deposits could be achieved. Consequently he was compelled to suggest that the banks would have to adopt a higher credit ratio—say, 80 per cent or even 90 per cent. But he then sought to defend such high ratios by pointing to the example of Japan, where to finance new development the banks had lent up to 110 per cent of Deposits. There is however this difference, that while in Japan the banking habit was sufficiently widely spread, in India high ratios might induce some loss of confidence in that sound banking principles were being discarded. It was therefore reassuring that, by the time the Seminar had ended the estimates both of anticipated expansion in Advances and the quantum of Deposit increase necessary were revised downward. The revised target of Deposit expansion, quite coincidentally, is the old one for anticipated rise in Advances—Rs 1,300 crores; and the latest expectation is that increase in Advances will work out to something like Rs 800 crores to Rs 900 crores.

But the mobilisation of resources in an amount of Rs 1,300 crores remains still a considerable task. A vigorous branch expansion programme will necessarily have to be worked out. Mr S. G. Barve, the Finance Minister of Maharashtra, who inaugurated the Seminar, remarked in this context that there were in India about 1,400 townships without any banking facility whatsoever. It is also known that the Reserve Bank is anxious that the network of bank branches should rapidly cover the urban map of India. The Desai Tribunal has held that its formula for gradual abolition of Area IV should act as an incentive in the opening up of such branches. It may moreover be added that a recent study conducted by the Reserve Bank clearly proved that rise in Deposits was proportionately much higher in townships with smaller populations. Unfortunately the fact remains that while Area IV branches may be richly productive of new Deposits the lower volume of banking activity results in losses being experienced. Hence the wariness of banks about moving in a big way into Area IV. In fact the

State Bank alone has ventured into virgin territory, but in its case it was in a position to meet its losses from the Integration and Development Fund created from the dividends payable to the Reserve Bank; and it is also a fact that the State Bank has had to draw from this fund. At a press conference following the seminar, Mr Kilachand suggested that under the aegis of the IBA a plan for opening up the 1,400 branches with allocation to banks (with some sort of regional preference) should be drafted. And he added that bankers did not feel the need for a "pool" to subsidise the losses expected at such new branches. But there can be little doubt that banks must raise earnings.

The Seminar has in this regard made two important recommendations. Firstly, it has called for an inter-bank agreement on service charges; and secondly that there be a code of conduct prescribing minimum conditions of lending. And Mr Kilachand has also disclosed the fact that the IBA is in process of evolving an inter-bank agreement on minimum interest rates on Advances. The margin of banks' earnings has got to be widened considerably for a number of reasons. Firstly, there is the additional cost to banks implicit in the introduction by the Reserve Bank of its four-tier bank Rate. Secondly, the Desai Tribunal's abolition of both Area IV and category four of banks will result in another increase in banks' operating costs. Thirdly, the proposed legislation in respect of liquidity ratios will automatically put a brake upon the limit for bank Advances—and the earnings thereon. Fourthly, the banks are under obligation in a short number of years so to transfer from profit to reserves as will enable the achievement of a capital plus reserves ratio of 6 per cent of Deposit resources. Fifthly, in the diversification of banks' lending policies so as to include greater assistance to small industry, we have the certain prospect of a somewhat higher loss to be provided for—and hence inner reserves have also to be strengthened. Lastly, there is the cost of the new branches.

Arising out of the Reserve Bank's introduction of the four-tier bank Rate we may expect the banks automatically to put up their lending rates. In fact in perhaps another two weeks letters will be sent to constituents explaining that the rates charged will be enhanced by 1 per cent. Naturally the borrowers will object, and in so doing will normally confirm that they will accept a one half of one per cent increase—which is all the banks want. But such individual action taken by the banks is not enough; and the sooner the IBA introduces the inter-bank agreement on Advance rates the better.

The Seminar's recommendation in respect of service charges needs to be urgently considered by the IBA. There is no doubt that while the cost of money has increased immeasurably since 1939, there has been little change in the cost to the constituent of various banking services. Revision is called for, and perhaps also stipulations to the effect that certain defined services and facilities should not be made available gratis by the banks.

These are some of the ways in which banks' earning potential can increase. But we would suggest that the Government can also provide both incentive and concession. Certain transfers to reserve, linked with risk assets, should have allowed on them suitable tax reliefs. A part of the losses arising from the new branches should be "compensated" for, just as the State Bank has a special fund for the purpose. Better remittance facilities might perhaps reduce the quantum of cash that banks are compelled to keep—and so pave the way for enhanced earnings from larger gilt-edged portfolios. The next few years will be decisive as far as the banks are concerned. The Seminar has done well to underline the problems that will be faced and to recommend the steps that should be taken. Let us hope that both on the part of the banks and of the Government we shall see quick and effective adoption of the necessary measures.

BANK RETURNS

Loan's Impact on Deposits

The new loan subscriptions have caused a sharp fall in the Deposits of Scheduled Banks as also a considerable decline in their cash balances with the Reserve Bank as shown in the return for 13 July.

According to the returns of the Reserve Bank for 20 July, steep currency contraction has taken place with Notes in Circulation falling by Rs 29.55 crores to Rs 2,060.76 crores and Rupee Coin returning from circulation in an amount of Rs 1.53 crores. To bolster Balances Held Abroad, a sum of Rs 1.65 crores has been transferred from Foreign Securities, which consequently are lower at Rs 89.34 crores. Currency has been contracted against Rupee Securities for Rs 28 crores by transfer to Investments in the Banking Department.

In consequence Investments have moved up by Rs 26 crores to Rs 275.63 crores. But it is known that the State Bank has, in the latest week, purchased some Rs 20 crores of securities from the Reserve Bank. Hence it would appear that the Centre has instituted deficit financing for Rs 20 crores. This was necessary presumably because during the week under review the 3½ per cent 1962 matured, and apparently holders of Rs 20 crores in the loan did not opt to convert and have been paid off in cash. This could also explain the considerable rise of Rs 18.33 crores to Rs 108.84 crores in the Deposits of Scheduled Banks. Lastly, the implication is that outstandings of the 2½ per cent 1962, due to mature in November, are now placed, after conversion applications to the new loan had reduced the total, at around Rs 7 crores.

The Centre's balances are lower by Rs 3.94 crores at Rs 49.33 crores and can be seen to be linked with the maturing liability of some Rs 7 crores of Treasury Bills purchased and discounted by the Reserve Bank.

The State Governments are by no means flush: their Deposits have fallen by Rs 3.18 crores to Rs 14.28 crores, besides which their ways and means borrowings from the Reserve Bank are higher by Rs 3.56 crores at Rs 17.80 crores.

A further investment to the extent of Rs 12 lakhs has been made from the Operations Fund in Central Land Mortgage Bank Debentures.

Balances Held Abroad have declined by Rs 0.86 crore to Rs 4.51 crores; the drain during the week thus works out to Rs 2.51 crores.

Borrowings of Scheduled Banks are placed for the first time in many months, at a nominal figure of Rs 0.63 crore, with outstandings against usance bills shown at Rs 22 lakhs, or a drop of Rs 15 lakhs.

State Co-operative Banks have also reduced indebtedness by Rs 2.72 crores to Rs 115.23 crores.

The return of the State Bank for 20 July apparently indicates that its subscriptions to the new loan amounted to nearly Rs 40 crores. But as last week's analysis showed, the new loan subscriptions as such were placed at Rs 20 crores. But the inflow of the State further free resources has enabled the State Bank to make a further purchase of securities from the Reserve Bank during the week under review. For, the Deposits of the bank are higher by Rs 6.46 crores at Rs 578.20 crores, and there is a truly slack season contraction of Rs 6.36 crores to Rs 283.52 crores in Advances. This, together with a small sum "drawn" from Other Assets, has enabled the State Bank to add another Rs 19 crores or so to the gilt-edged portfolio on top of the new loan subscription of Rs 23 crores. The gilt-edged investments of the State Bank are in consequence higher by Rs 29 crores at Rs 247.40 crores, while Other Assets have fallen by Rs 24 crores to Rs 42.42 crores. In the result, cash balances including money at call and short notice have moved up by Rs 0.77 crore to Rs 31.76 crores.

A rather steep decline in Deposits and balances with the Reserve Bank is noticeable in the return of Scheduled Banks for 13 July. These changes of course relate to new subscriptions. Net Demand Deposits are slightly higher by Rs 1.79 crores at Rs 886.59 crores. But the subscriptions of the LIC and provident funds have caused net Time Deposits to fall by Rs 32.31 crores to Rs 144.85 crores. Also, cash balances have dropped by Rs 24.83 crores to Rs 205.01 crores, of which about Rs 19 crores is in respect of balances about the Reserve Bank. But recourse to central banking credit has been practically avoided, the relative figure rising only by Rs 0.70 crores to Rs 2.19 crores. Borrowings from the State Bank also show only a nominal increase of Rs 0.70 crore to Rs 17.64 crores. Gilt-edged investments, lower by Rs 20 crores at Rs 578.66 crores, do not naturally reflect the new loan subscriptions, which may be expected to make their impact felt in the return for 20 July. We fancy that the portfolio will show a rise of about Rs 45 crores: this would relate as to Rs 6 crores and Rs 20 crores as the new loan subscriptions of the other Scheduled Banks and the State Bank respectively and as to Rs 19 crores being purchase by the State Bank from the Advances finally seems to behave in slack season fashion, in being marked down by Rs 5.80 crores to Rs 1418.99 crores.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 24 July, 1962. Total amount offered was Rs 3,10,00,000. Tenders at Rs 99.380 per cent and above were accepted in full and those at Rs 99.375 per cent were

allotted approximately 27 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.376 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 30 July, 1962. Successful tenderers should make payment on Friday, 3 August, 1962 at all centres. Other conditions are as usual.

During the week ended 20 July, 1962, Government of India Treasury Bills for Rs 1,47,18,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 25 to 28 July, 1962 at Rs 99.441 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 18 to 21 July, 1962 amounted to Rs 3,37,00,000.

BANK PROFIT

Indian Overseas Bank

The net profit of the Indian Overseas Bank Ltd. for the half year ended 30th June 1962, subject to audit, including the sum of Rs 2,22,933.24 brought forward from the last year's account, amounts to Rs 22,06,467.52 as against Rs 19,97,365.95 in the corresponding period of last year.

The Bank's Deposits and Advances as on 30th June 1962 were over Rs 35 crores and Rs 23 crores respectively as against Rs 31 crores and Rs 20 crores as at 31st December 1961.

Britain and Expansion

By Paul Einzig

By the time these lines appear in print the Prime Minister and his new Chancellor of the Exchequer will have made their policy statement in the course of the House of Commons Debate on the Opposition's Motion of Censure. No doubt they will have re-emphasised their determination to follow Mr Selwyn Lloyd's policy in substance, even if they will fore-

shadow its more subtle application. It would indeed be absurd if they announced to the world in general and to the trade unions in particular that the wage restraint was now a matter of the past, or that it would not be sought to be applied with the same vigour. In any case, that policy was crumbling down already under Mr Lloyd and is likely to be weakening further. There can be little doubt that the reconstructed Government's declared aim will be "expansion without inflation" which course is easier said than done. There can be little doubt that steps will be taken to encourage expansion, hoping for the best that they will not at the same time accentuate inflation. The only question is what method of expansion will be adopted.

The Government has the choice between expanding by means of relaxing monetary controls and by means of increasing public expenditure. The first method is strongly favoured by those who feel that it would assist the dollar at the same time as helping British economy. In this respect I cannot share their optimism. The position being what it is, any reduction of interest rates in London would drive hot money from London but not to New York. Owing to the persistent weakness of the dollar in relation to the D-mark, Swiss franc and French franc, the hot money diverted from London is certain to find its way to Frankfurt, Zurich and Paris.

The alternative method is to stimulate stagnant consumption by releasing consumer purchasing power. A start has already been made in that direction through an increase of National Assistance Benefits and by the increase of Service Pensions. It is expected that further steps will be taken in that direction, because, in addition to stimulating a trade revival, it would be expected to reduce the Government's unpopularity in the country. Whichever method is adopted it is certain to affect the balance of payments unfavourably—unless of course, the adverse change in the attitude of industrial labour in Germany and other Western European countries where wages are now rising fast, should cancel out that effect.

The Treasury's recent pronouncement that British exports are expected to increase by 5 per cent within twelve months and that there is therefore no need for the Government to go out of its way to stimulate trade, could also be interpreted in the opposite sense. It is arguable, and will no doubt be argued by expansionists, that since the outlook is so favourable there is no reason why the Government should not feel it could afford to encourage home trade and consumption. Anyhow, as usual, the policy will be decided and the arguments to match will no doubt be found.

Notes

PLAN INCOMES

Where They Went

The Mahalanobis Committee on Distribution of Income and Levels of Living which was appointed by the Government of India some two years ago is reported to have submitted its preliminary findings on the many aspects of income distribution and changes which it was asked to study. Press reports of the Committee's findings suggest that these accord with popular estimates of progress in real earnings of various income groups. But the Committee also found a decline of 11.8 per cent in real income of the agricultural workers. This should certainly be disturbing considering that agricultural workers constitute a substantial proportion of the rural population. The committee's conclusions on this subject have already been confirmed by the study conducted by some of the State Governments into the living conditions of agricultural workers as part of the census operations. In West Bengal, for example, a survey made nearly an year ago revealed very depressing conditions of living for the agricultural workers highlighting the fact that the development plans undertaken under the first two plans

brought no real relief. If anything this bespeaks the lack of a purposeful orientation to the development schemes that are being initiated for rural agricultural development. The formidable dimensions of the problem posed by improvement of living conditions of agricultural workers will offer no extenuation to the glaring failure that is testified by the findings of the Mahalanobis Committee.

In respect of the other classes, the picture that emerges from the figures of the Committee is one of uneven progress. The total earnings of the employed workers excluding agricultural workers are shown to have increased by about 10 per cent. But this was offset by rise in prices to the extent of 19 per cent so that rise in real earnings was only of the order of about 21 per cent. Coal miners with 76 per cent increase in earnings made the largest gain, while at the other end, Government employees with only 1 per cent increase were least benefited. In between these two ranges, come factory workers with 20 per cent increase, teachers with 18 per cent mine workers other than coal with 14 per cent and Railway employees with 8 per cent.

There has also been no material abridgement of the gap in the per capita income between the rural and urban sectors; per capita income in the rural sector continues to be less than in the urban sector. In this connection, the figures of the total contribution made by each sector to total national income and the proportion of population among which it is shared are revealing. It is stated that nearly 70 per cent of the total national income is contri-

buted by the rural sector which is shared by the 83 per cent of the population, while the contribution of the urban sector is of the order of 30 per cent which is shared by 17 per cent of the population. The significance of these figures in indicating the great disparity in living standards between the urban and rural sectors should be obvious enough.

One of the important terms of reference to the Committee was to study the trends in concentration of economic wealth in major industrial sectors like sugar, cement, vanaspati, chemicals etc which have already been noted for a fairly high degree of economic control. For the Government which is wedded to the socialist pattern of society a further accentuation of this trend could not have been easily reconcilable. However, the Committee's observation that such concentration is inevitable in a particular stage of growth in the industrial field is significant and should restrain the Government's impulses for a further tightening of its policy toward industry which though seeking to come down on concentration of economic power, only leads to restricting the industrial growth of the country drastically.

HMT Superlative Year

Contrary to the generally poor show of public sector companies in India, the performance of the Hindustan Machine Tools Limited, Bangalore, can be rated remarkable. The net profit of the HMT, as gleaned from the Director's Report for 1961-62, shot upto Rs 127.53 lakhs representing a return of 24 per cent on the share capital of Rs 5.31 crores as against the return in the earlier years of 13.9 per cent in 1960-61 and 8.2 per cent in the previous year. The gross revenue improved considerably to Rs 532.09 lakhs from Rs 392.16 lakhs of the previous year. The domestic sale prices of all the

machinery produced by the company were progressively reduced and were maintained ten to twenty per cent below the landed cost of foreign machines of equivalent quality, and the export prices were regulated in such a manner as to compete with the prices ruling in the international markets. The substantial profit of 24 per cent on the share capital is obviously the result of steady rise in productivity and efficiency attained by the employees. More striking is the provision of 10 per cent dividend which will absorb Rs 53 lakhs of the profits over and above the amount of Rs 8.49 lakhs paid to the Government as interests on loans, making a total return of Rs 61.59 lakhs on Government's share and loan capital.

Another important achievement of HMT is the setting up solely out of its own resources of the second machine tools factory in Bangalore for doubling the production to 2,000 machines per annum. Its construction was completed in record time, ten months ahead of schedule under the supervision of Indian engineers. There is a proposal to start a third factory in Punjab at an approximate cost of Rs 10 crores. The construction of the factory and the township is scheduled to commence in July. The release of watches assembled at the factory from imported components for sale is yet another feather to its cap. Equally significant is the entry of the factory produced machines into world markets by exporting them to West Germany and Switzerland. The company's plan for launching an extensive export promotion programme in respect of machine tools in Europe as well as in America is a pointer to its

eagerness to maximise exports of its products. Considering the manifold performance of the company in 1960-61 the HMT has been adjudged the outstanding and the best among the undertakings in the public sector.

EXPORT CREDIT Institutional Needs

The question of export credit loomed large in recent discussion on export promotion. A new study group headed by Mr K. P. Mathrani Chairman of the IFC has been appointed by the Government to make a thorough study of the problem. The group had discussions with business representatives and industrialists a fortnight ago in the course of which a few schemes to meet existing and prospective needs were suggested. The All India Manufacturers' Organisation for instance suggested the setting up of an institution on the lines of the Import-Export Bank of the US. But the usefulness of such an institution in the conditions existing in the country has been doubted by many. There is unanimity of view about the need for institutional arrangements for meeting export credit and an integrated scheme is expected to emerge from the study now being made by the group. Some preliminary ground has already been covered by the Kapur Committee set up earlier by the Government. One of its important recommendations was that the Refinance Corporation for industry should take up the work of recommending suitable alterations to the memorandum of the Corporation. The Committee had also recommended that the Export Risk Insurance Corporation should examine the desirability of giving cover for pre-shipment advances made by private organisations other than banks. The need for the Reserve bank to exempt usance export bills from the purview of its credit control measures was also stressed. Since it has been learnt that the Government is giving consideration to implementing these proposals, the Mathrani Committee will be free to devote its attention to other aspects of export credit which have not been hitherto studied. In connection with export credit it is remarkable that the needs of the small scale industries are not being neglected. Initiative in this regard is being taken by the Export Risk Insurance Corporation which has made some important proposals to meet the credit needs of this sector. Firstly, the Corporation has suggested the issue of policy to cover advances by exporters to small manufacturers to enable them to buy raw mate-

rials required for the manufacture of goods, meant to be delivered to the exporter for being exported from the country. Under the second proposal, the ERIC will issue a guarantee to banks covering their advances to small exporters against the risks inherent in non-payment of bills for foreign buyers due to disputes on quality. Both these proposals are designed for the benefit of the small scale manufacturers and should give a useful fillip to their exports.

RAW SUGAR Production for Exports

The decision taken by the Committee of the Indian Sugar Mills Association to manufacture raw sugar is an important one. The rapid development of the sugar industry in recent years has thrown up a serious problem: the disposal of its output. As domestic consumption has not expanded much, there has been left a large surplus. Export of the excess sugar has proved an uphill task partly because world sugar prices are much lower than the price at which India can sell its sugar without incurring loss and partly due to the fact that importer prefer raw sugar to refined sugar. Whatever is now being exported, therefore, is at a loss which is being shared by the industry and Government. The upshot of this situation has been a reduction in production of sugar by 10 per cent in the current year and as stocks continue to pile up it is apprehended that in the next season production may have to be further curtailed. But reducing output can only be a temporary measure and if the industry is not to founder a more suitable solution has yet to be devised. The manufacture of raw sugar appears to be the way out of the present difficulty of the industry. The demand for raw sugar in the world is increasing and many of the sugar importing countries have expressed their preference for raw sugar as they are already refining white sugar before releasing it for consumption.

Unfortunately, however, the Indian sugar industry is not in a position to switch over to production of raw sugar immediately. In the first place, raw sugar manufacture is new to it as it has all along producing sugar for direct consumption. Secondly, raw sugar cannot be stored for a long time as it is susceptible to quick deterioration during storage. As there are no refineries in India, whatever raw sugar is manufactured has necessarily to be exported. There is then problem of the transport of raw sugar from the producing centres to the ports. Transport of raw sugar in bulk is economical but facilities for bulk

handling are almost non-existent in the country.

Opinion on the feasibility of the manufacture of raw sugar is not unanimous. This is evidenced by the two articles appearing in the latest annual number of "Indian Sugar", the official organ of the Indian Sugarcane Mills Association. According to Mr R. C. Aitken of there is a strong case for embarking on the manufacture of raw sugar. Cost of production can be reduced to a sizable extent when compared to white sugar thereby rendering the task of exporting surplus sugar less difficult. He has calculated that the actual saving will amount to approximately Rs 49 per tonne for raw sugar 96.0 Pol. and nearly Rs 39 per tonne for raw sugar 97.0 Pol. A further saving can be effected if the cane cess is refunded on raw sugar. He has also pointed out that the manufacture of raw sugar should not present any serious difficulty as the methods employed have been standardised and so a few additions and alterations equipment may solve the difficulty. The other writer Mr V. D. Jhunjhunwala thinks that the Indian sugar industry will not be to produce raw sugar as cheaply as other raw sugar manufacturing countries because in those countries the plants have been especially installed for producing raw sugar. He therefore favours practical experiments before embarking on the manufacture of raw sugar on a large scale.

Now that a decision has been taken ways and means have to be devised to manufacture raw sugar at competitive prices so that raw sugar exports do not suffer from the same handicaps encountered by white sugar. In view of the need for disposing off raw sugar soon after its manufacture, it is essential to conclude contracts before hand. In this regard the STC should be able to negotiate advance agreements with importing countries. An assurance for making good the loss incurred by mills, if any, engaged in the manufacture of raw sugar will be an additional incentive. As the loss on export of raw sugar will be considerably less than on that of white sugar, the idea deserves serious study.

RURAL HOUSING Plan's Negligible Impact

Though housing is an essential ingredient of welfare, significantly enough it is the field in which the two plans have had very little impact. This is particularly true of rural housing. In one of its recent publications, the Planning Commission has furnished some up-to-date data which throws light on the immense size of the problem. The total rural population

has been estimated at present at 360 million and the requirements of housing at 80 million. The rural population is further expected to increase to 394 million by the end of the Third Plan and the requirements of rural housing will also register a corresponding increase to 88 million. Present facilities in regard to housing are deplorably meagre since there are only 54 million houses in the rural areas, vast majority of which are unfit for human habitation. The cost of repairing the existing tenements and constructing new ones to meet the full requirements has been estimated at about Rs 18,960 crores. Compared with this the present efforts will necessarily look puny. The Third plan provision for village housing is only Rs 12.7 crores which excludes the Central grant of Rs 5/- crores for the acquisition and development of houses.

The problem is obviously of such awesome dimensions as to damp down expectations of any tangible improvement being registered in the short run. With the limitations of resources, to expedite progress it is necessary to press in other measures of self-help. The scope for co-operative effort is particularly great and concrete schemes have to be chalked out to enlist voluntary labour in the rural areas. The village housing cells which have already been created at the headquarters of every State should provide the organisational nucleus to carry out surveys and other essential aspects of a successful drive for more housing in the rural areas. Co-ordination of work done by various agencies also leaves much to be desired.

COAL Power Requirements

The study team which was appointed by the Union Ministry of Irrigation and Power to assess the power requirements of the coal industry during the Third Plan has made a number of important recommendations to overcome the power shortage which has threatened to disrupt the scheduled production of coal in the Third Plan. In its study the team has placed the power requirements for coal industry on the basis of an anticipated production of 104.78 million tons, at 142.56 mw. One of its major recommendations to meet the power shortage in West Bengal coal fields is that the Damodar Valley Corporation should review all the existing demands for power and allocate the maximum power supply to the coal mining industry in the West Bengal Bihar region. The team has suggested that opportunity must be explored for utilising for the coal mining industry, the additional power

that the DVC could release by permitting the power station at Durgapur steel plant to generate their power requirements.

Another recommendation made by the team is that the Uttar Pradesh Government should be persuaded to release about 74,000 kw peak capacity or alternatively 30,000 kw power at 50 per cent load factor from Rihand hydro-electric project for utilisation in the coal fields in the Bengal Bihar area. A review of the de-

mands of the Hirakud project is also suggested to explore scope for diverting the surplus power for utilisation by the Bihar Bengal coal fields till such time as the demands to be met from the second stage extensions of the projects materialise. The committee also wants that scope should be explored for obtaining power from the West Bengal Government coke oven plant power station in addition to their existing arrangement with the DVC. Moreover it has been suggested that the power

generation from the six 1,500-kw package generating sets should be earmarked for supply to coal fields served by the Associated Power Company and the Dishargarh Power Supply Co Ltd for the period of shortage. All these suggestions are designed to meet the power requirements of the West Bengal Bihar fields which account for the greatest part of total coal production in the country.

For improving the power supply position in the outlying fields

the team has suggested that the Governments of UP and MP should take up immediately the construction of their respective portions of the transmission line to link up Rihand power station with Jhilmili in Madhya Pradesh and also that they should make power available to the Singrauli coal field from the Rihand power station.

★

PROCESSING INDUSTRIES

Drawbacks in Sharp Focus

The expert team sponsored by the National Productivity Council of India for conducting a probe into the affairs of the food processing and preservation industry has in the interim report submitted to the Government, brought to sharp focus many of the industry's drawbacks and the need for adopting modern techniques practised by the advanced countries of the world. Among the major problems stressed by the team is the comparatively high cost of commodities to be processed and preserved. This is obviously due to the low productivity in the field of agricultural and horticultural crops, of animals (for milk and meat) and of the fishing craft. Another factor highlighted by the report is the general dissatisfaction with the quality of the raw materials. Many of the varieties of fruits and vegetables that are ideally suited for preservation are totally neglected and the conspicuous lack of information on the subject is another serious impediment to the progress of the industry. The team's first endeavour has therefore naturally been to gather relevant information and to propagate the suitable varieties. Even in the field of preserving the quality of milk there is much room for improvement. The introduction of chilling units, as suggested by the team in the interim report, will assist in ensuring the supply of quality milk. The problems of meat processing units are more complicated: firstly, the processing units will have to start almost from the scratch and secondly, the country has no developed breeds for giving fresh meat. Therefore, the findings of the team will throw fresh light which will be of basic interest to the industry.

The inadequate arrangement for pre-packing, handling, transport and marketing of raw materials is another major ill that is plaguing the industry. As pinpointed by the team, approximately 20 per cent of fruits and vegetables is rendered unfit on account of improper packing, transport and marketing facilities which not only inflates the cost but also adversely affects the quality of the raw materials which in turn casts its shadow at every stage of production.

Indian Finance

28 July 1962

The handling of perishable goods by the railways has also come in for adverse criticism. The inordinate delay in transporting such commodities and the scant consideration given to their handling result in rendering those goods unfit for utilisation. And the team considers that road transport can be resorted to for obtaining better results. An equally notable suggestion is the need for imparting proper training to the food processors in dealing with the producers and help them in the sphere of marketing the perishables. The team has also laid stress on the need for maintaining the correct pattern of relationship between the manufacturers and wholesalers and retailers for yielding better results. It should be noted that the present report contains only a general view of the team and a final report will be submitted after returning from abroad incorporating its findings.

★

NON-FERROUS METALS

The Cost Factor

With the rapid industrialisation of the country, the demand for non-ferrous metals has considerably increased. But as the indigenous production of most of these metals is still small, the non-ferrous metal industries are to depend heavily on imports. Among these metals, aluminium, however, is becoming increasingly available from indigenous sources as domestic production is being stepped up. It is expected that by the end of the Third Plan, indigenous production of aluminium will exceed one lakh tonnes and in the course of the next few years, it is quite conceivable that not only will domestic demand be fully met but there will be a surplus available for export. In the meanwhile with the increased production of aluminium within the country, the difficulties presently encountered as a result of inadequate supply of other non-ferrous metals such as copper can be considerably minimised. As Mr H. K. Shah has pointed out in his presidential address to the All Indian Non-ferrous Metal Industries Association, a number of articles which are now being made from other metals can be fabricated from aluminium. An example is the increasing use of aluminium in the electrical cable industry. It would appear there is no limit to the uses to which this versatile metal can be put. In industrially advanced countries Aluminium is used where previously it was believed that steel alone could be used.

But the increased use of aluminium seems to be retarded by the high price at which the metal is made available in this country. World price of aluminium is much lower and according to Mr Shah the remedy is the discontinuance

of tariff protection to the indigenous industry. The Indian aluminium industry is enjoying protection for the past 16 years and Mr Shah seems to think that it should now be able to stand on its feet after such a long period of sheltered existence. There is much force, however, in his plea that aluminium being largely used by the poorer sections of the community in the shape of household articles in daily use, it should be the endeavour of every one concerned to ensure that the price of aluminium is not made costly. Fortunately there is in our country an abundance of good quality bauxite and although it is not an easy matter to convert the ore into aluminium ingots—this involves the setting up of capital intensive projects requiring plentiful supply of electric power—there is every hope that sooner or later aluminium production will overstep indigenous demand. But simultaneously with increased production, the industry should take steps to reduce its cost of production as only then the end products of aluminium reaching the consumer could be priced reasonably. But aluminium producers may not find it easy to bring down production cost especially since power which is considered a raw material in this industry continues to be costly what with the electricity surcharge.

In view of the extreme shortage of foreign exchange—the position is likely to continue for considerable time to come—it is imperative that all possible steps are taken to conserve it. If therefore aluminium can be substituted in place of metals that have got to be imported not only now but for a long time to come, it will only be prudent to encourage this substitution. For even after the Third Plan when efforts to increase indigenous production of non-ferrous metals will be intensified, there will be a big gap between demand and supply of copper, zinc and lead.

★

ELECTRIC FANS

Export Prospects

A study by the Engineering Export Promotion Council has indicated considerable prospects for expanding the export of Indian electric fans to Malaya and Singapore. Accelerated building activity in these countries deriving from increasing per capita income and increasing trend toward urbanisation, has put up a great demand for electric fans in these two countries and imports in recent years of both ceiling fans and table fans have shown substantial expansion. The humid climate of the countries is a factor that makes the need for fans indispensable while the higher costs of air conditioners rules them out of the budget of the average families. From 20,999 in 1958, import

of ceiling fans has gone up to 33,522 in 1961 while import of ceiling fans has increased from 33,655 in 1960 to 46,621 during the last year. The principal exports at present to these markets are UK, India, Japan, Netherlands and China. Geographical proximity to the Malayan and Singapore market should enable India to capture the top place as exporter of electric fans to these two countries. But the trend during the last year is far from encouraging in view of the reason, that India has actually lost some ground to the UK in the total exports. While Indian exports declined to during 1961, UK increased its exports fairly substantially for, 12,341 to 17,785 in the last year. Over and above this, the increasing competition posed by Japan is another factor that Indian has to reckon with. India's main disadvantage in competitive export is the poor publicity arrangements for popularising the Indian products. It has been pointed out in the report of the commission for India in Singapore on economic and commercial conditions in Singapore and the Federation of Malaya that purchasers in these countries are familiar only with two brands of Indian fans. The report also draws attention to other shortcomings in the sales promotion efforts of the Indian industry. To boost the sales of Indian fans, the exporters have been urged to take steps to make the Indian fans competitive not only in respect of price but also in respect of quality and design.

★

IDA

Fresh Credit to India

The International Development Association (IDA) has announced another development credit to India being the sixth in the series of credit extended for irrigation and drainage project during the past year. The latest credit which is for the equivalent of \$13 million takes the total value of credit provided by the IDA to \$56.5 million which were linked up with projects for agricultural development in various States like Punjab, Uttar Pradesh, Bihar, Orissa, Gujarat and Maharashtra.

The latest credit is intended to assist finance a project to irrigate about 152,000 acres in the Purna River Valley in the State of Maharashtra and to provide a 15,000kw Hydroelectric power station. It envisages the construction of two dams of the Purna River, while the irrigation system will consist of a main canal of about 50 miles long and 250 miles of distribution canals with associated works. Under the project the Maharashtra Government will operate a programme with the help of a consultant for prevent-

ing waterlogging and accumulation of salt to which the soils of the Purna project has been too prone. The State will also provide services to farmers in the project area to improve farming practices and to meet their requirements for fertiliser and agricultural credit.

The power plant which will be built at the foot of the Yeldari dam and equipped initially with two 7,500kw units with provision of a third will provide regular supply of electricity in the project area. The total estimated cost of the project is equivalent to \$35 million, of which \$9 million has already been spent. Construction of the irrigation and power station are the responsibility of the State of Maharashtra Department of Power and Irrigation which will operate the irrigation scheme. The State Government will also meet 40 per cent of the total estimated cost of the project while the balance of 60 per cent which includes the IDA credit will be met by the Centre.

The terms of the latest credit conform to the pattern of earlier ones. It is free of interest though a service charge of 3/4 of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet IDA's administrative costs. Period of repayment is spread over 50 years and repayment of principal will begin only from 1 January 1973, 1 per cent of the principal being repayable for ten years thereafter and 3 per cent annually for the final 30 years.

★

FOREIGN ASSISTANCE

Hungary's Contribution

The Hungarian gift of a complete textile testing laboratory comprising 140 instruments worth approximately Rs 2.5 lakhs to the Bombay Textile Research Association is a symbol of that country's participation in India's economic development. The laboratory has been formally handed over by the Hungarian Ambassador, Dr Laszlo Reczei, to Mr S. K. Wankhede, the Minister of Industries, Maharashtra, week before last. Produced by the Metriplex of Hungary, the laboratory is most modern and its utility for testing the quality of fibres, yarn and cloth has become an accomplished fact. Installed at the Bombay Textile Research Association, the equipment is bound to improve the textile industry in a variety of fields such as raw cotton testing, cloth testing and preshipment inspection. Considering the supreme importance and attached to quality controls in the manufacturing commodities especially manufactured for export purposes Hungary's contribution, though modest enough, will be gratefully acknowledged.

Right man on the Right lines...

That is the linesman in the public utility serving you. Be it a transient fault or a major line failure, the utility is always on the alert to restore service with least possible delay.

With the unfolding of the National Plans there will be more power but this to be of use must be delivered to industries and homes. Towards this task, and in augmenting power resources, the Electric Supply Undertakings affiliated to the Federation of Electricity Undertakings in India are dedicated. The successful performance of this task calls for investor confidence which is best fostered by the return being made really reasonable.

With investor confidence comes more finance, which means enlarged power facilities for the Nation.

THE FEDERATION OF ELECTRICITY UNDERTAKINGS OF INDIA

This donation is symptomatic of the growing interest shown by Hungary in India's industrial development. There are several instances that testify to the increased collaboration between the two countries agreements on some which have already been arrived at while others are in the initial stages. The negotiation between the two countries for the setting up of a 50,000 ton aluminium plant in Madhya Pradesh, for which Hungary's contribution will amount to about Rs 5 crores, is expected to conclude within a couple of weeks. Other notable instances of collaboration that require particular mention are the establishment of two pilot plants, one at Delhi and the other at Kanpur for the manufacture of bio-gas out of cowdung at cheap cost. The agreement reached with two firms in Bombay one in the manufacture of travelling crabs and the other in the production of acid chemical machinery is also another example of fruitful collaboration. To this list can be added the Komplex's contribution, which is at present engaged in the setting up of two hydro-electric plants in Kashmir and the prospects of erecting similar plants in other places are also rated good.

NEWS IN BRIEF

The first part of the new factory of Tube Investments of India Limited, near Madras, for the manufacture of cold roll formed metal has been completed and the plant will be installed shortly. Its primary products will be cold formed sections that can be utilised for the building of bus bodies, rail cars, roller shutters, insulation systems, furniture and in the motor and textile industries.

The second phase of the project, which will be ready within a couple of years, will widen the sphere of activity by fabrication of the cold formed sections by bending, welding, pressing, rustproofing and painting for the building industry. The TI, one of the leading cycle manufacturers in the country, also produces cycle components, cycle saddles and electric resistance welded steel tubes and roller chains.

India has attained self-sufficiency in the production of optical glass, an important strategic material for defence. Following years of intensive research, optical glass is now being manufactured by the Central Glass and Ceramic Research Institute in Calcutta in adequate quantities to meet the entire requirements of the country. Besides eliminating the country's dependence on imports, the production of optical glass at the Institute has provided a fillip to the development of the optical instruments industry. The proposed factory of the National Instruments Limited at Durgapur, for the manufacture of cameras, will utilise the optical glass produced at the Institute for making lenses.

Export Credit in Britain

The following are the details of the scheme referred to in the leading Article on this subject.

(1) Where the contract involves goods of a capital nature, and its value is £1 million or over, and the terms of payment exceed three years from the date of shipment, the banks will be prepared to provide finance at a fixed rate of interest of 5½ per cent. This rate will not be changed for at least five years.

(2) Where the total term of the financing transaction exceeds five years, the banks will finance the maturities due in the first five years after shipment at 5½ per cent, and the insurance companies the remainder, at a fixed rate of interest of 6½ per cent.

(3) Sixty insurance companies (accounting for over 90 per cent of the total of insurance funds) will lend up to £100 million at a fixed rate of 6½ per cent where the payment periods exceed five years. The funds will be channelled through a new company to be established by the insurance companies.

(4) To be eligible for finance under this scheme, projects must be covered either by an ECGD direct (bankers') guarantee or an ECGD financing guarantee. (The latter is tailored for large-scale contracts, the finance for which is loaned direct to the overseas buyers).

The new scheme is intended to supplement rather than supplant, other forms of export finance which the banks already provide. It has three main features: (1) it increases the pool of finance, (2) it represents a streamlining of the means of obtaining and supplying this finance, and (3) it gives a major concession to exporters on the cost of finance. Immediately before the scheme came into operation, exporters of capital goods were paying approximately 7 per cent (1 per cent above the Bank rate as it then was) for finance from the banks and 7½ per cent for funds from the insurance companies. The constant rate of 5½ per cent for the first five years and 6½ per cent for periods above five years compare well with those in other countries and removes yet another obstacle in the way of expanding exports.)

The Managerial Revolution

In a speech noted for its admirable clarity and grasp of details, Mr G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation described the revolution that is taking place in the country in the field of industrial management at an almost unobtrusive pace. In one of its most significant aspects, this is noticeable in the waning importance of the form of industrial management that till recently held predominant sway, namely, the managing agency system. Instrumental for the industrial progress of the country in the early period and particularly for the development of such industries as jute, cotton textiles, tea, sugar etc, the managing agency system acquired odium by the combination in one source of ownership of part of the capital and the control of management and the considerable room for abuse of power which this left open. Naturally enough the managing agency system became the special target of attack in the company law reform that was introduced in the country at various points of time. Since it was recognised that the system had outlived its purpose, sweeping changes were introduced having relevance to the continuance of the managing system in the Companies' Act passed in 1956. It placed special restrictions on the powers of the managing agents while its sphere of operations was also stringently regulated. The remuneration payable to the managing agents for their managerial function had been limited to 11 per cent of profits with a sliding scale as the quantum of commission goes up. In the wake of this legislation, the number of new managing agencies among new companies floated in the country in recent years has tended to decline.

The trend in recent years as disclosed and testified by the Company Law Administration, has been toward a more diversified pattern of management reflecting not only the effect of the Companies' Act 1956, but also the growing pressures on the function of company management in the context of the complexities associated with this function. As Mr Mehta has stressed, there is now a shift from the production of the more simple consumer goods to producer and capital goods involving more complicated processes of manufacture which in turn has led to more exacting demands on managerial function. "Establishment and operation of industrial enterprise requires today talents and skills which have to be mobilised and coordinated. Industrial organisation requires long-term planning which cannot be achieved without the cooperation of professional men and technicians. With a variety of governmental controls and regulations and the intricacies

of finance and taxation, an industrial enterprise today has to depend on the advice and assistance of accountants and lawyers; The growth of trade unionism and increase in the volume of labour legislation requires close attention to problems of industrial relations, supervision and welfare. The top executive in an industrial enterprise have to possess trained intelligence and capacity to work with others—qualities which can enable them to analyse the varied and changing requirements of the industry and coordinate the work of the specialist. The work of a manager is primarily concerned with achieving results through the cooperative action of a number of persons to attain common objectives". The institution of managing agents was no match to these onerous responsibilities. It is remarkable that a number of managing agencies themselves have recognised the lessons of the new trends and have converted their partnership firms into private or public limited companies with a view to broadening the organisational set-up and enlisting talent from outside. Further the Companies' Act has provided for the institution of secretaries and treasurers to serve functions previously discharged by managing agents. The institution of the Board of directors is also coming into greater vogue and there is a heartening feature for the majority of directors to be comprised of outsiders. There is also a noticeable tendency for many concerns now to have full-time paid chairmen and executive directors. With the gradual elimination of the managing agency system as envisaged in the Government's policy, the trend toward the institution of full-time paid executives performing managerial function is bound to be accentuated.

The multiplication of credit agencies to meet the financial requirements of new industrial ventures, has also served to erode the basis for the working of the managing agency system in a gradual manner. The public has been showing a keen awareness of the opportunities for investment in new industrial ventures and official policy also aims at encouraging this tendency for greater public participation in the new capital issues. As a sequel to this, functions of management and provision of finance have been getting gradually divorced. This has given a much-needed fillip to professionalism in management. As a result "a class of civil servants in the world of business is growing charged with the responsibility of creating national wealth through the private sector working in the public interest". As Prof Arnold Toynbee has observed "in place of the original association with notions of enterprise and profit, the

28 July 1962

term business is coming to be associated with the very different notions of administration and organisation." At the managerial level the change is being reflected in the declining share in the ownership of a concern of those who merely finance it.

Mr Mehta has referred appreciatively to the efforts that are being made to meet the requirements for training facilities for managerial personnel. With the Administrative Staff college, the Reserve Bank Staff Training College, and a host of other institutions, the record is commendable

and praiseworthy. Further in several universities and institutes of technology, course of industrial management have been introduced and are attracting young men and women. Along with the need for the expansion of such facilities to meet future demands, Mr Mehta has also very appropriately laid emphasis on the need to evolve a managerial ethic. Integrity in business is a categorical imperative and a self-conscious professional class of managers should strive for it both for its own intrinsic worth and as a matter of professional fastidiousness.

Company Finances in 1960

An annual review of the finances of Indian Joint Stock Companies for the year 1960, on the basis of the balance sheet data of 1001 medium and large-sized non-Government public limited companies closing their annual accounts during July 1960 and June 1961 has just been published in the June 1962 issue of the Reserve Bank of India Bulletin. The 1001 public limited companies in the private sector accounted for 78 per cent of the paid-up capital of all such companies. The article provides for the first time, information on the following three aspects: (1) the relative performance of companies in different size groups, (2) trends in profits and capital formation during 1951-55 and 1956-60 which broadly represent the First and the Second Plan periods and (3) trends in debt-equity ratio.

ALL-ROUND IMPROVEMENT

The financial results of the 1001 selected companies reflected an all-round improvement in production, sales, profits and capital formation during 1960 which was particularly marked in the case of cotton textile, engineering and chemical industries. The value of production 1001 companies rose impressively by Rs 308 crores to Rs 2344 crores or by 15 per cent as compared with 9 per cent in 1959. The value of sales rose by Rs 226 crores (11 per cent) to Rs 2273 crores as compared with a rise of Rs 177 crores (9.5 per cent) in 1959. All the major industries, except tea and shipping recorded increases in sales during 1960, the rise being particularly marked in engineering (Rs 50 crores or 19.6 per cent), Cotton textiles (Rs 42 crores or 8.9 per cent) and Jute textiles (Rs 36 crores or 31.5 per cent). As the increase in sales of the companies though significant was not commensurate with the rise in the value of production, the stocks of finished goods and work-in-progress rose by Rs 69 crores to Rs 333 crores.

On the expenditure side, all the main items recorded increases of varying orders; among these, the bulge in cost of raw materials and other manufacturing expenses was

pronounced, being of the order of Rs 200 crores, as against Rs 68 crores during 1959.

Corporate profits which had shown a marked improvement during 1959 rose further during the year but at a somewhat slower rate owing to a more than proportionate rise in manufacturing expenses vis-a-vis the growth in sales and a larger provision for depreciation, a part of which was necessitated by an increase in fixed assets. Profits before tax rose from Rs 163 crores in 1959 to Rs 187 crores or by 14.8 per cent as against 33.3 per cent in 1959. Amounts set aside as provision for taxation, for payment of dividends and as retained profits were all higher than in the previous year. The ratio of gross profits to sales moved up from 10 per cent in 1959 to 10.2 per cent in 1960 and the ratio of gross profits to total capital employed from 9.8 per cent to 10.1 per cent. The average rate of return to share holders, indicated by the ratio of dividends to paid-up capital was higher at 11.6 per cent as against 10.9 per cent in 1959.

INCREASE IN RATE OF CAPITAL FORMATION

Gross capital formation at Rs 224 crores was nearly double the level in 1959; the rate of gross capital formation which had persistently tended downwards from 16.9 per cent in 1956 to 6.1 per cent in 1959 recorded a marked improvement to 10.6 per cent in 1960. Increase in inventories was as much as Rs 101 crores or 17 per cent as against Rs 15 crores or 3 per cent in 1959. Gross fixed assets formation was also higher being Rs 123 crores as against Rs 106 crores in the previous year and the rate of gross fixed assets formation stood higher at 8 per cent as compared with 7.5 per cent in 1959.

For the five year period, 1956-60, the gross capital formation for the 1001 companies aggregated Rs 962 crores, made up of Rs 695 crores of gross fixed assets and Rs 267 crores of inventories. This works out to an annual average rate of 14.6 per cent.

During 1951-55, on the basis of the sample of 750 companies the annual rate of gross capital formation averaged 8 per cent.

With the shift in the assets formation there was also a change in the pattern of financing, there being larger recourse to external sources which had steadily dropped from 71.6 per cent in 1957 to 37.2 per cent in 1959 rose to 43.5 per cent in 1960. Even so, the internal sources were relatively the more important of the two, accounting for 56.5 per cent. Among external sources, bank borrowing was the largest individual component amounting to Rs 58 crores or 21 per cent of the total resources.

Industry-wise, for the five year period as a whole, external sources were relatively more important in jute textiles, iron and steel, matches and trading—varying between 65 and 75 per cent of the total sources.

There was relatively greater recourse to external sources mainly bank borrowings in the Second Plan period, while during the First Plan period internal sources, mainly depreciation and free reserves, provided about three-fifths of the total.

There was a further improvement, though minor, in the liquidity position of the companies, measured by the proportion of

current assets to total net assets which after declining continuously from 59.7 per cent in 1955 to 53.5 per cent in 1959, rose to 55.3 per cent in 1960.

For the 1001 companies as a whole, the conventional debt-equity ratio defined as the ratio of paid-up capital, reserves (other than depreciation and taxation reserves) and surplus to funded debt, moved up from 1:4.22 in 1955 to 1:3.36 in 1960; this narrowing down of the gap proportionate increase in debt which advanced from Rs 178.7 crores in 1955 to Rs 318.0 crores in 1960; equity rose over the same period from Rs 754.0 crores to Rs 1068.3 crores. Industry-wise, equity exceeded debt in all the major industries during 1960. Equity varied between 5 to 10 times the debt in coal mining, jute textiles, cement, paper and paper products and trading and between 3 and 5 times in sugar, cotton textiles, silk and woollen textiles, engineering and chemicals. The ratio obtained was 1:1 in iron and steel and shipping. The ratio of total debt (including borrowings from banks etc.) to tangible net worth (paid-up capital and reserves and surplus less intangible assets) increased from 1:1.08 to 1:0.87 during 1955 to 1960.

COMMODITIES Price Movement in 1961-62

The official index of wholesale prices (with the past year ended March 1953 as 100) stood at 126.0 in April 1961 as compared to 127.5 during March 1961 and came further down to 125.4 in the next month. In the succeeding two months it showed a rise and stood at 128.8 in July 1961. Thereafter, the index witnessed a continuous fall and touched the level of 122.9 in December 1961. The index moved up again to 124.3 in February, 1962 and subsequently, it stood at 123.6 in March 1962.

The financial year average for 1961-62 worked out to 125.1 as against 124.9 for the earlier year. During the year under review, 'Food Articles' stood at 120.1 as compared with the earlier year's average of 120.0. 'Fuel, Power, light and lubricants' moved up by 1.8 per cent to 122.1, 'Intermediate Products' by 6.3 per cent to 138.8 and 'Finished Products' by 1.5 per cent to 124.6 while 'Tobacco' declined by 10.6 per cent to 98.8 and 'Industrial Raw Materials' by 1.9 per cent to 98.8 and 'Industrial Raw Materials' by 1.9 per cent to 142.6.

FOOD ARTICLES

The index for "Food Articles" after a rise from 117.6 in April 1961 to 124.3 in August 1961, declined to 117.8 in December, 1961. Thereafter it again moved up and stood at 119.1 at the close of the year. The sub-groups which exhibi-

ted variations during the year were: Cereals (-2%), Rules (-1%), Sugar and Gur (-10.3%, Fruits and Vegetables (+16%), Fish, Eggs and Meat' (+10%) 'Edible Oils' (-4%) and 'Other Food Articles' (+2%).

The monthly index for 'Cereals' moved up from 99.3 in April 1961 to 105.0 in August 1961 and then fell gradually to 100.8 in December 1961. During the next two months it showed a rise and recorded 103.7 in February 1962. It, however, came down to 102.2 at the end of the year. The monthly index for rice advanced from 101.0 in April, 1961 to 110.1 in August 1961. Thereafter the index showed a continuous fall and reached the level of 101.0 in January 1962. However, it witnessed a rise during the two months and was at 103.2 at the close of the year. The fiscal year average for rice for 1961-62 stood at 105.0 as against 108.1 for 1960-61, showing a fall of 2.9 per cent. The index for wheat after an initial decline from 88.4 in April 1961 to 85.7 in May 1961, showed almost a continuous rise and reached 100.3 in February 1962. The index, however, went down to 94.3 in March 1962. The annual average index for wheat for 1961-62 worked out to 91.0 as compared with 90.0 for the earlier year, exhibiting a rise of 1.1 per cent. The yearly average index for jowar for the period under review registered a fall of 7.6 per cent per cent to 112.4 over the earlier year's average of 121.7. Bajra rose by 1.7 per cent to 132.4 as against 130.2 for the previous year. Barley receded by 7.2 per cent to 98.9 as compared with 106.3 for the earlier year. Maize advanced by 1.1 per cent to 110.3 as against

109.1 for the previous year. Ragl moved down by 1 per cent to 118.6 as against 119.7 for the earlier year. Gram declined by 4.8 per cent to 82.2 as compared with 87.4 for the previous year. Among 'Other Pulses' arhar fell by 8.3 per cent to 90.7 while mung, masur and urad recorded a rise of 1.0, 1.7 and 8.7 per cent to 101.6, 87.8 and 106.9 respectively.

As regards Fruits and Vegetables, onions moved up by 33.8 per cent to 160.5, potatoes by 33.5 per cent to 139.8, oranges by 21.5 per cent to 230.9 and bananas by 9.2 per cent to 118.6 while cashewnuts declined by 22.6 per cent to 73.2. 'Milk and Ghee' showed divergent trends. Ghee showed a rise of 2.1 per cent to 116.2 while milk receded by 1.0 per cent to 116.6 during the year under review. 'Edible oils' were higher: 4.1 per cent at 156.5 when compared with 150.3 for the earlier year as a result of a rise in the prices of vanaspathi (Dalda) (7.6% to 148.0), mustard oil (+5.4% to 177.1), ground nut oil (+4.5% to 143.9) and gingelly oil (+2.0% to 156.8). Coconut oil, however, declined by 2.7% to 160.0. In the case of 'Fish, Eggs and Meat', fish remained at its earlier year's average of 118.9 while eggs and meat recorded a rise of 8.5% per cent to 137.9 and 15.7 per cent to 144.1 respectively. The annual average indices for sugar and gur were lower by 1.3 and 14.5 per cent to 125.4 and 116.4 respectively. The fiscal year average for tea worked out to 193.2 as against 205.4 for the earlier year, registering a fall of 5.9 per cent. Coffee recorded a rise of 2.1 per cent to 88.1 as compared with 86.3 for the previous year. Among 'Other Food Articles' the commodities which witnessed appreciable variations during the year under review were: cloves (+53.6%), turmeric (+17.5%), Cum-

min (+3.8%), betelnuts (+10.9%), black pepper (-25.4%) and Cardamoms (-15.9%).

FUEL, POWER, LIGHT AND LUBRICANTS

The index for this group advanced from 121.5 in April 1961 to 122.6 in March 1962. Prices of kerosene oil and diesel oil witnessed a substantial rise of 4.3 per cent to 99.1 and 9.4 per cent to 123.3 respectively during the year review.

INDUSTRIAL RAW MATERIALS

The index for 'Industrial Raw Materials' exhibited a sizeable decline during the period; it stood at 153.1 in April, 1961 and moved down to 136.2 at the close of the year. The index for raw cotton which stood at 110.0 at the beginning of the year under review, continued to be around that level until May 1961, whereafter it showed a declining trend and came down to 104.2 in September, 1961. Afterwards it witnessed a rise and reached the level of 112.5 in March, 1962. The average index for raw cotton for 1961-62 worked out to 108.6, showing a fall of 2.9 per cent over the earlier year's average of 111.8. The annual average index for raw jute stood at 178.0 as against 210.2 for the earlier year, exhibiting a sharp decline of 15.3 per cent. The fiscal year average for raw silk also witnessed a fall of 5.3 per cent to 156.1 while the annual indices of raw hemp and raw wool registered a rise of 15.7 per cent to 142.6 and 3.6 per cent to 124.7 respectively. The fiscal year average for groundnuts was higher by 15.3 per cent at 154.9 when compared with that of the earlier year. The monthly index for groundnuts which stood at 162.3 in April, 1961 was at 162.2 in May. It recorded a rise in the next two months to reach 171.0 in July, 1961.

A declining trend set in then and the index moved down to 142.5 in October, 1961. Afterwards the index exhibited a continuous rise and reached the level of 149.2 at the close of the year. The annual average for linseed advanced by 13.4 per cent to 142.5, castorseed by 1.7 per cent to 126.2, gingellyseed by 12.4 per cent to 166.3 and rapeseed by 5.0 per cent to 171.5 while cotton seed moved down by 8.4 per cent to 165.0 and copra by 4.9 per cent to 139.8. Amongst other commodities the following exhibited significant variations during the year under review: mica (-2.5%), manganese ore (-5.8%), raw skins (-7.1%), rubber (-4.1%), lac (-15.5%), logs and timber (+4.6%) and bamboos (+59.9%).

INTERMEDIATE PRODUCTS

The index for this group showed a rising tendency during the first four months of the year under review it went up from 138.0 in April 1961 to 141.9 in July, 1961. Thereafter it fell gradually to 137.8 in January, 1962. The index rose slightly to 137.9 in the next month but receded to 135.5 at the close of the year under review. Prices of tin (+38.4%), rayon yarn (+28.3%), coir yarn (+29.3%), coir yarn (+27.7%) linseed oil (+13.2%), pig iron (+8.0%), brass (+7.9%) and copper (+6.4%), witnessed a rise while zinc (-10.5%) and aluminium (-2.5%), moved down.

FINISHED PRODUCTS

The index for the 'Finished Products' group which was at 126.1 in April, 1961, witnessed a decline in the next two months and came down to 123.9 in June 1961. It rose to 125.3 in July, 1961, when the downward tendency started again bringing the index down to 123.1 by September, 1961. Thereafter it exhibited a rise and the index rose to 124.7 in December, 1961. Afterwards the index exhibited a fall and came down to 124.3 in February, 1962, but showed a small rise to 124.9 at the close of the year.

The index for cotton cloth (mill) which was at 131.1 in April, 1961, maintained that level till July, 1961. Thereafter it rose to 131.2 and remained unchanged during the rest of the period under review. The average index for 1961-62 for cloth (mill) worked out to 131.2 as against 132.1 for 1960-61. The fiscal year average for handloom cloth was higher by 2.0 per cent at 117.8 as compared with 115.5 for the earlier years. The index for jute manufactures which opened at 142.2 showed a downward trend in the next two months and touched 125.1 in June, 1961. It went up to 130.5 in July, 1961. During the next two months it again receded and touched the level of 114.2 by September, 1961. In October, 1961, it went up to 118.7 but came down to 116.4 in November, 1961. It showed a rise to 117.7 in December, 1961. In the next two months it witnessed a fall and reached the level of 113.3 in February, 1962. The index, however, rose to 117.4 at the end of the year. The fiscal year average of jute manufactures for 1961-62 worked out to 122.4,

registering a fall of 6.8 per cent over the earlier year's average of 131.4. The index for woollen manufactures rose from 116.8 in April, 1961 to 123.7 by June, 1961. Thereafter it witnessed a small decline and the index came down to 123.1, in August 1961 and maintained that level till January, 1962. Subsequently it rose to 125.4 in the next month and was at this level in March, 1962 also. The fiscal year average for woollen manufactures worked out to 122.7 as against 109.1 for the previous year, showing a rise of 12.5 per cent. The index for rayon and silk manufactures, which stood at 116.8 in April, 1961, moved down to 115.3 in May. The next two months witnessed a rise and the index stood at 119.1 in July, 1961. It, however, came down to 118.0 in August, 1961. Afterwards the index exhibited a continuous rise and reached 126.5 at the close of the year under review. The financial year average for 1961-62 was at 119.2 as compared with 104.4 for the preceding year, recording a rise of 14.8 per cent. The fiscal year average for iron and steel manufactures registered a rise of 2.5 per cent to 151.5 as against 147.8 for the previous year. The fiscal year average for aluminium utensils was also higher by 2.8 per cent at 153.5.

Other commodities which showed variations during the year were: dyeing materials (+22.3%), coal tar products (+19.2%), lime (+17.6%), cement (+9.5%), bobbins (+9.2%), soap (+8.3%), matches (+7.8%), shoes (rubber) and glass (+7.6% each), bricks and tiles (+5.1%) pottery goods (+4.5%), paints and machinery (+3.0% each), tools and implements (+2.5%), shoes (leather) (+1.5%) and fertilisers (-1.4%).

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

COOLING his heels in gaol, Mr. Annadurai must be feeling that he has overplayed his hand. That won't prevent him from publicly blaming his followers' disgraceful behaviour last week (which included such endearing acts like breaking the arms of children) or the government's arrest of the DMK leaders. The chances of anyone accepting this as valid moral alibi are slim. Having said this, it is necessary to utter a word of warning. I have an uncomfortable feeling that in dealing with the DMK and Mr Annadurai the Congress is repeating unconsciously the mistakes it made in dealing with the Muslim League and Mr Jinnah. The demand for Dravidastan is being treated with the same lofty disdain that the intellectual congressmen reserved for Pakistan in the late thirties. Jinnah never forgave this and it is to this more than to anything else that the birth of Pakistan was due. Mr Annadurai is very different from Mr Jinnah in one important respect and this makes him even more formidable. He has established a degree of rapport with his followers that was never Mr Jinnah's. The DMK feeds on the mystique of a benign big brother and Mr Annadurai uses it with skill. In the last few years he has muted the more blatant anti-brahmin shrillness in his party, though his followers have not always acted in conformity with their leader's professions. But by and large it is true that the more important repository of anti-brahmin feeling now is the body from which Mr Annadurai broke loose—the Dravida Kazhagam of Mr Ramaswami Naicker whose vociferous support is not without its embarrassments to the Congress. A separate Dravidastan has at the moment no real chance; but the DMK and Mr Annadurai need to be combatted more positively and skilfully than seems likely from speeches heard this side of the Vindhyas. The forcing of the pace of Hindi is also driving more people into the welcoming arms of the DMK. The grievances over the alleged neglect of the South are largely imaginary but those over the imposition of Hindi, not at all.

The International Court of Justice has, by a majority decision, held that the costs of the UN operations in the Congo and Gaza fell within the "expenses of the Organisation" referred to in para

2 of Article 17 of the UN Charter. The consequence is that they have to be "borne by members as apportioned by the General Assembly". The Charter also provides that any member who is in arrears of dues under this clause for more than two years shall lose his right to vote in the Assembly. The decision, given in the Court's advisory capacity, is entitled to great respect and so far there has been no case when such advice had been flouted by the UN. Even so, it is doubtful whether everything will now be plain-sailing. The defaulters run across the cold war barricades and include the Soviet Union, France, Belgium, the UAR, and some Latin American countries. The arguments before the court were on familiar lines. The principle upheld by the Court was that the UN has "the legal authority to raise funds for the accomplishment of its paramount purpose, the maintenance of international peace and security." Before the Court, Professor Tunkin of the Soviet Union, defended its refusal to pay on the ground that only the States that were responsible for starting the trouble in the Congo and Gaza should be made to pay. Ironically, on the side of the Soviet Union are the very nations that the Soviet Union considers should be made to pay exclusively for these operations—France and Belgium, for example. The bench was divided in an unsurprising way. The judges who were in the minority were citizens of Poland, France, Argentina, USSR and Peru. Interestingly, Mr A. H. Badawi a citizen of UAR, voted for the decision.

The consequence of the decision are difficult to predict though it is premature to expect immediate disenfranchisement of defaulters for various reasons. A UN without China is odd enough but a UN without the USSR or France for whatever reason would be farcical. Moreover, contrary to the general impression based on vigorous US support of the case that the Court finally accepted, the Soviet Union will be among the last to be affected by the two year rule. For it has been regular in its payment of its normal contributions. As of to-day, it has paid its 1961 contribution in full and half of its nearly 12 million dollar assessment for 1962. The eventuality of its coming under the disqualification even if the

added is some distance away. Interestingly, among the first to go will be some Latin American countries, who were in arrears early this year even in respect of their regular contributions.

Meantime, the UN finances are in a terrible state. U Thant's proposal of a 200 million dollar bond issue for emergency tiding over was mooted on the assumption that the UN operations in the Congo will end by June 1962. It now seems clear that Tshombe has no intention of letting this happen. This means a monthly expenditure of 11.5 million dollars for God knows how much longer. As it is, even the 200 million dollar bond issue is running into difficulties. So far bonds worth slightly over 72 million dollars have been taken up by various countries, (including, interestingly, the UAR). The United States which has been most forthcoming in its financial support of the UN, is having unexpected difficulties in honouring its commitments over the bond purchase: at the moment of writing, the US House of Representatives has made the US purchase conditional on the defaulting UN members paying up their dues on Gaza and the Congo assessments. A rather odd caveat this, considering that in such an event, there would be no need for the issue of bonds. It is very likely that the joint Senate and House Conference will eliminate this condition. In any case, it is too early to imagine that the world court's decision has solved the UN's financial worries.

Trevelyan is among the few names that undergraduates in this country will recall with pleasure. British history lost some of its terrors and dreariness to them because of him and his "History of England" (now available as a paperback) was an unusual text book in that you loved to read it. (Macaulay, G. M. Trevelyan's grand-uncle, is supposed to have confidently predicted that his own "History" would displace "the latest fashionable novel on the tables of young ladies." Trevelyan's book did not probably achieve this dubious honour but it certainly made history readable and vivid, which was after all what Macaulay meant.) The intellectual family in England has been the subject of much speculation recently: along with the Huxleys, the Macaulay-Trevelyan clan has shaped innumerable minds in the last hundred years. Trevelyan's Indian antecedents are also important. Trevelyan's father and grandfather spent some years in India. Macaulay has often figured

in centenary commemorations in India recently. We may soon have to celebrate (next year, if memory serves me right,) another centenary—that of Northcote Trevelyan's famous minute that created the Indian Civil Service based on competitive examinations. As a historian, Trevelyan is nominally in the Whig tradition of his famous grand-uncle but this statement requires to be severely qualified. Lord Melbourne is supposed to have ruefully wished once that he could be as sure of anything as Macaulay was of everything. I do not think that anyone can accuse Trevelyan of cocksureness. Moreover, though Trevelyan was a libertarian—Garibaldi was among his earliest historical enthusiasms—he had none of Macaulay's irritatingly smug assumption that nineteenth century England was the best of all possible worlds. Macaulay's chief legacy to Trevelyan was the concept of history as literature. As a historian, Trevelyan was sceptical of the activities of metaphysical system-builders who hacked and hammered at facts to suit a theory. He had few prepossessions unless the emphasis on the social aspect of history, something of an innovation in his time, is considered one. Trevelyan was a great walker and once left a tired Bertrand Russell behind after about sixty miles to continue on his way. A great and a very English figure.

It is getting so that it is safer to stay at home. State buses career in their mad courses claiming their share of victims every day. And train smashes and air crashes are following each other in such quick succession that there is some danger of our not being able to die in bed if we at all venture out. When Mr Nath Pai kicked up a row in Parliament last time about the alarming number of accidents on the Railways in the recent past, the Minister for Railways considered that Mr Pai's picture was too sombre. The statistical picture the Minister had was in more satisfactory tints. Of course, he conceded that it was cold comfort to those who died in the accidents and their relations. The Dumroan disaster will no doubt be inquired into and the cause determined but if accidents come so thick and fast the public gets quite cynical about these exercises in fact-finding. It would be more to the point if the failure of the a human element was made less possible. Besides, track conditions and age of engines are as frequently mentioned as causative of accidents as the carelessness of a pointsman. The railways have no doubt a great many urgent demands on their resources, but it is probably not too unreasonable to ask them to consider safety of lives as the first charge on their funds.

EAVESDROPPER

INVESTORS' GUIDE

The 1962 Edition of the Calcutta Stock Exchange Official Year Book is now out. India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this edition: (1) Information relating to all Bombay Companies, and (2) List of Companies which accept vernacular signatures on transfer deed. Also lists of companies which accept and which do not accept signatures in dot pen on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta, at a price of Rs. 12.50 nP per copy. Postage Rs. 2/- extra.

Aid Prospects

With the Finance Minister's return from his three weeks' tour of European capitals, current assessments of trade and aid prospects have assumed a more hopeful colour. While Mr Desai appeared to be satisfied with the results of his mission, what he actually said on arrival at the air port was non-committal. The expression of guarded optimism about the outcome of the coming meeting of the Aid India Club was qualified by the injunction that nothing should be taken for granted until the meeting was over.

The question now is whether, at the meeting of the World Bank Consortium on July 31, members other than the USA will be prepared to make up the gap of \$220 million to match the offer of \$500 million by the United States for the second year of the Third Five Year Plan. The earlier meeting held in May had to be adjourned as only \$65 million of the extra aid required was indicated. The meeting was postponed to enable the members to reconsider the position and to see how far they could raise their contributions. Many reasons have been suggested for this unforseen delay in the approval of aid already indicated in outline, such as Goa, Kashmir, MIG and what not. But the main reason, it appears, was incomplete appreciation in New Delhi of the rapid growth of the economic power of the countries of the European Common Market and their aspirations to play an appropriate role in World affairs. Nothing has irked Europeans more than the facile assumption in this country, that all we have to do to get external assistance for our development plans is to satisfy the United States and the World Bank about our needs and that other members would pay up their share at America's bidding. Mr Desai's visit to the European capitals should have been helpful in overcoming any reservations that Governments of these countries might have entertained about increasing the quantum of assistance for India's Third Plan. In any case, the increase in the membership of the Consortium, which Italy is expected to join at the next meeting, is a hopeful feature.

There are also indications that Russia may be prepared to offer increased assistance for the Third Plan. Considerable significance is attached in this context to the unscheduled meeting between Mr Anastas Mikoyan, First Vice-Chairman of the USSR Council of Ministers, and Mr T. T. Krishnamachari, at the airport, where the former halted for an hour on his way to Jakarta and

his subsequent meeting with the Prime Minister on his return journey. According to earlier reports, the Soviet authorities had indicated their interest in some of the Plan projects for which no arrangements had yet been made for external assistance.

Soviet aid of this type may help the implementation of projects which otherwise may have to be jettisoned, but it will not be of much help in meeting the expenditure that has to be incurred in the course of the first two years of the Plan on projects already taken up for implementation, or of the difficulty of maintaining essential imports at an adequate level. Part of the US assistance offered for the year 1961-62 was not tied to projects and was available for maintenance imports from USA. It is also expected that a similar proportion of the aid that may be extended during the current year will also be "untied". But the total amount of aid from the West is still in doubt. It should be surprising if this question, of the imports required to maintain the level of industrial production, was not raised in the discussions with Mr Mikoyan.

The shortages are most acute in respect of special grades of steel, non-ferrous metals and fuel. We are already getting supplies of steel (for Railways) and of oil from Russia and East European countries against rupee payment. Larger supplies of steel and of furnace oil from Russia at this juncture would be timely. In respect of fuel oil there should be no difficulty. But in regard to steel production programmes are drawn up well in advance, and larger supplies now depend on how far the particular grades required by us could be spared out of stock. The level of imports on these arrangements will also be determined by the scope for increasing exports from India which, from past experience, appears to be rather limited. The annual imports of steel required over the next few years will be of the order of one million tons.

Steel Programme

The revised production programme of steel was reviewed at a meeting last Monday of the Planning Commission with the Ministry of Steel and Heavy Industries. Though production has improved at all the plants, and improvement is likely to be maintained, it is estimated that there will be a gap of 6.8 million tons of steel between production and total requirements over the Third Plan period. Delays in the achievements of rated capacity by the Second Plan projects and the consequent delay in taking up expansion schemes is mainly responsible for the larger deficit that is now anticipated. Production of

finished steel at the end of the Third Plan is now estimated at 5.8 million tons as compared with the earlier estimate of 6.8 million tons, when the Third Plan was formulated, and the estimated requirements of 7.2 million tons.

Fertiliser

As in the case of Steel, the fertiliser programme, too, has been hampered by the stretching out of Second Plan projects, so that it has to start from a lower base level than was assumed when the Plan was drawn up. Nevertheless, the Ministry of Heavy Industry is confident that the bulk of the additional planned capacity will be set up before the end of the Third Plan. The total installed capacity at the end of the Second Plan was 248,000 tons 'N'. A total additional capacity of 827,000 tons 'N' was sanctioned during the first year of the Third Plan. One of the parties to whom a licence was issued for establishing a plant with a capacity of 50,000 tons 'N' had subsequently decided to drop the scheme. Out of the remaining licensed capacity, according to the latest assessment, capacity for about 400,000 tons 'N' would be effective before the end of 1964. In addition to the above, further capacity of 262,250 tons 'N' has been approved in principle and licences are expected to be issued during the current year. Taking into account possible mishaps and the likely delays in securing foreign collaboration and foreign exchange resources, production in 1965-66, on a conservative basis, is estimated at 6.5 lakh tons in terms of Nitrogen.

When the Third Plan was formulated it was assumed that production in the last year of the Plan period would be of the order of 8 lakh tons 'N'. But it is pointed out that satisfactory progress has been made in respect of the other projects not included in the above calculation, and in respect of which the Ministry is not prepared to indicate any date for their completion. Only projects which are likely to be completed before 1964 and whose production will be available in the last year of the Plan are included in the estimate of 6.5 lakh tons. But the establishment of additional capacity, especially in the private sector projects, once the preliminaries are settled and the green signal given, could be much faster than is now anticipated; and it may turn out that the plan target of capacity may be fully achieved and even exceeded.

But shortage of fertiliser, in relation to the requirements as estimated by the Ministry of Food and Agriculture, will persist throughout the Third Plan period. The Third Plan has fixed a consumption target of one million tons Nitrogen for 1965-66. During the Second Plan, consumption of fertiliser had increased from 1.05 lakh tons 'N' in 1955-56 to 2.3 lakh tons 'N' in 1960-61. According to the Ministry of Food and Agriculture, consumption in the past would have increased at a more rapid rate if adequate supplies had been made available. The Ministry has, therefore, estimated the demand for 1961-62 at 5.3 lakh tons 'N' and for 1962-63 at 5.89 lakh tons 'N'. Only 60 per cent of the estimated demand could

be met last year. During the current year, the estimated internal production of 1.82 lakh tons 'N', and the quantity of 2.15 lakh tons which can be imported with the allocation of Rs 25.9 crores earmarked for import of fertilisers, would arise the availability to 70 per cent. According to the Ministry of Food and Agriculture, till internal production catches up with the demand, adequate foreign exchange should be made available for import of fertilisers. For covering the estimated deficit in the current year fully, a foreign exchange allocation of Rs 35.8 crores would be needed against the allocation of Rs 25.9 crores.

Farm Planning Seminar

The Farm Planning Seminar (the full title is Seminar-cum-Workshop on Problems of Farm Production Planning and Programming) is expected to focus attention on the factors which stand in the way of achieving higher productivity in agriculture through adoption of improved techniques of cultivation and management. Mr Patil, Minister of Food and Agriculture, referring to the importance assigned to Farm planning in agricultural extension activities abroad, described it as "perhaps the best known tool for narrowing the gap between what should be and what is practised in the field of agriculture."

The crucial problem in Indian agriculture, as Professor D. G. Karve, Deputy Governor of the Reserve Bank, reminded the Seminar in his welcome address, is to transform what is now a way of life, outside the range of economic calculations, into a business activity to which such calculations would be applicable. He also pointed out that, while at present all physical supplies and technical processes are taken care of by Research and Extension, the economic or business aspect of the measures proposed is either assumed as self-evident or left to be decided by the farmer himself. Pleading for a major change in research orientation in agricultural colleges, he said that, unless economic or business management is included in agricultural research and planning, there will be little realism either in our schemes of agricultural research or in our study of agricultural economics.

While Mr Patil appreciated the efforts to promote interest in Farm Planning, he said that lot more has to be done to turn it into a farmers' movement. And he suggested that the Seminar could help in refashioning the available techniques to suit our farming types and the present status of the farmers.

The objectives of the Seminar, which is organised jointly by the Indian Society of Agricultural Economics and the Directorate of Economics and Statistics of the Food and Agriculture Ministry, were concisely set out in the statement of Mr S. C. Chaudhri, Economic and Statistical Adviser. The need for adequate planning at the farm level and the problems involved have come to the fore with the introduction of the Intensive Agricultural District

Programme. The Seminar, he said, would assess the adequacy of data now available in the farm management studies undertaken in the past and indicate to what extent they would need to be supplemented by further studies. Pending availability of better and more comprehensive data, the Seminar will also indicate how the existing material could be used for drawing up production plans.

The Seminar, in which leading agricultural economists, farm management experts and experts and extension specialists from India and abroad are participating, is, as Mr Chaudhri said, "a good example of international co-operation". The discussions will be followed by a programme of field tests to ascertain reactions of farmers to the plans drawn up at the Seminar. These tests will be conducted over a period of four days in some villages in Ludhiana which is one of the "Package" districts. The Seminar will last till August 2.

Rural Industrialisation

The States have responded with enthusiasm to the Rural Industries Scheme sponsored by the Planning Commission which was approved at the Conference with State representatives held on July 21 and 22. Though the original scheme envisaged the setting up of only 40 projects, the number has been increased to 46 owing to pressing demand from the States. The programme is expected to be implemented without delay. The selection of project areas will be completed before the end of August. After a short training course, Survey Teams constituted by the States will undertake technoeconomic surveys to assess the scope for establishment of industries in the selected areas. The surveys beginning in October are expected to be completed in three months, and the area development programmes will be drawn up on the basis of these surveys. The Conference has also approved the organisational structure for implementing the programme, with the Rural Industries Planning Committee as the top planning body.

The importance of achieving high levels of productivity was repeatedly stressed by the Deputy Chairman of the Planning Commission who presided over the conference. He also said that the industries selected should not be confined to those based on agriculture. It was essential to broaden the pattern of rural industrialisation in order to ensure a more satisfactory life all around in the rural areas. One satisfactory outcome of the conference is the realisation that rural industrialisation, difficult as it is, should not be burdened with ideological attachment to primitive modes of production. Attention may be drawn in this context to Mr J. A. Prakash Narain's view that there should be no preconceived limitations in regard to such matters as use of power and technology. The only concern, he said, should be to maintain a balance between employment and efficiency—mini-

minising economic exploitation, promoting economic and social equality and developing the personality of the producer.

FICCI Regional Conference

The impact of the shortages of transport, and hence of coal and power, has been felt most severely in the northern region which has to get all its supplies of coal through the Moghulsarai bottleneck. The problems faced by industry on account of these shortages were

highlighted at the Regional Conference of the constituents of the Federation in Delhi, Rajasthan, Punjab and UP, held on July 21. Urging a many-sided programme of action, the Conference has called for improvement of rail transport, concessional rates of freight on raw materials and finished goods, as well as measures to encourage the development of road transport and the use of furnace oil as alternative fuel. The Conference has also suggested that, in order to help upcountry trade, "there was need to set up dry ports at two or three conveniently located centres. Alternatively, the

programme for setting up inland bonded warehouses should be promptly implemented."

The extended activities of the STC have come in for critical scrutiny. The Conference felt that the STC was encroaching upon the normal and established business, dislodging many small entrepreneurs without any advantage to the country on the export front. The Conference felt that the activities of the STC suffered from lack of knowledge of business, and consequently the consumers in the country had to bear the burden of higher prices and inadequate supplies.

The Simon-Carves Acid Plant Map is constantly expanding. The latest addition is the LARGEST SULPHURIC ACID PLANT IN INDIA, to be set up at Alwaye in the Kerala state by Fertilisers & Chemicals Travancore Ltd (FACT)

Simon-Carves have been selected for the detailed engineering design and for the supply of specialised components for the plant. Part of FACT's third stage expansion programme, the plant will produce 450 tonnes of acid per day and will be three times the size of the largest plant now operating in India.

JUTE Jute Production Trends

ALTHOUGH jute production in India has considerably increased since partition, uncertainty as to the size of the crop from year to year still persists. This is perhaps to a certain extent inevitable as the jute crop is governed by the vagaries of the weather. But that is no reason why steps should not be taken to ensure that supply of jute from season to season does not show extreme variations. One of the reasons for the irregular pattern in production is the wide fluctuations in the return to the jute cultivator. In 1958-59 production amounted to 51.58 lakh bales, but in the next two years output declined to 46.05 lakh bales and then to 40.30 lakh bales. In 1961-62 there has been a tremendous upsurge in production with the total output placed at 62.69 lakh bales. Speaking at the meeting of the Central Supervisory Body for Jute early this week in Calcutta, Dr Ram Subhag Singh, Union Minister for Agriculture, has pointed out that as fluctuations in prices of raw jute constitute the main hindrance to planned production, it is necessary to ensure that jute growers get a fair

and economic price for their produce. Several steps were initiated by Government toward this end last year. Two of the main measures were the setting up of a buffer jute stock and the fixing of minimum price for raw jute (Assam Bottoms) at Calcutta at Rs 30 per maund for purposes of futures trading. According to Dr Singh the main problem is maintaining reasonable prices in the producing centres which are in parity with the prices ruling in Calcutta. In order to keep up parity price therefore it is necessary to have an agency or agencies in the primary markets corresponding to the Buffer Stock Association.

It is, however, to be noted that despite the steps taken to stabilise jute prices at the minimum level cultivators had sold part of their jute at a price much below the minimum and that even the Jute Buffer Stock Association had been able to make purchases at prices below the minimum level of Rs 30 per maund bsais Assam Bottoms. It has also been pointed out that with last season's bumper crop and considering the trend of raw jute and goods prices elsewhere, it would be unrealistic from the point of view of exports to peg raw jute price at the present minimum.

Another way of helping the cultivator obtain a fair return for his

produce is to increase the yield per acre. In India the yield of jute per acre, as in most crops, is low. In recent years some improvement has been effected but there is still large scope for further improvement. In Pakistan the yield per acre is 3.5 bales. The yield in India was as low as 2.27 bales in 1950-51 and it has improved to 2.77 bales in 1961-62 thanks to the adoption of various steps such as the use of improved seeds, use of fertilizers, etc. It is evident that concerted steps should be taken to bring the yield to the level obtained in other jute growing countries. Considering the achievement in jute production in the light of the poor yield per acre, it will be noted that the increase in production has been obtained to a large extent through increase in the acreage under jute. Since every acre going to jute cultivation, will mean one acre less for paddy or other food crop, it is essential that the acreage under jute not expanded haphazardly. Further by obtaining increases out-turn from one acre, the cost of cultivation per bale of jute will also be reduced thereby enabling the cultivator to obtain a better return for his produce.

The jute goods market ruled easy most of the time during the past week but towards close there was a smart recovery especially in hessian. In earlier dealings, sentiment was adversely affected by apprehensions of a decline in US interest following news of a fall in US burlap consumption in June. It was also believed that Argentina would not be making any purchase for some time in view of its foreign exchange difficulties. Indications at that time were that the US would be in no hurry to buy because of the assurance of continued supplies at the primary markets due to full production in Indian mills as also because there would not be any demand from Argentina. In later dealings sentiment improved first following news of a powercut in the Calcutta industrial area and then on reports of sizable business with Argentina. Evidently, foreign exchange had been released as a special measure for the import of hessian as bags were urgently needed in that country for packing export commodities. On Thursday, Hessian 40" x 10 oz July improved to 54.37 while B Twills July was done up to Rs 124.65. In the futures section, Hessian Aug. closed higher at Rs 53.04 after opening at Rs 52.16. B Twills August opened and closed at Rs 123.05 and Rs 123.35 respectively.

TEA Demand for Exportable Types

IN the Export Sale held in Calcutta this week, offerings consisted of 37,047 packages. There was a good general demand. Plain orthodox kinds met with less support and were often easier, while the brighter sorts were again sold well. Legg-cut teas were sold readily with particular emphasis being paid to the brighter descriptions. CTC teas were irregular, the best again meeting with useful support. Medium kinds were, however, sometimes easier.

Tippy grades met with a fair demand, but generally followed a lower trend although again the best teas were sold at useful prices. Darjeelings came to a strong market, but were irregular. Those with flavour were sold particularly well. Darjeeling teas came to a strong market. Following rates were quoted:—Clean Plain Pekoe Rs 4.50 to Rs 4.70; Plain BP Rs 3.90 to Rs 4.10; Plain Fannings Rs 3.90 to Rs 4.20; Medium Assam CTC BP Rs 5.80 to Rs 6.40; Medium CTC Fannings Rs 5.70 to Rs 6.80; Best Assam CTC BP Rs 7.20 to Rs 8.20 and Best Assam CTC Fannings Rs 7.20 to Rs 8.20.

According to trade sources, exports of North-East Indian tea, in the year ended 30 June ended 1962, increased to 372.11 million pounds from 354.77 million pounds in the corresponding period of last year. While exports to the UK fell from 230.25 million in 1960-61 (July to June) to 225.64 million pounds in 1961-62, those to all other out-markets rose from 124.42 million to 146.47 million pounds.

The quantity of tea sold in the auctions held in London in June 1962 was reduced to 185,430 packages, each weighing 106 pounds on an average, from 260,913 packages in the preceding month. The shortfall was due to the fact that only three sales were held last month as com-

Indian Finance

28 July 1962

pared to four sales in May. There was no sale in the week commencing June 11 on account of the Waisun holidays.

Out of the total sales last month, Indian teas accounted for 41,993 packages; Ceylonese teas for 81,416 packages; African for 55,778 packages and from all other producing countries for 6,243 packages. Altogether 21,382 packages of North-East Indian teas were sold in June this year.

Meanwhile, the joint industry campaign of the Tea Council of USA has been reconstituted and is now being revitalised on a new basis stressing educational, promotion, public relations and publicity programmes. Financial support for an annual operation of about \$500,000 has been assured from India, Ceylon and Indonesia, who, together, will put in \$350,000 and the US trade expects to raise at least \$150,000.

The US trade support has been finalised on the following new formulae:—for packers 1 per cent on tea sold; for importers, agents and brokers 1/100 cent per pound on tea sold. Packers have already signed new agreements and have been making their contributions on the new basis for several months. Invitations to join are now being made to importers, agents, brokers and allied firms.

Production of tea in East Africa was slightly lower at 5.02 million pounds in April as compared to 5.14 million pounds in the previous month. Compared to April last year, however, the outturn during the month under review showed a rise of 1.33 million pounds. The total of East African tea, in the first four months of the current year, was considerably higher at \$2.04 million pounds as compared to \$2.86 million pounds in the similar 1961 period.

COTTON Futures Irregular

THE Bombay cotton futures market during the past week displayed an irregular tendency. The ruling contract after declining from Rs 729.25 per three quintals in the earlier transactions staged a partial recovery to close finally at Rs 724.00. The initial loss sustained by the contract was attributed to the heavy bull liquidation precipitated by the satisfactory reports of rainfall in almost all the cotton growing centres. It was reported that the sizable unloading by some bull operators caused a near debacle in the market and the prices were hammered down. However, this phase proved shortlived with lower levels attracting fresh buying support, particularly some speculative interests. The sustained support that emanated from the spot market also assisted the sentiment in the market.

The trade circles have expressed grave concern at the tight supply position of cotton. According to reports from Ahmedabad some of the mills have closed partially their third shift owing to the non-availability of the requisite varieties of cotton.

And there is a fear that the arrival of the new crop might be delayed by about three to four weeks. Furthermore the scope for importing adequate cotton is also rated bleak. Nevertheless official quarters are slow to take such an alarmistic view and the authorities are making every effort to procure cotton from the other cotton growing countries.

The possibility of the new cotton year commencing with a very precarious carryover stock of raw cotton is looming large. According to latest estimates the gap between production and consumption, after taking into account about 9 lakh bales for which import arrangements have been concluded so far, will amount to about 7 lakh bales. Despite the innumerable attempts made by the Government of India to tap all the available sources to make good this gap, the prospects for arriving at any import arrangement before the expiry of the current cotton year appear to be pretty dim. Even the move to import cotton from countries like Sudan, USSR and Mexico may prove to be fruitless as those destinations have already recorded their reluctance to supply cotton against rupee payments. Besides, in view of those countries long-term agreement with other countries it is debatable whether there will be any exportable surplus left with them. The end result, naturally, will be a diminished carryover stock. It may be recalled that the current cotton year commenced with a below-normal opening of nearly 41 lakh bales and if imports are also added to this quantum the aggregate total will be about 71 lakh bales; against an estimated consumption of 58 lakh bales.

A noteworthy development during the week under review was the deliberations to broaden the East Indian Cotton Association. At a meeting convened on Friday the Board of the EICA discussed a proposal for converting the Association into an all-India cotton association, though a decision is yet to take.

The spot market at Sewri depicted moderate activity. Mill interest was confined to all the available varieties of Laxmi, Kalyan, Surti, Wagad 1-147 and 197/3.

In the export section, the export quota of Bengal Deshi growth is reported to have almost exhausted. Trade circles are, therefore, awaiting the release of additional quota for that growth. A section of the trade are optimistic of the release of a quota for about 50,000 bales toward the end of August or early in September though according another version Government of India will release a bigger quota only in the coming season.

According to latest reports India was the biggest buyer of Sudan cotton during the past six months accounting for 80,000 bales. Eastern bloc countries are striving to top the list. The Soviet Union purchased about 15,000 bales of cotton from Sudan and the Communist China is reported to have expressed willingness to purchase double this quantity at basic prices.

The Egyptian Government has decided to join the 19 countries which

have accepted the international agreement regulating world trade in cotton textiles which was reached in Geneva early this year in the framework of the GATT agreements. Immediately after a detailed study of the clauses of the agreement by experts of the Egyptian Ministry of Economy, the Egyptian Trade Commission in Switzerland was instructed to proceed with a formal application on behalf of his country. The acceptance of the international agreement by Egypt will entitle it to continue its exports of cotton yarn and fabrics to member countries of GATT and also to America which has of late slashed down the imports of textiles from non-GATT member countries. According to official information, the Egyptian cotton crop for 1962 season aggregated 1,656,612 metric kantars in contrast to 1,986,254 metric kantars in the previous season.

The Cotton Textile Export Promotion Council has announced that some quantity in the unreserved quota pool for export of cotton textiles to the UK was still available. Fresh applications are, therefore, invited from those who had been enrolled with the Council or those who had sought enrolment upto a maximum limit of one million yards per application for shipment to be effected before the end of November. Allotments against such applications will be made on the basis of first come first served, subject to the fulfilment of the conditions.

The Licensing Committee reserves the right to decline allotments against any application without assigning any reason. Such deposits would be returned to the exporters pro-rata as and when shipments were made provided such shipments were made before 30 November or such extended dates as may be fixed by the Licensing Committee.

The quota allotment will on no account be transferable without the prior consent in writing of the Licensing Committee. The import policy for dates under the Sailing Vessels Concession will be announced at a later date.

Ceiling Prices for Yarn

THE Indian Cotton Mills' Federation has announced ceiling prices for yarns of over 40 counts, mainly for the benefit of handloom weavers. The following are the ex-mill net ceiling prices for hank yarn of counts above 40 (prices for a bundle of 10 lbs):—60s—Indian Carded Rs 47; Indian combed Rs 52; American carded Rs 50.50; American combed Rs 55.50; African carded Rs 52.50 and African combed Rs 57.50;

80s—Egyptian/Sudanese carded Rs 72.85; Egyptian-Sudanese combed Rs 78.85;

100s—Carded Rs 87.75 and combed as 93.75.

Prices for intermediate counts are to be worked out as follows:—between 41s and 43/- an additional 60 nP per count per bundle on

the price for 40; between 44s and 59s/-50 nP less per count per bundle than the price for 30s; between 61s and 69s/- and additional 60 nP per count per bundle on the price for 60s; between 70s and 79s/- 60 nP less than the price for 80s; between 81s and 99s/- an additional 70 nP per count per bundle on the price for 80s.

The following are the differential to be added for cone and double yarn;—between 41s and 50/- Rs 3.80 for cone yarn and Rs 5.10 for double yarn; between 51s and 60s/-, Rs 4.40 for cone yarn and Rs 5.70 for double yarn; between 61s and 80s/- Rs 5 for cone yarn and Rs 6.90 for double yarn; between 81s and 90s/- Rs 5.40 for cone yarn and Rs 7.50 for double yarn; between 91s and 100s/- Rs 5.80 for cone yarn and Rs 8.20 for double yarn.

Prices for mixed yarn are to be calculated as follows:—For a foreign cotton mixture of 25 to 49 per cent (both percentages included) /- add to the price of yarn from Indian cotton 25 per cent of the difference in price between the yarn from Indian cotton and that from foreign cotton; for a foreign cotton mixture of 50 to 74 per cent (both percentages included)/- add to the price of yarn from Indian cotton 50 per cent of the difference in price between the yarn from Indian cotton and that from foreign cotton. Where more than one variety of foreign cotton is used, the yarn price of the lowest of the varieties is to be taken into account for calculation of the prices of yarn.

Meanwhile, cotton yarn prices have moved up in the Bombay market following the announcement of higher ceiling rates. Reports, that the mills are likely to seek higher ceiling rates for yarns below 40 counts, have also aided the bullish sentiment in the market.

The Staple-Fibre yarn was firm.

SILK

In the Bangalore Silk market, prices remained steady during the week under review. Filature raw silk of 20/22 Dr. ruled between Rs 84.89 and Rs 85.99 per kgm. Cottage basin silk varied from Rs 77.16 to Rs 83.22 per kgm. Charka raw silk fluctuated between Rs 55.12 and Rs 76.06 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 74.06 per kgm.

Cottage basin and charka silk waste ruled between Rs 9.35 and Rs 11.88 and between Rs 3.85 and Rs 6.60 per kgm. respectively. Filature silk waste was quoted at Rs 12.37 per kgm.

Reeling cocoons ranged between Rs 3.00 and Rs 5.75 per kgm. Foreign and Mysore race seed cocoons were quoted between Rs 3.00 and Rs 10.00 and between Rs 4.00 and Rs 5.00 per thousand respectively.

The Bhagalpur Silk market presented an overall steady trend dur-

ing the previous week. Tasar raw silk ranged from Rs 66.00 to Rs 105.00 per kgm. Rates of silk waste and spun silk yarn were steady between Rs 22.00 and Rs 26.00 and Rs 30.00 and Rs 47.00 per kgm respectively. Reeling cocoons of Daba and Bogai varieties remained firm between Rs 80.00 and Rs 96.00 and Rs 50.00 and Rs 80.00 per kahan respectively. Eri cocoons and yarn varied from Rs 6.00 to Rs 8.00 and from Rs 22.00 to Rs 32.26 per kgm.

In the Malda Silk market, Prices of cottage basin and charka raw silk ruled between Rs 70.00 and Rs 78.00 and between Rs 60.00 and Rs 73.00 per kgm. respectively. Matka yarn was quoted between Rs 23.37 and Rs 40.72 per kgm. Reeling cocoons and silk waste remained firm between Rs 2.75 and Rs 3.12 and between Rs 1.62 and Rs 2.14 per kgm. respectively.

The f.o.b. price and landed cost of Japanese raw silk of 20/22 Dr were Rs 66.37 and Rs 101.59 per kgm. respectively as on 19th June 1962 as compared to f.o.b. price of Rs 51.35 per kgm. prevailing in December, 1961.

SUGAR

Prices in the Sugar market displayed a firmer tendency, thanks to brisk demand from the Punjab, Rajasthan, Gujarat and Madhya Pradesh. Spot delivery prices were marked up by Rs 1.25 to Rs 107 per quintal due to good demand coupled with poor supply position. Mill-delivery prices advanced by 19 nP to 37 nP per maund on better demand. The release of increased quantity of 2,25,000 metric tons for open sale failed to check the rising trend because of rosy export prospects.

The manufacture of raw sugar for export has prospects of opening up big overseas markets for India. Japan and Canada will be among the new markets. An international trade house is reported to have actually submitted a proposal to the Government of India offering to enter into a contract for the purchase of 200,000 tons of raw sugar annually for the next three years for exporting countries. This offer has brought before the Indian sugar industry an opportunity to take to a new pattern of production, which will be export-oriented. It is understood that the industry is already considering steps to be taken in order to be able to manufacture 200,000 tons of raw sugar in the first instance. Specifications for the raw sugar have been given by the foreign buyer.

All the sugar factories in India have, therefore, been asked to submit offers for the supply of raw sugar of the specifications of the foreign buyer. So far, the State Trading Corporation has made a sale of 2,07,000 tons against barter. Earlier, the STC's sales were confined to Canada and Malaya; but recently 35,000 tons have been sold to non-preferential markets of which the Export Agency Division of the Indian Sugar Mills Association has received official intimation regarding 10,000 tons only. About the balance of 25,000 tons, official intimation is

still being awaited by the Association.

GUR

The Gur market displayed a firmer tendency with the prices of the superior quality advancing by Rs 2.67 per quintal due to brisk demand from Gujarat. Stocks at the Hapur market were placed at 2,000 maunds.

The delayed start of the monsoon this season has created concern in the gur trade about the sugarcane crop. It is feared that the late showers will, in turn, mean late sugarcane crop. It is felt that the production will also be affected to some extent.

At present, the supply position is extremely tight due to lower production in the previous season. Stocks are stated to be at a low level in almost all the producing centres. This is especially so of inferior quality gur the demand for which has remained very brisk.

SHELLAC

Conditions in the Calcutta Shellac market continues to remain subdued. Turnover has declined considerably and there is a predominance of sellers and this is evident from the price trends during the past two months. Pure TN quality, which was quoted at as high as Rs 102 in the middle of last month, is brought down to Rs 80 per package. Whatever buying has taken place, has largely been confined to the State Trading Corporation. The Corporation is reported to have brought substantial quantities; but the selling pressure has not yet decreased.

What is more disturbing is that the foreign offtake has fallen in spite of the fact that the demand for the commodity has been well maintained in overseas countries. As the production of gramophone records and paints has been running at a satisfactory level in the UK and Europe, the use of shellac has been maintained. There is no evidence to suggest the increased use of synthetics as a substitute. In the circumstances, the minimum export price, fixed by this country, appears to have become unrealistic.

RUBBER

The difference between the demand and production of Rubber in India, during 1962-63, is estimated at 48,000 tonnes, thus making it necessary to import about 3,000 tonnes of natural rubber and 18,000 tonnes of synthetic rubber.

The Rubber Board is considering to take up marketing of rubber produced in India in the immediate future. The Board hopes to eliminate intermediaries, thereby guaranteeing high prices for producer. Moreover, the Board claims that grades and quality can be improved.

Some difficulty is being experienced now in the collection of cess. Before April 1961, the cess amount of Rs 15 per kg. was collected from producers. Up to March 1961, the cess arrears had amounted to Rs 71 lakhs. The cess being the main in-

come of the Board, it has been decided to merge it with rubber prices and to extract the same from the last point.

According to the preliminary figures released by the International Rubber Studly Group, world production of natural rubber is lagging behind consumption. These show that, during May, production was 150,000 long tons; deliveries from stockpiles 5,500 tons and consumption 187,500 tons. The consumption total includes estimated gross imports into the USSR of 29,000 tons and into mainland China of 15,500 tons. Figures for the first five months of 1962:—Production 787,500 tons; stockpile deliveries 26,000 tons and consumption 905,500 tons (including estimated imports into the USSR and China of 137,250 tons and 52,250 tons respectively). Stocks of rubber, at the end of May, totalled 655,000 tons—62,500 tons down since January. Production and consumption of synthetic rubber in May balance at 180,000 tons.

COFFEE

According to the figures released by the Coffee Board, the receipts of coffee into the Pool amounted to 44,721 tonnes up to the end of June 1962 (66,648 tonnes); made up of 22,120 tonnes (28,894) of Plantation; 3,495 (10,036) tonnes of Arabica Cherry and 16,156 (27,718) tonnes of Robusta. Figures shown within brackets indicate the corresponding figures for last year.

During the month under review, 3,321 (2,958) tonnes were released in the internal market, bringing the total for the first half of the year to 16,765 (16,299) tonnes. Up to the end of June 1962, a total quantity of 7,804 tonnes of the 1961-62 crop has been sold for export.

After an initial setback due to heavy arrivals, prices on the Bombay Bullion Exchange developed a firmer tendency on heavy buying and bear-covering following adverse political happenings in Ladakh and the Prime Minister's comment on it.

Price movements in the Silver section showed some irregularity. Arrivals were heavy at 55 bars as against an offtake of only 12 bars. Silver Bhadon delivery moved between Rs 214.50 and Rs 215.50, while the ready rate for (below 996) changed moved between Rs 213.350 and Rs 214.05.

Sentiment in the Gold section was initially influenced by encouraging spot advices. Later, however, reports of increased arrivals caused a mild recession in values. Receipts were estimated at 10,000 tolas against an offtake of only 4,000 tolas. Gold Bhadon delivery moved between Rs 124.85 and Rs 125.40, while the ready rate was quoted at Rs 125.60 to Rs 126.15. Sovereign ruled steady at Rs 98.

OILS & OILSEEDS

Steady conditions were noticed on the Bombay Oilseeds Exchange. Conditions in the Castorseed section improved significantly following a

favourable turn in the outlook for the export of castor oil. The re-emergence of US buying interest in Indian castor oil was attributed to the withdrawal of Brazil from the world market on the one hand, and the sub-standard quality of American castor oil, released from stockpile, on the other.

With the increase in Brazilian prices, the disparity between India and Brazil was stated to have narrowed to half a cent per pound against 1½ cents before. Some shippers claimed US enquiries and there were reports that a prominent shipper had booked freight for 400 tons of castor oil. In the meanwhile, castor ready was quoted at Rs 33.82 and Castor Oil, commercial quality, at Rs 12.90.

In the Groundnut section, trading reflected an uncertain behaviour of the market. While reports of favourable weather in the main producing areas tended to provide a bearish influence, lower levels continued to attract speculative support. Consequently, price variations were two-sided. Groundnut Bold ready was quoted at Rs 47.87 and Groundnut Oil at Rs 19.10.

Prices in the Linseed section ruled generally firm, thanks to higher upcountry advices and reports of strength in rapeseed in North India. The inflow was also meagre against a routine requirement. Linseed ready was quoted at Rs 40.25 and Oil at Rs 16.65.

For sometime last week erratic conditions in sympathy with Bombay affected the trend in the prices of oils and oilseeds in Madras. Due to paucity of arrivals of both kernels and groundnut oil, earlier prices ruled high for sometime. However, by the week-end, groundnut oil prices began to decline. Last Wednesday the quotation for a quintal of groundnut oil was Rs 180. Next day the price for ready commodity was Rs 179.50. July positions were priced the same. August valda was quoted at Rs 181. Kernels then remained at Rs 70 per bag of 80 kgs.

On Friday the price for Ready groundnut oil was at Rs 179.50. The prices of July and August positions also declined by 50 nP while that of January 1963 position was quoted a rupee less at Rs 175. The groundnut oil price on Friday and Saturday was the same for both spot and July deliveries though August position maintained a firm line at Rs 181. Kernels' price was continued to be quoted at Rs 69/70 per 60 kgs.

Arrivals of groundnut in the city were reported at hundred tons daily. This is better than last week. Local crushers continue to pick-up the stock. In South and North Arcot districts the arrivals of groundnut had declined to 300/360 tons per day. Due to keen competition among crushers the price of nut in these centers improved by a rupee per bag.

In groundnut oil again Calcutta interest was the main buyers. Shippers continue their last week's process of buying groundnut from the interior markets. During the earlier part of last week, groundnut oil even touched the price of Rs 181 to Rs 185 per quintal.

Company Reports

Mettur Industries Pay Less

DESPITE a further rise in sales from Rs 1.76 crores to Rs 1.77 crores, Mettur Industries has reported a slight decline in the net profit, before providing for Depreciation and Taxation, to Rs 33.03 lakhs for the year ended 31 March 1962 from Rs 33.76 lakhs for the preceding year, mainly due to the increase in salaries and wages and the high prices ruled for raw cotton.

In respect of allocations, the Depreciation amount is lower at Rs 2.01 lakhs against Rs 2.04 lakhs, while Taxation provision is raised to Rs 18.44 lakhs from Rs 13.73 lakhs and Development Rebate Reserve to Rs 16,100 from Rs 2,175. The dividend is reduced from 30 to 22½ per cent, subject to deduction of tax.

The directors state that, during the current year, power-cuts were imposed from the fourth week of June and have reached as much as 66 2/3 per cent. Consequently, there will a loss in production.

Lower Profit for Mysore Machinery

The decrease in the overall production is reflected in the working results of the Mysore Machinery Manufacturers Limited for 1961. Sales are lower at Rs 19.61 lakhs against Rs 21.38 lakhs, while the net profit amounts to only Rs 3.22 lakhs against Rs 4.21 lakhs for the previous year.

Except for Depreciation which is increased to Rs 81,162 from Rs 72,720, all other allocations have been reduced:—Taxation to Rs 1.25 lakhs from Rs 1.39 lakhs; General Reserve to Rs 10,000 from Rs 45,000 and Development Rebate Reserve to Rs 18,387 from Rs 38,616. The directors have proposed a taxable dividend of 10 per cent against 14 per cent, taxable, for 1960.

Against a capital of Rs 9.03 lakhs, reserves and surplus are shown at Rs 1.83 lakhs. The

gross block at Rs 15.71 lakhs is depreciated by Rs 7.30 lakhs, leaving a net block of Rs 8.40 lakhs.

Balanoor Tea Earns Less

The Balanoor Tea and Rubber Company Limited has reported a net profit of only Rs 3.73 lakhs for the year ended 31 March 1962 as against Rs 4.17 lakhs for the preceding year.

A sum of Rs 76,000 (Rs 1.45 lakhs) is set apart for Taxation; Rs 37,891 (Rs 39,126) for Depreciation; Rs 1,483 (Rs 3,725) for Development Rebate Reserve and Rs 75,000 (Rs 50,000) for Other Funds. The dividend on the ordinary shares is, however, maintained at 12 per cent, subject to tax.

The tea crop for the year was 2,60,310 kgs as against 2,25,168 kgs. All in-cost of production was Rs 3.04 per kg against Rs 3.09 and the average sale price realised Rs 4.55 per kg as against Rs 4.34.

The coffee crop was 124 tonnes against 215 tonnes, while the rubber crop is also lower at 16,023 kgs against 17,523 kgs.

Kesoram Industries & Cotton Mill Limited has also reported a lower net profit of Rs 74.74 lakhs against Rs 96.64 lakhs. The dividend is, however, maintained at 12 per cent less tax.

The working of the TELCO has resulted in a higher net profit of Rs 150.47 lakhs for the year ended 31 March 1962 as against Rs 145.47 lakhs. The directors have proposed a net dividend of 10.15 per cent, same as in the previous year.

The Bharat Starch & Chemicals Limited has reported a decline in the net profit from Rs 2.21 lakhs to Rs 1.38 lakhs for the year ended 31 January 1962. The dividend is passed over again.

★

STOCK EXCHANGES

A Turn for the Better

Watch-Dog Writes:

AFTER a severe shake-out which had taken place during the past two weeks, stocks markets have taken a turn for the better, thanks to the absence of any further selling pressure. The recovery in prices, however, does not indicate that the worst is over, as buyers seem to be still hesitant in making commitments. There is a general disposition to await the outcome of the Aid-India Club meeting; but there are now rumours—not yet confirmed—that the meeting has been postponed from 30 July to mid-August.

Although prices on the Calcutta Stock Exchange displayed a smart recovery, profit-taking erased some of the extreme gains towards the close.

Turnover was limited on the Madras Stock Exchange. Shares on the forward list met with good interest, while cash scrips showed a steady rise.

The outstanding feature of trading on the London Stock Exchange was the weakness of Gold shares as a result of President Kennedy's reiteration to maintain the dollar.

Wall Street closed steady with a majority of mostly fractional gains.

★

CALCUTTA

Calcutta, Friday Evening.

AT long last, a halt was cried to the steady downward trend in equity prices noticed during the past fortnight. The main factor contributing to this sudden turn in sentiment was the absence of any adverse news, resulting in the revival of bull support and hectic bear-covering.

First, the statement made by the Chinese Foreign Minister, that the dispute on the Indo-China border would not lead to war, induced the bear operators to be cautious in their activities. Secondly, hopes were entertained that India might get sufficient aid as more countries

had joined the Aid-India Club. Thirdly, it was believed that the announcement with regard to steel retention prices might be made by the first week of August. Finally, there were reports that the LIC had made more purchases of a few selected shares.

With the result, prices displayed a steady recovery under the impact of fresh buying being followed by renewed bear-covering. There was, however, an inclination to proceed with caution as it was thought that the recovery was due more to technical considerations than to real support. Moreover, unconfirmed rumours at the close of the week with regard to Aid-India Club having postponed its meeting induced some caution. The news of an interruption in the supply of bulk power from the DVC also caused some concern. But for these factors, the market would have retained the highest levels till the close.

The Gilt-edged section continued to rule dull. Enquiry was confined to the new Central Loans, while the prices of medium and long-dated issues displayed a slightly easier tendency. Interest in State Loans was halting owing to an inclination to await the terms of the new loans. 3 per cent 1986 Conversion Loan, after touching a new low of Rs 68.60 from Rs 69.12, finished the week better at Rs 68.75.

Bank shares were neglected, as operators seemed to have been disturbed by the prospect of an increase in the liquidity ratio of banks.

Jute shares displayed some weakness due to the predominance of sellers, although there was a mild recovery at the close in sympathy with the general trend of the market. The fall in the prices of gunny and fears concerning the shortage of power contributed to the subdued sentiment. Birlas were depressed at one time to Rs 32 from Rs 32.56 (Rs 32.44); Howrah to Rs 20.87 from Rs 21.25 (20.87); Ganges to Rs 13.75 from Rs 13.94 (Rs 13.75); Megna to Rs 14.12 from Rs 14.31 (Rs 14.25) and New Central to Rs 15.37 from Rs 15.75 (Rs 16.00). Anglo India, after a long time, came in for some enquiry up to Rs 226.

Coal shares were quiet and dull with Burrakun fluctuating narrowly between Rs 17.37 and Rs 17.69. Bengal were maintained at Rs 344, while Central India were quiet at Rs 11.06 against Rs 11.19. Western Bengal were better at Rs 10.37 against Rs 10.12.

Dealings in the Tea section were few and far between in the absence of any improvement in the prices obtained at the auctions, either at Calcutta or London. Betjan met with some business at Rs 32.50 to Rs 32.75; Bhatakawa at Rs 16.50 to Rs 16.75; Dhelakhat at Rs 20 to Rs 20.19 and Jay Shree at Rs 16.87 to Rs 17.

Sugar shares were practically neglected in the absence of any incentive. Cawnpore were on offer at Rs 12.50 against Rs 12.82 and Ramnugger Cane at Rs 27.75 against Rs

26.50. SKG were better at Rs 9.12 against Rs 8.90.

There was subdued trading in the Textiles section on fears of a cut in production in the coming months due to shortage of the raw material. The reports, that cloth exports were not picking up, were also a contributory factor. J. K. Rayon were barely maintained at Rs 18.50 and so Cawtex at Rs 7.00. Elgins improved to Rs 19.62 from Rs 18.47 and Jay Shree to Rs 15.06 from Rs 14.75.

Engineering shares were generally active under the lead of Indian Irons due to hopes of an early announcement of the dividend as well as the steel retention prices. Starting at Rs 25.64, Indian Irons receded at one time to Rs 25.54 at which level renewed bull support pushed up the rate to Rs 26, to close finally at Rs 25.88. TEXMACO were taken up to Rs 23.30 from Rs 22.55; Cuest, Keen, Williams to Rs 38.44 from Rs 37.69 and Jessop to Rs 22.81 from Rs 22, before finishing at Rs 22.00; Rs 38.25 and Rs 22.75 respectively. Binani Metal changed hands at Rs 11.19 to Rs 11.62; J. K. Steel at Rs 15.56 to Rs 16.25 and Indian Standard Wagon at Rs 34 to Rs 34.25. Figures shown within brackets were the closing rates for the week.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

	Week's	Week's	Week's
	High	Low	Closing
	Rs	Rs	Rs

WHOLESALE PRICE

Rise at End of June

The official wholesale price index (with the year ended March 1953 as 100) rose by 1.0 per cent to 128.9 during the week ended June 30, 1962 as against 127.8 (revised) for the earlier week. The index was also higher by 1.9 per cent and 1.3 per cent respectively when compared with that of a month ago and the corresponding week of the previous year. The monthly index for June

1962, worked out to 127.4 as against 126.3 (revised) for May 1962 and 126.2 for June, 1961.

Increased prices of Gur (+13%), Rice at Jayanagar & Maize at Mandi (+5% each), Bajra and Potatoes (+4% each), Barley, Urad, Oranges and Eggs (+3% each), Bananas, Milk, Mustard oil, Chillies and Salt (+2% each) and Jowar, Ragl. Gram, Arhar, Masur, Ghee and Betelnuts (+1% each) pushed up the index for 'Food Articles' by 1.4 per cent to 127.4. The prices of Rice at Kumbhakonam (-16%), at Badati (-8%) and at Imphal (-8%), Onions (-9%), Wheat at Saugar (-7%) and at Abohar (-5%), Maize at Ludhiana (-6%), Fish and Black Pepper (-3% each), Cardamoms (-2%) and Gingelly oil, Coconut oil, Meat and Coffee (-1% each), however, moved down.

The index for 'Tobacco' declined by 0.5 per cent to 95.5 as compared with 96.0 for the previous week due to a fall in the prices of raw Tobacco (-1%).

The index for 'Fuel, Power, Light and Lubricants' group stood at 124.2 as against 124.3 for the earlier week; the prices of Castor oil (-1%) showed a fall.

The index for 'Industrial Raw Materials' advanced by 0.4 per cent to 137.0 as a result of a rise in the prices of Rapeseed (+3%) and raw Jute, raw Silk, Linseed, Castor seed, Gingelly seed and raw Hides (+1% each). The prices of Bomboos (-8%), raw Skins and Lac (-4% each) and raw Wool (-1%) showed a fall.

Higher prices of Rayon yarn (+2%) and Linseed oil, Cotton yarn and Zinc (+1% each) raised the index for 'Intermediate Products' by 0.7 per cent to 140.3.

The index for 'Finished Products' moved up by 0.9 per cent to 128.1 as against 127.0 (revised) for the earlier week due to a rise in the prices of Jute Manufactures (+6%), General Chemicals (+3%) and Oil cakes and Bricks and Tiles (+1% each). The prices of Cycles (-1%), however, moved down.

RALLIS INDIA LIMITED

Closure of Transfer Books

It is proposed to subdivide the Ordinary Shares of Rs. 100/- each into 10 Ordinary Shares of Rs. 10/- each. For this purpose a meeting of the shareholders of the Company is being called on the 24th August 1962.

Notice is hereby given that the Transfer Books of the Company will be closed from the 4th August 1962 to the 24th August 1962, both days inclusive.

By Order of the Board
KENNETH SHEPPARD
Secretary.

16, Hare Street,
Calcutta, 25th July 1962.

Small Comfort

MR MORARJI DESAI'S trip abroad this year, it is quite patent now, was not in the least in the nature of a junket. It was a deliberate and purposeful odyssey undertaken so that— if a shift in Greek mythology could be per- mitted—the golden fleece of foreign assis- tance could be obtained. The obstacles were not a few. West Germany has been disen- charmed with this country for really no fault of ours: Rourkela's failure to measure up in performance has been ascribed as much to the ineptitude of local administration as to alleged supply of sub-standard plant and equipment. The American Congress—and perhaps to small extent this time the Admi- nistration as well—was put out not a bit by the reported negotiations of this country with the USSR for the procurement of Mig fighters. Canada, as one of the members of the Aid India Club, has been experiencing travails of its own, and it was surely very much in doubt whether we could expect any enhancement of its contribution. The United Kingdom, in the throes of a political situation whose confusion became worse confounded with its attempts to join the European Common Market, could at best have been expected to listen with a superficial ear to Mr Desai's plaints in behalf of the Third Plan. France alone seemed better placed to offer a higher quantum of assistance, what with the ratification of the transfer of its former territories in India, the solution of the Algerian problem and the prepayment to the USA of Marshall aid.

Against such a background it speaks well of Mr Desai's persuasive powers that India's requirements of foreign assistance for the second year of the Third Plan have been raised almost in full; the gap that remains is one of a mere \$80 million, and it seems even now possible that this shortfall, too, will be made good. No less laudatory is the expanding interest shown in India's planning, as witness the admission into membership of the Club of two new nations, Belgium and Italy; and Austria and the Netherlands, moreover, made their first pledges at this meeting of the Club.

Country	1st Year	2nd Year	Total
	(In millions of dollars)		
Austria	...	5	5
Belgium	...	13	10
Canada	...	28	33
France	...	15	45
Germany	...	225	139
Italy	...	...	53
Japan	...	50	55
Netherlands	...	...	11
United Kingdom	...	182	84
United States	...	545	435
IBRD and IDA	...	250	200
Total	1,295	1,070	2,365

It will be seen that despite pledges of \$79 million from four new members, the total for the second year is substantially lower; the implication is clear of course that the old members have been reluctant or unwilling to reach as deeply down into their purses. France has offered an heroic and brave increase in its pledge; but keenly disappointing are the efforts of the United Kingdom and of West Germany. In the case of Britain it may be that we have here an instance of inability rather than unwillingness. The general pre- text offered for Germany's refusal to consider an upward revision is that that country belie-

ves that the UK should shoulder more of the responsibility; but we are unable to shake off the feeling that pique and amour propre are not also reason therefore.

In a second sense, for all that the foreign exchange needs for the second year have practically been made sure of, we must ex- press disappointment at the latest communi- que issuing forth from the Aid India Club; and that relates to the considerable delay there has been in the announcement. A full five months of the second year have already been allowed to elapse, before uncertainties about foreign exchange were more or less resolved. To the extent that the bulk of the assistance will be linked with specific pro- jects, further delay may be expected in the utilisation of the aid in as much as negotia- tions for the purpose usually tend to be long- drawn out affairs. Hence the bleak conclusion that is forced upon us is that no import of a developmental nature and relating to projects as yet uncovered by foreign assistance can be expected to be effected during the current financial year. In retrospect therefore there is every likelihood of the second year of the Third Plan being reckoned in later years as a "do-nothing" period—a period of stagna- tion and drift.

And yet we cannot rightly pin the blame upon the Club for such a situation arising. Our foreign exchange reserves long ago reached a critically low level; and it was as certain as the sun rising in the east that the execution of new projects would have to wait upon arrangements being made for foreign assistance. It is true, we have before tried to impress upon our foreign friends that, in order that we be able to plan ahead and im- plement plans in time, we had need of "pers- pective" pledges of assistance. If we failed to impress them, then that failure is ours.

Thus, in a third sense the Aid India Club's communique is somewhat empty and bereft of meaning; we here refer to the fact that little promise is held out of part of the assistance being made available "untied"—that is, the assistance being utilisable for mai- ntenance imports upon which depends sus- tained increase in industrial production. This is quite distinct from the developmental im- ports that foreign assistance secures—imports of this nature merely succeed in raising indus- trial capacity, and oftentimes increase rather than reduce our requirements of maintenance imports. The sorry sight of idle capacity is to continue to be an eye-sore for some time more; the regular import restrictions may be intensified rather than relaxed. The nature of our problem about paying for maintenance imports has been emphatically underlined by the need we had last week to utilise roughly one-third of the stand-by credit that we lately had negotiated with the International Monetary Fund. The drawing upon the balance of about \$70 million is inevitable. Thereafter our hopes for enlarged maintenance imports will necessarily rest either on a better export performance than we can reasonably now expect or on the converting of part of the assistance promised to us last week by the Aid India Club into untied loan; or per- haps a combination of both.

A Decade of Company Finances

AN article in the Reserve Bank of India Bulletin for June 1962 examines with extensive data the financial position of joint stock companies in the country during 1960. It is a comprehensive survey covering all the important aspects of company finances such as income and expenditure, profit rate, dividends, capital formation, etc. The study is confined to the non-Government sector and also excludes banking, insurance, investment companies, companies and associations functioning not for profit and companies limited by guarantee. A representative collection of companies numbering 1,001 and belonging to the important industrial sub-groups has been included and considering that the paid-up capital of the companies selected from each sub-group adds up to more than 63 per cent of the total paid-up capital of all the companies in each sub-group, the conclusions acquire a high degree of validity. Apart from throwing illuminating light on the relative performance of companies belonging to each sub-group, it also gives a comparative picture of important aspects of company finances for the five year periods of 1951-55 and 1956-60.

The study reflects all round improvement in the financial position of the companies in 1960, though the relative performance of each sub-group has varied fairly widely. Reflecting the record expansion of industrial production during 1960, production and sale of the companies covered in the study also disclose substantial increases which were particularly marked in the case of the cotton textile, engineering and chemical industries. The value of production at Rs 2,343.5 crores during 1960 was higher by as much as 15.1 per cent as compared to a rise of 9.4 per cent in 1959 and an average of 12.1 per cent during the five-year period 1956-60. The rise in sales was, however, of a lesser order, being only 11.1 per cent and therefore contributed to a larger carry-over of stocks of finished works and work-in progress. The major portion of the increase in sales at nearly 60 per cent was accounted for by three major industries, namely, cotton textiles, engineering and jute textiles. Increases in sales of the cotton and jute textile industries amounted to Rs 42.2 crores or Rs 8.9 per cent and Rs 36.0 crores or 31.5 per cent respectively and compare with rises of 7.7 per cent and 2.1 per cent respectively in 1959. The increase in sales value in these two industries reflected mostly the rise in prices for the products of these industries, since in the case of cotton textiles, there was an actual decline in total off-take, while in jute textiles, production had remained somewhat stagnant. On the other hand the engineering industries registered strident advances both in production and sales. Production over the five year period ending with 1960 increased by as much as Rs 164 crores or 109 per cent and sales by Rs 161 crores or 110 per cent.

Alongside of the increase in sales value, the expenditure side also shows rises under all the important heads. The most pronounced rise was recorded in raw material costs and other manufacturing expenses. The increase of Rs 206 crores or 18 per cent in these two compares with the rise of 6.6 per cent in the previous year. The increase in expenditure under these two heads was as much as 59.6 per cent in the case of jute textiles, 14.5 per cent in the cotton textile industry and 17 per cent in the engineering industry. The in-

crease in the sugar industry was of the order of 27 per cent and reflected mainly the effect of higher production. It is significant that over the period 1956-60 the cost of raw materials and other manufacturing expenses rose by about Rs 449 crores or 52 per cent, constituting over one-half of the increase in the value of production.

Other important items of expenditure like salaries and wages, excise duty, etc., have also shown increases of varying order. Salaries and wages registered a rise of 9.5 per cent in 1960, two-fifths of which was accounted for by the cotton textile industry mainly due to the Cotton Textile Wage Board Award. Provision for depreciation was also higher by Rs 18.6 crores, which compares with a rise of Rs 9 crores in 1959. Excise duty registered a rise of Rs 18.8 crores or 11.6 per cent during 1960 while the rise in 1959 was of the order of Rs 10.1 crores or 6.7 per cent. The brunt of the rise in excise duty was borne by transport equipment, while payments by the cotton textile and sugar industry showed declines.

There was a noteworthy improvement in corporate earnings during 1960, profits before tax rising from Rs 163.4 crores in 1959 to Rs 187.7 crores or 14.8 per cent. But the rate of rise was substantially reduced from 33.3 per cent in 1959 to 14.8 per cent, mainly due to the disproportionate rise in manufacturing expenses vis-a-vis the growth in the value of sales and a larger provision for depreciation. Among industries, significant increases in profits before tax were recorded by the cotton textiles, engineering and chemical industries. The rise in profits of the sugar, silk and woollen textile industries was of a smaller order than in 1959. In contrast, notable declines in profits were registered in the jute textiles, iron and steel, mineral oil, paper, vegetable oil industries and in tea plantations.

Profits after tax also rose to Rs 115.7 crores in 1960 from Rs 103.7 crores in 1959 while the amount earmarked for dividend was higher at Rs 71.2 crores against Rs 64.5 crores in 1959. Dividends as a proportion of profits before tax were lower at 38.0 per cent against 39.5 per cent while as a proportion of profits after tax were placed at 61.6 per cent as compared with 62.2 per cent. Owing to the smaller rise in profits, retained profits also recorded a lower rate of increase by Rs 5.3 crores, which compares with the rise of Rs 20.3 crores in 1959. Dividends as percentage of profits before tax were highest at 63.6 per cent in the cement industry while for the silk and woollen textile industry it constituted 50.2 per cent of the profits before tax. In the cement industry, dividends claimed nearly 93.9 per cent of the after-tax allocation of profits while in the non-ferrous metals industry 73.4 per cent of the after-tax appropriations was accounted for by plough-back into the industry.

The improvement in profitability as measured by the ratio of gross profits to sales and the ratio of gross profits to total capital employed has also been maintained. The ratio of gross profits to sales moved up to 10.2 per cent from 10.0 per cent in 1959 while the ratio of gross profits to total capital employed rose from 9.8 per cent to 10.1 per cent. The industries to record appreciable increases in both these ratios were coffee and rubber plantations, cotton textiles, basic industrial chemicals, non-ferrous metals and coal. In contrast, declines were recorded in tea plantations, jute textiles, iron and steel, mineral oils, paper and paper products, electricity, vegetable oils, trading and shipping companies.

The survey also records a modest rise in the profitability of share capital as measured by the ratio of profits after tax to net worth. The ratio was fairly high for the coffee and rubber plantations, coal and cotton textiles, transport equipment, non-ferrous metals and basic industrial chemicals. The average rate of return to the shareholders indicated by the ratio of dividends to paid-up capital was also higher at 11.6 per cent against 10.9 per cent in 1959.

A remarkable rise in gross assets formation was also witnessed during 1960. The total gross assets formation of the 1,001 companies was appreciably larger at Rs 278 crores in 1960 which compares with Rs 157 crores in 1959. Inventory accumulation was also substantially larger at Rs 101 crores as against Rs 15 crores in the previous year. The rate of growth in gross fixed assets was also higher at 8.0 per cent against 7.5 per cent in 1959, but the rate of net fixed assets was lower at 4.7 per cent against 5.6 per cent in 1959. Gross capital formation was considerably higher at Rs 224 crores in 1960 against Rs 121 crores in 1959, showing an increase of 10.6 per cent against 6.1 per cent in the previous year. Gross capital formation for the 1,001 companies covered in the survey during the five year period 1956-60 amounted to Rs 962 crores which is shown to work out to an annual average rate of 14 per cent. This compares with the average rate of 8 per cent shown for the period 1951-55.

Industry-wise, cotton textiles, engineering, and iron and steel accounted for about half of the total gross fixed assets formation in 1960. In the cotton textile industry, this was entailed mainly by the need for renovation and modernisation of machinery while in the iron and steel industry this represented materialisation of expansion projects.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Embarras de Richesse

Money market circles have been caught unawares by the slackness in money conditions at the present. If the banks had only suspected that funds would be so plentiful they would have more bravely subscribed to the new loan three weeks ago. But at that time they were prevented from going through with any such intention by the emphatic indication by the Reserve Bank that borrowings for the sake of new loan subscriptions would generally be frowned upon. The result is that the Reserve Bank stands to make a fair profit on its open market sales of the 3½ per cent 1968 for which there is persistent demand. Since 13 July (or new loan week) the State Bank has purchased Rs 61 crores of securities, while the other Scheduled Banks appear, as at 20 July, to have effected scarcely any purchase at all. But regard must be had for the fact that some holdings of the 3½ per cent 1962 were not tendered for conversion; on maturity repayment was made in cash, and the proceeds have apparently fully been utilised to purchase securities from the Reserve Bank. Since 20 July undoubtedly there has been further absorption of Government securities by the banking system. It seems certain that by the end of the slack season the Reserve Bank would have more than sold off its entire cash support of the new loan which, it may be recalled, we had estimated at Rs 60 crores, as also its conversion holdings.

Although the loan announcements of the State Governments are imminent, we should like to suggest that banks' interest in a probable 4½ per cent 10 year series will be minimal and dictated solely by considerations quite extraneous. The usual measure of support will be forthcoming from the provident funds and the Life Insurance Corporation, not to speak of States' own departmental cash investment portfolios. And even should the banks be called upon to subscribe more than somewhat, prospects are that they will effect a quick re-sale so long as the loss is none too considerable, in order that they may utilise such funds in the six-year loan available from the Reserve Bank.

Thus, a situation should be reached where Government, to meet the persistent demand for the short-term loan, would feel compelled to issue a second tranche of its new loan programme for the year, although it has already obtained its target of borrowings from the first tranche. The second tranche will of course be meant for the banking system. Hence another re-issue of the 3½ per cent 1962 seems very possible, but at a higher issue price. With the firmness in the gilt-edged market, it is likely that except for the longest term loans, the depreciation in values caused by the terms of the new loan will almost wholly be made up by the end of the year. Unless there is a raising of bank rate later in the year, therefore, banks are unlikely to

need to press into service their inner reserves to cover any shortfall between the book and market values of their investments in securities.

As an index of the easy money conditions bidding at the Treasury Bill auctions is getting keener and more competitive. In the weeks since the new loan the interest rate on Treasury Bills has steadily been brought down to 2.35 per cent. Sales of intermediate Treasury Bills have also increased substantially. But the investment in the 91 day bills without surpluses continue to accrue with the banks which have inevitably to find sanctuary in Government loans. The banks of course would find greatly to their liking 182 day Treasury Bills with perhaps a slightly higher interest rate; and the recent Seminar in Bombay held under the auspices of the Indian Banks Association did make a recommendation to such effect. But Government's reluctance to make available 182 day bills can easily be appreciated. If banks purchase heavily of such 182 day bills, they will be so phased as to mature by 31 March; and on maturity the banks will simply use the proceeds for meeting busy season financing needs. Hence Government's ways and means as at the end of the fiscal year would not be helped at all, in as much as countervailing deficit financing would necessarily have to be resorted to.

What is the reason for such slack money conditions? The most significant reason is Deposit growth. One week remains for the mid-way mark of the 1962 slack season. In that period, the net Deposits of Scheduled Banks have risen from Rs 2,107 crores on 27 April to Rs 2,166 crores. At the same time the total of Advances has contracted by about Rs 30 crores. At this rate it seems possible that the slack season "accrual" of free resources with banks (in the form of growth in Deposits and decline in Advances) may very nearly amount to Rs 200 crores. We shall next week analyse why exactly the rise in Deposits is this year pronounced, as also why precisely the decline in Advances is also tending to be considerable.

+

BANK RETURNS

IMF Stand-by Drawn on

A New Delhi report vouchsafed the information that India had purchased during the last week about \$25 million of currencies from the International Monetary Fund; and this used up one-fourth of the stand-by credit that we had recently arranged. But the returns of the Reserve Bank disclose some evidence to suggest that the purchase transaction may have involved the slightly larger amount of \$30 million. The returns of the Reserve Bank for 27 July also offer testimony to the triumphant progress of the 1962 slack season.

Foreign Securities, as shown in the Issue Department, have been marked up by Rs 7

crores to Rs 96.34 crores; and Balances Held Abroad, as given in the return for the Banking Department, are higher by Rs 2.25 crores at Rs 6.76 crores. Thus, the total increase during the week in the foreign assets held by the Reserve Bank is Rs 9.25 crores; and if purchase of currencies from the IMF was \$25 million, or about Rs 12 crores, the foreign exchange drain in the week under review is shown to be at a modest Rs 2.75 crores. But, whenever a purchase of currencies is made from the IMF, the transaction is reflected in a "payment" being made to the IMF's account with the Reserve Bank, the latter being a depository of the IMF. Thus, it usually happens that there is an increase in Other Deposits corresponding to the amount paid for purchase of currencies. In the latest return for the Banking Department, Other Deposits have risen by almost exactly Rs 14 crores; hence our deduction that purchase of currencies may have been effected for \$30 million; and it follows that the import gap met out of foreign assets held by the Reserve Bank worked out to the larger amount of about Rs 4.75 crores.

In order to make this payment to the IMF, the Centre had recourse to deficit financing; created money was also resorted to in order to effect payments to the State Governments, whose balances show a welcome rise. We shall shortly calculate roughly the magnitude of deficit financing that was likely to have been instituted.

But first it may be noted that slack season conditions are reflected in a further fall of Rs 24.03 crores to Rs 2,036.72 crores in Active Note Circulation and in another inflow of Rs 2.43 crores in Rupee Coin. From the proceeds of the purchase of currencies from the IMF, an amount of Rs 7 crores has been credited to Foreign Securities, now higher at Rs 96.34 crores. Currency has been contracted for Rs 22 crores against Rupee Securities by transfer to the Banking Department. In the result, the Reserve Bank's cash in the till is higher by Rs 11.60 crores at Rs 27.91 crores.

The return for the Banking Department shows that Investments are higher by Rs 35 crores at Rs 310.57 crores; but the transfer from the Issue Department was only in an amount of Rs 22 crores. So, already, Rs 13 crores of deficit financing can be traced. There is, we can now see, further deficit financing which has been concealed because of open market sales of securities by the Reserve Bank. The State Bank alone purchased securities for Rs 22 crores; and purchases of other Scheduled Banks, as suggested by the fall in their Deposits with the Reserve Bank, may be anywhere between Rs 5 crores and Rs 10 crores. Consequently we would hazard the guess that deficit financing resorted to in the week ended 27 July could have been as high as Rs 45 crores.

Of this amount of Rs 45 crores, in the first instance Rs 14 crores were utilised in purchase of foreign currencies from the IMF; another element of about Rs 20 crores apparently represents payments to the State Governments; and a third element of about Rs 12 crores is on account of Treasury Bills Purchased and Discounted by the Reserve Bank which matured during the week. This last is a countervailing adjustment and so outstanding of Treasury Bill may rise only by Rs 35 crores.

+

As noted, the State Governments' Deposits rose by Rs 11.31 crores Rs 25.59 crores on top of a decline of Rs 7.68 crores to Rs 10.02 crores in their ways and means borrowings from the Reserve Bank. The Centre's Deposits, in rising by Rs 5.25 crores to Rs 54.53

crores, probably merely reflect a surplus of ordinary receipts over expenditure. Scheduled Banks have drawn down their Reserve Balances by Rs 5.80 crores to Rs 101.04 crores, presumably in order to purchase securities from the Reserve Bank. Scheduled Banks' indebtedness to the Reserve Bank continues to be nominally placed at Rs 63 lakhs. Other changes in the latest returns of the central banking institution are minor in character.

As anticipated by this journal, it looks as if the 1962 slack season is going to be productive of extremely easy conditions. The return of the State Bank for 27 July and the statutory statement of Scheduled Banks for 20 July both offer considerable confirmation of such a reading of prospects. In the week under review, Deposits of the State Bank have, for the second week running, sizably increased by Rs 5.26 crores to Rs 583.45 crores; and the contraction in Advances also, for the second week in succession, is satisfyingly large at Rs 4.41 crores. The newly accrued and newly freed resources have both been utilised by the State Bank further to add to its gilt-edged portfolio, which goes up by another Rs 22 crores to Rs 269.32 crores. Thus, in another week or so the State Bank may once again be in a position to report that its holdings of gilt-edged exceed Advances to constituents. For the purpose of the new purchase of securities, the State Bank has "drawn" on Other Assets to the further extent of about Rs 12 crores. The end result is a fall of Rs 2.83 crores to Rs 28.93 crores in cash in hand and with Reserve Bank.

All of the loss in Deposits reported by the Scheduled Banks in new loan week has been made up in the week ended 20 July. Net Demand Deposits are higher by Rs 8.17 crores at Rs 894.76 crores; and the rise in net Time Deposits is an incredible one of Rs 26.58 crores to Rs 1,271.43 crores. It needs further to be remarked that borrowings from banks, as shown under demand liabilities, have shrunk by nearly Rs 4 crores to Rs 15.49 crores and that borrowings from banks, under the head of the time liabilities, have been halved from Rs 31.73 crores to Rs 15.62 crores. Simultaneously, for the first time in the current slack season, contraction of note has taken place in the total of Advances, which has receded by Rs 15.60 crores to Rs 1,403.39 crores. The latest return of the Scheduled Banks reflects the new loan subscriptions of the banking system, but the apparent implication is that Scheduled Banks other than the State Bank have not paid more than lip service by way of support. For, the gilt-edged holdings of Scheduled Banks, in the week under review, are marked up by Rs 41.39 crores to Rs 620.05 crores, and the State Bank in the relevant week reported a rise of Rs 39 crores in the portfolio. But we must bear in mind the fact that the 3½ per cent 1962 matured during the

week, and as we pointed out in the last issue of Indian Finance, holders of perhaps as much as Rs 20 crores of the maturing loan did not opt to convert. It may be that banks held a portion of the 3½ per cent 1962 for which, during the week, they received repayment in cash. To the extent of holdings in the maturing loan for which they received cash, Scheduled Banks' subscriptions to the new loan get necessarily understated in the latest weekly statement. Our own guess is that the new loan subscriptions of banks other than the State Bank must have been in the environs of Rs 7 crores; and that, therefore, the Scheduled Banks did not exercise their right to convert some Rs 5 crores of their holdings in the 3½ per cent 1962. Borrowings from the State Bank, no doubt in respect of ways and means cash needs at branches, are higher by Rs 0.93 crore at Rs 18.57 crores, but indebtedness to the Reserve Bank has been slashed to the nominal figure of Rs 68 lakhs. Cash balances in consequence have swelled by Rs 11.16 crores to Rs 216.17 crores.

Government of India Treasury Bills outstanding as at 13 July fell to Rs 1,196.99 crores from Rs 1,283.99 crores on the previous Friday. This is a measure of the cancellation of advances that Government found possible in the wake of new loan subscriptions in cash for Rs 103 crores. Our contention had been, it may be recalled, that reverse ad hoc might have been instituted for about Rs 100 crores. The lesser figure is no doubt due to the rediscounting of Treasury Bills with the Reserve Bank by the State Bank in that week. We had noted last week, that in the week ended 20 July, Government had found it necessary to have recourse to created money for about Rs 20 crores; and this in fact is confirmed by the rise of about Rs 19 crores in Treasury Bills outstanding as on that date. This would seem to confirm that Government's need for deficit financing flowed from the necessity to repay in cash some Rs 20 crores of the 3½ per cent 1962 which was not tendered for conversion.

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened Tuesday, 31 July, 1962. Total amount offered was Rs 3,50,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 6 August, 1962. Successful tenderers should make payment on Friday, 10 August, 1962 at all centres. Other conditions are as usual.

BANK PROFIT

Indian Bank

The Net Profit of The Indian Bank Limited, Madras, for the half-year ended 30th June, 1962, before taxation, amounts to Rs 21,04,179.90, as against Rs 21,01,394.05 for the corresponding period in 1961. The Board of Directors have declared an interim dividend of 5 per cent and a bonus of 2½ per cent (subject to deduction of tax at the prescribed rates) for the year ending 31.12.1962.

Common Market Prospects

By Paul Einzig

Although the prospects of Britain's negotiations with the Common Market remain obscure, it is now quite certain that no early agreement may be expected. Indeed, during recent weeks it has become increasingly doubtful whether any agreement can be expected at all. Both sides have stated the limit of their concessions and the gap between the two limits was formidable. It is to be hoped that official opinion and public opinion in Commonwealth countries realise and appreciate the determined fight put up by the British negotiators to safeguard their vital interests. Should the negotiations break down Britain would have to face the disadvantages of remaining outside the Common Market largely as a result of its own unwillingness to join it on terms that would be gravely detrimental to Commonwealth interests.

The longer the negotiations are dragged out the less is the likelihood of an agreement. This is because industries in Common Market countries are beginning to experience difficulties and this fact is bound to strengthen resistance to deliberately increasing competition as a result of the admission of Britain. The recent Government reshuffle, too, has reduced the prospects of an agreement. In British domestic politics it has changed the balance of power in favour of Mr Butler who has committed himself in public statements to resistance to an agreement unless it could be reached on terms that would safeguard British agriculture. After the sharp reaction to the dismissal of Mr Selwyn Lloyd and other senior Cabinet Ministers Mr Macmillan would not be in a political position to dismiss Mr Butler or even to allow him to resign in protest against terms of an agreement which he would consider unacceptable.

Time is against the conclusion of an agreement. Its immediate effects would inevitably be detrimental to a number of industries and delay of its conclusion till next year would deprive the Government of an opportunity to live down the unpopularity of the sacrifices before the next General Election. It seems probable that the advantages of joining the Common Market would take longer to manifest themselves than its disadvantages. Unless an agreement is reached in the autumn it would be clearly suicidal for the Government to take the plunge especially since the attitude of the Opposition against joining the Common Market has been stiffened perceptibly. In the Labour Party the rank and file opposing the change is clearly beginning to influence the official policy. It seems, therefore, that a decision to join the Common Market can no longer be taken for granted.

Notes

INDIAN CHAMBER

The Problem of Shortages

In his address to the first quarterly meeting of the Indian Chamber of Commerce, Mr S. T. Sadasivan, President of the Chamber, drew attention to the problems that continue to plague industrial production in the country. The more serious of these are foreign exchange shortage, shortage of finance for industry and scarcity of coal and power. Under the impact of these shortages, rate of growth of industrial production has considerably slowed down while idle capacity has mounted substantially. As regards the foreign exchange prospects, hopes are now pinned on the Members of the Aid India Club other than the USA being able to muster resources sufficient to match the contribution promised by the US. With the entry of new members like Belgium and Italy, there is basis for hope that the requisite amount of contributions will be forthcoming. But the outlook on the other fronts is not very reassuring. The shadow cast by the power and coal shortage has still to recede. The recent experience of power famine in various parts of the country is

a reminder of the recurring character which power shortage has come to assume. The chronic shortage of power is the result of the under-estimation of power requirements under the Plans along with delays in the installation of power-generating capacity. At the same time, doctrinaire considerations are allowed to get in the way of a more rapid progress being registered in this field. The brunt of the power crisis is being borne by the West Bengal region and this should have particularly adverse repercussions on industrial production and the new export drive. The power shortage has underlined the importance of more detailed long-term planning in the perspective of future industrial development, while in the short run every means will have to be explored to increase availability of power to industry. In this connection, the scope for increasing availability of power through inter-State co-operation, as suggested by Mr Sadasivan appears great. Inter-connection of different power grids should make it possible for surplus power to be transferred from one State to another for short periods without making long-term commitments.

Shortage in supplies of coal has also constituted a serious bottleneck to industrial production. With shortfall in production of the order of about 12 million tons in the first year of the Third Plan, requirements of industries in the Western & Southern region have been met only partially. The effect of the lower than anticipated production has further been aggravated by inadequate transport capacity to move coal to points of consumption. The problem is therefore not one of increasing production alone but also of ensuring facilities for the timely movement of all the coal that is produced. This calls for expanding the transport capacity. In view of existing limits to railways' capacity, the only way to increase transport capacity is to develop road traffic to move coal. The recent scheme announced by the Government to enlarge and improve roads near the coal-producing areas will therefore be welcomed.

Mr Sadasivan has also referred to the adverse effect on industrial production spelt by the recent institution of the four-tier bank rate to replace the previous three-tier rate. The effect of this will be that the cost of maintaining the liquidity of banks will go up. Though the Reserve Bank is the

main source for the rediscounting of bills, "the bank rate has been made practically out of bounds to the banking system." In this circumstance, banks are compelled to pass on the higher cost to trade and industry which automatically gets reflected in a higher cost of production. Besides shortage of finance the series of restrictions placed by the Government on the working of the corporate sector has also dampened activity. "For a developing economy it is essential that the corporate sector should have some amount of freedom of action so that it is able to contribute effectively and to the maximum possible extent towards economic expansion." If the logic of these adverse trends developing in the industrial sector is appreciated by the Government, it should point to the need for a revision of the industrial policy which, as Mr Sadasivan has said, has not been always based on strictly economic considerations.

RURAL INDUSTRIES

Intensive Development

As a recent meeting of the Standing Committee of the Rural Industries Planning Committee of the Planning Commission, the subject of the intensive development of rural industries was examined in some detail. The principal objective of the scheme is to establish rural industries projects to revitalise the rural economy through development of agriculture, irrigation, communications, industries and social service. Thus conceived, the potentialities of the scheme are considerable and should provide the leverage for rural development. The Central Government is to provide a sum of Rs 20 lakhs for each project to cover the 4-year period 1962-66. A provision of Rs 8 crores has already been made for the scheme and besides, provision for a contingent fund of Rs 7 crores has also been made.

Necessarily careful and detailed planning are called for to ensure that tangible benefits flow from its implementation. The conference considered the more important aspects of a successful drive for development of rural industries such as the organisational set-up for the project both at State and project levels, criteria for the selection of the project area, size of funds to be made available for the project areas and arrangement for the evaluation of the projects and the state at which the evaluation work should be taken in hand. No final conclusions are learnt to have been reached by the committee at the recent meeting. This obviously awaits the views of the State Government, which are principally concerned with the projects. The State Governments have

shown considerable enthusiasm for the projects forming part of the development of rural industries. If the demands of all the State Governments were to be met, the Committee will have to raise the number of projects beyond 40 tentatively fixed for being taken in hand at first. A firm decision on this point may smooth the way to consideration of the other problems connected with the scheme.

DEPOSITS

Large Rise Goes to the Big Banks

The Survey of ownership of Bank Deposits by the Reserve Bank discloses a remarkable expansion of Rs 81.7 crores during the period April-October 1961 which compares with the rise of Rs 22.2 crores during the corresponding period of 1960. Along with Deposits, the number of bank accounts has also shown a corresponding rise of 410,000 against 233,000 in the corresponding period of 1960. This strident advance in bank Deposits and bank Accounts is attributed to the measures taken by the Reserve Bank to restore confidence in the banking system which was rudely shaken following the closure of two Scheduled Banks and to the efforts subsequently taken by the banking system as a whole to save savings by means of a moderate increase in the rate of interest on Deposits and expansion of bank offices.

The trend in Deposit growth during this period shows some

interesting features in that the bulk of the rise was accounted for by Time Deposits and Savings Deposits, whereas Demand Deposits showed a moderate decline. Of the increase of Rs 81.7 crores in total Deposits, the rise in Savings Deposits was of the order of Rs 27.7 crores and in Time Deposits as much as Rs 66.5 crores while Demand Deposits dropped by Rs 12.5 crores. Group-wise the largest rise of Rs 77.7 crores was accounted for by Personal Deposits, while the rise in Business and Government Deposits was only of a marginal order of Rs 2.0 crores and Rs 1.3 crores respectively. Personal Deposits are also shown to have recorded the largest rise of Rs 101.9 crores over the year. By size of banks the entire rise was accounted for by banks with Deposits of Rs 100 crores and above. The total rise of Rs 163.4 crores in the Deposits of these banks during the period April-October 1961 was offset by a substantial decline in Deposits of banks in other groups.

Time Deposits are shown to have accounted for the greater part of the increase in both Personal and Business Deposits. Of the total increase of Rs 77.7 crores in Personal Deposits, Time Deposits accounted for Rs 47.0 crores while Savings Deposits accounted for Rs 27.0 crores. In respect of Business Deposits, the rise of Rs 2.0 crores was the result of a rise of Rs 9.5 crores in Time Deposits and a fall of Rs 7.5 crores in Demand Deposits. Time Deposits also constituted the largest proportion of total Personal Deposits, the respective percentage of Time, Savings and Demand Deposits being 47.9, 34.0 and 18.1. Demand Deposits constituted the largest proportion at 58.0 per cent of Business Deposits the share of Time Deposits being 42.0 per cent.

As on the October 1961, Personal Deposits constituted the largest proportion of total Deposits at Rs 1,775.8 crores. Business Deposits come second with a figure of Rs 566.1 crores. In Business Deposits, the largest share at Rs 235.7 crores, forming 41.6 per cent was accounted for by trading concerns, while the share of industrial concerns at Rs 170.5 crores formed 30.1 per cent. By type of organisation limited companies had a predominant share amounting to 75.7 per cent of the total Deposits of industrial concerns, while in the Deposits of trading concern the major share at 65.7 per cent was accounted for by "partnerships and Others". The Deposits of limited companies at the end of October 1961 have been placed at Rs 282.2 crores, and that of State-owned and State managed concerns at Rs 65.6 crores.

Deposits of Government and quasi-Government bodies have shown a trend that is contrary to that noticed in respect of Personal and Business Deposits. The

total of these Deposits as on 27 October 1961 has been placed at Rs 134.5 crores of which Time Deposits at Rs 84.8 crores constituted 63.1 per cent. The share of Demand Deposits at Rs 49.6 crores formed 36.9 per cent. In contrast to the trend in Business Deposits, Deposits of Government and Quasi-Government bodies showed a rise in Demand Deposits which was somewhat offset by a fall in Time Deposits.

STEEL

A Heavier Import Bill?

According to the latest indications, the Third Plan target for finished steel is unlikely to be hit. It would appear that the Ministry of Steel and Heavy Industry is not at all sure that the rate of production in the last year of the current plan will reach the level of 6.3 million tons. The Planning Commission, however, seems to be still hopeful that between now and 1966 measures can be speeded up both for increasing the installed capacity of, and the supply of adequate raw materials for the steel factories. But if the anticipated increase in production does not materialise, it will not cause much surprise. For the annual targets for finished steel production set so far have all remained unattainable and actual output during 1961-62 has amounted to only 2.8 million tons against an anticipated production of 4.5 million tons. The Third Plan envisages steady increase in production from year to year so that by 1965-66 total production of finished steel would amount to 6.8 million tons. But production has been hampered by a number of adverse factors. The continued low output of the five steel plants now in commission in the country is largely due to persistent shortages in the supply of essential materials and services. Coal supply has become both indifferent and inferior in quality while transport is constituting a constant headache to the steel factories. According to Sir Jehangir Ghandy, the shortages in the three vital sectors of coal, power and transport are such that if no remedial steps are taken expeditiously, it will be difficult even to maintain the existing level of production in the steel plants.

An estimate of the Ministry of Steel and Heavy Machinery puts the gap between domestic production of steel and total demand during the Third Plan period at 6.8 million tons and the Planning Commission has estimated the requirement of foreign exchange for the import of the required quantities of Mild and Special steels alone at Rs 715 crores as against the Third Plan provision for steel imports of Rs 218 crores. It will be clear that

unless domestic production of steel is stepped up considerably in the remaining years of the Third Plan, there will be an acute shortage of steel as it is extremely unlikely that additional amounts of foreign exchange will become available for the import of steel.

Undoubtedly, scarcity of steel is due partly to lack of planning in regard to the production of the various categories of steel items. Speaking at the annual general meeting of the Steel Importers Association of India, Mr K. Ramachandran has drawn attention to the need for a "strict surveillance system to check over-production in certain categories" of steel. He points out that, in certain categories, there is over-production while in certain other categories, there is a widening gap between demand and supply. At the present stage of steel production in the country, such uncoordinated output pattern as has been referred to by Mr Ramachandran need not cause much concern. But such a haphazard production pattern is sure to involve the nation in great loss and the expenditure of sizable foreign exchange that we can ill afford to squander, if no effort is made to correlate the pattern of production to actual demand as steel output increases.

ENGINEERING

Shortages Disrupt Output

One of the direct consequences of the failure to hit the target of steel production will be a setback to the Plan itself as steel is a basic requirement. The present acute shortage of foreign exchange makes it impossible to fill the entire gap in domestic production by imports. It is not surprising, therefore, that a number of industries have already come to feel the pinch and perhaps the engineering industries will be the hardest hit. It is a pity that these industries are thus to receive a setback as they are some of the few industries which are showing good promise in the export field and have taken great strides in their expansion, particularly in the course of the last few years. The value of the total output of the engineering industries increased from about Rs 200 crores in 1956 to Rs 500 crores in 1961.

It is, however, doubtful if the engineering industries will be able to keep up this rate of progress in the immediate future as they are greatly hampered in their working by the shortage of almost all the essential requirements such as pig iron, steel, non-ferrous metals, coal and coke and power. According to Mr K. L. Chowdhary, president of the Engineering Association of India, if the present shortages continue, engineering indus-

tries will not be able to achieve more than half the production expected of them during the Third Plan. As against their requirement of pig iron of 1.2 million tons, they are able to get no more than 25 to 30 per cent. The supply position in this regard is not likely to improve in the near future as it is uncertain when the expected quantity of 350,000 tons of pig iron from the Bokaro steel plant, taken into account while assessing the availability of pig iron, will become available. The plight of the engineering industries calls for urgent attention as any serious setback to them will produce a chain reaction in the entire industrial sphere. It is imperative to devise measures to improve the supply of pig iron at an early date and in this regard Mr Chowdhary's suggestion that low-shaft blast furnaces should be established in the private sector deserves sympathetic consideration. Prospects for the setting up of low-shaft blast furnaces have brightened as the National Metallurgical Laboratory, Jamshedpur, has now found regional establishment of such furnaces feasible. The NML has recommended that low-shaft blast furnaces can be set up successfully in Maharashtra and East Punjab. Its reports embodying operational data and detailed project reports of smelting trials with raw materials obtained from some other States have been sent to the respective Governments.

COTTON TEXTILES

Revised Target for Organised Sector?

Opening the public enquiry into the question of fair prices of cotton yarn and cloth, Mr K.R.P. Aiyangar, Chairman of the Tariff Commission said last week in Bombay that the industry had a vital role to play in the country's economy. As a necessity, cloth is next only to food and it is of utmost importance to the nation that its cotton textile industry is in good trim. The Indian Cotton Textile Industry's importance is not restricted to the country's internal economy alone. It has great potentialities for augmenting the nation's external resources. It is the second largest in the world, coming next only to the US cotton textile industry in the matter of total production. In recent years, however, its export performance has been disappointing and the main impediment in the way of expanding exports is the uncompetitive price of Indian cotton textiles in the world markets. During the past three years the trend in exports has been alarmingly downward. Referring to the trend of exports, Mr Aiyangar has pointed out that the scheme in this

regard of the Indian Cotton Mills' Federation merits careful consideration. The ICMF has recently decided that mills should export 12 per cent of the turnover of cloth and 3 per cent of the turnover of yarn annually.

Despite the contention of the industry that the selling price of its products are unremunerative, the price that consumers pay for the cloth and yarn they buy continues to be high; and this has resulted in Government asking the Tariff Commission to make a comprehensive enquiry into the various aspects of the industry. Besides examining the cost of production of various types of cloth and yarn with a view to determining their fair ex-mill prices, the Commission will also study the capital structure, the pattern of investment and a fair return in the context of the need for continuous rehabilitation and modernisation. In this connection the Commission has selected 43 units from different parts of the country for detailed study. The industry is presently facing a number of problems. Perhaps the most compelling of these is the obtaining of adequate quantities of cotton as domestic production has fallen far short of demand from the mills. Due to import restrictions, dyes and chemicals needed by it are not available in sufficient quantities and of a sufficiently high quality. It has also to contend with shortage of power and coal.

One aspect of the industry which no doubt will receive the most careful attention of the Tariff Commission is the Third Plan target of cloth production and the shares allotted of such production to the organised sector and the other sectors. The Planning Commission has estimated the domestic demand for cloth at the end of the Third Plan period at 8,450 million yards. The target for exports is fixed at 850 million yards. Thus the production target has come to be fixed at 9,300 million yards. Of this the mill sector is allotted 5,800 million yards with the balance of 3,500 million yards going in favour of the decentralised sectors. The main purpose in giving a large quota for the handloom sector is to bring the benefit of employment to the large number of weavers dependent on the handloom for their livelihood. But this has not been achieved as the trend so far shows that the bulk of production in the decentralised sector is accounted for by the powerlooms. An inference from this is that the handloom will not be able to fulfil its large quota of production with the result that the overall target of 9,300 million yards will not be hit. The obvious course to adopt is to ask the organised sector to increase its output beyond the level now allotted to it.

One problem, however, cannot brook much delay, and that is the rehabilitation and modernisation of the mills. If Indian cotton

textiles are to sell well in foreign markets, not only should their price be competitive but they must be of a high quality. It has been represented by the industry to the Commission that rationalisation should proceed at a faster rate and rehabilitation should be completed within the next two years if the mills are to become efficient.

US

Buoyancy on the Farm

Latest official reports attest to the continuing vitality of American agriculture. Prices are buoyant, and marketings are large.

Net farm income in the United States for the first half of this year ran at annual rate of \$12,800 million, according to the Department of Agriculture. This is about two per cent above last year's first-half pace, as bigger returns from cotton, vegetable-oil crops, food grains, feed crops and vegetables have more than offset a slight dip in livestock and livestock product marketings.

Historically, over-all agricultural results for the second half of a year often surpass those for the first half. On this basis, there is reason to expect a further improvement in farm income this year.

Many agricultural economists lean to the view that total US farm income for 1962 will reach or exceed the \$13,000 million chalked up in 1961. And the 1961 income total represented a surge of \$1,000 million over the year before.

With the possible exception of a few commodities—wheat, for example—most major crops are expected to enjoy bumper harvests this year, helped by favourable weather in most parts of the country. Ever, in the case of wheat, growers' incomes should compare favourably with 1961 in view of this year's higher prices.

Even if aggregate farm income does little more than equal the 1961 total, it is likely that income per farm will continue its steady climb of recent years. In line with the long-term trend, the number of operating farms in the United States probably will decline about three per cent this year. Rising farm productivity over the years has enabled the United States to achieve its agricultural abundance with fewer farms and a declining farm labour force.

This continuing revolution in farm methods, coupled with the nation's agricultural prosperity, is having a noticeable impact on rising sales of farm equipment. According to a survey by the financial newspaper, Wall Street Journal, retail sales of farm machinery so far this year are up between five and ten per cent in most agricultural areas of the country. Farm machinery makers predict that their retail volume for all of 1962 will reach a total of \$2,500 million, some \$200 million more than in 1961 and the highest annual total in four years.

This sales rise is significant not only because of the size and import-

ance of the farm equipment industry generally, but also because it is one of the best available yardsticks of rural buying power. American farmers spend more money on farm machines than on any other group of products. Only about ten per cent of the American people live on farms today, but they buy 25 per cent of all the trucks sold, use more gasoline than any other industry, and provide a major market for such products as steel, rubber and chemicals.

Use of modern equipment has been a prime factor in enabling the American farmer to get more output from fewer acres of land. Farmers are expected to harvest about 288 million acres this year, some eight million less than in 1961 and the smallest total since 1909. This shrinkage in over-all acreage is due largely to Government programme aimed at restricting production of a number of farm commodities and curbing the nation's mounting surpluses of these products.

While acreage has been shrinking and the number of farms has been declining, the size of individual farms in the United States has been growing. The average US farm now has 302 acres, compared with 215 in 1960. But it still is a family farm, the backbone of US agricultural achievement.

The stress on productivity and the growing size of farms has elicited a great demand for improved and more powerful machines. American industry is meeting this demand, with machines that save time, labour and money by mechanising land operations or replacing several pieces of industrial equipment.

A new self-propelled cotton picker, for instance, gathers as much cotton in an hour as 80 field hands. And a powerful farm tractor today can pull ten plows 16 inches wide at 5.66 miles an hour, compared with the equivalent 1952 model's ability to pull four plows 13 inches wide at 4.36 miles an hour. Nearly 90 per cent of the tractors sold in the United States today exceed 35 horsepower, compared with only 12 per cent a decade ago.

MNP

Unconventional Raw Materials

The Mandya National Paper Mills founded in collaboration with M/s Parsons & Whittemore-Lyddon Organisation, pioneers in utilising unconventional raw materials for the manufacture of paper was inaugurated this week by President Dr S. Radhakrishnan. This will be the country's first paper mill to utilise bagasse the by-product of the sugar industry for the manufacture of paper, and for this reason has a unique importance. The traditional raw material for the paper industry is bamboo and sabai grass, and the signs of shortage in the availability of these two in recent years had underlined the importance of exploring the suitability of other raw materials like bagasse and

jute sticks etc. The use of bagasse for paper manufacture is fairly wide-spread in other important paper manufacturing countries, but is still in an experimental stage in India. The problems confronted in the utilisation of bagasse are not one of availability of bagasse alone but of ensuring alternative sources of fuel to the sugar industry which presently consumes the entire quantity produced. The setting up of the Mandya Mill utilising bagasse should therefore pave the way for more units in the paper industry to produce paper from bagasse.

The collaboration of M/S Parsons & Whittemore-Lyddon Organisation has ensured the latest methods and techniques for the Mandya Mill. It has been learnt that the factory will feature the first Horkel Dry Depithing plant, the first Rietz Wet Bagasse Depithing and Cleaning process, the first Pandia Continuous Digester and the first Continuous Pulp and Paper making process. It has already gone under production under the expert supervision of Indian and foreign engineers. The installed capacity of the mill is at present 35 tons of super-white ("the whitest of all") printing and writing paper per day, but is capable of producing upto 50 tons. The production capacity may also be increased to 100 tons per day. Bagasse is to be supplied by the Mysore Sugar Co and in the case of shortage of raw material the Pandia Continuous Digestion system will enable switch to other raw materials.

A notable feature of the Mandya Paper Mills is the housing colony which is being subsidised by the Government of Mysore. The colony will consist of a hospital, a school, market, Community centre, cinema house, playgrounds, parks, gardens, library, reading room besides spacious flats for the workers. The Mill has in its board of directors eleven directors representing the Parsons & Whittemore-Lyddon Organisation, Industrial Finance Corporation of India and Bedi & Co. Management P. Ltd besides leading industrialists, under the chairmanship of Khan Bahadur C. B. Tarporavala, Financial Adviser to the Nizam of Hyderabad.

TATA OIL

Raw Materials' Impact on Profits

The operations of the Tata Oil Mills Company Limited during 1961-62 mirrored a satisfactory pace of growth in regard to both output and sales which improved by nearly 11 per cent, though the corresponding rate in the growth of profit was a moderate one of about 3 per cent. The main factors responsible for the small

profit were the inflated price of raw materials, the increase in the salary and wage bill, the loss incurred on imports of essential chemicals and the upward revision of import duty on copra from 5 per cent ad valorem to a tariff value of Rs 1,400 per tonne to 15 per cent ad valorem.

As stated by Mr J. R. D. Tata the inflationary trend in the prices of raw materials continued unabated and pushed up the cost of production of finished products which was only partially offset by the enhanced selling prices. Besides, there was a further worsening of the situation in regard to the availability and prices of raw materials which has reached such a stage that unless some correctives are applied the persisting trend will have serious repercussions on the country's economy. That the production of oil seeds was lagging behind the requirements for edible and industrial oil is regrettable in view of the increased accent laid on the utilisation of improved seeds, fertilisers and the adoption of modern techniques of agriculture. A realistic approach to the entire problem is necessary for self sufficiency in oil bearing materials. Mr Tata's suggestion that the plantation companies with their resources, technical skill and vast experience, should explore the possibilities of cultivating agricultural raw materials required by the oil mills with Government cooperation merits immediate attention.

Another irksome aspect to which the chairman drew pointed attention was the discriminatory level of excise duty imposed on the organised sector of the soap industry in comparison with the factories in the unorganised sector, which proved detrimental to both the national exchequer and the community. The folly of such a step has already been realised and the authorities were constrained to eliminate this anomaly to some extent. While appreciating the revision of soap excise, Mr Tata spotlighted the harm done to the Company by the withdrawal of the concessional rate of duty on vanaspati which will mean an additional burden of Rs 80,000 per annum to the Company.

On the gain side are listed the improvement of sales of laundry and toilet soaps by about 8.5 per cent over the preceding year's thanks to the strengthening of the sales force, creation of the Mar-

keting Department and the vigorous drive launched for stimulating sale. Export earnings at Rs 71 lakhs showed a rise of Rs 10 lakhs over the previous year's total, obviously due to the larger exports of groundnut meal and copra cake. Further, both Industrial Perfumes and Lakme Limited recorded improvement in their operations.

INDUSTRIAL FIBRES Commonwealth as Prominent Source

Production of the major industrial fibres in the world during 1960-61 has reached new heights, with the Commonwealth countries figuring as prominent suppliers. According to the figures released by the Commonwealth Economic Committee, which undertook a survey of industrial fibre production, production totalled 43,200 million lbs, or approximately 11 per cent over the previous year's total. Sectionwise, the manufacture of natural fibres showed a slight increase while that of man-made fibres reached a new peak of 7,300 million pounds, a seven per cent increase on 1959 and about 17 per cent of the global fibre throughput.

The Commonwealth's position as the leading supplier of industrial fibres remained substantially unaltered in the period under review in contrast to the previous season. During the previous season there was a steep decline in the total production in the Commonwealth countries, but during the season under review it staged a dramatic recovery and its proportion of the aggregate total moved up to 14 per cent. But for the poor crop of jute and other allied crops in India and Pakistan, the percentage supplied by the Commonwealth would have been higher. On the contrary, the share of hemp was higher approximately by 34 per cent which not only offset the sharp fall in the output of jute and other fibres in India and Pakistan but also bolstered the total quantum. Another important development that affected the Commonwealth countries was the reduced imports of fibres by the US.

The bulk of the exports from Commonwealth countries went to the Six European Common Market

countries and the European Free Trade Association group. These countries imported about 90 per cent of their raw jute and nearly two-thirds of their hemp requirements from the Commonwealth. Japan also imported a considerable quantum of wool and raw jute, and to some extent hemp and cotton, from the Commonwealth countries.

The review also throws much light on the general pattern of production in the current season. According to preliminary estimates, world production of industrial fibres would be higher during this season. Increases are expected in wool, silk, man-made fibres and hard hems. The estimates anticipate a record jute crop this season and a nominal decline in cotton crop is also predicted.

SPICES Welcome Rise in Export Earnings

Addressing the first annual general meeting of the Spices Export Promotion Council in Ernakulam, Mr C. R. Krishnaswamy Rao Sahib, the chairman, highlighted the remarkable performance of spices on the export front during 1960-61. India's export trade in spices during the period surpassed the target fixed at Rs 11.91 crores by about Rs 5 crores, thus taking the total volume of exports to Rs 16.83 crores. Among the important spices that contributed to the sizeable foreign exchange earnings are listed pepper, accounting for Rs 8.5 crores as against a target of Rs 4.2 crores, chillies at Rs 176 lakhs and ginger at Rs 89 lakhs. Export of cardamom at Rs 3.78 crores was just below the target by Rs 0.23 crore. There was a major shortfall in turmeric, exports of which were lower than the target by about Rs 5 lakhs, largely due to the high local prices coupled with somewhat of a slackness in foreign demand. Similar decline in other minor spices were ascribed more to the low prices in the international consuming centres rather than any shortfall in the actual physical quantum of exports.

The export trade in spices, which has shown a rise of 42 per cent, is obviously the result of the determined effort made by the Spices Export Promotion Council and is a pointer to the fact that a sustained drive in other exporting commodities also can reap better results. The Council, which started functioning only in October 1950, is to be congratulated for this creditable performance and its endeavour to organise its activities for laying a sound foundation for a sustained export promotion programme will be widely appreciated. The Council has also constituted separate panels for

cardamom, chillies, pepper, turmeric, ginger and other spices which in turn set up from among their members separate working groups for undertaking a comprehensive study of the problems relating to production, internal marketing and quality control, external marketing and publicity and also taxation. The arrangement to make available relevant market intelligence to the Indian exporters through its bulletin is another useful purpose served by the Council. The proposal to establish strong propaganda machinery in the USA in collaboration with the American Spice Trade Association with a view to boosting consumption of Indian spices, especially of pepper, is a move calculated to promote the exports of spices to that important consuming centre.

The chairman also stressed the paramount significance of developing spice technology which forms an essential prerequisite for an overall and long-term improvement in the Indian spice export trade. The setting up of a technical development committee for spices under the leadership of Dr V. Subramaniam, Director of the Central Food Technological Research Institute, Mysore, is a step in the right direction. The committee is sought to engage its attention for examining the problems pertaining to spices and their export, laying special emphasis on the physical and chemical analysis of trade samples, development of novel uses and by-product utilisation, storage and packing problems. The importance accorded to quality control and pre-shipment inspection is another useful measure for ensuring Indian spices to the consumers abroad. Preliminary arrangements are under way for implementing the programme for quality control of pepper, cardamom and chillies under the general supervision and guidance of the Agricultural Marketing Advisor to the Government of India.

NEWS IN BRIEF

The West Bengal flood enquiry committee has recommended flood control schemes estimated to cost Rs 122 crores including Rs 22.20 crores for works under the control of the Calcutta Municipal Corporation. The committee has assigned priorities for a host of schemes which include raising of villages, afforestation, soil conservation, building of new embankments, basin drainage and hydrological and aerial surveys, apart from tightening up of meteorological observations and warning systems.

The Westinghouse Electric International Company has consented to provide a complete 69,000 kilowatt gas turbine power plant to Assam. This plant, when completed, will be the largest gas turbine power installation outside the western hemisphere.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

I AM, in what follows, reporting rather than reflecting. Perhaps I have not yet got round to others with a different point of view, but there was striking unanimity among those who spoke to me in Madras about the recent DMK trouble-making in the State. The impression in Madras is that the affair has evoked less concern than it ought to have in the North. There is a fair amount of appreciation of the Government's action but the people here seem to me far more deeply stirred than many elsewhere realise. The agitation is seen as a portent of much else to come, and stray acts of hooliganism—urchins throwing stones at buses, for example—have not made for reassurance. There have also been reports of ostentatious exchange of pen-knives at meetings ostensibly for "self defence", but not believed as so done. It is a trifle exaggerated to speak of a lack of sense of security, as I heard one or two do, but there has been a shake-up in the rather smug casualness about the DMK's demands and actions. The DMK ranks are themselves sullen and somewhat taken aback at the quick and effective way they were dealt with. As one of them put it, there was a general expectation that the agitators would be taken away from the scene of trouble and let loose. This didn't happen this time, much to their chagrin. The leaders are still to be released and, meantime, the DMK members of the Legislature are keeping away from the jobs they were solemnly elected for performing. There has been some hair-splitting about the slogan on which the DMK won the election and in pursuance of which the present agitation against prices is said to have been started. A DMK leader has declared that the party never promised "three measures of rice for a rupee". All it said was that if the Congress party would promise this felicity, they would withdraw from the election. It is rather academic whether the DMK would have arranged this miracle if it had been voted to power or indeed whether it ever promised it would. What is more to the point is that prices are not amenable to wishes and their control is not made easier by people—who ought to be engaged in productive endeavour—throwing stones at running buses—and stopping other people from doing their honest work. The DMK may or may not have learnt a lesson from the recent

events. Meantime, it is distressing to find that party and caste politics have infiltrated into the colleges. I was speaking to some students and I found that the elections to students' unions are being fought quite shamelessly on communal and party lines. The amount of money that is stated to be spent on the elections is scandalous and quite obviously there are outside affiliations. I also understand that there has been an eruption of the cruder forms of brahmin-baiting, which, I was told, were not so much in evidence in the last year or so. All this adds up to a considerably disturbing picture—at least as painted by people around here.

Rats in ice, lizards in beer, contaminated food that makes even eating a health hazard, sub-standard, if not spurious, medicine that kills sooner than the disease—just what sort of a worm is the Indian citizen, that he puts up with all this without much effective complaint? Harry Lyme, Graham Greene's symbol of positive evil, peddled as penicillin some trash that killed a million children in post-war Vienna: even he met his match in a well-meaning American whose ideas were probably uncomplicated but whose heart was in the right place. Our peddlers of death could do with someone with the same determined anti-septic goodness on our part. But all I find around is a cynical shrug, one enormous gesture of helplessness, if not active opting out. Our values are all twisted: a riot will ensue if a sacred animal is hurt, but human misery through human agencies leaves us curiously unmoved. Not wholly in joke, I was told that the beer could be drunk after throwing the lizard away; and as for deformed babies, why, we have seen far too many of them to be shocked by a fresh crop. Doctors, to whom I spoke about the matter, were grimly resigned about it all. What do you expect when every backyard is a pharmaceutical laboratory, if not an illicit distillery? Drastic cuts in imports have opened up a new commerce in death for the get-rich-quick merchant. The ubiquitous raddi-wallah is a menace with his regular traffic in used bottles and phials which are filled with spurious stuff and sold in the bazaar as the real thing. The more reputable manufacturers are forever battling with this menace. The import restrictions

have given an excellent opportunity for the indigenous entrepreneurs to step in and many of them with a high sense of integrity and responsibility take all the necessary precautions and their products are universally accepted as good. Others, less scrupulous, have taken to making sub-standard stuff which they market with the aid of the kind of high-power sales promotion that one has come to associate with medicine selling: all the rules of the game are broken shamelessly: imitation, of product and brand names and even the names of the firms are barely, if at all, within the limits of law. Above all, laziness, carelessness and inefficiency and a wholly inadequate check on standards are playing havoc with the lives of the people. The law is apparently helpless. West Bengal has thought up a Commission and it may no doubt come out with bright ideas. They will probably go the way of other such efforts in the past. After all, a nation gets the medicine it deserves.

It is good to hear from Mr Galbraith that he has no intention of relinquishing his office as the US Ambassador to India. This was an assignment to which he attached some importance at the time his future as a new frontiersman was discussed. Nothing that has happened since has made him change his mind that he is doing something that is both "interesting and important." God knows what might have happened if we did not have some one like him to understand our motives and explain them with lucidity to the Americans: our own understanding of the mainsprings of American action was none too informed and Mr Galbraith had his work cut out here too. The last year in particular has seen much to cloud the understanding of the two countries and it is a mercy that we had some one who understood our basic impulses with clarity and without illusions. Obviously, Mr Galbraith has his reservations about many of our actions but his academic stance has given him the ability to see things steadily and see them whole. More important than even this has been his role as a mentor, that of a "general scold"—the disinterested advice at an undecieved onlooker who cares enough for India to take the trouble of finding out where things go wrong and tell us. The series of lectures he has been delivering on academic occasions have given extremely valuable pointers on Indian planning. He has also not hesitated to point to serious errors in execution: his criticism of the set-up in Rourkela, in which he blasted the over-centralised admini-

nistration from Delhi, might have been considered by some as exceeding the bounds of diplomatic duties and even licence. It is a measure of our maturity that we do not react in thin-skinned peevishness at such useful advice. India has not only engaged Mr Galbraith's sympathy: it has stirred his intellectual curiosity and he wishes not only to assist but observe. In the truest sense of the much-misused word, Mr Galbraith's interest in India is academic. That is why press reports which imply that he is angling for a well-appointed office in Washington are grotesquely wrong. He may conceivably wish to get back to Harvard: but since India stirs his curiosity as an Economist, he is probably not nagged with a sense of being diverted from his real vocation in becoming a diplomat.

I notice that coincidentally with the Aid India Club's announcement of the foreign exchange requirements for the second year having been pledged almost in full we have had the first drawing on the stand-by credit we had arranged with the International Monetary Fund. There is, I am sorry to have to point out, much bleak significance in this. In effect the developmental aspect of the Third Plan now seems assured, though we shall again have a considerable carry over of projects into the fourth quinquennium; that is to say, the manufacturing capacity will have been created. But what of utilising that capacity to the full? There's the rub. Industrialisation has not helped us to reduce the import bill. On the contrary we have more need than ever before of imports, though their character is slowly changing. Components, spares and industrial raw materials are needed in much larger quantities. The trouble is, that the earnings from exports do not suffice to buy these so very necessary things from abroad. Export drives have been unavailing; and yet unless we soon succeed in selling more goods abroad we shall find that industrial production as a ratio of capacity will suffer. It is a difficult matter to urge upon those that are lending assistance for the implementation of the plans, that our need of "untied" (why, I wonder, is this word almost always misspelled in newspaper despatches as "united"?) loans is as vital. And then of course our planners have signally failed in setting targets for or arranging output of the "basic" industrial raw materials. It may even be worth it, I should think, to defer some of the plan projects and instead to concentrate upon the four "basic" raw materials. And let us remember, for the future at least, that for industrial advancement to be smooth the supply or availability of steel, coal power and transport should always be planned to exceed estimated demand.

(From Our New Delhi Correspondent)

Dominant Role of Agriculture

The dominant place of agriculture in the national economy was again affirmed by Mr Gulzarilal Nanda, Deputy Chairman of the Planning Commission, when he inaugurated the Community Development and Panchayati Raj Conference here last Monday. While there is general realisation of the importance of agriculture and the priority that should be assigned to it, Mr Nanda had doubts whether this understanding is being translated into action. The Minister for Planning made the significant remark that any shortfall in the achievement of agricultural targets will not be due to any shortage of resources. The Planning Commission is placing first place to agriculture in the matter of allocations. There were enough resources under several programmes, such as soil conservation, improved seeds and minor irrigation, etc. He also mentioned in this connexion that if a State makes effective use of its resources and if it needs more for minor irrigation, or other items in this category, the extra amount required would be sanctioned over and above the regular allocation for the State Plan. Referring to the question of availability of fertilisers that is frequently talked about, he declared that availability had been steadily increasing over the last three years from 200,000 tons to 400,000 tons in 1962. In this context he also made a reference to the scope for increasing the availability of organic manures. He felt that possibilities in this field were not being exploited to the fullest extent. This problem, he said, was more one of organisation than of resources.

Mr Nanda also made a special reference to the need for measures to increase the production of particular crops like cotton and oil seeds which have a bearing on industrial production, import requirements and balance of payments. The problems of raising the output of these commodities were discussed for two days at a conference of leading agricultural experts in the country last week. This meeting was part of the series of measures being taken by the Planning Commission, in co-operation with concerned Ministries to consider steps for raising production in various agricultural and industrial spheres. The meeting of agricultural experts was convened jointly by the Planning

Commission and the Ministry of Food & Agriculture. Besides agricultural experts, Directors of Agriculture of the cotton and oil seeds growing States, representatives of the Ministries of Irrigation & Power, Food & Agriculture, Community Development, Panchayati Raj & Co-operation, and the Planning Commission participated. Mr Shirman Narayan, Member, Planning Commission, presided over the meeting. Participants included Mr T. N. Singh, Dr A. N. Khoala, Mr C. M. Trivedi, and Mr Vishnu Sahay, Members of the Planning Commission, and representatives of the Ministries of Irrigation & Power, Food & Agriculture, Community Development, Panchayati Raj & Co-operation, and the Planning Commission.

Mr G. R. Kamat who initiated the discussion, it is learnt, drew attention to the steep fall in cotton production from 5.4 million bales in 1960-61 to 4.6 million bales in 1961-62, which indicated the urgent need to initiate measures to increase output so that the Third Plan target of 7 million bales could be achieved. In the case of oil seeds, production during the period was of the order of 6.5 to 6.8 million tons, whereas the Third Plan target for oil seeds has been set at 9.8 million tons. Referring to the need for putting more irrigated area under cotton and oil seeds, Mr Kamat said that there were possibilities of shifting crop patterns on the existing irrigated area, of introducing minor irrigation works specially in the tracts growing cotton and oil seeds and of giving priority to these crops in areas to be covered by new irrigation systems.

Mr Tarlok Singh, Additional Secretary of the Planning Commission, is understood to have pointed out that crop planning should be flexible to suit local conditions and that the Package Programme for these crops should be on a bigger scale. He felt that within limits it should be possible to provide additional resources for this programme.

The general discussions were followed by a business meeting which drew up the recommendations. Attention was drawn to the great potentialities of Rajasthan as a cotton growing area. With its special climatic conditions and with the extension of irrigation facilities, Rajasthan it was stated, might emerge as a major cotton tract in the country. It was also suggested that the new irrigated tracts in Rajasthan and in the new Tungabhadra Project

The agricultural experts approved the proposal for the introduction of the Package Programme for cotton in several areas of Punjab, Rajasthan, Uttar Pradesh, Gujarat, Madhya Pradesh, Maharashtra, Mysore, Andhra Pradesh and Madras. Some of these areas are Ferozepur and Hissar in the Punjab, Ganganagar and Mewar in Rajasthan, Bundelkhand, Allahabad and Rohelkhand in Uttar Pradesh, Rajkot in Gujarat, Marathawada and Vidharbha in Maharashtra, Belgaum and Gadag in Mysore and Krishna, Guntur in Andhra Pradesh. As regards groundnuts, in view of the area under this crop, it was recommended that the number of package programme units for groundnut production should be raised from the existing 8 to 24 in the States of Gujarat, Maharashtra, Mysore, Andhra Pradesh, Madras, Madhya Pradesh, Uttar Pradesh, Rajasthan and the Punjab. It was also recommended that the present programmes should be accelerated so as to cover the entire area under groundnut in three years instead of four, and that the scheme which was originally confined to irrigated areas should also include areas with adequate rainfall.

Earmarking of maximum practicable area for growing long staple cotton in the irrigated areas of Rajasthan was one of the important recommendations made by the experts' conference. It was also suggested that the possibility of setting up large-scale State farms for cotton, mechanised if possible, in the irrigated areas of Rajasthan should be examined.

Another recommendation related to the arrangements for buffer stock storage of fertilisers before the commencement of the season. The Ministry of Food & Agriculture, it is learnt, has agreed to bear interest and storage charges

on such stocks. It was also suggested that fertiliser loans should be given only in kind, as that would check its misuse for other purposes and would increase fertiliser consumption. As regards seeds, it has been suggested that the programme should aim to saturate 95 per cent of the area under cotton with improved seeds.

The experts have recommended that the practice of mixed cropping of groundnut with cotton, which prevails in Saurashtra and Andhra Pradesh, should be popularised wherever practicable. This would not only ensure maximum utilisation of land, manurial and irrigation resources, and afford greater income to the farmer, but also the production of the two commodities now very much in short supply.

The experts' conference has attached the greatest importance to plant protection measures which, it has recommended, should be speedily extended to the maximum extent possible. This step alone, it is felt, could make a significant and immediate impression on the output of the two vital cash crops. The State Governments have been urged to mobilise plant protection measures on a mass scale through sprayers and dusters for intensifying work on the ground. Aerial spraying might also be arranged for compact areas wherever possible. In this connexion it is learnt that it has been decided that the aerial unit maintained by the Union Ministry of Food & Agriculture should be made available to the State Governments, wherever possible, for aerial spraying of affected areas under cotton and oil seeds, and that no charge will be made for this facility for the 1962-63 season.

The Government of India, it is learnt, has also decided to make the following changes in the patterns of Central assistance for schemes in the State plans: (1) Subsidy given by the State Governments under the improved seeds programme will be shared equally by the Central and State Governments. Improved varieties of cotton will also be eligible for subsidy, as in the case of hybrid maize, jute and groundnut. (2) For pesticides, dusters, sprayers, etc., subsidy is at present being given up to 50 per cent to be shared equally between the Central and State Governments. In future the Government of India would provide its share of 25 per cent subsidy and it will be left to the State Governments to determine any additional subsidy which they may be able to provide. As regards the grant of subsidies, a point was made at the experts' conference, that it should not be given in a general manner. It should be given in only genuine cases as a general subsidy system impaired the initiative of the farmer.

JUTE

Raw Jute Supply

AS far as is possible to predict at this stage, jute supply in the current season appears to be quite adequate to meet the internal demand in full and leave a sizable quantity to be carried over into the next season. The official estimate of the crop, jute and mesta, in 1961-62 is 8 million bales while the trade estimate is some 4 lakh bales higher. It is estimated that there has been a carry-over of about 2.4 million bales at the end of the season. The prospects for the current year are assessed quite good now although some weeks ago it was believed that the floods would have caused considerable damage. It was believed that the floods in Assam have subsided, it has been reported that the damage to the crop has been negligible. The weather has been conducive to the rapid growth of the plant and in view of the very favourable weather all through the growing period, the quality of jute is also expected to show some improvement.

If the size of this year's crop will be somewhat smaller than last year's it will be due to the lower acreage planted with jute this season. The emphasis is now rightly placed on increasing the yield per acre. Government does not favour extension of acreage. Dr Ram Subhag Singh, Union Minister for Agriculture, has made it clear that promotion of jute production should aim at

attaining increase in jute production from increased yield and not from expansion of the jute acreage. Some headway has been made already in this regard. Even so, yield in India is much less than what is obtaining in Pakistan. However, during the past one or two years concerted measures have been taken to achieve better yield by the adoption of improved methods of jute cultivation. The quantity of improved seed that is being made available to cultivators is increasing yearly and the jute farmer is able to get more fertilizers. An indication of the great importance attached to this aspect of jute cultivation is the active interest evinced in this regard by the Indian Jute Mills Association.

The outturn of the 1962-63 crop is expected to be between 6.5 and 7 million bales. This together with the carryover of 2.4 million bales from the last season should be sufficient to meet the entire demand this season of about 7.3 million bales and leave a comfortable carryover for the next season.

It is gratifying to note that Government is fully seized of the need for minimising the recurrent uncertainty in raw jute supply from year to year. The wide fluctuation in jute production is largely due to the quantum of return that the cultivator is able to obtain for his produce. Last year steps were initiated to guarantee a minimum return. A buffer stock agency has been set up and a minimum price of Rs 30 per maund basis Assam Bottoms has

TEA

Easier Tendency in Prices

IN the Export Sale held in Calcutta this week, offerings amounted to 48,921 packages. There was only a fair demand and the market showed an easier tendency. The best bright liquoring Assams, both orthodox and CTC types, were sold well. Other types were 20 nP to 40 nP lower. The ordinary plain teas eased by up to 30 nP.

Doors orthodox and CTC teas followed the same trend, while non-wither legg-cut sorts also showed a decline of 10 nP to 20 nP per kilo. Whole Leaf grades generally tended easier especially the higher-priced descriptions and there was less enquiry for Tippy teas which were irregular and were often difficult of sale.

There was again a good market for flavoury Darjeelings which were sold well. Other sorts in this category were easier. The following rates were quoted:—Clean Plain Pekoe Rs 4.40 to Rs 4.60; Plain BP Rs 3.80 to Rs 4.00; Plain Fannings Rs 3.80 to Rs 4.00; Medium Assam CTC BP Rs 5.70 to Rs 6.20; Medium Assam CTC Fannings Rs 5.60 to Rs 6.20; Best Assam CTC BP Rs 7.20 to Rs 8.00 and Best Assam CTC Fannings Rs 7.20 to Rs 8.20.

In the Dust Sale, offerings were 29,628 packages. The market opened to a good demand; but there was a slight weakening as the sale progressed. CTC dusts were well supported although prices were generally lower except for the bright liquoring descriptions and the few small powdery teas. Orthodox teas were absorbed at a drop of 20 per kilo and sometimes more, while the good liquoring Assams realised satisfactory prices.

Legg-cuts met with a better market than of recent weeks. Although prices were irregularly easier, the few selected invoices were dearer. Following rates were quoted: Plain Orthodox Dust Rs 3.40 to Rs 3.70; Medium Assam Dust Rs 4.20 to Rs 4.50; Legg-cut Dust Rs 3.80 to Rs 4.30; Medium Assam CTC Dust Rs 5.60 to Rs 6.10 and Good Assam CTC Dust Rs 6.60 to Rs 7.00.

In the Cochin market, offerings were 679,006 kilogrammes of leaf tea. Against strong general demand low medium and mediums were irregularly 10 nP a kilo dearer, while good mediums were fully firm to dearer. Highgrowns were strong and considerably dearer following quality. All Fannings grades had better demand.

According to reports from Cochin, consignments of exportable tea totalling about 7,500 tonnes, which were lying accumulated in the godowns of Indian and foreign exporters there since early July, are expected to be cleared by the middle of August in view of an easing of the situation arising from the shortage of shipping space to the United Kingdom. The Malabar Coast-United Kingdom Eire Conference has now allotted adequate space in the

conference line ships calling at Cochin between 27 July and 7 August for lifting these tea stores.

Exports of tea from Ceylon amounted to 32.89 million pounds in April 1962, putting the total exports in the first four months of the current year higher at 141.41 million pounds as compared to 130.52 million pounds in the corresponding period of 1961. Exports to the UK, the largest buyer of Ceylon teas, rose from 48.5 million pounds in January/April 1961 to 53.4 million pounds in the period under review as did those to America from 16.51 million to 21.17 million pounds; to Australia from 12.72 million to 12.89 million pounds; to Africa from 11.25 million to 12.22 million pounds and to all other destinations from 41.53 million to 41.82 million pounds.

In the London auctions, offerings were 24,028 packages including 4,746 packages from Northern India. There was a strong demand for the few lines of Assam printed and prices realised were in excess of brokers' valuations. Tea from the Dooars met with a slightly easier tendency and were sometimes lower according to quality. The balance of the sale consisted mostly of Africa which were very irregular and prices tended lower.

According to official sources at New York, arrivals of 12.93 million pounds in May, 1962, raised the total imports of tea into the USA in the first five months of the current year to 53.65 million pounds from 46.91 million pounds in the similar 1961 period. Imports from Ceylon, the largest supplier of tea to the USA, rose from 18.28 million pounds in January/May, 1961 to 20.29 million pounds in the period under review, as did those from India, the second largest supplier, from 11.86 million to 13.36 million pounds. Tea supplies to the USA from all other sources, during the period under review, at 20 million pounds registered an increase of 3.23 million pounds over the figure for January/May, 1961.

COTTON

Futures Irregular

THE Bombay cotton futures market during the past week depicted an irregular trend. The Jarilla March contract fluctuated this way and that consequent on the alternate bouts of selling and buying induced by the congenial weather reports on the one hand and heavy showers in some of the cotton growing tracts on the other. The ruling contract which opened at Rs 724.00 per three quintals moved upto Rs 727.75 and touched this week's low of Rs 719.25 owing to the selling pressure from up-country centres. However, thanks to the support from Calcutta operators and the spot house buying locally, the contract staged a smart recovery. But the absence of any following-up support prevented the contract from making further headway and finished the week on a subdued tone at Rs 725.75.

The announcement of the Government of India permitting the import of 175 lakh bales of 400 lbs each of

cotton stapling 1-1/16" and above from any area was welcomed by both the traders and spinners. Out of the total allotment 25,000 bales would be reserved for allocation against retention quotas under the export incentive scheme and the balance would be distributed to the mills on the basis of their consumption of similar staples in 1960. The quota is valid for shipment between 1 January and 31 May, 1963.

The question of further issue of export quota for Bengal Deshi is expected to be taken by the reconstituted Cotton Advisory Board which is scheduled to meet on 2 August. A section of the trade is confident that at least 50,000 bales of this growth will be released for export in view of the fact that Japan is in the market for September-October shipment. According to another section such a step would lead to sudden break in the prices of Bengal Deshi and it favours a bigger quota in the next season instead.

The spot market at Sewri presented sluggish trend. Only those mills who have not fully utilised their quotas for indigenous cotton purchased choice qualities of Laxmi, Kalyan, Wagad, CO2, L-147 and 197/3. Many mills were reported to be finding it difficult to buy cotton of their choice and this matter was taken up with the Textile Commissioner and pleaded for arranging for such qualities or allow them to purchase available cotton without the restriction in force.

With the completion of the ceiling against the Bengal Deshi export quota, activity in the export section has almost come to a standstill. Only sporadic purchase was reported by shippers during the week under review presumably against their previously commitments.

In the import section moderate activity was reported in Pakistan new crop, Sudan higher grades and East African cottons. Prices of the latter variety eased slightly during the week.

Total production of cloth during the first of half of the current year at 2,504 million yards was lower by 50 million yards from the corresponding period in the previous year. But the production of yarn was higher at 942 million pounds as against 914 million pounds.

According to a review of the Secretariat of the International Cotton Advisory Committee, the total production of cotton in 1961-62 was down slightly from the 1960-61 level. Heavy damages to crops in India the UAR and Uganda were largely offset by the record production in Central America, the Middle East, Western Europe and Sudan and the bumper crop being harvested in Brazil. Consumption of cotton on a global basis has touched a new peak obviously on account of the strong showing of the textile industry in the USA and the accelerated upswing in India despite the prevailing hardships in the supply of cotton. World exports according to the estimates approximated 14 million bales. Exports from America are placed round about 5 million bales in contrast to 6.6 million bales in the past season. Reduced supplies have adversely

affected the export potential from countries like the UAR, Mexico, Uganda and some of the African countries. Nevertheless exports from most other countries are running ahead of a year ago and even in India and Brazil the bulk of the cotton has already been disposed of.

Meanwhile the agricultural experts are reported to have recommended a major extension of plant protection measures "to the maximum extent and with utmost speed" for raising the per acre yield of cotton. The State Governments have been instructed to mobilise plant protection measures on a mass scale through spraying for intensifying the work on the ground. Arrangements will also be made, wherever possible, for aerial spraying. There was unanimous opinion among the experts for concerted move by means of a package programme aiming at simultaneous provision of scientific know-how, adequate and timely supply of pesticides, implements, etc, liberal and easy supply of credit, marketing, strengthening of co-operatives and other allied institutions and organisations as also sufficient incentives and legislative measures wherever required.

These experts have approved the suggestion for launching the package programme for cotton in Punjab, UP, Rajasthan, MP, Gujarat, Maharashtra, Mysore, Andhra Pradesh and Madras. It was also recommended that suitable arrangements should be made for providing better seeds sufficiently and efforts should be made to saturate 95 per cent of the area under cotton with improved seeds. Another significant suggestion is the setting up of a seed testing laboratory in each State.

PIECEGOODS

Traders of cotton piecegoods are avidly awaiting an alicie spell after a protracted dull period as the scope for improved trading with UK and other countries is bright. Domestic demand is also expected to pick up after "Balev" festival. Last week the traders, who were anticipating a brisk demand from Calcutta, were sorely disappointed as that consuming centre was almost quiet. The stocks with local traders are piling up. The prices of almost all the varieties remained firm. There was some enquiry from a few upcountry centres for old qualities, but the supply was pretty meagre. Printed and dyed flannelettes met with good demand. Despatches of cotton waste blankets to Assam were negligible. Grey un-calendared dhoties were eagerly sought after. Grey mulls met with little support from up-country centres with the sole exception of Saurashtra. The present firmness in prices is attributed to the rise in the prices of cotton yarn.

Sale of Sugar to USA

IT is learnt that the Indian Sugar Mills Association is making efforts to sell at least 25,000 tons of sugar to the United States, which is buying 300,000 tons from the world

Indian Finance

market before the end of September. According to Indian sugar exporters, this was the first global purchase of sugar by the USA after the passage of the New Sugar Act last June. US importers have already called for global tenders.

Under the New Sugar Act, India has been given an annual quota of 20,000 tons for the next two years. India has already exported to the US, this year, about 100,000 tons of sugar. This includes the restored quota of 50,000 tons, which was cut by the US Government last year out of the total quota of 225,000 tons originally allotted to India.

Meanwhile, the world market price of sugar is somewhat lower than the preferential rate of about \$130 per ton applicable to sugar exporters under the allotted quotas to each country. Sugar interests have stated that, even if the price is less, they will still try to sell as much as possible under the global tenders in order to earn more foreign exchange.

According to the Indian Sugar Mills Association, the total sugar production in June, 1962 was 41,370 tonnes against 43,000 tonnes in the corresponding period of last season. This brings the total production of the season 1961-62, upto 30 June, 1962, to 2,710,000 tonnes as against 2,997,000 tonnes during the corresponding period of last season.

Offtake from the factories, during June 1962, including 40,000 tons despatched for exports, was 243,000 tonnes against 184,000 tonnes including 11,000 tonnes despatched for exports. Total despatches upto 30 June, 1962, amounted to 1,771,000 tonnes against 1,446,000 tonnes for the same period last year. The closing stock with the factories, as on 30 June, 1962, was 2,084,000 tonnes against 2,099,000 tonnes on the same date last year.

In the Hapur market, steadier conditions have continued to prevail although the demand for the commodity is not very brisk from the consuming areas. Mills are reported to be holding stocks expecting better prices, as stocks of gur and khandsari are now poor. Steady advices from Kanpur and the prospects of export of about 200,000 tons of raw sugar next season have also helped the firmer tendency in prices.

In the New York market, however, conditions have remained unsettled, pending the implications of the US Sugar Bill. Operators seem to prefer to mark time. The rate for the spot position improved by three points only, to finish a shade lower at 2.87 cents per pound. Sentiment is affected by an offer of 3,000 tons of Brazil's raw sugar at 2.85 cents.

In London, the price remains unchanged at £25.50 per ton for the period ended 16 July. In the white sugar market, isolated parcels of East German, Hungarian and Polish crystals have continued to be available at £21 per metric ton f.o.b.

CHEMICALS & DYES

The Bombay market for Dyes and Chemicals has presented a steady

4 August 1962

front. Demand is fairly encouraging and prices, with the exception of a few, have remained more or less firm.

Among Chemicals, Bleaching Powder is prominent and prices have shot up on the expectation that an import cut is imminent. The price for ICI small packing, touched at one time Rs 135 and the big Rs 115, before finishing at Rs 118 and Rs 108 respectively.

Although the rate for Caustic Soda was pushed up at one time to Rs 70 due to hectic buying by dealers, there was some selling pressure towards the close on reports of the arrival of a steamer from the UK with a substantial quantity of the material. Moreover, the demand from consumers, especially from the textile and soap industries, has tapered off with the inordinate rise in prices. The shortage of Soda Ash was reflected in the price, which was quoted better at Rs 29 for the ICI quality and Rs 24 for the indigenous quality.

As demand is consistent, prices in the Dyes section have remained generally firm. Among vat dyes, violet RR is better with the German and Japanese qualities quoting around Rs 74. Base colour are steady.

YARN

In the Bombay market, Yarn prices have moved up further during the week, thanks to demand and speculative support alike. Buyers are willing to pay as much as 317 per cent premium on licences. Sellers, agreeable to the so-called "deferred payment" of premium, are said to have ready offers of upto 340 per cent. The deferred payment is evolved by the trade with a view to hedging against the risks which might arise from official intervention or potential changes in Government's policy. The buyers pay 25 per cent of the premium amount in advance and the balance on the arrival of consignment.

The reported willingness of the authorities to raise the ceilings substantially indicates the eagerness of the Government to augment the exports of rayon fabrics. The trade in licences, therefore, has been flourishing and may not be disturbed in the foreseeable future.

Staple-Fibre yarn prices have remained firm with August delivery quoting around Rs 825.

NON-FERROUS METALS

Prices of Non-Ferrous Metals have generally continued to display a firmer tendency in the Bombay market. The only exception to the general trend was Zinc, which has suffered a setback due to profit-taking and contraction of support at the higher levels.

The chief stimulant for an all-round buying spree is said to be the Union Finance Minister's statement that the restrictions on imports will not only continue, but may be tightened. The remote possibility of getting supplies from abroad in the immediate future has provided another bullish factor.

Copper prices have touched higher levels on continued consumer demand, tightness of supply and the shortage of stocks. Lead prices have also showed an upward movement on persistent buying. Tin has reached a new high following persistent demand from actual users, while stockists are reluctant to sell.

RUBBER

In the Kottayam market, Rubber prices suffered a further setback last week in the absence of buying enquiry. Dunlops and National Tyre & Rubber Company, biggest of latex buyers, Firestone and Bata practically did not enter the market. The only buyer was Ceat Tyres.

It is learnt that the four companies mentioned above are holding big imported stocks. There is, therefore, hesitancy on their part to buy fresh stocks. There is, however, a belief in certain circles that prices are expected to hold steady at the current level. Apart from heavy rains, tapping has been practically nil in estates last week and it will take at least two weeks for supplies to reach a normal level.

The "Financial Times", London, has predicted that the price of natural rubber will fall later this year although, in the short term, the market will be strengthened by the collapse of Senator Symington's plan for an increased rate of release from the stockpiles. Mr Symington pressed for the release of 7,000 to 8,000 tons a month in place of the current 5,000 tons. His proposal has not been accepted. A second factor supporting short-term prices is the continuation of Russian purchases in Singapore at a fairly high rate of over 20,000 tons a month. There is, therefore, good reason to expect the Russians to buy less in the later months.

World production of natural rubber is lagging. During May, production was 150,000 long tons, deliveries from stockpiles 5,500 tons and consumption 187,000 tons. The consumption total included estimated gross imports into the USSR of 29,000 tons and into China of 15,500 tons. Figures for the first five months of the current year are:— Production 787,500 tons; stockpile deliveries 26,000 tons and consumption 905,000 tons (including estimated imports into the USSR and China of 137,250 tons and 52,250 tons respectively).

Stocks of natural rubber, at the end of May, amounted to 655,000 tons — 82,500 tons down since 1 January 1962. Production and consumption of synthetic rubber in May balance at 180,000 tons.

GOLD & SILVER

Prices on the Bombay Bullion Exchange displayed an easier tendency. Reports of increased arrivals, lower advices from Calcutta and the reduced demand for the metals, were the main contributory factors.

In the Silver section, arrivals were 50 bars as against an offtake of only 12 bars. Bhadon delivery moved between 213.05 and Rs 213.30, while the rate for ready (below .996) changed hands at Rs 212.05 to Rs 212.40.

Arrivals of Gold amounted to 5,000 tolas as against an offtake of 4,000 tolas. Bhadon delivery moved between Rs 124.55 and Rs 124.85, while the rate for the ready position was quoted at Rs 125.20 to Rs 125.50. Sovereign ruled firm at Rs 98.

OILS & OILSEEDS

Firm conditions were noticed on the Bombay Oilseeds Exchange. In the case of Groundnut, the recent upward movement in prices gathered further momentum due to fears that the crop might suffer on account of adverse weather in some of the major producing areas. The absence of rains in certain areas of Saurashtra was also stated to have affected the prospects adversely. In the circumstances, buyers were inclined to be aggressive, while the spot dealers preferred to hold on to their stocks. Groundnut Bold ready was quoted at Rs 48 and Groundnut Oil at Rs 19.25.

In the Castorseed section, trading was mainly of a speculative character. There was little indication of the expected US demand for castor oil and the fresh business with the UK was handicapped by the persistent disparity of £2 to £2½ per ton between domestic and foreign prices. Sellers were, however, cautious in going "short" in anticipation of a possible improvement in prices in the near future. Castor ready was quoted at Rs 34.12 and Castor Oil, commercial quality, at Rs 12.95.

The consistent firmness in rapeseed in North India had a favourable effect on the Linseed section. Sentiment was also aided by the reports that the State Trading Corporation had entered into commitments for the export of linseed oil. Dealers, who had sold supplies to the Corporation, were covering their position. Linseed ready was quoted at Rs 41.50 and Linseed Oil at Rs 17.20.

Slightly firmer conditions prevailed in the Madras Oilseeds market this week. Both offerings and offtake were limited and prices of both seeds and oils were kept under check. Conditions are different in Bombay where there was a spurt in oil prices and in futures. But such conditions do not obtain here and the trend showed a tendency to be firm with no prospect of sliding down as happened a fortnight ago.

Arrivals of Groundnut kernels locally were less than 60 tons daily, while in the districts of production like North and South Arcot, the daily arrivals remained around 400 tons. Small quantities of coromandel variety of kernels have also been coming in. In the districts the price of kernels is quoted at Rs 73/74 per bag of 80 kgs.

Both vanaspathi and Calcutta interests did not bestir themselves about groundnut oil and, therefore, the offtake was small from the South. Coupled with the lower interest of local bazar interests, the groundnut oil price steadied up though it did not show any tendency to go up. While there is demand for spot goods, trading in the August position is nominal. January 1963 vaida also remained nominal. Groundnut oil August and Ready both were quoted the same at Rs

160.70 per quintal till the end of last week. Ready goods were offered only at Rs 181 at which rate it continued till Saturday afternoon. The oil rate closed at Rs 182 per quintal on Saturday as well as on Monday last.

January vaida was nominal at Rs 176.50 on Wednesday last. It improved to Rs 177 in the next two days. By the week-end the quotation improved to Rs 179, but slid down later.

The quotation for kernels was at Rs 68/69 on Wednesday last. It gained a rupee the next day and still another rupee at the week-end. Coromandel, offered in the market from the middle of last week only in sizeable quantities, was placed at Rs 73 per 80 kgs.

Groundnut oil cake showed a small improvement in price by the week-end. Slight increase in oil price affected the price of oil cake.

While castor oil and gingelly oil remained unchanged, coconut oil went up due to the cut in copra imports.

The following were the closing quotations of oils and seeds in the Exchange Tuesday.

Groundnut oil per quintal ex-Madras godown cexpeller Ready 3 per cent FFA: Rs 182; August Vaida Rs 182, January 1963 Rs 178 Kernels per 80 kgs Coromandel Rs 74; Peanut Rs. 72. Castor oil per quintal Tiruppattur Rs 145.52. Coconut oil per tin Rs. 47. Gingelly oil per quintal Rs 202.80. Gingelly seed per bag Rs 73/74. Groundnut cake per bag Rs 29.50 to Rs 29.75.

The Groundnut oil price rules steady in the UK and continental destinations; but the price of deoiled cake has improved appreciably according to reports received here.

In the upcountry markets groundnut oil per candy of 500 lbs was continuing steady at the previous week's prices.

The prices obtained were as follows: Guntur/Vijayawada Rs 414 per candy; Vridhachalam Rs 406; Nandyal Rs 405; Villipuram Rs 407; Cuddappah/Yerraguntla Rs 405; Polachi Rs 405; Tanjore Rs 405 and Salem Rs 410.

HIDES & SKINS

There was no appreciable change in the tanned cowhide market, except that clearances were better consistent with local arrivals. UK inquiries, too, were not much in view of the coming holidays. The price quoted for the 5/5½ lb tanned cowhide was 49d to 50d. In semi-premium 5/5½ lb fourth was negotiated on the basis of 64d. But not much business was done. On semi-premium makes run, fourths and fifths business was reported at 74d, 64d, and 57d. In the 8/8½ lb run, fourth and fifth business was reported at 58d, 52d, and 43d.

There was good demand for 2/2½ lb tanned cow calf. Premium marks in the 2/2½ lb was quoted at 80d to 81d. Both tanned buffaloe hide and buffaloe calf hide remained unchanged. The continuous firm raw skin prices of goatskins influenced the unchanged firm rates in the tanned goatskin market. For 5/5½ lb the quotation for run, fourth and fifth were 16/3d, 13/6d, and 10/9d respectively. In 11/12 lbs skins good inquiries were noticed.

Hindustan Motors Pay 12½% Against 12%

Despite a decline in sales from Rs 30.45 crores to Rs 24.90 crores, Hindustan Motors Limited has reported a slight rise in the net profit, before providing for Depreciation and Taxation, to Rs 3.86 crores for the year ended 31 March 1962 from Rs 3.49 crores in the preceding year. The results would have been still more better, but for the prolonged labour strike which continued for two long months and the shortage of power during the first quarter of the period. After the strike was called off, every effort was made to raise production which, as a matter of fact, reached the all-time record of 2,365 vehicles.

In respect of allocations, the Depreciation amount is raised to Rs 73 lakhs from Rs 63.07 lakhs and Taxation to Rs 152 lakhs from Rs 113.50 lakhs, apart from maintaining General Reserve at Rs 50 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 11.50 lakhs against Rs 36 lakhs. The directors have proposed to raise the dividend on the Ordinary shares from 12 to 12½ per cent, taxable, for the year.

The production in the current year is going on as scheduled. There has been a notable increase in the indigenous content of the vehicles produced by the company. Machines, which were installed during the past two years, have gone into full production, resulting in improved working and reduction of foreign contents.

Every effort is being made to make the company self-sufficient as regards imported components. In this respect, an application for loan to the DLF is now pending with the Agency for International Development, USA. It is hoped that the decision will be made shortly. As soon as all formalities are completed, orders for mechanaries will be placed and these will enable the company to substantially reduce the imported components.

In the case of Bedford Trucks, the company has not yet received the required licences for capital goods from the Government. The directors state that the company could not make sufficient progress in production of shovels, scrapers, bull-dozers and dumpers on account of

delay in getting import licences for components and raw material for the same from the Government.

An application for capital goods required for the manufacture of shovels is still pending with the American Loaning Authority and is now expected to be considered soon. Manufacture of cranes has been taken in hand and is making steady progress.

Dividend Reduced by Lakshmi Mills

The voluntary cut in the price of cotton yarn, a similar reduction in respect of staple-fibre yarn, the steady rise in the price of raw cotton and the increase in the wage bill—all these factors are reflected in the working results of the Lakshmi Mills Company Limited for the year ended 31 March 1962. Despite a rise in sales from Rs 4.40 crores to Rs 4.69 crores, the net profit, before providing for Depreciation and Taxation, amounts to only Rs 79.27 lakhs as against Rs 83.24 lakhs for the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 22.52 lakhs from Rs 18.18 lakhs and Development Rebate Reserve to Rs 5.18 lakhs from Rs 2.09 lakhs. The provision for Taxation is, however, lower at Rs 25 lakhs against Rs 31 lakhs. The dividend on the equity shares is reduced from 30 to 25 per cent, subject to tax.

Indian Finance

The construction of the buildings of the staple-fibre spinning unit is nearing completion. In the meanwhile, 4,928 spindles are being worked at Palladam on staple-fibre whereby also the company has made good profits. Installation of machinery for the staple-fibre unit is expected to be completed by about the middle of 1963. Regarding Waste Spinning Unit, the import licence is awaited. Due to the long delivery period, the installation of 98 automatic looms is being delayed.

In the Coimbatore "A" Mills, the conversion to GX-2 drafting system is proceeding apace. The preparatory machinery for the same has been installed and commissioned. With regard to the improvements in the existing cards in Coimbatore, the changeover is nearing completion.

Indian Dyestuff Fares Well

Indian Dyestuff Industries Limited has fared well during the year ended 31 March 1962, thanks to the rise in sales from Rs 1.90 crores to Rs 2.58 crores. The net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 71.17 lakhs as against Rs 55.05 lakhs for the preceding year.

Except Development Rebate Reserve which is reduced from Rs 71.119 to Rs 49,026, all other allocations have been increased:—Depreciation from Rs 3.21 lakhs to Rs 4.91 lakhs; Taxation from Rs 24.00 lakhs to Rs 33.70 lakhs and General Reserve from Rs 12.30 lakhs to Rs 25.00 lakhs. The dividend on the Ordinary shares is raised by 1 per cent to 7 per cent, subject to tax.

The company has placed orders for the purchase of machinery and equipments pertaining to the Unit No. II amounting to Rs 3.68 lakhs. The

4 August 1962

company has issued 8,879 equity shares to Messrs. Aziende Colori Nazionali Affini, Italy, in terms of the collaboration agreement against their equity participation in respect to the machinery equipments they have supplied to the company.

Bharat Starch Skips

Bharat Starch & Chemicals Limited has reported a slight decline in the net profit from Rs 3.29 lakhs to Rs 2.46 lakhs for the year ended 31 January 1962 despite a rise in sales from Rs 63.14 lakhs to Rs 69.65 lakhs. The company manufactured 7,678 tonnes of starch crushing 12,133 tonnes of maize as against 7,334 tonnes of starch out of 11,552 tonnes of maize in the preceding year. The import arrangements for American maize under PL480 by the industry through All-India Starch Manufacturers' Association continued unhampered.

In respect of allocations, the Depreciation amount is almost maintained at Rs 1.08 lakhs against Rs 1.07 lakhs, while the provision for Development Rebate Reserve is lower at Rs 7,000

against Rs 22,000. The dividend is skipped again for the year. There is a debit balance of Rs 1.31 lakhs which is carried forward to next year.

The directors state that the soap plant remained idle for most part of the year, as the import licences for the import of palm oil in adequate quantities could not be secured.

Dhunseri Tea Pays Less

The Dhunseri Tea Company has made a net profit of only Rs 3.57 lakhs as against Rs 5.66 lakhs for 1960. After transferring Rs 2.00 lakhs from Rehabilitation Reserve, the directors have allocated Rs 1.2 lakhs (Rs 1.43 lakhs) to Depreciation; Rs 1.00 lakhs (Rs 2.10 lakhs) to Taxation and Rs 8,000 (Rs 27,000) to Development Rebate Reserve. The dividend is reduced from 20 to 15 per cent, subject to tax.

The crop outturn is higher at 632,799 kgs against 591,938 kgs; but the average price realised is lower at Rs 4.58 against Rs 5.31 per kg.

For the Investor

INVESTMENT GOSSIP Outlook for Equities

Stock market sentiment has considerably improved during the past week, with trading characterised by revival of buying interest. Speculative counters have recorded moderate gains under the leadership of Indian Iron which has been cheered by news of an interim Dividend of 80 p per share. The price of this scrip has been pushed up on expectations of further good news at the time of the declaration of the final dividend. Evidently such a calculation is based on the belief that a favourable retention price will be allowed for the company. Moreover indications are that the expansion plans of the private sector steel companies will receive favourable consideration from Government in view of the growing shortage of steel in the country. In this connection marketmen have noted a press report that IISCO's plan for doubling its capacity is likely to get official sanction.

The news, that the Aid India Club at its meeting early this week has made fresh pledges of aid for the second year of the Third Plan narrowing the gap to \$80 million, contributed in a large measure toward reviving confidence in the stock market. Although sentiment had already been encouraged by the hopeful estimate of the outcome of his recent European tour by the Union Finance Minister, the market was eagerly awaiting the announcement at the end of its meeting by the Aid India Club before moving either way. Now that it has become clear that there will be no serious difficulty in regard to the implementation of plan projects during the current year, much of the earlier anxiety has been dispelled. Even so, the fact remains that there is still a gap, though comparatively a small one, remaining to be bridged. It would appear that Government is confident that it will not be left unattended for long.

It will however be wrong to think that because the major portion of the foreign exchange requirements of the second year of the Third Plan has been pledged, the outlook for equities will automatically improve. For, since most of the aid promised by the Club is tied to specific projects, the difficulty as regards main-tenance imports will remain. It is not clear how this problem will be tackled. The only way out appears to be a sizable increase in export earnings and this is not going to be easy. In the meantime, there are reports of acute shortage of raw materials in a number of key indus-

tries. For instance the engineering industry is not getting even fifty per cent of its requirements of pig iron and steel and the supply position in those is daily becoming acute in view of the disappointing level of domestic production of steel. The question of shortage of power, fuel and transport is yet to be effectively tackled. In the face of the continued shortage of basic industrial materials and services, it will be rash to assume a strident rise in industrial production atleast during the current year.

NEW ISSUE NOTES Jeewanlal

The directors of Jeewanlal (1929), Limited have decided to issue 3,60,000 equity shares of Rs 10 each and 18,000 Redeemable Preference shares of Rs 100 each to the existing shareholders. The equity shares will be offered, at par, to those shareholders whose names stand registered as on 18 August, 1962 in the proportion of one for two shares held. The new shares will rank in all respects *pari passu* with the existing shares except that the new shares shall only be entitled to participate in any dividend in respect of the financial year ending on 31 December, 1962, pro rata from the date of allotment calculated on the amount actually paid-up thereon. The preference shares will be offered, at par, to the existing equity shareholders in the proportion of one redeemable preference share for every 40 equity shares held. These shares will carry the right to receive, in preference to the holders of equity shares, a fixed cumulative preferential dividend of 9½ per cent per annum for the time being paid up on such shares.

The company will have the option to redeem the said preference shares in part or whole; but such redemption shall not take effect earlier than 31 December 1974, or 12 years from the date of issue, whichever is later. In respect of the above new issues, the terms of payment will be as follows:—equity shares—Rs 5 a share on application and Rs 5 a share on allotment; Preference shares—Rs 50 per share on application and Rs 50 per share on allotment. The Board of Directors reserve the right to offer to the public the balance of shares not taken up, at par or premium, whichever the Board considers fit. Transfer Books of the company will be closed from 15 August to 18 August, 1962.

Subject to the consent of the Controller of Capital Issues, a holder of preference shares shall be entitled, from time to time, at any time after five years from the date of allotment and not later than ten

years from such date, to convert part or whole of the preference shares held by him into equity shares, on the basis of one fully paid-up preference share for ten fully paid-up equity shares. A holder wishing to convert any preference shares has to give not less than six months' notice thereof in writing to the company so as to expire on or before 31 December of any year to convert such number of preference shares held by him as may be specified. In the above respect, an extraordinary general meeting is convened on 18 August, 1962.

Asiatic Oxygen

The directors of Asiatic Oxygen Limited have announced the allotment policy in regard to their recent public issue of 6,70,000 equity shares of Rs 10 each. The basis of allotment has been approved by the Calcutta Stock Exchange authorities. The issue was over-subscribed by 14.70 times. An applicant for 50 shares will get 10; for 100 shares—20; for 150 shares—25; for 200 to 400 shares—30; for 450 to 600 shares—50; for 650 to 800 shares—60; for 850 to 1,200 shares—80; for 1,250 to 1,600 shares—100; for 1,650 to 2,000 shares—125; for 2,050 to 2,500 shares—150; for 2,550 to 3,000 shares—175; for 3,050 to 3,500—200; for 3,550 to 4,000—225; for 4,050 to 6,000 shares—250; for 6,050 to 8,000 shares—300; for 8,050 to 10,000—400; for 10,050 to 15,000 shares—500; for 15,050 to 20,000—650; for 20,050 to 40,000 shares—shares—500; for 15,050 to 20,000—1,000; for 40,050 to 60,000—1,500; for 60,050 to 80,000—2,000 and for over 10,000 shares—2,385.

INVESTMENT NOTES

IISCO

The Indian Iron & Steel Company Limited has adopted an unusual step of declaring an interim dividend of 80 nP per share, taxable, for the year ended 31 March 1962. This dividend is payable only to those shareholders whose names stand registered in the books of the company on 13 August 1962. A final dividend, if and when declared, will also be available to the same shareholders, who are registered as on 13 August. Meanwhile, on account of the delay in the receipt of information from the Centre about the revision in the retention prices of steel, it is not possible for the company to prepare its final accounts. The company has, therefore, obtained special permission from the Registrar

THE INDIAN IRON & STEEL CO. LTD.

It is notified that the Board of Directors of the Indian Iron & Steel Co. Ltd. in meeting held on the 31st July 1962 have declared by way of interim dividend a first distribution of dividend in respect of the year ended 31st March 1962 of 80 nP gross per share on the Ordinary Share Capital, being at the rate of 8% per annum. This action has been taken in view of the fact that closure of the Accounts for the year is unavoidably delayed pending notification by Government of the final sales retention price of steel and iron to apply in respect of the two-year price fixation period ended the 31st March 1962. Payment of this dividend will be made under deduction of tax at the prescribed rates to those Shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 13th August 1962 or to their mandatees.

On closure of the Accounts the Directors will recommend the further and final distribution of dividend for the year on the Ordinary Share Capital for declaration by the Shareholders at the Annual General Meeting of the Company to be convened in due course. This further dividend, when declared, will be payable also to those registered as Shareholders on the 13th August 1962. In the meantime, in case of necessity, the Registrar of Companies, West Bengal, has granted an extension in the first instance of one and a half months from the 30th September 1962 of the last date for holding of the Annual General Meeting for the current year.

By Order of the Board
MARTIN BURN LTD.
F. G. LIVESEDGE
Managing Director
Managing Agents

Registered Office:
12 Mission Row,
Calcutta.
31st July 1962.

of Companies, West Bengal, to postpone its meeting to the 15 November 1962.

Meanwhile, the production figures released by the company have shown an all-round rise in July as compared to the previous month, mainly due to the fact that one blast furnace was relined and brought into commission in mid-July. The output of Pig Iron has risen to 96,151 metric tonnes from 87,639 tonnes; steel ingots to 78,352 tonnes from 77,029 tonnes and Saleable Steel to 53,006 tonnes from 56,938 tonnes. Dispatches are, however, lower at 36,251 tonnes against 60,865 tonnes. In this connection, it is stated that about 4,000 tonnes of finished materials could not be despatched due to railway's failure to provide necessary wagons.

STOCK EXCHANGES

Cheerful Sentiment

Watch-Dog Writes:

STOCK markets have presented a cheerful appearance during the week under report. Apart from the fact that the outcome of the meeting of the Aid-India Club is considered to be encouraging, the proposal by the Indian Iron & Steel Company to pay an interim dividend of 80 nP a share pending the announcement of the revised steel retention prices, and double its output has imparted renewed strength to the markets.

The production figures, released by the IISCO for last month, have shown an all-round increase as compared to those of the previous month. There are also rumours of a comparatively higher retention price being approved by the Government. These factors have induced the bull operators to be more active than they have been recently, while 'shorts' have been compelled to cover in a rising market.

Equities on the Calcutta Stock Exchange forged ahead under the lead of Indian Irons, resulting in a considerable expansion of turnover. Activity on the Bombay Stock Exchange was brisk with all the major industrial sections recording handsome gains an balance.

Prices on the Madras Stock Exchange displayed a firmer tendency.

CALCUTTA

Friday Evening.

THE upward trend in equity prices, that was noticed on the local stock exchange last week, gathered further momentum during the week under review, being influenced by some favourable developments. Till the end of last week, it was thought that any real change in the trading pattern would begin only when the outcome of the Aid-India Club meeting was known, especially when there were rumours that the meeting had been postponed from 30 July to mid-August.

But, when the meeting took place on the scheduled date—30 July—and the outcome was favourable

with indications of India getting more assistance, prices forged ahead under the impact of hectic buying in several leading shares. Sentiment was also aided by the subsequent reports from Bombay that the Union Ministry of Steel had agreed to the Indian Iron & Steel Company's proposal to double its output, the announcement of an interim dividend of 80 nP a share for 1961-62 and the news of an all-round increase in production last month.

Another factor, which gave impetus to the market was the expectation of a considerably higher retention price of steel. Hopes were also entertained by some circles that unutilised credits might be available for liberalising maintenance imports and there would be a change in official policy. For obvious reasons, offerings even at higher levels found ready absorption by covering purchases. The only fly in the ointment was the anxiety in respect of shortage of power, coal and transport.

Only nominal activity was noticed in the Gilt-edged section. While the demand for short and medium-dated loans was more or less maintained, there was no interest in longer maturities with buyers reserved. 3 per cent 1986 Conversion Loan changed hands at Rs 68.95 to Rs 69.25, to finish the week at Rs 69.15.

In the Banking section, there was no activity with the Punjab National quoting Rs 20.50 and the United Commercial Rs 88.

In the week's dealings, Indian Irons enjoyed good support on prospects of an early announcement as well as an increase in the steel retention prices. While a section of the market is inclined to be of the opinion that the announcement might not be long delayed, the steel companies in the private sector are obviously unwilling to close their accounts for the year ended 31 March 1962 until it is definitely known what is the exact increase in retention prices. The Indian Iron & Steel Company has, therefore, adopted the unusual step of declaring a taxable interim dividend of 80 nP per share. The initial reaction to the announcement of an interim dividend was rather mixed. There was a desire to have an idea of what exactly would be the final dividend. Subsequently, however, the notification issued by the company stating the reasons for taking such a step as well as the decision made by the directors to fix up only one closing date both for the interim and final dividends, induced a smart recovery in prices.

After opening steady at Rs 25.84, Indian Irons made a gradual advance to Rs 26.46 selling pressure at this level brought down the scrip at one time to Rs 25.86 before recovering again towards the close to Rs 26.78. In sympathy, TEXMACO moved up to Rs 23.60 from a low of Rs 22.80; Guest, Keen, Williams to Rs 38.75 from Rs 37.94 and Jessop to Rs 22.54 from Rs 21.04, to close finally at Rs 23.45; Rs 38.75 and Rs 22.56 respectively. Binani Metals were a steady feature at Rs 11.44, while Calcutta Steel turned ex-dividend at Rs 15.44. Jay Engineering were in enquiry up

to Rs 27.62 from Rs 27.25 with J. K. Steel hovering narrowly around Rs 16.12.

Jute shares ruled initially weak on fears of a fall in production due to the recent power-cut and the absence of fresh enquiry for jute goods from overseas buyers. There was, however, a smart recovery towards the close in sympathy with the general trend of the market. Birlas were depressed at one time to Rs 32.25 and Howrah to Rs 20.81, before improving at the close to Rs 33.75 and Rs 21.00 respectively. Bally were, however, on offer at Rs 303 against Rs 308 and New Central at Rs 15.56 against Rs 16.00. National came in for some enquiry up to Rs 24.94 from Rs 23.25.

Coal shares fared better due to the revival of support on the belief that the Government might take early steps to remove the various difficulties facing the industry. Bengal met with business at Rs 343 to Rs 346; East Indian at Rs 50 to Rs 50.75; Burrakur at Rs 17.31 to Rs 17.62 and Western Bengal at Rs 10.19 to Rs 10.37.

As there was little news of cheering implications from tea auctions, either at Calcutta or London, Tea shares continued to be neglected.

Sugar shares came in for selective enquiry. Thanks to the recent issue of bonus shares, Dyer Meakins were in demand up to Rs 57 and dealings started on the ex-bonus basis from Thursday at rates varying from Rs 30 to Rs 33. Raza-Buland were rather quiet at Rs 9.19 against Rs 9.50.

Textile shares moved up moderately in sympathy with the general trend of the market. Trading was, however, restricted due to fears of a cut in production in the coming months in view of the shortage of raw cotton. Elgins were done at Rs 19.75 to Rs 20.06; Dunbar at Rs 15.25 to Rs 15.62. J. K. Rayon changed hands on the ex-dividend from Thursday at Rs 17.69 to Rs 17.94 as against Rs 18.12 cd quoted in the previous week.

Miscellaneous issues came in for good attention and the entire list emerged with handsome gains on balance, as will be clear from the price trends of a few selected shares:

Excluding borrowings from R.B.I. and

The Third Five Year Plan
Bird-Heilgers' part in it...

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs. 1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy: stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and tops the list of Bird-Heilgers' exporting activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

INVESTOR'S SUPPLEMENT

Reactionary Trend in July

Sentiment in the stock market during July was depressed on account of a number of uncertain elements in the investment situation. In the first place there was the continued anxiety over the availability of adequate foreign aid for the second year of the Third Plan. It was apprehended that in view of the adverse reaction in Western countries to the Indian proposal to buy jet fighters from the USSR as well as their earlier unsympathetic attitude toward India in its treatment of the Kashmir question, they might not evince much enthusiasm in aiding India. In the meantime, developments in Wall Street were not quite conducive to optimism as to the response from US to India's requirements of foreign exchange for the Third Plan. During the month under review, Wall Street came under heavy pressure and the weakness of Wall Street was interpreted to mean that the US economy had come to stagnate. One implication of a recession in US, it was pointed out, would be lack of enthusiasm in US for rendering assistance to developing countries. If, as was feared last month, there was a sizable gap between the requirements of the second year of the Third Plan and the aid available, there would be a serious setback to the Third Plan itself. Though toward the close of the month, sentiment tended to improve somewhat on the optimistic appraisal of his European tour by the Union Finance Minister, prices of equities continued to rule dull as operators would rather wait for the outcome of the meeting of the Aid India Club scheduled for the end of the month before extending commitments.

In earlier dealings during the month, prices tended to be depressed following the Reserve Bank's decision to raise the penal rate for borrowings by the Scheduled banks. As against the three tier system that had been in vogue, a system with four tiers had been introduced. It was feared that the change would increase the cost of bank credit for industry as banks would be obliged to pay a higher rate of interest for their borrowings beyond a particular limit. Higher levels of equities had become difficult to maintain during the month partly on account of the continued anxiety felt over the development in the country's northern border region. For some time it looked as though matters would take a serious turn on the reports of some fatal firing by the Chinese troops at our forward posts. Although after that incident nothing untoward had taken place, there was no inclination in the country to be complacent about the border situation. It was generally believed that the border would require continuous vigilance for a considerable time to come. The implication of the need for stationing a strong force in the border areas would be mounting defence expenditure and the stock market was naturally concerned over the possibility of further taxation.

It is not surprising that share

prices in July displayed a declining trend. For, concern was expressed over the increasing idle capacity in industry. Several adverse factors have combined to slow down production. It is true that considerable headway has been made in recent years in building up additional industrial capacity. But what does not seem to have received much attention is whether there is enough raw materials to engage in full the additional capacity. In the first place, the severe restriction on imports necessitated by the acute

shortage of foreign exchange has affected even maintenance imports. As several of the newly set up units depend in a smaller or greater measure on imported raw materials or components, the severe restriction on imports would seriously interfere with their working. Secondly, the problem of fuel supply is far from being tackled satisfactorily. Thirdly, there is growing apprehension in the country that industrial production will be adversely affected by power shortage. In the first half of the month, investors were worried

†Ex-dividend.

over the drastic power cut imposed in Madras while a similar situation was anticipated in Maharashtra and West Bengal. The power cut in Madras however proved short-lived and there was no necessity to implement earlier plans of a power cut in Maharashtra as water in the hydel reservoirs in the State rose with the onset of the monsoon. In West Bengal, the Calcutta Electric Supply Corporation had notified that a fifteen per cent power cut would be imposed on jute and engineering industries. Though the power cut in respect of the jute mills was not enforced on the intervention of the Board of Trade the engineering industries had to put up with a cut. It is apprehended that with the demand for power on the increase and plans for the expansion of power production being retarded by the shortage of foreign exchange, industries would not be able to utilise in full their additional installed capacity accruing in the course of the current Plan. Other contributory causes for the depression in stock markets during July were the continued delay in the announcement of the new retention price for steel and the dear money policy as was revealed by the pattern of interest offered for the new Central loans.

Sectionwise, jute shares were generally quiet during the month though for some time the trend was steady. In earlier dealings, sentiment was adversely affected by the reported decision of the CESC to impose a 15 per cent power cut on the industry. The decision however was not implemented thanks to the intervention of the Board of Trade. Even so, sentiment in later dealings again turned quiet as foreign enquiries were at a disappointing level. The news of the postponement of the Argentine order and of a lower burlap consumption during June contributed to the lack of interest. Coal shares continued to be a dull market with investors showing little interest in most of the shares. It was evident that the outlook for the coal industry was not considered to be bright especially after the disappointing increase in the selling price of coal sanctioned by Government recently.

Cotton textile shares attracted little attention in view of the gloomy prospects for the industry. The greatest difficulty the industry was encountering was shortage of cotton and it was apprehended that it might lead even to a cut in production. The export performance of the industry last year has strengthened the belief that unless it is able to bring about a reduction in the price of its products, the record would continue to be disappointing.

Tea shares were a dull market in the absence of fresh interest. Lack of support for tea shares stemmed from the disappointing price levels obtained at the tea auctions. With prices realised on the low side, prospects of higher dividend distribution by tea companies were not rated bright.

(a) After transferring Rs 53,872 from over provision for liability.

(b) After transferring Rs 255,000 from Reserve Fund.

(c) After transferring Rs 72,950 from Development Rebate Reserve.

(d) After writing back Rs 18,805 being provision for taxation for Indian Taxation in previous years.

(e) After transferring Rs 100,000 from provision for taxation and Rs 14,000 from Development Rebate Reserve.

(f) After transferring Rs 45,000 from General Reserve and writing back Rs 104,280 being excess provision for depreciation.

(g) After transferring Rs 550,000 from General Reserve.

(h) After transferring Rs 2,865,300 from General Reserve No. 1.

(i) After transferring Rs 100,000 from General Reserve and writing back Rs 90,000 being liability in respect of Inter-state Sales Tax.

(j) Includes Rs 2,240,000 being profit on sale of Orient Mill Property and Assets and writing back Rs 18,300 being Development Rebate Reserve.

(k) After transferring Rs 90,000 from General Reserve.

(l) After transferring Rs 100,000 from General Reserve and Rs 100,000 from Debenture Redemption Reserve.

(m) After transferring Rs 35,000 from Dividend Equalisation Reserve.

(n) After transferring Rs 500,000 from Taxation Contingencies Reserve.

(o) After transferring Rs 120,000 from Contingency Reserve.

(p) After transferring Rs 230,188 from General Reserve No. 1; Rs 360,000 from General Reserve No. 2 and Rs 45,500 from Dividend Equalisation Reserve.

(q) After writing back Rs 100,000 being excess provision for taxation.

(r) After writing back Rs 900,000 from provision for depreciation and including Rs 108,227 being dividends forfeited.

(s) After transferring Rs 2,865,218 from Reserve No. 1.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After writing back Rs 1,00,000 from provision against jute stocks and jute contracted for.

(v) After transferring Rs 100,000 from General Reserve and writing back Rs 30,000 being over provision for Inter-state Sales Tax.

(a) After transferring Rs 20,688 from General Reserve No. 1.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 80,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 1,098,546 from General Reserve No. 1.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 119,828 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 1,137,451 from Contingency Reserve.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 1,207,838 from General Reserve.

(s) After transferring Rs 289,747 being provisions made in previous year.

(t) After transferring Rs 200,000 from General Reserve.

(w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 390,580 from General Reserve.

(y) After writing back Rs 65,163 being excess provision in previous years.

(a1) After transferring Rs 1,078,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 300,000 from General Reserve.

(a4) After transferring Rs 308,000 from General Reserve.

(a5) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 88,529.

(a6) After transferring Rs 750,000 from General Reserve and Rs 48,088 from excess provision for Bonus.

(a7) After transferring Rs 650,000 from General Reserve and including Rs 166,002 being Refund of Income Tax.

11 August 1962

THE CHARTERED BANK

(Incorporated in England by Royal Charter 1853).
(Liability of Stockholders Limited).

Associated Institution:—
THE ALLAHABAD BANK LTD.

Head Office:
38, BISHOPSGATE LONDON,
E.C.2

West End Branch, London:

2, Regent Street, London S.W.1.
and at

MANCHESTER, LIVERPOOL, NEW
YORK and HAMBURG.

Branches of the Bank are established
at most centres of commercial
importance throughout Southern
and South-Eastern Asia and the
Far East.

Branches of The Eastern Bank
Limited, a wholly-owned subsidiary
of The Chartered Bank, are estab-
lished in Iraq, Bahrain, in the
Persian Gulf at Qatar and Sharjah,
Lebanon and Hadramaut and in
India, Pakistan, Ceylon, Aden,
Singapore and Malaya.

Calcutta Office:
4, Netaji Subhas Road.

Sub Branch: I. G. THOMSON
21, Chowringhee Road. Manager.

Managing Agents: — LIONEL EDWARDS (PRIVATE) LTD.

Look what you get with

HONEYWELL instrumentation

Far more than just instruments, you
get a complete control system, custom
designed for your specific needs, by
men who know your processes.

You get expert, interested assistance
every step of the way, with your
initial planning and long after your
instruments are installed. Blue Star
assume full responsibility for the
engineering, installation and start-up
of your system.

You get training for your instrument
technicians in the most up-to-date

maintenance methods at the tuition-
free Blue Star-Honeywell Instrumen-
tation Education Centre at Bombay.
You get prompt, competent service
from your nearest Blue Star office and
immediate replacement of emergency
repair parts.

These are but some of the plus-values
that comprise instrumentation by
Honeywell...and they apply regard-
less of whether you buy a single
instrument, a replacement part or a
complete control system.

Sold and serviced in India exclusively by

BLUE STAR

States' New Loans

The State Governments' borrowing programme, announced during the course of the week, is by any manner of reckoning a formidable one. Although some of the States have loans maturing this year, which are eligible for conversion, the net new cash that will be required for full subscription amounts to a considerable figure, and at this stage at least it looks as if the pressure upon the money market, especially the banking system, will be greater than was the case in respect of Central Government borrowing in the middle of last month. For there is one significant difference in the two sets of loans. At the time of the Centre's borrowing effort it does not greatly matter if the cash support from the public institutional investors fails to come up to expectations; the Reserve Bank can always be relied upon to make good any shortfall, and if the money market turns easy later on the banks usually are a consistent purchaser of gilt-edged through the Reserve Bank tap. In the event, the Reserve Bank acts as a middleman and as a temporary sanctuary for the new loan. Indeed, there is some semblance of evidence to suggest that the Reserve Bank put in some Rs 60 crores of the total of Rs 103 crores of cash.

But we gather that the Reserve Bank does not customarily buy State Government securities on its own account. Thus the total of Rs 93.5 crores, that is sought by the States, will have to be provided by the outside investing public; this amount of course will stand reduced by conversion applications which, it may be mentioned, could possibly aggregate about Rs 15 crores. Nevertheless the net new cash that will have to be found is about Rs 78 crores; and this contrasts with Rs 43 crores of subscriptions of this nature to the Centre's new loan from entities other than Reserve Bank.

Secondly, the pressure upon the money market, by way of drawing down of deposits, was small in the case of the Central Government loans. We must expect a greater drain on deposits, and therefore greater strain upon the banking system. It was a remarkable feature of the Centre's new loan week, that call money did not exceed 4 per cent and that the banking system was able to avoid any recourse to central banking credit.

Thirdly there is the fact that no coercive powers are utilised to elicit subscriptions for the Centre's borrowing. Indeed this year the Reserve Bank is understood to have indicated to the banks that if their subscriptions entailed central banking credit they would be better advised not to subscribe at all. But the States are helpless and when their target of borrowings is as large as it is they are compelled to use every measure of suasion that they are capable of.

Naturally the Life Insurance Corporation will be called upon for large-scale subscriptions. An amount of anything like Rs 30 crores, as compared with the LIC's cash support of Rs 20 crores for the Centre's new loans, may be involved. The provident funds and other institutional investors will normally be expected to muster another Rs 10 crores; and the drain on deposits of banks could there-

fore be in the environs of some Rs 40 crores. Then the State Governments, or at least, such of them as possess (like Uttar Pradesh) various Reserve and departmental funds, usually invest somewhat in one another's loans; and we may presume that the pat-me-and-I'll-pat-you-back subscriptions could be as large as Rs 10 crores. But there will still remain another Rs 30 crores to make up the target, and we are afraid that it will be the banking system which will be expected to fill the gap.

And here we come to the crux of the matter. An interest coupon of 4½ per cent, which the new State loans carry, is as enticing and attractive. A twelve-year maturity, from the viewpoint of banks, is not. And a positive deterrent is the certain fact of the new loans quoting at a discount, vis-a-vis the issue prices, even before the subscription lists open. In the light of banks' reluctance to invest in a 3½ per cent 1968, how can we expect them to be enthusiastic about a 4½ per cent 1974 series?

But enthusiasm or no, the Banks constituted by the State Governments is willing, and the poor banks cannot reject any proposal they receive. On the basis of a depreciation of one per cent and Rs 30 crores of cash subscriptions, the dowry that the banks will reluctantly pay works out to Rs 30 lakhs. Banks cannot obviously afford a loss of such dimensions, but they can be seen to have little choice in the matter.

Hence we suggest that the whole, pattern of States' borrowings has to be reviewed and revised. If they want to stick to medium-term series of loans, then they have to be more modest in their targets, or with the help of the Reserve Bank arrange for a broadening of the market for State loans. If, on the other hand, they cannot make do with smaller realisations from their new loan efforts, then in all conscience their borrowings must be on a two-tier basis, with a shorter-term series meant particularly for the banking system.

Little can be done to rectify the situation this year. But for the next year at least we trust our suggestions will be borne in mind. The banks for their part would do well to accept philosophically the fact of their having to put in something like Rs 30 crores. This means that till the opening of the subscription lists late this month they should conserve their resources, however much they might desire to invest in the 3½ per cent 1968. In the second place they had best resist any temptation to sell the new State loans even though a small loss might be experienced. There is no reason why they should not wait a while and gradually dispose of their new holdings to entities which will hold on to the State loans up to maturity. So that banks in this regard can be assisted, the State Governments through the Reserve Bank should arrange open market operations to support the new loans at the issue prices. In that case we may yet avoid the sorry experience of past years, when even before a new State loan came on the market it was freely offered at a discount.

Again the "Package Approach" seems to be based on an imperfect appreciation of the facts regarding the actual conditions under which cotton and oilseeds are cultivated in our country. The 'Package' prescribed for cotton and oilseeds, as in the case of cereals, is made up of chemical fertilisers, improved seeds and credit and other facilities. In suggesting this combination, it is assumed that there is considerable scope for introducing improved seeds and that fertilisers would be as effective in rain-fed as in the irrigated areas. Nearly three-quarters of the area under cotton were covered by improved seeds by the end of the Second Plan. As these areas raise most of the varieties of commercial importance, the scope

A comprehensive programme to popularise the practice of growing green manure for composting in the dry farming areas could also help to increase the output of cotton and oil seeds by releasing a part of the land under millets for cultivation of commercial crops. If the yield of millets is increased, as it will be if compost is extensively used, the local

The problem of increased production of cotton or oilseeds cannot be tackled in isolation. The battle has to be fought on the cereal front. And it can be won if the contents of the "Package" that is applied are chosen with due regard to the realities of the agronomic situation in the country.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

Embarras de Riqueza—II

So the first conclusion that we may come to is that following a rich harvest year consumer goods have succeeded in drawing rural money into the banking system. It may be noted here, incidentally, that production of consumer goods has not been affected by shortages, whether of power and transport or of foreign exchange, to the extent that organised and heavy industry has suffered. We may give one more instance: a few years ago the soap industry was bemoaning the considerable idle capacity on its hands; today the demand is adequate not only to the supply but also to the capacity.

The third factor responsible for Deposit growth is a strictly banking phenomenon. The introduction of Deposit insurance has induced greater confidence among the depositing public; and the public has had greater opportunities to acquire the banking habit with the branch expansion programmes of the banking system. A recent study by the Reserve Bank proved conclusively that the ownership of Deposits is increasingly vested in the category of individuals.

Fourteen State Governments have announced their borrowing programme for 1962-63 for a total amount of Rs 93.5 crores. All the loans carry a uniform rate of interest of $4\frac{1}{2}$ per cent. Particulars of the loans are as follows:

States	Amount of Loan (Rs crores)	Issue Price per cent
Andhra Pradesh	10	99.50
Assam	3	99.50
Bihar	4	99.50
Gujarat	6	100.00
Kerala	4	99.50
Madhya Pradesh	5	99.50
Madras	12	99.75
Maharashtra	12.50	100.00
Mysore	6	99.75
Orissa	7	99.50
Punjab	3.50	99.50
Rajasthan	4.50	99.50
Uttar Pradesh	9	99.75
West Bengal	7	99.75

Five States have offered conversion facilities against the maturing loans aggregating Rs 15.60 crores. These are the 3 per cent Bombay Provincial Development Loan 1962 and 3½ per cent Bombay State Development Loan 1962 and the 3½ per cent 1962 loans of Madhya Pradesh, Madras, Uttar Pradesh and West Bengal. For all these loans conversion will be at par.

A fourth factor, somewhat flowing from the second conclusion, relates to companies whose cash assets have risen because they have been unable to utilise such resources in any expansion that depended upon imported plant and equipment. Here, too, the Reserve Bank study disclosed that Time Deposits of companies had appreciably risen in recent years; that this factor holds good during the current year can hardly be doubted.

We may now consider why Advances are declining. Shortage of foreign exchange in some cases might involve an increase in the borrowings of industry. To the extent that for lack of a component an industrial unit is not able to offer the completed commodity for sale, semi-manufactures may be increasingly in stock with such companies as might depend upon imported components. But this

We expect, we may state in conclusion, such conditions to continue for some time—perhaps for as long as a year. The only interruption to easy money conditions should be offered at the end of the month by the State loans.

BANK RETURNS⁺ Gilts Further Added to

According to the returns of the Reserve Bank, month-early disbursements have, as at 3 August 1962, as usual interrupted the smooth progress of the current slack season. Active Note Circulation has, after a few weeks of successive contraction, expanded by Rs 8.47 crores to Rs 2,045.20 crores, and there has also been outflow of Rupee Coin in the amount of Rs 0.74 crore. For the purpose of replenishing Balances Held Abroad, Foreign Securities have been drawn down by Rs 3.50 crores to Rs 92.84 crores. There has been countervailing transfer to Rupee Securities which are higher by Rs 3.52 crores at Rs 1,733.49 crores. The result is that the cash balances of the Reserve Bank have been drawn down by Rs 9.18 crores to Rs 18.72 crores. But for the slack season currency expansion should have been more pronounced.

The return for the Banking Department gives the hint that there has been deficit financing in order that payments could be made to the State Governments. On the face of it, indeed, there does not appear to be any recourse to created money, but we must bear in mind the fact that the State Bank is known to have purchased securities for Rs 7 crores, and the possibility of other Scheduled Banks having made some purchase cannot be ruled out. Thus, Investments in the Banking Department are higher by Rs 5.20 crores at Rs 305.37 crores, and of this some Rs 3½ crores can be traced to transfer from Issue Department. But if regard is had for the tap sales to State Bank (and also presumably to other Scheduled Banks) it can reasonably be inferred that the Centre has sold ad hoc for about Rs 10 crores in favour of the Reserve Bank.

The deficit financing was necessary, it may be repeated, for the sake of payments to the State Governments. Deposits are higher by Rs 10.48 crores at Rs 36.07 crores on top of a reduction of Rs 6.28 crores to Rs 3.74 crores in their ways and means borrowings. The Centre's balances consequently have moved down by Rs 5.49 crores to Rs 49.08 crores.

The beginning of the month disbursements have also meant some strain to the banking

system. Reserve Balances of Scheduled Banks have fallen by Rs 7.81 crores to Rs 93.23 crores besides an increase of Rs 1.80 crores to Rs 2.43 crores in their borrowings from the Reserve Bank.

Other changes are minor in character. Deposits of State Co-operative Banks are lower nominally at Rs 1.63 crores, loans and advances from the Operations Fund to the State Co-operative Banks are a shade higher at Rs 12.18 crores and other loans and advances to the same category of institutions are higher by Rs 1.16 crores at Rs 115.79 crores.

The State Bank, in its return for 3 August, notwithstanding the fact that it is the first week of a month, reports a rise of about Rs 7 crores to Rs 276.29 crores in its gilt-edged holdings. This has been made possible by (a) the rise of Rs 0.94 crore to Rs 584.40 crores in Deposits; (b) the contraction of Rs 1.54 crores to Rs 277.58 crores in the total of Advances; (c) a small reduction in Other Assets; and (d) a fall of Rs 1.41 crores to Rs 27.52 crores in cash balances, including money at call and short notice. The next return of the State Bank should show that its gilt-edged investments exceed the total of Advances.

The return of Scheduled Banks for 27 July confirms our reading last week that substantial purchase of securities had been made by banks other than the State Bank. This was possible, or perhaps inevitable, because of the growth of free resources with the Scheduled Banks. Net Demand Deposits have risen further by Rs 3.25 crores to Rs 898.01 crores—since a month ago the increase works out to Rs 13.01 crores; and net Time Deposits are higher by Rs 5.97 crores at Rs 1,277.40 crores, the increase in a month being placed at Rs 9.82 crores. At the same time, the total of net Advances has again receded by Rs 9.35 crores to Rs 1,386.74 crores, the decline in the course of the past month being Rs 32.60 crores. Since indebtedness to the Reserve Bank all along has been nominal, the increase in resources could be used only in either of two ways: cash balances could be raised, or the gilt-edged portfolio could be added to. In the week under review there has, it is true, been a rise of Rs 3.77 crores to Rs 219.94 crores in cash balances, including money at call and short notice. But again, as at 29 June the cash position of banks was satisfactory, and the result is that the new resources have almost wholly gone to swell banks' holdings of gilt-edged, which over the period are higher by nearly Rs 48 crores. In the latest week alone, the addition is placed at just under Rs 35 crores to Rs 655 crores, and of the increase Rs 22 crores are traceable to the State Bank. The balance of purchase of course

is on account of other Scheduled Banks. In the period left till the opening of subscription lists for the State loans, it is possible that banks will make further purchase of securities from the Reserve Bank tap; individual banks may, however, be compelled to temper their eagerness to acquire the 3½ per cent 1968, in as much as they would be under pressure from some of the States to support their loans. How much the banks will find for the States is at the moment very much of a mystery, but if past experience is any guide then the Scheduled Banks will be called upon to extend not less than Rs 20 crores by way of support. Already it would appear that banks are being canvassed for their loan subscriptions.

BANK PROFIT

Indian Overseas

The net profit of the Indian Overseas Bank Ltd., for the half year ended 30th June 1962, subject to audit, including the sum of Rs 2,22,933.24 brought forward from the last year's account, amounts to Rs 22,06,467.52 as against Rs 19,97,365.95 in the corresponding period of last year.

The Bank's Deposits and Advances as on 30th June 1962 were over Rs 35 crores and Rs 23 crores respectively as against Rs 31 crores and Rs 20 crores as at 31st December 1961.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 7 August, 1962. Total amount offered was Rs 2,50,00,000. Tenders at Rs 99.410 per cent and above were accepted in full and those at Rs 99.405 per cent were allotted approximately 50 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2,350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to 11 a.m. on Monday, 13 August, 1962. Successful tenderers should make payment on Friday, 17 August, 1962 at all centres. Other conditions are as usual.

During the week ended 3 August, 1962, Government of India Treasury Bills for Rs 66,73,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 8 to 11 August, 1962 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 1 to 4 August, 1962 amounted to Rs 8,30,00,000.

Commonwealth's Last Chance

By Paul Einzig

AT the time of writing the prospects of an early conclusion of negotiations between Britain and the Common Market appear to have deteriorated considerably. It now seems virtually certain that the September Conference of Commonwealth Governments will be held before Britain has committed herself, indeed even before an understanding has been reached on basic principles. This delay and the obvious difficulties encountered by the negotiators may convey the impression in the countries of the Commonwealth that the danger of an agreement on terms unfavourable to them is now virtually over. This is not, however, the case. There is rather more than a possibility that the Government, while trying to secure the best possible terms will eventually feel compelled to accept the best terms obtainable. Its attitude will be largely determined by the outcome of the Commonwealth Conference. That Conference will give Commonwealth Government a last chance to abandon their present passive attitude and to make constructive proposals in order to induce the British Government to abandon the negotiations with the Common Market.

This aspect of the problem has not received nearly enough attention either in Britain or in the Commonwealth. A large and influential section of the British Press and of the two main political parties is engaged in a crusade to "save the Commonwealth" by opposing the project of joining the Common Market. While some of those taking part in the campaign are sincere friends of the Commonwealth, for others their enthusiasm for the Commonwealth is an entirely new discovery. It is no doubt sheer coincidence that the fellow-traveller wing of the Labour Party has worked itself into frenzied enthusiasm for upholding the Commonwealth at a moment when Mr Khrushchev has declared himself so emphatically against the Common Market.

The true friends of the Commonwealth are not those who confine themselves to exhorting the British Government to drop the project of joining the Common Market, without bothering to exhort the Commonwealth Governments to go some way to make this worthwhile. Economic relationship between the United Kingdom and the Commonwealth countries has been developing in recent years in a very unilateral sense. Had British trade with the Commonwealth been expanding in a satisfactory way instead of shrinking in proportion to Commonwealth trade with other countries, the need for joining the Common Market would not have been felt so strongly by the Government and a large section of British political opinion and public opinion. This aspect of the situation does not appear to have been realised in Commonwealth countries where it is taken for granted that for the sake of upholding the Commonwealth the British Government would be forced by public opinion to accept the unilateral trend of the relationship. It is to be hoped that the opportunity of the September Conference will be taken for initiating a more realistic approach.

Notes

LABOUR

Code of Discipline

The State Labour Ministers' Conference held in New Delhi early this week considered a number of problems having a bearing on improvement of labour welfare and also of labour relations in the country. The most important problem faced in the realm of labour relations is to minimise the number of industrial disputes. The code of discipline formulated in 1957 was aimed at fostering understanding between labour and management through measures voluntarily enjoined on the parties concerned. Owing to the enforcement of the code of discipline, there has definitely been an improvement of the industrial climate evidence of which could be discerned in the downward trend in the number of industrial disputes. The conference also considered measures designed at better implementation of the code. For example, it was decided that no subsistence allowance should be paid to workers found guilty of violating the code of discipline. Further, periodical reports on the working of the code to be submitted to the Union Ministry of

Labour and Employment has also been suggested.

An important aspect of industrial dispute that was discussed at the conference was the tendency on the part of the workers to resort to the weapon of hunger strike to enforce their claims. The labour ministers who participated in the conference unanimously favoured the imposition of stringent restrictions on workers resorting to this practice. As a counter-measure it has been suggested that no adjudication of other facilities should be given to such workers. Labour relations in the public sector is also a burning problem as the strike some three months ago in the Bhopal Heavy Electricals had shown. Though there was a proposal that the Centre should take over the responsibility of looking after the labour relations in the public sector undertakings, no agreement could be reached at the conference.

Draft proposals for the utilisation of the unemployment relief fund had been prepared by a sub-committee consisting of three members. The proposals for the utilisation of the fund were approved at the conference. The main objective of the scheme is to assist the workers thrown out of employment as a result of closure of industrial units. It is also meant to train the workers for alternative occupation. The fund will be mainly utilised for encouraging the formation of workers' co-operative on a selective closed industrial undertakings.

ECONOMIC SITUATION Far from Take-off

In his address to the Surat Rotary Club, Mr Shriyans Prasad Jain, President of the Federation of Indian Chambers of Commerce and Industry, spoke on the present economic situation in the country. While he was critical of the policies and programmes underlying the Third Plan, Mr Jain gave due credit to the achievements already made by the country in the course of a decade of development. It is admitted that in terms of national income or targets of individual production particularly food, clothing and other consumer goods and provision of employment opportunities, the country was substantially better off than before. Further, the country has also succeeded to an eminent degree in laying down the foundation

for the heavy industry with diversification in the industrial base. While these are remarkable achievements, the fact cannot be escaped that the rate of growth in development in the country is still low not only as compared to rates in the advanced industrial countries but also in some of the developing countries like Iran and Burma. One major impediment to greater progress being made in economic progress is the high level of population growth which at over 2 per cent per annum has tended to neutralise the effects of development to a substantial extent. Thus while the national income had risen by about 43 per cent during the last decade, the increase in per capita income was only of the order of about 18 per cent. The Indian economy was thus still far from the take-off stage and "would continue to be so until it attained the self-sustaining character and was able to propel itself on its internal factors".

Mr Jain also spot-lighted the problems which development in the course of the last few years has thrown up. These problems are traced chiefly to shortcomings in planning. The foreign exchange situation according to Mr Jain spotlights the fundamental problem of the consequences of the economy being excessively dependent on foreign aid for development. And to the extent that the shortfall in promised aid is not made up, it will necessitate a rephrasing of the priorities originally fixed in the Third Plan. Apart from such rephrasing Mr Jain has stressed the importance of scrutinising every sector of the economy with a view to avoiding wastage. In this connection, he has suggested that Mr T. T. Krishnamachari, who was looking into the problems of coordination should appoint an inquiry committee to go into the details of dislocation caused by shortages of essential materials like coal, power etc. The fiscal policies of the Government also came for adverse comment from Mr Jain who pointed out that the level of taxation both direct and indirect to support the investment targets of the Third Plan had already exceeded the limits of the capacity of the people. In the circumstances it would be in the interests of rapid development if more facilities were given for the direct inflow of foreign private capital.

POWER

Fresh Thinking

Reflecting the impact of the current power shortage on Government thinking on power development programmes, fresh thoughts are being given to power development programmes in the Third Plan. At a recent review of the power position by the Planning Commission and the Ministry of

Irrigation and Power, a significant decision to set an advance power target of 17 million kw to be achieved by the end of 1967-68 is learnt to have been taken, the obvious aim being to prevent recurrence of power shortage in the future. With this same object, the yearly demand for power in the Third Plan period is being assessed afresh and, further, re-phasement of some of the power development schemes is also considered likely. The current shortfall in power requirements on the basis of restricted supply is estimated at about 0.3 million kw and on the basis of unrestricted supply at 0.5 million kw.

What is required to meet power shortage is a selective approach that would take into account the divergences in the supply position in the various States. The current shortage in power supplies is mainly confined to the States of West Bengal, Mysore and Andhra. Most of the other States are more or less self-sufficient in supplies with some like the Uttar Pradesh having even surplus production which could well be diverted as is sought to be done now to meet the shortfalls of the power needy States. Shortages that had occurred in some other States like Madras are of a seasonal character being the result of the water resources getting dried up due to summer heat. In the light of the varying character of the power situation, it is a valid conclusion that the intensity of the crisis in States like West Bengal could have been mitigated had measures been taken for co-ordination of power grids between various States. Schemes for such co-ordination in supply may yet

avert regional shortages in the future.

The meeting of the Planning Commission and the Ministry of Irrigation and Power has also indicated other measures for expediting power development programmes. In this respect, a special cell in the Ministry of Irrigation and Power and the Central Water and Power Commission for the processing of power projects is considered essential. Further augmentation of the staff of the CWPC is also considered likely. Further the decision to authorise work on specified items of work before formal approval is obtained should go a long way in eliminating initial delays in the implementation of power development programmes. Emphasis has also been laid on the erection of transmission lines. Satisfaction at the progress of the current projects has induced optimism among official circles that the target for 1962-63 will be reached. What is more, there is even hope that the target may be exceeded by about 0.3 million kw.

SHIPPING Revised Target

The decision of the Planning Commission to permit an increase in the Third Plan Shipping tonnage target has perhaps been made easy because a sizable amount is

still available from out of the provision of Rs 55 crores, even after providing for the original target of 1.1 million GRT. The Third Plan envisages the acquisition of an additional tonnage of 375,000 GRT—133,000 GRT for the coastal trade and 242,000 GRT for the overseas trade. The progress toward acquisition of tonnage has been quite fast during the past one or two years and it was officially indicated recently that arrangements so far completed would ensure a tonnage of 1.14 million GRT at the end of the Plan period with a sizable amount of the provision of Rs 55 crores to spare.

It may be recalled that the target of shipping tonnage set for the Third Plan had been considered to be too small in view of the ever increasing demand for freight space both in the coastal and overseas trade. The National Shipping Board had asked for a much bigger allocation for shipping during the Third Plan as the provision indicated would not even ensure the maintenance of the rate of acquisition of additional shipping attained during the Second Plan. At its meeting early this month, the Board however recommended to Government the provision of an additional allocation of about Rs 27 crores so that the Third Plan target could be raised to 1.42 million GRT. The Board which made the revised

recommendation was guided by the suggestions made by the Coastal Shipping Committee and the Financial Allocation Committee set up by it. The recommendation places the emphasis on the urgent need for increasing the target for coastal tonnage in view of the fact that coastal shipping has been asked to move an additional one million tons of coal. According to the Coastal Shipping Committee, coastal tonnage needs to be increased from the present provision of 3 lakh GRT. Provision of increased tonnage has become imperative because a large number of coastal vessels is due for replacement. It has been estimated that the additional tonnage required inclusive of replacements will amount to 1.8 lakh GRT with the outlay coming to about Rs 28 crores.

It would appear that even this revised recommendation of the National Shipping Board is unlikely to find favour with the Planning Commission which has made it clear that, for the present, proposals will be considered covering the balance of Rs 14 crores. It would further appear that the progress of acquisition of additional tonnage even within this comparatively small amount of Rs 14 crores is not to be made smooth. For, it has been stipulated that there will not be any payment of free foreign exchange at the time of delivery of ships and all payments

should be made by the purchasing companies from out of the earnings of their own foreign exchange.

It has been estimated that with the release of Rs 14 crores, shipping tonnage during the Third Plan can be increased to the level indicated by the National Shipping Board. But it is to be noted that the Board has estimated that the programme for coastal shipping alone will involve Rs 23 crores. The moving of 1 million tons of coal is a strenuous job requiring adequate tonnage which is also reasonably efficient. It will be meaningless to expect coastal shipping to shoulder heavy responsibility without making sufficient financial provision for the acquisition of additional tonnage.

OIL 14 Million Tons by 1966

Speaking at a press conference in Madras, Mr K. D. Malaviya, Union Minister for Fuel and Mines, expressed the confidence that the country would be able to reach the target of 14 million tons for oil production by 1966. This is indeed a heartening assurance for import of oil has been proving to be a serious drain on the foreign exchange resources of the

11 August 1962

country, the annual amount involved being near about Rs 100 crores. Whether with a production of this order, the entire consumption requirements of the country could be met is not certain since estimates of consumption at the end of the Plan are of widely varying order. While the Government has estimated consumption requirements at about 14 million tons, the private sector refineries have put it at about 16 to 17 million tons. It is on this estimate of requirements at about 16 million tons, that the private sector refineries have pleaded for allowing production to full capacity. The reported willingness of the Government to allow such expansion to the Esso and the Burmah Shell, will be welcomed as a step that should enable the country to save considerable amount of foreign exchange that would otherwise be spent on import of petroleum products. The final decision of the Government on this subject will therefore be eagerly awaited. While thus the projected expansion of production in the private sector can be taken for granted, the progress of the public sector projects has left much to be desired. Of the three projects being set up in the public sector only the one at Nummati has been commissioned, but is yet to reach full capacity due to delay in the laying down of the pipeline to carry crude from the Naharkatiya oil field. On attainment of full capacity, production at Nummati and Barauni will amount to about 3 million tons and another 3 million tons will be added to public sector production when the Gujarat refinery also goes on stream. While the Gujarat refinery is to be set up with Russian assistance in technical know-how and foreign exchange the progress so far made in the implementation of this project is very slow.

Even if the consumption of petroleum products were to be pegged at a level of about 14 million tons, dependence on imports will not be eliminated on the basis of total production at 14 million tons. Most importantly, the country will continue to depend on imports of crude oil to feed the private sector refineries. Total production of crude oil in the country is expected to reach a level of about 6 million tons and will suffice only for processing in the public sector refineries. Though rigorous search for fresh oil fields is still going on with assistance from foreign countries, like the Soviet Union, France and Italy, the possibility of additional supplies from internal production can very well be ruled out. Even Cambay which figured in the beginning as one of the promising new fields had flattered only to disappoint and the early exuberant hopes have now given place to a cautious attitude on the part of the Oil Ministry itself.

Even within the 14 million ton target, there is noticeable a sharp divergence between the probable production pattern and the emerging consumption pattern. The greatest deficiency is expected in respect of middle distillates such as furnace oil and high speed diesel oil for which there is growing demand in the country. In contrast there is surplus production of motor spirit at present which will further be increased with the commissioning of the public sector refineries. Exports and enforcement of mixed use of diesel and motor spirit may take care of the surplus production of motor spirit but will not mitigate the need for increasing the production of high speed diesel oil for which the demand is almost insatiable at present. It is this need to increase production of middle distillates that lends point to the pleas of the private sector refineries that they should be allowed to raise production to the full limits of their present capacity.

MOTOR TRANSPORT Inequitous Burden

In a memorandum submitted to the Madras Government, the representatives of the bus and lorry operators have drawn attention to the inequitous burden constituted by the present level of taxation on motor transport in the State. They have been particularly distressed at the steep increase in the motor vehicles tax and TPG proposed in the budget for 1962-63. The tax levy as proposed, it has been stated, will cripple the motor transport industry. The memorandum has quoted facts and figures from the working results of the Southern Roadways Private Limited to prove the ruinous effects spelt by the latest increase in the taxation of motor transport in the State. The results of working of the Southern Roadways Private Limited show that after providing for additional expenses by the budget proposals, probable expenditure due to the Motor Transport Workers' Act and increase in dearness allowance, etc, there will be a net loss to the Company to the tune of Rs 19.50 lakhs.

The memorandum has detailed the various stages by which taxation has been successively increased on the motor transport industry in the State. Taxation on bus was increased from Rs 17 per seat per quarter to Rs 30/- in 1949. 1952 under TPG compounding the tax per seat per quarter on a bus was increased by Rs 12.50 and on public carrier at Rs 22.50 per month per vehicle. Further, because of successive increases in excise duty by the Central Government and sales tax by the State Government, the prices of HSD Oil which was Rs 1-6-3 per

gallon in 1953 rose to Rs 2.70. The price of chassis has increased from Rs 15,568 in 1959 to Rs 32,538 in 1962 because of excise duty. Similarly the price of bus body has increased so that a bus costing Rs 23,600 in 1949 is now selling at Rs 48,248. The motor vehicles spares are also shown to have registered a two hundred per cent increase from 1952 to 1962 on account of the import duty and rise in the cost of indigenous items. The excise duty on tyres and tubes was increased from Rs 20 per cent to Rs 40 per cent in the period 1949 to 1962. Apart from the increase in the fiscal charges, administrative expenses are shown to have gone up under the impact of increases in wage bill, implementation of provident funds act, the introduction of the ESI scheme and the increase in the wages and dearness allowance because of the spiralling of the cost of living. Under the impact of all these increases, the cost of operation is shown to have gone up by about 50 per cent without any corresponding increase in the bus collections.

The memorandum urges that the slab system of taxation that is sought to be introduced will cause great hardship and inconvenience to the bus and lorry operators. In this connection, the memorandum has sought to bring home the point that increased mileage is not necessarily due to long distance routes and that it will not be possible to gauge in advance the mileage that will be done by the spare buses and that it will be difficult to fit in this spare bus into the category of mileage slab. It has been stated that the new slab will almost result in a doubling of the tax on lorries which they cannot bear and which will make lorry operation uneconomical. The memorandum seeks that the Government should not introduce the category of over 9 tons and that the increase in taxation both under the Motor Vehicles Tax and TPG tax should be limited to the extent to which the goods transport industry can reasonably bear.

PLANTATION Stresses & Strains

Speaking at the ninth annual general meeting of the Association of Planters of the State of Madras, Mr E. J. C. Menzies, the President, pointed out some major maladies of the plantation industry in the country, with special reference to Madras. The production of tea in the State at 37.9 million kgs is a creditable performance viewed in the background of unpropitious weather conditions on account of torrential showers and devastating floods in many of the planting areas. Coffee crop at 8,000 metric tonnes was up by 2,000 metric tonnes over the previous year's record while the pro-

duction of rubber maintained its record at 2,076 metric tonnes.

Nevertheless we can derive little consolation as the future of the tea plantations, according to any manner of reckoning, will be one replete with stresses and strains. The ambitious target fixed by the Planning Commission at 900 million pounds for the current Plan, 600 million pounds for exports and 300 million pounds for internal requirements, has already been viewed with alarm by the FAO which has predicted an over production and the consequent glut in the world markets. This and other factors will have serious repercussions on exports. This cannot be viewed without concern as tea has already yielded place to jute as the chief foreign exchange earner of the country.

The internal market too does not provide room for optimism. The Government's endeavour to discourage internal consumption for promoting exports is no doubt a myopic policy. Instead the domestic market should be nurtured as a major safeguard for the industry against any violent fluctuation in the world prices. This is all the more important in the absence of any assurance that an increase in quantitative terms would earn more foreign exchange as the increased supplies are likely to depress the prices.

Mr. Menzies drew attention to the need for rationalising the tax policy and favoured a total abolition of export duty in order to stabilise the competitive ability of Indian tea. The industry should be permitted to drawback on the innumerable articles required by the tea factories to lower costs. The industry should also be allowed to accumulate adequate resources in order to resuscitate itself and for this periodical review of the tax policy should be helpful. The plantation industry should be ensured regular and adequate supplies of fertilisers, cement etc.

The labour front is not free of disturbances, and the amicable settlement of problems like bontis and gratuity has been rendered rather difficult consequent on the emergence of splinter groups and the rivalries and internecine feuds between the unions have considerably affected the productive efficiency. These drawbacks should be eliminated by suitable legislation.

The Government's efforts to provide some assistance to the industry were not entirely lacking. For example the enactment of the Madras Fixation of Ceiling on Land Act, has removed certain uncertainties as far as plantations are concerned. The grant of development rebate pertaining to workers' quarters in the assessment of agricultural income-tax is another notable step. The reduction of export duty on tea with adequate facilities for drawback on excise duty on exports

TELCO Satisfactory Working

By any standard, the performance of the Tata Engineering and

Locomotive Company Limited during the year 1961-62 can be considered satisfactory. Both sales and earnings have registered rise. Sales excluding excise duty have increased to Rs 37.93 crores from Rs 34.27 crores. Gross profits were higher by Rs 66 lakhs, but with a higher amount being set aside for depreciation and higher provision for taxation disposable profits were the same as last year's.

Dividend has also been maintained at 14.5 per cent. Though this is the same as last year if relief under Section 84 of the Income-tax Act, 1961, materialises, the rate of dividend will be higher than the previous year.

Progress in the expansion and diversification of the company's activities has also been commendable. The manufacture of Tata-P & H power shovels has been

firmly established and high-grade capacity has been created for the production of machinery for paper and pulp. The construction of the factory buildings and services and the enlargement of the capacities of the foundries and forge shops are also under way.

In the automobile division, the planned output of vehicles of 1,000 units per month was maintained throughout the year under review.

The demand for the Company's vehicles continues to be far in excess of supply. In this background, the programme for expansion of the production capacity in the automobile division has significance. In view of the shortage of foreign exchange the expansion programme is being implemented in two stages. In the first stage production capacity will be increased from 12,000 to 18,000 units per year and in the second stage it will be further increased to 24,000 units. The foreign exchange component of the scheme in the first stage is expected to be met from a loan \$13.65 million from the Agency for International Development, before which an application for the loan is now pending. For meeting the rupee requirements, the Telco has in mind the issue of convertible debentures for about Rs 5 crores. The successful debut made by the company in the export of its vehicles to some neighbouring countries like South Vietnam, Ceylon and Malaya is also a noteworthy achievement.

Mr Tata has referred to the adverse significance of the current foreign exchange shortage on the prospective production by the company, and anticipates some reduction in the foreign exchange allotment to them for April-September and October 1962/March 1963. According to Mr Tata for every rupee by which the allotment of foreign exchange is cut, the loss of production will be the largest and will have the most adverse impact on the country's economy. Mr Tata has also referred to the importance of road transport in the context of the country's development and has pleaded for equal importance being accorded to the development of road transport as on railway development.

utilised for lighting streets, driving motors, generating electric power, for energising pumps and other agricultural machinery. Small plants will cost about Rs 500 and generate adequate gas for culinary purposes and lighting the village household. All that a farmer will have to do is to provide five heads of cattle to produce dung and invest Rs 125 while the balance of the expenditure will be met by the Government in the shape of a loan to the farmer. According to the present calculations the cost of the scheme will be about Rs 1 crore during the first two years of running.

The Indian Agricultural Research Institute conducted pioneering work in devising the gas plant eight years ago as a result of which 10 plants have been installed near Delhi which produced satisfactory results. The present programme will result in giving a face-lift to the rural areas by facilitating the supply of gas at cheap rates for lighting and other purposes. The removal of cattle dung for feeding the gas plants and the resultant improvement in sanitation is an added attraction.

EEC

Commonwealth Trade

The UK has passed one of the crucial phases of its talks with the inner Six of the Common Market with its hopes of joining it considerably heightened. The recent talks between the UK and the Six on the problems connected with Commonwealth trade have been productive of a large measure of agreement. Considering that it was problems of Commonwealth trade that posed the greatest impediment to British entry to the Common Market, the difficulties for Britain should now be less and this should smooth the way for the final successful negotiations for full membership.

On most of the important problems connected with the Commonwealth trade tentative decisions on solutions have been reached. The offer by the Six to make special arrangement to meet the special problems connected with export of temperate foodstuffs went a long way in allaying British concern for the interests of New Zealand Australia and Canada. As a result of British efforts, it has been possible to improve the arrangement on price policy with assurance of reasonable opportunities for the export of temperate foodstuffs. The readiness of the Community to allow the Commonwealth territories 100 per cent of the Intercommunity preference during the transitional period was another significant concession. Special arrangements to meet the particular problems of New Zealand which stands most to suffer consequent on British entry in view of its heavy dependence on British Market have also

been hinted at. In respect of the independent and dependent territories of the Commonwealth a solution is being sought on the basis of association with the enlarged Community. The recent talks on this subject reached agreement on the eligibility of association for the greater part of the British dependent territories.

Considerable agreement has also been reached on problems of India Pakistan and Ceylon. The most significant decision having a bearing on the trade of these countries relates to tea for which the Six have now agreed to a nil tariff. This is no doubt a substantial gain considering that nearly 90 per cent of Ceylon's trade with Britain is made up of tea while in the case of India it constitutes about half of Indian exports to the UK. Nil duty and suspension of tariff have been agreed for a number of other products. Mention may be made of cashewnuts, mango chutney, curry powder, some spices, and handloom products. Nil duty has also been proposed for some sports goods like cricket bats and polo sticks and on a number of other tropical products.

With all this, as far as India is concerned, the outcome of the recent Brussels talks cannot be welcomed as meeting its demands put forward in the memorandum to the Council of the Six and conveyed by Mr Morarji Desai during his recent trip abroad, to any substantial extent. On two most important exports namely cotton textiles and jute products, no concession has been offered. In respect of jute goods, the agreement now reached provides for progressive application of the common external tariff at the normal speed. On cotton textiles instead of tangible concessions, only some modification of the steps for introduction of the full external tariff has been made. The original proposals provided for the application of 30 per cent of the external tariff on Britain's entry, another 30 per cent after 18 months and the full tariff when the Common Market takes full-fledged form. In its place, the proposal has now been modified to allow application of 20 per cent of the tariff on Britain's entry, another 20 per cent after 18 months, another 30 per cent a year after that and the final 30 per cent when the Common external tariff applies throughout the Community. As a result of the new proposals the adverse effects flowing from the imposition of fullscale tariff will not be eliminated when the Community comes into being and only mitigated very slightly in the early part of the transitional period. This offers very little consolation considering that India had asked for nil tariff on cotton textiles in view of the preminent position of cotton textiles in our exports. In respect of other manufactured goods and processed foodstuffs also the Community has shown no consideration and is determined to impose the full-scale tariff. The agreement reached on these items pro-

vides for five-stage decalage by which the common external tariff would be applied: 15 per cent on Britain's accession; 15 per cent on 1 July 1965; 20 per cent on 1 January 1967; 20 per cent on 1 July 1968 and the final instalment on 1 January 1970. This is only a slight variation of the formula proposed for cotton textiles, with one more step added to the introduction of the full scale tariff. There are some important items like East India kips, coffee, tobacco etc on which no decision has been reached so far. For some of these items like East India kips the UK had originally proposed nil tariff. The reactions of the members of the inner Six to these original British proposals are not known. But the overall picture will be only slightly altered even with the utmost concessions that might be given in respect of these goods.

NEWS IN BRIEF

During the quarter ended 30 June 114 companies with a total authorised capital of Rs 2,399.59 lakhs were registered in the Western Region consisting of Maharashtra, Gujarat and Madhya Pradesh against 92 companies with an authorised capital of Rs 2,560.67 lakhs registered in the preceding quarter. Of these, 16 were public, 97 private and one limited by guarantee. Fourteen companies went into liquidation during the quarter under review.

The Government of India has restored in full the cut in the import quota of X ray films and has also arranged for additional imports of this item under rupee payment through the State Trading Corporation.

A seven-member productivity team on non-ferrous metal industry, led by Dr B. R. Nijhawan, Director of National Metallurgical Laboratory, left for the UK and the USA on a nine-week study tour. The team will undertake a comprehensive study of the various techniques of production plants and the equipment used and also the optimum productivity achieved in non-ferrous metal industry in those countries. On its return, the team will submit a report of its findings to the National Productivity Council incorporating suggestions for increasing the productivity of the domestic non-ferrous industry.

The Indian Investment Centre has recently constituted an advisory committee of industrial experts to guide it in drawing industrial surveys, and feasibility studies for certain important industries included in the Third Plan.

An eight-member Industrial Development Corporation, under the Chairmanship of Mr S. G. Barve, the Finance Minister, has been set up by the Government of Maharashtra with a view to promoting and assisting the rapid and orderly establishment and growth of the industries in the State.

Who but Pan Am gives you free representatives in 114 world trade centres?

Pan Am's new World-Wide Marketing Service is a concept as dramatic as the recent reductions in air shipment cost. WWMS gives you on-the-spot representation in 114 world markets... helps you find new markets and new sources of supply!

Air cargo rates have never been cheaper! More commodities than ever may now be shipped on a straight-weight basis... and rates are down as much as 63%!

Low air cargo rates mean you can have more markets! And Pan Am's World-Wide Marketing Service helps locate prime markets for you, virtually anywhere in the world.

Pan Am's more complete cargo service really amounts to a revolution in the distribution of goods. Virtually any

commodity now may be shipped economically by air. You save time, so your money turns over faster. Insurance rates are lower than by surface means, because pilferage, damage, and loss are minimized. Packing, crating, handling costs are lower. Your packing and shipping

are even faster and safer when you use Pan Am's family of containers.

Pan Am advises you on such things as packing, international rates, insurance, local cartage, routing—and simplifies documentation for you, too.

Pan Am has more specialists working solely on cargo than any other airline—1357 specialists who can help you build a solid business in other parts of the world. For tips about new markets for your products, call your Cargo Agent or Pan Am in:

Calcutta:
42 Chowringhee, Tel. 44-3251 (5 lines)
New Delhi:
Imperial Hotel, Tel. 48172, 48177

WORLD'S LARGEST AIR CARGO CARRIER
WORLD'S MOST EXPERIENCED AIRLINE

THE LARGEST UNITS OF INDIA

3 × 82 500 kW

IN THE DVC THERMAL POWER STATIONS AT DURGAPUR AND BOKARO (4th UNIT)

M·A·N STEAM GENERATORS
• STEAM TURBINES

THE LARGEST UNITS OF INDIA

Three boilers with an individual capacity of 730 000 lbs./hr and three steam turbines rated at 82 500 kW, each have been supplied by M.A.N. for the Durgapur and Bokaro steam power stations of the Damodar Valley Corporation. They work at a pressure of 1450 p.s.i.g. and a temperature of 1000 °F. These are the highest pressures and temperatures applied in Indian power stations to date and enable maximum efficiencies and operating economy to be achieved.

The steam generators are burning coal of high ash content from the Damodar Valley fields and are designed for future use of blast-furnace gas from the nearby Durgapur Steelworks.

The steam turbines are of the tandem-compound impulse type and the acceptance tests have shown that the high output and economy guaranteed have been fully attained.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THESE are days of excessive centenary ballyhoo, but the commemoration of a hundred years of the Madras High Court as of Bombay and Calcutta earlier in the year is a natural act of piety. Great names have been recalled with gratitude and pride on the occasion. Sir T. Muthuswami Iyer, the first Indian Judge of the Madras High Court is part of every Tamil's early memories. His life is a characteristic nineteenth century Tamil variation of "Log-cabin-to White-House" myth. Other judges, Indian and British, have passed into the penumbra of popular lore. The bar too had its leading lights and their exploits are recalled with awe and admiration to this day. The Law is no longer the profession with the big-money tag, which has since become attached to film stars. Changes in the nature of Law too have been responsible for the loss of glamour the profession has suffered in recent years. Statute law has displaced vast areas which were formerly fertile field for litigation. The well-trained mind that could perceive distinctions quickly supported by vast erudition found in the unchartered field of, say, the Hindu law, the perfect opportunity for intellectual thrills as well as fat fees. Recent codifications have driven a coach and four through Anuloma and Pritiloma marriages, Sapinda classifications and rever-shioner's rights and so forth. The Indian High Courts share a long tradition of protecting the individual from the curt impatience of the executive, which in the old days had the further odium of being foreign. Equally important is their contribution to the modification of a social order that was unbending to the needs of the times and often unjust and cruel. Something of the judicious and judicial subversion (if such a word is permissible in such a context) that went into the broadening of the stream of British liberty from "precedent to precedent" operated in the humanising and liberalising of vast areas of Indian law and practice. Much learning, subtlety and (in the case of English judges, plain misunderstanding of texts and false analogies), helped the liberal cause along. Thus, if the texts were res- trictive, it was often successfully argued that a well-authenticated custom can overrule a hundred texts. And where custom was barbarous, its antiquity was challenged and its status as binding social behaviour undermined. Oppressive landlord tenant relationships have often been successfully overturned. In an article packed with information in the Mail, Madras, Dr Ruthnaswamy

quotes a Governor of Madras as saying, "the ryot of Southern India will never know how much he owes to Mr Justice Subramania Iyer for having declared that the common law of Madras gives him an occupancy right irrespective of the period of his holding". Earlier Sir T. Muthuswami Iyer had dealt the executive a severe blow in the Salem Vijayaraghavachariar case in which he held that a Municipal Commissioner wrongly removed from office by the Secretary of State could sue for damages. Constitutional litigation both before and after independence has given substance to the citizen's right to protection by court. Sometimes, as happened two years ago over the appointment of the Government pleader, such litigation tends to run riot. But by and large the rights under the Constitution are guarded with zeal as well as a sense of responsibility for which we have to thank a sound judicial tradition.

The small car has been ditched after all. It would have been a miracle if it had survived so many obstacles so assiduously placed in its path since it got started. The public can at best guess at the various spanners that have from time to time been bunged in the works. A study of the file would offer a most revealing picture of the tangle of motives and clash of interests that are at work in our economy. I may be wrong, but I have a feeling that the Planning Commission was never enthusiastic about the idea. The Third Five Year Plan does not mention it and I fear that some lurking ideological prejudice was at work in this lack of interest. I remember Mr Nanda waxing eloquent some years ago about the socialistic virtues of buses and the snobbery and class inequity involved in the desire to accord cars a higher priority in the plans. I also fear that the private sector lost all interest in the matter once it became clear that the public sector was to have the responsibility of manufacturing it. The Defence Ministry, in its role as an entrepreneur showed some interest: indeed, somewhat intriguingly, Mr Krishna Menon offered to take on the job just when almost every one had given up hopes of the project surviving. Government which in the early days had been evading decision by the ruse of repetitive inquiries couldn't obviously make up its mind between rival claimants and rival models and latterly whether it should go on with the project at all. Lack of foreign exchange was a decisive enough

obstacle. It is true that the French collaborators were willing to provide the foreign exchange needed and even make it possible to earn it by exports. But it was never very clear whether this would cut into France's probable other commitments as member of the Aid India Club. The relative priority of a small car is always arguable, especially in an economy like ours and at this moment. But I do think it unrealistic to consider it an expendable luxury. For many a professional man, a car is an indispensable necessity. In any case, as between a refrigerator and a car, I know what my preference would be.

★

Off-hand pity at the manner of Marilyn Monroe's death comes with sickening hypocrisy from a public to whom she provided hours of vicarious pleasure on and off the screen. It is probably its way of getting over its sense of guilt at second hand lechery. By comparison, childish gestures of sympathetic suicides that have been reported are cleaner tribute. Marilyn Monroe's personal life was obviously a mess but so are a million others' that have not received the maniacal publicity that hers did. She couldn't call on a psychiatrist (who is the priest of our times) without some

snooper emerging from under the couch to take a photograph. I have heard it said that her trouble was that she tried to live up to the glossy terms her press agent conjured up for her public and was overcome by her inadequacy to the enterprise. This may well be so, though I think it best to let her psychiatrist, who probably knows all the facts, to do the analysing. In any case it is a grimly academic exercise in the circumstances. It is better to think gratefully of her as a film star. I am probably being rash but I think that the Munroe (Marilyn) Doctrine is distinguishable from earlier pin-up philosophies: it established for the first time in the cinema that the male of the species finds irresistible the combination of obvious sex and wide-eyed innocence. Or call it "the dumb blonde is fair game". None brought this out more perfectly on the screen than Marilyn Monroe. In her time she seems to have worried about her probably not being a great actress and indeed to have gone to some trouble to learn to be one. She also tried to become less dumb by swotting at Dostoyevsky. What success she had at the latter enterprise is not know to me, but men who ought to know, Olivier, for example, though she would make the grade. In recent pictures she did impress by more than her mere presence. Whether a great actress or not, she was, without reservation, as much a part of the consciousness of her times as Chaplin or Garbo.

**COLOUR TO
BRIGHTEN
INDIA'S
HOMES**

LOOK UP NOW!

Chances are you'll be looking at a painted surface. Since time immemorial, the history of man has been coloured by paint. No one can safely say when it was first made. It may have been used to scar the skin of a primitive warrior, or

brighten the walls of his home. One fact is certain. Paint was a discovery as useful as fire, as important as the wheel.

J & N has produced paints for India's homes since 1922. The company has always believed that colour is vital to happy living. J & N use paint as a medium to reflect individual personality, to create mood and atmosphere, to enhance the warmth of a home. Towards this end, J & N has produced a range of decorative finishes second to none. It extends from the widely used Umbrella paints to Robbialac—a brand that spans the world.

LUCA DELLA ROBBIA— AN ITALIAN GENTLEMAN

Little is known about Robbia the man—but Robbia the artist has achieved lasting fame. He began his professional career circa 1500, as apprentice to a Florentine goldsmith. His talent carried him swiftly to sculpture. From there he passed on to terra-cotta and spent years of painstaking experiment before producing what the world was to know as 'Della Robbia Glaze'. A contemporary used the words 'endless durability' in describing Robbia's work. The first John Nicholson had admired Della Robbia's art ever since he received an order for a 'blue white...as in the Della Robbia Glaze'.

The day came when J & N produced a new product—an enamel of exceptional hardness, lustre and durability. It was fittingly named Robbialac, after the Italian with whom perfection was a norm.

Today, in the remotest corners of five continents, J & N equates with 'Makers of Robbialac'.

DID YOU KNOW ABOUT BERENICE?

She was an impulsive, golden-haired Cyrenean princess. One day she discovered Religion, cut off her tresses and dedicated them to the goddess Venus. To an angry husband she explained that the stars had stolen her locks. We now have a group of stars called Coma Berenices. The lady has yet another claim to fame. Her name was bestowed on a certain amber—widely used today in paint manufacture. Berenice is now pronounced 'Varnish'.

When next you buy a J & N paint, think of Berenice...

Q. WHAT HAS BUCKINGHAM PALACE IN COMMON WITH NO. 1 M. GANDHI ROAD?

A. J & N DECORATIVE FINISHES

Churches, hospitals, offices, cinema houses, universities, public buildings—all have been treated with J & N finishes. The list is international. It includes such historical landmarks as the Houses of Parliament, Buckingham Palace and the Tower of London, the Grand Theatre of Mexico City and the Stock Exchange, Valparaiso. At the Vatican, Rome, the private apartments of his Holiness, the Pope, are finished with J & N coatings. Among the many buildings in India treated with J & N finishes are Rastrapati Bhawan, the Prime Minister's residence, Parliament House, the World Health Organisation, National Museum, Vigyan Bhawan and the American Embassy, in New Delhi; Raj Bhawan, Tea Board Building, Telephone Bhawan, Woodlands Nursing Home, Calcutta Club, Statesman House and Firpo's, in Calcutta; 'Adelphi',

Metro Cinema, Bank of Baroda, Chartered Bank Building, Nataraj Hotel and Glaxo Laboratories in Bombay. The list is always increasing. There is no finer tribute to the consistent excellence of J & N decorative finishes.

WHEN IT'S A QUESTION OF COLOUR...

...for your flat or office, get in touch with J & N. Our Colour Advisory Service is specially organised and staffed to help you. The Service is managed by a Colour Consultant—an expert in interior decoration—and provides colour schemes free of cost and without obligation to use J & N paints. Though colour is largely a question of individual taste, the scientific use of colour is a precise and delicate skill. Correctly employed, colour can add warmth or coolness to a room, impart an illusion of space, transform a drab flat into a warm, inviting home.

FROM TOY TRAINS TO THE TAJ MAHAL HOTEL

Or, for that matter, from tables to ten-storey buildings—J & N has a paint for every decorative need. Enamels, emulsions, dry-distempers, porcelain lacquers, cement coatings...the range is exhaustive. It covers such national brands as Robbialac, 3 Umbrella, Jhilmil, Jenson—leaders in their fields.

Behind the success of these brands lies J & N research. At the J & N factory near Calcutta, a fully-equipped laboratory, staffed with skilled chemists, pursues an unceasing programme of research, development and testing. Each batch of paint is tested to precise standards before leaving the factory. The result of all this care: you take quality for granted in a J & N paint.

*
FEELING BLUE?
In which of J & N's shades?
*

ROBBIALAC PLASTIC EMULSION is excitingly different. It applies easily—brush marks vanish as you paint—and dries in an hour. It leaves a smooth, lustreous, extremely durable finish that will stand repeated washing and scrubbing. Robbialac Plastic Emulsion is especially suitable for decorating walls, ceilings and woodwork. When planning your new colour scheme, consider Robbialac Plastic Emulsion—choose from 120 delightful shades.

(From Our New Delhi Correspondent)

Neiveli Project

The Rs 113 crore Neiveli Project has entered the stage of achievement with the commissioning of the first 50 MW unit of the Thermal Power Station last Sunday by President Radhakrishnan. The Thermal Station, which will cost Rs 29 crores, is one of the most important constituent units of the Integrated Neyveli Project to which the Government and people of Madras look with anxious hope for providing the basic requirements of industry as well as agriculture-electric power, fertiliser and domestic fuel to say nothing of raw material for a variety of ceramic manufactures. But for many years since the project was formally taken up, it looked as if it were a case of hope deferred. For, apart from the usual troubles attendant on a project of this size, very complex technical problems had to be overcome before it could be established that the mining and utilisation of lignite was a feasible proposition. The project is based on the mining of 3.5 million tons of lignite per annum (in the first stage) which has to serve as the basic material for the other units of the integrated project. Mining lignite at Neiveli is complicated by the presence of artesian aquifers below the lignite seam. There is the danger of the mine getting flooded on the removal of the overburden, unless the water pressure is successfully controlled. But what was at first regarded as a major drawback has turned out to be an asset of the first magnitude. For without the water which is continuously pumped out by a network of giant pumps working round the clock, none of the other schemes—the Thermal Station, fertiliser plant or clay washing unit—would have been a practical proposition. On the other hand, the mining of lignite would not be economic unless it formed part of an integrated scheme.

Existence of lignite in Neiveli was known as far back as 1920. Investigations carried out by the Geological Survey of India during 1943-46 had revealed its existence over an area of 23 sq. miles. Subsequent investigations carried out by the Government of Madras in 1948, with assistance provided by T. C. M., not only revealed lignite reserves of 2000 million tons in an area of 100 sq. miles, but also made it clear that any project for the mining and utilisation of lignite would be beyond the re-

sources of the State Government. On the initiative of Mr T. T. Krishnamachari, the then Union Minister for Commerce & Industry, the Union Government took up the responsibility for the project in 1955. Under this arrangement, the State Government is to receive 25 per cent of the profit on the lignite mined. The bulk of the machinery for the open cast mining project has been imported from West Germany. The scheme was inaugurated by the Prime Minister on 20 May 1957.

The scheme consists of two phases, the development phase and the production phase. The development phase is now three-fourth complete, and a length of lignite seam adequate to meet the requirement of the first unit of the Thermal Plant has been exposed. Production at this rate will utilise only a small part of the production capacity of the mechanised equipment. But output has to keep in phase with the development of the lignite-using industries at or near the site. Lignite is a bulky material which is not profitable to transport. Moreover, it is liable to spontaneous combustion in the raw state and cannot be stored in large quantities. Though mining operations were formally started in 1957, a rudimentary level of production could be reached only five years later simultaneously with the commissioning of the Thermal Unit. Further increase in output is tied up with the progress of the other lignite-using schemes and some of these have been delayed by foreign exchange difficulties.

When all the five units of the Thermal Plant are commissioned, it will use 1.5 million tons of the annual output of 3.5 million tons in the first stage, for the production of 250 MW of electric power. About six lakh tons and 35,000 KW of power will be used by the fertiliser plant for the production of 152,000 tons of prilled Urea equivalent to 70,000 tons of Nitrogen. The remainder of the annual output of lignite will be briquetted for domestic and other uses. The carbonisation of lignite in the manufacture of briquettes will yield by-products like middle oil, tar and phenol. The Thermal Plant is being built with Soviet financial and technical assistance, while the bulk of the machinery and equipment for the other projects are obtained from West Germany.

Civil Works on the Thermal Station were started in September 1959, the erection of the first unit was started in June 1961 and completed by April 1962, the practically record time. The other four units are expected to be

commissioned at intervals of six months and the total planned capacity of 150 MW will be established by 1964. There are also proposals to step up the capacity to 400 MW, with financial and technical aid provided by the Soviet Union. As the Union Minister for Mines and Fuel pointed out in his welcome speech on the occasion of the formal inauguration of the first unit, the Neiveli Thermal Plant represents a magnificent example of team work and co-operation.

Of the other schemes forming part of the integrated project, the Clay Washing Plant is already in operation and has capacity to produce 20 tons of washed clay per day. In view of the growing demand, it is proposed to increase the capacity to twice or thrice the present level. It is an encouraging circumstance that the expansion scheme will require only a small amount of foreign exchange. The Clay Washing Plant, however, does not directly consume lignite. Of the other two lignite using schemes, namely, the briquetting plant and the fertiliser unit, a pilot plant for briquetting, supplied by TCM, is now in operation. A contract for supply and erection of the Rs 26 crore plant has been given to a consortium of West German and Indian firms. This plant is expected to be in operation by 1964.

The fertiliser plant, however, has not been progressing as fast as originally envisaged. Apart from the time taken in securing foreign assistance, miscalculations in the original plan, as the Managing Director told newsmen, were also responsible for part of the delay. When the Plan was drawn up, it was expected that the structural steel required for the plant would be available from the indigenous Steel plants. But this expectation was not fulfilled and extra provision had to be made for import of the required sizes of steel, and, in the meantime, machinery had been already delivered by the suppliers and have been on the site for nearly two years. A prompt allocation of foreign exchange for import of the small quantity of steel would have speeded up the project. Delay has also been caused in completing civil works as detailed drawings have to be sent abroad for approval by the suppliers of the equipment and this naturally takes time. The plant is expected to be completed by end of 1964 and will be in operation early in 1965.

The delays in getting the project started will be seen in proper proportion if viewed against the magnitude of the undertaking and complexity of the tasks taken on by the Neiveli Lignite Corporation. None of the units is being put up as a package deal, with the foreign collaborators undertaking the responsibility for the minutest detail. Equipment is secured by global tenders—incidentally this is perhaps the reason, why the East Germans, who have long experience of lignite mining and showed interest in the mining scheme in the early stages did not come in as collaborators. Satisfactory progress of work in these conditions calls for the closest co-ordination between the agencies supplying the equipment and those

responsible for erection and maintenance, as well as team work among the foreign and Indian technicians. It is a matter of gratification that the requisite degree of co-operation has been forthcoming. Mr T. M. S. Mani, Managing Director, described the Neiveli Project as a shining example, not only of what can be done in the fight against poverty and want, caused by non, under or unbalanced development of the resources of the country, but of peaceful co-existence, discipline and tolerance of people of various countries for the common good.

The mining scheme itself is one of the most remarkable excavation operations. A former Chairman of the ICI, Sir Alexander Fleck, who visited Neiveli in 1958, is reported to have stated that there is only one other project in the world that is comparable, and that is the St. Lawrence Seaway. That will give a measure of the magnitude of the project.

In addition to setting up the industrial projects, the Neiveli Lignite Corporation has also taken up the task of constructing a farflung township which is ultimately expected to have a population of one lakh persons, and providing all the requisite amenities and services. The township has been developed as a private colony, all the trade activities and other services being entrusted to the Corporation Employees' Co-operative Stores in which the Management takes a more than paternal interest. The activities of the Co-operative cover a wide range from running of a cinema and transport services, to vending vegetables and running hair-dressing saloons. The residents in the colony have thus an opportunity of getting a pre-view of life in a Co-operative Commonwealth built on the socialistic pattern. But, unfortunately, the residents seem to be more keenly aware of the rigours of the welfare State than of its blessings. The Co-operative has so far received from the Corporation loans for Rs 2 lakhs in addition to a grant of Rs 1 lakh for initial equipment for the Store and its branches and a recurring grant of Rs 2,000 for the emoluments of staff. So far the Co-operative has repaid Rs 1,14,500 of the loan.

The cost of the Integrated Lignite Project, including all its constituent units, has been estimated at Rs 113 crores. The outlay during the Third Plan may be of the order of Rs 135 crores, including the expansion schemes that it is proposed to take up. Up to the end of 1961-62, of Rs 76 crores had been spent on the project.

The UP State Electricity Board has drawn up a transmission and distribution programme, at an estimated cost of Rs 15 crores, for the construction of a suitable transmission system which is both efficient and economical for meeting the requirements of the various load centres in the State and co-ordinating the operation of various power stations. The work on the project is expected to be completed before the end of the current Plan.

Tata Engineering & Locomotive Co. Ltd.

Statement of the Chairman Shri J. R. D. Tata

The following is the statement of Shri J. R. D. Tata, Chairman of Tata Engineering & Locomotive Co. Ltd., for the year 1961-62.

The Company's performance during the past year has been good and sales and earnings have maintained their upward trend. During the course of the year, the Company's manufacturing facilities have been further improved and its capacity for the efficient production of high-grade engineering products has been substantially enhanced. The details of output in each of the Divisions and the present status of the projects under expansion are indicated in the Directors' Report.

The Company's operations during the past year have made substantial contributions to the national revenue and to the transport industries of the nation. Last year, the operations of this Company alone contributed to the national revenue by way of customs duties, excise, sales, income and other taxes as much as Rs. 13 crores, which incidentally is almost 1% of the total tax revenue of the Central and State Governments combined.

PROFITS AND APPROPRIATIONS

Although the gross profits for the year have exceeded the previous year's figure by Rs. 86 lakhs, the disposable profits for the year are about the same as last year's because of the larger provision for taxation necessitated by the increase in the taxable profits and also by the higher rates of tax under the Finance Act, 1962. The amount set aside for depreciation is higher by Rs. 39 lakhs, the increase being attributable partly to the amount provided on new assets created during the year and partly to depreciation being provided for a full year on fixed assets which, in the previous year, had qualified for depreciation for a few months only. The increase of Rs. 21 lakhs in interest charges is due to the higher interest rates paid as well as to large bank borrowings necessitated by increased manufacturing activities.

As there is no appreciable increase in the net profit available for payment of dividends, your Directors have recommended the same dividend as in the previous year, namely, 14.5% or 10.15% tax-free per share, subject to tax relief under Section 84 of the Income-tax Act, 1961, which will be somewhat higher than in the previous year. In viewing the dividend recommended this year it is necessary to bear in mind the present uncertainties, particularly in regard to the availability of

foreign exchange, which may impede production in the current year, and the need to retain within the Company a reasonable share of current earnings to finance the further growth of the Company. It may also be noted that a good deal of expenditure already incurred on various projects has not yet fructified and that it will be only during subsequent years that we shall be able to earn a return on our investment in production facilities now being set up.

FINANCE

Substantial additional funds will be needed for the expansion and diversification of our manufacturing facilities. A part of these funds will be available from retained earnings and it is proposed to secure the balance partly from a long-term foreign credit which is being negotiated with the Agency for International Aid (A.I.D.). Washington, in consultation with Government, and partly from an issue of Rs. 5 crores convertible debentures. The terms and conditions of the issue including the conversion terms are still under discussion with Government, but I may mention that our intention is to offer the debentures for public subscription by prospectus after reserving a proportion for direct subscription by holders of ordinary shares. The Directors have chosen this method of raising capital in the long-term interests of the Company and its shareholders.

EXPANSION AND DIVERSIFICATION OF ACTIVITIES

Last year, I gave an indication of the various schemes approved or under consideration for expanding and diversifying the Company's activities. I am glad to say that all of them are now taking concrete shape. The manufacture of Tata-P&H power shovels has been firmly established and high-grade capacity created for the production of machinery for paper and pulp. Apart from the major expansion of the Automobile Division about which I shall have more to say in subsequent paragraphs, the construction of factory buildings and services and the enlargement of the capacities of our foundries and forge shops are under way. All efforts are being directed towards increasing the efficiency and productivity of our manufacturing facilities and reducing our dependence on imported materials and components.

EXPANSION OF THE AUTOMOBILE DIVISION

You will note from the Directors' Report that the Agency

for International Development (A.I.D.) has under consideration a loan to this Company of \$13.65 million required for implementing the first stage of the Automobile Division expansion programme which when completed will step up the capacity of this Division from 12,000 to 18,000 units per year.

As stated in the Directors' Report, the expansion programme of this Division is being carried out in two stages at the specific request of Government in the light of the current balance of payments crisis. As the production of commercial vehicles is a high priority element in the country's development plans, we hope that Government will find it possible to sanction the second stage of the plan in time to avoid a costly hiatus between the two stages of the complete programme.

FOREIGN EXCHANGE

The critical foreign exchange situation prevailing in the country today is a matter of deep interest to us. The vehicles we manufacture at Tatanagar contain an appreciable proportion of parts made from imported raw materials and also some imported components and ancillary products. Our capacity to maintain the present level of production, let alone to increase it, must therefore at least for the time being depend on adequate allocations of foreign exchange for such imports. Our foreign exchange allotments for the licensing periods April/September 1962 and October 1962/March 1963 have not yet been communicated to us, but from preliminary indications received, there is a possibility of some reduction in the foreign exchange allotment to us in respect of these two licensing periods.

We are fully conscious of the gravity of the balance of payments position in the country and the imperative need to save foreign exchange. We hope, however, and have represented to Government accordingly, that the revised allocations of foreign exchange during the two licensing periods mentioned earlier, will take into account the fact that although we were the last to enter the automobile field, our output of commercial vehicles is by far the largest in the country and also has the largest indigenous content. This is reflected in the fact that in 1961-62 we were allotted 35% of the total foreign exchange made available to the industry for the manufacture of such vehicles, while we produced over 50% of the entire country's output. It is clear from these figures that for every Rupee by which our allotment is cut, the loss of production will be the

largest and will have the most adverse impact on the country's economy. I might also mention that since we began production of Tata Mercedes-Benz vehicles we have saved the country over Rs. 35 crores in foreign exchange, of which nearly Rs. 12½ crores were saved last year alone.

Shareholders will no doubt be concerned about the likely effect on our rate of production of any cut in foreign exchange. While such effect cannot be predicted until the exact extent of the cut, if any, in our foreign exchange allocation and the period for which it will apply, are known, there is in my view no cause for anxiety or pessimism. Government are fully aware of the Company's performance and the consequences to it and to the economy as a whole of any substantial or prolonged cut in production at Tatanagar. They are to my knowledge as anxious as we are to see full production of our vehicles maintained. We have, therefore, every reason to hope that if any cut is imposed upon us it will be a relatively small one and of short duration.

Before I leave this subject I wish to point out that the achievement of complete self-sufficiency in raw materials is not within our control and only partially so in the case of components and ancillary products. Whatever our own efforts, we can never make ourselves every part and component entering into our vehicles, and like every other automobile manufacturer in the world, we shall always have to depend largely on outside supplies for our raw materials and for certain components and ancillary products. It is therefore of crucial importance that capacity for the manufacture of essential raw materials, particularly steels of the specifications and qualities required for the manufacture of automobiles and trucks and of ancillary and proprietary products, keep pace with the growth of the automobile industry. While substantial progress has already been made in this direction, a considerable gap still remains to be filled and I would urge that Government give their full and urgent support to the rapid development of these industries.

EXPORTS

Apart from the steps we are taking to increase still further the indigenous content of our vehicles, we have also launched a vigorous export drive as a further contribution to the solution of the country's foreign exchange problem. For exporting the products of our Company, not only from the Automobile Division but also from

11 August 1962

other Divisions, we have to face stiff international competition and also to surmount national barriers from industrially advanced countries. Despite the formidable obstacles in our way, we have already made a modest beginning and have secured a few orders from South Viet Nam, Malaya, Ceylon, Pakistan and Sweden.

Although the Company's export field for commercial vehicles is restricted to certain territories in terms of our agreement with Messrs. Daimler-Benz, I have every hope that with their understanding and co-operation we shall before long be in a position to achieve a sizeable volume of export business.

ROAD TRANSPORT

In these days of acute transport shortage pointing to the urgent need for providing greater freight and passenger carrying capacity, road transport deserves, in my view, a higher priority and more sympathetic consideration than it has received so far. It seems, instead, to have been specially selected for a cascade of impositions and taxes as well as of innumerable restrictions and impediments in its intra-State and inter-State operations, in addition to the limitations imposed by the inadequacies, both in mileage and quality, of the country's road system. A vigorous development of the latter, coupled with an adequate and balanced production of commercial vehicles, would yield immeasurable benefits to our entire national economy. While India has one of the largest railway systems in the world, the mileage and quality of our roads and the number of commercial

vehicles plying over them, are grossly inadequate to the needs of a developing economy such as ours. While there can be no question as to the urgent need to improve and add to the rail transport system of India, I wonder whether our Planners have sufficiently appreciated the special advantages and potentialities of road transport; for instance, the fact that road transport capacity can be built up more quickly and at much lower cost than any other method of transportation; also its extreme flexibility and large employment potential. In this connection the following conclusion by the National Council of Applied Economic Research in a detailed study made by them of the subject is worth quoting in full:

"The conclusion that emerges is: that the financial contribution of the road transport industry is far from negligible. Indeed it is greater than that of the railways in absolute terms and in terms of return on capital invested. This is true for net as well as gross contribution (deducting the cost of offsetting payments made by Government for example in road construction). Some items in the calculation may possibly be challenged, but the margin is so great that any adjustment that is conceivable is hardly likely to alter the main conclusion."

Quite apart from the immense value and importance of road transport to the physical needs of a developing economy, the financial contribution which road transport already makes and will make in future to public revenues is tremendous. For instance, out of the price of about Rs. 34,000

which the purchaser of a Mercedes-Benz chassis pays in Bombay, as much as Rs. 10,000/- or only slightly less than 30% goes to pay for duties and taxes to the state and Central Governments. In addition, every commercial vehicle during its many years of operation, continues to be a favourite source of national revenue through crushing fuel taxes and a variety of other taxes. These factors seem to be some times overlooked in determining relative priorities to be given to different types of transport.

EXCAVATORS

The manufacture of Tata-P&H excavators has been established on a sound basis, your Company being the first in the country to produce this heavy line of equipment. We have started with the production of 2½ cubic yard machine. Our present output of three such machines a month will be increased to four from about September this year onwards. Our machines have received an excellent reception from users and are in operation in various locations in the country. The demand is a large and growing one; our order books are full for the next 12 months and we do not anticipate any difficulty in disposing of our total output.

LABOUR

Whereas last year there was no interruption to production caused by action on the part of our workers, there was a brief stay-in strike in a few shops of our Automobile Division during the year under review.

During the current year, the workmen as well as the

management will have to face the challenge posed by the reduction in vehicle output which has been forced on us by external circumstances. There is need to consolidate still further our position to enable us to implement rapidly the expansion programmes and make the most intensive use of the expensive plant and machinery that will be installed. I earnestly hope that we shall have the co-operation of our Union and our workmen in facing these problems.

In conclusion, I wish on your behalf to thank all those responsible for the Company's operations and progress during the past year—workers, staff, supervisors and top management, particularly our General Manager, Mr. R. G. da Costa, Mr. Hans A. Stoehr, who was in charge of our Automobile Division from its very inception, retired from the Company's service during the year under review on being recalled by Messrs. Daimler-Benz for an important assignment in Germany. Mr. Stoehr's exceptional abilities, drive and leadership were largely responsible for the growth and success of the Automobile Division since its early beginnings in 1954 upto its present pre-eminent position. I would also like to record our appreciation of the valuable part played in the Company's growth and development over a period of 11 years by Mr. A. B. Parakh, who recently relinquished charge of the Company's Head Office in Bombay on taking up a senior appointment in Voltas Limited.

J. R. D. TATA
Chairman.
Bombay, 26th July, 1962.

Indian Sugar Mills Association

Need for All-Out Effort to Promote Exports

Mr. D. D. Puri's Review

In his Presidential address at the 29th Annual General Meeting of the Indian Sugar Mills Association, held at New Delhi on the 8th August, 1962, Shri D. D. Puri, President of the Association said:

DETERMINATION OF SUGARCANE PRICE

For a realistic assessment of the problem of the Sugar Industry, it has to be borne in mind that the production of sugar in the world is much more than its consumption. The potential is even bigger than the production achieved hitherto. That is why most exporting countries and some importing ones, notably the U.S.A., have imposed statutory restrictions on cane and beet acreages. In India, however, control of this type would

present insurmountable administrative problems because of the large number of growers involved. Here the only way to stabilise the production of cane is to fix its statutory price at a level that is not so low as to be unremunerative as that would inevitably discourage cane cultivation and affect sugar production, and not so high as would divert additional land to cane cultivation and thereby disturb the economy of other food crops. Experience has proved that whereas the price of Rs. 1.44 was too low resulting in shortages in sugar production, the price of Rs. 1.62 was definitely too high and caused the crisis of over-production. The price was raised from Rs. 1.44 to Rs. 1.62 in 1959-60. Within two years, area under cane registered an increase of about

20% in the Northern zone alone. Thus in 1960-61 we produced 3 million tons of sugar when we consumed only 2.1 million tons. This rapidly expanding area under cane unless checked would lead to disaster. It would bring about a collapse of the Sugar Industry and with it wide-spread suffering to the millions of cane growers all over the country. That is why production of sugar had to be statutorily controlled in the last season. We have, therefore, to strike a balance between these two extremes to avoid measures like restriction on production becoming a recurring feature.

BASIC FACTS OF SUGAR INDUSTRY

The basic concept of a statutory price of cane, irrespective of its

sugar content, has been a major obstacle in the way of cane development. It has acted as an incentive in the wrong direction; it has encouraged the grower to grow cane without regard to the sugar content, thereof. There is no getting away from some basic facts of life in sugar economy. Let me state these as clearly as I can.

One, sugar is produced in the field; the factory only processes it. If India is one of the highest cost sugar producers in the world, the causes and the cures will have to be sought in the field.

Two, when cane is sold, it is the sugar in cane that is or should be paid for. The rest is trash, literally and metaphorically.

And three, the grower has to be helped into a correct concept of

the common objective and provided with the wherewithal to achieve it.

In the light of these observations, I venture to suggest that the recent policy of Government fixing Rs. 1.50 per maund as the minimum price of cane upto a recovery of 9 per cent and increasing it correspondingly to increase in recovery is a welcome first step. One might be tempted into suggesting improvements even in this first step. For instance, a mechanism could be built into the scheme whereby factories should be enabled to pay a higher than minimum price for cane at a time when competition from gur is particularly fierce and adjust this additional payment later on without in any way deviating from the average minimum price payable to the growers. The Industry, however, has an open mind on the scheme and is prepared to give it a fair trial so as to be able to make constructive suggestions after working it for one season. Later on the scheme of incentives will have to be carried further to groups of growers and ultimately perhaps the individual grower.

CANE DEVELOPMENT

Alongside the quality incentive price scheme, we have to provide the grower with the wherewithal to improve the production of sugar in cane. State Governments raise crores of rupees every year on account of cane cess. They have done so for decades now. By and large these monies have not been spent on cane development. Let it be understood clearly and without doubt that diversion of cane cess to general revenues is carried out almost entirely at the expense of the grower. There is no getting away from the fact that cane cess was first proposed and levied in the name of cane development. The most important single factor that can put sugar production on a sound footing is the utilisation of cane cess for cane development. The biggest beneficiary, if this ever happens, will be the cane grower. And this step will bring about stability to all aspects of the Sugar Industry, including exports.

I am happy to acknowledge here the welcome step taken by the Punjab Government when they announced that the entire cane cess would be spent on cane development in the State and sincerely hope other States will emulate the example. I also welcome the announcement of the Chief Minister, U.P., for setting up a high power committee to suggest ways and means of improving the position of the Industry in the State. I hope this committee will be formed soon, will go deep into the problems and suggest a corrective that could be implemented expeditiously.

SUGAR EXPORTS

Moving now from sugarcane to sugar, I may express that an ex-

port target of 5 lakh tons for 1963 is a safe figure to start with. This could be improved upon progressively in the following years. Our national economy is entering a difficult phase. As time passes the foreign exchange position is getting more and more difficult and there is no hope of checking the strain at least in the next few years. We, therefore, must export. Our failure on this front would rob our hard-won freedom of its content and meaning and deal an irreparable blow to our economic growth. We have passed the stage of ifs, buts and whethers and must get on with the job. My appeal to every one concerned is to make an all-out effort to promote exports.

NEED TO PRODUCE RAW SUGAR

For the Sugar Industry, which is relatively a new comer in this field, exports on a large scale will present many difficulties. Take raw brown, to start with. Technologically, switching over from the production of direct consumption white to raw brown which has to undergo further refining may appear to be a retrograde step. It may appear very easy. It may or may not be retrograde but it is certainly not as easy as may appear at first sight. We have to recognise the fact that a large part of the sugar that sells abroad is in the raw state. As more and more countries establish refineries, the raw market is expanding at the cost of white. The seller has no choice. He has to produce what the buyer wants.

This Association has given a very close look to the production of raw brown sugar. We convened two seminars followed by two meetings where the technologists discussed the problems involved. We have received valuable advice and assistance from the National Sugar Institute. As a result of all this, it is clear that with the exacting specifications demanded by some of the importers, the switch-over is not an easy matter. Apart from production, there are the problems of storage, handling and deterioration in transit. Nevertheless, I am confident that with co-operation and understanding at the hands of Government, the industry will and it must make an all-out effort to produce 2 lakh tons of raw sugar in the next season. Personally I have no doubt whatsoever, that the target will be achieved and valuable experience gained for expanding this production in later years.

SUGAR EXPORTS DURING LAST YEAR

During the last year we exported about 2.47 lakh tons of which more than half was for the U.S.A. and the balance for Malaya and other destinations in East and West Asia and East Africa. This was by far the largest quantity ever exported from India. Apart from affording some relief to the Industry in disposing of its stocks, exports of

sugar have enabled the country to earn a substantial amount in foreign exchange. Its contribution to the foreign exchange resources last year was about Rs. 13 crores at a time when the most unsatisfactory aspect of the country's economic situation, according to the Finance Minister was "the persistent attrition of our foreign exchange resources".

EXPORTS IN THE CURRENT YEAR

This year, we have already exported about 2.25 lakh tons and according to the sales already contracted should ship 1.10 lakh tons before the start of the next season. We have this year also made a first entry into the Canadian market by selling about one lakh tons there. This has given us confidence in being able to develop markets in far-off places also.

U. S. QUOTA

I would also like to make a brief mention of our efforts to obtain a quota for our sugar under the new U. S. Sugar Act. I am sorry that our expectations in this regard have remained unfulfilled and that we have been able to secure only a nominal quota of 20,000 tons per annum for the next two and half years. We have not won a better quota in spite of our having successfully overcome the difficulties involved in shipping, bulk handling and making supplies available at short notice. I make bold to say, the performance of Indian sugar—and we have exported 1.37 lakh tons to the American continent in a short span of three months—will bear comparison to that of any nation in the world, including those well established over decades in this business of exporting sugar to America.

REGULATION OF RELEASES

Coming now to releases for sale within the country, we are at one with Government that a fair and stable price for sugar is desirable in national interest. We recognise that in a large country like ours, transport and other problems tend to create bottlenecks leading to ups and downs in prices here and there. These limitations are inherent and have to be borne with patience, without panic. We believe that regulation of releases can help build a statutory corrective to the forces of instability. We thus state that the Industry should be consulted at the time these releases are determined.

REDUCTION IN EXCISE DUTY ESSENTIAL

Excise duty on sugar was first levied in 1934 at 97 Naye Paise per maund. Over the years it was increased to Rs. 4-12 per maund. In May 1957, this basic excise duty was doubled to Rs. 8.25 per maund. Further, an additional excise duty was levied in December, 1957, in replacement of sales-tax which

together with the basic duty, amounted to Rs. 10.70 per maund.

About one-third of the cane grown in the country finds its way to the vacuum pan sugar factory. The rest goes into the manufacture of gur and khandsari. There is no duty on gur. The duty on khandsari is nominal vacuum pan sugar alone bears this heavy burden. Whenever there is shortage of cane, the factories are unable to pay the price that khandsari and gur manufacturers can. In times like these, cane which is normally supplied to factories is diverted to gur and khandsari manufacture. This is a national loss, for the factory is able to extract between 33 and 50 per cent more than the gur and khandsari manufacturer is able to. And it leads to idling of capacity on the one hand and an over-all loss of sugar on the other. This phenomena acts most acutely when there is a shortage and aggravates this shortage. This situation leads to control and control in its turn inhibits production.

Sugar has swung between regularly recurring cycles of shortage, control, decontrol, glut and control again. In the three seasons ending 1955-56 we have imported 13.17 lakh tons sugar and later had over a million tons to export.

A major factor in this instability is the heavy excise duty on sugar and the economic disparity it generates between the different users of cane—vacuum pan factories on the one hand, gur and khandsari manufacturers on the other.

The only way to get out of this vicious cycle is to reduce excise duty on sugar. If the basic duty is reduced to the 1957 level, a part of the loss of revenue would be off-set by increased consumption. And yet, the increase in production would easily take care of the increase in consumption, so that our export programme would not be endangered.

If the present disparity perpetuates itself, the Indian Sugar Industry will never be able to get out of regularly recurring cycles of surplus and shortage. Vagaries of weather are bad enough by themselves. The man-made disparity created by the excise duty, aggravates the climatic variations, in both directions. This keeps every one connected with the Sugar Industry, the cane grower, the Industry, the trade and the consumer in a perpetual state of instability, almost of crisis. Pray do not imagine our sugar export programme can remain immune from these crisis. Excise duty has to be reduced drastically. This Gordian knot has to be cut. No cheaper solution is available.

INSTALLATION OF NEW UNITS VS. EXPANSION OF UN-ECONOMIC UNITS

Another matter which I must touch is that before licences for new factories are issued, the small

uneconomic units must be allowed to expand to economic capacities. The latter must rank prior to the former.

COAL SHORTAGE

The country has been passing through a period of acute coal shortage due to which the coal quota of the Sugar Industry was

drastically reduced to 185,000 tons for the season 1961-62 against its demand for 250,000 tons. It was with considerable difficulty that the Industry was able to carry on the season. For the year 1962-63 a drastic cut was again effected in the steam coal and hard-coke quotas of the industry from 711 wagons to 365 wagons

per month. However, I am glad to state that on repeated representations made, the cut in respect of steam coal has now been restored. But the cut on the hard-coke quota has yet to be restored. Hardcoke is essentially required by carbonation factories in the actual process of manufacture without which the factories can-

not work. I would, therefore, like to urge upon the Mines and Fuel Ministry of Government of India to reconsider the matter and arrange for early restoration of the cut in the hard-coke quota to enable the carbonation units to have sufficient supplies ensuring smooth and uninterrupted working during the coming season.

Indian Copper Corporation Limited

Ore Reserves Record 4 m. Metric Tonnes

Increase in Cost of Production, shortage in Essential Supplies

Mr J. W. Easson, C.A., the Chairman, on Company's Prospects

Presiding at the Annual General Meeting of the Company for the year ended 31st December 1961 held on the 8th August 1962, Mr J. W. Easson, C.A., Chairman said:—

Gentlemen,

The Annual Report of the Directors and the Accounts for the year ended the 31st December, 1961 were submitted to you several weeks ago and I am sure you will agree that the results are not unsatisfactory despite the economic hazards which your Company, in common with many others, experienced during the year. This is the first occasion on which I have had the pleasure of addressing you and I would like to continue the practice of my predecessors and tell you something about your Company's trading throughout the year, the progress achieved and future prospects.

GENERAL REVIEW

From June 1961 Copper prices on the London Metal Exchange have been remarkably stable and the difference between the highest and lowest quotations has been as little as £5 per ton. This compares with a fluctuation of £61 in 1960 and £33 in the first half of 1961. This unusual stability is the result of a balance between supply and demand which has been achieved by some of the largest producers who have reduced their output and given some support to the London Metal Exchange price. The cut back in production now stands at 15% of capacity and there is no reason to suppose that this percentage will not be varied to keep the world Copper output in balance. As long as there is no violent fluctuation in the demand for Copper or labour unrest among the larger producers I expect the price of Copper to remain around the present level of £234 per ton.

The selling prices of your Company's products are linked to the

world prices of Copper and vary in accordance therewith. Thus the price stability in the world markets which I have mentioned has been reflected in the steadiness of the price structure of our products in the Indian markets. At the present selling rates and if our production is maintained at approximately the current level the profit margin can be regarded as satisfactory and I think we can view the immediate future with confidence.

WORKING REVIEW

You will have noticed from your Directors' Report that production of Copper dropped by 574 tonnes in comparison with 1960, in which year you will recall production reached a record level. The fall in production during the year was due to a reduction in the number of days worked as the 1960 annual overhaul, when the plant has to be shut down, was postponed to January 1961 and had to be extended by several days in order to modify the Ropeway. A further shutdown of a few days later in the year was caused by a shortage of coal.

I am however pleased to be able to tell you that due to an improvement in the Copper recovery percentage the rate of production was actually higher than in the previous year.

Development and prospecting continued throughout the year but on a considerably reduced scale. Certain essential stores, in particular explosives and drill steel, were in short supply and development had to be suspended or curtailed in a number of areas. Nevertheless I am glad to be able to report that despite the reduction in footage developed, the ore reserves increased by over 110,000 tonnes during the year. These reserves at the 31st December, reached the record figure of more than 4 million metric tonnes.

Last year your Chairman drew your attention to the adverse

effect on production of cuts in import licences. Your Company's output of Brass and Yellow Metal Sheets and Circles depends entirely on the availability of Zinc, which must be imported and as a result of the serious foreign exchange position our full requirement of Zinc was not sanctioned in 1961. The output of rolled products, therefore, fell substantially in comparison with the previous year and with India's foreign exchange position still critical, the prospects of any improvement this year are rather remote.

Like most industrial undertakings your Company has been greatly concerned with the serious shortage of power, coal and transport but overall the effect, I am pleased to say, was not as bad as had been expected. Nevertheless the threat remains and it is to be hoped that every effort will be made to bring about a definite and permanent improvement in the supply of these utilities on which all industry depends.

Your Company is fortunate in that it possesses its own generating plant to augment the Electric Power supply from the Damodar Valley Corporation and thereby has largely been able to counter-act power cuts. As a result the Company suffered no serious power shortage during the year but I trust that there will be a considerable improvement before the end of 1963 when we shall require substantially more power.

Your Company has suffered an acute shortage of coal throughout the year and despite full co-operation received from suppliers and the Coal Controller it has been impossible to build up stocks which have remained at dangerously low levels. The facts of the national coal shortage are well-known to you all and need no repetition here. Suffice it is to say that energetic action is now being taken by the authorities concerned and while the scarcity will undoubtedly remain with us

in the immediate future, I hope that it will get no worse.

The shortage of coal has been aggravated by the difficulties of rail transport and in an effort to avoid a recurrence of a stoppage of work it has become necessary to augment supplies by the far more expensive method of road transport.

The rail transport problem has also been reflected in a decrease in the despatches of finished goods from the Works and in consequence there has been a further increase in Stocks. This accumulation of Stocks is, I am afraid, locking up more of the Company's finances than is desirable but I am pleased to say that there have recently been signs of an improvement in the wagon allotments and if this is maintained despatches should improve and the stocks should come down to a more satisfactory level.

The overall cost of production has increased, principally due to the lower output but the facts that raw materials are now more expensive and labour costs are higher and mining is generally being carried out at greater depths, have also added to the increase.

Modifications to and replacement of existing plant and equipment continued according to schedule in conformity with the plans to increase production and I am pleased to tell you that alterations necessary to increase the capacity of the Aerial Ropeway were successfully completed during the year.

I am happy to inform you that in place of Consolidated Goldfields of South Africa Ltd. who, for domestic reasons had to relinquish their appointment as the Company's Technical Consultants, we were most fortunate in being able to appoint John Miles & Partners (London) Ltd. as Consulting Engineers and Technical Advisers for a period of five years from the 1st July, 1961 and the appointment

has received the approval of the Government of India. John Miles & Partners (London) Ltd. have already been of considerable assistance in the progressing of our expansion programme.

I am pleased to report that good relations between the management and labour were maintained throughout the year.

KYANITE

A particularly satisfactory achievement of the year was the settlement, by way of a Compromise, of the longoutstanding dispute with our Superior Landlord, the State of Bihar, over our lease to mine Kyanite. Our thanks are due to all those persons who have brought these negotiations to a successful conclusion. I am pleased to report that the State Government has granted to your Company a fresh lease of the property to mine Kyanite ore for a period of 20 years from the 1st September 1961 with an option of renewal. The claim of the Bihar Govern-

ment on your Company including mesne profits for the period between the date that the old lease expired in 1955 to the date that the new lease was granted in 1961, was Rs. 1 crore which, in terms of the Compromise Settlement, stands satisfied by the Company undertaking to pay agreed annual instalments throughout the period of the lease.

Despatches of Kyanite increased from 21,659 tons in 1960 to 27,460 tons in 1961. The export of Kyanite continues to earn much-needed foreign exchange and with this in view we have increased our efforts to improve overseas trade and we now have contacts in most countries of the free world.

ELECTROLYTIC PROJECT

I am happy to report that work on the Electrolytic Copper Refinery is now progressing satisfactorily. Work has suffered from the shortage of cement and certain delays in the issue of licences for equipment being imported from over-

seas but these difficulties have now largely been overcome and there is no apparent reason why the Project should not be completed by the end of 1963.

ACCOUNTS

Turning now to the Accounts, the results disclosed reflect the conditions under which the Company has operated during the year and which I have outlined in my remarks to you today. The Profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,222,163 which compares with £1,307,982 for 1960. The provision for Taxation requires £504,512 while your Directors have decided to place £165,000 to Depreciation and £100,000 to General Reserve. This year £56,250 goes to Development Rebate Reserve.

I mentioned earlier the settlement of the Kyanite Suit and you will no doubt have noticed in the Balance Sheet that a sum of £28,964 has been transferred

from General Reserve to make provision against the Decretal amount for previous year. In addition £68,465 has been appropriated out of the profits for the year under review.

The balance available for disposal, including the amount brought forward from the previous year, is £442,561 and your Directors are recommending the same Dividend distribution as last year, namely 27% subject to tax. This will absorb £370,251 leaving a sum of £72,310 to be carried forward to next year.

STAFF

In conclusion, I am sure you will wish to join me in thanking Mr. N. A. B. Hill, the General Manager and the staff at the Mines and at the Works and all the workers for a year of loyal and industrious effort.

N.B. This does not purport to be a record of the above annual general meeting.

Indian Finance

11 August 1962

TEA Abolition of Common External Tariff

IT has been announced that the ECM deputies have decided to abolish the common external tariff in Tea. This decision is a distinct gain in the sense that the Tea Board and the industry are now allowed to consolidate their recently initiated efforts to promote exports more actively. India should utilise the opportunity to put her tea industry on a more competitive footing to withstand the chill winds of competition not only from coffee but other more fortunately placed tea producers. Efforts should also be made to consolidate the position of Indian tea in markets where tea as a beverage is already well-established. Promotion efforts should be supplemented by technical advice to tea blenders such as is to be offered to the trade in the United States by posting expert special officers. The availability of such advice can help India enlarge her share by assisting buyers to get the kind of teas they want.

Meanwhile, in the export sale held in Calcutta this week, offerings were 50,828 packages of leaf tea. There was a fairly good demand; but the market generally followed a lower trend. Orthodox descriptions declined by 20 nP to 40 nP per kilo with only limited interest being shown in the more ordinary and plain kinds, although selected lines were sometimes dearer. Bright liquoring Assams were again sold well.

CTC descriptions were, keenly sought after, but at irregular rates. Medium sorts were generally lower by 20 nP to 40 nP, and sometimes more. Legg-cut teas met with fair support at 10 nP to 30 nP below last rates with some withdrawals.

Whole Leaf grades followed the easier trend of the market and there was only limited enquiry for there was only limited enquiry for Tippy sorts. Flavours Darjeelings were again sold well although prices often showed a slightly lower tendency. Plain kinds from this district were taken up at around last prices. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.25 to Rs 4.50; Plain BP Rs 3.65 to Rs 3.90; Plain Fannings Rs 3.70 to Rs 3.90; Medium Assam CTC BP Rs 5.40 to Rs 6.00; Medium Assam CTC Fannings Rs 5.30 to Rs 6.00; Best Assam CTC BP Rs 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 8.00.

In the Internal Sale, offerings were 29,794 packages of dusts. There was a good general demand. Medium CTC dusts came in for good enquiry at prices which were generally lower by 20 nP to 30 nP per kilo. The small powdery and bright liquoring teas met with better support. Although the good CTC dusts were also in demand, prices were lower by 30 nP to 40 nP. Plain orthodox dusts were absorbed at a discount of 20 nP, while the bright liquoring Assams were the

strongest feature of the sale and the invoices offering quality realised considerably enhanced prices. Non-wither legg-cut types improved further on last week's rates, while some of the selected invoices were sold well. Following rates were quoted:—Plain orthodox Dust Rs 3.30 to Rs 3.60; Medium Assam Dust Rs 4.60 to Rs 5.00; Legg-cut Dust Rs 3.80 to Rs 4.30; Medium Assam CTC Dust Rs 5.50 to Rs 6.00 and Good Assam CTC Dust Rs 6.40 to Rs 6.80.

According to the revised figures available in Calcutta, exports of North-East Indian tea increased to 364.45 million pounds in the year ended June 1962 from 352.06 million pounds in the previous year. While exports to the UK, the largest buyer of Indian tea, declined from 229.39 million pounds to 221.57 million pounds, those to other out-markets increased from 122.67 million pounds to 142.87 million pounds.

Trade sources from Cochin state that production of tea in the South increased to 18.1 million pounds in June 1962 from 16.00 million pounds in the corresponding month of last year. This puts the total South Indian tea output, in the first half of the current year, higher at 94.9 million pounds as against 91.8 million pounds in the January-June 1961 period.

Exports of tea from East Africa declined to 4.51 million pounds in April 1962 from 5.47 million pounds in the previous month. Exports from Kenya fell from 3.3 million pounds in March 1962 to 2.63 million pounds in April 1962 as did those from Tanganyika and Uganda from 1.09 million pounds and 1.08 million pounds to 1.03 million pounds and 845,100 pounds respectively.

*

COTTON

Futures Buoyant

Thanks to the revival of buying by spot houses and the frantic short covering by the operators from the upcountry centres, the Bombay cotton futures market presented buoyant conditions during the past week. The sentiment was also assisted by the disturbing reports emanated from Saurashtra, North Gujarat, Khandesh and Punjab indicating damage to the cotton crop owing to inadequate rain fall. It was apprehended that the new crop would be considerably less than the present calculations and the supply position would not show any signs of picking up as the chances for immediate imports are few and far between. The ruling contract which opened the week three points higher than the previous week's closing of Rs 725.75 per three quintals smartly moved up to Rs 744.25 before closing at Rs 742.50.

The Cotton Advisory Board which met on 2 August recommended that the Government of India should import at least 1 million bales of cotton during the new season with a view to assisting the cotton-textile industry to maintain its production schedule. However, the Board felt that there is no need

for releasing export quota for Bengal Deshi in the current season but suggested that a large quota be announced for the coming season as early as possible. There was unanimity of opinion among the members of the Board that the Textile Commissioner should exercise his powers of random requisitioning effectively at his own discretion. They also agreed that the quota system should be allowed to continue and recommended that the prevailing practice of variety-wise distribution should be modified.

While discussing the question of control, which they decided to carry over to the commencing season also, it was suggested to continue a few large, strong and expert zonal committees comprising experienced surveyors in lieu of the existing multiplicity of regional survey committees.

The Board appreciated the Government's early decision at the commencement of the sowing season to enhance the prices for the 1962-63 season of the basic variety of Jarilla fine 25/32" by Rs 35 per quintal with corresponding increases in the prices of other growths.

The Board also considered the question of supply and demand of cotton and expressed grave concern over the precariously meagre carry over stocks for the next season. The Board estimated the next year's crop round about 52 lakh bales.

The recommendation for the import of 1 million bales of cotton was received with mixed feelings by the trade. A section of the trade is sceptic about the import prospects unless Government succeeds in securing cotton under PL 480 arrangement. In the export section the shippers met with great disappointment at the Board's decision not to recommend a further release of export quota for Bengal Deshi.

In the spot market at Sewri spinners were active buyers of the available lots, though the turnover was restricted due to the reluctance of the sellers to dispose of their goods at present in the anticipation of an enhancement in prices. De-

mand was focussed on Kalyan, Laxmi, L 147, 197/3, Jayadhar and Co 2. A brisk demand was noticeable in the import section for the East African cotton as a result of which the prices moved up slightly. Good enquiry for Sudan and Pakistani crop was also reported.

LIVERPOOL

Sluggish conditions prevailed in the US cotton futures market during last week with operators adopting a watch and wait policy. The trade support was absent on account of the uncertainty pertaining a possible increase in the US export subsidy. The market ruled fairly steady but the prices tended to slip down as the offtake was far from encouraging.

Business transactions were largely centered on light hedging in the March delivery which was met by short local covering. Sudan futures again remained featureless and the price fluctuations were practically nil. The Sudan Gezira Board disposed of about 6,987 bales of saket/lambert cotton of the current year's crop and 938 bales of saket/lambert of the preceding year's crop.

PIECEGOODS

The revival of upcountry demand coupled with fair bookings for overseas countries led to a slight improvement in the Bombay cotton piecegoods market during the last week. After a long period of inactivity, some of the upcountry buyers entered the indigenous section to replenish their attenuated stocks in anticipation of the festival season. The prominent buyers were from Bihar, Rajasthan, Kerala and Bengal.

Old popular goods were eagerly sought after but the tight supply position prevented transactions on an appreciable level. On the contrary, fairly good business was transacted for forward delivery even at a somewhat enhanced prices. Seasonal goods also met with good demand from the buyers. Coatings, shirtings, poplins and bleached longcloth also at-

Markets

JUTE

Outlook for Hessian Exports

THE jute goods market was rather irregular during the past week with heavy goods quiet while hessian was steady. The improvement in sentiment in regard to hessian has stemmed from the lower than expected rise in stocks of hessian at the end of July. The figures for stocks of jute goods at the end of July released on Tuesday disclosed that total stocks were higher by 5,600 tonnes at 85,900 tonnes. Stocks of hessian were at 26,100 tonnes, showing a rise of 1,300 tonnes while those of sacking were 6,600 tonnes higher at 45,700 tonnes. Other goods however were 2,300 tonnes lower at 14,100 tonnes. As it was earlier believed that stocks of hessian had accumulated due to steadily increasing production and diminished offtake, the news that actually the rise in hessian stocks has been as small as 1,300 tonnes, revived confidence in the section. The fact that stocks of hessian had risen only by a small quantity during the past month necessitated the revision of earlier calculations about foreign interest in this category of goods. The expectation is that in coming weeks, demand would improve as both the principal buyers of hessian are likely to increase their offtake. As far as the US is concerned the first half of the year is generally a dull period for burlap consumption while activity considerably increases in the

second half. Reports from that country that consumers were comfortably placed as regards stocks while the report that Argentina might not enter the primary market for some time further encouraged the slowing down of US enquiries. There was no doubt a lull in Argentine buying for some time but there has been a revival of enquiries from this country. This together with the increased demand for burlap likely in the second half of the year may result in fresh enquiries from US.

The long term outlook for hessian offtake by Argentina, India's second largest market for this category of goods, does not appear to be very bright. It cannot be denied that this year there has been signs of revival of substantial enquiries. One serious impediment in the way of expanding hessian consumption by Argentina is the acute shortage of foreign exchange in the country. It was feared some weeks ago that because of the foreign exchange shortage the country might ban import of hessian. It would however appear that a relaxation had been made in the case of hessian import as bags are essential for packing export commodities. But it will be wrong to assume that hessian imports by that country are hampered only by the present shortage of foreign exchange. There is evidence to show that Argentina is concerned about the very high prices it has sometimes to pay for its purchases of hessian from India. It is said that during the hectic rise in Calcutta prices a couple of months ago,

General Manager.

tracted the attention of the purchasers. There were also some enquiries for bleached longcloth and printed and dyed voiles.

The powerloom section displayed better conditions. The prices of grey mills obviously owing to the shortage of goods and the increased price of yarn, gained 3 nP per yard. Finished saris and dhoties also caught the fancy of the buyers, though turnover was restricted to immediate requirements.

The export front was active during the week under review. The UK accounted for good business though the prices realised were a bit lower than those prevailed a couple of weeks back. Burma focussed great attention on a variety of items but the turnover was pretty little. Ethiopia and Eritria were satisfied with a moderate quantum of usual qualities. Singapore's interest was confined to bleached longcloth and mull for its immediate requirements.

Cashew Export Prospects

IT is officially stated that an increase of more than 1.3 million pounds is recorded in the export of Cashewnut kernels during the first quarter of this year as compared with the export figures for the corresponding period of last year. India exported 24,394,150 pounds during January-March, 1962 as against 23,056,200 pounds in January-March, 1961. While imports by the USSR this year rose five times her offtake last year, those by the USA, the major consumer of Indian cashew, and the UK showed a sharp decline.

Imports of cashew kernels by Russia for January-March this year are put at 5,833,400 pounds as compared with 1,320,850 pounds in the same period last year. The USA and the UK imported 13,100,200 pounds and 1,716,550 pounds respectively this year as compared with 15,729,350 pounds and 2,313,900

pounds respectively during the past year. Total earnings from the export have, however, declined. While India earned Rs 4.95 crores in January-March, 1961 on this account, the earnings for the period January-March, 1962 were only Rs 4.44 crores.

Exporters expect a good demand for the commodity this year. The Communist countries have already purchased larger quantities. The US is also expected to buy more in view of the reduced tariff on cashew kernels. Purchases by Sweden, the Netherlands, Hongkong and Singapore have also been higher. The Western countries are expected to enter the market when the price is more favourable.

Again, with the introduction of scientific packing, cashewnuts have found more buyers in Canada. There is considerable scope for further increasing cashew kernel exports to Canada, provided attention is paid to attractive packing. Another factor in favour of better sales is the high prices of other edible nuts; and cashew kernels are by far the cheapest at present.

Canada is presently enjoying great economic prosperity. With the result, the people in that country are in a position to afford large number of luxuries. The market survey points out that this will continue to be the most influential factor, which can boost the export of edible nuts to Canada.

NON-FERROUS METALS

After developing considerable weakness, prices of Non-Ferrous metals developed a sharp recovery in the Bombay market, thanks to the tight supply position in the face of persistent offtake. It was thought that it would not be possible to get adequate imports from abroad, especially when the Finance Minister had stated that import restrictions were to continue as long as there was a shortage of foreign exchange notwithstanding the assurances of aid by the members of the Aid-India Club. It was felt that very little foreign exchange would be

available for imports of items of less importance to the country's economy.

Copper prices remained unchanged, quoting Rs 415 per 50 kg for electrolytic coils and Rs 562 per 100 kg for scrap. Tin was quoted firm at Rs 220 per 10 kg.

Tin prices continued to dominate the London Metal Exchange over the past week with wide price fluctuations following the uncertain outcome of the Tin Council's approach to Washington on the stockpile releases. The rate for the metal was fluctuating narrowly around £850—the support level. Market circles in London state that prices are expected to move around this level till the Buffer Stock Manager is ready to replenish his stocks. As he sold out most of the previous stocks at a much higher figure, he may well continue absorbing the metal.

Copper remained firm. A generally more settled international labour situation contributed to this. Lead prices continued their steady decline to a fresh low level for the postwar period. Prices have now fallen by 50 per cent in the last five years. Zinc prices have tended to weaken in sympathy although this metal is better-placed statistically than lead.

CHEMICALS & DYES

Conditions in the Bombay market for Dyes and Chemicals remained generally dull.

The Dyes section failed to maintain the higher levels touched in the previous week as the demand had dried up. In Vat colours, violet RR, both the German and Japanese qualities, fluctuated between Rs 80 and Rs 76. In scarlet RC, the German variety was steady around Rs 9.12. Turquoise blue was quiet with the Japanese quality quoting Rs 18 and the Italian at Rs 19.

Led by caustic soda and bleaching powder, prices in the Chemicals section moved down in the absence of demand and with stocks in fair supply. Caustic Soda lost Rs 5 at Rs 61 for the JCI variety due to selling pressure. This was attributed to the arrival of overseas goods during the week. The indigenous quality was offered at Rs 57. The fall in the price of bleaching powder was more marked. The small packing JCI slumped from Rs 118 to Rs 110 and the big from Rs 108 to Rs 95. It is stated that the price ruling in Bombay are higher than those in other centres.

YARN

Price movements in the Bombay Yarn market were mostly influenced by the speculative activity. After a brief downward spell, Staple-Fibre yarn prices have resumed the upward trend with both the spot and the forward delivery contracts recording sizable gains during the last fortnight. August and October delivery rates are quoting at Rs 824 and Rs 850 respectively, while the spot rates are higher than the forward. State-Fibre 2/40 on hanks are quoted in the range of Rs 4 to Rs 4.37, while 2/40 cones are realising Rs 4.37 to Rs 4.62.

The expansion of demand for staple-fibre yarn is mainly attributed to increased exports of fabrics. With art silk yarn prices soaring to

very high levels, weavers have switched over to staple-fibre fabrics. Staple-fibre is easily available, while art silk is reported to be scarce. Besides, exporters of staple-fibre fabrics are also granted import licences for art silk yarn. In addition, the rebate on exports is now allowed on an increased scale. In the circumstances, staple-fibre fabrics are figuring prominently in India's exports of rayon fabrics.

SUGAR

Despite the fact that the supply position continues to be comfortable, Sugar prices have been ruling firm due to brisk buying support from all parts of Uttar Pradesh, the Punjab, Rajasthan and Delhi. The rise in prices is attributed to brisk demand from khandasari and gur consuming areas in view of the scarcity of these commodities at producing ends. Trade circles clamour for a further release in order to check the rising trend in prices. Mill-delivery rate, at Hapur, is quoted at Rs 109.25 per bag.

Meanwhile, the Union Minister of Food and Agriculture has stated that conditions in the industry and trade will become normal in a year or two. He says that things have brightened up on the export side. The surplus stock of sugar has dwindled from 1,200,000 tons at the beginning of the year to less than 900,000 tons, while about 350,000 tons had been exported recently. The Government has also concluded a deal for the export of 300,000 tons to Canada and Japan.

OILS & OLSEEDS

A sharp advance in Groundnut prices was the main feature of trading on the Bombay Oilseeds Exchange. The recent upward trend in prices gathered further momentum due to renewed bull support on reports that weather conditions were not favourable in the major producing areas. With the approaching festivals, crushers and vanaspati manufacturers were inclined to obtain their requirements, while the keen demand for groundnut expeller and metal aided sentiment. Although fresh business in groundnut meal was relatively small, the overall outlook was considered to be favourable with the UK rate quoting £35-12-6 for August-September shipment. Local prices for groundnut expeller and meal ruled firm at Rs 419 and Rs 380 per ton respectively. Groundnut bold ready was quoted at Rs 49.50 and Groundnut Oil at Rs 19.90.

In the Castorseed section, trading was mostly of a speculative nature in the absence of fresh developments. Foreign demand for castor oil was negligible and prices were unremunerative at £111 for commercial oil and £118 for BSS oil. There was no fresh news from the US market. Castor ready was quoted at Rs 34.62 and Castor Oil, commercial quality, at Rs 13.20.

In the Linseed section, price movements were irregular due to alternate buying and selling according to advices from North Indian markets in respect of rape seed. Linseed ready was quoted at Rs 41.75 and Linseed Oil at Rs 17.20.

Indian Finance

For the Investor

INVESTMENT GOSSIP

Subdued Trend

STOCK market sentiment this week has been subdued as both operators and investors are reluctant to extend commitments in view of the continued uncertainties that cloud the outlook of equities. The higher levels have been found untenable as there is no fresh buying interest. The speculative fraternity is disappointed because there is yet no indication when the new steel retention price will be made known. In the meantime, there is the expectation that TISCO too will announce an interim dividend.

Bullish fervour has derived little encouragement from the Union Finance Minister's statement on the latest proposals pertaining to Indian exports to the European Common Market. The proposals have caused great concern because in spite of the Government of India's strong representations, the EEC has not extended any substantial concession. Contrary to earlier hopes, the EEC has offered no worthwhile concessions on two of our important exports, namely, cotton textiles and jute goods. Commenting on the new proposals, Mr Morarji Desai has pointed out that the restrictions that will come into force will have extremely serious effect on India's trade and its development plans.

What is perhaps causing the greatest concern to marketmen is the continued shortage in a number of vital sectors. It has been suggested by Government that in view of the acute shortage of foreign exchange it may become necessary to restrict the maintenance imports to what the country earns from exports. The implication of this will be that the required quantity of maintenance imports can be obtained only if additional foreign exchange is earned through expanded exports. This is not considered practicable at least for the some time to come in view of the various difficulties encountered by our important exports such as jute, cotton textiles and tea. It has, however, been reported that a part of the foreign aid recently promised by the Aid India Club may be untied thereby facilitating import of some essential raw materials.

Another important adverse influence is the growing anxiety over the Sino-Indian border situation. The Prime Minister's statement has not dispelled the doubt that the position may continue to require vigilant attention for a considerable time to come.

NEW ISSUE NOTES

Electro-Ceramic

Electro-Ceramic Products Limited, which will shortly enter the capital market with an offer of public issue, has secured the Government's approval of its collaboration agreement with a consortium of Compagnie Generale D'Electro Ceramique of France and Steatite and Porcelain Products Limited of the UK, the world renowned manufacturers of high tension and low tension insulators and industrial porcelain parts, etc. The company proposes to construct two factories, one at Kota with an annual capacity of 2,500 tons and the other at Bombay with an annual capacity of 1,440 tons for the manufacture of high tension and low tension insulators, industrial porcelain products.

Utkal Machinery

The investment in Utkal Machinery Limited was increased during the year by subscribing to a further 87,500 equity shares, at par. A further issue of 7,00,000 equity shares is proposed to be issued by this company and the directors have agreed to subscribe up to the company's maximum entitlement of 1,55,556 right shares. The construction of the factory of Utkal Machinery Limited has been completed and production is expected to be commenced shortly. Substantial orders have already been secured and continuing good demand is expected for the scheduled production range of heavy plant and equipment for the steel, mining, chemical, oil and paper industries.

Ravalgaon Sugar

Ravalgaon Sugar Farm Limited has decided to raise Debentures of Rs 1,000 each, at par, for Rs 45 lakhs bearing interest at 7 per cent. The offer will be made to the holders of the existing two series of debentures of Rs 10 lakhs, issued in 1942 and 1944, and to the holders of equity shares to the extent of their holdings. The decision has been taken in consultation with the Bombay Stock Exchange authorities. A sum of Rs 1,000 per debenture is to be paid by surrendering old debentures or by cash.

Chitale Sugar

Chitale Sugar Works Limited has proposed to offer, for public subscription, Rs 20.19 lakhs or 2,01,919 equity shares of Rs 10 each and Rs 8.65 lakhs or 8,648 cumulative redeemable preference shares of Rs 100 each carrying a rate of dividend

at 9.285 per cent, free of company's income-tax. The subscription list will open on 27 August and close on 31 August. The preference shares are redeemable, at par, in 1971. The entire issue of Rs 28.83 lakhs has been underwritten by the Union Bank of India.

Heavy Electricals

Heavy Electricals (India), Ltd., Bhopal a Central Government undertaking is issuing further capital of Rs 1.73 crores divided into 17,300 equity shares of Rs 1,000 each for cash, at par.

Apollo Mills

The Apollo Mills Ltd., Bombay, is issuing further capital of Rs 50 lakhs divided into 25 lakhs equity shares of Rs 2 each for cash at par to be made to the existing shareholders in the ratio of one share for every share held.

Navyug Dye-Chem

Navyug Dye-Chem. Indus. Ltd., Bombay, a new company, is raising capital of Rs 40 lakhs divided into 40,000 equity shares of Rs 100 each for cash at par. Out of this, shares worth Rs 6.66 lakhs will be issued to the foreign collaborator, Mitsui Chemical Company of Japan. The proceeds would be utilized for the manufacture of vat dyestuffs.

Lederle Laboratories

Lederle Laboratories (India), Ltd., Bombay, will raise capital of Rs 25,40,360. Of this, shares worth Rs 11.92 lakhs will be issued to American Cyanamid of the US at par to cover the cost of plant and machinery and for payment of designing and engineering fees. The shares for the balance of Rs 13.48 lakhs will be issued to Atul Products Ltd. for a cash consideration of Rs 21.01 lakhs. The proceeds will be utilized on the Malathion project of the company.

Carborundum

Carborundum Universal Limited, Madras is raising further capital of Rs 20 lakhs consisting of equity shares of Rs 100 each. All the shares will be issued for cash at par to the existing shareholders, resident as well as non-resident. The proceeds will be utilized for starting the manufacture of synthetic abrasive aluminium oxide grains.

Gajraj Pannalal

Gajraj Pannalal Ltd., Calcutta, will issue capital of Rs 12.50 lakhs in equity shares of Rs 100 each for modernization of the Mahalakshmi Cotton Mills owned by the company.

Lakshmi Commercial Bank

The Lakshmi Commercial Bank Limited, New Delhi, will issue further capital of Rs 3,50,850 (nominal) divided into 7,017 equity shares of Rs 50 each for cash at a premium of Rs 3 per share.

East India Hotel

The East India Hotels Limited, Calcutta, is raising capital of Rs 17,75,100 divided into 3,950 cumulative redeemable preference shares of Rs 100 each, and 1,38,010 equity shares of Rs 10 each for cash at par. The capital is required for the completion of the first phase of the company's development plan for the establishment of modern hotels at several places in collaboration with International Hotels Corporation of the US.

Indian Hume Pipe

Indian Hume Pipe Company, Limited, Bombay, will issue debentures of Rs 20,82,000 divided into 2,082 seven per cent taxable debentures of Rs 1,000 each, for cash at par. The consent is valid up to December 4.

BONUS ISSUE NOTES Hindusthan National Glass

The Hindusthan National Glass Manufacturing Company Limited is issuing equity bonus shares to the shareholders as on 10 September 1962 in the proportion of two for every five shares held.

Parrys Confectionary

Parrys Confectionary Ltd., Madras, will issue bonus shares of Rs 5 lakhs on capitalization of the company's share premium account to a like extent. The bonus shares will be issued in the proportion of one bonus share for every 3 held.

Asian Oil

Asian Oil & Paint Company (India) Private Ltd., Bombay, will issue bonus shares of Rs 5 lakhs.

Khare & Tarkunde

Khare & Tarkunde Private Ltd., Nagpur, is issuing further capital of Rs 80,900 divided into 809 equity shares of Rs 100 each to be issued as bonus shares.

Electro Metallurgical

Electro Metallurgical Works Private Ltd., Maharashtra, will issue bonus shares of Rs 7,49,400.

North-Western Cachar Tea

The North-Western Cachar Tea Company Ltd., is issuing bonus shares of Rs 5,60,000.

INVESTMENT NOTES

Atul Drug

A new plant, set up at Kandla at a cost of Rs 75 lakhs for the manufacture of formaldehyde and hexamin by the Atul Drug House Limited, will be inaugurated shortly. The manufacture of these two organic chemicals for the first time in India assumes greater importance. The

company also proposes to establish another plant at a cost of Rs 40 lakhs, which will produce 600 tons of pentaery-thritol, a product in treatment in the paint and defence industries.

INVESTMENT BRIEFS

Ashoka Paper Mills Limited has extended the date of payment of allotment money and call money in respect of its equity and preference shares up to 30 September 1962.

American Refrigerators Company Limited has extended the date of call of Rs 2.50 per share up to 30 August, 1962.

The New Asiatic Insurance Company Limited has extended the date of payment of final call up to 30 September 1962.

Velimalai Rubber Company Limited has recommended a dividend of only 5 per cent, taxable, for the year ended 28 February 1962 against a taxable dividend of 10 per cent for 1960-61.

National Insulated Cable Company Limited has decided to maintain the dividend at 25 per cent, taxable, for the year ended 31 March 1962.

Dhrangadhra Chemicals Limited has maintained the dividend at Rs 6 per share for the year ended 31 March 1962.

Radio & Electricals Manufacturing Company Limited has proposed a final dividend of 9 per cent, making a total of 18 per cent, taxable, for the year ended 31 March 1962, same as in the previous year.

BALANCE-SHEET BRIEFS

Indian Cable Company Limited has reported a profit, after providing for depreciation, of only Rs 1.38 crores for the year ended 31 March 1962 as against Rs 1.52 crores for the preceding year. The dividend is, however, maintained at Rs 2.25 per share, subject to tax.

Machinery Manufacturers Corporation Limited has recorded an increase in sales from Rs 112.78 lakhs to Rs 144.66 lakhs for the year ended 31 March 1962. The net profit, before providing for taxation and depreciation, is higher at Rs 37.56 lakhs as against Rs 27.15 lakhs. The directors have proposed a taxable dividend of Rs 1.25 per share and this will be paid pro rata as the capital structure was reconstructed last year.

STOCK EXCHANGES

Recent Advance Retarded

Watch-Dog Writes:

It looks as if the stock markets are in a process of consolidation in view of the continuous rise in prices throughout last week. A technical

correction was expected; and it has now come. It is felt that there will be again a better turn in sentiment if the TISCO dividend, which is expected to be announced shortly is satisfactory.

Prices on the Calcutta Stock Exchange developed a reactionary tendency due to renewed offerings.

Dull and quiet conditions prevailed on the Bombay Stock Exchange where bull liquidation in Tata Ordinary caused prices to react from the recent high levels.

On the Madras Stock Exchange, turnover was limited and buying support was selective.

After initial setback, prices on the London Stock Exchange recovered fully towards the close. The exception was provided by South African Gold shares which drifted lower.

Wall Street closed heavy with a moderate distribution of losses extending mostly to done dollar or so.

CALCUTTA

Friday Evening.

IN contrast to the excellent performance given last week, the local stock market presented a somewhat quiet appearance during the week under report. Trading was cautious and the volume of business was on a limited scale. There was a general disposition to press offerings even on the modest upturns.

The three main factors, that were mainly responsible for the sudden turn-in market sentiment, were the Union Finance Minister's statement expressing concern about foreign exchange earning capacity; the Prime Minister's observations on the border situation and the inordinate delay in the announcement of the revised steel retention prices.

Trading was, therefore, mostly of a speculative nature, while genuine investors were reluctant to enter the market until they were sure that the rate of industrial production would not only be maintained, but accelerated to make up for the rising cost of production. They also feared that the difficulty as regards imports would remain unless India could earn more by way of exports the prospects for which were not considered to be bright.

Sentiment, therefore, quickened down pending further developments. There was also an anxiety to await the announcement of the TISCO dividend, which was expected to be made shortly. It was felt that, if the dividend would be in line with market expectations, the onward movement in prices might again be started. There were, however, talks in certain circles that the TISCO might announce only an interim dividend as was done by the TISCO due to the continued absence of any news with regard to the Government decision on the steel retention prices.

The Gilt-edged section ruled generally steady. Although business continued to be restricted, interest was shown in the short and selected medium and long-dated loans. The response to the new State Loans was reported to be quite good, as

the terms of the loans were made more attractive than those of the existing comparable loans. Meanwhile, 3 per cent 1966 Conversion Loan changed hands at Rs 69 to Rs 69.40, to finish the week at the former level.

In the Banking section, Punjab National came in for some enquiry up to Rs 20.87 from Rs 20.75, while United Commercial were nominally quoted at Rs 88.

Jute shares, which were maintained till last week, turned quiet due to selling pressure. Operators seemed to be worried over the prospects for exports of jute goods. The news of a sharp rise in stocks with the mills at the end of last month was also a contributory factor. Birlas were marked down to Rs 33.06 from Rs 33.56 (Rs 33.25); Howrah to Rs 20.06 from Rs 21.00 (Rs 20.25); Gangas to Rs 14.56 from Rs 14.75 (Rs 14.62) and New Central to Rs 15.19 (Rs 15.31). Anglo-India and Banagore were, however, maintain at Rs 13.37 and Tezapore at Rs 15.19 at Rs 15.31.

Coal shares came in for selective support on the belief that the Government might take early steps to put an end to the various difficulties now experienced by the industry. Bengal were supported up to 358 from Rs 346; Amalgamated up to Rs 21.87 from Rs 21.62 and New Beerbhoom up to Rs 23.37 from Rs 22.50. Central India and Western Bengal were, however, offered at Rs 11.19 and Rs 10.25 against Rs 11.31 and Rs 10.37 respectively.

The disappointing results that were being obtained at the recent auctions were fully reflected in the Tea section, where dealings were few and far between. Brooke Bond met with business at Rs 14.12 to Rs 14.62; Hasimara at the Rs 14.12 to Rs 14.31 Huldibari at Rs 13.12 to Rs 13.37 and Tezapore at Rs 15.19 to Rs 15.31.

Although better advices from the commodity market caused a slightly steadier tendency in the price of Sugar shares, trading continued to be restricted due to an anxiety to await further developments on the export front. Raza Buland met with business at Rs 9.50 to Rs 9.69; Cawnpore at Rs 12.62 to Rs 12.75 and Dyer Meakins at Rs 32 to Rs 32.62.

In the Textiles section, sentiment continued to remain subdued. Reports, that the EEC countries had reaffirmed their decision to introduce external tariffs on textile imports from India, were the main depressant. Jay Shree were on offer at Rs 15.44 to Rs 15.62; Dunbar at Rs 31.62 to Rs 31.75 and J. K. Rayon at Rs 17.06 to Rs 17.31. Elgins, however, displayed a steadier tendency at Rs 20.12.

Price movements in the Engineering section was mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to a good deal of realising pressure. Against the previous week-end closing of Rs 26.80, Indian Irons opened lower at Rs 26.66. After improving at one time to Rs 26.72, the scrip moved down slowly to Rs 26.52 before finishing the week at Rs 26.56. TEXTMACO were marked down to

Rs 22.85 from a high of Rs 23.65 (Rs 23.00); Guest, Keen, Williams to Rs 37.87 from Rs 38.50 (Rs 38.06); Jessop to Rs 22.25 from Rs 22.50 (Rs 22.37); Calcutta Steel to Rs 15.44 from Rs 15.52 (Rs 15.50) and J. K. Steel to Rs 16.44 from Rs 16.87 (Rs 16.62). Figures shown within brackets were the closing rates for the week.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:—

More Power for Industry

The largest thermal power station in India is now under construction at Chandrapura for the Damodar Vally Corporation, and will come into operation late in 1964. The Chandrapura station is in the 280-megawatt bracket and will feed power to the Railways, new projects and to collieries in Bihar and Bengal.

Though most of the equipment is being imported, the order for the clarification and filtration plants has been placed jointly with Messrs. Paterson Engineering Co. (India) Private Ltd. and Messrs Bird and Co. (Private) Limited, while the order for the demineralisation plant has been placed with Bird and Co., who are the leading designers and manufacturers of this type of equipment, having built similar plants for several other power stations in India. These plants will give, daily, a continuous supply of 8 million gallons of clarified, and 1.8 million of filtered water and 1,50,000 gallons of water demineralized down to the equivalent of 'triple distilled' quality for make-up to the boilers operating at 2,150 lbs per square inch pressure.

The total value of the equipment ordered is Rs 30 lakhs. A considerable saving of foreign exchange has been effected as most of the equipment is designed and manufactured indigenously.

11 August 1962

Company Reports

Tata Oil Repeats

THE Tata Oil Mills Company Limited has reported satisfactory working results for the year ended 31 March 1962. Sales have risen to Rs 10.92 crores from Rs 9.85 crores. Despite an increase in interest charges of Rs 3 lakhs and a fall in sales agency commission receipts of over Rs 12 lakhs, the gross profit at Rs 72.09 lakhs is higher by Rs 1.95 lakhs than that of the previous year. The net profit, before providing for Depreciation and Taxation, works out to Rs 51.55 lakhs as against Rs 51.27 lakhs for 1960-61.

In respect of allocations, the Depreciation amount is raised from Rs 11.00 lakhs to Rs 12.75 lakhs and Development Rebate Reserve from Rs 2.85 lakhs to Rs 3.50 lakhs. The provision for Taxation is, however, lower at Rs 15.77 lakhs against Rs 17.10 lakhs and Plant Modernisation and Development Reserve at Rs 2.50 lakhs against Rs 2.25 lakhs. The dividend on the ordinary shares is maintained at 23 per cent, subject to deduction of tax.

The gross block at Rs 3.31 crores is depreciated by Rs 1.77 crores, leaving a net block of Rs 1.54 crores.

According to the directors' report, a part of the vanaspathi plant, belonging to the newly-acquired Amrut Oil Mills, was put into operation at the Bombay factory, while the remainder of the plant is being reserved for the North Indian factory. An application for importing the latest type of soap equipment for this factory has been submitted to the Government and is under their consideration.

The first of the new boilers was erected at Tatapuram and put into commission, while the second one is under erection. Owing to the inordinately long time taken in the delivery of locally-fabricated equipment, the erection of the fat-splitting and fatty-acid distillation plant has been delayed. The plant is now expected to go into production during the current year.

At the Calcutta factory, the Glycerine distillation plant was installed and went into production in February last. As the existing boilers were not sufficient to meet the extra demand of steam required at the factory, an additional boiler was transferred from the Bombay factory and brought into commission.

India Cements Fare Well

India Cements Limited, Madras, has reported satisfactory working results for the year ended 31 March 1962. The output of clinker and cement during the year, was only about 50 per cent of rated capacity, while the lower volume of production was due to continuing shortage of coal supplies and restriction of power consumption in May 1961.

In order to main production, oil-firing was resorted to for one of the kilns from the the end of 1961. Since the use of furnace oil was uneconomical representations were made to the Government of India for an adjustment in the retention price of cement. Although the Government fixed revised prices, the effect of the retention price has been reflected only for a period of five months in the accounts review.

While sales are shown higher at Rs 3.90 crores against Rs 3.56 crores, the net profit, before providing for Depreciation and Taxation, amounts to Rs 91.12 lakhs as against Rs 71.63 lakhs for the preceding year. The Depreciation amount is increased to Rs 40.33 lakhs from Rs 30.97 lakhs. After transferring Rs 5.00 lakhs from General Reserve, the Taxation provision is raised to Rs 23.50 lakhs from Rs 9.20 lakhs, while Development Rebate Reserve is reduced to Rs 87.40 from Rs 2.74 lakhs. A sum of Rs 2.07 lakhs is provided for Rehabilitation Reserve. In this connection, it may be added that, in the previous year, a large sum of Rs 24 lakhs was transferred Mortgage Loan Redemption Reserve to make the necessary allocations. The dividend on the ordinary shares is maintained at 12 per cent lex tax. Against a paid-up capital of Rs 2.68 crores, reserves and surplus stand at Rs 68.05 lakhs. Total gross block amounts to Rs 4.85 crores and this is depreciated by Rs 1.74 crores, leaving a net block value of Rs 3.12 crores.

In respect of the Vizag scheme, the survey conducted by the company's geologists has confirmed that adequate limestone, suitable for the manufacture of portland cement, is available in

the region. But, the company has been informed that the proposed railway line, connecting the Borra Cave Region to Vizag Port, will be completed only by 1966. This scheme has, therefore, been deferred.

In view of the delay in respect of the Vizag scheme and with a view to early establishment of a cement factory in Andhra Pradesh, the company is exploring the possibilities of putting up a cement factory in Ramagundam in Andhra Pradesh, which is about 150 miles from Hyderabad on the Madras-Delhi trunk line. Should the limestone deposits prove to be adequate, the directors have proposed to set up a factory for 200,000 tons cement production in this area.

In the meantime, however, in order to utilise the import licence already available, the company has obtained the necessary sanction, both from the Government of India and the Government of Andhra Pradesh, for utilising the licence, originally obtained for the Vizag factory, for purposes of putting a factory in Salem district where enough limestone for a large-sized cement factory is available. As soon as the lands have been acquired, the construction of the factory will be commenced. It is expected that the Salem factory will be put into commission by about the middle of next year.

Howrah Mills Skip

The shortage of raw jute, the disparities between manufacturing costs and the selling price, and the resistance from overseas buyers—all these factors are reflected in the working results of the Howrah Mills Company, Limited for the year ended 31 March, 1962. While sales have declined to Rs 4.11 crores from Rs 4.60 crores, the accounts reveal a loss, after providing for Depreciation, of Rs 5.85 lakhs as against a net profit of Rs 27.30 lakhs for the previous year.

The Depreciation amount is lowered to Rs 8.75 lakhs from Rs 9.82 lakhs. No provisions are possible for Taxation (Rs 5.05 lakhs); General Reserve (Rs 1.50 lakhs); Development Rebate Reserve (Rs 1.75 lakhs) and Debenture Stock Sinking Fund (Rs 1.00 lakh). The dividend on the ordinary shares is naturally passed as against a taxable dividend of 10 per cent paid previously.

A certain amount of balancing machinery was installed in the preparing and spinning departments during the year under review with the object of improving production efficiency. A battery of four circular looms, two cone winders and a pre-beaming machine are on order and are expected to reach Calcutta shortly.

The directors state that, in the highly competitive conditions in which the Indian jute mill industry operates, there is no doubt that within the not too distant future mill companies will be compelled, for reasons of cost reduction and quality, to spend large sums of money in modernising the machinery in their weaving factories. Experiments with other types of modern weaving machinery are in progress in other mill units under the same managing agency and the results obtained from the different types of machinery offering will be carefully compared and assessed in formulating any large-scale programme of factory modernisation.

Better Results for Reliance Jute

The principal source of income for the Reliance Jute Mills Company continued to be from the sale of loom-hours under the Working Time Agreement of the LJMA and its level was, therefore, determined by the working hours permitted under the Agreement and the profitability of the industry which regulated the price which operating mills were willing to pay for permission to work additional loomage.

The net profit of the company, before providing Depreciation and Taxation, works out to Rs 4.93 lakhs for the year ended 31 March, 1962 as against Rs 4.75 lakhs for the preceding year. Apart from providing Rs 3,917 for Development Rebate Reserve, the Taxation provision is raised to Rs 1.64 lakhs from Rs 1.27 lakhs, while the Depreciation amount is slightly lower at Rs 33,952 against Rs 36,000. The dividends, both on the ordinary and preference shares are again passed. There is still a debit balance of Rs 25.41 lakhs, which is carried forward to next year.

Bararee Coke Pays 15% After Three Years

For the first time after a number of years, the Bararee Coke Company, Limited found it possible to work the coke plant without serious interruption during the year ended 31 March, 1962. The production of hard coke, at 59,540 tons, is the highest achieved since the year ended 31 March, 1957.

While sales have risen to Rs 52.57 lakhs from Rs 35.12 lakhs, the net profit is substantially higher at Rs 10.33 lakhs as against Rs 3.80 lakhs for the preceding year. Apart from providing Rs 3.17 lakhs for Taxation; Rs 1.00 lakh for Deferred Repairs Reserve and Rs 50,110 for General Reserve, the Depreciation amount is raised to Rs 77,022 from Rs 67,149. The provision for Development Rebate Reserve is, however, lower at Rs 3,457 against Rs 18,506. The directors have proposed to pay a taxable dividend of 15 per cent. The last dividend, that was sanctioned, was 5 per cent for the year ended 31 March, 1958.

The paid-up capital of the company is Rs 12 lakhs, divided into 1,20,000 shares of Rs 10 each. Against this, reserves and surplus are shown at Rs 10.69 lakhs. The gross block at Rs 41.40 lakhs is depreciated by Rs 35.55 lakhs, leaving a net block of Rs 5.84 lakhs.

6" spindle ram-type horizontal mill and boring machine

No. 14/36 combination turret lathe installed in the AVB light machine shop

...a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

16, Queen's Road Estate, Bombay 1

Calcutta Offices: Ilaco House, 1 & 3 Brabourne Road, Calcutta 1

Works: P. O. Durgapur 1, Dist. Burdwan, West Bengal

The REAL POWER of AVB...

Vast Technical Resources...
Modern Workshops...

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools... here is the *real power* of AVB. The essential combination to generate *real industrial power*.

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry... by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. 6" ram-type horizontal mill and boring machine: This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India
2. Numerous capstan and turret lathes: Upto 36" diameter swing and central lathes upto 42" diameter.
3. 28/60 vertical model hydrotel milling machine: With 360° profile milling equipment.

Popular mood in West Bengal on the eve of the Fifteenth Anniversary of the transfer of power is sombre and subdued and poignant with a sense of recent bereavement. Elsewhere in the country too, the commemorative elan is notably muted. The most important reason for this troubled state of mind is undoubtedly the situation in our northern border. Recent events have dramatised the proximity in time and place of the challenge to our sovereignty from an aggressive neighbour. Early this week, Mr Nehru gave the Lok Sabha news of further Chinese needling. During the last week of July and in early August, there have been further provocative shooting by the Chinese. Mr Nehru has explained that the situation is indeed serious and that we should be ready for all eventualities. Indeed, at a public rally in Delhi early this week, he is reported to have recalled Winston Churchill's words—surely an unusual source of quotation for Mr Nehru—"to fight the enemy 'in every street and every town, and on shore and on sea'". The Galwan incident has demonstrated that the Chinese armed forces in these regions are far more numerous and better-served by communications and supplies than was thought. Though hard news about the military situation in the area is difficult to get, we are justified in taking at their full value the sombre, though general, view of the situation that the Prime Minister has presented in the Lok Sabha and elsewhere. It seems evident that any further attempt by either side tangibly to assert its respective claims to the territory would precipitate an armed conflict whose consequences will be incalculable. Secondly, the state of preparedness of our forces to combat any substantial further aggression appears much less certain than what ambiguous official utterances have led the public to imagine. Thirdly, there is wide-spread apprehension about precisely what the Government of India is prepared to concede as a prerequisite of talks with the Chinese, and what the ultimate consequences of such concessions will be. In the light of this, it is difficult to give oneself away to unrestrained rejoicings on the occasion.

Though not so immediately disquieting, the antics of another neighbour is a source of considerable uneasiness. During the last year, Pakistan has taken every opportunity of exacerbating Indian feelings. From minor delinquencies like border annoyances, to attempts at embarrassing India at the UN, Pakistan has been a source of irritation. President Ayub Khan has in recent weeks mounted a propaganda offensive against India that shows clearly that he has abandoned hopes of an amicable settlement with India. His flirtatious overtures to China clearly run counter to his avowed international attitudes and even Pakistan's treaty commitments, but these are considerations that Pakistan's President finds easy to overrule in his pathological desire to bait India. The Kashmir problem is capable of an honourable settlement if Pakistan would only

care to discuss it directly with India but of this there seems to be no early likelihood.

In the domestic scene, there was and is much that is uncheering. The course of the Third Plan has been erratic and the first year has revealed crucial shortfalls in basic sectors, which have rendered the outlook uncertain. This was brought home with vivid symbolism in the nation's Capital by the recent power failure there, a predicament afflicting the economy in various parts of the country in the last year and a half. The expectations from the economy in the coming years have been gravely jeopardised by the continuing power and fuel crisis and the failure of the transport system in the country to bear up to the demands made on it. This melancholy theme has been rehearsed often enough in recent public utterances. More distressingly and probably even more basically, the agricultural picture is also, despite contradictory official claims on the subject, disquieting. Prices have shown a disturbing trend leading to much unquestionable middle class misery and some opportunist politicking in some parts of the country. Above all, the foreign exchange situation continues to be harassing, despite recent assurances from the Aid-India Club. Another area of failure has been on the export front. Despite a good deal of official prodding and pampering, the rueful fact is that the country is still to make the minimal export efforts needed for hitting the modest targets set for the Third Plan. Alibis are assiduously sought and sometimes not hard to find.

Among the reasons that make the outlook for exports dubious is the prospect of Britain joining the European Economic Community. The most recent phase of the negotiations has been such as to dampen the earlier optimism about the possibility of winning favourable terms for our exports. The possibility, for other reasons, of Britain not being able to join the EEC is very much there. While such an eventuality may remove the fears that the enlarged EEC holds out, our export problems will not for that reason get automatically solved. The basic fact remains that a sheltered market on the one hand and insufficient cost-consciousness and productivity on the other have tended to stifle such export initiative as there is. Sir A. Ramaswami Mudaliar recently used strong language about the illegitimacy and immorality of reaping the advantages of a sheltered market without making sacrifices for export earnings. Unless a sense of urgency is imparted to this task we shall have failed our country dismally.

Thus, the political and economic tasks before the nation are such as to make the sternest demands on our patriotism. The nation is entitled to ask of us united and purposeful dedication. In our fifteen years of freedom, this is probably the first anniversary in which we are acutely troubled about immediate external challenges to our nationhood. It behoves every one of us to rise to the occasion by sinking our differences and to meet these challenges as one man.

INDUSTRIAL SURVEYS

A New IIC Role

Set up only last year and coming into operation only late in September, the Indian Investment Centre, has already made its existence felt in the industrial development of the country. In this short period, the IIC has not only considerably expanded the scope of its activities but has also scored some signal successes in arranging for foreign collaboration with Indian enterprise which is one of its principal functions. It has sought to do this in three ways: by providing information on various aspects of investment and particularly relating to Government's policy and rules and regulations governing investment of foreign capital, exchange control and other matters; by providing data on specific industries through its Industrial Information Division which collects information in regard to specific industries and supplies it to prospective entrepreneurs, Indian and foreign; giving assistance to Indian entrepreneurs in preparing their proposals in such a manner as to attract foreign investment and technique and finally by seeking, on its own, suitable foreign partners willing to collaborate in joint venture schemes with Indian enterprise. The number of inquiries it has received from Indian and foreign entrepreneurs will speak for the success of its activities and bear out the rationale for its establishment. During the past one year, for example, the Centre has received about 1,500 inquiries of various types from Indian and foreign entrepreneurs. Of these 500 were received from Indian entrepreneurs for setting up an industrial enterprise. The number of proposals to be received from foreign firms has been placed at about 60. Most significant of all, the Centre has been able to bring about collaboration between Indian and foreign businessmen in regard to three proposals. Other schemes have also been mooted and some are in an advanced stage of negotiations. It has been known that about five foreign corporations have chosen their Indian partners, while five more are under negotiation. In addition, six foreign corporations have indicated their interest in coming to India and are at present conducting detailed inquiries in regard to the location and size of the project and suitable Indian partners for joint ventures. The industries covered by such proposals are of wide ranging character and include electronic small tools, piston pumps, plastic injection moulding machines, contraceptives, heavy chemicals, synthetic rubber, machine tools, aluminium foil etc. By any standard this is an impressive record for an institution that has only got going and much of the credit should go to Mr G. L. Mehta whose dynamic leadership, business acumen, and influential contacts have been distinct assets to the Centre's functioning.

The Centre has lately added one more significant service to its schedule of activities and this is the formulation of a programme of industrial surveys and feasibility studies of specific industries enjoying high priority for development in the Third Five Year Plan. This programme is to be linked with the study of those sectors in the industrial structure which are not developing properly. In his address to the meeting of the Advisory Committee of Industrial experts, Mr G. L. Mehta, Chairman of the Centre explained the significance of the new role assumed by the IIC in the context of the glaring gaps in the industrial structure of the country at present. Despite the strident growth of industries in

the first two plans, the country is still dependent to a substantial degree on imports for its requirements of capital goods and spare parts, and precious foreign exchange worth more than Rs 100 crores is being drained away by imports of parts of machinery and components and machine tools. If anything it is this imbalance in industrial growth that is reflected and emphasised in the current acute shortage of foreign exchange. There are many items of such machinery and spare parts in which creation of indigenous capacity for production should offer no serious problems or difficulties. Mr Mehta has pointed to printing machinery as an example, but there are also other types of industrial raw materials and intermediates which are scheduled for development but whose capacity for manufacture is not yet established.

Fitted into a study of the gaps of industrial structure, the programme being undertaken by the IIC should be very useful and effective in giving the right direction to future industrial development. This is an approach that has been recently stressed by the Federation of Indian Chambers of Commerce and Industry in one of its memoranda to the Ministry of Commerce and Industry. The FICCI memorandum highlighted the vast scope for import substitution in the sectors of heavy machinery and spare parts. Foreign collaboration in some of these fields to the extent that it is consistent with the declared policy of the Government should do away with the need for the heavy deployment of foreign exchange toward initial capital expenditure that will be entailed in the setting up of these industries and for this reason should be most welcome. The proposal to link the Centre's projected surveys with studies of sectors lagging grossly behind in growth, has also official backing which should ensure it reasonable chances of success. In fact the very idea of such a link-up is disclosed to have been suggested by Mr T. T. Krishnamachari, Union Minister without portfolio.

In his speech Mr Mehta laid special emphasis on the need for the development of the ancillary sector which contrary to accepted aims and objectives has made but poor headway. Policy to develop this sector has to be based on careful study of the scope for setting up new units in this vast and straggling field. A survey of different industries with a view to selecting those products which are capable of economical manufacture locally should prove highly rewarding. A factor that has limited the scope for such development has been the tendency toward vertical growth in Indian industries with the manufacturers preferring to produce every item under one roof rather than to farm out production of ancillary items to subsidiary units. If, therefore, it could be ensured that some of the parts and components are from the commencement entrusted to ancillary units, before the development of new industries, it would reverse the pattern of vertical growth and give a fillip to the growth of ancillary sector.

The Centre has already selected a tentative list of industries for purposes of detailed investigation. This includes the following five industries: mica products, industrial instruments, glass-lined equipment, conveyance of coal by pipeline and machine tools. No plausible objection can be raised against the importance of any of one of these industries considering their basic character and importance to industrial development. Machine tools particularly should have special priority in view of its centrality to any substantial

measure of progress being achieved. A recent assessment of performance in the machine tool sector has revealed that considerable progress remains to be made and that even the sanctioned schemes in the private sector could make little headway in view of the limitations imposed by shortage of foreign exchange. There are also several other items of industrial importance where a combination of adverse factors like difficulties in obtaining technical personnel, etc has prevented new industries from coming into being. The projected studies by the Investment Centre, should, in this circumstance, be extremely useful in indicating a more fruitful and purposeful line for industrial development. Prime importance is attached to vital items of raw materials and spare parts and components as well as of capital goods. Within these, the most important of the items will be selected for a systematic programme of industrial surveys and feasibility studies. The considerable data that are available with the Development Councils and Panels set up by the Ministry of Commerce and Industry should be a source of advantage to the Centre in the carrying out of these studies. Association of foreign experts and other competent organisations will also be welcomed.

Referring to the usefulness of such studies by the Centre, Mr G. L. Mehta stated that during the past six months the Centre has received a number of representatives of American and Western European firms whose activities in their home country cover a wide range of production. On the basis of its studies, it should be possible for the Centre to recommend to interested foreign parties the particular items which would offer scope for development.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings. Individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

IIB

Mr Bhattacharyya's Suggestions

ON the surface at least, and on his own admission, it would appear that Mr P. C. Bhattacharyya's speech at the annual general meeting of the Indian Institute of Bankers marks a significant departure from the precedent set by earlier Presidents. In Mr Bhattacharyya's own words: "The President's addresses at the annual general meetings of the Institute in the recent past had usually dealt with topics of current interest in the fields of banking and finance. . . . However, I thought it would be useful, desirable and proper for me to speak about the affairs of the Institute."

And yet the Reserve Bank Governor's disavowal is only half-true. For, the fact remains that while it is mainly the Institute with which he has concerned himself, the perspective that he has given to his remarks is the broader one of banking in general today. What is discussed is the role that the banking system is being called upon to assume in the implementation of the Third Plan and the consequent tasks that will devolve upon the Institute.

In the decade to 1961 bank deposits rose sharply indeed from around Rs 800 crores to Rs 1,800 crores, and the number of employees, in the space of the last quinquennium, has gone up by 30,000 to 100,000. Branch expansion has been vigorous; and it has also been purposeful, in that, of the 1,231 offices opened between 1955 and 1960, much the bulk—765—was in centres with a population of less than 50,000. Thus for its part the mobilisation system has done well both in the mobilisation of resources and in the widespread diffusion of its services.

But, as Mr Bhattacharyya points out, the increase in the Deposits of banks during the Third Plan period would have to exceed substantially the growth of Deposits in the last 10 years. He reckons that bank personnel may well double itself by 1965-66. And herein lies the rub. The facilities in this country for the training and equipping of bank staff are all too meagre. True, some of the major banks have started their own training institutions. True also, we have the Reserve Bank's Bankers' Training College. But they are just not adequate. So, and it is here that Mr Bhattacharyya comes to the role of the Institute, there is need for the Institute to expand its activities in such a way as to ensure that sufficient potential should exist for training of bank personnel.

The number of students, who sit for the Institute's examinations, has almost trebled in the last decade. With a view to cater for the further increase expected, the Reserve Bank Governor has urged that the number of Bank Governor has urged that the number of centres and sub-centres of the Institute be increased. Secondly, the suggestion is made that integrated series of lectures be given both at Bombay and at other centres so that

the available training facilities for bank personnel can be supplemented; and the lectures could be published in the Institute's journal. Thirdly, the Institute could draw up a model syllabus to cover the various courses in the training of bank personnel. For the implementation of these suggestions, Mr Bhattacharyya sees the clear need of a full-time Secretary.

The banks would be well advised to heed the suggestions that Mr Bhattacharyya has given. Finance, he has hoped, will not be a problem in the way of the extension of the Institute's services. It is up to the Council now to implement the Reserve Bank Governor's plans for imbuing the Institute with that bias for expansion which will enable it in turn to contribute to the banking system's own efforts to fulfil its task over the Third Plan period.

State Loans

Terms of the States' borrowing programme announced last week follow broadly the pattern set last year as well as the Centre earlier this year. Fourteen States (as against thirteen last year, Assam being the new entrant this year) are asking for a total sum of Rs 93.5 crores. Conversions of earlier loans may reduce the quantum of cash subscriptions to about Rs 78 crores. Except for the loans floated by Maharashtra and Gujarat, there is a small discount on the issue price. The rate of interest, fixed at 4½ per cent, is in line with the new dearer money policy. The redemption yields work out to between 4.5 and 4.55 per cent as against the 4.25 to 4.31 per cent last year. The duration of the loan is twelve against eleven years of the loans of last year.

It is interesting to see that the performance in the matter of public borrowing of the States taken as a whole has been better than the Centre's so far. The Third Plan's target of borrowing for the Centre and the States is Rs 475 crores (net) and Rs 325 crores (net) respectively. This works out to an annual average of Rs 95 crores and Rs 65 crores respectively. The net realisations of the Centre from sources other than the Reserve Bank in the first two years of the Third Plan fell short of the target. (The Reserve Bank would appear to have put up as much as Rs 60 crores of the total Rs 103 crores of cash subscribed for the Centre's loans this year.) As against this, the States collected Rs 74 crores last year and appear to be well set to collect the Rs 78 crores targeted for the year and this without the assistance of the Reserve Bank. It is true that extra-monetary considerations operate usually in the subscription to the State Loans, but even so, the strength of the States in this regard gives hopes of at least this target of resources for the Plan being fulfilled.

West Bengal's loan of Rs 7 crores is a foregone conclusion considering the State's financial and monetary maturity and record in economic development. Partition left the

State shattered both psychologically and financially but since then it has made steady progress with revenue budget running to over Rs 107 crores as against the Rs 31 crores in a full year in 1948-49. Expenditure on development schemes have gone up steadily. Total investments of the State government in developmental and welfare schemes since partition to the end of the current year would amount to nearly Rs 300 crores. Valuable communal assets have been created in industries, agriculture and irrigation. The Coke-oven plant, Thermal power project and Tar distillation plant have gone into production in Durgapur and a giant Thermal power station is taking shape in Bandel. Schemes to make Calcutta a better place to live are also in the offing. The Government's debt position is comfortable in the light of the productive assets at its command and its own investments and loans. Of the total outstanding debt of Rs 335.68 crores, Rs 49.22 crores is public debt covered by corresponding sinking and depreciation funds. About Rs 286 crores are owed to the Union Government and institutions like the Reserve Bank. Most of these loans are reflected in capital assets like the DVC, Mayurakshi and Calcutta Milk Supply schemes etc. Funds for investment in the new loan should therefore be most readily forthcoming.

The rapid strides in development that Orissa has taken in the recent past and its abundant natural endowments which have only just begun to be exploited make it potentially one of the richest of the States. The loan of Rs 7 crores which the Orissa Government is floating is to finance schemes that will activate the rich resources. Port development, mining industries, forests and road development are among the purposes on which, as part of the Third Plan programmes, the loan will be spent. Development of basic economic overheads like roads and ports in Orissa is a task of national urgency considering the centrality to national development of minerals and ores. Large hopes of export earnings by shipping iron and other ores through Orissan ports have been written into the Plan. Investors both in and outside the State should therefore extend their fullest support to the loan.

BANK RETURNS

Deposits Continue to Rise

Spillover of beginning of the month disbursements into the second week is responsible, in the returns of the Reserve Bank for 10 August, for a further expansion of Rs 18.51 crores to Rs 2,063.71 crores in Active Note Circulation; and this is accompanied by outflow of Rupee Coin in the small amount of Rs 0.19 crore. There has again been need for transfer from Foreign Securities which are lower by Rs 3.50 crores at Rs 89.34 crores. Hence there has been expansion against Rupee Securities for a little over Rs 23 crores, and cash in the till has gone up slightly by Rs 1.31 crores to Rs 20.03 crores.

The return for the Banking Department shows that governmental (that is, both State and Central) Deposits are lower by Rs 3.78 crores at Rs 81.38 crores, and the States have increased their borrowings by Rs. 2.85 crores to Rs 6.59 crores. The rise of nearly Rs 10 crores in the Reserve Bank's portfolio of Treasury Bills Purchased and Dis-

counted is almost certainly to be linked with the State Bank's disinvestment for about Rs 84 crores in the same week. Thus, we may infer that, since investments are lower by Rs 27 odd crores at Rs 277.81 crores, and since transfer to the Issue Department was in an amount of Rs 23.51 crores, other Scheduled Banks should have bought some Rs 4 crores' worth of gilt-edged from the Reserve Bank during the week under review. But the spillover of month-early disbursements has undoubtedly entailed some element of strain for the banking system: Reserve Balances have been drawn down by Rs 3.40 crores at Rs 91.48 crores; but borrowings of Scheduled Banks have fallen though only nominally.

Lastly, it may be mentioned that the drain in foreign exchange reserves persists. Despite the transfer of Rs 3.50 crores from the Issue Department, Balances Held Abroad have declined by Rs 1.60 crores to Rs 5.16 crores; the net outgo has thus exceeded Rs 5 crores.

Spillover of beginning of the month disbursements is also somewhat reflected in the return of the State Bank for 10 August, wherein it is recorded that Deposit resources have fallen by Rs 2.12 crores to Rs 582.29 crores; though it is necessary to add that the total of Advances is also shown lower by Rs 0.62 crore at Rs 276.92 crores. Disinvestment in gilt-edged for Rs 8.58 crores, reducing the portfolio to Rs 267.61 crores, is more or less matched by the rise of about Rs 7 crores to Rs 36.10 crores in Other Assets; and replacement investment may be expected in the next week. The end result is that cash balances, including money at call and short notice, are lower by Rs 0.55 crore at Rs 27.07 crores.

Month-early expenditure of constituents is also seen to have made its impact felt upon the return of Scheduled Banks for 3 August. The total of Advances is higher by Rs 1.43 crores at Rs 1,395.54 crores; with the State Bank in that week reporting a contraction of Rs 1½ crores it is clear that expansion in Advances of other Scheduled Banks added up to nearly Rs 3 crores. Net Demand Deposits, drawn down for the purpose, are lower by Rs 3.62 crores at Rs 895.00 crores, but the general trend of Deposit growth is indicated in the more than offsetting rise of Rs 9.48 crores in Rs 1,286.88 crores in net Time Deposits. Some recourse to central banking credit has been necessary, borrowings rising by Rs 1.76 crores to Rs 2.41 crores; but this too is offset partly by the fall of Rs 1.45 crores to Rs 17.03 crores in indebtedness to the State Bank. The accrual of resources is responsible for a further addition to the gilt-edged portfolio, which has risen by Rs 17.12 crores to Rs 672.12 crores, and only Rs 7 crores of this rise is traceable to the State

Bank. In the result cash balances are lower by Rs 3.50 crores at Rs 216.45 crores. Incidentally, Scheduled Banks' holdings of gilt-edged have gone up by nearly Rs 4 crores since the new loan week of 13 July.

AGR. BANKS

The Madras Example

A recent study made by the Agricultural Credit Department of the Reserve Bank has brought out the fact that the agricultural banks in the Madras State have made the greatest progress as compared with similar banks in other States. Rising continuously from Rs 2.60 lakhs as on 30 June 1956, the total deposits of these banks reached a record level of Rs 47.05 lakhs as on June 1961. Such was the enthusiasm and response of the people of the State to the scheme of starting large-sized agricultural banks that even though only a target of 300 banks was envisaged for the Second Plan it was possible for the State to exceed this, and by the end of the Second Plan nearly 330 agricultural banks were set up covering in their area 2,019 villages. The banks have a membership of 3.26 lakhs and the average per society works out to 901. The remarkable feature of the working of these banks is the high level of deposits they have been able to mobilise from the rural population. The average level of deposits at Rs 14,301 compares with the average of Rs 288 for the small-sized societies. Reflecting this high degree of success in mobilising rural savings, there has also been a rapid increase in the shares of the agricultural banks in the State in the total Deposits of all primary agricultural credit societies.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 13 August, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on Monday, 20 August, 1962. Successful tenderers should make payment on Friday, 24 August, 1962 at all centres. Other conditions are as usual.

During the week ended 10 August, 1962, Government of India Treasury Bills for Rs 25,00,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 14 to 18 August, 1962 at Rs 99.401 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 8 August to 11 August 1962 amounted to Rs 4,40,25,000.

Stimulants for British Economy?

By Paul Einzig

WHEN assuming his high office, Mr Maudling inherited from Mr Selwyn Lloyd a dilemma—whether or not to take steps to stimulate the economy. On the one hand, the wage inflation continues in defiance of the Government's policy of restraint. On the other hand, consumer demand is stagnant and many industries have considerable unused capacity. Needless to say, the Government is exhorted from many sides to stimulate the economy by Bank rate reductions, the removal of the remnants of the credit squeeze and of hire-purchase restrictions, and even by cuts in taxation and increased expenditure. So far there are no indications that Mr Maudling has been persuaded to follow expansionist advice thrust upon him. But it seems probable that he will yield in due course, as soon as it becomes evident that sterling is able to withstand the seasonal pressure that is about to begin. And the chances are that the weakness of the dollar will relieve sterling of the major part of the pressure. In the circumstances it is conceivable that we shall witness unseasonal Bank rate reductions and possibly an autumn Budget.

Yet it seems that if the economy should be stimulated while the trade unions continue to defy the official policy of wage restraint the result will be a stepping up of wage inflation. Profit margins would continue to decline, with the result that capital investment expenditure would remain at a low ebb. It would be a grave mistake in the long run to take the line of least resistance for the sake of immediate relief to be attained at the cost of accentuated inflation. The statesmanlike policy would be to abstain from any stimulating measure unless and until the trade unions have accepted the principle of wage restraint. Unfortunately there are no indications of any progress in that direction, judging by the Trade Union Council's rejection of the Chancellor's National Income Commission scheme. There is indeed no reason why the trade unions should adopt a less uncompromising attitude so long as they can assume that the Government will continue to play the part of Santa Claus and will make concession without insisting on quid pro quo.

The next unconditional concession will be legislation providing for a minimum period of notice for workmen. It will greatly encourage unofficial strikes, because while at present they mean the laying off of non-strikers without pay, under the proposed measure a small group of key workers would be able to secure their full pay while they are laid off. The result would be even more unofficial strikes, much to the detriment of the output and of the cost of production.

(Copyright)

Notes

COAL Happy Compromise and—

The agreement reached between the Centre and the West Bengal Government conceding the latter's claim for operation and distribution of coal within its geographical jurisdiction was laid on table of the Lok Sabha last week. It represents a personal triumph to the late Dr B. C. Roy who stood up against the Centre on what he considered was an important issue which affected the industrial development of the State. That the West Bengal Government should have taken the matter to the Supreme Court for its verdict, shows the measure and extent of the early opposition with which the Centre viewed this demand. By coming down from its earlier stand, the Union Government has saved the issue from developing into an unseemly prestige fight which would probably have left bitter results in the trial. The result now is a happy compromise which while conceding what the West Bengal Government has been pressing for, retains as much of Central authority as possible over the exploitation and distribution of coal.

Under the agreement, the Centre retains full control of the nation's coal reserves, production, distribution and pricing, and the West Bengal Government also recognises this Central authority and control over coal development and policies in principle. In return, the West Bengal Government has been allowed some operational authority in respect of exploitation of mines within the State and also priority distribution of supplies. The West Bengal Government will assess its requirement for its own coal based industries in the public sector and specify the areas in which it proposes to take up operations. On the basis of its assessment of potentialities of the areas, it will submit plans and programmes of mining to the Centre for approval, and the plans and programmes so approved will not be changed except by mutual agreement between the State Government and the Central Government. In these specified areas, the State Government will be free to conduct mining operations.

In the matter of distribution also priority is conceded to requirements of the State from out of its production. The State Government will, however, have to conform to the Central legislation and orders in principle and in the result State requirements will be met from allocation orders by the Coal Controller. The State Govt. is also under obligation to make up to the Centre any production that may be surplus to its requirements. In the case of deficit to meet State requirements, the Centre, through the Coal Controller, will endeavour to meet the shortfall subject to the general scheme of distribution of call by the Coal Controller and provided the requisite transport is available.

Prospecting of the specified area is State's responsibility and will be done through its agency and not by any foreign agency except with the approval of the Centre. It also envisages technical and other assistance to the State Government to be made available by the Centre. But finance for prospecting etc is completely the State's care though foreign exchange difficulty will be a matter for settlement between the West Bengal and the Central Governments.

A Streak of Realism

With the shortfall in coal production in the first year of the Third Plan, the outlook for the coal industry reaching its Third

Plan target looks very bleak. Confidence is further depressed by what has now been disclosed to be the very slow progress of the public sector. At a press conference addressed by the chairman of the National Coal Development Corporation, it has been stated that transport shortage has been a serious impediment to progress of coal production by the NCDC. In the annual report of the Ministry of Mines and Fuel, the production target for the NCDC for 1962-63 was envisaged at about 10.5 million tons, but against this production is currently running at the rate of only 7 million tons. Because of the transport shortage and consequent possibility of accumulation of stocks at pit-heads, production is being held back and machinery used for raising coal is being utilised for stripping the overburden. In the present conditions, a substantial improvement in the production rate of the NCDC is contingent on the measures to improve coal movement, and progress will have to be watched in the context of the effects of steps being taken in to press in alternative means like roads and canals. Given the necessary conditions, the Corporation's ability to deliver the goods by the end of the Plan period has been affirmed by its Chairman Sardar Ujjal Singh. The schedule of targets for the NCDC envisages production at 14.5 million tons in the West Bengal-Bihar area, 11.5 million tons in the Madhya Pradesh area, 3 million tons in Orissa and 1.6 million tons in Maharashtra. During the Second Plan period production tended to fall behind mainly in the outlying field though transport shortage was not an important factor in this. For the Third Plan period also, the Railway Ministry has assured full wagon allotment to meet the requirements of the outlying fields.

In the private sector also, the rate of production has not gone up as much as was expected due to shortages of basic requisites like transport, power and capital funds. The private sector has been set a total production target of about 60 million tons to be reached by the end of the Third Plan. Even though the foreign exchange component of the funds needed to push through the expansion plans has been ensured by the loan made available by the World Bank, delay in screening the applications of the private sector units has held up progress of expansion schemes. The collieries have been hard put to find even the rupee funds in view of the low margin of profit allowed under the strict pricing enforced by the Centre.

Against this background, the incentives announced by the Ministry of Mines and Fuel to encourage production in the private sector will be widely welcomed as introducing a streak of realism in the Centre's coal policy. Though falling short of the industry's ex-

pectations, the enhanced subsidy for sandstowing, for difficult mining and the rise in price for the higher grades of coal etc have given an impression that the Centre is seeing its way into the difficulties experienced by the collieries in increasing output. In his recent press conference at New Delhi Mr K. D. Malaviya has given the assurance that ideological views will never be allowed to stand in the way of practical considerations in solving the coal crisis. Financial assistance has also been promised to the private sector in the coal industry to enable it to step up coal production. Most encouraging is the decision disclosed by Mr Malaviya to allow the private coal producers to develop coal mines in areas which are not continuous to their existing mines. If anything, it was in this rigid restriction of private sector collieries to contiguous areas that the Government showed its doctrinaire proclivities. Now that the restrictions are to be removed it should give considerable fillip to production and raise hopes of reaching the Third Plan target for coal production.

SUGAR

Critical Period in a Chequered Career

The sugar industry is presently passing through a critical period in its chequered career. So long as its production remained below or just level with domestic consumption, it encountered no serious difficulty. But once its

output outstripped internal offtake, all its weakness has come to the fore. For its size, it has been functioning in a vacuum as it were as it does not seem to have considered the possibility that somewhere in its development it will have to face the problem of the disposal of its surplus production.

Such unpreparedness is evident from the fact that it has made up arrangement to adjust its production so as to be able to supply the world market with the particular type of sugar which is mostly in demand. Only recently, it has decided to undertake the manufacture of raw sugar because most

importing countries would like to buy only raw sugar as they are in possession of refining facilities. Upto now the entire production of the industry in India comprises only crystal sugar.

Recent speeches of Mr S. K. Patil, Minister for Agriculture and Food, have, however, given the

impression that normal conditions may, before long, come to prevail in the industry. His optimistic stems from the improved export outlook for the current year as other favourable indications such as the reduction in sugar stock. The Minister is confident that the exportable surplus of 5 lakh tons will be sold overseas without much difficulty. An important step taken recently is the decision to relate cane prices to sucrose content. It has been decided to fix Rs 1.50 per maund as the minimum price of cane upto a recovery of 9 per cent and increasing correspondingly to increase in recovery. This will help bring down the cost of production in regions where sucrose content is low. Mr Patil has made it clear that the benefit accruing from the new cane price formula will be passed on to the consumer. With a reduction in price of sugar, internal consumption may increase. As a 10 per cent cut in production has already been enforced, the sugar situation is not expected to cause any great concern in coming months.

But Mr Patil's optimism is not shared by the sugar industry. Mr D. D. Puri, the outgoing President of the Indian Sugar Mills Association, is not sure that the remedies applied so far will suffice. In his view the greatest obstacle in the way of bringing stability to the industry is the high excise duty on sugar. He seems to be convinced that the industry will have to grapple with a crisis of shortage sooner or later if there is no substantial relief from the excise duty which places the vacuum pan sugar factories at a great disadvantage as compared with the manufacturers of gur and khand-sari. As gur has no excise duty to pay and khand-sari bears only a nominal duty, gur and khand-sari manufacturers are in a better position to obtain cane supply by paying higher prices whenever there is a shortage of cane. On such occasions, the vacuum pan factories are left with no other alternative but to curtail production. Mr Puri warns that if the excise duty is not reduced drastically, the sugar export programme will also be jeopardised. A sizable loss in revenue—that is what will happen if excise duty on sugar is drastically reduced—may not be palatable to Government but if the alternative, as Mr Puri has emphasised, is going to be "regularly recurring cycles of surplus and shortage", the price that Government has been asked to pay cannot be considered to be excessive. Moreover, a part of the revenue lost as a result of any reduction in excise duty will be regained in the shape of additional excise revenue accruing from increased sugar consumption as a consequence a lower price for sugar.

Another important point stressed by Mr Puri in his address is the urgent need for devoting con-

18 August 1962

certed attention on cane development. Most of the States which have been collecting the cess are utilising the funds so collected for purposes other than cane development. Punjab seems to be the only happy exception as it has recently announced that the entire cane cess will be spent on cane development. One or two other States also appear to be seriously considering rendering assistance to the cane grower. It is gratifying to note that Mr Patil has fully endorsed Mr Puri's plea in this regard. According to the Minister the yield of cane per acre which is at present as low as 14 to 16 tons is bound to increase to 20 to 25 tons as a result of the measures already taken by the industry and Government. The sooner Punjab's example is emulated by all other States collecting the cess, the better for the cane grower and the industry. For, cane development holds the key to the problem of a reduction in the cost of production.

SFC

Help to Small Industries

The State Financial Corporations were specially set up to cater to the financial needs of medium and small scale industries on a regional basis. There are now 15 such corporations and their progress during the past few years has been on the whole satisfactory. Loans disbursed by them are steadily increasing both in number and total amount, and delays in the processing of loan applications are being progressively minimised. The financial results of some of these institutions are showing steady improvement as subvention from the State Governments is either completely dispensed with or the percentage of subvention is brought down from year to year.

It has however been noted that recipients of assistance from the State Financial Corporations are largely confined to medium scale industries. Only a small share in the total credit supplied by the Corporations goes to small scale industries. No great blame, however, can attach to the Corporations for this state of affairs. As they themselves are governed by the certain regulations as regards the disbursement of loans, they cannot but ask in their turn for certain minimum conditions, from their borrowers.

But, if the State Financial Corporations are not to confer much benefit on small scale industries, the main aim in setting up these institutions will be thwarted. There are a number of institutions to meet the credit needs of large and medium scale industries. It is only the small scale industry, which is also the weakest, that is

not getting much assistance from any of these institutions, not even from the State Financial Corporations, which have been especially set up to help it. Small scale industries generally are not able to offer adequate security and are not in a position to defray the cost of incidental expenses like stamp duty etc. It would appear that suitable changes have to be effected in their constitution before asking them to take increased interest in meeting the credit needs of small scale industries.

A Working Group has been set up by the Reserve Bank for making an assessment of the working of the State Financial Corporations. It may be expected to make suitable suggestions so that SFCs are enabled to render greater assistance to small industries. Several valuable suggestions have been made in this regard by the Bharat Chamber of Commerce, Calcutta, in its reply to the questionnaire issued by the Working Group. The Chamber has pointed out that upto June, 1961 only

20 per cent of the funds of the SFCs has been made available to the small scale industries. In the opinion of the Chamber the lending criteria of the Corporations require to be suitably altered with a view to enabling the small scale industries to take advantage of the facilities offered by them. It has been suggested in this regard that loans should be given on fixed assets, both industrial and non-industrial, without insisting on ownership or lease of land and building. Another suggestion is

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

BRAITHWAITE & CO. (INDIA) LIMITED

(Incorporated in India with limited liability under the Indian Companies Act, 1913).

Registered Office: 4, Live Row, CALCUTTA-1

The Company is one of the leading bridge and structural engineering companies and railway rolling-stock manufacturers in the country and has heretofore specialised in the manufacture of structural steelwork to the highest standards for bridges and heavy workshop buildings. It has also developed the manufacture of rolling-stock for the Indian railways and is well known as a manufacturer and supplier of pressed steel tanks and troughs. The capacity of the Company's wagon shops has been expanded in recent years to enable it to undertake the production of the larger types of wagons now required by the Indian railways and a further expansion of this activity is in progress.

The Company proposes to diversify its activities by undertaking the manufacture of dockside level luffing cranes, railway break-down cranes and electric overhead travelling cranes for which it has entered into technical collaboration agreements with two well known British engineering companies who specialise in these types of cranes.

The business of the Company is carried on at its Hide Road Works, Calcutta, which extend to 13.872 acres and at Angus Works in the Hooghly District, which extend to 16.724 acres with an additional area of 57.283 acres which is available for future development.

SHARE CAPITAL:

Authorised Rs.	Issued, Subscribed and Fully Paid Rs.
40,000—0% Redeemable Cumulative Preference Shares of Rs. 100 each.	
40,00,000	
1,00,00,000	
1,40,00,000	1,00,00,000

NOW BEING ISSUED:

40,000—0% Redeemable Cumulative Preference Shares of Rs. 100 each at par Payable in Full On Application	Rs. 30,00,000
---	---------------

In respect of the above issue, which has been fully underwritten, firm applications have been received from the Underwriters and their friends for 20,000 shares and these will be accepted in full. The balance of the shares is now offered to the general public.

These shares will confer the right to a fixed cumulative preferential dividend at the rate of 9 per cent per annum (without deduction on account of income-tax payable by the Company, but subject to deduction of tax under Section 194 of the Income tax Act, 1961) and in a winding up to repayment of capital and arrears of dividend in priority to the Ordinary Shares but shall not confer any further right to participate in profits or assets.

They will be redeemable in whole or in part at the option of the Company at par on or after 31st December, 1974 on three months' notice, but in any event not later than 31st December, 1977. In the case of partial redemption the shares to be redeemed shall be determined by drawings.

The subscription List will open at the commencement of banking hours on Tuesday, 28th August, 1962 and will remain open until the close of banking hours on Tuesday, 30th August, 1962 or later at the discretion of the Directors.

Application forms along with copies of the Prospectus, on the basis of which alone the Redeemable Preference Shares will be allotted, can be had from the Registered Office of the Company, or from the Company's Underwriters, Bankers and Brokers whose names and Addresses are given below.

that the rate of interest charged for loans and the period of repayment should be determined with reference to the earning capacity of the borrowing units. It has also been pointed out that remission of registration and stamp duties chargeable on mortgages and other legal documents to be executed by the small entrepreneurs in favour of the Corporations will go a long way towards removing the difficulties now experienced by small scale industries in the matter of applying and getting loan assistance from the SFCs.

In view of the vital importance of small scale industries to the economy of the country—it is essential that conditions conducive to the growth of these industries in large numbers all over the country are created. The main impediment in the way now is the financial weakness of this sector. Though the Third Plan has considerably increased the provision for small scale industries, there will be a big gap between demand and supply of funds as far as this sector is concerned. The State Financial Corporations have there-

fore to shoulder the responsibility of fostering the growth of small scale industries but this will be possible only if the impediments in their way are first removed.

FOREIGN CAPITAL Scope for Partnerships

In the third report submitted to the UN Economic and Social Council, the secretary general has

elaborately dealt with the role of foreign capital in assisting industrial growth of the developing countries, examining at length the benefits that would flow from association of foreign capital, the scope for such flow the various issues that are encountered in the investment of such foreign capital, and the form of organisation in which such foreign capital investment will be most beneficial. Most commonly the benefits associated with foreign private capital are reckoned in terms of the contribution of capital, technical and managerial know-how etc. But the report states that apart from these, there is one major gain accruing to the developing countries from the international character of the foreign participant which can be taken advantage of to stimulate the industrial exports of the developing countries. It is stated that the foreign investor will be able to make the fullest use of the local materials while the local partner will serve as a "vector" agent for the diffusion of new concepts and approaches.

The report also states that the foreign investors are generally appreciative of the idea of partnership with indigenous enterprises, and furnishes recent statistics of US foreign investment to prove this point. It is shown that while about 40 per cent of all the enterprises existing at the end of 1957 were established since 1951, this period saw the founding of over half the existing enterprises in which the US interests owned less than 40 per cent. Referring to the various forms of partnerships and joint ventures, it states that the stimulating effects of foreign investors on the mobilisation of domestic capital for industry can be observed especially in the promotion of the corporate form of business organisation. The report underlines the effectiveness of the initial sponsorship and participation by foreign investors in mobilisation of domestic capital. On the other hand, the excessive dividend expectations of the local investors and the somewhat rigid conditions laid down by local Governments for the participation of foreign private capital are factors that may discourage the flow of foreign capital. Though the shift to the corporate form is held desirable it is conceded that initial advance in industrial development is likely to take place through limited partnerships.

The report also stresses some considerations to be kept in mind in the recruitment of technical personnel etc for the intending industrial ventures. It points to the possibility of the foreign partners tending to underestimate the availability of local technical personnel which may thus lead to wasteful expenditure. The report also refers to situations in which there may be a surplus of non-

Indian Finance

18 August 1962

specialised foreign personnel whose presence may only go to swell the cost of operation which may be particularly glaring in the case of medium sized ventures. To obviate such drawbacks, it is stated, the local partners should contribute to the selection of reliable local personnel as well as to the establishment of mutual confidence based on long personal relationship.

OILSEEDS

Poor Productivity

In his address to the annual general meeting of the Indian Oil and Produce Exporters' Association, Mr Ratilal M. Gandhi, drew attention to the problems facing the producers of vegetable oils.

Foremost among them is the continuing low production of oilseeds in the country despite the intensified programmes of development launched under the first two plans. The Second Plan laid down a target of production at 7.2 million tons for oilseeds, but because of failure to press in effective means, production amounted to no more than 6.5 million tons at the end of the Second Plan. There should be particular cause for concern at the relative failure of efforts to improve the productivity per acre of oil seeds. It may in this connection be noted that the total area under oilseeds rose from 31.3 million acres in 1958-59 to 33.1 million acres in 1959-60, but this has been accompanied by an actual decline in the per acre yield since actual production in 1959-60 was only of the order of 6.3 million tons against 6.9 million tons in 1958-59. This offers very depressing commentary on the effectiveness of the measures that are supposed to have been taken to increase oil seeds production during the first two plans. Export of vegetable oil and oilcake etc offers a very promising avenue for increasing the foreign exchange of the country and this should impart a sense of urgency to efforts to increase its cultivation. At the recent conference of Union and State agricultural experts, some important proposals have been made for increasing oilseeds production. But most of them have only a long term significance. Immediate attention has to be directed to achieve the Third Plan target of 9.8 million tons and to attain this level of production resources will have to be stretched to the utmost.

Mr Gandhi has also drawn attention to the adverse effects of the compounded levy of excise duty on vegetable oil and the arbitrary increase in freight rates imposed by the Karmahom Conference. The industry's demand for relief from the harsh effects of the compounded levy is legitimate in view of the fragmentation of the organised mill industry that

has been precipitated following this levy. Further, there is also urgent need to bring down the inflated domestic price structure, which is absolutely out of parity with international prices. Exemption from the central excise granted to vegetable oil exported from the country offers no remedy to the weak competitive status of Indian vegetable oil exports. Emphasis must be on lowering cost of production through measures to improve per acre yield.

PLASTICS POWDER

Further Protection?

Phenol formaldehyde moulding powder is first among the raw materials used in the plastics industry to be produced indigenously. Since its inception, the industry has taken long strides and one of the main reasons for its steady growth is that it is enjoying tariff protection for the past 12 years. Some other sections of the plastics industry were also given protection for some years but at present phenol formaldehyde moulding powder is the only section enjoying protection, the current rate of protective duty being 35 per cent ad valorem plus a countervailing duty of 20 per cent ad valorem. The period of protection to p.f. moulding powder is due to expire at the end of 1962 and the Tariff Commission is presently enquiring into the question of continuance of protection to the plastics (phenol formaldehyde moulding powder) industry. The industry has represented that it be granted continuance of tariff protection for a further period at an enhanced rate of protective duty. The main ground for the request is that as compared with foreign manufacturers, its production is high because of a number of adverse factors such as low capacity, higher prices of raw materials and low productivity of labour.

There are now six units in the industry with an aggregate capacity of 2640 tonnes per annum on single shift. Production of p.f. moulding powder as reported by the manufacturers was 1881 tonnes in 1959, 2219 tonnes in 1960, 2245 tonnes in 1961 and 1154 tonnes during the first half of the current year. Apart from steadily increasing production, the industry has diversified its output by way of a number of special grades. The domestic demand for p.f. moulding powder is expected to increase during the Third Plan period as consumption of plastic raw materials of all varieties is going up in the country. Production of plastic goods in terms of value doubled between 1956 and 1960 to Rs 20 crores and it is expected that during the Third Plan the value of plastic goods indigenously pro-

duced will reach about Rs 100 crores. It is anticipated that by 1965 the demand for p.f. moulding powder will be between 4000 tonnes and 6000 tonnes. Some of the principal raw materials needed by the p.f. moulding powder industry continue to be imported but near self-sufficiency in raw materials may be reached before long as units for the manufacture of raw materials such as formaldehyde, hexamine have been licensed and are either in the process of being set up or have already commenced production.

Although consumers of indigenous p.f. moulding powder appear to be generally satisfied with its quality, Mr J. N. Dutta, member, Tariff Commission has referred in his speech in opening the public inquiry, to the fact that an adverse comment has been received by the Commission from some consumers regarding lack of good finish of the indigenous p.f. moulding powder. As an industry which has been enjoying protection for a long period and which is asking for a further extension of the period, it should be its foremost aim to ensure that its products are of the highest possible quality. The emphasis on the maintenance of a high quality will pay rich dividends when the industry wants to send its products overseas in course of time. Although export prospects may at present appear to be not good, many of the nearby countries will be interested in Indian made p.f. moulding powder when their moulding industry becomes well developed.

INDIAN COPPER

Satisfactory Working

Considering the various difficulties that industry in general had been obliged to put up with, such as shortage of coal, power and transport last year (such difficulties continue to dog its steps), the working of the Indian Copper Corporation during the year ended December 1961 appear to be quite satisfactory. The company's production was also adversely affected by a reduction in the number of working days by the annual overhaul in 1960, postponed to January 1961, and modifications effected to the ropeway. But the setback was offset, to a large extent by an improvement in the copper recovery percentage which resulted in rendering the rate of production actually higher than in the previous year. Development and prospecting work had also been slowed down owing to shortage of essential stores but progress achieved during the year is not inconsiderable as ore reserves increased by over 110,000 tonnes, with the re-

sult that at the end of the year ore reserves were placed at the record figure of 4 million tonnes.

A significant development for the company during the past year was the amicable settlement of the long-standing dispute with the Bihar State regarding the company's lease to mine kyanite. A fresh lease of the property to mine kyanite ore for a period of 20 years with an option of renewal has been obtained from the State Government and the company has agreed to pay Rs. 1 crore in annual instalment throughout the period of lease toward the claim of the State Government for the period between 1955 to 1961. Despatches of kyanite increased during the year and the company is increasing its efforts to improve overseas trade in kyanite with a view to earning more foreign exchange for the country.

Referring to the electrolytic project, Mr J. W. Easson, chairman of the company, has pointed out in his speech at the general meeting of the company, that the project may be completed by the end of 1963. There has been some delay due to shortage of cement and other equipment but the position has now considerably improved. As for supply of power, coal and transport, shortage continues although some improvement here and there has occurred. It would appear that an increase in the overall cost of production of the company is inevitable as mining is carried out in greater depths and labour costs tend to become higher and higher. A new element in the cost last year has been the higher cost of raw materials. Though the gross profit is lower at £1,222,163 as compared with £1,307,982 for 1960, dividend is maintained at 27 per cent subject to tax.

US

A Letter from Washington

The US government came closer than expected to a balanced budget in the last fiscal year.

In closing out its books for the 1962 fiscal year that ended July 30, the US treasury report it had paid out \$6,300 million more than it had received. This was \$700 million less than had been estimated in January, mid-way in the fiscal year.

Thus, the improvement was small and the total deficit was still large, but any favourable fiscal news is highly welcome these days, and not to be lightly dismissed. The past year, after all, was one in which budget results were influenced by the after-effects of the 1960-61 recession and by the need to meet growing national and international responsibilities. By way of comparison, it may be re-

Issue Price Rs. 99.75

Opens on August 27, 1962

The loan will be closed without notice as soon as the total subscriptions amount approximately to Rs. 7 crores and in any case not later than the close of business on September 1, 1962.

The loan will be issued in the form of—

- (1) Stock, the applicants for which will be given Stock Certificates, or
- (2) Promissory notes, which will be in denominations of Rs. 100, Rs. 500, Rs. 1,000, Rs. 5,000, Rs. 10,000, Rs. 25,000, Rs. 50,000 and Rs. 1,00,000.

Applications for the loan must be for Rs. 100, or for a multiple of that sum.

Securities of the 3½ per cent. West Bengal Loan, 1962, will be accepted at par in payment of subscription to the 4½ per cent. West Bengal Loan, 1974.

Applications will be received at—

- (a) The offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
- (b) The branch of the State Bank of India at Patna;
- (c) The branch of the State Bank of Hyderabad; and
- (d) The branches of the State Bank of India within the State of West Bengal except in Calcutta.

Full particulars and application forms are available from any of the offices mentioned above.

called that the budget for fiscal 1959, also, the first year of recovery following a brief and mild recession, the deficit hit a peacetime high of \$12,400 million.

The treasury figures, which are subject to some slight further revision before they become final, show fiscal 1962 receipts at \$81,400 million and expenditures at \$87,700 million—both somewhat below the earlier estimates. Nevertheless, the revenue total represents a new annual high, indicating that the rebound since the re-

cession low of February 1961 has been substantial, even if it has not come up to full expectations. Larger-than-estimated collections of individual taxes, reflecting the steady rise in the total personal income of all Americans, helped offset a lag in corporate tax collections.

The spending total, meanwhile, came close to being a new annual record. Indeed, it was a new high for any peacetime year, although it was exceeded in the last two years of World War II.

Helping to reduce outlays below earlier projections were changes in some government programs and congressional postponement of some scheduled appropriations.

Secretary of the treasury C Douglas Dillon and budget director David E. Bell also noted, in a joint statement that the lower spending rate reflects the Kennedy administration's continuing efforts to keep outlays within the bounds of prudence and "frugality."

In that same statement, the two officials pointed out that if the

national economy had operated at its full potential the Federal government would have realized a substantial surplus in its fiscal 1962 accounts, as larger personal and corporate income gains would have produced larger tax receipts than those actually received. This ties in with the administration's efforts to accelerate the nation's long-term economic growth rate.

Interestingly enough, such efforts at this time could aggravate the nation's fiscal position. A slight budget surplus was originally projected for the current 1963 fiscal year that began July 1, but the outlook admittedly is somewhat cloudy at this time.

Reaching the goal of a balanced budget will depend on a rate of economic advance that would produce the necessary tax revenue, as well as on the level of congressional appropriations. A cut in tax rates or an increase in government spending, or both, to stimulate economic activity could lead to a sizeable budget surplus later on, but also could induce another deficit of fairly large proportions for the current year.

Whether an early tax cut is or will be needed is not at all clear right now. Despite some indications of a slowdown in the business advance, the economy still is demonstrating a good deal of strength. This, moreover, is the summer season, when activity in many key industries normally tends to slacken anyway.

It is safe to say, however, that the administration will make whatever recommendations economic circumstances seem to require. It is not likely to make the state of the federal budget an overriding consideration in this regard, especially at a time when inflationary forces are notably absent.

Also to be borne in mind is the fact that these traditional—or administrative—budget figures tend to overstate deficits and understate surplus, and may not be truly representative for the impact of federal finances in the economy. Another measurement, the so-called consolidated cash budget, puts the deficit for fiscal 1962 at \$5,700 million instead of \$6,300 million. This is a more comprehensive measurement, and includes spending and receipts, such as from government trust funds, which are not in the administrative budget.

The treasury report also shows preliminary figures for the national income and product account version of the budget held by many experts to be the best measure of the government's fiscal impact. By this budget, which includes transactions directly affecting current production and incomes and which estimates government receipts and outlays on an accrual rather than a cash basis the fiscal 1962 deficit was only \$2,000 million.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MAJOR Nikolayev and Colonel Popovich have just returned from a jaunt in space. Three years from now, a similar feat may excite no more than would a week-end picnic in a country house. For by then you can ask for the moon and get it, or rather, what comes nearest to it, a return ticket to it and back. But as of now, the achievement has struck everybody dumb or rather into an excited gabble. The two cosmonauts have performed several firsts. This is the first time that two men have been in space simultaneously, the second following the first in almost the same orbit within twentyfour hours. This, I am told, bespeaks fantastic accuracy. The two spent a leisurely two days in Space, eating, drinking, sleeping and working as usual. They circled the earth very many more times than did the earlier cosmonauts, the distance covered by them being over three times the distance from the earth to the moon. Even more remarkable than this was the fact that each could see the other in the other's ship and they actually spoke to each other, though only by radio. Their ships came very near each other and, though this was not observed, probably touched each other. The Russians are obviously and justifiably proud of what they have done. I don't understand the many things the experiment is supposed to have helped in verifying. Nor am I helped in verifying. Nor am I helped in verifying. Nor am I helped in verifying.

It is safe to say, however, that the administration will make whatever recommendations economic circumstances seem to require. It is not likely to make the state of the federal budget an overriding consideration in this regard, especially at a time when inflationary forces are notably absent.

Also to be borne in mind is the fact that these traditional—or administrative—budget figures tend to overstate deficits and understate surplus, and may not be truly representative for the impact of federal finances in the economy. Another measurement, the so-called consolidated cash budget, puts the deficit for fiscal 1962 at \$5,700 million instead of \$6,300 million. This is a more comprehensive measurement, and includes spending and receipts, such as from government trust funds, which are not in the administrative budget.

The treasury report also shows preliminary figures for the national income and product account version of the budget held by many experts to be the best measure of the government's fiscal impact. By this budget, which includes transactions directly affecting current production and incomes and which estimates government receipts and outlays on an accrual rather than a cash basis the fiscal 1962 deficit was only \$2,000 million.

in the Indian economy, is no longer likely to be a problem for the moon-stuck.

I am an acquiescent, if not enthusiastic, parliamentary democrat normally, but every now and again I am assailed by a Dickensian despair about "talking shops." The way last week's debate on the power crisis in the Capital got choked in procedural mesh made me wonder again. Even now I am not sure whether Hafeez Mahmud Ibrahim is a superb tactician or a parliamentary greenhorn who walked blunderingly into a constitutional argument beyond his depths. If, as is likely, the government hasn't a presentable case on the way it was faced without warning by an emergency, the constitutional wrangle was an excellent red herring. Mr Ibrahim was rather grand in his opting out: fixing responsibility was futile but if fix you must, you can't pin it on the Centre, much less on him. He was merely deputising (because of a "private understanding" with the late Mr Pant) for the Home Ministry and he needn't have intervened in the matter at all. Such comprehensive irresponsibility was too much and the Prime Minister had to pacify an obviously irate House. He did it in his characteristic manner, apparently ready enough to take the blame generally but ambiguous in detail. The Centre was responsible, of course, and came in some way or the other and so forth. The Speaker rightly detected a certain tentativeness in Mr Nehru's willingness to take the blame and asked the Law Minister to give a clearer definition of the Centre's responsibility. Several years' absence from the bar has taken nothing away from Mr Sen's ability to argue a difficult brief and after spending some hours with the books he turned in an opinion that suggested that Mr Ibrahim was right after all. Mr Nehru too appeared to find the escape routes he had provided himself in his morning's answers convenient and his acceptance of responsibility was less strident in the afternoon. The opposition would still have had the better of the government, if they had been more alert to possibilities, for when the Speaker put to vote the desirability of debating the motion, the requisite number of votes was not forthcoming. Some part at least of the opposition thunder

ment is the emergence, probably for the first time, of the UN as a local government. Until West Irian declares itself one way or the other, the UN will be running it. This throws up interesting possibilities for the future. However, any optimism about such developments should be modest since it is only rarely that the disputants will agree to such a procedure. It is quite out of the question, for example, that Katanga will agree to such an arrangement. It is probable that many in the West may use the West Irian accord to tell India how impatient she was over Goa and how unreasonable over plebiscite for Kashmir. I have always had grave doubts about Wilsonian self-determination in general and in particular about plebiscite as a procedure for it. After all, Hitler found it useful and de Gaulle's penchant for ordering one at the drop of a hat has very undemocratic implications. But this is to carp. If the parties to the dispute are satisfied about the arrangement and it has stopped fighting, that ought to satisfy us.

The excessive fuss that the Press in Pakistan is making over Vinoba Bhave's walking to India through Pakistan is further depressing evidence of its anti-Indian absorption. The authorities themselves have sensibly acceded to the Acharya's request which was probably forced on him more by geography than by politics. After all, the easiest way to get to West Bengal from Assam is still via Pakistan. Perhaps the tragic human implications of this circumstance in the light of our history have something to do with the unconscious truculence of much of the comments. Surely, it cannot be that people in Pakistan are genuinely afraid that Vinoba is on a sinister mission to subvert East Pakistani loyalty. At worst, the Acharya's tour is a harmless eccentricity of an old man who scorns the trains and is therefore obliged to walk by the shortest route. If, as Dawn avers it is nothing more than a "pedestrian stunt", why this flurry of apprehension and demand for stopping it? At best, it offers an opportunity for softening the bitterness that has tragically divided two peoples (who were, until the other day, one) for too long now. It is inevitable that the Acharya's tour should recall the Mahatma's in far more harrowing circumstances over fifteen years ago in those parts. The healing touch that Gandhiji then brought to the stricken people is still capable of stirring consciences on both sides of the border though the Mahatma is all but a faded memory in his own land. Is this what is causing all the panic? There has also been some furore over a translation of the Quran by Vinoba. Rather significantly, these objections are emanating principally from West rather than East Pakistan. It is not difficult to understand popular prejudices in such matters, but that news papers should solemnly object to an endeavour that can conceivably do no harm but can probably do a lot of good is a sorry sight.

EAVESDROPPER

4½ Per Cent

ORISSA GOVERNMENT LOAN, 1974

Issue Price Rs. 99.50 per cent

Opens on the 27th August, 1962

The loan will be closed as soon as a total of Rs. 7 crores has been subscribed and in any case not later than the close of the business on the 1st September, 1962.

Applications for the loan will be received at (a) the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, (b) the branch of the State Bank of India at Patna, (c) the branches of the State Bank of Hyderabad at Hyderabad (d) the branches of the State Bank of India located in the State of Orissa and (e) the Government Treasuries and Sub-Treasuries.

Full particulars can be obtained at any of the Offices mentioned above.

(From Our New Delhi Correspondent)

Central Apprenticeship Council

THE Central Apprenticeship Council, constituted under the Apprenticeship Act, 1961, will be holding its first meeting here on August 16 and 17. The Act which received the President's assent on December 1, 1961 was brought into force with effect from March 1, 1962. The 'specified industries' to which the provisions of the Act would be made applicable during the first stage of its implementation were also notified on February 12, 1962. The coverage of Act would be extended to other industries in gradual stages. Under the Act employers are required to provide facilities in their establishments for training a prescribed number of apprentices in 'designated trades'. In implementing several of the provisions of the Act, the Central Government is required to act in consultation with the Central Apprenticeship Council.

The Council, which was set up by notification in the Gazette of India dated June 29, 1962, consists of nine representatives of employers in establishments in the public sector,

nine representatives of employers in establishments in the private sector, ten representatives of the Central Government, fifteen representatives of the State Governments and six persons having special knowledge and experience on matters relating to industry and labour. As it is not likely that the Central Council would meet more than once a year, it has been proposed that two Standing Committees (one dealing with Standards and the other with general matters) should be set up. The Committees would consider the matters on which the Council is to be consulted and make recommendations to the Government. These recommendations would be circulated to other members and their opinions obtained by the Central Apprenticeship Adviser for submission to Government. The Director of Training in the Directorate General of Employment and Training has been appointed as the Central Apprenticeship Adviser and he will be the Secretary of the Central Apprenticeship Council.

Pending the appointment of the Central Apprenticeship Council, action has been taken by the Directorate General of Employment and Training to prepare the ground for the early implementation of the Act. Rules under the Act were framed and notified in the Gazette of India of April 28, 1962. A tentative list of

13 basic engineering trades was drawn up and the syllabuses for these trades have also been prepared by ad hoc committees of technical experts. The administrative problems that are likely to arise in implementing the Act were examined at a special meeting of the States' representatives held in Calcutta early in April.

Besides according formal approval to the Central Apprenticeship Rules, the Council at its first meeting will, among other things, be called upon to approve the list of 'designated trades', determine the ratio of apprentices to the total number of skilled workers, their period of training, and fix the minimum rate of stipend payable by the employers to the apprentices as well as the upper limit of expenditure for the purpose of sharing of the costs by the Central Government in the case of establishments employing less than 500 workers.

A tentative list of thirteen trades classified in five groups has been prepared for approval of the Council. These are:

- I. Machine shop trades:
 1. Fitter.
 2. Turner.
 3. Machinist (Miller).
 4. Machinist (Grinder).
 5. Machinist (Shaper, Slotter and/or Planer).
- II. Foundry trades group:
 6. Pattern Maker.
 7. Moulder.
- III. Metal-working group:
 8. Blacksmith.
 9. Sheet metal worker.
- IV. Electrical group:
 10. Electrician.
 11. Lineman.
 12. Wireman.
- V. Wood-working group:
 13. Carpenter.

These are the trades in which the greatest number of persons are at present employed and for which there is greatest need to train apprentices. The Directorate of Employment and Training also proposes to start work on a further batch of trades for which there is need in industry. The definition of trades as set out in the National Classification of Occupations prepared by the Ministry of Labour will be used for the purposes of the Act. This will help to eliminate the confusion that is likely to arise on account of the fact that the terms used to describe the same trade vary from State to State. A period of three years' training has been recommended by the Trade Committees for each of the 13 trades it is proposed to designate in the first instance.

Under the Act, Government is required to determine for each 'designated trade' the ratio of apprentices to workers other than unskilled. Within this ratio, the Apprenticeship Adviser may call upon an employer to train a specific number of apprentices. Taking into account the period of training proposed and the normal wastage of

workers due to retirement, disability, death etc., it has been proposed that the ratio of one apprentice to seven workers other than unskilled would be a suitable target to be reached at the end of the third year of the operation of the scheme. This ratio, which takes into account the requirements of replacements of skilled workers, makes no allowance for the industrial expansion during the Third Plan and later. A number of measures, such as upgrading of unskilled workers, short courses of training, etc., have been suggested to meet the deficiency. It is also suggested that action may be taken at a later stage to increase the ratio of apprentices, should it be considered feasible and desirable.

It has been proposed that the rates of stipend payable to the apprentices may be fixed at Rs 25 per mensem during the first year, Rs 50 p.m. during the second year, and Rs 60 p.m., during the third year of training. These are the mining rates and employers will be free to pay stipend at higher rates. It has also been suggested that it may be advantageous to adopt the system followed in certain establishments under which payment of a small portion of the stipend is deferred and the accumulated amount is paid on the completion of the period of training. Apart from the financial help which it provides to the apprentices at the end of training, this system will be an incentive to diligent work and successful completion of the training by the apprentices.

As far as establishments employing 500 or more workers are concerned, the entire responsibility for imparting training has been placed on the employers and no part of the expenditure will be shared by the Government. But there is a provision for Government sharing a part of the expenditure in the case of establishments employing less than 500 workers, up to a prescribed limit. The entire non-recurring expenditure on the establishment of institutes for imparting basic training to the apprentices will be borne by the Government. Moreover, the Act provides that recurring costs, including stipends, incurred by the employer in connection with the practical training of apprentices, shall be borne by the employer and the Government in equal shares up to such limit as may be laid down by the Central Government and beyond that limit by the employer alone. The principle of sharing of recurring costs will apply to 'basic training' as well as training on the shop floor. As it is proposed to impart basic training at the existing Industrial Training Institutes, the establishments concerned will be charged at a flat rate, not exceeding Rs 35 per month, per apprentice on this account. The Directorate General of Employment and Training has suggested for the consideration of the Council that an upper limit of Rs 70 per apprentice may be fixed for the purpose of sharing of the expenditure between the Government and the employers.

The Council will also have to prescribe the rates of compensation payable by or to the employer, as the

18 August 1962

case may be, when the apprenticeship is terminated. It has been suggested that the rate of compensation payable by the employer should range from Rs 300, when the apprenticeship is terminated within a period of 12 months of joining the apprenticeship to Rs 500 for termination after expiry of 24 months. On the other hand, in the event of failure on the part of the apprentice to carry out the terms and conditions of the contract of apprenticeship, it is suggested that recovery of the cost of training may be effected at the rate of Rs 35 per mensem, subject to a maximum limit of Rs 500. The Council will also determine the standards of educational qualifications and of physical fitness for being engaged as apprentices, the syllabuses and arrangements for basic training and practical training on shop floor, etc.

Small Car Project Shelved

The Small Car Project, about which a lot of dust was kicked up, has been shelved for the time being. Mr C. Subramaniam, Minister for Steel and Heavy Industries, made a detailed statement in Lok Sabha last week announcing the Government's decision that the project "cannot be taken up for implementation just now and that consideration of the project will have to be deferred." Considering the reasons given by the Minister, the relevant question is not why the project is being shelved, but why it was at all taken up and pursued with dogged persistence during the last three years, even though both the Planning Commission and the Finance Ministry were not in favour of the proposal.

Explaining the reasons for the Government's decision the Minister said that, in the context of the current economic situation both in regard to internal and external resources, the question is, not whether the project is a good or sound one on merits but what its priority should be. Although the small car project had been approved by the Government in principle before the Third Five-Year Plan was finalised, it had not been found possible to include the project in the Plan, because the projects which were then judged to be of a higher priority added up to a larger figure than the resources in sight, in terms of rupees and foreign exchange. The position has not improved since. The priority in the field of automobiles, the Minister said, should for some time to come be definitely and overwhelmingly in favour of the manufacture of commercial vehicles which will provide the base for the transport of goods and for public passenger transport.

Although under the terms worked out with the Renault Corporation, external resources are taken care of, the expectations in regard to the export of cars abroad and of non-traditional goods to France are not absolutely certain; and, in the latter case, would impose a strain on our export surpluses, which, in consideration of the priority of the project, it would

be difficult to justify. The main consideration which turned the scale was apparently the Government's assessment of the impact of the project on the quantum of foreign assistance that would be available for the Plan projects that had been accorded higher priority. The Minister said that, although credit offered for the project might be outside the French Government credits available to India under the Aid to India Consortium arrangements, the size of present and future credits available to us from all sources would be based on the lenders' judgment of our overall capacity to make interest payments and payments on account of capital repayment. On this reckoning, any outgoings, whether in terms of foreign exchange; or in terms of goods on account of the small car project would be a debit against our overall capacity to make payment. Moreover, immediate implementation of the project would involve not only money resources, but also physical resources like building materials, steel, power and transport, all of which are in short supply.

Indo-British Trade

While Government is naturally pre-occupied with the likely effects on India's trade of Britain's joining the ECM, sufficient notice, it appears, has not been taken of the declining trend already evident in Indo-British trade. Attention has been recently drawn to the figures for the first half of the current year, included in the Trade and Navigation Accounts of U.K. Exports from India during January to June 1962 amount only to about £65 million (Rs 86.6 crores) as compared with £75 million (Rs 100 crores) during the corresponding period last year. All major items of exports, except oil seeds, cake and meal, share in the decline. The largest fall is registered by Tea—from £28 million to £22.6 million. Imports into India from the UK have also decreased from about £76 million (Rs 101 crores) to £62 million (Rs 83 crores). In spite of the overall decline, imports of chemicals, scientific instruments, photo goods, watches and clocks, and machinery other than electrical, show increase as compared with the first half of 1961. Whatever may be the outcome of the Brussels talks, the figures indicate the need for a positive policy regarding Indo-British trade.

Mr Peter Walker, MP

A positive policy for Commonwealth trade as a whole was urged by Mr Peter Walker, Conservative Member of the House of Commons, who was in Delhi last week. Mr Walker who is an active member of the group of British MPs, led by Sir Derek Walker-Smith, which believes that the Commonwealth could be a practicable alternative to the Common Market, visited India in the course of a tour of Commonwealth countries to assess the support that may be forthcoming for a new Commonwealth policy. During his stay in Delhi, Mr Walker met the Finance Minister and the officials of

All the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 27th August, 1974.

The Loans will open for Subscription on Monday, 27th August 1962 and Close on Saturday, 1st September 1962 or earlier without notice as soon as subscriptions approximate to the amount of each issue.

All the loans will bear interest from 27th August, 1962.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 3% Bombay Provincial Development Loan, 1962 and 3½% Bombay State Development Loan, 1962 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3½% Madhya Pradesh Loan, 1962, Madras Government 3½% Loan 1962, 3½% Uttar Pradesh Loan 1962 and 3½% West Bengal Loan 1962, will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest on the securities of 3% Bombay Provincial Development Loan 1962, tendered for conversion will be paid at the rate of 3% per annum upto 31st July, 1962 inclusive and at 4½% per annum for the period 1st to 26th August, 1962 inclusive. Interest on the other securities tendered for conversion will be paid at the rate of 3½% per annum upto and inclusive of 26th August, 1962.

Applications for all the Loans will be received at the Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi, the Branch of the State Bank of India at Patna and the Branch of the State Bank of Hyderabad at Hyderabad.

Applications will also be received at OTHER PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) Branches of the State Bank of Bikaner, State Bank of Hyderabad, State Bank of Indore, State Bank of Jaipur, State Bank of Mysore, State Bank of Patiala and State Bank of Saurashtra, conducting Government work.

(ii) Branches of the State Bank of India at places where there is no branch of its Subsidiary Banks conducting Government work.

(iii) Treasuries and sub-treasuries (except in the States of Assam and West Bengal) at places not served by the aforesaid banks.

Copies of notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering applications at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may still be open for subscription. To avail of this facility, the applicants should complete the "Special Option Form" copies of which are available at any of the abovementioned offices of the Reserve Bank of India.

the Government of India concerned with ECM negotiations. He also had talks with representatives of the Federation of Indian Chambers of Commerce and Industry. His talks in India had drawn attention to the possibility of adverse repercussions on India's plans of economic development, if proper safeguards were not

secured in the event of Britain joining the ECM. The policy advocated by his group envisages increased investment and trade in the Commonwealth, as well as a policy of preference for 'infant industries' in the developing countries. The last may require amendment of the General Agreement on Trade and Tariffs.

Markets

JUTE Record Gunny Production in July

CONDITIONS in the raw jute market continue to be dull as mills are not evincing much buying interest. If mills are not keen to accumulate stocks it is largely because they are already well stocked and there is a plethora of supply in the market. The situation however is not viewed without some concern by raw jute holders. For, arrivals of new crop jute have been unusually early this season. It is also expected that import into Calcutta and mill stations will show further improvement in coming weeks. The arrival of large supplies alone would not have caused anxiety if there is no uncertainty as regards the maintenance of last year's minimum prices. Indications are that Government is reconsidering the question of minimum prices and has already heard the opinion of the Indian Jute Mills Association in this regard at a meeting in New Delhi. At the end of the two day meeting there has been no announcement from Government as generally expected. Reports from New Delhi go to show that Government is unlikely to make a hasty announcement. It was believed that the meeting be-

tween the representatives of the IJMA and Government would also consider the feasibility at this stage of some sort of price support, preferably by resumption of purchases by the Jute Buffer Stock Association.

While Government may be inclined to maintain last year's minimum prices, the industry seems to think that a downward revision is indicated in the present context of declining goods prices and the wide gap between raw jute prices in Pakistan and India. Moreover, already the industry is beginning to feel the weight of unsold stocks especially with regard to heavy goods. The IJMA at its meeting last week reviewed the market situation in the light of the stocks of manufactured

4 1/2 per cent ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1974

Issue Price Rs. 99.50 per cent

Open on the 27th August, 1962

The Loan will be closed without notice as soon as the subscriptions amount to Rs. 10 Crores approximately, and in any case not later than the close of the business on the 1st September, 1962.

Applications will be received at (a) the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi, (b) the branch of the State Bank of India at Patna, (c) the branches of the State Bank of Hyderabad conducting Government work in the State of Andhra Pradesh, (d) the branches of the State Bank of India in the State of Andhra Pradesh at places not covered by item (c), and (e) the Government treasuries and sub-treasuries in the State of Andhra Pradesh at places not covered by items (c) and (d).

Full Particulars can be Obtained

at any of the Offices or branches mentioned above or at any treasury or sub-treasury in the State of Andhra Pradesh.

goods held by the mills at the end of July. It noted with concern that for the third consecutive month sacking stocks had shown a rise, the increase in July being as much as 6,500 tonnes. However the IJMA has decided that for the time being the present maximum level of production should be continued for another month until the end of September. It may be noted that the industry is producing goods at a very high level. July production crossed the 100,000 tonnes mark and it is the highest production in any month since January 1948.

Trading in the jute goods market was marked by rather wide fluctuations. Hessian fared better than heavy goods which over the week closed on a quiet note. While sacking met with only some enquiry on Government account earlier in the week, there were quite a few enquiries for hessian. In late dealings speculative interest was centred on hessian. When the market opened last Thursday, heavy goods received considerable attention and consequently prices were pushed up. The incentive was provided by the report of a Government tender

18 August 1962

for B Twills August delivery for a sizable quantity. With the actual business placed, however, proving much less than anticipated by the market, interest in B Twills considerably diminished with the result prices eased. The next day both sections developed an easier trend due to lack of buying interest. During the rest of the week, conditions were irregular, prices moving down one day and recovering in the next day. On Thursday, Hessian was particularly in request in the futures market. The revival of interest evidently stemmed from reports of fresh enquiries for this construction.

A weak trend persisted in the raw jute market throughout the past week. While sellers were keen for business even at discounted rates, mills evinced little interest. As arrivals of new crop were unusually large for this time of the year, sellers seemed to be somewhat nervous. It was expected that Government would announce its raw jute policy during the week. Though no such announcement has been made till the end of the week, it is reported that as a result of last week's discussion between representatives of the industry and Government, the Indian Jute Mills Association may review its scheme of minimum purchase quota of raw jute for member mills.

TEA

Rise in Output

FIGURES released by the Indian Tea Association this week reveal an increase in output of North-East Indian tea to 87.07 million pounds in July 1962 from 85.1 million pounds in the previous month. Compared to 96.49 million pounds produced in July 1961, however, last month's outturn shows a fall of 9.42 million pounds. In the four months ended July 1962, the total North-East Indian tea production is lower at 206.35 million pounds as against 216.11 million pounds in the corresponding period of 1961.

Production in Indonesia increased to 8.5 million pounds in March 1962 from 7.9 million pounds in the corresponding month of last year. Total outturn, in the first quarter of the year, is fractionally lower at 23.6 million pounds as compared to 23.7 million pounds in January-March 1961.

While the production of tea in British East Africa rose from 33 million pounds in January-May 1961 to 48.1 million pounds in January-May 1962, the Portuguese East Africa tea outturn fell from 18 million to 15.5 million pounds.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 53,584 packages of Leaf tea. Demand was less general than in the previous week and Ortho-prices were again easier. Ortho kinds met with fair enquiry, but declined by 10 nP to 30 nP although liquoring BOPs were sold well and were a strong feature. Medium CTC descriptions

were well supported; but prices were irregular and often easier. The best types were, however, sold well at fully firm, and sometimes, dearer rates. Legg-cut teas registered a decline of 10 nP to 20 nP per kilo.

Whole Leaf grades followed the downward trend of the market and there was only limited demand for tippy sorts. Darjeeling teas met with less support and prices were easier following quality. Following rates were quoted:—Clean Plain Pekoe Rs 4.10 to Rs 4.40; Plain BP Rs 3.40 to Rs 3.70; Plain Fannings Rs 3.50 to Rs 3.75; Medium Assam CTC EP Rs 5.20 to Rs 5.90; Medium Assam CTC Fannings Rs 5.20 to Rs 5.90; Best Assam CTC EP Rs 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 8.20.

In the Cochin market, about 600,000 kg of Leaf was on offer. The quality was well maintained with a few invoices showing improvement. The market opened

with a good general demand, which was maintained throughout the sale. Low Medium and Mediums met with good competition and were dearer by 10 nP to 20 nP. Good Mediums were fully firm to dearer, while the plainest kinds in this category were barely steady. There was a good demand for high-grown, which were dearer. Unorthodox descriptions were sold at rates slightly above last week's levels.

According to trade sources, shipments of 8.47 million pounds in June this year put the total exports of tea from Cochin, in the three months ended June 1962, higher at 21.08 million pounds as compared to 20.95 million pounds in the corresponding period ended June last year. Shipments from Cochin to all other destinations, in April/June 1962, at 2.03 million pounds show a rise of 190,000 pounds as compared to the similar 1961 period.

In London auction held on Monday this week, offerings were 19,089

packages including 2,745 packages from Northern India. No Assam or Cachar teas were on offer; but the few Dooars available met with an easier market and were sold slightly below brokers' valuations.

COTTON

Cautious Trend in Futures

THE cotton futures market in Bombay during the past week displayed an irregular trend on account of the alternate bouts of buying and selling. The Jarilla March contract moved up to touch the season's new high of Rs 749.75 per three quintals during the early part of the week deriving inspiration from the good speculative support based on the reports of continued dry spell in many of the cotton growing tracts. There was a virtual scramble in the market for the available varieties of this season's cotton supplies which are

ESSO STANDARD EASTERN, INC.
(Incorporated in U.S.A. with Limited Liability)

becoming increasingly scarce. This factor and the gloomy new crop outlook coupled with the bleak scope for importing adequate cotton from the foreign cotton producing countries triggered off the upswing in the price of the ruling contract. However the rising trend proved short-lived as at higher levels the contract attracted profit realising and it slipped down to Rs 741.00. But the downward drift was soon arrested as the contract at lower levels met with stout resistance which pushed up the prices to Rs 747.25 toward the close of the week. The overall trend remained distinctly bullish. It should be noted that despite the bullish outlook there was an element of caution in pushing up the prices obviously on the apprehension of official intervention.

The Textile Commissioner's announcement pertaining to the application of revised ceiling prices for the new crop moving in the current month in the districts of Sholapur, Bijapur, Poona and Ahmednagar was greeted by the trade. It needs special mention that for the first time the Textile Commissioner has gone out of the usual practice to make the announcement before the commencement of the new season. The revised ceiling for Vinnar 29/32" works out to about Rs 1090.00 while new crop is quoting around Rs 250 higher. This has been the case with almost all the new crop varieties.

The decision of the Government of India not to release export quota for Bengal Deshi cotton is still viewed with great dissatisfaction by a section of the cotton shippers. The

reported move initiated by a prominent section of the Japanese cotton importers to import cotton from Pakistan against export of Japanese textile machinery has been viewed with grave concern. The total quantum of cotton involved in the arrangement has been approximately placed at 75,000 bales comprising both old as well as new crop Pakistani cotton. It has been rumoured that the Japanese importers were constrained to seek other sources of supply presumably on account of the Government of India's stiff attitude not to release additional quota for Bengal Deshi during the current season. Though the details of the transaction are not known it can safely be presumed that this is only one instance of Pakistan authorities to step up the exports of cotton. On the top of this move arrives the news that the Karachi Cotton Association has entered a strong plea to the Government to lift the export duty as well as the sales tax imposed on cotton meant for export. No doubt the removal of these taxes will go a long way in assisting the country to earn more foreign exchange through enlarged exports.

In the spot market at Sewri spinners were anxious buyers of the available sorts of cotton. Some of the leading mills were reported to have purchased large quantities of Laxmi, Kalyan, Wagad, L 147 and CO 2. The main contributory factor for this scramble was the apprehension of the delay in the arrival of new crop by about a month or so. Prices however continued to rule firm.

On the import section, purchasing was pronounced in Egyptian Karnak, Giza 45 and Sudan (new crop) for January shipment against the recent import quota announcement.

According to official information the State Trading Corporation has signed an agreement with the USSR for the export of Indian cotton textiles valued at Rs 25 lakhs. The Soviet Union is reported to be evincing interest in Indian cotton textiles and further orders are being processed. East Germany and Hungary were also interested in purchasing cotton textiles from India, the source said. Consequently the prospects for building up a good market in the USSR and other East European countries are rated bright.

The US Department of Agriculture has estimated the new crop at 15,102,000 bales. This figure, it should be remembered, is the first estimate of the new crop and pertains to conditions prevailing on 1 August 1962.

The consumption of Indian cotton by the Indian mills in the first nine months of the current season recorded a remarkable rise of 4.12 lakh bales (at 34.91 lakh bales) over that in the corresponding period of the previous season. If the present trend persists there is every possibility of reaching the trade expectations of 46.50 lakh bales. The previous season's consumption amounted 42.46 lakh bales. On the contrary the consumption of imported cotton continues its downward trend and during the period under

review it declined by 93,000 bales to 7.73 lakh bales.

PIECEGOODS

With the revival of demand from the upcountry centres the conditions in the cotton piecegoods market presented better conditions during the last week. In the domestic section, West Bengal, Bihar and Rajasthan were found active buyers. Though these centres preferred old varieties there was disappointment at the inadequate supply. The new varieties were more or less neglected. Dhooties, saris, bleached long-cloth and printed and dyed voiles met with moderate enquiries.

On the export front, transactions with the United Kingdom were encouraging. A considerable quantum of the usual varieties was booked by that destination. Sudan was satisfied with a limited quantity of mulmul, doria and shirtings. East Africa and Ethiopia evinced keen interest in the usual varieties though the turnover did not reach upto the expectations. An important development of the week was the large scale business done by Burma in netting saris and voiles. Belgium was in the news with fair enquiries though there was no appreciable business transactions. But the trade is optimistic that business with that destination will improve in the coming weeks. The USA's fancy was focussed on furnishing fabrics, poplins and shirtings.

Shortage of Copper

THE Union Minister for Industries has stated that there is an acute shortage of Copper in the country and the Central Government has practically no stock of the metal. He adds that, by 15 September, the Government will be in a position to state how much non-ferrous metal can be imported. He hopes to maintain imports at the previous years' levels.

The Minister has finally stated that, with the improvement of communication facilities and electrification of rural areas, copper is in great demand; but due to foreign exchange difficulties, the Government is not able to meet even one-third of the total demand for the metal. Considering that the most of the aid, sanctioned by the Aid India Club, will be tied, any relaxation of import restrictions is unlikely.

In any case, the price of the metal is expected to remain steady. On the London Metal Exchange, the rate for copper has been ruling very steady at £234 per ton. This stability in price is maintained due to the fact that the main producers of the world have not only cut back output, but also they have been supporting the price by buying the surplus. As the international demand is expected to decline in the near future due to the slackening activity in some major investment sectors, producers are expected to give bigger support to the price in their own interests.

Indian Finance

18 August 1962

YARN

It is learnt that, in view of the sharp decline in the volume of trade in Art Silk Yarn, the Bombay Yarn Merchants' Association & Exchange Limited has requested the Government of India to hand over the distribution of art silk yarn, imported by the State Trading Corporation, to the Exchange. The Yarn Exchange has suggested that the Exchange should be allowed to distribute yarn as in the case of the Paper Merchants' Trading Corporation and Chemical and Alkali Distributors to distribute paper and chemicals respectively.

Allottees in the handloom sector are stated to be finding it difficult to obtain art silk yarn from the established importers. But the importers say that they are not to be blamed for this, as a number of allottees are not punctual in taking delivery and consequently the funds of the importers are unnecessarily blocked up.

The warning issued by the Joint Chief Controller of Imports and Exports to the established importers of art silk yarn that they should not sell imported art silk yarn in the open market without obtaining prior permission from the Textile Commissioner has fallen flat on the market so far as the prices are concerned. The established importers

RALLIS INDIA LIMITED
Registered Office: 16 Hare Street, Calcutta

Forthcoming Extraordinary General Meeting

Reference is made to the Notice dated 25th July 1962 convening an Extraordinary General Meeting of the members of the above named Company to be held on Friday the 24th August 1962.

The purpose of that Meeting was to consider and, if thought fit, to pass certain resolutions to enable the subdivision of each equity share of Rs. 100/- in the Company into 10 equity shares of Rs. 10/- each.

It was announced in the Press on the 9th August 1962 that Fisons Limited have acquired a very large block of the shares of the Company and that they intend to pass over some of those shares to other interests.

The Directors consider that it would be inopportune to pursue the proposal to subdivide the Company's shares while a large proportion of those shares is in the process of changing hands. Shareholders are therefore advised that it is the Directors' intention to adjourn sine die the Extraordinary General Meeting of the 24th August without transacting the business which it had been intended to put before the Meeting.

BY ORDER OF THE BOARD
KENNETH SHEPPARD
SECRETARY

11th, August 1962.

contend that they do not sell imported yarn in the open market. On the other hand, it is pointed out that the weavers are selling their quotas at premiums in the open market.

CHEMICALS & DYES

In the Bombay market for Dyes and Chemicals, trading remained subdued due to sluggish demand and fresh arrivals of a number of popular items. The absence of local demand was attributed to the comfortable stock position with the textile mills, while enquiries from the upcountry centres were meagre.

With regard to the supply position, there were reports of ample stocks in the market. About 2,000 tons of caustic soda and 400 tons of bleaching powder are under clearance. While there was an all-round decline in prices, the worst to suffer were Caustic Soda, Bleaching Powder, Ultramarine Blue and Hydro-Sulphite of Soda among chemicals and violet RR and Magenta "B" among dyes.

SUGAR

In the Hapur market, Sugar prices have continued to rule firm, thanks to brisk buying support from Rajasthan, Delhi, the Punjab and Uttar Pradesh. The last quota release is reported to have been almost sold, while forward trading in the August and September quotas is being done at a premium of 19 nP to 37 nP per maund over the ruling rates. Higher prices of gur and khandsari and good prospects of sugar exports have aided the price-rise.

The Government of India has proposed to export about 400,000 to 500,000 tons of sugar this year. India has already exported to the USA 42,572 metric tons; to Canada 101,280 metric tons to Malaya 50,800 metric tons. Another 57,380 tons of sugar were also exported on a non-preferential basis. The Government also expects to export another 7,580 tons of sugar to the USA on a preferential basis and 3,000 tons on global tenders. The total exports this year to the USA, Canada, Malaya and the Middle East countries are expected to be about 4 to 5 lakh tons.

According to the Indian Sugar Mills Association, the total sugar production in July 1962, was 3,939 metric tons as against 9,000 metric tons produced last season during the corresponding period. This brings the total production for the season 1961-62 upto 31st July 1962 to 27,14,000 metric tons (including 56,000 metric tons produced prior to November, 1961 for the current season) as against 30,06,000 metric tons during the corresponding period last season (including 55,000 metric tons produced prior to November 1960).

The off-take of sugar from factories during the month of July 1962, including 36,000 tons despatched for exports was 2,61,000 metric tons as against 2,03,000 metric tons (including 24,000 metric tons despatched

for exports) during the corresponding period last season. The total despatch upto 31st July 1962, was 26,32,000 metric tons (including 2,09,000 metric tons despatched for exports) as against 16,48,000 metric tons (including 1,32,000 metric tons despatched for exports) by the same period last season. The total closing stock of sugar with the factories, on the 31st July 1962, was 18,28,000 metric tons as against 19,04,000 metric tons on the same date last season.

FOODGRAINS

In the Hapur market, prices of Foodgrains showed a mixed trend. While Wheat and Gram prices registered further gains over last

levels, rice and coarse grains are slightly depressed. In the Pulses section, the markets for peas and arhar were quiet in the absence of buying support.

Good demand and poor arrivals accounted for a hardening trend in wheat prices. The average quality advanced by 32 nP and the farm variety by 67 nP a quintal, thanks to Madras buying support. Gram sought higher levels, while arrivals were reported to be negligible.

In the Bombay market, prices displayed an easier tendency. Trading in wheat was featured by a fall of Rs 2 per quintal in the prices of the qualities grown in the Punjab. Wheat of the Madhya Pradesh origin maintained the levels of the previous week. The decline in the Punjab

SAFE AND CARE-FREE TRAVELLING WITH STATE BANK OF INDIA TRAVELLER'S CHEQUES

available in denominations of Rs. 100 and Rs. 50

He is ready to take off on a business cum pleasure trip. He is care-free as he is taking with him the State Bank of India's Traveller's Cheques which are encashable anywhere, anytime.

quality was attributed to selling pressure, induced by heavy arrivals from the growing areas.

Rates of almost all qualities of rice eased by about a rupee per quintal on account of the selling pressure, inspired by favourable weather reports from the major producing areas. While arrivals were fairly good, the offtake was subdued. Among Pulses, Gram lost a rupee, as buyers were inclined to withdraw from the market in anticipation of lower levels in the near future.

SILK

The Bangalore Silk market maintained a fairly steady trend during the previous week. Failiature raw silk of 20/22 Dr. remained firm between Rs 84.89 and Rs 85.99 per kgm. Cottage basin and charka raw silk increased slightly to rule between Rs 78.26 and Rs 83.22 and Rs 57.32 and Rs 76.06 per kgm.

Spun silk yarn of 2/20's was quoted at Rs 74.96 per kgm.

Prices of filature and cottage basin silk waste were quoted at Rs 12.65 and between Rs 8.80 and Rs 11.82 per kgm. respectively. Charka silk waste fluctuated between Rs 3.12 to Rs 6.15 per kgm.

Reeling cocoons ranged from Rs 3.25 to Rs 5.94 per kgm. Foreign and Mysore race seed cocoons ruled easir between Rs 3.00 and Rs 12.00 and between Rs 4.00 and Rs 5.00 per thousand respectively.

The Bhagalpur Silk market remained firm during the last week. Prices of tasar raw silk, silk waste as well as spun silk yarn remained unchanged between Rs 66.00 and Rs 105.00, Rs 22.00 and Rs 26.00 and Rs 30.00 and Rs 47.30 per kgm. respectively. Reeling cocoons of tasar and Bogal varieties ruled steady between Rs 80.00 and Rs 96.00 and Rs 50.00 and Rs 80.00 per kahan respectively. Eri cocoons and yarn fetched between Rs 6.00 to Rs 8.00 and between Rs 22.00 to Rs 32.26 per kgm. respectively.

In the Malda Silk market, cottage basin and charka raw silk prices varied from Rs 75.00 to Rs 78.00 and Rs 62.00 to Rs 74.00 per kgm. respectively. Matka yarn was quoted between Rs 22.31 and Rs 40.72 per kgm. Reeling cocoons rose to Rs 3.35 and Rs 3.77 per kgm and silk waste was quoted at Rs 2.14 per kgm.

OILS & OILSEEDS

A sharp advance in Groundnut prices was the main feature in trading on the Bombay Oilseeds Exchange. Conditions in other sector remained quiet.

The firmness in Groundnut prices was mainly attributed to the reports of inadequate rains in certain tracts of Saurashtra. Reports indicated that, if the monsoon did not take a favourable turn in the next few days the Groundnut crop would be seriously affected. The firmness was also aided by higher foreign advices and reports that the State Trading Corporation had entered into large ex-

port deals. Above all, vanaspathi manufacturers purchased a substantial quantity of groundnut and groundnut oil in anticipation of brisk business on the eve of festivals falling in the next two months.

In the Castorseed section, prices displayed a sagging tendency in the absence of foreign demand for castor oil. Reports, that a prominent shipper had booked freight for castor oil, however, provided a handle to the bull operators towards the end of the week, when prices tried to stage a sharp recovery from the initial low levels.

In the Linseed section, prices moved generally in line with those of groundnut and rapeseed.

Groundnut oil and seeds are looking up in the Madras market. Bombay market groundnut futures increased the rates which got further stepped up by Calcutta interestis who are keen buyers. Groundnut oil per quintal went up to Rs 193 on Saturday afternoon, but has come down on Tuesday. Buyers restricted their activities and fulfilled commitments of nearby deliveries only. Even so prices were boosted up by groundnut futures at Bombay. Lack of rains in northern groundnut regions also affected the trend.

There is steady arrival of kernels into Madras City at an average of 50/55 tons, while in North and South Arcot districts the arrivals are about 275 to 300 tons daily. The price of peanut crop in these areas went to Rs 78/80 per 80 kgs. Calcutta interestis were the main supporters to the market with a close follow up by local bazar interests towards the latter half of last week and this week Calcutta interestis looked more interested. There was lack of rains in Pollachi area and digging operations could not be commenced. There were no large-scale operations in forward positions.

Throughout last week the seeds and oils maintained a firmer outlook. Last Wednesday's groundnut oil was quoted for ready at Rs 186.00. August was also at the same quotation while September was available at a rupee extra. January 1963 rate for groundnut oil was at Rs 183.50. The next day there was an improvement in the market with the groundnut oil being offered at 50 nP higher. Both spot and September oil was quoted at this rate. The improvement was also reflected in the January 1963 vaida with an enhanced rate of fifty nP. On Thursday last with more of the bazaar interests showing up there was slight fluctuation on a higher level and groundnut oil went up by twenty nP more and the spot goods was offered at Rs 186.70. August deliveries on that day did not show any change and those who wished to buy for their contracts were doing so at the previous closing of Rs 186.00. Friday rate was definitely firmer at Rs 186.70 for spot, Rs 187.00 for August and Rs 188 for September deliveries. January vaida did not improve beyond Rs 183.00. On Saturday last the position of oil stabilised at Rs 187 for ready, August and September remained at the improved rate of

Rs 188.00. January vaida remained unchanged. Monday this week the oil rate for Ready was Rs 188. August deliveries improved to this rate.

As for groundnut kernels peanut variety alone was on offer. It was quoted at Rs 74 on Wednesday. The same rate continued to prevail throughout the week except on Monday, when there was a spurt to Rs 77 per 80 kgs.

The firmness was also reflected in the upcountry markets where the kernels position was better than here. The bag (80 kgs) was available at Rs 75 to Rs 76 on Tuesday.

HIDES & SKINS

Prices of tanned cow hides did not change this week. Arrivals of this commodity remained fair. There was less inquiry from UK. The quoted prices of tanned cow hides were on the basis of 64d, 54d, and 49d for 5/5½ lb fourths and fifths. On the same weight of semi-premiums the prices quoted were 75d, 65d and 58d.

In tanned cow calf and tanned buffalo calf, practically no business

transacted. There was no change in tanned buffalo hide also.

The raw market in goat skins proved dear. The market was firm business being reported in 5½/6 lb at 13/6d to 16/9d and the fifth being quoted at 13/9d. Inferior fifths were available at 10/9d. In 8/9 lb here the business reported was on the basis of 16/6d for run and 16 for third/fourth and 13/6d to 13/9d for fifth.

Demand for run and third/fourth continued to be firm in the 11/12 lbs on the basis of 17sh for run and 13/6d for fifths.

Also there was no change in prime class sheep skins. The bazaar price of middle class improved by about six nP.

The following were the prices of tanned hides and skins per lb: Tanned cow prime 5/5½ lb Rs 2.75 to Rs 2.81; 6/6½ lb Rs 2.44 to Rs 2.50; 7/7½ lb Rs 2.19 to Rs 2.22; 8/8½ lb Rs 2 to Rs 2.06; 10/12 lb Rs 1.88 to Rs 1.91; tanned cow calf 16 lb Rs 3.71 to Rs 3.81; buff calf 1½/2 lb Rs 3.19 to Rs 3.25; tanned cow inferior fifths 5/5½ lb Rs 2.28 to Rs 2.34; 7/7½ lb Rs 1.94 to Rs 2.00; 8/8½ lb Rs 1.84 to Rs 1.88; 10/12 lb Rs 1.72 to Rs 1.75.

THE DEHRI-ROHTAS LIGHT RAILWAY CO. LTD.

Registered Office: DALMIANAGAR (Bihar)

NOTICE

The Annual General Meeting of the Company will be held on Saturday, the 8th September, 1962 at 11 A.M. at the Registered Office of the Company at Dalmianagar to transact the following business:—

- To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1962.
- To declare dividend.
- To appoint a Director in place of Shri S. K. Bagla, who retires by rotation but, being eligible, offers himself for re-election.
- To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible, offer themselves for re-appointment.

As special business:

- To consider and if thought fit, to pass with or without modification the following resolution, which will be proposed as Ordinary Resolution:—

"Resolved that the number of Directors of the Company be and is hereby increased to six."

- To appoint a Director subject to the passing of the above Resolution No. 5. Notice from Shri Uma Shankar Bajoria signifying

his candidature for the office of Director has been received by the Company and is hereby given to the members.

- To appoint a Director subject to the passing of the above Resolution No. 5. Notice from Shri K. K. Jajodia signifying his candidature for the office of Director has been received by the Company and is hereby given to the members.

The Share Transfer Books of the Company will remain closed from 23rd August, 1962 to 1st September, 1962, both days inclusive.

By Order of the Board

For SAHU JAIN LTD.,
A. K. JAIN
Managing Director,
Managing Agents.

Calcutta,
6th August, 1962.

N.B. A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory note as required under Sec. 173 of the Companies Act has been forwarded to the members of the Company with the notice.

private sector steel companies are unable to finalise their accounts for the last year as they are yet to be informed what retention prices they have been allowed. Speculative interest in steels is also subdued as contrary to earlier expectations there has been no interim dividend announcement from TISCO. Rumour now has it that the company's distribution this year may not be as much as last year. Since subscriptions for the State Loans open at the end of the month, there will be a considerable diversion of funds and consequently money seeking investment in equities may suffer a diminution.
