The difficulty is that a large part of the promised German help may have to take the form of the purchase of arms in Britain; and the range of arms in the British shop is limited. Committed as they are to buying large quantities of arms in the United States, the Germans may find either that they cannot reach the target for purchases here, or that they have to buy British weapons they do not want. Bonn may help by paying the wages of Germans employed by the British forces. The German railways may buy some British railway equipment. But the long-term problem of financing Britain's contribution to the defence of western Europe has still to be solved.

Both sides would do well to face the problem with greater frankness than hitherto. If the defence white paper is any guide, the British have still to recognise that the defence of Europe is the first condition of their national security, and that the necessary financial sacrifices will have to be made not just this year but for many years to come. On the German side assistance to the British balance of payments ought to be seen as a natural and lasting part of west Germany's contribution to Nato.

Just as, within individual countries, local governments that run a deficit are helped out by the others, so in Nato it is time for burden-sharing to be put into practice.

ECONOMIC DEBATE

Mr Erroll's Optimism

WITH the Chancellor in purdah until Budget Day on April 9th, the main interest in last Monday's economic debate lay in the performance of Mr Callaghan and in the pre-budget hints thrown out by the President of the Board of Trade. Mr Callaghan's main and welcome brief nowadays is to persuade floating voters that the economic policies of the next Labour government would be in no way horrific or disastrous; provided Britain can get into the European common market before there is a Labour government (an entry that could provide a Labour Chancellor with just the right incentives and disciplines), he might be right. It is true that Mr Callaghan's recent economic researches have left him just a bit wobbly in his interpretation of the difference between, say, the monthly trade returns and the balance of payments ("the trade basis is fob and the balance of payments is cif—or the other way round, though I think I am right"), and that at one stage on Monday he seemed to be advocating import controls; but, significantly, he shied away from favouring these latter when Mr Erroll began to make political capital out of what he seemed to have said. All parties are trying to be liberals now, which is an excellent thing.

Mr Erroll, although generally a liberal in trade matters, has had the reputation of being one of the sternest advocates of demand deflation in the Cabinet this year; but, like other ministerial spokesmen recently, he now seems to be converted to favouring a neutral budget rather than an actively deflationary one. He told the House that "the domestic economy, as a result of the policies we have been pursuing, is no longer subject to the strains and pressures of excess demand." True, he feared that "the expansion of the economy, which we foresee this year" would go badly wrong "if demand were allowed to grow in advance of the rise in exports." But he has happily convinced himself that exports are likely to rise rapidly in 1962. This, he opined, should be the best year for exports since Britain achieved a 12 per cent increase in exports in 1959 (after a year in which, although Mr Erroll did not point this out, Mr Amory happened to have given the biggest tax reliefs and the sharpest deliberate dose of budgetary reflation in British history). Mr Erroll, however, remains strongly opposed to special tax incentives for exports, because he believes that every progressive firm should find it profitable to develop an export trade without them:

> Why should the public, through the Government, have to pay these people to do what is in their own best interests? To introduce financial inducements would reveal lack of confidence in our competitive power and selling ability.

There is still a strongly puritanical streak in Mr Erroll, which sometimes seems to make him more interested in evincing what he assumes to be "sound views" than in achieving the results he no doubt seeks.

BUTTER

On Buying Dear

To loud applause from the National Farmers' Union and some applause from the New Zealanders, the British Government has decided to impose licensing restrictions on butter imports for the year beginning on April 1st. Nobody else is at all pleased. The Danes (91,500 tons) have already asked to discuss the size of their quota, and it seems that the Board of Trade is prepared to do so. The Irish, while thankful that their quota (12,000 tons) is larger than the tiny allowance they got under last autumn's anti-dumping restrictions, are still thoroughly dissatisfied. The French (2,400 tons) are livid, and can be expected to make the most of Britain's attitude at future negotiations in Brussels. The Dutch, while fairly satisfied with their 14,000 tons, point out that a quota system is bound to look pretty funny while talks are in progress to do away with quotas inside Europe for good. Last but not least, British consumers should not show a glimmer of gratitude for a decision that may put up the price of butter by an unnecessary 4d. per pound.

It is practically impossible to be "fair" to everybody over a commodity which, for cowardly political reasons, is as vastly overproduced and over-subsidised as butter is at the moment. To allow the British housewife to get her supplies from the cheapest source—that is, to admit unlimited quantities of dumped butter from such high-cost producers as France, Ireland and Poland, who habitually subsidise their butter exports—is pretty hard on those, like the New Zealanders and the Danes, who produce butter cheaply and efficiently and do not significantly subsidise what they send to us. But it is equally hard to see what the high-cost countries should do with the butter produced as a result of last year's favourable weather. It is not very sensible to ask them either to throw it away, or else please only sell to us if they put their prices up. If Britain gets into Europe, it should become a loud pressure group urging that target prices for off-farm dairy products in Europe are pitched at a much lower level; even while Britain is still outside Europe, Mr Soames should obviously have reduced British farmers' high milk prices by more than he did at last week's price review. By keeping Britain's domestic milk surplus up—and butter production is one of the least profitable uses to which surplus milk can be put—he has now reached a stage where his next step has illogically had to be to impose quotas that will put import prices up too.

RETAIL PRICES

On a Chain

ALTHOUGH the official index of retai prices for February is expressed, a before, with January, 1956, as 100, it is o a new measure: the link with the old refer ence date, which will continue until the en of this year, allows time for revision o sliding-scale wage agreements. Some ne items appearing in the index for the firs time include refrigerators, electric cooker jeans and thick-knit sweaters. But the mos important change is that not only is there a new weighting pattern but this is to be revised annually each January. Thus whereas the old index was weighted alik throughout its six years' life according t "1953 spending habits revalued at January 1956, prices," the index for this year wil be weighted according to "average family expenditure in the three years ended June 1961, revalued at January, 1962, prices. Next year, however, the weighting system will be moved forward a year, using "three years' expenditure ended June, 1962, re valued at January, 1963, prices." The cal culations from one year to the next will be chained together to retain the base date of January, 1962, as 100 for, the Minister of Labour's cost of living advisory committee hopes, at least ten years.

This new chain type of price index ensures that the weighting pattern will not become out of date. In this respect, the new British index can claim to be about the most reliable in the world: the Swedish index is the only other one known to adopt a similar method. Will the new index "cheat" wage bargains by showing prices rising slightly more slowly in future or "help" them by showing prices rising more quickly? The answer is that the new measure will show a smaller movement than the old one would have done in a period when the goods of which consumption is rising most are those of which prices are rising least but will show a larger movement if consumption and prices rise together. Generally speaking people buy more things in which prices rise less so the most usual effect may be to make prices rise rather more slowly. But there is no hard and fast rule.

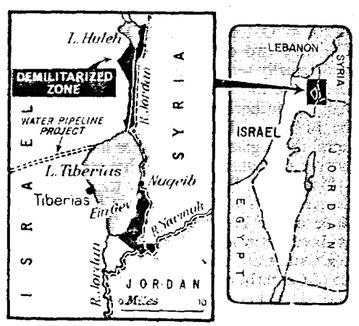
Will the medicine work?

Some say the patient is mildly sick, but swinging the lead. Hale and hearty, say others and medicine will poison him. And the medicine itself—placebo or potent, witch's brew or scientific prescription? What do the leaders of industry think? To diagnose, read the Financial Times every day.

Study the labour news, read the comments on company highlights.

Enjoy the lighter side, too. Films for example. **THE FINANCIAL TIMES** is much more than its name implies.



differences between the first two columns reflect relative changes in prices over the five years to January, 1961: prices of food, clothing and durables went up less than most so their proportions of the total budget fell, whereas prices of housing, fuel, transport and services went up more than most so that (before allowance was made for changes in consumption habits) these items became more important. The differences between the last two columns reflect the changes in consumption since 1953; in particular they reflect the big increase in the purchases of consumer durables, an instance where consumption has risen fast and prices comparatively slowly.

ARABS AND ISRAEL

Sea of Fire

HEAVY and calculated retaliation is the tenet of Israeli defence policy that sympathetic outsiders find hardest to stomach. On the principle that one sharp blow buys a period of calm, Israeli forces last Saturday attacked a Syrian outpost near Nuqeib, a village on the eastern shore of Lake Tiberias. These Syrians, claim the Israelis, had been harassing Israeli fishermen on the lake. The lake belongs to Israel, but the sight of Israeli boats lamp-fishing by night off the eastern shore (the best fishing grounds are believed to be where the Jordan flows into the lake) is a mighty provocation for Syrian snipers. A similar reprisal by Israel in January, 1960, achieved its planned results: there have been few incidents in the past two years. This time the raid has already led to another clash, both sides have appealed to the United Nations, and tempers are running high.

One of the most unfortunate aspects of the affair, from Israel's point of view, is that it has confused two issues, both involving Lake Tiberias but one infinitely more explosive than the other. In a couple of years,

or perhaps less, Israel will have completed its plan for diverting 350 million cubic metres of Jordan water a year to the deserts in the south. When the Syrians broke away from the United Arab Republic, President Nasser charged them with facilitating these plans. This is the standard stuff of inter-Arab exchanges, but it brought an agitated remonstrance from the Syrians. Alarmist reports followed that Israel had brought its plans forward; that it was going to take even more water than the amount allotted under the defunct Johnston plan; and, with greater precision, that the Israeli diversion (together with the Jordanian plan for the River Yarmuk) would leave the lower Jordan unusably salty. In any case, the militants argue, a concerted Arab policy should do something now to prevent Israel from steadily continuing with its plans. Although the dog-fights on the eastern shore of the lake possibly have nothing to do with the division of waters, the Israelis may seem foolhardy to strike matches near so incendiary an area.

ARGENTINA

Miscalculated Risk

WHAT is remarkable about the current crisis in Argentina is that a tactician as astute as President Frondizi should have so badly miscalculated the continuing strength of the Peronist movement. On Sunday, when elections were held for the provincial governorships and half the chamber of deputies, the Peronistas were, for the first time, allowed to take part under their own name. The decline in the blank vote (an expression of Peronist dissent) at recent by-elections has been interpreted as a sign of the movement's disintegration; it evidently misled President Frondizi into believing that he had nothing to fear from allowing the party a political voice. As things turned out, the Peronist candidates romped home, winning in several provinces, including Buenos Aires, and snatching half the congressional seats at stake. The president surely knew better than anybody that a victory on this scale would inevitably provoke his armed services.

Since they drove General Perón out of the country in 1955, factions in Argentina's army, navy and air force have been convinced of the need for military rather than civilian government. Because they quarrelled among themselves, and because President Frondizi managed to outwit the most militant, they have had to keep to the sidelines. But now that signs of Peronist resurgence are irrefutable the officers, acting in concert, have forced the president to dissolve his government, appoint military governors in the provinces won by the Peronistas, annul the elections and outlaw the Peronist party. Whether the president himself stays on depends, unhappily, on which groups in the armed services end by having the decisive say. The present commanders-in-chief (whose resignation the president has refused to accept) would prefer to keep him on; a faction of naval and army commanders are set on a straightforward military junta.

Peronist popularity is simply explained. The brunt of President Frondizi's austerity programme has fallen on the poorer classes in Argentina, who look back with faithful and unadulterated nostalgia to the fat years when the general handed out his largesse. It has been easy for their leaders, communist as well as Peronist, to trade on these day-dreams. The elections, and their aftermath, show conclusively how difficult in

The Economist

MARCH 22, 1862

OUR FINANCIAL POSITION

¶ The late Sir Robert Peel often used to ridicule amateur Chancellors of the Exchequer, and it cannot be denied that there is something which is not business-like in their occupation. The calculation of the ways and means of the year involves knowing what those ways and means are. . . . But without presuming to make a Budget, or to hint at one, there are some indisputable facts as to the Budgets of past years, and at least one general principle as to the future, which we may venture to explain and prove. We are at present unusually well able to review the past. A Parliamentary return of last Session gives in a most concise and intelligible form all the most remarkable particulars respecting the Budgets of the last thirty years, and, with these figures before us, we can with ease give our readers some particulars which they could not otherwise learn without much pains and labour. . . . There is another fact which the return before us brings out even more conspicuously and fully than any other fact—the wonderfully augmented scale of our national operations. In the year ending 5th April, 1852, our expenditure was £50,291,323. In the year ending 5th April, 1861, it was £72,842,059. . . . We are not now concerned either to justify or to condemn this increase. Rightly or wrongly, the nation wished it; the nation embarked in a policy which made it necessary, which continues to make it necessary. If England is to rule a vast empire in the East—is to retain scattered colonies in the East and the West, in the North and the South—is to aid liberty with an effective naval support in Europe—is to maintain the balance of power in the civilised world;—if, in so many words, the England we see is to continue the England we see, some such outlay is required. . . . We must cease to be what we are, if we would cease to pay what we do. And if such is our situation, it has a financial consequence—it imposes a condition on our Budgets which in old times we could disregard. We must now calculate on a large surplus. . . . We would propose, as an ordinary financial rule, that *every Budget should show a reliable, credible, business-like surplus of £1,000,000 at least.* This will be enough to ensure us against those small untoward accidents which are the bane of our present position.

practice is the formula that President Kennedy has made a pre-condition for his Alliance for Progress—social and economic development in a democratic framework.

DOWNING STREET

Mac's Folly?

THE news from Downing Street is not good. The reconstruction work at Nos. 10, 11 and 12 is now likely to cost £600,000 instead of the £400,000 that the Crawford committee thought would be sufficient in its report in 1958. The whole cost of the scheme, including repairs to the Treasury building in Whitehall, has now risen to £1.600,000, or £300,000 more than the official estimate at the end of 1959. The reasons are the usual ones: partly labour troubles, but chiefly dry rot. As at Kensington Palace, the deterioration of the structure of No. 10 had gone further than anyone had realised, except those already aware of the careful engineering calculations that had to be done before the Prime Minister could safely throw a medium-sized party. This is the price of inadequate upkeep in the past, for which the Ministry of Works is not primarily to blame. Only the expenditure on paint (umpteen layers of which have been found to cover quite decent woodwork) was really lavish.

Three years ago when the Crawford report appeared, *The Economist*, with some reservations, accepted the view that "the echo of ancestral voices" counted for much at No. 10. Possibly the echo is even worth the extra £200.000 that the preservation of the façade of Sir George Downing's specbuilt row will now cost the taxpayer. Certainly there will be some addition to Downing Street's cubic capacity and improvements to its interior design. But the Prime Minister, after his experience of working conditions at Admiralty House, has made no secret of his liking for its more spacious (and frankly better looking) premises. It is far too late for second thoughts about No. 10 now, but when similar options between preservation and starting from scratch come up again the present lesson of the extra £300,000 will be well worth remembering. In general, it may seem better in future to rehouse ministries in brand new office blocks—with proper provision for entertainment and family life for ministers who have to live on the spot—rather than entombing them in quaint and expensively patched-up museums.

IMMIGRATION

The second in the series of Studies on Immigration from the Commonwealth will be published on April 2nd, price 2/6d:

The Immigrant Communities

Where they come from. Why they emigrated. How long they stay.

This booklet also brings up to date the immigration figures published in Booklet No. 1. Basic Statistics.

PROBATION OFFICERS

Underpaid

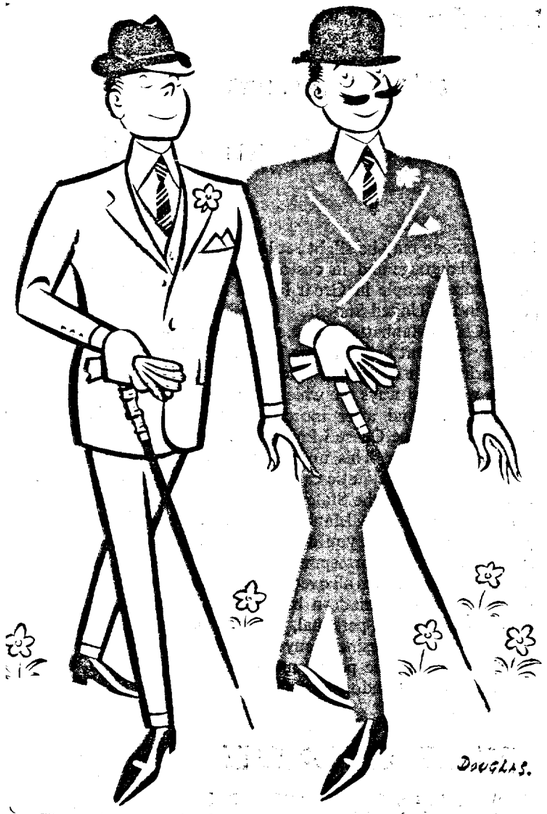
THE importance of the probation service in Britain is out of all proportion to its tiny size. At the end of 1950, its strength in England and Wales was just over 1,000 whole-time men and women. By October, 1961, it had expanded to 1,749, with men outnumbering women by rather more than three to one. Now the Morison committee has recommended a further expansion to 2,000 whole-time officers in the near future and to 2,750 in the next few years.

The need for this increase is clear; it follows automatically from the increase in the number of offenders if the case load on the officers, already too high, is not to become intolerable. This, the supervision of offenders placed on probation by the courts, remains the service's biggest duty. It is not likely to become smaller unless it can be shown that with certain offenders probation has no value over a fine or absolute or conditional discharge (the committee's report refers to research on this point being undertaken by the Home Office). But, in addition to the supervision of probationers, probation officers have a wide and increasing variety of other tasks. They have to supervise children in need of "care or protection" and the welfare of children whose parents are involved in matrimonial proceedings. They are increasingly concerned with the after-care of offenders discharged from approved schools, borstals or prisons. They have to make many inquiries for the courts in cases not involving crime: adoption, for instance, or minors wanting to marry. And their advice is sought, on a voluntary basis, by married couples or parents on problems that do not come before the courts at all.

Yet of the officers doing all this responsible work, which requires maturity as well as training, 30 per cent in October, 1961, had had no university qualification or training on their appointment, but have had to be trained while in the service. Thus the Morison committee's recommendations are designed to produce an adequately manned and adequately trained service—which means an adequately paid one. At present, a probation officer aged 22 begins at £625 a year and eventually, in his middle thirties, reaches a maximum of £1.025 (there are additions for the London area). The committee recommends a scale beginning at £750—for a trained officer—and rising to £1.350. Senior probation officers, if the committee's proposals are accepted, would be paid £1.450 to £1.650 (compared with £1.075 to £1.195 at present), and principal probation officers—the top posts—whose maximum at present is £2,100 in London and £1,895 elsewhere, a minimum of £1,750 in any area and a maximum of £2,600 outside London and £3,000 for the London post. These are large rises; but the committee has in mind the need to attract graduates to the service as well as to increase its total strength. There should be no pay pause here.

BISHOPS

Doctors No Longer?



IN future it looks as if an increasing number of Anglican bishops will have to be known as Bishop Jones, or even Mr Jones, instead of Dr Jones. That is the main consequence of a change in the practice of conferring Lambeth degrees which has just been announced by the Archbishop of Canterbury. In future,

> degrees will be given in virtue of contributing to scholarship, and care will be taken to avoid disparity with academic standards. They will not normally be given in virtue of nomination to ecclesiastical office. Degrees will also be given occasionally in the manner of ordinary degrees.

Many people will be surprised to learn that the Archbishop had any degree-conferring power in the first place, but this has long been so. The power was first enjoyed as legate of the Pope and since 1534 by Act of Parliament. The chief beneficiaries in the recent past have been the diocesan bishops. Until the first world war the English universities conferred the degree of Doctor of Divinity as a matter of course on a graduate who became a bishop. When this practice was discontinued the gap was filled by the Archbishop of Canterbury with his Lambeth degrees. By tradition the hood and gown of these degrees are the same as the equivalent in the Archbishop's own university. Until Dr Ramsey succeeded Lord Fisher at Canterbury anyone who got a see could count on a DD. One of the present bishops, who (like Lord Home) took only a fourth at Oxford, got a DD like the rest. The only two of today's Anglican bishops who actually seem to have earned their doctorates are the Bishop of Ripon (Dr Moorman, an authority on the Franciscans) and the Bishop of Exeter, the bench's leading moral theologian. Lord Fisher has fourteen doctorates, but they are all honorary.

Since Dr Ramsey was translated to Canterbury this divine shower has ceased. None of the bishops appointed since then has been given so much as a BA. Dr Ramsey is a Cambridge man—the first to hold the see of Canterbury since Archbishop Benson, who died in 1896—and naturally takes degree giving seriously. He is also bringing Anglican practice into line with that of the Roman Catholic Church in England. Roman Catholic bishops normally have to earn their doctorates; Cardinal Godfrey, Archbishop of Westminster, has two, both from Rome. In Ireland all bishops indiscriminately are known as Dr, but this is just Irish politeness and has no academic significance whatever.

THE WELCOME SERVICE

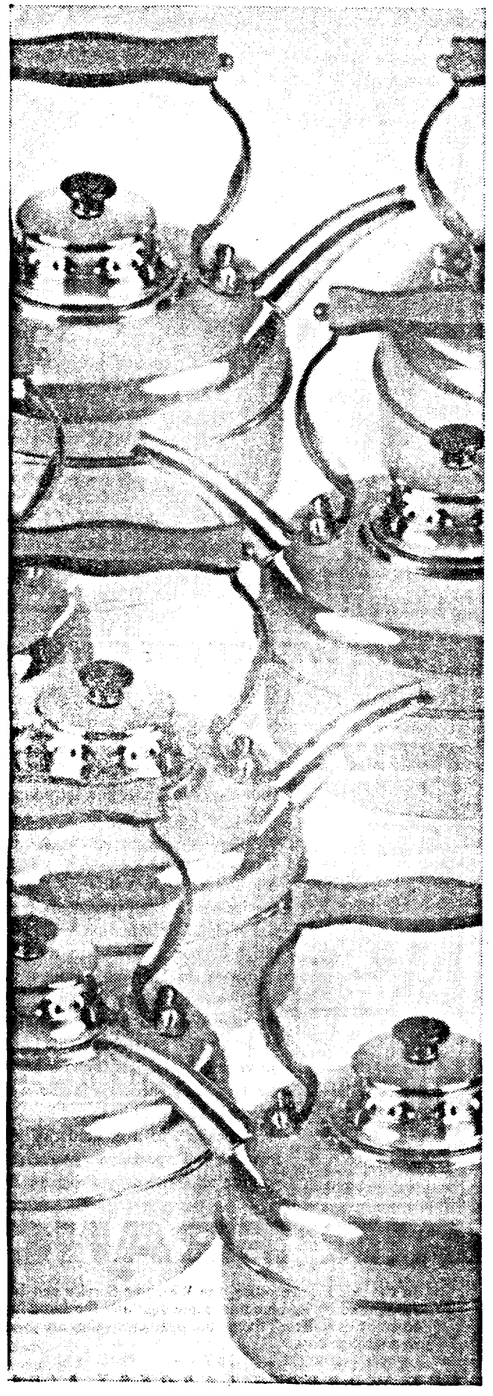
Yours for the asking in every major city . . .

NEW!

"How can I help you?"

You don't speak the language of the country? Do you know where to get theatre tickets? Hire a car? Find a guide or interpreter? A shorthand typist? Do you know what's best to buy, and where to get it? — You have only to ask me! I'm the Air France Welcome Service hostess.

To help you enjoy your journey even more, not only on your jet flight, but also during your stay, Air France now introduce the new Welcome Service on its vast world-wide organisation.



Whenever you visit any major city served by Air France, you will find the Welcome Service with its staff specially trained to give you helpful information and advice: to simplify your stay and to make it more enjoyable: to help make contacts, and to assist you in so many other ways.

But the Welcome Service is only one of many Air France services created to help you on your way, services found everywhere on the largest air network in the world. Air France has adapted its famed hospitality "a la française" to the needs of every air traveller, and especially for you . . . that's why you are certain to *enjoy flying Air France.*

AIR FRANCE

In the Air France office, the Welcome Service can be readily recognised by its blue and white sign and the same insignia is worn by its staff: tell them your problems—they are your friends in a strange city.

THE WORLD'S LARGEST AIRLINE

Made of aluminium ...or aluminum?

The difference may be slight . . . but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages —and with the ways in which they differ *among* the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad . . . it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

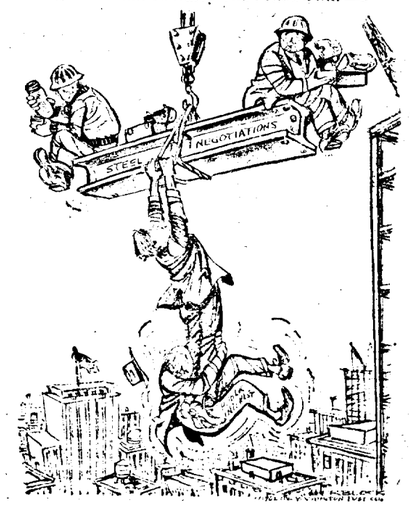
AMERICAN SURVEY

AMERICAN SURVEY, is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Mr Kennedy Goes a-Wooing

NEW YORK

FOR some months now President Kennedy has been taking special pains to win the confidence, even if he cannot win the votes, of the business community—a difficult task in spite of the American businessman's reputation of being an easy-going, back-slapping extrovert. For when he approaches Washington another side of his character emerges and he becomes suspicious and distrustful, with all the signs of a deep-seated persecution complex. Many businessmen, and the two major organisations that speak for them, the National Association of Manufacturers and the United States Chamber of Commerce, are convinced that the federal government possesses a basic anti-business bias; this conviction leads them to adopt a cantankerous and sceptical attitude towards almost any move made by Washington. Mr Kennedy, however, has persisted in his efforts to mitigate their grievances, real and imaginary, because he regards their co-operation as vital to the attainment of a proper atmosphere for a new upsurge of economic growth.



The current negotiations over wages and working conditions in the steel industry are a crucial test for the President's strategy of wooing business. In his view, either a prolonged strike or an inflationary settlement would be harmful to the economy and at the very least would bring a threat of a new crisis for the dollar. So Mr Kennedy is pressing for a reasonable settlement—with any wage increase limited by the rise in productivity and no change in the price level—well in advance of June 30th, the date on which the present contract expires. Mr Kennedy is not intervening directly in the negotiations but, since industry usually regards any government intervention, however indirect it may be, as an unwarranted and hostile act; the success of the renewed negotiations is in doubt unless the President has succeeded in allaying the fears of businessmen.

Certainly they are not now as critical of the Administration as they were last year. Relations between the then new Democratic Administration and the business community had an inauspicious beginning. But precisely for this reason the President's cautious courtship seems to be bearing fruit. Businessmen have been gratified to discover that Mr Kennedy, far from being a profligate spender, has promised to balance the Budget. They are impressed by his unexpected determination to protect the dollar. They respect both the way in which he resists such attacks from labour as the charge that his economic policy is "overly timid" and his refusal to bow to demands for more aggressive action to counter unemployment. There is no guile in Mr Kennedy's stand. He is not abandoning his belief that the government has a major responsibility for guiding the economy; in fact, his limited intervention in the steel negotiations is concrete evidence of this. By the same token, he is not about to cut back on government spending as most business leaders would like; on the contrary, he has sought to increase spending in order to assure an expansion in economic activity. But he has made concessions in the interests of harmony and has demonstrated a willingness to calm the ruffled feathers of his business opponents.

Some government economists have expressed the view that the pause in the economic upswing since the start of the year is due in part to lack of confidence among businessmen, who have been hesitant about committing corporate funds for the rebuilding of stocks or the installation of additional capacity. It is doubtful whether this subdued and somewhat uncertain mood arises out of misgivings about Washington but the Administration's hopes for a banner year, and a balanced Budget, depend on a bolstering of business confidence. And when a business spokesman like Mr Leslie Worthington, president of the United States Steel Corporation, criticises the government for discouraging corporate outlays by keeping profits "squeezed down," the climate for investment is not improved.

But the Administration's desire to gain co-operation from businessmen goes beyond the immediate question of confidence. It needs industry's help in strengthening the economy and its programmes for stimulating growth and improving the competitive position of American manufacturers cannot be enacted without the help of the business community. Of course this does not speak with one voice and on almost every issue the Administration is bound to face a certain amount of corporate opposition but, if it can convince some of the more responsible business leaders that its policies are not designed to favour the trade unions or to restrict the freedom of management, then it will be in a stronger position *vis-á-vis* Congress, always sensitive to business lobbying.

"I Don't Want To Hurry You Fellows, But —"

But as yet the Administration has not won any substantial backing from businessmen. It is finding it difficult to persuade them that what is good for the country is good for them and its officials confess to being frustrated and puzzled by the cool and often frigid reception that has greeted many parts of the Kennedy programme in business circles. Last year industry refused to embrace the Administration's plan for tax incentives to stimulate investment and increase productive efficiency. Spurred by labour criticism of the plan as a "giveaway," industrialists have had a partial change of heart since then, so the Bill stands a fair chance of passage during the present session of Congress. But the Administration is unhappy about the failure of those businessmen who would benefit from the new trade programme to give it vocal

backing in answer to the already clamorous opposition of those who fear that it will be harmful.

The Administration has some serious handicaps to overcome if it is to placate business. A vast majority of the business community opposes the Democratic party; since the New Deal era of Franklin Roosevelt they have associated it with an ever bigger government that is the forerunner of socialism. Their normal antipathy to government was reinforced by their disillusionment under President Eisenhower, when a Republican regime widely hailed as a "businessman's Administration" showed the same proclivity for increasing the activities of government. Even among those businessmen who recognise that the federal government cannot—and should not—wither away, the distrust of Washington is strong. They are prepared to exonerate Mr Kennedy and his brother, the Attorney General, from any bias but they suspect that neither of them can control the permanent bureaucrats who are alleged to run the government.

In fact, businessmen complain that President Kennedy's attempts to achieve a better atmosphere are generally offset by the announcement of a new anti-trust action or some other form of government intervention. There is no doubt that the Administration's law enforcement agencies have been active, but most of the material for the anti-trust suits and price discrimination cases now being aired was gathered during the Eisenhower years and does not represent a planned acceleration in Washington's harassment of industry. In the early days of the Kennedy Administration, some new officials were guilty of remarks that were construed as being unfriendly to business; the most ominous incident, to many executives, was the attempt by the Secretary of Commerce to down-grade the position of the Business Advisory Council, a group of high ranking corporate officials who consulted with government spokesmen at regular intervals.

The President himself stepped in to reconstitute the BAC (now called the Business Council) and organised the Labour-Management Advisory Committee, made up of representatives of both sides plus "public" members, to promote understanding on economic issues. And except for an occasional lapse, officials of the Administration have been extremely circumspect in their pronouncements, as if they were under orders to avoid provoking the business community.

MR KENNEDY does not seek the total support of the business community, particularly if this would alienate his other backers. He is determined to improve the conditions under which collective bargaining with the trade unions is conducted and is insisting that the only fair settlement is one that takes the public interest into account. Neither labour nor management, however, is completely happy with his view that this interest should be represented in their negotiations, since they feel that this may lead to direct intervention by the government. This is not the first time that an occupant of the White House has injected himself into wage disputes and past experience tends to confirm the businessman's natural scepticism; even when the government tries to be objective, usually it ends up by giving way to the side having the most votes and this puts business at a disadvantage.

But Mr Kennedy, a shrewd politician who is especially astute at gauging public opinion, realises that all his wooing of businessmen will be wasted if he favours one side over the other in the steel negotiations. His delicate job is to persuade both labour and management that the public interest is paramount and that, by exercising restraint, they will also benefit themselves. Businessmen seem to be willing, however reluctantly, to accept his thesis. If it provides a successful outcome for the steel negotiations, Mr Kennedy may be able to usher in a new wave of good feeling between business and government.

Space for Co-operation

PRESIDENT KENNEDY, refusing to give up at Geneva, even though all three groups of talks there—on atomic testing, on general disarmament and on Berlin—seem to have reached dead ends already, received some quite substantial encouragement from Mr Khrushchev this week. The Soviet Premier replied both promptly and favourably to Mr Kennedy's letter of March 7th, released only last week, containing concrete proposals for immediate common action in the exploration of space. This letter was in answer to the Russian congratulations on Colonel Glenn's orbital flight, in which Mr Khrushchev had asked that his country and the United States should co-operate in space research. That he should at last take up an idea which the Americans first put forward over five years ago suggests that he now feels that American progress in space has been such that the Russians have as much to gain as to give in an exchange of information; it is also thought that he is not averse to sharing the mounting costs of space experiments.

Mr Khrushchev is not prepared to go the whole way with Mr Kennedy. He points out that, since military missiles and peaceful space ships have the same scientific and technical basis, co-operation and a pooling of resources for such things as joint trips to Venus or Mars must depend to some extent on the reaching of an agreement on disarmament. And his reply did not pick up Mr Kennedy's proposal that each country should provide tracking services for the other's space programmes; this would mean an exchange of equipment and scientists. But Mr Khrushchev does want a joint effort for observing space probes towards the moon and the solar system. He welcomes co-operation in the putting up of satellites for communications purposes and for observing the weather, and collaboration in studying the earth's magnetic field and the medical problems of space. To these suggestions of Mr Kennedy's Mr Khrushchev adds two of his own: that countries should assist each other in rescuing space ships and "cosmonauts" if they come down accidentally; and that there should be discussion before any country undertakes a space experiment which might make difficulties for others. This refers perhaps to the abortive American attempt, soon to be renewed, to scatter metal filaments in space for communications purposes.

Mr Khrushchev also thinks that the time has come for the Soviet Union and the United States, the most advanced countries in space exploration, to find a common approach to the legal problems involved. A start has already been made in the United Nations and it is here too that the new discussions of co-operation in the peaceful uses of outer space are to be held, although they will be in private between American and Russian representatives only, at least to start with. They are to begin next week and the outlook in New York is much brighter than in Geneva.

Training in Vietnam

IT is not only the south Vietnamese who are being trained to fight guerrilla campaigns. The American people who, if they must fight, prefer their wars to be short, clear-cut and above-board, are gradually being taught that long-drawn-out subterranean struggles in far off countries are part of the responsibilities of power and that patience and self-control are required. Last week for the first time a top official, Mr McNamara, the Secretary of Defence, conceded what news reports had already made clear; that some of the 4,000 or so Americans now training the Vietnamese to deal with the Viet Cong communists were doing so under combat conditions; a few have been fired on and have fired back and there have been a handful of casualties. President Kennedy insists that no combat

NOMURA

Research Comes First

Which comes first, research or results? You know the answer. We feel the same way. And that's why we place research above everything else when we talk to our clients about companies and industries of interest. The basic policy of Nomura Securities is that investments are a type of savings, and should not be treated lightly. That is why we have always recommended long term growth stock to our clients. We can't say that investing in Japan is the direct road to wealth. And we won't promise certain results from all investments. But we would like to help you with your investments in the Japanese stock market to be sure that you have all of the relevant data.

We use research to study the complete economy, as well as individual companies, so that you will have the latest information. Write to us for information on the Japanese stock market which is backed by facts . . . through research.

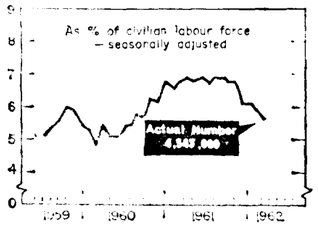
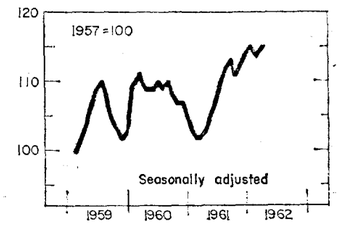
troops " as the term is commonly understood " have been sent to Vietnam, but the educational doctrine of these instructors seems to be " teach by doing."



The whole operation fits very neatly into Mr McNamara's description of the various layers of conflict, beside nuclear war, for which the United States must be prepared. One is the localised non-nuclear outbreak ; with the increase in the number of divisions allotted to the Strategic Army Corps the United States should be ready, later this year, to meet two non-nuclear crises at once without having to resort immediately to partial mobilisation. The other challenge is from what Mr Khrushchev calls " wars of liberation " and what Mr McNamara prefers to describe as " covert aggression " ; to meet this threat all four services are training men who can in turn teach others to resist. To help the Vietnamese the Administration last month set up a military assistance command —something only used before in Greece in the nineteen-forties— under the very able General Harkins. The Secretary of Defence has himself been flying each month to Honolulu with General Rosson, the new specialist in guerrilla warfare, to discuss the situation with Admiral Felt, the Pacific commander, and the American Ambassador to Vietnam ; on his return from his last trip Mr McNamara warned Americans that the struggle would be a long one.

The most remarkable event of this past week, however, has been the dogs which did not bark at the news of how deeply the United States is now involved in Vietnam. Last month the Republican National Committee said that Mr Kennedy should "drop the pretence that the United States is acting only as a military adviser " and asked if the country were moving toward another Korea. But the committee has been brought sharply to heel, partly because Mr Kennedy consulted in advance the leaders of both parties in Congress, partly because Mr Nixon, still the titular Republican leader, strongly supports American policy in Vietnam. On such an issue bipartisan support is essential. This may be why the Administration has treated with such surprising mildness Mr Nixon's charges that during the election campaign Mr Kennedy endangered the expedition to Cuba which was then being planned.

Boom—To Be or Not To Be?



THE cheerfulness of February's economic statistics does not stand up to close examination, except perhaps in the case of the employment figures, until recently the only series which lagged behind the general recovery. In February the number of people out of work normally shows little change but last month it went down, to the lowest point since July, 1960, and the number of people in jobs went up more than usual, to a total of 65,789,000, partly but not entirely as a result of the bad weather which reduced employment in January. There was also a contra-seasonal rise in the average number of hours worked in factories in February. Together these two increases brought a gain of $2.75 billion at annual rates in total personal income during the month ; this more than cancelled out January's loss but did not equal the rate of expansion in the latter months of 1961. Similarly industrial output made up for its January drop but was not yet expanding as fast as in October and November.

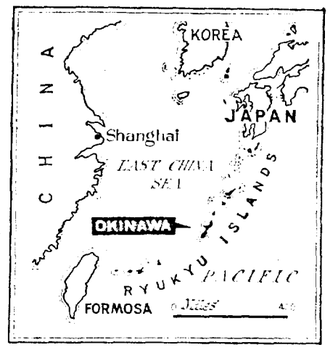
UNEMPLOYMENT

The number of new houses started in February actually fell by 11 per cent and there was also a decline in the value of new orders received by manufacturers of durable goods, explained partly by a slackening in plans for stockpiling steel as a strike became less likely. Finally the official forecast for capital spending by businessmen is for an increase of 8 per cent over 1961 for this year as a whole. But this was not as much as had been hoped for and the figures also showed that this spending had not been going up recently as much as was expected. But it has been rising steadily since the middle of last year and businessmen are behaving as they are supposed to do in times of recovery—increasing their expenditures—which is more than ordinary consumers are doing.

INDUSTRIAL PRODUCTION

Both these groups will become more important to the general economic picture in the second half of the year, when government outlays will slacken off, according to current plans, and the responsibility for keeping up the expansion will belong to private citizens. Both must then spend more than they look like doing at present if the official prediction is to be fulfilled, for a gross national product of better than $570 billion for the year as a whole. Already it has been admitted that the figure for the first quarter will not come up to expectations. But although the pace of the advance has slowed since last year, the February figures seem to show that the actual decline in January was probably only temporary. The economy may have more vitality than the latest statistics suggest—President Kennedy and Mr Heller, the chairman of his Council of Economic Advisers, say that it has—and it is possible that it is on the point of accelerating into a boom. Certainly reserve supplies are modest in practically all sections and it will be surprising if businessmen do not start adding to their stocks soon. This in turn would mean industrial output at the near-to-capacity rates which bring additional capital investment. And if consumers too begin to spend more freely, this should ensure that the gross national product will be running at the annual rate of $585 billion which Mr Heller still expects in the last quarter of the year.

"Something Old, Something New...



SOMETHING borrowed, something blue . . . " might describe the President's message to Congress on protection for the consumer, the first time that his interests have achieved the distinction of a President's undivided attention. The something blue is provided by the likelihood that few of these measures stand much chance of being adopted this year, even though their worthiness is now attested by the White House. Nevertheless, consumers will be gratified to find that they have a friend in the President. So will the progressive Democrats (who have had many doubts about Mr Kennedy's liberalism). Most of the raft of Bills defending a variety of consumer interests which are already before Congress owe their existence to the valiant efforts of Democrats like Senator Douglas, Senator Proxmire, Senator Kefauver, Mr Multer and Mr Dingell. Government agencies which have the consumer's good at heart will also be encouraged. Moreover, though the harvest of consumers' Bills may be slight this year, there may be a useful harvest of votes for the Democrats at the polls in November.

In his message the President announced that he had already directed his Council of Economic Advisers to set up a Consumers Advisory Council ; he has thus fulfilled, though in a rather watered-down form, his campaign promise to appoint a consumers' counsel. The new body will have no powers of its own. At present the Administration is planning to submit only two new Bills, both minor ; but the White House may have to draw up a third if Senator Kefauver's Bill to end abuses in the production of medicines cannot be retrieved from the shelf to which the Senate Judiciary Committee has just consigned it. It would enable the Food and Drug Administration to require proof that medicines are effective, as well as safe, before they are put on the market. What the manufacturers jib at—because, they say, it would hamper medical research—is another provision, aimed at reducing prices, which would cut the life of patents in this field from 17 to 3 years. If it has to draw up its own Bill the Administration will leave out this controversial proposal in the hope of being able to get power to pass the safety of new cosmetics, such as lipsticks, as well as access to the records and formulæ of drug manufacturers and authority to publish a list of the everyday names for drugs which are also sold—at higher prices—under brand names.

Other measures which the President backed include Senator Douglas's Bill for " truth-in-lending," which would make people realise how much they are paying for credit. Another is the proposal that Congress should require all television sets to be capable of receiving not only the 12 very-high-frequency channels now in use but also the 70 ultra-high-frequency ones which would make possible a much wider range of programmes. The President is also asking for new powers for the Federal Trade Commission and will submit later recommendations to make the packaging and labelling of goods a source of guidance, not misguidance, to the careful shopper.

Far Eastern Colony

THE Ryukyu Islands, the easternmost outpost of the United States, now serve two somewhat conflciting purposes: the State Department would like to hold them up as an example of the advantages of American democracy to both the independent countries of the Far East and to the remaining colonial powers ; the Department of Defence regards them as a base which is essential if the United States is to be able to deter aggression in the Far East and to help its allies there. The Department of Defence's view prevails although its application has been much modified over the years. Okinawa, the largest of the islands, was captured from the Japanese in 1945 after the bloodiest battle of the Pacific war and since then the islands have remained under military rule. The main concern of the commanding general has been the safety of the huge base, greatly expanded as a result of the Korean war, and the welfare of the American forces stationed there.

The islanders were given a modicum of self-government in 1957 and now President Kennedy has advanced them a stage further. Legislators are to have three-year terms and may add to the present 29 constituencies if they wish. The Legislature is to nominate

Taking Skills to the Workless

PRESIDENT KENNEDY'S first big legislative success this year is the Manpower Retraining Bill. He signed it on March 15th with the comment that it might well be the most significant legislation in this field since the historic Employment Act adopted in 1946. The aim of the new Act is to provide workers—primarily the long-term unemployed, but also young people, farmers and those in jobs who need to improve their qualifications—with the skills required in a rapidly changing economy which is turning more and more to automatic equipment. The length of the programme—three years—and the money authorised (but not yet appropriated) to be spent by the federal government—$435 million—fall almost exactly half-way between the generous provisions voted by the Senate last year and the much more limited ones approved by the House of Representatives in February.

Who Benefits?

It is estimated that just under a million workers will learn new skills or polish up old ones. This figure includes about 350,000 actually in work who will be helped to prepare themselves for better jobs as well as about 600,000 of those out of work. The trade unions complain that this is only a drop in the bucket of 4.5 million unemployed, but the number who have been out of work over 6 months, and whom the Act is particularly designed to help, add up to only about 700,000. Many of these people have exhausted their unemployment benefits and will be, it is thought, receptive to retraining. About 1.7 million workers have been idle for 15 weeks or more.

Priority is to be given to heads of households who are out of a job but have spent at least three years in work ; they will be tested to determine their aptitudes and their suitability for retraining. Allowances, equal to unemployment benefits in the trainee's state (varying, that is, from about $22 to $45 a week), will be provided for up to a year ; if training involves living away from home supplemental allowances of up to $35 a week will be paid. Young people aged from 19 to 21 may receive allowances of not more than $20 a week. Retraining, but without benefit of any allowances, will be available to youths between the ages of 16 and 19 and to the unemployed who do not qualify for priority.

What Skills?

The federal government will pay the total cost during the first two years, but in the third the states will have to pay half. Vocational training will be provided by the states under the direction of the Department of Health, Education and Welfare, which is also empowered to enter into direct agreements with training institutions if the states are unco-operative. The kind of jobs for which workers will be prepared include nurse's aide, laundry worker, calculating machine operator, television repairman, motor car mechanic and, for those with an academic background, elementary teacher, accountant, social worker and physical therapist.

Those taking part must have a reasonable chance of becoming employed and placing them in jobs after they are trained is the responsibility of the Secretary of Labour ; so is the choice of the skills to be taught. To help him discharge this responsibility he is directed to determine the country's needs for labour and how these are likely to change—in effect, to establish a national policy for manpower.

the Ryukyuan Chief Executive although the American High Commissioner, a general, may refuse to accept the nomination. The High Commissioner now has power to veto only Bills affecting military security or foreign affairs (this has in fact been his practice for some time) and his chief assistant, the civil administrator, will now be a civilian instead of a military man. This is all in the usual pattern of a gradual loosening of colonial ties, except that in this case it is not a question of preparing the islands for independence but of lessening the pressure for a return to Japanese sovereignty. Mr Kennedy recognises this sovereignty but holds out no hope that it can be restored soon.

Much of the pressure comes from a belief among the Ryukyuans that they would do better economically if they could share in the financial and social benefits which Japan offers to its people. To meet this complaint, which most American observers feel is justified, Mr Kennedy is asking Congress to increase its aid to the islands—this is now running at about $6 million a year—and is negotiating with Japan on a plan for co-operative assistance. It remains to be seen whether all this will be enough to save the United States from having to face the now classic colonial problem of maintaining a military base amongst a hostile population.

Hold-up in New York

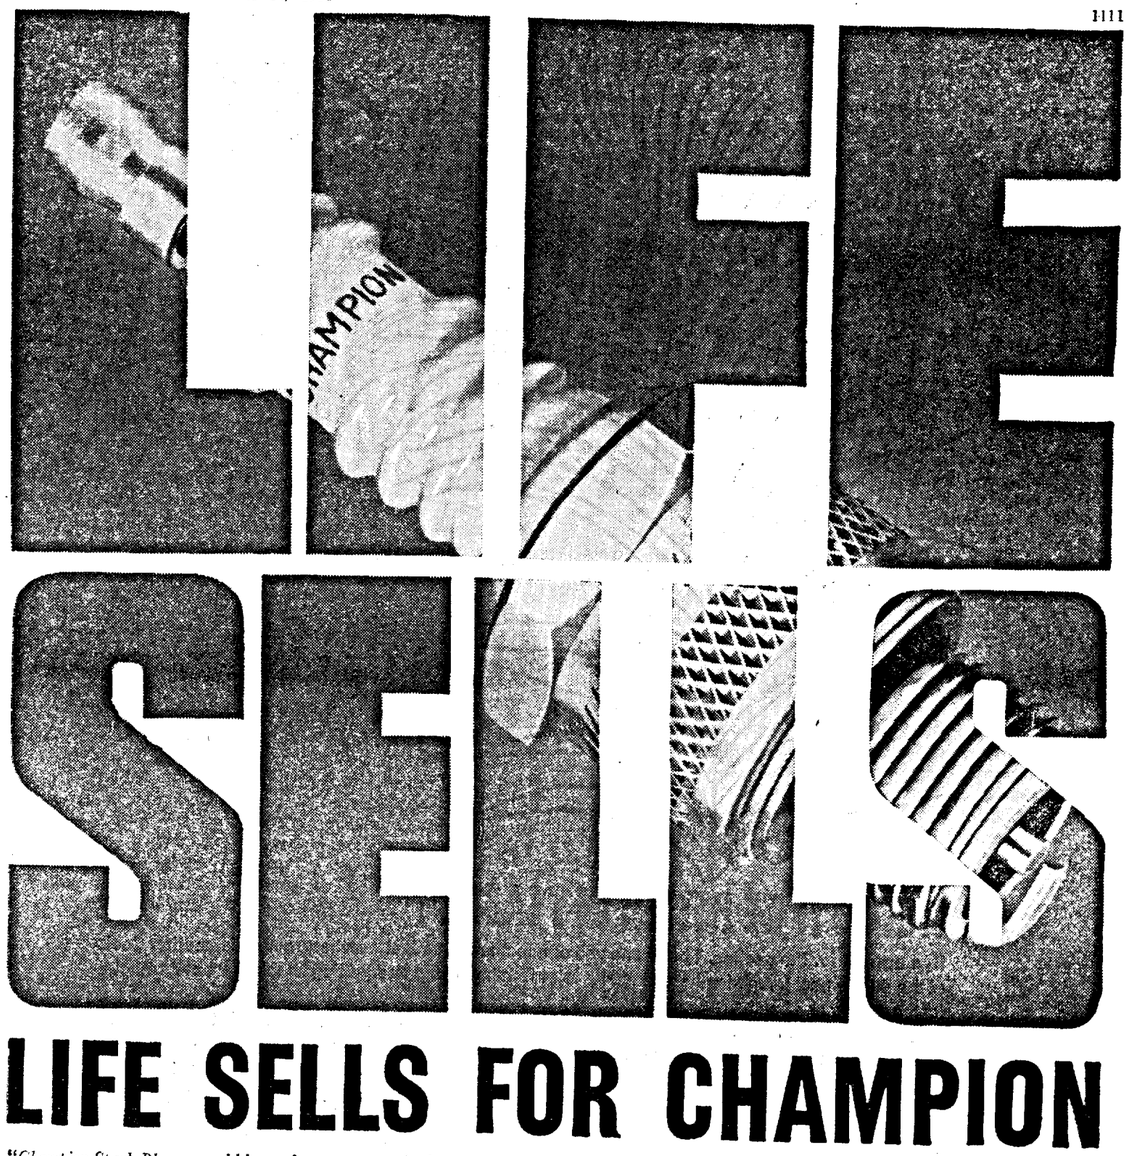
It's an ill Weinberg that blows nobody good. Mr Weinberg precipitated a three-week strike that has led to New York City taking over his bus lines. The strike diverted some passengers to the city-run underground ; the absence of the buses also gladdened the hearts of the taxi-drivers and of Mr Barnes, the new traffic commissioner. In the end, there may be a handsome windfall for the shareholders in the Fifth Avenue Coach Lines, Inc. (including Mr Weinberg's associate, Mr Roy Cohn, once Senator McCarthy's juvenile Torquemada) if the courts award compensation in amounts even approaching the brazen figures mentioned by Mr Weinberg. But the 6,500 men who run the buses are out of pocket and the people who use them—about 1.5 million a day—are cross and foot-sore. Moreover it begins to look as though fares—always a political sacred cow in New York—will soon rise. This is not good news for the Mayor, Mr Wagner, who promised last year in his election campaign that they would stay at 15 cents. He may be in the political arena again this year if he decides to challenge Mr Rockefeller, the Republican Governor of the state, who is seeking re-election.

Mr Weinberg may be right that New Yorkers are not paying a fair price for their bus rides, but no one accuses him of being in public transport primarily to teach people lessons in economics. He has made a fortune in this unlikely field by buying up faltering companies—in Scranton, Honolulu and Dallas—and firing employees, cutting services and raising fares. His enemies say he milks his companies and is more interested in their assets than their duties. As soon as he had seized control of the Fifth Avenue lines in February he asked for an increase in fares ; when this was refused he provoked a strike by sacking 29 long-service employees. For once the Transport Workers Union had some public sympathy. Then, according to Mr Weinberg, the Mayor approached him with an offer of an increase in fares if only the invaders would lie low and cause no trouble until after the election in November.

Mr Wagner hotly denied this tale, which was not only embarrassing in itself, but also offered an opportunity to the Republican majority in the State Legislature to hold up Bills which were needed to enable the city to seize the franchises and property of the company. But Mr Rockefeller, who is also a candidate and according to some observers one whose popularity is waning, could not afford to make political capital out of the Mayor's troubles. The Bills went through speedily and this week the city seized the buses, the garages and most of the franchises involved. But the Bills were carefully amended to make it clear that the responsibility for any increase in fares must be shouldered by the city, not by the state.

Fifty Miles to School

FROM A CORRESPONDENT IN COLORADO



The Ford Foundation has given $742,000 to five western states —Arizona, Utah, New Mexico, Nevada and Colorado—for a three-year project to improve instruction in their small elementary schools. About a fifth of all American children attend schools with fewer than 200 pupils each and they will continue to do so for the foreseeable future. The orange-coloured school bus is an ubiquitous feature of western roads and some children travel as far as 50 miles to school each day ; but the process of consolidating schools has gone about as far as it can, since rural areas are losing rather than gaining population.

The new project is an extension of a similar programme for small high schools, also financed by the Ford Foundation, which is now in its fifth year and has attracted the attention of teachers all over the country. This is because virtually every state has small rural schools, some of them still of the one-room or two-room variety. In the five states involved there are approximately 1,150 rural schools with 93,000 pupils and 5,600 teachers. For these children to be given as good an education as they would receive elsewhere would cost, according to one calculation, from 25 to 60 per cent more a head than the national average. Unfortunately income a head in these states lags behind income in the country as a whole.

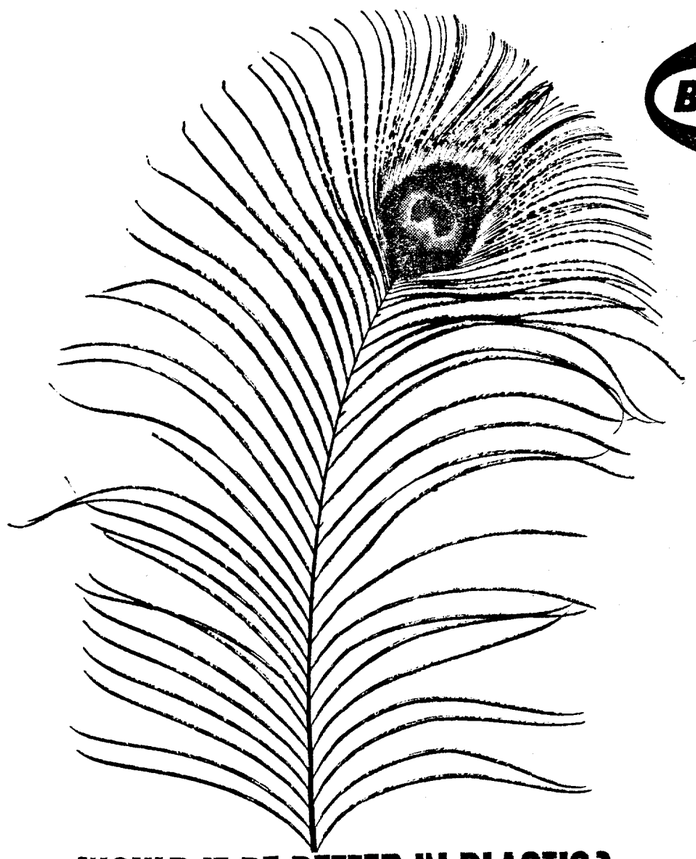
The new project will canvass all means of increasing efficiency, including aids such as television, where it is available, tape-recordings and film ; the instruction of two or more small classes at the same time by one teacher in a single room—a hang-over from the old days of the one-room school that some professional educators feel still has possibilities, even in big schools ; and the employment of farm wives as teachers' aids, to perform most of the routine duties. In Colorado there will be less emphasis on the rigid classification of children according to their age and more on allowing them to advance at their own pace. The high schools have also found it profitable to share teachers of special subjects (who may "ride the circuit" and teach a day in each of five schools during a week) and to share classroom and laboratory facilities. The Ford Foundation says that about a third of all high school pupils will continue to be taught in small schools and that therefore the standards of these schools must be improved continuously. Some serve areas almost as large as the whole state of Connecticut.

SHORTER NOTE

Pennsylvania is now all set for what is expected to be an exceptionally close gubernatorial contest next November between two able liberals, the Democratic ex-Mayor of Philadelphia, Mr Richardson Dilworth, and a comparatively young Republican Representative, Mr William Scranton. Both may be hampered in their inter-party fight by the intra-party feuds which preceded their selection as candidates. Mr William Green, the boss of Philadelphia, opposed Mr Dilworth's nomination, ostensibly on the ground that he could not win, actually because Mr Green's control over state patronage in the Philadelphia area might be interfered with should a reformer like Mr Dilworth become Governor. The choice of Mr Scranton was the result of a compromise between the old guard Republicans and the progressives ; it represented a victory for the latter, who were encouraged by General Eisenhower.

LIFE SELLS FOR CHAMPION

"Champion Spark Plugs are sold in nearly every country in the Free World and we require media that reach the car-owning market in each of these areas." These are Champion's own words, and they go on to say: *"The use of LIFE International and LIFE En Español helps us to attain that goal by reaching a high percentage of single and multiple car owners and to do it at a low cost per thousand.*



"In addition, a high percentage of the readers work for companies who own a large number of automobiles and trucks and either specify or influence the purchasing done by their firm.

"We have used LIFE International and LIFE En Español for several years and find them valuable media for selling spark plugs to-day as well as paving the way for future sales. Important, too, is the fact that these magazines provide an excellent backdrop for our local advertising and promotion."

In 146 countries around the world, LIFE readers make up a vast and profitable market for the goods and services advertised in its pages. They read LIFE—no less its advertisements—because the articles, the reporting and the photography add up to their kind of interest.

LIFE can sell for you, too. For more information about LIFE International and its advertising edition for Europe, as well as LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond Street, London W.1.

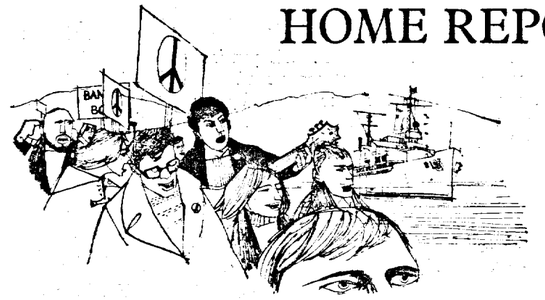
BIP BRITISH INDUSTRIAL PLASTICS LIMITED

WOULD IT BE BETTER IN PLASTIC?

Eye appeal for the peahen. That's one use of a feather. Practical weatherproofing is another (look at the duck's back). And feathers stand up to swimming, flying and getting knocked around without losing shape or sheen.

Few birds will be interested in plastic plumage, but today plastics can give all these natural qualities. Human "birds" like to dress in alluring glazed cottons (made crisp and creaseless by BIP resins). Weatherproofing? British Industrial Plastics make glassfibre sheeting to keep out the rain (and the heat: Persian Gulf oil tankers now have permanent awnings of Filon). And tough resin plastics make lighter lorry bodies (allowing heavier payloads). In some form—sheet or coating, laminate or moulding—BIP can help to make almost anything better.

GO ON-ASK US!



WOULD IT BE BETTER WITH PLASTICS?

DON'T GET LEFT BEHIND! While we explore these new materials, your product might benefit. You can trust us not to do anything rash. BIP have been in plastics from the beginning (we process raw material, build the press and tool plant, make our own moulded products). And we run two services without charge. One to see if we *can* give your product a plus, and one to design it for the materials (or advise your own designers). We think we can help you, so now it's up to you.

Scots Bards, Yankee Tunes

FROM A CORRESPONDENT IN GLASGOW

THE Polaris missile base has weathered many demonstrations by the Campaign for Nuclear Disarmament since the American depot ship, *Proteus*, sailed past Dunoon to drop anchor at Holy Loch in the Clyde just over a year ago. The CND remains a minority movement on Clydeside, but it certainly has all the best songs—which now even threaten to merge in the Scottish folk song tradition. Many of the anti-Polaris ballads are sung semi-professionally by a young art teacher, Josh MacCrae—"a fine lad from Glasgow," according to the great Jeannie Robertson, whose approval in these matters is worth having, based as it is on a reputation that began in Buchan and has spread round the world. The songs are not classics: they are not likely to survive as the best of the Jacobite ones, the last occasion on which there was quite such an outpouring of the muse. But they do have the first essentials of virility and emotion, they are mostly satirical, and they have much in common with the industrial-coalfield work songs that evolved naturally from the Gaelic and Lowland cultures.

Within two months of the *Proteus*'s arrival the first anti-Polaris songbook was published in Glasgow (five editions in the past eight months). This was directly in the Scottish tradition of ballad circulation by way of cheap chapbooks sold at country fairs. The current edition (15 songs for 6d.) includes "The Glesca' Eskimos" (which celebrates the canoe attempts to board the *Proteus* and a contemptuous American reference to the Eskimo navy). This speaks feelingly of the demonstrators' trials in reaching the Holy Loch at all:

It's in and oot and up and doon and on and aff the piers,
There's cooncillors, collaborators, pimps and profiteers;
The hairies[1] jouk the polis[2] and the polis jouk the queers,
We are the Glesca' Eskimos.

Others are "Ding Dong Dollar" (to the tune Marching Through Georgia) and "Ban Polaris—Hallelujah," which is sung to John Brown's Body and concludes:

When Dunoon folks breath atomic dust
And drink the strontium waste,
They'll hae clever deils for bairnies
Dooble-heidit, dooble faced,
Like the fish that soom in the Holy Loch
The first three-leggit race.
Send the Yankees hame.

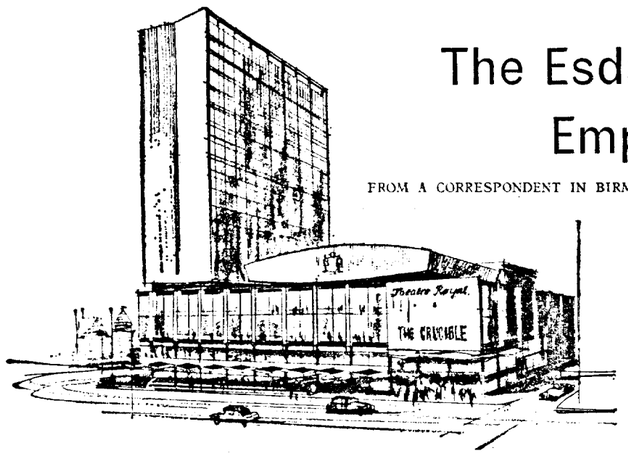
Certain of the ballads are in good Scots but most get by on a deft Glaswegian patois. There are two prolific authors. One is a Glasgow modern languages teacher, Maurice Blythman (who is also the poet, Thurso Berwick), and the other is Jim McLean, aged 24 and recently departed from Glasgow to see the world, meeting his expenses by playing the bagpipes.

The anti-Polaris repertoire is too new to excite real attention from academic folk song collectors. In the past, experts like the American, F. J. Child and Scotland's Marjorie Kennedy Fraser tended to assume that folk music was exclusively rural because they knew little themselves of industrial society or working class activity. It was the later Americans, John and Alan Lomax, who first sought and found the railroad, hill-billy, and general pioneering ballads that the opening-up of the United States produced in profusion. In Britain it took even longer to realise that rural work song (in Gaelic, Scots, or English) could have its genuine industrial counterpart.

Scotland itself, despite being one of the great European repositories, was slow to appreciate its wealth of this kind of folk song. It was not until 1951 that the School of Scottish Studies (currently directed by a Manxman) was founded at Edinburgh university on the model of the Irish Folklore Commission. Among the school's traditional collectors is Hamish Henderson, a wartime intelligence officer with the 51st (Highland) Division, who is also knowledgeable on modern political-industrial songs (he has himself written a splendid ballad on John Maclean, the Clydeside political agitator who died in 1923). He has traced and recorded rare songs, some of them thought to be extinct, taking "The False Knight Upon The Road" from a 19-year-old tinker at a Blairgowrie berry-picking in the early 1950s. Tinkers, outside the Gaeltachd and often in it, usually know the best of the traditional ballads. The School of Scottish Studies has discovered several young ones, still only in their twenties, who can sing the great classical ballads as they were sung generations ago. Jeannie Robertson, in her middle fifties, has some that only she knows, and the hundreds in her repertoire were learned either at her mother's knee or in travelling through the north-east Scotland of her youth.

PAUL ROBESON'S fondness for Scotland may have an ideological content, but it derives partly from his insistence that primarily he is a folk singer. He enjoys the anti-Polaris stuff, hopes to go collecting in the Western Isles some day, and is adamant that "no intellectual can compose greater music than the people have done over 5,000 years." Backed up by the reputation of Jeannie Robertson, John Strachan (who farms at Fyvie—devotees know the name well) and Dr Alan Macdonald of Skye, there is now a corps of balladists, professional and amateur, who make their music at the drop of a hat. They write and sing about such events as the reiving of the Coronation Stone of Scottish nationalists, the troubles of Glasgow Rangers and the Celtic, the Polaris base, and the Auchengeich mining disaster in which 47 Lanarkshire colliers were killed in 1959. The first ballad about that disaster was being sung within weeks, the type that might have come from Ewan McColl (from Stirlingshire, where he was born Jimmy Miller) who is both playwright and prolific folk song author.

All this activity should not be confused with the bastardised skiffle groups who in the nineteen-fifties were born in city basements and cellars and strummed guitars to simple pop-ditties commercially commissioned. But even that outburst, although a pseudo-culture, is not to be despised. It helped to revive an awareness that music can be made without juke-boxes or orchestras and folk song has often subsequently emerged where skiffle began. In Glasgow in the past year three folk song clubs have been founded. Audiences of up to 200 throng their weekly sessions, and Pete



For English reviewers:
[1] Women of the town. [2] The constabulary.

Seeger, the American who avidly collects Scots songs, packed 2,400 people into St Andrew's Hall for a concert last winter.

Radio and television have actually jumped on to the bandwagon —in a decorous way. The BBC's *Tonight* programme leans heavily on Negro and Scottish singers, like the Glasgow pair, Robin Hall and Jimmy McGregor. The main danger, however, lies in the version chosen for broadcast becoming accepted as a sort of authorised version, although it may not be the best of many forms of the song extant. All in all, it looks like a healthy revival of what was thought to be a dying art. Glasgow is not, of course, the only place that fosters this spontaneous combustion. But with the anti-Polaris bards contributing so powerfully to the general movement it almost seems that some CND members thank their stars to have the Americans in Holy Loch.

The Esdaile Empire

FROM A CORRESPONDENT IN BIRMINGHAM

BIRMINGHAM'S reputation as a kind of cultural Sierra Leone, a theatrical players' graveyard, stems largely, one suspects, from being too near London. The Midlander has been able to rely on seeing established successes on Shaftesbury Avenue after a two-hour journey to Paddington.

Not that the city's reputation is altogether deserved. Until Moss Empires decided that to sell the Theatre Royal and let Mr Jack Cotton build a Woolworth superstore on its site was more profitable than keeping the theatre open, Birmingham boasted five theatres to give a cultural gloss to its "Second City" claim—one based all too often on mere numbers.

The Royal itself was the latest in a line which had stood on the same site in New Street, the principal shopping thoroughfare, since 1774, though as a building the last Royal was merely inconvenient-Edwardian. When Moss Empires announced the sale of the Royal its then managing director, Mr Val Parnell, promised a magnificent new theatre ready for the support of "our Birmingham friends" as soon as the Royal closed its doors.

Before the Royal closed in 1956 he was admitting he had no idea when the new theatre would be ready, and Moss's Birmingham friends have probably declined greatly in number as the weary series of negotiations with Birmingham corporation over the rebuilding dragged on. A site stood waiting on the fine new inner ring road. Developers were announced (though not named) ready to build a theatre for leasing. The delays spread their tedium over five years while the corporation made concession after rent concession and Moss repeated that none of these allowed it to operate economically.

Now the new theatre is to be begun next autumn—without Moss Empires' help. Cutting its losses, the city public works committee last year advertised for developers, and after rejecting the five original schemes, accepted one from Atlas Securities, Ltd., whose chairman, Mr Alfred Esdaile, is a former actor who played Birmingham theatres in his time.

HIS scheme spreads the theatre's costs over a comprehensive development, including tavern, restaurant and night club, with the rents from shops and offices (15 storeys towering above the theatre foyers, with more alongside) helping to subsidise the theatre. By a series of financial arrangements Atlas is paying ground rent for 99 years and rack rental which exactly meets the £55,500 which the corporation will pay annually for the rental of the theatre fully fitted and equipped. Birmingham is thus getting its theatre at simply the cost of the site (which many people rightly regard as not inconsiderable). Atlas undertakes to find a satisfactory operator.

Mr Esdaile has since announced his intention of building theatres in Lancashire and Yorkshire (speculation has fastened on Manchester and Sheffield), as well as the Prince Charles in Leicester Place and the new Ballet Rambert home in Notting Hill. He even told shareholders at the annual meeting the other day that prospects for investment in theatres are good.

His new Theatre Royal, seating 1,800 people, will stand almost cheek by jowl with the famous Birmingham Repertory Theatre, one of whose distinguished graduates, Dame Peggy Ashcroft, will lay the Royal's foundation stone. Dame Peggy serves with Mr Esdaile on the council of the English Stage Company, whose home, the Royal Court, is owned by the London Theatre Guild (chairman, Mr Alfred Esdaile).

Birmingham waits with interest to see what Mr Esdaile's operating company (not so far named) will offer it. With the loss of the old Royal and the closing a year or two ago of the Aston Hippodrome after a decline prolonged by an unvarying diet of striptease, the city now has three theatres.

By far the most famous is the smallest, the Repertory Theatre, founded in 1913 by the late Sir Barry Jackson "to serve an art instead of making that art serve a commercial purpose." Its tiny building, seating 464, will vanish under redevelopment; the new "Rep." will stand in the new civic centre area half a mile away despite the pleas of the public works committee who wanted to create a "theatreland" around the new Royal.

Both the other theatres stand within a long stone's throw of the site. The Alexandra, basically a repertory and pantomime theatre of high professional repute, but which has two touring seasons a year, is the creation of a distinguished father-and-son management; its enlightened chief, Mr Derek Salberg, deserves wider fame for the standards he sets and maintains in his 1,500-seat theatre.

Birmingham Hippodrome, built last century as an unashamed music hall, is Moss's remaining Birmingham theatre, seats more than the other two put together (2,070), and has had an uneasy time putting up pretensions recently as a general purpose theatre (Sadler's Wells "Orpheus," for example, played to 37 per cent capacity). Moss Empires now seems satisfied to offer its Birmingham friends an unbroken diet of pantomime, musicals (including "Student Prince" and "Desert Song") and packaged variety shows between December and the middle of June.

Whether Mr Esdaile, in the present state of touring shows, will be able to offer much more without descending to the antics of the latter days of the old Royal (three weeks of top-price ballet followed by a mediocre bedroom farce at bottom prices) is an alarming question. If he succeeds, will the Alexandra lose some of its touring shows? And even more pertinently, what will happen to the Hippodrome, which Mr Leslie A. Macdonnell, Moss's managing director, has said he will refurbish extensively?

NATIONAL OPINION POLLS
RIGHT AGAIN

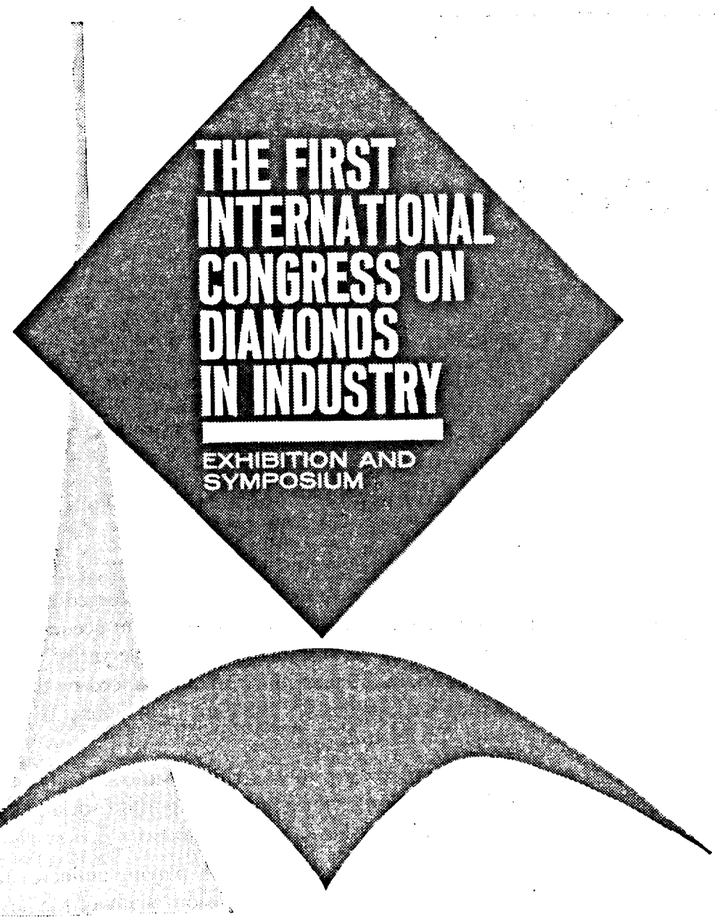
By-election results justify

FANTASTIC FORECAST

Right again and again, National Opinion Polls followed up Lincoln and Blackpool by forecasting the sweeping Liberal victory in the Orpington By-election.

On results, National Opinion Polls have forged ahead of any other similar organisation. Consistent accuracy clearly establishes NOP as Britain's most reliable yardstick of public opinion. Their reputation is enhanced by the fact that they fearlessly attack the difficult assignments most pollsters prefer to avoid.

Pursuing a wide range of activities, National Opinion Polls obtain the nation's viewpoint on important social, as well as political issues.



At a time when market research is playing an increasingly important role in business expansion, many of the largest companies in Britain are relying on National Opinion Polls for accurate analysis of markets here and overseas.

PARIS MAY 25th - JUNE 3rd

The first International Congress, Exhibition and Symposium on *Diamonds in Industry* is to be held in Paris at the Centre National des Industries et des Techniques (Palais du C.N.I.T.).

PURPOSE: To demonstrate today the production techniques of tomorrow, in relation to the ever-increasing use of industrial diamonds and the contributions they make to economy and efficiency in production.

FEATURING: **Papers, Discussion Groups and Films**

Practical demonstrations of:

- Metal Machining—grinding, turning, honing, lapping.
- Concrete, Stone and Tile Working.
- Diamond Drilling for mining and civil engineering.
- Glass Grinding.
- Diamond Powders—die polishing, watch stone manufacture, etc.

ORGANISED BY
De Beers Consolidated Mines Ltd,
Industrial Distributors Ltd,
The Diamond Research Laboratory,
The Industrial Diamond Information Bureau.

In association with
Biennale Internationale des Industries Mécaniques et Electriques

CENTRE NATIONAL DES INDUSTRIES ET DES TECHNIQUES · PARIS

The Nore Pirates

FROM OUR SPECIAL CORRESPONDENT

OFFICIALLY, British territory ends three miles to seaward of any British beach and, theoretically, one may do pretty well as one pleases beyond that limit: there is no law to prevent one exploding a do-it-yourself A-bomb, or starting a nudist colony on the retired *Queen Mary*, or drilling for oil, or erecting giant hoardings condemning the desecration of the countryside. At least four people have seen in this surprising freedom from interference the opportunity of starting up commercial broadcasting (whatever the Pilkington Commission may say) and two of them are in that state of preparedness in which daily bulletins are given to the press and sometimes published.

There is hoary precedent for such bureaucrat-baffling enterprises: gambling ships off the American coast, drinking ships off strictly licensed countries, other pirate broadcasting ships off the Low Countries. Ideally, one's cheaply bought but preferably seaworthy hull is packed with low-power diffusion equipment, steamed or towed three miles offshore and anchored ; and if one can find an estuary which thrusts into the heart of a thickly populated area and is at any point wider that six miles, so much the better. It is no wonder that the two pioneers have chosen the Nore which, if things go well, faces the prospect of a fleet of small ships jostling for air-space.

The two prime movers in the present ventures, Mr Arnold Swanson of Thame and Mr John Thompson of Slough, were at one time acting in consort ; somewhere along the tricky line they parted and are now, if not enemies, bitter rivals anxious to deprecate each other's state of readiness and possible achievement. Mr Swanson is the more ambitious of the two: under the callsign *GBOK*, he intends to use his converted lightship to preach the gospel of whiter-than-white and light-up-a-gasper (interspersed with snatches of popular music and hourly news bulletins) 24 hours a day. His equipment, he claims, will give him a transmitting strength of 5 to 8 Kw and a range of 150 miles. He has invested between £80,000 and £100,000 ; but at £35 a minute for a "one-time spot," his advertising income ought comfortably to allay any anxiety he may have felt about wasting his money. He says that he is already turning down £250,000 worth of advertising money.

Mr Thompson's horizons are less uninhibited. In his 70-ton motor fishing vessel he hopes to maintain a 1 Kw transmitter with a range of 50 miles, which will just allow him to use his callsign, *The Voice of Slough*, without actually stretching a point. Nevertheless, he is not despondent: spots in his programme will cost £5 a minute which, broadcasting 12 to 14 hours a day, should bring him in £20,000 a year. Perhaps not surprisingly, both men are Canadians, not conventional Britons.

NATURALLY, all is not done without opposition: the BBC, the Post Office, the Musicians' Union and the Performing Rights Society are in varying degrees enraged by these breaches of the Postmaster General's careful regulations. There is little any of them can do to stop this gap in the solid wall of broadcasting practice: an international wavelength convention exists to obviate interference between stations, but not all countries are signatories to it, and it is with the flag of one of the outsiders that the Nore ships will be graced, if they are registered at all (Mr Swanson will probably be a Monegasque for the occasion ; but Mr Thompson hopes to evade the regulation requiring registration of everything over 15 tons gross). The Post Office has decided to refuse radio-telephone facilities to the "pirates," perhaps in the hope of disturbing their news services ; but at three miles an Aldis lamp will do as well if an undersea cable proves to be too expensive.

Customs regulations are not of much help to the establishment: there is no bar on taking tapes, discs, gramophones or anything like that out of the country ; nor, if they can be proved to be of British origin, is there any hindrance to their coming in again. An attempt by an equipment manufacturer to stop the sale of a transmitter was too late, since one broadcaster already had two. The BBC is baffled, and talks of serious interference with ordinary broadcasting (Mr Swanson on 388 metres and Mr Thompson on 306 both overlap foreign stations) ; but short of setting up a jamming station, there seems nothing it can do to halt this march through its ancestral fields (it harbours the hope, however, that the foreign stations will interfere sufficiently with the pirates' programmes to drive them out).

The Performing Rights Society has given in with as good a grace as it can, and has accepted a voluntary but unenforceable offer from both men to abide by the usual copyright payments for recorded material (of which they will use much more than an ordinary station, limited to a certain "needle time" each week). The Musicians' Union and Phonographic Performances Limited both abet the PRS in its work of protecting artists' interests, but they are powerless to interfere with what they see to be the end of man's ethics.

There is some hope for them. Neither "pirate" has the resources to produce the type of programme which makes Radio Luxembourg so popular ; if the British public does not like the programmes, that in turn would drive the advertisers out. And there are other possibilities: the wireless ships might be designated dangers to navigation ; or they may be seized for purely maritime offences ; or they may sink in one of the storms for which the Nore is notorious. Or they may never even begin: at the moment, Mr Swanson languishes in a mud berth, settling lower and lower as he waits for a great spring tide to float him out of Britain ; and nothing has been heard of Mr Thompson for weeks.

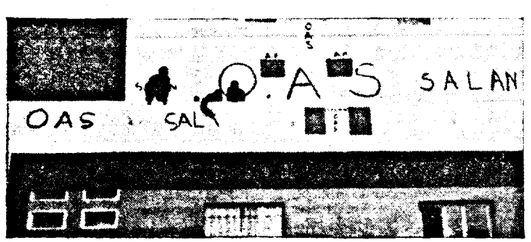
THE WORLD OVERSEAS

Battle for Peace



FROM OUR PARIS CORRESPONDENT

PEACE did not descend on Algeria with the ceasefire on Monday. The illusion was kept up for a day as Paris, half-astonished, rejoiced over the news of quiet from Algeria. Yet even that silence had a double meaning. In the Arab quarters, nationalist (FLN) stewards kept the crowds quiet and prevented mass demonstrations of joy. In the European districts, it was the silence of a deserted city, paralysed by strikes. By Tuesday afternoon, the OAS (Secret Army Organisation) had broken the silence and the illusions. Mortar shells fell on a crowded square at the entrance to the Casbah in Algiers, killing and wounding dozens of Moslems. All reports agree that, but for the discipline and authority of the nationalist cadres, this horrible provocation could have precipitated a race riot.

The dangers threatening the precarious peace were thus immediately demonstrated by this and similar, if less spectacular, provocations. It was obvious from the start that General Salan's Secret Army would use methods such as these to sabotage the agreements. What is not certain is whether the nationalist cadres will always be able to keep their people in check. Nor is it certain that the Algerian government-in-exile, now reinforced by Mr ben Bella and his companions, will be willing to accept responsibility for this state of things for long. Although its own guerrillas have not surrendered their arms, they are not at present using them. Its terrorists have stopped their activities in the towns. The French can no longer justify their weakness by the difficulties of a struggle "on two fronts." The battle for peace is now plainly the battle against the Secret Army.

Who is to carry on this struggle and how was not clearly defined in the Evian agreements (see the next article). It is hoped in Paris that Algeria's provisional institutions will be set up next week. The provisional government should have at its disposal an Algerian police force of 40,000 men. Their recruiting is not a major problem. There are many more Algerians who can be transferred from the French army and police forces, though there will certainly be a shortage of officers. But, although this is not specified in the agreements, French sources suggest that the new Algerian police force will be used only in the countryside and kept out of the towns. Yet it is in Algiers and Oran, where he has the backing of the European population, that General Salan can operate most effectively. Paris may be reluctant to use Moslem troops against the European population, but does this mean that French forces will now seriously tackle the task for which, in the past, they have shown so little enthusiasm?

There are many possibilities in this ambiguous situation. The Secret Army may not prove capable of provoking a major upheaval. The Algerian nationalists may urge their troops to be patient for a few more months, promising that they themselves will crush the Secret Army after independence. Alternatively, the Evian agreements may be drowned in blood. The unknown in all these equations is the French army. For nearly four years now General de Gaulle has been striving towards a solution in Algeria acceptable to the bulk of his officers. He is now convinced of his officers' loyalty and obedience. The test has come, and on its outcome much will depend, not only in Algeria.

In the meantime, Paris is scanning anxiously the reports from Algeria and wondering about the future. This week the National Assembly held a special session, probably the last of the present parliament, to discuss the Evian agreements. It was a poor debate and understandably so. The opponents of the agreements spoke with passion of dictatorship and treason but did not press for a vote because they did not wish to reveal how few are General Salan's open sympathisers in the chamber. The advocates of the agreement, particularly the neo-gaullist deputies, were half-hearted. They were not allowed to forget that they, too, had been elected on the platform of *Algérie Française*. And the prospect of dissolution added to the general sadness. Few people outside the Palais Bourbon will shed tears over this impotent and mediocre assembly.

The expectations of a general election spring from General de Gaulle's message to parliament on Tuesday. On April 8th Frenchmen will, once again, go to the polls to approve the Evian agreements and grant him full powers to carry them out. The general does not need this approval, and if he required exceptional powers he could assume them under Article 16 of the constitution. Article 16, however, does not allow the dissolution of parliament and the general's choice suggests that he wants to keep that possibility open. Some gaullist strategists are against an early election, arguing that no miracle will give them a chamber more obedient than the present one. Most of the general's advisers, however, consider that the undoubted triumph in the peace referendum must be used rapidly as political capital to give a new lease to the gaullist regime. The choice will, naturally, be affected by events in Algeria. The battle for peace will also determine the next chapter in the gaullist history.

Consequences of the Peace

FROM OUR PARIS CORRESPONDENT

THE Algerian war, which started on November 1, 1954, officially came to an end at noon on March 19th. The negotiators at Evian, who at last agreed on the terms of a compromise which would make possible a ceasefire, also agreed that between June and September of this year the Algerians should go to the polls to decide the future status of their country. The referendum, however, will be only a formality designed to conceal the fact that the French government is transferring power to the nationalist government returning from exile. In practice, it is with the Algerian nationalists that the French have agreed on the future relations between the two countries and on the guarantees for Algeria's European population. The Algerian electorate will be asked simply to endorse the formula of "independence with co-operation," advocated by the two contestants turned partners. The main points of the contract reached at Evian are analysed below.

Economic

Independent Algeria will have its own currency and other attributes of economic sovereignty. But it accepts, in advance, certain limitations. Algeria will remain within the franc area. It will allow free entry, or preferential treatment, for French goods and, subject to limitations, the free transfer of funds. The Algerian government binds itself not to discriminate against Frenchmen (whether they get naturalised or not) and to respect existing property rights. "A just and previously agreed compensation" will have to be paid in cases of expropriation. France, in turn, will allow Algerian workers to send money home and will maintain a privileged position for Algerian food exports. Above all, the French government promises to maintain its economic and technical aid at its present level for at least three years. It will be extended if all goes well.

> From the French viewpoint, this is the basis of the whole edifice. In its present structure, Algeria is dependent on foreign investment for its development. Its exports do not pay for its imports and they are tied to the French market. (Until 1960, when oil made its appearance, wine, fruit and vegetables accounted for over 80 per cent of Algeria's exports.) It is in this dependence that the French see "the guarantee of guarantees." The principle of non-discrimination would not be enough to protect the privileged European minority. What the French hope is that they will be able to slow down the process of transition in return for financial aid. Thus, for instance, the French will pay compensation to Europeans affected by land reform; they will also have a say in the terms and pace of that reform.

The problem of the Sahara did not block the second Evian conference as it had blocked the first. The French have admitted that the Sahara is a part of Algeria. In exchange they have obtained quite favourable conditions. All concessions and permits granted up to now remain valid. The French oil law (the *code pétrolier saharien*) remains operative. A mixed Franco-Algerian body (with both partners equally represented) will supervise the management of the Sahara's mineral wealth. For the next six years French companies will have priority over others when applying for exploration permits and other concessions. Finally, shipments of oil into France and the franc area will be paid for in French francs.

> Saharan oil production reached nearly 19 million tons last year. It is expected to top 24 million tons this year and to reach between 35 million and 50 million tons by 1965. It is hoped in Paris that oil links will strengthen still further the economic integration on which all the other guarantees depend.

Military

Within twelve months of the referendum (that is, of Algerian independence) French troops must be reduced to 80,000 men. These, in turn, must be evacuated within the next two years. The only French soldiers then remaining on Algerian soil will be confined to military bases. It is confirmed that France will be granted a 15-year lease for the naval base of Mers-el-Kébir and the use, for five years, of bases at In Ekker, Reggane and Colomb-Bechar.

> M. ben Khedda, the Algerian leader, claims that the lease of bases does not affect his government's neutralist position. A clause stipulates that the bases cannot be used "for offensive purposes." This could lead to differences in interpretation. Difficulties are even more likely to arise over nuclear tests. There is no specific provision authorising France to carry them out in the Sahara, and the words of the Algerian spokesman at Evian suggested that it might not be allowed to.

Political

After the referendum, sovereignty will be transferred to Algeria (a constituent assembly is to be elected within three weeks). One of the main tasks of the French negotiators was to obtain guarantees for Frenchmen in the Algeria of tomorrow, and the agreement is full of safeguards. Europeans (including Jews) will have three years to decide whether to opt for Algerian nationality. In the meantime they will enjoy the rights of full citizens. Precautions have been taken to protect the European minority both during that period and after. There are provisions for linguistic, cultural and religious freedoms, for property and other legal rights. The minority must also be assured of proportional representation in all the political institutions (the towns of Algiers and Oran will have a special statute for four years). Finally, those Europeans who choose to keep their French nationality will also be protected against discrimination by a special convention.

> All these safeguards are impressive on paper. How will they be applied in practice? The French insist that the agreement must be viewed as a whole and that the political guarantees rest on the economic foundations. Indeed, the question really is whether the attraction of French financial aid will induce the future government of Algeria to resist the pressure of Moslems thirsting, if not for revenge, at least for rapid change.

Dangerous Interlude

But the immediate concern is over the crucial period of three to six months preceding the referendum. The agreement has created a certain duality of power during this interim period. In principle, France still keeps full sovereignty; its high commissioner —M. Christian Fouchet—has control over the French forces and is responsible for defence, foreign affairs and, "in the last resort," law and order. At the same time, the predominantly Moslem provisional executive of twelve delegates has been given prerogatives over home rule. The two authorities coincide—or clash—in matters concerning the maintenance of order. The executive has been given the command of a *force de l'ordre* of 40,000 men, later to be increased to 60,000. Only if it cannot cope with the situation, and if it agrees, can the high commissioner bring French forces into play.

> The *force de l'ordre* was not ready at the time of the cease-fire. When will it come into being? What will be the relationship between this Algerian police force and the French army or between the Algerian executive and the French high commissioner? Time is important in this battle for peace. Some of the difficulties are reviewed in the previous article, but the answer to most of the awkward questions depends on one's estimate of how a seven years war ends: with the whimper of reluctant officers or with the bang of the Secret Army.

M. Louis Joxe

Bel Kacem Krim

Roget on the Lower Slopes

FROM OUR SPECIAL CORRESPONDENT IN GENEVA

BY April 1st the decision will have been taken. All the signs noted in the *Journal de Genève* point to a crushing defeat of the "anti-atomic initiative." Of course this refers to the impending national referendum on a proposal that Switzerland should irrevocably renounce nuclear arms. A less clear-cut prospect lies before the Geneva disarmament conference.

Geneva's most obscure field of activity lies outside the edge of the conference proper. It is the continuing series of informal talks on Berlin, mainly between Mr Gromyko and Mr Rusk (who has kept his Berlin advisers here with him after the departure of their British counterparts); and Lord Home has now arranged to come back here next week after another brief absence in London. No sign of "give" has been observed in the conversations on Berlin, and the famous piece of paper that the Soviet minister passed over to the Secretary of State on Monday is now understood to have been of no particular significance. But while the Americans appear resigned to the probability that no change will have been registered on Berlin when Mr Rusk and Mr Gromyko part company here, their ears remain cocked for any hint of a change in Soviet foreign policy that might emerge after the communist leadership's recent conclaves. So far they seem to have picked up no faintest echo. Probing, however, is not yet altogether at an end.

America, Russia and Britain are also back in business again as a threesome for discussion of the banning of nuclear tests. Wednesday saw the first meeting of the three as a subcommittee of the 17-nation conference—with a spare seat ready for France, as in the full conference itself. Before getting too heartened by Russia's acceptance at last of the Anglo-American proposal for three-power talks on this question within the conference framework, one must however note that when Mr Gromyko accepted, he already had plentiful evidence of promisingly exploitable divergences between the two western allies.

In context, these divergences may seem a bit academic. Mr Zorin spelt out on Monday Russia's refusal to put any test ban treaty into effect until France had signed it. The French government has made it equally clear that it will accept no test ban that is not accompanied by an agreement to halt production of nuclear weapons and to make a start on cutting down stocks of these weapons. Unless one of these two complementary obstacles is cleared away, there thus seems no present prospect that a test ban unaccompanied by substantial measures of disarmament could be achieved, even if the new subcommittee could solve the riddle now known as clarification of verification.

In a Lenten week, however, the meatiest dish for both press and delegates here has undoubtedly been the steadily denied but still presumptive, if not apparent, air of disunity between the Americans and the British—not to mention the penumbral spread among the eight non-aligned nations in the conference—in regard to the watch on the ban. Roget of the Thesaurus should be living in Geneva at this hour, as semantic disputation whirls round the nice nuances of such words as safeguards, controls, inspection, detection, verification, identification and information. Each delegation's choice of terms is being scanned through powerful lenses. Those who have chosen to say nothing on the subject are scrutinised most closely of all. The 700 pressmen congregated here are in themselves a sizeable international inspectorate; but of course all they can see here is verbiage.

Soviet spokesmen have repeated almost daily their unchanging and total rejection of the Anglo-American proposals for verification of a test ban treaty's fulfilment. These proposals, in their latest modified form, were formally presented to Mr Tsarapkin last Friday and were at once rejected. The Russians have stuck to their firm opposition to any kind of internationalised system of surveillance, arguing that they and the Americans are now well equipped to detect each other's nuclear bangs and for that matter anybody else's. While the Americans are thus partly victims of their own detective efficiency, the Russians rather oddly deny it the final accolade; Mr Zorin on Monday rather clumsily dodged a correspondent's inquiry whether he would give a precise total figure of Soviet tests to confirm whether the American monitors had got it right.

The non-aligned delegations' pressure for the scaling down of the western terms for verification emerged first when Brazil's foreign minister suggested that all except underground explosions could be adequately identified from outside the country concerned. On Tuesday Mr Krishna Menon proposed that the nuclear powers' own monitoring systems should be supplemented by additional stations in non-aligned and other non-nuclear countries, operated on either a national or an international basis, and serving to provide an objective and presumably trustworthy body of scientific evidence. He saw no need for stations on American or Russian soil under foreign control. After the flutter this caused, the silence on the same theme of Dr Fawzi, who spoke on Wednesday, seemed deafening.

Although Lord Home had spoken before Mr Menon, the foreign secretary's challenge to Mr Gromyko to say whether nationals of non-aligned countries were unacceptable as members of inspection teams was at once linked with the Indian thesis. Lord Home's omission to mention that Britain shared the American view that international posts on Soviet and American soil were essential caused lively comment, but a British spokesman filled the gap before Tuesday was out. Lord Home's insistence on inspection teams, however, caught fewer American eyes than his stress on British readiness to help work out the "absolute minimum" of essential verification. The United States delegation, caught in crossfire between a home public opinion and Congress that are wary of any new commitment that might help Russia to steal another lead like last September's, and obvious British and neutral anxiety for an early test ban, has been sticking to its position but developing a more persuasive kind of language. The Americans may be somewhat fortified in their apparent resolve to hold tests next month if no substantial Soviet concessions on verification come through—despite new appeals from Mr Nehru and others for no testing during the Geneva conference—by Mr Zorin's refusal to be drawn into any hint that Russia would walk out if American tests began. They also seem pretty sure that the Russians want to hold a further series of tests soon and are likely to do so whichever way things go.

PROJECT 304

The story of the great
Shell Chemicals
Sculpture Competition
by A. N. Other – Carter

Chapter Four:
Mr. Carter's Invitation

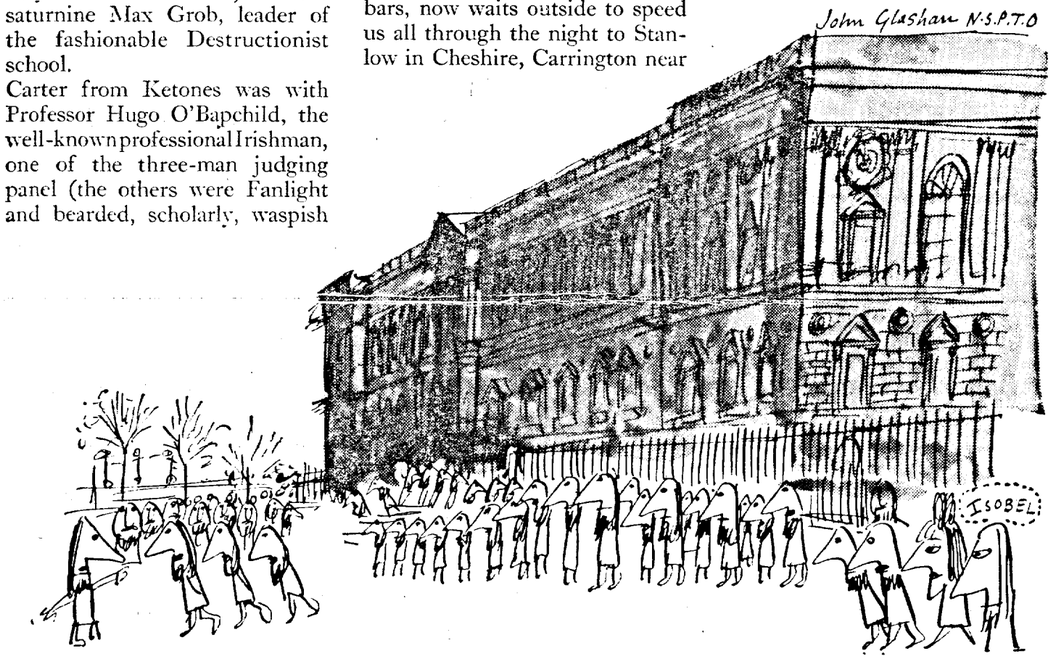
The press party given by Cosmo Fanlight, TV panelist, publicist, articist ('I'm not a dilettante, boy, I'm a dilettoncle') to launch the competition for a sculpture *The Spirit of Shell Chemicals* was the biggest attempt since the opening of Keele College to bridge the gap between C. P. Snow's 'two cultures'. I saw men like Carter from Ketones, Carter from Xylenes, Carter from Low Pressure Waxes and Greases (an absolutely top chap on Vapour Phase Chromatography) chatting animatedly with sculptors ranging from dear old Henry Jollifant (famous Bohemian, one of the oldest Savage Club members, scores of Boer War memorials and provincial mayors to his credit) to the saturnine Max Grob, leader of the fashionable Destructionist school.

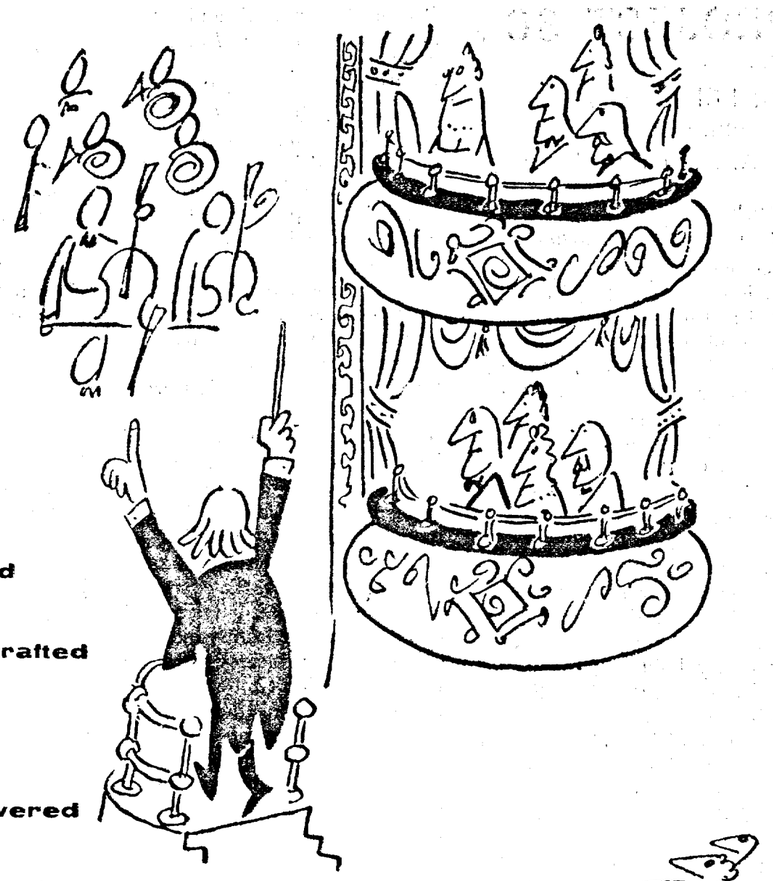
Carter from Ketones was with Professor Hugo O'Bapchild, the well-known professional Irishman, one of the three-man judging panel (the others were Fanlight and bearded, scholarly, waspish Benson Benson, critic and author of *Negative Form; Towards a Non-Sculpture*).

'The divil you say!' roared O'Bapchild. 'Twas a Cork man was telling me only yesterday how he used dieldrin against cabbage root fly, leatherjackets, cutworm, weevils' (he pronounced them *wivils*) 'and all the other little divils——'

'Yes, Professor, but to return to your point about Rodin's *Enfer* sequence' Carter from Ketones was saying, when there was a call for silence again for Mr. Carter, one of our directors.

'Dear sculptors and sculptresses' he said, 'as I moved around among you tonight, many of you seemed so interested in the way modern refinery processes of 'cracking' oil, producing large quantities of gases, the source of ethylene, propylene, butylene and other substances from which we get plastics, insecticides, synthetic rubber and I don't know what-all, that I have telephoned Transport, and a large fleet of luxurious limousines, many equipped with bars, now waits outside to speed us all through the night to Stanlow in Cheshire, Carrington near





Manchester, or Shell Haven in Essex, where many marvels are accomplished on behalf of farmers, paintmakers, papermakers, bridge-builders, garage men, packaging men, in fact I might say the entire human race, as represented in these industrialised islands. Kindly arrange yourselves in parties of from four to six.'

From the corner of my eye I saw Isobel (ah, Paris! Those mad student days!) join the party led by Carter of Ketones . . .

The Americans have had a rather better first week on the general disarmament front. Soviet spokesmen have kept up a daily bombardment of thumping declarations that this conference ought to concentrate on their programme since it is the only plan yet tabled with full ceremony and elaborate detail. Mr Menon, Dr Fawzi and other non-aligned delegates have, however, consistently argued that the American programme of last September, as newly elaborated by Mr Rusk here, should also be taken as a main starting point for discussion. Non-aligned countries may have been more attracted by the American approach—inviting them to help reconcile the rival plans—than by Russia's way of brushing alternatives aside without real examination and of offering the conference something suggestive of a *fait accompli*.

Nuclear-free zones, although mentioned by most speechmakers, have been less prominent in the scheme of things than a week ago, for all Mr Rapacki's efforts on Wednesday. Dr Fawzi and Mr Menon both struck notes of caution on this subject, while Mr Unden's position was complicated by the rather unexpectedly restrictive conditions that his own government had just formulated in reporting to the United Nations on its attitude to the non-nuclear club idea sponsored by Sweden itself. However, the need to translate into practice the principle unanimously agreed on at the UN Assembly, on Irish initiative, that the spread of nuclear arms to further countries should be checked, was stressed by Mr Rusk, Lord Home and others, notably Mr Green, Canada's foreign minister, whose speech on Monday was a notably crisp analysis of the conference's task.

By Monday afternoon Mr Menon and Mr Green had got the conference launched on a series of informal meetings of all seventeen members in which a real dialogue, including—to Mr Gromyko's evident distress—direct questions and sometimes even answers, began to emerge. This withdrawal into down to earth privacy did not of course mean an end of all access to a public platform ; the Russians in particular merely multiplied their press conferences. But this early plunge into daily confrontations, in which many evasive slogans and hazy concepts may be at last either properly defined or exploded, was a heartening move.

Unfortunately, as soon as Mr Menon was safely on his way to India on Wednesday evening, the Russians declared their opposition to informal procedures more forcefully and brought into doubt the whole future of these promising free for alls. With the foreign ministers, their formal opening speeches completed, now withdrawing one by one, the conference seems headed for one of those familiar and discouraging procedural scuffles. No clear vision of a summit is visible from the shores of the Lake of Geneva ; although the visitor's eye is caught by several likely looking peaks, Mont Blanc itself has remained veiled this week. Even so, here on what Lord Home might call the lower slopes there is visibly a lot of enlightening instruction to be acquired by all concerned.

Zanzibargaining

FROM OUR CORRESPONDENT IN NAIROBI

It now seems clear that the Kenya lion, shackled with tribalism, will be the last across the line in East Africa's race for independence. Even Zanzibar, which came out of its clove-scented torpor only five years ago, has slipped past Kenya ; the constitutional conference that began in London this week could bring it independence in October, at the same time as Uganda, or at any rate soon afterwards.

Unlike the Kenya African parties, the rival leaders in Zanzibar have eased Mr Maudling's lot greatly by reaching wide agreement before flying to London. This is a considerable achievement since the parties are divided racially rather than tribally. The governing Zanzibar Nationalist party has the support of the island's 40,000 Arabs as well as of Africans attracted by the liveliness of its organisation in the early days of party building. The Afro-Shirazi party has aimed its appeal at the poorest of the 250,000 Africans, attacking the Arab plantation owners and reminding its supporters that two generations ago these families were mostly slave owners as well. The small Zanzibar and Pemba People's party, remembering the parts of its ancestry which were either Persian or African freemen, has been less anti-Arab and has held the balance precariously. Separate trade union organisations loyal to the Nationalists and the Afro-Shirazis are staging a battle at workers' level. And although the Foster-Sutton commission, which inquired into the election riots last June when 68 people were killed, declared the causes were not " overwhelmingly racial," most islanders suggest that this was the phrase of a peacemaker.

Nevertheless in talks under Sir George Mooring, the British resident, the three parties have agreed on several broad points. The sultanate is to be retained as a constitutional monarchy, a

Afro-Shirazi, Maudling, ZNP : before Kenya?

matter on which the ZNP is more enthusiastic than the rest. All moves towards an east African federation are supported and in this the Afro-Shirazis are the most eager. They have been loosely allied with the Tanganyika African National Union for some time, while relations between Tanganyika and Zanzibar have worsened since the ZNP formed the government last June ; the immigration of mainlanders has been more strictly controlled and in reprisal Arabs are required to carry passports and post a £50 bond before entering Tanganyika. Thirdly, the parties have agreed to remain in the Commonwealth.

The main point of difference is whether there should be another general election before independence, the third in two years. The ZNP leaders, with more suavity than democracy, say it would only harm race relations. They claim that the tension which was created by a hairsbreadth election in January, 1961, when the result turned on a single disputed vote, and which was increased by the June riots, is still strong. They point for proof to the continued state of emergency and the presence of a detachment of Gordon Highlanders. Their solution is to form a national government of all three parties and hold elections (if necessary) later.

The Afro-Shirazis see this as a trick. For months they have brooded over the election figures and are convinced that Britain has been in league to deceive them. Why, for instance, did the resident add another seat to the 21 proposed by the commissioner, Sir Hilary Blood, and one which was a gift to the Arabs? Why, after the January deadlock, was yet another added which swung the victory to a coalition of the other parties although the Afro-Shirazis had a majority over the others of 1,082 out of 90,000 voters ? The Afro-Shirazi leader, Sheikh Othman Sharif,

strengthens the argument for another election by saying it should be held on the basis of adult suffrage. The ZNP suggests this would only add another 5,000 voters to the rolls, but these enrolments, together with a delimitation strictly by population, would probably be enough to put the Afro-Shirazis firmly in power without the need of any coalition.

The present government has done little either to aggravate or alleviate racialism, and thereby alter the long chances of achieving a coalition which must now be the island's best hope. Another budget deficit has stopped any big plans for new secondary schools which the Nationalists promised at the hustings. But they have made school opportunities more equal, acting in favour of African children. They explain that continued Arab dominance in the administration is not their design but is due to the lack of qualified Africans. In any reform that might dissipate racial feeling the government is hampered by poverty. With a budget of less than £4 million, and an economy so dependent on cloves, the margin of expenditure is tiny. Holding a conference and possibly an election in one year, let alone the necessary raising of a mobile police unit, becomes a large consideration.

But the clouds may roll away. Oil is the magic word at present. BP Shell, having dug three miles deep without reward on Zanzibar Island, has returned after five years to drill on Pemba Island to the north. Hopes remain too that lengthy experiments with a new cocoa crop will bear rich fruit. If Britain accepts the Robertson report, Zanzibar will immediately have a windfall of nearly £1 million as the price of liquidating its claims to Kenya's coastal strip. The political parties and the Sultan have agreed in principle, although they hope to make an even better bargain.

Zanzibar has sometimes been described as "the Cuba of the Indian Ocean," on the strength of some students taking up Chinese bursaries and an official of each main party journeying eastwards. But the communist bogey will probably fade as Zanzibar becomes more closely linked with the mainland of east Africa (it is at present outside the customs union and takes part in the common services organisation only on an agency basis). The Americans, with a consulate and a tracking station, which checked Colonel Glenn overhead, are more in evidence. And the rivals for the title of first premier—the Nationalists' Sheikh Ali Muhsin, and the Afro-Shirazis' Othman Sharif—are graduates in agriculture and veterinary science. Mr Maudling can more reasonably hope that their approach to the many problems of independence will be earthy and sensible.

Focus on Southern Rhodesia

FROM A CORRESPONDENT AT THE UNITED NATIONS

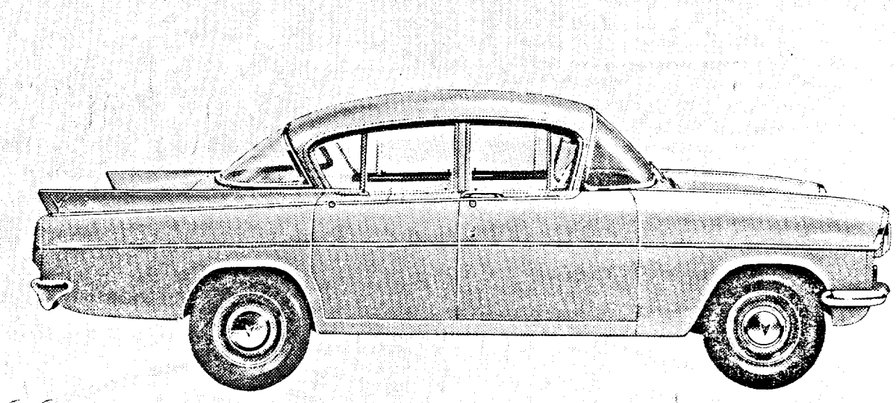
WHATEVER the merits of the case, Britain may expect to find Southern Rhodesia in the United Nations limelight in the weeks ahead. During its post-Christmas session, the sixteenth General Assembly decided to inquire into the degree of self-government in Southern Rhodesia; it referred the matter to the Special Committee of Seventeen. This committee, whose members include Britain, the United States and the Soviet Union, was set up by the sixteenth Assembly to implement the resolution, adopted a year earlier, on the granting of independence to all non-self-governing territories and peoples. This resolution is regarded by many new nations as the greatest international action taken since the drafting of the UN Charter. Indeed, by most Asians and Africans it is felt to be an addition to the Charter itself.

When early this month the committee of seventeen met to organise its work, it found itself in a rather ironical position. Although charged with the task of promoting rapid independence, it was in fact a "Johnny-come-lately" among several other committees which were already working away at different parts of the same job. In addition to the Trusteeship Council and the Committee on Information from Non-Self-Governing Territories, there are the special committees on South-West Africa and Ruanda-Urundi; there is also one special committee on Angola and yet another charged with investigating all Portuguese overseas territories. In the circumstances it is hardly surprising that the committee of seventeen should have decided to begin work by taking up the one problem that had been specifically referred to it and not to anyone else—Southern Rhodesia.

The first round of the committee's discussion on Southern Rhodesia was pretty much a repetition of the earlier debate in the Assembly itself. The British delegate again stressed his country's inability to intervene in the domestic affairs of this autonomous state, and its consequent inability to report on the economic and educational progress towards full self-government there. The Indian delegate, on the other hand, again protested that Southern Rhodesia cannot be considered self-governing since the indigenous population has not really participated in the process of self-determination. Behind these two points of view is the question whether a United Nations investigation will strengthen the hand of the liberal forces in Southern Rhodesia or drive the matter further towards a South African situation. The United States, which believes that British influence counterbalances that of South Africa, fears that UN intervention may weaken British influence. But local nationalist leaders from Southern Rhodesia, who were present at the Assembly debates, discount this on the grounds that South Africa would not want to add to its present difficulties.

A number of petitioners from Southern Rhodesia have asked to testify before the committee, and the first of them, Mr Joshua Nkomo, president of the Zimbabwe People's African Union, was heard on March 16th. The chairman of the committee, Mr Jha of India, has been trying to set up a sub-committee to deal with the petitioners; but the Soviet member apparently fears that this would minimise the importance of direct testimony by local leaders. Sir Hugh Foot has made clear the British view that before petitioners can be properly heard, the committee should present proof that Southern Rhodesia is not self-governing.

All this skirmishing has slowed down the work of the committee. But whatever delays and manœuvres there may be, the committee of seventeen will be pressed to demonstrate its worth by energetically tackling the Southern Rhodesian problem; it will not lack controversial material.



Syrian Patchwork

FROM OUR MIDDLE EAST CORRESPONDENT

THE Syrian government has high hopes for the country's economy in the coming year. These are based not so much on recent legislation designed to reverse trends started in the days of union with Egypt, but on the more elementary fact of good rainfall. The important mixed farming region of Jezira, which produces cotton and grain, has been well favoured, while in the Hama area, a stronghold of the land reform movement, rains have been three times as heavy as last year. Officials of the Syrian ministry of agriculture estimate that even if no more rain falls, the country will be self-sufficient in both wheat and barley. This is not quite so good as it may sound, since the deficit last year was covered by American surpluses, either given outright or sold on terms very favourable to the Syrians.

But, in their present optimistic mood, the Syrians are talking on the assumption that rain will persist on a comparable scale for several weeks more, which should make available a handsome export surplus of both wheat and barley. There is talk in Damascus of exporting these two commodities to a value of, perhaps, £25 million. This compares with a figure of about £20 million in the last good year, 1957. The chief difficulty may be to regain a footing in traditional markets after a three years' lapse. But

VERY
DISTINGUISHED
MOTORING

"The Vauxhall Velox seemed to us to be a car of considerable all-round merit and very good value for money. The overdrive and disc brakes, with which we tested it, raise the total cost to approximately £1,044 and one can think of few cars, if any, which offer a better combination of accommodation, performance, good handling and refinement at this price."

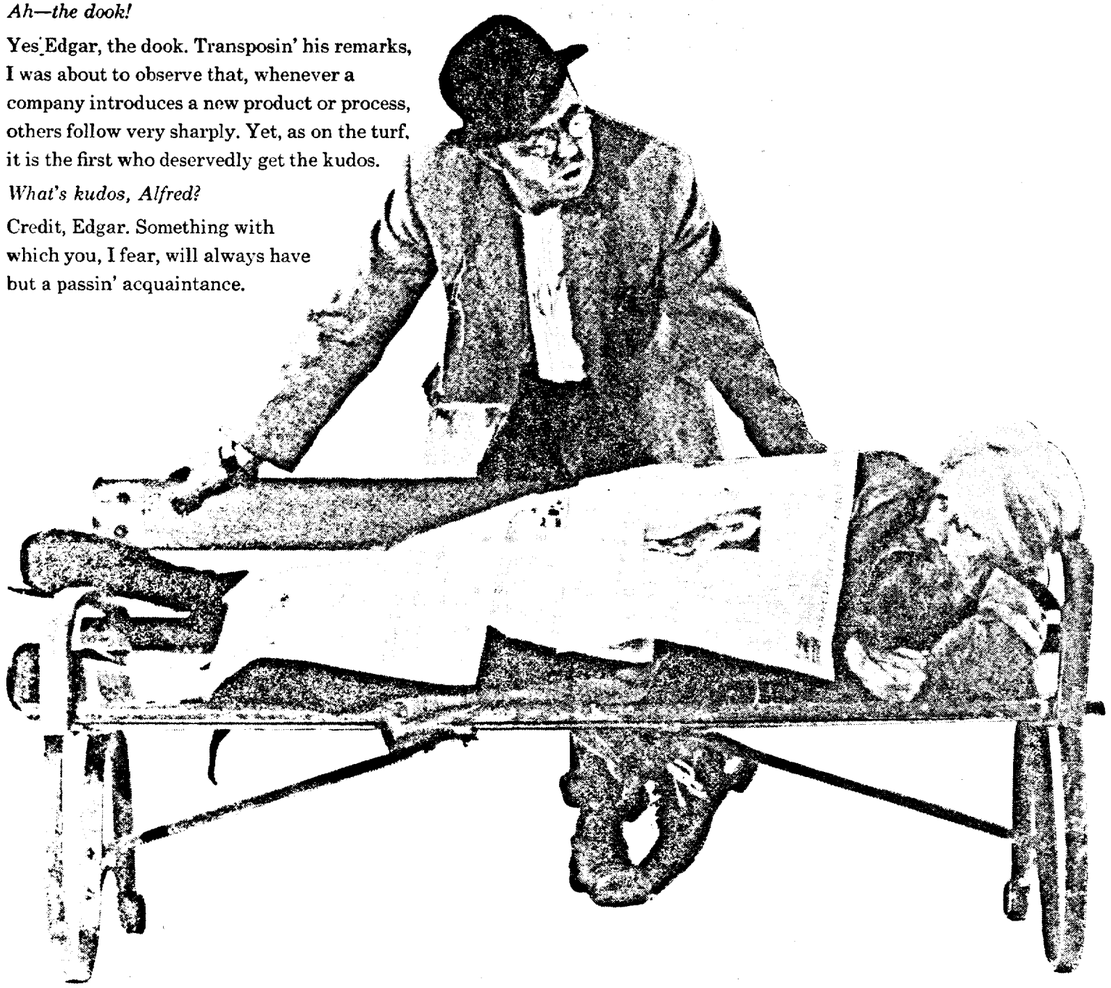
"THE MOTOR" FEBRUARY 14TH, 1962

Vauxhall Velox

Ask your Vauxhall dealer for a copy of The Motor's full road test report on the very distinguished 6-cylinder Velox—and ask for a trial run. 2·6 litre Velox £956.8.11 and the more luxurious Cresta £1,043.18.11. Extras: overdrive £65.12.6; Hydra-matic transmission £175; power-assisted front disc brakes £21.17.6. (Prices include purchase tax.) Hydra-matic is a registered trade mark.

A demn'd close-run thing, Edgar!

What race, Alfred?



I was quotin', Edgar, the Duke of Wellington and was referring to the industrial race rather than to the sport of kings.

Ah—the dook!

Yes Edgar, the dook. Transposin' his remarks, I was about to observe that, whenever a company introduces a new product or process, others follow very sharply. Yet, as on the turf, it is the first who deservedly get the kudos.

What's kudos, Alfred?

Credit, Edgar. Something with which you, I fear, will always have but a passin' acquaintance.

John Summers were the first in this country:—
(i) To roll cold reduced wide steel strip. (ii) To galvanize wide steel strip.
(iii) To coat steel electrolytically with zinc. (iv) To laminate plastic to steel sheet.

JOHN SUMMERS & SONS LTD STEELMAKERS

Hawarden Bridge Steelworks, Shotton, Chester.

inquiries are reported to have come in, notably from Italy, already. Better relations with Iraq suggest that there may also be an improvement in the export of Syrian textiles, vegetables and fruit. An early result of these great expectations has been a more flexible policy towards the granting of import permits to relieve merchants hard-hit by the austerity programmes of the Cairo government before Syria's secession. These figures should be read against a total of less than £60 million for all Syrian exports last year, when no grain was exported at all. If the wheat and barley harvests come up to the levels hoped for, they alone should increase the value of Syrian exports by more than 40 per cent.

Against these high hopes, it is still much too early to forecast the impact on the economy of the industrial and agrarian legislation passed by the chamber of deputies last month in the face of vigorous opposition from Akram Haurani and his fellow-Socialists. The object of the new laws is to halt the progress of nationalisation decreed by the United Arab government last summer, and to mitigate the effects of land reform on the landowners. Government spokesmen promise a fair deal for capitalists and landowners without prejudice to the interests of the workers and peasants. The opposition argues that the proposed measures will curtail rights acquired by the workers in the past four years and involve the eviction of peasants from lands they have recently acquired. Until it is seen how the laws are applied, it is impossible to say which party is right.

There are, in fact, obscurities in both laws as they stand. In the larger industrial concerns, 25 per cent of the net profits are to be distributed among the employees, who are also to be given first refusal of part of the 60 per cent of the capital which, by the terms of the new law, must be offered for public subscription. Individual shareholdings are now limited to about £15,000, but there is apparently no provision to prevent capitalists maintaining large fortunes by acquiring the maximum permissible shareholding in each of several concerns. The government's effort is a patchwork, designed to please the business and landowning classes whose discontent brought it to power, without causing explosions of discontent among the workers.

The new agrarian law met with the hottest opposition in the chamber. It raises, in almost all cases, the maximum landholding permissible; and the gradations it establishes between the various types of land and irrigation systems, for the purpose of determining the maximum, are more sophisticated than those decreed from Cairo. But the real storm blew up over those landlords who were roughly treated under the old law, and whose cases now require reconsideration to bring them into line with the new system. The government offered them compensation either in the form of expropriated land equal in value to that which they lost (in terms of the new law, unjustly), or in the form of government bonds redeemable in three years from the date of expropriation.

Here, Akram Haurani seems to be on strong ground in arguing that compensation in the form of already expropriated land must entail the eviction of peasants. On the other hand, the government, by suggesting an alternative form of compensation, has left itself with an escape clause. One can only wait and see what actually happens on the ground. After the fiasco of the union with Egypt it looks improbable that any Syrian government will rush into new experiments of federation or union, whatever the social and economic pressures. There is a notable flirtation, political, economic and military, going on with Iraq; its high point being the mysterious frontier meeting last week between General Qasim and Syrian leaders. On the other side of the medal, the Syrian government, with obvious reference to President Nasser's lingering prestige, has introduced severe penalties for those convicted of publicly acclaiming the head of a foreign state. The Syrians are a notoriously volatile people; they are still capable of surprising their neighbours, and themselves.

BOOKS

Party Fare?

Party Politics. *Volume III: The Stuff of Politics*
By Sir Ivor Jennings.
Cambridge University Press. 503 pages. 45s.

The British Parliament
By Roland Young.
Faber. 259 pages. 30s.

Backbench Opinion in the House of Commons 1955-1959
By S. E. Finer, H. B. Berrington, D. J. Bartholomew.
Pergamon Press. 228 pages. 60s.

Parliament at Work
By A. H. Hanson and H. V. Wiseman.
Stevens. 369 pages. 35s.

ONE'S principal reflection after reading these four learned volumes on the British political system is of the greatness of Walter Bagehot's achievement in "The English Constitution." He succeeded in making constitutional law and history interesting and readable, and above all diverting. None of the present writers, worthy though they be, does that. The truth is that British politics do on the whole (the Suez crisis and unilateralist controversy excepted) conform to the dignified dullness which Walter Bagehot so sparklingly recommended. Sir Ivor Jennings, who in the present book brings his monumental survey of the political scene to its conclusion, evidently thinks that this is no bad thing. British politics, he concludes in "The Stuff of Politics"—which he defines as "the ideas and prejudices in the minds of politicians"—owe their stability to the degree of agreement and common ground that exists between the two major parties. He might have put it more astringently and explained that this is why (with the exception of enigmatic Liberal stirrings) they are stagnating. But Sir Ivor is not so censorious. With the experience of Ceylon behind him he sees virtue in quiescence.

In the course of his book he analyses amongst other concepts liberty, nationalism, Ireland, the welfare state and socialism, and his judgments are sound enough. They are not original and they are not stimulating. Perhaps the best chapter in the book is the one on liberty where he shows that the English have generally thought in terms of concrete "liberties" rather than been dominated by abstractions. The Bill of Rights and the very inglorious revolution mark the high point of English pragmatism. Few would be found to disagree with his analysis of British socialism. He shows that the Labour party is essentially a working-class and trade-union epiphenomenon and owes more to Christianity than to Marxism. But this was known before. Some of his historical judgments are a little breath-taking such as his statement that in the Elizabethan period "there was no difficulty about rooting out Roman Catholicism," and on the whole he is more at home and more illuminating in the legal and constitutional sections of his study. Certainly he has established himself in his publisher's words as "the standard twentieth-century authority on British Constitutional History, Law and Practice," and we, and he, must be content with that.

Mr Roland Young does not intend his modest book to vie with Sir Ivor's "Parliament" and indeed seeks to find an excuse for having written it at all. He gives the perfectly adequate reason that he finds parliament of compelling political interest. The

same cannot unfortunately be said of his book. His judgments, though they cannot be faulted, are not illuminating. To say of the political process that "The final prize is command, when a party has achieved the strength and the ability to organise the Government and make the effective decisions concerning public policy" is obviously true, but one hardly needs to be told so. He is sympathetic to the British parliament but errs on the side of partiality. Perhaps as an American he is too diffident to criticise a foreign institution. Reading his emollient encomiums one would never realise that the British parliament is subject to widespread criticism, that the prestige of members has never been so low, and that books with such titles as "The Passing of Parliament," "Can Parliament Survive?," and "Parliament in Danger" have come out with significant frequency.

In his discussion of the activities of individual MPs Mr Young has a brief discussion of private members' motions and their influence on events. These motions, which any backbencher can table, are exhaustively examined by a team of research workers from the University of North Staffordshire in their book "Backbench Opinion in the House of Commons 1955-59." The importance of these motions is undeniable. At a time when party discipline is rigidly enforced the division lists are no guide to the actual state of political opinion within the parties. It is a recurrent complaint that the important decisions are taken at secret party meetings and that voting in the House is purely mechanical. These "secret" meetings, especially if they happen to be on the left, are assiduously leaked to correspondents, but such leaks are not wholly reliable and cannot be subjected to academic research. Private members' motions on the other hand do provide a good guide to fluctuations of feeling within the parties. Backbench motions have played an important role throughout the Conservative crisis over Rhodesia and a motion on Katanga actually led to a reversal of Government policy. Professor Finer and his associates, however, are not so much concerned with the political influence of the motions as establishing whether their content, and particularly any differences of opinion revealed, are related to any recognisable characteristics of members or their constituencies. They reach certain conclusions, but whether these are of very great utility is a moot point.

One characteristic they isolate is a member's university. It appears from their researches that it is Cambridge rather than Oxford that is now the home of lost causes. Apparently Tory members who went to Oxford are more pro-European and more pro-penal reform than those who went to Cambridge. The Cambridge graduates, supported by those from Sandhurst, tend to be pro-Commonwealth and pro-flogging. This is certainly a curiosity but perhaps one may be pardoned if one asks what it proves? For the record, it should be stated, that on social welfare matters Cambridge has the progressive edge on Oxford. The authors "discover" what one has always supposed; that younger members tend to be more liberal than older ones and that the strongholds of imperial feeling in the Tory party are the urban rather than the agricultural constituencies.

Oddly enough the most interesting of the four books under review is "Parliament at Work." This is really a textbook, a successful attempt to apply the American case book method to the working of parliament. Happily it presumes some knowledge of the British parliamentary system and plunges straight into such matters as privilege, points of order, public bills and financial procedure. No attempt is made to systematise and it is a satisfactory magpie collection. It allows parliament to speak for itself. It rivets attention by being embedded in the real and the concrete. It avoids the original sin of so much political writing—an inordinate taste for abstraction.

Fiat Lux

All Those in Favour? *The ETU Trial*

Presented by C. H. Rolph.
Deutsch. 255 pages. 21s. (Paperback 6s.)

THE wearisome *cause célèbre* that this book sets out to describe was an incident in an historical drama extending far beyond the frontiers of Britain. Throughout the trial the judicial fiction was impeccably maintained that the charges of ballot-rigging brought against certain officials of the Electrical Trades Union could be considered apart from those officials' political convictions. But it was for political motives that this group of intelligent, capable, self-educated and wholly devoted men descended to a series of mean tricks. They fumbled their way along the tight-rope of power within the union sustained only by the apathy and ignorance of their fellow-members, and sheltered by a rule-book of such complexity that even the judge failed to understand it.

The story of their downfall began, perhaps, with the rape of Hungary and the departure from the British communist party of many of its less blind members. The gaff was eventually blown on the tricksters by people who had been working on the inside themselves; the non-communists within the union, and the journalists outside, would have had a hard job to make their charges stick without this help. But the trial was merely one incident in a struggle that is still going on. It did not end with the verdict, nor with the crushing indictment of fraud delivered by Mr George Woodcock at last year's Trades Union Congress, nor yet with the quiet readmission of the ETU to the respectable fold of the TUC. Mr Frank Foulkes is still president of the union—and he is still (as many employers will admit) one of the most formidable negotiators in the business. Perhaps the most alarming aspect of the whole sad story is that the communists not only had the convictions, they also had a large share of the talents needed to run the union.

Mr John Freeman—himself, with Mr Woodrow Wyatt, one of the principal architects of the eventual victory of democracy within the union—claims in a preface that the story told by Mr Rolph (himself a socialist) is that of a legal battle fought by socialists against those who had perverted the generous libertarian impulses of left-wing thought. But it is also sadly true that many socialists less brilliant than these three had bumbled along loyally from year to year, refusing to believe that fellow trade unionists could really be so wicked as was alleged. The story of the Electrical Trades Union was a tragedy of self-deception as much as of deception.

Mr Rolph has qualifications for his task other than his left-wing views: he recently told the tale of the trial of Lady Chatterley (this is how he would probably write it, not as "The Trial of *Lady Chatterley*"). But there the villains of the piece were his natural foes—the forces of orthodoxy, of legal tradition and of the Conservative party—and the story was far more thrilling, the conclusion of the trial as much in suspense until the last as that of any of Perry Mason's forensic struggles. This time there were few doubts about the outcome; and the machinations of the communists seem, in defeat, merely pathetic. Two of them, Mr Haxell and Mr Frazer, were described by the judge as "blunt, unsubtle and ruthless": the others, shifting and dodging in the witness-box, seem merely panic-stricken. Their friends now sometimes put up the defence that a plot only came into existence after a series of petty frauds by individuals that nobody dared to expose. Some such story is the only charitable explanation of why these men should have got themselves so irretrievably into a mess: but then charity may be displaced in connection with so sordid a tale.

Nor do the defenders of justice within the union emerge in Mr Rolph's account as a convincing breed of freedom fighters. Mr Byrne, declared by the judge to have been elected general secretary of the union in place of Mr Haxell, was a sick man at the trial. Mr Cannon and Mr Chapple, the two ex-communists whose departure from the party after Hungary really let the cat out of the bag, appeared too involved in personal feuds with their former colleagues to serve convincingly as heroes. Only occasionally, in the mass of evidence, does a branch secretary emerge as a real person.

But there is a hero in this book, in the unlikely and abstract person of Justice astringently disguised under the wig of Sir Rodger Winn. Most of the forty-two-day trial was quite monumentally dull, consisting as it did of hard and contradictory swearing on a mass of points of detail. As Mr Rolph wrestles lucidly with this miasma personalities fade away, truth seems a will-of-the-wisp, and only the judge preserves us from confusion. It is hard at times for the reader to preserve himself from smugness—can there really be much wrong with a society that speaks with such a voice? The equally incomplete answer to this question is another: can there really be much good in a society a quarter of a million of whose members can, by default, allow themselves to be represented by a tiny group of cheats and liars? Those—including the Minister of Labour—who believe that nothing need be done by law to safeguard the public and the members of trade unions against a repetition of this sorry tale should read this book and think again.

Moral Despair

The Decline of the West

By Oswald Spengler. Abridged edition by Helmut Werner. Translation by C. F. Atkinson, edited by Arthur Helps.
Allen & Unwin. 393 pages. 32s.

FEW teachers have been less fortunate than Spengler, who gave up a perfectly good job as a schoolmaster in 1911 in order to write a book of prophecy which, by the time he got it finished, was already written on the wall for all to see. Gentlemen of Hamburg today, who had the privilege (little appreciated at the time) of studying under Spengler at school, recall the uncommon penetration of his mind and the quite exceptional tedium of his lessons. But as for his vision of the future course of history, it is as dust: who wants to know, who cares?

It must be said that in a specific sense the Spengler of 1911 had not got it exactly right; he feared that a victorious Imperial Germany would, after the inevitable successful war, fall victim to the decay of morals and will that overtook Imperial Rome. Things did not work out quite like that, and his second volume, completed in 1922, was darkened by the realisation that they had gone downhill even faster and more brutally than he had supposed. Hitler himself was a disappointment, the Nazis bringing their own synthetic philosophy of history to power with them and refusing to grapple with a system like Spengler's that required actual thought. Spengler found himself in more marked disfavour than ever; he died (in 1936) before the final demonstration of how low the twentieth-century Caesarism could bring his Europe.

To most of us Spengler's interpretations are now far back in history, his ideals irrelevant, his abstractions little better than meaningless: even his method has been used with greater lucidity and balance (by Professor Toynbee) for a more contemporary purpose. His masters, Goethe and Nietzsche, have retained their freshness and their interest: his are lost. If he remains of interest, it is because he was a many-sided man who showed how a wide range of science and culture could be brought to the study of history. This gives him a general interest to students of the history of thought in Europe. To this must be added a particular interest, fairly lively at the present time, in the philosophers of moral despair who were formative in the evolution of Germany and therefore in the decline and (we can now add) the fall of central Europe.

To urge the reading of Spengler on a wider circle would not be sincere: he is hard, and to most of us pointless, to read. The editors have, however, done a resolute and scholarly job to bring his work within a visible, if not exactly a readable, compass, and it is useful that the work should be available in this form.

Spread of Technology

The Industrial Revolution on the Continent: *Germany, France, Russia, 1800-1914.*

By W. O. Henderson.
Cass (1961). 297 pages. 30s.

EVER since Marx continental historians have been fascinated by the English Industrial Revolution; indeed, the best study of the subject is by a Frenchman, Mantoux. But the English have not returned the compliment and our historians have shamefully neglected the industrial development of the continent in the century before 1914. Dr Henderson is one of the very few exceptions. The author of a number of monographs in this field, he has now attempted a more general survey of the course of industrial change in Germany, France and Russia between 1800 and 1914. These continental industrial revolutions are intrinsically less interesting than the English, for they consisted so largely of the adoption and adaptation of English technology, and they lack the intriguing air that still hangs over the first and classic case of industrialism. Until the German developments in the chemical and electrical industry, the story is primarily one of the diffusion rather than the creation of techniques. It is nevertheless an absorbing story, particularly at the present time. Dr Henderson's account of the Zollverein, for example, cannot be of merely academic interest in a country that may be about to venture into the common market.

Dr Henderson has written a sober, concise and well-packed book, in some respects an up-to-date counterpart of the well-known work on France and Germany which J. H. Clapham published some forty years ago. He lacks, however, the robust shrewdness that bound together even the grittiest of Clapham's facts, and he is far from being the English answer to Mantoux. The work has some minor faults: too many quotations with no reference to their source, and a bibliography limited to books written in or translated into English. But the main defect is that the arrangement and proportions of the book are predominantly political. The factual content is modern, but, apart from a preliminary nod in the direction of Rostow, Kuznets *et. al.*, the questions asked and the considerations deemed relevant have a distinctly old-fashioned look. The arrangement by countries is probably unavoidable, if only because most of the literature has been written on this basis; but it is surely unreasonable, in a book with this title, to devote fourteen pages to Bismark's economic policy and only three to the activities of the German books. No doubt it is a sign of independence that Dr Henderson makes so few concessions to current fashions and certainly a sign of grace that he entirely avoids current jargon: but one cannot help regretting that the massive literature which the author (and probably no other Englishman) has mastered should have left so small a deposit of luminous generalisation. It is not that the author does not have his own views, but they are merged in the narrative, rarely made explicit and never argued. It is a pity, too, that the enquiry is restricted to three countries. The experience of Switzerland and Sweden would not only have been interesting *per se* but would also have illuminated the industrialisation of the major powers. The book is thus something of a disappointment. It is, however, reliable, clear, and abreast of recent research, and, for these reasons as much as for lack of any competitor, it is likely to have a long and useful life.

Not Quite Enough

The Narrow Margin: *The Battle of Britain and the Rise of Air Power 1930-40.*

By Derek Wood and Derek Dempster.
Hutchinson (1961). 536 pages. 35s.

IN his foreword, Air Chief Marshal Sir Thomas Pike, Chief of the Air Staff, calls this book "a serious, comprehensive and yet most readable study of one of the most crucial battles of our time."

Indeed it is, serious, comprehensive, readable—and a study. The prewar political constellation, the resulting debates and decisions, become the fascinating backdrop to the rebirth of the Royal Air Force and the birth of radar. The prologue introduces the reader promptly to a lesser known event in the history of German technical espionage, when the airship "Graf Zeppelin" was used in an attempt to fathom the electronic essence of British radar. Three flights were made to no avail and, indeed, the first round of the air war against Britain was lost by Germany during the summer of 1939.

From this overture of British technical accomplishment and German failure, the authors take the reader back to 1919, when von Seeckt organised the core of the future Nazi war machine in Berlin. In spare and laconic language the story unfolds, a story of intrigue and secret preparations until the cloak could be thrown back and the world was once more confronted by aggressive German might in the mid-thirties.

In the same admirable muted style, leaving the events themselves to create their impact on the mind, the authors tell the story of the period between the wars. In those years, when factories were idle, men went hungry and the RAF was reduced to a mere shadow of former glory, the allocation of £10,000 ensured the development of radar, the device that was to enable Britain to become an island once more and thus fight

the enemy to a standstill. No detail in the wide and intricate organisation that was built up on the promise of radar is left out of the study. The Royal Observer Corps, the development of VHF radio, the organisation of operations rooms, the deployment of the RAF, all find a place. The reader is confronted with a grand panorama of mighty forces in readiness and can watch the battle begin. For the first time unseen mysterious electronic impulses were used to detect the enemy, to control and to direct defending fighters, and thus to wrest victory from what seemed to be certain defeat.

Here the study becomes a dusty dry recital of facts, at precisely the moment when we expect a climax, a grand finale to a mighty tale of human accomplishment and courage. Then, when we expect a broad and scholarly analysis, yet turning a technical study into perceptive history, we are served a mixed batch of heterogeneous "Conclusions." The authors stand insignificant and helpless in the shadow of their subject. They are not worthy of the subject when they note of some of Britain's pilots in their finest hour that they "were very young and over-confident and inexperienced with little idea what it was all about." Little idea indeed. The desperate resolve to attack against overwhelming odds, the guts-searing fear, the supreme decisions, the last sacrifice against a resourceful and tenacious enemy—they are not there. The angry debates on tactics under the inhuman pressure of relentless enemy attack, the exultant feelings when victory dawned—they are not there; and the tale of the "Narrow Margin" ends in a whimper of insignificant language.

This is a good study—certainly it is—but the history of the Battle of Britain remains to be written.

Surveyor of Poverty

A Study of the Work of Seebohm Rowntree, 1871-1954: *Social Thought and Social Action*

By Asa Briggs.
Longmans. 381 pages. 30s.

THE contrast between conspicuous consumption for a few and misery for the masses once made exiled anarchists of Russian princes and drove plutocrats from the Middle West into expatriate despair. In late Victorian England, however, some of the sensitive among the well-to-do were more practical: confident that "much was to be hoped from clearer knowledge and acuter consciences," they stayed at home and dug up the facts. Like Shaftesbury half a century before, they forced politicians as well as the public to pay attention to their revelations. In the end, since many of those who suffered most now had the vote, something was done.

Prominent among the founders of the welfare state were not only those comfortable rentiers, the Webbs, but also a pair of Nonconformist tycoons, end-products of religion and the rise of capitalism. The private, lavishly financed enquiries of Charles Booth, a Unitarian shipowner from Liverpool, and Seebohm Rowntree, a Quaker manufacturer of cocoa at York, provided much of the evidence upon which the controversies of Edwardian England were based. Both men regarded their first task as diagnosis rather than prescription; but, by illuminating the problems of the poor, they directly inspired most of the social legislation of the last days of Liberalism.

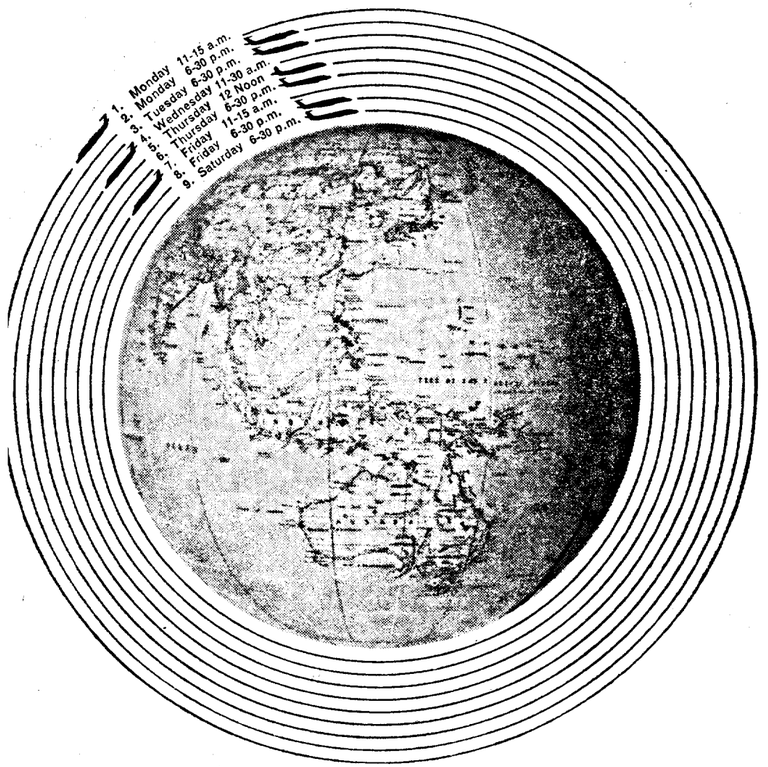
The appearance of this readable and informative "social biography" so soon after the study of Booth by Professor and Mrs Simey allows their achievements to be compared. In thought and action, Rowntree clearly emerges as the greater man. He followed Booth's lead as an investigator, but his values were more coherent and consistent, his methods more rigorous. The cold precision of "Poverty" was a frontal attack on loose thinking and smug assumptions, whereas "Life and Labour in London" was primarily a massive appeal to the emotions. If Booth supplied material for the moralising of the Charity Organisation Society, Rowntree demonstrated the inadequacy of its whole approach.

Once the inquests were over, Booth played a minor role on royal commissions and dabbled in that panacea, Tariff Reform; but Rowntree became a substantial figure in pre-1914 politics. As a successful business man who was also an expert on social policy, he soon acquired considerable influence with Lloyd George, and some of his ideas—on housing and agriculture, for example—were of permanent importance in shaping Radical thought, in both Liberal and Labour circles. For a time it looked as though "reconstruction" after 1918 would give Rowntree his chance to set new standards for an old society. But, like so many others, he was "betrayed" by Lloyd George.

Thereafter, Rowntree concentrated mainly on industrial relations. Unlike Booth, an enemy of trade unionism, he strove for closer collaboration as well as better conditions, and toyed with projects for "co-partnership." Between the wars the results of his decency, common sense and insistence upon the obligations of both sides formed the platitudes of progressive management everywhere. But such platitudes, if widely accepted, could work wonders, and Rowntree showed plainly that it was also good business to provide a tolerable environment for the worker and to treat him simply as a human being. Yet beyond a certain point diminishing returns set in, and there were signs that "co-partnership" might actually cost money.

In Rowntree's last years the old problems of poverty had shrunk to manageable proportions, thanks in part to his own efforts; but the difficulties of industrial relations often seemed to be growing. This may explain a new note of sharpness and even disillusion: more and more, the tough, puritan moralist broke through the benevolent smile and the kindly word. Had the limits of concession to human weakness been reached at last? In fact, Rowntree had always been a hard man, and it is here that Professor Briggs's otherwise admirable account is open to criticism. In the assessment of his subject's personality more than a little of the cloying sweetness of cocoa has crept in.

Counting Africans



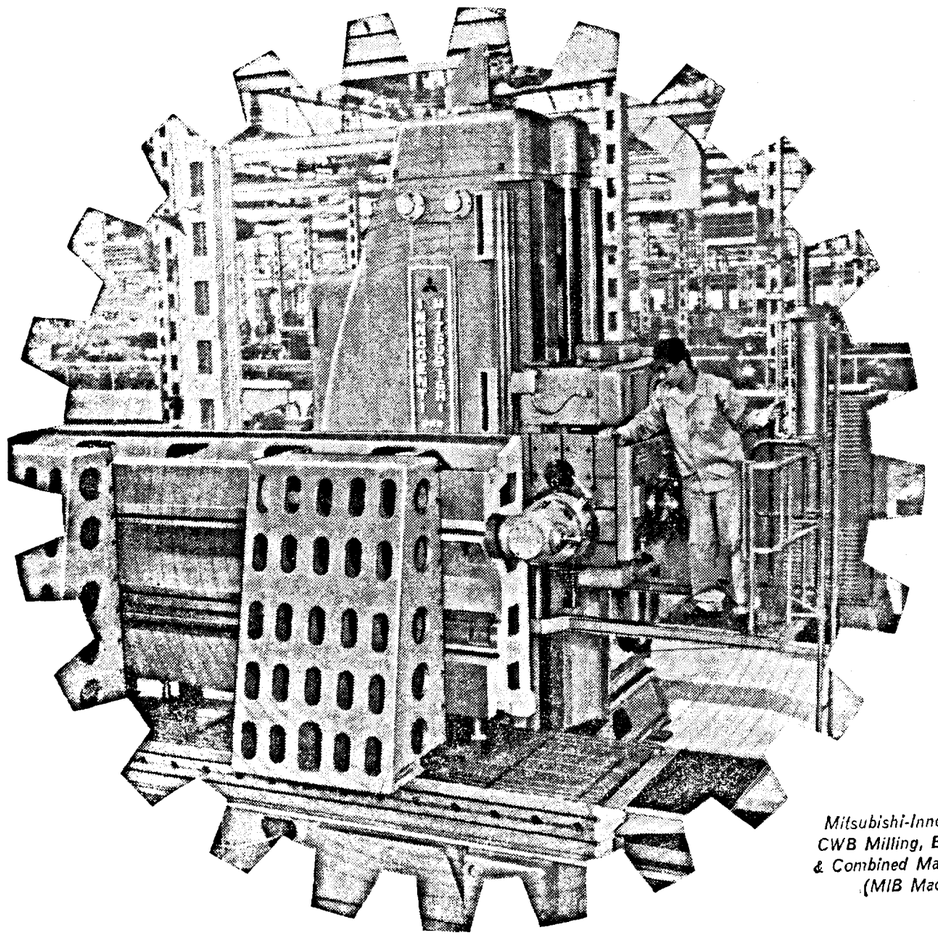
Essays on African Population

Edited by K. M. Barbour and R. M. Prothero.
Routledge. 406 pages. 35s.

"DIFFICULTIES of Demographers" might be a suitable sub-title for this somewhat specialised collection of essays. The importance of comprehensive population surveys in the rapidly emerging African states is enormous and widely realised, but only an expert will fully appreciate the discussion in this book on the finer points of the surveys so far conducted or on the relative merits of choropleth and dasymmetric maps for population mapping. Nevertheless the first eight essays, which deal mainly with these topics, bring home the inherent difficulties of census-taking in Africa. That the areas are vast and the people scattered is only the first obstacle; others are the scarcity of people sufficiently educated to act as enumerators and the lack of interest and even understanding of a census among many of the villagers. On the considerable inaccuracies of the age distribution in Zanzibar as recorded in the 1948 census, Mr Martin remarks: "In a relatively non-numerically minded society it was found that some people could not differentiate between 17 years of age and 70."

In the face of such problems the thoroughness of the study of four sample areas in Northern Nigeria by Mr Grove, and that of portions of Central Sudan by Mr Barbour, is amazing. Anyone expecting a highly statistical survey, including future projections, will be disappointed—the lack of a reliable series of results from past censuses makes this impossible—but from the geographer's point of view every aspect of the areas is covered. The only contributor able to substantiate his arguments with quite comprehensive statistics is Mr Mitchell, who presents a chapter on labour and population movements in Central Africa with particular reference to Southern Rhodesia.

The last essay, an analysis of boundaries in inter-tropical Africa, is a reminder that the interests of the border tribes were not completely disregarded in the dividing up of Africa; it ends with the rather depressing conclusion, for a book devoted to the painstaking work of demographers, that although the borders could be more realistically drawn as a result of the surveys, the rejection of narrow tribalism and the growing nationalist fervour means that "any attempt to redraw boundaries today would almost certainly provoke political troubles far more serious than those it was hoped to remedy."



Beginning April 2nd Qantas Flies to Australia 9 times a week

(both ways round the world)

Nine times in seven days both ways round the world. That's real airline service for you! That's Qantas service! Beginning April 2nd we're adding two extra flights to Sydney. And both are 707 V-Jets, the jetliners that cruise faster, fly higher and take off quicker. One will fly Eastbound from London via Rome, Istanbul, Teheran, New Delhi, Bangkok, Singapore and Sydney. The other flies Westbound via New York, San Francisco, Honolulu and Fiji to Sydney. See your Travel Agent or Qantas, corner Piccadilly and Old Bond Street, London, W.1. (MAYfair 9200.)

Australia's Round-the-World Airline
Qantas, in association with Air-India and BOAC

Mitsubishi-Innocenti CWB Milling, Boring & Combined Machine (MIB Machine)

Top Shipbuilder Makes Top Quality Machine Tools

The MIB Machine is one of the world's most superior large-sized machine tools. This machine can do various types of machining without changing the setting and is capable of completing many precision processes with ease. As a result of a technical agreement concluded in 1960 with Innocenti S.G., Ltd. of Italy, Mitsubishi Zosen has world-wide (excluding Italy) rights for the manufacture and distribution of the universally known MIB Machine. So far we have completed 18 units, including those exported, and 45 units are now in the manufacturing stage with orders for more steadily on the increase.
According to the British periodical "Shipbuilding & Shipping Record" Mitsubishi Zosen, in 1961, again placed first among the world's shipbuilding firms with a total of 246,606 tons actually launched. Ships are a complex of precision machinery which demand a far higher degree of safety than machinery used on land. Mitsubishi Zosen makes a wide variety of land machinery, such as power machinery and plants, iron and steel manufacturing machinery, chemical machinery and plants, loading and unloading machinery and machine tools. Mitsubishi Zosen's superior technology and most modernized facilities, which made it the world's leading shipbuilder, guarantee high quality and reliability in all its products.

LETTERS

University Grants

SIR—In your comment "Off Target" you rightly condemn the short-sighted nature of the Government's financial provisions for the universities, but persist in your view that the present level of university lecturers' salaries is generally adequate. May I make two points:—

(1) 1962 sees the first of "the bulge" applying for entrance to university. With all the money in the world, the universities of this country would have considerable difficulty in expanding their facilities at a rate equivalent to the increasing number of 18 and 19-year-olds—let alone cater for the "trend" of an increasing number of sixth-formers. One solution to this problem might have been to encourage university teachers to make every effort to cater for more students, even at the price of considerable personal inconvenience, until new and adequate facilities were ready. For such a policy to succeed, the goodwill of university staffs would be a first necessity. But this is not likely to be forthcoming with the Government's present attitude towards salaries.

(2) You fail to realise that the universities of this country are competing for men of ability not only with the other professions and industry, but also (and increasingly) with universities overseas, particularly in north America. In a time of expansion, more than any other, ability will be scarce. It would seem reasonable, and even essential, that we as a nation should do all in our power to ensure that an increasing proportion of our talent is not attracted to the higher-salaried universities across the Atlantic, and that the drain of university teachers does not reach the proportions of that of qualified doctors. A 3 per cent addition to already inadequate salaries is no way of doing this.—Yours faithfully,

GERALD MANNERS
University College of Swansea

West Indian Federation

SIR—Mr Albert Gomes in your issue of February 24th attacks Mr Macleod and Mr Maudling for permitting the Jamaica referendum and for capitulating to secessionist demands. He stresses that the West Indies constitution does not provide for secession. Unfortunately, again and again federations have collapsed because of the determination of one or more members to secede. The Central American Confederation broke into splinters. Not even the genius of Simón Bolivar could hold Gran Colombia together. Again and again political motives have swept aside juridical arguments.

If one were to criticise the Colonial Office, it would rather be for failing at an earlier date to recommend the holding of referenda on the issue, at least in the larger islands, before the federation was set up. The mistake of trying to hold together unwilling partners has been clearly demonstrated in the Central African Federation, while the attempt to compel a secession-minded Katanga to remain within the Congo has led to bitter fighting, and has almost bankrupted the United Nations.

The unpopularity or lack of interest in the West Indies Federation—call it what you will—caused too few politicians of major stature to seek election at the first and only federal general election. That more members of Mr Gomes's political experience and ability were not sent to Port of Spain was a tragedy. The blame must be shared by the different island political parties.

However, to say that "a majority of Jamaicans representing some seven per cent of the total population of the West Indies voted to secede" is stretching the credulity of your readers too far. The Jamaica referendum poll was not heavy. A majority voted again the federation. Mr Manley democratically at once accepted the verdict. My impression of the campaign as an observer in Jamaica is that the adverse vote might well have been higher but for Mr Manley's personal prestige.

Surely Mr Gomes would not envisage the West Indies Federal Government attempting to impose its will on a recalcitrant Jamaica. It is ludicrous to imagine the West India Regiment, led as it is largely by Jamaican officers and non-commissioned officers, setting out on a sort of modern "march through Georgia." Or would once again Great Britain have been expected to provide troops to pull the chestnuts out of the fire?—Yours faithfully, HAROLD P. MITCHELL
Stanford University, California

Healthy Advertising?

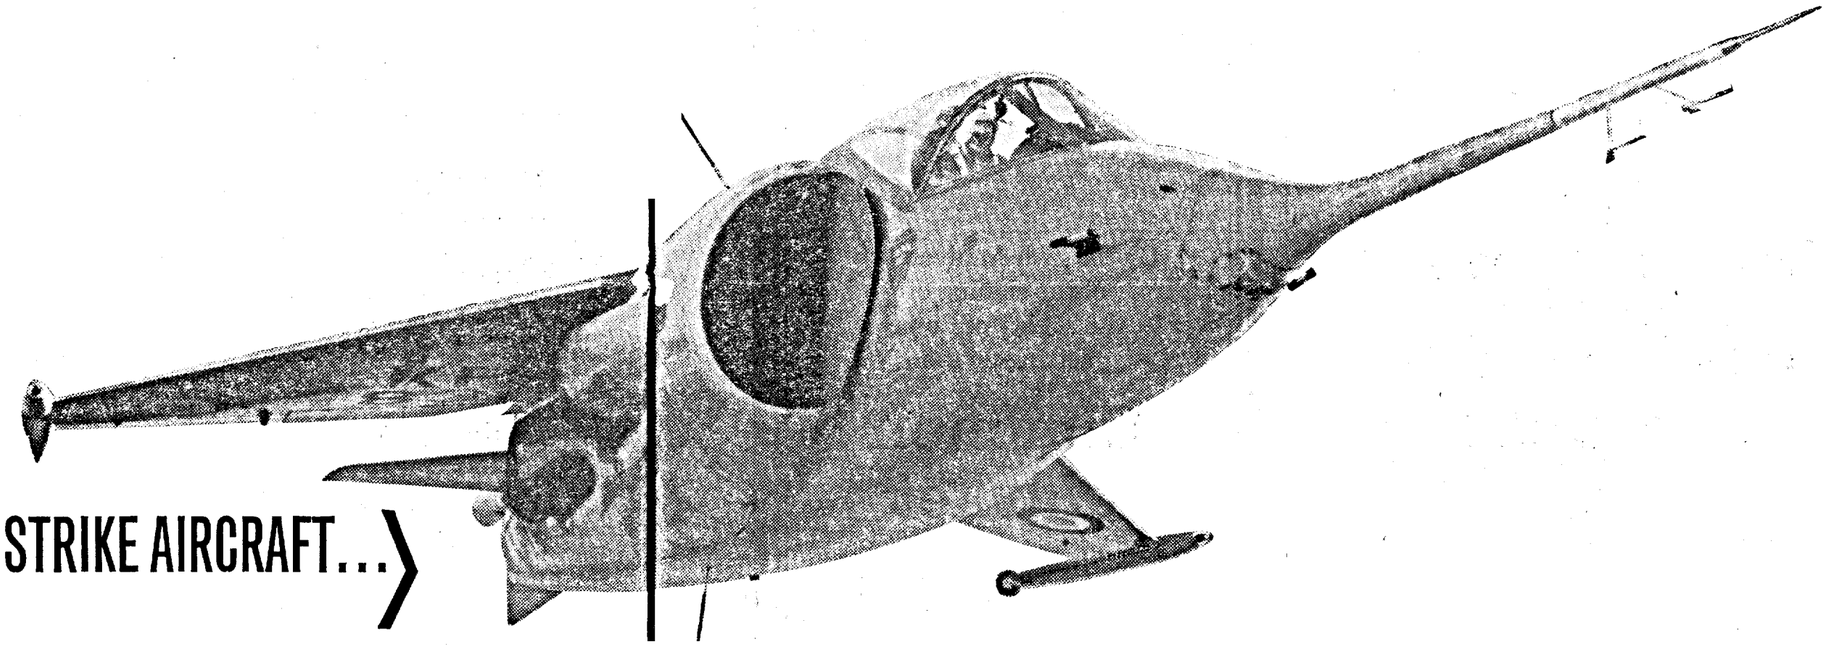
SIR—It is a pity that you chose last week to tell a scholar of Mr Reddaway's distinction that he was talking "extraordinary nonsense." In fact he is entirely right. Either cigarette advertising aims to make more people smoke, or it is beggar-my-neighbour waste. In the first case it is wicked, in the second uneconomic.

Your own argument that advertising helps "new varieties of product entering the field to challenge established ones" is incomprehensible. Try to apply it in any field where advertising is widespread—detergents, beer, daily newspapers or motor-cars. In all these cases, a few large firms have built up a public image of their product—not by improvement or price reduction, but by constant repetition of its name. The established firms have huge financial resources, established relations with newspapers and agencies (as well as televisers), established brand images and hence established buyers. So the new firm has little chance to oust the effect of years of repetition, even if it advertises on a comparable scale to the old.

Advertising is a safer way to protect one's product against competitors than either price reduction or quality competition. That is why—as any undergraduate-magazine "Vacancies" section will tell you—advertising jobs pay better than production jobs. The popular press may be reluctant to bite the hand that feeds it. Is *The Economist* no better?—Yours faithfully,

MICHAEL LIPTON
All Souls College, Oxford

Encouraging Exports



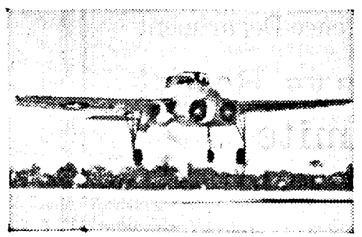
SIR—I am sure you are right to favour tax changes to stimulate exports. I doubt, however, if a turnover tax is the right answer. Britain's problem is to secure a marginal increase in exports. If the average firm could increase the percentage of its turnover which it exports from 20 per cent to 22 per cent our troubles would be over. Clearly therefore any tax incentive scheme must reward firms for *increasing* their exports, rather than for already exporting. The turnover tax only seems to have an incentive effect when the rather extreme case of a 100 per cent switch from home to export markets is considered. Few firms could do this in the real world. Many, however, could increase their exports by 10 per cent, but here the incentive afforded by the proposed scheme is slight. A firm which steps up its exports from 20 per cent to 22 per cent of turnover, gains a mere 0.1 per cent of turnover before and 0.06 per cent after corporation tax. This is equivalent to £60 a year added to net profits for a firm with a turnover of £100,000—hardly a strong encouragement.

I would suggest that a better plan would be to graduate the rate of profits tax according to the percentage of each firm's turnover exported. At 20 per cent exported the present level of tax would be paid; but as the percentage rose so the tax rate on the profits of the whole firm would fall. This really would give an incentive to go after marginal business rather than higher gross profit rates. It would also tend to make direct exports marginally more attractive than setting up overseas factories—with consequent further benefit to our balance of payments.

A device of this sort might indeed be contrary to GATT and the rest, but as you yourself have argued, the alternatives of sterling devaluation or severe import restrictions would be even less welcome abroad, so that as a temporary expedient we could probably get away with it.—Yours faithfully, EUAN COOPER-WILLIS
Penrhyndendraeth, North Wales

BS

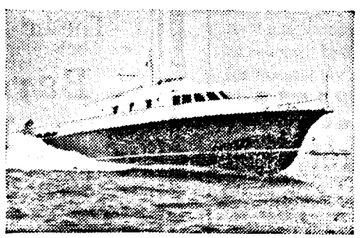
THE WORLD'S FIRST VTOL STRIKE AIRCRAFT...



...AND BRISTOL SIDDELEY SUPPLY THE POWER

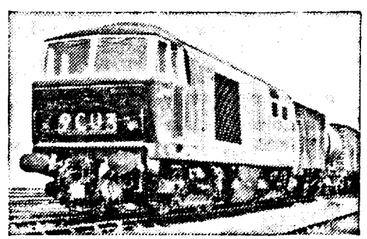
The Hawker P 1127 is a VTOL strike/reconnaissance aircraft designed for operational service. Its power for both lift and thrust is obtained from one engine—the Bristol Siddeley Pegasus turbofan. Not only is the aircraft revolutionary in its landing and take-off capabilities, but it has a range and speed which automatically place it in the front line of present-day tactical aircraft.

The P 1127 has fully demonstrated the ease and certainty with which transitions from vertical to horizontal flight can be carried out. The versatility of the Pegasus lift/thrust engine has also enabled the aircraft to demonstrate how advantage can be taken of short air strips, take off with a substantial overload of fuel and weapons.



Tripartite evaluation. Britain, the United States and the Federal German Republic are collaborating on a P 1127 evaluation programme. A number of aircraft have been ordered for this purpose and the cost will be shared equally by the three Governments.

BRISTOL SIDDELEY ENGINES LIMITED CENTRAL OFFICE: MERCURY HOUSE. 195 KNIGHTSBRIDGE, LONDON SW7
AERO-ENGINE DIVISION: PO BOX 3, FILTON, BRISTOL, ENGLAND. POWER DIVISION: PO BOX 17, COVENTRY, ENGLAND.



POWER FOR THIS

The Bristol Siddeley Viper turbojet powered the Bell X 14 research aircraft. The X 14 was one of the world's first jet-sustained VTOL aircraft to achieve transition from vertical to horizontal flight. The Viper engines range from 1,600 to 3,000-lb thrust and power many different aircraft.

...AND THIS

Bristol Siddeley Proteus gas turbines power Mr Stavros Niarchos's 100-ft yacht, "Mercury," which has accommodation for 5 passengers and a crew of 11. Delivering 11,400 bhp, the engines give "Mercury" a top speed of over 50 knots and a cruise range of 400 miles.

...AND THIS

Bristol Siddeley diesel engines power the 95 Hymek locomotives now entering service with British Railways. British Railways have ordered over 300 of these diesel engines and those already in service are averaging 14,000 miles a month over a variety of routes.

PER-CENT or PER-HAPS?

Fluctuations on the Stock Exchange reflect the uncertainty of the times. Better by far to invest in Abbey National where savings do not depreciate by a single penny and will earn a good return.

SAFETY Abbey National has the complete confidence of over 700,000 members. Furthermore, Shares and Deposits in this Society are Trustee Investments.

INTEREST The rate is 3¾% per annum on Shares with income tax paid by the Society. This represents £6.2.5d. per cent when income tax is paid at the standard rate. Build-Up Shares yield 4¼% —equivalent to £6.18.9d. per cent when tax is paid at the standard rate.

EASE OF WITHDRAWAL
Should the need arise, sums up to £100 may be withdrawn on demand—larger sums at short notice.

THE BUSINESS WORLD

More Trouble with Capital Gains

LORD RITCHIE'S attack on the Government at the Wider Share Ownership conference (where Mr Maurice Macmillan, MP, made another plea for the abolition of stamp duty and Mr Paul Chambers pressed for a review of a tax system that gives a "whole forest of special reliefs to almost every form of saving other than savings invested in the risks of private enterprise") had the shock of surprise. In the last two years Lord Ritchie has earned considerable praise for the temperate way he has steered the stock exchange along the path of reform. Not all is perfect and in many matters this conservative institution still has a lot to learn before it can fully serve the modern investor. But Lord Ritchie and the council are entitled to say that the government has done nothing to help towards sensible share transfers or to amend a penal 2 per cent stamp duty.

Lord Ritchie's strong words, seemingly out of tune with the man and the occasion, must surely owe a good deal to his forebodings about the Chancellor's capital gains tax. He has sought on earlier occasions to make clear to the Chancellor the dangers that would arise if this tax were to impede, as it so easily could, the efficient working of the capital market. If anyone is in a position to know the way in which the mind of the Inland Revenue is working on this, it is likely to be Lord Ritchie. Hence, when he declared on Tuesday that "the subject of investment, the subject of freedom of markets, the subject of the importance of the stock market to the country, to industry and to us all is constantly bedevilled by the government" it can hardly have been a momentary loss of control. His statement that "the City has very nearly reached the end of its tether and its loyalty and willingness to co-operate have almost reached breaking point" puts one man's exasperation in extreme form and though the rest of the City would certainly use more sedate words and probably concede that its own institutions could do with improvement, it has mingled a distant respect with its surprise.

There are said to be indications that Mr Selwyn Lloyd's tax on short-term capital gains from transactions in securities and other forms of property will be lengthy and complicated. The complications are certainly no fewer than were suggested in an article here on November 11th last year. It was then argued that there were no points of principle or fiscal morality that could be levelled against a capital gains tax; the governing questions are whether it is politically supported and fiscally worthwhile. But it was also argued that there was no distinction in political or fiscal merit for taxing short-term gains and letting long-term gains go free. A capital gains tax was going to be difficult, anyway; but it ought at least to be logically coherent.

Given the false distinction between short- and long-term gains that Mr Selwyn Lloyd has started from, he has lost all chance of making it so. And there are misgivings (which Lord Ritchie may have been reflecting this week) that the Inland Revenue is attempting some short-cuts in devising the tax in order to minimise the severe troubles it must expect when it comes to applying and policing it. It is always exposed to temptation in this way, and sometimes it succumbs—as in 1960 when its objectionable clauses in the Finance Bill had to be heavily amended. The apprehended shorts cuts are three: the exclusion of short-term losses from the computation of short-term gains; the possibility of retrospective assessment to last July, when Mr Lloyd first committed himself to the introduction of a short-term capital gains tax; and the threat of taxing these gains as an addition to the top slice of income as already assessed for income tax and surtax, with no option to tax at a specific rate such as the American system provides.

One can be quite short on each of these points. The exclusion of losses would make the Revenue's life much easier by denying what the ordinary taxpayer would regard as ordinary justice. If this is attempted, life will be made rough for the Chancellor by his own supporters, as it was for Mr Amory in 1960. On retrospective assessment, there are some ugly precedents, but they have almost always stemmed in the past from explicit warnings; they cannot be made to apply to the nebulous definition of a capital gains tax that Mr Lloyd attempted last July. Thirdly, the top rating of these gains for normal tax assessment would ensure that as few as possible of them would be realised and as many as possible carried over into that longer period in which (though he has yet to define it) the Chancellor will be quite happy for them to go entirely free. But it is all too likely that this process of postponement will not be available to plenty of economically useful and socially unobjectionable transactions, on which the full force of marginal tax rates will fall if top rating applies.

Let it be repeated here that what is at stake is no issue of fiscal morality, but solely a matter of efficient fiscal administration. If one is convinced that the Revenue can never be quick enough, despite the progress it has made, in fastening "badges of trade" securely on each new venture that contrives to dress up its gains as accretions to capital, one

can argue, as *The Economist* has already done, that the time has come for a considered and embracing capital gains tax. But there is another view on this which seemed to be in Mr Lloyd's own mind a year ago, when he rejected "what is called a capital gains tax" on the ground that the income tax commissioners could determine, under the existing law, whether a transaction fell on the side of "dealing" (and therefore taxable in its outturn) or on the side of "genuine investment" (and therefore not so taxable). This principle, specifically applied and backed by additional returns, could secure the essence of a capital gains tax. These are the two logical landmarks. Mr Lloyd chose last July to steer between and is in difficulties of his own making. He is committed; some parts of the City are angry; many investors are nervous; and conceivably some enterprise has already been frustrated. That is an unimpressive beginning for his new tax; he will only increase his self-created troubles if he proposes any arbitrary treatment for his new taxpayers.

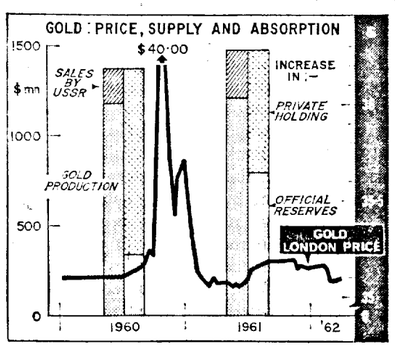
A New Plan for Gold

THE central bankers in their Basle club are hatching a new agreement—and apparently a more formal one than the gentlemanly understanding by which they altered the course of events in the exchange markets a year ago. That operation was unwound by Britain's loan from the International Monetary Fund last summer, though the central banks remain ready to extend similar first aid in appropriate circumstances in the future. Their new plan covers a parallel field, the gold market, and like the exchange operation it is essentially designed to strengthen the hand of central banks collectively in combating a sudden upsurge of disruptive speculation. This gold plan, which was first reported in the *Journal de Genève,* provides in outline for the commitment by central banks of limited amounts of gold into a central pool (or rather a buffer stock) which would be used, in certain circumstances, for counter-speculative sales on the gold markets; it remains to be seen whether continental central banks will channel gold into London, rather than into their own, narrower markets. The gold syndicate would also take suitable opportunities to replenish its gold stock by buying in the market when the price was low.

This, broadly, is all that can positively be said about the plan at the moment. It is not yet in operation and had no part in the decline in the London gold price this winter, which has been attributable to selective selling by the Bank of England on a quiet market. Nor, it appears, will the pool operate automatically or continuously. This, too, is likely to be part of the strategic reserve for world currencies, to be called out in particular circumstances. The conditions of operation, and the amounts involved, have still to be decided, probably at the next weekend meeting of central bank governors in Basle in a fortnight's time. They are crucial: a bold, flexible scheme could be a great step forward, and a narrow constrictive one could do positive harm.

The new plan takes its place in the framework of financial co-operation that has been built up since the debacle of the London gold rush in October, 1960, which at last convinced financial officials on both sides of the Atlantic that monetary stability could be defended only through much more concerted action among themselves. The new men of the Kennedy administration have brought the United States, for the first time in a generation, into active intervention in the foreign exchange markets, and on a rather more ambitious scale than that practised by European stabilisation funds. They have co-operated closely with the Bank of England in regulating the London gold market. And they have put great emphasis on international discussion, co-operation, and confrontation through every available means—the International Monetary Fund, the Bank for International Settlements (which the Federal Reserve Bank of New York attends as an observer) and through the transformed Organisation for European Co-operation and Development in Paris.

Europe's response to this new burst of drive and initiative has not always been enthusiastic, and cautious attitudes on the Continent have slowed down the pace of advance. But definite progress has been made. The Basle operation of last spring, limited and conditional as it was, provided a four months' reprieve for sterling—which might, admittedly, have been put to better use. The guarded addition to the potential resources of the IMF is a vital—if not in all conceivable circumstances adequate—reinforcement to oppose new trouble for either sterling or the dollar. And the official United States intervention in exchange markets has had clear tactical successes in strengthening the dollar in Continental markets. But the one unqualified success among all these innovations has been the New York-London gold bridge; and it is critically important, in the context of Operation Basle Mark II, that this should be fully understood.



WHEN the price of gold in London began to mount beyond its normal limit in summer, 1960, the United States authorities were disinclined to feed gold through the London market "into the hands of private speculators." Only at the eleventh hour, after the London price had shot up to a premium of some 15 per cent, did the Bank of England view prevail. Ever since, the American authorities have agreed to replenish any supplies of gold that the Bank of England uses, on its own discretion, to keep the London market under control. At the same time, leading central banks have agreed on a self denying ordinance to hold off the London market, meeting their needs for gold either in New York or directly from the Bank of England. These twin influences have had their desired effect; the London price of gold was restored to its normal range by the spring of last year, and when demand rose again in the wake of the Berlin crisis in the summer the official dampers prevented it from getting out of hand.

Official intervention has been on a large scale. The trade accounts record that in 1961 Britain imported more gold from the United States than from South Africa—some 21.6 million ounces, worth around $750 million. The figures of customs shipments must undoubtedly be taken with considerable

qualification in this connection: figures published by the Federal Reserve itself show gold sales to Britain of only about $300 million. Even this lower figure, for a year in which Britain's own gold reserves probably fell by about $200 million, suggests London sales to third parties of some $500 million. It is impossible to tell what part of these was in direct sales from the Bank to other central banks and what part was sold by the Bank in the open market, mainly to private buyers. The crucial point is that, notwithstanding the large scale channelling of New York gold through London in 1961, the amount of gold going into private hands declined sharply—from $1 billion in 1960 to $680 million in 1961, according to an estimate in this week's annual bullion review of the well placed London house of Samuel Montagu. Thus the feeding of gold to private buyers has indeed reduced the appetite.

If the new Basle arrangements consolidate and extend this bridge between the New York official parity and the major market for gold in London they will be welcome, and they could then usefully incorporate other innovations designed to by-pass the gold market: but only then. The scheme is in any case likely to go further in dissuading central banks from buying gold on the London market. Thus central banks contributing to the gold pool or buffer stock may be relieved of the present one-quarter per cent commission charge when they buy or sell at the New York Federal Reserve. In itself this move is sensible enough. The world's monetary authorities, who alone give gold anything like its present value (and specifically the United States authorities who alone stand formally ready to pay $35 an ounce for it) are fully entitled to use their position as monopoly buyers. They are at last finding, as outside observers have been trying to tell them for years, that this enables them in the end to do what they like about gold. But—and this is the vital market factor which not all American officials have yet recognised despite the experience of the past eighteen months—the power of these authorities to check the general appetite for gold is paradoxically dependent on their open willingness to meet it.

THE attitude of the European central bankers to gold has undergone no overnight conversion. Worries about their dollar balances have not disappeared. Unless the new Basle arrangements were to incorporate a gold guarantee on the dollar balances, which seems unlikely, they cannot be expected of themselves to increase European willingness to hold dollars

—and any moral pressure against converting dollars could ultimately have a boomerang effect.

The other potential danger of the new scheme is that it may be a damp squib. To have any real impact it would have to be on a considerable scale. The figure of $250 million of total commitments which has been unofficially mentioned is less than one-quarter of the flow of gold into all private holdings in 1960—and only half the national re-sales of American gold by the Bank of England in 1961. Then there is the question of when the scheme would be activated. At present the intention seems to be not to intervene against a normal steady rise in the gold price, but only against a rise which is (a) nervous, and (b) "unjustified," "irrational," and "temporary." The danger of adding a new engine to a fire brigade that is let out of the gates only for unjustified fires was already apparent in the IMF scheme as it emerged after its Paris mauling. The danger is greater still for the highly delicate gold market. "Is the bankers' pool operating, and if not, why not?" could become an explosive new question in every incipient market rise. In short: unless this scheme is to be on a much grander scale than at present seems likely, it is difficult to see just how it will materially strengthen the present New York-London gold bridge; if, without being strong enough, it is in any way designed to replace that bridge, it could be positively dangerous.

In the long run, certainly, the London arrangement needs to be more securely underpinned; and it is entirely desirable for central banks to operate directly, and economically, between themselves. A highly convenient means has long existed in the earmarking facilities at the Federal Reserve Bank of New York, under which gold is transferred from one European country to another by trundling the bricks from one cage to another in a Manhattan basement—with no commission charge here. The men of Basle might also reflect on using their own institution in a form that was partly envisaged at the outset—as a Bank for International Settlements. The more quickly official gold holdings and dealings are centralised, whether at the BIS, the IMF or in the Federal Reserve, and central banks become accustomed to book transfers, the easier it will be, over time, to move away from 100 per cent gold cover for these deposits towards a true international banking operation. But this process will never be helped by making gold scarce or exhorting people to curtail their demand for it.

Immediately, this probably means that the United States authorities should not put too much reliance on foreign willingness to increase dollar holdings; and that they must make further efforts to get the net outflow of United States funds down to the annual level of $1 billion or so which is widely regarded in Europe as tolerable. The important innovations of the past eighteen months have done a fair amount to ease the immediate (but only the immediate) problem of reinforcing official monetary reserves. But these new facilities have not provided the basis for the wide swings in international credit that are probably necessary if more direct instruments of adjusting international payments are to be dispensed with. It is to this aspect of international balance that attention now needs to be directed more urgently. In particular, international officials should seriously reconsider whether, on the basis of recent trends, they can confidently hope to go on indefinitely steering clear of import restrictions, floating exchange rates or inconvertibility unless they are willing to consider two alternative regulators: more flexible use of interest rates to affect capital flows on the one hand, and direct subsidies for exports by deficit countries to improve their trade balances on the other.

HOW JAPAN DOES IT—I

The Dual Economy

Japan's phenomenal industrial growth in the last ten years—its real national product has risen at an average of 8.2 per cent throughout this period—still retains a large element of mystery in the West. Certain aspects are familiar enough, at least conceptually: the low level from which recovery started; a reverse gap between productivity and wages; an abundant labour supply; a traditionally high rate of personal saving; and an undervalued currency. Economic circumstances such as these would have encouraged growth in any country. They do not themselves explain the extraordinary growth of Japan. Of fundamental importance here is the peculiar organisation of Japanese economic life. In this article, a correspondent who recently visited Japan considers the great Japanese economic achievement in the light of the structure of industry and the quality of management. In a second article he will turn to the remarkable and efficient system of credit control.

JAPAN is fast attaining the status of a fully developed and technically advanced economy. But the Japanese themselves are modest about claiming this status and readily draw attention to industrial sectors which are still backward. The 1959-60 Economic Survey contains a list of industries which still lack sufficient international competitive strength—a compilation that few other countries care to risk. First among Japan's "uncompetitive" industries, for reasons of unfavourable natural resources and social conditions, are:

coal, non-ferrous metals, paper pulp, soda and most agricultural products;

secondly, because of the narrow market and also because of technological backwardness:

special steels, chemical machinery, machine tools, metal processing machinery, passenger cars, computing and gauging instruments;

thirdly, because the industries are newly developed:

petro-chemicals, synthetic textiles and industrial electronics.

And these, by contrast, are the products in which the Japanese believe they are strong enough to compete:

other textiles, clothing, plywood, chinaware, ordinary steel products, ships, TV sets, radios, cameras, sewing machines, textile machinery, agricultural implements, trucks, buses, constructional machinery, rolling stock, cement and plastics.

Since the war one sign of a mature economy has emerged in Japan: the rate of population growth has subsided to less than one per cent a year. Moreover, by intensive farming, the country is now self-sufficient in rice. The "uneconomic" cost of this is not yet high but will need watching. Japan's prosperity is still grounded on a relatively small sector of its industry.

Whereas technical skills seem to be reasonably well-spread, management ability and initiative are concentrated in very few firms. This is partly the reflection of a general tendency to avoid taking decisions or, if they are unavoidable, not to take them alone. The brilliant young executive who takes snap decisions on his own initiative is very far indeed from the national ideal. This dislike of taking decisions naturally favours the growth of the large firm or group where the really important decisions for a large number of subsidiary companies can be taken at the top. Some such national characteristic must account for the rapid resurgence of the Zaibatsu, or large groups of manufacturing companies each centred on their own trading company and their own bank.

The Zaibatsu were supposed to have been thoroughly unscrambled by the Americans after the war. They have not reconstituted themselves exactly on the pre-war pattern; the large family shareholdings and holding companies were effectively dissolved, and the groupings are now different and indeed are changing slightly all the time. For example, at the moment the trading or merchanting company in the Sumitomo group, Sumitomo Shoji, is no closer to some of the metal companies in the same group than is the trading company of another group, C. Itoh. Some groups are closely bound together; for example the biggest group, Mitsubishi Shoji (the trading company) was reported in the *Oriental Economist* as showing sales for the half year to last September of about £386 million, and handling about one-third of the total business of the group, whereas the next largest, Mitsui & Co., showed half yearly sales of very slightly more (about £387 million) but handled only about 16 per cent of the total business of the Mitsui group. The links with the banks also vary; the Mitsubishi link is again very close, while Mitsui & Co. deals with both the Mitsui Bank and the Fuji Bank. It seems that these links are determined to a considerable extent by the personalities of the people at the head of the various companies. Even, however, in the closely-knit groups the heads of the constituent companies only meet once a month informally, and as equals—with the bank chairman perhaps a little "more equal" than the others.

KEY ECONOMIC INDICATORS

	1955	1956	1957	1958	1959	1960	1961	1970 (per 10 yr. plan)
Population (Million)	89					94		102
Industrial Production (1955 = 100)	100	122	144	145	180	228	277	570
Exports (US $ billion)	2·0	2·5	2·9	2·9	3·5	4·1	4·2	8·5
Imports (US $ billion)	2·5	3·2	4·3	3·0	3·6	4·5	5·8	8·1
Department Store Sales (billion Yen)	212	259	310	338	388	468	582	
Consumer Price Index (1960 = 100)	92·7	93·0	95·9	95·5	96·5	100	105·3	
Real Wages, Manufacturing (1955 = 100)	100	108·9	109·3	112·3	119·5	124·5	132	
Tokyo Stock Exchange (Yields %)	7·96	6·68	7·14	6·66	4·54	3·93	3·24	

One must note here that not all the large manufacturing companies are associated with one of the Zaibatsu; important examples of independent concerns include Toshiba, the electrical engineering company, and Toyota Motor. But at present the three largest Zaibatsu control 14 per cent (by asset value) of the 200 largest companies. The quality of the management of these groups is extremely high. At the other end of the scale the management of numerous small firms is extremely bad; but when they do get into difficulties they are usually in debt to the banks who step in and either reorganise them or wind them up.

JAPANESE industry, as is often pointed out, has a dual structure, of highly developed modern factories situated side by side with small unmechanised and primitive workshops. Thus about 50 per cent of firms in Japan employ 50 workers or less, compared with about 15 per cent in the United States; and rates of pay in such firms in Japan are under 50 per cent of those in the larger firms employing more than 1,000, compared with about 80 per cent in both the United States and Britain. These small firms, however, are important to the economy owing to the very wide practice in industry of subcontracting; but the social problems of these low-paid workers are an embarrassment to the Government and one perhaps which will be solved only as the larger and more efficient firms draw labour away from this part of the economy, or as efficient methods and the necessary capital reach it.

Over the whole range of industry, trade unions are mostly very weak. Unions hardly exist in the Western sense. They are often organised on a company basis not a craft or industry basis. This scarcely makes for hard bargaining, and the unions are also weakened by widespread hidden underemployment and wasteful employment due to lack of mechanisation. But their strength is at last clearly growing, along with workers' living standards. Thus the index of real expenditure by certain workers' families in 28 cities rose by over 30 per cent between 1955 and 1960, and the percentage spent on food, according to another sample, has fallen in the last ten years from 54½ per cent to 41½ per cent.

Living standards are still below European levels but there is now little of the grinding poverty which is so common elsewhere in the East. Real wages in manufacturing industries rose by a quarter in the period 1955-60, equivalent to 4½ per cent a year. The average cash wage in 1960, including bonuses, was still only £22-23 a month. But fringe benefits are important: in many industries housing costs, retirement allowances, and welfare facilities are often paid for by the employer. The bonus is an important item which often amounts to as much as five months' wages or salary. This seems to be a traditional feature and has important consequences on personal savings, since people tend to adjust their expenditure to their regular income and to save much of their bonus. And personal savings have a particularly important role since the Japanese have more than their fair share of calamities such as typhoons, floods and earthquakes and no Welfare State in sight.

Why has the "dual structure" of industry persisted? One factor in the past was the long period of unemployment and underemployment. This is changing now, but another rigidifying influence is the lack of mobility of labour. In Japan the usual pattern, particularly with large groups, is employment more or less for life. Thus a young man will join one of the large companies as he might the Civil Service and his advancement in responsibility and salary will be largely a matter of age, far more so than is usual in western countries. Moreover (like employees of the English clearing banks), he would never leave one group for employment in another; nor on the other hand will he be dismissed except for reasons of his own conduct. Fluctuations in labour requirements of such firms are handled entirely by taking on and dismissing temporary workers who have none of these rights. These workers are usually drawn from farms, especially in the winter, or from small family businesses to which such people are bound by filial piety to return if required when the head of the business dies. But some newer firms take on and lay off labour in the western manner.

The force of Japanese competition in recent years is explained in large part in two short tables.

TRENDS OF PRODUCTIVITY, WAGES AND PRICE INDEX IN JAPAN (Manufacturing Industry)

	1955	1956	1957	1958	1959	1960
Productivity	100·0	113·7	120·3	116·8	130·7	147·0
Wages	100·0	109·3	113·1	115·7	124·4	134·3
Prices	100·0	105·3	103·5	100·1	101·3	102·8

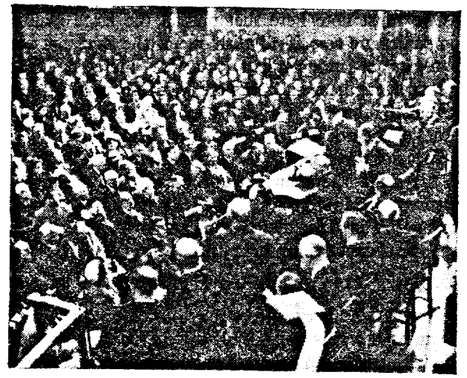
WAGE COSTS ROUND THE WORLD
1959 COMPARED WITH 1952

	Productivity Index %	Nominal Wage Index %	Wage Cost Index %
	(decreases minus; other figures show increase)		
United States	12·2	31·6	17·3
Britain	19·3	38·5	16·1
France	52·6	68·0	10·1
W. Germany	31·4	50·7	14·6
Italy	65·4	61·4	− 2·4
Japan	63·2	53·8	− 5·8



$$\text{Productivity Index} = \frac{\text{Productivity Index}}{\text{Employ. Index}} \qquad \text{Wage Cost Index} = \frac{\text{Nominal Wage Index}}{\text{Productivity Index}}$$

Source: Foreign Economic Statistical Annual.

Productivity up 47 per cent, wages up 34 per cent—this is a productivity gap in the right direction. The result has been that wage costs in Japan have been falling rather than rising. In 1961 it seems likely that the gap between productivity and wage increases in Japan closed a little, but it certainly did not disappear.

The margin between productivity and wages makes possible a high rate of capital accumulation by companies, and thus a high rate of capital investment. In addition, personal savings are surprisingly high and appear still to be rising; they are the basis of the whole credit structure of the country, as a second article will show. These are probably the most important determinants of economic growth in Japan. Will they persist? The habit of saving, in spite of the real inducements behind it, might be one of the casualties in a period of tremendous social changes; already hire purchase is beginning to grow, but it would be ironical if the fast rising standard of living should inhibit savings just when they have become easier for the average worker to sustain. Meanwhile labour productivity has continued to rise but there are clear signs since 1955 of a deterioration in the capital-income ratio in industry; more and more capital is needed for each unit increase in output, and last year's boom must have included some capital expenditure which will not justify itself very quickly. There is a vast field of government investment for which in recent years there have been insufficient resources, but investment of this kind is unlikely to lower costs through the whole range of industry.

Living with 38.5 per cent

THERE was cause for the directors and shareholders of Courtaulds to celebrate; but at last Thursday's meeting they did not. There was cause for the directors and shareholders of Imperial Chemical Industries to mourn; but at last Friday's meeting they did not. The flush of battle still reddened the cheeks of some shareholders; but, like men at a truce conference, both boards of directors were soberly pondering what would happen next. For them it was a time for fair speaking—an opportunity to get the tone right without making any precise commitments. Both, without damage to their *amour-propre*, found the right conciliatory words to say.

The meeting of a faithful five hundred of Courtaulds was not unlike a gathering of pen-pals after a lengthy correspondence. In this instance, the correspondence had been exceptionally one-sided—except for those postcards. Sedately, the correspondents were able to satisfy their curiosity. Mr Aubrey Jones, MP, was the only absentee director but, in introducing the other fifteen, Sir John Hanbury-Williams did not mention that Mr Jones was abroad. Mr Frank Kearton alone won a separate round of applause.

In a short speech Sir John said it was a matter of great encouragement to Courtaulds that the majorty of shareholders had rejected ICI's bid; he emphasised the "determination of the board and all who work for Courtaulds to justify this confidence." About future relations with Courtaulds' biggest shareholder, Sir John said:

> It now remains a matter of earnest hope that all concerned will be able to find a sound basis for the new relationship.

Then it was the turn of the shareholders. Criticisms of the cut in the interim dividend and such phrases as "got what you asked for" and "secretive and niggardly" were only to be expected and the directors had to take them on the chin. But Sir John refused to be drawn, amid shouts of "answer," about the reasons for the "unfortunate" cut in dividend. Many shareholders wanted to know whether any ICI directors were going to join the board. Sir John was diplomatic: "We have received no approach from ICI," immediately answered by a shout from one shareholder, "We don't want them." Another shareholder asked for a "few words from the man concerned with the future." There was a moment of hesitancy at the green-baized table and then Sir Alan Wilson stood up and said: "What we have promised we will carry out. Your remedy is to come and cross-question us at the annual general meeting." The resolutions approving the distributions of loan stock and capital profits were passed by overwhelming majorities. But the loudest applause of all greeted a suggestion from a woman shareholder that a woman should sit on the board.

ICI's meeting the following day drew fewer women than Courtaulds'—but, perhaps, slightly more shareholders. Half-way up the winding staircase into the Central Hall, Westminster, one of the more elderly ones remarked: "Mr Chambers certainly makes his shareholders climb." Shareholders, in their turn, made Mr Paul Chambers work, for the meeting lasted over two hours and though there must have been substantial proxy majorities in favour of the increase in authorised capital (amended at the last minute to £25 million) demands for a poll had to be recognised. One young lady could not remember how many shares she held. "How lucky you are," said Mr Chambers, who conducted the meeting with aplomb, as if he had won. Some criticised him; some praised him. One shareholder compared him to Napoleon, not in compliment. On the opposite side, Mr Randolph Churchill characteristically proclaimed. "A battle is not won at the first skirmish"; he advised Mr Chambers: "If at first you don't succeed try, try, try again." But a young executive in ICI was froward enough to tell Mr Chambers to look into some of the dark corners of ICI before "trying to run the affairs of other companies." A good deal of applause greeted the statement by a woman shareholder that:

> There is nothing worse than trying to be too clever. . . . ICI and Mr Chambers as well were too clever and I think they deserved defeat. They got defeat and now they are making out they are conciliatory. They were covetous about Courtaulds and they got a slap in the face.

Mr Chambers was in fact prepared to be as conciliatory as Sir John, and the ending of his speech that revealed that ICI now owns 38.5 per cent of Courtaulds' equity needs to be recorded:

> Your company's prospective holding of 38.5 per cent of the ordinary stock of Courtaulds will, of course, be by far the largest single holding in that stock and will clearly have to be taken into account in determining our future relationships with Courtaulds. We hope that these relationships will improve now that this offer to their stockholders has been concluded. In this matter I share fully the earnest hope expressed by Sir John Hanbury-Williams . . . that all concerned will be able to find a sound basis for a new relationship between our two companies.
>
> The next question which naturally arises is what we will do now that we have 38.5 per cent of the Courtaulds ordinary stock? Will we proceed to buy sufficient Courtaulds ordinary stock to bring our holding above 50 per cent? If we do not do this, will we use our voting strength to dominate the affairs of Courtaulds? As you know, a holding of this size when the balance of the ordinary share capital is spread among thousands of other stockholders can, in normal circumstances, give effective control.
>
> I can answer both of these questions. While I cannot, of course, say what might be done by your directors, whoever they may be, in years to come, when circumstances may be different, your directors have no intention in present circumstances of purchasing or selling any Courtaulds ordinary stock. Perhaps I should add that no Courtaulds stock has been purchased during the period of the offer and your company has no holding other than the 38.5 per cent already referred to. Similarly, while they cannot bind themselves or their successors for ever and while they would in no sense regard their holding as a holding of non-voting stock, they would only use their voting power in the spirit set by Sir John Hanbury-Williams in his statement yesterday in the cause of the effective and efficient operation of the Courtaulds business.
>
> Because of our close association with Courtaulds and our joint interests in British Nylon Spinners, this very large holding in Courtaulds ordinary stock could never be regarded simply as an investment.

Mr Chambers's last words can be taken as a model for both sides: "Your directors take the view that it will be better to allow for a period of quiet reflection on both sides before any further action is taken or any further statement made."

THE NEW STOCKS

Dealings will begin next Monday in both the new ICI convertible stock and the Courtaulds loan stock. Courtaulds shareholders, both those who assented to the ICI offer and who therefore will be receiving ICI's convertible stock and those who did not assent and who therefore will be receiving Courtaulds loan stock have been informed. Dealings in the 6½ per cent unsecured convertible loan stock 1972-77, of which £75 million is being issued against Courtaulds shares, will be for special settlement on April 18th. Holders of around 300,000 ordinary shares in Courtaulds have opted for ICI's ordinary shares. Dealings in the Courtaulds 7 per cent unsecured loan stock 1982-87, of which £40 million is being distributed to shareholders from a capitalisation of reserves, will be for special settlement on May 3rd. By these dates shareholders will have received renounceable stock certificates.

A prospect of progress

The developing countries of Latin America offer rewarding prospects especially to the exporter of capital goods. However, expert assistance is vital in dealing with the many formalities which abound. Consult our International Department Representatives. Their advice, based on detailed knowledge of local conditions, will prove invaluable.

Our branches and those of our associates – the Bank of London & Montreal and Balfour, Williamson & Co. – cover the whole of South and Central America. Through them, accurate market information reaches our International Department. The help and information which we are thus able to supply to business and industry includes the following:

Individual market reports
Tariffs and payments
Import and export regulations, including licensing and prior deposits
Names of agents
Transfer of funds
Financing

BUSINESS NOTES

BANK RATE

Low Enough

BANK rate came down from 5½ to 5 per cent on Thursday—the movement that, by error rather than by premonition, last week's issue of *The Economist* recorded for the reduction from 6 per cent a fortnight ago. The gap between these two Bank rate changes is the smallest for thirty years. Greater flexibility in the use of Bank rate is certainly to be welcomed in principle; nor was there any real purpose this year in adhering to the usual disinclination to "anticipate the budget," since ministers themselves have been more than usually forthcoming about anticipating what the general balance of the budget is likely to be—neutral. The Bank of England attributed its previous Bank rate reduction to domestic as well as external influences; and the further slackening in industrial production this week must have confirmed its general view that the economy is no longer in need of active restraint. But the main influence in this second reduction this month has been the firmness with which sterling stood up to the first one.

The Bank of England, one can safely assume, set its aim on getting Bank rate back to 5 per cent almost as soon as it put it up to 7 per cent last summer. By early November, probably earlier than had been hoped, the rate was down to 6 per cent; but further instalments in the new year were checked by official determination to play safe on the exchange market and by fears of foreign bankers' reactions to the sharp rise in government spending. Since such reactions have had virtually no impact in the markets, the Bank has proceeded to bring Bank rate to the level of 5 per cent which, although still high by past standards, has in recent years come to be regarded as the "neutral" point between high and low.

In Britain's present circumstances it is quite low enough. Further reductions would, of course, be needed to bring money market rates in London to the New York and Continental levels, and one need not doubt that the press and the markets will immediately begin talking Bank rate down further on these grounds. But these comparisons are of strictly limited value, since they ignore the fact that interest rates over the vast range of commercial lending are much closer to money market rates in Britain than they are in other countries. Even now, with bank lending rates to prime borrowers at 5½ per cent, London banks are providing finance at an effective cost that is pretty close to the American level, and far below the German level. Differentials such as these have an increasingly important influence on the flow of international funds, through "indirect arbitrage" by large corporations; and interest differentials in the long term market are also increasingly important for the balance of payments. There is reason to believe that an unusually large portion of the recent inflow into London has by-passed the usual money market sources. The authorities are presumably still concerned to lessen the burden of Britain's net exports of capital—last July they sharply stiffened their control on British direct investment overseas to this end. It is this logic which points to the need for Britain remaining, relatively, a high interest rate country—which at 5 per cent Bank rate it is not, except in the limited field of the money market.

THE NEW MONEY RATES

Local authorities	6	5⅞

IN THE MARKETS

High Enough?

THE stock market had been looking forward to another reduction in Bank rate but it had not expected one before the budget. On Thursday morning, however, there was a flurry in short dated gilt-edged stocks, but the gains after the change was announced were not fully held. The fall in equity prices, however, was checked. Earlier, gilt-edged prices had not repeated their previous week's achievement of a strong advance; but they had not fallen back and in a few instances continued to make small gains. In the last few months the gilt-edged market, because it has expected interest rates to come down, has been in good shape; prices have risen strongly but a fair amount of stock has been purchased by institutional investors and as a result of earlier funding sales the tap on the 1982-84s is now believed to be running low.

One reason for the quieter tone in the gilt-edged market this week was the heavy weight of new issues. The offer by Middlesex of £20 million 6¼ per cent stock 1975-77 at 97¼ was allowed to coincide with a £12 million debenture from Dunlop, a £7½ million convertible loan stock from John Summers and a number of smaller issues and placings. The meal proved to be too heavy for the market to digest at once for, although the Dunlop issue was oversubscribed on Thursday morning, 67 per cent of the Middlesex issue had earlier been left with the underwriters. Dealings began at ½ discount but by Thursday's close the price had improved to discount. The failure of the Middlesex loan and of its immediate predecessor, the £10 million offer by the government of Northern Ireland, suggests that there is a close limit to what the institutions, in their double capacity of investors and underwriters, are now prepared to absorb. But this appears to have been more a case of heartburn than of heart failure and the further cut in Bank rate may give the market new encouragement.

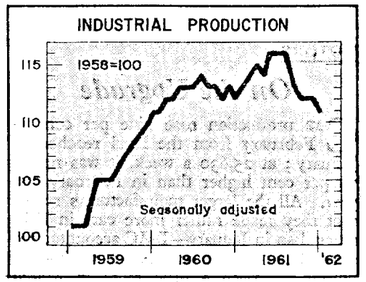
Certainly it had at least the temporary effect of checking a sharp decline in equity prices; but the gains recorded on Thursday afternoon were slight compared with the earlier losses, which had brought *The Economist* indicator down by 8.8 points to 347.9 in the week to Wednesday. Before the Bank rate announcement the equity market had been in a state of tension about the capital gains tax and Lord Ritchie's outburst had added to fears that it might be repressive. The slackness in industrial production, as revealed by the January index, had done nothing to cheer the market.

THE EXCHANGES

Help for the Swiss Franc

IN the foreign exchange markets Thursday's further instalment from the Bank of England came as a distinct surprise, and was followed by active dealings in which sterling dropped by ⅛ to $2.80⅞, with corresponding movements against most Continental currencies. In the afternoon, selling from New York brought the rate below $2.80½. Earlier in the week sterling had held firm at $2.80⅛ in a rather quieter market, in which, however, the official control was observed as being a rather keener taker of dollars at this level. There has been no sign of further outright forward sales of sterling from New York, which had previously prevented the forward discount from narrowing in line with the cut in Bank rate of a fortnight ago. On Thursday the cost of forward swaps again fell by the full interest equivalent of ½ per cent.

The most notable movement in the exchange markets in the past week has been in the Swiss franc, which after having been so embarrassingly strong against sterling and the dollar over the past few years has now been in need of official support itself. The dollar has been showing a firmer trend in Zurich since the beginning of this year. Greater confidence in the immediate prospects of exchange stability and the absence of any large international political disturbance had reduced the inflow of flight money to Switzerland, and this in turn exposed the large deficit in Switzerland's other external transactions. Thus in 1961 its current deficit rose to 600 million Swiss francs and its own capital exports rose to 1,000 million francs; the effect on the reserves was swamped by the inflow of up to 4,000 million francs of foreign funds. In January the deficit in the Swiss balance of merchandise trade rose further, to the very high level of 450 million francs; and at the same time the rapid flow of foreign issues brought further pressure. Thus Denmark converted a recent issue of 60 million Swiss francs into sterling, which the Swiss banks normally obtain through the medium of dollars.



These market movements forces, which had been nudged on at an early stage by the new official intervention by the United States authorities, raised the dollar rate in Switzerland to 4.34 last week, the point at which the National Bank had been expected to intervene. A considerable flurry was caused when it failed to do so—the official limit is only 4.37¼. Last Thursday the central bank stepped in at 4.3430. The amount of support was not large—probably $10 million; and this week, in a quieter market, the Swiss franc has recovered to 4.3360. But this is attributed in part to the making up of balance sheets at the end of the March quarter, and Zurich dealers expect new pressure on the franc in April. Meanwhile last week's movement and discussion of the forces behind it caused a sharp fall in Swiss share prices, for which, even in Switzerland, the journalists were blamed.

THE ECONOMY

Depressing Weather

THE fall of one point in the index of industrial production between December and January was apparently no mere accident of rounding off—as was the reported fall of a point from November to December (which has now disappeared in the revision of the last quarter's figures, showing the index steady at 112). Indeed the index of production in the manufacturing industries fell by two points in January, enough to make one wonder whether the economy is falling back into a decline. But there does not seem to be any clear explanation for the fall; engineering, vehicles and steel were all pretty static, though textiles may have fallen a little. That traditional British topic of the weather seems to be more to blame than any strictly economic factors. The cold and snow hampered building, which had been keeping the index up before; and slippery roads upset transport arrangements—so did iced-up railway points—while the effect of the cold on the underheated British worker was to produce the usual increase in colds and influenza. More invalids mean less production, and this is all the economic message that the January production figures bring.

The March count of unemployment reversed the slight sign of improvement in the previous month. Usually the number of people wholly unemployed may be expected to fall by some 18,000 from February; this year, instead, it rose by a few hundred. Expressed as a percentage of the labour force, the total number out of work on March 12th was 2.0 per cent compared with 1.6 per cent a year before. Perhaps, once again, the weather can be called on as an explanation of the worsening labour situation; it may well have been holding back the usual growth of construction. But the number of situations vacant failed to rise as much as it normally does, suggesting a continued reduction in industry's demand for labour. The static output of the engineering industries after so long a period of growth has removed one pull on the demand side of the labour market.

Spring should be starting with a gentle rise in output—not only as the weather improves, but with increasing car production and the consequent improvement in business for the engineering and steel industries (and, one is assured, better times for chemicals). But this hardly looks enough to produce a stirring rise in industrial activity; the signs of incipient decline in the capital goods industries that have been shown by the new order figures for engineering and construction (though not for machine tools) may, unless checked, be offsetting this improvement by the end of the year. And now most industries have plenty of capacity to spare, a rise in demand does not make them rush into expansion schemes.

OVERSEAS TRADE

Running on the Flat

IN Mr Erroll's estimation all the ingredients for a powerful surge in Britain's exports this year are to hand. The mixture is just obstinately refusing to come to the boil. Unimpressed by the flicker of hesitancy in their economies, the President of the Board of Trade appears to be banking heavily on further growth in American and European markets. He claims that their expansion is already pulling primary producers out of the doldrums. Primary producers take half Britain's exports, so that lurking below a surface calm as a millpond and expansion in exports might be under way. Mr Erroll is prepared to suggest that the overdue expansion in exports might have already been booked. As orders placed in earlier months are completed the overdue expansion in exports will follow. That is an argument that cannot be refuted, but it also cannot be verified satisfactorily from the statistics that are available.

This optimistic view is shared by the Export Council for Europe, whose chairman, Sir William McFadzean, held a press conference on Wednesday to mark publication of a report on the council's National Convention at Eastbourne last November. The council, whose job is to study market opportunities and to urge exporters to take them, evidently senses an almost revolutionary change in the attitude of British exporters during the past year. Trade associations are now helping the council by egging on their members. Small firms are collaborating in joint export promotion. As happened earlier on the continent, the common market is affecting British business life long before any tariff reductions occur or are even agreed.

In the past three months there was little change in seasonally adjusted imports or exports. Exports to the overseas sterling area in December-February fell a further 4½ per cent and exports to western Europe barely increased, but exports to North America improved by 6½ per cent. Within the common market, the rise in exports to Germany, France and Italy was substantial, but was offset by a decline elsewhere in Europe.

Despite the irregularity of imports from month to month there does not appear to have been a decisive change in either direction. Seasonally adjusted imports in the last three months were a little lower than in the previous three, but were still 2 per cent higher than in the third quarter of 1961. A reduction in imports of industrial materials was offset by increased fuel imports. There was no change in imports of foods or finished manufactures.

SOUTH AFRICA

Boost for Kaffirs

GOLD shares provided one of the few bright spots in the markets on Wednesday and Thursday following the announcement by Dr Dönges, the South African Finance Minister, in his budget speech of some relaxation of the restrictions on transfers imposed last June. Since then arbitrage between London and Johannes-

burg has been almost impossible and as a result London prices have stood at a discount of about 25 per cent on prices in South Africa. Now this differential has been reduced to about 17½ per cent as a result of Dr Dönges' proposal that the South African Reserve Bank may buy South African shares in London for approved

financial institutions and sell them to the institutions at the ruling Johannesburg price. The "fortuitous profits" resulting from these transactions will go to a "defence special equipment account." It appears that a limit of £10 million to £15 million will be set on these transactions but it seems unlikely that these limits will be reached; there will be little incentive to the institutions to make additional contributions to South Africa's defence expenditure except in cases where they cannot obtain the required stock in Johannesburg. Nevertheless the fact there is a potential big buyer was sufficient to raise prices in London and to lower them slightly in Johannesburg. But by Thursday afternoon gold shares in London had lost some of their earlier gains.

There is still no prospect of a non-South African resident taking immediate advantage of the Johannesburg prices, but at least the door has been opened slightly. Holders of blocked rands are now invited to subscribe for 5 per cent bonds repayable in five annual instalments and freely transferable in foreign currencies. For these bonds the limit in the current financial year is £10 million with an upper limit of £25 million for later years. These limits could well be tested, for the need to increase defence expenditure by £24 million to £60 million this year is hardly likely to restore the confidence of overseas investors in the Republic's future.

MOTORS

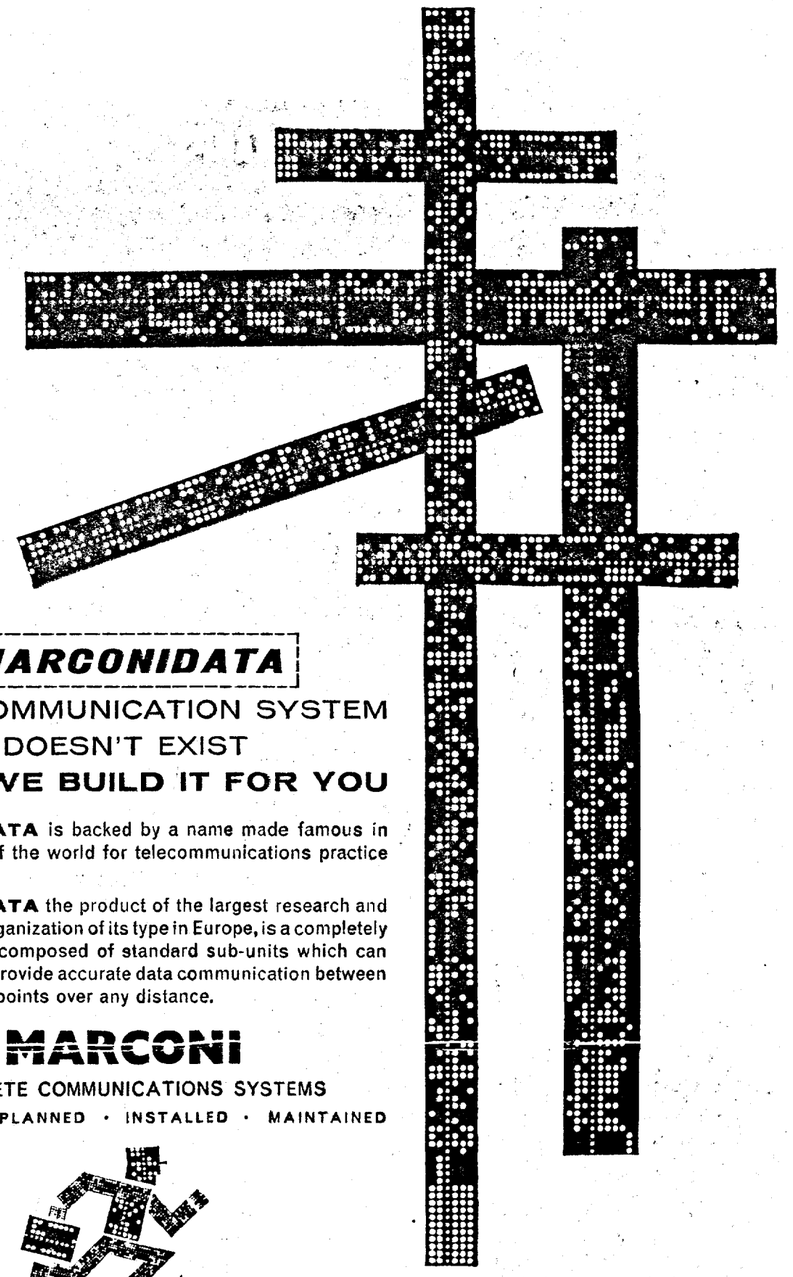
On the Upgrade

CAR production rose nine per cent in February from the level reached in January; at 25,630 a week, it was nearly 70 per cent higher than in February last year. All the larger manufacturers report that they made rather more cars in February than in January—BMC accounted for about half the rise of 2,000 a week—and output has risen a little more in March although home market sales are rather disappointing. Although February's sales of 58,500 were higher than one might have expected—only 1,000 fewer than in January, traditionally a better month for new car sales—there are signs that some potential buyers have held off in hopes, probably mistaken, that the 10 per cent surcharge on purchase tax will be removed in the budget. Makers assume, however, that sales lost this month will be made up in April, and are therefore going ahead with their plans to build up output to meet a home demand as high as last spring's together with higher exports.

Shipments of cars to export markets fell little in February; at 45,789 they were also 70 per cent above the level of last February. The United States continues to account for much of the rise, taking more than 7,000 cars instead of 800; the rest of the increase came mostly from Europe and South Africa. Makers report an encouraging demand for their new models in Europe; Vauxhall says it could export all its output of Victors, and Rootes is having to starve the home market of Super Minxes to try to meet export demand.

Commercial vehicles have not been doing so well as cars this year. Production has been running about 11 per cent below that of last year; exports are down by a third, and home sales by about a seventh. If the demand for vans to be

What Happened to Mr Hammarskjöld



THE Rhodesian government's report on the air crash that killed Mr Hammarskjöld ought to settle all the mysteries, and worse, that were noised around the world at the time of the UN secretary-general's death. He took off in secrecy from Leopoldville on an afternoon in September last year in a Swedish-owned DC 6 chartered to the United Nations, three-quarters of an hour after a more conspicuous departure of a smaller aircraft carrying Lord Lansdowne and a party which was rumoured, deliberately, to include Mr Hammarskjöld himself. Both aircraft were bound for Ndola for a meeting with Mr Tshombe to mediate between him and the Congo government.

Lord Lansdowne, flying a direct route, landed about 8.30 p.m. Shortly after 10 p.m. Mr Hammarskjöld's DC 6 arrived over Ndola, where the runway and approach lights were switched on waiting for it. The pilot reported he could see the lights, checked his altimeter settings with the control tower and flew over the airport towards the radio beacon 2½ miles away to line up his aircraft with the runway. On this bright, clear night he intended to land visually, in preference to using instruments. But at some point during a normal landing procedure, confused perhaps by a small hill that could temporarily have hidden the Ndola approach lights, the pilot flew his aircraft into the ground; its undercarriage was down and its flaps set to give the correct 5 degree angle of descent, but it was many hundreds of feet too low for safety. It is clear from the dying words of Sergeant Julian, the only passenger to survive for a few hours, that he and Mr Hammarskjöld thought that the aircraft as it sheared through the tree-tops had landed on an obstructed runway, and Mr Hammarskjöld shouted for them to "go back."

This type of flying accident is not uncommon, but it is one that a layman finds difficult to accept. Hence the belief that something must have happened to damage, or blow up or shoot down the aircraft. The report of the court of inquiry effectively demonstrates that no such thing happened. Whatever enemies Mr Hammarskjöld may have feared when he insisted on secrecy for his flight, there was absolutely no evidence that any of them had tampered with the aircraft or shot it down. There was no evidence of gunfire, or of explosion other than that caused by bursting fuel tanks, or of any other aircraft in the neighbourhood. There was nothing in the suggestion that the pilot might have confused Ndola with Ndolo, many hundred miles away; he knew he was landing at Ndola and had all the facts about it firmly in his mind, including its height above sea level. He must have misjudged his height at a critical stage during landing in the dark.

The point that will be argued by pilots and ought to be argued by airlines is how a man of great flying experience can make such a fatal, elementary error. His altimeters were properly set after checking with Ndola control and they survived the crash. "We cannot say," reports the inquiry, "whether [the mistake] came about as a result of inattention to altimeters or misreading of altimeters." There are many pilots who will conclude that this accident adds to the long list caused by a pilot misreading that highly confusing instrument, the old-fashioned type of altimeter still used in far too many aircraft belonging to far too many airlines.

Ndola's airport manager is criticised for not searching earlier for the wreckage, although police reported that they saw an explosion during the night and even sent patrols to try and locate it. But his exalted visitors, who with the police and the military had virtually commandeered the airport, had evidently impressed him with Mr Hammarskjöld's idiosyncrasies and at that stage were themselves accepting the likelihood that the Secretary-General had changed his mind about the meeting and flown elsewhere. Had the search started earlier, said the court, Sergeant Julian would have lived, but the Secretary-General was beyond avail.

turned into cars was not still buoyant, production would have fallen more than it has. A check to investment in commercial vehicles at home with the tighter industrial situation—and after years of boom following the removal of purchase tax—seems to explain the fall in demand on the home market; the drop in exports is more surprising and disturbing, suggesting a weakening of the British industry's competitive position.

STEEL

What Freedom?

THE steel industry has a leaning towards a double life. It wants to woo that solid dame, higher prices, at the same time as it flirts with the more adventurous female, competitive fuel supplies. The report of the British Iron and Steel Federation for 1961 reveals these conflicting emotions. Sir Julian Pode, the new president, says of the Iron and Steel Board's recent price increase that it "will do something to improve the year's out-turn: but I cannot find it in me to say more in its favour than that." He then goes on to repeat the industry's call to be free to import American coal. "If coal could be freely imported," he says, "then the landed price of imports would set an independent and realistic standard of costs which all British mines would have to strive to meet and beat in order to hold their market. If Lord Robens's plans for greater efficiency were really to bear fruit, then the presence of such an independent check would have no terrors for him." And Sir Julian assures the Coal Board that the steel industry will continue to look to it for the bulk of its fuel requirements—importing perhaps two million tons a year, enough to cut the average cost of a ton of steel by 3s. 6d. and to take £1 off the costs of one firm (could this be Colvilles?).

What Sir Julian does not say is whether the steel industry would be prepared to abandon its present right to obtain all the fuel it wants from the Coal Board in return for the right to compete with it. If the Coal Board were forced to cut its costs it would have to cut its output; and it might also feel that it could hardly then be expected to supply just whatever coal the steel industry could not import. It might want to be more choosy about what and where it was prepared to sell; the increase in the price of Scottish coal that helped to make the steel industry so bitter about its treatment by the Coal Board is only a foretaste of the sort of pricing that could be expected if the board had a freer commercial hand.

Entry into the European Coal and Steel Community is one possibility that Sir Julian considers strengthens the case for freedom to buy cheap fuel. He believes that the steel industry will be faced with more competition when the ECSC method of setting prices is adopted—which is a basing point system, not a delivered price system. A trial run of this new pricing system should be possible in Britain before the end of the year; the Federation agrees that steel users and producers should have a chance to get used to it before entering the community.

WIDER SHAREOWNERSHIP

The Small Investor

IT is over two years since the Acton Society Trust characterised the small investor as a man earning about £17 a week with nearly £1,000 already invested and hoping to add about £100 a year to his investments. Now the Wider Shareownership Committee in a survey by Dr Mark Abrams on "Savings and Attitudes to Share Owning" has tried to establish more exactly who owns shares and why they own them. The survey, based on a sample of 568 men in the four highest of the six social grades, was designed to establish the differences between those who are shareowners and those who invest their money in other savings media but who do not own shares. The accompanying table has been extracted from the survey; it makes the distinction between "shareowners" and "non-owners" and it shows where people invest their money, where they invest most of their savings and where they would invest a windfall of £500. The survey estimates the number of shareowners at between 3.2 million and 3.6 million but it also suggests that approximately the same number (about 11 per cent of all "non-owners") have more than £500 in long term savings other than shares. Around £500, the survey believes, is the minimum accumulation of savings required before going into share investment. Hence a substantial untapped source of savings is available, given the right sort of inducements, for buying shares.

Against this, however, the survey establishes that younger men are more attracted towards buying shares than older ones; apparently as a person grows older he is increasingly reluctant to try a new method of saving. This exposes a dilemma, for while the "under-forties" are the most willing to invest in shares they are the ones, because of commitments on house mortgages, education and so on, who face the greatest demands on their incomes and therefore have little money left over for saving. The survey in fact found that very few of the men under 35 who were interviewed had large sums of money in long term savings.

As expected the survey found that most shareowners are in the highest social grades and that over half the "upper middle class" group own shares; only 2 per cent of the skilled manual workers group were shareowners, but this means that people in this group make up about 10 per cent of all the shareowners in this country. In absolute numbers there are as many shareowners in the lowest white collar grade as there are in the highest grade. Most shareowners found the principal attraction of shares to be not the yield but what they variously described as "capital gains," "tax-free profits," "making money" or "for the gamble."

Half the men who owned shares valued their holdings at less than £500; 10 per cent had their shares given them and a further 19 per cent had some given them. Only 45 per cent of shareowners and only 14 per cent of "non-owners"—and these were predominantly younger people—would invest a windfall of £500 in shares. But over half the "non-owners" reacted favourably to the idea of a regular share purchasing scheme and about two thirds when the suggestion of a special tax relief on such a scheme was put forward. The survey suggests that there are still strong resistances to investing in shares on grounds of risk and complexity: at least a quarter of "non-owners" had no idea where or how to seek advice about share investment.

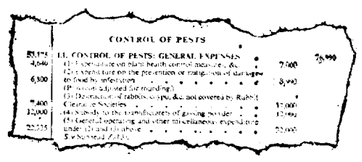
SHIPBUILDING

Close Look at Productivity

It is doubtful if any industry, particularly one engaged in a highly competitive international field, has ever subjected itself to such a highly introspective examination as the British shipbuilding industry has done. Two years ago it set up a committee, under the auspices of the Shipbuilding Conference, the Shipbuilding Employers' Federation, the National Association of Marine Engine-builders and the British Shipbuilding Research Association (now the British Ship Research Association, incorporating shipowners as well as shipbuilders and marine engineers) to "consider ways and means of improving productivity and developing research in the shipbuilding industry." The result has been a report which is quite remarkable in its scope and its implications.

One thing that the report brings out is that, contrary to common misconception, British shipbuilding facilities, on the technical side, are as good as, if not superior to, those of continental shipyards in most respects, even though the latter had the advantage of being rebuilt *de novo*, often on "green field" sites, after wartime destruction, and with "aid" in one form or another. But a capable or efficient shipyard depends on more than equipment. Two essential features are efficiency of labour and of management, and on these the report does not pull its punches. For example "Viewed as going concerns—that is to say as a combination of management, labour and facilities—a small number of the foreign yards visited are considered to be superior to the best of their British counterparts; the least progressive British yards likewise create a less favourable impression than any of the comparable foreign yards."

Behind the whole report is the incentive to discover what are the principal reasons for the generally greater effectiveness in recent years of the Dutch and Scandinavian yards in continuing to attract a high proportion of the orders placed. Eight principal conclusions are drawn:



1. Most of the large firms are highly sales conscious. Too many British firms sit back and wait for inquiries.
2. A much higher annual throughput of steel is obtained.
3. The fast production times achieved abroad are facilitated by rather longer preparatory periods.
4. Efforts are made to ensure greater accuracy at all stages in prefabrication.
5. The flexibility of labour and interchangeability of labour reduce the labour cost of a ship built in a foreign yard.
6. Generally speaking, as much as 70 per cent of the cost of a ship comprises materials or work subcontracted to outside firms. This work and materials (including the cost of steel) can often be obtained more cheaply abroad than in Britain.
7. Much greater efforts are made abroad in the training of apprentices, supervision and management.
8. The identity of purpose which exists between management and labour in shipyards abroad helps productivity.

In its detailed sections of the report, the committee is to be commended on its criticism of managements. An immediate result of this investigation has been the formation of a permanent Production Research Section of the British Ship Research Association, which has been given several specific tasks by the authors of the report. But the future prosperity of a vital industry depends most directly on the chances of removing the blinkers and the earplugs of the overmany trade unions concerned.

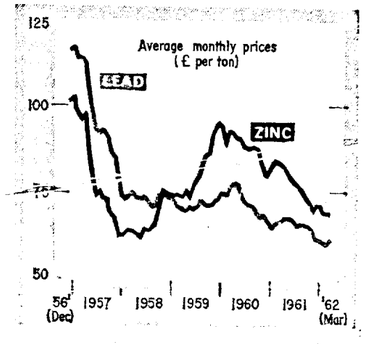
CIVIL ESTIMATES

Half the Size, Twice as Clear

The civil estimates for 1962-63 appeared this week in a new form. This first major overhaul since the Exchequer and Audit Department Act of 1866 follows the recommendations of the Plowden committee, which felt that public expenditure would be brought under better effective control by dropping the traditional comprehensive—and in practice virtually incomprehensible—coverage in favour of a shorter, clearer set of estimates more sensibly aligned to the main forms of expenditure. The estimates now appear as one volume of 543 pages; the corresponding volumes for 1961-62 contained 1,216 pages. Previously the individual classes of votes were bound separately and appeared one after the other over the period of a fortnight. The new volume has had a typographical uplift complete with blacked-up subheads, and the two sets of estimates, for

CONTROL OF PESTS

the year ahead and the current year, are clearly compared. The Treasury has evidently picked up a few tips from company accounts. The cost of dipping into these estimates is now £1 16s. against a total of £4 os. 6d. for all of last year's volumes together.



The new form involves no changes in the actual accounting technique: the Plowden Committee recommended against any change in the present system of voting money for a single budget year. The main substantive change in the new estimates is a pruning of the massive detail of establishments that hampered public understanding and in practice obscured the important items. Each important block of expenditure is now presented as one vote. A valuable addition is an explanation at the end of each estimate of the way in which the total vote is classified in the national income accounts. As a further aid, while the Civil Estimates have been drastically pruned, the summary statement in the Memorandum by the Financial Secretary to the Treasury has been usefully expanded. This provides in 80 pages a comprehensive analysis of the Estimates as a whole.

LEAD AND ZINC

Once Bitten

The meeting of producers in Geneva which ended on Wednesday produced a provisional agreement by "nations representing 70 per cent of the world trade in lead and zinc" to limit production, presumably of both lead and zinc. To instil a little firmness into the lead and zinc markets looks beguilingly simple, but in practice producers have found the task about as easy as attempting to eat an apple on a string with their hands clasped behind their backs. The absence of any sustained recovery in the price of lead since 1956 is a sad commentary on the effectiveness of production curbs and attempts to barter stocks out of existence. The difficulty has been that a loyal few have been left shouldering most of the burden when they could have raised their output and at least obtained the benefit of lower production costs.

But this time the majority's forbearance depends on the minority 30 per cent giving a satisfactory assurance that they will accept similar restrictions. Some producers evidently arrived at the meeting unprepared to make the sacrifice. Time has therefore been allowed for them to go home for consultations and obtain the necessary approval. They have been given until May 28th to make up their minds. A further meeting will be called on that date at which measures to eliminate surpluses and reduce stocks will be considered. Russia has agreed to limit exports of lead in 1962 to last year's level and is prepared to co-operate in strengthening the zinc market. On Thursday lead rose 12s. 6d. to £60⅛ a ton and zinc by 7s. 6d. to £69⅜ a ton.

OIL

A Look at British Demand

In the next eight years, Mr John Davies, managing director of Shell-Mex and BP, suggested in a paper to the Institute of Fuel this week, oil consumption in this country might rise 50 per cent—from 50.6 million to some 76 million tons. The biggest increases, he expected, would take place in the industrial use of fuel oil; excluding use for electricity generation and gas making, consumption should rise from 14¾ million tons to 23¾ million tons—25 per cent of industry's fuel requirements, compared with 21 per cent now. Heating should take twice as much oil—10 million tons—and demand for aircraft fuel should double also. Petrol and oil for cars and lorries will not, however, prove such a fast growing market, Mr Davies believes; though the number of vehicles on the roads should rise from 10 million to 17 million, the amount of fuel that they consume will rise only from 11 million to 16 million tons: the more vehicles there are, the lower their average use.

With this sort of growth in prospect, Mr Davies declared the major companies are not daunted by their present problems in a world where oil is in surplus and the pressure on prices is downwards—"a pressure accentuated from a more sinister source, namely the Soviet which pays no dues to landlords." The majors will not neglect their commitments to keep up exploration, refinery capacity, tanker fleets and research. And despite the incursion of newcomers to the British market taking advantage of the oil surplus to undercut the majors' retail prices, Mr Davies is confident that the existing companies will still dominate the British market scene in 1970. Has this young industry, then, already become completely set in its ways and impregnable against any newcomers?

JASPER GROUP

Sorting Things Out

A principal complaint at last month's meeting of shareholders of the Jasper Group of companies was that they were not given sufficient information about their directors' plans. This is largely remedied by the latest circular from the chairman, Sir Dingwall Bateson. He refutes the suggestion that the directors had sabotaged any overall scheme and points out that the scheme sponsored by Sir Isaac Wolfson fell through largely because there seemed to be little chance of any firm offer for the shares of the outside shareholders in the companies, apart from Rubens-Rembrandt, being made. Sir Dingwall is still hopeful that the present tangle will be unravelled within a year or eighteen months.

The directors' first objective is to pay off the liabilities to the State Building Society; the £2 million of mortgages not in dispute carry very high rates of interest. By further sales of property the directors hope to pay off this liability by the end of the year. Of the further £1 million which was borrowed to buy shares in the Jasper Group they hope to make a settlement at a discount, with the State agreeing to a "phased programme" of repayment.

After the property sales are completed a cash surplus should remain available for the minority shareholders; this surplus largely reflects the rise in property values since 1959. But the surplus on some recent sales has not been as high as expected because inflated "bridging profits" (amounting in all to about £400,000) were taken out before the properties were originally acquired by the various companies. But the directors believe that these "secret" profits and other monies taken from the companies are "still invested somewhere or other within the Jasper Group" and that the final result of "sorting things out" will be that the companies and shareholders will emerge just as well as if an overall scheme had gone through.

For shareholders of the State Building Society the prospect is for further repayments of 4s. in the £ in 1962; this will bring the total distribution up to 12s. in the £. This money arises from the repayment of mortgages. In addition the Society's claims, primarily for the recovery of its money used to buy Lintang shares, have to be settled. This is not likely to occur before the end of this year but once the claims are settled the chairman, Lord Reith, is hopeful that shareholders will "in due course receive at least their money back—20s. in the £—plus some interest."

ATOMIC ENERGY

Lower Spending

Slightly more is to be spent in the coming year on most forms of government research—the Department of Scientific and Industrial Research, for example, will be assisting in the research associations and universities to the extent of £18 million in 1962-63 against £15 million this year. Retrenchment at the Atomic Energy Authority, however, continues. Or does it? Estimates for its civil work in 1962-63 are £10 million down to £68 million compared with a peak figure of £100 million a few years ago. But most of this saving will result, it seems, from running down stocks rather than staff and it is not clear whether the lion's share of the economy amounting to £8 million has been brought about by moving the account for such materials as plutonium from the civil to the military (and secret) side of the AEA's balance sheet.

The Authority might have been able to show even bigger savings but for the need to advance £16½ million, twice as much as in the current year, to uranium producers for not delivering the tonnages of uranium that the AEA is committed under long-term contracts to buy. But it is beginning to earn a significant income from the sales of fuel to the Central Electricity Generating Board—most of the £30 million of sales expected in 1962-63 will represent manufactured fuel against £27 million in the current year. And however the savings are achieved, it must help the Minister for Science considerably in his negotiations with the Treasury to be able to point to some part of his empire where spending is visibly on the decline.

NYLON

New Ways for Old Partners?

A year and a half ago ICI and Courtaulds announced separate plans to make caprolactam. ICI was to build a 15,000 tons a year plant on the Severn and Courtaulds had in mind a plant of 10,000 tons capacity. Last week brought official confirmation of ICI's decision made, it appears, last summer, to postpone its plan "for the time being." Courtaulds has said nothing about their intentions. Caprolactam is the base material of nylon 6. There are many different nylons; nylon 66, made in Britain by ICI under licence from Du Pont, is spun by British Nylon Spinners in which ICI and Courtaulds are partners; in Europe nylon 6 is the leader and in developing this both partners were pursuing separate ways. Courtaulds has a licence to use the Snia Viscosa process which is said to show high yields, cheap raw material and low capital costs. Little is known publicly about the Inventa process which interests ICI; it is in full scale production in Switzerland whereas Viscosa's plant has yet to come on stream. The Italian process has some formidable backing; several million pounds have already been paid by such companies as Allied Chemicals of America and Rhone Poulenc of France for licences.

This rivalry touches on the point where ICI and Courtaulds are in closest contact. British Nylon Spinners is contracted to take its polymer from ICI and is by far its largest customer. Courtaulds could supply BNS with nylon only if ICI agreed and is precluded from spinning nylon itself by the terms under which BNS was set up. Nylon is an expensive plastic and while it is acceptable at a high price in its most important outlet in textiles, the expansion of nylon sales significantly into other markets—for instance moulding—would demand lower prices; these would be likely to result from increased competition between different nylons and different methods of making them. Some processes of making caprolactam give up to five tons of ammonium sulphate per ton of caprolactam as a by-product. Other processes that produce

less ammonium sulphate may become more attractive as lower prices affect fertilisers.

There are nylon troubles of a different sort in British Nylon Spinners' results for the year to December 31, 1961. The fall in demand for nylon goods, as for other textiles, persisted into the beginning of 1961 and combined with a continued fall in prices to reduce the trading profit of BNS to £9.4 million, compared with £11.5 million in 1960 and £10.5 million in 1959. The ratio of net profit after taxation to net assets fell from 14 per cent in 1960 to 11 per cent last year. The intriguing item "loans to members" has been reduced by £1.4 million to £3.2 million—all that remains of the £8 million that BNS lent free of interest to its joint owners in 1958.

TIN

Beyond Control

SINCE no-one knows precisely when, at what price, nor perhaps whether, the United States will unlock its tin chest and relieve the world's shortage of the metal, people in need of it have been forced into a game of economic brinkmanship in which stakes are fairly substantial. When disposal of part of America's superfluous tin stockpile was first mooted in September, tin dived £37½ to £935½ a ton. If prices now soar, manufacturers will hope to eke out their stocks of tin, bought at comparatively low prices, until the shortage is relieved, but though there is no immediate shortage they are afraid of getting caught in a squeeze that will intensify should releases of American tin be delayed. This week, the absence of public hearings on American stockpiles by the United States Senate and an announcement that President Kennedy might make a statement about them added to the uncertainties.

Release mechanisms usually prove sticky and are inclined to be treacherous. There is no chance of disposals before the summer, but also no guarantee that they will not give the market indigestion when they are made. Following a period in which consumption appears to have been unexpectedly low, spot tin stayed docilely in the region of £950 a ton from the beginning of December to the end of February. But since then, the seasonal rise in consumption seems to have unsteadied buyers' nerves. Three months' tin shot up to £973 and has remained defiantly above the international tin council's new price ceiling of £965 a ton.

Producers and consumers argued long and loud before setting the upper limit of the international price stabilisation range at £965 when £970 appeared a more logical choice. But the international agreement has now entered properly into force with Bolivia's tardy ratification and is designed to last until 1966. Consumers are naturally reluctant to commit themselves to prices which appear historically high, but a top limit of £965 a ton has no particular merit and, at present, no means of enforcement, although the prospect of stockpile releases makes buyers wary above this price.

At current prices it seems impossible for disposals of American tin to be made through the international tin council even if the United States fulfils its tentative promise to become a member. It might however observe a minimum reserve price of £965 at tenders, or more logically a minimum of £910 a ton at which the ITC's buffer stock manager is empowered to sell any tin he has available as and when he feels fit. However, producers see the £965 ceiling as a floor. They expect shortages to keep prices around that level and they hope that the United States will not sell tin below it. This year production of tin has got off to a good start with output in Malaya very much higher than a year earlier, and far above the average for the whole of the year. After declining persistently since the nationalisation of the mines in 1952, an increase is promised in Bolivia's output in the second half of the year.

HONGKONG-SHANGHAI BANK

Asian Survey

THE Hongkong and Shanghai Banking Corporation is still a power in the East; its influence runs from Japan to the Eastern Mediterranean. Sir Michael Turner's annual review, his last after nine years as chairman of the bank, again provides a valuable survey of Asian economies. Sir Michael finds that encouraging progress has been made, but he feels that development plans give insufficient attention to "closer co-operation on a regional basis." In practice, unfortunately, countries that need to keep their development engines at full steam merely to keep pace with increasing population tend to have little time for regional co-operation.

Hongkong itself is worried by the national and international agreements that are limiting its cotton textile exports. Last year the Colony's imports from Britain were over £47 million while its exports to Britain were only £38 million. Exports as a whole doubled in the four years to the end of 1960; but they rose only fractionally in 1961. To counter these trends Sir Michael says that Hongkong must diversify its industries and find new markets. A rapidly growing population of over three million, 40 per cent of which is under the age of 15, adds urgency to the problem. Unlike other Asian economies Hongkong has no shortage of investment capital; what is now needed, says Sir Michael, is new techniques and know how.

The bank has its ear close to China and Sir Michael describes the sequence of natural calamities of the past three years that have necessitated the purchase of grain and flour from Australia and Canada. These setbacks have resulted in a "reappraisal of past internal policies" and Sir Michael expects that in the future "sounder practices and planning" will produce "slower and more balanced growth" in China's economy.

SHORTER NOTES

Following the disagreement over export tonnages, the International Sugar Council has decided that articles in the international agreement regulating trade in sugar are inoperative for the time being. Consumers are therefore free to import from non-member producers without restriction. However, the council has raised its estimate of the free market's minimum net import requirements in 1962 by 530,000 to 11.8 million metric tons and believes that taking all factors into account, supplies offered on the market will be reasonably balanced by demand.

★

The bill empowering Britain to meet its contingent lending commitment to the International Monetary Fund under the new scheme was given an unopposed second reading in the House of Commons on Wednesday.

★

Stewarts and Lloyds has sold the unused tube-making machinery from its Shotton plant to Page Hersey Tubes of Toronto. The equipment will be installed at Camrose, Alberta. Stewarts and Lloyds decided to build this plant in 1957 and it was completed, at a cost of £3½ million, in 1960; but the demand for pipe has never justified starting production.

★

Town and City Properties has acquired three property investment groups in Central London, Birmingham and Manchester, each on a share exchange basis. The Central London group comprising City Properties (Cannon Street) and Archway Developments (Holborn) will be acquired in exchange for 240,000 2s. ordinary and 1,200,000 2s. deferred ordinary shares in Town and City, which has entered into building agreements with the British Transport Commission to develop sites at Cannon Street and Waterloo Stations.

COMPANY MEETINGS

THE HONGKONG AND SHANGHAI BANKING CORPORATION

REPORT OF THE PROCEEDINGS AT THE ORDINARY GENERAL MEETING HELD IN HONGKONG ON 16th MARCH, 1962

A SATISFACTORY YEAR BY ALL MEMBERS OF THE GROUP

SIR MICHAEL TURNER'S REVIEW OF WIDESPREAD INTERESTS

The Ordinary Yearly General Meeting of The Hongkong and Shanghai Banking Corporation was held on March 16, 1962 at the City Hall, Victoria, Hongkong, Sir Michael Turner, C.B.E., the Chairman, presided.

The Chairman read the notice convening the meeting and the representative of the Auditors read their Report.

The CHAIRMAN then said:

Ladies and Gentlemen,

It is thirty-one years since an Annual General Meeting of the Bank has been held in the City Hall and I am sure that those of you who remember the old City Hall will agree that the new one is a vast improvement.

As you will see from the Accounts before you, the profit for the year amounted to $43,315,459 (£2,700,000) an increase of $1,125,399 (£70,000) over the previous year. This figure includes the dividends paid by Mercantile Bank Limited and The British Bank of the Middle East and, in accordance with normal banking practice, the profit has been arrived at after making transfers to the credit of our inner reserves, out of which full provision has been made for the depreciation in the value of our investments and for all known doubtful debts and contingencies.

It is proposed that a sum of $5 million (£312,000) should be written off Bank Premises. After allowing for this provision and the interim dividend of 5s. per share your directors recommend the payment of a final dividend of 10s. per share which, on the shares outstanding at December 31, 1961, amounts to $25,400,596 (£1,581,000) leaving a balance of $2,340,534 (£146,000) to be carried forward.

CONSOLIDATED BALANCE SHEET

Turning to the Group Consolidated Balance Sheet, which shows the overall position of the Bank and all its Subsidiary Companies, you will note that the total now exceeds £478 million, an increase of £33 million over 1960. A list of the main Subsidiary Companies is shown in the booklet in your hands. At the Annual General Meeting of The British Bank of the Middle East held on March 13th, it was decided to increase the issued capital to £2,500,000 by the capitalisation of £500,000 from the Share Premium Account and the Reserves and to transfer £400,000 to Reserve Account from that Bank's Inner Reserves. This raises the issued Capital to a figure more appropriate to the standing of the Bank in the countries in which it operates.

Sir Michael Turner, CBE

Hong Kong currency notes in circulation increased by $32 million (£2 million) due to a rise in the excess note issue and this increase is reflected on the other side of the Balance Sheet by a similar increase in Hong Kong Government Certificates of Indebtedness. Current Deposit and Other Accounts have increased by $500 million (£31,250,000).

When we turn to the Assets side of the Balance Sheet we find that Cash in Hand has increased by $24 million (£1,500,000) while Money at Call and Short Notice and Investments have decreased by $15 million (£937,000) and $4 million (£250,000) respectively. British and Other Government Treasury Bills have fallen by $177 million (£11,062,000) but Trade Bills Discounted have increased by $196 million (£12,250,000) and Advances are $461 million (£28,812,000) higher, a satisfactory indication that we are playing our part in meeting the ever growing demand for finance by commerce and industry. This has naturally affected the Liquidity Ratio of the Group which now stands at 33.90 per cent. You will note that the Balance Sheet of Wayfoong Finance Limited appears among our Accounts for the first time. This company has had a satisfactory year and the profits earned have been retained to build up reserves.

On the whole, all members of the Group have had a satisfactory year and profits have been maintained. The dividend paid to shareholders in 1953, when I assumed office as Chief Manager, was £5 per share. Since then there have been two free scrip issues and this year's dividend of 15s. per new HK$25 share is equivalent to a dividend of £9 7s. 6d. on the old HK$125 shares. Also to be taken into consideration is the fact that shareholders have been relieved from the Reserve Liability, while the market value of our shares has increased by approximately 2½ times. I think you will agree that shareholders' interests have not been neglected.

The changes in the Board of Directors during the year are shown in the Report which is in your hands. Mr. S. W. P. Perry-Aldworth, Senior London Manager, retired at the end of last year and has been succeeded by Mr. G. O. W. Stewart, formerly Deputy Chief Manager here in Hong Kong, who was also appointed Deputy Chairman of the London Committee.

We, in partnership with S. Japhet & Co. Ltd., the well known London merchant bankers, and

National and Grindleys Bank Ltd., have formed a new company in London. Exporters' Refinance Corporation, Ltd., to provide longer term finance for exporters than can usually be obtained from commercial banks. The Authorised Capital of this company is £1 million and arrangements have been made to obtain additional finance from the joint stock banks in London.

NEW OFFICES

Last year we opened eight new offices here in the Colony and started a mobile bank, based on our Tsuen Wan Office, which operates in the New Territories. We have also opened new offices at Beaufort in North Borneo and at Petaling Jaya, near Kuala Lumpur, in the Federation of Malaya, where Mercantile Bank Limited have opened new offices in Bentong and Mentakab. The British Bank of the Middle East have opened their fifth office in Kuwait, but their two branches in Syria have been nationalised. Two branches of their subsidiary, The British Bank of the Middle East (Morocco) S.A., were opened in Casablanca.

Many of you are aware that I am leaving Hong Kong today on retirement and my wife and I are very sad at the prospect of leaving the Colony and all of our many friends, but we look forward to seeing them all again when we return for the centenary of the Bank in 1965. During my tenure of office as Chief Manager I have been most loyally and steadfastly supported by the Staff, from the senior managers down to the most junior local employee, to all of whom I am most deeply indebted. I am certain that there are few concerns today in which staff relations are as good as in ours and my thanks, and those of shareholders, are due to the Branch Managers of the Group and to the Staff of all nationalities for their continued loyalty and efficient service.

I have no hesitation in commending to you my successor as Chief Manager, Mr J. A. H. Saunders, who is well known to many of you. I have no doubt at all that he will serve the Bank well.

Ladies and Gentlemen,

The Report and Statement of Accounts having been in your hands for the required period I will now formally propose their adoption as presented.

After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions on the motion before you which shareholders may wish to ask."

THE HON. DHUN RUTTONJEE'S REMARKS

The Hon. Dhun Ruttonjee, in seconding, said:

"Mr Chairman, Ladies and Gentlemen,

I am deeply conscious of the honour and privilege that is accorded to me in seconding the principal resolution from the Chair at the Annual General Meeting of this Bank. But it is with mixed feelings that I address you; pleasure that my family should again be associated with the Bank in this manner and sadness since it is the last time that Sir Michael will deliver the Chairman's Speech.

I feel that I may, with pardonable pride, refer to the part which my compatriots, the Parsee community, played in founding the Bank. At that time the Parsees formed a substantial proportion of the mercantile population of Hong Kong and the lists of the first shareholders and of the first depositors of the Bank include the names of most, if not all, of the Parsee merchants in the Colony. The Provisional Committee and the first Court of Directors included the names of two of the leading Parsees, thus illustrating the unity of the mercantile community in the founding of a bank of their own and the broad international character on which the Bank was so solidly based.

Twelve years ago, my late father also had the privilege of seconding the Chairman's Speech. At that time, the economic and political disorders throughout the world, and more particularly on our own doorstep, seemed to give little cause for optimism. The same can be said of conditions today, but I firmly believe that in ten years' time progress will be found to have been as marked as it has been during the last decade.

It is nine years since Sir Michael stepped into the august shoes of his predecessor and during the period he has been Chief Manager Hong Kong has undergone the most fundamental change in its history, having passed from an entrepôt to an industrial economy. Our textile industry was only in its infancy in 1953 but it is now regarded with concern by the industrial west. Other products are being made today which would have been considered beyond our capabilities at that time. An indication of the progress that has been made can be seen from the fact that in 1953 exports of Hong Kong made products at $636 millions represented about 22 per cent of our total exports, compared with $2,939 millions, or about 75 per cent of our total exports last year, a phenomenal increase and one which I do not consider would have been possible without an enlightened and farsighted banking policy, reciprocating that faith and trust which the individual places in the bank. How many international bankers a decade ago would have financed our industry in the manner that this Bank did, leading the way in Hong Kong and setting the pace for our other banks? Not many I think.

TRIBUTE TO SIR MICHAEL

The credit for the financial foundation of Hong Kong's industry and continued prosperity of its trade must go in great measure to Sir Michael, who seized opportunities that would have deterred lesser men. He has guided and directed our financial affairs with great skill, determination, foresight and boldness. At the same time he has expanded the interests of our Bank into new banking fields, particularly in the Middle East. In all he has achieved, he has acted in the tradition of his two most brilliant predecessors, Sir Thomas Jackson and Sir Arthur Morse. When the history of the Bank comes to be written, these three gentlemen will occupy a most prominent place, each for a different reason and each having written a legend of his own.

Sir Michael's interests are many and varied and he has played a leading part in so many of the Colony's charitable and social activities that it is always a source of astonishment to me how he has found the time to do all he has done. But this is not the time or the place to dwell upon those activities. His departure from the Colony will leave a void which nobody will ever be able to fill in quite the same manner. In commending to us as your successor, Mr J. A. H. Saunders, however, we are confident, Sir, if I may say so, that you could not have chosen a more promising or able gentleman, who is well known to us all for his keenness of mind, charm and understanding of Hong Kong's problems.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hongkong with Limited Liability)

SUMMARISED GROUP CONSOLIDATED BALANCE SHEET

Liabilities	1960 Sterling	1961 Equivalent
Issued Capital and Reserves	£ 20,100,000	£ 20,100,000
Hongkong Currency Notes in Circulation	52,400,000	54,400,000
Current Deposit and other accounts, etc.	370,400,000	401,700,000

Fixed Assets	2,900,000	3,100,000
	£445,000,000	£478,700,000

To him go our best wishes and support for the onerous and responsible task which lies ahead of him.

Finally, Sir, I would like to convey a measure of our appreciation of the part that Lady Turner has played by your side in the life of the bank and the Colony. I can think of no more fitting partner for you or one who has such a warm place in all our hearts. I am sure that shareholders will wish to join me in extending to you both our very best wishes for a long and happy retirement.

In conclusion, I know that shareholders would want me to endorse the Chairman's tribute to the Staff.

Mr Chairman, Ladies and Gentlemen,

I now formally second the adoption of the Report and Statement of Accounts as presented."

There being no questions, the motion that the Report and Accounts be adopted as presented was put to the meeting and was carried unanimously.

The retiring Directors, Mr G. T. Tagg, Mr L. Kadoorie and The Hon. W. C. G. Knowles were unanimously re-elected.

Messrs Lowe, Bingham & Matthews and Messrs Peat, Marwick, Mitchell & Co., were unanimously re-appointed Auditors at a fee of $60,000 each.

CHAIRMAN'S STATEMENT

The following is the Statement by the Chairman:

The course of relations between the western nations and the Soviet Union during the past year gives us little hope for anything more than a possible lessening of tension in the year ahead. If the resumption of nuclear tests on a large scale by the Soviet Union, in complete disregard of world opinion, was intended to intimidate the western powers and to overawe the uncommitted countries, it failed, because it has in fact strengthened the resolve amongst the nations not to give in to pressure of this nature over such outstanding problems as Berlin. In Africa some progress has been made in restoring order in the Congo, while there has been renewed tension in the Middle East where the threat to the independence of Kuwait has been averted for the time being. In Asia there is hope for a peaceful solution to the New Guinea question and although the civil war in Laos has been halted for considerable periods, during the protracted negotiations to establish a neutral coalition government, greatly increased communist activity in South Vietnam is a grave danger to the stability of that area. The acceptance by the governments of the United Kingdom and Malaya that the concept of Greater Malaysia was a desirable objective and the formal establishment of the Association of Southeast Asian States of Malaya, the Philippines and Thailand were two notable constructive advances, both of which should contribute considerably to the development of Southeast Asia.

In the economic sphere, one of the most important developments has been the decision of the United Kingdom to apply to join the European Economic Community. Negotiations, which may well be protracted, are being conducted regarding the conditions under which the United Kingdom will be admitted, with particular reference to the extent to which associate member status may be accorded to Commonwealth countries. Whatever may eventually be decided upon, it seems certain that if Britain does join, Commonwealth trade with Europe, particularly in manufactured goods, will be adversely affected unless some exemptions for traditional exports to the United Kingdom market can be arranged. The economies of western European countries have continued to expand, although at a slower pace than in 1960, and further impetus to this trend will be given by the decision of the members of the Organisation for European Co-operation and Development to set a target of a 50 per cent growth over the next ten years. In the United States there was a recovery in the economy during the second half of the year, but the deficit in the international balance of payments and the loss of gold persisted. The growing strength of the European Economic Community has led the American administration to propose that a change in trading policy will be necessary, if the United States is to participate effectively in this expanding market, and that the Reciprocal Trade Act, which expires this year, should be replaced by legislation which would give the government wider powers to negotiate on tariff changes. The United Kingdom, unfortunately, was beset by economic difficulties during the year which followed an all too familiar pattern; an increasing pressure of home demand on production, costs rising proportionately faster than productivity and a continuing decline in Britain's share of world exports, contributing to a deterioration in the balance of payments. The re-valuation of the German mark and of the Dutch guilder a year ago set in motion a wave of speculation which caused a flow of funds from the United Kingdom, and also from the United States, and although this was mitigated to some extent in the case of the United Kingdom by the action of the European central banks in extending assistance, it was not enough to reverse the trend. In July it became necessary to raise the bank rate to 7 per cent and to impose various measures to reduce consumption and government spending, while massive aid was received from the International Monetary Fund. These measures have had the desired short term effect but there is, as yet, little indication of any progress having been made in formulating plans for the more fundamental changes in Britain's economy which will be necessary if any lasting improvement is to be achieved. The agreement reached at the end of last year to increase the potential resources of the International Monetary Fund by some US$6,000 million, through a system of supplementary credits to be granted by the ten principal industrial countries, should, when ratified by the governments concerned, prove to be a deterrent in the future to large-scale speculative operations against the major currencies of the free world.

A further decline in the price levels of many primary products, coupled with the increased cost of many types of manufactured goods from the industrialised countries, has affected the terms of trade of a number of countries in Asia, while in Japan, a temporary balance of payments problem has arisen caused, to some extent, by the too rapid growth of industrial activity. Industrial production in Asia has, however, continued to rise. This situation has emphasised once again the desirability of devising some means of avoiding excessive variations in commodity prices and of providing markets for the less developed countries, in order to gain for the recipients the full benefits of the aid that has been given in various ways. It is, unfortunately, all too easy for these sentiments to be expressed at such gatherings as ministerial meetings of the Colombo Plan and the General Agreement on Tariffs and Trade held last year, but putting them into practice is an exceedingly difficult problem to which there is no easy solution.

HONG KONG

Last November Hong Kong had the honour of welcoming Her Royal Highness, Princess Alexandria, for an all too short stay during her far-eastern tour. Although her visit was mainly in connection with the golden jubilee celebrations of our University, she carried out a very crowded programme during which she saw many facets of the Colony's activities and met a large number of people. The warm welcome she received from the crowds which gathered wherever she went was a spontaneous testimony to the pleasure her visit gave to the people of Hong Kong.

Considerable progress was made last year in general development in the Colony, but after the rapid increase in our trade over the last few years it was disappointing, but not entirely unexpected, that the total value was only fractionally higher than in 1960. Since the value of locally made exports has more than doubled in the last four years a pause sooner or later was, I suppose, inevitable and while we may perhaps do as well again this year, there have been a number of developments which cause grave concern to our manufacturers and exporters. I refer, of course, to the application of the United Kingdom to join the European Economic Community; to the International Cotton Textile Agreements drawn up at Geneva; to the proposed United States levy on imports of cotton textiles and to the extension of the voluntary limitation of certain exports to Britain until the end of this year. It is not yet clear what the full effects of all these measures will be but I have every confidence that our industrialists will meet, and solve, the problems that lie ahead with the resourcefulness and resilience that they have shown in the past, provided that our exports are allowed to expand at an orderly but steady rate. We shall certainly extend what assistance we can.

The need to diversify our industries and to find new markets for our products has been stressed on many occasions and this has now become more pressing, both because of the developments to which I have already referred and also because of the implications of the results of the census which was held last year. This reveals that out of a population of more than three millions, 40 per cent are under the age of fifteen and that the natural rate of increase is over 3 per cent per year, without taking into account the unrecorded immigrants from China. Although there is a temporary shortage of workers in the seventeen to twenty year age group, this will soon vanish and the magnitude of the problem may best be illustrated by the estimate that in the next ten years 800,000 new workers will expect to find employment. To help in dealing with some of these urgent problems various steps have been taken with the aim of protecting the Colony's existing trade and of encouraging expansion in areas where this may be possible. A Cotton Advisory Board was established last year to advise the government on all matters relating to the cotton industry, upon which the major portion of our trade at present depends, while a trade mission visiting Australia and Hong Kong participated in the Sydney trade fair. This year the Colony will be represented at the trade fair in Lagos and consideration is being given to sending trade missions to other areas. The report of the Economist Intelligence Unit on Hong Kong's economy, which was sponsored by ourselves and some other interested parties, is expected soon and it will no doubt contain many valuable

recommendations to guide the future policies of our industrialists.

The competition among the many banks now operating in the Colony resulted in increasingly high rates of interest being offered for funds placed on deposit and this in turn forced up the rates charged for advances. I think that few would disagree with the view that the lower lending rates are the better for trade and industry, and it was a welcome achievement that an agreement was reached by a majority of banks on maximum rates of interest to be allowed on deposits, thus stabilising the rates charged to borrowers. Large sums of money were subscribed to new issues of shares in well known Hong Kong companies, the Jardine, Matheson & Co. Ltd. issue being over-subscribed 56 times, and this put a severe strain on the resources of some of the smaller banks, one of which we had to assist to a very considerable extent. It has been evident for some time that the very limited supervision that is now exercised over banks is inadequate under present conditions, and we welcome the appointment of a senior Bank of England official to advise on legislation for the control of banking operations in the Colony. It is encouraging to note that the banking habit is becoming more widespread in Hong Kong and we have found that greater use is being made of the facilities offered by our network of sixteen branches in the Colony.

The building boom, which has been such a feature of the Hong Kong scene for some years now, continued unabated and the demand for business premises and housing in the private sector seems to be insatiable. Although the estimated investment in new construction last year was less than in 1960, it was still considerable and a visible expression of confidence in the continued prosperity of Hong Kong. There has been a considerable and welcome increase in plans for the construction of flatted factories and I hope that this will lead to the stabilising of rents charged to small industries.

A relatively recent factor in the evolution of our economy has been the collaboration between Chinese industrialists and those of other countries in setting up new factories here. There is a need for new techniques and "know how" rather than the investment of capital, of which there is no shortage, and it is a matter for regret that British manufacturers have so far shown so little interest in taking advantage of what Hong Kong has to offer in this respect.

Hong Kong's trade last year increased by about 1 per cent compared with 1960, the total value amounting to HK$9,900 million with imports at HK$5,970 million and exports at HK$3,930 million. Imports from China, Japan and Pakistan declined but those from other main suppliers increased. Exports to the United States, which remains our largest market, were 13 per cent lower than in 1960 but those to other countries were higher and although Indonesian purchases of Hong Kong products were more than double those for the previous year, there is some concern as to our future prospects in this market. Those in Britain who criticise Hong Kong should take note of the fact that last year the value of the Colony's imports from the United Kingdom was over £47 million, while our exports to the United Kingdom were only about £38 million.

The number of tourists visiting Hong Kong last year increased by 35 per cent compared with 1960 and there is no doubt that the tourist industry is making an increasingly valuable contribution to the Colony's business and to our balance of payments. To encourage even more tourists to visit Hong Kong in the future, a number of new hotels are under construction which will add another 3,000 bedrooms to those already available. A fine new terminal building at the airport will be completed in the near future and plans for a new terminal for ocean shipping are well advanced.

The financial position of the Colony continues to be very satisfactory and the Financial Secretary estimates that there will be a surplus of at least $21 million, and possibly up to $50 million, in the financial year now ending instead of the original estimated deficit of $161 million. In the financial year 1962-63 estimates for revenue, at current rates of taxation and expenditure are $1,058 million and $1,226 million respectively, leaving an estimated deficit of $168 million. Minor changes in indirect taxation are expected to yield $5 million, while the government lottery, which is to be started this summer, is expected to yield $2 million to be spent on social welfare projects. A review of our present system of direct taxation is to be undertaken this year.

The Financial Secretary forecast that total capital expenditure over the next five financial years to 1967 would exceed present sources of revenue by about $550 million and that the general aim would be to cover half the estimated deficit by taxation and half by borrowing. Legislation is being prepared to enable a short to medium term loan of up to $100 million to be raised, while it is proposed that the current deficit in the Development Loan Fund should be covered by utilising the excess funds which have accumulated in the Exchange Fund. It is encouraging to learn that the economic commission from the World Bank which visited the Colony last year indicated that it would be willing to consider lending to Hong Kong for sound projects if public capital requirements should prove to be beyond the Colony's capacities for financing from revenue, domestic and other external borrowing and a reasonable use of other government resources.

CHINA

Accurate statistics are not available, but it seems unlikely that agricultural production last year, particularly of food grains, was very much higher than in 1960. Floods and drought in various areas have again done much damage to crops and although the total output of food grains, which is claimed to be about 160 million tons, is estimated to be adequate, despite the soaring increase in population, there would appear to be no margin available to replenish the reserve stocks which have become depleted as a result of the poor harvests of the last three years. The purchases of grain and flour from Canada, Australia and other sources last year, amounting to over five and a half million tons, represents only a small increment in per capita consumption for China's millions and it is probable that this supply was retained in the major cities thus easing the pressure upon the transport system. With no improvement in the food situation to report and the embarrassing cutback in industrial development and production to explain away, it is understandable why the usual public meeting of the National Peoples' Congress was not held last year. It has been customary on these occasions for production statistics for the previous year, and targets for the current year, to be announced and it will therefore be interesting to see what transpires at this year's meeting, which is due to be held in a few days time. Such information as is available, however, would seem to indicate that heavy industry at any rate has fulfilled many of the targets set for it and is undergoing a period of consolidation, the only expansion being in the tractor and chemical fertiliser sectors in implementation of the government's desire to aid agriculture.

In the longer view, the setbacks of the last three years have resulted in a reappraisal of past internal policies and a realisation that, in spite of all that was achieved in the "Great Leap Forward" in 1958, too much was attempted in too short a period and that financial and other rewards are necessary as well as ideologies, in order to produce results. These factors should lead to sounder practices and planning in the future resulting in a slower and more balanced growth in the development of China's economy. One aspect of this has been the open acceptance of the hitherto "reactionary" view that the acquisition of technical and scientific knowledge is as important as Marxist theory or political education. Greater reliance is now being placed on experts and on capable administrators, than on doctrinaire theorists as has been the practice in the past, and this has been commented on particularly by those who have had recent business dealings with representatives of the Chinese trading corporations.

The ideological dispute with Russia continued throughout the year with increasing bitterness and although the political consequences of this are still obscure, there is little doubt that economic pressure has been brought to bear on China, one aspect of which was the withdrawal of technical aid in 1960. Direct financial aid seems also to have been discontinued although Russia did agree that China's accumulated trade deficit of some US$320 million could be repaid in instalments over five years. In consequence, there are indications in last year's trade agreement that Russia's exports to, and her imports from, China would be roughly in balance and the volume of trade is likely to be appreciably lower than in 1960. It seems probable too that the major reduction in Russian exports will prove to have been in heavy capital equipment and machinery, but this should not affect China greatly at present provided, of course, that spare parts can be obtained, since there is an intentional slowdown in the rate of industrial expansion necessitated by her economic difficulties. While too much should not be made of this rift, the lessening of China's dependence on the Soviet Union could lead to the improvement of commercial relations with western countries and with Japan, but any marked expansion in trade is unlikely for the time being. There was in fact a sharp decline in imports from Western Europe last year and it is clear that China's reduced export potential and her need to conserve foreign exchange to pay for her food purchases, for which purpose appreciable quantities of silver and some gold were sold abroad, will be limiting factors for at least another two years.

The drive to initiate and improve diplomatic and trade relations with other countries has been continued, notwithstanding internal economic difficulties, but China's external relations with the non-communist world continue to be dominated by deep and persistent hostility towards the United States of America. Trade agreements have been concluded with Indonesia, Nepal, Ceylon, East Germany, Poland and a number of countries in Africa, while a trade mission was sent to South America. Towards the end of the year there was a further deterioration in the border dispute with India, making the possibility of a negotiated settlement of this issue even more remote.

JAPAN

A much calmer atmosphere prevailed in the political sphere last year than in 1960. The

government were, however, subjected to some strong criticism on account of their financial and economic policies which, it was feared, would lead to a degree of inflation and particularly over the budget for 1962, which is 24 per cent larger than that for the previous financial year. In July the Prime Minister re-formed his cabinet to include four leaders of factions within the Liberal-Democratic party and this move was generally welcomed. While there are hopes that settlement of the long standing differences with South Korea may be reached fairly soon, leading to the restoration of normal relations between the two countries, there is again no progress to report on any resumption of official relations with China although there has been an increase in the volume of trade.

The government's plan to double the national income in ten years, rising domestic consumption and the desire to meet foreign competition expected to result from the liberalisation of imports programme, stimulated an intensive investment in industrial expansion. Expenditure on imports, particularly of raw materials and machinery, increased by nearly 30 per cent compared with 1960, while the value of exports increased by under 5 per cent, resulting in an adverse visible trade balance of over US$900 million although the foreign exchange reserves declined by only about US$330 million due to other factors. The disappointing export performance has been partly due to a larger volume of consumer goods being directed to the more profitable home market, but there has also been a sharp fall in shipments to the United States and a reduction of American aid spending in Japan as part of the defence of the dollar programme initiated at the end of 1960. To strengthen the reserves arrangements were made to borrow US$325 million from American sources and the International Monetary Fund has authorised stand-by credit facilities of US$305 million for one year. There was considerable disappointment that the first meeting of the Joint Committee of Trade and Economic Affairs, attended by a high level American mission led by the Secretary of State, failed to agree to any measures which would enable Japan to balance her trade with the United States, or to reverse the policy on military and economic aid purchases. An increase of nearly 8 per cent in the quota of cotton textile exports to the United States has been agreed for this year, but the effect of this will be reduced if the proposed levy on the cotton content of textile imports is implemented. A satisfactory agreement was, however, reached regarding the repayment of Japan's postwar debt to the United States at a figure considerably lower than had at first been demanded.

The authorities were reluctant to resort to drastic deflationary measures to halt the decline in the balance of payments, which they regarded as temporary, and reliance was placed on administrative action to induce restraint in both industrial investment and consumption. This included requests to industry to postpone new capital investment and to the banks to reduce the rate of increase in new advances to industry. In addition the Bank of Japan enforced a tight money policy, raising the re-discount rate to 7.3 per cent and increasing the reserve requirements of the commercial banks. The deposit of cash margins of up to 35 per cent on the issue of certain import licences was also re-introduced and a number of additional incentives to promote exports were put into effect. The foreign exchange allocation authorised for imports for the past six months was, however, over 6 per cent higher than for the previous period, and the policy of liberalising imports was continued. In December the proportion liberalised was raised to 70 per cent and this is likely to reach 90 per cent by the end of September this year. It should be noted, however, that import licences still have to be obtained and that liberalisation does not mean that all internal restrictions or tariffs are removed.

It is expected that the "credit squeeze" measures will be felt to an increasing extent in the months ahead, and there has been a notable increase in the activities of industrial firms and institutions in raising funds overseas to supplement domestic resources, at rates of interest somewhat lower than those obtainable in Japan. The emergence of a labour shortage, which caused a 13 per cent increase in industrial wages last year, has been an incentive towards investment in new modern equipment and there is little doubt that despite temporary setbacks the economy will continue to expand, although at a slower rate than in the past two years.

PHILIPPINES

The success of the Liberal party candidates in the recent elections has been generally welcomed. President Macapagal is, however, likely to experience some difficulty in implementing his policies in the legislature as, although he may win sufficient support in the senate, the opposition Nacionalista party have a large majority in the lower house and are in a position to block the passage of legislation of which they do not approve. In the months preceding the elections there had been a steady deterioration in the economic position and the external reserves had fallen to a dangerously low level. One of the new President's first acts was to introduce measures designed to restore economic stability and to eliminate a number of controls which had led to irregularities in the past. These measures included the lifting of import and exchange controls, the lowering of tariffs on essential imports and increasing those on non-essentials and on items which could be produced locally. In addition, steps were taken to reduce the demand for imports, the Central Bank increased the re-discount rate to 6 per cent and raised the reserve requirements for commercial banks, while the margin fee was suspended, and although there was no official devaluation, exchange rates for the peso are being allowed to find their own level. To strengthen the external reserves the new administration was successful in obtaining from United States sources a stabilization loan of US$300 million, while further assistance was provided by the International Monetary Fund.

Trading conditions last year were hampered by rising prices, the tightness of money and speculation about the devaluation of the peso. Export earnings were lower than in 1960 and since there was an appreciable increase in the value of imports, including expenditure of over US$26 million on shipments of rice to meet the shortage which developed last October, there was a trade deficit instead of the modest surplus achieved in the previous year. The Philippines continued to benefit from the allocation of part of the Cuban sugar quota and a total of over one million tons was shipped to America last year, but reports that consideration was being given to changing the method of United States sugar purchases from the present basis to that of a global quota at world free market prices, has caused considerable concern.

The current year is likely to be a difficult one for business but it is hoped that the measures which have been introduced will prove effective in creating the sound conditions which will be necessary if the five-year programme of social and economic development, outlined by the President in his address to Congress in January this year, is to be achieved.

VIETNAM

Internal security deteriorated to such an extent during the year as to cause very serious concern and the government declared a state of emergency in October. Increased numbers of well-armed communist bands have been operating in many areas and the situation is comparable with conditions at the height of the emergency in Malaya. Considerable assistance to the Vietnamese army has been provided by the United States in the form of training facilities and increased supplies of weapons, transport and communications equipment, and this should enable government forces to deal more effectively with this threat to national security. There is no doubt, however, that the coming months will be very difficult. President Diem was returned to office by an overwhelming majority in the presidential elections held last April and although a number of administrative changes have been introduced since the elections, there does not appear to have been any noticeable decentralisation of control.

The security situation and the Mekong river floods have affected agricultural production, the latter causing considerable damage to the rice-growing areas. Exports of rice were reduced to about half the volume sold in 1960 and further exports are unlikely to be permitted until later this year. American economic aid is, however, expected to be substantially increased and an economic and social development plan has been announced, which is to be financed jointly by the United States and Vietnam. New fiscal measures introduced by the government include a defence and economic development tax of five-sevenths on the landed value of all imported goods, which has the effect of altering the official rates of exchange of the currency and has caused an increase in prices of imported goods. The internal situation has caused some slackening in trade and, as merchants already have difficulty in disposing of their stocks, the higher prices of newly arrived imported goods will not make their position any easier. Nevertheless, industrial production has risen and the development of new projects has continued, so that when success has been achieved in restoring order in the interior, there should be an appreciable improvement in the economic situation.

CAMBODIA

Events in Laos are of considerable concern to Cambodia and it was appropriate that Prince Sihanouk's initiative in suggesting the convening of the Fourteen Nation Conference in Geneva, and in getting the three Laotian Princes to agree in principle to the formation of a neutralist government, should have led to a ceasefire, albeit an uneasy one marred by sporadic outbreaks of fighting. Thai charges that Cambodia was facilitating communist activities directed against her and South Vietnam, which were subsequently disproved by the International Armistice Commission, caused the government to break off diplomatic relations with Thailand and the border between the two countries remains closed.

The damage to the rice harvest by the heavy Mekong river floods has been less than had at first been feared and although it will be delayed, it is expected that the crop will be only about 10 per cent below average. Progress has been made with irrigation schemes and an improvement in agricultural output may be expected in

the future. There has been a further improvement in the economy and, although rice exports were suspended at one period to conserve stocks during the floods, the visible trade deficit is likely to be somewhat less than in the previous year. There has been little industrial expansion in the private sector, but two more government operated plants built with Chinese credits, a paper mill and a plywood factory, started production during the year, and a number of other projects are under consideration, including a refrigeration plant with a view to establishing an export trade in frozen meat.

THAILAND

The Thai government is sceptical as to whether the neutralist government, which is expected to be established in Laos, will be able to avoid domination by communist influence and there will always be some uneasiness in Thailand as to their own future political and economic position as long as these doubts exist. The country has, however, continued to enjoy internal political stability under Field Marshal Sarit's government, but there have been reports of communist infiltration in the north-east provinces adiacent to the 1,500 mile border with Laos and these activities were promptly suppressed. One-third of the population lives in these provinces, many of whom are ethnically related to the Laos across the border and the region is less advanced than other parts of the country. The government is now implementing a development plan for this area as part of their overall six-year plan, the main aim being to build up an infrastructure of communications, irrigation and hydro-electric schemes for the purpose of improving agricultural output and exploiting mineral resources, thereby raising living standards. A somewhat similar plan has been drawn up for the southern provinces, which is no doubt connected with the government's interest in the building of a canal across the isthmus of Kra, a project which is once again under consideration.

The economy has continued to progress in a satisfactory manner. Agricultural crops are more diversified, thus reducing dependence upon rice as the main source of foreign exchange earnings. The value of exports was over 15 per cent higher than in 1960, while imports rose by only 8½ per cent, and in consequence the trade deficit has been reduced to the lowest level for some years, while foreign exchange reserves have steadily increased. Exports of over one and a half million tons of rice, greatly increased exports of jute and tapioca, and to a lesser extent of maize and tin, have compensated for the lower value of rubber shipments. Considerable interest has been shown in the cultivation of Thai jute by foreign buyers in the past year due to the poor crops in the 1960-61 season in both India and Pakistan and, provided export quality can be maintained, this commodity is likely to become of increasing importance in the future. For the second year in succession there has been a surplus of revenue over expenditure in the nine months period covered by the 1961 budget.

Modest progress has continued in the industrial sector and after protracted negotiations with the government, an oil refinery is to be built at Sriracha, a small port on the Gulf of Thailand which, incidentally, is the subject of an expert study as to its suitability for a possible alternative port to Bangkok. The state railway system has been granted a development loan of US$22 million by the World Bank in which we and Mercantile Bank Limited have participated.

FEDERATION OF MALAYA

The concept of greater Malaysia, involving the political merger of the Federation of Malaya, Singapore, North Borneo, Brunei and Sarawak put forward by the Malayan Prime Minister last year, has been generally accepted as a desirable objective which would give added stability to this whole area. The Singapore government has warmly welcomed these proposals, but there has been a more reserved response from the Borneo territories, which are not so politically or economically advanced. Misgivings have been expressed in Borneo as to the form and timing of the proposed merger and there is a feeling in some quarters there that closer integration should be achieved first before consideration is given to joining the larger federation. Delegations from the five territories have attended a number of meetings of the Malaysia Solidarity Consultative Committee at which discussions have taken place regarding the constitutional, political and economic aspects of Malaysia, with particular reference to the powers to be retained by the Borneo territories. A commission is touring North Borneo and Sarawak, but not Brunei, to find out what the views of the people are, but since there are few representative organisations which can truly reflect public opinion the commission's task will not be an easy one. While the full details have yet to be worked out, there is little doubt that the long term interests of the three territories would best be served by joining a confederation with Malaya and Singapore in which the three, either as separate states, or combined to form the State of Borneo, would have a large measure of autonomy over their own internal affairs. The Association of Southeast Asian States which, in its present form is an economic and cultural pact between Malaya, the Philippines and Thailand, was formally inaugurated last year and the scope of this association will be greatly enlarged by the accession thereto of Singapore and the Borneo territories, if these become part of Malaysia.

For the second year in succession revenue in the Federation has exceeded M$1,000 million despite the sharply reduced price of rubber, from which over 60 per cent of total export income is derived. In the budget for 1962 ordinary expenditure is estimated to exceed M$1,000 million for the first time, an increase of 8½ per cent over the revised estimate for last year, leaving a deficit of M$50 million, but the Minister of Finance evidently expects revenue to exceed his prudently conservative estimate as no new tax measures, other than minor tariff changes, have been proposed. There was a favourable balance of trade of about M$400 million, over 45 per cent less than the previous year due mainly to the lower rubber price, but the value of tin and iron ore exports increased by M$67 million. Total imports were some M$74 million higher than in 1960, a trend which seems likely to continue to meet the requirements of the development plan.

Progress has been made in rural development schemes, while the decision to construct deep water berths at Butterworth in Province Wellesley on the west coast, and to build a highway from there across northern Malaya to Kelantan on the east coast, should lead to more rapid development in this area. Further progress has been made in the industrial sector, including plans to build an iron and steel plant near Ipoh by a joint Malayan-Japanese concern, and the heavy over-subscription of a number of public share issues has been a welcome indication of the amount of local capital available for investment in sound enterprises.

The demand for tin during the year, some of it speculative, exceeded available supplies, resulting in higher prices and the disposal of the whole of the tin buffer stock during the month of June. It was not until January this year that the International Tin Council decided that the floor and ceiling prices were to be raised to £790 and £965 per ton respectively. Current supplies and surplus stocks met immediate demand during the year, but it is generally accepted that world consumption of tin is likely to rise in the future, while the scope for any appreciable increase in production to make good the deficit is limited, and only a higher guaranteed price will induce producers to work low-grade areas where extraction costs are high. The disposal of part of the large American tin stockpile, which is equivalent to about six years domestic consumption at present levels, has been under consideration, but from statements which have been made, it appears that this will only be permitted when normal supplies are clearly shown to be inadequate to meet consumers' requirements. Rubber production has continued to increase but prices are more than 20 per cent below the average for the previous year and although this undoubtedly affects the short term interests of producers, and the revenue, in the longer view only lower prices and better marketing can counter the threat from synthetic rubber. The initial announcements regarding sales of rubber from the United States and United Kingdom stockpiles caused some concern, but arrangements have since been made which will reduce the effect of these disposals upon producing countries. Each year new areas of high yielding trees come into production and it should be possible for natural rubber to be produced profitably at a cost well below current market levels and, as there are limits to which production costs of synthetic rubber can be reduced, the natural product should be able to remain competitive.

SINGAPORE

The ruling party has been seriously weakened during the year by the loss of two by-elections and by the defection of thirteen of its elected members to form a new aggressive left-wing opposition party, the Socialist Front. This has left the government with an overall majority of only one in the Legislative Assembly, but it has nevertheless shown considerable vigour both in denouncing the alleged pro-communist tendencies of its principal opponents, and in pursuing its maior objective of merger between Singapore and the Federation of Malaya. The agreement reached by the Prime Ministers of the Federation of Malaya and Singapore, on the terms under which Singapore could join the Federation as the twelfth state, has been ratified by both governments and accepted in principle by the United Kingdom, with whom a flexible agreement has been reached regarding the use of the bases after the merger has taken place. The main heads of agreement are that the Federation would be responsible for defence, external affairs and security, while Singapore would retain control over education and labour policies, with a large measure of financial autonomy. Provision would also be made for the continuance of the important entrepôt trade. Singapore would be entitled to send two members to the Federation Senate and to elect fifteen members to the House of Representatives in Kuala Lumpur, although this elected representation is somewhat less than proportionate to the population. The Singapore Prime Minister has undertaken that a referendum will be held, as these proposals are opposed by the Socialist Front, who want either complete

merger in which Singapore would be accepted on the same basis as other states in the Federation, including full proportional representation in the Federation Parliament, or a confederation in which Singapore would retain full autonomy over her internal affairs, including internal security, but ceding by treaty control over defence and external affairs to the Federation government. The Prime Ministers of the two territories have expressed the hope that the merger will take effect not later than June next year, when the Singapore constitution is due for revision in any event, but it appears likely that this merger will be contingent upon the Borneo territories joining the Federation of Malaysia, either at the same time, or within a very short period thereafter.

While the main interest in the merger proposals has been centred on the political implications, economic questions such as the basis upon which Singapore manufactures will have access to the larger Malayan market have yet to be fully explained. If a satisfactory solution to these problems can be found it should broaden the base of the island's economy and give further inducement to the investment of local and foreign capital in industrial enterprises. This has so far been well below the level necessary to provide the 70,000 new jobs which is the target in the government's four-year plan and industrial relations will have to be much improved if the labour unrest, which has been such a disturbing feature in recent months, is not to have a damaging effect on development. Progress has continued in the government's projects to provide basic facilities for industry, while notable success has been achieved in the building of living accommodation and there has been considerable expenditure on educational facilities. Banking legislation, somewhat similar to that in force in the Federation of Malaya, was introduced at short notice in January this year.

There has been a decline in the overall value of trade, imports being slightly higher and exports about 8 per cent lower than in 1960, due chiefly to the reduced price of rubber. An agreement was finally signed with Indonesia covering the basic terms upon which trade between the two countries should be conducted, and there has been a welcome increase in the value of exports to Indonesia during the year. The financial position of the State has continued to be satisfactory and last year ordinary revenue exceeded expenditure by about M$64 million, while about M$110 million was spent on development schemes. The Minister of Finance described his budget for 1962 as being intended to keep the public services going while the details of the merger with the Federation were being worked out and no new taxation was proposed. Revenue is, however, expected to increase by M$46 million over the 1961 estimate, while development expenditure is likely to be higher than last year. Merger with the Federation should provide the necessary stability which is indispensable if hopes of intensive industrialisation are to be realised.

NORTH BORNEO

The suggestion that North Borneo should join the greater Malaysia Federation has found both the government and the people of the Colony as yet unprepared to take the far reaching decisions about their future which acceptance of these proposals would entail, as the vast majority of the population are unable to appreciate fully what is involved. One of the many difficulties is the shortage of local men with administrative and technical experience and although there are a number in the lower ranks of the public service and over 300 students are training abroad, it will be many years before the expatriate officers at present employed can be replaced. It is hoped that by the end of this year some town boards and district councils will have elected members, while the legislative and executive councils have been enlarged by the appointment of additional unofficial members to enable more local men to gain experience in the working of the administration. A number of embryo political organisations, advocating divergent views on the Malaysia proposals, have been formed in the last few months and it is hoped that the leaders of these associations will not allow political issues to destroy the good relations which have hitherto prevailed between the various communities.

There has again been considerable progress in many directions, particularly in the development of communications, and three ocean shipping lines have started regular scheduled services from Jesselton to Europe. The value of the Colony's trade was over M$435 million, exceeding the record total of the previous year, but the visible trade surplus was considerably less than the M$27 million earned in 1960. Exports of timber have again increased and they now account for nearly 45 per cent of the total value of exports but, as in other producing countries, a lower price was received for a higher quantity of rubber shipments. Once again the revenue surplus is expected to exceed the estimates for last year by over M$7 million, enabling the contribution to the development fund to be raised to M$16 million. In the budget for this year expenditure of nearly M$68 million, an increase of more than 13 per cent over 1961, is expected to be covered by revenue and no new taxation has been imposed other than an increase in the maximum rates of personal income tax to bring this more into line with the rates levied in other countries in the area.

BRUNEI

The elections to district councils which were due to be held last September, had to be postponed until October this year due to the delay in passing the Brunei Nationality Enactment. This law was finally approved by the Legislative Council in December and when the electoral rolls have been prepared, there should be no further delay. His Highness, the Sultan, has expressed his personal opinion in favour of his State accepting the Malaysia proposals in principle, but leaders of political parties are demanding closer association with North Borneo and Sarawak first, followed by independence, before they wish to consider these proposals. The Sultan has, however, appointed a commission to find out the views of his subjects before reaching a decision on this important issue.

A United Nations expert has submitted a new development plan which is being studied by government departments, the main aims of which are to raise the level of employment and the standard of living by the development of agriculture, forestry, fishing, small-scale industries, and the more economic use of land. There was a further decline in oil output last year with a consequent reduction in revenue from this source, but income from investments has risen and there was again a substantial surplus of revenue over expenditure.

SARAWAK

The people of Sarawak, with wider educational facilities and a longer experience of local government, are in a little better position to assess the consequences of accepting the Malaysia proposals than the two other Borneo territories. Local authorities, which have been in operation since 1948, now cover nearly the whole of the country and there has been an elected majority in the legislative council since 1957. This year the franchise is to be extended to all persons over the age of twenty-one, subject to residential qualifications. Political parties are of comparatively recent origin and, as in North Borneo, they hold different views about the Malaysia proposals. There has, however, been evidence of considerable communist subversion and the government introduced the Restricted Residence Ordinance to help in dealing with this problem.

Revenue collections last year, although less than in 1960, are likely to be a little higher than the estimate and a small surplus over expenditure is expected. Lower commodity prices will affect the revenue this year and in the budget for 1962, estimated current expenditure of M$68½ million is expected to exceed reliable revenue by M$3 million, part of which is to be covered by increased excise taxes and motor vehicle licenses. The value of the Colony's trade, excluding Brunei oil, is expected to be about M$17 million less than in 1960 with an unfavourable balance of some M$30 million, due largely to a decline in both the volume and value of rubber shipments, offset to some extent by higher exports of pepper. There are promising developments in connection with coal deposits at Silantek, near the Indonesian border, and a number of new light industries have been started during the year. It is hoped that the inauguration of the Free Trade Area Agreement with North Borneo this year and the opening last June of the new port at Kuching, will lead to further expansion.

INDONESIA

The military preparations in Indonesia for direct action against the Dutch in West New Guinea appear to have reached a fairly advanced stage, but both countries have recently altered their attitudes to this problem and it is to be hoped that negotiations may still be possible to reach a peaceful solution. Due weight must, of course, be given to considerations of national prestige, but it should not be forgotten that the adverse economic consequences to Indonesia of armed conflict are likely to be considerable. Defence expenditure already absorbs over 50 per cent of the budget, although the virtual end of the four-year-old rebellion may enable some reduction to be made, while inter-island shipping capacity is barely adequate for present requirements and any dislocation thereof could have unfortunate repercussions.

The publication of statistics regarding the monetary supply and foreign exchange holdings was discontinued at the beginning of last year, but there is no doubt that there has been a marked increase in inflationary pressures, an appreciable rise in the note issue, and an aggravation of Indonesia's economic difficulties. The value of export earnings declined, while imports to meet the demand for consumer goods continued at a high level until the last quarter of the year, when many import licences were suspended. A loan of over US$41 million was obtained in August from the International Monetary Fund, to support the falling foreign exchange reserves and it is surprising that earlier action was not taken to halt the flow of imports and thus to reduce the adverse balance of trade, particularly as an appreciable proportion of the country's exports are committed under barter

deals for, among other things, the supply of military equipment. There has also been a reduction in the output of many agricultural products and although this is partly due to poor weather conditions, which have caused damage to rice and other crops in Djawa and Sumatra, the elimination of Chinese traders from the rural areas has been a contributory factor.

It is not easy to assess what progress has been made in the industrial sphere, but it is expected that a number of projects will be started soon with foreign assistance under the eight-year development plan. These include factories for the production of fertilisers, paper, cement and certain iron and steel manufactures, while a German concern is to construct a tin smelter on the island of Bangka. The government has introduced a " guided savings " campaign to raise funds to finance the development plan, which takes the form of a compulsory deduction from the incomes of all persons resident in Indonesia, except foreign nationals, as well as from the annual profits of all companies. It is also reported that measures are under consideration to reduce the large volume of currency notes in circulation by imposing a limit on cash transactions and thus to force all other payments to be made through the banking system. To what extent these measures would be successful, if implemented, remains to be seen but urgent action of some sort is certainly necessary to curb the continuing inflation and the rapid increase in the cost of living, particularly in the urban areas.

INDIA

At the end of the year there was renewed tension over the border dispute with China, which arose out of Indian complaints of further encroachments into her territory, and Chinese counter-charges that Indian troop movements in the north-east frontier area amounted to aggression against her. The border dispute continues to cause considerable indignation in India and has given opposition parties an opportunity of attacking the government for lack of firmness in dealing with this issue. Mounting criticism of inaction and the approach of the general elections may, perhaps, have been factors influencing the government's decision to seize the Portuguese enclaves. The Congress party won their expected victory in the general elections held last month for State Assemblies and to the National Parliament although a number of seats were lost to opposition parties.

The foreign exchange reserves fell to a very low level during the year and in July the government had to draw the equivalent of US$250 million, in a number of currencies, from the International Monetary Fund to tide them over until the first instalments of foreign aid, promised by the Aid-India Consortium and the World Bank for the first two years of the third plan, were received later in the year. Stringent import controls have been continued with the intention that the limited foreign exchange resources should only be used to ensure, in so far as possible, the most advantageous balance between maintenance imports, to make the best use of the country's industrial capacity, and imports of capital goods for development where these are not provided under foreign aid schemes. The value of exports, although higher than in the previous year, has not been increasing as rapidly as was hoped, and this is a cause for concern since the third five-year plan envisages as essential a greatly increased volume of exports, if the targets set therein are to be achieved. An encouraging feature during the year has been a notable increase in foreign collaboration with Indian concerns in setting up industrial enterprises.

Looking back on the results of the second five-year plan, which ended last year, it is clear that although the achievements fell short of what had been expected, there was a definite advance in industrial production, an improvement in agricultural output and a rise in national income which was, however, diminished by an 11 per cent increase in population during the five-year period. There has also been a small improvement in the standard of living in the vast rural population in the form of improved services and amenities, such as educational and health facilities, and the gradual spread of such things as electric light and piped water supplies. This, it is hoped, will stimulate some enthusiasm, particularly among the younger men and women, to adopt new methods and techniques leading to a further increase in agricultural production and thus help to lift rural India out of the poverty in which it has existed for so long.

India's population of 438 million, as revealed in the census held last year, is expected to rise to 490 million in the next five years and this has caused the planning commission to increase targets for food-grains, industrial production and employment in the third five-year plan, which has been finally approved. There are, however, indications that the shortage of power and transport capacity is likely to get worse and measures to mitigate this situation are being considered by the commission. The revised total expenditure amounts to the equivalent of £8,700 million, but the estimated foreign exchange deficit to be covered by foreign aid remains at £1,950 million, a sizeable proportion of which has been promised to cover the first two years of the plan.

There seems to be considerable doubt as to whether the resources of the banking system are growing fast enough to keep pace with the expanding economy and from the figures which are available, advances are increasing at a proportionately greater rate than deposits, resulting in growing pressure on the liquidity ratios of the banks. To counter this trend the Reserve Bank is considering measures designed to raise minimum requirements in regard to both cash reserves and liquid assets and has issued a directive to the effect that the ratio of capital plus published reserves to deposits should not be less than 6 per cent. A corporation was set up on the 1st January of this year to insure bank deposits up to a maximum of Rs.1,500 per account which will be financed by a levy paid by the banks on their total deposits. It is hoped that this measure will assist in creating greater confidence, which was shaken to some degree by the failures in 1960, and will encourage a flow of savings into the banking system.

PAKISTAN

The new constitution for Pakistan, announced by the President on March 1st this year, provides for a federal form of government under a president, with a central national assembly and provincial legislative assemblies for East and West Pakistan. Political parties will remain banned and election of the president and of members of the central and provincial assemblies will be by an electoral college comprising members of existing local councils, or Basic Democracies as these are called. The improvement in relations with India, which was expected to follow the signing of the Indus Waters Treaty in 1960, has not materialised and although some minor issues were resolved during the year, Pakistan's reference of the Kashmir problem once again to the United Nations has placed a strain on relations between the two countries. The dispute with Afghanistan culminated in the severance of diplomatic relations by that country in September.

A reappraisal of the second five-year plan has been necessary following the disclosure in the recent census that the population, at 94 million, was increasing at a rate higher than had been previously estimated and, in consequence, targets in the plan and the overall cost have been increased by one-fifth. In January this year the consortium of countries and international organisations interested in helping Pakistan agreed to provide a total of about £340 million for the second and third years of the second plan, thus meeting Pakistan's requests for foreign aid for this period in full.

Further progress has been made in the economic sphere during the year and the indications are that the country may be entering upon a phase of fairly rapid development if governmental foreign aid and the notable increase in private foreign investment, which occurred last year, continues. Industrial production is increasing and the tax concessions contained in the budget for the current financial year include additional incentives to new foreign investment, which should give further encouragement in this direction. One development has been the award of a contract to construct a steel mill near Karachi.

The more liberal import policy introduced in 1960 has been continued, but the reduced earnings from exports, due partly to a higher rate of local consumption of such items as raw cotton, have resulted in a trade deficit for the first nine months of the year. The increase in agricultural production has lagged behind that of industry and this is causing considerable concern. If jute and cotton manufactures are included, agricultural products provide over 90 per cent of export earnings, while an increase in food-grain production is essential in order to reduce dependence on imported supplies. One of the main problems to be surmounted is that of salinity and waterlogging of agricultural land, which is assuming alarming proportions in West Pakistan, particularly in newly irrigated areas where it is estimated that as much as 25 per cent has been affected in this way. Expert advice has been obtained to devise some means of checking, and if possible, solving this problem.

BURMA

The political situation remained outwardly unchanged during the year, but there were serious differences between the two main factions of the ruling Union party and only the intervention of the Prime Minister, who resigned his position as president of the party, preserved any semblance of unity. Two weeks ago the army, under General Ne Win, suspended the constitution and resumed control of the government which the General had voluntarily relinquished two years ago. Burma has continued to follow her avowed policy of non-alignment, but especially cordial relations have been developed with China following the settlement of the border issue and the economic and technical agreement to which I referred last year. There has been little improvement in the internal security situation, but one source of trouble has been much reduced by the repatriation to Formosa of the majority of the former Kuomintang troops, who were operating in the Thai border area.

The revised revenue surplus for the financial year 1960-61 was Kyats 58 million, but capital and development expenditure was less than expected and there was an overall surplus of Kyats 17 million instead of the anticipated deficit. The budget estimates for the current financial year show an estimated surplus of Kyats 35 million, including the yield from increased customs duties, excise and sales taxes, but if all capital receipts and expenditure are taken into account, it is estimated that there will be an overall deficit of Kyats 165 million. Exports of rice were one and a half million tons, a considerable reduction compared with 1960 and although the value of imports was about 17½ per cent lower, there has been a further decline in the balance of payments and in the foreign exchange reserves.

The draft of the second four-year plan, designed to be the first of a series of four such plans covering the period 1961-1977, has been published. The main aim is to raise living standards and to double the per capita real income by 1977, which is now still 13 per cent below the pre-war level and one of the lowest in the world. Comprehensive diversification of agriculture and increased production is planned to lessen the dependence upon rice, which at present accounts for two-thirds of foreign exchange earnings, but greatly improved internal security conditions will be necessary before this can be achieved. The government's part in the plan is largely confined to improving the transport system, the provision of electric power and the consolidation of existing basic industries. The establishment of new industries is to be left to the private sector, and to the Burma Economic Development Corporation which will operate a number of new factories to be set up with machinery and technical assistance supplied under the Chinese credit. The private sector is expected to provide nearly half of the investment envisaged by the plan, and an industrial Development Bank was set up last October to assist in meeting credit requirements. About half of the foreign exchange deficit is covered by Japanese reparations and other loans and credits already promised, and it is hoped that the balance of about £35 million will come from foreign investors. The inducements and safeguards for foreign capital contained in the Investment Act are somewhat vague and the government's announced intention to eliminate all private concerns from the import trade, which would then be entirely in the hands of state or semi-state owned organisations, may well have a discouraging effect.

CEYLON

For the second time in three years Ceylon has been governed under emergency powers, which are still in force, and these include press censorship and the other usual adjuncts. The present state of emergency was imposed last April in order to deal with the civil disobedience campaign, organised by the Tamils in the northern and eastern provinces as an expression of their dissatisfaction with government policy, particularly over the implementation of the law making Sinhala the only official language. Order was soon restored in the affected areas, but the Tamil Federal party was proscribed and its fifteen members of parliament were arrested. Normal conditions have prevailed for some time now and the arrested members of parliament have been released, but the government, with its overall majority in the legislature, has extended the emergency month by month and this, together with the deterioration in internal economic conditions, has caused some discontent. Since November there has been a wave of industrial unrest; bank clerks, transport, public utility, Colombo port and other workers have been on strike and, since strikes are illegal under the emergency regulations, this action has constituted a challenge to the government by the trade unions The government have made some concessions but troops were used to handle cargo in Colombo harbour and the essential services were maintained. An attempted para-military coup to overthrow the government was discovered at the end of January this year. Some of the officers concerned endeavoured to implicate the Governor General, who resigned in order to facilitate further investigations.

The severe import restrictions imposed at the end of 1960 and the beginning of 1961 have had a considerable effect, and there will be a favourable balance of visible trade compared with a deficit of Rs.120 million in 1960. There has, however, been a decrease in export earnings due to the lower world prices for the country's main exports of tea, rubber and coconut products and this has caused a sharp decline in the revenue from export duties. The budget for the current year shows a deficit of nearly Rs.570 million which is to be covered by further deficit financing, new taxes amounting to Rs.230 million and expected foreign aid. New taxation measures include the virtual expropriation of all personal incomes over a prescribed ceiling, the imposition of a 4 per cent national development tax on all incomes over Rs.300 per month and increased import and excise duties. The Finance Act 1961 also contained legislation nationalising the Bank of Ceylon and prohibiting Ceylonese nationals, and firms with Ceylonese partners or directors, from opening new accounts with banks other than the Bank of Ceylon or the People's Bank. This discriminatory legislation against the foreign banks, who have for so many years made a valuable contribution to the island's economy, has caused us the greatest concern as it must severely affect our business in the future. Authoritative speeches, published in the local Hansard, leave little ground for doubt that it is the intention of the present government to restrict the business of the foreign banks to such an extent as eventually to force them out of business altogether. This attitude, if continued, is unlikely to attract new foreign investment, which it is the official policy of the government to encourage.

MAURITIUS

The appointment in September of the leader of the Legislative Council as Chief Minister, marked the first stage in implementing the plan for the constitutional advance of Mauritius towards internal self-government, which received a large measure of agreement at the conference held in London earlier in the year. A further modest advance will take place after the general elections which are due to be held in 1964, if the Legislative Council then votes in favour of the proposals.

Severe drought conditions at the beginning of last year damaged the sugar crop and in consequence production was about 4 per cent lower than the original estimate of 575,000 tons. Under the Commonwealth Sugar Agreement, which has been extended until 1969, the negotiated price for 1962 has been fixed at £45 15s. 3d. for a guaranteed quantity of 350,075 tons, an increase of 13s. 3d. over last year's price, but a decrease of 1,675 tons on last year's quota.

The devastation caused by two cyclones at the beginning of 1960 was such that the government decided to cancel the five-year development plan which started in July, 1957, and to embark on a new five-year reconstruction and development programme as from June 30, 1960, involving expenditure of Rs.354 million. Two-thirds of this expenditure has, however, already been committed under the earlier plan, leaving only the remaining one-third for new projects. In the budget for 1961/62 estimated ordinary expenditure, at Rs.158 million, is expected to exceed revenue by Rs.13 million and this will be covered by the imposition of a 5 per cent export duty on sugar and by increased excise duties. Trading conditions last year were satisfactory, but prospects for this year are likely to be adversely affected by damage caused by a cyclone which struck the island at the end of last month.

CONCLUSION

Once again, and for the last time in so far as I am concerned, I have come to the end of my review of the eastern countries in which we and Mercantile Bank Limited operate and while developments in some territories give cause for concern, on the whole a satisfactory rate of progress has been maintained during the year.

As I look back over my thirty-two years services with the Bank in the East, what strikes me most forcibly is the tremendous change which has taken place in this part of the world. I refer in particular to China, where an appreciable part of our business used to be conducted, to the many territories, which were formerly dependencies of European countries, where political and economic developments have taken place and to Hong Kong, which has been transformed from a trading port to the important industrial centre it is to-day. While it is encouraging to see the progress that has been made in most of these countries, it is difficult to avoid reaching the conclusion that insufficient attention has been given to the advantages of closer co-operation on a regional basis. All the territories in which we operate have development plans, and nearly all of these schemes have been drawn up without prior consultation with, or consideration for, their effect on other countries. For the most part their aim has been self-sufficiency in the production of as many commodities as possible, including staple foodstuffs and, in the early stages, this development satisfies national aspirations and local requirements in regard to such things as the provision of employment and the conservation of foreign exchange. In the not too distant future, however, as the needs of domestic markets are met, even after allowing for rapidly growing populations and rising standards of living, it will be found that there will be competition for markets among these developing countries. Trade relations are assuming an increasingly multilateral character and while the actions of some Asian governments in granting exclusive privileges to their own nationals in trading, financial and other fields, to the detriment of foreign concerns, is understandable under the circumstances, I think that in the wider view it is misguided to dispense entirely with the services of old-established institutions which have a long and varied experience of trading conditions and markets not only in this region, but in many other parts of the world. There are indications that the success of the European Economic Community, which in many respects discriminates against imports from this area, has focused attention upon the need to study the possibility of forming new economic groups, and I am glad to see that the Economic Commission for Asia and the Far East and other organisations are devoting their attention to this problem, which will become increasingly important in the years ahead.

British Iron and Steel Federation

SIR JULIAN PODE'S PRESIDENTIAL ADDRESS

EVENTS in the industry last year are described at length in the Annual Report* before you and I shall not, therefore, discuss them in detail today. By and large 1961, despite record rates of output in the opening months, was a disappointing year, with a sharp worsening of trade in the closing months and heavy pressure on profit margins throughout the year.

For 1962, the prospects are unusually difficult to assess. On the one hand, for the bulk of the industry, and especially for the heavy steel trade, the opening months of the year have seen trade weakening and short-time working spreading; whereas on the other hand, the strip mills have experienced a sharp recovery to near capacity working. As far as we can see, something like the same pattern may persist throughout the middle part of 1962, with the heavy end of the industry depressed by a downturn in industrial investment and the lighter end favoured by whatever easing of the credit squeeze occurs. The major uncertainties, however, surround the closing months of the year: and whether trade picks up then must depend closely on what happens meanwhile to Britain's external payments position, which still requires to be considerably strengthened before internal expansion can be resumed with confidence.

In financial terms, the Iron and Steel Board's recent price increase will do something to improve this year's out-turn: but I cannot find it in me to say more in its favour than that.

Economic Growth

So much for the immediate situation. Let me now turn to the future, where prospects—though far from unclouded—give greater grounds for hope.

Here, the crucial issue is clearly how soon and how vigorously the general growth of the British economy is got under way again. The Industry, having invested on a massive scale in order to ensure that enough steel would be available in the mid-sixties to meet the anticipated needs of a buoyant economy, is committed to the cause of the Expanding Economy. We welcome, therefore, the new interest in growth policies being shown by the Government.

In particular, we shall follow with close interest the work of the National Economic Development Council. If, as seems likely, one of the first steps of the new Council is to convene Industry Groups, within which the implications of various growth rates can be studied in detail, the steel industry will be well-placed to contribute to the Council's labours, since we already have in being an organisation with an unrivalled body of experience in this task.

It is, of course, upon how soon and how vigorously general economic growth gets under way again that the validity of the Industry's demand forecasts for 1965 will, in the event, depend. Since industrial production in Britain has risen by only 3.2 per cent a year since 1957, as against our forecast rate of 3½ per cent, we now need an increase of 4.2 per cent a year in industrial production to reach the level underlying the steel demand forecasts for 1965. Bearing in mind that the European Community has recently grown more than twice as fast as Britain, and that British industry has still to harvest the full fruits of its vast capital investment since the mid-fifties, there is no reason to suppose that such faster growth need be unobtainable—if the country puts first things first.

Aggressive Selling

All this, however, must not be taken to imply that the Industry is simply sitting back and waiting for faster national growth to bring steel demand up into line with potential supply. In face of widening margins of spare capacity, greater competition from foreign steel and stronger competition from substitute materials, the Industry is going out to sell. Aggressive selling is recognised as the key to a prosperous industry.

The results are already becoming visible in encouraging profusion. In the home market, the companies, the product groups and the Federation are all putting very considerable efforts into market development in all its forms. Within the Federation, for example, organisational and staff changes have just been approved in principle with the object of intensifying market development and product development work; and in the public relations field, the main weight of the Federation's press advertising, as of its exhibition work overseas, is now being concentrated on commercial aims.

In the export field, we have been severely limited during most of the post-war period by a variety of formal and informal Government directives and restraints, the last of which—an informal limit on sheet exports—was not removed until the Autumn of last year. Even so, within these limitations, aggressive selling has been bringing results. Last year, despite weakening markets the world over, steel exports established yet another post-war record; and to quote one particular example, Britain is now the world's biggest exporter of tinplate, selling some 40 per cent of its total output in world markets. Abroad, as at home, aggressive selling is the key.

Development Policy

However, even with extensive sales efforts, the Industry faces a widening margin of spare capacity; and this has led to a careful review of development policy. As early as 1945, the Industry's first post-war development plan laid down two main objectives—the expansion of capacity; and its modernisation. In the event, the great post-war expansion of the British steel-using industries naturally focused public attention on the former aim; but the Industry has throughout sought to press forward with the latter one also. For example, despite the pressure of demand, some 6 million tons of old steel-making capacity and some 6½ million tons of old iron-making capacity have been retired altogether since the war—with helpful results for productivity and costs.

Now, with demand temporarily lagging behind capacity, and still more with new techniques becoming available which offer greatly increased outputs from existing plants, development thinking is naturally concentrating even more on investment designed primarily to reduce costs and improve quality and product range. The link between this reshaping of technical development policy and the reshaping of market development policy already described, is clearly direct and intimate.

Stocks

The fact that the Industry's development has now moved to a point where customers can be fully confident that all reasonable requirements will be met without delay, even at times of high demand, has one valuable by-product. This is that the vicious problem of stock fluctuations, which has affected the Industry so badly in recent years, now becomes more readily capable of solution. In the past, consumers who were worried lest they should run short of steel as trade boomed, undertook excessive stock building, which itself often created the shortages which they feared; and then when trade weakened and credit tightened they sought relief by running down those excessive stocks, thus aggravating the difficulties in the Industry caused by the slackening of the real use of steel. Now, as confidence in security of supply grows and spreads, these wasteful and disruptive fluctuations in stocks should come to an end. Instead, there should emerge much greater stability of consumers' stock holdings, even though the absolute level of consumers' stocks may tend to be rather less.

Europe

Let me now come to what may prove the most important of all the factors influencing the prosperity of the Industry in the sixties—the prospect of Britain's entry into the European Communities.

The Federation, after conducting a widespread review of this issue in which all sections of the Industry have joined, has sent to the Government two major statements of Industry policy. The first of these declared the Industry's readiness to support full membership of the European Coal and Steel Community in the event of Britain's joining the Economic Community; and the second reiterated the Industry's readiness to accept the E.C.S.C. Treaty and the main arrangements made thereunder in their existing form, without seeking any major amendments, provided that certain limited transitional arrangements could be secured to ease the unification of the markets. The Federation is keeping closely in touch with developments in connection with the coming negotiations on Britain's possible entry.

One major change which may occur if Britain enters E.C.S.C. will be the replacement of the existing pricing system by the E.C.S.C. pricing system. This is based on three main features. Firstly, the companies are free to fix their own selling prices and conditions of sale. Secondly, these prices have to be published as at particular basing points, and consumers are then charged this basing point price plus freight rather than some uniform delivered price. And thirdly, to promote competition, producers may align their selling price down onto any lower price available from any other Community or third country producer. All this will involve a tremendous change in existing practices, both for those selling steel and for those buying it. The Industry is, therefore, actively discussing the desirability and possibility of introducing a pricing system on E.C.S.C. lines into Britain sometime this year, that is before entry into the Community, in order to allow all concerned to gain practical experience in its operation. The Federation has made initial approaches to the Iron and Steel Board on this matter.

Fuel

One point which stands out clearly from any consideration of the consequences of joining the European Communities is that it will be essential in this wider market to keep costs as low as possible. In so far as costs arise within the Industry, we freely accept this responsibility. But in large measure, our costs are set for us by outside bodies: and here, it is less easy to be confident as to future trends.

Unfortunately, this is particularly so with regard to fuel costs. Although the Industry has made major advances in the more efficient use of fuel, such savings have been outweighed by the never-ending rise in fuel prices. For example, the prices charged for the Industry's coking coals have risen by 62 per cent since 1953 and United Kingdom steelmakers are paying more for their fuel oil than are their Community competitors. Britain is becoming an increasingly high energy-cost country in an increasingly low energy-cost world.

If the British steel industry and the steel-using industries are to compete effectively in the European market, this adverse trend must be checked. The National Coal Board, under the enterprising direction of their new Chairman, have plans in hand to achieve this: and we wish them every success. But one fundamental weakness of the present situation is that, since the discipline of competition has been removed from the coal industry, there has been no independent check on cost efficiency to reinforce the personal drive of those in authority. In the absence of such external discipline, the coal industry has in the past been more productive of promises than of performance in the field of price stability: and there is as yet no firm evidence to show that the tide has turned.

Coal Imports

It is against this background that one must view the steel industry's call for freedom to import coal. With regard to *direct* effects, the Federation has never claimed more than that import freedom might result in imports being made by certain well-placed coastal works, designed to replace certain marginal high cost tonnages from home pits, which might affect in all about 1 per cent of British coal output. That in itself would offer the steel industry no small cost advantage, which might reach 3s. 6d. a ton of finished steel averaged over the whole industry or more than £1 0s. 0d. a ton in one of the works directly concerned. But in general, it is clear that it would remain the British coal industry to which the steel industry would continue to look for the bulk of its fuel requirements.

It is, indeed, precisely because of that continuing dependence on home supplies of coal that the Industry is pressing the case for coal imports. Important though the direct savings from coal imports might be, the *indirect* effects might well be greater still. If coal could be freely imported, then the landed price of imports would set an independent and realistic standard of costs which all British mines would have to strive to meet and beat in order to hold their markets. If Lord Robens's plans for greater efficiency were really to bear fruit, then the presence of such an independent check would hold no terrors for him.

Let me put this clearly. The steel industry has every interest in the success of Lord Robens's efforts to shake the coal industry free from its past. But as entry into Europe approaches and competition whets its pruning knife, we cannot live on promises alone. If the Government decides to expose British steel producers to open competition in Europe, then equally it must ensure genuine competition in the field of fuel supplies.

**Copies of this report may be obtained from the British Iron and Steel Federation, 21 Tothill Street, London S.W.1.*

MONSANTO CHEMICAL COMPANY

SALES AT ALL-TIME HIGH: NET UP SLIGHTLY

The sixtieth annual meeting of Monsanto Chemical Company was held at St. Louis, Missouri, USA, on March 22nd. Following is a condensation of the circulated statement of **Charles Allen Thomas,** chairman, and **Charles H. Sommer,** president:

Monsanto achieved record sales of $932,916,000 in 1961, compared to sales of $890,114,000 in 1960. The increase, which amounted to $42.8 million or 4.8 per cent, was attained despite declining selling prices throughout the US chemical industry.

The year's net income was $68.7 million, compared to $67.8 million for the previous year, a gain of 1.3 per cent.

Due to an increase in shares outstanding, however, per-share earnings declined from $2.49 in 1960 to $2.45 in 1961. The share increase resulted mainly from the two per cent stock dividend paid in December, 1961.

Cash flow per share from earnings before depreciation, obsolescence and depletion was $5.47 in 1961 and $5.29 in 1960.

Monsanto's leadership in many basic product groups enabled us to maintain our profit level despite the lower prices, which we met to keep our commanding position in the market place. In most cases, industry-wide overcapacity was responsible for price decreases. Helping to offset their effect was Monsanto's strength in such major products as phosphates, nylon, plasticizers, alkyl benzene, ammonia, vinyl butyral film, pesticides and feed chemicals.

Helping also were new processing efficiencies and cost-control methods throughout the company.

The year's achievements went beyond the areas of marketing and production. The Chemstrand Corporation, the nation's second largest manufacturer of chemical fibers, became a wholly owned subsidiary and gave us new scope and new opportunities. We made good headway at Chocolate Bayou, near Alvin, Tex., in the on-schedule construction of a chemical refinery which will shortly provide us with our own hydrocarbon raw materials at a substantial cost saving. Also, we opened our Research Center in St. Louis County, creating an environment which should breed and encourage practical inventiveness. And, in the area of forward integration, we acquired Gering Plastics Company and thus moved closer to the consumer in certain areas where the present is profitable and where the future holds promise.

CAPITAL INVESTMENT

Our expenditures for new plants and equipment, including property of acquired companies, were at an all-time high in 1961. They totalled $153,818,000 compared to 1960 expenditures of $121,253,000.

In the 12-month period, a total of $9,810,000 was invested in or advanced to our 50 per cent owned associate companies and to affiliated companies in which our ownership is less than 50 per cent.

AGRICULTURAL CHEMICALS

Our sales of farm chemicals were up more than 20 per cent.

Sales of our plant food materials, which include ammonia, ammonium nitrate, urea and related products, rose to record levels. Sales of ammonia for field application were up about 40 per cent.

We began building an ammonia plant of 200-ton-per-day capacity at Muscatine, Iowa.

Sales of weed and insect killers rose more than 30 per cent. Sales of feed chemicals climbed sharply.

HYDROCARBONS

Formation of the Hydrocarbons Division in October was the result of planning which began in 1955 with the acquisition of Lion Oil Company, its facilities, its reserves and its personnel.

The new division's responsibilities include production of chemical raw materials from petroleum sources, as well as all of Lion's activities.

From the refinery it operates at El Dorado, Ark., come gasolines, fuel oils, asphalts and other *Lion* branded products. Principal products of the plant at Texas City, Tex., are styrene monomer, vinyl chloride monomer and acrylonitrile. The chemical refinery at Chocolate Bayou, near Alvin, Tex., will be on stream late in 1962.

At Texas City, completion of the final phase of a 200-million-pound styrene monomer expansion increased our capacity for that product to 560 million pounds a year. Capacity for vinyl chloride monomer was stepped up to 150 million pounds annually.

Also in 1961, we announced plans to build a 45-million-pounds-per-year unit to produce vinyl acetate monomer for our own needs. Construction is to start early in 1962.

Shareowners will recall the large and unique refinery we are building at Chocolate Bayou to convert petroleum into ethylene, propylene, naphthalene, benzene and other important hydrocarbon raw materials to feed Monsanto plants elsewhere.

Ground was broken in March, three months after our initial announcement. Since then, the work has progressed with remarkable speed and efficiency.

Production and exploration efforts in the Texas-Louisiana Gulf Coast area were intensified.

In 1961, we participated in the completion of 56 producing wells, representing a net interest to Monsanto of 32.77 wells.

Exploration expenditures were $11.5 million, slightly more than those of 1960.

Continued restrictions on allowable production of domestic crude oil, along with pipeline proration, resulted in a six per cent reduction in our production and sale of crude oil. Our total crude production for the year was 8,017,000 barrels, while our natural gas production of 22.6 billion cubic feet was three per cent below the 1960 level.

Record throughput of crude oil was achieved at the El Dorado refinery. Approximately 12.3 million barrels were run to stills, a daily average of 33,800 barrels. The 1960 average was 32,700 barrels a day.

Our gross refinery sales were higher by six per cent. Branded product sales were up five per cent.

INORGANIC CHEMICALS

Production and sales of phosphorus chemicals exceeded previous records.

To meet the demands of expanding and changing markets, many capital projects were initiated or completed.

Sodium, calcium and potassium phosphate, and phosphoric acid facilities in the St. Louis area were enlarged. Capacities of the sodium tripolyphosphate and phosphoric acid units at Long Beach, Calif., were doubled.

In the third quarter, we announced plans to build a plant at Augusta, Ga. Its initial products, phosphoric acid and sodium phosphates, will go into production late in 1962.

Sales of surface-active agents were higher. Demand for alkyl benzene reached a record high level.

Although sales of heavy chemicals turned up in the last quarter, they were off slightly for the year. The year's orders for sulfuric acid plants of Monsanto design set a record in terms of the total capacity they represented.

Monsanto's silicon project showed continuously lower cost of manufacture and continuously greater sales through the second half of the year.

Sales of III-V compounds, especially gallium arsenide, increased. Monsanto, the first supplier of epitaxial gallium arsenide, will begin pilot-plant production of the product in the first quarter of 1962.

ORGANIC CHEMICALS

Volume and dollar sales of organic chemicals were the same as those of 1960.

In December, our new Delaware River Plant, near Bridgeport, N.J., had an unusually smooth start-up. Its initial products are phthalic anhydride, benzyl chloride and *Santicizer* 160, a plasticizer derived from the first two products.

Total sales of functional fluids and petroleum additivies were up slightly, due primarily to gains by gear oil additives. Sales of dielectric fluids, however, were checked by slowness in the electrical industry.

Sales of intermediates were up slightly. Extensive modernisation at the Monsanto, Ill., plant resulted in a 10 per cent phenol capacity increase.

Sales of fortified rosin sizes were above those of 1960. Sales of industrial preservatives were down.

Bulk aspirin and our new food-grade adipic acid led pharmaceuticals, flavors and condiments to a higher sales level. Higher selling prices on saccharin and caffeine also helped.

Despite a short supply of phthalate esters during the year's first half and depressed prices later, 1961 sales of plasticizers exceeded those of 1960. We strengthened our position in "permanent-type" (polymeric) plasticizers with the successful introduction of two more which give long-lasting flexibility to vinyl plastics. At mid-year, we began making phthalate esters at Long Beach, Calif.

The continuing shortage of naphthalene (raw material for phthalic anhydride) and the increased competition for maleic anhydride markets combined to hold sales of resin materials below 1960 levels. New *Phosgard* flame retardants for such materials as wood, synthetic fibers and plastics underwent intensive market development.

Increased activity in the automotive and rubber industries helped us improve our sales of rubber chemicals.

Elastopar rubber modifier, which made possible the successful commercialization of the butyl rubber tire, was found to impart both added resilience and heat stability to natural and synthetic rubbers. Manufacturing capacity for the product was doubled at Monsanto, Ill.

PLASTICS

In plastics, sales volume was the same as that of 1960, while dollar sales declined.

In 1961, we achieved significant yield and quality improvements and substantial manufacturing economies. We also stepped up efforts to give customers better products and service.

Noteworthy new products include four *Opalon* vinyl chloride polymers—a plastisol resin and three resins for extrusion, molding and calendering; a patented, liquid-modified phenolic resin binder for producing heat-resistant thermal insulation; a high-gloss, high-impact polystyrene for refrigerator components; two polyethylenes for extrusion coating and laminating at high speeds and low temperatures; a general-purpose polystyrene with improved heat resistance; and a polyethylene from which films are made at a strength 40 per cent greater than that obtained with general-purpose resins.

Lustran styrene-based molding and extrusion compounds made progress in their first year. Interim production facilities at Springfield, Mass., were taxed to supply the tough, durable plastic for such uses as luggage, refrigerator components, appliance housings and a new chair for children. Early in 1962, at Addyston, Ohio, we will start making the product in a plant designed to produce 40 million pounds annually.

GERING PLASTICS COMPANY

In December, we purchased the Gering Plastics Division of Studebaker-Packard Corporation, renamed it the Gering Plastics Company and made it a department of Monsanto.

Gering, a 35-year-old company, now markets a broad line of plastics for industrial and consumer use. To the plastics industry it sells molding and extrusion compounds. Its consumer plastics products include garden hose, bags, floor mats, furniture coverings and closet accessories.

THE CHEMSTRAND CORPORATION

In its first year as a wholly owned subsidiary, Chemstrand bettered its sales. Its shipments of fiber and yarn increased 12 per cent.

The gains were made in the face of mounting competition from foreign and domestic producers.

In 1961, Chemstrand began a 200 per cent expansion of its nylon yarn capacity at Greenwood, S.C.

Strong demand again helped increase sales of nylon yarns. Tire cord volume expanded, with nylon cord tires winning a record 58 per cent of the automobile replacement-tire market.

Cumuloft continuous filament textured nylon carpet yarn continued to make good headway in the carpet market. *Cadon* multilobal continuous filament yarn continue to show promise in the upholstery field, as well as in outerwear and other apparel uses.

Acrilan acrylic fiber improved its position in a number of major uses. A new tufted blanket material was introduced. Solution-dyed *Acrilan* attracted interest in deep-pile fabrics for liners, outerwear and certain home furnishings. *Acrilan* and nylon gained prominent positions in the field of foam-laminated garments.

Overseas, Chemstrand fibers and yarns from the US were sold in more than 30 countries. Chemstrand Limited, the corporation's wholly owned British subsidiary, increased its *Acrilan* sales. A 50 per cent expansion of its plant at Coleraine, Northern Ireland, began in 1961 and is scheduled for early 1962 completion.

RESEARCH

In 1961, following an eight-year period in which 327 parent-company products were introduced, 230 of these products contributed 26.0 per cent of total sales for our four chemical divisions and 28.2 per cent of gross profits. Forty-nine new products survived screening tests in 1961 and were sold commercially.

Also in 1961, our parent company was granted 249 US patents and 383 foreign patents.

Expenditures for research, development, patent work and basic engineering amounted to $46.7 million in 1961. The comparable 1960 figure was $46.4 million.

Our new Research Center in St. Louis County was completed and staffed on schedule. The multimillion-dollar complex has about 13 acres of enclosed floor space.

Research projects handled under government contract are the responsibility of Monsanto Research Corporation, a wholly owned subsidiary. Monsanto Research Corporation's current investigations include the desalting of sea water, and the development of fuel cells, atomic power devices for generators in satellites, and high-energy fuels for supersonic aircraft.

FOREIGN OPERATIONS

Export sales were less than those of 1960's record year. The drop was expected in view of the increased capacity for many standard chemicals throughout the world, including the increased capacities of some of our overseas companies.

Monsanto Chemicals Limited, our subsidiary in the United Kingdom, had sales about equal to those of 1960. More pounds of material were sold. But increased competition, both domestic and foreign, pushed selling prices lower and caused a sharp drop in earnings.

Monsanto Canada Limited, wholly owned, showed slightly higher sales but lower profits. The profit drop was largely due to fixed charges on new plants still operating at less than capacity.

Monsanto Chemicals (Australia) Limited was caught in the downswing of the Australian economy. Purchases of consumer durables fell sharply. And MC(A)L's sales to manufacturers of such products dropped. The styrene monomer plant of Australian Petrochemicals Pty. Ltd. had a successful start-up. Monsanto has a 55 per cent equity in this company.

For 1960, we could merely note that our Argentine company, Monsanto Argentina S.A.I.C., had begun making vinyl compounds, phthalic anhydride and plasticizers. For 1961, we can report that its operations were eminently successful with respect to sales and profits.

Wholly owned Monsanto Mexicana S.A. had lower sales and profits. Sharply increased competition hurt sales of its two main products: polystyrene and sodium tripolysphosphate.

At Ghent, Belgium, our subsidiary, Monsanto Belgium, S.A., started production of *Saflex* polyvinyl butyral interlayer for laminated safety glass. Late in the year we increased our equity in this company from 75 to 100 per cent.

Mitsubishi Monsanto Chemical Company, our Japanese associate, showed a healthy increase in sales and profits.

Societe Monsanto Boussois, our French associate which produces polystyrene and styrene copolymer, did not match its 1960 sales or profits.

Sicedison S.p.A., our 40 per cent owned Italian affiliate, experienced a downward trend in prices of many plastics and chemical products during a large and costly expansion program. Final sales and earnings figures are not yet available.

50 PER CENT OWNED DOMESTIC ASSOCIATED COMPANIES

Mobay Chemical Company, owned with Farbenfabriken Bayer A.G. of West Germany continued its fast growth. Today Mobay is the nation's largest producer of urethane chemicals

Wider use of urethane foam cushioning in household furniture, commercial seating and mattresses was mainly responsible for the company's 70 per cent increase in sales of urethane raw materials.

Mobay expanded its tolylene diisocyanate (TDI) plant for the fifth time since 1956. And a sixth major expansion of TDI capacity was scheduled for 1963 completion.

Plax Corporation, owned with Emhart Manufacturing Company, increased its sales. But income was lowered by the high costs of plant start-ups and foreign operations.

Plax put three plants on stream and expanded another.

Shawinigan Resins Corporation, owned with Shawinigan Chemicals Limited of Canada, made sales advances in almost all established applications.

However, sales of Shawinigan's principal product, polyvinyl butyral for laminated safety glass interlayer, were down.

Fome-Cor Corporation had somewhat higher sales. But the young company, still in its developmental stage, did not turn a profit.

Fome-Cor is owned with St. Regis Paper Company.

* * *

Thus went 1961, the year of Monsanto's 60th anniversary. Our company has come a long way since it began in 1901 as the part-time venture of its founder. It has weathered many vicissitudes since it set out to make its first product —saccharin.

But despite the changes of the first 60 years, the objective has been constant. From the start, Monsanto's mission has been to extend man's mastery of the atom and the molecule and, in doing so, to develop, make and market at a profit products that contribute to human welfare. Our success in this mission is to the credit of our employees and to the benefit of our shareowners.

SUMMARY OF INCOME AND EXPENSES

(In Thousands of Dollars Except Per Share Figures)

	1961	1960
Income:		
From sale of products	$932,916	$890,114
From licenses, dividends, interest, etc.	11,755	10,411
	944,671	900,525
Deductions from Income:		
For raw materials, fuel, supplies, etc.	480,645	459,459
For wages and salaries to employees	223,790	209,683
For depreciation, obsolescence, depletion	84,527	76,088
For taxes	75,092	73,557
For interest, principally on long term debt	11,579	12,362
For minority interests in subsidiaries	382	1,569
	876,015	832,718
Which Left as Net Income	68,656	67,807
Distributed to Shareowners as Cash Dividends	27,316	25,659
Retained for Future Growth	$ 41,340	$ 42,148
Per Common Share Parent Company:		
Net income	$ 2·45	$ 2·49
Cash dividends paid	1·00	1·00
Book value	23·24	22·06
Common Shares Outstanding	28,023,440	27,195,189

The above summary includes the operating results of Monsanto Chemical Company and all of its subsidiary companies, including The Chemstrand Corporation and its subsidiaries.

PHILIPS' INCANDESCENT LAMP WORKS HOLDING COMPANY

EINDHOVEN

The Annual Report and Accounts of the above-named Company and of the Operating Company, Philips' Incandescent Lamp Works, will shortly be available in their English translation. The Holding Company owns fl.685,183,000 Ordinary shares of the Company out of a total of fl.685,432,000 and fl.143,660,000 Preference shares out of the fl.144,000,000 in issue. Below are given the Balance Sheet and Profit and Loss Account of the Operating Company as at 31st December, 1961.

BALANCE SHEET AS AT 31st DECEMBER, 1961

ASSETS			LIABILITIES		
Property, plant and equipment:			**Share capital and reserves:**		
Replacement value	1,025,725,000		Ordinary share capital	685,432,000	
Depreciation	469,234,000		6% cum. part. pref. share capital	144,000,000	
		556,491,000	Share premium account	87,635,000	
Intangible Assets		—	Retained profit	1,261,185,000	
Investments in and amounts due from subsidiary and associated companies		2,229,267,000	Revaluation	344,589,000	
Sundry non-current assets		15,519,000			2,522,841,000
Stocks:			**Sundry Provisions:**		
Factory stocks	345,028,000		Long-term provisions	133,845,000	
Commercial stocks	173,410,000		Short-term provisions	33,001,000	
		518,438,000			166,846,000
Debtors:			**Long-term Liabilities:**		
Trade and other debtors	119,725,000		3½% 25-year debentures (unsecured)	41,250,000	
Prepaid expenses	23,828,000		3½% 20-year dollar debentures (unsecured)	18,000,000	
		143,553,000	4% 25-year dollar debentures (unsecured)	72,000,000	
Liquid Assets:			4½% 18-year debentures in Swiss francs (unsecured)	41,695,000	
Marketable securities	40,723,000		Other long-term liabilities	446,095,000	
Cash at bank and in hand	276,533,000				619,040,000
		317,256,000	**Current Liabilities:**		
			Bank overdrafts	18,312,000	
			Creditors, including provision for taxation	256,878,000	
			Accrued expenses	50,309,000	
					325,499,000
			Profit for distribution		146,298,000
(All amounts in guilders)		3,780,524,000			3,780,524,000

PROFIT AND LOSS ACCOUNT FOR THE YEAR 1961

Profit, including profit of subsidiaries and associated companies, after foreign taxation	425,833,000
Netherlands tax on profits	119,000,000
Net profit	**306,833,000**
Distribution of profit:	
Shareholders, dividends at the rate of 8 per cent. per annum on the Cumulative Participating Preference Shares and 16 per cent. on the Ordinary Shares	121,189,120
Board of Directors and Board of Management	11,768,129
Personnel interests	13,341,417
	146,298,666

The development of the Philips Group as a whole over recent years is shown in a table published in the Annual Report, from which the following figures have been extracted:

	1961	1960	1959	1958	1957
	In millions of guilders				
Sales (excluding inter-company sales)	4,936	4,762	4,182	3,595	3,177
Increase on the preceding year	4%	14%	16%	13%	18%
Trading profit	731	862	740	557	442
As percentage of sales	14·8%	18·1%	17·7%	15·5%	13·9%
Net profit	326	397	351	244	187
Per Ordinary share of 8.50 (in guilders)*	21·43	27·72	25·54	20·18	16·27
Increase on the preceding year	−18%	13%	44%	30%	18%
Retained profit	180	257	217	142	92
As percentage of net profit	55%	65%	62%	58%	49%
Dividend on Ordinary shares	16%	16%	16%	14%	14%
Scrip issue	5%	5%	5%	—	—
Dividend on Preference shares	8%	8%	8%	7·6%	7·6%
Scrip issue in Ordinary shares	1%	1%	1%	—	—
Net worth	2,689	2,526	2,266	1,922	1,665
Long-term liabilities and provisions	1,482	1,153	933	951	896
Short-term liabilities and provisions	2,080	1,816	1,497	1,305	1,105
Current assets	3,972	3,545	3,107	2,748	2,354
Ratio of current assets to short-term liabilities and provisions	1·9	2	2·1	2·1	2·1
Additions to property, plant and equipment	472	425	279	239	275
Depreciation of property, plant and equipment	209	179	158	140	118
Number of employees	226,000	211,000	189,000	174,000	160,000

* Net profit after deducting distributions other than to Ordinary shareholders.

Copies of the above Accounts will be obtainable from the Company's British Fiscal Agents.

TEXACO INC.

AEG

ALLGEMEINE ELEKTRICITÄTS-GESELLSCHAFT

In the financial year 1960/61 the turnover of the AEG rose from 1,572 to 1,807 million DM. The turnover together with the major subsidiaries amounted to 2,817 million DM as against 2,497 million DM the previous year.
Substantial investments were again made to improve research and production facilities.

At the end of the financial year the AEG's labour force numbered 67,500. If the personnel of the major subsidiaries is added, the total amounts to 125,200.
The Annual General Meeting agreed to the distribution of a dividend of 15% for the year 1960/61. The year 1961/62 has so far progressed satisfactorily.

ALLGEMEINE ELEKTRICITÄTS-GESELLSCHAFT

THE IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED

EXTRACT FROM THE STATEMENT BY THE CHAIRMAN

MR R. S. W. CLARKE

The Annual Meeting of The Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held in Bristol on March 20th. The following are extracts from the Chairman's Statement to Stockholders.

TRADING RESULTS

The Parent Company's Trading Profit at £18,554,107 was £1,154,037 higher than in the previous year or almost exactly back to the level of 1959. The principal reason for the recovery in profit is that in June last we increased the prices of our tobaccos and some of our cigarettes in the United Kingdom, and in July made similar increases in our prices in the Republic of Ireland. There had been no increase in our cigarette prices in the United Kingdom, other than those necessitated by increases in the Tobacco Duty, since September, 1957. Our leaf costs have increased each year, and there have been increases in wages and salaries and in selling expenses. We have been able to offset some part of these increased costs by greater efficiency, but by the middle of last year it was clear that some increase in selling prices was inevitable, and we increased the prices of our more expensive cigarettes by ½d. for 10. We left unchanged the prices of our cheaper brands, including the very popular Wills Woodbines and Player's Weights.

This small increase in prices had virtually no effect on the sales of cigarettes, but at the end of July the Chancellor of the Exchequer imposed a 10 per cent surcharge on all the main Customs & Excise revenue duties, and this made it necessary to increase the prices of cigarettes of the Player's Medium Navy Cut class by 2d. for 10, and of the Wills Woodbine class by 1½d. for 10. This sharp rise in prices had an immediate effect on consumption, and, although it has since recovered to some extent, there is no doubt that it is still well below what it would have been if the Duty surcharge had not been imposed.

MANUFACTURE, BRANDS AND PACKINGS

We continued during the year the programme of re-equipping our factories with Molins Mark VIII Cigarette Making Machines, and by October 31st last the whole output of Player's Medium Navy Cut and Wills Capstan cigarettes was manufactured on these new machines. Improvements in machinery and manufacturing techniques are constantly being introduced in our factories to ensure that the quality of our brands is the best than can be achieved.

In September last our John Player & Sons Branch introduced a new cigarette—Gold Leaf Virginia Tipped. This brand immediately achieved a remarkable success and it continues to sell extremely well. Of the five leading brands of tipped cigarettes this Company now has three —Player's Gold Leaf and Bachelor and Wills Bristol.

During the past year W. D. & H. O. Wills revised the design of the other packs of their Capstan cigarettes to match the 20s. hinged lid carton which they introduced in 1960. They also completed a series of improvements to the design of the Woodbine carton.

More recently, John Player & Sons have adopted for the 5s, 10s and 20s hull and slide packs of their Medium Navy Cut cigarettes the design of the 20s flip-top cartons introduced to mark the Diamond Jubilee of the brand in May, 1960.

These famous brands—Player's Medium Navy Cut, Wills Woodbine and Wills Capstan—owe their great popularity to the outstanding quality of the cigarettes themselves. In their newly re-designed packs they will continue to maintain the reputation for quality on which their success has been founded.

GIFT TO EMPLOYEES

For many years past, it has been our practice to make an annual Gift to our employees over and above their normal salaries and wages in recognition of continuing loyal and willing service. This year the Gift will be 11½ per cent of earnings in the year ended October 31, 1961. Throughout the Company employees at all levels are fully aware of the necessity for maintaining our products at the highest level of quality and of giving our customers the best possible service. Their co-operation in achieving these aims has been an essential factor in helping us to meet the competitive conditions which prevail in our industry.

SMOKING AND HEALTH

Much publicity has been given to the recent report of a Committee of the Royal College of Physicians concerning the effects of smoking on health. There has been a great deal of public comment, some of it well-informed, much of it singularly ill-informed. I propose to confine myself to two points.

First, I endorse entirely the statement issued to the press by the Tobacco Manufacturers' Standing Committee and the Tobacco Advisory Committee. The statement by TMSC seeks to present a fair appraisal of the scientific aspects of an extremely complex issue. The statement by the Tobacco Advisory Committee comments on the commercial aspects of the principal recommendations contained in the report.

Secondly, it has been said or implied in a number of quarters that the position taken up by the manufacturers is heavily biassed by the fact that our commercial interests are involved. I want to say quite categorically that any such imputation is completely unjustified and unfair. It is of course self-evident that the industry's commercial interests are involved ; but the tobacco manufacturers also fully recognise their responsibility to the public. Indeed it is for both these reasons that the industry has for years past devoted so much effort and money to research and has kept in close touch with all the research that is being undertaken in this field in many countries of the world. It is out of the knowledge acquired in this way that the industry has expressed, and continues to express, its genuinely held belief that in these grave problems of public health there are many questions yet to be answered; that a general condemnation of cigarette smoking is neither justified nor constructive : and that the real need is for a great intensification of the research effort. In that effort the industry will play its full part.

MONOPOLIES COMMISSION

The Report of the Monopolies Commission on the supply of Cigarettes and Tobacco was published last year. The general conclusion of the Commission was that this Company's dominant position in the industry does not operate, and may not be expected to operate, against the public interest. Moreover, the Commission commented upon the responsible attitude which the Company had taken in its relations with the Government, and upon the value of its research and its efforts to develop new sources of leaf within the Commonwealth. Stockholders will share the satisfaction of the Board that after the most exhaustive examination of the Company's activities over a long period the Commission's general conclusions were so favourable.

THE TOBACCO DUTY

Tobacco is the most heavily taxed commodity in this country, and it is taxed more heavily in this country than in any other. Even before the imposition of the 10 per cent Duty Surcharge, tax accounted for 72½ per cent of the retail prices of our leading brands of cigarettes; the proportion now is about 74 per cent. The extent of the tax-discrimination against the smoker can be seen in the fact that in 1960 14s. 6d. of every £1 spent on tobacco goods went to the Exchequer whereas for all other consumer goods and services the average was about 2s. 3d. in the £1.

The Surcharge has made the distribution of the tax burden even more inequitable. It raised the price of 20 cigarettes previously selling at 4s. 2d. by 4d.—an increase of 8 per cent. Some of the other goods covered by the Surcharge were much less affected ; the Purchase Tax on a 12 guinea suit rose by 1s., increasing the price by ½ per cent. and the increased tax on a £60 refrigerator represented a 1½ per cent increase in price. A very wide range of goods and services escaped the Surcharge altogether. As far as tobacco is concerned, the Surcharge represents an additional imposition on a basic rate of Duty which is already far too high. Nor can I believe that it is in the long-term interest of the revenue that the Tobacco Duty should be maintained at its present excessive level.

PROSPECTS FOR THE CURRENT YEAR

In the present situation, when we do not know what the Chancellor of the Exchequer's intentions may be with regard to the Duty Surcharge, it is particularly difficult to forecast how consumption will move in the next few months—and even more difficult to forecast what our sales for the whole year may be. Leaf costs will be higher this year than last, and there will be increases in some other costs, but we shall have the benefit for the full year of the improvement in our profit margins due to the small price increases in June last. At this stage, in spite of all the uncertainties, I am hopeful that we shall be able to maintain the rate of Ordinary Dividend after making adequate transfers to Reserves.

THE STERLING TRUST

The forty-fifth annual general meeting of The Sterling Trust, Limited, was held on March 13th in London, **Mr M. F. Berry** (the chairman) presiding.

The following is an extract from his circulated statement:

At the beginning of the year our issued debenture capital consisted of £1,443,760 3½ per cent Debenture Stock redeemable 1963/73 and £700,000 4 per cent Debenture Stock redeemable 1953/63. The feeling of your Board is that investment trust company ordinary stockholders attach considerable value to the gearing which arises from the prior charges in the capital structure of their companies. We accordingly decided to issue in June, 1961, £1,300,000 6½ per cent Debenture Stock 1976/86 at 97½ per cent.

The impact of the heavy interest charge as far as 1961 is concerned has to some extent been cushioned by the high rates obtainable for money on deposit.

It will be noted that of the money raised by the issue, some £500,000 is still in this form. The balance of approximately £800,000 has been invested, mostly in the U.S.A. and has increased the book value of our holdings to £7,940,794. This compares with a valuation of just over £15 million, reflecting an appreciation of 89½ per cent compared with 78 per cent for the previous year. The asset value of the ordinary stock is now 67s. 7d. per £1 unit against 58s. a year earlier.

The gross income for the year ended December 31, 1961, again shows a substantial increase, having risen from £621,091 to £692,248.

The report was adopted and a total distribution of 10 per cent approved.

RIO FLOUR (HOLDINGS) LIMITED

In his statement circulated before the first Annual General Meeting of Rio Flour (Holdings) Limited held at 20/24, Moorgate, on March 15th, the Chairman, **Mr. J. H. Hansard,** reported that the reorganisation of The Rio de Janeiro Flour Mills & Granaries Limited Group which had been taking place had reached the position that Rio Flour (Holdings) Limited owned the shares in The Rio de Janeiro Flour Mills & Granaries Limited which company would, if its application to the Brazilian authorities were successful, become a Brazilian company.

In the current year, assuming that the former Rio Flour Mills Company became, by the granting of the necessary Brazilian Government decree, a Brazilian entity, the position would be reached where all operating subsidiary companies were Brazilian registered and the next phase would involve the setting up of a single operating company in Brazil to be named Companhia Aymoré de Industrias Gerais (C.A.I.G.) which was intended to own, through shareholdings, all the existing Brazilian subsidiary companies and to provide a single operating and marketing organisation for all products of the Group under the AYMORE trade mark. When this had been done it would be possible to make shares in C.A.I.G. available to investors within Brazil, which seemed most desirable to the Board, and to take advantage through such facilities as might exist locally for the raising of additional funds for the future capital expenditure programme of the Group in Brazil.

The report was adopted.

DONALD MACPHERSON & CO., LIMITED

INCREASED TURNOVER AND PROFIT DESPITE CREDIT RESTRICTIONS

STRONG FINANCIAL POSITION

MR R. P. CHESTER ON THE OUTLOOK

The sixty-seventh annual general meeting of Donald Macpherson & Co. Limited, was held on March 22nd at Winchester House, Old Broad Street, London, E.C.

The following is the Statement by the Chairman and Managing Director, **Mr R. P. Chester, CBE, JP,** circulated with the report and accounts:

I have pleasure in presenting the Report of the Directors and the Accounts for the year ended October 31, 1961.

GENERAL

In each of my statements for the last three years I have felt it necessary to refer to the effect of measures taken by the Government either to reduce consumption or to increase demand in the country as a whole. This year is no exception. There were signs in January, 1961, of an easing of the credit restrictions then operating, but in July the Government found it necessary to introduce much more severe measures to reduce the level of demand at home. I am, therefore, pleased to be able to report on the satisfactory year's trading, a year in which both our Turnover and our Profits have increased.

Since 1954 we have acquired a number of Subsidiary Companies and in this last year we have been paying particular attention to the integration of these Companies to ensure that we make the maximum use of their resources.

The field of research is one in which concentration of effort pays substantial dividends. I referred last year to the new Industrial Development Laboratory at Bury. This year we have added a further department to this Laboratory and we have concentrated the efforts of our Cellulose and Woodfinishing Chemists at Barking. The results of each of these Laboratories are available to all members of the Group.

Another and more difficult field of integration is in the Selling force of the Group and considerable progress has been made in this direction.

CAPITAL COMMITMENTS

In this highly competitive trade not only must one pay continual attention to the needs of the customer but one must also have the best facilities for producing the material in the best possible manner. To this end our capital expenditure proposals in the current year are heavier than they have been for some time past and you will see from the Consolidated Balance Sheet that the capital commitments amount to £180,594. Part of this expenditure will be made on a new factory for our Subsidiary, R. Cruickshank (Cellulose) Ltd., which is in course of erection at the moment and it is hoped that it will be in production before the end of the current financial year. The remainder of the expenditure will take place at various other factories in the Group to ensure that our facilities remain equal to those of the leaders in the Industry.

You will recall that in July, 1960, we acquired the whole of the Issued Share Capital of L. G. Wilkinson Ltd. and its two smaller associated companies. During this year these three companies have been re-formed into a sub-group of L. G. Wilkinson Ltd. and this change is reflected under the heading of Subsidiary Companies in our Balance Sheet.

ACCOUNTS

The Net Profit of the Group before Taxation amounts to £494,802, an increase of £59,623 compared with last year. This increase can be attributed both to expanding Turnover and also to the inclusion this year of a full year's trading by the L. G. Wilkinson Ltd. Group.

The rate of Company Income Tax has remained the same for a few years now but there have been a number of increases in Profits Tax in recent years and it will be seen that Profits Tax this year has increased by £16,845 to £62,918. The total requirements for Taxation amounts to £230,083, after crediting £13,657 over-provided last year. We are thus left with a Net Profit after Tax of £264,719, an increase of £21,111. The balance brought forward from last year is £34,267, thus making available for appropriation £298,986.

APPROPRIATIONS

Your Directors again recommend the appropriation of £100,000 to General Reserve, £5,000 to the Pension Fund and £20,000 for Additional Depreciation of Plant and Machinery.

In March, 1961, a Bonus Issue of one new share for every one held was made, and it is recommended by your Directors that the costs of this operation, £6,695, be written off.

With the increase in Profit of the Group your Directors would normally have felt justified in recommending an increased Dividend, but in view of the Chancellor's appeal for restraint in this and other matters, they feel that it is right not to increase the Dividend. They, therefore, recommend that the Final Dividend be maintained at 10 per cent, equivalent to the 20 per cent last year on the Capital before the Bonus Issue.

FINANCIAL POSITION

Turning to the Consolidated Balance Sheet you will see that the Current Assets standing at £2,292,887 exceed Current Liabilities by £1,372,649. This is an improvement of £125,940 over the Net Current Assets last year and indicates a strong position.

The Consolidated Balance Sheet also shows the effect of the capitalisation of the Share Premium Account and part of the Revenue Reserves which took place in March last year. After this capitalisation and including the £100,000 recommended to be appropriated this year the General Reserve now stands at £541,840.

Fixed Assets stand at £756,664 after normal Depreciation and the £20,000 Additional Depreciation have been deducted.

PROSPECTS

Again I have to refer to the economic situation of the country; even the experts seem to be divided in their assessment of the next few months. I will, therefore, only say that I believe that the efforts which we have made in the past years will stand us in good stead in the future and enable us to maintain and improve our position in the Industry.

STAFF

Once again I am pleased to record our grateful thanks to all the people employed in the Group. They have played no small part in achieving the successful results which I am reporting to you today.

INTERUNIE

1960	55,500	91,062	229,513	206.65 (b)	8.57 (b)
1961	**67,500**	**124,225**	**292,641**	**228.00**	**9.50 (c)**

(a) *Includes share premium account.* (b) *Adjusted to take account of Stock Dividends.*
(c) *Plus 5% Stock Dividend proposed.* (d) *Including costs.*

10% RISE IN SHARE VALUE

The increase in asset value per share during 1961 was over 10%. The continued growth of its issued capital proves the high regard in which 'Interunie' is held by investors both at home and abroad. 1961 was a good year for the economic integration of Europe. The British application for E.E.C. membership has opened the prospect of 1962 putting an end to the split of free Europe, and expectations of a further economic expansion of the E.E.C. are surely not unjustified.

GEOGRAPHICAL SPREAD

	31.12.1961	31.12.1960
NETHERLANDS		
International stocks	21.2%	28.4%
Local stocks	22.1%	22.9%
	43.3%	51.3%
U.S.A.	32.9%	27.7%
CANADA	3.9%	4.3%
GERMANY	3.7%	2.5%
UNITED KINGDOM	3.7%	2.9%
FRANCE	2.4%	—

SCAFFOLDING GREAT BRITAIN (HOLDINGS) LIMITED

TURNOVER AND PROFITS SUBSTANTIALLY INCREASED

MR E. C. BECK VIEWS THE FUTURE WITH CONFIDENCE

The annual general meeting of Scaffolding Great Britain (Holdings) Limited will be held on April 16th at the Head Office, Mitcham, Surrey.

The following is the statement by the Chairman, **Mr E. C. Beck, MA,** which has been circulated with the report and accounts:

Trading Results.—The Results for the year ended September 30, 1961, again show an increase in both turnover and profits.

It will be seen from the Consolidated Profit and Loss Account that the profit before taxation has increased from £770,944 to £1,056,573.

This satisfactory result is accounted for by maintaining a reasonable profit margin on a considerably increased turnover.

Management and Staff. This year, I should like, in the early part of my Statement, to commend all our employees for the success of their efforts, as it is largely due to them that the Company continues to prosper.

Our thanks are especially due to our Managing Director, Mr Clifford-Jones, who by his leadership and enthusiasm continues to give inspiration to all those working with him in the Group.

Investment Allowance. You will see from the Accounts that, during this year, agreement has been reached with the Inland Revenue on Investment Allowances, which as I mentioned in my report last year were then under negotiation.

Taxation adjustments in respect of previous years going back as far as 1954 amount to £237,935 largely made up of Investment Allowances.

Current Assets. In the Consolidated Balance Sheet it will be seen that Materials and Equipment have increased by £547,000, without any appreciable increase in Current Liabilities.

These Materials and Equipment have been valued conservatively as in previous years, but it has, of course, been necessary to increase Stocks in order to obtain the increased turnover.

So long as the Building Industry continues to maintain its high level of activity, I am confident that these Stocks will be fully employed, but this is a matter, of course, which your Board will keep continually under review.

Share Capital and Reserves. The Directors have decided to put £625,000 to General Reserve, making the Total Reserves of the Group, including Carry Forward, £1,632,730.

From these Reserves the Directors are proposing a Bonus Issue of one share for every five now held, which will absorb £296,476, leaving £1,336,254 in the Reserves, while the increased issued capital will be £1,778,856.

Your Directors are also recommending that each £1 share be split into two shares of 10s. each.

Dividend. You will also see from the Directors' Report that it is proposed to recommend a Final Dividend of 12½ per cent, less tax, making 20 per cent for the year.

Your Directors considered increasing the dividend, but in view of the Chancellor's wish that restraint should be shown by public companies for the time being, they decided to recommend the same dividend as for the previous year.

Shareholding Scheme. Your Directors have under consideration a scheme for providing loans to assist executive directors and senior executives to acquire shares in the Company. If such a scheme proves feasible, it will of course, be submitted to Shareholders for their approval at a General Meeting.

Operating Companies. Scaffolding (Great Britain) Limited, the main operating company in this country, has had a most successful year.

G. C. Cook Limited, acquired in 1959, has shown an attractive return on the capital invested, and our companies in Eire and South Africa have both shown good results again, particularly pleasing in the case of South Africa in view of the economic and political difficulties which exist in that country.

During the year, Mr J. A. Bowker and Mr C. H. Vaughan were appointed Directors of Scaffolding (Great Britain) Limited. Both have given many years of valuable service to the Company, and I am sure that with their further responsibilities they will continue to increase the prosperity of this Company.

Capital Commitments. From the Notes on the Accounts it can be seen that there is an increase of approximately £172,000 in Capital Commitments this year.

This is due to further necessary Building work at our Head Office and Depots, and the order for a 1301 Computer, delivery of which is expected within the next 12 months.

This computer will be a welcome addition to our accounting facilities in many spheres of our activities.

Prospects. We have, during the year under review, opened a number of new depots and provided additional facilities at others, which puts us in an even stronger position to cater for all the requirements of the Building Industry.

From the Preliminary Statement given to the Stock Exchange you may have seen that it is hoped to be able to maintain the 20 per cent Dividend on the increased capital for the current year.

For the first five months of the current year, results compare satisfactorily with those of 1961.

In the foreseeable future, it does not appear that there will be any serious lessening of the amount of work carried out in the Building Industry, and I am therefore hopeful that we shall continue to maintain, and, if possible, increase our turnover and, providing profit margins can be maintained, I have every hope for the future.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

The Economist,
22, Ryder Street, S.W.1.

Management Consultants Association

CONTRIBUTION TO HIGHER PRODUCTIVITY

The Annual General Meeting of the Management Consultants Association was held on March 21st at the Savoy Hotel, London, W.C.2. **Mr. Ernest E. Butten,** the Chairman, presided. The following are extracts from his statement:—

Need for Growth: The 1960 Economic Survey of the United Nations shows the UK's annual rate of growth, in terms of real domestic product, over the ten years from 1950 to 1959 at only 2.5 per cent. She comes last of the 16 countries listed. The average growth over this period was 4.4 per cent and the individual maximum was 9.1% or nearly four times that of the UK.

This is an intolerable state of affairs—and an unnecessary one. We have within this country technical brains, managerial experience, and skilled craftsmen that are second to none. We have the power to double our rate of growth—and I believe that 4 per cent or 5 per cent, not our Chancellor's 2½ per cent, is the target at which we should aim.

Members of MCA know from experience what can be achieved in terms of increased output by the application of modern management methods—and they know it is measured in terms of 10% or 20%, not in terms of 1% or 2%.

To achieve this goal, however, three things are needed:—

First, a proper Government plan for efficiency and growth.

Next, a genuine determination by management to set its house in order.

Then, a readiness on the part of organised labour to eliminate all forms of restrictive practice—given reasonable safeguards.

The establishment of the National Economic Development Council, the co-operation of the TUC, and the potential stimulus of the British Productivity Council's excellent project of a National Productivity Year all show an awareness of the need. We urge that positive action should follow in the coming months.

The Export Position: In the last few years the sale of British management consulting services in countries overseas has increased considerably. In 1961 out of a revenue of £6,889,000, some £1,492,000 or over 20 per cent of the total, was earned by MCA members outside the UK.

While this sum may seem small in comparison with some export figures, it is a very real sign of enterprise and has a substantial indirect value to Britain's export effort. For the presence of British management consultants in foreign countries has helped to make their nationals aware of British services and equipment, and has frequently led to export orders for UK firms which would not otherwise have been secured.

Management Training: Management training lies at the root of many of our country's industrial problems. The old idea of training by experience is not remotely adequate to the needs and conditions of today. Although many firms, principally, of course, the largest, are alive to the existence of new management techniques and the need for specialist training at all levels, there is still a deplorable number which feel that what was good enough for their grandfathers is good enough for them too. This can be disastrous in modern competitive conditions.

What we need is a radical new approach both to initial training for new managers, and to "refresher" training for existing managements.

Though management consultants lead the field in management training today, this is still not enough to meet the country's real need.

However, the sort of training that is provided by MCA member firms might stand as the model for a positive national policy, because of the emphasis it places on having lecturers and instructors who are all men with practical, up-to-date, industrial and commercial experience.

The Role of Management Consultants: The member firms of Management Consultants Association have now served some 8,500 clients of whom about 7,000 are in the UK and 1,500 overseas. Whilst the majority of these clients are still in the industrial field, an ever increasing number comes from Commerce, Distribution, and the various municipal and national undertakings—as well as from professional firms such as Architects, Lawyers, and Stockbrokers.

As the demand for Management Consultants has increased, so the range of their services has broadened to keep pace. In Marketing, Production, Administration, Finance, or Personnel, there is an ever-growing body of management knowledge and practice to be mastered if the consultant is to provide his client with the first-class and up-to-date service he is entitled to expect.

The Association was formed in 1956 and now comprises eight of the principal firms of Management Consultants in the United Kingdom. Today members of the Management Consultants Association undertake approximately 85 per cent of all management consultant work now carried out in the country.

The total consultant strength of these firms, in the UK and overseas, is now over 1,400, an increase of 15% in the past year. Over 80% of their staff have university or the equivalent degrees. They all have at least five years' experience in industry or commerce before joining our various firms. Once joined they have rigorous training in up-to-date management practice—and this training continues throughout their consultant career. Each year they gain experience and see management problems over a wide range of concerns.

This background and experience are of incalculable value, and though the range of work consultants do today is wide, there are still many ways in which this country could—and I believe should—make more use of the management consultant's services. On industrial and commercial problems the management consultant has certain unique assets. He has worked with countless managements and unions—and knows their problems in detail. But how often do you find a management consultant on any major Government or trade committee, or any special negotiating body in the industrial field?

We have in the Members of the MCA a national asset of high value which could profitably be used to a far greater extent by the Government and by trade associations.

Finally, I would stress the relationship between the work carried out by management consultants and the country's general economic position. Consultants play a vital role in the national drive for higher productivity and greater industrial efficiency, and for this reason, I firmly believe that a more universal application of their work would help us to achieve a proper rate of economic expansion, accompanied by a significant reduction in costs.

INTERNATIONAL COMBUSTION (HOLDINGS) LIMITED

Annual Report and Accounts of the I.C.L. Group for 1960/1961

PRINCIPAL FEATURES

1959-60		1960-61
£		£
971,277	Net Profit for year after Taxation *(a)*	789,398
136,621	Adjustment of Provision for Taxation	247,559
1,027,898		1,036,957
5,512	Preference Dividend	5,512
528,783	Ordinary Dividend (30 per cent)	658,927

564,000	Investments (less provision)	782,000
8,656,000		12,483,000

(a) Including the profit of The Superheater Co. Ltd. and its subsidiaries for three months.

EXTRACTS FROM THE REVIEW OF THE CHAIRMAN, SIR JAMES REID YOUNG

One of the most important actions taken by your Board during the year was the offer made to acquire the whole of the share capital of The Superheater Company Limited, and it is now a wholly owned subsidiary of your company.

The profit for the year before taxation was £1,741,651 which includes profit from Superheater for a three months period. After allowing for taxation the net consolidated group profit is £789,398, to which has to be added £247,559, provided for taxation in previous years and not now required.

A proportion of the Reserve for Research and Development has been utilised during the year, and an amount of £358,000 has been added.

Your Board is pleased to recommend payment of a final dividend of 20 per cent. This will absorb a sum of £439,285 and leave £14,518 to be added to the amount brought forward of £543,464.

The value of contracts received during the year was an all time record and brought the value of unexecuted work at the year end to a figure slightly in excess of £55 million.

I said last year that the distant prospect was brighter and this I can reaffirm but, looking at the immediate future, I must advise that we do not at present anticipate increased Group earnings in the next year or two. We will, however, have the benefit of the full earnings of The Superheater Company Limited.

This announcement appears as a matter of record only.

New York, N. Y., March 20, 1962

LINDUSTRIES LIMITED

SIGNS OF IMPROVEMENT

The sixty-fifth annual general meeting of Lindustries Limited was held on March 22nd in Glasgow, **Mr William E. Luke** (the chairman) presiding.

The following is an extract from his circulated statement:

The results of the financial year which ended on September 30, 1961, have been a great disappointment.

The consolidated trading profit is down by £444,798 or 42 per cent, and represents a decline in profit in every major section of the Group. Approximately 75 per cent of the Group's funds is invested in the United Kingdom, about equally divided between our Textile and Engineering interests. Of the overseas investments rather more than half is invested in Textile interests and the balance is in the Canadian subsidiary.

In all Divisions our sales and profits were seriously affected by the credit squeeze. When people curtail their purchases of motor-cars, carpets, shoes, luggage, furnishings, clothing and many other commodities, most of our subsidiaries are affected directly or indirectly. We cannot expect to move against general trends.

TEXTILE DIVISION

As expected, activity in our yarn mills in Northern Ireland has been at a low level. Profits from the manufacture and sale of threads were fairly well maintained, but losses in the yarn mills were aggravated by reduced orders for thread-making, due to the continuing switch from natural to man-made fibres.

Our difficulties are formidable, but I am quite sure that within a year of two we shall obtain a much better return on the capital employed in this Division. Almost inevitably this will have to be accomplished by a phased programme of contraction rather than expansion.

In the face of stern competition from other British and European manufacturers of fish nets and netting twines and constantly growing competition from Japan, our management has done well to maintain sales, but it is becoming increasingly difficult to obtain remunerative prices.

An unexpected setback occurred in our Narrow Fabrics section where profits were substantially lower, mainly because our management maintained its skilled labour force in order that customers could be assured of supplies of zip-fastener tapes on an upswing in demand which has not so far occurred.

ENGINEERING DIVISION

During the period under review Elliot Equipment Ltd., was transferred to the Engineering Division and its heavy development expenses (which must continue for some months) were charged to revenue.

The results of Delaney Gallay Ltd. inevitably suffered from the recession in the motor trade and a decline in activity within the aircraft industry. Profits have been squeezed by higher costs on the one hand and lower prices on the other and have also been affected by the expense

associated with the establishment of a new factory at Barking, at which motor car heaters are now being manufactured for the Ford Motor Company Ltd.

Fractional H.P. Motors Ltd., showed an increased profit and Central Engineering Works (Hastings) Ltd. substantially maintained its profits.

In making reference to the Group's Overseas activities the Chairman indicated that trading conditions in Canada and Australia had been difficult; and that the Company had decided to close down the French factory.

Referring to the acquisition of Heating Elements Ltd., Joseph Rhodes & Sons Ltd., and a 60 per cent interest in Waddington & Duval (Holdings) Ltd., the chairman said:

The policy of diversification is not an easy one and we in Lindustries Limited have had our share of difficulties and disappointments. The Group is not yet making enough profit overall but your Board is quite sure that this will develop satisfactorily.

The new financial year opened with conditions no better than during the later months of the last financial year, but there are now signs of improvement.

Our recently acquired companies will benefit from the considerable expansion programme undertaken and completed since we purchased them and we shall have the profit from Joseph Rhodes and Sons Ltd., so I think we should do better this year and, given a fair wind, a good deal better on the middle and long term.

If Great Britain enters the European Community we should benefit from the general expansion that should take place in the European economy, and in most fields of our endeavour, but not all, we are equipped to compete on equal terms with European manufacturers.

Our ability to improve our position in European markets would seem to depend on the attitude of the Trade Unions. No industry can stand wage increases unless they are accompanied by an increase in productivity and, generally speaking, workers in this country receive, in the form of wages and other benefits, more than their counterparts in countries now associated with the European Community.

The report was adopted.

LINGGI PLANTATIONS, LIMITED

YEAR OF CONSIDERABLE ACHIEVEMENT

SIR JOHN HAY ON MALAYA'S NEED FOR DIVERSIFICATION

The Annual General Meeting of Linggi Plantations, Limited will be held in The Queen's Room, Baltic Exchange, London, E.C.3, on April 10, 1962. The Chairman, **Sir John Hay,** in his Statement to stockholders, writes:

Since our 1960 report there has been a change in the composition of the Board. Owing to continued ill-health Sir Charles Innes felt compelled to resign in September last. We much regret this resignation and the occasion for it. In the few years that Sir Charles had been associated with us he gave ample evidence of a robust sense and good judgment, and in the exercise of these qualities he made weighty and valuable contributions to the deliberations of the Board. To fill the vacancy we have elected Mr John Gullick, who knows Malaya well from residence there and has acquired a first hand knowledge of our properties on very recent visits.

ACCOUNTS

In my statement to you last year I indicated that the fall in the price of rubber must have a considerable adverse effect on prospects in the year under review. We have in fact done much better than I expected, and our profits as now disclosed approximate closely to those of the preceding year. To this satisfactory outcome we have been helped by a fortuitous increase in the item "Refund of Malayan Cesses" and the non-recurrence of some exceptional expenditure which fell against last year's revenue. But even so the results are in themselves a considerable achievement, reflecting credit both on production in terms of cost and on selling carried out with shrewd judgment. In deciding on the rate of dividend we have been mainly influenced by two considerations, that the increase in wages recently granted after prolonged negotiations must inevitably increase costs, and that the refund of cesses will fall below last year's accumulations. Also, of course, the consequent increase in the amount that can be placed to reserve, thus ensuring financially the continuance of our long-term improvement policy, is an important factor which we have not overlooked.

Our meeting is fixed for a rather later date than last year, and to avoid our dividend falling into another fiscal year and perhaps causing taxation difficulties for our stockholders, we are paying a dividend of 5d. per ordinary share in the form of an interim. The amount transferred to Reserve is £100,000.

ESTATE OPERATIONS

This statement is written on a journey back from the East. The impressions formed on my visit to the company's estates are therefore fresh in my mind. Production is mainly centred on our two older divisions, Siliau and what is now known as Kombok. Both these properties are well maintained and output is at the rate of over 1,000 lbs. per acre. Mantin has been completely replanted and the new trees are well established. In the course of a few years output at a high rate should be forthcoming. Sembrong estate which has served us so well in the post-war years now constitutes our biggest task in replacement and extension. Considerable progress has already been made and will be steadily carried on to completion and when that is achieved we shall own an estate of over 4,000 acres, all planted up with the most modern stock. It will be appreciated that some years must elapse before the benefit of these developments finds expression in enhanced outputs. Crop for the next few years will be stabilised at ten to eleven million lbs., but thereafter we expect continuing increases in output until all new plantings reach maturity.

OIL PALMS OF MALAYA

Our investment in Oil Palms of Malaya continues to prove increasingly valuable. Although, as will be noted from the summary of this company's accounts, the rate of dividend remains unaltered, we anticipate that the company will benefit from larger outputs in the following years.

MALAYA AND SMALLHOLDERS

The outstanding impression that I derive from my recent visit to Malaya, is the striking but welcome contrast between the stable and orderly government of the Federation and the conflicts and disorders that continue unhappily to afflict some of its neighbouring territories. The measures that are in force for improving and modernising the smallholders' rubber plots are well-conceived and should evoke the sympathy of all estate owners who are following the same course. Whether the outlook for natural rubber is such as to justify the planting up of additional areas is a matter of serious doubt and one which will presumably be re-examined before such developments are carried far. Malaya's heavy reliance on rubber is the weak plank in her economy. There is need for diversification. An enterprising and active agricultural department has an opportunity here of giving valuable guidance to the smallholder and contributing to the strengthening of Malaya's economy.

STAFF

Our Senior Manager, Mr R. A. White, retired at the end of our year after 36 years' service in Malaya, nearly the whole of which was spent with Linggi. We wish him well in his retirement and include him in our thanks to the staff and their workers who continue with us.

L. RYAN HOLDINGS LIMITED

PROFIT AND DIVIDEND FORECAST EXCEEDED

The annual general meeting of L. Ryan Holdings Limited was held on March 16th in Cardiff, **Mr L. Ryan** (chairman and managing director) presiding.

The following is an extract from his circulated statement:

This is the first occasion on which I have had the pleasure of reporting to you since your Company's Ordinary Share Capital became quoted on the Cardiff Stock Exchange in August last year under the auspices of Gwent and West of England Enterprises Limited.

The Consolidated Trading Profit for the year ended November 30, 1961, was £303,034. This compares with £168,350 for the previous year. After dealing with the items enumerated in the Consolidated Profit & Loss Account, the Group Profit before taxation was £208,446 (1960 £103,414), which compares with the forecast of £175,000 made in August, 1961, when the Quotation was granted.

An Interim Dividend of 15 per cent less tax has been paid already, and your Directors propose recommending a Final Dividend of 25 per cent less tax. The Final Dividend compares with a forecast of 20 per cent less tax indicated at the time application was made for a Quotation in the Company's Ordinary Share Capital.

Commenting on the Balance Sheet, Mr Ryan said that the Total Assets of the Group were £879,515 at November last, which was an increase of almost £400,000 over the position at the end of 1960. He continued:

At November, 1960, the Group was operating only two complete Washing and Screening Plants, compared with four in production at November, 1961. As a result of the increased production from the additional Plants, the value of the average monthly output during the full year to November last was 75 per cent higher than that for the previous year, although the two additional Plants came into operation only towards the close of the Financial Year.

Your Directors are also well pleased with the continued development which has taken place on the Plant Hire side of the Group's business and which has been expanded aggressively.

THE FUTURE

On the coal side of the Group's business we plan to bring into production during 1962 three additional new Washing and Screening Plants. The first of these it is expected will be in production in March. Since the close of the year we have purchased an existing Plant already in production in one of our areas, and that together with the site and supporting equipment is already working for your Group.

Negotiations have been conducted with the Central Electricity Generating Board for some little while with a view to the Group entering into long-term contract for the supply of coal to a larger number of Power Stations in South Wales. Considerable demands are also being made upon us for our products by other large Industrial users both in the home and export markets.

All the while we shall be pushing ahead with the continued expansion of our Plant Hire.

Whilst it is too early in the new Financial Year for me to give any firm estimate of the Group Profit for the year to November, 1962, all the indications are from the vigorous progress being made right throughout the business, that the profit before Taxation will show a substantial increase over the position upon which it has been my pleasure to report for the year to November, 1961.

The report and accounts were adopted.

APPOINTMENTS

BRADFORD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited for the post of SENIOR LECTURER OR LECTURER IN THE HISTORY AND PHILOSOPHY OF SCIENCE.

Candidates should be well-qualified scientists who have made a specialist study in the History and Philosophy of Science and/or who have had experience in teaching in this field.

The person appointed will be required both to organise and to teach classes in the subject as part of the programme of General Studies for students in most departments of the Institute.

The grading of the appointment depends on the qualifications and previous experience of the candidate:

Salary scales:
Senior Lecturer, £1,800-£2,000 per annum.
Lecturer, £1,600-£1,850 per annum.

Previous industrial and research experience at a suitable level will be taken into account in fixing the commencing salary.

Further particulars and forms of application may be obtained from the Registrar, Bradford Institute of Technology, Bradford 7.

UNIVERSITY COLLEGE OF SWANSEA

CHAIR OF POLITICAL THEORY AND GOVERNMENT

Applications are invited for appointment to the Chair of Political Theory and Government which will become vacant on September 30 next.

Particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, to whom applications must be sent by April 14, 1962.

MARKET RESEARCH ASSISTANT

required for Package Foods Division to work on both existing and new product development with responsibility later for commissioning research with outside agencies.

Applications from men or women, age 24-30, who should have at least two years' Market Research experience, are invited. Salary and substantial Profit Sharing Scheme give good remuneration. Other benefits include Pension and Life Assurance Schemes.

Applications to
Group Personnel Manager,
Brown & Polson Ltd.,
125, Strand, London, W.C.2.

ECONOMIST Required by Rhodesia National Farmers' Union, Salisbury. Must have good honours degree in economics and at least 2 years' experience. Aged 28/38. Minimum initial salary £2,500. Pension scheme. Passage of appointee paid with assistance for family.—Fuller details from S. J. Lee, c/o N.F.U., Agriculture House, Knightsbridge, S.W.1.

H.M. TREASURY (ECONOMIC SECTION)

Appointments as (a) ECONOMIC ADVISER and (b) ECONOMIC ASSISTANT (at least 2 posts at each level), for work in London on economic trends at home and overseas, are offered to men or women with 1st or 2nd class honours degrees in Economics or closely related subjects. Age on 1.4.62: (a) at least 30; (b) at least 23 and preferably under 30. Candidates for (a) should have experience in teaching economics, in research, or in an economic advisory capacity. Final year students may apply for (b). Salary scales: (a) £1,781-£2,483; (b) £934-£1,282; starting salary according to age and experience. Initial appointment for 5 years, or less by arrangement. F.S.S.U. Application forms, obtainable from Civil Service Commission, Burlington Gardens, London, W.1 (quote S860/62), should be returned by April 17, 1962, for Economic Adviser and May 18, 1962, for Economic Assistant.

NORTHAMPTON COUNTY BOROUGH EDUCATION COMMITTEE

NORTHAMPTON COLLEGE OF TECHNOLOGY

Applications are invited for the appointment of a full-time GRADE B ASSISTANT LECTURER to teach COMMERCE, ECONOMICS AND LAW to professional students; duties to commence September 1, 1962. Applicants should be Graduates or hold appropriate alternative qualifications.

Salary, Burnham Technical Scale—£770 to £1,350 per annum with appropriate additions for training, qualifications and experience.

Forms of application and further particulars may be obtained from the undersigned to whom applications should be returned within two weeks of the appearance of this advertisement.

H. A. SKERRETT,
Chief Education Officer.

Borough Education Office,
"Springfield," Cliftonville, Northampton.

THE ECONOMIST INTELLIGENCE UNIT LIMITED

is again expanding its RESEARCH DIVISIONS. Candidates for further posts should have at least an upper second class honours degree, preferably, but not necessarily, in Economics and/or statistics; they should also have had at least two years' experience of consumer market research, or of research into economic or marketing problems of industry, finance or commodities; a good working knowledge of at least one foreign language would be an advantage. Age preferably between 25 and 35. Salaries according to experience and qualifications.

Please send full particulars of qualifications, experience and present salary to "Research," The Economist Intelligence Unit Ltd., 5, Bury Street, S.W.1.

THE POLYTECHNIC

309 Regent Street, W.1.

SCHOOL OF COMMERCE AND SOCIAL STUDIES

Applications are invited for the following three full-time appointments to commence on 1st September next.

A SENIOR LECTURER to teach students preparing for B.Sc.(Econ.), special subject of Statistics, and Institute of Statisticians final examinations.

Candidates should possess an honours degree, with high qualifications in statistics. Research would be encouraged.

The salary scale commences at £1,800 and rises to £2,000 per annum, plus London Allowance of £45 or £60.

TWO GRADE B LECTURERS, one to teach Economics and one to teach Law, as main subject to students preparing for B.Sc.(Econ.), H.N.D. in Business Studies and commercial professional examinations.

Candidates should possess an appropriate honours degree or legal professional qualification and should state a subsidiary subject they could teach.

The Grade B salary scale for graduates commences at £870 and rises to £1,450 per annum, plus London Allowance of £45 or £60. Additional allowances are payable in respect of a good honours degree and approved training.

Application form, to be returned by April 9, may be obtained from the undersigned.

J. E. RICHARDSON,
Director of Education.

NATIONAL FARMERS' UNION have the following vacancies:

ECONOMISTS with good honours degree in Economics and possessing knowledge of agriculture and international trade problems.

ECONOMIST with qualifications stated above, and also fluent in modern languages including French and German.

Salaries according to age and experience.—Apply to General Secretary, N.F.U., Agriculture House, Knightsbridge, S.W.1.

EXPERIENCED ASSISTANT Required for the Investment Department of a leading firm of Manchester Stockbrokers. Responsibilities will include the analysis of clients' portfolios and the preparation of advice. The post offers scope and prospects in an expanding organisation.—Box 1605.

For further appointments and other classified advertisements see pages 1182 and 1183

A LEADING FIRM OF STOCKBROKERS have a vacancy in their Institutional/Research Department for an Assistant aged between 23/30 years.—Applicants should give age, details of previous experience and present salary, Box No. 1604.

UNIVERSITY OF KHARTOUM

Applications are invited for (a) a Senior Lectureship or Lectureship in Economics and (b) a Senior Lectureship or Lectureship in Social Anthropology.

Salary Scales:
Senior Lecturer — LS.2052-LS.2127 per annum.
Lecturer — LS.1077 x LS.75-LS.1977 per annum.

Entry point according to qualifications and experience. Cost of living allowance approximately LS.180 per annum. Output allowance LS.80. Family allowances: wife—LS.60 per annum, 1st child—LS.90 per annum, 2nd and 3rd child — LS.30 per annum each. Passages for appointee and family on appointment, termination and annual leave. Initial appointment 5 years, with possibility of renewal (second tour welcomed if possible). There is a superannuation scheme, and arrangements can be made to maintain F.S.S.U. policies. Unfurnished accommodation provided at rent (excluding rates) up to 7½% of salary.

Detailed applications including list of publications (10 copies) naming 4 referees by April 18, 1962, to Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29, Woburn Square, London, W.C.1, from whom further particulars may be obtained.

CANADA

SOCIAL INSURANCE ECONOMIST

Up to $9,800 per annum

Unemployment Insurance Commission

OTTAWA, CANADA

A challenging position exists for an experienced Economist to carry out studies and advise on matters of policy affecting Unemployment Insurance Legislation in Canada.

For Information Circular 62-2002, with full details and application forms, write IMMEDIATELY to:

Dept. 2002
National Employment Service of Canada,
38 Grosvenor Street, London, W.1.

COMPANY AFFAIRS

Thursday's reduction in Bank Rate to 5 per cent brought the sharp decline in equity prices on the London Stock Market to a halt. But generally the rises that followed were small and did not wipe out earlier losses which, in the week to Wednesday, brought The Economist *indicator down sharply by 8.8 points to 347.9. An important influence in the market was apprehension about the effects of a capital gains tax which was not allayed by Lord Ritchie's speech on Tuesday. One of the few bright spots was the Kaffir market after the first relaxations in South African exchange controls were announced, but prices did not hold all their initial gains. After a quiet week, gilt-edged prices moved up a little after the Bank rate announcement.*

Philips NV Consolidates

A YEAR ago the directors of Philips NV predicted that sales in 1961 would reach Fl. 5,000 million and in view of the dramatic increases in both sales and profits in earlier years this estimate seemed conservative. But in fact this target was not hit last year: sales rose by only 4 per cent in value and by 8 per cent in volume, while trading profits fell by 15 per cent and net profits by 18 per cent. Two factors largely account for this setback, for which, admittedly, shareholders were well prepared by the flow of quarterly statements. First sales were hit by the revaluation of the guilder and secondly by the need to cut prices of some products, particularly of television sets and components. The decline in sales of television sets in Britain and Germany already evident in 1960 persisted throughout 1961. Costs, particularly of labour, continued to rise with the result that the gross profit margin fell from 18.1 to 14.8 per cent.

There are signs, however, that prospects for television sales are improving and the directors see no reason to alter their optimistic assumptions about the long-term prospects for the television market in Europe. The British market is saturated; but the rest of Europe is not and the directors estimate that demand in Europe is likely to rise from the current level of 6 million sets to about 9 million a year before many years are past. In domestic appliances, a relatively new market for Philips' sales are expected to more than double in the next decade; at present their contribution to profits is "not very impressive."

	1957	1958	1959	1960	1961
	— Guilders million —				
Sales	3,177	3,595	4,182	4,762	4,936

The directors emphasise the great strides that have been made in electronic equipment. Its contribution to profits is currently small but the group has concentrated a relatively large amount of its capital expenditure on telecommunications, electronic monitoring, measuring and control equipment. Expenditure on property plant and equipment amounted to Fl. 472 million last year, against Fl. 425 million, and is expected to rise further this year and again in 1963; after that the present level of new projects now being authorised suggests that expenditure is likely to show some fall from peak levels. Stocks too rose sharply in 1961 by Fl. 400 million to Fl. 1,880 million and at the end of December bank overdrafts of Fl. 612 million were higher than liquid assets of Fl. 544 million. It is not therefore surprising that the directors tell shareholders that "the financing of our operations will call for our special attention." This suggests that this year they will call on the shareholders for more funds either by a rights issue or, as in 1958, by a convertible debenture. These hybrids appear to attract investors in Holland as well as in this country, for only this week AKU has announced such an issue.

A convertible debenture may well prove to be the answer to Philips' problem, for if the directors' long-term forecasts are well-founded the current period of consolidation, in which sales are expected to rise but profits to show little change should be followed by a period of more rapid growth. The shares at £9[15/16] are well below their 1961 peak but still yield only 1.6 per cent on the dividend of 16 per cent paid on the capital as increased by the customary 5 per cent scrip issue.

Imperial Tobacco

IT is too early to judge the permanent effect of the report of the Royal College of Physicians on lung cancer upon tobacco consumption. On this subject, Mr Roger Clarke, the chairman of Imperial Tobacco, confines himself to general points, bluntly refuting as "completely unjustified and unfair" the imputation that the attitude of the tobacco manufacturers is heavily biased because of their commercial interest and making a plea for more research, in which he says the industry will play its full part.

Nor is it possible at this stage to anticipate what the Chancellor will do about the surcharge on tobacco duty, which has already checked the rise in consumption, or whether in view of the suggestions made in the lung cancer report, he might contemplate a more radical revision of taxes on tobacco. As Mr Clarke says, it is therefore difficult to forecast how consumption will move in the next few months or how much Imperial Tobacco will sell in the full financial year. Its sales in the first four months of the financial year were a little lower than they were a year ago. Costs, particularly of tobacco leaf, will be higher, but Imperial Tobacco will have a full year's benefit from the increase in selling prices last June. Despite the uncertainties Mr Clarke is hopeful that the directors will be able to maintain the ordinary dividend after making adequate transfers to reserves. Since the lung cancer report, tobacco shares have been weak and at 52s. 4½d. "Imps" now yield 8½ per cent on a 22½ per cent dividend, covered nearly 1¾ times.

Swan Hunter

THROUGHOUT the world shipbuilders are plagued by over-capacity, and British yards, confronted with the competition of lower cost producers overseas, have not gained many of the few new orders that have been placed. Depressed freight rates and passenger business show no sign of lifting; and for the first time since the war this country has no major passenger liner under construction. It is greatly to Swan Hunter's credit that its trading profits in 1961 were only £26,000 lower at £2,071,000; after a lower tax charge and bigger realised profits on investments net income actually rose by 12½ per cent from £1,419,000 to £1,598,000. Earnings have accordingly risen from 29 to 32 per cent and the total payment of 12 per cent (made up of a dividend of 10 per cent and a bonus of 2 per cent) has been left unchanged.

One reason for this relatively good showing must lie in the effectiveness of Swan Hunter's earlier development programme in adding to the efficiency of its shipbuilding yards and engineering works. Last April the chairman said that the order book was at least as good as any other in the country and clearly the most important question for the future is how quickly the orders are being worked off. On the preliminary results the £1 ordinary shares rose to 34s., 2s. above their low point for the year, to yield 7 per cent on the 12 per cent payment. Among shipbuilding equities there is only one stock yielding significantly less than this—John Brown, which earns a substantial income from its machine tool subsidiaries. Swan Hunter, shareholders will have noted, acquired a small civil engineering firm last December "to provide a measure of diversification"—a prudent move for any shipbuilder at this moment.

Lombard Banking

LOMBARD BANKING is predominantly a hire purchase finance house; the fall in its profits in 1961 should not therefore be too much of a surprise. The cut in the interim dividend last August was a warning. Gross profits are halved from £1,143,000 to £591,000; net profits, excluding tax write-backs, are down from £318,000 to £222,000 and the dividend is cut from 19 to 10 per cent. Two years ago this company's net profits were within striking distance of the £1 million mark and Mr E. G. Spater, the chairman of Lombard, was bolder than most spokesmen of HP finance houses when early in 1960 he said that the company was "stronger and better equipped than at any previous time." Profits were sharply down in 1960 but the unchanged dividend of 19 per cent was not, on a strict reckoning, fully covered; this year the smaller dividend is again short-earned.

The preliminary statement throws no light on the reason for the further setback. The cut in the interim was attributed to the uncertain conditions associated with the increase in Bank rate and the directive to financial institutions to reduce their lending. The full report will probably show that bad debts have also had a hand in cutting into profits. At 13s. 3d. the 5s. shares yield 3¾ per cent; investors are obviously still optimistic about the future.

Dutch Trusts

WARY of the low yields offered by most European stocks many British investors seeking a stake in the common market have sought a European unit trust. In particular the Dutch trusts **Robeco** and **Interunie** have attracted a good deal of interest; already 10 per cent of Robeco and 6 per cent of Interunie are held in this country. As forecast last September, the shares of Robeco are now to have an official London quotation not only in the full shares of Fl 50 each in bearer form but also in sub-shares of Fl 5 each, which are to be issued only in London. The sub-units are designed to overcome the British investor's dislike of heavily priced shares; the full shares will be dealt in around £25 and the sub-shares are expected to open around 25s. They will be registered in the name of the National Provincial Bank (Nominees) and dividends attributable to them will be paid without deduction of the Dutch withholding tax.

Both Robeco and Interunie are open-ended trusts. They are not bound, as unit trusts are under British law, to buy back their shares though they do so when selling is heavy. But market prices reflect underlying asset values. Interunie shares yield 4.1 per cent and Robeco 3.6 per cent, and these returns do not take account of stock dividends of 2½ per cent paid by Robeco and of 5 per cent paid by Interunie. The table shows that in 1961 both trusts were thinking along the same lines about investments; they reduced their holdings in Dutch internationals (such as Philips and Unilever) and added to their holdings of dollar stocks. Both also added to their holding of British securities and both found insurance shares particularly attractive.

APV

IN the last few years APV's growth has made a good impression, and an optimistic interim statement in September revealed still higher sales and profits. This specialist producer of plant and equipment in stainless steel, copper and nickel now reports an advance of 20 per cent in gross profits, from £750,000 to £900,000, in 1961.

The interim report warned shareholders not to expect any increase in the ordinary dividend for 1961 but in fact it is raised from 11¼ to 12½ per cent. The directors say that but for the Chancellor's request for restraint the higher profits would have justified a higher payment—they raise the earnings cover from just under three times to just under three and a-half times. Thus their decision to make a one-for five scrip issue has wider implications than a tidying up of the balance sheet.

The directors say that over the past few months there has been a drop in the value of orders received but there are indications that there will be an improvement over the rest of the year. In the long term the prospects look bright. About half of APV's products are exported and it has a foothold in the common market, not least through a manufacturing agreement with a Belgian company. At home APV enjoys the custom of the dairy and food processing industries and it is the leading manufacturer of brewing equipment, being one of the members of the original consortium formed to develop the technique of continuous brewing. Given the past record of rising returns on capital employed and the soundness of future prospects, it is hardly surprising that the 10s. shares at 35s. yield only 3½ per cent.

City Centre Properties

SHAREHOLDERS of City Centre Properties looking for some indication of the trend of future profits as its numerous property developments are completed will find little guidance in the statement of the chairman, Mr Jack Cotton. He has already forecast that dividends by 1964 should substantially exceed 40 per cent, compared with the current equivalent annual rate of 25½ per cent. This is the first report and accounts of the group since the merger with Mr Clore's City and Central Investments. The balance sheet reflects the impact of this and other mergers and of development projects. On June 24th last properties amounted to no less than £54 million; but this certainly underestimates their value, for £35 million is entered in the books at cost or at 1948 valuations. At the same date the ordinary capital amounted to £4¾ million, but as a result of the acquisition of Murrayfield Estate and a 50 per cent stake in Samuel Estates it now amounts to about £5¼ million. There has also been a substantial increase in loan capital since the end of the financial year, for £18.9 million resulting from the issue of convertible loan stock in July has been added to the £30¾ million already outstanding on June 24th when bank overdrafts amounted to £9¾ million.

Perhaps the most interesting part of the report is Mr Cotton's survey of City Centre's principal development projects in this country and overseas. The biggest of all these is the Pan-Am building in New York and already 80 per cent of this building, which will be completed by December, has been let. This is one of several joint investments in the United States made by City Centre with Mr Erwin Wolfson; Mr Cotton says that the group plans to add to these developments and that several of them will probably be financed completely in the United States.

At home Mr Cotton says that the group has undertaken only those developments which show an adequate return and that the demand for premises is still buoyant and that the rents are "adequate." He assures shareholders "that the cumulative results of our enterprise will become increasingly apparent." This assessment accords with that of the market, where the 5s. shares at 58s. yield 2¼ per cent on the current dividend and only 3¼ per cent on the minimum forecast payment of 40 per cent.

THE MONEY MARKET

After the passing of only one Thursday since the last reduction, Bank rate was cut by a further ½ per cent this Thursday, and it now stands at 5 per cent. The reduction was followed as usual by a corresponding cut in fixed rates in the money market. At the Treasury bill tender before the latest reduction the bill rate fell by 2s. 10.32d. to £4 17s. 7.57d. per cent. The market was not, however, forced to borrow from the Bank of England in the following week. The discount houses raised their agreed bid by 8d. to £98 15s. 7d. (a rise in the annual rate of 2s. 8d.); total applications for the unchanged offer of £230 million bills rose by £16 million to £412 million, and the market's allotment fell to 41 per cent compared with the previous week's 57 per cent.

Credit was fairly tight in the week preceding the Bank rate cut, with the exception of last Friday when the authorities sold a small number of bills to absorb surplus credit. On Saturday, Monday and Wednesday, however, the authorities gave the market small amounts of assistance by special purchases of bills, and on Tuesday this help was very large.

In New York this week the three months' bill rate fell from 2.804 to 2.689 per cent.

APPOINTMENTS

COMMONWEALTH OF AUSTRALIA

CAREER OPPORTUNITIES
IN
ELECTRONIC DATA PROCESSING
SYSTEMS DESIGN, DEVELOPMENT AND APPLICATION

An Electronic Data Processing Centre is being established in the Bureau of Census and Statistics in *Canberra* to develop and institute data processing systems of advanced design using a large-scale digital computer.

Type of Work
- SYSTEMS ANALYSIS AND DESIGN
- PROGRAMMING AND PROGRAM DEVELOPMENT
- ADVANCED STATISTICAL ANALYSIS OF ECONOMIC AND SOCIAL DATA
- TRAINING OF EDP SYSTEMS ANALYSTS OR PROGRAMMERS
- SUPERVISION AND OPERATION OF DATA TRANSMISSION AND COLLECTION EQUIPMENT

Positions and Qualifications
- **Senior Programmer (£2556-£2751)** Considerable experience with EDP systems in one or more of the above types of work. Ability to supervise, direct and train Programmers and operators. An appropriate University Degree (including Mathematics as a major) is desirable.
- **Programmer (£2296-£2491)** . At least one year's suitable experience with EDP systems in one or more of the above types of work. Ability to direct staff as required. An appropriate University Degree is desirable.
- **Programmer (£1871-£2101), Assistant Programmer (£1651-£1871).** At least one year's experience of programming for large-scale digital computers involving familiarity with modern systems languages. Alternatively, experience in problem analysis and systems research for use with such systems, or relevant civil service or O and M type experience. An appropriate University Degree would be an advantage.
- **Programmer-in-Training (£1321-£1651).** Training will cover theoretical and practical work on EDP investigations and programs. On successful completion of training, trainees will be advanced as Assistant Programmer, £1651–£1871. An appropriate University Degree, or relevant experience with potential programming ability is necessary.

Selected applicants will be tested by appropriate written examinations.

Conditions of Appointment. First-class travel will be arranged for successful applicants and their families who will be assisted with accommodation in Canberra. Salary, determined according to qualifications and experience, will be paid from date of embarkation. A superannuation scheme applies.
All salaries quoted in Australian currency.

Applications should be made on forms obtained from the Recruitment Officer, Staff Branch, Office of the High Commissioner for Australia, Australia House, Strand, London, W.C.2, and returned by 16th April, 1962.

SOUTHERN RHODESIA GOVERNMENT

VACANCY: DIVISION OF LOCAL GOVERNMENT FINANCIAL ADVISER

Applications are invited for the post of Financial Adviser to the Division of Local Government in the Southern Rhodesia Government. The appointment will be for a period of three years with a fixed salary of £3,000 per annum.

Applicants should be qualified and have extensive experience of Local Government accounting and auditing. The successful applicant will be required to advise on any financial problems arising within the field of Local Government and will also be required to examine and advise Local Authorities in respect of their accounts procedure and progressively to train the staff of the Division in these fields. In addition, the successful applicant will be expected to assist in new financial legislative provisions for the various levels of Local Authorities which operate in Southern Rhodesia, e.g., Municipalities, Town Management Boards, Local Boards, etc. It is proposed to create a financial "cell" within the Department and this Cell would be the co-ordinating link between Government, the Local Authorities and the professional auditors employed by them.

The successful applicant will be employed in Salisbury but will be required to undertake a certain amount of travelling within Southern Rhodesia. Travelling and Subsistence Allowances applicable to Southern Rhodesia Civil Servants will be paid in this connection.

Family passages provided, low income tax, good schools, free tuition to University entrance), generous sick and occasional leave, medical aid, opportunities for sport and recreation in excellent climate.

Application forms and further details from:—

The Secretary (R), Rhodesia House, Strand, London, W.C.2.

Closing date: April 21, 1962.

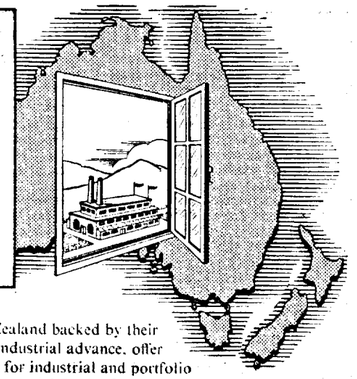
THE HUDSON'S BAY OIL & GAS CO. LTD.

During 1961 the production branch of the Canadian petroleum industry operated in a more favourable climate than at any time in the past several years. This statement was made by G. T. Pearson, President of Hudson's Bay Oil & Gas Co. Ltd., in the Company's 1961 Annual Report to its shareholders. Reflecting the improved conditions prevailing in the industry, Hudson's Bay Oil & Gas reported a net income of $2,000,000 or 20 cents per share for 1961. These earnings, which did not include any special credits from sales of properties or investments, were higher than comparable earnings for any previous year. In 1960 net income exclusive of special credits was $1,000,000 or six cents per share. The improvement during 1961 was primarily attributable to an increased volume of sales, but small increases in selling prices and a reduction in expenses were also contributing factors. With a higher level of earnings the Company declared the first dividend on its outstanding Capital Stock in the amount of $3,549,000 or 20 cents per share. This dividend was paid on January 26, 1962, to shareholders of record at the close of business on December 29, 1961. The Company reported a new high output of crude oil and natural gas liquids in 1961, net production averaged 26,822 barrels per day, an increase of 4,133 barrels per day or 18.2 per cent over the prior year. Natural gas sales by the Company in 1961 were also higher than in any previous year. These sales averaged 60 million cubic feet per day, an increase of 16 million cubic feet per day or 35.8 per cent over 1960. In 1961 the Company participated in the drilling of 126 exploratory and development wells. After deducting the interests of others this was equivalent to 78.9 net wells, a decrease of 2.2 net wells from 1960. At December 31, 1961, the Company owned 486.6 net wells which were capable of production, 698.6 net oil wells and 88.0 net gas wells. At year end the Company's undeveloped land holdings in Western Canada totalled 11.6 million acres. This was a decrease of 1.8 million acres from the previous year end, primarily reflecting acreage relinquishments in the Yukon, North West Territories and other new exploratory regions. Hudson's Bay Oil & Gas expended $25.5 million, including both capital and expense items, for finding and developing reserves of hydrocarbons in 1961 an increase of $1.5 million over the previous year. Expenditures included $7.5 million for the Company's 4½ per cent share of expenditures made during the year on producing facilities and a plant designed to process raw gas from the Windfall Pine Creek and Beaver Creek natural Gas Fields. When this plant comes on stream later this month the Company's share of production after deducting royalties will be about 34 million cubic feet per day of saleable residue gas, 4,200 barrels per day of natural gas liquids and the hydrogen sulphide equivalent of 200 long tons per day of sulphur. The hydrogen sulphide will be converted into elemental sulphur at an adjoining plant owned by a major sulphur company. Mr. Pearson stated that the growth in demand for crude oil and natural gas had continued in 1962 with consequent additions to the Company's revenues.



Offering You a Second Income

An extra source of income is always welcome. For that special something you have longed for, for vacations, etc., a second income is the logical solution.

To establish a second income, Nikko offers for your choice a diversified portfolio of stocks, bonds, investment trusts and debentures. Weir BOILER FEED PUMPS

Turbofeeders and Electrofeeders

for the
Power Generation Industry

Weir boiler feed pumps have for many years enjoyed a high reputation for efficiency, reliability and ease of maintenance in the power stations of Britain and abroad.

Recently completed units include those for three of Britain's nuclear power stations, and a number of very large pumps are under construction for thermal stations, including the world's largest capacity boiler feed pumps for the C.E.G.B.'s Thorpe Marsh power station. Twelve very large Weir units are also on order for their new Ferrybridge "C" 2,000 mw station.

Pre-eminent in the design and manufacture of
CONDENSING, FEED HEATING, FEED PUMPING, FEED REGULATING AND DE-AERATING PLANT
for the efficient and economical operation of Power Stations of the smallest or the greatest size, Industrial and Public Utilities.

Weir G. & J. WEIR LTD., CATHCART, GLASGOW, S4

It's the Home Service Insurance Man, the friend of the family. Through him, ten million families are investing in their own and Britain's future, by their regular payments on industrial life assurance policies.

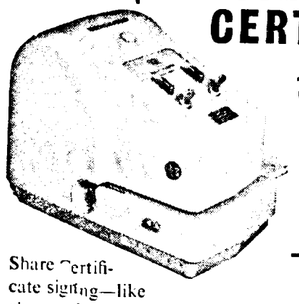
WHAT IS A FELLMONGER?

Note by courtesy of Barrow Hepburn & Gale Ltd

A worthy quizmaster question?



When supplying a pump for dealing with Sodium Sulphide Lime Paste we knew a good deal about pumping the paste, but a little puzzled about Fellmongers. But there is the Mono Pump tucked away on a machine for fellmongers who prepare woolled sheepskins. Only one of the many, many duties performed by Mono Pumps on many machines, in many factories, on many processes —commonplace or outlandish.

The MONO pump

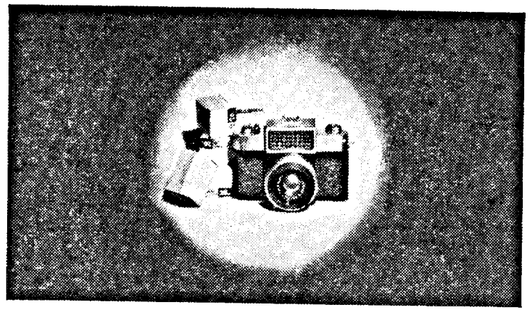
SIGN SHARE CERTIFICATES *this easier, faster, safer way*

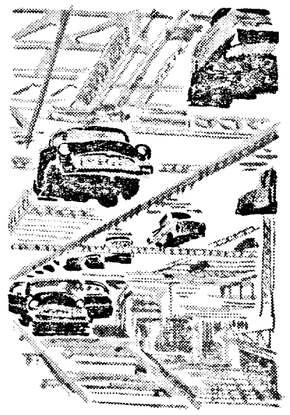


All-Electric Model 96

Share certificate signing—like cheque signing—is a job for a modern machine. Protectograph Document Signers can sign certificates of any size with ease, speed and absolute security. They save hours of precious executive time . . produce indelibly printed signatures in perfect facsimile in any position on the document. Dual locking control prevents unauthorised use: and a non-resettable meter records every document signed. Just get your secretary to send for illustrated literature on electric or hand-operated models.

PROTECTOGRAPH DOCUMENT SIGNERS

HALSBY & CO. LTD., ROOM 76, 52 DEAN STREET, LONDON, W.1. GERRARD 4163



Or putting the above in English, importing even one camera from Japan takes a good deal of paperwork. Your Mitsubishi Bank man has the knowledge and the modern facilities behind him to help you eliminate much of this or at least speed it up. He and the Mitsubishi Bank have built a reputation over the past 67 years on their ability to give you all the banking services necessary for successful import-export operations. From paper work to market assessment and credit ratings, the Mitsubishi Bank handles all import-export and everyday banking matters quickly, expertly.

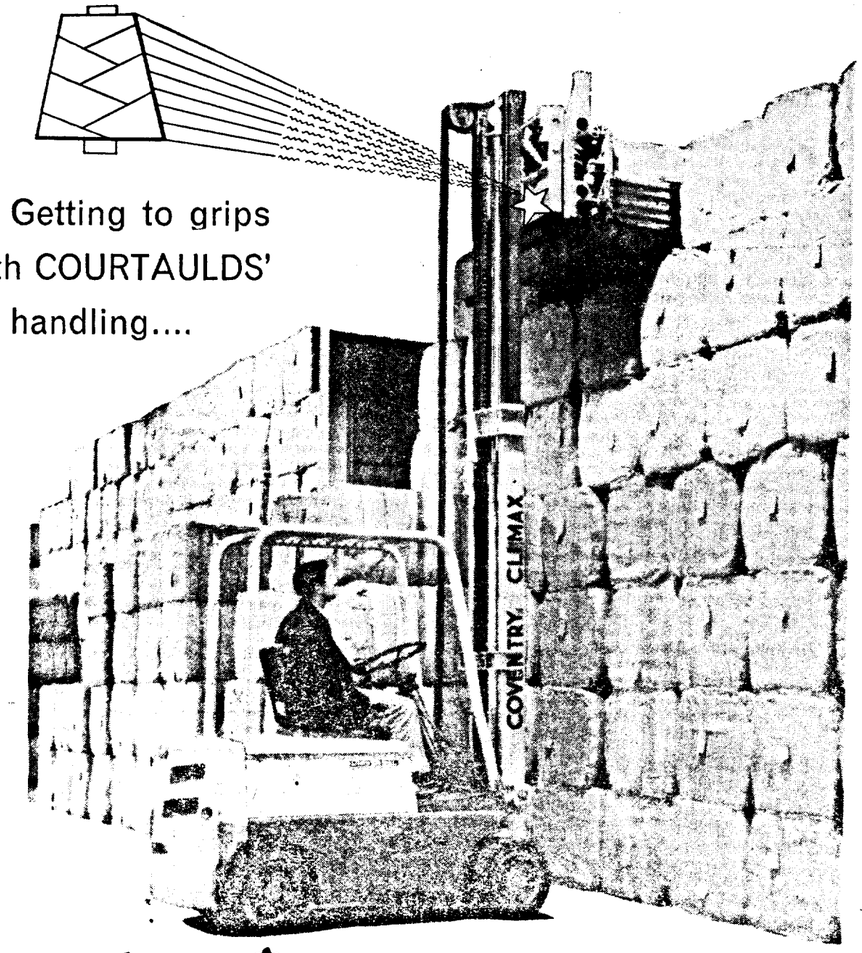
They make a lot of things from cold rolled sections

It's so exciting to be taken round a big engineering works. I saw them making parts for buses, railcars, greenhouses, refrigerators, toys . . .

I'm beginning to think that wherever I go and whatever I do I shall always see things which start their life as cold rolled sections made in Birmingham by Metal Sections Limited.



I'll bet it's great fun working there

GUIDE TO CONTENTS SEE OVER

English cargoes on the Rhine

Up and down the Rhine goes the inland shipping of half Europe, as it has, for centuries, fetching and carrying a hundred different kinds of cargo between Basle and the open sea. Swelling this familiar traffic is a growing new element — tankers carrying petrochemicals. These are the exciting new materials out of which ingenious chemical engineers will produce polyester fibres for glamorous clothes, hard-wearing synthetic rubbers for shoe-soles, supple plastics for car upholstery.

Here and there among the flags at the mastheads is one bearing a symbol that is becoming more and more familiar to European industry—the I.C.I. trade mark. From I.C.I.'s petrochemical plants—the largest in Europe—cargoes are now finding their way across the North Sea and deep into the heart of Europe. In the years ahead these cargoes will be augmented by the products of new I.C.I. plants to be built near Rotterdam, at the mouth of the Rhine itself. In the petrochemicals sphere, as in so many others, from colour chemistry to crop-protection, the name I.C.I. has come to mean quality, service, experience.

The influence of I.C.I. research and production is felt today in every corner of the globe

Lions to Tame

The Chancellor's budget speech must make it plain that the national objective is to increase industrial production: he should offer some bold ideas on how to achieve it (p. 1201).

Equal boldness would be needed to forecast the result of next week's **Stockton by-election** but an eccentric candidate's gleanings at Pontefract may quieten too quick cries of victory for **Liberal** policies (p. 1207).

A spontaneous outbreak of labour troubles in **the docks** could damage the prospects for long-term reforms in this vital industry (p. 1204).

High Wire

In the year of **sterling's** greatest crisis, Britain actually had a balance-of-payments surplus—this is the strange conclusion to be drawn from the Treasury's latest wobbly calculations (p. 1259).

In the United States domestic economic problems are contending with those of the international balance of payments: Europe will need to co-operate in keeping **the dollar** on the level (p. 1249).

The row between a pair of film producers and the film technicians' union has cast a brief, menacing shadow across the boardroom (p. 1212).

Performing Fleas

The London **television companies** have been waxing fat on the advertisers (p. 1275).

Television violence needs watching by adults, if not by children or censors (p. 1214).

The **hire purchase** companies are squaring up to bite each other where it hurts (p. 1266).

Oxford is by no means totally opposed to the imposition of a road across **Christ Church meadow** (p. 1220).

Side Shows

Portsmouth is knocking down some dubiously attractive old buildings to make room for healthy redevelopment (p. 1218).

Railway fares explained (p. 1264), and Kentish commuters up in arms (p. 1219).

Au pair girls are coming in for comment: the rules governing their admission and employment need straightening out, but not stiffening up (p. 1212).

Fuel injection can increase the output of **blast furnaces,** but it is unlikely to be used while coke is over-abundant (p. 1273).

SPRING BOOKS 1962

INTERNATIONAL

THE WORLD'S WEATHERS

Silver Linings

The British, in mid-voyage towards Europe, have begun to take a gloomier view of the Brussels negotiations—with the conspicuous exception of Mr Heath. The Lord Privy Seal is right—there is no solid reason now for despondency about getting into the common market on fair terms (p. 1203).

A cheerful projection of a possible international agreement on **disarmament** in 1965 may lighten the cares of those following the present grinding talks at Geneva (p. 1205) where **Berlin** is causing the usual difficulties (p. 1208).

Winter Discontents

German stock markets have at last been hit by domestic inflationary pressures of the sort only too familiar in Britain (p. 1263).

So Professor Erhard has been issuing stern warnings against self-indulgence to the **west Germans** (p. 1240). The **east Germans** have been hearing their rulers' explanations of why the state of their economy still leaves so much to be desired (p. 1239).

Spring in the Balkans

In **Bulgaria** the communist government is making some sort of effort to prevent any re-emergence of the worst excesses of stalinism, though it hastens slowly at best (p. 1209).

In **Greece** the Liberals are embarked on a ruthless attempt to discredit the King (p. 1244).

Further Outlooks Unsettled

The military coup d'état in **Syria** has caused that country to revert to its traditional role as a factor of instability in the Middle East (p. 1244).

The military coup d'état in **Argentina** has toppled President Frondizi in circumstances that suggest that in his person democracy has been deposed (p. 1207).

In **Algeria,** the fate of the European settlers, the Franco-Algerian ceasefire—and even the date of the next general election in **France** —depend on the speed of General de Gaulle's defeat of General Salan (p. 1243).

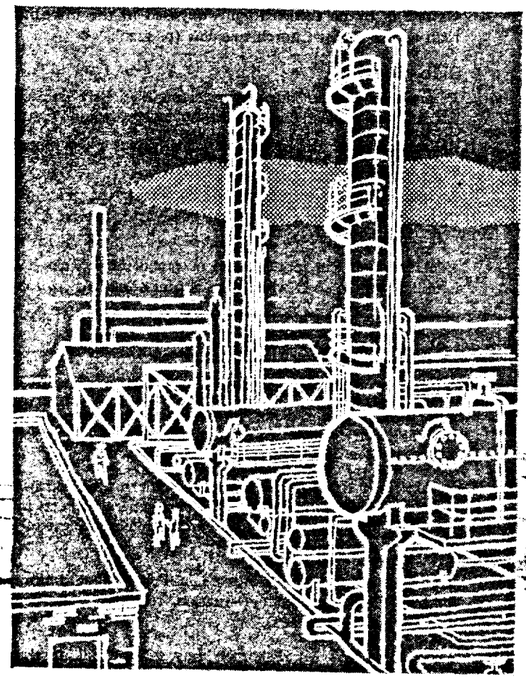
The National People's Congress in Peking should throw some light on **China's** economic situation, relations with Russia, and internal politics (p. 1208).

Mr Adoula and Mr Tshombe may still be talking themselves towards a settlement of their differences in the **Congo** (p. 1212).

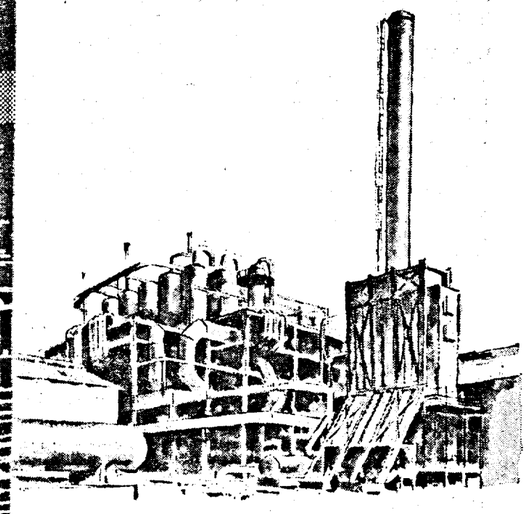
The methods **Japan** uses to control its financial affairs would raise eyebrows in the City; Japan has the fastest-expanding economy of any industrial country (p. 1261).

The American Climate

The Supreme Court has given **city voters** a great victory (p. 1250) and the Senate has put **Negro voters** on the road to achieving a much smaller one (p. 1253).



The settlement in the **steel industry** seems to be a triumph for the Administration's insistence that wage increases must be justified by increases in productivity (p. 1253).



President Kennedy has improved the climate for his **trade Bill** at home but he may have made it less acceptable abroad (p. 1256).

Two of America's most famous magazines are hard pressed (p. 1256).

Detailed contents on page 1201

Kellogg again at work for I.C.I.

Once again Kellogg is proud to be co-operating with ICI. This latest in a long series of projects is to execute ICI's first crude distillation unit, having a capacity of 1,000,000 tons per year and scheduled to be in operation in 1963 on Tees-side.

Kellogg will be responsible for the design, engineering, procurement of materials and construction of the unit which will provide some of the light distillate naphtha required by ICI in its three olefin plants at Wilton. Kellogg was associated with ICI in the development of all three plants. The new distillation unit, normally a step in petroleum refining, will allow the chemical concern to handle crude oil for the first time and will provide ICI with greater control over the raw materials needed for ethylene production at Wilton.

If you are planning to build new processing facilities at home or abroad—in the refining or petrochemical field,—you will be interested in the new brochure, "On the Job with Kellogg International Corporation". Write for your copy.

Plastics for the Space Age

Plastics that meet the unprecedented requirements of rocket and satellite applications are one of the many products of Budd's subsidiary, Continental-Diamond Fibre. Budd laminated and molded plastics are successfully meeting world-wide demands for strength, lightness, heat resistance and electrical insulation that can be fully satisfied by no other materials. Other Budd plastics—in the form of sheets, rods, tubes and tapes—have wide industrial application, make possible important product improvements, and substantially reduce production costs. Pioneering in plastics closely complements Budd's developments in engineering . . . metallurgy . . . tooling . . . welding . . . research . . . testing and production for international industry. These diversified activities help place Budd high among the world's 250 largest industrial concerns. For information about Budd plastics, write The Budd Company, International Division, Philadelphia 32, Pa., U.S.A.

Many Budd high quality laminated plastics are also produced by Budd's French subsidiary, La Fibre Diamond, 72 Rue du Landy, La Plaine St. Denis (Seine) France

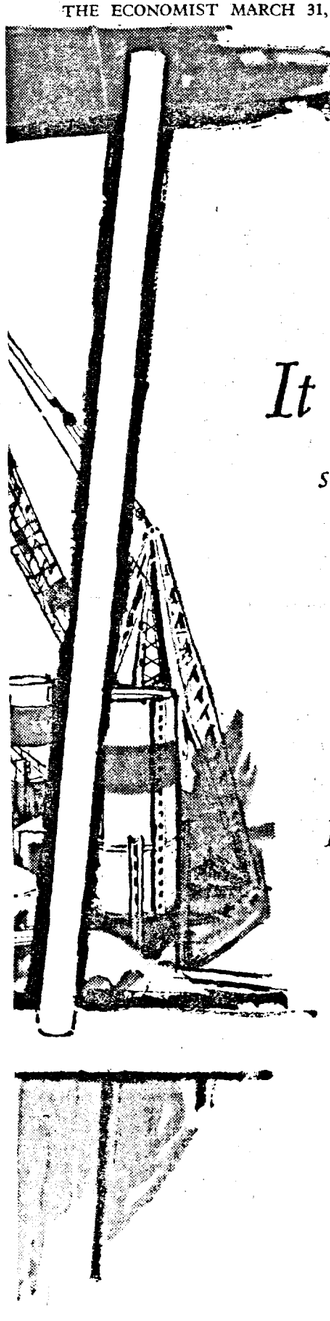
Certainly not...

Clearly, no one in his senses would use chewing gum at a time and place such as this.



However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself.

E375/2

It occurs to me that I am—

slothfully and inexcusably ignorant of the machines that made the cement, which, mixed with sand, aggregate and water in a suitable ratio and laid with considerable skill and effort, will provide the foundations from which will spring fine new buildings conforming in every respect with the requirements of the Ministry of Town and Country Planning, the Model Building Bye-Laws and British Standard Specifications, and even the client.

In so many instances it is Vickers who make the machines that make the products you use. Or even make the machines that make the machines that make the products you use. Cement grinding mills and kilns and complete cement making plant, for instance. They not only make machines, but also other products that engineers rely on, such as structural steel. For in a whole world of engineering, Vickers are Engineers to Industry.

Compact grouping of three 175 bhp Clayton Steam generators in boiler room of Gresham Berry Growers plant, Portland, Oregon.

STEAM PROCESSING COSTS DOWN 48% with *Clayton* MODERN STEAM

STEAM PRODUCTION COST COMPARISON

1960 SEASON

1 HRT Gas Boiler . . . . . 150 bhp
1 HRT Gas Boiler . . . . . 200 bhp

TOTAL CAPACITY 350 bhp

GAS FUEL (359,339 Therms)	$ 14,373.56
BOILER ATTENDANCE (Labor)	$ 6,864.00
MAINTENANCE (Season Average)	$ 1,500.00
1960 TOTAL SEASON COST	$ 22,737.56

1961 SEASON

3 Clayton 175 bhp Generators

TOTAL CAPACITY 525 bhp

GAS FUEL (246,573 Therms)	$ 9,862.92
BOILER ATTENDANCE (Labor)	$ 1,500.00
SEASONAL MAINTENANCE	$ 400.00
1961 TOTAL SEASON COST	$ 11,762.92

1961 SAVINGS with *Clayton* STEAM

48% or $10,974.64

Cut the boiler room space in half while increasing steam production; reduce the cost of seasonal processing steam by 48%, and you have a fair idea of how well Clayton *Modern Steam* is serving Gresham Berry Growers of Portland, Oregon, processors of FLAV-R-PAC brand frozen and canned foods. The comparison chart at the left tells the story.

Look at these figures! Fuel consumption down 31% in 1961 for added steam and a saving of $4,510.64 . . . cost of boiler attendance reduced 78% for a saving of $5,364.00, and maintenance cut 73%, or $1,100.00. Overall cost of producing steam reduced from $22,737.56 in 1960 to $11,762.92 in 1961 . . . *a saving of $10,974.64!* And these figures are not unusual! Similar savings are typical of thousands of Clayton installations in 95 countries around the world.

Versatility Unlimited

ASAHI PENTAX

There are many satisfactions to owning an Asahi Pentax. The smallest and lightest of all single lens reflexes, it is admired by professional, and amateur alike for its handling ease, mechanical perfection, and most important, the new quality it gives to their 35mm photography.

When you invest in a Pentax—for yourself or for a really fine gift—you do so with the confidence that this camera will not only perform magnificently in almost every picture situation, but will also grow in value as other Pentax equipment is added to your system.

The Pentax camera system will lead you all the way from the intimate world of the micro-photograph to the wide-open adventures of imagination-inspiring tele-photography. In the meantime, you know you have the finest camera in the world at its price, with automatic diaphragm, Pentax-invented instant-return mirror, positive, brilliant focusing, smooth shutter release, and a host of other features designed to help you take better pictures.

Choose a Pentax S1 or S3 according to your individual preference. Each one is a fine product of precision manufacturing—each has an individual personality.

ASAHI OPTICAL CO., LTD.
C.P.O. 895, Tokyo, Japan

REORIENTATE

visit **INDIA** ten thousand images

REORIENTATE—join today's top travellers going east to India—to the most profound holiday experience of all.

NAVIGATE—go north, south, east or west, you'll find more than a million square miles of unrivalled scenic beauty, home of the world's highest mountains, longest rivers, deepest valleys.

CONTEMPLATE—India is a thousand epics in stone, symbolic of man's driving quest for spiritual truth. A galaxy of dramas and festivals brings India's 5,000 years of civilisation to life.

ASSIMILATE—sample the world's most exotic foods (oriental or occidental). You have a splendid choice of that internationally popular dish—curry. Try it with fine, long-grained rice.

PENETRATE—tiger, panther, bear, elephant, buffalo, bison and wild boar in the jungle; trout and mahseer in the rivers, the wily snipe and the strong-winged duck on the jheels; above all, India's showpiece—the Gir Forest—with its one hundred regal lions.

Ask your travel agent.

Through the Alps in 14 minutes?

M. Lecoq is the owner of a Panhard-Levassor (1903). Like all motorists with veteran and vintage cars, he is tremendously proud of her performance. Although she is not much of a hill-climber by modern standards, M. Lecoq claims that his Panhard can average 30 mph on a level stretch of good, straight French road. Yet soon he may be able to make an even more remarkable claim. If he could disregard speed limits and maintain his average of 30 mph he would be able to motor through the Alps in 14 minutes!

Within the next year or so a 7-mile tunnel will be completed through Mont Blanc, from Chamonix in France to the Val d'Aosta in Italy. This will shorten the motorist's journey from Paris to Milan by 194 miles, and cut the distance from Paris to Turin by 137. For the first time it will be possible to drive from France to Italy via the Western Alps at any time of the year.

Atlas Copco compressed air equipment and Sandvik Coromant drill steels are being used to drill the Alpine granite from the Italian side. And this is only one of the many major engineering projects in which Atlas Copco and Sandvik Coromant equipment has played a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

VOLUME CCII - NUMBER 6188

Prescription for the Budget

THE official Economic Survey for 1962 will not appear until after this weekend; it will be considered in our pre-budget issue next week. But this is the time to set down some general views about the broad economic strategy that Mr Lloyd should pursue on April 9th. The Government's main task this year should be to revive confidence in the idea of an expanding British economy, not least its own confidence and that of the business community.

To say this is to admit at once that it is not only economists who should sit in judgment on this year's budget, even if the Chancellor were able to make up his mind which group of economists to believe in. Judgment has also been passed by those who seek to assess that strange fourth dimensional factor in any modern economy: the degree of confidence or nervousness, of buoyancy or tendency to panic, which can upset any economic prescriptions based on mere figuring. But this article had better first make clear to which school of strictly arithmetical economists this newspaper finds itself belonging in 1962.

In terms of strict economic reasoning, of the sort that was regarded as orthodox until a few years ago, we believe that this is a year in which the Chancellor could have scope to give some emphatic tax reliefs. The latest index figure for industrial production (for January) was no higher than it was two years before; yet, in the intervening period of investment boom, productive capacity has clearly been expanded. Nor does it really seem sensible to say that capacity should remain under-utilised this year because of the special nature of the balance of payments problem in 1962—unless the argument is that a lot of capacity should be uneconomically under-used for ever. Some ministerial spokesmen have recently come dangerously close to saying that, because they consider that 1962 should be a year of exceptionally good prospects for exports, they believe that Britain had better delay the first surge of re-expansion to a year when prospects for exports may be slightly worse. The ordinary layman will justly say that, in its extreme form, this doctrine sounds to him like nonsense; he may be relieved to hear that to at least some economists it sounds like nonsense too.

Nevertheless, the fact remains that, ten days before the budget, the Government —despite a welcome turnround from sheer asceticism in the past three weeks— is still plainly feeling cautious; and, in these circumstances, it may actually—if paradoxically—be better for the sort of long-term policy that expansionists want if any bolder spirits in the Government do not push timider spirits forward too fast against their will. For it is here that the confidence or buoyancy factor enters into the reckoning—both among officialdom and in the business community. We would prefer this year to see Mr Lloyd start to move the motor ahead at a sedately gathering speed, foot poised over the accelerator and looking forward the while—rather than to dash ahead at full throttle straightaway, looking back nervously over his shoulder and feeling that, perhaps, he will have to be ready to jam the brakes on brutally whenever he next misreads the changing weather signs.

For expansionists, this should be a year for cautiously re-educating people. *The Economist* has long made clear its belief that the policy initiated last July was two-thirds broadly right and one-third broadly wrong. The two things that the Government got broadly right were, first, to raise Bank rate temporarily to 7 per cent (because the run upon sterling that had developed on the morrow of the German revaluation could be staunched only by making it immediately more

profitable for foreigners to hold money here); and, secondly, to try at last to initiate a wages pause and long-term incomes policy (and thus damp down the persistent cost-push inflation). The thing which we believe that the Government got broadly wrong was that it greatly overestimated the extent to which the troubles that had then arisen were due to what the Treasury called "an excessive pressure of domestic demand upon resources." Future historians will probably conclude that the controllers of the economy, which was sick enough of other diseases in all conscience, contracted a sort of hypochondria last July about the illness of demand-pull inflation when most of the usual symptoms of it were just not showing: witness, for example, the relationship last summer between the previous year's growth in production and growth in capacity (the former was lower); the statistics showing whether stocks of finished goods were being drawn down below danger level (they weren't); the trend in the current balance of payments (just before the Chancellor's measures it was already improving).

The measures that the Government took in July directly to restrain demand (such as the surcharge on indirect taxes) seem to have had two main depressing effects. One effect, which has been minor and short-term, is that the tight clamp on demand has caused a temporary tendency towards the under-utilisation of productive capacity, without apparently moving new resources into the export effort, or causing competitive price cutting, or doing any of the other things that should have followed action against a really excessive pressure of total demand (if such an excess had existed). The second effect is that industrialists, their confidence in future expansion shaken, have clearly begun to cut down their future investment programmes. Of these, the second or confidence effect is much the more important, and the one that most needs to be remedied. From this flows our own main broad prescription for Mr Lloyd's budget.

BEFORE he sits down on Monday week, the Chancellor should have made it plain that it will be his definite objective to secure a significant increase in industrial production in the new financial year; and should have persuaded his wider audience to feel that they can base their forward investment plans on the assumption that he means business about achieving this. This does not necessarily mean that a stated target figure for an expansion in national output (say, 4 per cent between the beginning and end of 1962-63) should be written into the budget speech or into the Economic Survey —although, on balance, it would be much better if it were. It does not necessarily mean that the Chancellor should immediately remove the whole of last July's surcharge on indirect taxes, although he should certainly cause the House to feel that he will be leaning forward ready to remove that surcharge if demand and production do not rise enough. But it does mean three other things.

First, the budget should contain sufficient immediate tax concessions to give it a small net reflationary content. The symbol of some such reliefs could be almost more important than their amount or directions, although a reduction (or removal) of last year's pretty ill conceived fuel oil tax, and some relief on income tax allowances (especially for the lower paid) would be useful priorities. Secondly, the Chancellor should pull himself up, even at this last moment, from making his proposed short-term capital gains tax into the fabulous piece of fiscal nonsense which rumour has suggested it may be going to be: if the tax really does exclude short-term losses from the computation of short-term gains, if it is made retrospective to last July, and if it really is applied to top tycoons at the rate of 17s. 9d. in the £, then it will have a much more damaging effect on business operations (let alone business confidence) than Mr Lloyd seems to understand. The obvious alternative is to introduce a genuine and non-discriminating capital gains tax on the American model and, with that having been done, to make this also a year for reforming taxation on company earnings. The two fields where incentives for companies are most needed are for investment (reform of the depreciation allowances?) and for exports. No better suggestion has been made for the latter than that of a correspondent in *The Economist* (March 3rd, page 826) for the replacement of existing company income tax and profits tax by a flat rate corporation profits tax and corporation turnover tax (on which latter tax, under the rules of Gatt, remissions to exporters may be made). If Mr Lloyd would only be bold enough to make an advance in this direction, many other defects in his budget could be forgiven him.

THE third requirement for getting Britain moving again this year is to abandon the now hallowed assumption that the first reaction to any sort of economic trouble must automatically be to make the biggest and most publicised possible cut in total planned demand. There has been an extraordinary lack of mature thinking in the use of the Bank rate weapon in recent years. Whenever hot money has been flowing into Britain and Bank rate has been brought down, discreet statements have been made to explain that this reduction must not be regarded as a green light. When hot money has been flowing out of Britain and Bank rate has had to be put up, Chancellors have hurried to beat their breasts before the Commons and explain that this increase must certainly be regarded as a red light. Very often the publicity effort ought to be pitched precisely the other way round. Some runs out of sterling, and most runs into sterling, in recent years have been due to interest rate differentials or (more commonly) to technical considerations affecting certain currencies abroad, rather than to any real rake's progress in Britain; indeed the Treasury statisticians have just in effect reported (see page 1259) that during most of last year's run Britain probably had a surplus in the current balance of payments. Britain has still to learn that it really is not sloppy husbandry to say that the proper way to meet such largely adventitious runs out of or into sterling is to move interest rates quickly up or down—sometimes, if necessary, with compensatory reflationary fiscal policies at home—instead of to thresh about with massive programmes for cutting internal demand.

The one thing that has gone really wrong with the British economy in recent years, apart from governments' tendencies to cut down demand too frequently and too early, has been income-push inflation. Once again, a real test of Government policy in 1962-63 will be whether it really resists this. It is worth putting forward one suggestion for the budget in this respect. It is generally assumed that the Chancellor will say in his budget speech that he will not hesitate to raise profits tax if profits increase their share in the national income under the new incomes policy, but it is also assumed that there is no equivalent instrument that could be used if increases in wages greatly exceed the Government's guiding light. In fact, however, such an instrument could be forged: the Chancellor could take power to raise employees' weekly national insurance contributions in the same way as last year he took (but did not use) power to raise employers' weekly contributions.

Theoretically, indeed, the whole effect of a cost-push inflation could be countered in this way; when the average rise in wages and salaries exceeded the Government's guiding light, the Chancellor could proceed to put employees' insurance contributions up and employers' contributions down at the same time. Politicians will blench with horror at the thought, and it would no doubt be political unrealism to call for an explicit statement threatening to impose quite this degree of economic realism this year. But there is no reason at all why the Chancellor should not take at least the contingent power to vary employees' contributions while extending for another year his present power to vary those of the employers.

Channel Doldrums

Despondency about Britain's negotiations with the common market is not justified by the facts

ON every long and difficult voyage, a time comes when nerves fray, spirits flag and an infectious pessimism begins to colour the judgment of the crew. Britain's negotiations with the common market seem just now to be passing through such a period. Sound Establishment men in London can be heard putting the odds on joining at a mere 60-40, and the anti-common marketeers (like Mr Peter Walker in the Commons on Monday) have been teasing the Government by asking what it will do if the negotiations fail. In Brussels and in Paris people regularly ask whether the British Government is serious after all. Some Americans, concerned for their own trade plans, have become so nervous that they are writing off the Brussels negotiations altogether; they are clutching, instead, at the old impractical idea that Britain should sign the Rome treaty as it is and negotiate changes afterwards.

Such doubts are no doubt natural so long as the negotiations have not produced results. But they have no foundation in reality. Because the Six needed time to settle their own agricultural problem, Britain's negotiations have moved more slowly than one would have hoped. It has been necessary to pick out each particular problem and bring it to simmering point where it can be mixed with the others and boiled up in a final bout of bargaining. On all the major trading issues, except that of the terms of sale and entry for the products of temperate agriculture, there has in fact been enough progress to make this serious bargaining possible within a few weeks.

Only if the talks on temperate agriculture fail to make comparable progress within the next six weeks will there be real cause for the present (premature) concern. That failure would indeed make it impossible to carry out the British Government's essential aim of sketching out the broad lines of an agreement before the summer. The consequences, at Westminster and in Brussels, would be grave. But there is no evidence yet that any such delay need occur. The six governments, and still more the European Commission, are now deeply committed to the success of these negotiations. The British Government, in Mr Thorneycroft's phrase, "is straining every nerve to get into Europe." Mr Heath is, in a matter-of-fact way, buoyant.

The pessimistic rumours now going around seem to feed more on themselves than on what is going on. Early this month the Parliamentary Labour Party agreed on a resolution about the common market which slightly favoured the views of the anti-Europeans. Dr Adenauer evidently read about it, and about the latest statements of interest from the National Farmers' Union, and liked neither of them. Perhaps, he suggested gloomily to *Le Monde* (which published an interview with him on March 10th), M. Monnet was too optimistic about the British and Europe. What Dr Adenauer said about the Commonwealth on this occasion has been confused by the habitual retrospective touching-up from Bonn. But even the original version in *Le Monde* ("the maintenance of the Commonwealth in its present form will certainly not be possible") hardly deserves the alarm it caused. There has never been any doubt that, even in the best of bargains, some parts of the Commonwealth preference system would have to be changed if Britain went into Europe. What the negotiators have to do is to safeguard, in the words of Dr Schröder, the west German foreign minister, the "vital interests of the Commonwealth."

IF the sluggishness of winter is indeed followed after Easter by a period of harder, and faster, negotiation, bearing fruit during the autumn in a detailed treaty, the protestants may well have something to sink their teeth in. Neither the British, nor the Commonwealth, nor the European Free Trade Association, nor indeed the six members of the European Economic Community, are going to get all they want from these complex negotiations. There are bound to be cries from all sides when the many conflicting interests have to be resolved. But there is no indication today in Brussels that the "Europeans" have stiffened their terms during the past nine months. Indeed, there is now a greater understanding there than ever before of the Commonwealth problem. Australia's demand to get into the talks may be inconvenient for Mr Heath. But it is at most a minor embarrassment, more than matched by the striking shift in Canada's attitude from obstruction to co-operation. While Mr McEwen, the Australian minister of trade, has been lobbying in Europe, Mr Heath has been having properly friendly talks with Mr Diefenbaker in Ottawa.

Halfway to Europe, with land ahead still out of sight; some Britons inevitably look back wistfully to the receding coastline. But thoughts of the changing world around them can

be a tonic for doubting voyagers. The mere fact that Britain is seeking membership of the European communities has already transformed, for good, this country's relations with its Continental neighbours and opened up new world-wide perspectives. The promise is there. The best lesson the Government can draw from its recent electoral losses—to common marketeering Liberals—is that votes are to be won by pursuing this promise, and the vital British interest in its fulfilment, with the pragmatic boldness and imagination that electors have lately failed to find in their long-set Tory rulers.

Dock Strike Ahead?

The dockers' section of the Transport and General Workers' Union is notoriously led by moderates and swayed by extremists. The country is now faced by the threat of serious trouble in the docks because the former feel that they can no longer maintain full control over the latter, and may therefore temporarily join them instead.

DISCONTENT has been building up on the waterfront for the last six months or so, while the slackness of foreign trade has kept the port workers' take-home pay down. During the same period the dockers' union leaders and employers have been engaged in lengthy, complex and constructive talks on ways of changing the system of casual employment in the docks, and have simultaneously been bargaining over a straight wage increase. To many disgruntled employees—and disgruntled dockers in London and Liverpool are not exactly rare birds—the militant left-wingers have seemed to be talking sense when they have said that the union's leaders (already identified with the employers through their shared membership of the national and local dock labour boards) have been going slow on the wage claim because of these other, longer-term discussions.

The employers have now firmly rejected the wage claim (i.e. the claim for increased piece rates and other earnings while actually on a job), while agreeing that some arrangements might be made to cushion the burden of underemployment by increasing fall-back pay and signing-on money for dockers who do not get a job on any particular day. A one-day unofficial strike started at Southampton in protest and Mr O'Leary, the moderate leader of the Transport and General Workers Union's docks section under Mr Cousins, has now been empowered to call an official strike after a month's delay. Mr O'Leary has said that, in the present national climate, he will not agree to refer the claim to arbitration and has rejected in advance any idea of intervention by the Ministry of Labour.

At the same time, dockers' unrest has broken out on a separate pretext at Liverpool. Here the TGWU has, since about 1925, been at odds with the rival National Amalgamated Stevedores and Dockers—known as the "blue union" from the colour of its membership cards. The quarrel reached its peak in 1955 when the NASD was expelled from the Trades Union Congress for failing to observe agreements on the division of membership between the two unions. The TGWU claims that the NASD has only 400 members in Liverpool, while the blue union claims 5,000 members there: more positively, it is known that 2,400 of Liverpool's 10,000 dockers do not belong to the TGWU. Some of these, for various reasons—sometimes, but not always, left wing reasons—have no doubt left the TGWU in protest at what they regard as its inefficiency; others, very probably, have simply opted out of the inter-union squabbles by failing to pay dues to either TGWU or NASD.

Work has been short in Liverpool for many months, with an average of 12 per cent of registered dockers failing to get a job each day. The paid-up members of the TGWU have now decided that they alone are to have the jobs available, and the union has called an official strike intended to compel the employers to refuse to hire "non-unionists." Alderman O'Hare, chief TGWU official in Liverpool, resembles Mr O'Leary in being a moderate man who has often shown his willingness to work with the employers when both sides are likely to benefit. But the forces of moderation are under specially strong pressure in Liverpool (where the National Union of Seamen, whose members are allied by kinship and proximity to the dockers, is also riven by a feud between left and right over the succession to the post of General Secretary): the poverty of the city, the traditional toughness of the employers, and (some would say) the Irish blood of the Liverpool waterfront folk make for extremism. The problem for reasonable men in this climate, particularly in the trade unions, is to be constructive without seeming to have sold out to the other side. The usually moderate Alderman O'Hare appears to have found the problem too hard for him this week.

THE first result of the strike, predictably and naturally, has been to arouse immoderate feelings among non-dockers in Liverpool. The local papers proclaim that famine prices for vegetables are on the way; the importers of perishable goods angrily bewail their losses; in a less serious key, all good Liverpudlians are indignant when horses for this Saturday's Grand National must travel in from Ireland by air. The threat of a national dock strike, too, lends steam to the anger of those port employers throughout the country who are not too keen on their federation's (fairly generous) plan to reduce the amount of casual employment in the docks, and to guarantee dockers against undue drops in their living standards at times of slack international trade. The opposition that the port employers' negotiators face from their old-fashioned tough members differs in degree, but not at all in kind, from that faced by union leaders like Messrs O'Leary and O'Hare.

The angry men on both sides are now in the ascendant. Meanwhile, the crucial principle of decasualisation, warmly supported by the official leaders both of the employers and of the union, is in danger. Only by ensuring that the men get work and full wages more regularly and more predictably, and are spared the twice-daily cattle-market of the "call" at the dock gates, can the bitter labour-management hostility of the docks be reduced, and more efficient working methods eventually be fostered. The Liverpool stoppage may yet be settled without too much delay, through the intervention of the Ministry of Labour's mediators and of the union's national officers. But it will leave a sour aftertaste in the docks which have, by their own peculiar standards, been pretty tranquil for over a year now—greatly to the assistance of the top-level negotiators so far in their talks on decasualisation. An even more sour aftertaste will be left with the public if so powerful a body as the TGWU shows again that it cannot put up with a small number of independent spirits in a trade that it effectively controls—even if some of the Liverpool non-unionists may seem to it to be tiresome as individuals.

The national disagreement is an altogether more dangerous affair. The employers, if the decasualisation talks come to a satisfactory conclusion, will face some pretty heavy payments to get a new system running. Understandably, they do not want to commit themselves to paying higher wages and larger piece rates just before entering into such an agreement: the more so since any new payments might be based on the average level of wages just before the new system comes into operation. On the other hand, the moderate union leaders may well feel that they would not have the power to persuade their thoroughly hide-bound members to accept any revolutionary new system unless they can appear as ruthless negotiators. There are four weeks clear until the union's notice to end the national agreement runs out, and the time can then be extended by two further weeks. If the talks on decasualisation can possibly be pushed through to a conclusion before the fatal date, the concessions it will necessitate from both sides could be presented to save the faces of each and lead to a happy end. That, at least, is the main hope now.

How Disarmament Happened

From The Economist of March 27, 1965

GREAT things come gradually. Seldom, in mankind's confused progress, is a clearly marked milestone passed at a single step. Some people will quarrel, indeed, with the title given to this article. They will quite correctly point out that the world has only just begun actually to execute the programme of comprehensive disarmament so painfully thrashed out at Geneva in recent years. The road to the completion of the programme is still a long one; and, quite apart from the bickering that resounds in many quarters (including our letter columns) at this very moment, there are still tense possibilities of a serious breakdown at some later stage—particularly at the end of stage two. Optimism must certainly still be tempered by caution. But it is, at least, enlightening at this time to look back at the record of what future historians may rate as the supreme—and most unexpected—achievement of modern diplomacy.

It has to be remembered that, when the great Geneva marathon began in March, 1962, very few people saw any hope of a successful outcome. On the contrary, all the immediate omens were gloomy. The eighteen-nation conference started one government short—although it was only five days after its opening that France achieved the Algerian cease-fire which set the French Republic on the road back from its self-imposed and doubtfully splendid isolation.

The first days at Geneva were overshadowed by menacing Soviet feints at the Berlin air lanes; and Mr Gromyko's absurd pretence that he knew nothing of these risky adventures was a depressing echo of old-school stalinist diplomacy (in 1962 the agile and witty Soviet foreign minister had not yet dropped his public mask of dourness). Within a week, deadlock had once again become apparent on the question of a nuclear test ban. Despite the ingenious Soviet ploy on nuclear verification that was, predictably, trotted out just as Mr Kennedy's time-limit expired, American and Soviet test explosions soon duly reverberated through Geneva's halls. In Moscow, Mr Khrushchev rattled his new "global rocket" and warned his subjects that guns must come before investment in production for consumers. But the talks lurched on.

How many people at that time took seriously Mr Kennedy's pledge that his negotiators were ready to sit down doggedly to a continuous series of thrashing-out sessions that would go on until disarmament had actually been reached? Even those who accepted this as a genuine American intention were sceptical about the Russians' readiness to do the same. They recalled the Soviet walkouts from disarmament conferences in 1957 and 1960, and assumed that after a time the Russians would stage another break. What they forgot was that to quit the eighteen-nation conference in 1962 meant walking out not only on the West but on the non-aligned countries too. There was scope (for the western allies as well as for Russia) for gouging a concession here and there by hinting at growing disinterest and impending withdrawal; but actual, final, withdrawal was another matter.

As the months passed, and the conference, despite some rather queasy adjournments, kept coming back for more—at various levels—speculation about a break-up gave place to talk of the whole thing being just a parallel to the long and fruitless test ban talks of 1958-1961. Preambles and principles, even some operative clauses in a draft programme, were one by one agreed; but did this mean anything at all? The world wondered; but while it wondered it also became dimly aware of certain gradual changes, changes that are easier to identify now than they were then.

MOST decisive of these changes, perhaps, was the progressive diminution of the unbalance of secrecy between Russia and the West. This unbalance had been the biggest single obstacle to disarmament. Russia's superiority in secrecy had long been a built-in part of its defence system. While this superiority lasted, Russia was bound to refuse the verification that other countries were bound to demand, whether for general disarmament or for a test ban. But by 1962 technological change was already fast redressing the unbalance. As more and more nuclear missiles vanished, submarine-borne, into the vastness of the oceans, or were dispersed in other

mobile forms that baffled conventional espionage, Russia lost most of the advantages in military intelligence that the relative openness of the western world had given it.

Paradoxically, Russia's own post-1962 switch from fixed missile launchers to mobile ones worked in the same direction. While Russia's spies in the West became less useful, the prevention of western espionage in Russia simultaneously became less important. Frenetic spy-phobia began to yield, in Moscow, to a resigned recognition that, in the new technical conditions, Russia now enjoyed only a very modest advantage in secrecy—and even that was largely offset by American superiority in photographic reconnaissance by orbiting satellites. Gradually it dawned on the Russians that they would need adequate verification of disarmament just as much as

Back in 1962: Mr Zorin, Mr Tsarapkin at Geneva

other countries did. They felt this need the more strongly because by now they were no better placed than any other foreigners to find out what was going on in China.

Meanwhile, there emerged quite starkly the sheer impossibility of attaining the Soviet economy's cherished national goals if the costs of the arms race soared into the dizzy spiral that the development of effective anti-missile systems implied. With the rural half of Russia relapsed into stagnation, the population's impatience for better living steadily mounting, and the last Soviet levers of influence in Peking snapping as China, virtually writing Russia off as a source of supply, turned again and again to western countries to meet its vital needs, the whole Soviet approach to disarmament changed. Disarmament was no longer a means of baiting the West while making sure that the terms offered were safely unacceptable. It became so real a need that the Soviet government was now ready to make real sacrifices of its aspirations to get it.

IN the United States, too, the climate was changing. A decisive defeat of the school of thought that identified disarmament with depression occurred in 1962, after the publication of the reports on the economic implications of disarmament compiled by the United Nations panel of experts, by the new United States Disarmament Agency, and by the Humphrey sub-committee. The Kennedy Administration found that it was going to be surprisingly easy to override the "military-industrial complex," partly by switching business from defence to space exploration, but more often by taking the kind of firm stand that Mr McNamara had already taken in blocking the B-70 bomber project. Once the first signs emerged of Soviet readiness to work on a truly balanced disarmament plan, the Americans at Geneva got down to brass tacks with a vigour that startled those of their allies and friends who, forgetting the United States' deeply anti-military tradition, had got into the habit of regarding Washington as incorrigibly "hard" in contrast to London's "softness." The enthusiasm of Mr Kennedy's representatives took away the breath not only of the Germans and French, still clinging to their military past in the name of Atlantic solidarity, but even of some of the non-aligned governments, which were still uneasily working out the full implications of general disarmament for their own countries.

Steady pressure from the under-developed nations, keenly aware of the massive benefits that world disarmament will bring them, has, however, been one of the steady factors that have made for progress at Geneva. Western fears that the non-aligned Asian and African countries' participation in the conference would work in Russia's favour have proved false. Not only has the final elimination of colonialism eased these countries' relations with the West; they have also shown, during these three years at Geneva, a developing understanding of the real problems that disarmament involves, and an ability to provide missing elements that could not come from either the Soviet or the western side. This applies, in particular, to the shaping of the now agreed formula about international peace-keeping in a disarmed world. We have not heard the last of the reservations that were formerly expressed so strongly in both western and communist capitals about "U Thant's Army," as the now nascent UN force has been nicknamed. But it is already hard to remember that only a few years ago the Asians and Africans were deeply suspicious that any such project was merely a "neo-imperialist" idea for curtailing their new-won independence.

When the third stage of the disarmament programme is reached, by 1970 if all goes well, cries of alarm at the imminent prospect of "world government" will almost certainly resound more shrilly than ever. By then, however, it is likely to be virtually impossible for any one party in any country to halt the massive processes of the Geneva programme. Already the more far-sighted are concentrating their thought on means of adapting diplomacy to conditions in which its tasks, indeed its very nature, will be wholly changed. Disarmament, whatever the idealists tell us, is bound to usher in new problems quite as complex as the old ones of which it disposes. But the mood of cautious optimism that is now, in March, 1965, so generally pervasive, is not merely due to the coming of spring. It arises from the simple fact that our new problems, for all the challenge of their complexity, are going to be much nicer to live with than the old ones.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out this week:

ARGENTINA

Describing the economic background to recent political events, the Review analyses the implications of the government's austerity programme, and the country's mounting financial difficulties. The future fate of the peso is discussed, with reference to last year's trade figures and recent movements in costs and prices. Reorganisation of the railways is the most important aspect of the government's policy of cutting public expenditure, and the Review describes the present position and the significance of the latest union moves.

NOTES OF THE WEEK

LIBERALS

The First Party?

EXACTLY two years ago (March 26, 1960, page 1196) *The Economist* indulged in some of its customary psephological musings, directed on that occasion towards those who "scoff at the idea of a real Liberal revival." It opined that it was quite possible that during this Parliament, as during the last one, there might come a time when between 15 and 20 per cent of the electorate would again be swinging from Tory to Labour, and said that this time "quite a large swing to the Liberals could conceivably come from Labour as well"; we thought that most people had not recognised the "very odd" things that could then happen. For in the previous October's general election we pointed out:

> 49.4 per cent of the electorate voted Conservative, 43.8 per cent for Labour, and 5.9 per cent for the Liberals (although they fought only a third of the seats); subtract 15 per cent each from the Conservatives and Labour, add the whole 30 per cent to the Liberals and the latter would presumably and temporarily become the most popular party in the country.

On Wednesday of this week, National Opinion Polls Ltd. published in the *Daily Mail* its latest survey on how people said they would vote in a general election, and its findings — which were admittedly between 5 and 8 per cent more favourable to the Liberals than two subsequent polls in equally reputable newspapers—sent a thrill of flabbergastedness through the country. The percentages (excluding the Don't Knows) were: Liberal 33.7, Labour 33.5, Conservative 32.8. Compared with actual voting in the general election the reported Liberal pick-up was 16.6 per cent from the Conservatives, 10.3 per cent from Labour. By far the greater part of both swings was said to have occurred in the immediate wave of excitement after Orpington.

This reminiscence to 1960 has not been made in order to say "we told you so"—because as a matter of fact in terms of forecasting, we didn't tell you so. (The next two sentences after the above quotation unfortunately ran: "One doubts if anything on quite that apocalyptic scale is going to happen. But one can well envisage . . . quite spectacular advances could be made towards it, at any rate outside the heavy industrial areas.") But it is worth picking up—and now reiterating—the main conclusions we were drawing at the time.

The first conclusion was that there could be during this Parliament "some very odd by-election results indeed"; that conclusion now seems an understatement, and the Stockton by-election next week is going to be very interesting to watch. The second conclusion was that the Liberals should strive to utilise any such opportunity (if it arose) to proclaim a distinctive and controversial policy; we believed that they would hold on to a significant part of their mid-term swing only if much of it was a swing to genuine Liberalism, and not a mere grumbler's swing to a policy of nothingness. In our view (see below) this warning has been reinforced by the result of last week's by-election at Pontefract. Our third conclusion was that if the Liberals did hold on to any of this mid-term swing, if by the time of the next general election the idea of a genuine three-party system had been re-established in people's minds, this would be likely in the short term to threaten more Tory seats than Labour ones; but in the long term its main effect would be to necessitate a change in the whole nature of the Labour party into something with a much more liberal image. And we still think—despite Labour's new threat to discipline Mr Woodrow Wyatt—that this is what is most probably going to have to happen now.

PONTEFRACT

Swing to Eckley

IN the by-election in the safe Labour seat of Pontefract last week, on a quite decent (63 per cent) turnout, the Conservative share of the vote dropped by 4.2 per cent compared with 1959. But of this only 0.9 per cent went to Labour. The other 3.3 per cent went to the third candidate, a religious zealot who had come to Pontefract claiming to be supported by God and who proceeded to be supported also by 1,146 of its citizens. With respect to both the Deity and the zealous Mr Eckley (whose last-minute nomination papers had been signed, as an act of kindness, by the local lavatory attendant), one doubts if this result was a symptom of a great religious revival. But it inevitably throws an extra scintilla of doubt on the real nature of the recent great Liberal revival also. Tory cynics have often said that their by-election deserters who have temporarily turned Liberal would have deserted equally to a Flat Earther if one came along. Last week, at Pontefract, one virtually did. The small direct swing of under one per cent from Tory to Labour, if repeated at a general election, would serve to cut less than 30 off the present overall Conservative majority of 100 in the House.

ARGENTINA

Inheriting a Cauldron

Dr Frondizi: the indispensable vision

THE campaign in Argentina to jettiso President Frondizi was brought to head on Wednesday when, with soldier already in possession of key points in Buenc Aires, his resignation was demanded by a three service chiefs. Formerly divided, th military men, by uniting, plunged thei country into graver crisis. On Dr Frondizi' refusal to bow to their ultimatum, he wa placed under house arrest and more troop moved in. Thursday saw his depositio and imprisonment and a full scale militar takeover. Sr Guido was installed by th military chiefs in Dr Frondizi's place.

The hounding of President Frondizi ha been largely emotional and escapist. Fo whether or not he is in office, the probler remains the same. In the late, lamente elections, thirty per cent of the electorat was shown to be Peronist. And scrubbin the elections has not altered this fact. No does scrubbing President Frondizi. Wha is to be done with these blackshirts who ar estimated now to comprise more than three fifths of the working-class population Among the president's detractors there hav been two groups—utterly opposed. Th military feared he would be too kind to th Peronists. But the democratic parties, othe than Dr Frondizi's own Intransigent Radi cals, thought him not kind enough: the claimed that the elections should not hav been annulled. As for the Intransigen Radicals, they still form the country' largest single party. Thus a military regim must inherit a cauldron of discontent. I could also, as hinted in Washington, forfei United States aid under the Alliance fo Progress, thus inviting economic disaster a well as political frustration. It would seen that such a regime can command no confi dence anywhere unless it immediatel shows willing to establish a provisiona government in which civilians take part. D Frondizi in person may not be essential t Argentina. His vision of democracy, ever imperfect democracy, almost certainly is.

CHINA

Suspense in Peking

THE suspense was becoming unendurable. On, off, half on again, the National People's Congress did finally gather in Peking on Tuesday. Even though the tension has subsided, however, speculation is bound to continue, for, unlike previous meetings of China's "parliament," this one is not open to foreign reporters or diplomats.

Under the constitution, the NPC is supposed to meet at least once a year. It did not, however, meet at all last year, and this, together with the postponements of the past few weeks, suggests a reluctance on the part of the communist leadership to face even their hand-picked deputies with the hard

Mr Liu Shao-Chi

current realities. The present meeting was originally supposed to open on March 5th. It was first postponed for a fortnight, without explanation, but probably to give the Chinese time to read what Mr Khrushchev told the central committee of the Soviet Communist party, which met on that day. March 19th, however, passed without news; and three days later Peking announced that a preparatory meeting for the NPC had been held that day, still without mentioning when the actual session would begin. In the meantime, a meeting of the People's Political Consultative Conference—which had also been postponed from March 5th without explanation—has been held in Peking and the Chairman of the Republic, Mr Liu Shao-chi, has called a meeting of the Supreme State Conference. The hierarchy of these bodies is important. The Supreme State Conference is an emergency body which can only be summoned by the Chairman of the Republic. The Consultative Conference, as its name shows, is no more than a sounding board, and it includes some 800 nominated observers. By contrast the NPC, at least on paper, is the highest organ in the state and its only legislative authority. Since it meets so seldom, however, its real power is exercised by its powerful standing committee.

The Show Itself

AFTER such a curtain-raiser, the show itself ought to be good. Last year went by without a published economic plan, and no targets have yet been announced for 1962. In view of the critical food shortage, agriculture seems bound to be given top priority at the NPC; and this can happen only at the expense of capital construction. (The extent of China's plight emerged obliquely last week when the Administration in Washington rejected a Seattle company's request for permission to sell about $400 million worth of grains to communist China.) The NPC's session should also throw light on Sino-Soviet relations and on domestic politics. There have been no startling developments lately in Peking's quarrel with Moscow, but the twelfth annual celebration of the anniversary of the Sino-Soviet treaty was noticeably cool; no more than 1,500 people attended the rally in Peking on February 13th, compared with 10,000 last year. In domestic politics, the party has been rehabilitating intellectuals and experts who had been demoted or humiliated for supposedly right-wing views. The congress should show how right-wingers and advocates of better relations with Russia now stand, in the light of China's present isolation.

BERLIN

Bone in the Throat

NONPLUSSED, the diplomatists and journalists in Geneva watched the foreign ministers of the great powers go their ways at the mid-week with cordial talk of "clarification" about Berlin, but with no glimmer of an approach to an agreement. Mr Rusk and Mr Gromyko had had something like six meetings on the Berlin question. The American Secretary of State had suggested once more, on March 22nd, an international control authority for the access corridors. The Soviet foreign minister countered with a proposal that looked, in this one respect, not dissimilar; Mr Rusk turned it down.

This same proposal of Mr Gromyko's was elaborated more publicly at about the same time by Herr Ulbricht in east Berlin, at the plenary session of the central committee of the Socialist Unity party (further discussed on page 1239). Herr Ulbricht declared his readiness to consider conceding to "the guarantor powers" the right to function as "a kind of arbitration tribunal to assure peaceful traffic from and to west Berlin"; and apparently this could be a tribunal of four—the three western powers and Russia.

However, Herr Ulbricht made it plain that this would have to be part of a package deal that would include a peace treaty with the German states, and that the deal would involve acceptance of his government as the sovereign authority over the territory through which Berlin is approached. The occupation of west Berlin would have to end, and the three powers would have to withdraw their troops—though a "symbolic" contingent of neutral troops might be allowed. Other spokesmen of the east German government have been explaining, in the friendliest way, that the sector boundary in Berlin would also have to be accepted as an international frontier.

More will be heard of this idea of a control commission, or arbitration board, or whatever it should be called. But it will not be bought easily, as Mr Gromyko made clear when, at a dinner in Geneva, he toasted his guest, Dr Bolz, Herr Ulbricht's foreign minister. There would be no Berlin agreement and no German agreement, Mr Gromyko said, without recognition of the German Democratic Republic. Thus the familiar bone is left in the West's throat.

HEALTH SERVICE

Unattractive to Stay In?

AT one extreme there are people who assert that the national health service will shortly break down through a shortage of staff: that dissatisfied young British doctors are migrating in their hundreds each year, mainly to North America; that exploited young nurses fail to complete their training and that underpaid ward sisters are working themselves to death filling the gaps; that there are serious shortages in all the ancillary professions—almoners, occupational therapists, physiotherapists, dieticians and their like. At the other extreme is the view that the increase in the strength of nearly every profession working in the health service shows uncommon happiness in a job.

The Minister of Health came a bit too near this view in this week's all-night debate in the Commons when replying to Mr Robinson (who was far from the other extreme). Mr Powell scotched the idea of a mass migration of doctors, and of hospitals manned in the junior ranks almost entirely by Indians, Pakistanis, Ceylonese and other overseas graduates, by showing that the increase (of 4,000) in the medical staff of the hospitals over the last ten years was greater than the total number of overseas doctors serving in them. Similarly with nurses: Mr Powell declared that there has been an increase of 10 per cent in wholetime and 70 per cent part-time nurses over the past five years and that the recruitment of student nurses is beginning to go up again. The increase in part-time nurses he regarded as particularly encouraging; it means that the so-called wastage of student nurses is recovered later on by the employment of part-time married nurses.

Nevertheless, the work of the hospitals has expanded too. The number of in-patients treated rose during the nineteen fifties by 37 per cent and would presumably have risen even more were some 10,000 hospital beds not unused for lack of staff. Thus the increase in strengths is not the whole story. Mr Powell himself referred to the need to make effective use of staff, rather than merely increase its numbers. In physiotherapy, for instance, a profession which in Tuesday's debate was singled out as underpaid and undermanned, a committee of the Central Health Services Council has pointed out that, without any physical benefit, patients are given massage for months, even years, on end because their cases are not reviewed by anyone senior enough to stop it. Similar real "wastages" could be found throughout the hospital service. Here is another slogan for Mr Powell: "fewer staff with newer methods." He would then find it less costly to pay significantly higher salaries to those who give long service to the hospitals, even though he was quite right to resist some of the demands for much higher salaries for every transient novice.

LORDS

Noblesse n'obligera plus?

AN apathetic and half-empty House of Commons agreed this week (without a division) to a Government motion setting up a joint committee of both Houses to investigate what changes should be made in the rights of peers to sit in either House. The indefatigable Lord Stansgate (Mr Wedgwood Benn) was not in the gallery to witness this preliminary triumph but Lord Hailsham was there, clearly brooding on his future. Downstairs Sir Winston listened intently but Mr Butler had discreetly absented himself from the scene. Mr Macleod in proposing the motion was all sweetness and light, as was Mr Gaitskell. The leader of the Opposition indicated coyly that the new wording of the Government motion was acceptable to him, but refrained from any gloating.

On tactical grounds the Government has been right to have second thoughts on the scope of the proposed committee and to limit it to considering a small group of anomalies. A broader inquiry into the composition of the Lords, designed to make it look less ridiculous, would have forfeited any chance of co-operation from Labour (which is afraid that a less ridiculous Upper House would insensibly become a more powerful one). This tactical retreat by the Government has not pleased all Conservative backbenchers but their opposition was not pressed very far in the debate.

If the principle of renunciation is accepted two main points will have to be decided. What should be the period of renunciation and to whom should the unnobling measure apply? At one extreme, a peer could be left free to chop and change between the two Houses as the whim took him; as he could only get into the Commons if the electorate chose him, some people will say that this would not really do anybody else any harm, but Labour seems resolutely opposed to it. The other extreme (which Labour would like) would make a renunciation absolute both for the holder and his heirs. Such a rule would be too harsh. The most likely compromise solution may be to allow a peer who has not yet taken his seat in the Upper House to announce that he wishes to stand for the lower House instead and thereafter to disqualify himself from sitting in the Upper House for his lifetime (unless he happens later to be specifically made a life peer of Parliament, as a reward for his own services). If this is done for future peers, however, all existing peers (whether they have sat in the Upper House or not) should certainly be given the right of renunciation to be exercised within a limited period. These changes would also remedy the ridiculous situation in Scotland where the non-representative peers (i.e. those not elected to the 16 available seats) are debarred from sitting in either House. A final anomaly which should be removed is the ban on peeresses in their own right sitting in the Lords. Now that women may be members of the House as life peers their exclusion is more absurd than ever.

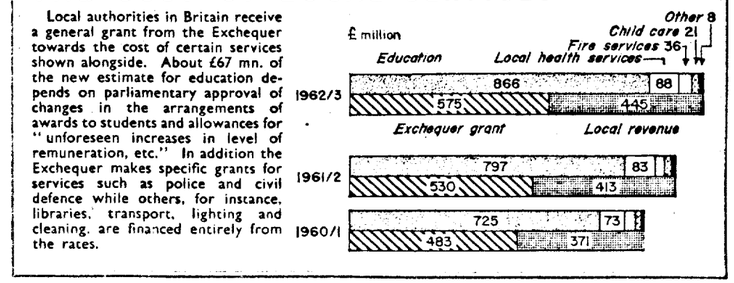
FRANCE

Have a Care, Sir

"AND mock not the boar in his lair," says the law of the jungle. Mr Khrushchev must brush up his Kipling. It is unlikely that he intended any offence when he recognised the Algerian nationalists as the *de jure* government of the country the moment the Evian settlement was announced on March 18th. He had been under pressure to give recognition for some time, China having done so in 1960, before Russia even recognised the provisional government *de facto*. He had no wish to let the Chinese appear more anti-colonialist than he, but equally he had no wish to offend General de Gaulle, for whom he shows an odd respect. Russian aid to the Algerians has consisted chiefly of medical supplies and support at the United Nations. No doubt Mr Khrushchev saw the Evian agreement as a heaven-sent opportunity to restore his credit with the Algerians without vexing the French unduly. But General de Gaulle swiftly disillusioned him. It was announced on Sunday that the French ambassador in Moscow had been recalled "for consultation," and Mr Vinogradov, the Russian ambassador in Paris, had been invited by the French to go to Moscow for consultation till further notice.

President de Gaulle's reasoning is fairly clear. French sovereignty in Algeria has been recognised, during the interim before independence, by the nationalists themselves; the Russian action is therefore seen as unwarrantable interference and an insult to France. Judging by the allusion, in the president's speech on Monday, to "a certain totalitarian empire, which muzzles fourteen nations" and yet lavishes insults on "so-called colonialist" France, General de Gaulle was particularly upset by the terms of Mr Khrushchev's telegram to the Algerians, which might be taken to mean that gaullist France stood in the way of self-determination. Russia has not mended matters by suggesting that the French government may not really want a speedy implementation of the Evian accords.

Mr Khrushchev has gained nothing by his manœuvre. Mr ben Khedda's reply to his message was warm but carefully vague. And General de Gaulle, whom all parties are so anxiously trying to tempt to the disarmament talks at Geneva, has dexterously placed himself once more in his favourite posture of injured but haughty virtue, from which he is not accustomed to emerge without some solid reparation.



BULGARIA

Travail in Sofia

WHEN a prominent Bulgarian communist says he is in favour of having ministers hauled over the coals (or, as he put it, made to "sweat a bit") in the National Assembly for the shortcomings of their departments, it does not mean that Bulgaria is about to be transformed into a western democracy. In any case it remains to be seen how much use the newly-elected Bulgarian parliament makes of Mr Staykov's invitation to forsake its customary role of rubber stamp. But his remarks are an interesting sign of the complicated travail through which the regime is now going, in its efforts to comply with the current destalinising fashion without losing its hold on power.

THE COST OF LOCAL SERVICES

Local authorities in Britain receive a general grant from the Exchequer towards the cost of certain services shown alongside. About £67 mn. of the new estimate for education depends on parliamentary approval of changes in the arrangements of awards to students and allowances for "unforeseen increases in level of remuneration, etc." In addition the Exchequer makes specific grants for services such as police and civil defence while others, for instance, libraries, transport, lighting and cleaning, are financed entirely from the rates.

Until recently Bulgaria's contribution towards destalinisation appeared to be confined to finally getting rid of the former "little Stalin," Mr Chervenkov—he was sacked as deputy prime minister just before Christmas—and making him the scapegoat for all failures and mistakes. But the cabinet reshuffle approved by the new parliament suggests a further cautious and hesitant step towards a more liberal regime. In particular, Mr Georgi Tsankov has lost his post as minister of internal affairs, which he has held ever since Mr Chervenkov appointed him in 1951. But although he has lost the key ministry, Mr Tsankov has not lost all influence, since he has been made a deputy premier. Significantly, however, his successor at the ministry of internal affairs, Lieutenant-General Dikov, has just been in Moscow studying Russian experience in "strengthening socialist legality and legal order"—in other words, how to avoid stalinist abuses of power.

Other cabinet changes, in particular the sacking of the ministers of internal trade and of foreign trade, reflect the regime's concern with the serious shortages of foodstuffs and consumer goods which were freely admitted by party leaders during last month's election campaign. Shortages provoke grumbling and discontent, and until they are overcome Messrs Zhivkov (the party boss) and Yugov (the prime minister) will be reluctant to speed up their present hesitant crawl towards a more liberal regime.

Avoiding Boer War Two

BETWEEN Lord Montgomery, hand at his sword to fight by the side of white South Africans, and President Nkrumah, who has different ideas, lies Britain's policy on South Africa. This policy is the result of negotiations between the two governments that began in March, 1961, when Dr Verwoerd decided to leave the Commonwealth. Since then, the British Government has been accused of being in favour of Dr Verwoerd—both because it has refused to attack South Africa (by means of trade boycotts, economic sanctions or United Nations votes) and because it has not completely withdrawn the privileges of Commonwealth membership from the new republic. The reason is plain: Dr Verwoerd, Whitehall knows, has the power to hurt Britain.

Thus, sitting on a barbed-wire fence, the British Government has avoided doing battle with the Boers all over again, while in its own judgment avoiding support of apartheid. But there lies the barb: in the judgment of Africans and Asians Britain is in effect supporting a country that proudly proclaims white to be superior to black. A certain deference does indeed mark every aspect of Britain's relations with South Africa:

Money: The new South Africa Bill, due to come into force at the end of May, allows Commonwealth preferential treatment for South African exports even though the republic has now been out of the Commonwealth for nearly a year. The excuse is that British investment in South Africa is worth £900 million, and the republic is Britain's fifth best customer, taking British exports to the tune of £150 million a year. Golden South Africa, the argument runs, is a valuable member of the sterling area, and should be treated as such.

But, according to The Economist Intelligence Unit* the preferences given to British goods by South Africa are so small, and confined to so narrow a range of products, "that their entire abolition would have negligible effects, save perhaps in some branches of trade in electrical goods." It is not clear whether or not the British Government is seeking the same consideration for South African exports to the common market as for those of countries still in the Commonwealth.

South African sugar will in future be bought by Britain at a price roughly half way between the present world market price and the Commonwealth Sugar Agreement price—the excess over the world price costing the British taxpayer some £2.7 million a year. Here the explanation is that Swaziland sugar would suffer with that from Natal because Swaziland's economy is inextricably a part of South Africa's. But Swaziland production is, by arrangement with its big neighbour, restricted to 80,000 tons a year—while South Africa's sales to Britain at the special ex-Commonwealth price will be 150,000 tons a year. The £2.7 million might more profitably have been given to Swaziland direct.

Citizenship: The South Africa Bill is generous to South Africans who want to become British citizens; in effect it gives them three years to make up their minds. This is a kindness to individuals, and a recognition of the many personal and family connections between people in both countries.

Protectorates: Basutoland, Bechuanaland and Swaziland could probably be occupied by South African troops if Dr Verwoerd so desired, to the great embarrassment of the British Government. Long before he did it, however, Dr Verwoerd could use his economic power to squeeze the protectorates to death. Bechuanaland depends on the South African market for the sale of its beef; Swaziland exports its products to and through the republic; Basutoland exports Basutos to the gold mines.

The British Government is to spend £6 million on these three territories in the period between mid-1961 and March, 1963; they are to be "shop windows" of non-racial development. But Dr Verwoerd will spend £57 million in the Transkei (an area due to be granted limited tribal self-government) during the next three years; apartheid's window may, in economic terms, be the better dressed.

Politically, Britain has made timid steps forward in Bechuanaland and Basutoland (now nearly ripe for a new constitution), but Swaziland, economically the most advanced, still awaits a decision. The danger here is that the Colonial Office will take the easy way out and give an increased say in Swazi affairs to equal-but-separate groups of whites and the traditional Swazi aristocracy, sitting together. The few modern-minded Swazis are vociferously demanding a compromise between this and African control and votes for all. Mr Maudling has deference to the chiefs, which would also be deference to "separate development."

South African refugees pass through the protectorates and sometimes settle down in them. This must be allowed to continue; it probably will.

South West Africa: Within a very short time the International Court of Justice can be expected to pronounce on whether or not South Africa has a right to occupy South West Africa against the oft-expressed will of the United Nations. The British Government has yet to vote in favour of a strong UN resolution on this issue.

Defence: Arrangements between the two countries have not been altered by South Africa's departure from the Commonwealth; apparently this is thought a reasonable price to pay for the continued use of the Simonstown base. There is, apparently, to be no embargo upon sales of arms, ammunition, or even tear-gas to the South African government. Some of Dr Verwoerd's new £60 million defence budget (up by £24 million) will undoubtedly be spent in Britain. The Joint Under-Secretary for Foreign Affairs, Mr Peter Thomas, has explained that, in the British Government's view, "not all arms are used for repression." There is no serious indication of what other purpose the South African government might have in mind.

An independent report on

COPPER

Demand for copper grows, yet production continues to exceed consumption. Producers are facing a growing threat from substitutes, and attempts are being made to stabilise prices. But the outlook is uncertain.

Copper is the subject of the most recent of a series of enquiries into raw materials and their prospects conducted by Barclays Bank. In this report, the Bank explores the background and development of copper and discusses the numerous problems of price, production and markets. For an informed appraisal of copper today, and a realistic estimate of its place in industry tomorrow, investors and businessmen will find this report invaluable. Copies can be obtained from:

TRADE UNIONS

Boss over the Boss?

Most managing directors are employees of their company, in the sense that they hold a service contract with it; and some have felt an understandable alarm this week at the Boulting brothers case, which has seemed to imply that a trade union that enforces a closed shop policy can insist that they become union members and then tell them what to do. In the case concerned, the judge, though openly sympathetic to the Boultings, decided for the union on the technical point to which he felt he was restricted: namely the interpretation of the union's rules. The plaintiffs, the Boulting brothers, had been managing directors of Charter Film Productions Ltd. since 1937 and besides managerial functions also carried out technical functions as directors, editors and screen writers. In 1941 the plaintiffs were admitted to the Association of Cinematography, Television and Allied Technicians after a request from a union official that they should apply for membership. After 1947 various disputes occurred between the union and the plaintiffs as managers and in 1953 it was agreed that their membership should be held in suspense. In 1959 the union claimed a large sum in back subscriptions from the Boultings and insisted that in future they should be members of the union; otherwise it would bring its members out on strike.

The Boultings then brought an action against the union asking for a declaration that as employers they were ineligible for union membership under the union rules, and also for an injunction to restrain the union from taking any action to force them to become members. The judge held that the union's rules did make them eligible for membership. But the Boultings' second and wider point was that if the rules did do this, then they were to that extent *ultra vires* and void as being contrary to public policy. The judge conceded that if the dual capacity of the Boultings as managers and members would *necessarily* lead to a breach of trust or a breach of contract on the part of those observing it, then the rules would be void. But he went on to hold that any such breach would be only contingent, since the rules themselves did not oblige the plaintiffs to become members, and did not impose any obligation on them to adopt union policy in their capacity as managing directors. (It is the policy of the union as enforced by strike threats, not its rules, which might do that.) The judge, however, conceded that the union's attitude had placed the Boultings in an embarrassing and invidious position and deplored its action in seeking to force them to become members. This, surely, brings one straight back to the case for the legislative reform which has been urged *ad nauseam* by this newspaper. When a union enforces a closed shop policy, its rules should be subject to review by some such arbitrator as the Registrar of Friendly Societies—in order to protect its own (sometimes unwilling) members' personal rights.

AU PAIR GIRLS

The Wandering Students

The army of foreign "home helps" who have become an indispensable adjunct of the middle-class British young-married household are of two types. First, there are those who come here specifically as servants, subject to Ministry of Labour permits and entitled to payment of a set minimum wage. Secondly, there are the *au pair* girls who come here nominally as visitors, albeit ready to help their "hostesses" with light duties about the house. Now and again the wildest rumours run about concerning the way they are treated by their "host families," or the way their "hosts" are treated by them, or what some of them have really come here to do. The latest pamphlet* from Political and Economic Planning seems to have been intended to answer some of these questions. Unfortunately it is one of their rare duds. This is perhaps not the single inquirer's fault: no record is kept by the immigration authorities or by the police of the numbers of these girls entering the country. Guesses have ranged from an official 15,000 to an unofficial 40,000.

The method chosen here was to take a random sample of 417 foreign candidates for the Cambridge Lower Certificate in English at schools in London, the Home Counties, Oxford and Cambridge, and ask them what they thought of life in Britain. 89 per cent of the sample were girls, almost 75 per cent of them were aged between 18 and 23, 41 per cent of them were German. This sample drawn from the schools is bound to be overweighted with *bona fide* students as against other girls (hence, just possibly, the preponderance of Germans and the mere 9 per cent of French?). In any case their answers were dreadfully stodgy: 86 per cent of them were satisfied with their classes; of their shatteringly predictable comments on Britain the highest proportion (18 per cent) of unfavourable remarks concerned the weather.

Perturbed by the lack of knowledge about

Perturbing—or just predictable?

these girls, and about the fairly high number (although low proportion) of them who get into serious trouble while in Britain, the National Council for Women has for some time been urging the Ministry of Labour and the Home Office to try to restore to the term *au pair* its original meaning of an exchange of visits, and to make the granting of labour permits to part-time students easier. Surely this is what needs to be done. Instead of making this rigid distinction between servants (subject to controls) and visitors (whose real experiences are concealed behind a lump of missing statistics) officialdom should recognise that there is a large group in between: girls who want to come here, to earn a few honest pounds a week while learning English, and to provide valuable domestic services in exchange. Any new legislation should make it easy for them to enter Britain to do this, and also give them a perfect right to move on to a different house if they do not like the first family with whom they live. The danger is that all those who are concerned about the untidiness of the present position may combine to be restrictive rather than welcoming to the new and hopeful young people's international.

CONGO

Pulling Through

Mr Adoula's talks with Mr Tshombe, which began in Leopoldville on March 19th, have progressed so far that they seemed, this week, to have reached their first breakdown. The difficulty

Drama

TV schweppsicolor

"Progress and experiment" is the watchword of our Drama Department.

Our domestic comedy is based on ordinary people whose actions are even more ordinary than usual because they have been passed as ordinary by a special panel of absolutely ordinary people.

Our Westerns are further West; but they are even more ruthless in their advocacy of anti-sadism. In the saloon scenes, for instance, a small Dubonnet is asked for instead of slugs of Scotch. When the fight for non-violence developes, bottles are thrown under arm only; and cartridges are imitation, not genuine, blank.

In our crime series, once again we break old ground, while making it more certain than ever before that no-body will recognise the real murderer. Titles and credits obscure the view of the face reflected in the top of the water butt. The blue wall-flower embroidered on the dirty washing bag of the schizophrenic hall porter is never explained, nor is it certain whether the slow "Ping" is a sound effect or symbolic music. The woman screaming when she looked into the washing machine was a clue, but we purposely left unexplained why, when the gangsters flung the two dead men in the doorway, the guests went on eating hot *hors d'oeuvres* as if nothing had happened.

It was our Idea to play the actual murder by flash-back in darkness and it was up to the audience to spot the criminal and not get him mixed up with the reconstructed corpse, even if both did bear a superficial resemblance to the chief detective, who had the lights full on him for the first time just when, because there was only five minutes to go before Fad Time, we had to start running the titles and credits for the end of the programme.

Written by Stephen Potter; designed by George Him

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

seemed to be that Mr Adoula (prime minister of the Congo) was insisting on treating Mr Tshombe (provincial president of Katanga) as a provincial president ; Mr Tshombe preferred to conduct himself as head of an independent state. But it was about this issue—Katanga's secession—that the talks were begun, and the initial manoeuvres inevitably had to be concerned with matters of face. Even if there are further breakdowns to come, however, some hope for a genuine Adoula-Tshombe *rapprochement* lies in the balance of forces between the two men. Mr Tshombe now realises that he cannot maintain a separate Katanga against the disapproval of almost the entire world ; Mr Adoula must recognise that the Tshombe regime is, nevertheless, likely to retain physical control over the part of the Congo that contains most of the country's mineral wealth.

In the long run, they can only compromise. What then? The United Nations' technical assistance plan for 1962 will cost $16 million. It will provide a thousand imported experts and train 2,329 Congolese at home and abroad. But UN experts, necessarily on contract for only a year at a time, often have to leave soon after they begin to settle comfortably in their jobs—and the shortage of trained Congolese will be felt in central Africa for many years to come. The answer, unpalatable though it may sound to most African ears, is that only the Belgians can give the Congo the help it really needs—always provided, of course, that relations between individual Belgians and their Congolese employers are adjusted to the new atmosphere of independence. Mr Tshombe, Mr Adoula, and also the UN may gradually be discovering that this is unavoidable.

TV VIOLENCE

Milk and Water?

THE proposed inquiry into the effects of violence in television programmes on children in Britain will no doubt be welcomed as a step in the right direction—that is, towards a censorship of television programmes—by those Members of Parliament who complained so bitterly this week of the horror of Nancy's murder by Bill Sikes in the serial version of "Oliver Twist." (They include, as a borderline case, the Postmaster General, Mr Reginald Bevins, who, though he thought the episode "brutal and inexcusable," was yet not so far gone in indignation as to yield to a plea for the total banning of TV violence before 9 p.m., when children are officially presumed to be in bed.) Other people should greet the proposal with some reservations, although without being too violently opposed. It is always useful to know what effects certain people think television has on children or grown-ups ; and it is difficult to believe that a sane committee could be so silly as to recommend putting into the Government's hands some continuing instrument for censoring the content, artistic or otherwise, of television productions.

It is not at all clear what connection the advocates of censorship see between television violence and "teenage crime" ; cases have been quoted of children hanging themselves, but, tragic as these are, by no stretch of the imagination can television be said to have suggested to them that hanging themselves was a good thing to do. One might as well say that the repeated cases of accidental death through covering the head with a polythene bag are the result of displaying potatoes in those bags. Perhaps the best thing a committee can do is to recommend the taking up by both networks of a suggestion made by the last (or was it the last but one) inquiry into the effects of television violence on the young: that programmes which producers think likely to bruise the tenderer minds among their audience should be prominently labelled—perhaps "H" for horror or "V" for violence. Admittedly not many plays (least of all the classics or, say, Grimm's fairy tales) would escape the label ; and to most balanced people the BBC's current practice of broadcasting a warning of unpleasantness before the relevant programme if it is screened before 9 p.m. seems safeguard enough. But at least classification would give timorous parents (and Mr Bevins) the opportunity of taking the evasive action which has all along been open to them—namely, of switching off.

What Price Wheat?

IN Britain's negotiations with the common market, the price of grain plays a crucial part. Is western Europe to become a high-price, high-cost area, effectively self-sufficient in wheat, dumping soft wheat abroad while importing limited amounts of high quality Canadian wheat? Or is it to remain a deficit area, importing on a large scale from countries like the United States, Canada and Australia? The six present members of the community have not yet made up their minds. They have merely agreed to move towards a common price somewhere between the extremes of the present French and German levels.

GUARANTEED PRODUCER PRICES, 1961–62

	Price £ per ton
West Germany	37
Belgium	37
France	27
Britain	27
United States	27
Canada (hard wheat)	18
Australia	23–24
British Import Prices: Soft	24–25
Hard	26–28

Source: International Wheat Council.

As the table shows, the French price is a low one by European standards, but it is high by the standards of the rest of the world. The British import price—commonly known as the world market price—for, say, soft Australian wheat is below the French level. But it is also below the British home support price (maintained by subsidies) and, when transport costs are taken into account, below Australia's own support price (though in this case the difference is financed by a fund levied on producers in good years).

To solve the problems posed by Britain's entry, the French have proposed a world-wide system of price support at, say, their own price level. Outlets would be guaranteed to overseas producers at the new high price ; dumping, by Americans and Australians, would stop. It is easy to see why this is supported by the Australians and Americans ; their export price would rise. But the Canadians, the most competitive wheat producers, would not necessarily benefit if the increase in price encouraged other people to produce more. Canadian farmers are already earning higher prices on the market than their own guaranteed price. They oppose the new plan.

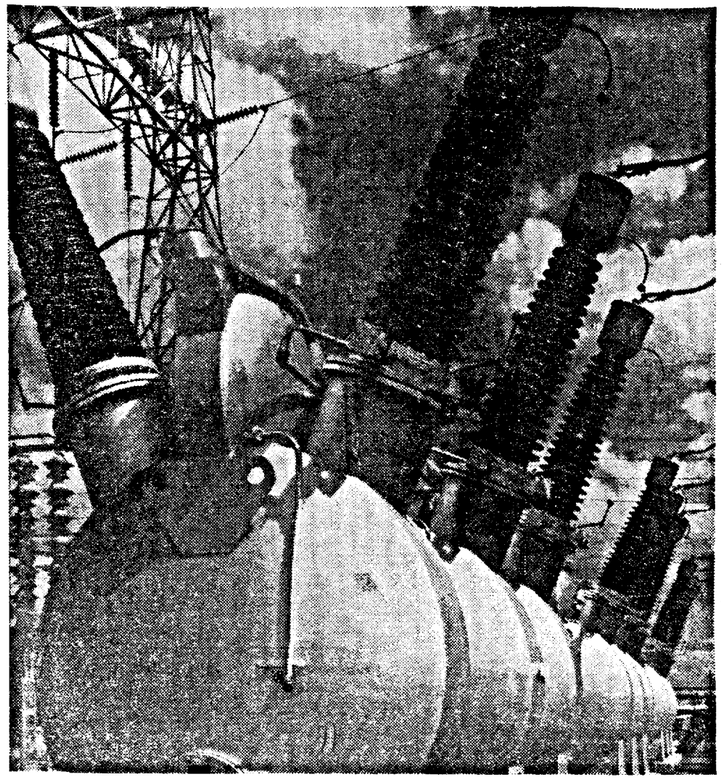
In Europe, fixing the price of wheat at the French level would helpfully discourage production in Germany, Belgium and Italy, where prices are higher. But outside Europe it might encourage Australia (where the price is lower) to produce more, unless quantitative restrictions were imposed on output. Higher prices would also increase Britain's import bill for food.

The level of feed grain prices will also decide the pattern of livestock prices in Europe. If feed grains are cheap the price of poultry, pigs and dairy products may be held down, too. In any world-wide agreement Britain would therefore favour a low coarse grain price (at, say, the Australian price of £24 per ton). But this will be fiercely opposed by farmers in most parts of the western world, apart from Canada.

Immigration

The second in the series of Studies on Immigration from the Commonwealth will be published on Monday next, price 2/6d:

The Immigrant Communities



Where they come from. Why they emigrated. How long they stay.

This booklet also brings up to date the immigration figures published in Booklet No. 1. Basic Statistics.

AUSTRALIA/country, continent . . . a world of opportunity

A skyline of circuit breakers symbolises the rapid growth in Australia's power supply.
Below: Construction work on one of the huge concrete dams in the £A400 million Snowy Mountains Hydro-Electric Scheme.

NEW POWER BEHIND AUSTRALIA

Diverting the flow of four rivers through 3,000 square miles of alpine country; building new power stations on black coal fields; turning a brown coal field of 22,000 million tons into one of the world's major fuel and power production centres—this is the scale on which Australia is developing her power resources. Australia's total capacity of stations generating for public supply, rose by over 23% in the two years to July 1961 to reach 6,388,000 kW. Of five hydro-power projects now in hand, one—the Snowy Scheme—is among the greatest engineering feats ever undertaken by man. With a capacity of some 2,555,000 kW, it will generate electricity in 11 power stations, while feeding irrigation water to open up new farmland. Much of the special equipment needed is being made in Australia. Not only is Australia abreast of the latest technical developments in the more conventional power generating fields, but is actively engaged in atomic power and solar research, at Lucas Heights (N.S.W.) and elsewhere. Those overseas companies already located in Australia are confident of the potential of this vigorous, developing nation. Australia welcomes them and welcomes their contribution to the continuing growth and stability of the Australian economy. *Information about trade, investment and immigration can be obtained from Australian representatives in Australia House, Strand W.C.2, and at the Offices of the Agents-General for the Australian States.*

When a Cornishman says, "a proper job!"—things are good. And Alf Coote says it often these days.

He's helping to build Goonhilly Down, the satellite tracking station in Cornwall that will relay live TV from America.

"I used to work on a farm for £7 a week" he says. "Now, more often than not, there's £30 in my packet."

Thirty pounds a week to spend—and to save.

To spend on his car, and his collection of classical records . . . to save for the house he'll be buying soon. Alf reads the Mirror.

BRUSSELS TALKS BREAK DOWN

¶ Our readers will have seen with very great regret the fulfilment of the unfavourable prognostications of our commercial men with respect to the intentions of Belgium towards this country. . . . In spite of the confident tone of the Government, both in July last, when Mr Forster gave in the House his very lucid statement of the whole question, and again in February, after the negotiation had been entered upon, few of the more discriminating of our commercial men ventured to hope that Belgium would for a moment offer to England the same terms which she has offered to France. Mr Forster intimated pretty clearly his conviction to this effect as far back as last July. And the truth appears to be that we are in a bad position for the negotiation, in consequence of having already done all and much more for Belgium than we had the slightest hope that Belgium would do for us. When, therefore, we hear that Belgium has made large demands on us in consideration of the concessions which she proposed to make, the motive must be obvious—to back out of the negotiation as easily as she can. In truth, we have no equivalent to give, simply because we have already given it for a long series of years. Our annual imports from Belgium are at least worth three millions and a half sterling, as against an export thither of British produce valued at less than two millions sterling. And while almost everything we send to Belgium is heavily taxed there, there is nothing which we receive from her in any quantity, except refined sugar and hops, which is subject to an English import duty at all. The measure, therefore, of the benefit which we have been freely bestowing upon Belgium for the last sixteen years, is the measure of our incapacity to make any present equivalent for her so-called sacrifices. . . . The hardship is greater, because of the extreme inequality in the dealing of Belgium with England and France. . . . Belgium should remember that though political treaties require us to support her political independence, there is all the difference in the world between the hearty support of a friendly nation indignant and eager for her defence, and the lukewarm support of a nation whose people and parliament she has alienated by a selfish and exclusive policy.

LETTERS

Competition in Europe

SIR—Your appraisal of the anti-cartel regulations recently passed by the Council of Ministers of the Six is in general very balanced—except for the unaccountable omission of any detailed reference to the way in which they are intended to hamstring the European Commission, should it try to make practical use of its ostensible powers.

The "vigilant and often jealous eye" with which the ministers regard the commission in general is in this case looking so intently in one direction that it is unmistakably squinting. Apart from the specific limitations mentioned by you there are two important provisos which you seem to have overlooked.

(1) The less important of these is clearly labelled as a temporary compromise and is, therefore, at least in theory only provisional. This is the recognition (for a maximum of three years) of the clean bills of health given by national authorities in the past to previously existing cartels which would otherwise have come under the jurisdiction of the commission (Article 23).

(2) Article 10 can only be described as a permanent brake on the "exclusive competence" given the commission in Article 9. Reasonably enough, it provides for "close and constant liaison" between the commission and the national authorities, but it also sets up a permanent consultative committee composed of official representatives of the member states at expert level. This must be consulted by the commission before it takes any steps on outlawing or permitting cartels, before it imposes fines and even before it sets up any inquiry into the competitive situation of suspect sectors of the economy.

Apart from its subjection to the High Court of the Communities, the commission is thus subject to a kind of preventive censorship. This is characteristic of the growing tendency to surround the commission with permanent watchdogs of the member governments in the execution of its functions; in addition, this arrangement should help the "still curious inquirer" to make up his mind about the fundamental attitude of Regulation 17 towards monopolistic business practices.—Yours faithfully,

E. STRAUSS

Thames Ditton, Surrey

Hire Purchase Maverick

SIR—There are two sorts of motor dealers: first class and bad. On the whole finance companies have now learned this simple lesson and competition for first class dealers is fiercer than it has ever been. I daresay United Dominions Trust is not above *Machtpolitik* but I believe the funds employed by this firm have yielded a poorer and poorer return for a surprising number of years; they would hardly aggravate this very serious problem merely to bankrupt countless tiny competitors (that will come as a bonus).

My impression is that the top finance companies have now cut out most of the dealers they do not consider first class; and the other dealers who, as you say, transact a high percentage of bad business will indeed receive no commission, since they will receive (from the big companies) no finance.

But although a reliable motor dealer is a pearl of great price, it happens that in many cases the management is weak. Thus, even as the clearing banks bought their way into hire purchase, now, in remarkably similar circumstances, hire purchase companies will probably start to buy themselves into the motor trade. Let us hope they are more selective than the banks.—Yours faithfully,

P. J. BISHOP

London, SW15

Pictures on Loan

SIR—Your article on the picture-lending scheme of Leeds City Art Gallery prompts me to offer information about a scheme launched two years ago by the Department of Extra-Mural Studies in the Newcastle division of the University of Durham, which we claim was the first such scheme ever to be started in non-commercial circles in this country.

We have collected original paintings and sculptures by local artists totalling about 130. These are lent by the artists and are hired out by us to anyone who is prepared to pay 5s. a month per work. Those not on loan are displayed in the department. Currently there are about fifty actually on loan, and the turnover is approximately twenty per month. It is admittedly a small scheme—indeed we would be embarrassed were it to grow much larger than it is—but it has been successful enough to encourage more local artists to offer their work to us, and to enable us to be strictly selective in what we are prepared to accept. We have been able to buy twenty-one paintings ranging from a MacTaggart through some lithographs by Graham Sutherland, Ceri Richards and Henry Cliffe (who are not local) to works by local people which seem to have permanent value. We have no reproductions. The only financial assistance the scheme has had was an allocation of departmental funds and the hiring charge to borrowers, one third of which is paid to the artists as a token that we have their work in our hands. The collection is fully insured and the borrowers, as at Leeds, are mainly professional people but include a few ordinary workers, a few students, businesses, schools, and an RAF station. Some borrowers take a liking to a picture, which they

cannot then bear to part with, so we put them in touch with the artists, from whom they are able to buy the work.—Yours faithfully, B. W. ABRAHART
University of Durham,
Newcastle upon Tyne

Advertising

SIR—Whatever the merits of prohibiting the advertising of cigarettes, Mr Michael Lipton's advocacy seems to strengthen the doubts you expressed about further inroads into free speech. His letter shows how quickly the specific arguments of Mr W. B. Reddaway on cigarette advertising might be extended to other fields where advertising (or display, salesmen, packaging, even branding ?) is assumed to be wasteful.

It is clear, as Mr Lipton says, that advertising can be used by established firms to strengthen their hold on the market and, intentionally or not, to impede the entry of new competition. The last report of the Monopolies Commission drew attention to this effect of the advertising of tobacco:

> it is becoming increasingly difficult for the smaller or medium-sized manufacturer to maintain a steady level of business without quite disproportionate expenditure on brand promotion.

But it would be unbalanced to fail to see the use of advertising you rightly emphasise by new firms entering the market, or, we would add, by existing firms expanding their share of it. In preparing a second edition of *Advertising in a Free Society,* we have recently assembled evidence on the use of advertising in marketing 70 widely differing commodities and services. We were left in no doubt that advertising (as part of an integrated marketing strategy) can provide the only or most efficient way in which a new or growing firm may challenge long-established giants.—Yours faithfully,

RALPH HARRIS
ARTHUR SELDON
Institute of Economic Affairs
London, SW1

Dr Adenauer and the Critics

SIR—It is only now that we have seen the article in your issue of March 3rd, in which your Bonn correspondent refers to the case of Dr Gerd Bucerius, publisher of the political weekly *Die Zeit* and the illustrated weekly *Der Stern,* who resigned his parliamentary seat. Your correspondent writes: "The other night, television watchers had the salutary shock of hearing the editor of *Der Stern,* Herr Nannen, point out that the fiercest denunciation of his paper's morals had come from a much-respected religious weekly whose editor had been employed by Himmler's Reich Security Service in 1938 to carry out research into the Jewish problem."

The "much-respected religious weekly" is *Christ und Welt* (as a matter of fact this weekly is mainly a political and cultural one). The Hamburg broadcasting station, *Die Zeit* and *Der Stern* meanwhile had to correct themselves and had to admit that Herr Nannen's above mentioned statement concerning the editor of *Christ und Welt* was totally untrue.—Yours faithfully,

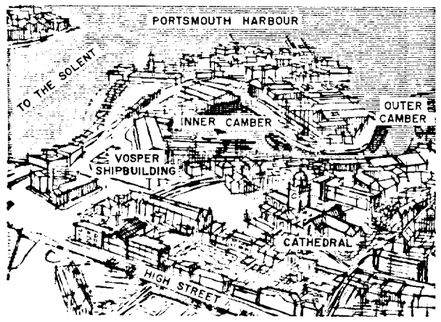
H. G. VON STUDNITZ
Stuttgart-Sillenbuch *Christ und Welt*

Dropping the Bomb

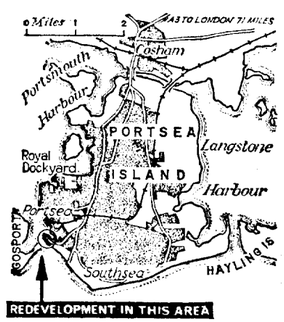
SIR—It was a pleasant surprise to read at the top of your article of March 17th the words: "When and how Britain might usefully give up its nuclear arm."

But a reading of the article makes it clear that you are only referring to the strategic nuclear weapon. To a person who believes that the renunciation by Britain of the use of nuclear energy for military purposes is the path of wisdom in defence policy your proposal is better than nothing, but very little better. The trouble is that the so-called tactical nuclear weapon is, to use your own words, a very substantial "atomic high horse," both in yield and range. What is to happen in your scheme to the tactical air force, one plane of which can deliver a nuclear yield equal to all the explosives dropped on Germany in world war II ?

The longer I study this nuclear problem the more convinced I am that it is all or nothing so far as nuclear weapons are concerned. I am for nothing.—Yours faithfully,



STEPHEN KING-HALL
London, SW1



HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Victory in Portsmouth

FROM A CORRESPONDENT IN PORTSMOUTH

THIS year Portsmouth is celebrating the 150th anniversary of Dickens's birth. In a planning sense, the city has been grappling with Dickensian problems for a long time now. The corporation's piecemeal modernisation plans are largely governed by the lack of space on Portsea Island, where most of Portsmouth's 250,000 people live and work. Portsea contains Britain's chief naval station, a civil and a naval dockyard, a commercial port, a holiday resort and an increasing number of light industries—70 new factories have been built in the Portsmouth area since the war. But the loudest commotion has been coming from the protectors of the oldest part of the town, who see in the corporation's development programme an undisguised threat to their interests. Smarting from their late defeats at official hands, the Friends of Old Portsmouth could only declare darkly at their last meeting on Monday that the city's actions would be "watched carefully."

Old Portsmouth lies to the south of the island and consists of a small residential area near the cathedral and on the main road leading to the Camber, the small commercial port. The development plan, which has been approved in Whitehall, includes knocking down some old property near the cathedral, building new blocks of council flats, providing a more efficient routeway to the Camber, creating a lorry park for vehicles that load or unload at the port, and, finally, isolating the cathedral precinct from the gigantic power station whose chimneys tower over the neighbourhood.

The Friends of Old Portsmouth, a small but vocal group, say that the amenity of their properties will be destroyed. But this amenity seems largely illusory. Tourists staying in the city or going on to the Isle of Wight throng the area in summer, Vospers shipyard shatters the air daily, and the locality already carries a heavy lorry traffic to and from the port. If Britain enters the common market such commercial traffic is bound to increase.

Indeed, a slow increase is already visible. More ships were handled in the early weeks of this year than in any other previous comparable period. Usually 120 to 130 coasters dock each month. A quarter of the ships docking are colliers; the remainder are mainly small vessels bringing Channel Island vegetables over to be sent by road to London. Exports so far are only a fraction of imports, although between November and January 15,000 tons of barley were sent to Holland and Germany.

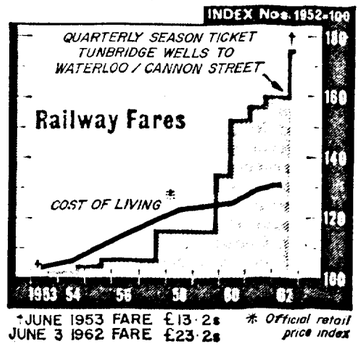
Portsmouth corporation seems to have realised that the common market is a distinct possibility. With France only a hundred nautical miles away a flourishing trade could develop (today Breton onion sellers are the only outward sign of the town's proximity to the continent), particularly if small exporters grow increasingly tired of restrictive practices and delays at London docks. The question is whether Portsmouth can expand its own facilities to catch the trend. The corporation's plan for the compulsory purchase of just over two acres in Old Portsmouth should certainly ease congestion in the existing port. The city is slowly buying land from the Admiralty—the War Department is another large landowner—but the navy is loth to sell any of its long waterfrontage, despite the decreasing numbers of the actual fleet.

The corporation scheme is also opposed on the ground that redevelopment would destroy Old Portsmouth's charm—specifically, that of three period cottages due to disappear. But, in fact, German bombs destroyed any charm that Old Portsmouth ever possessed; and well-designed council flats are eminently preferable to the numerous bomb-sites that still exist. Some Portmuthians go further and regret that more property was not destroyed in the war, for the backlog of poor nineteenth-century houses on Portsea Island is considerable. Add to this the fact that the Portsmouth-Southampton area ought to be made one of the counter-nuclei to London in alleviating the population problem of the crowded Deep South East and the importance of making real headway in redevelopment is increasingly evident.

WITH land prices soaring on the mainland outskirts of Portsmouth, and little land available on Portsea Island, blocks of flats have been the city's answer to providing reasonable accommodation for some of the 22,000 families that are now supported by the (modest) wages from the naval dockyard. Rehousing the dockyard workers near the docks is a necessary step in keeping down peak traffic on the only two main roads off the island.

In a city where sound planning has often been conspicuously absent, the Old Portsmouth clearance is a small step into the future. Development of this kind can give the city a real chance, first, to escape from its history—its squalid, nineteenth-century buildings are as much a part of Portsmouth's present existence as its attractive Sallyport and HMS Victory—and, secondly, to avoid overdependence on the naval dockyard and on the fluctuating holiday trade.

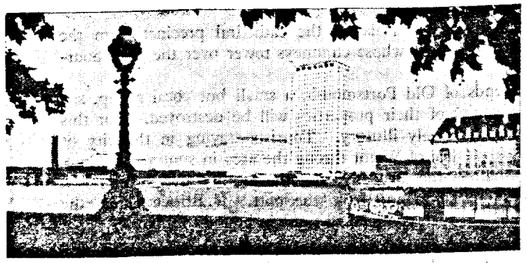
Kentish Revolt



FROM OUR SPECIAL CORRESPONDENT

TUNBRIDGE WELLS, still a rather prim Kentish spa-cum-dormitory, lies in the heartland of the commuters' and mortgagers' sporadic anti-Tory revolt. It belongs to the Tonbridge constituency which jarred the Government in 1956. Orpington is just up the line—and it was not by coincidence that the first act of Orpington's Liberal champion, Mr Eric Lubbock, on reaching the House of Commons was to table two questions on behalf of his commuting constituents. For those railway season-ticket holders who could not let off steam at the polls there are the local Rail Travellers Associations which are sprouting rapidly in Kent. Growing in numbers and enthusiasm as the details of the revised timetables (due to start in June) seeped through, the associations now have the 10 per cent fares increase to raise recruiting still further, although whether they can perform the miracles that these recruits expect is another matter.

In Tunbridge Wells alone more than 500 commuters joined the local association in one week and about 400 showed how strongly they felt by turning up last Friday evening to confront a British Railways spokesman. This was one of several occasions recently when a railway official has submitted to pretty rough questioning. This time his answers did not satisfy the Tunbridge Wells commuters who see the new timetables representing more inconvenience, more standing (over 250 standing passengers have been counted on some rush hour trains) and more delays. But as long as the Borough Market bottleneck at London Bridge exists there is little prospect of more trains, and less crowded ones, for Kent passengers. And Borough Market's troubles are not likely to be tackled while the railways run a deficit of £150 million.



When the railways dare to talk of modernisation the protesters are apt to turn up ancient timetables to show that there were more rush hour trains to and from Tunbridge Wells in 1884 than there are now—and there were almost as many in 1866. The fastest train in 1884 took 51 minutes against the present fastest 53 minutes. In those days, of course, there was nothing like the traffic build-up in the south-eastern approaches to London.

It is not exactly surprising that the Conservative MP for Tonbridge has promised his support to the local travellers' associations. He may not prevail on Dr Beeching; but one sensible thing he could urge the Government to do is hasten the process of office dispersal outside London. The rise in season tickets will certainly reduce the net differential that still makes clerical work in central London attractive, despite the discomfort of getting there. So far there are not enough Kentish advertisements asking "Why Work in London ?"—although Tunbridge Wells itself has its pioneering offices, like those of Reliance Mutual Insurance and the Hospital Service Plan, which have led the diaspora. Until more follow, the collapsible seat concealed in brief case or shopping bag will remain as much the symbol of the unhappy commuter as that increasingly expensive season ticket.

South Bank Cliffs

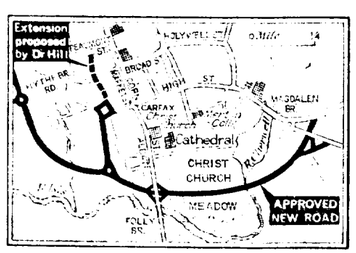
FROM OUR SPECIAL CORRESPONDENT

Shell centre—as Shell sees it

THE new Shell office tower has reared itself stiffly and stonily 351 ft. above London's south bank. It is inescapable, and in its appearance and proportions it is a disappointing £33 million worth (this sum, vast in itself, looks a drop in the bucket of the group's resources). Visually, a chance has been muffed. Most Londoners, and almost all visitors, invariably look across the Thames from north to south. They thereby miss the better river frontages, like Somerset House, on the north bank, and what they do see—the dilapidated-looking Royal Festival Hall, the horrible inter-war Ministry of Works on the Albert Embankment and now the looming Shell cliffs—are poor substitutes. Thames-side seems doomed to remain one of London's most underdeveloped assets. Its photogenic vistas have to be carefully angled.

The merits of the Shell centre are engineering ones: the foundations sunk in the London clay, the straddling of the Bakerloo underground tunnels, the communication channels between the upstream and downstream blocks (the 7½ acre site is split in two by the decaying brickwork of the approach to Hungerford railway bridge). Inside, the centre, with its 1,200,000 sq. ft. of air-conditioned office space and ancillaries, is chiefly a masterpiece of the movable partitioners' repetitive art. Considerable expense (no official breakdown is available) has gone into the automatic delivery of tea and coffee to each floor—although the familiar trolleys still have to manœuvre down 6ft. and 4ft. corridors. The restaurant décor will not upset copy typists. At the LCC's urging, Shell has provided an international-size swimming pool, a rifle range and a multi-purpose internal sports area. These should do something to keep York Road alive after office hours.

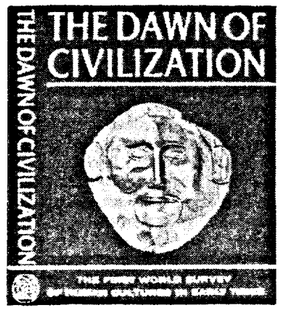
FOR the group itself the value of centralisation is inestimable. Hitherto the headquarters operations have been scattered among 30 buildings in the City. The company has already cut its staff drastically (it is said by 1,800) but there may be further trimmings at headquarters if the number is to be kept down to the 6,000 or less that the new buildings are meant to house. Devolution of work among branch offices is one solution; even so, the impression is of a further rationalisation and consolidation after the shake-down period.



The move to the south bank (direct access will be provided to Waterloo station) might have contributed to easing the City's traffic problems, were it not that all the company's old offices will presumably be snapped up and occupied by other firms. (Development plans for the chief site are already well in the air.) In fact, Shell expects to recoup £11 million by the sale of its City premises and leases. For the one-fifth of the staff who travel by Waterloo anyway, the new centre is a blessing; fortunately very few employees use Paddington, Marylebone or Euston. The real difficulty has been over the East Anglians: their lengthened journey to work has meant postponing the start of the office day to just after 9 a.m.

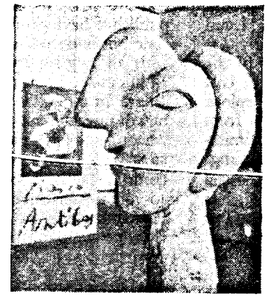
Meadow-Go-Round

FROM OUR SPECIAL CORRESPONDENT

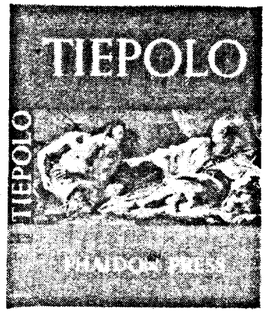


OXFORD'S establishment has swallowed the Ministerial verdict in favour of the Meadow road with something like aplomb. For this there are three reasons. First, the old guard sees years of public inquiries into all the consequential planning decisions; the guerrilla war will keep it happy until the time comes for it to retire—at least as far from the Meadow as North Oxford. Second, it is pinning its hopes on the probability that the wider by-pass ring will be completed before the Meadow road gets under construction: enough through traffic will then be diverted (it claims) to make the Meadow road pointless. Third, it hopes that the city will baulk at the cost—and particularly at the extension through to Gloucester Green and Beaumont Street which the Minister of Housing and Local Government, Dr Hill, wants to relieve congestion in Cornmarket Street. The end of Oxford's most contentious issue is not in sight by any means.

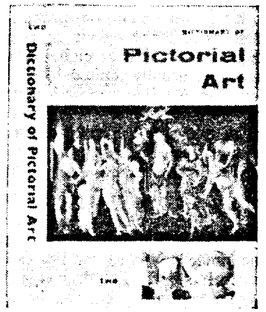
As far as it goes, Dr Hill's decision to take traffic out of the disintegrating High Street is unquestionably the right one, and he has plenty of support in the city for it. Not everyone in Oxford, by a long chalk, will mourn the dank Meadow, and even Christ Church and Merton should be relieved that the road is to take a broader sweep towards Folly Bridge than some other plans had proposed. In fact, there should be relatively little reason for tears from anyone except the most die-hard Malignants if the city takes Dr Hill's advice and sinks the road as much as possible below eye level; a local variation of some of the better American methods of concealment would not be at all intolerable.



But even if this scheme is at last carried out—and, for Oxford's sake, let it be done—Dr Hill will then still have to follow through to give Oxford the positive benefit of a full diversion of traffic from the High. The gradual emergence of a pedestrian precinct (allowing goods deliveries within the area only at limited hours of the day) is worth developing both for its own sake and to stop local traffic being attracted back to the High once the through traffic takes to the Meadow. There is a good case for the eventual closing of Magdalen Bridge, but as a beginning the cut-off might be imposed further up to allow for filtering past Magdalen to Holywell Street. Alternate one-way working along this narrow passage could be regulated by traffic signals at each end. When the Meadow road is in operation (probably not before 1970 on present calculations, if that) the advantages of the idea of a central precinct free from motor traffic should be much more apparent to Oxford opinion than they have been in the permanent obfuscation of the past generation's debate.



Spring Books



Everyman's Art

SIDE by side, on adjacent counters, a leading London bookseller displays the contrasting fashions in the book trade today. On one stand are the paperbacks, growing in variety week by week; on the other, the handsome art and other illustrated books, their shining dustjackets as easy an eye-catcher as any gramophone record sleeves. The publishing trade is developing fast at each end of the cost scale.

Art publishing in this country is certainly not new. Early this century George Bell produced Herbert Horne's "Botticelli," and Palgrave was writing on Italian art a hundred years ago. But before the last war, British publishers produced in a year only some 200 new titles and new editions which the *Bookseller* classified as "art and architecture." Today, they turn out three times as many. The figure includes technical books on architecture, which are in no sense picture books; nevertheless, a good deal of the growth has been in illustrated works on art. Furthermore the size of the editions is far bigger—thousands of copies instead of hundreds.

Britain's first art publisher, that is, the first to concentrate on art books instead of producing them as a sideline, was the Viennese firm of Phaidon, founded in 1923, which set up in London in the nineteen-thirties. Its first production was a book on Van Gogh; this was received unenthusiastically by the booksellers, who thought the large format would be unpopular and predicted a sale of no more than a few hundred. How wrong they were: in all a million copies have been sold, in various editions and various languages, and the book goes on selling.

Phaidon remains the doyen of modern British art publishers, but, in sheer size, the lead has been taken over by the firm of Thames and Hudson. Not all of that house's annual turnover of £1 million is derived from the sale of art books; but of its 87 new titles and new editions last year, about half were art books and another fifteen to twenty were illustrated books about archaeology. Of the total turnover, about 44 per cent comes from export sales, while of the home sales, about half are made in London and half in the provinces. Perhaps stimulated by the evident success of this firm, other publishers are now entering the art field. Will they burn their fingers?

A publisher contemplating spreading his business in this way must first review the various levels of art book publishing to see where he might enter. At the top are scholarly works like Phaidon's six-volume edition of Rembrandt's drawings. This, and the three volumes of his etchings and paintings, contain between them about 3,000 reproductions. Such a book is for specialists by specialists: this is not a branch line for general publishers. Next come those handsome gift volumes which, retailing at between three and eight guineas, look like the candy of the trade. The theme may be the world's great art galleries, modern art, twentieth century sculpture, Egypt, the first rumblings of civilisation, or the Tate Gallery. The factors common to all are largeness, lusciousness, profuse illustration and, almost without exception, colour. Needless to say the high season for them is Christmastime, but in an affluent society they are appropriate gifts at other times for aunts, nephews, hostesses and bridegrooms, and are displayed in homes as status symbols in specially designed bookcases. But some booksellers have reservations and think this market is saturated. Moreover, not all subjects are acceptable: a book of fifty modern colour prints, for instance, may in time seem a less attractive buy than a single lithograph of actual size to hang on the wall.

Somewhat cheaper, and smaller in format, are editions selling at between 35s. and 50s., more often than not devoted to a single painter or a single art gallery; these books vary considerably in the quality of the text and reproductions. Still cheaper are slim editions costing a pound or just under, designed mainly for the student. Below that, and going out of favour, are small paper-covered monographs. Most publishers produce at a range of prices. Last year the average price of new titles produced by Thames and Hudson was a little under £3, by Studio and Phaidon just short

of 50s., while the eight illustrated books coming out under the imprint of Lund Humphries cost, on an average, nearly £5.

It is the size, quality and number of the illustrations that largely determine the cost of an art book. To this cost any colour printing adds considerably, may be far from satisfactory and even at its best has limitations—it has been described as an attempt to convey the quality of a major orchestral work by whistling the themes. Nevertheless new processes for reproducing illustrations are still being tried and old methods improved. Of the more costly processes used for the colour plates in expensive books, collotype (in which the printing surface, for each of the colours, is a sheet of glass coated with a gelating emulsion) probably gives the most satisfactory colour reproduction but may require seven or eight printings to do so and is usually limited for book illustration to small editions of under two thousand, and often not over five hundred copies, after which the plate has to be renewed. Photogravure, also expensive, may be used when the print order is big enough to justify it.

For the most part, reproductions are now made by line or half-tone processes. The line process is cheapest but is suitable in art work only for line drawings. Letterpress half-tone process, on the other hand, is dependent, for reasonable results, on the use of glossy coated art paper, which is more expensive and heavy to handle. The illustrations, therefore, are often printed separately from the text and inserted in batches; another method is to "tip in" the pictures on the matt text paper. If glossy paper is used throughout, as in—to give but one example—Sir Kenneth Clark's "The Nude" (John Murray), there is the great advantage that the illustrations appear where they are wanted; but, apart from the higher cost of paper, there is the additional expense of setting the type round the small illustrations inset into the print. When colour is used in the half-tone process, separate blocks must be made, as a minimum, for the three primary colours yellow, blue and red; for better results, four or more blocks should be used, but this adds considerably to the problem of getting correct register of the colours and therefore to the cost. The blocks for a four-colour illustration measuring about 8 by 10 inches may cost about £100. Another method of reproduction, half-tone colour offset lithography, does not necessitate the use of art paper, although this is sometimes used.

There are blockmakers in Britain whose work is excellent. But they cannot always guarantee to produce the blocks in time, particularly for a publisher anxious not to miss the Christmas market. This is one reason why some publishers go abroad for their blockmaking. They also save money if they go to Holland, but not if they go to France or Switzerland where there are firms with a long tradition of high quality craftsmanship.

Many of the art books on sale in England have in fact emanated from other countries and are straight imports, with the English publisher having no say in their content or style but undertaking to buy a fixed number, with an English translation, and acting to all intents and purposes as a wholesale bookseller. In other cases, there may be a combined international operation, with simultaneous publishing in several countries, perhaps in several languages. Thames and Hudson, for instance, is participating in the 40-volume series entitled the Arts of Mankind, of which the first two volumes have already been published. This is being undertaken in co-operation with four other publishers, Librairie Gallimard in France, where the project originated, Feltrisselli in Italy, C. H. Beck in Germany and the Golden Press in the United States. The project, which will take eight to fifteen years to complete, is said to involve an investment of £2,500,000 to be shared by all five publishers; even at such a sum, the publishers are cutting their industrial costs since the illustrations for the various editions are simultaneously printed and the different translations trimmed carefully to the same length to fit. In this venture, the printing is being done in Paris.

As a rough and ready guide, a British publisher is said to price his art book, like any other, at three to four times the actual cost of its production, that is, the cost of paper, plates, printing and binding; an American publisher at about five times. If the actual cost of manufacturing, therefore, is £1 a copy and 2,000 copies are sold at £3, the publisher allows the retailers £2,000 and receives £4,000 himself. His manufacturing costs are £2,000, but in addition he has to pay the cost of the author, distribution, advertising and overheads. He may find it easier to make money on his more expensive scholarly art books than on his cheaper ones. For libraries have to purchase a scholarly work, and there are 500-600 such potential customers for one copy apiece, while an American college library may buy as many as ten copies of one book. But if a general public is being sought that wants, say, a hundred colour plates in a book, the locking-up of the necessary capital, which on the plates alone may be as much as £10,000, is only economically justifiable if a large edition is required, which in its turn can often be guaranteed only by international co-operation.

What sales do art books have? Of one retailing at thirty shillings, such as that on the Dutch museums published by Thames and Hudson, a sale of 7,000 to 8,000 in the first year is anticipated and a subsequent steady trickle of 1,000 a year. Of the same firm's "Dawn of Civilisation," published last autumn and priced at eight guineas, 11,000 were sold in the British market in the first six months and altogether about 178,000 in all editions up to now. When the text is as important as the pictures, sales over the years may amount to large figures. Thus, of Phaidon's "The Story of Art" by E. H. Gombrich, first published in 1950 at 21s. and now in its thirteenth edition, some 400,000 copies have been sold. Certain standard works are in constant demand; for instance, of the various editions and translations of Goldscheider's "Michelangelo" (Phaidon) a quarter of a million copies have been sold.

When the first volume in the Arts of Mankind series was launched a year ago, sales forecast over the first two years were 10,000 in the whole of the Commonwealth, including Britain, and a like number in Italy, 15,000 in Germany and also in the United States, and 30,000 in France. That the general editors of this series and the author of the first title in it were Frenchmen might be expected to boost up the French sales. But take another set of figures: of Thames and Hudson's six guinea book on London's National Gallery, which has been translated into different languages, recent sales figures were 10,000 in Britain, 8,000 in Spain and 12,000 in France. By previous standards art books are booming in Britain. But publishers thinking mainly in terms of a British market may have to work harder for sales than their colleagues on the continent.

Middleman

Reflections of a Jacobite

By Louis Auchincloss.
Gollancz. 228 pages. 16s.

One must cast aside any prejudice instilled by the title: "Jacobite" nowadays has taken the place of the no less repulsive "Janeite," which Kipling dealt with once and for all. But it has a more respectable meaning; one simply reads Jane Austen, whereas Henry James is there not only to be read but also to comment on other authors and to affect one's reading of them. This is Mr Auchincloss's sense of the word. It does not mean that the book is all about Henry James, or that Henry James's views are dragged visibly into other subjects; but he is Mr Auchincloss's constant guide and mentor.

This book contains a number of essays, mostly about novels and novelists. It is easy but not profound reading: there is no deep analysis here, but rather thoughts of one who has read a lot and enjoyed his reading. Mr Auchincloss serves as a middleman to middle-brow readers, tempting them to raise the height of their brows. There is not very much about Henry James himself, though one essay gives a very sensible reading list to those who want to try the master for the first time. He is used rather as a lead in to other authors: to the great Russian novelists, to Edith Wharton and (interestingly to a generation that has never read him) to James's friend Bourget. The author explains why he can enjoy only one of George Eliot's novels, and two of Meredith's. Of contemporaries, he deals only with Marquand and O'Hara. It is a book worth reading, as good reviews and still more retrospective articles are worth reading. There is nothing remarkably original in it, but there are fresh combinations of ideas, and it turns one back to the authors about whom he writes.

The Offensive Spirit

Trenchard: *Man of Vision*

By Andrew Boyle.
Collins. 768 pages. 45s.

"You of all men know," Lord Trenchard wrote to Winston Churchill on May 23, 1940, "that I am very bad at putting my case and you probably quite rightly resented the way I said it. . . . Believe me, I did not want to be a dictator." This over-long, too sprawling and inconclusive book does faithful and lively justice to the brusquely inarticulate (and polo-playing) infantryman who did not find his métier—and mission—in military aviation until he was nearly forty years old and left it for good only seventeen years later when he ceased to be Chief of Air Staff in 1929. Whether it does equal justice to the soldiers, sailors and politicians—and airmen too—with whom Hugh Trenchard wrestled without respite, and without tact, on the independent air service's behalf must indeed be doubted; but it has to be said that the snares and stratagems used by his foes to split up or slay the separate air force were often as cynical and irresponsible as he was stubborn and difficult.

This is Trenchard's single-tracked side of a frequently disturbing and distasteful story. And, essentially, Trenchard won, even though he did spend the last third of his long life, including the second world war, left out of his country's defence counsels. Whether the Trenchard way was right is still a crux of military argument. The men who led his independent air force in the second world war were the men he had brought up. But, as Mr Michael Howard has cuttingly said in the current issue of *Encounter*, the course of the war still did not bear out his doctrine of independent air power: victory through the "big strike" proved as illusory, to both sides, as the "big push" of the first war; there was still no short-cut from attrition; the enemy had still to be beaten in the air (the Battle of Britain itself ran counter to Trenchard's idea of hitting the enemy where he lived) as well as at sea, and grappled with on the ground before the bombers could prevail.

Trenchard was, of his time, a new man, one of the first air professionals. Yet, peculiarly British, he had the marks always of the pragmatic amateur: more unmechanical than any but an untechnical country would have allowed to shape an air force: as an organiser, insatiably curious, assiduous and persistent in the dogged detailed process of trial and error which produced the structure, machines, men, tradition and ethos of the new arm; not always by any means as right as he thought in his simple dogmatic decisions, but in his fashion a true builder. His weekend flyers were, in the end, an inspiration that served the country well; and when he went to be commissioner of London's police in the early thirties, though his prescriptions proved to be inappropriate, his diagnosis of a force run down in morale and morals as well as in efficiency was surely right. As a youngster he swore that "One day I'll build a Harrods of my own"; as a subaltern, he told the Royal Scots Fusiliers in India that "I hope one day I shall live to command it"; in the end he moulded the RAF.

Three men, each of them the maker of something in his own way, Reith of the BBC, Pick of London Transport and Trenchard of the RAF, never got a real second war job with Churchill. Of these Trenchard was the odd man out because, unlike the others, he had been alternately clashing or, more often, conniving with Churchill ever since they had their first hot words on an Indian polo field in 1896. The truth was that, from their dealings when Churchill was one of his ministers in and after the first war, Trenchard had concluded that the best way of countering what he called his political master's "tendency to wobble when attacked" by "the last devil's advocate" was to lay down the law to him as combatively as he could. So when in May, 1940, Churchill offered him the command of all forces at home against invasion he sparked off the last of their blazing rows by proclaiming with all the old half-strangled truculence his terms for accepting—and stayed outside.

Always a martinet—"just beast" they called him—but aloofly and unspeakably loyal to his men, he called for the offensive spirit—and showed it himself. Mr Boyle asks, without answering, whether Lord Trenchard was not "his own worst enemy" with his way of putting his case "always at the pitch of his voice." Yet, for all their squalid manœuvres when he was so dourly and devotedly bent on building and keeping intact first the RFC and then the RAF, Trenchard was not badly served by his political masters. One after another, when the decision had to be made, they came down on his side: Smuts in 1917—"aerial operations may become the principal operations of war" (which Trenchard agreed with but thought premature, as he did the setting up of the RAF in mid-battle on April Fools Day, 1918); Churchill after the war when Trenchard won him by a phrase when he swore that airmen should not be merely "chauffeurs" and made his case for substituting air squadrons to keep order in the Middle East; Balfour in 1921—"the air force must be autonomous."

At 83, he lived to see his independent air arm pass into the paraphernalia of the nuclear deterrent. The object and opportunity of the air arm were still, to him, "to defeat the enemy nation"; but this was now the warning principle of the Bomb. He insisted to the last, Mr Boyle says, that the thermonuclear bombs and ballistic missiles were "essentially airmen's tools," but he doubted whether mankind would "ever be mad enough to use them in anger."

MEDIEVAL TECHNOLOGY AND SOCIAL CHANGE

LYNN WHITE, JR

The author examines the role of technological innovation in the rise of social groups during the Middle Ages, showing how a sudden change in methods of warfare affected the feudal nobles; how inventions altered peasant life in northern Europe, and how in the cities natural power and labour-saving devices applied to industrial production laid the foundations of capitalism.

1903 and All That

Newnes Dictionary of Dates

Compiled by Robert Collison. *Newnes.* 428 pages. 35s.

How nice that Mr Collison's long trail should lead from "A.1, first British car registration, issued to the 2nd Earl Russell 1903" up and down the years to "Zymose, yeast-cell fermenting agent, discovered 1903." He has, of course, many other vintage years. His first page alone offers, for instance, "AE" (1867-1935), Abadan, Abdication, Abelard, Abhorrers (1680), About (Edmond, 1828-1885), and Absolute Zero ("idea introduced by Lord Kelvin"). And so on in a foaming torrent of people and events. All eighteen Louis of France. Over fifty Johns—23 popes, eight Byzantine emperors, ten assorted kings, and Johns of Austria, Beverley, Damascus, Gaunt, Leyden, Nepomuk, the Cross *et al.* Three Gordians, all emperors, not a single knot between them. Jerome *Klapka* Jerome. Those four highly charged men, Ampere, Ohm, Volta and Watt. McNaghten, of the Rules; Macpherson, of "Ossian"; McMahon, of the Line. Melba (Helen Porter Mitchell, 1861-1931); but no date for the historic peach.

Who now remembers the 1937 Nyon Conference on the suppression of Mediterranean submarine piracy? Who developed decimals or the dynamo, water-closets or the willow pattern? Every schoolboy knows that the first woman prime minister was (and is) Mrs Bandaranaike; but what about all those Parliaments—Addled, Cavalier, Long, Mad, Merciless and Rump? Mr Collison pinpoints them all. As well as an alphabetical dictionary, he provides anniversaries for each day of the year. February 3rd (St Blaze's Day), to take a ready example, may seem rather uneventful at first sight: on this day Greece became a kingdom, the Yalta conference opened, John of Gaunt died, Horace Greeley, Felix Mendelssohn and Lord Trenchard were born; but what is this? "1826: Walter Bagehot, 'the spare Chancellor,' born."

With Bagehot here, and *The Economist*, and James Wilson's dates thrown in, carping seems churlish. When Mr Collinson has given us the Treaty of the Malcontents, the Year of Confusion, and the XYZ Mission, his omission of the Defenestration of Prague may be forgiven. But Fashoda is not in Egypt; few would agree that South Africa "achieved independence 1961"; and, among the non-Christian festivals, the book gives us Huli (more usually Holi) but no Diwali, Dussehra or Id, and falls into an old trap by ascribing Ramadan to "Feb.-Mar."

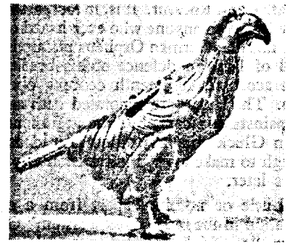
Right But Repulsive

Sainte-Beuve: *A Portrait of the Critic, 1804-1842*

By A. G. Lehmann. *Oxford University Press.* 446 pages. 63s.

To do Sainte-Beuve "some sort of justice"—such is Professor Lehmann's declared, modest and laudable aim: to do justice, that is, to the man who "rediscovered—what had been lost" literary criticism's "essential character as a discipline of tolerant and human understanding." The author deserves to succeed in this aim, since Sainte-Beuve's merits as a critic are now, surely, beyond cavil; and he has succeeded. He has set forth his hero's immense learning, formidable industry, almost overscrupulous honesty, exact perception and transcendent lucidity, in such a way that it ought to be impossible to close his book without the impulse to take up one of Sainte-Beuve's: for in the "Causeries de Lundi," or in "Port-Royal," or in any other of his many volumes, one is at length persuaded, will be found those qualities in which criticism may properly aspire to excel: coolness of judgment, comprehensiveness of outlook and instinct for what is centrally important about literature.

And Professor Lehmann achieves this very much *à la* Sainte-Beuve. He shows how various intellectual, emotional and accidental pressures combined to induce Sainte-Beuve to oppose the dominant literary tendencies of his early manhood; how the critic therefore found himself obliged to define his classical position with greater precision than might otherwise have been necessary; and how that precision, thanks to the effort involved in achieving it, was the foundation of his greatness.



How, then, is it possible to have reservations about this "portrait of the critic"? The answer is suggested by this subtitle. Like Sainte-Beuve, Professor Lehmann has tried to illumine his author biographically, to explain intellectual characteristics in part by private quarrels and love affairs; and the result, unfortunately, is to diminish the impact of Sainte-Beuve's great critical virtues. For this method results in undue stress being laid on his private character. Professor Lehmann does his best, and no doubt Sainte-Beuve has been unfairly treated by his enemies; but, entertaining conversationalist or not, he was something of a sniveller. It does not matter that he fell in love with Hugo's wife, and she with him; but the manner in which they conducted their affair (no bed, but plenty of walks in the park and an ending in boredom) does suggest that their veins were filled with weak tea.

It is also unpleasant to read how the young Sainte-Beuve, minor poet and 'prentice critic, turned one by one against his friends and mentors as he outgrew them, so that after writing puffs he wrote ungenerous condemnations. Professor Lehmann, even as he apologises, draws attention, too, to the fact that Sainte-Beuve's resistance to the taste of his age led him to condemn, disinterestedly (perhaps) but still finally, or to miss, Stendhal, Hugo, Balzac, Lamennais, Lamartine, Chateaubriand, George Sand, Dumas *père*, Baudelaire and Gérard de Nerval—in short, one of the greatest, if not the very greatest, of French creative generations. Attempts to explain this away necessarily look like special pleading. In fact, taken in conjunction with all this, Sainte-Beuve's real perceptiveness merely tempts one to assert that some measure of bile (as in more recent literary squabbles) is necessary to achieve great criticism; but the memory of Samuel Johnson forbids one.

Marcel Proust, whose arguments (admittedly idiosyncratic) Professor Lehmann never examines, proffered, in "Contre Sainte-Beuve," two charges against the critic: first, that he had a despicable character, and, second, that he did not understand the creative act. One must still return a verdict of guilty on both counts; basing, however, a recommendation to mercy on the extent of Sainte-Beuve's perfect understanding of what readers may properly exact from writers—holding, even, that he is to that extent still entitled to his laurels, and that his detractors (to that extent), though romantic, are wrong.

Art in Roman Britain

By J. M. C. Toynbee. *Phaidon.* 219 pages, 260 illustrations. 70s.

The famous naturalistic six-inch high bronze eagle from Roman Silchester, now in the collection of the Duke of Wellington, might once, according to Miss Toynbee, have "perched on a globe held in the hand of a statue of Jupiter or of an Emperor." This bronze could have come from Rome; it was almost certainly imported into Britain in the second century. It is among two hundred or so objects remaining from the Roman occupation of Britain which are excellently reproduced in this book from new photographs taken by Mr Otto Fein. They show the varied craftsmanship of the first four centuries, some of the examples being of continental origin and others made in Britain; they include small bronzes, monumental carvings in stone and marble, mosaics, silver bowls and caskets, and decorated pots.

This book is based upon an exhibition held last year in the Goldsmith's Hall in London, which was organised by the Society for the Promotion of Roman Studies.

LONGMANS

Three for Music

The Collected Correspondence and Papers of Christoph Willibald Gluck

Edited by Hedwig and E. H. Mueller von Asow.
Barrie & Rockliff. 250 pages. 50s.

Composers of Operetta

By Gervase Hughes.
Macmillan. 294 pages. 35s.

The Choral Tradition

By Percy M. Young.
Hutchinson. 371 pages. 45s.

OF these three books, "The Choral Tradition" is the most important, the best composed, and the most appealing to a British audience. We have our own operetta, now in full spate, and are still not so morally emancipated that all of us easily take Offenbach; and many serious opera students could not name more than three of Gluck's works. But it would be a mistake to write off the Gluck letters as being for musicologists only. It is a collection with a remarkable history, started by Dr von Asow and his wife as long ago as 1913, resumed in 1948 from the beginning after type and manuscript had been destroyed in the war and now published in Mr Stewart Thomson's excellent translation by the enterprise of Barrie and Rockliff. It is, in fact, astonishingly lively, to anyone who ever heard of the fight that the German Orpheus put up in the Trial of Paris in defence of his breakaway from accepted eighteenth century operatic form. The letters are annotated with almost too painstaking care, but the argument between Gluck and his traducers is dramatic enough to make a vivid impression two centuries later.

"Little or nothing, apart from a slight alteration in the mode of expression," Gluck wrote, "would be needed to turn my aria in *Orfeo*, 'Che faro senza Euridice' into a puppet-dance." Tommaso Traetta managed this in 1778. But Offenbach, that great lampooner, did it far more provocatively less than a century after. Mr Gervase Hughes, perhaps unconsciously echoing what was in Gluck's mind, observes: "One may now be permitted to question whether 'Che faro' is really such a magnificent tune as one has been brought up to believe . . .". But Offenbach put himself beyond the pale in Paris in the sixties by his travesties, pursuing another kind of fight than the one Gluck fought, against another kind of stuffiness. Today Sadler's Wells fills the house with *Orphée aux Enfers* and *La Vie Parisienne* and no one ever puts on Mehul. There are few sections in this original book quite so fascinating as the chapters on Offenbach, and there are indeed an immense number of bores in the long history of operetta from *Zar und Zimmermann* to *West Side Story*. This encyclopaedic first study of operetta has plenty of shrewd comments and musical illustration.

Dr Young's survey, too, is encyclopaedic, and it covers the more important achievement of five hundred years of choral music. It is an important work, with writing of a quality not always found among musicians. He can link Monteverdi to Walton and Stravinsky; he has a warm judgment on Schütz; and he finds the right words for Purcell: "above all, athletic; lithe and rhythmic, various in his colouring, unaware of binding convention, and quick to suit his forces to whatever engagement they were committed—whether in church, at court or in the theatre." But Bach and Handel inevitably provide the centrepiece. Dr Young puts them in their proper context—consummate masters but neither of universal reputation in their day, with contemporaries that looked of equal stature; above all,

> practical music-makers observing the accepted convention of the time that a composer was not a special sort of musician but that every musician was a special sort of composer, obeying the needs of time and place.

Dr Young laments the perversion of *Messiah*—a work, as he rightly says, which is in accord with modern thought in its economy of statement and apparatus and in no need of the trappings of nineteenth century romanticism. And of that he observes that there has rarely been a period when so much deplorable music by so many experienced composers was written as in the last half of the century. Then the "Motu Proprio" came in 1903, not merely as an instruction to Catholic composers but also as a statement of guiding principles for composers of any faith or no faith—"economy of means, aptness of music to words and philosophic integrity as necessary to a state of artistic grace." With Dr Young's scrupulous analysis and copious musical illustration, the course of choral music from Gabrielli to Messaien is always enlightening. His book is worth the money as programme notes, and it is far more than that.

Wessex Tale

The Life of Thomas Hardy

By Florence E. Hardy.
Macmillan. 483 pages. 30s.

IN 1928, the year of Hardy's death, there appeared an instalment of his biography "The Early Years," covering the period 1840-1891. Ten years later, his second wife, who had been responsible for the first volume, followed it with another, "The Later Years," 1892-1928. These have been out of print for some time, and it is good to have the two of them combined in a single volume, pleasant to handle, with several illustrations.

Hardy was already seventy-three when he married for the second time, and his wife wisely encouraged him to set down facts and recollections about his past, if only to forestall misrepresentations by ill-informed biographers. Working from his notes, from

British Foreign Policy in the Second World War

by SIR LLEWELLYN WOODWARD

Deals largely with the relations between Great Britain and the two other leading Allied powers, the U.S.A. and U.S.S.R., from 1942. The accumulation of hitherto unpublished facts and correction of many misconceptions about British policy, makes it an indispensable contribution to the diplomatic history of the war. **37s. 6d.** *(post 2s. 6d.)*

". . . It is consistently readable, often dramatic and exciting in its narrative, always lucid in its analysis and temperate in its judgment". *John Connell in the Yorkshire Post*

Roads and Road Transport in an Under-developed Country

by E. K. HAWKINS

An examination of the economics of road and rail transport as they affect Uganda, an African country which presents many of the features common to all under-developed countries. Many of the problems dealt with have a wide application and the book will claim the attention not only of those interested in Uganda and in transport, but in economic development in general. Illustrated and indexed. **45s.** *(post 1s. 2d.)*

Indians in a Plural Society

by BURTON BENEDICT

A comprehensive account of Indian life on Mauritius, written by an experienced American social anthropologist, who spent two years on the island studying the Indian section of its "multi-racial" society. The book describes the physical, demographic, economic, and political setting in which the Indians live and analyses the plural society as it exists today. Illustrated. 25s. *(post 1s.)*

HMSO

From the Government Bookshops in London, Edinburgh, Manchester Birmingham, Cardiff, Bristol and Belfast, or through any bookseller

diaries, letters and conversations, she put together a life-history that is inevitably the source-book for anyone who wants to know about Hardy's career. Mrs Hardy practised the most scrupulous reticence in her handling of personal issues, and later writers have had much more to say about his psychological make-up and the tension of his first marriage. But here, without interpolations or interpretations, we have the basic material. The earlier years are far more fully documented, and more absorbing, than the period of Hardy's old age; but from an account written by Charles Morgan (at Mrs Hardy's request) of the old man's visit to Oxford to see an OUDS performance of *The Dynasts* comes the following impression—one that the biography as a whole is likely to convey to a sensitive reader:

> There was in him something timid as well as something fierce, as if the world had hurt him and he expected it to hurt him again. But what fascinated me above all was the contrast between the quiet rigidity of his behaviour, and the passionate boldness of his mind. . . .

Famous Men

William Pitt

By John W. Derry. 160 pages.

William Wilberforce

By Oliver Warner. 174 pages.

Samuel Johnson

By M. J. C. Hodgart. 128 pages.
Batsford. 16s. each

HISTORIANS tend to frown on writing history round famous men. But ordinary mortals tend incorrigibly to prefer absorbing their history in biographical chunks. Too often, however, they have to be satisfied with distinctly mediocre fare in which too much attention is paid to trivia and too little to anchoring the subject of the book firmly in his historical context.

To judge, however, by these first three volumes in their new "Makers of Britain" series, Messrs Batsford are determined on a more scholarly approach. These modest, but pleasantly produced, volumes are really introductory essays designed to lead on to the "further reading" conveniently set out in each volume. They are all well written, and all avoid the dullness which so often goes with any effort to cram a great deal into a little space; in particular, the life of William Pitt is a model of elegant and vivid compression. Between them they provide a rounded picture of the political, social and literary aspects of English life in the late eighteenth century. This may, however, be more by accident than design; the next three volumes promised are to be about Oliver Cromwell, Elizabeth Fry and Henry VIII, and the series as a whole does not seem to have been particularly coherently planned. But it should prove welcome to students picking their way down the long perspectives of a historical tripos; as well as to others who merely want to brush up their history.

The Early Greeks

The Greeks: Till Alexander

By R. M. Cook.
Thames & Hudson. 264 pages. 30s.

The Origins of Greek Civilisation

By Chester G. Starr.
Cape. 408 pages. 50s.

Early Sparta

By G. L. Huxley.
Faber. 164 pages. 30s.

MR COOK'S book is one of the well-known series "Ancient Peoples and Places," under Dr Glyn Daniel's editorship. Like the rest of the series, it is concerned mainly with the material remains of the civilisation; it is the work of an archaeologist, not of an historian of politics or culture. It is more or less confined to mainland Greece and the islands, since further volumes are promised about the eastern and western Greeks; but Mr Cook cannot help spilling over a bit. It is admirably produced and illustrated, with 48 pages of plates and good line drawings.

Even with these limitations, Mr Cook has been set a superhuman task: the main text (excluding notes and so forth) is only about 150 pages, and he has not ignored history, politics, science, technology or literature. He wastes no words and has made an excellent job of it. His main concern is with art and architecture; here he is on his own ground, and it would be hard to find a better short account of the development of the material culture of Greece up to the middle of the fourth century. As is the fashion today, the earlier part of the story has the larger share; more space is given to the period before 500 BC than to the classical century and a half that follow.

If any one wants to pursue the earliest period in greater detail, he can turn to Professor Starr's stimulating book, which deals in great detail with the period from the collapse of the Mycenean culture about 1200 BC, to the sudden flowering of early Greek civilisation in the decades about 700 BC. It is a book of learning, with vast documentation; but it is written clearly and can be read by the non-specialist. Professor Starr's thesis is the one generally held by the ordinary man, almost by instinct, but which is hard to put to the proof: that the main stream of Greek culture is largely original, and that borrowings from the east, over the period which he discusses, are secondary. In the earlier part of his period he has little evidence to build on except pottery, which he treats as a measure of the growth and quality of Greek culture. The trouble about this approach is that a great deal depends on the author's personal aesthetic judgments, and one is inclined to discount some of his enthusiasm and imagination; but the main lines of his analysis are convincing.

Mr Huxley's book is a short but highly condensed and fully documented study of

Detail of inside of Attic cup

the history of Sparta up to 490 BC. In this period the Spartans had not developed the repulsive austerity and philistinism for which we know them. They were tough and cruel, as they had to be—they were always a small minority who rested their power on force, guile and skill of arms—but in those days they were prosperous and loved the arts. Unfortunately they left little behind them by way of material remains or history told from their point of view; Mr Huxley has had to work backwards from traditions, as often as not contradictory, dating from much later times. His book cannot be a clear-running story: it is an analysis of conflicting evidence, and therefore hardly meat for the beginner.

Novelists and Moralists

The Moral and the Story

By Ian Gregor and Brian Nicholas.
Faber. 275 pages. 30s.

ENGLISH critics of fiction, particularly those who are obliged to be critics because they are teachers, are apt to confound the functions of the novelist and the practical moralist. There is, after all, a profound difference between the attitude of a creator to the creatures of his imagination and that of a commentator on an actual human situation. The confusion is no doubt mainly due to the fact that our greatest native novelists have been so obviously concerned with ethics. Whether as critics of society or analysts of behaviour, they have, with a few exceptions, cared more about the moral issues implicit in their themes than about the technical problems that must be solved if a novel is to be a wholly integrated work of art. In France, novelists and their critics have given far greater weight to these aesthetic considerations.

This book, a study of moral judgment embodied in works of fiction, is particularly valuable because it is the fruit of a highly intelligent collaboration between two people, each qualified to supplement the critical assumptions of the other. Mr Gregor is a lecturer in English at the University of Edinburgh, Mr Nicholas a lecturer in French at Birmingham; and between them they examine, in some depth,

A Writer's Craft

Raymond Chandler Speaking

Edited by Dorothy Gardiner and Kathrine Walker.

Hamish Hamilton. 271 pages. 21s.

"THE mystery writer's material is melodrama, which is an exaggeration of violence and fear beyond what one normally experiences in life. (I say normally: no writer ever approximated the life of the Nazi concentration camps.) The means he uses are realistic in the sense that such happen to people like these and in places like these; but this realism is superficial; the potential of emotion is overcharged, the compression of time and event is a violation of probability, and although such things happen, they do not happen so fast and in such a tight frame of logic to so closely knit a group of people."

The melodrama can nevertheless be art in the hands of a craftsman. This Chandler certainly was in taking the crude excitements of the pulp magazines and transmuting their world of private eyes, drug addicts, nymphomaniacs and phoneys into a moral comment on corruption and violence. If he had chosen to write something other than "mystery" stories, would there be any reluctance to call him by the title he deserves, a novelist? What emerges clearly from these letters and fragments—and Chandler, as those who care for his books must have long realised, was a brilliant letter writer—is how much he was concerned to raise the "mystery" above the dreary and mechanical platitudes of the "plotted" detective story and how much he cared for and with what labour he tried to achieve style in his writing. His writing is highly wrought and for all its realism and brutality—the hotel lobby that was "as restful as a split lip"—often ornate. It is colourful, gaudy even—and it races. Chandler, one suspected and these letters confirm the suspicion, was an intellectual who took pleasure in creating a written style from American colloquialisms. In his letters he is more unbuttoned but still as delightful to read; for the satire at the expense of the shoddy, the second rate and the pretentious is there. One's only regret is that for fear of libel the editors had to purge some of the letters; the thought of what we have missed is tantalising.

a number of English and French novels which share the theme of the woman exposed to the censure of society. At one end stands George Eliot, who could assume in her readers a settled scheme of moral values corresponding to her own; at the other, D. H. Lawrence, who had to create his own creed and seek out converts. Mauriac and Graham Greene are brought into telling conjunction when the treatment of morality and grace in fiction is being considered, and there are excellent chapters on "Madame Bovary" and "Tess of the D'Urbervilles." Altogether it is a thoroughly stimulating and original book.

LIONEL GELBER
America in Britain's Place
THE LEADERSHIP OF THE WEST AND ANGLO-AMERICAN UNITY

'It is possible for a Canadian to be more revealing and less wounding on this subject than anyone else. Mr. Gelber makes excellent use of his opportunity.' —*The Times Literary Supplement* 35s.

'quite the most important book to appear on the British Cinema for some time.'—*The Financial Times* 25s.

ALLEN & UNWIN

Waters in Oblivion

The Lost Rivers of London.

By Nicholas Barton.
Phoenix House in association with the *University of Leicester Press*. 148 pages. 21s.

THE motorist passes too swiftly, the pedestrian plods too slow, the horse is gone; few are left to feel the bones of London thrusting through the uniformity of brick, asphalt and pampered grasses. Only the progressive and growing minority who have learnt to evade the traffic jams astride a bicycle can savour the essential hilliness of Grosvenor Square, or the subtle declivities of the Bayswater Road; only they can truly appreciate the *raison d'être* of the Holborn Viaduct, and face with interest (if with aching thighs) the Roman gradients of the Old Kent Road. Mr Barton's scholarly and wholly delightful work is devoted to explaining and exploring the courses of the rivers that ran—and, transmuted, still run—over and beneath the tract of country that has become the London conurbation. Under his loving attention the Great Wen becomes once more a living territory whose hills and valleys fall into pattern along the mistress-piece, the Thames.

The Thames, of course, is an historic national scandal. Instead of giving life and unity to its two banks, and acting at once as a commercial highway and a massive breathing lung for the city, the riverside has been pinched up between warehouses or, worse, allowed to serve as a confused car park (this last, finally, is to be changed, and a motor-racing track substituted along the potentially noble Victoria Embankment). Mr Barton makes it plain that the loss of so many of its tributaries has been an equal disaster, both social and aesthetic. Those left above ground have been revoltingly polluted, their fish life killed and their banks covered with household and industrial filth —detergent foam, the latest and perhaps ugliest of polluting agents, has at least a less offensive smell than its predecessors of other centuries.

The chief fascination of Mr Barton's study is that so many old watercourses have quite literally been lost—nobody quite knows where they ran, and nobody quite knows what happens to their waters now. Particularly curious is the story of the sewers of Soho. When the speculative builders were at work on this far western extension of the London built-up area in the late seventeenth century, they had to get rid both of rainwater and of less celestial detritus. Richard Frith, in particular (who gave his name to Frith Street, where Italian is now the vernacular) was involved in a set of lawsuits resulting from his building of an illicit sewer. This was then replaced by a further artificial underground watercourse, whose path cannot be traced; but Mr Barton intriguingly speculates that the original and illegal sewer may in fact still be running, as the stream that can be seen in the basement of a club in Meard Street, and which

The Fleet River near St Pancras (1825)

once provided water for the aquatic spectacles that preceded Miss Eartha Kitt at the London Hippodrome. This part of the work, with its sordid details of commercial development, may be the most interesting of all for some modern readers. It is worth noting that, as in the best moral tales, Mr Frith died bankrupt, but he did leave some mark on history. When Karl Marx was living in Dean Street, the Frith waterworks were still inflicting cholera on the inhabitants: Mr Barton quotes a letter to Engels in which the author of *Das Kapital* confesses his resulting terror of Soho Square.

The squalor of the sewers was put to an end by the Metropolitan Board of Works—the body that preceded the London County Council as that worthy body will one day have preceded the Greater London Council. The squalor remains of some rivers left, polluted and attenuated, above ground, despite the pleas of (among others) Ruskin, William Morris and Sir Alan Herbert. But Mr Barton argues, supported by some very curious statistics, that the invisible streams have not only determined the growth—military, political, industrial and social—of the city. They may still from their underground lairs affect the health, the moral welfare and even the psychic balance of Londoners who live along their ancient courses. *Naturam expellas furca. . . .*

Makers of Modern Europe

Medieval Technology and Social Change

By Lynn White, Jr.
Oxford University Press. 216 pages. 30s.

THIS book consists of three essays, each of which examines the origin and diffusion of a technical invention, or group of inventions, and their effect on mediaeval society. The first deals with the stirrup. Few inventions have been so simple, yet few have had such a momentous influence on history. For the stirrup welded horse and rider into a single fighting unit of unprecedented power, and out of the exigencies of the new type of warfare there developed a society dominated by an aristocracy of mounted warriors. The consequences still live with us in our system of landownership. The second essay discusses a cluster of inventions in agriculture—the heavy plough, the nailed horse-shoe and a new type of harness—and their role in the evolution of the manorial system and the open fields. In this case too, the inventions were simple from a technical point of view but had profound repercussions in northern Europe; for the increase in agricultural productivity provided the surplus food that allowed urbanisation to gather pace from the tenth century on. In this environment developed the new sources of power, and the mechanical devices to use them, which form the subject of the third and most original essay.

Each of these topics is thickly encrusted with learned articles and monographs, but Professor White has systematised and consolidated previous work, and by relegating his more complicated disquisitions to a series of lengthy notes he has succeeded in keeping the main lines of his argument clear of the threatening sea of specialist disputes. The result is a vigorous and exciting survey, which in learning, style and verve does not suffer from comparison with the work of Marc Bloch, who preceded Professor White in this field and to whom the book is dedicated. It is brief—the text itself runs to no more than a hundred and thirty-three pages—but it is packed with ideas and information and has all the marks of a seminal book. It not only illuminates a problem of general importance—the relation between technology and social forms; it is also an exercise in method, for it shows how much archaeology, iconography and etymology can yield for the history of those social groups who did not speak for themselves. It also demonstrates how much mediaeval society owes to the East, and how much modern technology owes to technical developments made before 1500. The extent of mediaeval progress in mechanical devices is especially striking: the discovery of spring and treadle in the thirteenth century, the development of complex forms of gearing in the fourteenth, and the elaboration of crank, connecting-rod and governor in the fifteenth. By the end of the middle ages Europe had the technological resources adequate for an industrial revolution. One is left wondering why the world had to wait so long for Watt and Arkwright. Professor White's book is at once an advance in the study of mediaeval technology and also the best introduction to the subject for the serious general reader.

Sandwich Vindicated

Jemmy Twitcher: *A Life of John Montagu, 4th Earl of Sandwich, 1718-1792*

By George Martelli.
Cape. 292 pages. 30s.

THERE are few more derogatory articles in the sober volumes of the Dictionary of National Biography than the one on Sandwich. The only thing that can be pleaded in extenuation is that at the time it was written there was nothing to go on except material provided by Sandwich's detractors, notably Wilkes and Walpole. Yet it was Walpole himself who admitted that there was no one in North's unlucky ministry who "was so much a master of his business, so quick or so shrewd."

The rehabilitation of Sandwich began when four volumes of his papers during the American War were published by the Navy Records Society in 1932. More recently Mr Spencer has edited a volume of his diplomatic correspondence. And now that Namier's disciples have exorcised the horror that used to be felt at words like "jobbery" or "interest," it is possible to make a more rational assessment of the man who was a member of nearly every administration between 1744 and 1782. When, indeed, more is published about his notorious exercise of patronage, it will be found that it is the servility of his applicants that is really shocking.

Mr Martelli is right in claiming that there never was such a hard working statesman. Apparently the sandwich was invented, not because of the noble lord's reluctance to leave the gaming tables, but because of press of business. All the more pity that a silly nickname is commemorated in the title of this book, since it was Wilkes who really took the first step in breaking up their old companionship. Although the book can be recommended to the general reader, it does not pretend to be a standard biography: whole aspects of Sandwich's life are excluded; there is no bibliography; and there are only scattered and arbitrary references. This is all the more irritating because the author has had the privilege of using the mass of material still at Hinchingbrooke.

In his justifiable anxiety to clear Sandwich's name the author fails to explain the extraordinary unpopularity which his subject so frequently aroused. And even if it is agreed that Sandwich was more interested in racing and cricket than in orgies, that the Medmenham Abbey business was nonsense, and that his mistress was comparatively respectable (he had five children by her before she was murdered by a lovesick parson), there are plenty of sly hints in the letters printed here to show that he was a considerable rake.

All that is the gossip of history. What we have to thank Mr Martelli for is his convincing defence of Sandwich as a naval administrator. In the American War he was simply unlucky in his admirals, most of whom were foisted on him and nearly all of whom proved factious or plainly incompetent: "Though I acknowledge there are some very good officers among them, they have suffered politics to lead them so totally that the good of the service is a very secondary consideration with them." The irony is that the improvements for which he was responsible benefited a generation of naval officers which he did not live to see, and that the one great victory of the war by the man he had himself selected came after he had resigned. George III was right when he said of Sandwich: "whatever his private failings, I know no man so fit for his department."

Royal Refugee

The Memoirs of James II: *His Campaigns as Duke of York, 1652-1660*

Translated by A. Lytton Sells.
Chatto & Windus. 308 pages. 42s.

THIS book is based on a manuscript that was accidentally found in a chateau in France in 1954. The original memoirs, which James kept during his service as a soldier of fortune under Turenne, were deposited at the Scots College in Paris, and are known to have been burnt in panic during the French Revolution. Before they were destroyed, they had been used as the basis of various accounts, including a "Life" that was acquired by the Prince Regent and published in 1816 by the Reverend J. S. Clarke. The present manuscript turned out to be a translation of the original memoirs, made during the king's lifetime expressly for Cardinal Bouillon, a nephew of Maréchal Turenne, and corrected by James himself. It can therefore reasonably be assumed that the Bouillon manuscript is the nearest thing to the original memoirs that has survived.

The present book is in fact only partly based on the new manuscript. Many parts proved to be practically identical with extracts from the memoirs in Clarke's "Life," so that a new translation was unnecessary. The present edition therefore adds little to what was already known, but it does include one new and interesting detail in a brief note referring to James's first meeting with Anne Hyde, his future wife.

It cannot be said that James's memoirs are in themselves of major historical importance. They are interesting because they reveal from the inside details of the war, and of the campaigns of Turenne; and in the later sections throw some light on the intrigues of the exiled royalists immediately before the Restoration. But James is not a penetrating or amusing diarist and their real value lies in the light they throw on his character.

Professor Sells's translation is most readable, and the book can be recommended to anyone interested in James II, or in an eye-witness account of the campaigns of the Fronde, many of which were fought over twentieth century battlefields.

Letters to a Vice-Chancellor
JAMES DUNDONALD
'. . . James's counsel is intelligently cogent and fresh. He makes some admirable points on student residence . . . on relations of the university with local people and institutions, with the technical college and the college of art, on the increasing need now for teaching skill in the university, and on science as a possible centre of liberal education.' A Scot on the Make

Robert Adam and his Circle in Edinburgh and Rome

By John Fleming.
Murray. 415 pages. 40s.

THIS long awaited biography of Robert Adam proves to be a seductive piece of writing crammed with new material. Research has yielded too much material for a single volume, and the author takes the story only as far as the year 1763, when the dilettante James returned from Italy to find the strenuous Robert, five years after his own return, in full possession of the architectural field in London. One hopes that the coming volume will continue to round out this new picture of Robert Adam, his family and his patrons by means of a wealth of letters, diaries and memoranda, as this volume has done. It is hardly fair to tax the author with making this kind of book out of the treasure found in the Clerk of Penicuik papers (now in the Register House), but it is a reflection on the role played by architectural history in this country that books on great architects seldom receive the serious scholarly treatment meted out to politicians, writers or philosophers. Certainly this book —perceptive, skilfully compiled, and produced with great care as well as richly illustrated—will appeal to a wider public than would a serious edition of the Adam papers. But let us hope, all the same, that we shall one day get just that. The excerpts here presented whet the appetite.

The early chapters deal with Adam senior, his patrons and the cultivated Edinburgh circles after the Union. We meet William Adam—a hitherto shadowy figure —guided by Sir John Clerk, and the Marquess of Annandale emerging from a commercial start in Fifeshire, to establish himself as "the universal architect of his country." For the first time the sequence of his houses can be identified and dated. His connection with the Board of Ordinance, which afterwards employed John and Robert, is documented and the work at Fort George after the Forty-Five is established. The Adam family were a warm hearted clan —four sons and six daughters ruled after William's death by a stern, but much loved, old mother. They developed ties of marriage and friendship with many important intellectuals in the Athens of the North.

The body of the book is concerned with the sequence of Grand Tours taken by the serious Robert and the flighty James. Scotland never produced a more purposeful and determined artistic ambition than that of Robert Adam. James was a trifler by comparison. Very early on his voyage Robert announces his intention to oust Chambers, "who has very considerable friends and real merit," also to cut out the young Brettingham, and see that the poor but industrious Scottish Mylnes will not get a look in. It is easy, from a contemporary egalitarian point of view, to poke fun at Robert for his determined pursuit of lordly patrons. These

William Adam's design for Newliston

Grand Tours cost a fortune in suitable lodgings, brilliant suits, and fine equipages, but reaped a harvest of good connections. Robert saw his artistic course as clearly as he saw the social. It was to attain as wide a grasp as possible of classical decorative motifs, and of new aspects of ancient buildings, which might be applied to a novel architectural fashion on his return. He harnessed himself to the French painter and classical enthusiast, Clérisseau, established a studio, and went hard to work. It was difficult to be a professional architect and retain social status. But what passionate amateur architects, what gullible collectors and what victims of classical one-upmanship these milords were.

Of the travellers that infest Rome, there are three ranks—great Lords, great Fools, and sensible Gentlemen. The first of these I mean to court on account of their greatness. The second I endeavour to shun for the same reason, and the last to be well with according to their sense and influence.

It was Robert Adam's acute perception of the contemporary scene and of its peculiar and British limitations—the lack of royal and state patronage, the antipathy to the current tide of continental rococo, the dependence on the taste of suspicious and capricious Whig squires—that moulded him. Singleminded in his determination to bear back—not to Edinburgh but to London—a new style, he set to work in Rome to build up a huge repertory of designs and to keep in with all the right people.

When he set up in Lower Grosvenor Street in the spring of 1758 he had not long to wait for the harvest of all his effort. He was soon "tickling up" John Carr's façade at Harewood to dazzle the eyes of Squire Lascelles. Commissions for Kedleston and Syon followed swiftly. Three years later an eminent patron stated that the Adam brothers were in the van and about to inaugurate "a reign of taste in Architecture." The Grand Tours had paid off.

The Basis of Radicalism

Wilkes and Liberty: *A Social Study of 1763 to 1774*

By George Rudé.
Oxford University Press. 256 pages. 30s.

AS a political leader, John Wilkes was a lightweight, a rake with a gift for demagogy, who ended his career as a pillar of the establishment; but he was also the founder of latter-day Radicalism. By his defiance of George III and his servants, Wilkes forced the judges to recognise the liberty of Englishmen to curse the government without fear of arbitrary arrest. He destroyed the pretensions of the House of Commons to control the choice of the electors, and he secured the freedom of the press to report parliamentary debates. In his wake, the people fought their way into the narrow circle of the eighteenth-century "political nation," and before long the road was open to the reform of "the old, rotten system." These were no mean achievements for an ardent member of the Hell-Fire Club.

Yet, if Wilkes made the world safe for Michael Foot, why he was able to do so remains a mystery. Shifts in the structure of English society on the eve of the American Revolution, and stresses within the structure of its politics, somehow gave him the opportunity to revive emotions and attitudes that had apparently been dead for a century and more. Just why that opportunity crystallised in the London of the 1760s has never been satisfactorily explained, and Mr Rudé only hints at an answer. But this modest, unpretentious book gives a clear picture of who Wilkes's supporters were, and for the first time an explanation has been brought within the bounds of possibility.

Mr Rudé's earlier work, "The Crowd in the French Revolution," was a brilliant demonstration of what could be revealed by determining the actual composition of "the mob" and the exact nature of "the people" at a crucial moment in history. His new survey is neither so well constructed nor so comprehensive, but its pioneering importance is even more notable. For Mr Rudé has moved from a field dominated by the great French historians of the Jacobin tradition, with their sensitivity to social forces, to the preserves of the Namier school, who tend to relegate the populace to an ill-defined but vaguely contemptible minor role. His methods have been successfully transplanted, and a fresh wind is blowing in the world of patron and placeman.

By assiduous research and painstaking analysis, Mr Rudé has established the class basis of Wilkes's party. First in London and then throughout much of the country, its foundation was provided by solid citizens of "the middling sort," and the most sustained enthusiasm came from the humbler men of property. In parliament, at the Middlesex elections, and in the City, the great were against Wilkes. At the other extreme, the riotous coal-heavers and silkworkers of the East End might cheer him, but their grievances were primarily economic and their support was fickle and incidental. Thus English Radicalism in revival was once more the product not of "the mob" but of the petty bourgeoisie. Now that we know where we stand, Mr Rudé must tell us why.

Elizabethan Diptych

Ralegh and the Throckmortons

By A. L. Rowse.
Macmillan. 352 pages. 35s.

IN this book (to be published on April 5th) Mr Rowse has not attempted to write yet another full-scale life of Ralegh, but to paint his portrait against the setting of his family and connections. The stimulus was provided by the discovery of the diary of Sir Arthur Throckmorton, Ralegh's brother-in-law; but since the lives of the two men crossed only occasionally, Mr Rowse has painted a diptych rather than a family group. Mr Rowse displays exuberant enthusiasm for the diary, but Throckmorton was painfully discreet and laconic, "for ever halting on the brink of what he might have told us." Indeed he supplies only one important new piece of information about Ralegh: that a child was born to him and Bess Throckmorton five months after their imprudent marriage, which cost them the Queen's favour. The diarist was a timorous, bookish man who noted his expenditure, social engagements and the state of his health. Unfortunately, no diary has survived for the period of Ralegh's trial; and it is especially sad for so patriotic an Elizabethan as Mr Rowse that the diary for 1588 ignores the Armada.

But it is a tribute to Mr Rowse's perception and artistry that he has put flesh on the bones, so that Throckmorton emerges "in the round, from a succession of minute, disparate strokes in one dimension." Mr Rowse traces the history of the Throckmortons under the early Tudors, using a delightful source, a doggerel family poem, which candidly emphasises the importance of court favour. The family divided into Catholic and Protestant branches, and Nicholas Throckmorton, who became ambassador to France under Elizabeth, climbed highest. Yet he was disappointed at the Queen's accession to receive only the Chief Butlership:

> Excepting that, all offices were gone:
> The fruits were pulled, and all the birds were flown

His son, the diarist, failed at court and knew affluence only when he retired to his books in his new house at Paulerspury in Northamptonshire. He drew steady profits from wool and should have been happy enough had he not submitted to the punishments inflicted by Elizabethan doctors upon which his diary and Mr Rowse dwell at length. His tours of southern England, calling on his Puritan and Catholic relatives alike, make his diary "a comprehensive *Who's Who* of Elizabethan society." Mr Rowse nostalgically accompanies him, hearing the "frost tinkle in the brook," and missing the bugle calling in the rides of Whittlewood Forest.

If Throckmorton does not help us to understand Ralegh better, Mr Rowse does. His analysis of this brilliant, heroic, unscrupulous and rapacious man, a diamond whose every facet catches the light, is sure and telling. Ralegh was a sceptic who did not suffer fools gladly, and he lacked "that element essential to a politician and the successful running of politics: humbug." Yet his History was the best seller of the century and an inspiration to Hampden, Milton and Cromwell. Mr Rowse writes with his accustomed verve and sparkle. For him France in the Wars of Religion is "the world of Dumas and Mérimée, of the Three Musketeers and the *Chronique du règne de Charles IX*": but his romanticism is controlled by his scholarship. Some will wish that the control had been firmer, while others will find the style merely endearing and characteristic.

Frank Lloyd Wright

By Finis Farr.
Cape. 224 pages. 25s.

THIS Unitarian Church, designed by Frank Lloyd Wright for Madison, Wisconsin, in 1949, is typical of the most influential and original of American architects. Built of local stone, arising naturally out of its surroundings, with the design based symbolically on the triangle, it is unpretentious yet inspiring, well suited to its function—except that anyone much over five feet tall bumps his head if he seeks to shelter under the eaves. To Frank Lloyd Wright architecture was an application of ethics and philosophy and far more than a mere means of providing living and working space—although he did provide the latter in an imaginative, interesting and, particularly in the last part of his ninety years of life, provocative way. These adjectives describe the man himself as well as his work and it is with the man more than his work that Mr Farr is concerned. His book is a readable but superficial introduction to a fascinating character.

Before Columbus

Land to the West

By Geoffrey Ashe.
Collins. 352 pages. 28s.

THIS book examines the possibilities of a European discovery of America, before Columbus and other than the Norse. The evidence, which is treated with care and intelligence, comes chiefly from three ancient myths: the legend of the voyage of St Brendan, the Irish saint-navigator of the

FABER

sixth century ; the Greek legend of Atlantis ; and the early American legends of wise white men who came across the sea from the west. Mr Ashe suggests first that the story of Brendan indicates some genuine knowledge of the North American mainland and the West Indies. This may not, however, have all been firsthand knowledge ; early Irish geographers may have learnt something from classical sources which have not survived. He is thus led on to examine the Atlantis story, and other tales of western lands in classical authors. Their stories of Thule, of Atlantis, and of the Hyperboreans may, he believes, echo early knowledge of a north Atlantic route to America ; the Carthaginians, too, may have guarded secrets about Atlantic sailing, which were lost when their civilisation fell. These hints, in combination with those of Mexican myth and archaeology, permit the conjecture of a classical or pre-classical discovery of America. Signs of early Christian influences there are probably due to the arrival of some small band of Irish pilgrims in the dark ages.

As historical conjecture, Mr Ashe's case is sometimes farfetched, but by no means always. That wandering monks from Ireland did sail very far into the Atlantic is undoubted ; they could even have reached America. But the crust of myth has formed too thick about any substratum of fact that may underlie the classical stories, and the American evidence, though intriguing, is inconclusive. The author, however, never claims he is doing more than suggest workable hypotheses, and he shows admirable control in refusing to make his conclusions too definite. This is far from being the only admirable quality of his book. In themselves, the legends he examines are fascinating ; they lose nothing in his retelling, and are worked skilfully into a personal account of a personal inquiry. Grace of writing, the compelling interest of the problem, the intelligence with which the leading questions are phrased, all make this book wholly delightful reading.

Taken from Life

Colour Photography

By Eliot Elisofon.
Thames and Hudson. 156 pages. £3 3s.

"THE knowledge of photographs," Moholy-Nagy once wrote, "is just as important as that of the alphabet. The illiterate of the future will be the person ignorant of the use of the camera as well as of the pen." He overstated his case, of course, for though words are a necessary means of communication, only a minority can express themselves best in drawing, in painting, or in photography. Yet many people try to use the photograph as a record, to express feeling, or to convey ideas without taking pains to learn the alphabet and grammar of the art.

Now that reliable colour film is available, many an amateur who felt that he had mastered a limited part of the rich and complex technique of black-and-white photography has been at sea again, unable to control all the new variables, and desperately in need of guidance. To him, and indeed to anyone who wants to see what can be achieved nowadays in colour photography, this very handsome book will appeal. Mr Elisofon is a photographer for *Life* and will be remembered as the man chiefly responsible for the subtleties of colour in the film *Moulin Rouge*. His book consists of 68 large and varied colour photographs and 13 black and white ones together with much technical detail about how they were made. Between the groups of pictures there are chapters packed with information on equipment, lighting, composition, control of colour and the use of filters, the influence of weather and the time of day—"twilight is to me the most interesting time of day"—which anyone intending to try anything more ambitious than holiday snapshots will find most valuable.

Much of the equipment which the author uses, particularly in interior work, is beyond the reach of the amateur: there are references to fourteen different cameras used in taking the pictures in the book, and one particularly exciting photograph needed three days, five men, ten trucks and truck drivers, and two radio police cars. On the other hand many of these pictures were taken with ordinary 35 mm or twin-lens reflex cameras on ordinary colour film.

What will probably charm most readers is the lack of garish colour in many of the plates and the soft almost monochromatic effect which the author's expertise can produce. He can even turn to good use the liability of colour film to produce overblueness. If Mr Elisofon's advice is widely heeded, as it should be, there will be less "get the sun over your left shoulder, set the exposure for 1/50th at f 5.6, push the button and the lab. does the rest," and fewer disappointed amateurs looking ruefully at rather indifferent picture postcards.

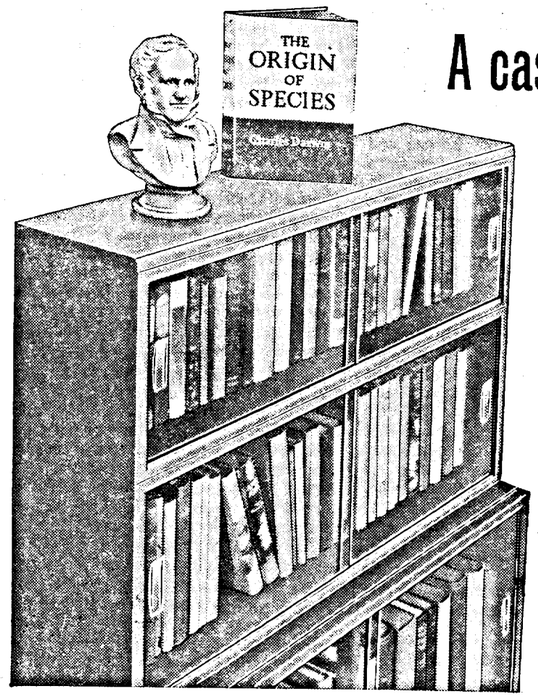
Pioneers! O Pioneers!

The Discovery of the Great West

By Francis Parkman.

Ordeal by Hunger: *The Story of the Donner Party*

By George R. Stewart. (To be published on April 19th.)



Eyre and Spottiswoode. 331 pages and 414 pages. 25s. each.

THESE new editions of classics owe much to British scholarship and enthusiasm. Professor Hawgood writes a perceptive foreword to Parkman's classic of the American West ; and Mr Cunliffe, who has made a reputation on both sides of the Atlantic as a critic of American literature, has written as good a preface to Stewart's terrible story of the Donner Party's snowbound crossing to California in the 1840s (one of the last occasions on which cannibalism broke out among white folk) and added to it notes, contemporary letters, and so on.

The great work by Parkman on the discovery of the West first appeared in 1869, and its Boston Brahmin author awoke to find himself famous. Parkman was devoted to the American Indian, but his work really focuses on the great *voyageur* La Salle. How many Chicagoans and others busy in their local "Wall Street," named after La Salle, stop on the Michigan Avenue bridge, where Fort Dearborn once stood, to read the green-encrusted plaque to those Frenchmen of the seventeenth century who carried their canoes over the *portage* from nearby Lake Michigan to the rivers a few miles inland flowing down to the Mississippi and the Gulf? Tonty, Joliet, Marquette, Nicollet, Hennepin, Frontenac, all the other great Frenchmen, traders or Jesuits, appear in the book, too. Most Americans probably only think of them now as the names of railroads, hotels, highways, prisons, cities, which now cover where they first trod or paddled "through forest and savannah." (Few have paid tribute to those other great discoverers, the Spaniards coming up from New Spain in the south, to spread names like Colorado, California, Florida, Arizona, Texas, across the map. De Soto discovered the Mississippi a century before the Frenchman Nicollet reached its northern tributaries.) The aristocratic La Salle, disinherited, joined and left the Jesuits on good terms, and departed on his travels to find a way to China and Japan. How often, in the story of European expansion, does this lure of the Orient play its part. Instead, La Salle found his death at the peak of his achievement: the mouth of the "Great Water," the Mississippi, after he had been the first white man to travel all down it. No one can read such classics today without wondering at the phyiscal and nervous stamina of these discoverers.

Stewart's story of the Donner Party's awful journey by ox-wagon across the Rockies towards California first appeared in 1936, but the new version is made more interesting by Professor Hawgood's additions to the original text: foreword, unpublished letters (especially the one from the 12-year-old schoolgirl who survived) and appreciation of more recent scholarship. The "Party" left Illinois, led by Donner who was already in his sixties, in July, 1846, rather late in the year, with plenty of money and goods, and many Germans, some Irish, many native-born Americans, and one

A case of natural selection

Would Mr. D. have charted the Origin sooner with his tomes of reference more conveniently arrayed—in a Minty bookcase, for instance? Did he take time off from his tadpoles to ponder the fact that books are also prone to extinction through wear and tear? Could be. Too bad, however, that the most naturally selective answer of all—Minty—was not available to him. Today, book-loving homo sapiens has the advantage—and takes it.

Minty have survived supreme for years as the makers of bookcases most fittingly designed to house valued volumes. Behind elegant sliding glass doors your books are protected in dust-free distinction and discernibility. And, since Minty bookcases are *sectional*, your library can evolve to any size you wish, starting from as little as £10.16.0.—on deferred terms if you prefer.

Only at the Minty Centres shown below can you see and buy Minty bookcases, (and furniture). The Centres are so placed that Minty furniture is within reasonably easy reach of most people. If, however, for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Write to Dept. E.19, Minty Ltd., 44-45 High St., Oxford.

Englishman. Eighty to ninety persons set out; forty-two died in the high snow of the Rockies; forty-seven reached the sun and the Pacific. The last survivor, saved as an infant, died in 1935. This "most spectacular" disaster of all the covered-wagon crossings of the Great West occurred for the same reasons as many motor-car and aeroplane disasters occur: the pioneers were late in starting; they cut corners; they were not equipped to run the risks they decided to run; they could not go back; they could not reach their goal.

Another topical feature of this trial of endurance was that women survived better than men, even among the group that attempted to walk their way out of the impasse. The letter of Virginia Reed, printed at the end of the book, is certainly, as the editor claims, "a 'natural' of literature" with its child's unemotional veracity of observation, and its blank avowal of cannibalism "that was 3 died and the rest eat them thay was 11 days without any thing to eat but the Dead."

These two books about pioneers, mindful of only such security as their own hands could command, make heartening reading today. They are a credit to editors, publishers and printers.

Serving and Saving

My Seventy Seven Years

By Norman Bentwich.
Routledge. 344 pages 30s.

THIS autobiography is a very moving book. Written simply and with great modesty, it records a lifetime of untiring service, of loyalty to ideals (which sometimes clashed) and (at the close) the satisfaction of having helped to redeem many thousands of lives from slavery and torture.

Norman Bentwich was born in a London family of orthodox Jews; educated at St Paul's and Trinity Cambridge; called to the bar, and adopted as Liberal candidate in a difficult constituency. But the strongest element in his blood was Zionism, and after six years at the bar, he accepted a legal post in Egypt because it looked like a good jumping off place for Palestine. The jump came in 1916 when the young lawyer mounted a camel, became a colonel, and at the head of a lot of other camels helped to drive the Turk out of the promised land, "revelling," as he says, "in the feeling that I was going up like our forefathers to the land of Israel." That ride on a camel settled his destiny.

In the mandate he was attorney-general in Palestine—in those days a ticklish post for a Jew. The Arabs resented him, and one of them shot him in the leg. The Labour Government at Westminster recalled him, and his connection with Palestine seemed to be ended. But the Hebrew University on Mount Scopus offered him a professorship; the tie was restored; and it looked then as though his working life would be spent in the green pastures of an academic life in Palestine.

That did not happen, and in fact the most active part of his life was just round the corner. At fifty he became Deputy of the League of Nations High Commission for German refugees, and for the last twenty-seven years his life has been devoted to helping persecuted Jews. From centres in Switzerland and England he worked and travelled, pleading the cause of Hitler's victims, providing them with shelter in England, raising money and sometimes challenging cut-throats like Eichmann face to face. With his eye on the one target he has gone almost all over the world—to Germany, Austria, France, Holland, Belgium, Italy, America, Spain, Greece, Abyssinia and the East Indies and as war came nearer he was running considerable risks. When Hitler's shadow was already over them he was still busy in Holland, Belgium and France, and he might easily have been one of the 130,000 Jews caught by Hitler in Holland, of whom fewer than 13,000 survived the war. He would not have been one of the 13,000.

Altogether Norman Bentwich must have helped directly in saving hundreds of thousands of Jewish lives, working easily with Jews and Christians—especially Quakers. He seems to have got on particularly well with Quakers. And that is not surprising. He would have made a splendid Quaker himself.

Thought in Transition

The Scientific Renaissance, 1450-1630

By Marie Boas.
Collins. 380 pages. 30s.

IF the remaining seven volumes of this series—"The Rise of Modern Science"—are as good as this one, it may well be the best general account of the history of scientific thought that has yet appeared in this country. When complete, the series, which is edited by Professor Rupert Hall, will range from ancient Greece to the present day.

Dr Boas's book is the second volume, and covers the crucial period of the Renaissance. She is therefore faced with the difficult task of describing scientific thought in an era of transition. The line between experimental science and magic was thin. Dr Dee dabbled in crystal gazing; Paracelsus was famous as an alchemist as well as being a doctor and chemist; even Kepler cast horoscopes.

Although by the end of her book the ancient conception of the universe had been shattered forever, the old teachings and superstitions died surprisingly hard. Yet the climate of Renaissance thought was such that, as Dr Boas shows, whenever a man of real vision rose the results were startling. Vesalius and the medical faculty at Padua had begun to free the study of anatomy from the teachings of Galen, and the valves in the human veins had been described by a number of sixteenth century observers, notably Fabricius of Aquapendente, but no one had understood their purpose until Harvey in the early seventeenth century applied the analogy of the pump to the heart and described the circulatory system of the blood. In the same way Copernicus, who saw correctly that the apparent motion of the sun was in fact due to the revolution of the earth, retained the Aristotelian conception of solid spheres; Tycho Brahe, the greatest observational astronomer of his age, rejected the spheres, but thought the sun revolved round the earth; it was only when Kepler working on Brahe's observations, and using Gilbert's idea of the earth as a giant magnet, calculated the elliptical orbits of the planets, that the old theories began to be discarded.

The final chapter on Galileo proves how difficult it was for tradition to absorb these new ideas. The Copernican system was rejected by Catholic and Protestant authority alike. Luther's remarks on Copernicus, "The fool will turn the world upside down. But as Holy Writ declares it was the sun and not the moon that Joshua commanded to stand still," were echoed by the Inquisition against Galileo. The "two cultures" may be a modern phenomenon, but it has its roots farther back than the dispute over evolution in the last century.

Dr Boas has succeeded brilliantly in getting across one of the most interesting periods of scientific thought. Her book is never dull, and never becomes a mere recital of facts and information. It is stimulating and even absorbing, and covers a wide field clearly and well.

Massif Central

Fastness of France

By Bryan Morgan.
Cleaver-Hume Press. 294 pages. 30s.

THIS is an irritating, at times almost illiterate, lively, well-informed and admirable illustrated guide to a neglected part of France. It is a find for the fireside traveller, as well as for the tourist thinking of plunging into the Massif Central.

What are the faults? First, there is the style. "This pip of an old village" is not only inelegant but baffling. Does Châtel-Guyon give him the pip or is it "the tops"? Since Mr Morgan dislikes all spas and totally disbelieves in their medicinal merits, one must assume the former. And why is he so coy about the "spécialité de la maison"? As Royat cures heart troubles, Châtel-Guyon cures constipation—or claims to. Then Mr Morgan sometimes lets his French slip in odd ways and has irritating typographical hobbies like putting "Roman" and "Norman" in lower case. Nor does he pursue his historical researches very far. There is no doubt about the site of Gergovia; recent excavations have uncovered, for the second time, Caesar's camp and far from the Clermontois hushing up rival theories, the campaign for the claims of the Côtes de Clermont was a local stunt. Sometimes one is baffled by Mr Morgan's brisk allusions. What had Catherine de Medici to do with the family of La Tour d'Auvergne? And we have not only the traditional English solecism of "the Auvergne" but also the new one of "Puy-de-Dôme" and "Creuse" without the definite article. Nor is Mr Morgan always adequately interested in the economic history of the region (of Roanne) and he sometimes makes slips in detailed description.

But how great are the book's merits. Mr Morgan has excellent judgment; that is, he almost always agrees with this reviewer, although he is too hard on Salers and, like Belloc, exaggerates the loneliness of La Chaise-Dieu. His information about roads, trains, hotels, food and drink is up-to-date and sensible. It is possible that he is too hard on Auvergnat cooking, but that famous product of the Massif Central, the *Guide Michelin*, is by implication equally severe. He remembers the needs of the innocent traveller who may be looking for the equivalent of Blackpool or of the cheaper Riviera resorts. He has in mind mainly the nomadic tourist, who does not want to stay long in one place and who is so innocent of French that he has to be told that the "g" in Guéret is hard. If these—and more sophisticated travellers—take Mr Morgan's advice and his book, they will have reason to bless him even though (among other sins) he writes "Sevigny" for "Sévigné." It is a good buy.

Noble Savages

Primitive Song

By C. M. Bowra.
Weidenfeld & Nicolson. 317 pages. 36s.

SIR MAURICE BOWRA, the Habakkuk of poetic criticism, has pushed the frontier back and writes about the origin of poetry. Its earliest forms are unrecorded; so he takes as his subject the songs of those people whose life is closest to that of palaeolithic man—the hunters and food-gatherers, in jungle and desert and on ice, who practise no agriculture and keep no domestic animals. Simple as their life is, their songs are often highly developed.

One's first doubt is whether the dozen or so cultures that provide the material form a sufficiently well-defined class, considered as singers rather than as food-gatherers. Sir Maurice proceeds by way of internal analysis and hardly ever makes comparisons with other cultures. For example, he quotes widely from the charming songs of some jungle pigmies; he tells us that they often speak the language of their Bantu neighbours; he does not tell us whether the songs of the two cultures are similar. Next, it is perfectly clear that each primitive culture has its own marked style of singing. Leaving aside the inevitable restriction of subject, one begins to doubt whether the various primitive singers are so much alike among themselves and so different from other folks. As one reads their songs familiar echoes cross one's mind from nursery rhymes, college cheers, memories of sing-songs and so forth; for example, no one could read the Australian charm against falling stars quoted on page 268 (or Sir Maurice's analysis of it) without thinking of "Rain, rain, go to Spain."

In short, one suspects this of being a study not of a significant sub-class but of a haphazard selection of unsophisticated singers—and some of them not so unsophisticated either, as is shown by the introspective and personal poems of the Eskimos. This may be unjust, but there is no proof to the contrary in the book. Hence a slight suspicion of Sir Maurice's anthropology. Of course he disclaims all knowledge of it, but his book is about little else. Some of it must be derived; but, as he only gives references to the texts of the songs, one cannot guess how much. His analyses of primitive thoughts and motives are not always convincing; they may be correct, but they smack too much of Wadham. Nor are his generalisations less suspect. He says that song "is derived from the dance and is historically posterior to it": so far as the evidence given in this book goes, this is pure surmise, and one can see no reason why it should be universally true. On the whole, it is better not to take Sir Maurice's anthropology too heavily, but to follow his admirable taste; it is sheer gain to have him as guide to a new world of delightful songs.

The price is a real deterrent, for a short book with a hideous binding, to which has been added in the middle a gathering of handsome but unnecessary plates. Roll on the unillustrated paperback.

OTHER SPRING BOOKS

EVERYMAN'S DICTIONARY OF PICTORIAL ART. Vols. 1 and 2. Compiled by William Gaunt. *Dent.* 412 and 396 pages. Both 25s.

These two volumes attempt to give, in short biographical notes, an introduction and reference to some 1,200 painters, as well as the main periods of art in all parts of the world. Some one thousand illustrations accompany the text, mostly in black and white.

MOTORING HOLIDAYS IN SWITZERLAND. 135 pages. 15s.

MOTORING HOLIDAYS IN FRANCE. 176 pages. 16s.

MOTORING HOLIDAYS IN SPAIN. 175 pages. 16s. By Alison Lascelles. *Arthur Barker.*

A new series of short chatty guides, giving a lot of information to motorists taking a car abroad for the first time. They include routes, aids to eating and shopping, currency equivalents, continental weights and measures and sizes. The foreign phrases are not always quite accurate.

SIX CAROLINE PLAYS. Edited by A. S. Knowland. 569 pages. 9s. 6d.
Oxford University Press. (World's Classics.)

Algerian Quicksand

A Scattering of Dust

By Herb Greer.
Hutchinson. 224 pages. 21s.

AN Arab journalist remarked recently that British foreign policy had never been more civilised than since the day Whitehall decided to dispense with conscription. Palestine, Cyprus, Suez and Algeria exemplify the kind of quicksands governments with idle conscript armies and irons in too many fires are apt to get themselves into. It is so much easier to send in the army and teach the bastards a lesson than to sit down and think.

Britain was rescued from its quicksands by a fortunate combination of parliamentary vigilance and international pressure. France was left floundering because its democratic institutions were inadequate and its allies were anxious to avoid aggravating the complexes born of 1940 and Dienbienphu. As France floundered, the moral sense of most of its politicians, publicists and officers wilted. By 1958 Frenchmen were no longer surprised—or greatly concerned—to learn that certain of their élite units crucified prisoners after amputating their hands and feet; that newly arrived conscripts were required to "prove their manhood" by shooting prisoners at point-blank range; that villages suspected of supplying the rebels with food were systematically obliterated. The torture of prisoners and suspects, men and women, was a matter of routine, condoned and "covered" by socialist (SFIO), radical, Catholic-conservative (MRP) and right-wing ministers alike. One can understand the anxiety of the French government to obtain from the Algerian delegation at Evian a pledge that the "black book" of atrocities which the FLN was rumoured to be compiling would not be published.

"A Scattering of Dust" might be described as a freelance "black book." But it is much more than that. Mr Greer spent two winters in eastern and western Algeria touring villages and guerrilla units and filming them for an American TV network. On to his personal narrative he has threaded accounts of the experiences of a colleague in Algiers and of a score of Algerian *maquisards*. His style is crisp and sober, and he demonstrates quietly and with economy how, for example, the savagery of the French police and army won recruits for the FLN, and how American military assistance to France outraged the Algerians without lessening the obsessive anti-Americanism of the French.

Although he was moved by the sufferings of the Algerians, he never glamorises their cause; he portrays them as they are, fleas and all, and does not conceal the fact that they could be as barbarous as the French troops they fought. He realises that they were not the victims of the tragedy: the tragic figures were the French who squandered lives and resources on no better altars than those of political incompetence and intellectual torpor.

This is the second in a series of advertisements inserted by Svensko Metallverken

Your secretary probably couldn't care less whether the non-ferrous metal parts for this Swedish business machine originated on Mars or at Svenska Metallverken. But the manufacturers of it do. They know that the semi-finished products from Svenska Metallverken have helped them make Sweden "The Country of Better Business Machines". And any secretary will prefer a better business machine no matter where the semis came from in the first place. This is another example where SM-semis help make a good product better.

THE WORLD OVERSEAS

Herr Ulbricht's Discontent

FROM OUR SPECIAL CORRESPONDENT

A STRENUOUS bout of economic stocktaking, most of it far from cheerful, has been going on in east Germany. The occasion was the 15th plenary session of the central committee of the ruling Socialist Unity party, held in Berlin from March 21st to 23rd to approve the reports and policy documents which are to serve as directives for the work of government in 1962. These include Herr Ulbricht's basic report (it was in this that he made his suggestion for guarantees of access to west Berlin, discussed on page 1208), an economic policy report by Herr Karl Mewis, the head of the state planning commission, and the draft economic plan for 1962.

Vainglory and bombast have so often marked Communist economic policy documents in the past that it has become difficult for outsiders properly to evaluate them. Western readers of such documents are accustomed to make a handsome allowance for exaggerated claims. When Communist economic authorities rub their people's noses in their failures and shortcomings the inference is drawn in the West that the real picture is worse than the picture officially painted. But this does not follow—still less that, if it did, this would in some way be a cause for western satisfaction.

Herr Ulbricht and Herr Mewis may have had just as strong reasons for making the hard facts of life plain to the east German people as Professor Erhard had for warning the west German wage-earner in his speech of March 21st, discussed in the following article. The Erhard speech has been even more over-dramatised in the east German press than the Ulbricht and Mewis speeches have been in western reports. In fact, both governments have reason to apply the damper to personal incomes. In east Germany the reasons are more urgent, and it looks as if the damper is being more energetically applied; but there is a considerable way to go before production and incomes are brought into line. This does not mean that the population is suffering grave material hardship. The economic reports and speeches read like plain speaking, not like attempts to cover up a crisis.

Nominally speaking, east Germany has entered the fourth year of its ambitious seven-year plan; but the statements made to the central committee make it plain that the plan has got so far out of gear as to be virtually in suspense, and the present effort is being directed to getting back into a position from which a fresh start can be made. Herr Ulbricht said that the increase in personal incomes planned for the first three years (9,000 million marks) had been exceeded by 1,600 million marks, while new investments, which should have been 6,500 million marks, had fallen 2,800 million marks short. Herr Mewis said that out of 262 selected items in the plan for last year, the targets were reached for no more than 106 items; he did not say how great the average shortfall was, but he did say that shortfalls in various branches of industry were having disruptive effects in other branches, and he held out for this year no more than the hope of a "beginning of a change" of the trend of recent years. He claimed an increase of 17 per cent in national income between 1958 and 1961, but said that nearly all of this increase had been going into consumption, and not nearly enough into investment. The disproportions between different branches of production, between purchasing power and supply of goods, and between the shares of consumption and investment in the national income, were too great to be removed this year; they could only take the first steps.

Herr Ulbricht went into the causes of what had gone wrong. They were still, he said, grappling with the economic consequences of the second world war and they "had originally assumed that this would be done with the frontiers open"; but west German hostility had forced them to take steps to assure their economic independence, and these measures took up money and time. Up to August 13th (when the east Germans sealed off the Berlin sector boundary) they had suffered a total economic loss of 30,000 million marks through the "enticement and organised flight" of the population—a sum corresponding to the unrealised investments which would, if made, have enabled them fully to modernise their economy. In addition, he said, security measures on the frontiers had cost them heavily.

He might have added, but did not, that a good deal of the galloping rise in money incomes, of which Herr Mewis complained, could be traced to the open frontier, which held over every employer's head the threat of losing his labour, or his managers or technicians, if he treated them with any firmness. The new toughness in the government's attitude to labour is doubtless connected with the fact that the frontiers are now tightly shut. When Herr Ulbricht said that even the existing scope for raising productivity had not been made use of "because of the ideological influence and the disruptive activity of the class enemy," he was touching delicately on another aspect of the same subject.

SOME of Herr Ulbricht's other explanations amounted to complaints of bad morale in industry and administration (and, as always, agriculture). He complained of money being wasted in the economic enterprises, in the industrial associations and in the foreign trade organisations. Public property was stolen, squandered or left unutilised. Up-to-date machines of high capacity were used for only a few hours a day and enterprises went in for "regular falsification" to get such machines for themselves, promising a high rate of utilisation that was not achieved.

What is called the "production drive" to correct these shortcomings, and get the economy back into a rhythm of expansion, is brought to the visitor's attention daily in the press, in the tedious slogans that still adorn factories and streets, and in conversation. By repute, this is simply a drive to force people to work harder. It is true that Herr Ulbricht spoke of hard work for everybody, and that the now general slogan, "more work for the same money in the same time," is not much calculated to appeal to trade union members in West or East. Much emphasis is, however, being put on rationalisation, technical improvement, higher utilisation of plant, automation and the adaptation of working methods and work standards to new equipment. The truth seems to be not only that managers have for many years been timid with labour that they feared to lose by flight to the West, but that the regime itself has been nervous of meddling with work stints (norms) ever since the 1953 rising was set off by an attempt to change the

building workers' stints on what was then the Stalinallee. (It is now the Karl Marx Allee at one end and the Frankfurter Allee, because it is the road to Frankfurt-on-Oder, at the other; Stalinstadt has become Eisenhüttenstadt, hardly an improvement.)

Now that flight has been cut off the ruling party is taking its courage in its hands, and stints are being revised. The working week is plainly going to be kept at 45 hours for some time yet; earlier talk of leading the world in shortening hours has proved unreal and has been stopped. But it is to technology that the regime is mainly looking for salvation; and its output of machine tools and industrial plant is impressive enough, both in quality and quantity, to make it likely that rationalisation and re-equipment will in the end have their effect.

The rewards, if the production drive succeeds, are offered not in higher money wages all round but in more regular supplies of goods and services in greater variety and better quality. There is need for improvement. Just now, potatoes are the most obvious shortage. House coal was the last. Butter supplies have been uneven. But it is necessary to keep these things in proportion. Rice and macaroni to take the place of potatoes seem to be abundant. It is true that Germans like potatoes, and that macaroni cooked by a Mecklenburg peasant is not the most appetising of dishes, but this is an inconvenience, not a hardship.

Butter is not now on the open shelves in the self-service stores, but it usually seems to be on hand (at the bakery counter) for regular customers. Butter consumption (13.6 kilogrammes a head a year) and meat consumption are high. Margarine and other fats are plentiful. Heating generally seems to be more than adequate. The men are well shod, the women well nyloned. The waiting period for a motor car is long, three years or more, but other durable consumer goods—television sets, refrigerators, furniture—are in better supply than they were. Housing has immensely improved. When there are shortages, people are most aware of what they lack. But a visitor returning to east Germany after four years' absence is struck by the improvement in a wide range of material things. Doubtless the east German shopper is harder to impress.

Cassandra in Bonn

FROM OUR BONN CORRESPONDENT

NOT only a belated dose of winter has been chilling this year's spring in the Federal Republic. The Berlin wall's harsh look of finality had prompted many west Germans at the turn of the year to question the propriety of observing the venerable rites of carnival. By February the colliery explosion at Völklingen and the North Sea floods had settled the matter: this was no time for fooling. Deadlock among the statesmen discussing disarmament and Berlin at Geneva has since aggravated the chastened mood.

At home public confidence in the national leadership has been shaken in quick succession by the Kroll affair, with its disclosure of nasty intrigue in high and middling places, and by the necessity for appointing a parliamentary committee to investigate charges that Herr Strauss, the defence minister, has been abusing his authority to further private interests. And now even that habitual optimist and symbol of success, Herr Erhard, has been seen on television deploring the way the world of west German economics is going—already quite some way, Herr Erhard reckoned, along the primrose path to the everlasting bonfire. His disturbing diagnosis and blunt allocation of blame have provoked a spirited public debate.

Although he has refused since to take back a single word, the minister of economics would probably concede in private that he did exaggerate a little on March 21st. For Herr Erhard wanted to focus attention, not only on a potentially serious situation, but also on himself as a statesman of vision and achievement. Only twenty-four hours earlier the 86-year-old Dr Adenauer had set off for a longish spell of leave in northern Italy, leaving Herr Erhard in charge at Bonn. His qualifications for taking over the chancellorship when Dr Adenauer retires next year having been recently much in dispute—partly in consequence of his reluctance, or inability, to assert himself—Herr Erhard has been looking for opportunities to prove his detractors wrong. This was a good one. Naturally preferring to show his paces on familiar territory—a field with which Dr Adenauer has a notoriously superficial acquaintance and which he is inclined to neglect—Herr Erhard discussed matters of bread and butter. To his radio and television audience he repeated rather more forcibly what he had already said in the Bundestag in the course of the budget debate on March 17th. It was an admonition to the west Germans to eschew the folly of behaving as though it were possible for them to consume individually and collectively more than they were producing. Extravagant wage claims, he protested, were inflating costs to an extent that was impairing west German industry's ability to compete effectively in international trade. And he went on to startle the complacent by reminding them that the Germans had earned the reputation of being a people tragically lacking in moderation. Should they now allow their remarkable postwar economic recovery to go to their heads, they could precipitate an economic crisis which might have such serious international repercussions that the Germans would be guilty once again of disturbing the general peace. Sounding a patriotic note rarely used by him, Herr Erhard appealed to his audience to remember that "the constant threat to Berlin throws a new light on the questions of our freedom and security."

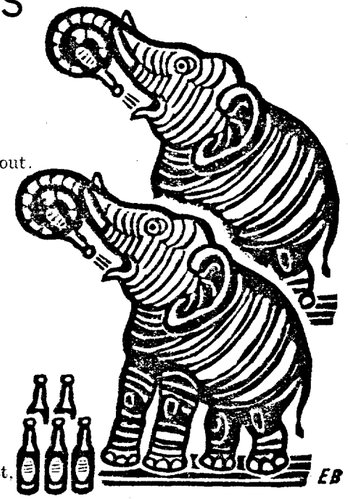
Briefly stated, the developments on which Herr Erhard's show of consternation was based are these: in spite of the introduction of shorter working hours in many occupations (a forty-hour week for all is planned by 1965) west German income from wages and salaries increased last year by 10.1 per cent, while production went up by only 4 per cent. Prices rose during the same period from 2.5 to 3.5 per cent. Wages in west Germany are now higher than in any other European common market country. They have risen by 21 per cent in the course of the last two years, while those in the partner countries have gone up from 6 to 13 per cent.

Yet since the beginning of the year the metal workers of Baden-Württemberg, after threatening to strike, have been given another rise of 6 per cent, and the 185,000 workers of the north Rhineland chemical industry have got a rise of 11.5 per cent. Further substantial wage claims are being made. In the Ruhr 220,000 steel workers are demanding a rise of 10 per cent. Some 1.3 million building workers are asking for an increase of 5.2 per cent, and those who are organised are demanding a summer holiday bonus of 100 marks as well. (Building costs went up by 8 per cent last year.) More than a million workers in the public utilities and 486,000 railwaymen are claiming a 9 per cent increase.

The cost of German exports went up by 4.8 per cent with the revaluation of the D-Mark in 1961. The export surplus, which was running at an average of DM 500 million monthly last year, was only DM 32 million in January this year, and as low as DM 5 million in February. The labour pool is diminishing, for the flow of refugees from east Germany has ceased and fewer Italians are coming to Germany now that their prospects at home

AESOP-TO-DATE

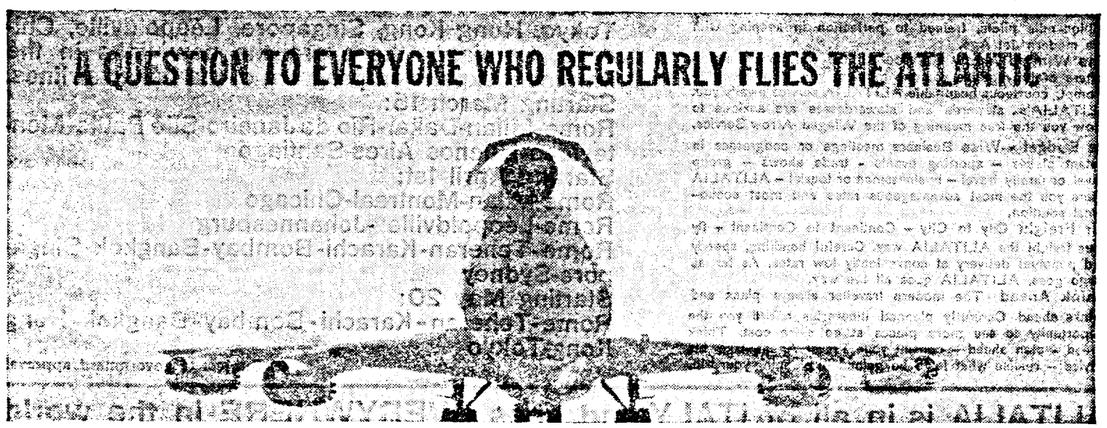
The Early Bird and the Elephants



A singing Bird did so entrance
A pair of simple Elephants
That they implored the songstress tell
What was it made her sing so well.
It must at least be Guinness Stout
That brought such rapturous twitt'rings out.

Alas! the eager pachyderms
Found that her diet was of worms,
And though at first they were upset,
They said "We'll trill like Birdie yet,"
And started singing semitones
On Things they dug up under stones.

At length one day at crack of dawn
Their trumpetings announced the morn.
The neighbourhood so rudely stirred
Not only gave them both the bird,
But further concerts they implied
Might end in elephanticide.



The Moral: Nature knows what's best.
And that's where Guinness stands the test.
For barley malt and yeast and hops
Make this a drink that's really tops.
And music-makers can go far
On several Guinness to the bar.

Guinness
is good for you—and me

A QUESTION TO EVERYONE WHO REGULARLY FLIES THE ATLANTIC

DO YOU FLY BECAUSE YOU ENJOY IT
or just because you're in a hurry?

By his second or third crossing, the transatlantic traveller begins to be critical. He appreciates the speed—but where has the pleasure gone? It hasn't—if you fly on our Shamrock services. On these services, the speed is provided by the latest Boeing jet liners and the pleasure begins at the beginning. Why? Because alone among airlines we offer:

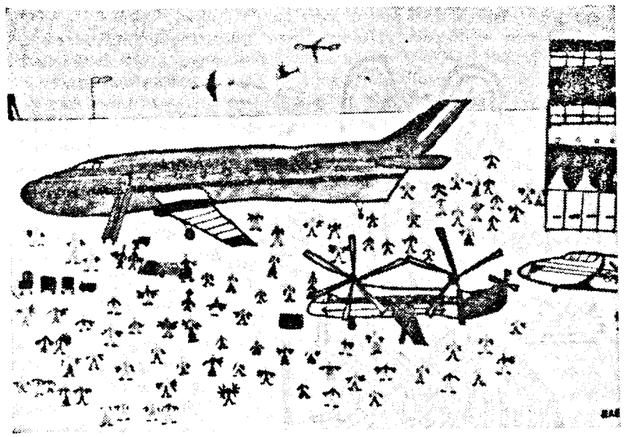
THE 11-POINT TAKE-OFF You can fly to America from any of eleven cities in Britain—London, Manchester, Edinburgh, Glasgow, Blackpool, Liverpool, Leeds Bradford, Birmingham, Cardiff, Bristol, Isle of Man—saving perhaps hours of cross-country travelling.

THE LUCULLAN INTERLUDE Relaxing, before the long hop, in the comfort of Dublin Airport, you will find a restaurant where the food is as superb as anywhere in the world—each dish a creation cooked and served to highest international standards . . . Dined and wined, legs stretched, lungs freshened—you discover the next pleasure . . .

SMILING IRISH EYES, sparkling property of the air hostesses—beautiful, soft spoken, thoughtful and efficient—that you will meet whether you fly 1st Class Golden Shamrock or Economy Class Silver Shamrock. If you're a traveller first class, *your* eyes will light up at the sight of—

THE GOLDEN SHAMROCK MENU starred with such delicacies as Broiled Liffey Salmon or Limerick Ham Bunratty style, with Pouilly Fuisse 57 or Charles Heidsieck 53. Travellers who know, place Golden Shamrock food in a class by itself.

THE 2-POINT TOUCH-DOWN Shamrock services give a choice of flights not only to New York, but also to Boston. On which thoughtful note, we wish you goodbye—until your next transatlantic trip.



DUTY FREE SHOPPING The Shamrock transatlantic service gives you time enough at Shannon to make profitable purchases at the International Duty-Free shopping centre.

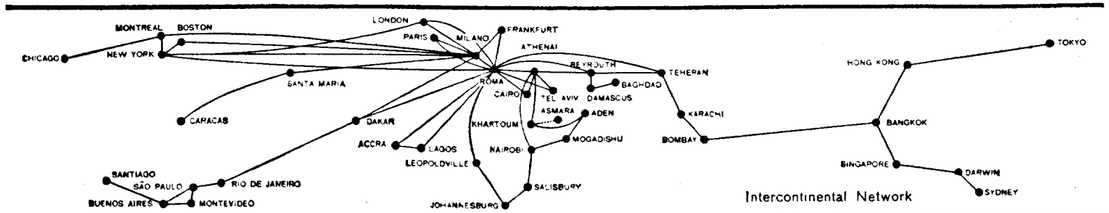
SYDNEY : CHILDREN MEET JETS

Do you believe in love at first sight?
This happened when ALITALIA invited members of the younger generation to visit various airports throughout the world in order to see for the first time, the ALITALIA Caravelle and Super DC-8 Jets.
They spent one full exciting day as ALITALIA guests-and devoted a part of their day to drawing and painting the ALITALIA Jets which were leaving for other lands on ALITALIA's world-wide network.
The children's excited concentration can be seen in the picture taken at Kingsford Smith Airport.



ALITALIA AIRLINES

Men and Jets SUPER DC-8 S AND CARAVELLE S - two of the finest and fastest Jets in the world - flown by million-mile pilots, trained to perfection in keeping with this modern Jet Age.
The Winged Arrow Service All the warmth and atmosphere of Italy greets you the moment you step aboard - prompt, courteous hospitable ALITALIA service awaits you. ALITALIA's stewards and stewardesses are anxious to show you the true meaning of the Winged Arrow Service.
Be Budget - Wise Business meetings or congresses in distant places - sporting events - trade shows - group travel or family travel - businessman or tourist - ALITALIA offers you the most advantageous rates and most economical solution.
Air Freight City to City - Continent to Continent - fly your freight the ALITALIA way. Careful handling, speedy and punctual delivery at conveniently low rates. As far as cargo goes, ALITALIA goes all the way.
Think Ahead The modern traveller always plans and thinks ahead. Carefully planned itineraries afford you the opportunity to see more places at no extra cost. Think ahead - plan ahead - consult your Travel Agent, take his advice - realise what is to be gained in planning your trip.

EAST TO WEST AROUND THE WORLD:
Tokyo, Hong Kong, Singapore, Léopoldville, Chicago, Santiago - these are the new links in the imminent expansion program of the Italian airlines.
Starting March 15:
Rome-Milan-Dakar-Rio de Janeiro-São Paulo-Montevideo-Buenos Aires-Santiago
Starting April 1st:
Rome-Milan-Montreal-Chicago
Rome-Léopoldville (*)-Johannesburg
Rome-Teheran-Karachi-Bombay-Bangkok-Singapore-Sydney
Starting May 20:
Rome-Teheran-Karachi-Bombay-Bangkok-Hong Kong-Tokyo
(*) Subject to government approval

ALITALIA is in all of ITALY and goes EVERYWHERE in the world

48 countries, 76 cities, 18.000 approved agents all over the world

are improving. A shortage of labour is likely to be a major problem during the nineteen-sixties.

Such is the broad picture that moved Herr Erhard to appeal dramatically for moderation. The trade unions and the Social Democrats have objected that while he scolded the workers for over-reaching themselves, Herr Erhard did not rebuke the employers for grasping greedily at profits to the detriment of the consumer. (He has since elaborated his censure to include the state for extravagance, and some employers for virtually bribing workers into their service.) On behalf of the employers, the Institute of German Industry has retorted that the workers' share of the national income rose from 60.6 per cent in 1960 to 62.3 per cent in 1961, while income from private enterprise and property fell from 39.4 per cent of the national total in 1960 to 37.7 in 1961. And a large proportion of profits, the institute has pointed out, have been ploughed back into the businesses from which they derived.

So many statistics are being bandied about to prove that it is only the other fellow who is having a cushier time than is good either for him or the public interest that it has all become rather confusing. The foreign observer sees many signs of prosperity and extravagance in the Federal Republic, and also many of pinching and scraping. Some of the latter is enforced, particularly upon the salaried civil servants and the professional classes, by continually rising prices. But much of it is tribute to the bondage of hire purchase. The value of hire purchase credits rose in 1961 by 11 per cent to DM 4,556 million—an increase of as much as 22 per cent on the previous year. Most of the credits are being used to buy cars. According to the institute of industry, some 2,700,000 cars—roughly 56 per cent of all cars registered—were owned by workers and employees on July 1st last year. All in all, 611,000 more cars were then owned in west Germany than on July 1, 1960—an increase of 28.4 per cent. In January the issue of passenger car licences was 20 per cent greater than a year ago. Manufacturers of clothing, washing machines and portable radios report a continuing "striking increase" in sales this spring. Building has slowed down. Altogether 542,000 flats and houses were built in 1961—8,300 fewer than in 1960 and 22,900 fewer than in 1959. But the houses going up these days are on the whole rather larger than they used to be.

The ministry of economics' expectation is that the Federal Republic's gross production will increase this year by 4 per cent, or perhaps by only 3.5 per cent. If this prognosis is correct, Herr Erhard's alarm at the continuing demand for higher wages and shorter working hours is justified. He is being listened to with respect, and in the meantime he has proposed the setting up of a representative council—"more scientific and technical than administrative"—to advise industry and trade on the adjustment of wages to costs and prices.

After Salan's Blunder

FROM OUR PARIS CORRESPONDENT

SIX national servicemen were killed in Bab el Oued on March 23rd; the past week's events in Algeria flow from this cold-blooded murder which deprived the Europeans in Algeria of a great deal of sympathy in France. It also provided an answer to the key question that was being asked in Paris: will the army fire on Europeans? But after this the army was bound to reply and even wavering officers could hardly plead for restraint. The reaction to the killing of the national servicemen was swift and its results significant. Bab el Oued, the fortress of General Salan's Secret Army (OAS), was taken and occupied. General Jouhaud, General Salan's deputy, was seized in the heart of the hitherto lawless city of Oran. Such prompt and spectacular results provide confirmation that the power of the Secret Army had rested on the real army's tolerance (or complicity) and on the government's pusillanimity.

But while this tolerance lasted the Secret Army not only collected an armoury; it also gained complete control of the European population. It was, therefore, obvious that to make up for the miscalculation on March 23rd General Salan would throw the European crowds into the streets, in an attempt to drown the memory of the murdered national servicemen in the blood of European victims. Who pulled the trigger first when the Europeans demonstrated in the heart of Algiers on Monday afternoon nobody can swear. General Salan, however, got his martyrs (46 dead, according to the official list; 70 killed and scores of wounded, according to unofficial reports). A week earlier French newspapers would have been full of appeals to the government to stop the carnage. But in the meantime French soldiers had been killed, and few people in Paris now dared to deny that the real responsibility for the massacre lay with the Secret Army.

The Secret Army is now attempting to revert to its original tactics. Hidden amongst a still sympathetic European community, its killers concentrate their blows against the Moslems. Yet it is doubtful whether the Secret Army can recapture the sympathy, let alone the complicity, of the officers serving in Algeria, without whose help it is doomed to failure. Besides, any concessions to the Europeans would revive Algeria's second front. Although European victims hit the headlines, the Moslem casualty list grows monotonously longer every day. The Arab nationalists have nevertheless managed to keep their followers in check. If they got the impression that the authorities were monkeying with the Evian agreements the impressive quiet on the Arab front would be broken. The French authorities have little room for manœuvre.

FRENCHMEN were, this week, so absorbed by the bloody, complex and moving picture from across the Mediterranean that they hardly noticed the beginning of the campaign for their own referendum. General de Gaulle himself opened the campaign on Monday evening, but his broadcast, for once, fell flat. His listeners may well have been stunned by the impact of the day's terrible events in Algiers. The general did not stoop to such details. He spoke of future Franco-Algerian co-operation and held France up as an example to the world at large. In his final plea for massive support he made it plain that the next referendum would be a plebiscite. He asked Frenchmen to express their confidence in his personal rule and in his policies, past, present and future.

If the broadcast fell flat, however, this does not mean that the ballot boxes will be empty on April 8th. On the contrary, they will be filled with ayes. The majority will be so overwhelming that it will show nothing beyond the political isolation of the Secret Army in France. In a country fed up with war no major party has dared to advocate a negative vote, but each gives a different meaning to its approval. The Communists justify their course on the ground that General de Gaulle was "compelled" to adopt their position. They have launched the slogan: "*Oui* to peace, *non* to de Gaulle." The Socialists, Radicals and even the Christian Democrats limit their blessing to the government's Algerian policy. Only the neo-gaullist UNR maintains its unconditional approval.

The government and parties attach so much importance to the referendum poll because they are working on the assumption that there will be a general election in May. The UNR, basking in the general's glory, is now convinced that it will cut its losses and, possibly, repeat the miracle of 1958. The Communists, on the other hand, hope to recapture the votes, if not the seats, that they lost in that election. All the parties are studying the electoral map and pondering over alliances. Yet it is not at all certain that the election will in fact be held in May. The general's choice

hinges on the situation in Algeria, that is to say on General Salan's chance of recovering from his blunder last week. Both the fate and the date of the French elections will be determined in the streets of Oran and Algiers.

Syria Back to Barracks

FROM OUR MIDDLE EAST CORRESPONDENT

THE Syrian army has done it again. After less than four months of parliamentary life its patience was exhausted and in the early hours of Wednesday morning the high command dissolved the Chamber of Deputies on the grounds that it had failed in its mission. Damascus accepted the change calmly, a calm doubtless born of familiarity and resignation.

Just how parliament is judged to have failed the country is not clear. It was elected early in December by a popular vote that was generally admitted to have been free from improper pressure. Dr Maaruf Dawalibi formed his government just before Christmas and was confirmed by a substantial majority of the chamber. Since then it had passed comprehensive agrarian and industrial legislation, accomplished much in re-creating a diplomatic service and other government organs, and gone some way towards giving Syria a new foreign policy. Its measures went through with comfortable majorities. Some, it is true, were bitterly contested by the opposition, but that scarcely seems sufficient cause for outright condemnation of the parliamentary system.

The crisis began with the resignation of Dr Dawalibi and his government, which became effective on Sunday. The prime minister complained in parliament last week of "obstacles" being put in his way, and he was angered still more when certain unnamed "authorities" forbade publication of his complaints by the press or radio. At the time there was much speculation about the nature of the obstacles and the identity of the "authorities": the identity at least is made clear by the army's action. The government's resignation was followed by intensive lobbying in the chamber dominated by Dr Dawalibi's attempt to form a "government of national union." That has all been swept away now and with it new Syria's first experiment in democracy.

With the resignation on Wednesday of President Nazim Kudsi on judicious grounds of ill-health, the armed forces took control of the whole country. Army commanders have been given full powers and civilian officials made accountable to them. Vicious attacks from Damascus radio against the deposed politicians, who are accused of corruption and intrigue, suggest that action against them may go beyond mere dismissal. These former rulers, according to an army proclamation, failed to understand that "the army and country belong to the whole people, not just to a small group." (The accused are no doubt reflecting that for years past both country and people have in fact belonged to the army.) Other army pronouncements from Damascus suggest that the austerity measures, which the former government was trying to relax, will be re-introduced with rigour. The former government is accused of depriving the workers of "the fruits of their labour" and a new government is promised, pledged to "constructive socialism." There is also more than a hint that the psychological motive for the army's intervention was temporary intoxication as a result of the comparative success scored by the Syrian forces in the recent Galilee action.

For some time past the Dawalibi government was under pressure to restore "public liberties." Such liberties included freedom of assembly, speech and press. But, as the prime minister remarked shortly before his resignation:

> We inherited restrictions from the past regime. We cannot simply abolish them by a stroke of the pen until we have passed new laws organising public liberties. Anyway, we have been so preoccupied by foreign affairs that members of the government have found time neither to eat nor sleep.

It may well be that agitation in favour of public liberties was one of the causes of the army's intervention, although there was little to suggest that it had reached dangerous levels. It is too early to say whether the army's action presages a change in the direction of Syrian foreign policy, notably in halting the recent trend towards better relations with Iraq. It is known that there are many in Syria who think the Dawalibi government was sliding too fast and too far under the influence of Baghdad.

When the United Arab Republic broke up last September the optimists were loud in suggesting that Syrian politicians and soldiers would have learnt the value of moderation and continuity from their experience of union with Egypt. These hopes have been shattered and independent Syria has emerged again as a factor of instability in the Arab world.

Athenian War of Nerves

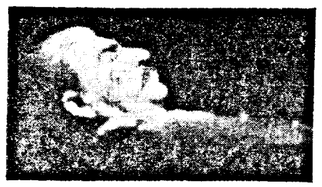
FROM OUR ATHENS CORRESPONDENT

EVER since Otho of Bavaria became king of Greece in 1833, the Greek monarchy has mixed actively in domestic politics. This was a form of self-defence since the Crown was forever at the mercy of the unpredictable temperament of its subjects. But times and concepts have changed. During the reign of King Paul I who celebrates tomorrow, April 1st, the 15th anniversary of his accession, the Greeks have begun to stop identifying themselves as royalists or anti-royalists.

Otho

Paul

The Greek Liberals have been in Opposition for at least two-thirds of King Paul's reign; they feel, rather unjustly, that he has been partial to the right wing. They have coined the word *eunoiokratia* ("favouritocracy") to describe the king's bold initiative in October, 1955, when after the death of Field Marshal Papagos, he appointed as prime minister the then junior minister of public works, Mr Karamanlis. It was a masterly solution which settled the crisis of the right wing (the leadership of which was taken over by Mr Karamanlis) and preserved political and economic stability. That the royal choice has since been confirmed three times by popular suffrage has not lessened the resentment felt by the Liberals who naturally expected to gain from the inevitable, even if partial, disintegration of the Right after Field-Marshal Papagos's death.



Palace and opposition have been at variance ever since. The term *eunoiokratia* has been used in polite and indirect reproof of the Palace. The general elections of last October aggravated the situation. The Liberals—carrying on under the title of Centre Union and led by Mr Papandreou—assert that the Right, realising that it would not gain a working majority in Parliament, engineered a nation-wide plot to "adulterate the will of the people by fraud and intimidation." Instances of both have been detected and are being investigated by the electoral tribunals. The opposition regards these cases as proof of its claim of "rigged" elections. The government disputes the charge, suggesting that fraud and intimidation are endemic features of Greek elections, but that they are far too limited in extent to alter the will of five million voters.

The opposition is persistently demanding new elections under guarantees of freedom and fairness. It argues that these guarantees could only be effective if an interim coalition of all nationalist parties purged the administration and the armed forces of partisan elements before holding new elections under the system of proportional representation. The government of course disdainfully rejects this demand. The opposition, therefore, is exerting pressure on the king to force new elections. Its campaign now includes mass meetings of protest, the first of which was held in Crete on March 18th. It has been suggested that the next rally may be held in Athens between May 3rd and 5th when the Nato council will be meeting here for its spring ministerial session.

The effort to induce the king to proclaim elections has acquired bitter anti-royalist overtones. The opposition press has forcefully reminded the king of his father's adventures when he came to loggerheads with the founder of the Liberal party, the late Eleftherios Venizelos, during the first world war. Then came the issue of the $300,000-dowry voted by Parliament for Princess Sophia; during the debate on the dowry the opposition hurled hostile criticism against the royal family, its entourage and some of its more controversial welfare activities.

Suddenly the opposition has begun to scrutinise closely all that is said and done by the Court. A remark in a royal address to the officers of Salonika garrison this month, which would normally have passed without comment, gave fresh ammunition to the eager opposition snipers. The king said: "God has united us. I belong to you and you belong to me." Critics promptly cried out that the king reigns by will of the people, not by the grace of God; that the army belongs to the nation, not to the king. They discovered that Kaiser Wilhelm II had spoken to his troops in similar terms upon his enthronement. He said in an Order of the Day in June, 1888: "Thus we belong to each other—I and the army—thus we were made one for another and thus shall we stand inseparably united, by the will of God, both in peace and in war." The opposition is now pressing for a full-fledged debate on these quotations; it is evidently seeking another opportunity to weigh in against the king, and to admonish him that he "should reign, not rule."

All this is treated by the government as "sheer blackmail" against King Paul, designed to make him feel that unless he gives in to the opposition demand for elections, the old feud between royalists and anti-royalists, which shook the throne between 1917 and 1935, might be revived. The Centre Union has persevered in its campaign with remarkable tenacity and, many believe, with a shocking disregard of the hazards involved for political moderation and stability. This attitude has already lost it ten of its 87 elected deputies; of these three joined the government party, and three went to Mr Markezinis, who has dissociated his Progressives from the Centre's tactics. The Centre Union is, of course, hoping that a climate of political turmoil would ultimately sap both the popularity of the government, and the patience of the irascible Mr Karamanlis. This is, above all, a war of nerves.

Fathers and sons

SIX years have gone since Mr Khrushchev came out with his "secret" indictment of Stalin and five months since Stalin's removal from the mausoleum, but Soviet novelists have not yet plucked up courage to show how grim life really was during Stalin's reign. They still work round the subject with understatements and allusions. The magazine *Novy Mir* has published an article commemorating heroes of the civil war whom Stalin caused to be executed. Novelists, however, are more cautious. True, Sholokhov's latest novel is set in the period of collectivisation, but he does not depict the harsh reality of famine, bloodshed and mass deportations to Siberia. Among well-known authors who have tackled the stalinist period, Babayevsky writes as if the "cult" had never existed. Kochetov skates over the problem. Others prefer to avoid the awkward subject altogether.

V. Kaverin provides a striking exception in a recent issue of *Novy Mir*. His longish short story opens on the eve of the German attack in 1941. A ship loaded with arms sails from Murmansk. In its hold, it has another cargo: a hundred or so prisoners. One of them is a former naval officer condemned to death—his sentence then commuted to ten years' jail—for unintentional damage to a submarine. There are also a dozen industrial workers who have committed the offence of being late for work. One of the prisoners plans a mass escape, possibly to Norway. But the mood changes with the news of the German attack. The prisoners are then ready to get down to work, to unload the arms and help in the defence of their country.

The portrait of the ship's master, Captain Mironov, still believing and yet doubting, is neatly drawn: "He didn't understand the alliance with Nazi Germany, which may have been indispensable because of higher calculations, but which to his own common sense could only bring harm. He still believed in Stalin's genius, in his innocence, in his foresight and his capacity to guide the country. There is no doubt that the mistakes made—if one can call what happened in 1937 "mistakes"—were made because the truth was kept from Stalin. When he found out, the guilty would be punished severely and the innocent would return. But how could Stalin fail to see how badly things were going?

"Mironov knew that if the thoughts that crossed his mind—and not only his, but the minds of many decent and sensible people who loved their country—if these thoughts were known, he would be arrested. He would be dragged out of his comfortable cabin, with its plush sofas and the brandy in the cupboard, first to jail and then somewhere else: perhaps to the hold of the very ship he was now commanding. This would probably happen if his dangerous thoughts became known to, say, his own son."

Mr Kaverin is not a newcomer. In the first phase of the thaw, he was a contributor to the unorthodox *Moscow Almanach*. After Mr Khrushchev put the heat on the restive writers in 1957, Mr Kaverin was silent—or silenced—for a time. His comeback is an event.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Redressing the Balance

NEW YORK

THE battle to eliminate the deficit in the American balance of international payments is becoming a siege rather than an assault. Last year an air of crisis prevailed in Washington and the defence of the dollar was being given priority over practically every other economic issue. Now, however, the dollar is considered out of danger and, though an adverse balance persists, the Administration is turning its attention to other deserving problems. This shift is partly a reflection of the advances that have been made in reducing the deficit and restoring confidence in the dollar abroad and partly the result of concern over the mid-winter pause in economic activity at home. President Kennedy himself admitted this week that business expansion was "below expectations" when he asked Congress to appropriate $600 million for a programme of public works to be undertaken during the next eighteen months in areas where unemployment is high and chronic. The request would increase the deficit already incurred in this year's Budget and place in jeopardy the Administration's hopes for a balance in the coming, 1963, fiscal year. It is thus an acknowledgment by Mr Kennedy's policy-makers that they are not prepared to eliminate the deficit on the international account at the expense of the domestic economy. The request also presages a new and much more vigorous effort to convince Europe that its resources should be deployed in the dollar's defence.

Obviously the White House did not relish going to Congress for extra funds, but it did not hesitate when the economy failed to do as well as had been hoped and when political pressure to relieve unemployment gathered steam. The Administration's economists are still expressing confidence about the outlook and describing the public works programme as being specifically designed to cope with local unemployment, but the speed with which the President acted suggests that they no longer feel constrained by the deficit in the balance of payments. This does not mean, however, that complacency has set in or that the defences of the dollar are being abandoned.

The charge made by the Democratic majority of Congress's Joint Economic Committee, that "the balance of payments problem has been much overplayed as an excuse for pursuing a tight money policy and for boosting interest rates across the board," has been refuted by Mr Walter Heller, chairman of the President's Council of Economic Advisers. He observed in a recent speech that the payments deficit remains "our most troublesome problem" and approved the monetary policy being carried out by the Federal Reserve Board (the central bank). Yet the economists in the Administration have been divided to some extent between those who have counselled that this foreign deficit dictates a substantial degree of restraint in fiscal as well as monetary policies and those who think that the best defence of the dollar is domestic expansion.

The economic lull that developed during January has strengthened the hand of the expansionists. But an increase in government spending, even if it means risking another deficit in the Budget, can now be supported with few if any qualms by more conservative officials, since the international deficit is under control. This week the White House sent to Congress what amounted to a progress report on the balance of payments, compiled by the Treasury. This emphasised that the task of dealing with it has "only begun" and exhorted industry to increase exports. The Administration's export campaign is to be given additional status by the appointment of a top-level co-ordinator within the Department of Commerce who will set "meaningful" export targets for each industry and will strive to reconcile the various government programmes dealing with exports. But aside from the already well-publicised drive to increase exports which, a Treasury official admits privately, will take time, the tone and contents of the report have a sober confidence which are evidence of a belief that the many actions taken on many different fronts will produce a victory in the battle against the international deficit.

The Treasury is anxious, of course, to avoid undue optimism and in public at least is determined to minimise the success it has had; but it cannot help noting that the speculative attack against the dollar was thwarted last year and that the deficit in the balance of payments was reduced substantially in 1961, amounting to only $2.5 billion, a considerable improvement over the $3.9 billion of

1960 and the $3.7 billion of 1959. True, most of the reduction came in the first half of the year but the deterioration in the second half, particularly in the fourth quarter when the deficit shot up to $1.5 billion, is now considered misleading; it was due in part to what the Treasury describes as "statistical aberrations" and to some unusual short-term bank loans to Japan, the Philippines and Europe. This outflow largely reversed itself in January and preliminary estimates put the deficit for the first quarter of 1962 at an annual rate of less than $1.5 billion.

While Mr Douglas Dillon, the Secretary of the Treasury, has predicted that the international payments of the United States will be in balance by the end of 1963, neither he nor his underlings are willing to estimate the size of the 1962 deficit, both because of the distortions in the figures and the feeling that confidence in the dollar might be impaired if these projections went awry. In private, though, Treasury officials were talking in terms of a balance of payments deficit for 1962 in the neighbourhood of $2 to $2.5 billion at a time when they expected a much higher level of imports and when most business and bank economists were predicting a deficit of $3 billion; in recent weeks officials have adopted a much more sanguine view, with some forecasts for as little as $1.2 billion. This is not due to any substantial revision in the estimated surplus on the normal trading account for, though the demand for imports was slacker than expected during the first two months of this year, exports were also sluggish. Rather, the Administration feels that its psychological offensive and its defence in depth are proving effective and it is counting on a new combination of measures, domestic and foreign, for further gains.

IN formulating its defences for the dollar the Kennedy team never contemplated a rapid return to equilibrium, which could only be achieved by a sharp reduction in American commitments abroad. Instead, according to Mr William Martin, whose place as chairman of the Federal Reserve Board makes him one of the Administration's top strategists, the problem of the deficit was approached as "a long race, not a sprint," once the immediate objective of restoring confidence in the dollar had been attained. As things turned out, the dollar crisis proved short-lived and, while it would be an exaggeration to describe the defence as going precisely according to plan, the fact is that both the dollar and the deficit are in better shape than had been expected.

Certainly the renewed strength of the dollar in the foreign exchange markets has been gratifying to the Administration. The Treasury is convinced, moreover, that its short-term defences are strong enough to prevent any serious resumption of weakness. Indeed, it hopes that the short-term outflow will be reduced substantially as a result of increasing liquidity in Europe, which should encourage a lowering of interest rates—as it has in Britain—and thus narrow the attractive spread in these rates between New York and Europe. For its part the Federal Reserve is continuing its Operation Nudge, designed to provide an ample supply of credit in the United States without lowering short-term interest rates to a level which would invite a renewed outflow of capital.

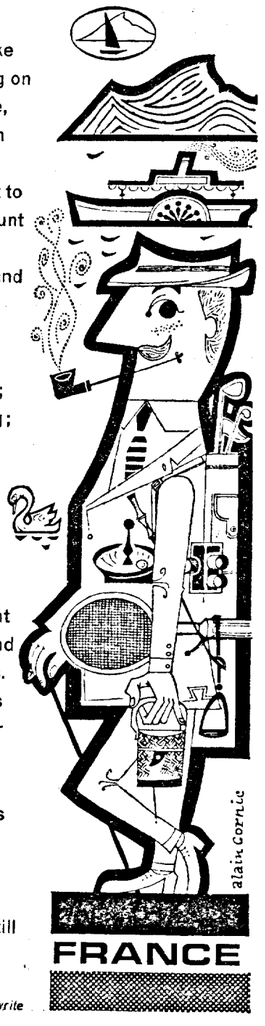
With an adequate system for countering short-term losses, the Administration is in a better position to deal with the problem posed by long-term private investment abroad. Here it feels that its proposals for tax incentives should lead to a rise in capital investment at home provided, of course, that rising demand is also making itself felt there. In addition, officials have an unspoken hope that the increase in European manufacturing costs and the slowing down of the rate of growth in the common market countries will tend to reduce the appeal of investment abroad. But it is not relying on hopes alone; it has recommended the removal of American tax incentives which are supposed to have stimulated such investment and is putting pressure on European governments which have made concessions to attract American investors.

Treasury officials report that the North Atlantic Treaty countries are receptive to the idea that they should increase their expenditures for military procurement; this may reduce American spending abroad by as much as $1 billion, or roughly one-third, this year. But the Administration is not prepared to settle for the results to date in this field. On the contrary, it appears to be getting ready to launch a new offensive aimed at demanding a much greater effort to utilise Europe's reserves. Mr Kennedy sounded the opening gun at a recent press conference, observing that Europe had to share the burden of providing aid to the developing areas.

The pressure on Europe is likely to mount whatever course the Administration decides to take on the domestic front. For though there may be some internal disputes over tactics, the CEA, the Federal Reserve and the Treasury, which together comprise Mr Kennedy's general staff, appear to agree that, while the problem of balancing America's international payments must still be treated as a matter of urgency, it is no longer the only problem. The Administration does not want a victory won by a shrinkage in the demand for imports as the result of a falling off in domestic activity; actually, it would prefer some decline in the trade surplus if it stems from the needs of a growing economy. This suggests that the Administration will not be satisfied with what it feels are mere gestures but will demand a good deal more in the way of co-operation. Indeed, this week both Mr Kennedy and Mr Dillon expressed disappointment that the European countries had not taken over more of the burden.

Victory for the Cities...

THE United States took a giant step into the twentieth century this week when the Supreme Court ruled that the federal courts have jurisdiction over the constitutionality of the way in which the boundaries of state electoral districts are drawn. This may seem a dry and dubious victory. But it means that eventually State Legislatures should reflect the needs and desires of the majority of Americans who now live in cities rather than those of the rural conservatives who have been in the saddle for so long. As the State Legislatures, in their turn, control the congressional districts, the House of Representatives can hardly fail to receive a great infusion of new blood from the cities. The Democrats, who are already much stronger there than the Republicans, look forward to an increase in their strength in the House unless the Republicans read the writing on the Supreme Court's decision and abandon their rural, backward-looking bias in time.



"Hugh—There's Nothing In Those Silos But People"

Conservatives have perpetuated themselves in power in the State Legislatures primarily by refusing to redraw electoral districts as the cities grew and the countryside was depopulated. This week's case was brought by residents of cities in Tennessee, by no means the most flagrant example. Yet in one rural county 3,454 residents elect a member of the Tennessee House, while

Health-giving holidays

aix les bains

Looking over a lovely lake from its beautiful setting on a gentle mountain slope, less than fifty miles from Geneva, Aix-les-Bains offers every inducement to spend the greatest amount of time out in the invigorating Alpine air and sunshine: golf amidst majestic scenery; swimming, sailing and water-skiing on the lake; enchanting walks; riding; clay-pigeon shooting. Entertainments centre round France's most brilliant Casino, the Palais de Savoie. Aix-les-Bains is famous as a spa for the treatment of rheumatic troubles and after-effects of fractures. The Romans founded its reputation, which in later days brought it an aristocratic British clientèle and it continues welcoming many distinguished Britons every year. Advanced techniques are adding still further to its celebrity.

THAMES BOARD HAVE THE MEN TO HELP YOU

Thames Board don't just make boxes. They make "FIBERITE" cases, tailor-made to your special needs. That's why they have a large team of technicians and designers, whose job is making sure that every customer's product—be it detergents, day-old chicks, or petrol pumps—always reaches its destination safe and sound. And when they have designed the right "Fiberite" case they don't just sit back and relax—they test it over and over again. (At Thames Board there are testing devices that can do things to a "Fiberite" case that even its worst enemy wouldn't.) Here is just one example of the many different problems dealt with by Thames Board.

A Quatermassian cloud

Mr. P. sells liquid detergents in bulk. And containers for transport were his problem. Traditional containers were safe—but not exactly cheap. Other, more economical forms? At the very thought, less courageous spirits might have had nightmares of gallons of liquid detergent breaking loose on a rainy day amid a Quatermassian cloud of foam.

But not Mr. P. He went to the Thames Board experts. Together they developed a way of packing the detergents in polythene cubes inside "Fiberite" cases. The cases (perforated for easy pouring) are made of "Aquapruf" board developed during the war for dumping supplies on invasion beaches. These "Fiberite" cases are so liquid-proof that they have even survived being tethered in the River Thames for several weeks.

FIBERITE PACKING CASES

in Memphis there is only one member for each 78,000 people. Although the State Constitution requires redistricting every decade, this has not been done for over fifty years; in Vermont it has not been done since 1793. The suburbs, whose growth is the most recent, are often worse off than the cities.

This injustice has not gone unrecognised but it has been assumed ever since 1946, when the Supreme Court refused to intervene in a case involving congressional districts in Illinois, that the issue was too political for the courts and that redress was to be sought only at the polls. In fact, as Justice Brennan pointed out in his decision this week, even in 1946 a majority of the Court felt that federal courts had the power to intervene under the equal protection guarantees of the Fourteenth Amendment, but one Justice, who decided the issue, felt that the Court should not do so in that particular case. The size of the majority this week—6 to 2, with Justices Frankfurter and Harlan dissenting—leaves no constitutional doubts, though the decision gives little guidance over how unjust the distribution of seats must be to be ruled unconstitutional. The courts are certain to have plenty of raw material to work on. The Mayors of big cities all over the country are sharpening their arguments. Beside the case which is now to be heard in Tennessee, another is being reopened in New York and others are likely in Georgia, Pennsylvania, Michigan and Kentucky. This may, indeed, prove to be the "political thicket" of which Justice Frankfurter warned the country in 1946. But it seems to be the only road to majority rule where State Legislatures and state courts refuse any redress and Congress fails to intervene.

. . . and for Negro Voters

While the Supreme Court was opening one door to more representative government the Senate was debating another, the abolition by constitutional amendment of the payment of a poll tax as a prerequisite to voting in federal elections. This is the least controversial of all measures to extend Negro voting rights. The tax is only a dollar or two (though it is cumulative in some places); it lingers on only in five southern states—Mississippi, Alabama, Texas, Virginia and Arkansas; and it is considered to be a real bar to Negro voting only in the first two. In the past both the Senate and the House have, on different occasions, voted to end it. This time it was plain from the beginning that when the hour of decision arrived the Senate would vote overwhelmingly (by 77 to 16 as it turned out) to ban the tax. This was fifteen more votes than the two-thirds needed for a constitutional amendment.

Yet for the past fortnight fifteen Southerners—fourteen Democrats and one Republican, Mr Tower of Texas—have been conducting a "friendly filibuster" against the measure or, to be more precise, against a Bill to make Alexander Hamilton's home in New York a national monument. (The poll tax amendment had to be hung on this innocuous peg because the Judiciary Committee, headed by Senator Eastland of Mississippi, refused as usual to let it reach the floor in the conventional way.) One reason for this demonstration was that, with the South so touchy about Negro rights, southern Senators, and particularly those up for re-election, such as Mr Fulbright of Arkansas, felt that they must show the confederate flag. A more important reason was that the Southerners wanted to remind the Senate of how they can make mince-meat of a legislative time-table when a Bill which they really dislike comes up; the Bill they have in mind is the President's chief proposal on civil rights, which would combat the discriminatory use of literacy tests in the South by declaring that six years of education should be proof of sufficient literacy to vote.

Southerners regard this Bill as real interference with the constitutional right of the states to fix qualifications for voting, and they are opposed (as are some worried non-Southerners) to dealing with literacy tests by an ordinary Bill instead of a constitutional amendment, because this would make the way much easier for further federal interference with voting rights. A constitutional amendment, which must be ratified by three-quarters of the states after Congress has approved it, takes much longer and can be defeated by thirteen of the states. Supporters of civil rights legislation oppose the route of a constitutional amendment for this very reason, even for the poll tax, for they argue that this sets a precedent for more controversial measures which they favour.

Steel's Good Example

If the reports from Pittsburgh are correct, the Administration has won the key battle in its fight to make the public interest prevail at the industrial bargaining table. In the negotiations for a new steel contract the public interest required two things: a non-inflationary settlement, because rises in steel prices are contagious, and one reached long enough before the present contracts expire at the end of June to avoid heavy private stock-piling of steel. In 1959 purchases in the first half of the year by users of steel who feared, correctly, that there would be a strike led to a famine of orders after the strike was settled; this helped to bring on a recession. In the last few weeks orders have fallen and users of steel seemed to be confident that a strike would be avoided. But if a settlement had been postponed much longer, extra orders for delivery in May and June would have started to pour in.

The reported terms of the settlement should rule out any general increase in steel prices—a vital victory for an Administration which is anxious to cure America's deficit in its balance of payments by a large increase in exports. There is to be no increase in wages during the first year of the two-year contract, although it may be reopened at the end of twelve months for negotiations over wages. The steel workers have taken their reward in the form of higher unemployment benefits, pensions and more paid holidays for long-service workers. These holidays will help to spread the work a bit among unemployed steelworkers; they are a substitute for the shorter hours sought by the trade union which would have set a precedent dangerous to hopes of higher output.

The cost of these concessions is put at 10 cents an hour for each worker. This is 2 cents above the steel industry's original offer, which was based on the assumption that productivity in steel increases about 2 per cent a year, but not quite as high as the 3 per cent (which would have worked out at 12 cents an hour in steel) laid down as a rough guide-line by the Administration. If nothing happens to upset these arrangements—and nothing is expected to although they must be ratified by the trade union's wage committee and tailored to the circumstances of each individual firm—critics of the Administration's labour policy, both in business and in the labour movement, will have to pipe down. But a good deal of the credit ought to go to the moderation shown by both parties to the steel negotiations; this relieved the Administration of the need to take any controversial steps.

All Co-oped Up?

FROM A CORRESPONDENT IN NEW YORK CITY

The practice of buying a flat in a co-operative block, which in the past has been associated chiefly with costly city living, is invading small towns outside New York and is being introduced into government-aided housing for middle-class people in the city. How to make such co-operatives safe and attractive for people of moderate income is a problem of real concern to the state government. In the city the price range between the subsidised and the unsubsidised is astronomic. The building which the Russians have just bought for over $3.5 million to house their United Nations delegation was designed originally as a co-operative

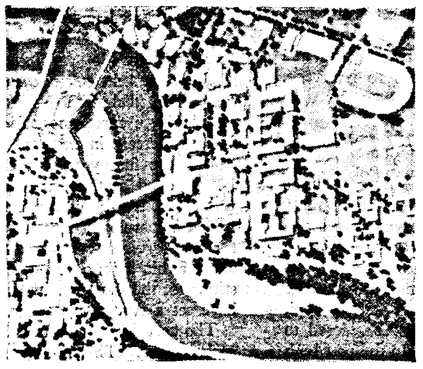
with prices which ranged from $13,000 for three rooms (with maintenance charges of $213 a month) to $25,000 for six rooms (and a monthly charge of $380). Prices on Park Avenue and Fifth Avenue may go much higher; flats in a projected 19-storey co-operative facing Central Park are to sell for an average of $25,000 a room. On the other hand, the state-aided co-ops ask deposits of only $313 to $698, with monthly maintenance and carrying charges of $21 to $30 a room.

Both kinds of co-operative are flourishing. The Tenant-Owners Association, with members including perhaps 85 per cent of the owners of privately-built, conventionally financed co-operative apartments, has on its list 172 blocks containing some 11,000 flats. As for the publicly-aided, the State Housing Authority has 18 projects in New York City which are completed or in hand, of which 13 are co-operatives containing 8.669 flats; others are rising in the suburbs and in Buffalo. The City Housing Redevelopment Board has, complete, in process or in blueprint, 91 projects with about 60,334 dwelling units; the vast majority of these are to be owned co-operatively. The Amalgamated Clothing Workers' Union is also putting up co-operatives, with the help of both the city and of the federal government. Such aid makes it possible to sell these co-ops to workers at relatively low prices.

The city and state, however, are finding that the very people who need housing most are often the ones who cannot scrape together the money for the deposit and Governor Rockefeller is proposing cheap state loans to reduce the minimum deposit to $200. Those who can buy flats enjoy a number of advantages. The monthly charges are lower than the rent for similar accommodation in blocks of flats put up with help from the state or the city and owners can deduct from their taxable income their share of the interest on the mortgage on the building and of the taxes paid on it. Builders also like putting up co-operatives because they get back their investment —which amounts to very little in government-aided projects—as soon as the flats are sold.

The essence of the housing co-operative is the linking of dwelling space with a certificate for a certain number of shares in the corporation that owns the building. (One lawyer calls a co-operative arrangement "the child of a marriage of a long-term lease with a stock certificate.") The corporation is created by people who come together for the express purpose of owning the block; the shares cannot be sold to outsiders nor dealt in, nor can dwelling space be sold without the appropriate shares. The legal concept of buying a single flat, instead of a share in the whole building, is just making its way in the housing field in the United States where it is known as a "condominium." It was encouraged by a provision in the Housing Act of 1961, which permitted the federal government to guarantee mortgages on individual flats. Changes in the state law, now under study, will probably be necessary before it can be used widely in state or city-aided building in New York. Condominiums can be sold at a profit, unlike the co-operative flats now being put up with government aid, which must be sold at the purchase price.

Finnish bricklayers who settled near Boston many years ago are credited with the first use of the co-operative idea in housing. It was taken up by New Yorkers seeking stable rents after the first world war and by owners eager to evade the rent control laws. Landlords turned their buildings into co-operatives by the simple process of announcing that tenants could no longer rent the space they were occupying but must buy it. A price was put on each flat, and a scale of monthly costs set out which included not only those of keeping up the building, heating, hot water and wages, but also of insurance, amortisation of the inevitable mortgage over a number of years and other recognised running costs.



In most cases the stock was bought on a hire-purchase plan under which the owner made a deposit, large or small, and then paid a monthly sum. Ideally, this sum was supposed to diminish as the mortgage was paid off, but inflation and the increased costs of maintenance which came as the building grew older washed out that dream. On the other hand, when the monthly charge had to be raised it was the tenant, by virtue of his membership in the corporation, who helped to decide to raise it; when he left the flat he had accumulated a vested interest which could be sold, perhaps at a profit.

In the innocent days after the first great war shrewd building promoters set up payment schemes on descending or ascending scales. The second type appealed to young executives with large ambitions, who were charmed by the idea of getting better living quarters than they could then afford by taking advantage of a system that assumed rising salaries. Many of these were caught in the squeeze of the 1929-32 depression; some of them lost not only their invested equity but were also sued for non-payment of the ballooning carrying charges. Some of those earlier experiences influenced the present law.

But there are still man, and woman, traps in the co-ops. Successful co-operative living on an economical scale requires a forbearance that is sometimes lacking. Properly managed (either by an executive group of tenant-owners or by an estate agent paid for that service), inhabited by a reasonably intelligent and homogeneous group of people, they are one answer to the high costs and great uncertainties of city living. Even so, the motto *cæveat emptor* should be engraved over each front door. The intangibles of responsible behaviour on the part of one's co-tenants are fully as important as sound plumbing and financing.

One University

FROM A CORRESPONDENT IN MINNEAPOLIS

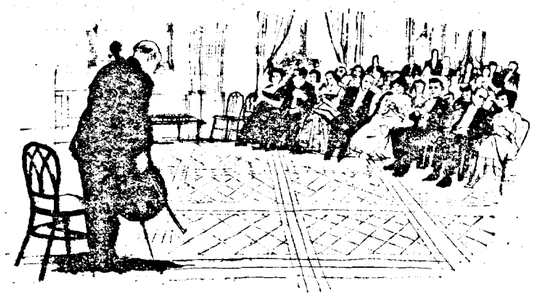
AMONG the great state universities which are the fullest expression of the American belief in higher education for everyone, the University of Minnesota is unique. The huge college systems of California and New York are bigger but are spread over a number of different centres; last autumn Minnesota, the fourth largest public university in the eighteenth largest state, had 27,526 of its 30,846 full-time students, a record number of postgraduates and undergraduates, on its main campus in the twin cities of Minneapolis and St Paul. An instructor in psychology lectured to a single class of 2,100 students.

Minnesota has one of the largest foreign enrolments of any American college and a number of strong young men from Pennsylvania and North Carolina have gone there recently to make its football team one of the country's best. But more than 90 per cent of its students are from within the state and three out of five are from the fast-growing Twin Cities metropolitan area, which contains nearly half of the state's 3.4 million residents. The university is required to admit any applicant who has passed through an accredited high school in Minnesota with an "average or better" record, but the less-qualified students spend their first two years doing general studies, so as not to pull down the standards of the more specialised courses.

This huge central university came into being partly by design and partly by accident. Its first president advised this struggling frontier community in 1869 to

> divide your resources for primary education but concentrate them for higher education. . . . Found but one university: you have your choice between one great, rich, free, populous, cosmopolitan university which shall be your pride and joy, and the dozen or more petty, starveling and ill-appointed affairs in which you will have no common interest.

Being on the fringe of the area affected by the private college movement of the nineteenth century, Minnesota had little competition; it benefited, too, from the decision to merge with it the state's college of agriculture and mechanic arts set up as a result of the grants of public lands to the states by the federal government in 1862. It was nourished by the Yankee capitalists who were developing this new region a century ago and who hoped to build an institution that would some day rival the private universities of their native New England and it was filled by the children of Scandinavian immigrants, eager for education.



It also had the great good fortune to be the only combined state-and-land-grant university in the country to be established in what later became the population centre of the state it serves; the state capital and the prison, then thought more desirable prizes, had been picked off in the early days by cities which were then larger and more influential. Its reputation rests on heart surgery, on research into the utilisation of Minnesota's low-grade iron ores, on service to agriculture and, more recently, on President Kennedy's choice of the head of its economic department, Mr Walter Heller, to be chairman of his Council of Economic Advisers.

The "one university" policy has just passed through its most serious challenge of recent years. Faced with the prospect of 47,000 full-time students by 1970, officials drew up an ambitious building programme which involved an expansion across the gorge of the Mississippi river in Minneapolis to a campus on the west bank, connected with the main building by a pedestrian bridge so that students could get from one class to another in ten minutes. Appropriations to pay for the land in 1957 and for the first buildings in 1959 were fought stubbornly by state legislators who felt that a new centre of this sort could just as well be built in one of their communities in western Minnesota. The effort was beaten, however, and two multi-storied classroom towers are expected to be ready on the west bank for use next autumn; the picture is of a model of what is planned for some years ahead. The university is now turning its attention to internal reorganisation, to the use of television and other mechanical teaching aids and to the impact on the community in which it lives of the housing, transport and land which it needs.

Washington Takes to the Arts

LAST week, fourteen months after he had ushered in the Kennedy Administration as "a golden age of poetry and power," Mr Robert Frost, America's poet laureate in fact if not in name, came back to Washington to receive a medal from the President. He complimented Mr Kennedy on his "nice Irish weakness for the arts," a weakness which is also French apparently since it is shared, if not inspired, by Mrs Kennedy. Together they have brought a series of artistic occasions to the White House—concerts, theatrical performances and so on—that have not been rivalled since the days of Theodore Roosevelt; they have entertained a wide range of guests from the intellectual and cultural world; and Mrs Kennedy, with the help of an expert committee and many private gifts, has refurnished much of the White House. Now, 150 years after it was burnt by the British, it is a worthy residence for the President of a country which has a fine heritage in the decorative arts.

It is a heritage of which Americans are becoming increasingly conscious and last month Mrs Kennedy took 56 million of them on a televised tour of the White House—an experience which British viewers shared this week. Much of the interest, of course, was in the First Lady rather than in what she had to show but more and more the American public is admiring objects as well as personalities. Attendances at the Metropolitan Museum of Art in New York would have been over 3 million last year even without the display of the Rembrandt, purchased for the record sum of $2,300,000, which brought in 82,000 visitors in one day; and in Utica, New York, a town of 100,000 inhabitants, more than twice that number of people visited the rebuilt art museum in the first nine months after it opened. Symphony orchestras and chamber music groups abound; so do community theatres; classical recordings are bought by the ton; coffee houses offer opportunities to hear singers of folk songs and readers of poetry; and a brewer is

reported to have sold thousands of sweat shirts adorned with life-size portraits of Beethoven, Brahms or Bach which were an advertising offer "in accordance with our policy of bringing culture to the masses."

All of this suggests that President Kennedy will gain political support as a result of giving leadership in the arts, rather than lose it by his egg-head proclivities as some people feared. But whether he can induce Congress to approve the establishment of a Federal Advisory Council on the Arts remains to be seen. Meanwhile he has added a highly-qualified cultural co-ordinator to his White House staff, Mr August Heckscher, who thinks that America's cultural values have not kept up with its material progress. And the President and Mrs Kennedy are giving full backing to the National Cultural Centre which is to be set up in Washington as a much-needed "showcase for the performing arts"—and a rival to New York's Lincoln Centre—if enough money can be raised by the nation-wide appeal to be launched next November.

The theory is that the Federal Advisory Council, by offering the official encouragement to the arts that has long been provided in other countries, would prove to the world—and to artists—that Americans are really serious about culture. To be of any practical use, however, it would need money. One suggestion is that such help should take the form of grants to the states to stimulate their own efforts. Another is for direct federal outlays to bring the living arts to people in places where such performances are not available. This is already done by New York's State Council on the Arts, a pioneering effort pushed through the Legislature by Governor Rockefeller, himself a famous private patron.

Many people in the cultural world object to anything that would bring artists under even a modicum of congressional control. But, as the Secretary of Labour, Mr Goldberg, has pointed out, the

demands of the box office or of patrons limit the freedom of artists as much as a subsidy need do. He does not propose that the federal government should take over all, or even a major part, of the responsibility for the financial support of artistic endeavour. This, he believes, should be the duty of a six-fold partnership between the public (the principal source), private benefactors (who are helped already by tax concessions to be patrons of the arts), private corporations (which have recently become very active in this field), trade unions, local governments (which seem more ready to support museums than operas or orchestras) and last, and probably least, the federal government.

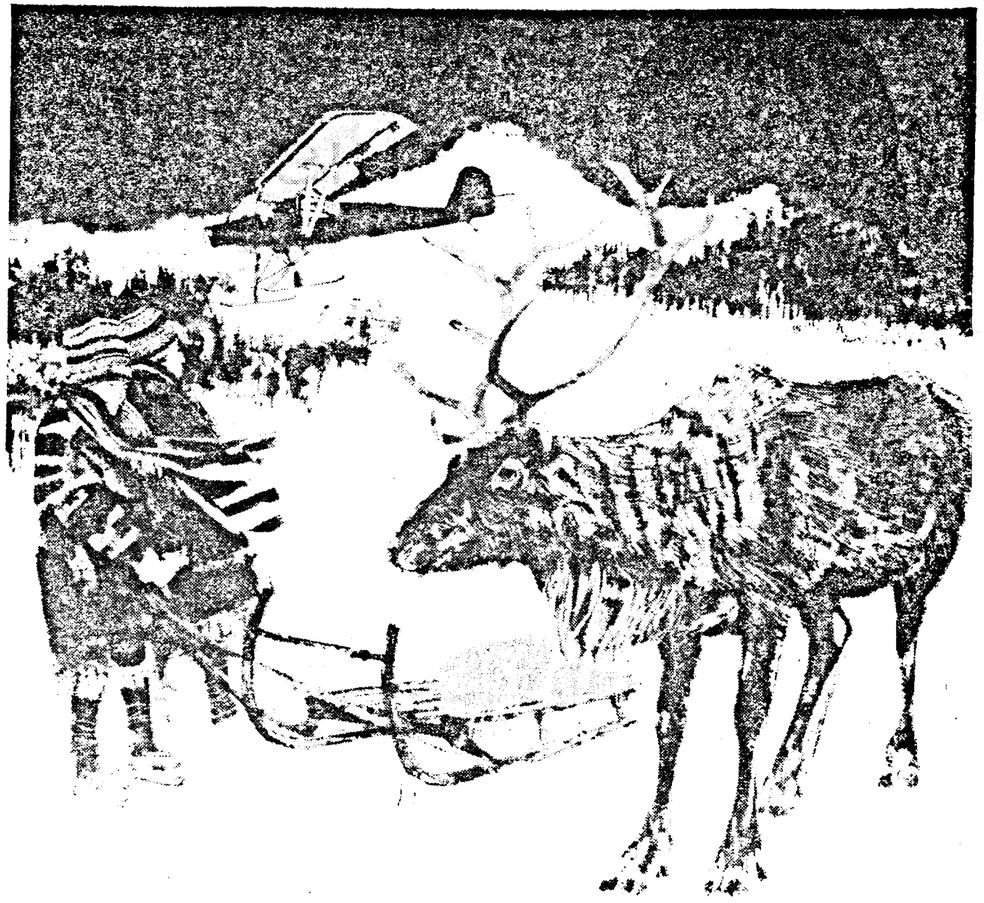
One reason why the arts still need help, flourishing as is the interest in them today, is that even this interest does not provide enough jobs for artists. Orchestras and opera companies, even in great cities, are run at a loss for short seasons only and cannot pay really adequate salaries. Mr Goldberg's own department does not advise any young person to embark on a career in the arts, even though Mr Goldberg himself regards them as a growth-industry. He entered the cultural world when he was called in last autumn to settle a wage dispute which threatened to keep New York's Metropolitan Opera from opening its winter season. Since then he has become, unofficially, the Cabinet member responsible for the arts, not at all unsuitably. One of the main concerns of the Secretary of Labour at the moment is the increasing amount of leisure, voluntary and involuntary, in America and this leisure explains why culture is booming today.

Tough Tariffs

MR KENNEDY evidently believes that, when foreign trade policy is involved, the end justifies the means. Last week, as the House committee began to hear evidence from the opponents of the new Bill which would give the President sweeping powers to cut tariffs, he took the wind out of their criticism by allowing substantial increases in existing duties on Wilton and velvet carpets and on cylinder, crown and sheet glass. These increases had been recommended by the Tariff Commission under the escape clause in the present legislation, on the ground that domestic manufacturers of these products were being injured seriously by foreign competition.

The increases served two purposes. They were evidence that Mr Kennedy was ready to be tough with foreigners if the interests of American producers required it. Further evidence of this kind had been provided a day earlier when the President had banned the entry of shipments of cotton textiles from Hong Kong because they exceeded the quotas accepted by that island's government in order to prevent disruption of the American domestic market. Together these moves should weaken what at the moment seems to be the main threat to the Trade Expansion Bill: it looks as if Congress may give the President the general authority for which he asks but with a strengthened escape clause and with other limitations on his ability to negotiate tariff reductions with other countries.

Secondly, these increases in duties should divide the opposition to the Bill. In the case of the textile industry, the strongest and most influential of the protectionist lobbies, criticism may be almost eliminated with both the cotton and the carpet manufacturers having reason to be satisfied with the President. The glassmakers, too, were in need of wooing for they had been infuriated by the reduction in the duty on glassware, breaching the peril point below which the Tariff Commission had said cuts should not go, in the latest American concessions under the General Agreement on Tariffs and Trade. If Mr Kennedy can buy off the domestic petroleum industry, perhaps by promising that quotas on oil imports will be held down to current levels, and the coal industry, with his legislation to facilitate the transport of coal by pipeline, then his new Bill should be almost safe.



But probably the President will still be given the authority for which he asks for only two or three years, instead of five. If this whole process has to be gone through again in 1964, he will be running short of sops for the opposition. Even worse he may find that Europe has come to distrust him so much that his bargaining powers are hardly worth having. Already the Belgians, who are the main sufferers from the higher duties on carpets and glass, are accusing him of being a protectionist at heart and they will hardly be appeased by the postponement of the new rates for two months, in order that orders which have been placed already may be delivered. The Japanese are also among the sufferers, but at least the President refused to raise the tariffs on others of their main exports—ceramic tiles and baseball gloves.

Last Post for Magazines?

WHETHER times are good or bad advertisers spend more on television each year, but the giant magazines are not insulated from recessions in this way. Last year television's advertising revenues grew by nearly 5 per cent, while those of the national magazines fell by 1.6 per cent. In the scramble to secure a larger share of this smaller cake *Look* and the refurbished *McCall's* did handsomely, but their two rivals from the Curtis Publishing Company—both of them household names—were hard pressed: the *Saturday Evening Post's* advertising revenues fell 18 per cent below those of 1960 and those of the *Ladies' Home Journal* by 4 per cent. So far this year both have continued to trail their competitors.

Critics of the Curtis empire, which goes back to Benjamin Franklin and is second in size only to that of Time, Inc., argue that old-fashioned management is partly to blame and it is true that even in 1960 the firm did not make enough to pay the dividends on its preference shares. Last year it certainly had a substantial loss. This faltering aroused the anger of some old shareholders and the interest of outsiders, who have been buying shares up, together they speak with the authority of almost a quarter of the total and they are now to be represented on the board. It has also brought big changes inside the company. The new editor of the *Saturday Evening Post* (normally the firm's big money-maker) is to leave after three months in which he turned the staid old weekly upside-down ; in future, to cut costs, there will be only 45 issues a year. At the *Journal*, which for four years has been fighting a losing battle with *McCalls*, Mr and Mrs Bruce Gould have left after twenty-seven years in the editorial chairs. It, too, will appear less frequently, only ten times a year. Both magazines will accept advertising for alcoholic beverages for the first time.

Up to now competition between magazines has meant a frantic race for bigger circulations, which justify high advertising rates. Many of these enormous circulations, achieved by offering cut-rate subscriptions, have been very costly to maintain and are likely to become more so with the probable rise in postal charges. It is too soon to say that the drive for higher circulation is slackening (though Curtis decided last year that the game was not worth the candle), but there seems to be a shift toward offering advertisers a better deal. *McCall's* has put more of the financial burden on readers by raising its price from 35 cents to 50 cents a copy and is cutting the cost of four-colour advertisements to that for black-and-white. The *Journal* is continuing a 10 per cent discount on advertising rates. With increased prosperity revenues are likely to improve. Whether there will be enough for everyone, or whether the *Post* and *Journal* will follow *Colliers* and the *Woman's Home Companion* into the graveyard remains to be seen.

Air attack on an Arctic killer

Against the snow the reindeer merge into one dark mass. The hum of an aeroplane circling the herd is almost part of the silence. Then the note rises to a whine as the machine dives, and there is the crack of a rifle. Startled by the noise, the herd move on, leaving behind them the grey shape of a dead wolf.

In Northern Norway these air hunts are the most effective way of keeping down the wolves which would otherwise kill thousands of reindeer each winter. And reindeer are the Laplander's sole means of livelihood.

The flying marksmen enable herd-owners to take the initiative against their traditional enemy. But organising the hunt means arranging for fuel to be delivered from Oslo, a journey of 1,500 miles by sea and land. And in winter the last 500 snow-covered miles can only be crossed by tractor.

Shell make this journey whenever it is necessary—just as they are making other difficult journeys all over the world to deliver aviation fuels. Sometimes the distance covered will seem uneconomic compared with the amount of fuel transported, but this is the kind of responsibility which Shell accepts in maintaining supply lines for oil and oil products in 130 different countries.

YOU CAN BE SURE OF SHELL

THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-seven territories extending from the Eastern Mediterranean to the Pacific Ocean.

Britain's Balancing Act

IN 1961, the year of sterling's greatest crisis, Britain almost certainly paid its way on current account and actually achieved a surplus in its basic balance of payments as well. This is the remarkable picture that emerges from the latest white paper on the balance of payments issued this week.* As expected, this document makes some major revisions in the previous series of figures; to a large extent, it reverses the unfortunate and, as it turns out, misleading revisions made by the Treasury statisticians a year ago, when the move to a new basis of compiling the estimates withdrew receipts from the classified categories and left them unidentified and uncredited in the swollen "balancing item." Overseas observers still find it hard to believe that, in the midst of a sterling crisis, Treasury chiefs should have let through a staggering increase in the recorded deficit which their own statisticians could not square with the other side of their accounts. But that is what happened; and now, a little late in the day, improved information is producing revisions in the other direction.

The outcome of the whole exercise is not likely to enhance respect for this crucially important statistical series. Thus the current balance for 1959 was provisionally estimated in March, 1960, at a surplus of £145 million; the 1961 revision axed this to £51 million; now the Treasury has pushed the figure up again to £115 million. The deficit for 1960, which at £344 million was as much as £200 million more than had been expected, is now pared down to £288 million. And the current deficit for 1961 is put at £70 million; this is little over half the figure that would have been expected on last year's basis of reckoning; moreover, the Treasury has admitted, short only of recording the fact in its tables, that this deficit was illusory. It has managed, first, to identify part of the previous unidentified receipts as current income, notably commissions on imports; and it has also found, from a belated survey, that a large part of the remaining mysterious receipts went into long-term, rather than short-term, investment.

In this way, the sum of unidentified receipts, which earlier figures had shown at £222 million for the first nine months of 1961 alone, has now been reduced to £81 million for the whole year. This is £11 million more than the recorded current deficit. The Treasury now brings itself to admit that "on present data, a reasonable hypothesis would be" that short-term capital movements were "probably negative" over 1961 as a whole (it was after all a year of sterling crisis); so the implication must be that the whole £81 million, and something more, represented unidentified current receipts, which, the Treasury now concedes, are "perhaps tending gradually to increase with the growth in the volume of transactions."

Britain's achievement of a true current surplus in 1961 is an important fact to get on record; and so, too, is the big change in Britain's long-term capital account. In other words, Britain has been contributing more towards meeting its net capital commitments, and has had smaller net capital commitments to meet, than previous official figures suggested. But this does not at all mean that the whole crisis was a phantom. For, apart from the statistical windfall, Mr Lloyd's July measures themselves contributed to the improvement. In the current account, this contribution is still inadequate, transient, and not very solid. On the capital side, it is much more rewarding, and the Treasury at last seems to be drawing the right lessons from it.

The improvement of over £200 million in the current balance between 1960 and 1961 was wholly in visible trade, where the true deficit narrowed from £391 million to £135 million. Exports rose and imports fell; but the rise in exports was limited to the first few months of the year, so that while the total for 1961 was higher, the trend was not rising; and the small drop in imports was plainly attributable to the reversal in stockbuilding and to the cutback in domestic production which followed the July restrictions. This is not a sound basis for the future; nor is the slight surplus in visible trade achieved in the last quarter anything like sufficient for external stability over the whole business cycle.

For, despite the discovery of the rather double-edged source of invisible income from import commissions, total invisible

* Excluding domestic use of gold, but including gold taken into reserves.

earnings continued to fall, though more slowly—to £65 million, compared with £103 million in 1960 and £219 million in 1959. Once again, the chief culprit was the Government itself; its net expenditure overseas jumped by £53 million to £337 million, more than £100 million above the total two years earlier. This year the Treasury should at last see some abatement here, as the agreement with Germany should bring in two annual amounts of £54 million. Net identified invisible earnings from all private sources actually rose slightly in 1959, by £15 million, to £402 million. Most of the main groups contributed to the modest improvement; the long deterioration in the shipping account was checked, with a fall in the net debit from £56 million to £50 million, despite a further rise in charter payments.

But while Britain's current balance certainly needs to be strengthened further, its overseas capital account has already been strengthened very considerably, and very usefully. The really striking figure in this white paper is "Balance of long-term capital, +8." This was admittedly a freak result, produced by official prepayments of debts to Germany and France amounting to £72 million and by the exceptionally large investment of £131 million in the Ford take-over. If these special items are allowed for, there is a residual net outflow of long-term capital of around £200 million. This is broadly the same as the outflow in 1960 and, allowing for special Government transactions in the other direction, much the same as in 1959. Yet the Government is now lending more to developing countries and private overseas investment by Britain continues at a very high level, some £350 million a year: the dip in 1960 was reversed last year, as a result, it is said, of a rise in investment by the oil industry and of smaller disinvestment through liquidation of African securities.

The explanation is that these massive overseas commitments, which have for some time appeared too large for Britain to finance out of its own current earnings, are now finding a substantial offset in the flow of capital into Britain —and above all of portfolio capital. The official figures, ridiculously, still lump portfolio investment together with direct investment by the insurance and oil industries. But it is quite clear that the jump from £26 million to £155 million in this item from the first to the second half of 1961 represented predominantly overseas investment in London securities. This is believed to have been split fairly evenly between equities and gilt-edged (in 1960, rather surprisingly, the rather smaller but still considerable inflow of portfolio investment appears to have gone entirely into equities, with some net sales of gilt-edged). Overseas investment on the London stock exchange has plainly been a major factor in the recent inflow of funds—which totalled about £300 million in all forms from the summer crisis until the year end. Nor do these figures of long-term investment include investments in local authority mortgages or any purchases of gilt-edged by official funds, which are both classed as short-term monetary movements in sterling balances or miscellaneous capital.

This inward flow of long-term investment capital, plainly, is not an automatic or permanent phenomenon. It depends, in particular, on the level of Britain's interest rates in relation to those of other countries. But a major support for the balance of payments is not to be despised because it can be regulated. The Treasury, which must after all be getting rather tired of its unending apologia for Britain's inadequate external performance, seems at last to be recognising its lifeline. It has not, officially, changed the estimate it gave the Radcliffe committee four years ago that to meet Britain's overseas investment commitments, and obtain a requisite strengthening of the reserves, scope needed to be found in the internal economy for a current surplus of £450 million. But since, quite evidently, a surplus of this kind has not been forthcoming, even when the domestic "room" has existed for it, it would be folly to miss the opportunity of scaling down the size of the net overseas commitment itself. The change of view since the Radcliffe statement is a change of concept. The capital account is no longer regarded as a fixed and unchanging burden; it is subject to influence, and notably to the influence of monetary policy. This is the Treasury's great discovery of the past few months. It should be communicated without delay to the Bank of England.

HOW JAPAN DOES IT—II

The Window Operation

Japan's economic growth in recent years has many causes. Last week's article discussed matters affecting management and labour. In this second article our correspondent examines the way in which credit and finance are controlled.

THE "Window Operation" is a form of moral persuasion exercised by the Bank of Japan over the commercial banks through monthly consultations at which the Bank of Japan reviews the trend of advances of each bank, the surplus or shortage of funds, the requirements it has to meet through call money or Bank of Japan borrowings, and takes a look at the next month's estimates for these items. If the Bank of Japan considers that the brakes should be applied, it declares an "overall loan level" and issues, if necessary, requests to the individual banks to reduce their advances, or to refrain from extending new ones, in order to meet it.

This mechanism is founded on no statute or administrative regulation, and is a source of some embarrassment to the Bank of Japan which would like to modify the system to accord more closely with western banking control; spokesmen for the Bank of Japan describe it as a subsidiary function to bank rate policy but it is in fact the main weapon of credit control. Now, as for many years past, the commercial banks keep their advances and discounts closely in line with their deposits from the public, supplementing their resources by loans from the Bank of Japan. These are marginal in amount, but they are the fulcrum on which the Bank of Japan exercises credit control. The foundation of the system is personal savings, rather than the creation of deposits in the British manner. The only way a bank can increase its advances in the short term is by obtaining increased loans from the Bank of Japan. These loans are nominally for three months, but are regarded almost as "reserves"; marginal adjustments are made but in the main loans are automatically renewed. They have to be. The Bank of Japan as lender of last resort has the whole credit structure in its pocket.

But the Bank of Japan exercises its control without ever actually refusing a loan; it does so through a schedule of "penalty" rates which it levies on about 5 per cent of its loans. The most important of these levies are at present about equivalent to 10.22 per cent and 9.5 per cent per annum (Japanese rates are fixed in 1/100ths of a yen per day). These are the rates levied on less desirable loans—the kind that in today's conditions, when passed on through the borrowing bank, are seen by the Bank of Japan to contribute nothing to exports or to stretch still further the already over-extended operations of the bank concerned. The banks themselves have their own schedules of rates for advances according to the status of their customers, and seldom meet a request with a blank refusal.

Apart from this general disinclination to say "no," the Bank of Japan itself has no liquidity ratios to observe and can legally print notes indefinitely. To a foreigner, the whole system presents a nightmarish quality. But the Bank has a highly-developed sense of responsibility and the business community and general public have complete confidence in it. Probably the main impediment to the efficient working of the system is political pressure; this certainly delayed the two increases in the Japanese bank rate last year. But since the war the system has weathered successfully two bad bouts of inflation.

There are other subsidiary means of credit restriction. Movements of the Japanese bank rate itself are taken seriously; all interest rates are related to it and a strong psychological influence is exerted by it. On the other hand, regular open market operations by the Bank of Japan are hardly possible since the volume of Government bonds is far too small—the last public issue was twelve years ago. This does not mean that direct fiscal receipts and payments have no influence on the money market; they have a considerable seasonal impact, but this is smoothed in various ways by the Bank of Japan (which acts independently from the Treasury), and the total fiscal effect is carefully assessed and adjusted if necessary during the year by one or even two supplementary budgets. The Bank of Japan cannot at present operate in government bonds, short or long term, as a means of credit control. But it can and does raise reserve requirements, that is the level of deposits which the commercial banks must keep with it. These frozen deposits, however, are far outweighed at the moment by the loans the Bank of Japan grants; the impact of its operations therefore is simply to raise the total interest payable on the net balance owing.

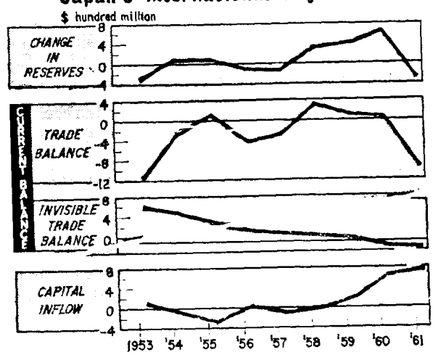
THE system is not as precarious as might appear. It is true that half the new capital raised by industry in each of the last five years has been obtained in the form of short-term loans, mainly from the banks, and is largely invested in fixed assets which cannot be realised within the nominal period of the loans. But the Bank of Japan claims that the natural growth of currency required to support the rise in Japanese output has been met by these loans—the function performed in Britain by expansion of Treasury bills, and in West Germany by purchases of rising foreign exchange receipts from the public. The banks thus regard their Bank of Japan loans with some justification as a continuing source of liquidity.

The Bank of Japan tries to put on the banks themselves the onus of keeping their advances within reasonable limits, and they for their part watch their customers carefully and do not

hesitate to put pressure on any debtor whose operations they regard as unsound. The whole credit system is founded upon popular savings. These are paid into the banks as deposits (the cheque system is hardly developed) at branches all over the country. More recently some savings have been diverted into the new investment trusts and thence into bond issues or equities, to the discomfiture of the banks; investment trust deposits were negligible in 1956, but by last year they amounted to as much as one-third of the banks' time deposits from individuals and nearly as much as postal savings. But these funds quickly flow back to the banks.

How successful have the monetary authorities been in damping down the boom by credit restriction since last autumn? In November there was little to show for it, although there were reports of a growing tightness in the money market. In December bank advances and Bank of Japan loans rose once more, owing to end of year requirements, but in January the process appeared to have stopped and Bank of Japan loans even fell. Meanwhile, bankruptcies increased and the Government had to take special steps to aid small firms. The restriction of credit is now severe.

It was called into being by the need to correct the sharp deterioration in the balance of payments. The deficit on trading account began to rise early in 1961, and the gold and foreign exchange reserves began to fall in May. Imports were sucked in by the investment boom, which last year gathered renewed strength from two sources. First, manufacturing companies were concerned to be competitive once it was clear that the Government was determined upon trade liberalisation in October, 1962; secondly, the publication of the Ten Year Plan led many firms to plan for themselves a generous share of the official target for their industry. September last year was a particularly bad month, since there was a rush by importers to bring imports in before September 18th when importers had to make bigger deposits or guarantees.



The first move to deal with this situation was a formal request to the banks in July last to cut by 10 per cent their loans to customers for the purpose of capital investment, and the measures described above followed. But other factors were involved. Short term and long term capital movements have played an integral part. Between January and March, 1961, the considerable current account deficit of $248 million was more than offset by a large net inflow of short term capital amounting to $382 million. This inflow resulted mainly from an increase in import credits, which were relaxed during the last quarter of 1960 and the first quarter of 1961, and from a hot money influx following the establishment of the free yen account in July, 1960, mostly in the form of Euro-dollar deposits. In April-June, 1961, this flow was slightly less at $225 million against an even larger current account deficit of $360 million, but in the next quarter it was already negative, behaving as hot money always does when gold reserves fall and the outlook becomes unsettled.

Long term capital movements, however, continued favourable throughout the year, amounting to $163 million net receipts for 1961 compared with nil in 1960. This change has been attributable mostly to increased loans in the private sector; in the six months April to September, 1961, these showed a threefold increase to $133 million compared with the previous six months. This $133 million consisted of $62 million of direct investment loans, $50 million of investment in securities (the biggest proportionate increase) and $21 million of other items. The interesting point is that the confidence of the long term investor was not shaken at all by the overheating of the economy last summer, nor by the exit of the hot money. According to the Ministry of Finance, in the twelve years 1949 to 1960 $149 million has come in from abroad for investment in securities of all kinds and $828 million in loan investments.

The net effect was that when the inflow of short term loans was reversed in July-September, the long term capital inflow was nowhere near large enough to offset the current account deficit and the gold and foreign exchange reserves fell by nearly $300 million in that quarter. This brought them down to $1,610 million—not far from the psychological danger level of $1,300 million. It was then possible for the Bank of Japan at last to persuade the Japanese Government to take steps to damp down the import boom. At the same time foreign loans were raised as a safeguard—$200 million from American banks and a stand-by credit of $305 million from the International Monetary Fund.

It seems that the deterioration in Japan's balance of payments has now been stopped; will there be an improvement in 1962? The Ministry of Finance and the Bank of Japan always said that the rot could be stopped; but they were less optimistic about the possibility of getting exports increasing again. Yet this must be done both to market the increased output coming in 1962 from all the plant and equipment installed in 1960 and 1961. Japan hopes to increase exports of light manufactures to America and Europe, where it has a comparative advantage in costs, and to sell more heavy industrial and electrical goods to the underdeveloped countries of South East Asia. Unfortunately, America is in a defensive mood, caused by the weakness of the dollar, and although Europe has afforded a growing market for Japan in the last five years, it discriminates under Article 35 of Gatt. South East Asia is short of free funds, since much of its aid consists of tied loans favouring other exporting countries; only cars and machinery look promising for Japan in these countries. Japan will need to correct its own behaviour in subsidising exports in various ways, before its campaign against Article 35 makes much headway. But a country that can produce, for example, superb cameras of its own original design far below the cost of any other country should not for long be short of European markets. Nor should it take long to expand in South East Asia. And Japanese cars may be really competitive, within a year or two.

Japan's International Payments

Changing Views at the Bundesbank

BY OUR SPECIAL CORRESPONDENT

THIS week's new fall on the German stock exchange, which brought average share prices almost one third below their peak of summer 1960, was set off by the sombre warnings ("Have We Lost Touch With the Possible?") broadcast by Dr Erhard last weekend. Economic homilies of the kind that have become almost routine in Britain over the past decade and a half are getting an unfamiliar airing in German, as our Bonn correspondent reports on page 1240. But the transformation of the miracle of inflation-free growth to the ordinary pressures of full employment has been anything but sudden. The German central bank, in particular, voiced loud warnings against wage inflation two years ago, when the "Blessing memorandum" set down 4 per cent as the safe figure for wage increases in 1960; a few months later it declared openly that the boom in share prices had gone dangerously far. In the event the actual increase in wages was nearer 10 per cent, in 1960 and this was repeated in 1961 and is now in prospect for 1962.

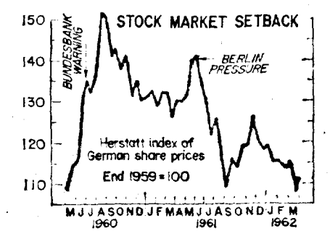
In retrospect at least it appears that the Bundesbank cried "wolf" too early; industrial prices rose by only 1.2 per cent in 1960 and 1.5 per cent in 1961. But the Bundesbank derives little comfort from this. Prices of services, and notably of housing, have increased substantially and in the central bank's view the maintenance of general price stability demands a fall in industrial prices, in line with gains in industrial productivity. In any case, German industry has been able to hold the price line only with the help of revaluation (which lowered import costs) and, more important still, by accepting a sharp squeezing in profit margins. The Bundesbank believes that this process is near its limit and, accordingly, that industrialists will themselves be more resistant to wage claims. It declares that if excessive wage increases erode profit margins further, this will discourage investment and thus increase the danger of recession or at least the pause in expansion that some German commentators (notably the Berlin Konjunktur Institute) fear; others, notably the Munich Institute, see the present pause merely as an inventory adjustment and expect expansion to be resumed in the spring. Ordinarily, one would expect higher wages to encourage investment; but the Bundesbank argument, which is on the lines of the concept of pricing oneself out of one's own market, recently expounded by Dr Per Jacobsson, makes sense when it is considered in the wider context of what the financial authorities may be forced to do to maintain financial balance, internally and externally. The Bundesbank recently wrote:

> The course of events in certain other industrial countries, where excessive cost increases during recent years were evidently a material reason for the much regretted slowing or even stoppage of "growth," gives a clear warning in this respect.

British readers should get the Bundesbank's point.

THESE domestic pressures in Germany's economy are now, at last, having a clear impact on the balance of payments, and to this extent at least they are welcome even in Germany. While the trade surplus for the whole of 1961 was, at a mammoth 6.6 billion marks or nearly £600 million, still larger than that for 1961, the trend over the year as a whole was plainly downward: in the last quarter exports were below their level a year before while imports were up 3½ per cent by value and 7½ per cent by volume. In the first two months of this year the trade surplus almost ran off. This was partly a freak result, but German officials are certain that the surplus for 1962 will fall substantially. The deficit on services and donations is still growing, and the total current surplus is expected to be 2½-3 billion marks in 1962. This compares with 3.3 billion marks in 1961 and 4.4 billion in 1960; and it should be almost covered by disbursements of overseas aid from public funds. Some 5½-6 billion marks is allocated for 1962 and 1963 together, though the actual outflow is likely to be rather smaller.

The German authorities now consider their external payments to be in basic balance. They recognise that the fall in official reserves in 1961 reflected special, non-repeatable transfers such as prepayments of debt, but they maintain that the smaller current surplus will now be broadly offset by the official exports of capital. As a result, less emphasis is now being placed on fostering the export of private capital. Official attempts to encourage this from 1958 onward met with distinctly limited success. German investors proved doggedly suspicious of bond yields much below 6 per cent, and while the bond market is in better shape now, helped by some alleviation of the Berlin tension and by the uncertainties over the share markets, commercial interest rates in Germany are still high by international standards. Not many borrowers would be willing to concede the yield of 7¼ per cent which recently had to be offered to German investors by the city of Osaka.



The Bundesbank still aims to reduce the structure of German interest rates, but it feels from its recent experience that it cannot force the pace. At the same time, the central bank is also having second thoughts about its inducements (at times almost amounting to bribes) to commercial banks to transfer short term funds abroad. The German banks have been using overseas money markets, and above all the Euro-dollar market, as their first cushion of liquid reserves, in much the same way as the English banks use the London call money market. The upshot has been that technical factors such as the incidence of tax payments in Germany have caused massive transfers of foreign assets into or out of the Bundesbank, and a good deal of international confusion.

The Bundesbank has now realised that these temporary transfers in the ownership of the same dollar deposits between itself and the commercial banks make no real contribution to easing the pressure of the German surplus; and the big external cushion of the commercial banks adds to the Bundesbank's own problem of credit control. The central bank would much prefer to operate through a genuine domestic money market of its own; this has been hampered hitherto by the dearth of public debt. The era of cash surpluses in the Federal budget is now over; and, a little bashfully, the Bundesbank is recognising that a larger national debt will have its constructive uses.

BUSINESS NOTES

RAILWAY FARES

Getting What They Can

THE increases of fares on British Railways and London Transport trains announced this week were large enough to produce the standardised protests from travellers and socialists—who appear to believe that this item of consumer expenditure should be isolated from questions of cost—but it will probably add only £8.8 million to the British Transport Commission's revenues. As the commission expects to lose £146 million this year, consumers of transport are hardly being asked to make a huge contribution to the BTC's solvency. And since most of the loss seems to be incurred by lines in the more remote parts of the country, travellers on trains that may be showing a profit (like the Western Region's mainline expresses) would have cause for grievance if they had further to subsidise services for the Scottish highlanders.

The new increases apportion the burden evenly between the commuter and the occasional traveller: season ticket rates go up by ten per cent, ordinary train fares by nine to ten per cent (to 3d. a mile second-class and 4½d. first class), while single and day return fares in the London area go up by odd pennies—though this can mean 20 per cent. There is an economic case for larger increases in season ticket rates than for the ordinary fares; especially on the shorter journeys—under about 20 miles—commuter services tend to be unprofitable. There is no real competition to be feared from public road transport on such routes, though some few extra motorists may choose the pleasures of the jam. On long intercity journeys, however, road and air competition are real problems that the railways have to face. The special low fares that they have introduced as a counter to the coaches on routes where they were eating into the railway's traffic are unlikely to be raised. Aeroplanes are reckoned by the BTC to gain their traffic more by speed than by cheapness: so it doubts whether higher fares on the routes concerned will make a significant difference to its competitiveness. But in reckoning that the increases will add only £6 million to British Railway revenues it is assuming that they will drive away traffic to the value of another £6 million. The LTE, in its monopoly position, expects to lose little traffic from the fare increase.

Freight rates, like the special fares, are too closely governed by road competition for any significant increases to be likely. Reducing the BTC's £146 million deficit must therefore depend mostly on cutting expenditure. But there might be a little more to be gained from commuter services if fares were adjusted more closely to demand. There are already lower fares in the middle of the day, and some discount on season tickets too for off-peak travel; but these concessions are limited and generally small. The BTC may therefore try the effect of bigger variations with the time of day in all fares, including seasons, to give a real incentive to passengers to spread their travel in a more economic way. Dr Beeching has emphasised that conditions cannot improve until working hours are staggered—and that fares are too low at peak hours. And fares outside London may also vary from line to line once the railways are free from statutory obligations. While the railways remain able to apply a flexible pricing policy to freight, a similar approach is appropriate for passengers too.

RATES

Industry Pays

ANYONE who suspected that the Government would not have the courage to follow through the good intentions of the 1961 Rating and Valuation Act finds his worst suspicions now confirmed by the first official figuring on the 1963 revaluations released by Dr Hill, the Minister of Housing, last week. Under the new valuations the householder's share of the rate burden will on average fall by 1.6 per cent, while industry's share will rise by 43 per cent.

When industrial and commercial properties were last revalued, in 1956, industry's share of the rate burden increased by 48 per cent and that of householders fell by

CHANGES IN THE RATE BURDEN
(England and Wales)

Type of property	Before revaluation £m.*	Before revaluation %	After revaluation %	Change in share %	Valuation multiplier
Houses	353·4	42·04	41·35	− 1·6	3·6
Industrial	80·4	9·57	13·71	+43·3	5·2
Commercial	189·8	22·60	19·65	− 13·1	3·2
Crown	73·2	8·71	6·66	− 23·5	2·8
Miscellaneous	37·6	4·48	3·45	−23·0	2·7
Rate-deficiency grant	105·8	12·60	15·18	+20·5	4·4

* Total rates and rate-deficiency grants for 1961–62 estimated by Ministry of Housing at about £840 million.

17 per cent. Industrial properties were then rated at 50 per cent of their 1956 values and commercial properties at 80 per cent of 1956 values. Houses continued on their 1939 values. From next year all groups will pay rates on full current values. Outside observers had supposed that this up-

valuation would mean a substantial increase in the householder's share of the rate burden. Mr Brooke, when he introduced his Rating and Valuation Bill, seems to have supposed much the same thing. Why else should he have taken temporary powers to derate private dwellings where the increase proved too sharp?

How then has Mr Brooke's successor managed to produce such a widely different result? Dr Hill's valuations have not understated the increase in domestic values since 1939, as some people may have thought; what he appears to have done is to inflate the rise in industrial rents since 1956. In the new valuation lists, as the table shows, the value of domestic property has in effect been multiplied by about 3.6, after allowing for the new statutory deductions for the cost of repairs. From this it can be calculated that industrial valuations have been multiplied by 5.2. This increase compares with outsiders' guesses of a multiplier for industrial property of between 3.0 and 3.5.

Valuation is by no means an exact science but a multiplier of 5.2 for industrial property is higher than experience would suggest. It implies, after allowing for the removal of the 50 per cent derating, a rise in industrial rents of 2.6 times since 1956, compared with a rise of 3.6 in domestic rents since 1939. This again puts in question the principle that the new valuations should put all types of property on an equal footing. The raw deal that industry is about to receive will increase the ranks of those who feel that site value rating, or rating according to numbers employed, would be better than relying on a system that no Government seems to be capable of running fairly.

PUBLIC INDUSTRIES

Bogeys for the Boards

MR RONALD EDWARDS, chairman of the Electricity Council, and the council's other permanent members may have had some arguments from the operational board chairmen who make up the rest of it when these saw each others' financial objectives for the next five years, and those of the gas industry. In electricity, the figures of gross return and surplus that each board is being asked to aim at, on the average, between now and 1966-67 are set for individual boards by the Council. In gas, with its less centralised pattern, each area board conducts its own negotiations with the Ministry of Power and at one remove with the Treasury. The Council has accepted a higher rate of return as an objective for electricity than follows from averaging the figures accepted by the gas boards: moreover, in both industries there is quite a range between the "bogey" rates of return set for different boards.

These rates—averaging 12.4 per cent for electricity and 10.2 per cent for gas during the period—are gross, before depreciation or interest, on the net value of the boards' whole assets (those existing, of various ages and written-down book values, and those that the industries plan to bring into being during the next five years). Differences in age pattern of assets, apart from other factors, offer plenty of reason for variance in returns so calculated, between and within industries; no outsider can hope to judge

Percentage Rates of Gross Return on Net Assets for Boards to aim at between 1962/3 and 1966/7

Boards*	Electricity	Gas
London	11·9	
North Thames		9·5
South Eastern	13·0	10·1
Southern	12·4	9·5
South Western	14·0	9·8
Eastern	12·8	10·0
East Midlands	12·5	10·4
Midlands	12·6	
West Midlands		10·6
South Wales	12·4	
Merseyside and North Wales	12·9	
Wales		10·0
Yorkshire	12·5	
Northern		10·4
North Eastern	12·7	10·6
North Western	12·9	11·2
Scottish		10·9
South of Scotland	"about 12½"	
National average:		
England and Wales only	12·4	
Great Britain		10·2

* Gas and Electricity areas with similar titles are not coterminous.

the objectives set particular boards. So far as new investment is concerned, there would be a *prima facie* case for requiring similar returns on capital, or at least for showing good reason for departure from one level.

The rates of return now set as objectives are each over two per cent higher than these industries achieved in the five years 1955-59* (10.0 per cent for electricity and 8.3 per cent for gas). They will involve gas in earning a total surplus for the five years of £54 million, and electricity in earning one of no less than £336 million. The Electricity Council will have its problems, too, in keeping £67 million of surplus each year out of the hands of trade unions—and consumers.

*As set out in Cmnd 1337 "Financial & Economic Obligations of the Nationalised Industries" last April.

THE EXCHANGES

Sterling See-Saw

LAST week's surprise cut in Bank rate to 5 per cent was followed by a relatively sharp fall in sterling, from $2.81⅛ to only just over $2.81 on Monday. By the middle of this week, however, sterling had staged a recovery to $2.81⅞; and while the cut in Bank rate appears, momentarily, to have checked the inflow of funds, there is no reason to believe that the Exchange Account sustained a net loss of dollars from the reserves. The figures for March as a whole which will be released next week are expected to show an appreciable true increase. The actual change may be affected by another repayment to the International Monetary Fund, by Australia this time, of the whole of its drawings a year ago of £A78 million (£62 million sterling). The repayment leaves Australia's reserves at a comfortable £A530 million.

The weakening of sterling at the end of last week was attributable partly to some bear selling of sterling by speculators in Paris and elsewhere, who were duly discomfited by the midweek recovery. Another element which has blurred the real impact of the Bank rate reduction on the flow of international funds has been the approach of March 31st and the ensuing window dressing by Continental banks and corporations in preparation for accounting make-ups. Money has been extremely tight in Germany and the commercial banks have been busily turning in foreign bills and deposits to the Bundesbank—this is reflected in the rise of DM 850 million (some £76 million) in the Bundesbank's external reserves in the first three weeks of March. These operations have their first impact on the dollar, but sterling and the dollar have recently been moving very closely together against the Continental currencies. By midweek the German money market had eased, and the dollar rose in Frankfurt from 3.9910 to 3.9985-90. The Swiss franc, following a temporary recovery, has weakened again to near 4.34½, the effective support point of the Swiss National Bank.

AIRCRAFT INDUSTRY

Supersonics and All That

ON Monday, the Minister of Aviation had another of his cosy chats with his French counterpart, M. Buron. Then they announced that a joint design study was to be commissioned from the British Aircraft Corporation and Sud Aviation for a dual-purpose supersonic airliner capable of being produced in long and short-range versions. Both ministers confirmed that this agreement does not commit either side to build the aircraft that emerges. Indeed any request by Mr Thorneycroft to the Treasury for the £50 million or so that is the (very modest) current estimate of Britain's share of the actual costs of building it would get a poor reception today.

The Ministry of Aviation would be failing in its duty if it were not thinking hard about supersonics; this is the logical next step in civil aviation, even if it is fifteen years or so away. But the blinkered view that the Ministry is taking of what a notional supersonic airliner and its market may be is quite terrifying. There are two ways of building this airliner, one easy and one hard. The easy way is to build it out of light alloys, in which case its speed will be limited to around twice the speed of sound and its potential for future development will be nil. The hard way is to build it out of steel, which may take longer but will give an aeroplane with scope for development, since the structural material will not melt under the speed-induced temperatures that would burn up a light alloy aircraft. Whoever builds a light alloy aircraft may find himself having to design a second, different steel one, incurring two sets of development costs in a relatively short period. It is this fear that has made American manufacturers opt for a steel aircraft, although this may not fly much faster at the start of its career than the Anglo-French light alloy design because other materials besides the basic structure succumb to heat.

Are the British and French right to ignore the use of steel in this cavalier fashion? Mr Thorneycroft missed the opportunity provided by last week's debate on the aircraft industry to explain what arguments have convinced his Ministry. He did, however, throw in one important aside—to the effect that support was to be given to investigations on aircraft with jointed wings that can change their form in flight. And there are scientists who think that no supersonic airliner will take the air without a device of this kind to mute its sonic bangs.

BUSINESS AHEAD

Engineering Orders Fall

NEW orders from the home market for the engineering industries fell in January, but there was little change in export orders. Though orders do fluctuate from month to month, a fall of six per cent in home demand from the already reduced rate of the second half of last year confirms other indications—such as the fall in demand for iron castings—which had suggested that the longer-term outlook for engineering is now rather less expansive. The export position continues to look a little healthier, with orders only three per cent lower than in the last quarter of 1961 and still above those of a year before; but they are too small a proportion of the industry's total activity to offset the fall in home demand. Despite the usual fall in output in January—still five per cent higher than a year before—the orders that the industry had on hand at the end of the month fell for the fifth month in succession, until they were back to the level of January, 1961.

Less Work for Builders

THE new commissions received by private architects—which seem to give an indication of the trend of new orders for contractors some nine months ahead—continued to fall in the last quarter of 1961. A drop of nearly 50 per cent in the commissions for houses from private owners and developers accounted for most of the

decline. New commissions for other sorts of private development—such as offices and factories—showed a rather surprising recovery in the last quarter, though this survey probably covers too small a sample of such work to provide conclusive evidence of trends. But the signs that demand for private houses is already dropping enough for builders to be noticing the effect—after a year in which the value of architects' commissions were 23 per cent. below the 1959 level—is reinforced by the results of an enquiry made by the National Federation of Building Trades Employers among 500 of its members. This showed that many of the smaller firms—likely to depend most on housebuilding—now have less work on hand or ready to start than of late, though the bigger companies are mostly quite busy and have a fair volume of work coming forward.

IN THE MARKETS

Post Bank Rate and Pre-Budget

LAST week's reduction in Bank rate to 5 per cent helped to steady the equity market after the steep fall which had been occasioned by fears about the capital gains tax and was sharpened by Lord Ritchie's outburst. The Governor of the Bank of England, Lord Cromer, added a steadying voice this week:

> I am sure that the financial community is eager to play its full part. There need be no doubt of its readiness to support, to the best of its ability, governmental and national efforts to strengthen our international position.

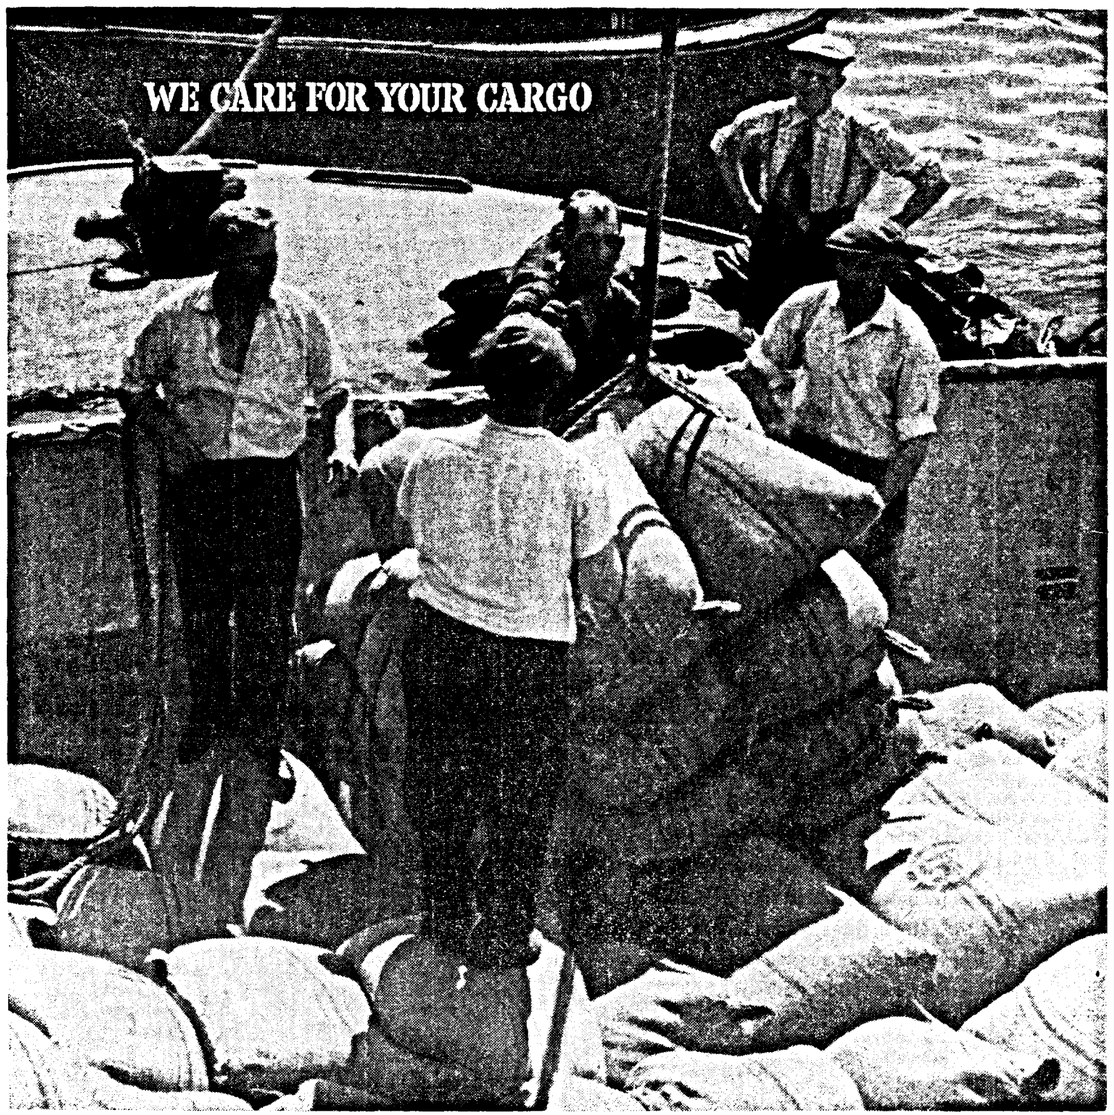
The capital gains tax is only a few days away and this week it has again been a major factor in the uneasy drifting of prices in the equity market. The fall in prices has not been as sharp as it was before the reduction in Bank rate, but *The Economist* indicator lost 1.6 points to 346.3. The indicator includes "Imps" and "Bats" which, along with Gallaher, dropped sharply before the week-end, and rallied slightly this week. Though the further cut in Bank rate surprised and pleased the market, few investors are prepared to make any large commitments ahead of the budget. Apart from the capital gains tax investors do not expect the budget to be unduly restrictive; on Thursday they were cheered by the improved payments figures from the Treasury. But fears for the medium-term economic prospect remain.

Following the increase in railway fares, indeed, the gilt-edged market was just a little affected by its old inflation fears. Sterling, moreover, weakened initially after the reduction in Bank rate and this also kept the gilt-edged market quiet. The short-dated bonds were marked up in response to the sharp fall of 8s. 7.10d. per cent in the Treasury bill rate to below 4½ per cent; but later these gains were largely lost. And long-dated and undated bonds did in fact fall back a little from the level they had reached on the eve of the Bank rate announcement. The head of steam has been absent from the gilt-edged market for some weeks, partly because investors have taken notice of the counter attractions of new issues of fixed interest stocks. Dunlop's £12 million offer of a 6¾ per cent debenture at 98½ was, for instance, oversubscribed twice and dealings began at ⅞ premium; the price later improved to 1⅛ premium.

Taking Their Bow

THE convertible loan stock offered by ICI for Courtaulds ordinary stock and the 7 per cent loan stock created by Courtaulds through a capitalisation of reserves also took their official bow in the stock market this week. ICI's 6½ per cent convertible opened at 105½, touched 106 but fell back later to 104⅝. At this price, it imputed a value of 52s. for Courtaulds ordinary stock. For inexplicable reasons of their own some 800 shareholders in Courtaulds assented to the ICI bid, not for convertible loan stock, but for the share offer of four ICI for five Courtaulds. In all, about 260,000 new ordinary shares in ICI have been issued in exchange for about 325,000 shares in Courtaulds; with ICI ordinaries standing at 54s. 9d. this imputed 43s. 9d. for Courtaulds ordinaries, over 8s. less than the loan stock offer was worth. ICI had given early assenters to the bid in ordinary shares a chance to withdraw and shareholders who did not get the best price

HIRE PURCHASE



Jungle Warfare?

AFTER an odd hiatus of a fortnight, the hire purchase trade's reactions to the torpedoing by United Dominions Trust of the Finance Houses Association's 10 per cent limit on dealers' commissions have come thick and fast. A full-scale commission war is now under way, and two members of the association have resigned, giving unconvincing reasons. They are both small companies, but their departure must inevitably weaken the association's influence still further. Wagon Finance, one of the more prudent houses, has resigned in protest against UDT's action. Campbell Discount, with a new chairman sympathetic to UDT's ideas, has apparently resigned in order to be able to compete more aggressively outside the limitations of FHA rules—which no longer cover dealers' commissions but still cover terms (minimum deposit and maximum periods of repayment that are perceptively stiffer than the statutory limits). Campbell Discount, which expanded its business dramatically fast in 1959-60, has now announced a trading loss of £455,000 for 1961, and Minster Trust, the major shareholder, has made an interest-free loan of £500,000 to the group, to cover money lent by depositors and bankers.

None of the bigger companies looks like following the lead of these two; in fact, they appear to have realised that there is now more need than ever to keep the FHA intact and to stop the rot from spreading. This has not stopped them from speaking their minds about UDT. Mr R. A. Dyson, in his annual statement as chairman of British Wagon, in which the Three Banks Group has a 40 per cent interest, says that UDT's action "does nothing whatever to stimulate trade but represents merely an attempt to buy the connections of other companies, which must take counter action." Other members of the industry are saying much the same things privately, and they deplore the refusal of UDT to live up to its responsibilities. Meanwhile, Mr J. Gibson Jarvie, chairman of UDT, states in a letter to stockholders that UDT's new commission rates "must benefit" both dealers and car buyers and that they "go at least some way towards cleaning up the mess and the bad practices for which we are in no way responsible." The industry's troubles, he says, "were inspired by the determination of our competitors, or many of them, to take accounts from us," and he add that UDT was in no way responsible for the "crazy competition or for the fabulous losses." This is strong stuff, but Mr Jarvie ignores the fact that, just as UDT began the terms war in 1958 that played a major part in encouraging defaults, so it has now begun a full-scale commission war from which nobody but the motor dealer can expect to benefit.

Limit on Charges?

ALL the major companies seem to have increased their commissions in line with UDT's sliding scale of up to 20 per cent, with up to half the commission tied to experience with bad debts, but most companies are also offering their dealers the alternative of a straight increase in the flat commission of 15 per cent or more. Many of the bigger motor dealers report assiduous soliciting from all the companies and some dealers have been offered rates of commission of 22½ per cent. Commissions on this scale will cut deep into the finance companies' profit margins. The finance houses appear to have reduced their service charges by ½ per cent to 8 per cent flat on new cars; but Bank rate, to which their borrowing costs are directly tied, has fallen a full one per cent. Higher commissions to dealers must keep charges to the public higher than they need be. The industry's behaviour is capable of provoking the Government to step in with statutory limits on hire purchase charges.

IHI's after-service is your assurance of quality

IHI's many-sided operations include the designing, engineering, procurement, and construction of chemical plants and components. After installation IHI backs up its products with continuous, expert after-service, sending many technical consultants to perform on-site supervision.

From tanks, kilns, digesters, and vacuum distilling apparatus to chemical plants, oil refineries, paper mills, and cement plants, IHI's processing plant production ranges over the entire field of industrial chemistry.

IHI is Japan's leading heavy-industry company. In addition to chemical plants, it designs and manufactures all kinds of heavy equipment — from ships, engines, and boilers to heavy machinery for use in the construction, iron and steel, power generating, and mining industries. Brochures outlining IHI's capabilities and our informative quarterly "IHI Letter" will be sent on request.

IHI — Ishikawajima-Harima Heavy Industries Co., Ltd.

have only themselves to blame. Over 60 per cent of the Courtaulds ordinary shareholders preferred to stand by their directors, whose promises and forecasts seemed to underpin a prospect for the shares at least as good as that claimed for ICI's bid. Among the inducements offered by Courtaulds was 10s. of 7 per cent loan stock and a tax-free distribution of 2½ per cent for the next three years on every ordinary share. Dealings in the loan stock began at 101 and the price improved later to 102; thus each Courtaulds share had about 10s. 3d. in the equivalent of cash attached to it and another 6d. actually in cash from the first of the capital distributions. Ex these distributions, Courtaulds ordinaries were quoted at 40s. 9d., so that their total worth (including the distributions to come) was 52s. 6d., slightly above their equivalent value in terms of ICI convertible loan stock.

BANK CREDIT

Advances Slow Down

THE rise in net advances by the clearing banks slowed down from £113 million in the five weeks to February 21st to £38 million in the four weeks to March 21st: this is in fact the smallest March increase for many years. Advances by the Scottish banks rose rather more sharply, by £9 million to £382 million. Although part of the deceleration from February at the clear-

ing banks is attributable to a turn-round by nationalised industries—for all other borrowers the rise in advances was £93 million in February and £46 million in March—it now seems to be confirmed that there has been no dramatic change in bank lending policy. The big factor in February was the heavy concentration of tax payments, which continued in minor key in March. In the two months together, advances have risen by £151 million; this is smaller than the increases at this season during the period of rapid expansion of advances in 1959 and 1960, but it is well above the increases in other years. The banks believe that industry has been forced to lean more heavily on the banks for their tax payments this year, when taxes on a year of good profits have been paid at a time of narrowing profits. So the underlying increase in advances following the sharp cutback of the second half of 1962 appears to have been modest, and the monetary authorities in their present mood find this quite acceptable. Bank liquidity at the seasonal low point for the year is comfortable without being excessive. At 32.6 per cent there are two and a half points in hand —and the authorities can release a further three from special deposits whenever they wish.

BRITISH BANKERS' ASSOCIATION
(£ million)

	3 months to Feb., 1961	3 months to Feb., 1962	12 months to Feb., 1962	Total at Feb., 1962
Personal and professional	+ 9	+ 8	− 19	672
Hire purchase	− 3	− 11	− 29	105
Retail trade	+ 7	+ 26	+ 11	381

Other groups	− 13	+ 13	− 10	191
Change in total	+147	+159	+132	3,849

Recent increases in advances have been widely spread over the main categories of borrowers. The detailed classification of advances by all members of the British Bankers' Association shows that twenty of the twenty-six individual groups of borrowers participated in the total increase of £159 million in the three months to mid-February. Personal and professional borrowers increased their advances by £8 million, following a cut of £40 million in the previous quarter, and retail trade was up £26 million following a decline of £12 million. The banks still applied a severe curb on the hire purchase houses, whose advances were cut by another £11 million; but the "other financial" group showed a renewed expansion, by £8½ million to £344 million. In industry, by far the sharpest increase was for the chemical industry, whose advances shot up from £46½ million to £67¼ million for no very obvious reason. The big engineering group increased its advances by a further £33 million to £522 million.

ENERGY

Governments at Each End

ON April 5th, the Organisation of the Petroleum Exporting Countries begins its fourth full meeting, in Geneva, and the Council of Ministers of the European Coal and Steel Community begins an "informal" meeting on energy policy in Rome. The juxtaposition in time is fitting: these European ministers, wearing the ECSC hats in which they rule these particular discussions, are the nearest thing to an Organisation of the Petroleum Importing Countries that so far we have. And if their quest for a common energy policy in Europe is proving a long and weary one, well, OPEC has not yet found itself an effective policy either.

Its Geneva meeting, unhappily, seems likely to be bereft of the liveliest presence associated with the establishment of OPEC, Shaikh Abdullah Tariki of Saudi Arabia, who was not re-appointed oil minister when Prince Faisal returned to head the government there last month. His successor as oil minister is a distinguished Saudi lawyer, not yet presumably as immersed in and fanatically fascinated with oil affairs as Shaikh Abdullah has long been.

The change may leave Dr Perez Alfonzo of Venezuela as the main theorist of collective action through OPEC. Iraq decided to go it alone in unilateral action in a dispute that admittedly pre-dated the formation of OPEC: it has asked for fellow-members' support of its expropriation of unexplored areas of the IPC group's concession area, but nothing very positive, at present, may be required. Kuwaitis directly concerned with oil have in recent weeks shown signs of a less moderate and complaisant attitude towards the oil industry than is generally associated with their quiet, super-affluent shaikhdom. The government of Iran, however, has recently achieved apparently satisfactory settlement of various outstanding minor issues with the oil consortium operating there.

The OPEC members' attitudes towards the industry, therefore, may be mixed. They will begin the meeting armed with much advice from economic consultants in the West about prices and rates of return in the oil industry. Whether this will add fuel to or dampen any incendiary arguments remains to be seen. But it would be quite premature to assume that OPEC will not find some lively arguments and complaints with which to tax the companies: and some delegates at any rate, have been arguing that at this meeting the organisation must demonstrate that it has **now** become effective.

Brainstorm in Rome?

IN Rome, the meeting of Europeans responsible for formulating a common energy policy appears to be partly an

HMG's WALL STREET STAKE

Tucked discreetly away in a footnote to a table of the gold and currency reserves the balance of payments white paper contains this disclosure :—

Furthermore, the Exchange Equalisation Account holds a substantial volume of dollar securities which were vested in the United Kingdom Government during the war and have been retained since. At the end of December, 1961, the market value of this portfolio, which is subject to fluctuation from time to time, was between $750 million and $1,250 million.

The range is wide enough. In practice this seems to be the Treasury's roundabout way of showing that the value has recently increased: last October's white paper recalled the valuation at the time of Suez of $750–1,000 million, and stated that "this remained the position at the end of June, 1961".

attempt to sort out the tangle of different proposals now cluttering this issue; and partly, perhaps, an attempt by the ministers who form the councils of both ECSC and the common market commission to get the reins back into their own hands. It follows an inconclusive formal meeting in mid-March, when these ministers and the inter-executive group of officials from Brussels and Luxemburg did not manage to distil much co-ordinated policy out of their joint assortments of ideas, plus those of the European Assembly. After that, this less formal meeting (a "brainstorming" session?) was decided upon.

One may suspect, however, that the ministers are not anxious to have too much fresh progress initiated on energy policy by the executives before they are sure in which direction the progress will occur. The inter-executive group from all three European communities interested in energy, chaired by M. Lapie of the Luxemburg high authority, has a sizeable basket of ideas, ranging from liberal to protectionist, already. And now that France has formulated a deal on Saharan oil, it may bring up again the question of getting this preference in European markets. Recently there have also been hints that M. Robert Marjolin, of the common market commission, was preparing to make the running, with his own fresh selection of policies—presumably aimed towards cheap energy and as little protectionism as possible. Will he be ready with "a coherent policy, at once logical and realistic, self-consistent in its principles but also taking account of the economic realities that exist in the different countries" by next week?

BRANCH LINES

Many a Mickle?

SIR RONALD GARRETT, chairman of the Central Transport Consultative Committee, suggested this week that too much stress is being laid on the closure of railway lines as a means of ending losses. The committee's latest report shows that £724,000 was saved in 1961 by closing 36 branch lines with a route mileage of 566 miles; since 1950 the aggregate saving has amounted to £4,311,000 a year. Dr Beeching has a nation of branch line lovers to contend with—meandering through the country behind an elderly steam engine remains for many railway enthusiasts the only truly pleasurable means of travel—and many country dwellers prefer the chance to use rail rather than bus travel. There may be some justification for the committee's doubts whether the financial benefit from small closures is commensurate with the loss of goodwill that they cause. Last year shutting 18 lines saved an average of £5,000 each, while the other 18 closures saved £35,000 each. But the sort of closures that the railways need—as Dr Beeching well knows—are massive.

HUNTERSTON

A Plague on Both Your Houses?

THE lid has been lifted off a bubbling cauldron of trouble that has been boiling up for some years on the banks of the Clyde. Six years ago, the South of Scotland Electricity Board picked an idyllic cove for its first 300 megawatt nuclear power station. It also picked an exceptionally good design. Now, SSEB reports that work is three years behind schedule, and there are rumours that the estimated cost has risen from the expected £37 million to a figure nearer £60 million. The board complains bitterly in its annual report that "the protracted delay in the completion of Hunterston is involving the board in serious financial loss." Total expenditure by the board is put at more than £40 million to date, roughly £30 million of which appears from the accounts to have been paid to the General Electric Company, which was the original contractor for Hunterston but whose atomic energy division has now been merged with that of Atomic Power Constructions to form United Power Company.

It is no secret, however, that GEC, for its own part, feels badly treated by the SSEB and has invoked government help to get its differences—and its bills—settled. The construction of Hunterston is a long and sorry story of strikes and mis-management, but by no means all of this can be laid at GEC's door. Scottish consumers who may face an increase in electricity charges might well ask the SSEB what it was doing at Hunterston during the past six years to allow such affairs to get so far out of hand.

CHECKING INFLATION

The Swiss Way

A Zurich Correspondent cables:

A FEW days ago the Swiss National Bank came to a new agreement with Swiss commercial banks to establish a borrowing limit. Details of the limit have not been published, though there are reports that "the rate of growth in borrowing, in comparison to the previous year," is being reduced to 15 per cent. Within the guiding principles of this agreement the banks will be selective as between borrowers. Since March, 1961, there has been a gentlemen's agreement between the National Bank and the commercial banks to sterilise a substantial amount of liquidity (the National Bank has no power to set minimum reserve ratios) and to regulate the banks' acceptance of foreign deposits. This agreement has been extended and is still in force. The National Bank has generally appealed to the commercial banks to exercise restraint in lending. It is not ready to increase the Bank rate because it does not want to hamper capital exports.

Besides these measures, the private sector of Swiss business is trying to help public efforts to overcome the exaggeration of the Swiss boom. (The Minister of Economics stated recently in the Parliament that the Government is prepared to cut down public investment and capital expenditure, fortify the budget surplus and support capital exports.) Several business associations, representing a large part of the private sector, have now recommended their members to introduce an "expansion pause." They have appealed to the entrepreneurs to re-examine their investment plans. Some sectors of the economy have also committed themselves not to raise prices—for instance the suppliers of building materials, chemicals, paper and rayon. Others, such as the metal and machinery industries, have agreed not to expand their labour force till the end of this year, and moreover not to employ people who have changed their jobs more than three times during the last two years. (Perhaps Swiss industry is stable and localised enough to find it safe to discourage labour mobility.) Employers' associations and the central organisation of Swiss trade unions have made similar declarations of readiness to help counter inflation. The Government and the National Bank hope that their limited counter-cyclical operation, together with voluntary self-restraint in the private sector, will be sufficient to do the trick.

AERO-ENGINES

Rolls-Royce's Exports

WITH understandable pride, Rolls-Royce announced this week that its exports last year amounted to £55 million. This is not a particularly striking increase, only £1½ million on the previous year, but it makes Rolls-Royce responsible for more than a third of aircraft exports; the company's performance is considerably better than that of several other engineering industries and its export sales are equivalent to a fifth of those of the entire motor industry. Recently, Rolls-Royce has drawn nearly half its income from foreign sales. Most of the credit must go to the Dart engine in the several hundred Viscounts and Fokker Friendships used by foreign airlines, followed by the Avon engines used in Sud Aviation's Caravelle. An aero-engine consumes roughly a third of its original purchase price in spare parts each year, and an elaborate engine, such as the Tyne in service in Canada, can cost about £60,000 each. The aircraft they power may have a working life of ten to twenty years. Significantly, the industry's combined exports of new aero-engines amounted to only £33 million last year.

The dilemma facing Rolls-Royce is typical of that confronting the aircraft in-

PROBLEM No. 5

GET E.C.G.D. STOCKHOLDING COVER

When you hold stocks overseas you can deliver the goods as fast as the local man. And with E.C.G.D. cover to protect you, it is as safe as holding stocks in Britain. War, riots, seizure by a foreign government—even cancellation of authority to ship unsold goods to another market—E.C.G.D. takes care of all these and a lot of other risks as well.

EXPORT WITH AN EASY MIND

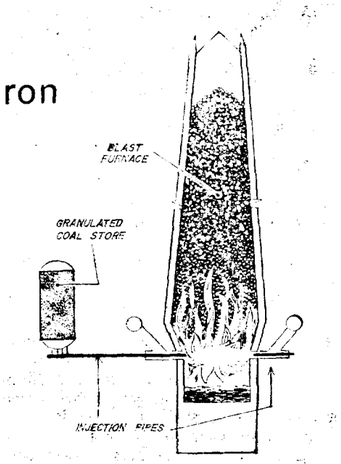
dustry ; its short-term order books are comfortably full but work for the longer-term future is lacking. Great efforts have been made to reduce dependence on UK aircraft manufacturers by selling engines for foreign-built aircraft, with some success. Apart from Fokker and Sud, both Boeing and Douglas offer Rolls-Royce powered versions of their big jets, though these have not sold in any great number. Canadair's huge Canadian-built freighter and some military aircraft in Europe also use Rolls-Royce engines. But in the two most rapidly developing fields, supersonic flight and vertical take-off, competition from Bristol-Siddeley has hit Rolls-Royce hard and where it most hurts.

LEAD AND ZINC

Time for Second Thoughts?

As a result of last week's meeting in Geneva, lead and zinc markets can rest until May 28th secure in the knowledge that an apparently formidable majority of producers desire international control of their production. Lowly lead has recovered more than 30s. to £61¼ a ton since the end of the meeting and zinc, which only by a long stretch of the imagination is likely to be directly affected by the next round of the international study group's deliberations, has similarly strengthened to £70¼ a ton. The discordant note in this seemingly more hopeful situation is the identity of the 30 per cent minority who could not find it in their hearts to make even a token contribution towards curtailing supplies this year. Australia and Britain offered nothing, though in the past Australia has been among the first to co-operate in schemes to reduce surpluses.

Australia was not impressed by some offers to curtail smelter output. Previously, control had been exercised through mine production, and Australia doubted whether restrictions on smelter output would be fair or more effective. Australian producers also fear that their voluntary restraint since 1959



FUEL INJECTION

Less Coke, More Iron

Iron is scarcely short just now, and ways of making more from existing blast furnaces have a rather academic interest. But once the steel industry begins to climb out of its present recession, one can expect greater application of methods of injecting oil, gas or granulated coal into the base of a blast furnace to replace part of the coke charge, and so to allow a bigger iron ore charge and greater iron output. Fuel injection allows more iron to be made without building more blast furnaces, one of the more expensive single lumps of equipment that a steel works needs to expand its output, and promotes more flexible output. More established means of increasing the output of blast furnaces are to use sintered or pelletised ore, which also increase the proportion of iron to the total charge of the furnace.

Oil and natural gas are being used on a big scale in American blast furnaces and oil is being used commercially in France, but there are only half a dozen more or less experimental oil installations in use in Britain. One experimental coal injection installation exists in America and another in France; the first in Britain, financed by the National Coal Board, comes on test this summer.

The principle of fuel injection is simple, and so is the equipment. To smelt the iron from the ore needs heat; in the blast furnace this is provided by coke mixed with the ore and loaded from the top. Hot air is blown in at the bottom to provide the draught, and as the iron is melted it settles at the bottom with slag above. If fuel is added with the blast, more heat will be generated in the furnace; so the amount of coke used can be reduced and more ore can be put into the furnace. The replacement of coke by injected fuel is governed by the cooling effect of adding

cold fuel—which has to be offset by raising the temperature of the blast, which can only be done to a limited degree. The highest proportion yet reported is replacing a third of the coke by injected fuel but more should be possible if oxygen is added. The amount of fuel injected equals the heat value of the coke replaced.

It makes basically little difference whether oil, coal or gas is used. The fuel is injected through a lance that runs into the furnace through the blast pipes, as shown in the drawing. Granulated coal can be handled much as a liquid or gas and pumped around by compressed air through small-diameter pipes; it costs something to prepare, needs a supply of compressed air, and causes rapid wear on pipes where they bend. Oil and gas need little more than storage tanks, a pump and a meter and can be arranged for £5,000 or so.

For a commercial installation a more typical cost would be from £10,000 to £20,000. Using coal would cost a good deal more. To produce enough granulated coal for one blast furnace needs a plant costing around £100,000, which the Coal Board would pay, and the installations at the furnace as much again—though it might be reduced to about £70,000 if ordered on a big scale. Though the lower capital outlay obviously favours oil, £100,000 for coal is not something to frighten the steel industry. Operating costs will depend on fuel prices ; coal may have a slight advantage over oil, and near coalfields this might be enough to offset the higher capital charges. But coastal steelworks might find little difference, in which case the cheapness and simplicity of the equipment needed for oil could tip the balance in its favour.

It is possible therefore that the Coal Board will find that the demand for coking coal does not rise proportionately when the demand for steel begins to recover; even if coal is used for injection, the board will be selling two tons of granulated for every three tons of coking coal replaced. But the lower cost of the injected coal should give the Coal Board some benefit. British experience suggests that oil saves about 5s. a ton of iron, and this might be increased if a higher proportion of the coke is replaced by oil. But saving depends on there being no increase in the cost of coke; and under present conditions when no increase in output is wanted, replacing coke by oil means running the coke ovens below capacity—which could put up the cost of coke more than the saving promised by oil.

Blast furnaces look like being another field where coal and oil battle for the consumer's favour. The steel industry is willing to accept whatever small mercies in the way of experimental work the Coal Board may like to bestow upon it, though needing some persuading that any price offered will be maintained. And the oil companies got in first, and proved that oil could save money before coal had been tried. The ironmaker will decide solely on cost per therm; it is heat that he buys and the cheapest fuel will win.

will go unrecognised. Consumption of lead is not rising very fast, and Australia might never be given the opportunity to reach what it regards as its proper potential. While voluntary curbs have been observed, the American industry has added subsidies for small producers to existing protection through tariff and quota and because of the industry's decline, demand for more protection is mounting.

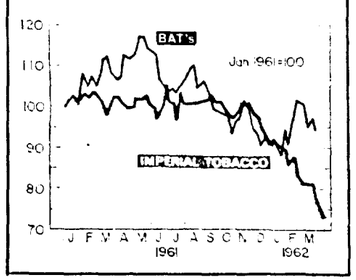
Higher prices would considerably weaken the case for protection. But though it is now threatened by American and European import hurdles, it might be difficult to persuade Australia and countries like Canada who find themselves in a similar position that restraint pays, though the danger of trying the patience of the two large trade blocks too far is obvious. Australia will now be under considerable pressure to think again before the study group reassembles. The study group forecast that the prospective surplus in lead this year was smaller than in 1961, but that the zinc surplus was likely to grow. The massive surplus of lead and zinc (about half a year's supply for the free world) now revealed as surplus to American stockpiling requirements holds no terrors for the market. A few noughts added to the size of the surplus would not have increased its impact. Because of its enormous size, the present state of the industry and the strength of the winning lobby in the United States, at the moment disposals seem unthinkable.

CHEMICALS

Salted Away

NEWS that an American company may build a plant to extract potassium chloride from the salt beds under the North Yorkshire Moors National Park must have re-opened the wounds of an old disappointment in ICI and Fisons. In 1955 it was announced that, after seven years of work and spending more than £500,000 these two companies had decided not to go on with the development of the deposits.

The presence of these deposits had been suspected since 1938 when the D'Arcy Exploration Company, a subsidiary of BP, found in the course of an oil-prospecting programme potash-bearing brine and sylvinite (a mixture of potassium chloride and salt) in a boring near Whitby. Information from the bores was passed to ICI which was keenly interested in potash, used in fertilisers and explosives, and in salt, one of its most important raw materials. In 1948 ICI's first test borehole was sunk and Fisons, which also uses large quantities of potash to make fertilisers, associated itself with the exploration.



Tests established the existence of two beds of sylvinite at depths from 3,500 to 4,500 feet. The existence of about 350 million tons of potassium chloride was shown to be likely: this would yield, at an assumed extraction efficiency of 30 per cent, about 100 million tons. Much encouraged, ICI converted one of its boreholes into a brinewell, hoping to extract the potash in the same way as it takes salt from the salt beds of Cheshire, by pumping down water and pumping up brine. Unfortunately, the experiment showed conclusively that the potash could not economically be won that way.

The Cheshire salt beds are one thousand feet below the surface and are nearly pure sodium chloride. The deposits at Whitby are much deeper and contain mixtures of salts, mostly potassium and sodium chlorides, in varying proportions. No means could be found of producing a solution that contained a sufficient concentration of potassium salt to be worth processing. Added to this were the difficulties of working in a deep borehole and of processing a solution whose composition varied continuously. ICI and Fisons also examined the possibility of winning the potash by some deep mining process, but decided that such exploitation could only be carried out by a firm with appropriate experience.

Brine extraction processes are used to get potash in Israel, by the Dead Sea, and in Utah. But these could not be applied to the Yorkshire deposits because they operate under quite different circumstances: for one thing, they depend on the sun to provide energy for evaporation. The first hint that the deposits might be winkled out successfully came last year when Armour Agricultural Chemicals of America announced that it was going to work deep salt deposits at Saskatchewan for potash with a new brining method that it had developed. Trials have been carried out for some months but results have not yet been announced. If Amour is going to use its new process in North Yorkshire, it is fair to assume that ICI and Fisons will be associated with it in some way. Potash importers must be waiting for further announcements with apprehension.

TOBACCO SHARES

Prices of tobacco shares fell sharply last Friday after Lord Hailsham's anti-smoking speech. Shares were already well below their 1961 peaks before the publication on March 7th of the report on smoking by the Royal College of Physicians. The fall has been less sharp for British American Tobacco which operates only overseas, while this week Imperial Tobacco shares have staged a recovery on buying by investors attracted by the present 9 per cent yield.

DIVIDEND RESTRAINT

Prudential Reserve

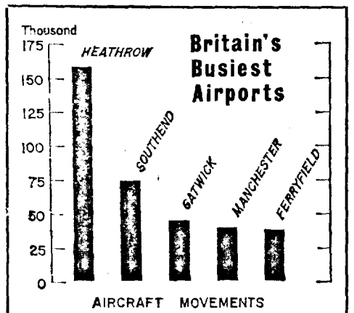
SIR EDWARD BOYLE declared this week that dividends paid since the little budget have risen by less than 5 per cent, compared with 12½ per cent before the Chancellor asked for restraint. The profit analysis made in this office suggests that the Financial Secretary's 5 per cent must represent the utmost limit of any increase that has occurred. Very few companies have announced bigger payments, and only where they have earned exceptionally good profits or because they have felt morally obliged to make good earlier forecasts. One of the biggest increases came from Shell, but this company in partnership with Royal Dutch has always to look beyond national policies towards an international horizon.

The fall in profits has been so steep for some companies—and such important ones as P & O, Hoover and English Electric are among them—that they have been forced to cut their dividends. The great majority of companies have simply left their dividends unchanged; often making a virtue out of necessity, since neither profits nor cash flows justified increases. A handful have admitted that the dividend would have been higher but for the Chancellor's request, though they have not indicated how much higher.

The Prudential Assurance has been an exception. In leaving the tax free dividends unchanged at 8s. 4d. per "A" share and 1s. 10d. per "B," the directors have transferred £286,458 to a dividend reserve. They say that they have had regard to the Chancellor's request, "but for which the amount transferred to the dividend reserve fund would have been distributed as a further dividend of 11d. per 'A' share and there would have been a small increase in the dividend on the 'B' share." But the "Pru" is a special case, for its articles of association bind the allocation of profits to shareholders to the allocation of profits to policyholders. As the surplus on the ordinary and industrial branches clearly justified and permitted an increase in bonuses to policyholders, some balancing provision had to be made for shareholders and the articles specifically permit this to be done by way of a transfer to a dividend reserve. But an allocation to a dividend reserve might have been a useful device for some directors of industrial companies to employ if they had wanted to show how much more they would have paid but for the Chancellor. It ought to be carefully considered by all companies if the Chancellor goes on asking for restraint.

WOOL

Out of the Rut



THE three-man committee investigating Australia's method of wool marketing worked hard and long through a testing

year for the industry. It digested a torrent of words and travelled thousands of miles and its recent report, recommending no significant changes, comes fortunately at a time when the price of better quality wool has climbed to its highest point for the season. Prices have now recovered to the level of two years ago. As a result, Australian woolgrowers stand to earn £24 million more this season, which will considerably soften the blow to smaller woolgrowers of the rejection of their demand for reserve prices at auctions, though they have given the report a hostile reception. It should also sweeten their attitude to increased levies for wool promotion.

Consumption of wool last year rose by about 6 per cent. By the end of 1961, trade stocks were drawn down to the lowest level for several years. The sharp rise in wool imports into Britain in January, which helped to swell total imports in that month to a rather unnerving level, was reflected in a recovery of 14 million lb to 201 million lb in stocks held here in that month. Without the help of any reduction in the United States' import duty of 25½ cents a lb on raw wool, American consumption rose by 8 per cent last year, while other fibres is said to have suffered a fall of 30 per cent. Though last year was not typical, there are signs that wool is recovering a little of its lost popularity even before the full blast of wool's projected counter propaganda against its competitors is felt.

Australia will continue to press for a reduction in the American tariff on wool, but in the recent round of tariff cuts negotiated at Geneva, wool textiles were a notable exception. Following the substitution of a crippling import duty of 38 per cent for the existing tariff quota on wool fabrics at the end of 1960, the United States has just met claims for compensation by making concessions in non-related fields quite separately from some very small concessions made on wool textiles in the Dillon round of tariff cuts.

Though the United States' market has not been allowed to find its natural level, consumption of wool outside the main wool using countries is expanding fairly rapidly. Purchases by communist countries have recently supported wool prices when slack trade in the main wool textile centres, particularly Bradford, has reduced demand at auctions. Because of the low level of stocks and reasonably good rate of consumption, prices should be firm up to the end of the current season, though there is the danger that Japan, now running an extremely large balance of payments deficit, might slip into the background at auctions allowing prices to sag. The Australian marketing committee agrees that sudden and costly reverses of this kind could be avoided. But it would require an £80 million fund to cushion sudden price falls, and £120 million would be needed to hold prices close to the average level expected over a longer period. The committee therefore recommended less ambitious, but probably more beneficial, changes such as the setting up of a commission to co-ordinate and improve marketing mainly in technical details.

The second busiest airport in Britain last year, in terms of **aircraft**, was municipally-owned Southend; how a small airport like this handles so much traffic remains a mystery. Second place in terms of **passengers** goes to another municipal airport, Manchester, with nearly one million passengers to Heathrow's 6 million. Jersey beat Gatwick to third place by a short head. Silver City's car ferry base at Ferryfield not surprisingly handles 35 per cent of the country's air **freight**, 122,000 tons to Heathrow's 100,000 tons. Southend, with an appreciable car ferry business too, comes third with 53,000 tons.

TELEVISION ADVERTISING

Time, Occasion, Chance

READING this column on a weekday evening in the London region probably takes up about £2,000-worth of time—by current television advertising standards. Readers in Inverness, however, will be glad to know that, during the same "peak" time of day, eight solid pages of *The Economist* reading can be done for the same price in time. Advertisers, however, are interested not simply in the price of different times of day, but in the "rate per thousand" homes as revealed by the latest viewing figures. They are fond of pointing out that, on this basis, the London region rates are not only the highest in real terms, but are also disproportionately high in terms of the audience reached. Associated Rediffusion, the London weekday company, has used in its defence the higher average spending habits of Londoners, and it is about to publish a detailed psychological survey of the region that is likely to be as interesting to salesmen as to sociologists. But at the moment, and for a long time to come, the only tangible basis of comparing the value of advertising in different regions is the record of actual viewing, imperfect as this may be.

Judged by February figures, the discrepancies are considerable. Granada, which charges, at full rates, £1,000 for 30 seconds of peak time, estimated that on average this rate, plus tax, was equal to a cost of 14s. a thousand homes. In London, a half-minute of weekday peak time is charged at £1,145, only 14.5 per cent dearer than Granada, but until recently this worked out at £1 per thousand, nearly 50 per cent above Granada's charge. But so-called peak time is in fact a series of steep peaks and valleys, so that strategically placed advertisers, the actors' strike notwithstanding, may actually be getting a better run for their money in spite of higher average costs.

Responding to pressure, Associated Rediffusion has now lopped off the last half hour from its highest-priced period, which, it hopes, may bring the average cost down to 17s., which is roughly equivalent to Midland weekday values. Rebates for falling below the expected audience are now common among most contractors (though the ITA has said that giving free time is contrary to the Act).

The big advertisers are in a mood to fight for further concessions for it is only now, with the ending of earlier "rate protected" contracts, that they are feeling the effects of the 1960 rise of 20 per cent in time charges, in addition to which they are carrying in full the 11 per cent tax passed on by contractors. They know, moreover, that even the big television companies are no longer sure of a sellers market: most time can now be obtained at quite short notice, where only a short time ago it might have been necessary to book six months or even nine months ahead.

SHORTER NOTES

The Government is "not at present convinced" of the long-term need for a Post Office giro system, the Postmaster-General told a questioner in the House of Commons on Tuesday. Mr Bevins said that this "does not rule out the possibility" of a British giro system eventually. But "many developments are taking place over a very wide field," and the government, noting that "at least two or three" of the continental systems operate at a loss, is holding its hand.

★

Dissatisfied investors exploded about ten squibs in the Milan Stock Exchange on Tuesday, but business went on as usual and prices closed around the day's lows.

★

Trading profits of the Savoy Hotel fell in 1961 from £1,021,000 to £919,000 but the ordinary dividend was maintained at 21 per cent.

COMPANY MEETINGS

THE STATE BANK OF INDIA

RECORD INCREASE IN ADVANCES

GROWTH OF FOREIGN EXCHANGE BUSINESS

MR P. C. BHATTACHARYYA'S SPEECH

The Seventh Annual General Meeting of the State Bank of India was held in Bombay on February 27th, 1962. **Mr P. C. Bhattacharyya,** the Chairman of the Bank, presided. The State Bank has produced very good results for 1961 both in its traditional business as well as its developmental activities. The following are a few salient features of the Bank's Report for 1961 and important points made in the Chairman's Speech:

ADVANCES

During the busy season of 1960-61 (November, 1960-April, 1961) the State Bank's advances (including bills) increased by a record amount of Rs.660.0 million to a peak of Rs.2,769.7 million and they fell by Rs.379.4 million during the following slack season. The average level of advances in 1961 was higher by about Rs.500 million than during the previous year.

The expansion of the advance portfolio during the current busy season is well under way and the Bank's credit now stands at Rs.2,723.5 million. Advances to industry form about 71 per cent. The private sector accounts for 92 per cent of the Bank's total advances.

DEPOSITS

The Bank's aggregate deposit liabilities stood at Rs.5,116.6 million in December, 1961, against Rs.5,574.2 million in December, 1960. The decline in deposits was entirely due to the transfer of a part of U.S.P.L.480 funds to the Reserve Bank of India. Exclusive of P.L.480 funds, the Bank's deposits increased by Rs.378.1 million in 1961, and now stand at Rs.3,610.6 million. The increase in deposits had to be fully utilised for financing trade and industry. Investments in Government securities could not therefore be augmented. This was also true of the other banks in the country. While banks have to meet the increased demand for credit, they have also to spare a reasonable proportion of their resources for Government securities and thus assist the successful implementation of the Third Plan. It is therefore necessary that they must try to maximise their deposits.

With a view to attracting more deposits, the State Bank raised its interest rates on fixed and savings deposits early in 1961. This showed some good results; the Bank's savings deposits increased at a much faster rate in 1961 than in previous years. There is, however, a limit to which interest rates can be advantageously raised. Other measures such as better customer service and wider coverage of depositors should also be tried for increasing deposits. One such measure implemented by the State Bank from the beginning of 1962 is a special credit transfer system intended to cater to certain personal needs of its customers in the lower and middle income groups. In addition to the branches opened under the Expansion Programme, the Bank has also been increasing the number of its Sub-urban Branches, so as to increase the number of its customers and serve them in a personal way.

FOREIGN EXCHANGE BUSINESS

The volume of foreign exchange business handled by the Bank recorded an increase during the year. The rupee accounts maintained with the Bank by foreign correspondents rose to 144 and the Bank opened during 1961 six more foreign currency accounts. In addition to financing private sector transactions, the Bank continued to provide financial facilities for the barter deals and other special arrangements entered into by the Government and the State Trading Corporation.

The sales of the Bank's Rupee Travellers' Cheques increased from Rs.8.4 million to Rs.9.5 million in 1961. The Bank's Chairman and Managing Director accompanied by the Manager and Assistant Manager of Foreign Department visited several foreign countries for strengthening the Bank's good relations with its foreign correspondents.

BRANCH EXPANSION

After fulfilling the statutory obligation to open 400 new branches within five years after its establishment on July 1, 1955, the Bank has decided that it and its subsidiaries should open 300 new branches during July, 1960-June, 1965. The State Bank will open about 145 more branches and the subsidiaries about 155. The State Bank has already opened 25 new branches up to the end of 1961 and its subsidiaries have opened 67 branches.

At the end of 1961, the State Bank had 954 branches and offices, comprising four Local Head Offices, the office in London, five offices in Pakistan, one each in Burma and Ceylon and 671 branches and 271 sub-offices in India. During current year 13 more offices have been opened bringing the total now to 967 offices. These 967 offices together with the 490 branches and offices of the subsidiaries have been meeting all the banking requirements of a large section of the country's population.

FINANCE TO SMALL SCALE INDUSTRIES

The number of small industrial units assisted by the Bank, the credit limits sanctioned and the outstandings rose from 2,451, Rs.78.2 million and Rs.36.6 million in 1960 to 2,811, Rs.101.3 million and Rs.50.7 million in 1961. Similarly the number of units assisted by the Bank's subsidiaries, the credit limits sanctioned and the outstandings also rose over the year from 384, Rs.26.7 million and Rs.11.4 million to 463, Rs.34.0 million and Rs.14.6 million in 1961.

The bulk (83 per cent) of the limits sanctioned by the State Bank at "Intensive Centres" was less than Rs.50,000/- each, indicating that the Bank is really assisting small scale units

RURAL CREDIT

The various facilities granted by the Bank to co-operatives on specially favourable terms recorded an increase during the year. Between September 30, 1960, and September 30, 1961, the total number of advances granted by the Bank to co-operatives, the limits sanctioned and the outstandings increased from 527, Rs.228.0 million and Rs.55.0 million to 550, Rs.246.0 million and Rs.66.0 million respectively. There was also a marked increase in the advances granted against warehouse receipts.

The credit limits sanctioned against such receipts rose over the year from Rs.21.6 million to Rs.44.6 million in the case of the State Bank and from Rs.7.9 million to Rs.27.3 million in the case of its subsidiaries.

PROFITS AND THEIR APPROPRIATION

The Bank earned a net profit of Rs.27.1 million during the year, as compared to Rs.21.8 million in 1960. Earnings from interest and discount declined slightly from Rs.148.7 million to Rs.141.2 million which was due to the decline in the Bank's investments. Earnings from commission, exchange and brokerage increased substantially from Rs.42.9 million to Rs.54.0 million. On the expenditure side, interest paid on deposits, borrowings, etc., decreased from Rs.80.5 million in 1960 to Rs.68.9 million in 1961 due to the transfer of U.S.P.L.480 funds. Establishment expenses including salaries, allowances and provident fund increased from Rs.73.2 million to Rs.79.8 million.

The Directors have set aside Rs.12.9 million for dividends at the rate of Rs.23 per share as against Rs.22.75 per share in 1960. Reserve Fund absorbs Rs.7.5 million as compared to Rs.2.5 million in 1960. Amounts transferred to Pension Funds, Staff Welfare Fund, and Bonus to staff have all been suitably raised. The Bank's subsidiaries have also showed further progress in 1961.

THE SCOTTISH PROVIDENT INSTITUTION

ANOTHER RECORD YEAR

REVIEW BY THE CHAIRMAN, LORD CLYDESMUIR, MBE, TD, DL

In moving the adoption of the Report and Accounts at the 124th Annual Meeting held in Edinburgh on March 27, 1962, **Lord Clydesmuir** referred with pride to the fact that new sums assured had established a high record in each of the previous thirteen years and in 1961 amounted to over £20 millions. The total premium income, £5,610,178, showed an increase in the year of over 11 per cent and annuity purchase prices exceeded £2½ millions. The rate of interest earned on the funds, including the General Reserve Fund, was £7 0s. 7d. per cent before deduction of income tax—the highest rate ever obtained in the Institution's long history. The net rate of interest had also risen and in 1961 was £5 13s. 3d. per cent but Lord Clydesmuir pointed out the unsatisfactory nature of this figure as a means of comparing different life offices inasmuch as it was affected by various extraneous factors, and would, for example, be increased by a rise in the expenses of management, because such expenses qualify for tax relief.

FUNDS OVER £63½ MILLIONS

During 1961 the Funds had increased by nearly £6 millions and at the end of the year amounted to over £63½ millions. There had been added to the holdings of Stock Exchange securities £2 millions in fixed interest stocks and £1¼ millions in ordinary stocks, half of the latter figure having arisen from "rights" issues on favourable terms. House mortgage loans showed a net increase of nearly £1½ millions and although it was being found necessary to restrict the amount invested in this way Lord Clydesmuir was sure that by helping policyholders to buy a house to live in, while paying for it out of earnings, the Institution was helping to build up the backbone of a modern democracy.

INTERMEDIATE BONUSES

After mentioning the part it was playing, in association with other insurance companies, in offering to lend funds to help British exports subject to the guarantee of the Export Credits Guarantee Department, Lord Clydesmuir emphasised the continued prosperity of the Institution. As a mutual association, the Institution in a very real sense was the members themselves, and the with-profit policyholders had shared in its prosperity by receiving an increase in the rate of intermediate bonus for the second time in the current quinquennium. The rate of intermediate bonus for policies in the immediate bonus class was now 53s. 6d. per cent per annum, calculated on the sum assured and all declared bonus, with a further addition of 10 per cent of the declared bonus.

The Report and Accounts were adopted.

GENERAL REFRACTORIES LTD.

"NEW MARKETS FOR EXISTING PRODUCTS AND NEW PRODUCTS FOR EXISTING MARKETS"

MR. R. A. KIRKBY, J.P., F.I.Ceram, in his Chairman's Statement to shareholders with the Report and Accounts for 1961

The following are extracts from the Statement:—

ECONOMIC PRESSURE. In the early months sales and profits continued at the buoyant 1960 level. Then the U.K. steel industry, our largest single market, began to move from a state of boom to recession, and wages and the costs of all services were rising. Many profit margins were significantly reduced.

STOCKHOLDINGS. When demand falls, first the users of steel, and then the steelmakers, naturally adjust their financial position by reducing raw material stocks, and the ultimate effect on the manufacturer of refractories can be most severe.

BELGIAN SUBSIDIARY. It is hoped to bring the first stage of a development plan into operation during 1962. The necessary funds are being sought in Belgium and we expect negotiations to be concluded shortly.

TECHNICAL RESEARCH. Our research programme continued to anticipate and meet the new conditions created by revolutionary changes in user industries. Increased funds are to be allocated for research to strengthen and expand our activities in the whole field of industrial refractories application.

FOUNDRY SANDS. We acquired the business of Arthur Smith S & B Foundry Sands Ltd., and additionally carried out plant modifications at three of our quarries to meet the demand for silica sand of exceptional purity and grading.

OVERSEAS. Despatches overseas were again a record in the face of severe foreign competition.

FINANCIAL. Available net profit was £529,609, which compares with £602,427 for 1960. The dividend is maintained at the same rate as for the previous year, absorbing £229,687.

CHAIRMANSHIP. After thirty-three years service with the company, I intend to retire as Chairman but my colleagues have asked me to remain on the Board. I shall be succeeded by Sir George Briggs who has been a director for five years.

GENEFAX HOUSE • SHEFFIELD 10

EASTBOURNE MUTUAL BUILDING SOCIETY

MR LAURENCE A. CAFFYN'S SPEECH

Presiding at the eighty-fifth Annual General Meeting of the Society held on March 28th at Eastbourne, **Mr Laurence A. Caffyn,** the chairman, in the course of his speech, said:

The total assets have increased from just over £8¼ million to just under £9 million. This is a very satisfactory increase, particularly when the reserve ratio has also increased. Advances during the year amounted to £1,405,631. This is the highest figure for the last ten years.

During the year we continued to grant loans under the terms of the House Purchase and Housing Act 1959 and an amount of £139,000 was advanced to the Society by the Treasury in respect of these loans. This amount was less than the figure for 1960, but in that year the Society had some funds on which it could call left over from 1959. This Act has now ceased to operate, partly due to the credit squeeze and partly due to the fact that societies had drawn the whole of the original amount set aside by the Treasury for this purpose. It is sad that this should be so. The money was designed in the first place primarily for pre-1919 houses. A large proportion of these houses are still of good construction and the object of the Act was to enable these houses to be purchased and modernised. Many of these modernised houses have a long life yet, and the result of the Act was, in a small measure, to raise the standard of housing throughout the country. However, it is no longer with us and we can only hope that when the credit squeeze is finally concluded the whole matter will again be reconsidered.

The report was adopted.

NORCROS

LIMITED

Year of consolidation and hard-won progress

Export incentives urged

MR. JOHN V. SHEFFIELD, the Chairman, reviewing NORCROS Group's year ended 30th November, 1961, looked forward to better results this year.

Considering that conditions throughout industry were difficult during much of 1961 the level of trading was generally satisfactory and results would have been excellent had it not been that two companies suffered a severe temporary setback. One of these, Jensen Motors, is now picking up and the other, Weseros, is also expected to do better.

Financial

Capital expenditure by the subsidiaries amounted to £1,630,000. Of this about 20% was for normal improvements and capital replacements, and the remainder for extensions of which the greater part of the benefits has not yet been reflected in the profitability of the companies concerned. In addition £430,000 was paid for acquisitions. The allocation for depreciation has been increased from £397,697 to £803,276.

A one-for-three Ordinary bonus issue was made in April, 1961. The issued capital of the company at 30th November consisted of 2,038,327 Preference Shares of £1 and 14,822,288 Ordinary Shares of 5 - each. A rights issue of £2,500,000 6¼% Convertible Loan Stock 1977/82 at £98 per cent was made in February, 1962, to fund bank indebtedness brought about by acquisitions and capital expenditure.

Profits and Dividend

Group profit after tax was nearly the same as in 1960.

FROM THE ACCOUNTS

Year ended 30th Nov	1961 £	1960 £
Profit before tax	1,886,112	1,891,754
Profit after tax	943,892	943,697
Minority interests	45,353	6,413
Dividends	541,061	475,392
Retained	357,478	461,892
Net Assets	7,886,321	7,164,975

A final dividend of 11⅓% was recommended, making 20% (19⅔% equiv.) for the year.

Acquisitions

During the period to Nov. 30th acquisitions were: 51% interest in Bulk Carriers Ltd. (Feb.); Lowton Metals Ltd (April); Sig Wrapping Machines Ltd. (June); and Aluminium Ingot Makers Ltd. (Nov.). In Feb. 1962, we acquired Dow-Mac (Products) Ltd. All these acquisitions (except Dow-Mac) were made basically for the purpose of consolidation with existing companies in the Group.

Plans for expansion and diversification continue and the potential earning capacity of the group is greater than ever. Much emphasis is placed on exports and the Government is urged to take a realistic approach to the introduction of export incentives.

Copies of the full report are obtainable from the Secretary, Norcros Ltd., 129 Kingsway, London, W.C.2.

ALUMINIUM LIMITED

ALCAN

MR NATHANAEL V. DAVIS ON IMPORTANCE OF FREER TRADE CONDITIONS

The thirty-fourth annual meeting of Aluminium Limited will be held on April 26th, in Montreal.

In the course of his general review of the Company's affairs in 1961, **Mr Nathanael V. Davis,** the President, stated:

THE YEAR'S RESULTS

Net Income of Aluminium Limited consolidated, after all charges, including dividends on Preferred shares of subsidiaries, was $30.6 million or $1 a share on the 30.7 million shares outstanding at the end of the year. This compares with net income of $39.1 million or $1.28 a share on the 30.5 million shares outstanding at the end of 1960.

Consolidated Sales of aluminium in all forms were 663,600 tons, after certain fourth quarter adjustments, compared with 705,100 tons in 1960.

Sales and operating revenues amounted to $516.9 million compared with $508.6 million in 1960. After deducting "cost of sales and operating expenses," there remained $187.3 million in 1961 compared with $185.8 million in 1960.

Cash generation, comprising net income and depreciation, was $85.3 million in 1961 or $2.78 a share, compared with $97.4 million or $3.19 a share in 1960.

Dividend payments during 1961 were U.S. 15c a share in each quarter. Total dividends disbursed were equivalent to $18.6 million in Canadian funds compared with $20.7 million in 1960.

Expenditures on new capital facilities and investments during the year totalled $79 million compared with $70 million in 1960.

TRADING CONDITIONS

The reduction in earnings in 1961 was due, in part, to the decline in tonnage of sales and to stiffer price competition.

The Company's sales tonnage declined by some 6 per cent from the 1960 level. Despite this decline in total tonnage, sales revenues and cost of sales showed increases in 1961 due mainly to a larger proportion of aluminium sales being made in higher valued products costing more to produce. Sales of non-aluminium commodities were also higher in 1961.

During the year Alcan's Canadian smelters operated at an average of 73 per cent of capacity. This rate of production was more than sufficient to meet group sales requirements and metal inventories were increased by approximately $19 million during the course of the year. At the end of the year Alcan smelters were operating at 77 per cent of capacity.

The Company estimates that consumption of aluminium in the free world in 1961 increased by approximately 180,000 tons or 4 per cent over 1960. At the same time there was an estimated decline in primary production by some 100,000 tons or 2 per cent. Nevertheless, there was no let-up in the severe competitive conditions which have prevailed in the industry. The heavy load of surplus capacity remained a major determinant of international trade patterns in aluminium and continued to exert a downward pressure on prices. The most notable change in the price structure occurred in September when the published price in the United States was reduced from U.S. 26c to U.S. 24c per lb. In February of this year the Company reduced its price in overseas markets to U.S. 22½c per lb.

On the fabricating side of the business, which is becoming increasingly important for the Company, the programme for the expansion of fabricating facilities proceeded satisfactorily in 20 countries during the year. The steps being taken are expected to provide for larger assured outlets for our primary aluminium. While in 1961 the Company's expansion programme in the field of fabricating added only modestly to the capacity of those companies in which Aluminium Limited owns a 50 per cent or greater equity, the projects under way or authorised are expected to result in an increase of 30 per cent in capacity over the next two years.

Competition in semi-fabricated products was strong in all markets. Nevertheless, consolidated shipments increased by 5 per cent over the previous year and made an important contribution to net income.

The construction of facilities to produce aluminium by the basically new process announced in July 1960 proceeded satisfactorily during the year. The plant will go into operation in 1962.

In last year's report reference was made to the appearance of area protectionism and economic nationalism in some parts of the world—developments which pose a threat to international business including that of Aluminium Limited. In 1961, the predominant forces at work, particularly the international trade policies advanced by the United States administration, give encouragement that ways will be found to bring about freer trade conditions in the international aluminium industry. The Company firmly believes that freer trade conditions provide the soundest basis for the continued development and growth of the industry.

PERIOD OF INTENSE COMPETITION

In conclusion, 1961 was not an easy year. Commercially, the severe competition which has existed during the past few years was, if anything, intensified. In common with the industry as a whole, the Company's earnings fell well short of representing a satisfactory return on the capital invested, largely if not solely as a result of the forces brought on by overcapacity. Much is being done by the Company and others in the industry to contribute to the growth of consumption through sales development activities and by adding the fabricating facilities needed to convert aluminium into usable forms. This and our confidence in the future are reflected in planned fixed capital outlays and investments of $80 million in 1962 following upon comparable expenditures of $79 million in 1961.

While the degree of buoyancy of general business in world markets has a more immediate impact on consumption—and on the level of the Company's sales—the development work being done and the expansion of fabricating facilities are clearly contributing to the increase of consumption of aluminium. It is to be hoped that the effect of these steps will not be nullified by unjustified increases in primary capacity undertaken without reference to the basic forces of supply and demand in the free markets of the world.

ANGLO-ISRAEL BANK LIMITED

YEAR OF ALL-ROUND EXPANSION

The second Annual General Meeting of Anglo-Israel Bank Limited was held on March 29th at the Registered Office of the Company, Bow Bells House, Bread Street, Cheapside, E.C.4.

Sir Henry d'Avigdor-Goldsmid, Bart, DSO, MC, MP (the chairman), presided.

The following is his Statement which had been circulated with the Report and Accounts and was taken as read:

1961 has been a year of growth for the Anglo-Israel Bank and the Board takes considerable satisfaction in the results of the year's operations. As will be seen in the accounts, ordinary deposits have risen by 35 per cent, loans and advances by over 40 per cent and acceptances by over 30 per cent. This all round expansion in the Bank's activities is reflected in a substantial rise in the net earnings after tax which have risen from just under £43,000 to just over £75,000, an increase of £32,000, i.e. almost 75 per cent on the year. While it would be unrealistic to expect growth to continue at this dramatic rate, your Board see further signs of expansion and they are satisfied that the present earnings level will, at least, be maintained in 1962. Each year brings its own problems but the management's ability to take advantage of changing conditions has largely contributed to the success won in 1961, and the fact that the Bank is becoming more widely known encourages confidence in its future.

Your Board is satisfied that the value of the Bank's assets is unaffected by the devaluation of the Israel pound which was announced on February 9th.

During the year the issued capital of the Bank was increased by £300,000 and a further increase is now under discussion.

Had it not been for the Chancellor's request for dividend restraint your Board would certainly have wished to recommend an increased payment which is fully justified by the current level of earnings.

During the year Mr E. J. Hill resigned from the Board owing to increasing business commitments, and Mr F. R. Norton and Mr S. G. Warburg have joined it.

The Board would wish to put on record their appreciation of the devotion, energy and harmonious working of their management and staff by which alone these satisfactory results have been achieved.

The Report and Accounts were unanimously adopted and the dividend of 7½ per cent (less Tax) as recommended, was approved.

The retiring directors, Mr J. M. Geri, Mr J. D. Layton, OBE, Mr F. R. Norton and Mr S. G. Warburg, were re-elected.

NATIONAL PROVIDENT INSTITUTION

RECORD NEW BUSINESS

The Annual Meeting of the National Provident Institution for Mutual Life Assurance will be held on April 17, 1962, at 48, Gracechurch Street, London, E.C.

The following are extracts from the address which will be submitted by the Chairman, **Mr Lawrence Emlyn Douglas Bevan:**

In investing the savings of our members, which we hold against the due payment of policy moneys as they mature, the Directors have the policyholders' interests as their overriding consideration and have long felt that investment policy should be widely based—both as to the type of security and geographically.

Nevertheless, it is the investments in the United Kingdom which comprise the main part of our portfolio. These, whether they take the form of investment in industry, in commerce, in property, or in Government securities, are a stake in the prosperity of the country.

The rate of interest yielded by our investments on their balance sheet values last year was £6 17s. 10d. per cent and while this is a little below the rate of £7 0s. 4d. of the previous year it is nevertheless a satisfactory yield. Although the dividend income from our existing holdings of ordinary shares once again increased, the rise was insufficient to offset the fact that the yield obtained on new investments as a whole was lower than that on the balance sheet value of our existing holdings.

SERVICE THROUGH LIFE ASSURANCE

The new business which we have completed this year totals £14,130,958 (including group life business), another record. Although this experience is by no means exceptional among life offices, our own figure shows satisfactory growth and we confidently look for more in the future.

We carry on our business in a field where competition is strong. We have held our position in both the forms of new business which now make up our total, namely policies taken out by individuals for protection and saving, and pension schemes arranged by employers for the benefit of their employees. It is a matter of great satisfaction to us that each of these two sides of our business is growing steadily, but we should not attain this end even though our terms were competitive if our service were not prompt, helpful and based on sound technical knowledge.

I would like to direct attention to the needs of two types of people. Firstly the young man with a family who has not had time to save much and needs Protection above all else. He should ask himself "How much guaranteed income would be needed for the upkeep of my wife and family, if my own earnings were suddenly cut off?" Special assurance of this type is available under our Family Protection Policy and I cannot commend it too strongly to such a man. The premiums are very low relative to the cover provided.

The other type is the man who has to protect capital—for instance in the form of a private business—where the claim for death duties in one sum on his death may cause great disturbance in, and possibly the forced sale of, his business.

PLEA TO CHANCELLOR

Members may recall that on more than one occasion I have pleaded that the Chancellor of the Exchequer should make it possible for the individual to provide during his lifetime, in a convenient form, for the duty which arises immediately on his death, without incurring heavy additional liability by so doing.

BANK HAPOALIM B.M.

1961 was another successful year for Bank Hapoalim B.M. Total assets of Bank Hapoalim increased by 31.5 per cent since the end of 1960, despite the more stringent liquidity regulations introduced during the year and the deduction of income tax on interest at the source. Deposits of the public, savings etc. increased from IL. 236.2 million at the end of 1960 to almost IL. 289 million (23.6 per cent) by the end of 1961. The share capital of the bank was increased by IL. 2 million (20 per cent).

The growth in its resources enabled the Bank to increase its credit activities in the agricultural sector by 14 per cent, in the industrial sector by 16 per cent and in the building sector by 50 per cent. The Bank also continued to assist individual immigrants and workers through personal loans.

1961 marked the fortieth anniversary of Bank Hapoalim. The unique rate of growth of the bank during the past decade can be attributed to the accelerated pace of economic development in Israel after the establishment of the State, and to a series of mergers in 1957 by which Bank Hapoalim absorbed about 25 loan societies. Its branches today number 120.

During the years of its existence Bank Hapoalim has served as the central financial instrument for the cooperative sector of the Israeli economy. In recent years its scope of activity widened considerably with the extension of private investments, domestic and foreign, in the Israeli economy. Bank Hapoalim occupies a prominent place in financing and servicing Israel's foreign trade, and maintains close business ties with correspondents in all parts of the world. The bank established this year a representation in Europe, and intends to intensify its activity in the common market area.

Around Bank Hapoalim there is a group of auxiliary and complementary financial institutions, most important among which are:

AMPAL-AMERICAN ISRAEL CORPORATION—an American finance corporation set up by Bank Hapoalim and Hevrat Haovdim in 1942. Total assets of Ampal in 1961 reached $42.5 million.

HOUSING MORTGAGE BANK—was established in 1951. By the end of 1961 its loans portfolio exceeded IL. 100 millions.

ISRAEL AMERICAN INDUSTRIAL DEVELOPMENT BANK—established in 1956, serves the medium and long term credit needs of industry.

GMUL—an investment company was established in 1950 jointly by Bank Hapoalim and the Workers' Provident and Insurance Funds.

BANK HAPOALIM TRUST CO.—a fully owned subsidiary which offers cooperate and personal trust services of every description.

The consolidated assets of the Bank of Hapoalim group of companies reached by the end of 1961 IL. 850 million.

LEICESTER PERMANENT BUILDING SOCIETY

ANOTHER YEAR OF STEADY PROGRESS

ASSETS NOW EXCEED £75,000,000

The Annual General Meeting of The Leicester Permanent Building Society was held on March 26th in Leicester.

Mr Norman D. Ellis, MA, JP (Chairman), presided and, in the course of his speech, said:

The past year has been one of steady progress, the Society's total assets having increased by £6,389,965 to £75,101,577. This means that the Leicester Permanent remains in its proud position as the eighth largest Building Society.

We continued our policy of lending a substantial part of our resources on new houses and maisonettes and, in fact, of the £12,336,753 lent, £6,212,963 was to 3,212 purchasers helping them to buy newly built properties.

During the year investments in Shares and Deposits totalled £15,129,024, whereas withdrawals amounted to £10,172,210, or approximately two thirds of the new money invested. This proportion is a little higher than last year but compares quite favourably with the global figure for Building Societies as a whole.

Our Reserves and the Balance on Appropriation Account at December 31, 1961, amounted to £3,768,940 which is equivalent to 5.37 per cent of the balances due to Shareholders and Depositors, and 5.02 per cent of the Total Assets. I would emphasise that these percentages have been calculated after making provision for the market depreciation of our Government securities.

ATTRACTION OF FIXED TERM INVESTMENTS

During 1961 the original Fixed Term investments issued by the Society in 1958 were due for repayment. The popularity of this type of investment was adequately shown by the fact that 72 per cent of the amount repayable during the year was re-invested with the Society, and the amount repaid was more than made good by new investors.

Since starting to prepare my notes for this speech, there have been two reductions in Bank Rate which is now down to 5 per cent. This, however, is the rate which was in force when Building Societies fixed their current rates to both investors and borrowers about the middle of last year. When, at the end of July, Bank Rate was increased to 7 per cent we made no further increase in our rates and it would appear therefore that existing rates should be maintained until there is a clear indication that the inflow of new money is at least adequate to cope with the demand for mortgages.

We have continued our policy of expansion and during the year we have established new branches in Bradford, Cambridge, Derby, Luton, Oxford, Swansea, Taunton and Worcester.

The results for the first 3 months of this year have proved most encouraging, and if the present trend continues both our growth and the amount we are able to lend should be well above the figures achieved during last year.

The report and accounts were adopted.

On March 28, the P & O Chairman told Stockholders—

"Nobody must get the impression that conditions are too difficult to be worth fighting.

The fall in profits is due to no single trade or service, but to the cumulative effect of worse trading experience . . . . All an individual company can do in the face of a world position of this sort is to shorten down and tighten its own operations.

What are we likely to achieve by this? In itself it will not achieve any substantial turnround in profits. For that we have to await better conditions for shipping. What we can hope to achieve is a better tool, with a sharper cutting edge. Whatever gains we can make now will be worth all the more when conditions improve, and our approach must remain constructive."

SIR DONALD ANDERSON, Chairman,
Peninsular and Oriental Steam Navigation Company

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED

GROUP SALES SHOW A SATISFACTORY INCREASE

The fifty-ninth Annual General Meeting was held on March 22nd in London. **Sir Duncan Oppenheim** in the course of his speech said:

It was very satisfactory to be able to report that the Consolidated Profit before Taxation was the highest in the history of the Company. Although the figure has again been adversely affected on balance by changes in exchange rates, it shows by comparison with the 1960 figure an increase of just under £7,000,000. That part of the Group Net Profit dealt with in the accounts of British-American Tobacco Company Limited itself increased by some £660,000. The greater part of this is due to increased dividends from subsidiary companies.

Although in some countries there has been a loss of sales due to competition or to economic factors, including the imposition of heavy tobacco taxation, in other areas sales have shown substantial increases, sometimes in the face of severe competition. Overall, there has been a satisfactory increase in the Group's total cigarette sales, the main increases being in Asia, Europe and Latin America.

Of the Group Net Profit for the year to September last amounting to £33,000,000, just under 60 per cent was attributable to the Group's interests in Europe and North America, including the export trade from the United Kingdom and the USA. The balance was attributable equally to Asia and Africa on the one hand and Latin America, the Caribbean and Australasia on the other.

The Group's interests in the less developed parts of the world are widely spread throughout these areas and a relatively small part of our total profit comes from any particular country.

Your Company has long been established in Europe through subsidiaries and more than half the increase in the Consolidated Trading Profit resulted from improved trading in Europe. Our subsidiary companies have factories in the Common Market, namely in Western Germany, West Berlin, Holland and Belgium; they also have factories in Switzerland, Denmark and Finland. We do business with the French Regie and the Italian Monopoly and also with the Austrian Monopoly; furthermore, our brands are to be found in Sweden, Portugal, Spain and Norway. We are, therefore, well placed to take advantage of any general liberalisation of trade in tobacco products which may evolve as the European Economic Community develops and expands its membership.

THE CURRENT YEAR

The volume of sales for the first five months of the current year shows some increase over the corresponding period of the previous year but the rate of increase is less.

I am satisfied that we can look for some increase in the dividends to be received from associated and subsidiary companies. Against this, we must expect a decrease in the trading profit of the Holding Company, largely as a result of continuing increases in costs and the full effect of the further transfer of manufacture from this country to overseas subsidiaries during the past year. While I regret that we must expect this trend to continue, I hope that it will be at a slower rate and I assure you that every effort is being made to maintain our exports from the United Kingdom.

Provided that there is no substantial increase in Company taxation imposed in the next Budget, I am reasonably confident that the share of the Group Net Profit dealt with in the accounts of British-American Tobacco Company Limited will be no less than for last year and I am therefore satisfied that, barring unforeseen circumstances, we shall be able to maintain the total distribution of 2s. 3d. free of tax on each 10s. unit of Ordinary Stock.

The Report was adopted.

LUTON WATER COMPANY

CONTINUED EXPANSION

The One Hundred and Sixtieth Ordinary General Meeting of The Luton Water Company was held on March 27th at Luton, **Mr A. F. Plummer, MC., AIEE.,** chairman, presiding.

The following are extracts from his circulated statement for the year to December 31, 1961:

The accounts clearly show the continued expansion of your Company and that the expansion has been in the right direction and under proper control.

The estimated population supplied at December 1961, including 36,500 in the Dunstable area, was 178,000. The daily average quantity of water supplied for all purposes in 1961 was 9½ million gallons, of which 2 million gallons daily was consumed in the Dunstable area. Just over 10 miles of distribution mains have been laid during the year, together with 4¼ miles of pumping main to connect up the new Bow Bridge Pumping Station. 2,493 new houses were connected during the year.

In accordance with the Minister of Housing and Local Government's policy to reduce the number of Statutory Water Undertakings by amalgamation, it is proposed to attach the northern parishes of the Hemel Hempstead RDC and the southern parishes of the Luton RDC to this Company. At the time of writing, the draft Orders giving effect to these proposals are before the Minister for confirmation, the proposed day of transfer being April 1, 1962. If confirmed, these Orders will have the effect of extending the Company's Statutory Area by some 37 square miles to 73 square miles, and will increase the number of consumers to approximately 190,000 persons.

The new source of supply which has been developed at Bow Bridge between St. Albans and Redbourn is expected to yield 1¼ million gallons per day. Application is also to be made to the Minister for authority to develop an additional source of supply at Leagrave Common, Luton.

Income from all sources, excluding proceeds from the sale of land, shows an increase of £58,383 over the corresponding amount for 1960. It should be noted that the 1961 figures include the first full year's operation of the Dunstable Undertaking, whereas the 1960 accounts included only one quarter's figures in respect of the Dunstable area.

£98,497 has been transferred to Contingency Fund, including £63,497 surplus on sale of land, and after paying the Dividends, at the Statutory rates, including Final Dividends, the balance to be carried forward is £35,003 as compared with £40,760 brought in at the beginning of the year.

The report and accounts were adopted.

A. & S. HENRY & CO. LIMITED

(Manufacturers and Merchants)

SUBSTANTIAL MAIL ORDER TRADING

MR FRANK STOCKDALE'S STATEMENT

The seventy-third Annual General Meeting of A. & S. Henry & Co. Limited will be held on April 17th in Manchester. The following is the statement of the Chairman, **Mr Frank Stockdale,** as circulated to the stockholders with the Report and Accounts for the year ended December 31, 1961:

Trading profits are £778,070 against £854,567 in 1960. The Directors consider the results reasonable. Turnover has been maintained but profit margins generally have been under pressure.

The majority of our Subsidiaries have made their usual contribution to the group results despite increased operating costs, including several factory removals the cost of which will be non-recurring.

Our Mail Order companies are now the source of almost half our consolidated profits. Their expansion in turnover this year has been limited by two factors. Firstly, we felt the need for caution in granting credit in face of the huge losses which have been incurred in the country in Hire Purchase trade. This naturally tended to restrict expansion in turnover but the increase in our bad debts has been negligible. Secondly, with the anticipated extensions of the College of Technology, bordering upon our property, we had to remove our Mail Order Warehouse section out of Manchester. We have purchased the large Eclipse Spinning Mill at Rochdale, which is now occupied and fully equipped to handle more economically the increasing range of goods required by our customers. This change caused some dislocation to our trading. We hope this expansion will help to mitigate in some way, the ever-increasing costs which on all sides continue to hit Mail Order businesses—e.g., carriage, postage, etc.

Both Mr F. S. Winterbottom and myself visited Durban during the year. We found the factory in excellent condition and the plant working satisfactorily. They have had no labour trouble.

RAW MATERIALS RESERVE

Activity in our Jute Sack factories both in Dundee and South Africa has been affected by the difficult market in raw jute and our need to purchase ahead from Pakistan. With some of the grades of jute which we use falling in price over 50 per cent during the year, profit contribution from our Spinning and Weaving plants was reduced. As mentioned last year we have built up a substantial Raw Materials Reserve to meet these exceptional fluctuations and the Board have transferred £50,000 from this Reserve to the credit of Profit and Loss Account (leaving £450,000) which serves to reflect more accurately the true working figures of the factories. Prices this year have started at a more reasonable level and we anticipate conditions will be more stable.

Export trade, particularly in linen goods and machinery, to South and Central American markets, largely owing to unfavourable political and economic conditions, has seriously declined and we do not anticipate any revival. We look for replacement of this turnover in other directions within our diversified activities.

EXPANDING SACK MARKET

Peak output has not been reached in our new and enlarged multiwall Paper Sack plant; pressure from customers for quick delivery delayed the removal of some of our machinery from the old factory to the new building at Liverpool. Transfer has now been completed and has removed the uneconomical running involved in splitting our labour force. The expanding use of multiwall paper sacks, despite the strong competition which exists, should off-set the declining use of jute sacks on which our Dundee subsidiaries have always relied.

The increase in the amount of our Trade Investments represents a purchase of shares by our Subsidiary Joseph Grave & Co. Ltd., in Packaging Products (Holdings) Ltd. This interest gives us access to a wider range of productions in converted paper of all kinds.

Investment income from our Indian interests has declined, as Calcutta mills were involved in substantial losses due to the violent fluctuations in raw jute. Trading now is generally on a profitable basis and prospects for 1962 are more encouraging.

Since the financial year closed we have purchased the old established private business of John Smith & Co. (London) Ltd., whose factory at Romford produces a wide range of made-up canvases, linked to the products of our manufacturing Subsidiaries in Dundee. We visualise an expansion in their productions and distribution, particularly of camping equipment of all kinds, trampolines and fabricated metal coverings for lorries.

BOARD CHANGES

I regret that, for health reasons, our colleague Mr A. H. Russell has retired from active business. I take this opportunity of thanking him for his past services to the Company. The Board have elected Mr Frank Miller, formerly North Western Regional Manager of the Midland Bank Ltd., a director of the Company.

The Directors consider it advisable, in view of our expanding and diversified interests, to acquire power to add to the number of members of the Board. A resolution to amend the Articles of Association, increasing the present limit from 8 to 10 will be placed before you at the Annual General Meeting.

I find it difficult to forecast the future, but subject to no abnormal conditions arising in the general course of trade, I view our prospects with confidence.

We recommend a final dividend of 20 per cent which, with the interim dividend already paid of 7½ per cent makes 27½ per cent for the year. If this recommendation is passed, the Group Revenue Reserves will stand at £2,304,214—an increase of £53,902 during the year. Capital Reserve remains at £177,294.

On behalf of Stockholders my colleagues and myself, I again thank and pay tribute to our Managing Director, Mr Frank Winterbottom and staff for their work in a difficult year.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED

ANOTHER OUTSTANDING YEAR

Mr C. R. Munro, CA, Chairman of the Board of Directors, presided at the Annual General Meeting of the Company held at Edinburgh on March 27th.

In moving the adoption of the Report and Accounts for 1961, the Chairman said:

This is the twelfth successive year in which a record of new business written has been achieved and the first occasion on which the net new life sums assured have exceeded twenty millions. This is an increase of 26 per cent over the new sums assured in 1960 and more than 50 per cent over the new sums assured in 1959. New annual premiums have risen in two years by over 50 per cent from £481,560 in 1959 to £746,284. During the year we have also received £583,411 in considerations for annuities, which, along with the net new premiums, provided in 1961 our highest-ever total new premium income of £1,329,695. I am glad to add that a high proportion of new annual premium income is in respect of contracts of long duration.

Another impressive result in our figures for the year is recorded in the new annuity business obtained during 1961 which, at £1,125,294, not only exceeded a million pounds for the first time, but was also very nearly double the amount obtained in 1959.

Premium income, which exceeded £4 millions for the first time, shows an increase of 11½ per cent on the previous year. Gross investment income exceeded two million pounds and that part allocated to the Life and Annuity account yielded a gross rate of £6 12s. 3d. per cent, an increase of 1s. 2d. per cent over the 1960 figure. The net interest was £5 15s. 5d. per cent, an increase of 4s. 6d. per cent.

The mortality experience in 1961 was favourable. There has been a small increase in our crude expense ratio, which is a consequence of our continuing expansion, but it is not unsatisfactory that an increase of over 50 per cent in the level of new business in two years should have been associated with a relatively small percentage increase in the ratio.

The steady increase in our funds continues and the life fund has been increased since last year by over £3½ millions. Most of this new money has been invested in dated fixed-interest securities, principally British Government securities, Mortgages and Debentures, where favourable long-term interest returns have been secured. The total market value of our assets at December 31st, 1961, was again considerably in excess of the book value.

REDUCTIONS IN PREMIUM RATES

We have completed a review of our premium-rate structure for non-profit business, with the result that we have introduced new rates as from March 1, 1962. These rates show substantial reductions over the previous rates.

Reductions in our premium rates for the main classes of pensions business were introduced as from January 1, 1962. Under our Immediate Discount Plan, these reductions are substantial and our terms for new Group Pension Funds under this Plan are now very competitive.

The new Head Office building is now complete and the Lord Provost of Edinburgh, the Rt Hon Sir John Greig Dunbar, is to honour us today by declaring the building formally open. The plans for this were first given detailed consideration as long ago as 1954 and for various reasons it was decided to carry out the rebuilding in two stages. There have therefore effectively been two rebuilding operations and our Head Office staff have been working under considerable difficulties during all these years. Throughout this time the high standard of service to our agents and our policyholders, on which we pride ourselves, has been maintained and I would like to express our appreciation to all concerned.

The Directors now recommend a final dividend for the year ended December 31, 1961, of 6s. 6d. per share, tax free, payable on March 28, 1962, which with the interim dividend of 6s. 6d. per share, tax free, already paid, makes a total of 13s. per share, tax free (equivalent to 21s. 3d. per share less tax at 7s. 9d.).

The Report and Accounts were adopted.

CO-OPERATIVE PERMANENT BUILDING SOCIETY

(Extracts from the Address by the President, Mr. C. J. Dunham, at the Annual General Meeting in London on 24th March, 1962).

I have to submit to you the Directors' Report and the Annual Accounts for the year ended 31st December, 1961.

For the second year in succession building societies found it necessary to raise their interest rates to attract and retain the savings needed to maintain the mortgage output. These increases took place in the late summer and early autumn but it was not until the closing weeks of the year that they began to produce any marked response. By then, the inflow of funds had risen to about the same level as at the end of 1960.

ASSETS £257 MILLION

The experience of our own Society during 1961 is recorded in the Directors' Report and Accounts now before you. Your Board is pursuing a policy of planned development which has as its object the further strengthening of the Society's reserves. This policy was continued throughout 1961. Total assets increased by £18 million to a figure of £257 million and, after making the adjustments required by the Trustee Investment Regulations, the Society's net reserves rose by more than £1 million.

SOUND FINANCIAL POSITION

After meeting all expenses, the balance on Revenue account amounted to £898,000. This was augmented by a surplus of £3,000 on sales of premises and a surplus of £108,000 on sales of investments. After taking account of the balance of £125,000 brought forward from the previous year, the total available for appropriation was £1,135,000. From this sum £80,000 was set aside for future taxation, £595,000 has been used to reduce the book value of the Society's investments, and £300,000 was transferred to General Reserve. After providing £11,000 for mortgage losses this left a balance of £149,000 to be carried forward to 1962. The total of the General Reserve and balance carried forward as at 31st December, 1961 was £8,449,000 which represented 3.28% of total assets.

At the end of 1961, the Society's holdings of cash and trustee investments amounted to nearly £40 million. This represented 15.8 per cent. of total assets. Of this amount, £7¼ million was immediately available in cash, Treasury Bills, and short-term loans to local authorities, and a further £14¾ million was invested in quoted securities redeemable within 5 years. The strength of the Society's investment position will be readily apparent when I tell you that the amounts repayable on the redemption of investments which reach maturity within 6 years from the date of this Balance Sheet exceed the book value of those investments by more than £2 million.

CO-OPERATIVE PERMANENT BUILDING SOCIETY
NEW OXFORD HOUSE · BLOOMSBURY WAY · LONDON WC1
Shares and Deposits in the Society are Trustee Investments · Member of the Building Societies Association

BANQUE FRANCAISE DU COMMERCE EXTÉRIEUR

The Meeting of the Shareholders of the Banque Francaise du Commerce Extérieur was held on March 14, 1962, under the Chairmanship of Mr Georges Assémat, the Chairman of the Board; Mr Jacques Chaine, the General Manager, was present.

In the name of the Board, the Report of the financial year was read out.

The profit increased by 28 per cent. This increase was assisted by the expansion of foreign business, resulting principally from the development of financing of exports.

The net profit, slightly greater than that of the year before, amounted, after deduction of charges, amortisations and provisions, to NF. 4,260,354,61 against NF. 4,118,949,46.

After having made provision for statutory allocations to shareholders, staff and welfare services, the Board allocated NF. 1,300,000 to the General Reserve Fund and placed at the disposal of the Meeting of Shareholders a balance of NF. 1,508,283,69.

The Meeting, after having heard the Report of the Auditors and taken note of the approval of the Welfare Committee, unanimously approved the accounts and resolved to allocate to the shareholders an additional dividend of 5 per cent, and to transfer to the General Reserve Fund a sum of NF. 300,000.

The whole of the Bank's funds, excluding the provisions and amortisations, will thus reach a sum of NF. 39,960,000.

ANGLO-AMERICAN SECURITIES CORPORATION LIMITED

The second annual general meeting of Anglo-American Securities Corporation Limited was held on March 22nd in London, **The Rt Hon Lord Latymer** (the chairman) presiding.

The following is an extract from his circulated statement:

Gross Revenue for the year amounts to £1,243,419 as compared with £1,207,223.

An interim dividend of 5 per cent was paid in August last and a final dividend of 12 per cent is proposed, to make a total of 17 per cent for the year, which is the same rate of dividend as paid last year.

You will notice that there is a heavier charge for Profits Tax this year, which is mainly accounted for by the increase in the rate of Profits Tax imposed in the last budget. Companies pay dividends out of profits which have suffered both Income Tax and Profits Tax. Provided that the shareholder is liable to no more than the full standard rate of Income Tax his fiscal liability in respect of the dividend has thereby been discharged. Individuals are not, of course, subject to Profits Tax and, in consequence, have no right to reclaim, but of necessity it diminishes their share of the net profit available for distribution. Profits Tax is, therefore, in effect, an additional and selective tax imposed on particular members of the community, i.e., equity shareholders, and as such is to be deplored.

The report was adopted.

THE CHARTERHOUSE GROUP

"I see no reason why Charterhouse should not go forward with Renewed Strength"

. . . Sir Nutcombe Hume

The 27th annual general meeting of The Charterhouse Group Limited will be held on April 18th in London.

In the course of his Review which has been circulated to Shareholders, **Sir Nutcombe Hume, K.B.E., M.C.** *(the Chairman)* said:

"Although the year under review was for us one of anxiety, earnings applicable to the Ordinary Share Capital exceeded 8 per cent. However, your Directors have decided, albeit with regret, that the best interest of the Group's shareholders will be served by limiting this year's distribution to 6 per cent so that a start may be made in restoring reserves.

Whilst it is too early to be able to make any reliable forecast of the results in our current year, we have before us indications which we think entitle us to anticipate that we shall be able to report materially greater profits than for the year under review. Consequently we expect that we shall be able to restore the 8 per cent rate of dividend.

Although we have suffered a nasty blow in the last two years from our investment in Charterhouse Credit Company, I feel we are nearly out of that trouble. We think the Credit Company can be made profitable within three years and in the meantime trading losses should be relatively small.

Carefully selected hire purchase business is undoubtedly a profitable activity subject to the Industry following a reasonable policy in regard to rates of commission. The service which this Industry renders is likely to be in active demand in this as in other countries for the foreseeable future.

Despite the problems of past investments the year has been one of growth. The increase of £1,737,001 to £14,687,572 in the Group's interests in its own immediate financial subsidiaries does not fully reflect the further investments by them in their subsidiary and associated companies. The 72 companies in which Charterhouse Industrial Development Company Limited has interests are, on the whole, operating satisfactorily. The Charterhouse Finance Corporation Limited did well against a difficult background for new issue and allied activities; and Charterhouse Group Canada Limited had a successful year. In the aggregate the profits from these four sources attributable to the Group were in 1960/61 greater than in any previous year.

S. Japhet & Co. Limited and Glanvill, Enthoven & Co. Limited both enjoyed a year of record profits and in each of these companies prospects for the current year are satisfactory."

British Home Stores Limited

The following are extracts from the review by Sir Richard Burbidge, Br, CBE, Chairman, which has been circulated with the report and accounts:

The Profit for the period of 52 weeks, before taxation was £1,614,959, a decrease of £480,457 on the previous period, covering 53 weeks. The charge for the interest on Debentures at £166,528 shows an increase of £62,001, while the charge for Amortisation and Depreciation has increased by £27,933. Taxation required the sum of £770,000 and after transferring £200,000 to General Reserve, your Directors recommend a Final Dividend of 5d. on each Ordinary Share, making, with the Interim Dividend, a total of 7d. for the period.

Trading

While total Sales in 1961 were ahead of the previous period, they were not sufficient to cover increased costs of operation, when the measures taken by the Chancellor in July last had a severe effect on our Autumn and Christmas trading. Further, the new Stores opened during the year, after charging to Revenue all opening charges, made only a nominal contribution to the profits. Our recent experience shows that some time must elapse from the date of opening Stores in new areas before goodwill is established and the investment gives an adequate return. This is a new factor, which we attribute to the present trading climate. Your Board is satisfied with the progress made by our Oxford Street Store since it opened in March, 1961, and believe it will be a great and growing asset to the Company in the years ahead. During the year our Buying Department and our Suppliers have concentrated their efforts to ensure that merchandise sold under our brand name "Prova" represents first class quality and value. Throughout this period the re-packaging of every line bearing the "Prova" name has been reviewed and new packs and better presentation have been produced for the great majority of items. The building up of a brand image is a costly and long-term project, but the increasing demand for these lines will prove that our customers are aware of the constantly improving standard of merchandise sold under the "Prova" name. Despite the continual attention being given to the whole range of expenditure of operation, the tendency to rising costs continues. No efforts are being spared to effect economies wherever possible. Your Directors continue to have in mind the problem of further finance for our important development programme, but it is not envisaged that additional Capital will be required during the current financial year.

Development

During 1961 we opened Stores at Oxford Street, London, Scunthorpe and Bradford, and completed extensions at Nottingham and Tunbridge Wells. During 1962 we plan to open a new store at Rotherham, rebuild Woolwich and Sutton and extend Gravesend, Taunton and Sunderland. New stores are planned at Watford, Wembley, Kirkcaldy and Norwich. New sites have been acquired at Belfast, Chester and Gloucester. Your Board is satisfied that the major development programme undertaken was soundly conceived and will lead to greater profitability in the future.

The future

While it is too early in the year to make any forecast about profits for 1962, your Directors have complete confidence in the future growth and profitability of the Company.

HICKSON & WELCH (HOLDINGS)

SATISFACTORY TRADING ACHIEVEMENT

The tenth annual general meeting of Hickson & Welch (Holdings) Limited was held on March 28th in London, **Mr Bernard Hickson, MSc, FRIC** (chairman and managing director), presiding.

The following is an extract from his circulated statement:

The trend of increased turnover with lower profit margins has affected your company, but in spite of this I am able to report that the trading profit is satisfactory.

An extensive capital programme was undertaken following the Rights Issue in July, 1960. At September, 1961, this was still proceeding and is now approaching completion. The results of the year under review, however, do not reflect the reduction in costs and the expansion of activities that will follow from this expenditure. I am confident that the completion of our present plans will leave us in a position to meet the further competition that we are likely to experience.

I will now indicate the progress of the main trading companies in the Group.

Hickson & Welch Limited has increased its turnover by approximately one-tenth and manufacturing costs have been reduced, but competition was such that profit margins declined.

Ronsheim & Moore Limited has maintained its position in the pharmaceutical and cosmetic trades and continues to return a satisfactory profit.

Our associated company in India, Hickson & Dadajee Limited, has had a successful year.

Hickson's Chemical Company (Pty.) Limited has shown a satisfactory increase in profit.

The main timber preservation companies in Great Britain, New Zealand and Australia have increased their activities considerably during the year.

Hickson's Timber Preservation (Malaya) Limited is proving to be a successful addition to the Group's activities.

On the West Coast of Africa business has been maintained.

Our associated company, Hickson's Timber Impregnation Co. (S.A.) Limited has had a record year.

Richardson & Starling Limited has had a satisfactory year's trading, although profits have been lower.

J. Waddington (Builders) Limited was acquired at the beginning of the year and has carried out a major part of the Group's capital building programme in addition to other building operations.

The acquisition of Alvin, Morris & Co. (Timber) Limited was made during March, 1961. It has experienced very successful trading during the period after acquisition and its directors' forecast of profits has been exceeded.

The English manufacturing companies have again increased their sales abroad, and I am pleased to say that 43 per cent of their turnover has been exported.

Commenting on the financial results of the Group, Mr Hickson said that the profit, after deducting all expenses other than taxation, amounted to £680,043, compared with £643,986 in the previous year. The Board recommended a total distribution of 19 per cent, which would absorb £152,742, after deduction of income tax, compared with £133,219 for last year. He concluded:

A good start has been made by all the companies in the Group for the first four months of the current financial year. I look forward to the results of the current year being comparable with the last and the maintenance of dividends at the present rates.

Addressing the Meeting the Chairman said:—

" Since I made my statement, I have concluded an agreement in South Africa for the purchase of the balance of the shares in Hickson's Timber Impregnation Co. (S.A.) Ltd. which until that time had been held outside the Group.

Your Board feel that this purchase will be of great benefit to the Group, and in due course full details of it will be made public. I am giving you this advance information now as a matter of considerable interest.

This purchase will have an additional effect of bringing the whole share capital of Hickson's Chemical Company (Pty.) Ltd. in South Africa into the Group, as at present 49 per cent of it is held by the South African Company."

The report was adopted.

ABBEY NATIONAL BUILDING SOCIETY

ANNUAL GENERAL MEETING, TUESDAY, 27TH MARCH, 1962

In moving the adoption of the Directors' Report and Accounts for the year ended December 31, 1961, **Sir Harold Bellman, MBE, DL, JP**, said:

By the end of the year the Society's assets had risen by over £45 million to the substantial total of £434 million, the largest increase ever recorded in the Society's long history. This growth can be primarily attributed to the receipt in 1961 of over £82 million from shareholders and depositors, compared with £76 million in 1960. Withdrawals in 1961 were higher than in 1960. This we expected, for the new facilities for withdrawal of limited sums on demand have been much appreciated. Nevertheless, the *net* intake of shares and deposits in 1961 at £28.5 million was above the 1960 net figure of £27.7 million.

ADVANCES

Although there has been no lack of potential borrowers seeking loans, the total advanced on mortgages in 1961 was a little below that in the record year of 1960. The shortfall was less than £½ million. But for the suspension of the House Purchase and Housing Act in the autumn, advances by the Society would undoubtedly have established a new high record in 1961. In the circumstances the 1961 total of £68.5 million must be regarded as satisfactory. We continue to give preference to existing members of the Society when allocating the amount available for lending.

LIQUIDITY AND RESERVES

At the close of 1961 the Society held cash and investments in the amount of £72 million, giving a ratio of liquid to total assets of 16.6 per cent. The reserve funds of the Society increased by £1½ million to £15½ million, and the reserve ratio was 3.59 per cent. These two sets of figures should give assurance to the investor, for they are the twin safeguards of accessibility and resource.

MANAGEMENT EXPENSES

It is gratifying to be able to report that Management Expenses, at fractionally over 10s. per cent of total assets, are proportionately lower than in the preceding three years. Ten years ago the comparable management expense ratio was 13s. 3d. per cent.

NEW HOUSES

Of our total loans in 1961 of £68.5 million, some £28 million was advanced to owner-occupiers of newly-constructed houses. It is a vital part of our lending policy to make mortgage facilities available to the purchasers of new houses, for the stock of British homes is still far from adequate. We have also to make funds available to the purchasers of other than new houses and the residue of our total lending in 1961 has been so directed.

BRANCH EXPANSION

During the year, the Society opened six new branches bringing the total number to one hundred. We believe that this widespread provision of facilities is the most important single development of the Society in recent years. We are thus enabled to give good service in the major centres of population to savers and investors, and with local knowledge to help the home buyer.

DEPUTY CHAIRMAN'S REMARKS

Mr Stanley C. Ramsey, FRIBA, Deputy Chairman, in seconding the adoption of the Report and Accounts said :—

If I may chart the progress of your society's lending in the past decade, in 1951 we advanced £29 million for 1956 the figure was £40 million and for 1961 the amount was £68.5 million.

Over most of this period it has been hard to secure funds from investors, and so this substantial growth in our lending is a performance in which we may take some pride.

MANAGING DIRECTOR'S REMARKS

Sir Bruce Wycherley, MC, FCIS, Managing Director of the Society, said :

Over the next few years I think we may expect, if present trends persist, to see the Society become established more firmly than ever in the sphere of small savings and investment. Our members can be assured that it will never become our object to expand the Abbey National more rapidly than prudent judgment can justify.

GRAMPIAN HOLDINGS LIMITED

EXPORTS INCREASED

The Annual General Meeting of Grampian Holdings Limited will be held on April 18th at Glasgow.

The following are extracts from the Statement by **Sir James R. H. Hutchison, Bt, DSO, TD, JP,** the chairman, which has been circulated with the report and accounts for the year ended December 31, 1961:

The Group's profits have risen from £582,895 to £886,062. For the Companies owned for a full year the Grampian profit has been maintained in a difficult trading period and in addition profits were expanded by the acquisition of further companies.

Profits from our furniture interests dropped in 1961, as did those of our Harris Tweed subsidiary. Some improvement in demand in the furniture trade has already become apparent. We have now acquired the more broadly based textile unit of Robert Laidlaw & Sons Ltd., and the rationalisation of administration and production by the integration of all the Group's textile interests is expected to lead to an increase in profit in 1962.

Fleming Brothers (Structural Engineers) Ltd., whose profits improved during the year, was the subject of a searching review during 1961. The changes made in the administration will be of considerable benefit.

The other companies in Grampian Holdings are doing well and those interests worthy of special mention are transport, radio valves, musical instruments and nuts and bolts.

GRAMPIAN SERVICES

Grampian Services is the internal consulting division of Grampian and has a staff of qualified accountants, engineers and marketing specialists. With this concentration of technical skills a programme of consolidation within the subsidiary companies has been initiated and its work is expected to contribute to increased productivity within the Group. It is also intended that appointments to executive positions within the Group, when these arise, should be made from this division.

Grampian now has 17 direct subsidiaries and to meet the administration of this growing group of companies we are now in a position to bring related companies together under sub-holding companies. A start has been made and Grampian Lighting Limited was formed to combine previously separate lighting interests, namely Kego Electric Co., Ltd., New Endeavour Engineering Ltd., and Lumitron Ltd. Grampian Textiles Ltd. has also been formed to incorporate MacDonalds Tweeds Ltd. and Robert Laidlaw & Sons Ltd.

Grampian Holdings Ltd. in future will give preference to acquiring companies related to existing holdings. This, of course, will not preclude the acquisition of companies outside these categories where the opportunity appears to be attractive.

COMMON MARKET

We are making every effort within our own organisation to improve efficiency so that we can compete on favourable terms with any similar manufacturing units within the Common Market Countries.

From the national point of view, exports are all important. During the past year our Companies exported over £1½ million worth of goods, compared with exports of just over £1 million last year.

In order that the Company's bank facilities should be available to finance future developments, a further issue of share capital is being made to fund the Company's present bank indebtedness.

TATE & LYLE, LIMITED

ADVERSE EFFECT OF FOREIGN DUMPING

SIR IAN LYLE ON THE COMMON MARKET

The Chairman, **Sir Ian Lyle,** in the course of his statement said that there had been a sharp decline in home refining profits mainly due to a drop of nearly 5 per cent in the volume of home trade sales and 37 per cent in export. This loss of trade was due to the resale by Russia and her satellites of beet sugar, in markets previously supplied by Tate & Lyle, in order to make room for sugar bought from Cuba for political purposes. Some of these forced sales, as well as blatantly subsidised French surpluses, flowed unchecked into the United Kingdom who alone amongst European countries kept her doors open. In all, some 200,000 tons of Communist and French subsidised sugar, not to mention 11,000 tons from Ireland, were sold to buyers here.

These large sales had jeopardised the working of the Commonwealth Sugar Agreement and the Government was forced to take action. For forty years refiners had added to the price of Empire sugar the amount of the Empire duty Preference. By transferring to the Sugar Board the responsibility for this payment, sugar refined from Empire sources was allowed to compete more effectively with foreign refined sugar. Prices charged to consumers were not affected by the new arrangement. Sir Ian added that, while waiting for these Government measures, Commonwealth exports were only maintained by storing excess sugar; the burden of this falls on the Company and the cost would affect its 1962 trading results.

OTHER ASPECTS OF GROUP'S TRADING

Turning to other aspects of the group's trading, Sir Ian said that the road companies had continued to expand but had operated at a reduced rate of profit. Shipping had had a difficult year and earnings of the combined fleets of Sugar Line and Silvertown Services Shipping had done little more than cover operating costs and depreciation. In the West Indies, Trinidad had had a record year but Jamaica had not fared so well. A considerable tonnage had been shipped to the United States at remunerative prices, without which Jamaica in particular would have been in a sorry plight. There was doubt whether any American quota would be allocated to the West Indies in 1962 or, if it were, whether prices would be equally attractive. Under those circumstances, group profits were unlikely to benefit in 1962 to the same extent as they had in 1961.

In Rhodesia, both the refining company and the raw sugar producing company were now subsidiaries of Tate & Lyle. Sir Ian expressed his hope that the political problems would be solved and the Federation maintained. The raw sugar company had made its first profit in 1961 and with political stability he was confident that both refining and raw sugar production would develop into profitable concerns.

In Canada it was recalled that the controlling interest in the Canada and Dominion Sugar Company was bought at a price of $25 per share. The market price of the shares is now in excess of that figure. There was some doubt about the future of the beet sugar industry in Ontario. While hoping to continue it, the Company had made it plain that it could not support an unprofitable industry.

THE FUTURE

As to the future, apart from the uncertainties in the West Indies, the indications were that results would not be very different from those of 1961. The long term future depended on the Common Market. There was evidence that the general efficiency of refining and raw sugar production was at least the equal of that of existing Common Market suppliers. An enlarged Common Market could provide new markets and as the present consumption of the Six was only two-thirds of ours, there were prospects of sharing in the potential expansion. Sir Ian confessed to being soberly confident in a future in which we are members of the Common Market.

In conclusion, Sir Ian spoke of taxation. In face of increasing Government spending, he foresaw a new raid on industry. If profits were too high, competition, he said, should be stimulated. It was no solution to impose a higher profits tax which would fall on all alike. Such a tax, so far from reducing prices, would in many instances increase them. In calling for greater productivity and for more exports the Government should remember that companies, like individuals, need incentives, which it was sincerely hoped the Chancellor would give in place of resorting to threats of increased taxation.

The report and accounts were adopted.

TAIPING RUBBER PLANTATIONS

The fifty-first annual general meeting of Taiping Rubber Plantations Limited was held on March 27th in London, **Mr W. Anderson** (the chairman) presiding.

The following is an extract from his circulated statement:

The decline in the price of rubber, which began in May, 1960, continued until November of that year; an improvement during March to May, 1961, was not sustained and at the close of the Company's financial year the spot price of R.S.S.1. was down to 2s. 1d. per pound. The recession was reflected in the lower net average price realised for our crop (all grades) which I regret was 7d. per pound less than the average for the previous year. Thus, despite a further small increase in the crop harvested, net income from rubber sales was some £56,000 below revenue from the same source in the previous year.

The Chairman added that the reduction of income was cushioned to some extent by a lower cost of production and reduced export duty, the eventual result being a profit from rubber trading of £38,700 which in the circumstances ruling must be regarded as reasonably satisfactory.

Tin mining operations contributed £26,958 to the year's income and with the addition of interest on investments and deposits total profit before taxation was £70,862.

Mr Anderson went on:

We are continuing with our long term policy and programme of rejuvenation and we now have nearly 1,800 acres of pedigree rubber. It is intended to replant 157 acres this year and this should see us past the half way stage towards our aim of replanting the whole Estate as expeditiously as finances and other circumstances may permit.

I would not be sanguine enough to make any forecast of the possible price we may average for our crop over our current year, but whilst I can see no reason to expect any upward trend above the present level, I risk saying that I do not anticipate any material fall.

The report was adopted.

THE MONOTYPE CORPORATION LIMITED

HIGHER TURNOVER—PRESSURE OF RISING COSTS

The fifty-fourth Annual General Meeting of The Monotype Corporation Limited was held on March 26th in London.

Brigadier Sir George Harvie-Watt, Bart, TD, QC, the Chairman, presided and, in the course of his speech, said:

I am glad to report that we have had another satisfactory year. On a turnover higher than the previous year, the trading balance increased by £29,244 to £948,821, that is about 3 per cent. We are, however, experiencing, along with many other companies, the pressure of increased costs and consequent smaller margins.

Despite our unceasing efforts for greater efficiency there is a point at which higher costs must break through. We are, however, continuing our efforts to nullify increased basic costs by still further improving production efficiency. In addition, through an increased volume of sales at home and abroad we hope to maintain the overall profitability of the company.

The net profit of the Group for the year ended September 30, 1961, is £384,984, an increase of some £2,700. Your Directors again recommend a total dividend for the year of 8 per cent.

The Home market has enjoyed a successful year's trading. Although this turnover has been steadily increasing, the export side continues to absorb nearly 70 per cent. While this is eminently satisfactory, the importance of a stable Home market cannot be under-estimated. The interest in filmsetting continues to grow. Up to the present time, over 100 of our filmsetters have been ordered from 24 countries and more than half have now been delivered.

Our trade in Europe continued satisfactorily during the past year. Sales included a number of filmsetters to Germany, Holland, Sweden, Switzerland and Yugoslavia. Orders have been obtained at a rate somewhat higher than in the previous year.

The remainder of the Export Market has again shown an improvement and some new customers were added. In particular there was an improvement in turnover in India, the Middle East, the Far East and West Africa. In order to combat difficulties brought about by licensing and to extend and expand sales of machines and equipment for the lithographic printing trade we, in conjunction with our subsidiary company, Pictorial Machinery Limited, have set up manufacturing facilities in India. The factory is now in production and first results are encouraging. We are confident that there is a growing market there and orders are being received at a satisfactory rate. Closer co-operation with our American friends, the Lanston Monotype Company, has resulted in our shipping a number of machines, both type and filmsetting, to that country.

The factory at Dunfermline commenced production in the summer of 1961. Production is steadily proceeding and the quality of work is most satisfactory.

I am reasonably confident about the future and I have no doubt that we shall continue to obtain our share of the business available. We are well equipped to do so, with our strong organisation and products for which there are expanding markets.

The report and accounts were adopted.

APPOINTMENTS

EDUCATIONAL EDITOR

An expanding publishing Company require a man with an honours degree, a cultured but firm personality, wide interests, and possessing both creative and administrative ability, for the position of Head of their Editorial Department.

He should be between the ages of 35 and 50, preferably with publishing experience, possessing good contacts in educational circles and the ability to extend them. Teaching experience would be helpful, but a general knowledge of the educational field might suffice.

He will be required to develop a well-known, expanding educational list, and devise and carry out a policy for its further extension.

An attractive salary will be paid, and a car provided, the Company also operate all the benefits normally found in a progressive organisation. The prospects are excellent, and the appointment will provide plenty of scope for a really keen mind.

Interviews will be held in London during the week commencing April 9th.

Write in strict confidence for form of application to the Managing Director, Box 1610, quoting E. 1.

BRIGHTON EDUCATION COMMITTEE

BRIGHTON TECHNICAL COLLEGE

(Incorporating Preston Technical Institute)

ASSISTANT LECTURER, GRADE "B" in ECONOMICS with GOVERNMENT or STATISTICS required from September 1, 1962. Salary £756-£1,359 p.a. plus training and graduate allowances, if appropriate.

Increments for approved experience.

Further particulars and application forms from the undersigned, to be returned to the Principal, Preston Technical Institute, Coombe Road, Brighton 7, by April 13, 1962.

W. G. Stone,
Director of Education,
54 Old Steine,
Brighton.

UNIVERSITY OF CANTERBURY
CHRISTCHURCH, NEW ZEALAND

SENIOR LECTURER OR LECTURER IN POLITICAL SCIENCE

Applications are invited for the above-mentioned position in the Department of History and Political Science. A special interest in the comparative study of political institutions or the sociology of politics would be desirable but it is not essential.

The salary attached to the position of Senior Lecturer will be at the rate of £1,750 per annum, rising by annual increments to £2,000 per annum, and to that of Lecturer at the rate of £1,250 per annum, rising by annual increments to £1,700. Commencing salary will be in accordance with qualifications and experience.

Approved fares to Christchurch will be allowed for the appointee, his wife and children. In addition actual removal expenses will be allowed within specified limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on 30th April, 1962.

UNIVERSITY OF BRISTOL

Applications are invited for two posts in the Department of Economics from August 1, 1962.

An Assistant Lectureship (Grade III).

An Assistant Lectureship (Grade III) or a Lectureship (Grade II).

One of these appointments will be in Economics and the other in Econometric Statistics. The salary scale for Grade III is £600 by £50 to £950 p.a. and for Grade II £1,050 by £50 to £1,400 by £75 to £1,475 (bar) by £75 to £1,850 p.a. plus F.S.S.U. and Family Allowance. Further particulars may be obtained from the Registrar, The University, Bristol, 8, to whom applications should be sent by April 28th.

UNIVERSITY OF DUBLIN
Trinity College

LEFROY STEIN SCHOLARSHIP

Applications are invited for the LEFROY STEIN SCHOLARSHIP which on this occasion will be awarded to a graduate for full-time research in history or any of the social sciences. The scholarship is for two years and the stipend is £400 p.a. The holder is eligible to reside in the College or, if a woman, in Trinity Hall.

Application forms and further particulars may be obtained from the Registrar, Trinity College, Dublin, 2, who will receive applications until May 1, 1962.

THE UNIVERSITY OF LEEDS
DEPARTMENT OF SOCIAL STUDIES

Applications are invited from graduates in Sociology or allied subjects for the post of Lecturer or Assistant Lecturer in Sociology in the Department of Social Studies. Salary on the scale £1,050 x £50—£1,400 x £75—£1,850 (efficiency) bar at £1,550 a year for a Lecturer, or within the range £900-£950 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach The Registrar, The University, Leeds 2, from whom further particulars can be obtained, not later than May 7, 1962.

MAKERERE UNIVERSITY COLLEGE—EAST AFRICA

Applications are invited for Lectureship in Agricultural Economics, with particular reference to Farm Management Economics. Salary scale £1,450-£2,151 p.a., entry point determined by qualifications and experience. The appointment will be for one tour of twenty-one months plus three months leave, in the first instance. Secondment welcomed. F.S.S.U. Child allowance £50 p.a. per child (max. £150 p.a.). Passages for appointee and family up to five adult passages) on appointment, termination and leave. Rent according to quarters provided, £45-£84 p.a. (including basic furniture). Detailed applications (six copies) naming three referees, by April 28, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

For further appointments and other classified advertisements see pages 1296 & 1297

UNIVERSITY OF SYDNEY
CHAIR OF ECONOMIC STATISTICS

Applications are invited for a recently-established Chair of Economic Statistics.

Salary will be at the rate of £A4,250 per annum, plus cost of living adjustments (at present £A44 per annum). There is retirement provision under either the Sydney University Professorial Superannuation Scheme or the New South Wales State Superannuation Scheme.

Under the Staff Members' Housing Scheme, in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

The Senate reserves the right to fill the Chair by invitation.

A Statement of conditions of appointment and information for candidates may be obtained on application to the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on May 15, 1962.

COMPANY AFFAIRS

Last week's further cut in Bank rate brought only a temporary relief to the London Stock market. With fears of a capital gains tax still a dominating influence prices of equities slipped back again and The Economist *indicator lost 1.6 points to 346.3. But on Thursday prices both of equities and gilt-edged were helped by the improved balance of payments picture. Among the brighter spots were tobacco shares which recovered much of last Friday's sharp falls. Gold shares however did not hold their sharp gains of last week while shipping shares drifted lower on the depressing chairman's statement from P. and O.*

P & O Close Hauled

In his address to P & O shareholders a year ago, Sir Donald Anderson offered comforting words: "The worst is now behind us." With the ordinary dividend cut from 11 to 6 per cent. and gross profits down from £5,846,000 to £579,000 (of which £400,000 represented non-recurring profits on sales of government securities) Sir Donald told shareholders that he hoped he would not fall into similar error this year. He continued:

> There is little enough temptation to do so, for the prospects for the current year show no improvement, and indeed the tramp market is worse now than ever before.

Giving the directors' reasons for the cut in dividend, he stressed the exceptional nature of a large part of the meagre profit. He may even have raised doubts as to whether this rate could be maintained:

> The current year shows no sign of producing more profit, whilst we know that the charge for depreciation will be higher. Thus, until we can see signs of improvement we shall have to continue to face the same problem of distribution, and probably with less surplus available. It is with this in mind that your Board has recommended a final distribution of 3 per cent. This involves drawing on profits of previous years, but the board regards this as justified, if only because profits have not been fully distributed in the past.

Sir Donald reminded shareholders that this was not the first time that the shipping industry had been through a slump and cited the 1930's when P & O passed its dividend for four successive years. But there was an important difference between the two periods:

> The shipping slump . . . formed part of a world-wide pattern of the deepest depression in all business activity. The present shipping slump, which began in the early months of 1957 and acquired its full shape within that year, has taken place against what has been until recently a generally prosperous background of British and world trade, and is the harder to understand for that reason.

In his statement Sir Donald gave considerable space to the vast growth in ships at sea, both dry cargo and tankers, and to the problem of flag discrimination:

> There are many aspects of this problem, one of which is whether we should move from our traditional policy of doing all we can to enlarge the area of world trade open to shipping of all flags. If we move, it must in one direction be towards taking defensive measures to protect ourselves, which may involve retaliation where no other course is open. Such questions raise grave issues and indeed we may be approaching a critical point in national shipping policy, which can be settled only by the closest collaboration between the Government, which alone can act, and the shipping industry.

On the brighter side the chairman told shareholders that both the new liners *Oriana* and *Canberra* have overcome their teething troubles; they have both made a cash profit and have come nearer than most other passenger ships to covering their full depreciation. The tankers too have made a useful contribution to profits and but for them the results would have been still worse. With profits at a "marginal point" P & O is trying to cut its costs. But Sir Donald said:

> Our approach must remain constructive. We must ride out the storm, but we must also be ready to take the initiative, now and when things improve. The worst of both worlds would be to suffer a slump and then be unable to gain from the revival which will follow.

BICC

The latest results from British Insulated Callender's Cables reveal a further recovery, very much in line with the forecast made by the chairman, Sir William McFadzean, in November. For the year as a whole BICC's sales rose by 5½ per cent from £143 million to £151 million but slightly higher prices and greater productivity pushed trading profits up by as much as 16 per cent, from £9.4 million to £10.9 million. (These figures do not tally exactly with those in the table as in the past trading profits have been shown after charging an unspecified amount for bank interest and this charge has been deducted from the latest figures to make a comparison with earlier periods possible.) Bank interest in fact fell last year from £381,000 to £275,000, reflecting the impact of the £15 million debenture and rights issue in May, but this was more than offset by the rise in debenture interest from £351,000 to £560,000. Depreciation and tax were also higher and factory reorganisation expenses were another item which cut into net profits. Thus over the two halves of 1961 net profit

Six months to	June 30, 1960	Dec. 31, 1960	June 30, 1961	Dec. 31, 1961
	£'000	£'000	£'000	£'000
Sales	74,000	69,000	75,000	76,000
Trading profit	4,469	4,553	5,273	5,384
Depreciation	1,285	1,297	1,424	1,456
Profit before tax	2,823	2,849	3,321	3,189
Investment income	38	535	62	700
Tax	1,113	1,480	1,471	1,855
Net profit	1,748	1,904	1,912	2,035
Trading profit/sales	6·0%	6·6%	7·0%	7·1%

margins fell slightly, even though the improvement in gross margins was maintained. Investment income however has risen so that earnings still cover the maintained dividend of 13½ per cent just under 2½ times. On this payment the £1 shares, at 62s., yield 4·4 per cent.

Lesney Products

The toytown boom continues and the shares of the toymakers have attracted investors almost as much as their brightly-coloured toys attract children. The 5s. shares of Lesney Products offered to the public in September, 1960, at 20s. a share were soon standing at double that price and now at 61s. 3d., they yield 2.4 per cent on the dividend as increased from 27½ to 30 per cent. The group is principally known for its "Matchbox" series of toy models but it also makes die-castings for the motor and allied industries. In the year to January 19th its consolidated profits before tax rose by 16 per cent from £332,000 to £385,000. After tax of £195,000 against £164,000 net profits rose by over 23 per cent from £154,000 to £190,000. This advance reflects the increase from 1s. 6d. to 1s. 8d. in the price of "Matchbox" toys which does not seem to have hit the schoolboys' pockets. The bigger King Size series has also apparently had a good reception. But there are signs that margins came under pressure late in the financial year for in an interim statement in November the directors said that sales for the first nine months had increased by about 20 per cent and that profits before tax had "increased in proportion."

With the results comes a one-for-eight scrip issue and shareholders may not be over optimistic in assuming that the 30 per cent dividend will be maintained on the bigger capital this year. The 1961-62 dividend was covered over 5 times by earnings but of the currently issued capital of £400,000, some £200,000 is in deferred ordinary shares, which are held by the directors, and rank for dividends from 1963-64. The forthcoming scrip issue to holders of the deferred shares will be in ordinary shares so that the capital ranking for dividends in the current year is increased to £250,000.

Delta Metal

FOR the fourth successive year Delta Metal has earned higher profits. In 1961 its gross profits, including stock credits and £346,000 from six months' profits of Davis and Timmins, rose by 18 per cent from £3,777,000 to £4,457,000; if stock credits (which amounted to £11,000, against £147,000 in 1960) and post acquisition profits are excluded the rise is 13 per cent. This suggests that the group continued to prosper in the second half of the year at a time when many companies were earning much lower profits.

Following a rise in net profits from £1,973,000 to £2,237,000 the ordinary dividend was maintained, as forecast, at 20 per cent. Davis and Timmins contributed only six months' profits but the shares issued in respect of its acquisition rank for a full year's payment. Earnings at 38 per cent, against 36 per cent, thus slightly understate the year's achievement. A year ago the chairman, Mr W. E. Ogden, said that the policy of development for the group's metal, alloy and engineering interests, had borne fruit sooner than had been expected and that further plans should bring a fresh increase in profits in the future. The current slackness of engineering orders in this country may temporarily hold up the group's progress but Delta Metal serves a good number of industries both here and abroad. The yield on the 5s. shares at 21s. 3d. is 4¼ per cent; this is low for an engineering share, but Delta Metal has earned its place in the esteem of investors.

British United Shoe Machinery

FOLLOWING four years of rising profits, the gross profits of British United Shoe Machinery Company fell by 3 per cent from £4,212,000 to £4,083,000 last year. But an interim report published in August showed that profits had fallen by 9½ per cent in the first half of the year; the directors attributed the decline to lower margins, after heavier charges for depreciation, research and advertising. Thus it would appear that profits recovered a little in the second half of the year; even so profit margins are still likely to be under pressure, though it is not clear which of the group's activities has been hardest pressed. A year ago the chairman said that home and export order books for shoe machinery were "considerably in excess of manufacturing capacity" and a really marked fall in the demand for the other products of the group, which include rivets and the "Bostik" range of goods, does not appear all that likely. But even as dominant a company as British United Shoe cannot fully insulate itself from a rise in costs.

Its net profits fell by 7½ per cent from £2,140,000 to £2,021,000, so that the tax free ordinary dividend, effectively unchanged at 7½ per cent, is covered just under 2½ times. At the time of the interim dividend the directors said that they would have paid more but for the Chancellor's request for restraint. British United Shoe is controlled by an American company and the minority shareholders must hope that the heavy capital expenditures of recent years will soon boost profits. The £1 ordinary shares lost 1s. 9d. after the results were published and at 73s. yield 3.4 per cent.

Associated Fisheries

THE decision by Associated Fisheries to pay a dividend of 26 per cent, against a forecast of 25 per cent, pleased the market. For 1959-60 a dividend of 25 per cent was paid but the latest payment is on the capital as increased by a two for five rights issue as well as by the shares issued when Arlac Steam Fishing and London Ice and Cold Storage were acquired. The pre-acquisition profits of these subsidiaries contributed £158,000 to the increase in the group's trading profit from £628,000 to £1,011,000 after depreciation of £610,000, against £506,000. It would appear therefore that the group's interests in trawling and distribution had another good year. But it is still not clear whether any profits have been brought in from the Eskimo frozen foods business; in the past any surplus earned by Eskimo has been used for expansion rather than being transferred to the parent organisation. Once again, as a result of investment allowances, the tax charge is disproportionately low and net profits have risen from £428,000 to £617,000 to cover the dividend just over twice.

Since the end of the financial year the group has acquired Hellyer Brothers and its subsidiary Kingston Trawler; these companies dominate the Hull trawler fleet much in the same way as Associated Fisheries dominates the Grimsby fleet. The merger has created one of the world's biggest fishing fleets and the combined profits before tax are likely to amount to about £1,300,000 in 1961-62. To achieve the merger about three million ordinary shares in Associated Fisheries have been issued, increasing its ordinary capital by about 40 per cent. It remains to be seen whether the economies in operation envisaged from the merger, the rapid growth of Eskimo Foods (which are now sold in over 50 countries) and the inspiration of Sir Hugh Fraser (who became chairman in January, 1961) can produce profits that will justify a further increase in dividend in the face of this sharp increase in issued capital. The latest results are encouraging but at 30s. 3d. xd the 5s. shares yield only 4¼ per cent.

George Wimpey

THE £1 shares of George Wimpey, the civil engineers and property developers, have been looked upon as one of the outstanding growth prospects over the next few years. But the shares suffered a sharp setback this week following the group's disappointing results. For 1961 group profits before tax rose by only 2¼ per cent from £3,137,000 to £3,209,000 after providing for all charges including depreciation of £1,655,000 (against £1,423,000). Nevertheless taxation took considerably more at £1,432,000 against £1,283,000 so that net profits fell by 4¼ per cent from £1,854,000 to £1,777,000. In the building and civil engineering business profits must vary through changeable weather conditions and as contracts are completed. However in view of the chairman's statement in April last year that the order book was the largest in its history and that he therefore hoped for another successful year these results must be judged as disappointing.

Hopes of a scrip issue were also not realised and the £1 shares fell from 181s. 10½d. to 167s. 6d. but recovered to 175s. to yield only 1.1 per cent on the maintained dividend of 10 per cent. On the current earnings this payment is covered over 7 times.

Gold Shares

THE relative peace of London's Kaffir market was shattered for only a short while last week by a sharp rise in prices following the South African budget proposals to relax slightly the present exchange control. But since the budget held out little prospect of any early return to normal dealings between London and Johannesburg prices soon slipped back. As expected prices have been weaker in Johannesburg and the average discount in London has narrowed from 20-25 per cent to 15-20 per cent on prices in South Africa.

Meanwhile two of the leading mining finance houses have announced their results. While Anglo American Corporation maintained its dividend at 9s. per share Union Corporation again raised its payment from 4s. 0¾d. to 4s. 1d. per share, but this in fact represents the rounding up of the dividend in South Africa to 25 cents free of tax. By contrast net profits of Anglo American rose from £7.8 million to £8.5 million while those of Union Corporation fell from £3.7 million to £3.2 million. In 1961 Anglo American's total income rose from £9.9 million to £10.5 million and while it wrote less off its investments (£843,000 against £1.2 million) it had to pay more in taxes.

Union Corporation too showed an increase in investment income from £2.5 million to £2.7 million but its share dealing profits were cut from £1.1 million to £174,000 while the amount written off its investments was increased from £150,000 to £175,000. Both groups are likely to maintain conservative dividend policies. Union Corporation's new mines in the Kinross area, Bracken and Leslie, and Anglo American's new Western Deep Levels mine on the Far West Rand which started production last week will soon need more capital. At present priced in London at 141s. 3d. the 10s. shares of Anglo American yield 6.3 per cent while the 2s. 6d. shares of Union Corporation at 50s. 7½d. yield 8.1 per cent.

Lewis's Investment Trust

FOLLOWING a slight fall in profits in the first half of the year to February 1st, Lewis's Investment Trust virtually maintained its profits in the second half. The chairman, Mr Rex Cohen, says that under the circumstances it is "with some satisfaction" that he is able to report that trading profits at £6,081,000 for the year as a whole were only £2,000 lower than they were in 1960-61. The bad weather and the Government's measures to restrain demand depressed trade, and the group had to carry the extra burden of £750,000 in wages. Net profits fell from £5,298,000 to £5,279,000 and the ordinary dividend, rounded up from 12½ to 12½ per cent, is covered about twice by earnings.

Mr Cohen says it is difficult to venture an opinion on prospects in the current year. Trade at Selfridges was hit by the bad weather in December and January and fewer tourists appear to have shopped there, so that its trading profits fell from £1,664,000 to £1,583,000; it is now threatened by proposals to make Oxford Street a one-way street. But the reconstruction programme has been completed and Mr Cohen says that "the whole store is now poised for a substantial increase in trade and profitability as soon as normal trading conditions return." Reconstruction has already helped the Leeds and Glasgow branches of Lewis's, and is under way at Manchester and Birmingham where it should eventually raise the profits. Capital commitments stand at £3,316,000 so that the group, whose cash flow is about £1¾ million, may have to draw upon its cash balances of over £3 million. The 4s. ordinary shares at 14s. 4½d. yield 3½ per cent, and the earnings yield of about 7 per cent is higher than that of many other similar store groups.

Debenhams

AS already forecast, the directors of Debenhams have declared an unchanged interim of 5⅝ per cent on the capital as increased by the one-for-fifteen rights issue in June. They expect that profits in the full year to July 31st will enable them to recommend an unchanged final of 13¾ per cent. As the 1960-61 dividend was covered more than 1½ times by earnings, there would not appear to be any difficulty. But the directors' statement is not wholly reassuring for it says that while the turnover of those subsidiaries whose financial year ends on January 31st was higher their pre-tax profits were about 4½ per cent lower. Expenses, particularly wages and salaries, have been rising. In the last two months, the directors say, the fashion trade has been adversely affected by the prolonged spell of cold weather and by a late Easter. The odds seem to be that Debenhams profits in the current financial year will be lower than in 1960-61 and the stock market marked the 10s. shares down by 1s. 6d. to 55s. to yield 3.6 per cent.

General Refractories

WHEN the steel industry was working overtime in 1960, manufacturers of refractory bricks were working to capacity and earning record profits. Recession in the steel industry quickly ate into their profits last year and does not hold out any hope of recovery until late this year. Shareholders in companies making refractories, such as Steetley and General Refractories, have always to be prepared for these cyclical swings; but they cannot fail to note that the fall of 20 per cent from £1,290,000 to £1,029,000 in the trading profits of General Refractories was almost twice as steep as that reported by Steetley. The chairman of General Refractories, Mr Roland Kirkby, says that sales and earnings in the early months of the year were maintained; but wages rose, the tax on fuel oil was raised and as the demand for steel fell the steelmakers, having built up big stocks of refractories, cut down their orders. Investment allowances reduced the tax charge and limited the fall in net profits to 12 per cent from £602,000 to £530,000 and the maintained ordinary dividend of 25 per cent is covered about 2¼ times by earnings.

Mr Kirkby says that many lessons were learnt in 1961 and that General Refractories hopes to improve production planning as a result of its experience. The swing from boom to recession was certainly sharp, being reflected in the replacement of a net cash balance of £461,000 by a net overdraft of £328,000. It may be that the overdraft is bigger now but Mr Kirkby hopes for some improvement in the group's liquidity in the second half of the year. The yield of 5.1 per cent offered by the 10s. shares at 49s. certainly looks that far ahead.

Bradford Dyers

IN 1960 a recovery in the domestic piece-dyeing section of Bradford Dyers' Association was largely responsible for the revival of the group's profits; last year, however, the trading profits of the United Kingdom dyeing, printing and finishing branches fell back so that the trading profits of BDA's interests in this country as a whole fell by 27 per cent from £553,000 to £404,000. Overseas subsidiaries earned slightly higher profits of £260,000, against £214,000. The chairman, Mr James Ewing, says that there was a big increase in the output and profits of the Canadian and United States subsidiaries, though a loss was incurred by the Australian subsidiary. The group's net profits fell from £222,000 to £182,000, leaving the maintained ordinary dividend of 6 per cent from trading short-earned by about a fifth. A tax-free bonus of 2 per cent is to be paid from the surplus on the sale of shares in the Egyptian company, Beida Dyers, SAE. Mr Ewing makes no specific forecast for the current year, but he says that the inadequate response to the government reorganisation scheme for the finishing sections of the textile industry leaves it with excess capacity still on its hands. Though the £1 ordinary shares have risen from 12s. in 1961 to 15s. 6d. xd, it is not surprising in view of the short-earned dividend and the constant competition of foreign imports that the yield is 7¾ per cent, excluding the tax-free bonus.

Harveys of Bristol

JOHN HARVEY'S financial year ended on February 28th but at last Friday's extraordinary meeting, which approved the company's change of name, the chairman, Mr George McWatters, was already able to tell shareholders that the group's trading profits, excluding pre-acquisition profits, were not less than £900,000, against £707,000 in 1960-61. As forecast the ordinary dividend is to be maintained at 21 per cent on the capital as increased by the one-for-four rights issue and acquisition issues. Shares were issued in the purchase of Cater, Stoffell and Fortt, which contributed a full year's profits from its grocery, restaurant and catering interests. But Harvey's principal acquisitions in the past year have been for cash; about £450,000 was paid out for Martinez Gassiot, and about £550,000 for the whisky business of Stewart of Dundee.

These acquisitions must have eaten deeply into the group's liquid resources, reinforced only a year ago by the £1.6 million raised by a rights issue, and the directors now have a £1 million-£2 million debenture issue under consideration. Ordinary shareholders will hardly grumble at such an issue for the latest increase in profits has left the dividend cover virtually unchanged at just under twice. The 5s. shares, now standing at 50s. 6d. to yield 2.1 per cent, have been firmly in the "growth" category since they were first introduced on the London Stock Exchange three years ago.

THE MONEY MARKET

At last Friday's Treasury bill tender following the further ½ per cent cut in Bank rate, the average rate of discount fell by 8s. 7.10d. to £4 9s. 0.47d. The syndicate of discount houses raised its bid by 2s. 2d. to £98 17s. 9d. but its allotment was still only 48 per cent. This compares with 41 per cent for the previous week but 57 per cent at the tender after the reduction in Bank rate a fortnight before. The demand for bills remains high and applications for the £230 million of bills fell by only £4 million to £408 million.

The reaction of the authorities to this further sharp fall in the bill rate was swift and on Monday four or five houses had to borrow a moderate amount from the Bank of England at Bank rate. On Tuesday credit was very tight; the authorities gave special help by purchases of bills on a "considerable" scale, but this was still not sufficient to prevent two or three houses borrowing a small amount at Bank rate. The shortage of funds reflected not only heavy calling by the banks to meet tax transfers but also the absence of bill maturities following the Christmas holidays three months earlier. By Wednesday the market was slightly better placed.

APPOINTMENTS

SENIOR EXECUTIVE APPOINTMENTS

Three senior executives are required to complete the team co-ordinating and controlling the overseas subsidiaries of a major international Company.

Duties will include evaluation of proposed projects and programmes for the manufacturing and marketing activities of these overseas subsidiaries.

These appointments, based on London, will involve overseas travel.

Minimum salaries of £3,000 per annum are envisaged, and applicants earning less than £2,600 per annum will not be considered. The preferred age range is 32-37.

The requirements are as follows:

PRODUCTION EXECUTIVE — **Reference PE/1611**

Candidates should have a degree in engineering or equivalent technical qualification. They must have had executive experience in production management, and of operating related management techniques

MARKETING EXECUTIVE — **Reference ME/1612**

Candidates, preferably qualified economists, must have had considerable executive experience of marketing techniques in manufacturing industry.

FINANCIAL CONTROL EXECUTIVE — **Reference FCE/1613**

Candidates must be Chartered Accountants and have had extensive experience of management accounting and financial control techniques in manufacturing industry.

Applications, giving full details of age, qualifications and experience, should be addressed to Urwick, Orr & Partners Ltd., who have been asked to advise on these appointments, at 14, Hobart Place, London, S.W.1, quoting the appropriate reference number.

EXPERT ECONOMIST and company Analyst required by City Stockbrokers. Replies, with particulars of experience in confidence, to Box No. MA/133, c.o. 95, Bishopsgate, E.C.2.

MINISTRY OF EDUCATION

H.M. INSPECTORS OF SCHOOLS

Non-contributory pensionable posts in England for men and women, preferably under 45 with good educational qualifications. Experience in any aspect of Primary, Secondary or Further Education (including Adult Education and the Youth Service) or in Teacher Training or the organisation and inspection of School Meals. Vacancies in all the main subjects of the curriculum and especially in Physical Education (Women), Nursery and Infant Education, Mathematics and Science.

Salary scale £1,830-£2,755, London Weighting if applicable.

Appointments may be made above the minimum. Higher posts filled by promotion, also some with £163 allowance.

Application form from the Secretary, Ministry of Education (Inspectors' Section), Curzon Street, London, W.1. Closing date April 27th.

MATHEMATICIAN

HEINZ, Manufacturers of the 57 Varieties, require a qualified mathematician to work with the Industrial Engineers on a number of interesting projects which require mathematical or statistical techniques.

Candidates should preferably have a degree in Mathematics or anticipate graduating in Mathematics in the Summer of this year.

Full details of duties will be discussed during interviews, together with conditions of employment but, initially, applicants should please forward a brief summary of personal history to date to:

The Personnel Officer,
H. J. Heinz Co. Ltd.,
Waxlow Road,
Harlesden, N.W.10.

BBC REQUIRES Thai Programme Organiser (British subject). Duties include planning and production of broadcast programmes and supervision and co-ordination of duties of programme staff concerned with translation and broadcasting of news bulletins, talks, commentaries and feature programmes in Thai. Essential qualifications include definite interest in and knowledge of international affairs with special reference to South-East Asia, journalistic ability, sense of news values and wide cultural background. Experience of journalism, production and planning of broadcast programmes, ability to write for broadcasting, recent knowledge of Thailand are considerable advantages. Knowledge of Thai desirable, but successful candidate must, in any case, be willing to study the language in order to become reasonably fluent. Salary £1,575 (possibly higher, if qualifications exceptional) rising by five annual increments to £2,001 p.a. max. Requests for application forms (enclosing addressed envelope and quoting reference 62.G.43.T.) to Should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

ECONOMIST

The Milk Marketing Board requires a young Economist (aged 21 to 28) with a good honours degree to assist with planning and research for sales and marketing operations. Previous experience in Economics and Statistical work and in a commercial organisation will be an advantage. Salary in accordance with age and experience.

Applications, giving brief details, to the Personnel Officer, Milk Marketing Board, Thames Ditton, Surrey.

FEDERATION OF RHODESIA AND NYASALAND

AGRICULTURAL ECONOMISTS

MINISTRY OF AGRICULTURE

Applications are invited from persons holding either an Agricultural Economics, Economics Commerce or similar degree with experience in Agricultural Economics for appointment as Economists.

Salary depends on standard of degree and experience commencing entry in the range of £1,230 and £1,575 rising in a scale to £2,115 (£1,755 overseas).

Gratuity. Free conditions.

Gratuity. Passage benefits.

Farm or station accommodation and families to position, duties, etc.

The Federation offers a sunny climate with many sports and social facilities, a low income tax rate and good education facilities.

Application forms and further particulars from the Secretary, (K), Rhodesia House, Strand, London, W.C.2.

Closing date: 28th April, 1962.

NATIONAL INSTITUTE FOR SOCIAL WORK TRAINING

Applications are invited for the post of Research Assistant, scale £1,200 x £75 to £1,650 with child allowances and superannuation. Further particulars from the Research Assistant, Institute for Social Work Training, 5 Tavistock Place, London, W.C.1, to whom completed applications must be returned by April 28, 1962.

THE RANK ORGANISATION

requires a top-flight

ECONOMIST

to fill a newly-created post

The successful applicant is likely to be aged 25–35; to have obtained an honours degree in economics, preferably with some statistics; to have had experience in the application of economics, statistics, and of market research or related subjects to the problems of industry; and to have the ability to work hard without supervision.

This is a senior appointment with good prospects.

Apply with full particulars of qualifications and experience to The Personnel Adviser (E106),

THE RANK ORGANISATION, 11 BELGRAVE ROAD, LONDON, S.W.1

BRADFORD INSTITUTE OF TECHNOLOGY

APPOINTMENT OF HEAD OF THE DEPARTMENT OF INDUSTRIAL ADMINISTRATION.

Applications are invited for the above post, at a salary scale within the range £2,600 to £3,675, according to qualifications.

The Institute, which is developing rapidly, will be transferred to an independent Governing Body as from April 1. The expansion of the Department of Industrial Administration is an integral part of the planned development of the Institute as a college of advanced technology.

At present the Department has an establishment of over 30 staff, specialising in Management, Economics, Professional and General studies. Considerable importance is placed on the development of courses in Management Studies, especially at post-graduate level. The Department is also responsible for a wide range of Management and General Studies for students reading for Diplomas in Technology. Research, for which adequate facilities are available, is strongly encouraged.

Applicants should have appropriate academic and industrial qualifications and experience. The ability to direct new developments in education and research in management will be the main criterion for the appointment.

Further particulars of the appointment and forms of application may be obtained from the Registrar, Bradford Institute of Technology, Bradford 7.

RESEARCH Officer required for British Travel and Holidays Association with at least three years' experience in Market Research, commencing salary according to ability.—Apply in confidence to Financial Controller and Secretary, British Travel and Holidays Association, Queen's House, 64-65 St. James's Street, London, S.W.1.

OVERSEAS DEVELOPMENT INSTITUTE

requires an Assistant for work in economics and statistics. Candidates should have experience of work with statistics, preferably in international trade and finance.

Salary £1,000-£1,250. Appointment two to three years. Apply to the Director, Overseas Development Institute, 160 Piccadilly, W.1, from whom further information may be obtained.

BRIGHTON EDUCATION COMMITTEE

BRIGHTON TECHNICAL COLLEGE

(*Incorporating Preston Technical Institute*)

ASSISTANT LECTURER, GRADE "B," OF LECTURER for ACCOUNTANCY, SECRETARIAL AND ADMINISTRATIVE PRACTICE, largely for Final Professional courses, required from September 1, 1962.

Salary:

Assistant Lecturer, Grade "B," £770-£1,350 p.a., plus training and graduate allowances, if appropriate.

Lecturer, £1,600-£1,800 p.a.

Increments for approved experience.

Further particulars and application forms from the undersigned, to be returned to The Principal, Preston Technical Institute, Coombe Road, Brighton 7, by April 13, 1962.

W. G. Stone,
Director of Education.
54 Old Steine,
Brighton.

TOTHILL PRESS requires a graduate economist. The successful candidate must be familiar with statistical sources and he must have the ability to search out facts and to present them concisely and coherently. Experience in market research or industrial research is desirable.

This is a new appointment in a new and growing research field. Salary will be in accordance with age (not over 30) and experience.

Full particulars of qualifications and experience to Cohen, Tothill Press Limited, 33 Tothill Street, London, S.W.1. (Whitehall 9233.)

For further appointments and other classified advertisements see page 1288

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of LECTURER in ACCOUNTANCY and FINANCIAL ADMINISTRATION (with special reference to the Accounts of Public Corporations and Local Authorities) to begin duties on 1st October, 1962. Initial salary according to qualifications and experience on the scale £1,050 x £50—£1,400 x £75—£1,850, with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar, to whom applications (four copies) should be sent by 5th May, 1962.

INDUSTRIAL MARKET RESEARCH

The British Oxygen Company Limited is developing its market survey facilities and wishes to appoint a young market survey assistant.

Applicants should hold an appropriate Honours Degree or equivalent. Two or three years' experience in industrial market research or similar commercial activity within industry, or with a consultant, would be an advantage.

Initial salary £1,250-£1,350 per annum, dependent on age and experience. Housing and removal assistance given where appropriate.

Applications, in strictest confidence, to—

The Personnel Officer,
Technical Division,
The British Oxygen Company Limited,
North Circular Road, Cricklewood, N.W.2.

SECURITY ANALYST

We wish to employ an experienced security analyst for responsibilities in the field of foreign securities. This will entail periodic visits out of the United States, primarily in western Europe.

Prerequisites for the position include competence in meeting upper echelon management and a knowledge of major international economic and political factors, as well as sound analytical abilities and background.

Please submit full particulars in confidence to:
J. Mitchell Graybard, *Personnel Manager*,
Smith, Barney & Co.,
20 Broad Street, New York 5, New York.

THE UNIVERSITY OF LIVERPOOL

Applications are invited for the following posts, tenable from October 1, 1962:

(a) Lecturer in Accountancy. The initial salary will be within the range £1,600-£1,850 per annum, according to qualifications and experience.

(b) Assistant Lecturer in Economics. The salary will be within the range £800-£950 per annum, according to age, qualifications and experience.

Applications, stating age, academic qualifications and experience together with the names of three referees, should be received not later than April 21, 1962, by the Registrar, from whom further particulars of the conditions of appointment may be obtained. Quoting CV 39/2.

ECONOMICS GRADUATE

(FEMALE)

ANALYTICAL RESEARCH

A graduate in Economics is required to analyse and make research into product markets. A young lady in the age group 20-25 with a good degree and some commercial experience would be preferred but candidates graduating this summer would be considered.

The Company has a very active marketing policy and this appointment will provide both interest and scope to the right applicant. Employment conditions are excellent.

Please write:
Mrs. G. V. Davies,
H. J. HEINZ CO. LTD.,
Waxlow Road,
Harlesden, N.W.10.

THE JOINT IRON COUNCIL

Assistant to the Secretary

Applications for the post of assistant to the Secretary (leading to appointment as Assistant Secretary) are invited from men between 25-30 having a good general education, professional qualification or a degree.

The commencing salary will depend on experience and qualifications but will be not less than £1,000. The Council has a generous pension and life assurance scheme.

Forms of application may be had from The Secretary, The Joint Iron Council, 14 Pall Mall, London, S.W.1.

For other appointments see page 1286

GKN

G.K.N. GROUP RESEARCH LABORATORY

OPERATIONAL RESEARCH

Applications are invited from graduates with operational research experience for a position of Group Leader in the Midlands Unit of the Operational Research Service for the G.K.N. Group of Companies.

The work is in the engineering companies of the Group, most of which are within daily travelling distance of the base in Wolverhampton.

Please telephone or write outline of career to the:

Personnel Officer,
G.K.N. Group Research Laboratory,
Birmingham New Road,
Lanesfield, Wolverhampton.

Telephone: Wolverhampton 37361.

Scotia BANK

has roots in prairie wheatland

Prairie farmers appreciate the down-to-earth approach of Scotiabank. In the Eastern provinces, too, industrialists find in the bank a welcome ally. All across Canada indeed, Scotiabank plays a vital part in the life of the nation, more than 570 Canadian branches form an important network of North American listening posts for businessmen everywhere. That's why keeping in touch with Canada is simple if you keep in touch with Scotiabank.

If you are interested in Canada, get in touch with either of the London Branches. The managers will be pleased to help you.

THE BANK OF NOVA SCOTIA

Incorporated in Canada with Limited Liability.

London, 24-26 Walbrook, E.C.4. Mr. J. D. Hubbert, Manager,
& 11 Waterloo Place, S.W.1., Mr. H. Freestone, Manager.
Offices across Canada and in New York, Chicago, Los Angeles, Buenos Aires, Jamaica, Trinidad, Bahamas, Barbados, Antigua, Puerto Rico, Dominican Republic.

£10,000 Life Cover can cost only £6 quarterly

This policy gives you life assurance now, yet keeps your outgoings to a minimum for several years. Then you can change, at the appropriate premium, to whatever policy suits your purpose.

The Equitable's plan offers full life assurance at reduced premiums for five years.

The Equitable offers attractive terms because it has no shareholders to take any part of the profits and pays no commission for the introduction of business.

DO YOU KNOW

that this bit of flex could be shockingly expensive?

VULCAN KNOW The condition of an electrical installation can only be determined by making thorough tests. The expert who knows how to verify the soundness of the insulation, to check the effectiveness of earthing systems, switch polarity, and switchgear, is the Vulcan Engineer Surveyor.

The regular annual inspection of your electrical installation is the greatest safeguard against the hazards of shock and fire. This inspection and protection is what Vulcan provide. It is a specialist's job.

Equipped with the finest modern instruments, the knowledge, and the experience, Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!

We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

Vulcan ARE SPECIALISTS

THE VULCAN
BOILER & GENERAL INSURANCE CO. LTD.
DEPT. 17, 67 KING STREET, MANCHESTER 2

* *The safety of any electrical installation depends on the soundness of the earth conductors, the insulation, the wiring itself. Nothing is more ill-used than electric flex. A break at any point, and you're in for serious trouble. Many times before now, the most innocent-looking flex has hidden away such a fault. Fire, costly damage, sometimes loss of life, have been the direct result.*

The Dry Fly palate

Styles of sherry vary considerably, but Dry Fly, a finely blended medium sherry, is designed to cover the widest possible range of tastes. It is delicious as an aperitif before a meal, served mid-morning with biscuits, or as an evening refresher. 18/6 a bottle.

Those who prefer a dry sherry should try CECILIA, a delicate Amontillado; and for sweet tastes—GOLDEN CHANCE, a rich Oloroso Cream. Both at 20/6 a bottle.

Japan's
Investment Picture Puzzle

Only a little over a year ago the expansive mood of Japan's overall economy was so pervasive that a novice investor in the securities market could select a profitable stock almost with his eyes closed. But over-rapid expansion encouraged heavy investments in plant and equipment, leading to a worsening of the international payments position. Corrective measures have been taken. Meanwhile, Japan's economy is still growing, but now at a slower pace and with a certain amount of differentiation. Sound investments in today's market thus depend on intimate knowledge of the facts and sound analysis.

We have been giving sound advice to investors, large and small, for 65 years. Our 115 offices throughout Japan and our staff of 50 trained research specialists are in constant touch with every segment of the economy, providing us with accurate data and scientific analyses of corporate growth potential. If you are considering an investment in the Japanese market, let the fruits of this experience work to your advantage.

Lloyds & Scottish Finance helps manufacturers and merchants to sell...helps firms and individuals to buy

A comprehensive hire purchase service backed by two great banks

Through its integration of two long-established finance houses—Scottish Midland Guarantee Trust and Olds Discount—Lloyds & Scottish Finance Ltd. represents an unusual concentration of specialized skill and experience in financing the purchase of: ● *Cars, commercial vehicles, and motor-cycles* ● *Industrial and agricultural plant and equipment* ● *Domestic electrical appliances and household goods.*

To traders in motor vehicles, radio, television, and domestic appliances and furniture, Lloyds & Scottish Finance offers both direct collection and block discounting facilities. The manufacturing and building industries, and other users of capital equipment and machinery, including agriculture, are employing its financial resources on an increasing scale. And convenient time payments are arranged for individuals for central heating installations, marine craft, garages and garage extensions, school fees and other such personal requirements.

Lloyds & Scottish Finance Ltd. is a subsidiary of Lloyds & Scottish Ltd., a holding company with a capital of £15,000,000 jointly owned by Lloyds Bank and National Commercial Bank of Scotland. With assets now exceeding £100,000,000, Lloyds & Scottish Finance is well placed for further expansion. Through its country-wide network of branch offices it has established a reputation for efficient, courteous and understanding service to all its customers.

Prognostication

The Government seems prepared to preach rather than to plan for economic policy—but what is its Budget practise likely to be? (p. 11).

Figuring out the Budget (p. 68).

New rules for procedure in **bureaucratic decisions** may help to make justice visible (p. 23).

Capital punishment—how long? (p. 24).

Introspection

This year's official Economic Survey is sometimes vague, often questionable—and perhaps unnecessary (p. 63).

The Minister of Labour has shown yet again that he fails to understand what the Government claims to be its **wages policy** (p. 18): his ministry's new statistics are very useful (p. 20).

How has the pay pause worked? (p. 22).

Television performers, at least, have not been affected by the pause (p. 22).

Reconstruction

The **Labour party's** machine, as well as its policy, is sorely in need of a reshuffle (p. 16).

The City of London's **Wren churches** are finding a new mission now that their parishioners have fled to the suburbs (p. 60).

The Government had better make up its mind what to do with its embarrassingly efficient aircraft factory in Belfast (p. 73).

Car dealers must build on the assumption that in future they will have to fight for business (p. 65).

Rustication

The Prime Minister has paid a visit to his political grass-roots at **Stockton** (p. 57): the result could be acutely embarrassing to him and his party (p. 19).

The **Kingdom of Fife** is passing from the age of coal to the highway era, and meeting troubles on its way (p. 58).

Fowl pest: for fowls as well as folks, vaccination is a modern must (p. 24).

INTERNATIONAL

Channel Storms

Mr Macmillan has at last pointed plainly to the opportunities in Europe. Mr Pickles points, just as politically but equally persuasively, to the pitfalls, but his criticisms can be put to positive use (p. 13).

Professor Meade fears, as does Mr Jay, that if Britain joins the **common market**, Europe may import less from the undeveloped world but, if it stays out, Britain may become more protectionist and less able or ready to import from anybody (p. 20).

Two Kinds of Coup

Syria's latest military coup has had one good result—the restoration of civilian government (p. 15).

Argentina's coup has brought the soldiers back to power, but behind a facade of civilian government (p. 18).

Coals of Fire

Israel could teach mankind its own lesson by sparing, instead of taking, **Eichmann's** life (p. 17).

Austria's attempt to bury the past has left some neo-Nazis in high places and provided soil for a revival of nationalism among a minority of young people (p. 27).

Paths to Peace

The neutral **Swiss** are not prepared to renounce atomic weapons (p. 18).

The British Government has been wise to invite members of the United Nations colonial committee to London, to discuss **Rhodesian** affairs (p. 19).

But the American Senate is unhappy about President Kennedy's request for permission to invest in United Nations bonds (p. 37).

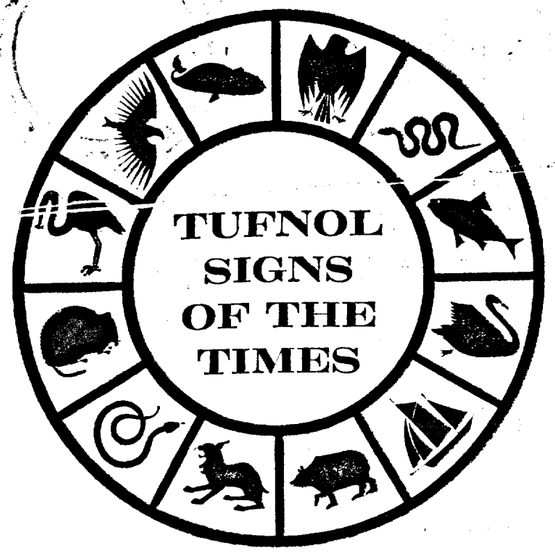
Before **Belgium** and the **Congo** can live together with mutual benefit a vast financial settlement has to be made (p. 28).

Blood and Sand

Before the formation of the new **Algerian** republic, more blood will still be spilt by the Secret Army and its new Moslem collaborators (p. 27).

The new state will have sovereign powers over the **Sahara** but it will share profits, ownership and management of oil resources with France (p. 67).

Justice and Affluence



The **United States** is trying to guide the **undeveloped countries** along a modern "take-off" run (p. 35).

There will be no risk of a static **Supreme Court** with Mr "Whizzer" White on the bench (p. 36). His nickname was won in college football (p. 38).

Last week's debate on the new **tax bill** found both Republicans and Democrats reversing their usual stands (p. 37).

The **desegregation** of southern schools is being speeded up at last (p. 41).

Kite - sign of Tufnol

Those people born under the sign of the Kite ascend in ever increasing circles until they reach the top of their profession. Kite men become chief purchasing officers, chief engineers, chief draughtsmen and chief designers. Kite men are perfectionists with eyes like hawks. They hunt for a material that combines the properties of many materials—a material that is light yet strong and hardwearing, resistant to corrosion and a good electrical insulator. They also expect this ideal material to resist deterioration in storage, to machine easily with ordinary tools, and to be available in sheets, tubes, rods, angles, and channels. Many Kite men have already spotted this ideal material—"KITE" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with pre-determined properties.

All brands of Tufnol are laminated plastics; each formulated to satisfy specific requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol.

Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.

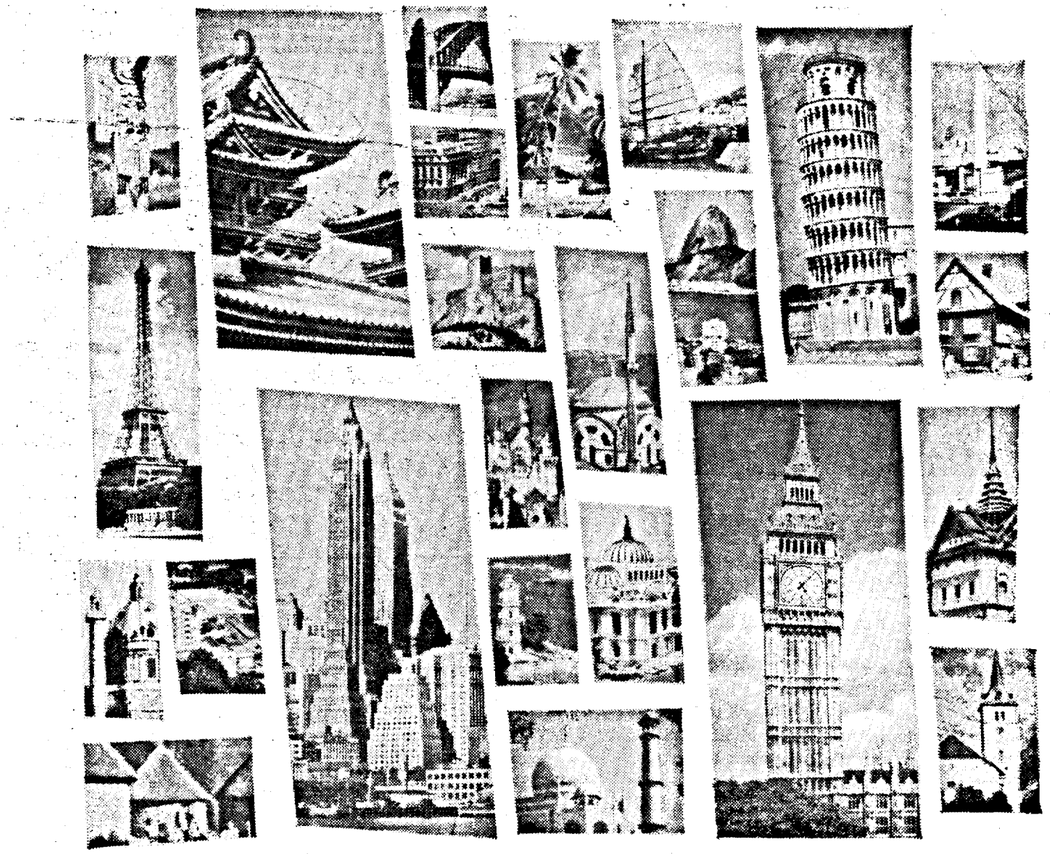
2,500,000 customers
and a trader who knows them all

Businessmen cry, "Come to the Fair," and from all over the world, businessmen come. Some 2,500,000 are expected to gather at the Osaka International Trade Fair in Japan this month. And in the thick of them will be an old friend—the man from C.Itoh, one of the world's largest trading and investment concerns.



They all know him because he does business in all their countries. And he knows all of them—not only them but the markets they represent, the things they have to sell and the customers they want to sell to. Men from C. Itoh can be found in the major commercial centres of the world. Whatever your business—importing, exporting, co-operative ventures—why not find out how C. Itoh's world-wide organization can help you.

Who but Pan Am gives you free representatives in 114 world trade centers?

Pan Am's new World-Wide Marketing Service is a concept as dramatic as the recent reductions in air shipment cost. WWMS gives you on-the-spot representation in 114 world markets . . . helps you find new markets and new sources of supply!

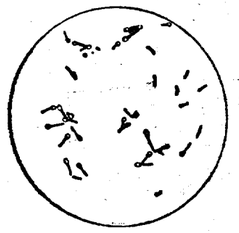
Air cargo rates have never been cheaper! More commodities than ever may now be shipped on a straight-weight basis . . . *and rates are down as much as 63%!*

Low air cargo rates mean you can have more markets! And Pan Am's World-Wide Marketing Service helps locate prime markets *for you*, virtually anywhere in the world.

Pan Am's more complete cargo service really amounts to a revolution in the distribution of goods. Virtually any commodity now may be shipped economically by air. You save time, so your money turns over faster. Insurance rates are lower than by surface means, because pilferage, damage, and loss are minimized. Packing, crating, handling costs are lower. Your packing and shipping are even faster and safer when you use Pan Am's family of containers.

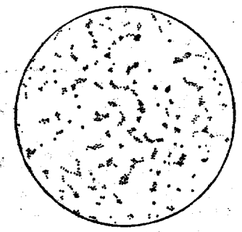
Pan Am advises you on such things as packing, international rates, insurance, local cartage, routing—and simplifies documentation for you, too.

Pan Am has more specialists working solely on cargo than any other airline—1357 specialists who can help you build a solid business in other parts of the world. For tips about new markets for your products, call your Cargo Agent or Pan Am.



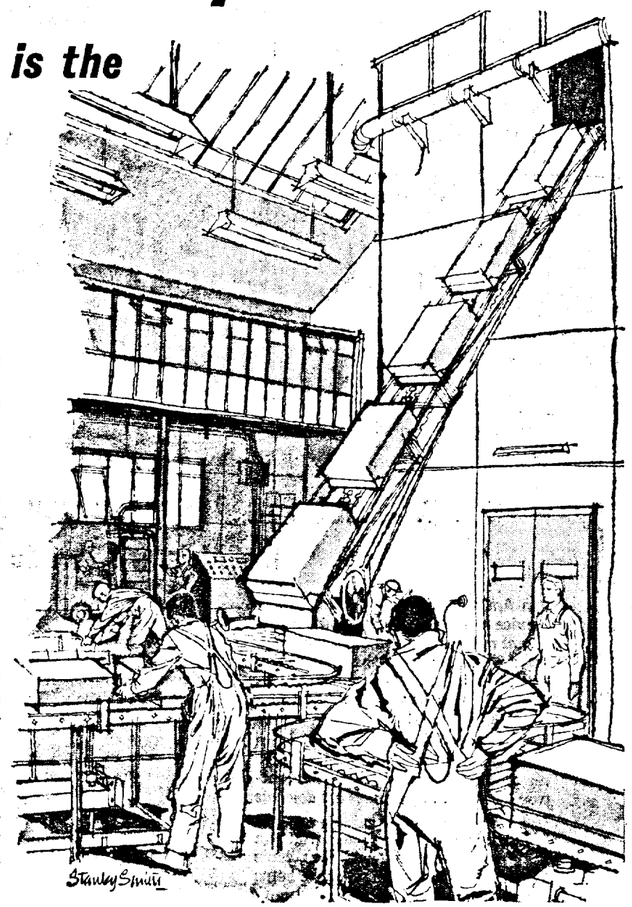
PAN AM

WORLD'S LARGEST AIR CARGO CARRIER
WORLD'S MOST EXPERIENCED AIRLINE



BACILLUS ANTHRACIA
Popularly known as anthrax, a deadly disease conveyed by animal hair, hides, wool, etc.

CLOSTRIDIUM TETANI
This is the lock jaw-causing organism that makes strict sterilisation essential of such things as talcum powder, hospital dressings and sutures, etc.



STAPHYLOCOCCUS AUREUS
A scourge of modern medical nursing. Develops a resistance to penicillin and other antibiotics. Almost anything used in hospitals needs protection from it.

These are the problems

Irradiation Sterilisation is the new answer for hygiene

Effective sterilisation of raw materials and other industrial merchandise medical and otherwise, has always been difficult and found to cost a nation more than almost anyone imagined.

This is largely because sterilisation has had to rely entirely on the human element, and has had to be carried out before packaging, thus wasting highly skilled hands on what should properly be a mere routine. To this problem one answer is supplied by Vickers-Armstrongs: sterilisation in bulk by exposure to the cobalt-60 radio-isotope.

Advantages are great. Plant offered by Vickers-Armstrongs is completely mechanised and thus economical in man-power. Your sealed packaged goods to be sterilised are conveyed through the plant and emerge on the conveyor with all their contents surgically sterile and with no risk of re-infection.

Because neither heat nor steam is involved, most materials unsuitable for sterilisation by to-day's normal methods present no kind of difficulty and are unharmed. Designed in conjunction with the U.K.A.E.A. Radiation Laboratories at Wantage, Vickers-Armstrongs plants are planned for throughputs of 2,000; 6,000 to 25,000; and 90,000 lb. a week, assuming a density in the packs of 6-30 lb. per cubic foot. Operation of the plant is simple, straightforward and completely safe to use and there is no residual radioactivity.

As a contribution to world health, Vickers-Armstrongs are ready to undertake design studies for particular applications of their plant with interested governments and organisations.

THE CITY PAGES WITH THE WEEK'S INSIDE NEWS

The City Editor of a Sunday paper has more time for delving than his Daily counterpart. Nigel Lawson, City Editor of The Sunday Telegraph, has established a reputation for spotting the news within the news.

In the last twelve months he has unearthed the inside stories of an extraordinary number of take-overs and special situations. He and his staff interpret shrewdly the background trends—and a growing list of television and radio broadcasts proves that what Lawson knows is well worth sharing.

Each week his main article looks coolly at a burning question. Recent successful unravellings include the I.C.I.—Courtaulds collision. And the queries settled by the "Family finance" and "Investors ask" columns (picked from a full postbag, all answered personally) have a happy knack of helping a lot of other readers too. Easy and profitable reading for Sunday!

Sunday Telegraph

THE PAPER PEOPLE READ FIRST

HE ECONOMIST APRIL 7, 1962

"Like a real hot number, dad?"

"Take care it doesn't burn your lips, Son"
"No, I'll play it real cool, man—er—Dad"
"Sort of blowing hot and cold, Son?"
"Sure, Dad; cold at the ends and hot in the middle"
"Sounds like a description of The Twist, Son"
"Oh! I dig that, Daddy-O—sorry, Dad; but you really are with it. You're right; it *is* the twist that does it, only it's called a spiral. And the spiral gets hot while the ends stay cool"
"Central heating in fact, Son"
"Yes, Dad, in a way. But *very* hot, something like 1500° in industrial heat-treatment furnaces"
"Fahrenheit or Centigrade, Son?"
"Well, according to Old Squirt we ought to say Celsius for Centigrade if we're going into the Common Market. So let's compromise and say 1500°C"
"You haven't said what it's made of, Son. Perhaps you don't know?"
"You bet I do, Dad. Silicon Carbide—and it's all in one piece, too"
"Has this thing got a name, Son?"
"Yes, Dad; it's called Crusilite—and it's made by Morganite Electroheat Limited"
"What, Morgans again, Son?"
"Yes, Dad"
"Hot stuff, Son"
"I'd say Hot Rods, Dad"

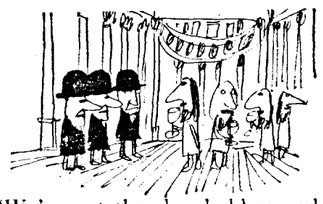
PROJECT 304

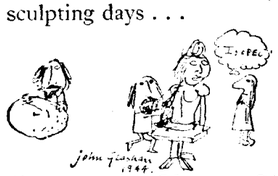


The story of the great
Shell Chemicals
Sculpture Competition
by A. N. Other-Carter

Chapter Five: Mr. Carter and the Three Hard Men

Most of the scientists were behind Mr. Carter, our director, who conceived the plan for the great sculpture competition for *The Spirit of Shell Chemicals.* When the first party of sculptors turned up at our Carrington plant, near Manchester, they got a great welcome. Even the maintenance men high on steel ladders, high among the columns where non-aromatic feedstock is cracked, whistled after the beautiful models and the lady sculptors (also beautiful; as with policewomen these days, there just didn't seem to be any ugly ones) and shouted such witticisms as 'Ethyl! Ethyl!' or 'You'll spoil your butylene-ing against that wet paint.' (Tough, rust-resisting paint, incidentally, made from Epikote resins). At the reception in the Propylenes Lounge the welcome was expressed more conventionally. I heard Carter of Alkyl Aryl Sulphonate Type Detergents saying to Max Grob, the Destructionist sculptor, and some of his models (all looking remarkably undestroyed) 'One gets so tired singing Morley canzonets and playing chess with Carter from Isoprenes up here. Glad to have you art-people around. Welcome to Carrington. It's called Carterington on old maps, you know . . .'

But the Shell Chemicals Three Hard Men (from somewhere in Accounts), Jarker, Cromp and Barlby-Towson (the only ones in this whole thing not called Carter; Accounts people *are* different) were dubious.



'We've got the shareholders and all like that to think of, Mr. Carter,' said Jarker. 'And anyway, it's not *practical.* How could you have *one* sculpture representing service to agriculture, with fertilisers and pesticides, to industry —'

'—with plastics and rubbers? —' said Cromp.

'—with detergents, paints, resins?' said Barlby-Towson.

'You almost convince me, gentlemen,' said Mr. Carter. 'Maybe we should have *three* competitions. One for Carrington, one for Stanlow (alcohols and ketones, solvents and intermediates), one for Shell Haven (fertilisers)—' 'No, not that, Mr. Carter,' said the Three Hard Men, and hastily withdrew. Meanwhile, in the Propylenes Lounge, inspiration had suddenly come to old doyen-sculptor Henry Jollifant. 'Bring me clay!' he roared, and began there and then a figure of Carina (a PVC), a gentle, Eve-like figure ('soft and pliable when plasticised'). 'No, curse it, that won't do, I want Carlona' (polyethylene, 'unbreakable, flexible and easily processed')—a classical, dark-eyed, noble, Italian-looking girl. Not unlike the Isobel of my own sculpting days . . .

Do not miss Chapter Six: 'Over the Sea to Stanlow'

VOLUME CCIII - NUMBER 6189

1962

No Jam on Monday?

THE Economic Survey for 1962 (which is examined practically on pages 63 to 65) represents the Government's most disappointing departure yet from any semblance of modern economic thinking or exposition. It proceeds, in the language of the pulpit rather than the planner, from a series of blandly unsupported assertions to a string of mainly unexplained conclusions. Four times in the first five pages, the survey talks about an excessive pressure of demand at home, an illness which it thinks was the great curse of Britain in 1961 and which by implication it also fears for 1962—but without defining what it now means by excessive pressure or letting anybody know by what particular indicators it nowadays attempts to measure it. The general philosophy of the survey is: high demand obviously bad, under-utilisation of resources (called here making room for exports) obviously good. If the hand that wrote this survey also presents next Monday's budget, the British people could not logically look for any tax reliefs; they should expect taxes to go up instead.

Whether this will in fact happen is more difficult to say, for the forward-peering parts of the survey plumb an especially murky depth of economic obfuscation. Not only is there no sign of any advance to target-setting for a growth in national income in 1962; the document actually retreats further from such vestiges of indicative economic planning (or guesswork) as previous surveys have attempted. The only statistical estimates vouchsafed for 1962 are those that we had been given already: it is expected that Government current expenditure may rise by about 3 per cent in real terms during 1962 (largely, complains somebody in the Treasury, the local authorities' fault) and that public investment may rise by about 5 per cent. For the rest, it is expected that productive private investment will fall, perhaps even by nearly enough to cancel out the effect of the increase in public investment; it is said that there should be "some increase in personal spending" as output and incomes rise (but by how much, and what if they don't?); and the main hopes for economic expansion this year therefore seem to be pinned upon exports and stockbuilding.

The present stagnation of exports, it is opined—indeed, it is desperately insisted—must end some time provided the Chancellor goes on holding down home demand; it would be utterly unfair if it did not. Stockbuilding, it is explained, may proceed rather slowly for a time, because the rate of stockbuilding was "substantial in 1960 and 1961" so that "there is reason to believe that at the end of 1961 stocks were high in relation to the current levels of output." This last admission comes in the middle of a passage alleging that these were also years of an excessive pressure of home demand upon resources—which presumably means that the Treasury thinks that these most volatile of resources were excessively drawn down and excessively built up at the same time (on some wonderfully ingenious tandem?). At the end of all this, the survey concludes that "there should be some increase in the pressure of demand as the year [1962] progresses," and that if export opportunities are seized, "production should expand at a rate that may be relatively slow at the beginning, but a good deal more rapid at the end of the year."

If Mr Lloyd believed this prognosis, his logical policy should presumably be to try to expand demand and output a bit in the slack period at the beginning of the year, but to stand ready if need be to reimpose some new restrictions later. In fact, however, one's guess is that he is probably standing ready to do precisely

the opposite: that he may introduce a neutral or even a mildly disinflationary budget now, but then remove some restrictions later in the year. (Unless, of course, in the meanwhile some rumours about revaluation of the Ruritanian rouble have caused speculators to move out of sterling into Ruritania, and thus encouraged the Treasury to say that Britain's home demand must again plainly be excessive.) For one is driven increasingly to the conclusion that the real spring behind British economic policy now is that the Treasury made a mistake when it decided that the main reason for Britain's troubles last year was an excessive pressure of demand (when just before the July crisis stocks of finished goods were not being drawn down, the balance of payments was not deteriorating, and production was not bumping against available capacity). Yet some informed resistance remains to admitting this yet awhile—and the Government's compromise is now to pretend to itself that re-expansion will in some mysterious way be safer if it is delayed just a little bit longer.

IF pessimism proves unfounded, if Mr Lloyd does after all introduce a reasonably expansionist budget on Monday, no one will be more delighted than *The Economist*. Meanwhile, however, it seems sadly sensible to discuss details for the coming budget on the assumption that any tax reductions may be broadly balanced by tax increases or new impositions. Which taxes can be increased or newly imposed in order to fortify the revenue in 1962-63? The Chancellor's proposed tax on short-term capital gains will presumably have to be collected, like present surtax, at least a year in arrears; it seems unlikely to bring in any revenue in 1962-63. Cynics may remember that in the 1952 budget, in fulfilment of an impulsive political pledge, Mr Butler announced the imposition of the excess profits levy; in the 1953 budget, just before the first collections of the tax had been made, he had to announce that the tax had proved such a disruptive nonsense that it would be discontinued after the next year's tax assessments had been made, and replaced by something else. *Si sic non omnes!* There is a good case for a swingeing increase in the tax on cigarettes; that is how Britain gradually cured its last major vice of gin-drinking, but even if tax rates go up, consumption should preferably fall more than proportionately. This is one impost where the Chancellor will achieve his objective most praiseworthily only if, by putting rates up, he eventually manages to bring his total revenue from the tax down. But perhaps he could legitimately assume in his estimates that there would be a positive financial return from a big increase in the tax for at least the first few years.

The Economist pleaded last week that the Chancellor should take power to increase employees' weekly national insurance contributions if wage increases exceed his official guiding light; but nobody is suggesting that such an increase should be made immediately. This leaves him with two other hardy perennials. There is a good case for imposing a sizeable tax on betting (including bingo?), now that betting shops are well organised and that the law-enforcing tax collectors would no longer have to run after law-breaking bookies' runners; and for trying to secure over £50 million of new revenue a year by bringing various new commodities—including sweets, soft drinks and other manufactured foods—within the orbit of purchase tax or other indirect taxes. But the case for both these taxes has often before been argued here.

One of the places to which tax relief ought not to be directed—despite heavy pressure from Tory backbenchers—is towards houseowners' property income tax, called in Britain Schedule A. As the recent rating revaluations have shown, Schedule A tax is already levied on less than a third of real current values, and houseowners are also helped by Britain's fairly generous tax reliefs on payments of mortgage interest; like council house tenants and tenants of rent-controlled dwellings, houseowners in fact get their houseroom at less than its true economic cost. The one class which does not get any tax relief are tenants of uncontrolled dwellings; the landlords of these pay full Schedule A and Schedule D income tax on rents they receive, while every other form of dwelling is subsidised—and these are principal reasons why it is generally uneconomic to build new dwellings for rent, which serves in turn to keep uncontrolled rents higher than they otherwise would be. If any tax reliefs are to be made in the housing field, it is plainly towards these fully-taxed uncontrolled tenancies that they should go. But the move would be exceedingly courageous politically because Labour would misrepresent it as a tax hand-out to speculative landlords, and make a squeal of a fuss.

For the rest, the removal of last year's ill-conceived fuel oil tax would cost about £50 million a year; the removal of a half of last year's 10 per cent surcharge on indirect taxes (but leaving in being the higher tax on cigarettes) would cost about £65 million; another £50 million could profitably be devoted to improving income tax allowances for the lower paid; and a straight 3d. off the standard rate of income tax would now cost about £60 million a year. A reasonably expansionist prescription would in fact be to do all these four things this year—and then to draw back rather less than half of the £230 million reliefs thus granted by a new betting tax, a tax on manufactured foods plus the probably temporary revenue yield of a higher tax on cigarettes. We would also like the Chancellor to say that he will be leaning forward to remove the rest of last July's special surcharge on indirect taxation if demand does not expand sufficiently to allow production to rise by at least 4 per cent this year. But we have already made it clear that we will, in fact, be pleasantly surprised if Mr Lloyd is immediately expansionist at all.

IN the field of company taxation, we argued last week for replacing the existing company income tax and profits tax by a flat rate corporation tax and a corporation turnover tax (on which latter tax, under the rules of the General Agreement on Tariffs and Trade, incentive remissions to exporters may be made). It seems very unlikely that Mr Lloyd will be bold enough to do this, but he indicated last year that he had a personal predilection for a different "reform": for having one system of taxation for companies instead of the two systems, income tax and profits tax, in operation at present. If the taxes were merely amalgamated at their present gross rates, there might be an actual disadvantage in this. The main effect could be merely to make it unnecessary to bring down companies' tax when personal income tax is reduced, and it might therefore steadily (and foolishly) lead to productive business enterprise bearing an even heavier share of the tax burden than it does now.

Similarly there should be no great urgency for amalgamating the system of assessment of surtax and income tax this year, so that surtax could be deducted concurrently instead of being paid (as now) on the income of the year before. It would be better to take this rather complicated step in a year in which a few other minor adjustments (favouring the remaining surtax payers) could be made at the same time.

Two other "reforms" which Mr Lloyd said he was considering last year were to re-distribute the items that go above or below the line in the budget accounts, and to stiffen tax treatment of "so-called business entertaining that goes further than purely business motives." The first of these changes would be pretty pointless. What is really wanted now is not another fussy redefinition of what are current and what are capital receipts and expenditures, but a return to plain statement of what is the net reflationary or deflationary effect of each new budget—and the relating of that net effect to the target level of demand at which the Chancellor wishes to aim in the new financial year: in other words, what is wanted is a return to precisely that process of positive policy-planning from which this year's Economic Survey again turns tail.

The Inland Revenue's new form for inquiry into business expenses is discussed on page 68. It might be a useful minor reform if the Chancellor were to require some of these items of expenditure to be listed separately (like directors' fees) on public companies' published accounts. The companies' shareholders could then see how often they (and the taxpayer) were paying for their top executives' lunches; any firms in which these expenditures were particularly extravagant would then become the butt for informed criticism—instead of all businesses being the butt for uninformed criticism, as now. Two other announcements that would be very worthwhile next week would be an end to manufacturers' present legal power to forbid efficient retailers to sell their goods at a cut price, and a unilateral cut in Britain's external tariffs even before Mr Heath's negotiations in Brussels end. In the first field, at least, there may even be some room for hoping that the Government's reforming spirit has not finally and irrevocably spluttered out.

Is there any hope of re-lighting the flames in the Government's broader economic policy too? It is a pity that this article has had to sound so crabby. But we believe that Britain will not recapture its dynamic until the Chancellor sets himself a definite annual target for national economic expansion, and recognises that various other pressures that now influence his policy—including his private urge to look respectable before certain circles in the Treasury, the Bank, the Cabinet, the trade unions and (as he mistakenly envisages the place) Zurich—must yield priority to his forward drive for attaining that expansion.

Ginger from Pickles

Mr Macmillan has pointed to the opportunities in Europe. Some are unintentionally suggested by the latest attack on the common market

AT last the Prime Minister has entered the European lists. It was high time he did. As he himself put it, when he rallied the doubting Tory troops at Stockton-on-Tees on Monday, "The common market presents Britain with a tremendous challenge and a gigantic opportunity." He held out the hope of achieving "success in securing our Commonwealth interests, success in securing the interests of our manufacturers and our farmers, success at the end in achieving an ever more dynamic influence in the affairs and the future of western Europe and the western world." Not the substance, but the tone was new in all this. For want of a word of leadership, doubts about Europe have been growing on both sides of the House of Commons; the anti-common marketeers have been making most of the noise; the case for joining has been allowed to rest on the negative difficulties of staying out. The Government may perhaps wish to hold its heavy fire for the full-scale battle that must come when the negotiations end. But as the talks near their climax it is good to hear from the Prime Minister that the common market is not a mere bed of nails but an adventure and an opportunity.

Mr Macmillan's circumspect advance towards a conference of Commonwealth prime ministers does no harm either. In correspondence with his Commonwealth colleagues he has, it seems, suggested a conference in September. Consultation with the Commonwealth over these negotiations is already elaborate. Mr Heath has worked out that for every eight hours spent negotiating with the Europeans he spends five telling the Commonwealth and the members of the European Free Trade Association about it. But the Government has not only to consult the Commonwealth, but also to be seen to consult it. As most of the Commonwealth governments, though not perhaps the Canadian, are well aware, it would be a waste of time to gather the prime ministers before the negotiations have reached the decisive stage. The Commonwealth would get nothing from the British except vague promises and vaguer predictions; the British could hope for nothing beyond a grudging assent to continued talks with the Six. But in the late summer—provided the negotiations have defined the issues by then—the time may be ripe for a Commonwealth summit. The new landscape the negotiators have charted can then be surveyed; the British—whose own decision this is, and must remain—can put to their partners the real terms, and the full case for joining, together.

The fact that the heart of the negotiations still lies ahead makes it hard to pass a judgment now on the commercial terms the Commonwealth should get, as Professor Meade has tried to do in a new pamphlet, discussed on page 20. But just now, while the economic problems are in Mr Heath's hands, there is everything to be said for seizing the political bull by the horns and discussing the political choice the country faces, as Mr William Pickles has done in a new Fabian pamphlet.* Stimulating, furious, packed with information and exaggeration as well, this is the most penetrating and provocative attack on the common market that has yet appeared. Possessing

* Not with Europe; the political case for staying out. By William Pickles. Fabian International Bureau. 3s. 6d.

almost every intellectual quality but balanced judgment, it should do much to bring the great political debate out in the open, where it belongs.

MR PICKLES'S pamphlet is not easy to summarise, for it has the ebullient tendency to charge off everywhere at once. To him, those who want Britain to join the common market build their case on sweet dreams ; the reality, as he describes it, has an almost nightmare quality. The common market, in the Pickles view, provides neither free trade nor planning, neither the advantages of the national state nor those of federation. Run by bureaucrats, it is essentially an undemocratic, indeed "despotic," institution. For all the withdrawal of powers from the member states, the European Economic Community is incapable of taking decisions, because the members do not trust each other and have riddled their treaty with nationalist safeguards. The idea that Britain can influence the community from within is dismissed as nonsense. "The sensible missionary does not jump into the cannibal's stewpot in order to reduce its temperature." Common law will be devoured by Roman law, social justice by big business. Mr Pickles's view of the common market (and incidentally of Whitehall and of successive British governments) is that of Apemantus in "Timon of Athens." : "I wonder men dare trust themselves with men."

A lay reader may find it hard to dispute the detail of Mr Pickles's fierce misanthropy, but inconsistency gives it away. In one paragraph Mr Pickles points out that there is no chance of getting the common tariff down if Britain joins, since changes must be agreed unanimously. In the next he explains that, though any advance towards political federation must also be agreed unanimously, it would be almost impossible for any one country to stand in the way of such a political development. His argument does not fit the facts. The six members of the European community have already agreed (unanimously) to cut their outer tariff by 20 per cent on most manufactures, so that it is now well below the British tariff against third countries ; this and the abolition of most quantitative restrictions in the last three years already give the community a much more liberal look than it had when the Treaty of Rome was signed. This is also one of the rare occasions when Mr Pickles gets his facts about the treaty wrong ; once the common market enters its third stage the common tariff could be reduced by qualified majority vote. By contrast there are still no signs of a move towards federation coming off ; it certainly seems that one country (France) is well able to block it. And no responsible person in the community suggests that this country must commit itself in advance to a federal future which the other members do not yet accept, or even contemplate.

There are similar points on many other subjects which are hard to square. Mr Pickles implies strongly that the community is run by big business. And, admittedly, its new rules against cartels, published in January, are not backed by a political authority or an ethos of competition comparable to the forces behind America's anti-trust laws. But by the standards of the British restrictive practices act, or those of the European Free Trade Association (mere consultation) the new rules are a formidable beginning. And nothing whatever in the Rome Treaty prevents individual member countries from having much stronger rules of their own. His fears for national planning powers are equally exaggerated. The treaty does indeed prevent governments from restricting imports and operating discriminatory price policies to the detriment of the common market, but there is nothing at all to prevent investment planning and regional development policies on a national basis. (In fact, the European Commission encourages these things.)

While Mr Pickles has pertinent criticisms to make—needing fair and unpolemical attention—they cannot all be true at the same time. We, the British, he explains, "believe in taking a step at a time and then feeling the ground under our feet before we take the next step." Yet he attacks the community for being an ugly constitutional compromise, neither federalist fish nor national fowl. How fortunate it is, in reality, for British policy that the community does not fit the extreme categories of the constitution-makers, and that it is no more than a "first-step." Mr Pickles's "brakes," which make it so difficult for a block of countries to overrule the minority, were expressly designed to ease the gradual progress from the nation state to something larger and wider. The European Commission, which he attacks as bureaucratic and "anti-democratic," has a special part to play in this gradual attempt to pull the six members closer together. There are very few occasions when it can overrule governments ; its principal jobs are to act as a catalyst of further moves towards unity, to mediate between different governmental points of view, and to seek out common ground for all the members. It is already proving a useful mediator in the negotiations between Britain and the Six. In short, the Brussels institutions are based on a new kind of balance between the nation states and the collective interest. They represent a novelty in constitutional conceptions ; and they work.

AFTER so much fire and brimstone has been hurled on the hapless continentals, readers will be astonished at the conclusion Mr Pickles draws. Wait and see, he simply says. The one thing Britain should not do is join now. At the moment the community is "the wrong grouping" for Britain to join ; it is being shaped in the wrong way ; but in other circumstances he could see merit in "planning agriculture on a continental scale," free movement of labour in Europe, and, it seems, even a better industrial division of labour in Europe. Britain must wait until "the open parts of the treaty" are "filled in." With luck things might go in a more liberal direction. Mr Pickles, in short, would be prepared to join one day, but not until the community has taken final shape—without Britain, and on the off chance that that shape might suit the British taste.

Ten years of history suggest the folly of that view. The problems Britain faces today in Brussels would have been easier to solve in 1952, or even in 1956. Even the loss of the last two years has been costly to this country. The tricky problems of temperate agriculture would have been a good deal more manageable if Britain had been a member before the common agricultural policy was given an outline. Today in Brussels the British can at least get a hearing as the community policy on dairy products (still in the making) is devised. The community's association with Africa is being reshaped with the Commonwealth in mind. Such opportunities would

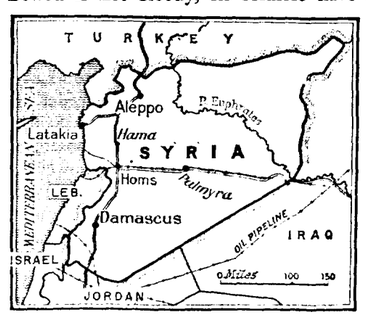
be lost if Britain followed Mr Pickles's advice and stayed aloof. The Atlantic context which President Kennedy's trade proposals have opened up would be in jeopardy. Can Mr Pickles really suggest that a British retreat into isolation now would improve and liberalise the prospect for the western world ?

Yet if Mr Pickles can stimulate the Labour party to do some equally hard thinking about Europe, looking forward, instead of backward as he does, his destructive criticisms can indeed be put to positive use. Like every institution the European community is imperfect ; and Britain, inside, could help to make it better. It would plainly be an excellent thing if the Labour party were then to throw its weight behind a vigorous enforcement of the anti-cartel rules. Planning could be more effective on a European basis than on a national one. There is force in Mr Pickles's plea for stronger parliamentary control over the new institutions. If the foundations had not been laid by the technocrats, the European communities might not have been built at all. Now that this is done, some way of direct democratic control is needed. The present assembly of the Six is better than nothing, but it needs larger powers and will soon need the authority that can come only from direct election.

From outside the European community, the British can do no more than discuss these matters academically. Inside, they can bring their national political talent to bear with practical effect. Mr Macmillan has been brought to hint at these possibilities. It will do neither Britain nor the Labour party any good if Labour, despite the light growing over Europe, remains blinded by provincialism.

Two Cities of Syria

Balance sheet of a coup that came unstuck



NO one likes military coups ; nor military counter-coups either. Yet out of the recent fracas between soldiers in Aleppo and the army high command in Damascus some profit for Syria has been wrung. All was over bar the shouting by Sunday, when the two sides met at Homs and admitted in hangdog fashion that the army had made a hash of things. On the face of it Aleppo was Nasserite and wanted to reunite with Egypt, while Damascus, though pro-Egyptian, wanted Arab unity only, not union. But the primary dispute was simpler. It boiled down to the single question: should soldiers or civilians rule Syria ? And the soldiers by quarrelling among themselves had let the civilians win.

The Damascus delegation to Homs had been fortified in advance by messages of loyalty from most of Syria's garrison and represented General Zahreddin, Syria's commander-in-chief. But this wily officer was not to be tempted to a showdown. He offered instead to sacrifice the ringleaders of the coup of March 28th, who swept away Dr Dawalibi's government and imprisoned most of its members. He agreed that they be sent into exile provided that the several "free" officers who had organised Aleppo's uprising should also leave the country. (By Wednesday most of them had gone.) It was agreed then that Dr Kudsi should be let out of jail and asked to resume the presidency. A provisional government was envisaged that would supervise a referendum on whether Syria should unite with Egypt again—or not.

ALL this was eminently sensible. But there was still the shouting to contend with. And this, first from Cairo and then from Aleppo radio, rent the ether on Monday and Tuesday with calls for union now. But these were the last cries of a last-ditch group in Aleppo, soon to be silenced by a small show of force from Damascus. Aleppo is not really a deeply Nasserist stronghold. Its original and basic uprising was one against military government, more especially as Dr Kudsi and Dr Dawalibi are both Aleppo men. On this, with the help of inflammatory propaganda from Cairo, was superimposed the "Nasserism" of a quite small group of officers—men who had served in Cairo when Syria was joined to Egypt, and had fallen under President Nasser's spell. They were known for their views, which the Syrian government found worrying ; by an irony, they were sent to Aleppo so that they would be out of harm's way.

Not less ironically the March 28th coup was in one way a coup in Egypt's favour—indeed, almost to Egypt's dictation —though its authors had reservations about joining Egypt again. What they wanted was to bring their country more in line with forward Arab movements. The government had, in their eyes, though committed at first to "true socialism," swung too far to the right and got itself into bad company. At least, in the rapture of reaction from Cairo's domination, it let Syria be classed, if unwittingly, with Jordan and Saudi Arabia. The rapprochement with Iraq was considered a move in the right direction, but it still was not good enough. When the Syrian army three weeks ago fought the Israelis at Galilee, it scored a success. But the action, all the same, brought home its dangerous isolation from Egypt. And this, more than anything, set the temper for the events that led to the coup of March 28th.

The leaders of coup and counter-coup were all turned to Egypt in some degree or other. And Syria still has its Nasserites ; those who definitely aim at restoring the union with Egypt are in the minority, but there are plenty of sentimentalists. So Cairo may again have had visions of bending Syria to its will. But President Nasser's own utterances—as opposed to Cairo radio's—were happily sufficiently correct to leave no door closed in the future. Here may lie Syria's hope. Bowed if not bloody, its soldiers have learned that coups can backfire. Difficulties now confront them in restoring civilian government. One must hope that these events have shown them that, in Syria, armies cannot govern alone.

Still the Penny Farthing?

The Labour Party's organisation in the country is still urgently in need of reform

Organisers Williams, Phillips, Brown

"THE Labour party is the most ramshackle institution in its topmost storey." Thus Beatrice Webb in 1918. "Compared with our opponents we are still at the penny-farthing stage in a jet-propelled era." Thus Mr Harold Wilson in 1955. The recent appointment of Mr Len Williams in succession to Mr Morgan Phillips as secretary of the Labour party—i.e. as chief paid official in charge of the party's permanent staff—has again focused attention on the problems and alleged shortcomings of Transport House.

Transport House rises on the west side of Smith Square, opposite Conservative Central Office. The Transport and General Workers Union has had its headquarters there since 1928 (The Tories arrived in Smith Square only after the war) and the Labour party occupies a floor as Mr Cousins's tenants. There are 120 staff at headquarters plus twelve regional organisers. They work in seven sections, the principal of which is the secretary's, whose task is to exercise a general supervision over all party activities. He has two senior officials to help him, the national agent and an assistant. The other sections are "organisation," "women," "international," "finance," "press and publicity," and "research." Brooding at the highest level over the whole organisation is a special committee made up of the chairmen of the committees responsible for each section and some outside members, which meets regularly once or twice a month.

The principal purpose of Transport House is to organise and co-ordinate Labour party activities throughout the country. The constituency associations are autonomous, but candidates must be approved from the centre. Transport House keeps two lists of candidates: List A of union-sponsored candidates and List B of the rest. These lists are sent to constituencies "on request," but for by-elections Transport House may take the initiative in recommending a candidate. The constituency is, however, under no obligation to accept a recommendation, and often fails to do so. During a general election the headquarters naturally has an important part to play, and in the 1959 election this was discharged particularly successfully. A special campaign committee of Mr Crossman, Mr Driberg, Mr Gunter, Miss Alice Bacon, and Mr Morgan Phillips met daily to survey the course of the campaign, after which a press conference was held. At the final meeting Mr Morgan Phillips received an ovation from the press.

Traditionally, Transport House has not played a prominent part in policy making. It has no control over the leader or the parliamentary party and is not subject to them but to the National Executive Committee, which in turn is supposed to be responsible to the annual conference. In practice, however, Transport House has always worked harmoniously with the parliamentary party. The first two secretaries, Ramsay Macdonald and Arthur Henderson, who between them held the office for over thirty years, were both members of the parliamentary party. Henderson's successor, J. S. Middleton, was essentially a "civil servant" and the same could be said to begin with of Mr Morgan Phillips—until in 1953 he came forward, eagerly enough, to play a more positive role. Had his health not failed, Mr Phillips might have played an important part as a "third force" or "attempted mediator" in the unilateralist controversy; in retrospect, it is probably very lucky for the party—and for Mr Gaitskell—that he did not. With the appointment of Mr Len Williams as secretary a return has been made to the "civil servant" tradition. The public image is to be projected by Mr George Brown, deputy leader of the parliamentary party and chairman of the organisation sub-committee, who has a wide and vague brief as general commander-in-chief. Mr Brown got off to an unfortunate start by appearing in person at the Orpington count to preside over the Labour candidate's loss of his deposit. Nevertheless, the arrangement is a good one, since it avoids the formation of yet one more centre of power in the party.

AFTER the general election of 1955 the performance of the Labour machine was subject to so much criticism that a special committee was appointed under Mr Harold Wilson to find out what was wrong. The committee came up with a number of sensible recommendations for radical change; but the report displeased some whose functions were to be radically changed (especially some of the trade unions) and at the Blackpool conference of 1955 the report, while not being rejected, was not accepted. It was in fact cast into limbo by being "received." The organisation's primary need—despite Mr Brown's moving perorations on the need for more voluntary workers—is for more cash. This is needed at the centre and should be more equally distributed at the periphery. The tendency is for the unions to concentrate their funds and their "sponsored" (i.e. paid for) candidates in the safe seats, where money is least needed, while the marginal and other seats are starved of funds. Another pressing need is to raise the minimum annual subscription. At present this is still only 6s. per member (whether trade union or constituency) of which Transport House gets 9d. Starting in January, 1963, Transport House will get a shilling, but the total cash flow is unlikely to be much altered. Collection methods are also antiquated. To collect 6s. by weekly or monthly instalments is hardly appropriate in the modern era; one result is that many of the party members in whose names votes are solemnly cast at party conferences are well behind with their subscriptions—and some, in fact, are possibly long since dead.

The incidence of the financial burden in the constituencies is also inequitable. Where the Labour vote is weak, membership of the local Labour parties tends to be high, but where the vote is strong, the membership is low. In some safe mining seats joining the local association hardly seems necessary, or local tradition may even be against it. As a result the contribution of the safe Labour constituencies to party funds is often less than that of hopeless seats. The Wilson committee made the sensible recommendation that 6d. per member (as the levy then was) or £2 per thousand of Labour voters should be paid to Transport House, whichever was the greater. This device would even out contributions and would also be an incentive for local associations to get more members. If in any constituency, membership was less than one-twelfth of the Labour vote, then the privilege would have to be paid for. Nothing has been done about this recommendation.

The other great weakness in the Labour organisation is the lack of agents. Only a third of the constituences have full time agents and the number of agents is still dwindling. In 1954 there were 244 full time agents; today there are only 210. The need for full time agents in marginal seats is especially urgent. Political agency, at the best, is not a rewarding career, but to be a Labour agent often requires heroic virtue. What is needed is a national agency service run from Transport House which would raise conditions and morale. The Wilson committee made the establishment of such a service one of its most urgent recommendations, but no action has been taken.

At the centre, Labour organisation has undoubtedly been improved since 1955, but in the country as a whole the penny-farthing era remains. In an age of political professionalism the Labour party will have to do more than sneering at Conservative use of advertising agencies and making windy appeals for more dedicated volunteers. Labour could do worse than follow the Liberal example. Not the smallest factor in the recent Liberal success has been the radical overhaul of its party machinery. Up to now the Liberals have been able to afford only 25 full time agents, but—significantly—they have just announced a scheme for the appointment of 50 more.

At Israel's Mercy

The Jews' persecutor is the Jews' opportunity

PROSECUTION and defence having made their final speeches, Israel's supreme court retired on March 29th to weigh Eichmann's appeal against the death sentence passed on him by a lower court on December 11th. If the appeal fails, Eichmann's fate will turn upon the decision, in theory of President Ben-Zvi, in practice probably of Mr Ben-Gurion, to grant or deny clemency to the man responsible for the organisation of five million deaths. Several distinguished Jews, noted for their qualities of heart as well as of intellect, have already called for clemency. It is now the turn of outsiders who believe that this case offers a singular opportunity to illuminate the difference between evil and good, and who suspect that the Jews are better able to recognise such an opportunity than any other people, to urge that the right course is not to execute Eichmann; that he be made an example, not of men's power to exact retribution, but of their ability to rise above the circle of crime and punishment.

This plea is not based on any doubt about Eichmann's guilt. He has said himself that he is morally guilty, and his claim to be legally innocent depends on the argument that he was obeying orders; to which the reply is that such orders should not have been obeyed. Nor has it anything to do with the way in which he was brought to trial. If he is hanged, many people will find it unpleasant to remember that the road to justice began with a kidnapping, but few of them will argue that this invalidated the meticulous process to which the Israelis submitted him from then on. If the legal road were to end, on the other hand, in a magnanimous act of mercy, the end would excuse the means which made it possible.

There is a case for showing mercy to Eichmann—for reprieving him from the sentence of death or, better still, for giving him a chance to work out atonement of his own free will. It will not be easy, if he is spared the noose, to guard him against private vengeance afterwards; but there may be corners of the world (perhaps a kibbutz in the Negev?) where he could show in peace that he was sorry. The case for giving him the chance to do so rests on the belief that to execute him would be pointless; whereas to be merciful would lift the whole matter above the level of judicial accountancy to a plane where it might catch the world's imagination.

Eichmann's death would not serve any of the usually accepted purposes of punishment. It would not be a form of compensation; one man's extinction does not begin to make up for the extinction of five million. It would not be a deterrent; no lunatic bent on a campaign of genocide would be put off by Eichmann's execution, and indeed the anti-semitic brand of lunacy might well be inflamed.

Nothing can alter what Eichmann did to the Jews. What the Jews now do to Eichmann, however, can have a powerful effect for good if what is done is right. In an imperfect world there rarely occurs a wholly evil act which can be met by a response of unqualified charity. The persecution of the Jews has now given the Jews such an opportunity. To forgive a man who steals one's property or injures one's family is commendable. To forgive the man who arranged the killing of millions of one's race would be an act of imaginative compassion calculated to bring out, as white against black, the full evil of what Eichmann is responsible for. It is doubtful whether any group of half a dozen men has ever held an opportunity on this scale in its hands before.

It is hard to think of any other people who could take advantage of this chance. Only the Jews have passed through the Jewish experience; perhaps only the Jews possess the quality of intellectual imaginativeness required to see that clemency would serve their purposes better than punishment.

The trial of Eichmann, once he was found, was inevitable. It has reminded the world of what the Germans did to the Jews, and reminded the Jews themselves of the new strength, moral and political, they have acquired since then. This having been done, the new self-confidence of Israel should show itself in a preference for looking to the future. If Eichmann is executed a line will have been drawn under a bloody episode of history, but the line itself will be of blood. But if the Jews can overcome their memories and, having demonstrated what Eichmann did, make him an example of mercy, it is possible that in the future historians will remember his name, not for what he did, but for how the Jews responded. Other people might even be moved to copy them; who knows?

NOTES OF THE WEEK

SWITZERLAND

Men at Arms

DEMOCRATS to a man, if not to a woman, the Swiss went to the polls on Sunday to decide by popular vote whether to renounce nuclear weapons, and, being Swiss, cautiously decided to do nothing so radical. The all-male electorate, or rather the 55 per cent of it that took part, voted two to one against a proposal to ban the use, manufacture or deployment of atomic arms on Swiss soil. Only three cantons in the French-speaking west of the country, and one in the Italian-speaking south, produced a majority in favour of the "anti-nuclear initiative" which was designed to write the renunciation of these weapons into the federal constitution. The bulk of the votes that killed the idea came from the German-speaking east of the country, where feelings on such matters are coloured by a martial anti-communism that makes even Dr Adenauer look a shade pinkish. What the Swiss women think nobody knows. They have presumably been told to go to the *Kirche* to pray that their *Kinder* will not be cooked in a nuclear *Küche*.

At first sight it seems odd that this enclave of peace and neutrality should have rejected the opportunity to be the first country to forswear atomic arms once and for all. But the Swiss face the problem of all neutrals who rely on arms, not just crossed fingers, to protect their independence. Conventional weapons, which were good enough to convince the Germans in 1940 that an attack on Switzerland would be more trouble than it was worth, will not deter an enemy who can reduce Swiss defences to nuclear rubble from a safe distance. The temptation to equip oneself with equal weapons is considerable. The Swedes, who are in the same position, are being pressed by their generals to make their own atomic arms, but have so far avoided a decision. The trouble is that it is not much good having tactical nuclear weapons, with a short range, if the probable enemy possesses strategic weapons with which he can blackmail you into submission from a thousand miles away; and neither the Swiss nor the Swedes feel like going the whole hog and acquiring strategic monsters of their own. Thus, despite Sunday's referendum, the problem is not really solved.

ARGENTINA

Waiting for Guido

As a parting gift to his country, just before being bundled off to detention on Martin Garcia island, Dr Frondizi asked his friend, Dr Guido, to succeed him as president. Both are (in Argentina's charming political vocabulary) Intransigent Radicals. Thus the decencies have been preserved. The military who had been on the verge of installing a brass-hatted president can operate now, more respectably, behind a constitutional façade. This at least gives Argentina a breathing space, for all that the façade is thin. Dr Guido was accepted by the service chiefs only on his undertaking to go all the way along with them in smashing Peronism. Next, officers from all three services were lodged on him at Government House to help him concoct a cabinet. This has not been an easy task. The military are by no means cock-a-hoop at having ousted Dr Frondizi. Even Admiral Clement, a ring-leader, has had to be coaxed to serve again as navy secretary. The war minister resigned; the army nominated another; but this week saw an anxious search for some really prominent civilians to push through the army's tough programme of banning Peronist political activities and curbing the labour unions' powers.

In less than a month comes zero hour. Labour day, May 1st, may not only spark off demonstrations by Peronist trade unions. It is also the date when Congress is supposed to reconvene. And what will the Peronist deputies, their election annulled, do then? It is not an inviting prospect; and matters are made worse by the inconsequence of the two major radical parties. Together they could dominate the chamber; instead, they have gone to pieces. The Intransigents have split, some repudiating Dr Guido, others thinking it the better part to wait and see. "Giving Dr Guido a chance" has also become the policy of the People's Radicals, though last week they were advocating the seating of the Peronists. This confusion of thought is a measure of Argentina's dilemma in having a labour movement that, though reared in a bad environment, does stand in some ways for social justice, and cannot be sledge-hammered out of existence as simply as the military think.

Guido with guides

WAGES COUNCILS

Make Up Your Mind

THE Government is still dickering indecisively with the way in which its wages policy is to be enforced, even in the industries where it has some real power to enforce it. The latest example came from the Minister of Labour this week, with a fuzzy letter to the chairmen of 50-odd wages councils. These bodies fix minimum wages, which are then made legally obligatory minima for all employers to pay, in industries where either employers or workers are too loosely organised for ordinary negotiations to be fully representative of either side. The councils are composed of an independent chairman and equal numbers of representatives of both sides; all members are appointed by the minister. Eight of the councils have recently agreed that workers in their trades should have wage rises of between 3½ and 8 per cent: their proposals must now be either formally ratified for statutory enforcement, or else totally rejected, by the Minister of Labour.

No private outside commentator can really pretend to know whether there are special circumstances justifying above-average increases in any of these industries. *The Economist* has no idea whether there is or is not a tight squeeze on labour in the corset industry, which is one of the eight trades involved. But Mr Hare does have the evidence before him. He must know whether these councils' proposals are in accord with the Government's guiding light, in which case he should accept and enforce them; or out of accord with the guiding light, in which case he should summarily reject them. Instead, however, he has written public letters to ask the erring chairmen to reconsider their proposals, or alternatively to explain to him how they can be reconciled with "the principles set out in the white paper on incomes." It is

fairly clear that this means that he believes that they are irreconcilable with those principles, in which case it should be impermissible for him to sign the orders. Yet signing the orders is apparently just what he intends to do if the chairmen do not repent. Since they knew all about the guiding light when they made their proposals, it is most unlikely that they will change their minds under this feeble pressure. So the Government still seems prepared to see its wages policies torn to shreds, so long as it does not appear on the surface to be doing the tearing itself.

BY-ELECTIONS

Bogey for Stockton

STOCKTON-ON-TEES was voting on Thursday, and the result will be sprawling across the newspaper headlines by the time this issue is in readers' hands. In 1945 this heavy industrial constituency not unexpectedly ejected its temporary Tory incumbent of the 1930s, Mr Harold Macmillan, by 8,664 votes (or by 17.6 per cent of the poll). Throughout the 1950s Stockton marched in almost exact step with the slow national swing. When the Liberal candidate withdrew after losing his deposit in 1945 and 1950, nearly all the 8 per cent of the electorate who had previously voted Liberal switched to voting Tory in 1951. At the next two general elections, approximately 1 per cent of the electorate switched from Labour to Tory, so that by 1959 the Labour majority was down to 3,277 (or 7.4 per cent of the poll). It thus became almost a marginal seat.

Before Orpington, Stockton might have been expected to vote in much the same way as that other near-marginal Labour constituency of Lincoln did four weeks ago. At Lincoln the intervening Liberal picked up rather over 18 per cent of the poll, of which over 14 per cent came from the Tory and over 4 per cent from Labour; at Stockton a similar result might have increased the Labour majority to 7,500 or so, but still left the Tory in second place. The special Gallup poll published by the *Daily Telegraph* on Wednesday suggested that perhaps 4 per cent more Stocktonians than Lincolnians might now swing from Tory to Liberal, which on a heavy turnout would serve to put Labour's potential majority still higher, but would not be right out of line with Lincoln's experience. By contrast, National Opinion Polls Ltd. reported in the *Daily Mail* on Tuesday that their survey last weekend suggested that nearly 21½ per cent of Stocktonians might swing from Tory to Liberal, and another 6½ per cent from Labour to Liberal; that would leave the voting percentages approximately Labour 47, Liberal 28, Conservative 25—i.e., a Labour majority over Liberal of perhaps up to 8,000 (depending on the size of the turnout), but with the Tory in third place.

Hitherto these polls have underestimated the extent of eventual Liberal support, presumably because most last minute impulse-voting has recently been going the Liberals' way. The Tories' unspoken fear throughout this by-election must have been that middle-class Stocktonians might decide that a Liberal vote represented their one pretty thin hope of getting Labour out, and that a last-minute surge on to the Liberal band-wagon might then conceivably send their own candidate's vote down to deposit-losing proportions. As Mr Macmillan was saying on Monday that he thought that that candidate had a "very good chance of winning," that would be very embarrassing indeed.

UN AND RHODESIA

Six Guests in London

THE usual outcry, from the usual quarters, greets the arrival in London this weekend of six members of the United Nations special colonial committee of seventeen. The Government has shown courage as well as good sense in inviting these so-called "snoopers." Criticism of the UN may at present seem less articulate here than in America, where Mr Kennedy's fight for Senate approval of the purchase of UN bonds—discussed on page 37—has had a backdrop of full-page newspaper advertisements of a wildly scurrilous nature, paid for by a "committee for aid to Katanga freedom fighters"; but the underlying feeling persists.

What the heated critics have missed—or chosen to ignore—is the interesting and encouraging background to the present visit. The British invitation was issued, and accepted, after the committee of seventeen had set aside without a vote a draft resolution which demanded that Southern Rhodesia be made independent under African rule within a year. This resolution had been pressed by Mali and by Tunisia, which is represented on the committee by Mr Taieb Slim, formerly ambassador in London. While it was being debated, the British representative, Mr Colin Crowe, resisted the proposal for a sub-committee to go to London to take up the matter of Southern Rhodesia with the British Government. Now the London talks have been more broadly, and more tactfully, defined as embracing the whole work of the committee.

Most committee members, and notably the Indian chairman, Mr Jha, who warmly welcomed the co-operative attitude shown by the British invitation, have sensibly tried to avoid pushing Britain too hard on the embarrassing Rhodesian issue. Among the Asian and African members, considerable sympathy for Britain's difficulties was generated by the crude—and unsuccessful—tactics of the Soviet and Polish members, who overplayed their hand once again to such an extent that one of their demands evoked general laughter. But the committee's preference for moderation in tactics ought not to be seen as indicating any lack of deep concern about Southern Rhodesia. The consensus of the committee's views, as summarised by its chairman and strongly endorsed by most other members, contained three major points: that the colony is not fully self-governing; that its 1961 constitution needs revision, as it does not provide satisfactory African representation; and that Britain should arrange for an early constitutional conference, with equitable representation of the African population as well as of other groups.

COMMUNIST BLOCK

Albania's Lifeline

WHATEVER the trend of the discussion of how to cope with Mr Khrushchev behind the closed doors of the National People's Congress in Peking, in Tirana they are still sticking out their necks with uninhibited pugnacity. Last week the Albanian Democratic Front approved an appeal to the voters (who will have to perform their honorific duty on June 3rd) which vigorously laid into "Nikita Khrushchev and his group" and prophesied that these would end by being covered with shame. A few days earlier the party paper, *Zeri i Popullit*, published a sizzling attack on Mr Khrushchev as a splitter of the international socialist movement; it purported to describe in detail Mr Khrushchev's efforts before the Moscow meeting of 81 communist parties in November, 1960, to get the Albanians to line up with him against "a *third party*" (i.e. China), "and thus divide the socialist camp."

In all these diatribes against Mr Khrushchev the Albanians attempt to make it clear that they have no quarrel with the Soviet Union itself, nor with the Soviet people, and that they still consider themselves to be loyal members of the socialist camp. (The distinction did not prevent them from turning down an offer of aid by the Soviet Red Cross to the victims of an Albanian earthquake in March—an affront which apparently took the Soviet officials completely by surprise.) Some of the practical considerations governing Mr Hoxha's tough attitude towards Moscow, and his simultaneous determination not to be counted out of the socialist camp, were revealed in an article on Albania's foreign trade published in *Zeri i Popullit* on March 29th. This stated that in the current year the volume of trade with communist countries should increase by roughly 10 per cent, and will account altogether for more than 90 per cent of Albania's foreign trade. The proportion of trade with communist China has gone up from 28 per cent last year to 59.1 per cent this year; in 1958 it was only 2.3 per cent. Nothing at all was said about trade with the Soviet Union, which four years ago was more than 50 per cent; and Albania's willingness to increase its trade relations with non-communist countries has apparently so far met with only a modest response. Clearly the Peking-Tirana axis has at least one solid link.

WAGE STATISTICS

Help for Researchers

BEFORE welcoming the first issue of the Ministry of Labour's new bulletin* for what it is, it is legitimate to send up a sigh of deprivation about what one had once hoped it was going to be. Back at the time of the white paper on "incomes policy" last February, the Government had seemed to be indicating that it would henceforth set a target for increases in national production each year; and that it proposed to collect together and publish at regular intervals factual information for arbitrators and wage bargainers about how far this target was being attained and how far increases in money incomes were running beyond it. But the idea of setting targets for national production was most certainly not taken up by this week's Economic Survey; and now the bulletin merely takes the form of an improvement—admittedly an interesting one, admittedly a much-needed one—in the Ministry of Labour's normal output of statistics, plus some other departmental returns. The 129-page foolscap-size booklet contains a few charts, very little explanation and some formidable looking tables.

The booklet does collate a lot of interesting information, including a section on company finance. Although most of the statistics have already appeared in other publications, the exceptions include new tables showing movements of wage rates and earnings in different industries. This analysis is not as detailed as that done by Professor Ely Devons and Mr J. R. Crossley for the *Guardian*. Officially it is not felt that the breakdown can be taken quite as far; but the ministry is prepared to show in which industrial groups and in which occupations standard wage rates have increased most, and least, since 1955.

There are also index numbers of average earnings by regions, although these stretch back no further than April, 1960. And, for the first time, there is an index of average salary earnings which will attract some attention, although it comes no further up to date than October, 1960. At that date, the salary index was 33.4 per cent higher than it had been in 1955; the rise in weekly industrial earnings over the same period was only fractionally less, 32.5 per cent. This closeness of fit is a surprise. In manufacturing alone, the previous pointers had suggested that the average salary-earner had been regaining in recent years a little of the large differential he lost during the war and the postwar decade.

BRITAIN AND EUROPE

Liberal Isolationism?

PROFESSOR JAMES MEADE, who succeeded Sir Dennis Robertson as Professor of Political Economy at Cambridge, has this week declared himself only a lukewarm supporter of Britain's entry into the common market. In a Hobart Paper,† he concludes: "The UK could and should join the EEC if it has real promise of becoming a liberal, outward looking institution. But she should not join if it is designed as a tight, parochial European bloc." In this event, Professor Meade believes that Britain "should be prepared for the time being at least to remain outside," and work for the general worldwide reduction of trade barriers—particularly, he implies, on manufactured goods from the emerging new Japans among the developing countries of the Commonwealth.

Despite its generally liberal tone, this pamphlet is going to be widely quoted by anti-marketeers. It is therefore important to explain why we disagree fundamentally with its main premise. If Britain stays outside the common market, it seems singularly unlikely that Britain will gradually become more liberal towards the "new Japans." It is much more likely to become steadily more restrictive towards them—as it already is, compared with the United States, towards manufactured imports from Japan itself. The reason is simple. A developing country generally industrialises first on the basis of making the things that appear in its own import bill. So long as Britain continues to base its main export effort on goods that it can sell on imperially preferential terms within the Commonwealth, it is therefore likely to continue to twist its productive pattern into a shape where too much of its industry is still concentrated on making precisely the goods which the developing Commonwealth countries will themselves be making tomorrow. And one is rarely free-trade minded towards emerging countries' new industries that compete with one's own declining ones.

If Britain enters the common market, on the other hand, its export effort can then be turned more and more towards producing goods bought by the advanced countries; this should aid Britain's future growth prospects as well as foster its liberalism. And Britain should surely have more opportunity to help push Europe in the same direction of liberalism towards the new Japans if it enters the European club than if it stays outside it. If one accepts these arguments, a main reason for not heeding Professor Meade's cautious caveat is surely precisely because one wants to further his far-sighted objectives.

CYPRUS

Settlement under Strain

AFTER a three-day visit to Cyprus, Mr Sandys departed on Tuesday making optimistic noises about the island's situation and prospects. During his visit he also made soothing sounds to the authorities about the impact on the

APPOINTMENTS TO THE CIVIL SERVICE

¶ Some years since considerable indignation was excited by statements . . . that numbers of the *employés* in the various departments of the permanent Civil Service were utterly incompetent to discharge the duties of their posts. . . . The assertion was exaggerated no doubt, but it had an ugly element of truth at bottom. . . . Under the new system there can be no doubt that we get some very suitable men, some very clever men, some who are smart without being shallow or discontented,—and no dunces. As long as the competitive system is not pushed too far and made too imperative and universal, the harm done to the Service may not be very great nor very widely felt. But it is now proposed to abolish nomination altogether, to adopt "open competition," to throw open all vacancies in the public offices to *all*, of whatever rank or whatever antecedents (respectable character assumed), who can pass a better literary examination than their competitors; in a word, to put up the junior appointments in all the administrative departments of the Government to public auction—the biddings to be pronounced upon by the umpires who sit at Deans' Yard, Westminster. . . . The . . . objection is that as all promotion is now given *in* the Service, and no "uncovenanted" aid is ever introduced from without (except in a few of the very highest posts), the youths who obtain the junior appointments now are the men who will be called upon to fill the senior appointments some years hence. If the present system is continued and extended, in the course of less than a generation the heads of every branch in our several Government departments will be men who were received into the public service simply because, at eighteen or twenty years of age, when fresh from school, and with the acquisitive memories and ready facility of youth, they passed with superior credit a pretty strict literary ordeal, and have conducted themselves well ever since. Now, who are the most likely to carry off the greatest number of marks at such an ordeal? Nobody, we think, will contradict us when we answer: "Pupil teachers, and that class of crack scholars, head boys, in National and Inspected schools, who now obtain the certificates of proficiency from the Inspectors of the Education Board." Do we wish—are we prepared—to see all our public offices *filled*, managed, and ruled by this class? If not, we should pause where we are.

Man who dreams of tomorrow

must be wide awake today. Awake to the exciting demands of the future—its challenge and its chances. Awake to progress. And aware of Ferranti . . . for Ferranti and progress have always gone hand in hand. Ferranti and progress in the air, with Airpass, the revolutionary automatic navigation and target tracking system. Ferranti and progress on the ground, with transformers for the Kariba Dam, the Niagara Falls Power Project . . . and the biggest generator transformers in the world for the British National Grid. Ferranti and progress adding up to the largest and most versatile range of computers in Europe.

In electrics and electronics, Ferranti have been leading the world for nearly eighty years. Modern civilisation owes much to Ferranti invention and experience. Ferranti are helping the dreamers of today to bring about tomorrow's reality. It's their business.

FERRANTI

First into the Future

FERRANTI LTD., HEAD OFFICE: HOLLINWOOD, LANCASHIRE. LONDON OFFICE: KERN HOUSE, 36 KINGSWAY W.C.2.

Cypriot economy of Britain's membership of the common market and of the gradual rundown, foreshadowed in this year's defence white paper, of a considerable proportion of the British troops now stationed in the two sovereign base areas. Both developments could be serious ; nearly 70 per cent of Cyprus's agricultural produce is now sold to Britain, while the money spent, and the employment provided, by the services are an important prop to the island's struggling economy. The British Government, however, is well aware of the political importance of shielding the frail young republic from harsh economic winds that are bound to weaken its resistance to increasingly effective communist penetration ; Mr Sandys's assurances on these points are likely to have been sincere as well as soothing.

His more general optimism about the island's future is less convincing. Although the Zurich agreements were not formally on Mr Sandys's agenda, he can hardly have avoided talking about them informally. His visit took place against a background of renewed communal tension between Greeks and Turks, which has recently erupted in violence, although only on a small scale. The two communities are still squabbling over the implementation of the provisions in the Zurich agreements for a 70:30 ratio of Greeks to Turks in the public service, as well as over the Turkish demand, also enshrined in the agreements, for the partition of the five chief municipalities. The Turks have been making full use of their legislative powers to obstruct financial legislation, and among the Greeks there has been a discouraging renewal of talk about enosis.

It is doubtful whether in the present atmosphere any revision of the Zurich agreements would be either useful or practicable. But they cannot work effectively if the Turks and the Greeks do not manage to overcome their mutual suspicions. This is a situation in which neither the good advice nor the economic aid of friendly governments can help. It is up to the Cypriots themselves.

Since the Pay Pause

In a Parliamentary Question on March 27th, the Chancellor of the Exchequer was asked to show how certain key economic indicators had moved since the introduction of the Government's wage pause policy. With production and vacancies added, the official assessment is reproduced below.

Item	Period covered: From	Period covered: To	Rise (+) or fall (—) per cent	Remarks
Weekly wage rates ...	July, 1961	February, 1962	+ 1¾	Estimates of the total amount paid in wages are only available annually.
Company profits	2nd Quarter, 1961	3rd Quarter, 1961	— 3½	Seasonally adjusted.
Purchasing power of £ sterling.	July 18, 1961	February 13, 1962	— 2½	Based on the retail price index.
Retail price index	July 18, 1961	February 13, 1962	+ 2½	—
Value of imports	May–July, 1961	December, 1961–February, 1962	No change	Based on averages of the seasonally adjusted figures for the months shown.
Value of exports.....	May–July, 1961	December, 1961–February, 1962	— 1	
Terms of trade.....	July, 1961	February, 1962	— 1	A fall is favourable to the United Kingdom.
Employment.....	July, 1961	January, 1962	— ½	—
Unemployment (wholly unemployed, excluding school leavers).	July 10, 1961	March 12, 1962	+67	The normal seasonal change accounts for more than half of this increase.
Unfilled vacancies.....	July 5, 1961	March 7, 1962	—45	The normal seasonal change accounts for less than half of this decrease.
Central Government expenditure.	2nd Quarter, 1961	3rd Quarter, 1962	+ 2½	Total current expenditure, including National Insurance benefits and other transfer payments.
Industrial production..	July, 1961	January, 1962	— 4½	Seasonally adjusted.

Some indication of changes in dividends can be deduced from the accounts of public companies. Those companies which published their accounts in the period January to July, 1961, *showed increases of about 12½ per cent in ordinary dividends, compared with the previous year, but for dividends declared between August and December,* 1961, *the increase was less than 5 per cent.*

FRANCE

Convalescence

NOBODY could pretend that the past ten days in Algeria have been precisely quiet. But it can be said that matters could have been very much worse and that, in the third week after the ceasefire, there have been a few hopeful signs that the tide is turning. The Secret Army suffered a conspicuous defeat, more moral than physical, in the capture of General Jouhaud (who is to be tried on April 11th). After the massacre of the rue d'Isly on March 26th it had to abandon its policy of mass demonstrations for the time being. Most serious of all, on March 29th an attempt, commanded by Colonel Gardes, to establish the Secret Army in the *bled* behind Orleansville, was frustrated by the Moslems of the area, on whose sympathy the colonel and his friends had counted. Their defeat is a blow at the myth that the Moslems secretly support the Secret Army. Without that myth it is hard to see what can long sustain the attempt at subversion, other than the courage of despair.

The outlook is still far from clear all the same. Foiled in the countryside, the Secret Army has reverted to its terrorist attacks in the towns, designed to force the Moslems into violent action which might end in the French army being forced to fire on them. Hence the brutal attack on the Moslem hospital in Algiers. The French officer corps itself is by no means wholly reliable ; there seems to be a marked inclination to work only to rule, if not actively to assist the Secret Army.

In France itself, all goes smoothly on to the referendum on the ceasefire this Sunday. General de Gaulle is certain of an overwhelming majority, and would be even if the major parties had not all advised their followers to vote "oui." It is universally assumed that the referendum will shortly be followed by a general election, in which the general's policies will be put to a more stringent test. It is this assumption that has governed the parties' referendum campaigns, and it explains why they have been at pains to state that their "oui" goes to the Algerian settlement only, and not to the gaullist regime.

WHITE COLLAR UNIONS

Acting Up

AFTER standing firm during a five-month boycott of jobs offered by the independent television companies, the actors' trade union has won its basic principle of payment according to the number of companies transmitting a programme, and has thereby notched up what look like some of the most sensational rises ever achieved. The minimum payment for a solo "speciality" variety act, for instance, is to go up from 10 to 72 guineas: it would be churlish to point out that a performer good enough to be hired for a speciality act on television would never be on the minimum scale anyway. The fees of the most expensive performers will also go up ; but as they are always subject to negotiation between agent and employer they will surely not rise unduly. The most important effect of the new agreement will no doubt be that it should roughly treble the fee received for showing throughout the country by performers who hitherto were getting between the minimum (formerly 10 guineas) and 50 guineas a show ; the danger for these "bit part" players, however, is that if it is now to cost the big companies 28 guineas for performers who utter only one sentence, productions are likely to be edited so that the one sentence is carefully left out. The union has now managed to make these high fees (the rise will probably cost present ITV companies £2 million a year) a standing charge on the industry just before the growth of post-Pilkington competition may make television companies less obviously affluent employers. However, for purely local showing, small regional companies will still be able to employ bit part players for nine guineas a time.

Two other white-collar groups who have made claims during the past week are unlikely to be as lucky as the actors. The bank employees' union has asked for a 30 per cent increase for its clerical members, which seems more than a little optimistic at a time when more and more banks are distributing glossy pamphlets about their new computers. Journalists in news agencies have asked for a rise in their minimum rate, under a threat to strike in four weeks' time: the employers are stalling until they know the result of the union's claim from the Newspaper Employers' Association, and the three firms involved do not seem to be totally in agreement on their stand. Some of the jobs done in the agencies could certainly be taken over by machines if men became too expensive: the time has come in this industry when Oliver Twist's game is getting dangerous. The BBC, which knows that it will soon face a claim from the actors' union for its television performers, is making sure that the implications of wage rises are properly understood before negotiations begin: they have warned the public that an increase in their salaries bill would mean an increase in television licence fees.

TRIBUNALS

After the Chalkpit

"JUSTICE," said the late Lord Hewart, so establishing his only claim to immortality, "should not only be done, it should also be seen to be done." This is the principle which has inspired the Council on Tribunals to recommend that two new rules should be included in the procedure for the conduct of statutory inquiries. First, where the minister proposes to disagree with the inspector's recommendation either because of some factor not considered at the inquiry or because he differs from a finding of fact made by the inspector, he must notify the parties to the appeal of his disagreement and the reasons for it, and give them an opportunity for making comments and representations in writing before finally making his decision. Second, where the minister proposes to depart from the inspector's recommendations because of (a) fresh evidence on a question of fact, or (b) fresh expert evidence (including expert advice), or (c) the introduction of a fresh issue, the inquiry should (if any of the parties so desire) be reopened and the new evidence or issue should be produced at the reopened inquiry.

These rules are the direct result of the case last year in which Mr Brooke, then Minister of Housing, decided to allow chalkpit working at Saffron Walden, despite a contrary recommendation of his inspector who had held a public inquiry. Mr Brooke reached his decision after consultation with the Ministry of Agriculture, and it was this consultation to which Major Aubrey Buxton and other neighbours of the proposed chalkpit objected. They claimed they had suffered injustice since they had been given no opportunity to question the Ministry of Agriculture's new evidence. This was always the strongest part of their case, and the council's recommendations (which the Government should accept) have vindicated it. Wisely, however, no attempt has been made to go to the other extreme and say that a minister should never be allowed to turn down any recommendation by his inspector ; as there is always a convincing flood of objections to anything new anywhere in rural Britain, this absolute bar would be likely to weight the scales too heavily against many forms of new industrial or other development that might be urgently in accord with the national interest and public policy. But, if the council's proposals are accepted, ministers should now be under a salutary new pressure to follow the sensible recommendation of the Franks committee: that every effort should be made to make ministerial policy clear before any inquiry, instead of just issuing a *diktat* after it.

GHANA

Not Capitalism

PRESIDENT NKRUMAH is making Ghana's bed ; it is the Ghanaians who must lie in it. Fortunately, a certain flair for cushioning western sensibilities from the occasional shocks of Accra policies is now evident. Mr Krobo Edusei, the Ghanaian minister of industry, was quick to rebuke his wife for spending £3,000 on a golden bed in London ; that, he pointed out, is not socialism. But threatening to put political prisoners who have served five years without trial back into the cells for another twenty years is not the best expression of the African personality. This is what Dr Nkrumah did on March 24th.

He also announced that foreign firms operating in Ghana must in future reinvest 60 per cent of their profits after tax within the country. Provided depreciation, and the ten per cent of net profits already contributed by foreign firms as a development loan, are taken into account, this is not an unduly harsh burden. Most firms (except those out for a quick kill) already reinvest as much ; the awkwardness lies in making a voluntary act obligatory. Public relations advisers must have got to President Nkrumah for, in a broadcast on Monday night, he made the same announcement in a different way: companies are still free, he said, to distribute to their shareholders 40 per cent of their net profits after tax—and tax allowances will be made for extra heavy reinvestment.

GERMANY

Jeremiads

LAUNCHED by Herr Erhard on March 21st, the public debate on the state of the west German economy has continued this week up and down the federal republic. At the annual meeting of the Federation of German Industries—a gathering exclusively of bosses—Herr Erhard observed that employers who yielded to higher wage demands and then promptly raised their prices were behaving just as irresponsibly as trade unions that asked too much. The economic minister's plea for moderation was vigorously supported by the president of the federation, Herr Fritz Berg; he pointed out that west Germany was only just beginning to undertake substantial obligations to the common defence of the West and to the underdeveloped countries. These entailed a contribution of some 21,000 million marks, roughly 8 per cent of the gross national product. Either productivity must be increased, or consumption reduced. In the opinion of Herr Otto Brenner, the chairman of the powerful engineering union, these managerial jeremiads were tantamount to a declaration by Herr Erhard of the bankruptcy of his cherished "social market economy." Herr

Brenner has been protesting that Herr Erhard has been conducting economic policy for too long with words instead of deeds. Both the trade unions and the Social Democratic party are advocating that the state should do more planning than it has done in the past. By Thursday the debate had reached the Bundestag, where the Social Democrats maintain it should have started. Herr Erhard announced that the government would shortly set up an advisory council on costs, wages and prices, and, by way of an example, would cut most of its public building programme by 20 per cent.

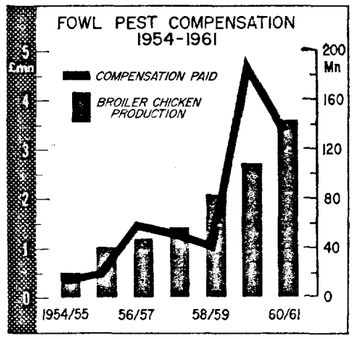
It has been comforting to Herr Erhard to hear the finance minister, Herr Starke, swearing he would resign rather than consent to a rise of 7.7 per cent in civil servants' pay, but highly discomforting to see such prominent motor-car manufacturers as Volkswagen, Auto-Union, Ford and NSU increase their prices by some five per cent. Austerity is more easily preached than practised. After the sobering speeches while they were waiting for luncheon in the Beethoven Hall in Bonn on Tuesday, the members of the Federation of Industries were stayed with flagons of orange juice "refreshed" with champagne. They went on to a meal of smoked salmon, roast saddle of pork, a concoction of cream and pistachio nuts, a choice of Rhine or Mosel wine, coffee and liqueurs. Admonished and restored, the industrialists set off in their chauffeur-driven cars back to the Ruhr and other places where men toil for gain.

CAPITAL PUNISHMENT

When Will it End?

As long as Britain is ruled by a Conservative Government, the best chance for ending capital punishment is probably not by any formal act of abolition but by a more generous use of the royal prerogative of mercy. There had been some hope recently that this Government might gradually start to move towards this. That is why abolitionists will regret that no reprieve was granted to James Hanratty, commonly known as the A6 murderer, who in February was convicted of shooting a man in a car on a main road last summer, and by implication of raping and seriously wounding his companion.

There were two grounds on which it seemed that a reprieve could have been granted. First, can anyone say that there was not a "scintilla of doubt" about the verdict—the criterion which the Home Office said to the Royal Commission on Capital Punishment had to be satisfied before an execution was carried out? The trial judge's summing up, and the long time—nearly ten hours—which the jury took to reach a decision, certainly did not give the impression that the case was clear-cut. In the end, it rested on a question of identification, and it should be remembered that it was a case of mistaken identity, in Adolph Beck's case, that led to the setting up of the Court of Criminal Appeal in 1907.

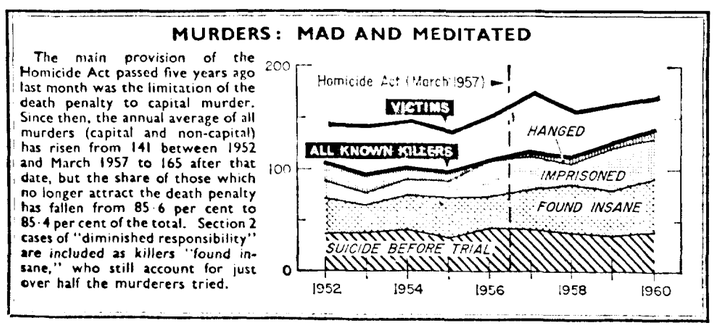


But even if there was not a sliver of a scintilla of doubt about the case, surely there was enough in Hanratty's past medical history to justify a reprieve. Obviously he was not McNaghten mad; and if the defence of diminished responsibility had been put up at the trial, which it could not be since he stuck to his alibi, the jury might still have rejected it, for his mental state too was not clear-cut. But enough has been revealed since the trial to show that he was, or at least at one time had been, close to the border over which he would not have been held responsible for his actions. Alleged to have been diagnosed at the age of fifteen as a mental defective and later considered a psychopath, at the age of twenty-five he has now been deemed fit for hanging. When will it end?

FOWL PEST

Golden Birds

NEWCASTLE disease—or, simply, fowl pest—is common in most of the major poultry rearing countries; only Ireland, Scandinavia and Australasia are generally free from it. The rapid increase in the number of poultry in Britain in the last eight or nine years, and their concentration in broiler and deep-litter houses, have led to ever greater ravages by fowl pest, and to a soaring rate of compensation paid by the Government to afflicted farmers for compulsory slaughter of infected and endangered stock. Up to now the official policy, as in foot-and-mouth disease, has aimed at total eradication by slaughter. This has succeeded, since 1953, in eliminating the peracute type of Newcastle disease; but the acute and subacute forms have stubbornly persisted.



The report of the Plant committee on fowl pest policy (Cmnd 1664) places some of the blame for spreading the pest on other birds

(like pheasants) which carry the disease, but places much of the blame squarely on human frailty. One suspects that some lucrative private rackets have grown up under the present system; nobody really knows, for example, how many farmers have got the full compensation money, and then still managed to flog the dead poultry to some restaurant. The Plant committee does not say this straight out, but it is plainly unhappy about the unregulated disposal of dead birds ("our attention has been called to some undesirable consequences") and it exclaims that it was "shocked" by the low standards of hygiene at some slaughterhouses.

The committee sensibly concludes that to continue the present policy, even with stricter regulations, would be an expensive flop. Encouraged by vaccination successes in Canada and elsewhere, it therefore recommends that a policy of vaccination plus slaughter should be introduced. Even more important, it wants the cost of compensation for slaughter to be transferred immediately from the taxpayer to the poultry industry, so that the industry should pay for its own feather bed. For this purpose it proposes a levy on hatchery turnover—which also involves the registration of hatcheries. This proposal has roused a loud outcry, but it will be very worthwhile if it provides an incentive for full voluntary vaccination by commercial producers throughout the country.

Correction.—The figure of £57 million was wrongly given in *The Economist* of March 31st, page 1210, as the South African government's proposed expenditure in the Transkei over the next three years. This amount is to be spent over five years, not three, and is to be spread over all the "Bantu" areas, including the Transkei.

To bow, or not to bow? Pitfalls big and little await the international businessman in this alien world.

Japan has its share of these pitfalls, but the exceptional profit in trade with Japan makes it worthwhile coping with them. The dynamic economy of the country is constantly creating new profit opportunities for both buyer and seller from overseas.

A good way to start taking advantage of these opportunities is to consult Mitsubishi Shoji. This big general trading company represents 30 Mitsubishi companies in foreign trade. Products of Mitsubishi companies carrying the Three Diamond mark cover the entire range of light and heavy industry.

You will find a Mitsubishi Shoji branch or affiliate in any of the world's trading centres.

IRELAND

–where new export industries get maximum help

New industries exporting from Ireland are eligible for substantial non-repayable grants. These can, in some cases, amount to full cost of site, premises, and training of workers, and half the cost of equipment.

This is just one of the overwhelming advantages that are attracting more and more new industries to Ireland. Others include:

No Income Tax, no profits tax, for 10 years on profits from new industrial exports from Ireland, plus 5 more years of reduced taxation.

Capital and profits can be freely repatriated to Great Britain. Ireland is in the Sterling Area.

Labour: all the workers you need at reasonable wage rates.

At Shannon Free Airport firms interested in the possibilities of air freight can obtain factories for renting, grants for machinery and for worker training, full tax exemption until 1983—and plenty of labour.

Mr. Gerard MacCarthy, representative of the Industrial Development Authority, will be glad to provide further information on what Ireland can offer your industry. Contact him through the Irish Embassy, 17 Grosvenor Place, London S.W.1 (BELgravia 2171).

Or write for two informative booklets to:

THE INDUSTRIAL DEVELOPMENT AUTHORITY OF IRELAND

common market or not...

France is an expanding market for British manufactured articles or consumer goods.

Now is the time for you to plan your entry into the French market !

PUBLICIS, the leading French Full Service Advertising and Marketing Agency, is ready to help you to promote or expand your sales in France :
it will introduce you to suitable Distributors or give you any assistance you may require for setting up your own Organization in France and building up your own Sales Force ;
it will test the market for you and, if necessary, will redesign your packaging in order to give it a French touch ;
it will devise the best advertising schemes, selecting the most suitable media for supporting your sales promotion ;
it will organize your public relations.

PUBLICIS already handles the French advertising for leading British Advertisers such as :
Beecham Overseas Ltd. (Eno's Fruit Salts),
British-American Tobacco Co. Ltd., Dunlop (France),
E. M. I. (Pathé Marconi), Shell (France), etc...
Why not contact NOW Mr. G. E. LEVI-TILLEY, the PUBLICIS U. K. resident Director, or invite your Home Advertising Agents to discuss your French problems with him.

PUBLICIS S. A. 133, Champs Elysées, Paris 8e, France
PUBLICIS (FRANCE) LTD.
Fountain House, 130 Fenchurch Street, London E.C.3, Tel. MINcing Lane 8371

Gracious service—her life's pursuit She's hostess on your

JAL

JET TO JAPAN

In Japan, the supreme accomplishment for a girl is mastery of the arts of hospitality and courtesy. Your hostess on your JAL polar flight to Tokyo has learned from childhood to take pride in obliging others. Smiling, kimono-clad, she welcomes you aboard the giant DC8 that will carry you at almost the speed of sound. As you relax amid the tasteful elegance of the traditional decor, she waits on you with o shibori hot towels for your face and hands, serves you with exotic Japanese delicacies as well as the finest Western cuisine. Her one wish is your enjoyment of a most serene and memorable journey.*

London-Tokyo polar flights are twice weekly. The service is direct and there is no change of aircraft en route. JAL also operate frequent Trans-Pacific flights to Tokyo from the U.S.A. and a comprehensive service throughout S.E. Asia.

THE WORLD OVERSEAS

Algeria after the Ceasefire

FROM A SPECIAL CORRESPONDENT IN ALGIERS

THE final phase has opened in Algeria with the installation at Rocher Noir of the new French high commissioner, M. Christian Fouchet, and the twelve members of the provisional executive headed by Mr Abderrahman Farès. What chances are there for these thirteen men to organise the self-determination referendum within the next two months ? The few remaining French officials are optimistic. They say, " The march of history cannot now be impeded ; somehow the referendum will take place. We agree that it will not be efficiently organised in some regions, but it will happen and the new Algerian republic will be established ; nothing can now stop that."

This may be correct. But chaos, confusion and administrative cowardice will cause much more blood to flow before the white and green flag flies over the summer palace in Algiers. There is no authority in Algeria. Only this week a distinguished French official armed with a *laisser passer* from Rocher Noir and from his ministry in Paris was trying to board an aircraft for Paris. " I have government *priority*," he told the CRS (special police brigadier in charge of the airport at Maison Blanche. " Whose government ? " answered the brigadier, pushing the officer firmly back into the crowd of screaming women and children. In Algiers one-way traffic signs are no longer respected. If a foreigner is arrested outside Algiers there is no one to whom his consulate can apply for help or information.

BUT life goes on: the hairdressers are open ; so is the casino ; weekend tea dances and football matches are well attended. The rich Europeans—the bankers and merchants—realise that the Secret Army Organisation (OAS) will never be able to take over the country. Some of them are planning to return to France—the Secret Army permitting—while others are putting out feelers towards the Moslems. The middle classes and the " poor whites " are still solidly behind General Salan.

The Secret Army leaders are quarrelling among themselves. Some would be ready to settle for a *de facto* partition which would be practically impossible to arrange. But this is not accepted by the extremists who hold what is called the " bunker philosophy " (the reference is to the Wilhelmstrasse). These men say they will blow up and destroy everything—oil wells and installations, harbours, drains, public buildings, themselves and as many other people as possible ; anything rather than let the Moslems take over. A recent dangerous development has been that not only have the Secret Army taken to the *maquis*, where they have some 2,000 armed men organised in twenty or thirty bands in the *bled*, but they have persuaded Moslem members of the MNA (Messali Hadj's old party) to co-operate with them. These bands are causing a great deal of trouble in many areas, especially in the region south of the Atlas mountains, which were peaceful before the ceasefire. The Moslems themselves are deeply concerned by this and by the increase of political activity by the MNA in the suburbs of Algiers, which, the FLN claim, is inspired entirely by the Secret Army. Supporters of the MNA state that they hate the FLN so much that they will work with the Secret Army to get rid of them.

Mr Fares (with cigarette) and colleagues

The FLN have complete control of the casbah and it is impossible not to be impressed by the manner in which they maintain order there. The narrow dark alleys have never been so clean because the FLN organise the street sweeping. When the general strike was over loud-speakers informed the population that they could go out of the walled city to work, but " Go steady, be careful not to cause any trouble with Europeans." The clandestine leaders are an impressive group of mild-mannered young men who talk of the difficulties they will soon face with modest confidence. They know they will be economically dependent on France for years to come, since they cannot afford to lower the standard of living of their countrymen or stop the family allowances and health services to which many Moslems have become accustomed.

Much must depend again on the army ; indeed, this becomes even more important since the administrative machine has almost broken down. The CRS gendarmerie, mobile gendarmerie and marine commandos are still loyal to a man. It is difficult to judge how many officers would go over to Salan if they thought there was a chance he might win. Certainly there are some hundreds of officers who will take no action against the Secret Army and hundreds too who work secretly for Salan and co-ordinate the activities of their units with those of the Secret Army when important operations are taking place. There is at least one military headquarters where the French Army and the Secret Army co-operate fully ; General Salan is often their guest. Both communities expect that he will make a big bang soon, blowing up either the airport or Rocher Noir, or both. The daily routine of murder by plastic bomb attacks merely keeps fear alive, and General Salan has captured sufficient dynamite to be able to lay both Oran and Algiers waste.

Congolese Belgium

FROM OUR SPECIAL CORRESPONDENT LATELY IN BRUSSELS

SUPPRESSING their irritation with difficulty, Belgians are slowly moving towards doing a deal with the Congo and with the United Nations. The foreign minister, M. Spaak, seems to be looking forward to a time when individual Belgians can work on the United Nations staff in the Congo—even though, people in Brussels say, no one can ever be expected to understand that man U Thant. Equally, the Belgian government hopes that enough may come out of the present talks in Leopoldville between Mr Adoula and Mr Tshombe to enable a start to be made on settling the gigantic Belgian-Congolese financial reckoning.

The amount of money involved is immense: probably about £700 million. At the invitation of the Congolese, the World Bank has begun an investigation into just how much Belgium and the Congo do owe one another; both sides think they know the answers, but neither is likely to be completely happy with figures coming directly from the other. The World Bank expects the job to take a team of accountants some months to complete; two representatives started talking about it in Brussels last month. Nervously, the bank assures everyone that it is just recording facts, not acting as a negotiator. Even more fearfully, it recognises that the invitation to act as conciliator may arrive one day.

A look at the list of items in this Belgo-Congolese *contentieux* is enough to show how staggering the job would be for a conciliator. Two items account for 70 per cent by money value of all the argument: the fabulously valuable portfolio of shares in Congo companies inherited by the Congo government (but held in trust in Brussels since independence) and, second, the equally large Congolese public debt, all except $20 million of which has been ignored by the Congolese since independence. About a quarter of the loans that make up this debt are guaranteed by the Belgian government, which has paid out 3,000 million Belgian francs in interest and capital repayment since June, 1960.

ALL the loans involved were spent in the Congo when it was Belgian; the fury of the Belgian government that it now has to pay the guaranteed part is matched only by the rage of the many Belgian families and institutions which own bonds that were not guaranteed, and are therefore unpaid. When, in December, the Congo government paid the amounts due in April and October, 1961, on a $20 million loan negotiated in New York, the Belgians protested that this discriminated against the loans negotiated in Brussels, and not so far repaid. Correspondence on this subject has not progressed happily. Monthly reminders of the amounts due are sent to Mr Adoula's government. To the first a reply was received that the Congolese treasury was, at the time, empty; subsequent letters have remained unanswered. Yet Mr Adoula's government has not repudiated the public debt.

Naturally, the Congolese are eager to discuss the portfolio—but they want to negotiate its transfer alone, and not as part of a settlement linked to the public debt, as the Belgians demand. The portfolio (which Belgium recognises belongs to the Congo state) includes shares in many large companies operating in the Congo. Thus, theoretically, the Congo central government owns 18.14 per cent of Union Minière du Haut Katanga stock, as well as 24 per cent of the voting rights in the company. (It might have had a dominant say in Union Minière, but for a rearrangement of holdings carried out a few days before independence). The central bank of the Congo and Ruanda-Urundi; the Otraco state transport company; the Forminière mining company; and, through subsidiaries and associates, dozens of other important pies baked by the Belgians now, in theory at least, have the Congo government's fingers in them.

There are other items. Before independence, corporate taxes of Belgian companies operating in the Congo were collected in Brussels and sent to Leopoldville; in the same way Congolese import duty on Belgian goods was collected when the goods passed through Antwerp. This arrangement has continued. The Congolese want the collecting offices moved to their country, the Belgians say this would reduce efficiency and, anyway, fees for collections made up to now must be paid. With their genius for computing what is owed to them (down to the last franc), the Belgians say that these amounts, together with such things as stamp money on both sides, money paid as pensions to returning civil servants, air fares for men on Congo business paid by Belgium, and the like, must all be settled together with the major items—the portfolio and the public debt—in the *contentieux*.

IN the same way the Belgian government has a bill all ready to present to the United Nations as an answer to any UN request for a contribution to the cost of its operations in the Congo. This includes rent, fixtures and fittings of the Kamina base—the property of Belgium even after independence, under a prior agreement with the Congolese. This apart, M. Spaak seems willing to arrange for Belgian technicians to serve in the Congo either under the Adoula government, or under the United Nations, or under a mixed agreement between all three. Such an agreement, not thought impossible in Brussels, would go a long way along the path of Belgo-UN *rapprochement* opened up by M. Spaak in speeches and talks in New York since Christmas. The official resumption of diplomatic relations between Belgium and the Congo (the Belgian ambassador arrived in Leopoldville this week) is also a step in the conciliatory direction.

For, in all this, most Belgians want no more than to cut their losses and to have peace and be done with the Congo. Most of them still suffer under a sense of outrage at what they have been told about UN "atrocities" in Katanga; they all feel vastly misunderstood by a world which, they say, saw only Belgian mistakes, and not Belgian positive achievements, when all went wrong after independence. A minority of Belgians, on the right wing, feel that independence should never have been granted; some of these support Mr Tshombe and Katanga secession.

Most Belgians, however, seem to feel that leaving the Congo was inevitable; the excesses that followed are thought to be a pity and their causes are often not understood. But they remember reading letters from relations and friends in the Congo saying "it won't last long"; now that the *colons* are back, bitter and complaining, the Belgians who never went out wonder why their friends and relations are so surprised. A small minority of Belgians (M. Spaak and, perhaps, King Baudouin included) understand that preparation for independence should have begun in 1950 or, at the very latest, in 1955. They are likely to prevail upon their fellow-Belgians, in the light of this understanding, to be generous to the Congo when the time for settling the *contentieux* comes.

Meanwhile, there are still a good many Belgians who would, and could, usefully serve in the Congo. At the end of 1961 there were 2,503 technicians from Belgium in the Congo and 2,000 Africans training in Belgium. The numbers should be much higher; they should not, however, include those older Belgians who may really find it too late now to learn how to forgive. Some young Belgian technicians have complained of the effects of "negrification," the rest are hoping for an improvement. One of Belgium's most respected elder statesmen said about it all this week, "If only the Congolese could find one good word to say about us, public opinion might be transformed, and enormous good done to the economies of both countries as a result."

Neo-Nazis in Austria

FROM A CORRESPONDENT IN VIENNA

A SERIES of violent incidents involving Austrians—in the south Tyrol, elsewhere in Italy, and in Austria itself—has raised the question how active, and how extensive, neo-Nazi influences are in Austria. The overwhelming majority of Austrians have no sympathy with neo-Nazism or violent activity in any form. Still, it is clear enough that the youths in the dock in Rome, and those brought to court in Graz, are only pawns in a game. The Austrian press has been asking, *Wer sind die Hintermänner?*—who are the instigators?

The existence of the Austrian republic rests on the thesis, acknowledged by the western powers, that the country was overrun by Hitler in 1938, that it ceased from that moment to exist as an independent entity, and that it was liberated, not conquered, by the allied forces. While true, of course, of the state, where the population is concerned this was an oversimplification. And this was the point at which many sins, mainly of omission, began. From 1945 to 1949 registered ex-Nazi party members were the subject of special legislation which included the loss of the right to elect or to be elected. By 1949 the government of the day, largely supported by the churches and public opinion, had come over to the view that selective penal laws should be repealed; and that the presence, and perpetuation, of an embittered section of the population would hamper the development of democracy in Austria. Even today it would be hard to say that the course taken was wrong in itself. But it was negative and incomplete. The country needed teachers, technicians, and so on, and it needed them at once. Re-education on the Japanese model was thrust into the background. It was assumed that most people were sickened by all that they had seen and learned, and no doubt most were. After the franchise had been restored to former Nazis, the rush for their votes began. This is a weakness which still persists. Although the *Freiheitliche Partei Österreichs* is the main repository of ex-Nazi votes, it is a common delusion to suppose that all of them

Mr Mao's Cardboard Heroes

FROM OUR CORRESPONDENT IN HONGKONG

FEW experiences are more depressing than a reading of the annual Peking review of contemporary Chinese literature and the earnest party-line criticism of those selected efforts that win awards of merit. The Peking *Wen-yi Pao* (Literary Gazette) has belatedly reviewed the best short stories of 1960, and the western student, bemused and shaken, is once more forced to the conclusion that there are still rewarding advantages in illiteracy in China.

Here again is the same cardboard gallery of smug heroes sacrificing themselves, their wives and their families for Chairman Mao and the broad masses; the busybody activists interfering in everyone else's lives; the despicable commune officials kowtowing to any authority however arrogant; the insufferable children shaming their parents into collecting manure in leisure half-hours.

Here again is the same monstrous monotony of plot, describing only the personalised triumph of Chairman Mao's precept and example over (*a*) the calamities of anti-party Mother Nature, (*b*) the weaknesses of selfish or insincere sheep straying from the Marx-Lenin fold, and (*c*) the saboteur conspiracies of those "rich landlords and wicked counter-revolutionaries" who still manage to survive mysteriously in the liberated land.

An urbane sycophant, Mao Tun, who is a celebrated essayist at Peking University, (as well as minister of culture, in which capacity he calls himself Shen Yen-ping), solemnly reviews this abominable rubbish and discovers degrees of "merit" and even "genius" in a score of selected short stories. One 4,000-word masterpiece which moved him deeply was "The Milepost of the Struggle," by Hsiao Mu, which "portrays from fragmentary episodes of

life communist ideological character and qualities." It is a simple, honest railway tale with only three characters: Veteran Driver Hu, who has "a locomotive which is backward because of the objective faults of old age"; comic-relief Fireman "Little" Chou, and "stoutly-built, dark-skinned" Comrade Liu who has been sent along by the party to find out why the train does not run on time.

Driver Hu surlily resents Comrade Liu's arrival, but is finally won over by the party man's tact and skill as a railway worker. He persuades Hu that there is no disgrace in driving an ancient locomotive so long as he, like the locomotive, is sincerely serving the people, the party and Chairman Mao. They buck a "seventh-grade typhoon" coming round the mountains, when Comrade Liu impresses, first, "Little" Chou by "adding several pieces of coal to the furnace" before they reach the toughest gradient, and then Driver Hu by jumping off the footplate to hit the cylinder of the defective sand-sprinkler with a hammer.

The wretched Mao Tun lauds "the communist characterisation and lively style" of this story and gives a quotation to illustrate its vivid atmosphere (which must have suffered in translation): "Thunders echo in the valley, adding more colour to the struggle. Clouds overhanging in the sky are moving fast and large drops of rain are sporadically falling on the top of the driver's cabin, making some noise."

Then Liu, in the moment of triumph as they lurch into the station on time, asks excitedly: "My good fellow, Hu, can you guess what the cargo on the train is?" To the delighted amazement of Hu and "Little" Chou, the cargo is indeed a vital delivery of machinery from Shanghai for the Paotow steelworks. As critic Mao Tun sums up: "All these descriptions not only render the story truly absorbing but, what is more important, create an atmosphere conveying the magnificence of the overall planning in the Great Leap Forward."

Mao Tun does offer some mild criticism of the year's crop of party-line literature: "In many stories, the description of the communist ideological qualities of the heroes is stereotyped. I mean, of course, personal qualities, and not the principles of communist ideology affecting the party which are universal and ought to be stereotyped. . . . Then the images of party secretaries and commune officials are not sufficiently diversified and tend to be somewhat formalised, while their statements at party meetings and the language and sentiments they express are nearly always identical in all stories. . . . Some critics have also pointed out that our short story writers use only three words to describe the eyes of girl characters—'dark,' 'big' and 'bright.'" It all seems a far, dreary cry from Li Po and "The Dream of the Red Chamber." Mr Mao, a subtle and sensitive writer in his own right, must read the drivel with contempt. But presumably he believes it to be necessary or useful—a heavy and sad price, indeed, for even a successful revolution.

are concentrated in this one party. The jobs are in the hands of the two main parties (the People's and the Socialist parties). Consequently there are today a number of ex-Nazis in high positions in the nationalised (Socialist-controlled) industries. The main authority in the country on these matters assured your correspondent that, if the gauleiter of a certain province were to return from the dead and wish to contact his former staff, he would merely have to reach for the telephone and contact the board of directors of X . . ., one of the largest concerns in Austria. The head of one of the hydro-electric works was directly involved in the defeat of the 20th July plot in Berlin. Similar examples could be added.

It may seem odd that so many former Nazis should have swarmed within the Socialist orbit. One explanation given is that much of the Socialist brainpower before the war was Jewish, and its absence created a certain vacuum. To obtain a post within the sphere of the *Volkspartei* usually involved a return to the Catholic church, which many Nazis were unwilling to do. The editor of *Neues Österreich,* Herr Walter Hacker, himself a Socialist, has said that it might be an exaggeration to say that the majority of formerly active Nazis had gone into the nationalised industries ; they were, he maintained, fairly evenly distributed, but it was a greater scandal to find them there rather than in private firms where the authorities could hardly intervene.

It can be proved, then, that there are a considerable number of formerly active Nazis occupying influential positions in Austria. But they would only be a serious danger in the event of economic decline or the collapse of democratic institutions in Europe ; and they are not the active instigators of the recent troubles—the people, say, who, in an inn opposite the Catholic Herder-Verlag offices, pressed bombs into the hands of young enthusiasts. Young neo-Nazis are produced, to begin with, at home. Fathers, tired of being on the defensive about their past, tell tales of heroic deeds, swashbuckling heroes, and a great idea that failed. The boys fill their minds with warlike rubbish off the bookstalls. There are plenty of (inadequately financed) youth organisations, both church and secular, but there are a rash of others which, although not always specifically anti-democratic in character, create what the editor of *Die Furche* describes as a pre-Nazi climate. Their emphasis is *deutsch-national,* involving the old mysticism of German blood and language, together with racial antagonism and anti-American propaganda.

The law requires all societies with a paying membership to be registered, but it is relatively easy to get round this. The *Nationale Jugendverbände Österreichs* (membership about 6,000) were dissolved not long ago, only to turn up two days later under a slightly different name. The *Turnerbund* (athletic federation) has 60,000 members, of whom the great majority are probably quite innocent. The leadership is less so. The university student societies, the *Burschenschaften,* are a rather different matter. Most of them are reliably democratic ; those that are not have either been dissolved or are under close observation. The leaders of these dissident groups, and individuals working alone, are in touch with right-wing extremist organisations such as *Action pour Europe Nouvelle, Partisans Europe Nouvelle,* the MSI in Italy, the *Viking-Jugend* in Germany and others on the Continent, in England and overseas. Their badge is the Celtic cross.

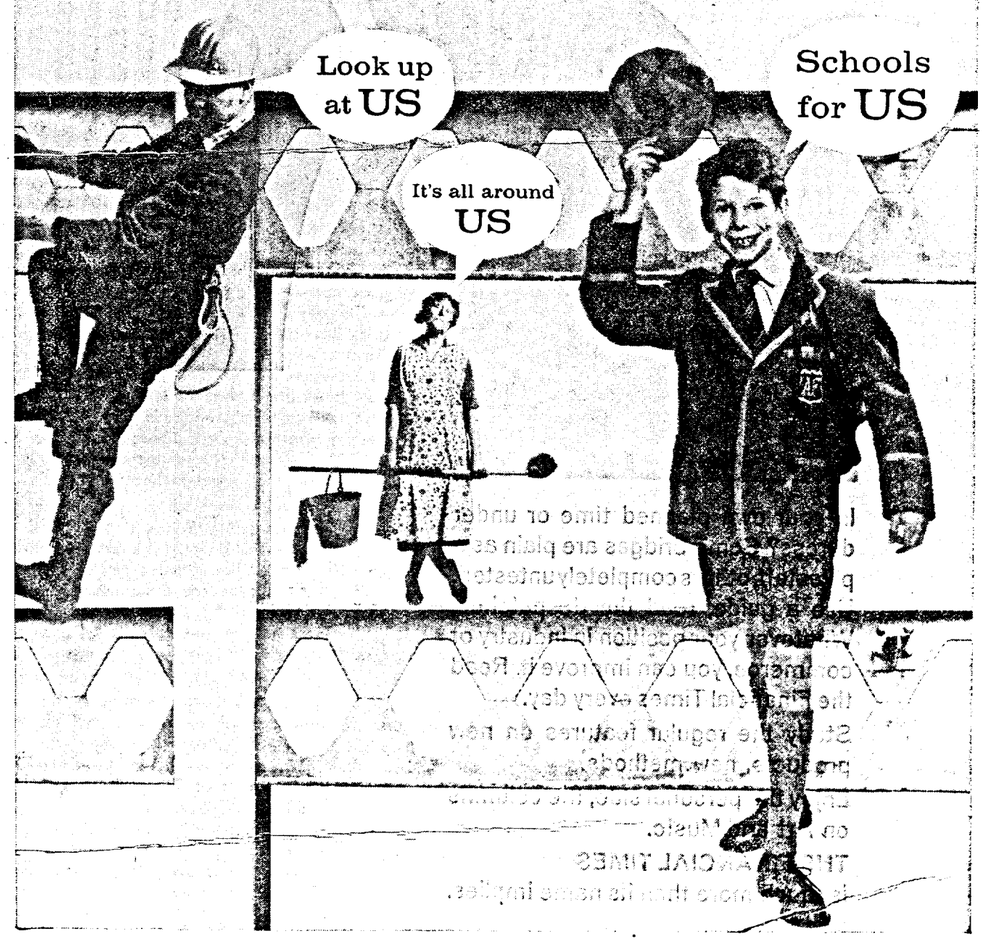
Great pains have been taken to build up Austria's small post-war army, and the opportunity is certainly being taken to teach recruits the purely defensive nature of their task and to give them a solid grounding in the Austrian constitution. But when the commandant of Carinthia, Brigadier Holzinger, made a speech in July, 1960, glorifying the part played by Austrian units in the attack on Narvik, in 1940, deep offence was caused in Norway and, it can thankfully be said, scandal and mortification in Austria. One is assured that such a thing is unlikely to happen again. Quite recently, however, Herr Rösch, Socialist *Staatssekretär* (nr. 2) in the ministry of defence, gave rise to even greater consternation by saying at a semi-private gathering in Graz that Austria should "forbear to make eyes at the West," and that Austria's neutrality is "more threatened from the West than from the East." Far from calling for his resignation, the cabinet, in the person of the vice-chancellor, Herr Pittermann, covered him up in an involved statement which begged the issue. Herr Rösch, holder of the golden badge of the Hitler Youth, is being groomed, it is said, as a possible minister of the interior.

The Socialist monthly review *Die Zukunft* has now raised the whole subject in a series of contributions from newspaper editors and others, headed by the minister of justice, Dr Christian Broda, and the minister of the interior, Herr Josef Afritsch. The articles are in general agreement ; many of the points they bring up have already been mentioned above. What, the contributors were asked to suggest, ought to be done to combat neo-Nazism ? Dr Broda maintains that the big guns of the law meet the danger too late. There must be a stricter watch, backed by the law, on all groups that disseminate anti-democratic ideas, for example by bringing the republic and its symbols into disrepute, and by racial propaganda. The home, schools, and the whole of society, he said, are responsible for education, but the state must mark out the frontiers of tolerance more clearly than hitherto. The minister of the interior said much the same on this point, adding an appeal to the parties, youth organisations, authors, press, radio and television to play a more active part in strengthening democratic life and thought. Dr Kurt Skalnik, editor of *Die Furche,* emphasised the general lack of a sense of identification with the Austrian state. (This is a theme which comes up again and again.)

Numerically, the Nazis in Austria are an insignificant minority. But the political parties are so evenly balanced that the Nazi voters are in a position to tip the scales. Awareness of this has led to many nods and winks in their direction by both the main parties. With general elections looming next autumn, several contributors to *Die Zukunft* called for an agreement between the parties that all their members, from ministers downwards, should refrain from compromising themselves and their parties by attending doubtful gatherings for vote-catching purposes, and should forswear all concessions that might tend to lend this small minority an importance out of all proportion to its numbers.

Perils of Twinning

FROM OUR CORRESPONDENT IN SOUTH-WEST FRANCE



IDEALISTS have longed for centuries for a single international language in which statesmen might insult each other directly without the frustrating intervention of interpreters. Unfortunately, more than one hundred synthetic international languages exist, and their advocates are apt to debate their merits with acrimony. Ten years ago, a distinguished French Resistance hero, M. Jean-Marie Bressand, who had escaped from the Gestapo, determined to devote himself to international understanding ; he therefore launched a movement called *Le Monde Bilingue* with the aim of tackling the problem from a different angle.

M. Bressand's plan capitalised the most durable legacy of the age of imperialism, the almost world-wide distribution of the English and French languages. Let the English-speaking peoples, he proposed, learn French as a second language from primary school up ; let the French learn English ; and let other peoples choose English or French. An English-speaking Icelander might still have difficulty in communicating with a French-speaking Malgache, but if linguistically uncommitted nations conscientiously taught half their children French and half English, the traveller would usually be on speaking terms with fifty per cent of the people he met.

Le Monde Bilingue attracted an impressive cohort of sponsors.

talk about structural steel

Schoolboys appreciate modern buildings. So do charwomen. And United Steel Structural Company puts them up. Puts up steel skeletons for town halls and office blocks. Bridges and schools. And (dare we remind you?) Jodrell Bank radio telescope. Got a lot of up-to-date ideas has United Steel Structural. Like the well-known weight-saving beams called 'Castella'. And now, castellated universal beams. Time-saving. Cost-cutting. As befits a member of United Steel – one of Europe's biggest steel producers.

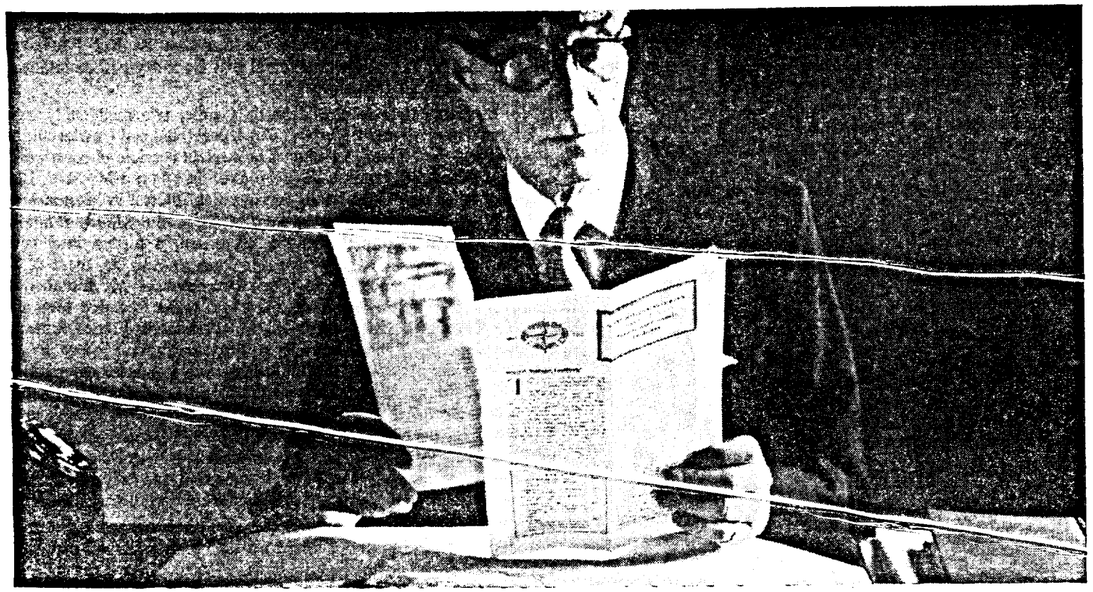
THE FINANCIAL TIMES

is much more than its name implies.

President Vincent Auriol supported it ; Mr Eisenhower gave it his blessing. The Canadian federation of mayors and the French Socialist (SFIO) deputies affiliated *en bloc*. To popularise the movement, M. Bressand organised scores of *jumelages* (a word he unfortunately translates "twinnings") between British and French, American and French, and French-Canadian and British-Canadian towns—stimulating educational exchanges, visits, trade and even marriage between their citizens. (Shortly after the "twinning" of Arles and York, Pennsylvania, the mayor of Arles married a York teacher.)

There were occasional *contretemps*. Two British Conservative municipal councillors suddenly began fighting each other during a reception in their honour in their French "twin-town." A Catholic bishop placed an interdict on a concert that was to have been given by the Catholic choir of Chartres in the Anglican cathedral of Chichester. One or two Harrogate ladies were shocked when a French cookery demonstrator proposed to chop a lobster in two without first boiling it to death in the humane English way. But the movement made steady progress and inspired linguistic experiments in several American and French schools. Its *jumelages* opened unsuspected windows on the world for thousands of men and women who could never have been reached by the *Alliance française*, the British Council, and other worthy but slightly stodgy veterans of the cultural export trade. Inevitably, M. Bressand began to acquire some influential enemies.

To the gamekeepers of the French foreign ministry's cultural relations department, he was simply a poacher. French diplomats had nightmares in which they saw themselves judging poodle shows and waiters' races in Pittsburgh and Preston. The cupola of the French Academy rang with denunciations of M. Bressand's plot to subvert the French language. "Within a generation," cried an eminent novelist, "the peasants of Auvergne will be speaking English!" Communists considered M. Bressand a Nato agent whose mission was to Cocacolonise France.



At a Kremlin reception in 1956, the leaders of an official Socialist delegation touring Russia cited M. Bressand's *jumelages* as an instrument of "popular diplomacy" and invited Mr Khrushchev to attend a congress at Saint-Etienne the following July that was to set up an international federation of "twinned" towns. Back in Paris, anguished roars were heard from the influential SFIO mayors of Marseilles and Puteaux, Senator Gaston Defferre and M. Georges Dardel, who were closely linked with M. Roger Duchet and other right-wing "Little Europeans" in the *Conseil des Communes d'Europe*. The support of MM. Defferre and Dardel was essential to the "Molletiste" leadership of the SFIO, then under fire for M. Mollet's about-face on Algeria, and the party machine went promptly into reverse. SFIO members were ordered to leave the *Monde Bilingue*. The president of the republic and other patrons of the movement were informed on the authority of Senator Defferre and M. Maurice Pic, then secretary of state at the ministry of the interior, that M. Bressand had a pro-Nazi war record. When a *jury d'honneur*, having heard the testimony of his wartime commanders, cleared him of this smear, rumours were circulated accusing him of pro-Soviet sympathies. They drew sustenance, apparently, from the fact that he had "twinned" Sainte-Etienne and Coventry, and that Coventry had maintained a link with Stalingrad since 1942.

In memoranda to President de Gaulle, two moderately right-wing deputies—MM. Lucien Neuwirth (UNR) and Charles Dutheil (MRP)—have accused United States secret services of contributing to the campaign against M. Bressand. In 1955, a Mr Mark Bortman called on M. Bressand, expressed an interest in his *jumelages*, and was allowed to make a close study of the *Monde Bilingue's* organisation and methods. M. Neuwirth, a former intelligence man himself, states flatly that Mr Bortman was an agent of the Central Intelligence Agency and the author of Mr Eisenhower's People-to-People Programme. It seems to be true that soon after Mr Bortman's visit, certain of M. Bressand's Franco-American *jumelages* were lured away from the *Monde Bilingue* to form a nucleus for the affluent PPP ; other *jumelages* were organised by the PPP between American and foreign cities ; dollars and facilities suddenly became available for "Little European" *jumelages* under the auspices of the Council of European Municipalities. Co-ordinating all these activities was Mr Bortman as chairman of the civic committee of the PPP. In 1960 and 1961 he attempted to bulldoze congresses of the International Union of Local Authorities into accepting the political guidance of the PPP.

MM. Neuwirth and Dutheil accuse Mr Bortman of perverting the *jumelage* to propagandist ends. Whatever his intentions, the crudity of his methods—and the tendency of American-subsidised organisations to discredit the *Monde Bilingue* merely because it insisted on remaining apolitical—did offend many distinguished Frenchmen and contributed to the determination of anti-communist mayors like Canon Kir (Dijon) and M. Dutheil (Millau) to favour *jumelages* with Soviet cities.

DESPITE the SFIO's desertion, M. Bressand's *Fédération mondiale des villes jumelées* (known in English as the United Towns Organisation) came into existence in 1957. More than 300 towns have adhered to it : about 250 in Nato countries, 35 in Africa and 12 in the communist states. Its chairman is the Lord Mayor of Coventry ; its supporters range from the Abbé Pierre to President Habib Bourguiba, and include cabinet ministers of five African states. Mr Kennedy wrote M. Bressand a letter of warm commendation in 1959 ; and indeed the change of American Administrations seems to have brought a reaction against exploiting the *jumelage* idea for political crusading. Mr Bortman seems to have gone into eclipse. M. Bressand's French opponents, too, are beginning to be impressed by the confidence his stress on apolitical links has inspired in African leaders wary of cold war recruiting.

The fact that the communists, the Quai d'Orsay, the SFIO, and "Little European" and "People-to-People" cold-warriors have all sniped at M. Bressand from time to time is a testimonial in many African eyes. His advice is now being sought on means of piercing the linguistic barrier between French-speaking and English-speaking Africa. At a congress he organised at Avignon recently, plans were laid for an ambitious series of Franco-African *jumelages* within the framework of which French towns will provide their African "twins" with technical aid and advice, and reserve an annual quota of school places and apprenticeships for African youngsters. The congress was one of the most important European-African get-togethers ever held at grassroots level, and the participants were exuberantly enthusiastic. This week the United Nations Economic and Social Council was due to discuss a Senegal resolution urging that a subsidy of $10 million should be given to M. Bressand's organisation.

World-wide economic trends
delivered to your desk

If you were a client of the First National City Bank you would receive a first class international banking service. But First National City pride themselves on providing their clients with many valuable *extra* services.

One important example of these extra services is the Monthly Economic Letter. This is a round-up of world-wide business and economic conditions with special reference to the United States; information of great value to any British businessman who is interested in expanding his export trade.

The Monthly Economic Letter, published in four languages, goes not only to the bank's clients, but is also sent to the influential leaders of public and business opinion all over the world, with more than two hundred and fifty thousand copies being distributed every month.

MANY OTHER SERVICES. Clients of first National City can call on many other services too. For instance, letters of introduction can be arranged to the manager of any overseas branch or correspondent—a valuable passport to local business and local trading conditions.

There are travelers' checks, up-to-date credit information on any foreign company, and with eighty-four branches in twenty-nine countries there are many other ways in which First National City can help.

If you would like to benefit from the services that First National City provides, contact the bank at 117 Old Broad Street, E.C.2 (London Wall 1221) or 17 Bruton Street, W.1 (Mayfair 6600).

FIRST NATIONAL CITY BANK
NEW YORK
INCORPORATED WITH LIMITED LIABILITY UNDER THE NATIONAL BANK ACT OF THE U.S.A.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

AID's Progress

WASHINGTON, DC

BRAZIL's good-looking but politically ambivalent President and Iran's handsome but harassed Shah are visiting the United States this month. Both hope for continued American aid for their troubled countries. They come at a time when the United States is trying to evolve a new philosophy of foreign aid and to rid itself of some old fetishes. There is a new tolerance, and even encouragement, for economic planning and social reform as the best means of combating communism. But there is also a strong temptation to fall back again despairingly on strong men in uniform.

Anguished American taxpayers have asked before, and are sure to demand again, why Brazil and Iran should get help at all. Both countries are rich: Iran's income from oil is almost a million dollars a day. Neither overtaxes its wealthier citizens noticeably and Brazil is seeking to nationalise American property. The answer is that Iran and Brazil, like South Vietnam, are being aided on the theory that they are key countries whose fall into communism would topple adjacent countries as well.

Whatever may be thought of this theory—and there are some who do not think much—at any rate the United States no longer behaves about aid like a householder with a flood in the basement and termites in the walls. It does not rush from one peril point to another, trying to mop up discontent with a handkerchief and applying plaster to cracks. A five-year plan has become almost indispensable for an underdeveloped country which hopes to receive American help. Americans now insist positively that the countries which they aid must come forward with their own programmes for accelerating their rate of economic growth and improving the lot of their people, socially and politically. From South Vietnam to South America, the United States is seeking strenuously to obtain the friendship of the underdeveloped countries, by proving to them that nations at very different levels of progress can work together without the advanced countries becoming imperialist or the backward ones losing dignity. It is in Latin America that this is becoming most evident.

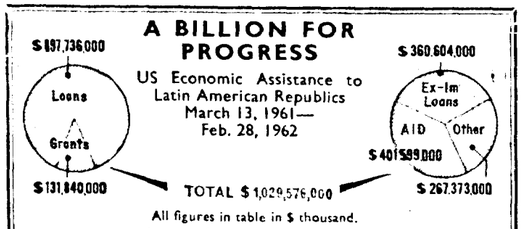
Last week Dr Milton Eisenhower, who was his brother's expert adviser on the affairs of the western hemisphere, declared that American efforts to construct a better life for the neighbours south of the border were natural and inevitable steps in a long process that would have reached this point of decision even if an egocentric Cuban leader had not betrayed his people. Dr Eisenhower admitted, however, that the threat of Castro-type communism had certainly speeded matters up. Until four years ago the United States had given more aid to Jugoslavia than to the whole of Latin America. Now Mr Teodoro Moscoso, who is in charge of aid for Latin America, is trying to erase the image of the United States that some Latin Americans have held, but not cherished, ever since the time of Theodore Roosevelt. Americans have been shocked by the realisation, forced on them by the Cuban revolution, of how very close they are, physically, to abysmal poverty and to the violent hatred which it breeds.

In Latin America, as elsewhere, the United States would like there to be consortia and other forms of joint aid with western Europe participating. The Monroe Doctrine, having proved quite ineffective at keeping out the Russians—and the Chinese—has ceased to apply even in theory. Americans hope that the re-entry of a Europe that has purged itself of imperialism and that is known not to be unutterably opposed to the welfare state or even to socialism will dilute Latin America's anti-Americanism.

All this could mean a considerable change in the American conception of foreign aid and how it ought to work in the world. Last month, in an atmosphere richly redolent of mahogany, club-chair leather and cigar-smoke, Mr Fowler Hamilton, the suave Administrator of the Agency for International Development, set up to handle these problems under last year's reorganisation, spoke almost with fond pride to the Foreign Affairs Committee of the House of Representatives about such things as Pakistan's five-year plan and Nigeria's six-year plan. He encountered some mild scepticism and was reminded that foreign aid has produced many disappointments in the past. But nobody said that planning is just creeping communism.

Mr Hamilton is not likely to get all of the $3.4 billion for economic aid and the $1.5 billion for military aid which has been requested as this year's annual instalment. But he was heard with respect as he explained that the task of foreign aid is to change the lives of a billion and a half people who are living in the twentieth century at pre-Galileo levels of income and who, as a result, are not much of a mass market for a mass manufacturing country but are very receptive to communist propaganda. Last year Congress made evidence of self-help a condition of receiving American aid and this, as interpreted by Mr Hamilton, means that recipient countries must establish comprehensive, long-term economic plans. This year's request for money even includes $300 million that is earmarked for training people to carry out national plans.

MEANWHILE, however, the underdeveloped countries are still a very long way from solving their many pressing problems and in Latin America there is a split, already familiar in other parts of the world, between liberals who say that the United States is supporting reactionary policies and conservatives who accuse the United States of encouraging socialism and of being imperialist as well. Americans themselves are still divided between those who think that the United States damaged its reputation by supporting intervention against Dr Castro in Cuba and those who believe that it lost face in Latin America by failing to suppress him. Among the latter there appears to be a persistent vision of high-minded Latin American military men seizing power and then defending the masses against communism, by winning their love without bothering to count their votes. This form of wish-fulfilment has unhappily been encouraged by Argentina's reversion to controlled democracy.



As it promised to do when it signed the Charter of Punta del Este last August, the United States has committed $1 billion, mostly in loans, for the development of Latin America under the Alliance for Progress. But over half of the total had in fact been promised by the Export-Import Bank and others before the Alliance for Progress came into existence and very little of the money has actually been disbursed. Nevertheless, President

Kennedy wants Congress to approve another $600 million for the Alliance for the coming fiscal year and he also wants authority to commit $3 billion in loans and grants to Latin America over the next four years.

Congressmen are bound to point out that there is an estimated $5 billion of private Latin American capital cannily cached abroad. One Senator wants to deny aid to any country which attempts to confiscate American property. Radical social reforms are rarely carried out in accordance with sound financial principles but this is what Latin America is apparently being asked to attempt. Even the sterner efforts to collect income taxes which the United States insists on and which Brazil and other countries have promised to make have cost Venezuela and Chile some private American capital, in addition to having accelerated the frightened outflow of indigenous capital. Most of the American aid money could be frittered away easily in shoring up currencies and covering budgetary deficits instead of being devoted to long-term development.

Brazil has been described as the fat man in the Latin American canoe. Both may be alarmingly close to the rapids. Yet there does seem to exist in Latin America, including Brazil, a distaste for extreme courses, a wistful desire for the victory of moderation and a spreading disillusionment with Castro-ist excesses even though American attacks on Fidelismo continue to be resented. There also exists, however, an impatient desire to press the take-off button and to go into an orbit of prosperity, although most of the countries are at least a generation away from that point.

Mr Douglas Dillon, the Secretary of the United States Treasury, would like to see $20 billion of foreign capital entering Latin America in this decade, to be matched by $80 billion of Latin American funds. The foreign contributions would consist of $10 billion from AID and the Export-Import Bank, $3 billion of private American capital and $7 billion from the World Bank, western Europe and Japan and the Inter-American Development Bank. But Latin America also needs stable prices for its primary commodities and deliberate curbs on its population, which threatens to treble itself before the end of the century.

All figures in table in $ thousand.

* Social Progress Trust Fund, Food for Peace, Peace Corps, Inter-American Highway. † Does not include recent loan of $150 million

Much of this goes dead against American fetishes and against Latin American ones as well. But the United States is gradually trying to accustom itself to the unpleasant idea that in Latin America it may now be only one minute to midnight and that semi-socialism and neutrality, on the Indian pattern, may be the best that can be hoped for, while the alternative could easily be a repetition of the tragedy in China. On the wider world stage the underdeveloped countries may be in the phase of only a slight pause before a final descent into chaos and communism. There is, however, some evidence to support a more optimistic view that, from Thailand to the Congo and from the Philippines to Brazil, the balance may have shifted in favour of the forces of moderation and responsibility. If this view is to be sustained, it would seem to be of the utmost importance for the United States and Europe to try to guide those countries along modern paths rather than to take the short-cut of supporting local *generalissimos*.

Frontiersman Goes to Court

PRESIDENT KENNEDY deprived Washington of its favourite party game—speculation on whom he is going to nominate—by his quick choice of Mr Byron White, an outstanding lawyer from Colorado, to fill the vacancy left on the Supreme Court's bench by the retirement of Mr Justice Whittaker. But there was nothing else disappointing about this nomination, the first that Mr Kennedy had made to the most powerful office in his gift. For this reason in particular it was important that there should be no controversy over the appointment. This seems to have been avoided most successfully even though Mr White, at 44, will be one of the youngest men ever to become a Justice of the Supreme Court, even though he is a close, although somewhat independent, political associate of Mr Kennedy's and even though he has no previous judicial experience.

Mr White's new boss, the Republican Chief Justice, Mr Warren, is happy about the nomination. The American Bar Association's committee which is the arbiter in these matters has given Mr White its unqualified and enthusiastic endorsement. Its members know him well because, as Deputy Attorney General of the United States, he has been co-operating closely with the committee in choosing judges to fill the unprecedented number of vacancies which have arisen owing to the expansion of the lower federal courts. As Deputy Attorney General Mr White was also in charge of the marshals who were sent to the South by the federal government last year to restore peace after the "freedom riders'" protest against racial segregation in public transport. Yet Mr Eastland, the reactionary Southerner who heads the Senate's Judiciary Committee, agrees that Mr White will "make a good Justice." Therefore his nomination seems sure to be approved quickly.

Interest now centres on Mr White's position once he joins the eight colleagues who are at present often evenly divided on the basic question of today, the proper relationship between government and the individual. They have dramatised the danger of deadlocks by postponing until the autumn their consideration of a number of important cases so that Mr White can participate in the decisions. In the many recent 5-4 rulings Mr Whittaker was usually found on the "conservative" side, that is, on the side of more power for the government. Mr White has great sympathy for the "little man" but he also has great respect for the law and there is no certainty that he will lean to the "liberal" side of the Court. Even if he begins by doing so he may change as time goes on, as others have done. His appointment is for life and he is not a man to become set in his ways. One thing seems sure: Mr White's presence on the bench will encourage the Supreme Court's recent tendency to break new legal ground, to enlarge its judicial concerns just as today the executive is enlarging its political concerns.

Doubts About Steel

NEW YORK

WHILE the President and his officials are clearly pleased with the early and, in their opinion, non-inflationary settlement of the wage negotiations in the steel industry, the reaction in business and financial circles is curiously apathetic, even though there is relief that a strike has been averted. This reaction is not entirely unexpected, for businessmen are unable to believe that Washington ever acts in their favour where labour is concerned —and the present Administration is regarded as especially pro-labour. While Mr McDonald, the head of the steel workers' union, has denied repeatedly that the Administration was responsible for the settlement, some businessmen maintain that it was and the representatives of the steel companies contend that in fact the agreement is inflationary. There is no doubt that the Administration had a vital interest in the success of the negotiations and played a part in getting the two sides together, but its participation was much less marked than that of the Vice-President, then the Republican Mr Nixon, in the last negotiations in 1959 and the actual results this year were much more satisfactory to the steel producers.

There is nothing surprising in the attitude of the companies; it follows naturally on their claim that the present pressure on their profits will continue to make itself felt, unless they put through a general increase in prices to offset the increase in labour costs arising out of the added welfare benefits to be paid under the new contract. But the main factor ruling out a rise in prices now is the very moderation of the settlement; if demand for steel builds up over the next twelve months some piecemeal increases may well be announced. And negotiations can be re-opened on wages in July, 1963; this, according to businessmen, will almost certainly lead to the increase which was avoided this year.

Whether or not the steel settlement bearing Washington's stamp of approval will become a pattern for future negotiations in other industries, it certainly has immediate benefits for the economy as a whole. But, over and above their deep-seated distrust of Washington and its influence on the negotiations, businessmen are disturbed simply because that economy is not displaying the robustness which they had expected. Even an inflationary settlement might well have been found acceptable if businessmen had been in a more confident mood, but at the moment even this moderate settlement is considered suspect. This uneasiness is reflected in Wall Street where equity prices have been declining ever since the agreement was announced with steel issues, which were already selling at comparatively modest prices, moving down fairly sharply. If the current renewed upturn in economic activity proves to be more vigorous and longer lasting than businessmen now expect they may well take a fresh and more favourable view of the steel settlement.

How Many for the UN?

THE Senate seems likely to vote while *The Economist* is in the press on the Bill to provide up to $100 million for the United Nations; this is to tide it over the financial crisis caused by the failure of most of its members to pay their share of the cost of military operations in the Congo and the Middle East. For two reasons it is important that the Bill should pass by a large majority, as much as 75 to 25. A small one would encourage the enemies of the Bill in the House of Representatives, which is much less favourably disposed to it than the Senate; a narrow squeak would also look very like a vote of no confidence in the United Nations, even though most observers agree that in the country as a whole there is a big majority which supports its purposes.

Originally the Administration proposed simply that the United States should take up $100 million of the $200 million in bonds which the UN voted to issue. The Senate Foreign Relations Committee, concerned because the United States is shouldering so disproportionately large a share of the burden of the UN's military operations, modified this; the United States could buy $100 million of the bonds but its contribution would have to be matched by other members, dollar for dollar, beyond the first $25 million. (So far other countries have promised to subscribe $50 million.) Opponents of this measure, however, have looked recently like collecting about 40 votes, most of them for Senator Aiken's proposal that the United States, instead of buying the bonds, should simply lend the UN $100 million for three years at an interest rate of about 3½ per cent—a loan which, as Mr Kennedy pointed out, might be wholly unacceptable to the UN and which, in any case, could not possibly be repaid in so short a space of time. There probably would have been a few votes for Senator Russell, a respected figure who proposed simply to forgive the UN's debt to the United States—about $30 million—and to apply a congressional curb to any future participation by the United States in international military operations.

The agreement reached by the President and Senator Aiken permits the President to lend up to $100 million in any form he sees fit, for any number of years, providing only that, after the first $25 million, the rest must be matched by other contributions. Senator Dirksen, the Republican leader, supports this "compromise." But it is hard not to sympathise with the conservative western and middle-western Republicans who declare that their leaders, far from wresting any concessions from the President, have surrendered to him completely; the House may share this view. More important than the squabble over this relatively small amount of money is the clear evidence which has been provided—by Senator Fulbright, Senator Mansfield (the Democratic leader) and Senator Jackson—that even friends of the United Nations are beginning to feel doubts about the growing power of the UN Assembly and the way in which this power is used by the new nations.

Taxing for Business

LAST week the President's cup ran over; on top of the steel settlement and the Supreme Court's historic decision on apportionment for State Legislatures, the House passed his tax Bill, which provides businessmen with incentives for modernisation as well as the money to pay for this by closing a number of loopholes in the tax laws. The final vote—219 to 196—produced only a slender majority for the Bill, but a defeat would have been a bad omen for the rest of the session. To win this victory the White House had to pull all the strings at its command—something it cannot afford to do often—and the tax rebate to encourage capital investment, which Mr Kennedy says is essential if American businessmen are to compete successfully for exports and if the economy is to grow fast enough to produce many new jobs, was cut substantially. The tax credit was reduced from 8 to 7 per cent of the cost of new facilities and the amount which a firm can claim in any one year was lowered drastically.

This cut the annual cost of the tax credit from $1.8 billion to $1.2 billion. How much the Bill as a whole will cost—if it costs anything once all its provisions are in effect and its stimulus is felt by the economy—is a matter of partisan dispute. But the reduction persuaded the bulk of the southern Democrats that the measure was not the "budget-buster" which the Republicans claimed it was. In the end, although the Republicans were absolutely united behind their motion to delete both the tax credit for business

and the withholding at source of taxes on dividends and interest, *only 16 southern Democrats and 11 from the North joined them.* That Republicans should vote against aid for business and virtuously denounce "cream for the fat cats" may seem strange. In fact, they would have liked to substitute for the tax credit the more generous allowances for depreciation which most businessmen would prefer as probably longer-lasting. But this would have cost even more than the tax credit.

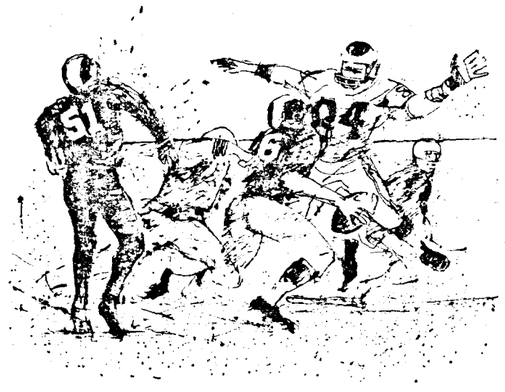
The Bill has been subject to pressures from all sides; for example, the clauses on taxation of overseas subsidiaries were tightened up substantially in recent weeks to win the support of the trade unions and the liberals who are worried about the so-called "export of jobs." As the Bill stands, such income will be taxed as it is earned (instead of only when it is returned to the United States) unless it is re-invested or invested in an undeveloped country. *This still falls short of the Administration's* desire to tax all such income in developed countries on a current basis. Although the Senate Finance Committee, where hearings began this week, is unsympathetic to the Bill, the White House hopes that the overseas provisions and a number of others will be tightened on the floor and that the tax credit for capital investment will be restored to 8 per cent in spite of the opposition of many conservatives and some liberals.

Frankenstein of Football

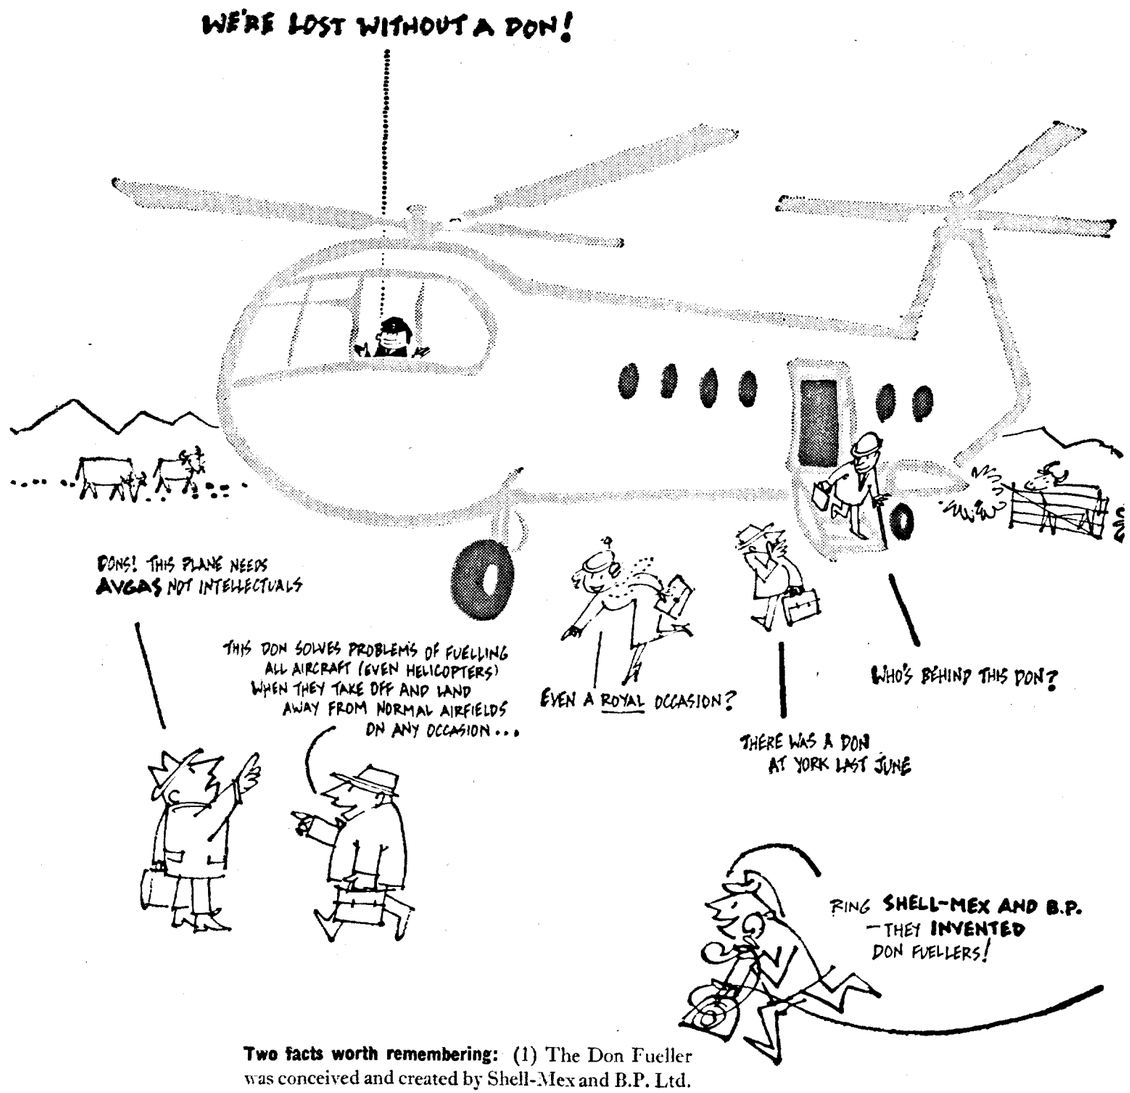
FROM A CORRESPONDENT IN COLORADO

To Americans one of the engaging things about Mr "Whizzer" White, the President's choice for a vacancy on the Supreme Court, is that he paid for his legal training by playing professional football and the annual frenzy of college communities over their amateur football teams is so peculiarly American that it is hard to understand elsewhere. Successful players—and coaches—become the heroes of gown, town and press. The rewards and penalties of coaching football teams are great. Every winter sees a parade of successful coaches breaking long-term contracts to take over the jobs of less fortunate colleagues whose own contracts do not protect them from being fired. A winning coach, on the other hand, is probably more secure in his job than the president of his university.

So it was astounding last month when the Board of Regents of the University of Colorado dismissed Mr "Sonny" Grandelius, who had been given a white Cadillac only a few months earlier by admiring fans for having coached the university's most successful football team. Mr Grandelius, who is still only 31, was once an All-American player—the coveted award for football stars, also won by Mr White while he was at the University of Colorado. Three years ago Mr Grandelius took the place at Colorado of a coach who had been dismissed for being unsuccessful; in particular, his teams had failed to defeat Colorado's great rival, the University of Oklahoma. Mr Grandelius's teams did this twice and in 1961 qualified for an Orange Bowl Match in Miami; this represents the very peak of achievement.



The dismissal of Mr Grandelius—for recruiting players by giving them improper financial assistance—affords a sudden glimpse into the cold world of merciless ambition, power and money which lies behind the glamorous façade of intercollegiate athletics and football in particular, though other games are not immune. Intercollegiate football, now over 90 years old (the first match was played by Rutgers and Princeton in 1869) has become almost a synthetic monster which devours its devotees. *Life* magazine calls it "the annual fraud." But nothing seems to check its growth. More giant stadia are built or enlarged each year to hold the millions who pay high prices to attend, although in millions of homes football dominates the television screen every Saturday afternoon. No moral setback seems to affect football. At Colorado, if anyone is to suffer, it may be the Board of Regents, who are popularly elected and who are already being threatened with political reprisals under the battle-cry of "Remember Grandelius!".



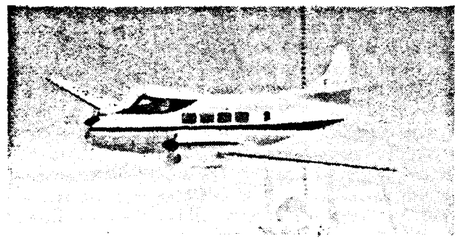
The regents had, in fact, no choice but to dismiss him. In the popular expression, he was fired for being found out. The National Collegiate Athletic Association had investigated disquieting reports about Colorado and forwarded its findings to the university; these presaged severe penalties. The NCAA can deny a university conference standing (a conference is a group of institutions which band together for athletic purposes) and can prevent its team from participating in the glamorous and profitable bowl games, a fate worse than death for some colleges. The regents named their own investigators; these found even more serious evidence against Mr Grandelius, whom they also accused of lying to them about his activities. His dismissal reflects real official shame and regret, but it was also ordered, in part at least, to avert the severer NCAA penalties; even so, a number of Colorado's brightest stars may be disqualified.

The NCAA, as its name implies, is the organisation whose regulations are supposed to keep intercollegiate athletics within ethical bounds. Each conference, in turn, has its own rules which limit "athletic scholarships" to subsistence, tuition, books and a small monthly cash allowance of about $15. These rules are considered stingy by many. One aggrieved member of an All-American team complained "We draw 80,000 into the stadium every Saturday; we deserve more." President Gallagher of New York's City College has suggested seriously that college players should be paid substantial salaries. One famous one was—he and his wife together were paid $800 a month.

Often coaches, fans and local businessmen, anxious to keep a good thing going, combine secretly to raise "slush funds" to pay likely boys a salary, to provide them with special academic coaching—since a sound body does not always house a scholarly mind—and to give them free transport to and from the university. A wealthy graduate may support a good player right through college though there is a story about one sponsor, a motor car dealer, who dropped his *protegé* precipitately when the boy turned up with a new car—not the make which his sponsor sold. In some places the madness has spread down into the high schools; tales are told in the Southwest of fathers being offered jobs 200 miles from their homes just so their sons may attend the local high school.

A college coaching staff works a 12-month year divided between coaching and an almost frenzied hunt all over the country to maintain the good players without whom the best coach is helpless (the profession sympathises deeply with coaches "forced to depend on students"—that is, on ordinary undergraduates who play for fun). One expedient is to "hide out" players at a junior college;

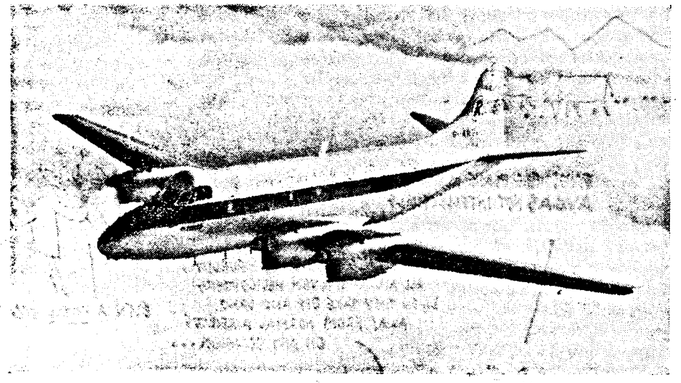
Two facts worth remembering: (1) The Don Fueller was conceived and created by Shell-Mex and B.P. Ltd. anticipating the need for a safe, simple way to transport fuel and load it to aircraft away from normal airfields. (2) Shell-Mex and B.P. Don Fuellers now operate from Hamble and Manchester and will take fuel to aircraft almost anywhere in Britain.



SHELL-MEX AND B.P. LTD — SHAPE A FLYING FUTURE

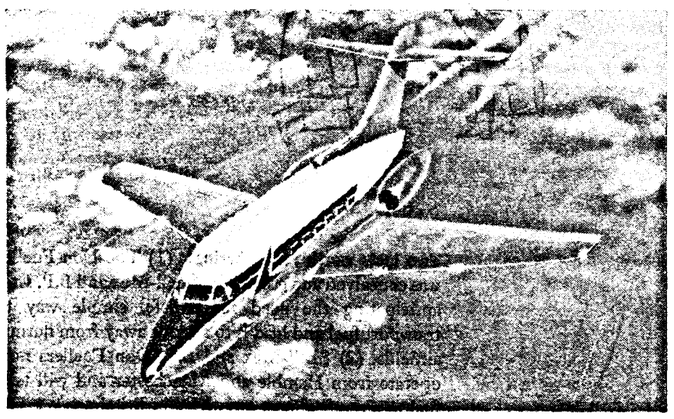
de Havilland executive aircraft

to airliner standards in design, engineering, equipment



Dove

The DH 104 Dove 8 powered by de Havilland Gipsy Queen 70 Mk. 3 400 b.h.p. ejector-exhaust engines driving de Havilland constant-speed propellers. 200 m.p.h., 320 km./hr., six passengers with two crew and baggage over practical stages of 750 miles, 1205 km. Five hundred in world service.



Heron

The DH 114 Heron 2 powered by de Havilland Gipsy Queen 30 Mk. 2 250 b.h.p. engines driving de Havilland constant-speed propellers. 183 m.p.h., 295 km./hr., eight passengers with two crew and baggage over practical stages of 1,000 miles, 1610 km. One hundred and fifty in world service.

DH 125

The DH 125 jet executive aircraft powered by Bristol Siddeley Viper 520 turbines of 3,000 lb., 1360 kg. static thrust. 500 m.p.h., 800 km. hr., six passengers with two crew and baggage over practical stages of well over 1,000 miles, 1600 km. Able to use grass fields. First flight this year, deliveries a year later.

The world-renowned Dove and Heron and the new DH 125 jet-powered executive aircraft have been evolved out of continuous experience and consistent leadership in the light transport field, dating back to the DH 84 Dragon of 1932 and the DH 89 Dragon Rapide of 1934.

They are designed to take comprehensive and duplicated navigation and communication equipment to make possible all-weather operation to airline standards.

No executive can do with less.

Into these aircraft, their conception and their detailed engineering, is built knowledge that has gone also into the Comet and the Trident jet airliners.

The same research, design, testing, tooling and production facilities, the same great industrial resources and universal after-sale service — in short, the same team — are behind these "airliners in miniature".

There is no substitute for experience.

HAWKER SIDDELEY AVIATION

32 Duke Street, St. James's, London S.W.1

here they mature under sound coaching. They are brought to the university for their last two years. In its turn, college football has become a mine of talent for the professional teams. The big professional baseball "leagues" have to maintain minor ones to supply a steady stream of players but the football organisations find their material ready-trained in the colleges.

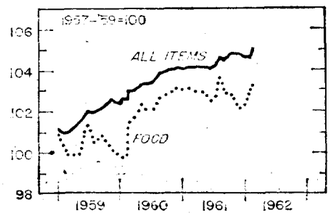
The group of large private eastern universities, sometimes scornfully referred to as the "Ivy League," and a few others seem to have reduced this athletic mania to reasonable proportions. And a score of sizeable colleges have given up intercollegiate football altogether. But the head of one of these says frankly: "We couldn't stand the loss. It was costing us $100,000 a year beyond the receipts." This particular institution now specialises in hockey; its yearly squad comes *en masse* from Canada.

Too Deliberate Speed

FOR the first time the federal government is using financial pressure to speed up racial integration in southern schools. Segregated classes will no longer be regarded as "suitable" for the children of people who live and work on federal property—military bases, etc.—and such schools will no longer receive federal subsidies; last year about 46,000 children were involved in the southern states, where most schools still keep Negro and white children separate, and payments from the government came to over $8 million. To allow time for the provision of educational facilities on federal property—and for at least some outside schools to abandon segregation—the new policy will not come into force until the autumn of 1963.

More immediately effective are the rulings issued last week by federal courts in Knoxville, Tennessee, and New Orleans, Louisiana, that for publicly financed schools to mix Negro with white children at the rate of one class a year is too slow to comply with the Supreme Court's original order that integration must proceed "with all deliberate speed." In New Orleans this minimum degree of desegregation has been applied in only six schools and to only twelve Negro children; one of these schools, which had nearly 500 white pupils in the summer of 1960, before integration and before the violent demonstrations against it, now teaches only fifteen white children and five Negro ones. The federal judge has said that from next September all New Orleans children, whatever their colour, in the first six classes may attend the school nearest to their home, whether it has been all-white or all-Negro until now.

The order is sure to be contested but the state authorities, strongly opposed though they are to integration, are in a difficult position. They are negotiating for sorely needed financial help from the federal government and fear that this may be refused if there is any serious crisis over the school issue. Whether or not one develops over the publicly financed schools, one has developed already over the parochial schools run by the Roman Catholic church. For the blow which has hung over Catholic segregationists since 1956 has fallen at last; the Archbishop of New Orleans, believing that this moral duty can no longer be postponed, has ordered that segregation must be ended in all parochial schools, primary and secondary, in the diocese. Nearly half the population is Roman Catholic and there are 75,700 Catholic school children, of whom 10,850 are Negro. The Archbishop's action has been castigated as "serving the cause of communism" by a reactionary but vociferous and influential minority of his flock; they are urging their co-religionists to cut off their financial contributions to their schools and the State Legislature to stop the church's tax exemption and the supply of free text books and lunch subsidies to the parochial schools. The leaders of this revolt are being threatened with excommunication and are appealing to the Pope; last time they did so, some years ago, on the same issue, they received no comfort from Rome.



Private Enterprise in Space

MANY people may well share the qualms of Mr Murrow, the head of the United States Information Agency, about the political troubles which world-wide television transmissions are likely to cause. These are not just around the corner but there will be a portent in the sky next month with the launching of Telstar, American Telephone and Telegraph's communications satellite. Like Relay, the government's entry, which will follow it shortly, Telstar is a pioneer in that it is an "active" satellite; it will not merely reflect signals, like Echo but will amplify and retransmit them. Both are experimental vehicles with a short—six-month—expectation of life; because they will circle at a low altitude they can be used for only a few minutes of each orbit for the exchange of television programmes between America and Europe. But already there are problems of national pride to be sorted out: if Mr Kennedy takes part, who is to speak for Europe? And should the broadcasts come at Europe's prime listening time or America's? Should the Soviet Union be brought in officially?

No one expects the new system of space communications, for telegraph and telephone messages as well as television, to be in commercial operation for at least four or five years, but it is urgent for the United States to decide what organisation is to handle the American end. The Senate made a beginning last week when, contrary to expectations, its Space Committee accepted in principle the Administration's plan for a federally chartered and created private company—the first in history. But the committee made some changes which reflect the fact that in Congress there is a good deal of sympathy with the desire of the communications companies to run the whole show.

The Administration's plan was based on two convictions. One was that AT & T, the giant of the industry, must not be allowed to dominate the new system. The other was that the taxpayer, who has invested over $175 million in preliminary research, should be allowed to share in the potential profits—though there is not likely to be any Eldorado, for charges and earnings will be regulated by the government. The committee has made this easier for the ordinary investor by reducing the price of a share in the proposed billion dollar corporation from $1,000 to $100. But by providing only one class of shares, to be divided equally between the public and the communications companies, the committee gave the latter more of a voice in how the corporation is run. (The Administration had proposed restricting voting shares to the public.) The President will be represented by three directors. Foreign governments will be able to buy up to 10 per cent of the public shares. A change that will be welcome to the communications companies is that they, as well as the corporation, will be empowered to own the necessary ground-stations; these are likely to provide most of the profit. With these alterations both the House and Senate seem likely to approve the scheme, though a lonely little band of liberals, under Senator Kefauver, is conducting a rear-guard action in favour of government operation.

CONSUMER PRICES

The sudden and substantial rise in the American cost of living in February was due mainly to a contra-seasonal increase in food prices, as the result of bad weather, and is not considered to be the beginning of a new period of inflationary advances. The index was put on a new base in January, 1957-59 instead of 1947-49.

LETTERS

Downing Street

SIR—The note in your issue of March 24th on the Downing Street reconstruction is neither fair nor sound. As the Minister responsible for the planning of the scheme, I should like to write a few words in reply.

The Ministry of Works is responsible both for the maintenance of goverment offices and for the preservation of historic buildings. Whenever possible, both things are done simultaneously. Number 10 had, for many years, caused great concern to the Office, and later to the Ministry, of Works. There was danger of collapse and of fire, and the cost of maintenance was extremely high. While I was Minister, the time came to deal with the problem. When you speak of "Mac's Folly," the suggestion is that the Prime Minister was responsible for initiating an expensive reconstruction of his official residence for his own convenience. The Prime Minister, as head of the Government, has, of course, ultimate responsibility, but the initiative was mine. His main action was the appointment of the Crawford Committee to make an independent examination of our proposals. In all essentials, the Crawford Committee endorsed the Ministry of Works' plan.

When you describe the older Government offices as "quaint and expensively patched-up museums," and express a preference for brand new office blocks, you revive an unpleasant connotation of the word "economist" which your own cultured and scholarly journal has done much to destroy. Parliament, the press, and, I think, the country, have seldom criticised the Historic Buildings Act of 1953. Had Number 10 been a private house, it would have qualified for assistance under the act. I do not doubt that the council would have recommended a grant, and I should certainly have paid it. There is no reason why the government should not take proper care of its own historic houses when it forbids the destruction of such buildings by private people and makes grants for their preservation, whether they are inhabited or not.
—Yours faithfully, MOLSON

House of Lords, SW1

Pre-Pilkington

SIR—A university of the air was an inevitable starter from the field of pre-Pilkington manoeuvres. Like the universities of the high seas, which tend to be launched when liners are broken up, there is a seductive and superficial attractiveness about it all; even when carried to the extremes of your article of March 10th which advocates a university of the air "complete with extra mural examinations."

The Economist to which we turn for informed and impartial statement can, on occasion, indulge in a little light heartedness; but it was surely a pity to spoil it by a petulant protest that the BBC did not follow the hare you started on December 16th. In fact it was not chased much by anybody in education. The records of a recent Eastern Counties conference called by the Independent Television Authority in Norwich show this same reticence especially by the uncommitted members. A failure to recognise what the BBC has in fact achieved or what its aims in adult education are (these have been clearly stated in a recent pamphlet) suggests a partiality which is unfortunate; as is the apparent determination to divorce education from the totality of experience which the concept of ETV would seem to imply. Your readers might find an appropriate corrective in the articles on this issue which have appeared in *Education*. These should play a part in forming the public opinion which your article, rather obviously, concludes should influence the Government.
—Yours faithfully, F. LINCOLN RALPHS

Norwich Chief Education Officer, Norfolk

How Japan Does It

SIR—I read your interesting article on Japan of March 24th. Although your description of Japanese economics is quite well understood, I should like to point out some misunderstanding about the position of Sumitomo Shoji, which you mention in your paragraph about Zaibatsu. It is true that the Zaibatsu after the war was completely changed from its former system; in the Zaibatsu there are no Stock Holding Companies or so called Large Family Share Holdings.

To emphasise this fact you said that Sumitomo Shoji is not so closely tied-up with some of the metal companies in the same group; this is far beyond the actual fact. The metal company in the Sumitomo group is called the Sumitomo Metal Industries Company, head office in Osaka. Messrs Sumitomo Shoji handled about 43 per cent of the total out-turn of Sumitomo Metals for the half year to last September. This means that Messrs Sumitomo Shoji are still handling the largest share in the metal field of the same group. According to the description, it appears that C. Itoh are closer than Messrs Sumitomo Shoji in this field. Perhaps you will understand, therefore, that what you say is incorrect.—
Yours faithfully, S. KISHIDA

Sumitomo Shoji Kaisha Ltd.

London, EC1

Scandinavia and Europe

SIR—The political and economic issues posed by new applications for membership in the European Economic Community are sufficiently difficult that we should all make special efforts to avoid exaggerating them or giving a distorted version of the treaty's goals. Unfortunately, the article entitled "Welcome, Wild North-Easters (March 17th) seems to depart from this standard.

(1) It declared that "they [Scandinavians] would presumably draw the line at submitting their budgets and their monetary policies to control by a supra-national agency." No control of national budgets or monetary policies is delegated by the Treaty. It is clear, however, that close co-operation is necessary to contribute to the achievement of the Treaty's aims.

(2) It declared that "they will join no body in which the vote of a majority of the members could dictate foreign or defence policy." No delegation of such sovereignty is provided for in the Treaty. Can one imagine President de Gaulle party to a treaty which did so provide?

(3) It declared that the Scandinavians will demand "freedom to make trade treaties with other countries." Such freedom is not restricted by the EEC Treaty, unless indeed one means freedom to adopt tariff, quota or discrimination policies inconsistent with the common market.

We feel that the statements in the article could confuse public opinion, increase the difficulties of co-operation between European countries, and weaken the common cause.—Yours faithfully,

LOUIS B. SCHWARTZ
EBERHARD GUNTHER

University of Pennsylvania

Atlantis Without Walls

SIR—You state, as though indisputable, that the lifting of restrictions on dollar imports has had almost no effect upon the British economy. How can you know that?

I know, as do thousands of shareholders, of one key British manufacturer which has suffered severely. It passed its dividend for the first time in its history, and unless taken over may not survive, because it cannot meet American competition. And there are plenty more.

The merits of Free Trade are great, but they do not justify inexactitude on a statement of central importance.—Yours faithfully, J. G. LOMAX

BOOKS

How Kennedy Did It

The Making of the President 1960
By Theodore H. White.
Cape. 409 pages. 35s.

LIKE bees to clover, historians are going to cluster upon the year-long struggle that brought Mr Kennedy to the presidency of the United States for the sake of the political honey they can extract from it. But the writing of history requires a pause until documents are collected and the lips of the participants are opened; during this pause the writer's memory of the little details that establish a connection between the reader and the events described loses its freshness. The interval is the journalist's opportunity. Mr White has written a book about the presidential election of 1960 which, by combining a lucid outline of the strategy of the battle with a remarkably entertaining account of some of the tactical details, is almost a model of its kind.

Mr White's virtues are peculiarly American. The Americans excel in the craft of the particular. Except for one chapter in the middle and another at the end, Mr White does not attempt a general view of any one aspect of his subject. He leaves the reader to piece together his own general view—say, on the importance of the negro vote as against the southern white vote, or the part played by television—out of the description of particular episodes. He can do this successfully because he writes well. The reader, passing for instance from page 264 to page 313 to see why Mr Nixon forgot the intelligent strategy his advisers had planned for him at the start of the campaign, travels through the intervening pages without the feeling (provoked by some of Mr White's compatriots) that he is walking through a wet ploughed field.

Perhaps the best example of this technique is the description of how the various candidates—Messrs Kennedy, Nixon, Johnson, Humphrey, Symington, Stevenson and Rockefeller—took their decisions to run or not to run. Mr White gives detailed descriptions of the meetings at which each man, with his advisers, made his decision, starting with that of Senator Humphrey in a hotel at Duluth, Minnesota, on July 11, 1959: one learns who was there, what they recommended, even what they wore, and why the decision eventually taken was the only one open to that particular man.

Out of this mass of detail it is possible to learn a great deal about the intricate and delicate machine of American politics. Six of the seven main contestants found that their course of action in the months before the two parties' nominating conventions in the summer of 1960 was inexorably dictated by the workings of the machine. Senator Humphrey, for instance, found that his only chance of persuading the voters that he was not just a loose-tongued radical was to plunge into a series of primary campaigns in separate states, even though this involved a risk that he might be killed stone dead somewhere en route by Mr Kennedy (as he was, in West Virginia).

Senator Johnson realised that, as he came from the South, his only hope was to impress the Democratic convention with his skill as the party's leader in the Senate. (The convention, having virtually given its heart to Mr Kennedy in advance, remained unimpressed.) Of the seven, only Mr Adlai Stevenson ignored the dictates of the machine and, out of a decent distaste for the scruffy jostling of pre-convention politics, refused until the very last moment to climb aboard the bandwaggon his supporters were trying to set in motion. But for that distaste he might just conceivably have been President now.

Mr White's book will remove two misconceptions about presidential politics widely held abroad. One is that the nominating process, by which the two main candidates are picked out of the original bunch of contestants, is a haphazard hit-and-miss affair. In fact, his two hundred pages on this process demonstrate that each contestant has to expose his ideas and his personality to a minute, indeed painful, examination by his party; and the party has a very shrewd notion of what it wants. Given the mood of America in 1960 on the wide range of questions then engaging people's attention, Mr Nixon and Mr Kennedy (with one solitary reservation about Mr Stevenson's candidacy) seem in retrospect to have been the inevitable choices for the main struggle: and, all things considered, the best choices too.

The other misconception is that this main struggle between the two parties' nominees is decided by the vague preferences of an ill-informed electorate for one man's "image." It would be stupid to exaggerate the political knowledge of Americans (although one suspects that on average it is superior to that of Britons). But Mr White makes it clear that—in a reasonably close-fought race, anyway—the issue is decided by a few decisions on quite specific points. Mr Kennedy won in 1960 mainly because, unlike Mr Nixon, he made up his mind whether to woo the negroes or the white southerners (he wooed the negroes, and chose Senator Johnson as a vice-presidential candidate to mollify the South as much as possible); and because Mr Nixon could not make up his mind whether to jettison President Eisenhower or call on his aid. This tells a good deal about Mr Nixon.

This is not a perfect book. Mr White does not delve into the purposes of the candidates between the conventions and election day as deeply as he does before the conventions. Perhaps this is an unavoidable defect of journalism; the candidates were simply in no shape for intimate chats during that stage of the struggle, and Mr White had less than six months after election day to get his book written. But, within these limits, he has produced a book that should stay on bookshelves, including those of historians, for some years. It is also great fun to read.

Relations with China

Britain and China
By Evan Luard.
Chatto & Windus. 256 pages. 25s.

The Rise of Modern China
By Victor Purcell.
Routledge. 36 pages. 2s. 6d.

THERE was a real need for an intelligent book on Britain's relations with China, and Mr Evan Luard has admirably filled it. His book is the first volume of a series, to be published in conjunction with St Antony's College, Oxford, and the Leverhulme Trust, dealing with Britain's reduced position in terms of international power. If further volumes are of the same high standard, the complete series will be of great value.

The underlying theme of Mr Luard's book is that of mutual incomprehension, which began in 1596, when Queen Elizabeth addressed a letter in Latin to the Chinese Emperor, continued when the Chinese ambassador, Chien Lung, told George III in a famous letter: "There is nothing we lack, we set no value on strange or ingenious objects . . . and have no use for your country's manufactures"; and persisted, in more violent form, during Britain's nineteenth century aggressions. Indeed, in the milder mould dictated by this country's reduced circumstances, the incomprehension persists to this day, exacerbated, on the Chinese side, by the adoption of an intransigent ideology.

Mr Luard, who is well served by a lucid and very readable prose style, summarises the past, until the defeat of the Kuomintang, in some 60 pages, and rightly devotes the bulk of his book to a detailed consideration of Britain's relations with the Chinese People's Republic; two interesting chapters on "the future" complete the design. There are many arresting, and some controversial, pages. Among the former are the passages dealing with the unavailing efforts made by the Attlee government in the autumn of 1950 to dissuade the American-controlled United Nations Command in Korea from crossing the 38th parallel in pursuit of the defeated north Koreans, on

the ground—later substantiated—that this would provoke a Chinese counter-intervention. The chapter on Hongkong throws further light on the miracle of its survival. The most controversial passages, dealing with the appeal of communism to the leaders of underdeveloped countries, occur in the last chapter, on "British Policy and the Future." But there need be no quarrel with Mr Luard's view that Britain has much to contribute to the education of China's arrogant and inward-looking elite, by means of visits and "cultural exchanges"; nor with the view that, in time, a "two Chinas" solution is the only possible way out for the appalling dilemma set by the existence of a rival government in Formosa.

Victor Purcell's pamphlet, one of a series published for the Historical Association, is an exceedingly useful short guide through Chinese history in the light of relations with the West.

France's Economic Supremacy

France and the Economic Development of Europe, 1800-1914.

By Rondo E. Cameron.

Princeton University Press. London: *Oxford University Press* (1961). 604 pages. 80s.

OUR picture of the French economy in the nineteenth century is heavily coloured by Balzac, by memories of his passive and security-minded investors, conservative and short-sighted businessmen, and grudging and avaricious peasants tucking their louis away into black stockings. And these notions have been endorsed by reputable modern scholars in their attempts to explain the slow economic growth of France by reference to its social institutions and persistent traits of national character. It was never plausible to believe that this was a true account of the country which, at the opening of the century, was the wealthiest in Europe and had much the most advanced system of scientific and technical instruction; and the performance of the French economy since 1945 has made us chary of supposing that the French temperament is incompatible with rapid economic progress. Now Professor Cameron, a young American scholar, has described in detail the massive part which, in fact, French enterprise played in the development of Europe in the century before 1914. French engineers and technicians built and operated transport systems, opened mines, and introduced new technology from the Balkans to the Baltic. French civil servants were recruited for the public services of the backward states of south and eastern Europe. The most venturesome of French banks, the Crédit Mobilier, engaged in industrial promotion on a large scale and left its mark on the banking systems of many countries. French enterprise even penetrated London in the form of the Compagnie Générale des Omnibus de Londres, formed in 1855 to buy up the independent bus operators and the origin of the old London General.

It is evident that France played in continental Europe a role analagous to that of Britain in the regions of recent settlement. With differences of course. The trade relations of France with Russia or the Balkans were nothing like so strong as those of Britain with America or Australasia; and more of the British foreign investment was devoted to the opening up of new natural resources. But the French achievement is of comparable significance at least between the 1830s and the 1870s. It is a striking story, and Professor Cameron tells it with a wealth of illustration drawn largely from hitherto unexplored government and private archives. Since French influence permeated so widely, his book is not only a contribution to French history but also a commentary on the railway age in Europe generally, and on its politics as well as its economics.

There are some topics on which a more extended discussion would have been welcome. Although the author presents new estimates of the French international accounts that correct those of H. D. White, the transfer problems presented by the heavy foreign investment are never systematically examined. Nor is enough attention paid to a feature of French development that was crucial for French foreign domestic investment—the slow rate of population growth. It was because domestic investment in housing and public utilities was curtailed by the slow growth of its population that France was able to invest abroad a higher proportion of the national savings than Britain. The book also bears some of the birthmarks of its origin in a doctoral thesis—a certain prolixity and diffuseness. But the English reader is not likely to press such criticisms when he reflects that there is no volume on Britain and the development of the world overseas in this period at all comparable in range and scholarship.

No Noble Savage

The Fishermen

By Jeremy Tunstall.

MacGibbon and Kee. 294 pages. 25s.

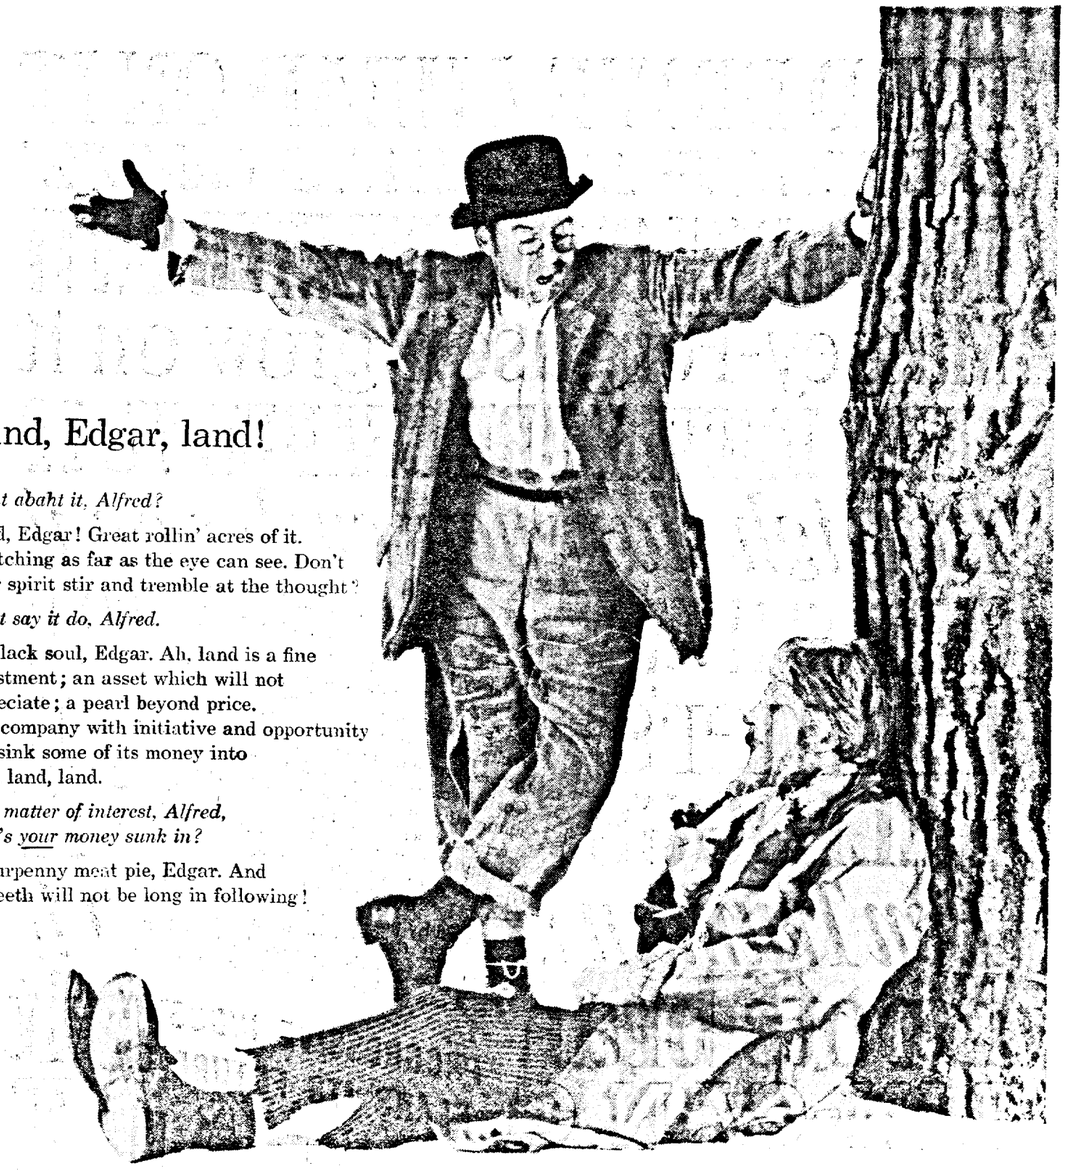
IN the late fifties the trawler owners were spending more each year on advertising and public relations than the Conservative party did in the entire pre-election period. During 1956, the Hull owners alone spent the equivalent of £50 for every fisherman they employed; so Mr Tunstall asserts in his admittedly partisan study of the Hull distant water fishermen. Some of this money went on an unsuccessful campaign to persuade people to eat fish on Tuesdays, but the greater part was devoted to combating public hostility towards the industry—hostility based on a shrewd suspicion that price fixing was at work.

Mr Nolan, and later Galitzines, did a good job. They exploited for all it was worth the public's sentimental view of the fishermen as the noble savages of the sea. "The existence of such fellows, not yet forced into the dreary pattern of cockney clerks and shop-walkers is yet one more reason for preserving our fishing industry," wrote Mr Priestley in "English Journey." Mr Tunstall tartly observes that Mr Priestley got his information from the owners. The fishermen take a less romantic view.

Of all manual occupations trawling is just about the most dangerous. In almost every year since the war the death rate has been higher than in mining. Despite the well-publicised earnings of a minority of top skippers, ordinary deckhands are right at the bottom of the league in terms of earnings per hour. Their fairly high annual income is the fruit of the fantastically long hours they work. A 90-hour week is common, Mr Tunstall asserts, with only three days off after a three week trip.

What then attracts people into the job? Much of this thoroughly readable and careful book is devoted to finding the answer. The author thinks that, despite the trawlermen's own belief to the contrary, family tradition plays only a small part. Unlike mining, where most of the boys in a community expect to become miners, it is an occupation people contract into rather than out of. The money counts, of course. For a boy in a fishing port who has failed his eleven plus and not got an apprenticeship trawling offers just about the only way of making big money—quickly. Even sixteen-year-old deckie learners can end up with £15 spending money after a good trip. But other factors count as well. Fishermen tend to come from big families—they average five living brothers and sisters apiece—and trawling is a way "to get away from the crowded bedrooms and the back-rooms packed with chattering women." The author notes that few fishermen know how to dance. Boys who feel socially inadept think of fishing, and the money it provides for drink and whoring, as a way of showing their virility.

Once in the job, they find it hard to leave, partly because there is little alternative employment in the ports. By the time a deckhand realises he has no hope of going skipper, it is too late. One bad trip and a man may never get another chance. Many end up as watchmen: pay £8 a week.



Coffee, Opium, Piecegoods

East Indian Economic Problems of the Age of Cornwallis and Raffles

By H. R. C. Wright.

Luzac. 380 pages. 42s.

IF it is true that the study of the past is only justified by its relevance to the present, one may query the value of a book about coffee, opium and cotton piecegoods

Land, Edgar, land!

What abaht it, Alfred?

Land, Edgar! Great rollin' acres of it.
Stretching as far as the eye can see. Don't
your spirit stir and tremble at the thought?

Can't say it do, Alfred.

You lack soul, Edgar. Ah, land is a fine
investment; an asset which will not
depreciate; a pearl beyond price.
Any company with initiative and opportunity
will sink some of its money into
land, land, land.

As a matter of interest, Alfred,
what's your money sunk in?

A fourpenny meat pie, Edgar. And
my teeth will not be long in following!

The John Summers steelworks at Shotton covers some 1,000 acres. This is but a small portion of the freehold land which, through the foresight of earlier generations, is owned by the company and is available for further extensions of the works. Geographically, too, John Summers are particularly well placed for delivery both to home and overseas customers—close to the Port of Liverpool and within easy distance of London, the Midlands and the Industrial North.

These famous companies (and thousands more) are going forward on *coal*. Fashion and fancy have no part in their shrewd thinking on the vital question of industrial fuel. They choose coal—and they go on choosing coal. Coal, because coal gives the maximum heat for the minimum cost. Coal, because coal, used with modern automatic equipment, is smokeless. Coal, because coal is the British fuel; there's plenty of it to meet all the demands of industry for generations to come, and—vital for the future—supplies are unaffected by political changes abroad. The National Coal Board technical service will gladly advise you on the vital part coal can play in *your* plans for the future.

PROGRESSIVE INDUSTRY PLANS ITS FUTURE ON
COAL

ISSUED BY THE NATIONAL COAL BOARD

a century and a half ago. The world has too much coffee and, short of teaching the English how to brew it, there is little scope for expanding the drinking of it. Opium, in a puritan world of do-gooder governments, is decidedly non-U. Cotton piecegoods, though the spearhead of Asia's counter-attack on Europe's industrial supremacy, are more popular for cheap wearing than for expensive reading.

But for the growing corps of professional developers—the international experts who circle the equatorial world from Bogota to Singapore—there are salutary lessons to be learnt from the gropings of Daendels, Raffles and Cornwallis so long ago. Should one expand the production of coffee and reduce its price, or restrict its production and maintain its price? That problem, despite five-year plans, is still unsolved, for coffee and for much else. Should a dynamic industrial world force its own ideas of progress on "lazy" traditional communities? Should custom, enshrined in a peaceful but static society, be respected and protected, or should feudal and medieval relics be shaken up with a good cold douche and a few broken noses? Those problems faced Russia thirty years ago. They faced China yesterday, and today they are the ferment of all Africa and much of Asia and America, with varying answers. This book, undigested and diffuse though its material is, describes in detail similar problems as they faced the Dutch and British in Java and Bengal at the time of the Napoleonic wars.

Of particular interest are the discussions on land development and tenure in Java. A system of traditional land rights, as now in much of, for instance, Sarawak and Fiji, was proving unsuited to anything more rewarding than subsistence agriculture. The Dutch wanted something more rewarding; they wanted revenue, and as a means to revenue they wanted coffee. Was it to be best obtained and controlled by compulsion or by incentive, by planning or by free markets? To the Dutch there was at that time seldom a doubt; planned compulsion was the only way known to a monopoly-holding company. planning without the facts on which to plan or the staff with which adequately to compel.

The result was a cycle of compulsory planting followed by compulsory grubbing up of bushes, with very little satisfaction to anybody. They had yet to learn what parts of the world have still not realised—that governments who wish directly to tax the cultivator must also capitalise the cultivation; the alternative is to farm out both the revenues and the duties of providing capital to a class of landlord or estate owner, as the British did in Bengal, running the risk that many will gulp down the revenues but fail to cough up the capital.

This is a publication for the specialist. It assumes in the reader more background knowledge than is usual. One wishes the writer had not remained content with notes for a book, but had gone on to write the book itself.

Unusual Victorian

Newman: *The Pillar of the Cloud*

By Meriol Trevor.

Macmillan. 663 pages. 50s.

SO many biographies of Newman have been written that the reader sighs upon seeing another. The authorised life of Newman was published by Wilfrid Ward in 1912 and nothing has taken its place, for Ward printed a mass of documents otherwise inaccessible. Upon the basis of Ward and other papers published from time to time, the tribe of biographers has worked at the puzzling character. But meanwhile the Oratorian Fathers were known, not only to possess Ward's original papers, but also to have made a great collection, and to be engaged upon sorting this material with a view to eventual publication. The first volume (called volume xi) of Newman's letters appeared in the autumn of 1961, well edited by Stephen Dessain of the Oratory. It was also known that there were various aspects of Ward's life that dissatisfied the Oratorians and other students of the papers.

Miss Trevor is the first modern biographer to have the use both of all this material and of the invaluable sorting and analysing of the Oratorians. This is the first volume of a pair, the second being expected in the autumn of 1962. It ends with the year 1853, when Newman had just emerged from the vile Achilli trial, when he was convicted for libelling an ex-Dominican, and was entering the period of his melancholy and frustration. (Ward divided his work at the *Apologia* of 1864, but only by a heroic neglect of the Anglican period up to 1845.)

This new life is a little romantic in its style, for Miss Trevor cannot easily forget that she is also a novelist. The quotations, if checked against Dessain's text, do not quite always tally, though this is rarely more than trivial (for instance, Newman at Langres 1846: "We are all knocked up by their mode of living," Miss Trevor: "We have all three been knocked up by the wines and mode of living" Dessain). The reader who does not know the Victorians will hardly understand what the fuss is about, for the author thinks that the theory of evolution first appeared in Darwin and that Peel was Prime Minister in 1829. But the general portraiture is admirable, and the book exceedingly readable. The student will value it especially for its hitherto unknown extracts from the archives—the best little picture of Newman as pastor of a parish in Oxford and at Littlemore; the facts about that mysterious problem-brother Charles; the relations with the Froudes, and with Dr Arnold and Hampden; the wig which he wore when his hair fell out, the extent of his personal austerities. It will not add to Newman's reputation with a more caustic century, but it makes a most important contribution to understanding one of the most unusual of Victorians.

PAPERBACKS

Australia's Empty North

Australia in the 1960's

By L. St Clare Grondona.

Anthony Blond. 462 pages. 35s.

DEVELOPMENT of Northern Australia casts a nagging shadow over most thinking Australians. The campaign for political and public support has ebbed and flowed, hesitantly, for more than forty years. All those from the cities curious enough to penetrate north of the twenty-third parallel tend to become enthusiastic converts within a week. Politicians habitually give lip service. Nothing much is done.

Mr St Clare Grondona, an expatriate Australian, takes up the cudgels for the valiant few—those hoarse, untiring campaigners for the use of Australia's north, and sets out a tidy £150 million scheme. He produces the arguments for the profitable large-scale production of beef from the north-western area around Darwin, Derby and Wyndham, with the Australian, United Kingdom and United States governments each investing £5 million a year for ten years. China alone, he claims, assures the future of a meat market without visible limits, so an additional quarter million tons from this region would be easily absorbed at buoyant prices.

Time is running out fast for Australia. Immediate development of the north-west, with its excellent soil and great possibilities as pastureland, was urgent in the mid-fifties. It is a far more pressing need today as the first hints of the population explosion see Asia pushing ever nearer to Australia. It is less of a gamble, far more of a strategic necessity, than the Snowy River scheme, in which tens of millions have been invested. But it does not mean votes. So hitherto the politicians' activities have been limited to token tax remissions and casual, passive approval.

Unfortunately the great bulk of Mr Grondona's missionary book is a potted textbook, presumably for the migrant and investor, but full of evidence of hasty note-taking without checking. Better books backed by ampler research and a clearer concept of the object have been appearing in increasing numbers about Australia. But the author should be commended for trying again to call attention to that Australia so remote from its big cities, "the last stretch of the tropical world which remains in the as yet undisputed possession of white men."

Practice Then Principle

Canadian Economic Thought

By Craufurd D. W. Goodwin.

Duke University Press. London: *Cambridge University Press* (1961). 230 pages. 48s.

THE evolution in new countries of economic studies is a process of considerable interest. Dr Goodwin traces this process in the British colonies north of the American border and in their successor, the Canadian Confederation, during its first half century. He brings together useful and interesting material on the origins and development of statistical and descriptive Canadian economic data and their interpretation, surveying both the emergence of academic scholarship and the role of studies made by royal commissions and in government departments. He sketches the life and work of such pioneers in the field of Canadian economics as Robert Gourlay, John Rae (not the Arctic explorer of the same name), James Mavor, Baillargé, Montpetit and Adam Shortt, "the first native-born Canadian economist and the first to select the domestic economy as a primary field of interest."

Economic "science" was slow to emerge and fell into frequent early disrepute. At first consisting largely of generalisations imported from more mature economic centres, it was irrelevant to the special conditions of an immature economy. Answers had to be found to immediate questions of policy on land disposal and settlement, tariffs and trade, banking and currency, long before a coherent system of economic thought had developed in Canada. Theories borrowed from Britain and the United States could not give the answers; they created widespread scepticism about the usefulness of economics. Practical necessity gave rise to sporadic and piecemeal attempts to collect economic information and analyse economic problems; but it is only in this century that a distinctive Canadian discipline has developed based on "the association of economics with history and its application to public policy." In this the "Toronto School" of economic history and Queen's University have played a notable part.

OTHER BOOKS

CONTEMPORARY GOVERNMENT OF GERMANY. By Elmer Plischke. 256 pages. THE FEDERAL GOVERNMENT OF SWITZERLAND. By G. A. Codding. 185 pages. THE GOVERNMENT OF REPUBLICAN ITALY. By J. C. Adams and P. Barile. 245 pages. THE GOVERNMENT AND POLITICS IN ISRAEL. By O. Kraines. 254 pages *Allen & Unwin.* 25s. each.

These four volumes are the first of a contemporary government series of textbooks, by American authors and primarily designed for American students of government and politics. The general standard of accuracy, impartiality and exposition is high, and the books should serve a useful purpose. The bias, where there is one, tends naturally enough to be in favour of the country being discussed and of its existing system of government. In the case of Germany, this tendency runs the author, Mr Plischke, into a difficulty. Naturally enough, he takes his information and where necessary his views from the West German government. His book sets out, however, to cover East Germany as well; and here the attempt at impartiality collapses, with a consequent loss of informativeness. To call the East German state "the so-called East German Democratic Republic" is not helpful, since that is not actually what it is called. To describe the prevailing system of government there as an "autocracy" is not accurate either. The account of the system is incomplete and too narrowly political; thus the place of the State Planning Commission in the East German system of government—in itself a not uninteresting matter for the students for whom the work is intended—is overlooked. Germany, however, is an especially difficult case from this point of view; these faults do not deprive the account of West Germany of its value, nor do they reflect on the series as a whole.

TRADE UNIONS IN A FREE SOCIETY. By B. C. Roberts. *Hutchinson.* 206 pages. 30s.

Mr Roberts has revised and brought up to date the book on British unions that he published in 1959, and added to it a series of essays on trade unionism in the United States. It is all eminently painstaking, balanced and reasonable. Perhaps because of Mr Roberts's correct insistence on the fact that unions are very much a product of the society in which they operate, his American and British studies fail to bring out any general lessons. It would be nice to believe that his sensible advice will be heeded by trade unionists.

AMERICAN CO-OPERATIVES. By Jerry Voorhis. *Harper,* New York. London: *Hamish Hamilton.* 237 pages. 38s.

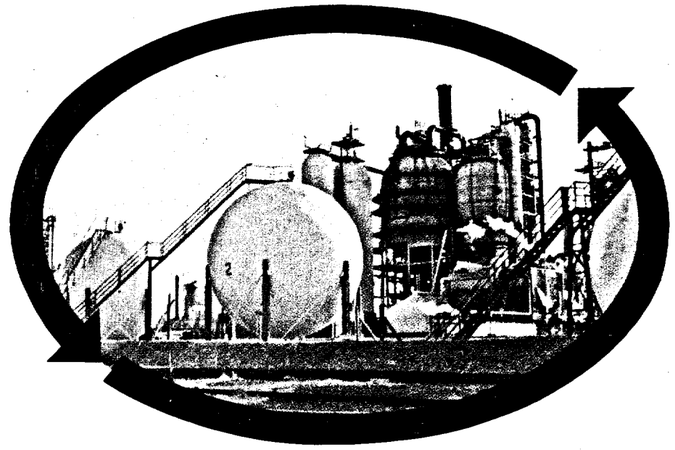
This survey of the history and the achievements of co-operatives in the United States from the executive director of the Co-operative League is clearly a labour of love. Co-operation, in Mr Voorhis's view, gives the individual a chance to recapture the power of making decisions which he has lost, in so many cases, to big business. This is a splendid ideal, but from Mr Voorhis's book it is not easy to judge how it has worked in practice or how many Americans have taken advantage of this opportunity. Outside certain fields—such as the rural electrical co-operatives—consumer co-operation is a rather neglected shrine in the United States and candid discussion of why this is so would have made the book more interesting.

THE SOVIET AIR FORCE. By Asher Lee. *Duckworth.* 288 pages. 30s.

This is the third edition of Mr Lee's painstaking assessment of Soviet Air Power, which has been almost completely re-written since it last appeared in 1952.

DEMOGRAPHIC YEARBOOK 1960: *Population Trends. United Nations.* 632 pages. 71s. cloth; 57s. paper.

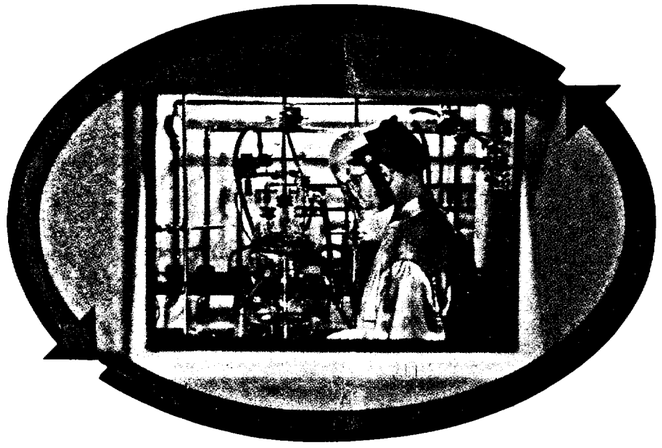
A HISTORY OF LAND USE IN ARID REGIONS. Edited by L. D. Stamp. *UNESCO.* 388 pages. 52s. 6d.



IT IS THE SHAPE OF LEADERSHIP

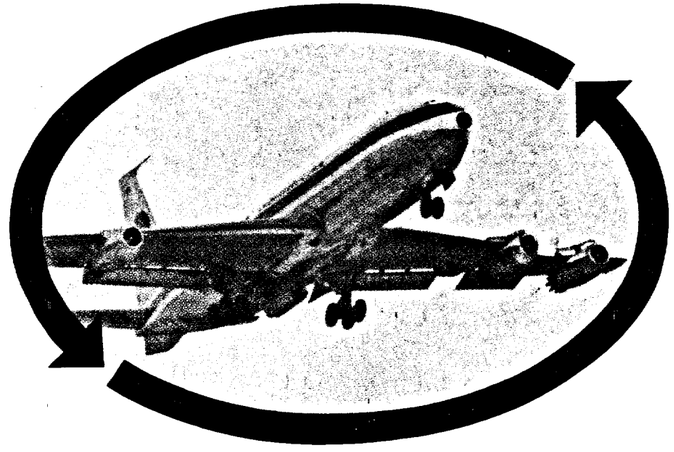
bringing growth to people everywhere—Accelerating the development of these countries—industrial and otherwise—will be energy from oil. Most important to us is what this means to people. The people who work for us. The people we serve. You can measure this progress in terms of satisfying human needs... and in terms of contributions to human dignity.

...oil products bought by more people throughout the world—Add up all the volume of gasoline and oil sold throughout Europe, the Americas, Asia, Africa, Australia. You'll find more people buy these products of Esso than any other. All over the world, the first choice is Esso.



with energy produced the world over—The world's single most important producer of energy from oil is the Esso family. For many people Esso is a new name in these countries. But it is an old one everywhere else. The Esso organization is the largest producer, refiner, marketer of the oil companies. But its name stands for more than size alone. It is an international operation, with an international reputation.

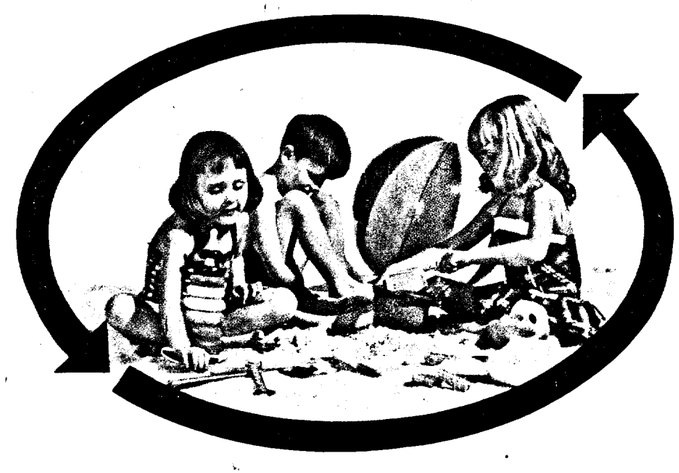
Esso



and here is—the sign of energy—Soon you'll find the Esso sign in all of these countries. Look for it in gasoline stations, and wherever lubricants and kerosene are sold. It symbolizes the big changes that are on the way in product quality and in the quality of service.

Esso

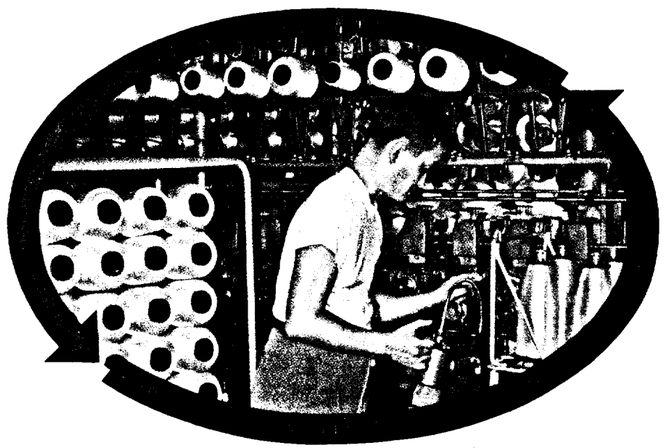
RESEARCH CAN HELP SHAPE ENERGY



from Esso's unmatched research facilities—In Esso labs throughout the world, scientists work to unlock products from petroleum. Hundreds of useful products have been developed, yet the full resources of petroleum remain untapped. To reach these resources, all of the advances of science are used, including atomic research. Research like this brings about not only better energy products but developments that add to better living generally.

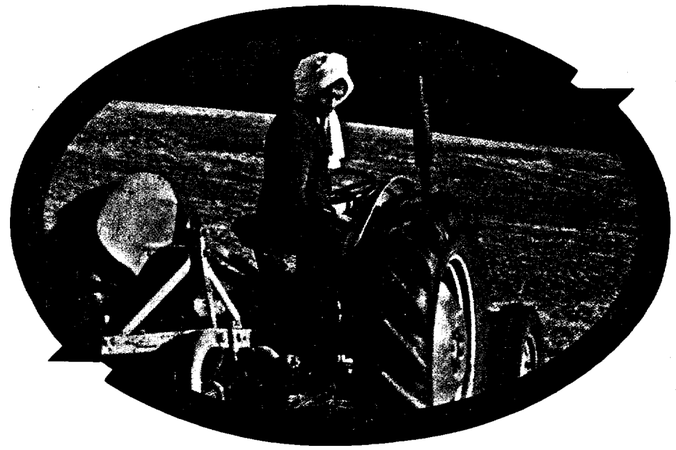
...new fuels for transportation—Jet aviation grew up on Esso fuels and lubricants. The first jets were powered by an Esso fuel. The first synthetic turbojet oil came out of Esso research. Today, Esso research is developing the fuels and lubricants that tomorrow's planes will live on. In aviation, as in other industries, Esso research helps shape the future uses of energy.

...bigger and better bowlfuls—Esso pesticides and herbicides now help bring in crops in many parts of the globe. Ingenious research and painstaking manufacture go into these remarkable oil products. Easy, safe to use, they're built to single out the enemy insect or vegetation...without harming growing crops. The result: more and better crops...more people will eat better.

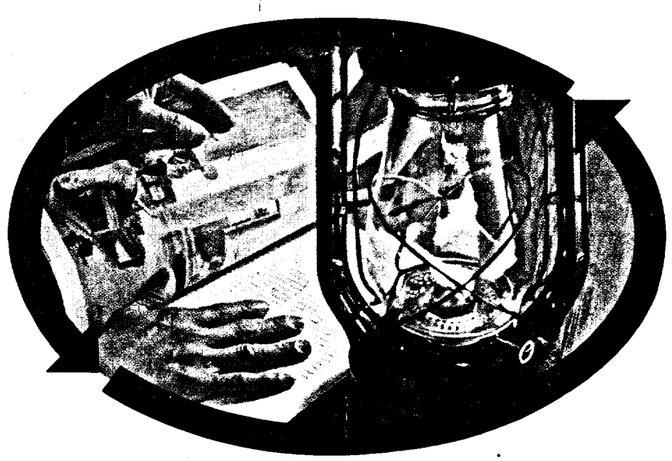


...all things to better your life—Without knowing it, most of us use several products made from petroleum through Esso research. For instance...many of the plastic products around you come from petroleum. Other oil derivatives...solvents and additives...are essential ingredients in paints, lacquers—countless other things that make life better.

Esso



THROUGH ESSO RESEARCH COME NEW AND BETTER PRODUCTS



better gasolines and oils—You may be satisfied with today's gasolines and oils... but Esso research isn't. It works continually to improve the performance of its automotive products even though they are the world's first choice. New Esso Extra Motor Oil came out of this concern for perfection, along with cleaner-burning Esso gasolines, and many other products. New ways to change and improve the life of the individual are important goals of Esso research.

better technical assistance for industry—The particular problems of local industrial mechanization will become the problems of Esso technical experts, who will work closely with local plants. What has been learned through decades of experience in other parts of the world will be applied in your country from the very start. All the energy of Esso products... all the energy of Esso research will go to work for your industry, your people.

better fuels for farmers—Esso research will be tailoring fuels to the demanding requirements of the machines farmers use. Carefully designed, these fuels will help protect the heavy investment in farm machinery. In a very real way. Esso fuels help cut down costly time losses because of breakdowns. Fuels for the newest machinery as well as the oldest are important contributions from Esso research to farming. For special problems. Esso technicians are on call to bring you famous Esso service.

better fuels for cooking, heating, lighting—Esso research is constantly striving to make better kerosene for home and industry. Research for better and newer products is a never ending task at Esso laboratories. Throughout the world, energy from Esso petroleum products warm and light millions of homes.

WATCH FOR THIS SIGN OF ENERGY

Esso

Wherever it appears, industry and the people will be brought closer to the advances of science. The local Esso dealer or representative will link his community to the vast resources of this world-wide energy company. Esso products... Esso research... Esso technical assistance are then within reach. In the years ahead, we hope to serve you as well as we have served so many other forward looking areas of the world.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Stockton's Wind of Change

FROM OUR SPECIAL CORRESPONDENT

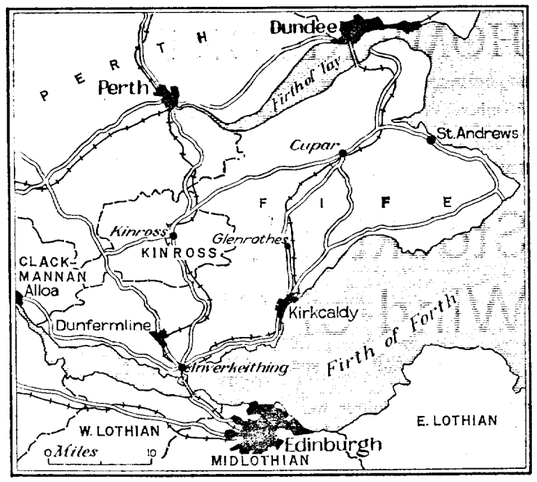
THE Prime Minister went back to Stockton on Monday to wrestle with a trend. Even if Captain Macmillan had not fought the seat six times between 1923 and 1945 (three wins, three defeats) and could not find his way blindfold to Finkle Street, Fred Beaumont's Grill and the Maison de Danse, it was no bad place to pick for a personal appearance. Stockton crowds snugly in upon its broad High Street : its pavements this week were jammed with agents and canvassers drafted in from Manchester, Birmingham and even Lowestoft, but there is precious little that goes on which Stocktonians do not know about or see from their green double-deck buses. There is (for a population of 80,000) a lively evening paper and, quite apart from the northern editions of the nationals, there are local dailies competing in the town from Darlington and Newcastle. The Prime Minister could not fail to capture the headlines (" It's a changed Stockton—poverty has been left behind ") ; he also drew an audience of over 1,000 to the Maison de Danse, with another 300 left queueing on the wet pavement outside.

These were, of course, the faithful, and it was to revive them that the Prime Minister had come at all. " It's all wind and no change," claimed a heckler, but since the bulk of the perspiring and faintly anxious audience stayed on to listen to the cherubic-faced but stentorian-voiced Mr Coles, the Tory candidate, it may be assumed that the faithful heard mostly what they wanted to hear. They strained visibly to know about the pay pause, and relaxed at the news that it had worked. But there was greater applause for Mr Coles when he served notice on Mr Macmillan that he would press for more money for teachers and nurses if (by some curious chance) he was returned. Where Stockton's shopkeepers and working-class Tory housewives (the town, with ICI Billingham on its doorstep, has always been one of the less badly hit corners of Tees-side) felt surer of themselves was in scorning open-handed Labour and Liberal promises. Money was not chucked about like that in their own households, they knew that.

The Prime Minister's speech was forceful, but it came over raggedly. There were over 40 interruptions by two Empire Loyalists ; the galleries had more than a smattering of young Liberal volunteers from outside the constituency. Their sceptical silence made it all the clearer whenever the body of the hall was less than convinced by the argument. Thus the faithful seemed just satisfied that the Tories were more liberal than the Liberals on pensions ; they were not so sure that a vote for anyone other than Mr Coles was really a vote for conscription. But they got the real message. Mr Coles (" He's stuck by you and I think you will stick by him ") was in trouble : he would need every bit of help he could muster on Thursday to finish a breathless second.

Before the two public opinion polls came out (see page 19)

the Liberals' weekend canvass had given 34 per cent to the Gaitskellite Mr Rodgers, 32 per cent to the local Liberal boy Mr Mulholland and only 27 per cent to the Tory—with the rest really undecided. Privately, some Liberals did not quite believe their figures themselves, although their capture of over half the Tories' 1959 vote at Middlesbrough East was a portent. Their organisation, after all, had begun " with half-a-dozen chaps and four bob in the kitty "; they still felt on Monday—safely before Mr Grimond arrived—that they would do well to give Mr Coles a real fright. And this, in fact, was nearer to what the Gallup Poll in Wednesday's *Daily Telegraph* suggested they would do. But their confidence was growing visibly.



Stockton does not give an impression of easy volatility. The old Liberal roots, set in the nonconformist past (Mr Mulholland happens to be a Roman Catholic), are there all right, but no one claimed to have spotted many good Liberal issues. The Tory suburb of Hartburn has its mortgagers, but Stockton property is not all that dear. There are no hard-pressed commuters: a 3½d. bus ride goes quite a way. Tees-siders wanted to be told encouraging things about the common market, but they have retained plenty of reservations about plunging in. If Mr Mulholland does, in fact, poll heavily, his supporters can really claim a deeper, more unspoken discontent with the other two parties than the apparent white-collar feeling at Orpington.

MR RODGERS set himself to lift Labour's majority to 7,000 (it was just over 3,000 in 1959) and he seemed to have most of his natural vote in the housing estates firmly in hand : the Liberal advances there looked to be chiefly at Tory expense. It was in predominantly Tory areas, as might be expected, that the Liberals appeared to be scooping up what Labour votes remained. In the older parts of the town, still rows of brickwork and cobbled streets, there were fewer signs of new allegiance. But here, too, the Liberals were not without hope. Plenty of these Coronation Street terraces had had an amateurish coat of paint and new doors in the past two or three years—and the Tories had actually made local election gains last year. Just to ward off any real upsets Mr. Rodgers and Mrs Bessie Braddock (" perhaps I'm just a gimmick ") reiterated the threat of unemployment creeping up the river from Middlesbrough to swell Stockton's present 4.2 per cent—although most of those actually hanging round on the pavement for jobs have seemed to be Indians. Mr Rodgers could draw what satisfaction he wanted from the fact that the one looming threat to his chances—a general Tory jump behind Mr Mulholland to oust the old enemy—was precisely what Mr Macmillan had arrived to prevent. The local odds against the Tory vote disappearing entirely as Labour's did at Orpington still looked pretty high in midweek. But how many Stocktonians would spend Thursday night watching Spurs v. Benfica on the telly ?

The Prime Minister retired to his sleeper on Monday apparently content with the day's work. It has not been an inconsiderable factor that Toryism has been led for the past five years by a man who knew, and felt for, the Stockton of the depression. This week's return was not his first since 1945 by any means, and by now the town is much less sentimental about him than he remains about it. " Positively the last appearance," said a cloth-capped man staring belligerently. Perhaps so. Still, here it was that the now-celebrated Mrs Winpenny (E. Winpenny, outfitters) first took Captain Macmillan home to tea. Here he mulled over the lessons of the 1930s. Here he spoke first of his ideas for industrial reorganisation, for the distribution of essential foods by the state, for a national minimum wage—and a National Economic Council. There are people in Stockton who say they actually remember.

Drumbeat in Fife

FROM OUR SPECIAL CORRESPONDENT

MUCH of the county of Fife has lived on coal and railways: now the mines are closing down, while the Forth railway bridge that has been the one link with Edinburgh and the industrial world outside is being matched with a fine new road suspension bridge. In ten years, when the Forth road bridge and, after it, the Tay road bridge to Dundee are completed, Fife will be on the shortest route between two established industrial centres. In the meanwhile it has to face the decline of coal. An average of ten pits a year have shut in Scotland for five years now: the mining labour force has dropped from 86,000 to 67,000 since 1956, and there are plenty more closures to come.

This process is particularly painful for Fife, where several communities in the west of the county depend on mines that will very soon be worked out. One-third of Fife's 30,000 working miners will no longer be needed in five years' time, and those left will be concentrated at a few large, highly mechanised (and ultimately, it is hoped, profitable) pits away from the traditional inland mining centres. But a good deal of the smoothness of the coal board's tactical withdrawal has been badly marred by the failure announced last month, of the Rothes colliery.

Rothes was to have been the newest and brightest showpiece of coal; the Queen herself went down the pit wearing white overalls. Some £12 million was spent on sinking the pit and endowing it with buildings and gear of unparalleled elegance; the new town of Glenrothes was designed to house its eventual work-force of 2,500 men, and to provide a choice of other jobs for their families. But by a freak of geology the coal under the pithead is split and threaded with seams of porous volcanic rock bearing water at high pressure. Urged by the miners' union and by some other local spokesmen to spend yet another £5 million in searching for an equally dubious seam of coal at an even lower level, the coal board has decided, sensibly enough, not to risk throwing good money after bad. Rothes is now to employ 80 men—on care and maintenance.

The consequence has been alarm in the whole county, and despondency among those most closely involved in the industry. The Scottish division of the National Union of Mineworkers—of very left-wing leanings—has received offers of co-operation from such true-blue organisations as the local housewives' association: the Conservative convener of the county council has asked the Secretary of State for Scotland to direct industry into the Rothes area and western Fife.

Glenrothes itself is facing the new situation with rather more equanimity: for, whatever its other difficulties, it is now almost wholly independent of the coal industry. The first house was completed in 1950, between the two small communities of Markinch (population 2,500) and Leslie (population 3,000). It is now a town of 13,500 people, with an eventual target of 32,000, and only 800 of its inhabitants are employed by the coal board (many of these being clerks and administrative workers for whom it should be easy enough to find alternative jobs). A mere 300 Glenrothes people work at the Rothes colliery itself: 2,000 of them work in the paper industry that has always been there, and many others in the two new electronics firms (both Scots subsidiaries of American companies) and two light-to-medium engineering concerns that have moved in.

The new town's administrators are perking up as the new central shopping centre begins to take shape. Now that they can offer not only houses, ready-made factories, clean air, good education and subsidies to new firms, but also quick road access to the growing industrial complex near Edinburgh, they hope to make up for what was a pretty ghastly beginning. The chief complaint is that the Board of Trade advisory committee takes a long time to approve applications for factory grants, and some applicants are won away by the swift administrative decisions of the Ulster Ministry of Commerce.

The county authorities, however, feel themselves sorely underprivileged. Only small areas of the county qualify for development grants under the Board of Trade's powers: the special attractions that can be offered there under the Local Employment Act are tiny, and totally ineffectual. The council's main concern is what to do about the 30,000 council houses with which it has determinedly replaced the squalid "miners' rows" built by the old mining companies. To build them it has worked up a capital debt of £28 million, of which £20 million has been borrowed in the past ten years. As so often in Scotland the housing problem is vastly confused by the traditional policy of keeping rents artificially low. A typical council tenant might pay £49 2s. 6d. rates in a year, but only £18 15s. rent. The council is now intending to put this rent up by £10 a year—unless, as some councillors no doubt hope, the Secretary of State forces them to go even higher.

But a sane rents policy will only solve some of the problems. Many of the smaller mining communities, crowded round a colliery that is shortly doomed to close, consist almost entirely of council houses. It is extremely unlikely that any industrialist would want to move into a blighted little valley, where the ground is likely to subside at any moment into an old mine and where the workpeople have very decided ideas on how things should be run.

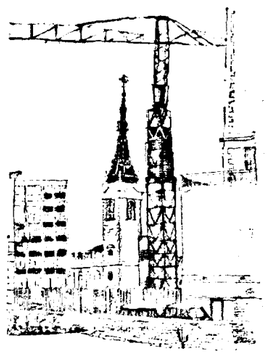
FIFE miners have lively traditions—of brass band playing, communist voting, hard drinking and steady, spine-wrenching underground work—and they are not likely to take kindly (at least within the existing communities) to lower-paid and fairly unskilled factory jobs. Nobody can think what to do with the council estates when the pits, their *raison d'être*, have closed.

But even in the absence of state aid there are some signs of hope. A few local industries—linoleum, whisky, shipbreaking—are well enough off: and the county council cannot wait to get its hands on a large unused Admiralty site considered ideal for industrial development. As a foretaste of the consequences of the Forth road bridge, a private company is planning to build a whole new town of up to 10,000 people for commuters to Edinburgh. But Fife has not caught the hopeful post-war wind that was to waft Glaswegian industry to the coalfield; instead, the best prospects for development have turned out to be in the central belt at Bathgate, Livingston and Grangemouth.

Even so, Fife has something to offer: not all the county is pit-bings and council houses. Even within a mile of some of the blackest, bingo-haunted mining towns the country is open and smiling, ready for development, and within easy reach (executives may be reminded) of St Andrews and other golfers' paradises. In the long run, Fife's new communications should do the trick. It is the short run that scares Fifers in their kingdom now.

How Cecil King masterminded the great Odhams take-over

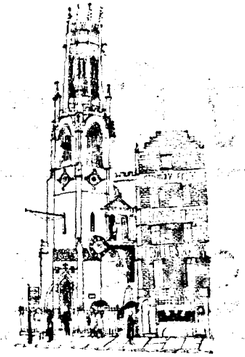
by Hugh Cudlipp



This was the biggest and liveliest of all the Fleet Street take-over battles. The prize was the vast Odhams empire. The contestants were the Thomson Organisation and the Mirror-Pic group led by Cecil King. King won, after a struggle which involved Parliament, the Prime Minister, Hugh Gaitskell, Sir Christopher Chancellor, Sir Eric Bowater, the News of the World and the merchant bankers Warburgs and Rothschilds.

Now Hugh Cudlipp tells what really happened in a series of articles beginning in The Observer next Sunday.

This is the first comprehensive account by a man who was right there on the inside. And very comprehensive it is too; every move has been recorded and letters from the combatants are published in full. Cudlipp's account of the Odhams affair is as dramatic and as full of unexpected twists as a financial whodunnit.



Begin Cudlipp's inside story on Sunday in the

Blessed Guerrillas

FROM A CORRESPONDENT

THE thanksgiving service in a City church for the staff of Courtaulds after their safe deliverance from the clutches of ICI is a reminder of the shrewd mixture of God and Mammon that still characterises the square mile of the City of London. For apart from their traditional religious zeal, expressed in the constitutions of the guilds and livery companies, many City workers have a friendly and pious attachment to one or other of the 23 parish churches which still adorn the financial landscape, and have now been restored from war damage.

These 23 parish churches are more than ample for the 7,000 or so people who actually live within the City boundaries, but a million commuters flock past (and a few enter) their doors every day. This gives a pathetic look to the electoral rolls: St Giles in Cripplegate has one of eight, and St Olave's, Hart Street, has 221 electors. But there is an abundance of mid-day services, memorial tributes, and pious diurnal functions of one sort and another to justify a parish existence.

Ten years ago the Bishop of London, Dr Wand, took a long look at this scene of ecclesiastic under-production, studded with comfortable sinecures for the older incumbents; postwar restoration problems gave him his chance to escape the traditional heritage of the City churches and Parliament gave him permission to take 15 of them as it were out of service—leaving 23 for parish duties. The happy resurrection of the word "guild," with its overtones of craft and discipline, describes those churches which were declared non-parochial. There were outraged cries that the bishop was invading the citadel of the "parson's freehold," but he withstood them with fortitude, and in the decade just past his guild churches have emerged as tried recruits to the ecclesiastical army.

Each guild vicar is appointed by the bishop for a term of years (usually five in the first instance) and is guaranteed £1,000 a year, out of which he provides his own living accommodation. He has no parish duties as such, but he and his church are there to build a congregation outside the four walls of the building, by being recognised as a centre at which one of the non-ecclesiastical disciplines of church life is respected and practised. All Hallows, London Wall, for instance, will this summer open itself as a shop window of church art. Its high-walled nave has been stripped of pews, and the vicar (who is also assistant secretary of the Council for the Care of Churches) will stage a series of exhibitions displaying the various crafts of sculpture, painting, carving and building used in the church. St Andrew's, Holborn, the largest of Wren's city churches, is a meeting place for educationists, and St Ethelburga's specialises in the ministry of healing.

Each guild vicar is given a great deal of freedom to practise his specialty, and is looked on as a servant of the whole church and not just of the City of London. The vicar of St Martin Ludgate, for example, has built up a wide range of contacts as an adviser on marriage problems and is referred to for help by clergy far outside the boundaries of the City. St Benet, at Paul's Wharf, has been given over entirely to the Welsh-speaking people of London; and the Corporation of the City of London has, in St Lawrence Jewry, a most handsome church for its official ceremonies and celebrations. These last two are strongly bound by heritage and tradition, but generally a guild church is expected to be lively and experimental.

At St Katharine Cree the Industrial Christian Fellowship has established a headquarters, and at St Mary Abchurch the arts are celebrated; at St Margaret Pattens the clergy of London themselves are catered for with an ingenious adaptation of the church as a conference and study centre. Two churches and their vicars (St Dunstan's in the West and St Nicholas Cole Abbey) have their eyes on "other communions" and are concerned with ecumenical relations and the overseas work of the church; St Botolph Aldersgate is dedicated "to work amongst men" and St Mary Woolnoth for evangelism. Only one guild church troubles the bishop—Dick Whittington's old haunt of St Michael Paternoster Royal, which appears to be unwilling to turn again into something new.

Freed from parochial duties and statutory obligations, the guild churches hold out fascinating prospects for other great cities, many of which (and not only the older cities of Britain but some from across the Atlantic too) periodically send investigators to London. "Down-town" with a vengeance, and devoid of a regular congregation, the guild church can be an effective guerrilla in the warfare with materialism—given a practised hand to direct the fighting. The Bishop of London and his colleagues are wisely not claiming too much for their invention and say that a decade is not much to go by, and that to be thoroughly effective the guild church needs more staff and resources to do its job. But in a tradition-laden (some would say bound) area the church has broken through to some of the new ways so often urged on it.

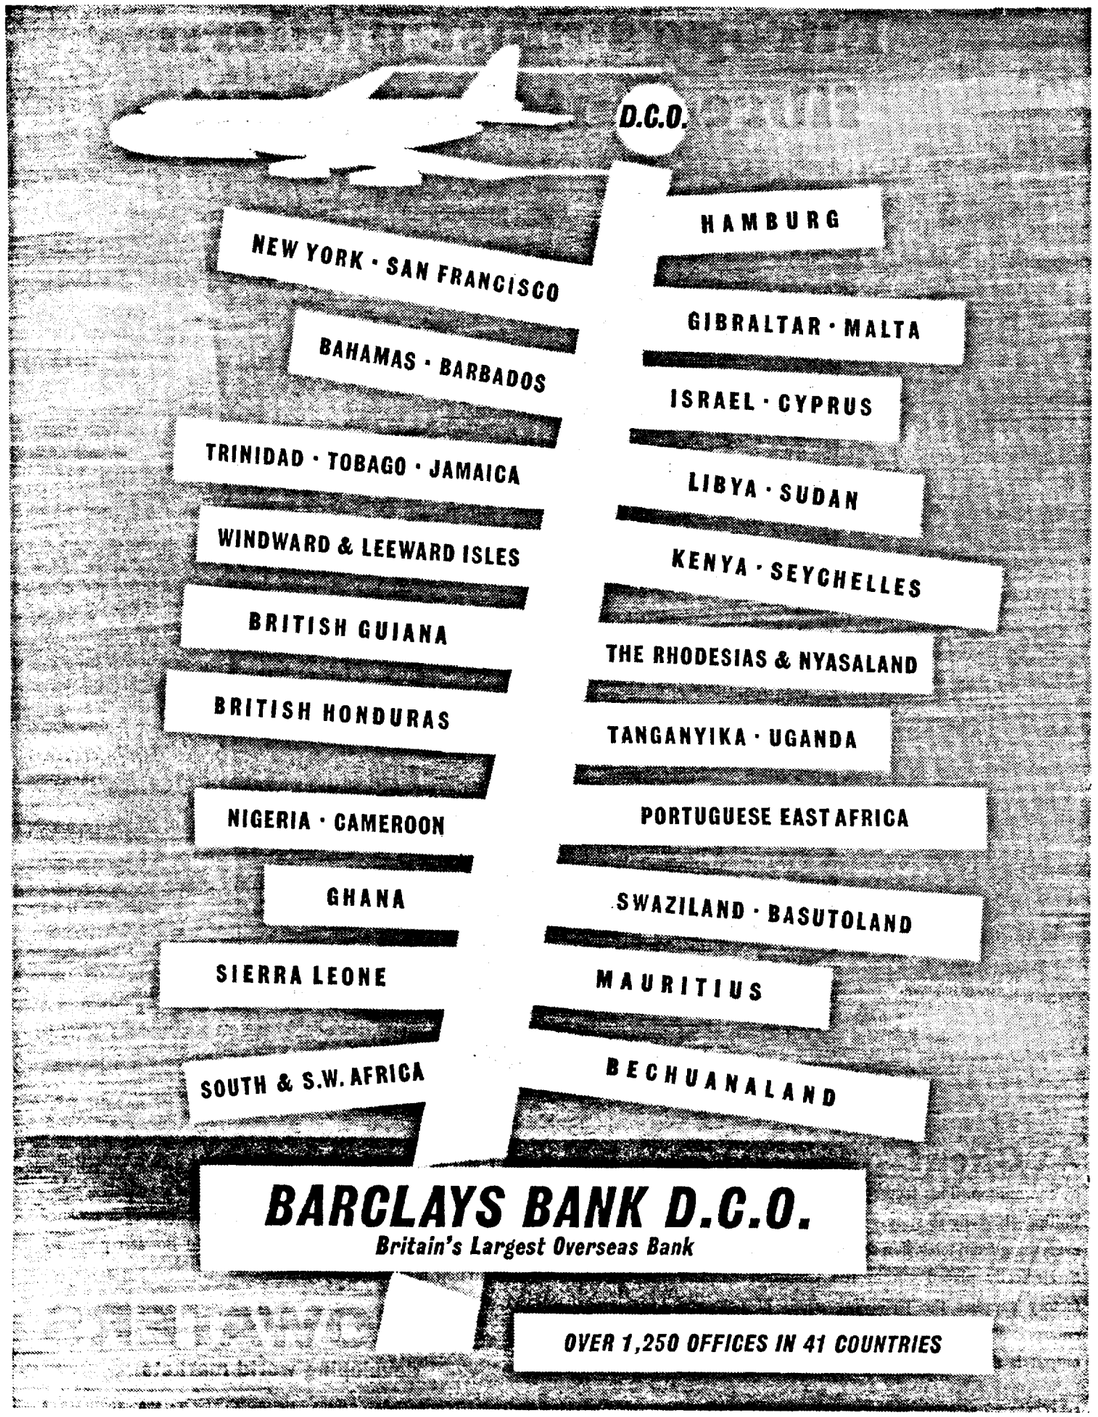
Europe's most modern fibre container plant



At Ghent—a new factory, making corrugated cases by the million. This factory—a joint enterprise of Bowaters and Philips—is ready to supply Europe with universal containers for everything from television sets to toothpaste, tea, toys.

Strategically placed within the Common Market, the Ghent factory supplies the packaging needs of new and developing enterprises on the continent. A substantial part of this factory's output is destined for the Philips Organisation. New plants at Ghent and at Stevenage strengthen Bowaters' corrugated case resources in Europe and in Britain.

Bowater enterprise has already established a network of 20 packaging plants in Britain and Europe. Purposeful Bowater planning opens up new markets everywhere.

THE BUSINESS WORLD

1962 £ Surveyors with No Plan

It is becoming questionable whether Britain's annual Economic Survey, in its present form, any longer serves much purpose. This is partly because the Treasury itself, over recent years, has so considerably supplemented its quarterly series of statistics and is now improving the quality of its periodical commentaries upon them. It is partly because the Bank of England's quarterly now provides a considerably better-integrated running record and official rationale of what has been happening in the economy—and the record of the past, still, takes up well over 90 per cent of the wordage of this week's survey. The Bank's quarterly has provided an "establishment view" to balance the differently academic quarterly commentaries of the National Institute of Economic and Social Research and the London and Cambridge Economic Service. These have swelled the documentation of economic performance, official and unofficial. Another overlap that might do more, positively, to change the form of the survey may be the form of expression "Ned" chooses for its own economic prognostication.

As the National Economic Development Council begins "to examine the economic performance of the nation with particular concern with plans for the future," how will its purview be delimited from that of the sections of the Treasury concerned with this survey? There is little in this year's survey to denote particular concern with anything but the past; but short-term analysis and forecasting, at least internally, ought to be its main business. The advent of the new forward-looking body, looking longer ahead but unlikely to disregard short-term pointers, expressing its own expectations separately and perhaps more often, will now probably tip the balance towards modifying the pattern of the Treasury's own survey.

Such budgetary implications as can be sensed from the mood of its commentary are analysed, to their disadvantage, in a leading article on page 11. Provision of such tea leaves for reading remains one perfunctory purpose of each year's survey. Of late, however, Chancellors have tended jealously to reserve the Treasury's forward arithmetic of real resources, which used to be the main thing one looked for or tried to deduce from the survey, for the preamble of their budget speeches.

Comparisons of what happened last year with what the 1961 survey suggested would happen are not particularly relevant now, as official policy went into reverse within four months of its publication. This year's survey makes an effective comparison of expenditure between the first six months of 1961 and the second—marred only, for the Government's purposes, by the failure of exports to respond to treatment:

PERCENTAGE CHANGES, AT CONSTANT (1958) PRICES

	4th quarter, 1960, to 2nd quarter, 1961 Per cent	2nd quarter, 1961, to 4th quarter, 1961 Per cent
Personal consumption	+1·9	−1·2
Public consumption	+1·4	+1·9
Gross fixed investment	+6·3	−3·8
Exports, goods and services	+3·1	−0·6
Imports	−0·7	−2·9
Gross domestic product (factor cost)	+2·1	−1·1

The response of home demand to the measures of July 25th came partly by way of restraint on incomes: wages and salaries, which had risen more than 5 per cent from the fourth quarter of 1960 to the second quarter of 1961, rose only just over one per cent in the following six months.

Changes in stocks are notoriously the least easy element in national demand to identify and then to explain. The survey's stabs at explaining what happened to them last year serve incidentally to illustrate the pitfalls of phrasing in this kind of official gloss upon figures that are anyway open to considerable uncertainty. It may, eventually, be possible to reconcile succeeding statements such as "stockbuilding fell, but there was some recovery towards the end of the year"; "stockbuilding was substantial in 1960 and 1961"; and "the substantial fall in stockbuilding between 1960 and 1961"; but at first sight they look rather odd to anybody but the scholiast. The survey reckons that by the end of last year the level of stocks may at any rate have been rather high in relation to current output (which was falling); this would make possible some lag between resumption of a rise in output and the consequent build-up in inventories.

These official analysts remain more convinced that there was a strong pressure of inflation in the economy before those measures than were many outside observers; similarly, they regard what has happened since as in most ways more desirable than many others do. The squeeze on everybody's home demand except the Government's, combined with the failure of exports to achieve the increase Whitehall has been confidently predicting for so long,

> caused total production to fall a little and by the end of the year there were some industries in which plant and labour were not fully employed.

At the end of 1961, the survey reckons, employment and output were both about 2 per cent higher than in the first quarter of 1960: output per head had not grown. Between

Continued from page 63

1959 and 1961, indeed, domestic incomes grew at an average annual rate of 6½ per cent, while the value of domestic output grew at an annual rate of only 3¼ per cent. Domestic costs, therefore, were rising—at least until the pause—and the average price of total final output in 1961 was about 4 per cent higher than two years before. In the manufacturing industries, the rise in labour costs was more rapid. In 1959 a sharp rise in output per man hour had cut unit labour costs when prices were rising a little, which caused a sharp increase in profit margins. In 1960 and 1961 there was little change in productivity, and hence a large increase in unit labour costs. Prices did not keep pace with these and other costs: so there has been "almost continuously throughout the past two years . . . a rapid fall in both profits and profit margins."

In this survey the Treasury reiterates its confidence that opportunities for British exports this year are good—though the emphasis is perhaps a little less firm than in its utterances of a month or two ago, or those of ministers this week. Now the surveyors are less ready to guess just when their export ship will sail out; they are waiting upon the buoyancy of trade, of the primary producing countries, both ways, to show itself and supplement the rises already occurring in trade between industrialised countries. The one thing they are sure will go on rising dependably is the current expenditure of the Government and local authorities at its "underlying annual rate of increase" of 3 per cent. They accept that the private investment boom has passed its peak; this investment seems to them likely to be smaller this year, though an expected rise of 5 per cent in public investment may outweigh this and bring about a slight increase in the total of fixed investment. From larger incomes, and the likelihood of some increase in output later this year (presuming exports take off), they count upon some increase in personal spending; and the hire purchase cycle is approaching a stage in which it may swell spending on credit.

Assuming no more official stimulus, and some realisation of their export hopes, therefore, the surveyors predict "some increase in the pressure of demand as the year progresses"; perhaps "at a rate that may be relatively slow at the beginning but a good deal more rapid at the end of the year." And again assuming some export success, Britain's external position, on current and capital account, "should be . . . stronger . . . this year than last." Where they differ from outside observers is in their apparent readiness to rely on exports alone to stimulate expansion this year—and to regard the fall in private investment comfortably as providing slack for capital goods industries to increase exports?

One page of this survey is devoted to a fairly dilute technical assessment of this year's economic prospect; the rest of its forward looking is a short sermon on incomes policy and planning. The remainder assesses the recent past. The pattern of this survey, except for the text of each year's homily, is now becoming so standardised that if the present form were to be maintained one might suggest programming a computer to write it.

Car Salesmen Fear Freedom

WHETHER or not the government is about to act against resale price maintenance, the life of the dealer in new motor cars, which has recently become more competitive, is likely to remain so. Though a freer supply of new cars means a higher turnover for him, he must carry larger stocks, while the fall in used car prices and the need to offer more generous part-exchange allowances have cut into his margins. Dealers may talk nowadays as if the abolition of resale price maintenance would mean the end of their world, but it would hardly affect the 90 per cent of new cars sold for which a second-hand car is traded in. The dealer's profit margin is already far from guaranteed. But a competitive market has its compensations. Manufacturers—foreign as well as British—who are determined to increase their sales are at present anxious to get more dealers, though they are not yet wooing dealers quite as expensively as the oil companies woo petrol stations (sometimes the same businesses). And the finance houses, in their search for dealers who will not add too much to their load of bad debts, are now bidding against one another with commissions to add to the dealer's profits.

There are about 10,500 new car dealers in Britain now, and their number is gradually growing as more firms obtain a franchise. Foreign manufacturers in particular have recently been giving dealerships to small firms, and if Britain enters the European common market one can expect that this process will be accelerated. Among the British makers the British Motor Corporation and Vauxhall are making noticeable efforts to add to their dealer networks, but the other major companies, too, are anxious to get as many dealers as possible signed up before foreign makers can seduce them. And makers are also trying to persuade all their dealers to become exclusive—which is easier for BMC and Ford than for the second-rank groups, which can nowadays hardly offer big enough sales alone to give a dealer a living. At present BMC has 435 distributors and about 4,750 retail dealers, 78 per cent of the total being exclusive. Ford has 359 main dealers, all but two exclusive, and 1,600 retail dealers of whom about 30 per cent are exclusive. Vauxhall has 350 main dealers, 80 per cent of them exclusive, and 1,050 retail dealers, 50 per cent exclusive. Rootes is believed to have 160 main dealers and 2,650 retail dealers, 25 per cent exclusive; while Standard-Triumph International has 89 distributors and 1,600 dealers.

The basis for a dealer's operations is the profit that he gets on a new car. This margin is fairly standardised at 17½ per cent for a retail dealer and four per cent for the distributor—who supplies the retail dealers in his territory but sells direct to the public as well. Though competition for outlets is growing it has not yet pushed up margins. But there are some divergences; the British Motor Corporation and Vauxhall allow an extra one per cent to any dealer who sells their cars exclusively, Ford gives 18½ per cent to all its dealers and Rootes allows five per cent to its distributors. Raising the commission for hire-purchase business from 10 per cent to around 20 per cent effectively adds two per cent to the dealer's margin where he can persuade a buyer to take this form of credit—so one can expect that his arguments will be pressing.

Out of the gross margin a dealer has to pay for the full cost of the pre-delivery check and the first service on a new car; and

he is likely to have to pay something towards the cost of any work that needs doing under the maker's guarantee. In theory the manufacturer meets this expense in full, but he will not be pleased if a dealer sends in a claim that has involved less than an hour or so's work ; so the dealer usually bears the cost of any minor adjustments that a new car may need. And the payment for work under the guarantee is not generous ; it is usually calculated to do no more than meet the costs of an efficiently-run service depot. The many dealers who fail to reach this standard—or who have to pay high rates for premises or labour—are therefore liable to find that work under guarantee is done at a loss. Though they recognise that they are helping to keep the goodwill of their customer as well as the manufacturer's, they somewhat resent undertaking what they feel should be the maker's responsibility. It is significant that two now less strongly-placed makers, S-TI and Vauxhall, have done something to meet the dealers' complaints: S-TI has simplified the pre-delivery check on its cars, while Vauxhall claims that it pays more than any other firm for guarantee work.

Quite apart from work under guarantee, a dealer has normal repairs and maintenance to do. This is probably the part of his work where efficiency varies most from garage to garage ; yet it ought to cover the overheads of the whole service establishment, so that guarantee work does not form a drain on his resources. Schemes that pay the mechanic by results rather than time—containing the essential proviso that he has to do the work again without payment if it proves faulty—are one way of raising efficiency ; Ford is advocating such a plan to its dealers. The target for a dealer, some makers feel, should be to cover his costs and break even without selling new cars, so that the margin from sales represents pure profit.

Allowing for possible profit or loss on these servicing activities, and on cars they take in part-exchange, as well as the cost of holding stock, dealers seem able to earn from 20 to 30 per cent on their capital ; but, as one maker put it, the range may be from almost nothing to infinity (for a dealer with more liabilities than assets). Quality of management rather than size seems to be the determining factor—a sample of public companies in the business shows returns ranging from 7½ to over 25 per cent on capital. But the larger garage does have an advantage when competition gets fiercer in that it can offer a generous part-exchange allowance because it is better able to operate a second-hand business. One needs a minimum stock of about 20 used cars to get a good enough balance of models to maintain the quick turnover that is essential for a profit. A small dealer will usually have to re-sell the cars he takes in part exchange to other traders, getting perhaps 8 per cent less than the firm that re-sells them itself.

The availability of finance seldom limits the stocks of new or used cars that a dealer can hold, unless he is seriously over-committed. He can get loans on the security of his stock from the finance houses—most manufacturers make arrangements for their dealers to get such finance—or a larger firm can usually get bank overdrafts. But the cost will take two per cent off his margin if he holds a new car for three months, as the maker would like him to do in the winter. The dealers' heavy reliance on short-term loans to finance stocks makes the proportion of their own capital involved in the business relatively small, and so inflates the return they can earn on it. To get enough long-term finance is more of a problem for the smaller garage, as for other private companies.

WOULD the abolition of resale price maintenance really transform the dealer's position ? All that it would mean in practice is that the two sides of the bargain—the allowance on the old car and the price of the new one—would both become subjects for bargaining, to which only one side is subject now. It would also offer the 10 per cent of buyers who have no car to trade in a chance to drive a bargain too. But dealers feel sure that the public would become more pressing in bargaining once it knew that the actual price of a car could no longer be fixed, and they therefore expect that an end to resale price maintenance would squeeze their margins, too. From this they predict disaster, arguing

A SELECTION OF DISTRIBUTORS

that profits would be too small to allow them to maintain their existing service facilities, let alone expand them, that the smaller dealers would be forced out of business and the trade concentrated into the hands of a few large firms.

Such a picture seems unduly alarmist. Ending resale price maintenance would add something to competitive pressure, and there are probably some dealers who for a time would allow their new freedom to go to their heads and find themselves losing money on cars. But the experience of the past 18 months, during which some dealers were tempted to do just this by offering inflated part exchange allowances, should surely have done something to discourage this suicidal behaviour. And the answer to the problem of service is partly a matter of making it profitable in itself, as it should be, and partly for the manufacturers to allow the dealer to earn enough from guarantee work itself to make this profitable. There seems little reason for the bigger dealers to gain much from the change, for they already use most of their advantage in part-exchange bargaining. Small dealers have some advantages, such as closer contact with the public, which likes to buy its cars and have them serviced as near home as possible. These should continue to help them meet the competition of the bigger firms. Even with resale price maintenance, however, the less efficient are likely to go to the wall as competition grows. And only legislation would change the system. No manufacturer, however iconoclastic, would dare end it voluntarily, so strong would be the reaction of this trade.

Saharan Oil for Algerians

FOR a time, it looked as if the mineral wealth of the Sahara might be a major obstacle on the road to peace in Algeria. But the obstacle was removed as soon as the French switched their attention from political sovereignty to economic advantage. The compromise then worked out on Saharan oil and gas was included in the Franco-Algerian agreements signed last month at Evian. Indeed, it is now hoped in Paris that collaboration in the Sahara may create one of the strongest ties to keep an independent Algeria within the French orbit. The main provisions of the agreements, and some of their implications, are summarised below:

Compromise on co-operation

Along with independence, the Algerian government will acquire sovereignty over the whole territory, including the Sahara. Algeria will take over "rights, prerogatives and duties" that France exercised in the Sahara. It will also inherit such property throughout the country as belonged to the French state not directly, but as "government-general" of Algeria.

This means that the independent Algeria will take over such public utilities as electricity and gas in Algeria, including their shares in other companies. It will also inherit a 40.51 per cent share in SN Repal, the semi-nationalised company that has the largest stake in Saharan petroleum. (The French government will retain 40.51 per cent too: private French investors own the rest.) In addition to a half-share in the oilfields of Hassi Messaoud, and the gas fields of Hassi R'mel, SN Repal has important holdings in various companies concerned with the transportation or sale of oil and gas. It also has a 33 per cent share in Carep, a company exploiting a small oilfield in Algeria proper (outside the Sahara) ; 4.86 per cent share of Creps, which is developing the Edjeléh oilfield ; and a 10 per cent share in a refinery to be built in Algiers. Finally it owns 33 per cent of the shares in UGP, the refining and distribution company lately set up in France. It remains to be seen how the various Algerian holdings—through SN Repal, Gas and Electricité d'Algerie—will be consolidated.

Sovereign, the Algerian goverment will be able to pass new legislation in the Sahara. However, it has agreed in advance to respect vested rights. All the concessions and permits for exploration or transport granted before the Evian agreement are to run on and to be covered by existing legislation, that is to say the French *code pétrolier saharien*, with its fifty-fifty rule (a 12.5 per cent royalty brought up to a 50 per cent share of the profits by direct taxes). In case of conflict this code will commit the Algerian authorities to accept international arbitration.

This part of the Evian agreement provides that functions hitherto exercised by the OCRS (the Joint Organisation for the Saharan Regions) will be carried out by a new body, on which Frenchmen and Algerians will be equally represented. The new body will be responsible for the general management of Saharan resources. Its running costs are to be shared equally by the two partners, except that, for at least the first three years, Algeria is to make an additional contribution amounting to 12 per cent of its revenue from oil taxes.

On paper, changes in the Sahara should be gradual. Under the *code saharien* concessions are granted for fifty years and companies are guaranteed against tax changes for 25 years. New Algerian legislation could, thus, be applied only to portions of the Sahara not yet allocated or to parts that must, by law, be given up, periodically, for redistribution. But the French recognise that these agreements will work only if the Algerian government remains convinced that it has a stake in their preservation. In Paris, therefore, it is hoped that the oil companies, taking a long-term view of their interests, will adapt themselves to the requirements of a young state, particularly its financial needs. The working of any concession agreement depends considerably on the extent to which companies take advantage of the fine print. The Saharan agreements can survive only if the companies are guided by the spirit of collaboration rather than the letter of each deal.

More Equal than others?

The Algerian government binds itself in these agreements not to discriminate against French firms. Moreover, in the first six years, "on equal offers," French companies and their associates are to be given priority when applying for permits in new or redistributed territory.

"Equal offers" is a vague term. Obviously, terms that can be expressed quantitatively—the rate of investment promised, bonuses and rentals—can be taken into account. But the Algerians might also be tempted, as Kuwait was in 1960, by factors not necessarily written into the offer: the marketing opportunities offered by the integrated companies. If the French do hope to preserve a privileged position, it is mainly because:

(1) they will be represented on the Franco-Algerian advisory council ;
(2) France will be helping Algeria financially in other fields ;
(3) France will provide the chief outlet for Algerian oil.

Oil destined for consumption within the franc area, directly or not, will be paid for in French francs. For all shipments outside the area, Algeria will be entitled to drawings on foreign currency on terms still to be worked out. This is a clause which the French, with a cautious eye on their balance of payments, were eager to obtain.

Unwritten Assumptions

In the current state of the world market, the price for Algerian oil—$2.65 a barrel, posted price Bougie—is quite artificial, even if the 15 cents discount given to refiners in France who are forced to take quotas of the oil is taken into consideration. France has sufficient governmental control over its internal market for petroleum to compel all companies there to accept such quotas and this high price. On occasional sales to free buyers outside France discounts have been of the order of 60-75 cents a barrel, not 15 cents. Looking ahead to the time when Saharan production will exceed French needs, the French government has always pressed for a special position for Algerian crude within the European community. Algeria's independence will not relieve that pressure. In order to preserve its privileged position in Algeria, the French government will struggle even harder for a privileged position in Europe for Algerian oil.

Officials in Paris are pleased with this deal, which seems indeed a better outcome for the French interest in Saharan oil than anyone could have counted on. They know, however, that its success will depend on the fulfilment of several assumptions. First, the oil companies will have to play the game adroitly enough—but also with sufficient forbearance—to keep the Algerian government satisfied. (There is now no shortage of expert Arab advisers for the new government to choose from: one recent rumour is that the FLN would like to get Shaikh Abdullah Tariki, now that he has ceased to be oil minister of Saudi Arabia.) Secondly, sufficiently attractive market outlets for oil and gas will have to be found to maintain that satisfaction. Last but not least, these terms for oil and gas are part of a general agreement—and part of the French gamble that an independent Algeria can be kept close to France by economic ties.

BUSINESS NOTES

IN THE MARKETS

Hopeful Gust

With the budget only a few days away, equity prices suddenly shot ahead in the middle of this week, gaining more ground on Wednesday than on any single day for about six months. The gain in the gold and dollar reserves announced on Tuesday and the tone of the Economic Survey published on Wednesday brought a little more optimism into the market. The propect of expansion in a few months time hinted at by government spokesmen pleased, if only because of the contrast with the earlier, dreary platitudes about restraint; at the worst, dealers thought, the budget would be neutral and at the best might be mildly reflationary. Within the outer circle of slightly more reassuring economic influences, however, lay an inner ring of professional dealings. These were primarily concerned with the possible effect of the capital gains tax and were sufficient to give an added impetus to the rise. Hopes that the tax would not be made retrospective gained ground and encouraged a few bulls to buy ahead of the budget deadline. At the same time the professional market had to adjust itself to the possibility that the shortage of stock would be accentuated by a tax which would deter selling; the jobbers certainly did not want to carry a lop-sided look over the budget and hence there was a certain amount of bear covering.

For the moment, therefore, these sophisticated operations overlaid the general fear that the tax would put another brake on equity prices. This fear has kept buyers away from equities in the past few weeks and was not spirited away overnight by the operations of a few professionals who were looking to their own interests. Not surprisingly, therefore, the market was quieter on Thursday though prices remained firm. Nevertheless, the rally, which pushed *The Economist* indicator up by 9 points to 355.3, was an impressive one for a week when investors customarily stay on the sidelines. It was, moreover, confined almost entirely to equities, for gilt-edged prices were no better than steady—not least because the authorities' tactics in the money market suggested that a 5 per cent Bank rate was as far as they were prepared to go for the time being.

BUDGET OUT-TURN

The Accounting Figures

The Exchequer figures for the fiscal year just ended give the Chancellor an overall deficit of £211 million as a starting point for next Monday's budget calculations. Last April he budgeted for a small deficit of £69 million; in July the 10 per cent surcharge on revenue duties transformed this deficit into an expected surplus of £61 million. The shortfall is the result of a sharp increase in above-line expenditure and a rise in loans to nationalised industries below-line.

The above-line surplus at £410 million was up on the year by only £263 million compared with an expected increase last April of £359 million or £489 million if the revenue surcharge had brought in all that was expected. Ordinary revenue was surprisingly close to target in a year when the economy was subjected to a stiff dose of disinflation. And although customs and excise failed to increase by the full £130 million expected from the July surcharges, this was offset by better than expected increases in surtax and profits tax, charged on the previous year's income, and death duties.

Exchequer spending was well ahead of the budgeted increase for the full year; it was up by £448 million compared with last April's estimate of £215 million. Expenditure was inflated first by the steep rise in supply expenditure which exceeded the estimates by £181 million and second by the higher cost of servicing the National debt, which was £50 million up on the estimate of last April when Bank rate was 5 per cent. It was only in the final fortnight of the fiscal year that Bank rate returned to this level.

The Budget Framework

It is now possible to fill in some of the framework for the 1962-63 Budget. On the revenue side the surtax concession in last year's budget was estimated to cost the Exchequer £58 million this year. Against this, the increases in profits tax in the 1960 and 1961 budgets will bring in an extra £70 million in 1962-63, and on top of this the surcharge on revenue duties, if maintained at 10 per cent and renewed in August, would add a further £80 million in the full year. On this basis the Chancellor can therefore expect a rise in revenue of around £92 million.

Against this must be set the increase in expenditure on supply services to a total of £5,611 million in the fiscal year ahead, which is £243 million above the 1961-62 out-turn. On the other hand provided Britain manages to get through 1962-63

* Not adjusted for expected £130 million from 10 per cent surcharge on revenue duties. ‡ Supplementary and revised estimates presented during year totalled £248 million.

without pushing Bank rate back above 5 per cent the saving on the servicing of the national debt should be somewhere around £50 million. On this basis, total ordinary expenditure would be about £193 million higher. Thus if all else were to remain unchanged, and ignoring the buoyancy of income tax receipts which could add anything up to £300 million to revenues, as it did in 1961-62 despite the pay pause, the Chancellor could expect an increase in the past year's deficit of about £100 million, which would mean an overall deficit of £311 million for 1962-63. Mr Lloyd could adopt this figure as being entirely consistent with neutral budgeting; but if the Chancellor sought to give a gentle prod to the economy, he could suffer the overall deficit to rise without jeopardising his fiscal virtue.

Below the Line

Advances to nationalised industries make up four-fifths of net government expenditure below the line, the capital advances that are ordinarily financed by government borrowing. Next year these

are expected to come down by £44 million. Local authorities are continuing to make large net repayments (£58 million, expected in 1962-63) to the Exchequer. Richard Thomas and Baldwins and Colvilles Ltd. have had the bulk of their loans from the government. Cancellation of the special assistance to building societies should mean a net reduction in advances of £46 million from 1961-62 to 1962-63. In the field of

overseas advances, however, a substantial increase in export guarantees is expected.

Total advances below the line are expected to be £507.1 million, about £114 million less than in 1961-62. It has to be noted that last year's figure ran out £46 million more than was forecast at this time last year: but clearly the figures offer the Chancellor the prospect of a considerable reduction in these borrowing requirements, although public investment is expected to rise significantly.

GOLD AND EXCHANGES

Firm Favourite

On Tuesday Mr Brooke told the House of Commons that "sterling is now strong and people on the continent are envious of the favourable position into which we have now got ourselves." During March the sterling area's gold and convertible currency reserves rose by a further £10 million to £1,233 million. During the month, however, Australia repaid £62 million to the International Monetary Fund, buying the necessary foreign exchange in London from the Exchange Equalisation Account, so that the real increase in the reserves was £72 million. This means that, allowing for IMF repayments, the flow of funds into London in the first three months of the year have added £185 million to the reserves.

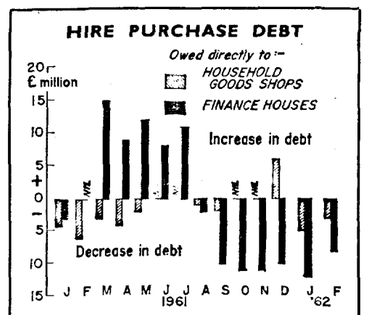
Now that Bank rate is back to 5 per cent it seems likely that this inflow of funds has abated. For although there is still a considerable margin between short-term rates in London and other centres, on a covered swap these margins tend to disappear and in some cases turn against London. The margin between the Treasury bill rate in London and New York is just over 1½ per cent, but the cost of forward cover is now 2 per cent. Equally, with loans to local authorities commanding only 5½ per cent there is now no profit in borrowing Eurodollars in London at 3½ per cent, converting them to sterling, covered by a forward contract costing 2 per cent, and then lending the proceeds to a local authority.

By mid-week sterling had risen to $2.81 1/16, recovering a good deal of the ground lost at the time of the last cut in Bank rate. This strength owes a good deal to the loss of colour among some of the continental currencies. The Swiss franc has again been weak and fell to 4.3480 against the dollar earlier in the week, but later recovered to 4.3450. The Swiss National Bank is reported to have entered the market, although it is not known on what scale. The weakness of the Swiss franc has allowed the United States Treasury to end its support of the dollar in the Swiss market and to repay the final $23 million Swiss francs outstanding on a National Bank loan used for support purposes. Also during March the Treasury borrowed $50 million in Italian lira. This is the second lira borrowing by the Treasury; the first, equivalent to $25 million, was made in January.

An intriguing event in London this week was the physical movement by chartered airliner of 10 tons of gold worth £4.1 million to Kuwait. The gold had previously been held on Kuwait's behalf by the Bank of England and no loss to the gold reserves is involved. However the real riddle—just why the Kuwaitis actually want their gold where they can touch it—remains unanswered. This is the first time Kuwait has shipped gold out of London for at least three years. Most countries like to own a token amount of gold that they can put in their central bank's balance sheet; last year Nigeria bought £7 million of gold from the Bank of England but it was content to leave the gold in the Bank's vaults.

PROFITS AND DIVIDENDS

Down Again



Twice the number of company accounts were analysed in this office in March compared with February, but the month's total of trading profits was little more than half February's total. The March figures were dominated by three companies—P & O, English Electric and Hoover—which accounted for nearly a third of the month's total profits. Shipping and electrical manufacturing groups were responsible for nearly all of the fall of 6.6 per cent in profits; profits in the other groups fell by no more than 2 per cent. Dividends fell for the first time since our monthly analysis of profits started last July.

PROFITS AND DIVIDENDS

* Excluding non-recurring credits.

It is always difficult to draw reliable conclusions from a single month's profits. A fall of 5½ per cent in January's profits (dominated by the steel companies), a rise of 5 per cent in February's profits (reflecting the experience of tobacco companies and Woolworth) and now a fall of 6½ per cent in March leaves total profits reported in the first quarter 2¼ per cent lower at £587 million. But the downward trend in returns on capital employed continues. While the latest figures relate to trading periods ended in December or earlier, there has been little supporting evidence in chairmen's statements with company

Hire purchase debt fell during February by a further £11 million. But credit sales of household goods slackened no more than is usual, while the new business of finance houses edged up again even after making allowance for the usual seasonal factors.

The car trade, however, was still slack compared with last year. Figures collected by Hire Purchase Information show that hire purchase sales of new cars in March, at 14,593, were 28 per cent below last year, and those of used cars were some 22 per cent short of the March, 1961 figure.

accounts in the last few months that British companies have yet begun to find trading any more profitable—though there is a growing belief that they will during the course of 1962.

CAR EXPORTS

What Hopes in America?

SHIPMENTS of British cars to the United States may have recovered this year, but there is no sign of an improvement in sales. So the long decline in stocks that began in the summer of 1960 is now being reversed. Stocks of British cars rose by more than 5,000 in January. Now that sports cars are the most popular type Britain sends to the United States, some stock accumulation in the winter might be expected. But the disturbing feature is that British sales in January were 20 per cent below those of January, 1961, while the total for imported cars was the same: sales of German, French and Swedish cars all rose.

Even the European performance cannot give much encouragement to importers, for the sales of American cars had risen by nearly 20 per cent, and the share of imported cars in the United States market declined by about one per cent to under five per cent. One might therefore expect that sales of imported cars should approach the 1961 level of 378,000, but that British sales are more likely to be around 60,000 than last year's 75,000 or so. The level of shipments may therefore soon begin to fall; the United States is not a market that holds out hopes of a massive rise in car exports.

EXPENSES AND TAXATION

Beyond the Fringe

ANYONE who still believes that it is easy to pluck the forbidden fruit of fringe benefits will be disillusioned when he examines the new form P11D which has gone out to employers this week. This revised form was foreshadowed by the Chancellor in his budget statement last year and is designed to give the Revenue more precise information initally about the expense allowances and benefits in kind received by directors and other senior executives. Mr Selwyn Lloyd added that he *did not* believe that it would in the end make more work as it "would save subsequent enquiries."

More precise it certainly is. Under fifteen headings, ranging from general expense allowances to benefits from the provision of shooting or fishing facilities, every conceivable type of benefit or expense is covered. The questions are cross referenced to the detailed notes which were issued last August and the fine-meshed net is cast widely and will land most of those it is designed to catch—saving only any who fill it in untruthfully. The repeated emphasis on the inadmissibility of the cost of travelling from home to office, whether by car or other means, will cause most difficulty, particularly where a car is in fact needed after the office has been reached. It is only rarely practicable to garage cars near to an office.

Whether the new form will save time in the long run is more doubtful. It will take a lot of filling up and where many employees are concerned it is quite unreasonable to expect that it can be submitted by May 5th—under a penalty of £50 and a further penalty of £10 a day while the default continues. It is also wrong that the form should have to be signed only by the employer. The disclosure of information which may lead to tax liabilities ought to be the responsibility of the taxpayer himself and he should not be able to look to the unfortunate company secretary or accountant who will have to complete and sign the form to carry his conscience for him. Subject to these two points the Chancellor is entitled to point to the slashing reductions which have been made to the marginal tax rates of the higher executives in recent years and to claim that unreasonable benefits and expenses ought at last to be firmly controlled.

STEEL

Change in the Federation

IT seems open to question whether the British Iron & Steel Federation will appoint another independent chairman to succeed Sir Ronald Morison, whose appointment was terminated by mutual arrangement last week. This post is written into the constitution of the federation: it dates back to the thirties when the federation was formed to bring together a number of trade associations and conferences representing different parts of the industry, whose interests were not always parallel. A chairman from outside, above any potential conflict, was considered advisable; the appointment also suited the rather special responsibilities given this organisation during a period when the industry was being pressed by governments to reform itself behind a tariff.

The job was tailor-made for the late Sir Andrew Duncan, and he made it central to the whole running of the industry. Since his day, its significance has waned. Other centres of independent scrutiny and supervision were set up for the steel industry: the federation itself became more simply representative of the steelmakers, within whose groups open conflicts of interest have been much less frequent since the war. It could be, indeed, that the present supervisor within Britain, the Iron and Steel Board, will not survive British entry into the common market. But that would still mean a considerable degree of supervision from a more distant supranational body, the European Coal-Steel Community. And the federation, to ECSC, would be even more simply another trade association representing one sectional interest.

Last autumn, in a reorganisation within the secretariat of Steel House, Mr E. Senior, its general director, was given more power and even more direct access to the federation's council. How or whether the federation chooses to alter its constitution remains to be seen; but independence of the industry at the top of its trade association may well now seem to steelmakers far less essential.

OIL

Whose New Price?

WHILE its negotiations with General Qasim dragged on and finally broke down, followed by partial expropriation of its concession area, the Iraq Petroleum group was completing various major investment projects. One of them, a new £20 million offshore oil terminal now christened Khor el Amayah, south of Basrah, is expected to begin pumping oil in its first "flushing out" operation today, Saturday. The first tanker scheduled to load oil there is one of British Petroleum's: and as oil "lifted" has to be given a value for tax and other accounting purposes, it was expected that BP would be the first corporate shareholder of the IPC companies to publish (or "post" in the jargon of this industry) a fob price ex-Khor el Amayah this week.

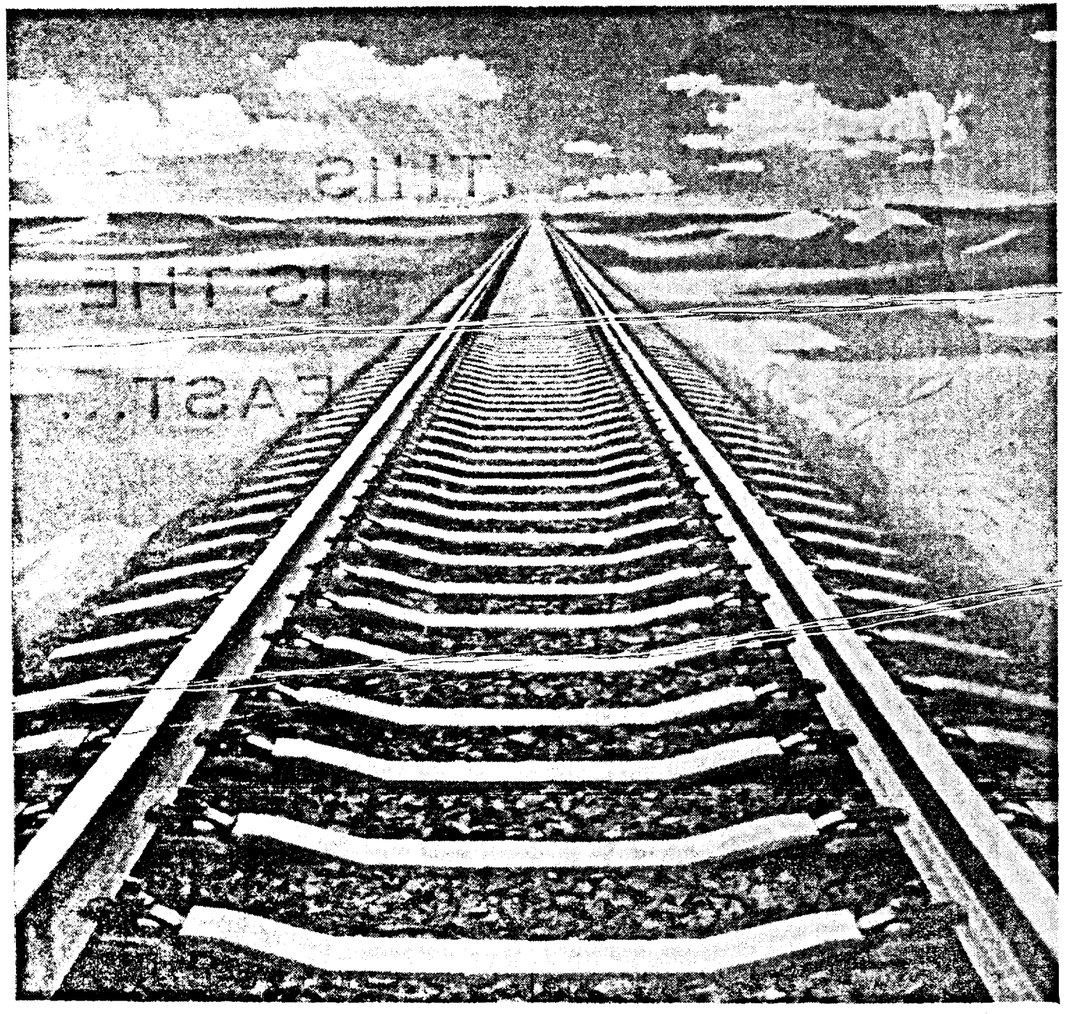
Instead, the French partner, *Compagnie Francaise des Petroles*, was the first to post a price for deliveries from this terminal though its own first deliveries are not due for a week or so. And the reaction this provoked from BP, broadly supported by the other integrated companies that are IPC partners, made it clear that they thought the price CFP had set was too high. Its figure was $1.78 a barrel, as against the $1.72 charged for Basrah crude from Fao, the oil loading port in Basrah harbour. The BP view, shared by the other partners, appeared to be that the new price should have been about the same.

Arguments on both sides were partly related to the dues payable at Fao and the new terminal, and partly to the refining value of this crude oil in relation to others available in the Persian Gulf. The new terminal offers some savings in costs—and port dues—to tankers lifting Basrah oil. But BP and other companies would argue that since Fao prices were last altered, increases in dues payable by tankers there have made its posted price several cents too high in comparison with other loading points in the Gulf—enough to offset the savings a tanker will get by loading at Khor el Amayah, and justifying as high a price at the new terminal as at the port (until the Fao price can be adjusted downwards). The Iraq government, which has an interest both in the profits shown at posted prices and in the

THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-seven territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE CHARTERED BANK



Incorporated by Royal Charter, 1853

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

West End London branch: 2 Regent Street, London, S.W.1 · Branches in the United Kingdom at Manchester and Liverpool, in Germany at Hamburg and in the United States at New York

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) · The Irano British Bank (Incorporated in Iran)

THE SHORTEST DISTANCE BETWEEN YOUR FACTORY AND THE DOCKS IS 2 STRAIGHT LINES

London Midland offers an important priority service to British exporters: *Export Express*. *Export Express* links selected docks by rail overnight to factories in major industrial centres of the London Midland network between London, the Midlands, North and North West. **For full wagons and container loads the assurance to exporters is: at your factory today, at ship's side tomorrow.** Safe. Sure. In all weathers. No extra cost. No red tape. No anxiety. Priority for export goods on trains running to timetable. Today, tomorrow, all through the working week. If you are concerned with shipping goods abroad, *Export Express* can take a great load of freight problems off your mind. Ask your nearest London Midland Station Master or Goods Agent for the latest details of the service. London enquiries ring AVEnue 7535.

LONDON MIDLAND RAILWAY'S EXPORT EXPRESS

dues payable, will be watching this disagreement with interest. Up to the time that *The Economist* went to press BP had not taken the responsibility of posting a different, and lower, price ; but it still seemed convinced it was right.

AIRCRAFT INDUSTRY

Short's Future

THE heyday of Short Brothers and Harland as manufacturers of aircraft coincided with that of the flying boat in the thirties. Short's Belfast factories are unique with huge doors opening directly on to the slipways outside. During the war, the Government acquired a majority shareholding in the company ; it has been wondering what to do about this ever since. Two years after Mr Sandys's shot-gun reorganisation of the aircraft industry, the future of the Short factories remains undecided.

Mr Butler told the House of Commons during last week's Northern Ireland debate, "I have not got any final answer on the subject of Shorts to give today" and his audience would have been struck dumb with surprise if he had. Neither big aircraft group is any more anxious to take over Short than they are to buy Handley Page, perhaps even less so since whoever buys the Belfast factories will have to promise work for the company's 7,000 staff ; it is one of the biggest employers in Northern Ireland. When the Bristol Aeroplane Company badly needed extra assembly space some years ago, it acquired a 15¼ per cent holding in Short from the Government ; this it still holds, leaving the Government with 69¼ per cent, the balance being held by Harland and Wolff. Since then, there have been no new takers.

The company's order book is now running down. The Government has to decide whether to let Short run down with it or divert new work to Belfast and risk the unbridled wrath of Hawker Siddeley and the British Aircraft Corporation. Short's present order book spans two extremes. The Seacat missile is a poor sailor's rocket selling well abroad—the touchstone of a good design. Then there are ten huge "Belfast" military freighters, whose civil prospects depend on whether air freight users will be seized with the urge to fly 50-ton chunks of machinery to their customers (stranger things have happened). This work fills only a few odd corners of the echoing hangers; its work on vertical take-off with Rolls-Royce is at a standstill. But Short is nevertheless a force to be reckoned with. Its independent design is good, whenever the company is given anything worth designing, and occasionally touches heights of excellence. Its efficiency and ability to deliver on time compares well with other factories in the industry. The Government's dilemma might be a great deal easier if Shorts were less competent.

SCIENCE

The Quiet Sun

AFTER the International Geophysical Year, which lasted 30 months, comes the Year of the Quiet Sun, scheduled for a mere 24, from January, 1964, to December, 1965. The IGY was timed to span the peak of the eleven-year sunspot cycle, when sunspots with their associated storms and flares are at their maximum. It succeeded almost too well. The IGY hit on the most intense period of sunspot activity since records began 200 years ago, and flares followed each other off the face of the sun in such numbers that their effects swamped the records.

The coming Year of The Quiet Sun is timed to coincide with the quietest period in the eleven-year cycle, for two reasons. One is to take measurements in the atmosphere when there are no sunspots about, which scientists describe as putting the base line on to the IGY graphs. The other is to find out what really happens when the sun throws off one of the great flares that accompany its storms.

There is a time-lag of 30 to 40 hours between the coming of the flare into being, and the start of the magnetic storms that it causes here, upsetting the weather and blacking-out radio communications. The IGY had so many storms that it was rarely possible to follow one single flare through from start to finish before its effects were overlapped by another. The rare storms during the Quiet Year should stand out clearly.

BANK OF CANADA

A Good Beginning

MR LOUIS RASMINSKY opens his first report as Governor of the Bank of Canada with the text of his admirable statement issued last August, a few weeks after the painful public shouting match that preceded Mr Coyne's resignation. This statement was a classical exposition of what the responsibilities of a central bank and its relations with the government should be. It approached the functions of central banking with a humbler and more contrite heart than Canada had recently been used to, but gave the Canadian government, which had been only too prone to evade its ultimate responsibilities for monetary affairs, courteous but firm notice that Bank and government must evolve close working relations.

Evidently a useful start has been made. These matters will be in the forefront of the deliberations of the Royal Commission on Banking and Finance. Mr Rasminsky does not anticipate the evidence he will give, but he does specifically refer to the method by which Bank rate has been determined since November, 1956. For more than five years, Canada's Bank rate has been set each week at ¼ per cent above the treasury bill rate ; it has thus emerged as a resultant of the weekly bill tender, and not positively determined by the needs of monetary or economic policy. The method has been criticised alike by commercial bankers and also by monetary students who argued that whatever value could be claimed for the method as an ancillary to money market arrangements, it afforded no opportunity for exploiting the wider psychological uses of Bank rate. On this question, Mr Rasminsky is keeping "an open mind until all those with a major interest in it have had a chance to express their opinions."

On the change in Canada's exchange rate policy, the report picks its words carefully—and eschews any reference to the misgivings that the International Monetary Fund has expressed. It is, indeed, only since the turn of the year that the costs of the policy on the reserves have become apparent though they were inherent in deliberate depreciation from the moment it was introduced last June. By the year end, the reserves stood at $US 2,056 million, retaining much of the benefit of the increase that occurred in the third quarter when, against Mr Fleming's intentions, there was a heavy demand for Canadian dollars. The trend has since been reversed dramatically: at the end of January the reserves were down to $US 1,922 million ; at end February to $US 1,746 million ; and informed observers put the March loss at between $US 40 million and $US 50 million, with intense pressure at the beginning and end of the month, and apprehensions of longer run pressure resulting from American efforts to conserve gold. The government's decision again to allow borrowing in the New York market (though accompanied by ambivalent warnings against doing so) suggest that deliberate depreciation of the exchange rate is now not intended to proceed at more than deliberate speed. The rate is now Can. 104⅛, compared with 104½ at the year end.

COTTON TEXTILES

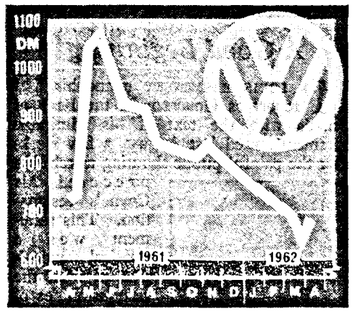
Lancashire United?

REBUFFED at the Board of Trade, the cotton textile industry believes it has a case for more protection that ought to go on appeal to the Prime Minister's office. Pressure for a Cotton Board delegation to seek an audience began at least two months ago. One possible reason for the apparent delay may have been the need to secure a uniform voice among the delegates ; another may have been the political aspects of making such a request at this juncture. The

Cotton Board has been a godsend for any government that does not wish to know the difference in the degree of danger from imports to manufacturers of weft and warp yarns or to get entangled in arguments for and against vertical integration. The Cotton Board refines gruff Lancashire accents and technical jargon into passable Whitehallese, and brings down the tablet from the mountain when the Government decides to reshape the industry. It naturally gets more kicks than ha'pence for its pains.

No body which consistently fails to get the required results can endear itself to manufacturers; but talk of a widening rift within the Cotton Board comes oddly at a time when the industry is displaying an unaccustomed degree of unanimity. Within the board, each estate of the cotton realm has more or less equal representation. The four employer members represent spinning, weaving, finishing and merchanting respectively. They are balanced by union representatives. Two independents—one of whom stood down this week—and the chairman represent outsiders. The spinners complain that when it comes to paying dues they are more than equal but finishers and merchants with whom they do not always see eye to eye have an equal say in policy.

But the steamroller of Asian imports and common adversity seems to be pressing all sides of the industry into a similar frame of mind. Finishers have been hit by increasing imports of finished cloth. On Tuesday, the president of the British Spinners' and Doublers' Association said at its annual meeting that producing sections of the Lancashire cotton industry had the support of finishers and merchants in trying to secure a more definite response to appeals for action to curb imports of yarn and cloth. This pressure will therefore be harder to resist. At the same time the industry has been demoralised to the pitch at which the chairman of one of the biggest spinning combines can declare: "It is no use fighting among ourselves in present conditions. Keen friendly rivalry is one thing but cut-throat competition is another. All that is to be gained by it is that we shall go down fighting."



Volkswagen down to Earth

BY A CORRESPONDENT IN FRANKFURT

The magic of Volkswagen has proved to be of much shorter duration on the German stock exchange than on the roads. In April last year, one and a half million people—office employees, housewives, and the retired—joyfully took up their allotments of "people's shares." These stock exchange newcomers have learned, sooner than they might have expected, the lesson that share prices are subject to considerable fluctuations. Within a few months the DM 100 nominal share has slumped from DM 1,100 to DM 650—an even steeper fall than that in the German market as a whole. The special efforts taken by the German authorities to boost the shares and to offer them to a wider public are now having boomerang effects.

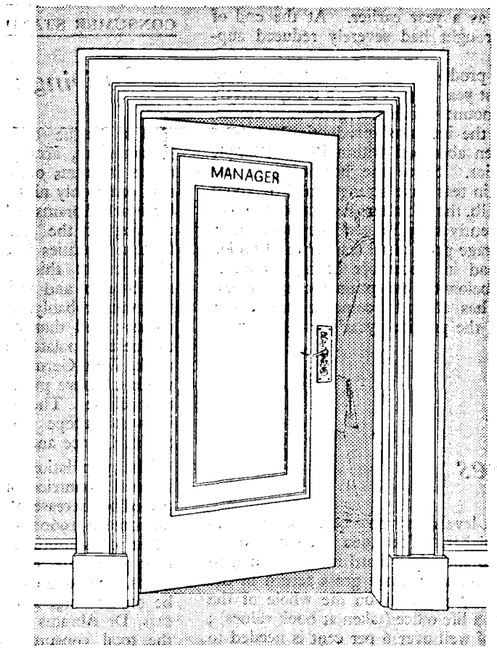
The Federal Government and the Land Government of Lower Saxony, as owners of the Volkswagen plant, decided in March, 1961 to offer to the German public Volkswagen shares valued at DM 360 million, 60 per cent of the basic capital. The shares were offered at the price of DM 350, with a reduction of from 10 to 20 per cent based on the buyer's income: and they were offered only to people whose annual incomes did not exceed DM 8000 (around £700) if single and DM 16,000 for married couples.

People in higher income groups, business organisations and foreign investors could purchase Volkswagen shares only after they were officially offered on the German stock exchange, in April, 1961. Interest in the shares was intense, and extended to foreign investors: the price of the shares rose sharply and quickly. Many of the new shareholders began immediately unloading their shares and the price settled at about DM 750, thus bringing those who sold a profit of 100 per cent. But profits on shares sold within six months of purchase are subject to income tax in Germany, so the big

rush to sell came only after six months—that is, last autumn. Meanwhile the appetite of investors for Volkswagen shares had fallen off sharply with the general weakening of the German market. Their present price of DM 670 is certainly more realistic: even so it offers a yield of only 1.8 per cent. Original purchasers still show a profit on their investment: but the sharp loss of their peak capital appreciation has produced an unfortunate climate for further experiments in issues of "people's shares." So, for the time being, plans for the return to private ownership of other undertakings whose ownership is vested in the Federal Government have been postponed.

NORTH BRITISH LOCOMOTIVE

End of the Road



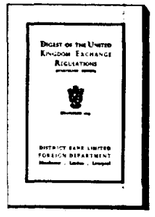
The decision of the directors of North British Locomotive to recommend the liquidation of the company marks the end of its prolonged death agonies. Ever since it decided to turn itself from a maker of steam engines into that very different animal, a builder of diesel locomotives, the company has been operating at a loss. No preference dividends have been paid since the end of 1955, and the accumulated loss had reached £2,320,000 by the end of last year. Despite the injection of £1¼ million from the Treasury and £500,000 from General Electric in 1959 (plus a bank overdraft of £1.3 million at the end of 1960) the chairman, Dr T. Coughtrie, says that lack of capital has been one of the company's most serious difficulties; it "can no longer undertake home business where progress payments are not available or foreign business where long-term credits are involved." On the production side, he said, "we could give no assurance that problems affecting labour intake and production of transmissions could be resolved without some further trading loss." He did not add that the company had received its last order from the BTC in 1958.

Ordinary shareholders will wonder whether there will be anything left for them after the preference shareholders, the bankers, Treasury and GEC have all been repaid. On the basis of the end-1960 figures for assets and overdrafts there would be 3s. a share if book values could be realised; but fixed assets were valued at the end of 1959 on a "going concern" basis, so though the chairman states that there was still a surplus at the end of last year, it must be problematical whether it can be realised in practice. The chief hope of a surplus lies in the property that the company owns in Glasgow; but the odds against this are reflected by the price of 7½d. to which the ordinary shares have slumped this week.

TEA

Taking Stock

Unlike many commodities, tea has the priceless asset of a virtually unfathomable market. Hundreds of millions of Indians are ready to take more tea with their water at the right price, and most of the 100 million lb prospective surplus of tea from the current crop seems to have popped down that drain. The unexpected elasticity of demand for tea caught the tea market on the wrong foot, and tea that failed to attract a suitable offer towards the end of last year has come up again and been auctioned with no difficulty at considerably higher prices. It also casts doubts on the accuracy of the Food and Agriculture



DO YOU KNOW YOUR BANK MANAGER
-AND DOES HE KNOW YOU?

In any bank, the moment of truth comes when you need help. Not necessarily money. Perhaps just advice, or guidance through some labyrinth of regulations. Perhaps an introduction, or information about a foreign firm.

That's when you call on the manager. How much he can help you depends partly on how much time he has. Inevitably, it makes a difference if you're already well acquainted and he knows your circumstances.

All banks want to be helpful. It's much easier when the branch you deal with is not so big that service becomes impersonal. Most District Bank managers are able to know practically all their customers—in general, we like our branches to be of a size where this is possible.

There are over 570 District Bank branches, and more are being steadily added. In each of them we aim at giving a complete and unusually personal banking service, both for businesses and for private people.

HELP FOR EXPORTERS Through any branch you can call on the full service of our Foreign Department, which has a reputation for sound information on overseas markets and expert handling of foreign transactions. A copy of our *Digest of the United Kingdom Exchange Regulations* (14th edition) will be sent on request. This brings together in handy form the main requirements of the exchange regulations—arranged and indexed for ready use.

DISTRICT BANK 1829
helps you make the most of your money

A complete banking service for business and private customers ... over 570 branches and steadily expanding

Head Office: Spring Gardens, Manchester, 2. *City Office:* 75 Cornhill, London, E.C.3

Organisation's long-range forecasting, with which Indian producers are apparently not in full agreement.

The FAO's prediction of a potentially damaging surplus of tea is based on more than a cursory reading of the tea leaves, but is unavoidably hedged about by the sort of pitfalls that upset reasonably confident predictions of weakening prices this year, though from hard experience the tea trade has learned to be prepared for the unpredictable. Under the threat of surplus, prices of plain teas fell by about 1s. to 2s. 7d. a lb by the end of last year. But when the customary stocktaking took place at the end of the year, North Indian estates found they had as little tea remaining for export to London as a year earlier. At the end of 1960, drought had severely reduced supplies.

India produced an extra 73 million lb of tea last year; apart from a comparatively small amount which has gone into stocks, most of the increased production seems to have been absorbed within its own ample boundaries. Since the beginning of the year, plain teas have strengthened by about 1d.-5d. a lb, though after the recovery, prices have recently shown a tendency to relapse. The average price of all teas sold in London which had in December been running at 9d. a lb below the exceptional level of a year earlier has recently come within a few pence of the previous year's level.

LIFE ASSURANCE

Peak Bonuses

HOLDERS of with-profits policies continue to do well, with the life offices whose trading periods—covering up to five years—ended in 1961 declaring bumper bonuses. Keen competition for new business ensures that the benefit of high interest rates and of buoyant dividends and rents is passed on to the with-profits policyholders; and bonuses are boosted in most offices by the bulk of the surplus from non participating contracts, including pension schemes. In addition to normal bonuses, a few offices have in recent years used part of their capital gains to finance special distributions.

ORDINARY LIFE PARTICIPATING POLICIES
(Bonus per cent per annum)

	Annual Distributions		
	1956	1960	1961
Britannic	40/–S	50/–S	52/–S
Co-operative	40/–S	48/–S	52/–S
London Life (a)	42/6C (e)	50/–C	50/–C
Norwich Union (b)	42/–S (c)	55/–S (c)	60/–S (c)
Provident Life	40/–S	50/–S	60/–S
Prudential (c)	42/–S (f)	56/–S (f)	60/–S (f)
Refuge	38/–S	46/–S	50/–S
Standard	42/–C (g)	42/–S (h)	42/–S (h)
Wesleyan & General	32/–S	44/–S	46/–S

	Triennial Distributions		
	1955	1958	1961
Equity and Law (d)	50/–S (i)	60/–S (j)	60/–S (j)
Scottish Mutual	44/–S	50/–S	52/6S

	Quinquennial Distributions		
	1951	1956	1961
Midland Employers'	32/–S	44/–S	55/–S

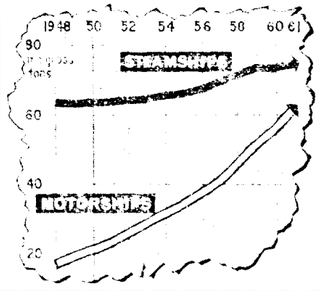
S = Simple bonus calculated with reference to the sum assured only. C = Compound bonus calculated upon the sum assured and existing bonuses. (a) In an alternative class bonuses take the form of reductions in premiums. (b) On endowment assurances, a higher rate of bonus was allotted to whole life assurances. (c) On United Kingdom policies; different rates apply overseas. (d) Minimum rate; bonuses on sliding scale. (e) Plus special bonus of 47s. 6d. per cent compound. (f) Plus special bonuses depending on age of policy. (g) Plus 42s. per cent on existing bonuses. (h) Plus 84s. per cent on existing bonuses; and in 1960 an additional bonus of up to 10 per cent of sum assured. (i) Plus special bonus of 50s. per cent compound. (j) Plus 40s. per cent on existing bonuses.

Life offices do not declare higher normal bonuses than they can reasonably hope to maintain. The table suggests that offices whose bonus rates have reached exceptionally high levels may now be reluctant to go much further. The 1961 accounts so far published show how hard it is becoming to improve on an average gross return in the region of 7 per cent on the whole of the funds of a life office (taken at book values); a yield of well over 6 per cent is needed to support the bonuses in excess of 50s. per cent compound that some offices have established. If dividends were to remain frozen, either by request or by economic fact, the already perceptible swing of the life offices' new money towards fixed interest stocks would doubtless become more pronounced.

With-profits policies will prove to be very satisfactory investments if bonus rates can be kept close to the current level—which depends on the course of future profits, to which they are linked. Premiums for non participating assurances have been progressively reduced and are attractive to people who are not prepared to take the equity risk that is inherent in with-profits policies. Last year's increase in life and annuity funds (including industrial assurance) of £515 million, compared with £490 million in 1960, as estimated by the life offices' associations, reflects the attractions of life assurance and pensions contracts.

In announcing higher bonuses for its policyholders at its triennial valuation, Equity and Law has raised its tax-free dividend from 3s. 6d. to 5s. 4d. per £1 share (8s. 6d. paid). The directors propose to call up the unpaid liability of 11s. 6d. per share and then to split the shares into 5s. units. This proposal will give the shares trustee status and may improve their market. The directors say that the dividend will not be altered "in normal circumstances" during the coming triennium and they have taken account of the interest which should be earned on the £575,000 which is being called up. But on yield considerations the shares were marked down sharply to £32½ on Thursday.

CONSUMER STANDARDS



Living in Europe

IN a league table of west European countries, arranged according to their riches in terms of income a head, Britain may come only ninth in 1970, according to Dr Mark Abrams. Addressing a luncheon meeting of the Metropolitan and South Eastern Counties of the British Institute of Management this week, he pointed out that Sweden and Switzerland certainly, and Belgium probably, already have higher incomes; and that if past rates of growth can be extrapolated, France, Norway, Denmark, West Germany and the Netherlands would all have pulled ahead by the end of this decade. The only poor countries left in west Europe would then be Portugal, Spain, Greece and southern Italy.

The population of the seventeen continental countries of west Europe is expected to increase by 10 per cent from 250 millions in 1960 to 275 millions in 1970. Their consumption, Dr Abrams reckons, may go up by as much as a half in real terms. Although the biggest increases will be on housing, household equipment and cars, Dr Abrams guesses that one-third of the total consumer expenditure in these countries in 1970 will still be on food, a higher proportion than in Britain now. He also foresees a vast teenage market, spreading, it would seem, across the channel, since he believes teenagers' tastes, unlike those of their parents, are much the same in any European country.

THE WORLD'S FLEET

Since 1948 the world's fleet has risen by nearly 56 mn gross tons to 136 mn gross tons. Motorships with diesel engines have accounted for four-fifths of this increase. Oil has now almost completely replaced coal in steamships: the proportion burning oil has risen from 71 per cent in 1948 to 92 per cent in 1961. Among steamers, turbine engines have been ousting reciprocating engines: their share has risen from 22 to 52 per cent over the thirteen years while that of reciprocating engines has dropped from 67 to 39 per cent.

CHEMICALS

Comparisons with Europe

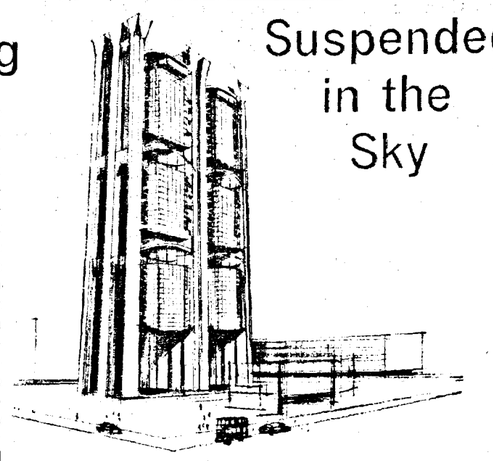
MR HUTTON-WILSON, vice-Chairman of the Association of British Chemical Manufacturers, wound up one of its conferences at Harrogate last week with some comments on the opportunities for chemicals in the common market. He said that the British chemical industry, which has to rely on imported raw materials and comparatively expensive power, starts "with the dice loaded against it." But the potential of the market is such that great efforts are justified; the total European trade in chemicals is about £750 million a year. At the moment, Germany holds 35 per cent of the mutual trade in chemicals in OECD countries while Britain holds 13.5 per cent. Yet the turnover of the German chemical industry is of the same order as that of Britain—£1,850 million in 1960 (compared with £1,810 million).

The industry is sensitive to government action to a degree that, Mr Hutton-Wilson thinks, the government does not appreciate. Dumping in particular is a practice to which the chemical industry is peculiarly prone, and one which the government can do much to prevent. Mr Hutton-Wilson listed a number of problems "currently causing concern" which could affect the competitive power of the industry:

- delay in implementing anti-dumping legislation;
- taxation on fuel;
- foreign government aid to competitors, e.g., through export subsidies; and
- the unequal burden of taxation and legislation on costs in the UK.

If Britain does join the EEC, Mr Hutton-Wilson added, it is bound to learn that the "main consideration for industry is to produce goods rather than jobs."

In his list of problems, Mr Hutton-Wilson was less than fair to the government on the questions of dumping and export subsidies. While the Board of Trade has the power to impose anti-dumping duties quickly, it regards duties as a last resort and prefers to take its time in examining applications; so far its decisions are generally thought to have been unexceptionable. In any case, export subsidies and dumping between EEC countries should be effectively dealt with under the Rome Treaty.



RESTRICTIVE PRACTICES

No Shelter in the Crown

THE agreement between the telephone manufacturers, by which they choose the company to supply the Post Office with apparatus under a quota system, was declared to be registrable under the Restrictive Trade Practices Act by Mr Justice Wilberforce in the Chancery Division this week. The manufacturers had argued that their agreement did no more than provide the mechanism for carrying out the agreement they had made with the Post Office in 1952, whereby they were to form a committee which would nominate one of the eight manufacturers to supply each of the Post Office's orders, while it would inform the committee of each order and give it a fortnight in which to select the lucky manufacturer. And, even if it was held to place more restrictions on their freedom than their agreement with the Post Office did, they argued that it was not registrable because to do so would prejudice the interests of the Crown.

Mr Justice Wilberforce agreed that this

Building Suspended in the Sky

HANGING a bridge from cables is a technique familiar enough by now; but using the same principle for a building—yet alone one 650 feet tall—sounds to the layman more like science fiction than fact. Such a project has, however, been prepared by a London consulting engineer, Mr Gordon Rose, and the Colman group has applied for planning permission to build it. Using so unconventional a method of building has a genuine technical appeal; moreover, Mr Rose estimates that the proposed building would cost 20 per cent less than one built by conventional methods. And the higher one builds, the greater may be the advantages of this new method.

The principle of the structure is simple: to place only compressive or tensile loads on the structural members. If the main pillars that carry the weight of the building are subject mainly to compressive loads they can be made taller than on a conventional building without needing to be made uneconomically strong; and if they are outside the inhabited structure, and this is made in several sections suspended from the pillars by cables—the strongest method of taking tensile loads—the structure need intrude little into the rooms. Mr Rose makes the load on the pillars mainly compressive by fixing half of the cables that carry each section of the building to a curved arch, and half to a separate cable inverse to the arch and below it. The only bending loads on the pillars come from wind forces; each floor is connected to them (the blocks do not swing in space) but these connections do not carry any of the weight of the floor. The cables carry all the weight; they would be encased in concrete to give the usual protection against fire.

The sequence of operations in erecting such a building would be first to erect the pillars. When these had reached the level of the first arch, this arch would be cast and its balancing cable placed in position; then the cables that would carry the floors below would be lowered. Then the floors would be cast and secured to the cables, starting from the top; and the same would apply to each section of the building—their number depending on the height desired.

The saving in cost claimed for this structure comes partly from the more efficient use of materials that it provides, and partly from the opportunities it gives to use more advanced structural methods. The size of each pillar, for example, and the number of identical floors, would make it economic to use the "moving form" method—a semi-permanent mould that is moved as each section is completed—which is a quick and cheap way of casting concrete if a large shape has to be repeated often enough. And the size of the foundations would make it worth employing more elaborate machinery than on a normal building.

The appeal of this technique is not just that it makes taller buildings cheaper; it also makes them more flexible in design, layout and situation. They need not be rectangular in shape, for the width of the pillars can vary; less space inside is taken up with structural members, as the cables are so much thinner than the normal pillars that they can fit into partitions; and the ease with which the building can straddle an open space makes it ideal for placing over railway tracks. So despite the startling nature of the proposition, this is a technique that may well succeed—if tall buildings are wanted.

argument was an attractive one, but he found that the agreement between the manufacturers was restrictive in that the secretary of the committee was empowered to nominate the company to receive an order on the basis of a quota system: each manufacturer is entitled to an equal share in the business available. By giving the secretary the power to exclude them from any order, Mr Justice Wilberforce held that they were accepting a restriction over and above that imposed by their agreement with the Post Office. He also held that even if the Restrictive Practices Court should consider that the quota agreements between the manufacturers were against the public interest, the Crown's interests would not be prejudiced. It was only concerned that one manufacturer would be chosen to fulfil each order, not with the manner in which this company was selected; the committee would just have to vote on this. Real competition in telephone manufacturing, it seems, would however have to wait on a change in Post Office policy.

THE GOLDDISKONTBANK

The Dego Deal

THE west German Government last week accepted its obligation to the preference shareholders of the long defunct Deutsche Golddiskontbank (Dego), the majority of whom are not German nationals, with an offer worth £13.5 million. Holders of the Reichsmark 84 million Dego 4 per cent cumulative preference shares are offered DM 170 for every RM 100 nominal, and holders of the RM3 million Dego "B" shares are offered DM 120 for every RM 100 nominal. The offer is roughly equivalent to the nominal value of the shares plus the accrued interest since 1945. It is some way below the DM 210 the shareholders' protection committees felt the shares were worth, but these committees have heaved a sigh of relief, closed their overflowing files, and recommend acceptance of the offer.

The Dego affair has its origins in the bitter years between the two World Wars, when the allies hung a burden of reparation debt around Germany's neck that inevitably pulled its face down into the mud of default. This default brought a slump in the prices of German foreign bonds; the Reichsbank, through its subsidiary Dego, seized this opportunity to buy back part of the debt with what little foreign exchange it had left. In 1939 Hitler could not bear the thought that the Reichsbank had foreign shareholders—the bank had been reconstituted in 1924 largely with British and American capital—and these shareholders were forced to swap into shares of the Golddiskontbank, the dividend of which was guaranteed by the Reichsbank. The war came and the Reichsbank and Dego disappeared, but Dego's portfolio of foreign bonds remained and as Germany climbed back on its feet, what in 1945 was a write-off became increasingly valuable. Dego shareholders were aware of what was happening and demanded their share in the resurrection.

The matter fell outside the 1953 London Debt Settlement which did not apply to German obligations issued abroad but held within west Germany, as were the Dego holdings and the affair became a legal wrangle between the shareholders and the German Government. But when the Americans virtually made the restitution of German property confiscated in the United States during the war dependent on the honouring of the Reichsbank obligations, final settlement became a matter of fixing a price. Now, on the advice of Dr Herman Abs, who acted as mediator in the dispute, the German Government has offered compensation that looks like being accepted. At long last, the Dego affair is at an end.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out next week:

JAPAN

The report traces the latest developments in Japan's balance-of-payments difficulties and discusses the terms of the recent IMF loan.

The progress of demand—both capital and consumer—is analysed, together with the latest price trends and the outlook for the wage claims now being put forward.

Export prospects are reviewed and there is a discussion of progress—or the lack of it—with liberalisation.

STOCK EXCHANGE STATISTICS

Market Maths

IT is doubtful whether the annual publication with the impressive title *Interest and Dividends upon Securities Quoted on the Stock Exchange, London*, adds much to investors' knowledge of trends in the stock markets. But until the London Stock Exchange can publish turnover figures, this booklet at least provides a useful supplement to various share price indices and to calculations of company dividends based on annual accounts. In 1961 the gross total of interest and dividends, according to this booklet, rose by 5.9 per cent to £1,870 million, compared with 25.9 per cent in 1960. But the compilers of these statistics again point out that no such sum can "reach the pool of personal disposable income." After allowing for tax, duplication in the figures and the sums paid over to Government departments and to institutional investors, it is estimated that not more than £740 million passed into the hands of private investors.

With share prices rising in the second half of 1960 and falling in the same period in 1961 the rise in market values over the calendar year is much less sharp than is shown in the accompanying table which is based on mid-year estimates. Over the year to December 31st last the value of all securities rose by 3.1 per cent, or by £1,167 million to £38,242 million. Excluding new issues made last year the increase was about £800 million, or 2.1 per cent.

SHORTER NOTES

Mr J. A. Barke has been appointed managing director of the Ford Motor Company in succession to Mr Charles Thacker, who is retiring. Two other directors, Mr S. J. Elliott and Mr F. E. W. Hammond, are also retiring, and will be replaced by Mr A. J. Taylor and Mr L. Crossland.

★

Office equipment deliveries last year rose by about 13 per cent to £102 million. Exports accounted for 38 per cent of the total though in value they increased by only 6 per cent compared with 1960. The USA remained second only to Australia as an individual market but sales there were worth much the same, £2.7 million, as in 1960. Exports of this equipment to Europe continue to rise and were still doing so in the first two months of this year, though total exports then declined compared with the same period of 1961.

★

The coffee study group which includes both producers and consumers of coffee has agreed to call for a full United Nations conference to consider the establishment of a long-term international coffee agreement. The draft of a five-year agreement was discussed and a sub-committee has been set up to consider suggested amendments.

COMPANY MEETINGS

JAGUAR CARS LIMITED

NEW PRODUCTION RECORD: 90 PER CENT INCREASE IN EUROPEAN SALES

SIR WILLIAM LYONS' STATEMENT

The Twenty-eighth Annual General Meeting of Jaguar Cars Limited was held on March 29th at the registered office, Browns Lane, Coventry.

In his speech, which was circulated with the accounts, **Sir William Lyons,** the Chairman, said:

I have pleasure in presenting the report and accounts for the year ending July 31, 1961.

Once again I am able to report that a new production record was established, 15 per cent higher than the previous record year and no less than 26 per cent higher than the total for last year (1959/60). Perhaps the magnitude of the achievement is only fully appreciated when viewed against the background of the general recession which affected the industry during the year under review.

I regret to state, however, that despite a record production and record turnover, trading profits have shown only a moderate advance over last year, due to the fact that costs have continued to rise in spite of very determined efforts to control them. The ever-rising level of wages and salaries, combined with the extra costs resulting from Government action—such as increases in National Insurance and pensions contributions, and taxes on fuel oil for industry—have resulted in lower profit margins. We have made every endeavour to increase efficiency, and this has entailed a heavy expenditure on plant, and on body dies, jigs and tooling for the new models now in production.

The net trading profit for the year before taxation amounted to £2,061,773, which is an increase of £216,082 over last year.

After taxation of £976,463, the net profit is £1,085,310. We propose to recommend a dividend of 20 per cent, less tax, on the ordinary share capital and make the appropriations of profits as detailed in the accounts.

It will be observed that taxation takes a larger proportion of profits this year, partly due to increased profits tax and partly to various taxation adjustments. The increases in stock, work-in-progress and sundry debtors and creditors were due to the increased level of production attained by the end of the financial year.

EXTRAORDINARY GENERAL MEETING

You will notice that an Extraordinary General Meeting has been convened to follow the Annual General Meeting, for the purpose of altering the Articles of Association. There are three alterations which will respectively raise the maximum permissible number of directors to eight instead of seven as at present, to permit share certificates to be signed by mechanical means, and to raise the borrowing powers of the directors to three times the amount paid up on the issued share capital including, of course, any borrowing by subsidiary companies. At the moment these borrowing powers are limited to twice the amount of the paid up share capital, which facilities are not considered by your board to be adequate in view of the increased activity of the company.

In my report for last year, you will recall that I made reference to the subject of costs, and I would like to refer to this subject again since I believe that this continuous rise in costs represents the most serious threat to our future prosperity.

I believe that it is generally acknowledged that our cars possess a combination of quality, performance and moderate cost which places them in a category by themselves. These are the characteristics which have created the world-wide demand for our products and which we constantly strive not only to maintain but to improve. I am confident that we can continue to do this, but if our costs rise in the way they have done in recent years then our competitive ability must inevitably suffer.

I would stress that the problem of ever-increasing costs is one which faces the entire motor industry, and I view with dismay the apparent unconcern shown by the vast majority of those employed in our industry towards this very vital matter, particularly as the wages paid in this industry are about the highest in the country, and the constant pressure to raise them is a most serious threat to our future. I am always surprised by the fact that, at times when apprehension is rife about the possibility of redundancy, the very means by which we can insure against redundancy—the stabilisation of costs—is given little or no consideration. I have no doubts that should we enter the Common Market—as it now appears we shall—the necessity to regard our costs as a vital matter will compel us to adopt a more realistic attitude towards the maintenance of our competitive position.

"E" TYPE ANNOUNCEMENT—CONTINUED SUCCESS OF MARK 2 MODELS

Perhaps the most memorable event during the year under review was the introduction of the "E" Type Grand Touring models at the Geneva show. Few cars have been received with such acclaim, and from the outset they have captured the imagination, not only of the motorist, but of the public at large in a manner that has seldom—if ever—been experienced before. I need hardly add that our production programme for these models has had to be increased continuously, and even now the demand is taxing our production capacity to the utmost. These new models, together with the outstanding and continued success of the Mark 2 range, have been the major factors in achieving the results I have just outlined. To a vast number of motorists in all parts of the world, the specification of the Mark 2 conforms exactly to their conception of the ideal car.

INTEGRATION

During the year the integration of Jaguar and Daimler manufacturing resources has continued, with the ultimate aim of concentrating all supply departments at the Radford factory and all assembly facilities at the Browns Lane factory. The whole reorganisation is an operation of considerable magnitude and is not scheduled for completion before 1963. That we should be able to produce a record number of cars during a period of such intensive reorganisation reflects great credit on our production and planning departments and all those connected with the project. I would like to make it clear, however, that the cost of this integration will fall mainly within the accounts for the current year, since the greatest expenditure has taken place during this period. The integration will, of course, considerably increase our production capacity and, providing the benefit of this is not outpaced by rising costs, it should result in higher earnings in future years. In addition, the current year will have to carry the cost of the production build-up of the new Mark X.

EXPORTS

Turning to broader fields of activity, I am pleased to report that our exports continued at a very satisfactory level in spite of the uncertain international trading conditions. In America we retained our share of the market during a period when even the sales of domestic products declined sharply and restrictions in Australia once again curtailed our activities in this most valuable market.

Perhaps the most significant feature was the considerable increase in sales to Europe as a whole, and the Common Market and E.F.T.A. countries in particular. During the year under review, our sales to Europe increased by no less than 90 per cent. Taking the E.F.T.A. and Common Market countries separately, the percentage increases were 87 per cent and 78 per cent respectively. These percentage increases indicate that all previous records for exports to Europe were broken, and present trends suggest that even better results can be expected for the current year. I need hardly stress the significance of the figure for Common Market countries, and I am confident that, whether Britain joins the Common Market or not, the volume of our business in Europe will continue to increase, provided our prices remain competitive. If, however, we do not join the Common Market, then the rate of increase must inevitably become smaller as the tariffs operate against us. Provided we are able to retain our competitive strength, and I am certain we can if the determination to succeed is present at all levels in our organisation, then I believe that the future expansion of our export business will be governed solely by our ability to produce enough cars to meet the demand.

THE DAIMLER COMPANY

Turning now to the Daimler Company, the Majestic Major saloon received a most encouraging reception and was put into full production at the commencement of the year. We were, however, most disappointed to see the demand for this model adversely affected by the introduction of the £2,000 limit for business tax allowance. On the other hand, the demand for the Daimler limousine introduced in September, 1961, and thus not within the period of the accounts, has been very substantial for a car of this type. The introduction of a limousine marked the re-entry of Daimler into a market in which it has always been pre-eminent.

The rear-engined double deck "Fleetline" bus, which was introduced at the last Commercial Vehicle Exhibition at Earls Court, has been very

well received by both operators and municipalities alike, and the substantial orders placed for this vehicle have completely justified our decision to put it into volume production. The considerable number of orders, placed by municipalities in all parts of the country, for the orthodox front-engined double deck chassis has still further strengthened Daimler's position as one of the leading suppliers in this most competitive market; and the knowledge that the proportion of tenders for new vehicles being awarded to Daimler is continually increasing is a matter of great satisfaction to us all.

Before I finish with Daimler's activities, I would like to refer to the "Ferret" reconnaissance vehicle which we manufacture for the War Office, who consider it to be the finest vehicle of its type in the world. This is a four-wheel drive armoured vehicle of advanced specification which has been accepted as standard equipment not only for the British Army, but for the armies of many other countries as well. The visit to this country of a number of military missions from foreign powers to inspect the "Ferret" is indicative of the excellent reputation of the "Ferret" itself and of the growing interest in this type of vehicle. I feel confident, therefore, that provided this type of vehicle continues as an essential part of the modern army's equipment, the "Ferret" will make an increasingly important contribution to our activities.

GUY MOTORS (EUROPE) LTD.

As you are no doubt aware, we purchased, in October of last year, the business and assets formerly belonging to the old-established company of Guy Motors of Wolverhampton, and though this took place after the closing date of the year we are reviewing, I would like to refer to it now. Our decision to purchase Guy Motors' business was motivated by the desire to extend our sphere of activities into the commercial vehicle field as a natural addition to that of passenger vehicles. The opportunity to acquire Guy Motors' business provided a short cut to achieving this objective and this further diversification of our activities was thus initiated in a shorter time than would otherwise have been possible. We are doing everything we can to re-establish this once very successful business on a firm profit-earning basis.

MARK X ANNOUNCEMENT

I would like to close my report by referring to an event which again took place outside the period under review. I refer, of course, to the introduction of the Mark X saloon at Earls Court last October. This replaced the Mark IX saloon, production of which came to an end about the middle of last year. I have no hesitation in stating that Jaguar's big saloons—as exemplified by the Mark VII, Mark VIII and Mark IX—were unquestionably some of the most successful models ever produced. During a production life of almost 12 years they provided the firm basis upon which the Company depended for its success and their contribution to the present prosperity of the Company cannot be underestimated. It is hardly surprising, therefore, that the task of designing a successor proved to be very exacting, but I believe that in the Mark X we have a worthy upholder of Jaguar's big saloon tradition. During the four years that it has taken to design and develop this new model our sole aim has been to create a car as near perfect as possible, irrespective of the cost involved. This has resulted in a completely new model with a very advanced specification offering a unique combination of quality, elegance and performance. It has been received with remarkable enthusiasm throughout the world and there is no doubt that in the Mark X, Mark 2 and "E" Type models Jaguar possess one of the most complete and formidable range of cars ever presented by one manufacturer.

This statement would not be complete without a word of thanks to our staff and workpeople who have supported the Company so loyally during this difficult period of reorganisation and integration. I would also like to thank our suppliers and our distributors and dealers for their cooperation throughout the year.

The retiring directors, Mr A. Whittaker, Mr F. R. W. England, Mr J. S. Silver and Mr R. W. Grice were re-elected.

The report and accounts were adopted.

At a subsequent Extraordinary General Meeting the resolutions referred to above were carried.

The Chairman stated that Mr A. W. Thurstans, the Company's Chief Accountant, was being appointed to the Board of Directors.

WESLEYAN & GENERAL ASSURANCE SOCIETY

The 121st Annual General Meeting was held on April 3, 1962, at Birmingham, Mr **A. H. Sayer, MC, JP,** the Society's Chairman, in moving the adoption of the Reports and Statement of Accounts for the year ended December 31, 1961, said:

I would emphasise that the Society's business is not local. Every city and town and most villages in England, Wales and Central Scotland are regularly visited by our representatives to give insurance home service.

Record new business figures were achieved in 1961. The total of new Life Sums Assured was £14,029,000 compared with £12,752,000 for the previous year.

The Premium Income of the Fire & Accident Departments was £417,000, having increased by £32,000.

The total Premium Income of the Society was £5,336,000, an increase of £232,000.

The total of Claims and Surrender Values paid was £3,824,000, an increase of £590,000.

The Gross Rate of Interest earned on the Funds was £5 14s. 2d. per cent, showing a commendable increase of 4/5d. per cent.

Mortgages granted under the House Purchase Plan during the year exceeded £1,850,000. More than £12,000,000 of the Society's assets are now in the form of mortgages to owner occupiers.

The total premium income of the Ordinary Department increased by £100,000 to £2,152,000.

The Directors have declared a Reversionary Bonus of £2 6s. 0d. per £100 original sum assured, compared with £2 4s. 0d. a year ago.

The premium income of the Industrial (Home Service) Department increased by £115,000 to £2,929,000.

The Directors are able to declare Reversionary Bonuses at the increased rate of 20s. per cent of the sum assured for claims by death or 25s. per cent of the sum assured for claims by maturity.

Towards the end of October an IBM 1401 electronic computer was installed. By the beginning of December the computer had started on production work and is already assisting more than half the staff at Chief Office in their work.

We look back on a year of growth in all Departments with the establishment of new records. We can, I am sure, look forward with confidence to further achievements in the future.

THE CRITTALL MANUFACTURING COMPANY

IMPROVED TRADING PERFORMANCE

The thirty-eighth annual general meeting of The Crittall Manufacturing Company Limited was held on April 3rd in London, **Mr J. F. Crittall** (chairman and managing director), presiding.

The following is an extract from his circulated statement: Since the last Annual General Meeting your Company has sustained a heavy loss by the death, on May 21st last, of Lord Braintree, for thirty-one years Chairman of the Company. I would like to take this opportunity of paying a tribute to the outstanding part which he played in guiding and leading your Company to the position which it holds today.

For the reasons given in my circular letter of September 26, 1961, Accounts have been prepared for the period of sixteen months ended December 31, 1961.

The Group Trading Profit, including Investment Income for the sixteen months' period amounted to £995,969. For the twelve months ended August 31, 1960, the equivalent figure was £696,873, which, if converted to a sixteen months' period on a proportionate time basis, would become £929,164.

Having detailed the factors which affected a comparison of the results with the previous year, Mr Crittall said that there had been a gratifying improvement in the trading performance of the Group for the period. He continued:

The results of The Crittall Manufacturing Company Limited can be considered as reasonably satisfactory. Our new factory for aluminium products is now producing at a high rate and we are well satisfied with its performance from every point of view.

We have also obtained our full share of important contracts for all our products and we are particularly proud to have been entrusted with the supply of the Great West Screen and the bronze windows for the new Cathedral at Coventry.

Having reviewed in detail the activities of the operating companies at home and overseas the chairman, referring to the group's export business, said: We are more and more having to face the threat of competition from local manufacture. The need to consider the possibility of undertaking local manufacture ourselves in such areas is one that increasingly faces us.

Commenting on Britain's possible entry into the Common Market, Mr Crittall said that in general it was felt that the possibilities which might be open to the Group in that field were encouraging. He concluded:

An assessment of the prospects for the current year must take account of the continuance of the restrictive effect of Government policies on the rate of house building in this country with the consequent impact which it is at present having on the demand for our standard windows. It is to be hoped that there will be an early return to policies which will stimulate the rate of house building which from so many points of view is a vital need for this country at the present time. For our other products the prospects appear encouraging and demand continues at a satisfactory level.

The report was adopted and a total distribution of 22½ per cent, less Income Tax, was approved.

CARIBBEAN CEMENT CO. LTD. JAMAICA, W.I.

YEAR OF FURTHER PROGRESS AND EXPANSION

SIR WILLIAM STEPHENSON'S REVIEW

The annual general meeting of the Caribbean Cement Co. Ltd will be held on April 17th at Rockfort, Kingston, Jamaica.

The following is the statement by **Sir William Stephenson, M.C, D.F.C,** the Chairman, which has been circulated with the report and accounts for the year ended December 31, 1961:

For the year under review cement production reached a new record of 212,303 tons. Clinker production exceeded the rated capacity of the kilns by 11.9 per cent. During 1961, sales of cement amounted to 206,000 tons which is approximately .8 per cent lower than in 1960. The lower sales in 1961 as compared to 1960 are due to lower domestic consumption. Intensified sales efforts in the domestic market are imperative and will be launched.

Net profit for the year ended December 31, 1961, was £652,129, this being a 2.8 per cent increase over 1960 due mainly to income from investments. Based on 1,800,000 Ordinary Shares outstanding at year-end, earnings per share were 7s. 3d. ($1.01) in 1961 as compared to 7s. 1d. ($0.99) in the previous year.

A 7 per cent Cash Distribution to shareholders amounting to £105,000 was made during the year, in addition to a Share distribution of one for five on the 1,500,000 outstanding Shares. This was the tenth successive year in which shareholders have received distributions in Cash and Shares.

During the year £20,642 of 6 per cent Mortgage Redeemable Debenture Stock was redeemed following our policy of redeeming only the minimum amount as stipulated in the Trust Deed. Cash was, therefore, retained in the business to assist in the continued expansion of the plant.

Following a comprehensive study of the Company's legal, accounting and financial status by experts from the United States of America—a registration statement for 300,000 Ordinary Shares was filed with the Securities & Exchange Commission in Washington, D.C. The secondary offering of these shares represents the first time a Jamaican-owned company has filed such a registration and it has met with full acceptance to the great advantage of shareholders by providing a ready trading market in the shares of the Company. This action is a significant step forward for the financial credit status of Jamaica in international financial centres.

EXPANSION PROGRAMME

In my review for 1960, I stated *inter alia* that ". . . expansion of production facilities is a continuous process . . ." and also, referring to Jamaica ". . . in or out of Federation Jamaica undoubtedly will have a greater voice in the councils of nations than ever before." Today, one year later, Jamaica stands at the threshold of independence, with a tradition of democracy, ready to grasp the opportunities that a free world has to offer.

Our Company is a participant in Jamaica's forward march to independence, and is preparing to meet the challenge that nationhood will present.

In the latter part of 1961, the Company signed contracts with Macdonald Engineering Company of U.S. and Canada for engineering and supervising a substantial plant expansion, designed to double the present rated capacity of 200,000 tons per annum to 400,000 tons. In addition to the increase in capacity, improvements are planned for the flow of process materials, modern bulk-loading facilities and additional administration accommodation. The total cost of this expansion, which is scheduled to be completed in 1963, will be in the region of £2.8 million. Estimated capital savings of half a million pounds may be realised by the installation of the larger kiln.

These new facilities will have a rated production potential in excess of immediate domestic cement requirements. In an effort to absorb this excess, it is the Company's intention to vigorously pursue the export market, which will also materially contribute to a favourable foreign exchange ratio for Jamaica. The Government of Jamaica has given this substantial expansion its approval, under the terms of our Company's Licence, allowing the Company to offset the cost of the extension, in two stages, against its taxable income. This expansion is being financed through the Company's own resources with the co-operation of our good friends, the Company's bankers, Royal Bank of Canada.

EXECUTIVE CHANGES

Mr George W. MacDuff was appointed Managing Director as of July 1, 1961.

Mr MacDuff was President of the Jamaica Public Service Company Ltd. for seven years. A director of the Cement Company since 1949, he has had intimate knowledge of the Company and its operation from its inception and has contributed materially to its success. We are fortunate to have induced him to assume the managing directorship of our Company.

Mr R. L. Osler's resignation was accepted by the Company on May 31, 1961, in order that he might accept an appointment with Macdonald Engineering Company. As Managing Engineer for Macdonald he will continue to work closely with the Company under the terms of the contract the Company holds with Macdonald. Mr Osler has good reason to be proud of his very successful term of office with Caribbean Cement Company.

The appointment of Mr Lee M. Yarberry as General Manager became effective November 1, 1961. Mr Yarberry joined us as Works Manager on May 1, 1960, from Canada, where he had been General Manager for the Franceschini group of companies. He brings to us extensive experience from his association with cement companies in the United States and has already proved his worth at Rockfort.

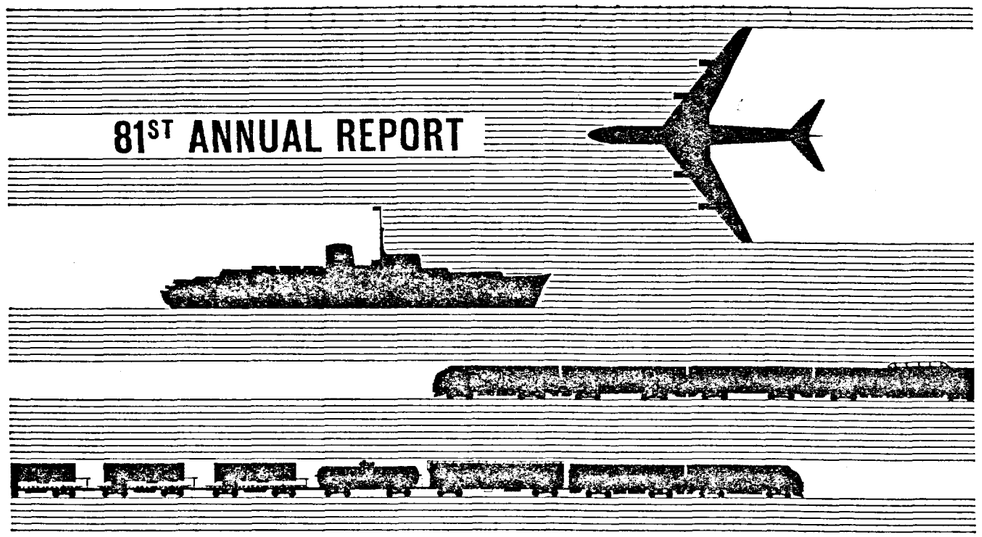
Mr Sydney Chen See's first year of service with the Company as Secretary-Treasurer has further confirmed my view that first class talent is available in Jamaica.

EMPLOYEE RELATIONS

The Company's labour relations were again maintained at a high level. This has been achieved by the painstaking work of the joint labour-management consultative committees. The production achievements of 1961 are a matter of great satisfaction. These could only have been attained through the close collaboration of management, staff and works personnel.

HURRICANE RELIEF

Our company, concerned with the devastation visited upon the people of British Honduras by *Hurricane "Hattie" during the year, made a* prompt contribution of 5,000 bags of cement to the Government of Jamaica to assist the British Honduras Government in rehabilitation.



THE FUTURE

This review of 1961 reflects, I trust, the confidence our Company has in its own future and the future of Jamaica. The decision of Jamaica to withdraw from the West Indies Federation has given no indication of it retarding economic development in any way. Indeed, so far, the opposite has been the case. Local conditions demonstrate clearly that industrial investors are convinced that Jamaica's economic and political stability are well based whether in or out of Federation. During 1961, Jamaica achieved a continuing rate of economic growth which was fostered by substantial increases at all levels of production and by the continued steady rise in the number of new industries. The Company held its position in the vanguard of industrial development through its programme of expansion. The announcement of our expansion plans, coming within a fortnight after the Referendum results, demonstrated the Company's profound confidence in the future stability of Jamaica as a country that offers the progressive investor a safe locale for investment.

Jamaica has proved itself qualified for Dominion status as evidenced by its stable transition to independence with a progressive system of governments ably administered. Responsibility of individual citizens in an independent nation is deep-rooted. Such responsibility must be shared and encouraged by the industries of the country. Our Company has demonstrated its desire to contribute to a higher standard of living and increased economic opportunity for all.

It is our belief that the industrious, democratic attitude of the people of Jamaica will invoke the material interest and co-operation of the Free World's governments.

I conclude with an expression of faith in the future of this sturdy new nation. Details are now being worked out for a new constitution for independence that will preserve a democratic framework while leaving the people free to make the social progress that their legitimate aspirations demand. The mutual confidence that has been built up between our Company and the Governments of this country is an omen that we shall not fail in our objective of helping to build a greater Jamaica.

Canadian Pacific

TRAINS / TRUCKS / SHIPS / PLANES / HOTELS / TELECOMMUNICATIONS
WORLD'S MOST COMPLETE TRANSPORTATION SYSTEM

Canadian Pacific in 1961 moved forward along the broad front of its world-wide transportation system with new facilities—improved services—and expanded sales programs.

New sources of freight revenue were aggressively developed, industrial sidings constructed, automated switching yards advanced, centralized traffic control enlarged, sales offices integrated and streamlined, and electronic data processing improved.

Merchandise Services, conceived by Canadian Pacific, and providing for one-control handling of rail, road, water and air package freight continued its steady expansion.

Piggyback, one of Canadian Pacific's fastest growing services, opened five new terminals and now extends across Canada from Saint John to Vancouver.

Telex was provided to 29 additional stations and microwave systems were extended in the Maritimes.

The new flagship, Empress of Canada, joined the fleet, two more chartered vessels were operated in the service between European and Great Lakes ports, and a new cargo liner commissioned.

Canadian Pacific introduced a fleet of four Super DC-8 jet aircraft, Calgary was added on the Polar route to Europe, and approval was received for CPA to inaugurate new services from Windsor and Calgary to Mexico City.

The policy of refurbishing its hotels across Canada continued and the opening of new facilities, such as the motor lodge of The Empress in Victoria, featured hotel operations.

The Canadian continued to attract substantial rail passenger business city-to-city and across Canada.

Canadian Pacific extended its policy of resource development drilling 20 successful gas wells and 3 oil wells.

Canadian Pacific, in 1962, in order to secure its share of traffic in a competitive and complex market will continue its policy of adding new equipment and services, improving efficiency and reducing costs, seeking out new markets and expanding sales.

BEAUMONT PROPERTY TRUST

The twenty-eighth annual general meeting of The Beaumont Property Trust Limited was held on March 29th in London, **Sir Cyril Black, JP, DL, MP, FRICS, FAI,** Chairman, presiding.

The following are the main features from his circulated statement for the year ended September 30, 1961:

REVALUATION OF PROPERTIES: A valuation of freehold and leasehold properties owned, including properties then under construction, was made as at September 30, 1961. As a result a net surplus of £824,769 over book values has arisen in respect of properties and investments owned by the Investment Companies which has been taken to capital reserve.

FINANCIAL POSITION: Freehold and Leasehold Properties stand at over £8,000,000, an increase of approximately £3,000,000, against which we have secured loans totalling almost £3,000,000 giving a borrowing ratio of approximately 37½ per cent. This ratio is very low, and the position will be improved by the arrangement made with The Prudential Assurance Company Limited whereby £2,500,000 of mortgage or debenture money will be available over the next four years.

As at September 30, 1961, the Group had current assets totalling nearly £1,200,000.

FUTURE PROSPECTS: Your Directors view the future with confidence.

The Report and Accounts were adopted.

At a subsequent Extraordinary General Meeting the Authorised Share Capital was increased to £6,000,000.

GENERAL INVESTORS AND TRUSTEES

The fifty-fifth Annual General Meeting of General Investors and Trustees, Limited, was held on March 29th in London, **Mr R. G. Mills** (the chairman) presiding.

The following is an extract from his circulated review:

The Board in its Report has recorded the death of Mr Eric Davenport in May last year. The progressive growth and prosperity of the Company can be attributed in no small measure to his continuous application to our affairs.

Our valuation at January 31st shows a not unsatisfactory improvement of £581,706 compared with that of last year.

Last year I expressed the view that, despite the uncertainty of the outlook at that time, our income would be reasonably maintained. In the event this has been more than borne out by an increase in our gross revenue from £455,885 to £478,989 and with net income showing an increase of £12,789 to £244,450.

The uncertainties that existed in February last year have, not unexpectedly, been intensified through lower profit margins in industry and credit restrictions in the Government's attempt to control the inflation in our economy. Therefore, unless an early and unforeseen relaxation in this policy occurs, the Shareholders, on the basis of our present estimates, must expect a small contraction in the Company's income during the coming year. This should not, however, endanger the present rate of dividend.

The Report was adopted.

Land & General Developments Limited

The Annual General Meeting of Land & General Developments Limited was held on March 29 in London. The following extracts are from the Directors' Report and Balance Sheet and the Statement by the Chairman, **Mr P. A. Bligh, MSMA.**

	1961	1960
	£	£
Issued Capital	245,493	140,933
Total Assets	4,569,454	3,662,452
Net Assets	1,737,053	708,029
Profit, before Tax	82,174	65,028
Dividend	30%	30%

FUTURE PROSPECTS

It is anticipated that the current programme of the Property Development Division will produce, on completion, net rental incomes, subject to mortgage interest, over the next five years as detailed hereunder :—

	£
1962/63	20,000
1963/64	85,000
1964/65	155,000
1965/66	230,000
1966/67	295,000

Preliminary estimates in regard to these developments would indicate that on completion a revaluation of these assets would produce a surplus of over £1 million.

A projection of the Group's activities, incorporating the Property Development Divisions' rental income enumerated above, would suggest consolidated profits, before tax, over the next three years as follows :—

	£
1962/63	118,000
1963/64	167,000
1964/65	225,000

Copies of the Report and Accounts and Chairman's Statement can be obtained from the Registered Office, 24 Portland Place, London, W.1.

ALFRED HERBERT LIMITED

(Manufacturers and Distributors of Machine Tools)

EXPANSIONS IN MANUFACTURING CAPACITY

STRONG POSITION IN COMMON MARKET

COLONEL C. W. CLARK ON THE ENCOURAGING OVERALL PICTURE

The sixty-ninth annual general meeting of Alfred Herbert Ltd. will be held on April 27th at Coventry.

The following is a summary of the circulated statement of the Chairman, **Colonel C. W. Clark, DSO, OBE, MC**:—

For the year ended October 31, 1961, the Company's profit before tax is £3,497,930, an increase of £439,139 on the previous year. An interim dividend of 2½ per cent was paid on September 12, 1961, on the ordinary shares of the Company which, with the further dividend of 6 per cent, makes a total for the year of 8½ per cent, free of tax, as in the previous year.

Although the state of our national economy is a matter for serious concern, some aspects of dividend restraint are not always appreciated.

Firstly, it is our practice to retain part of the distributable profits, belonging to our shareholders, to meet the needs of our growing business, and last year such funds exceeded £800,000. Therefore, by paying the same percentage on the issued capital this year, we are in effect giving our shareholders a smaller return on their actual investment.

Such savings of earlier years have been used to purchase other businesses and expand the parent concern. This venturing, being recent, has not yet produced adequate results, but the advocates of dividend limitation should understand that enterprise of this kind cannot long be denied the appropriate reward.

PROFITS AND PRICES

From small beginnings, our Company has been built out of profits reinvested in the business. With this background I would be a poor apologist for the profit motive.

Demands for limitation of profits and dividends frequently imply that the two are the same thing. It is from profits that we have become a great industrial and commercial nation, providing increased security, improved conditions and other benefits for our workers. And, it is from the profits of industry and commerce that the Government offsets the heavy losses of some of our nationalised undertakings.

More than half of our Company's trading profit is taken in Government taxation, and from the remainder we must modernise our buildings and plant, develop research and design, expand, and create more and better jobs for our people. Only from what is left comes the reward of the shareholders who have risked their money to make the whole operation possible.

When installed in our customers' works, machine tools achieve very important economies on work of a repetitive nature, but the manufacture of machine tools themselves does not normally permit of quantity production, and highly-paid craftsmen are required. Labour costs are therefore a very important factor in the prices both of our own machines and equipment and of those of other important British Companies which we sell.

Already we are at a serious disadvantage in some important markets through the continual rise in labour rates unmatched by comparable increases in production.

SELLING

AT HOME

Machine tools are a means of production rather than an end-product in themselves, and our representatives must be competent to advise manufacturers in the most advanced techniques of engineering production.

To this end, we have for many years maintained well-staffed branches throughout the country.

The Leeds area is now served by new premises having 22,500 square feet and a similar, but larger, project will shortly be commenced in West London.

A recent nation-wide survey of machine tools in British factories revealed the extent to which old and inefficient plant is used. Our technical staffs will be of valuable assistance to firms wishing to modernise their plants.

AND ABROAD

Subsidiary Companies in Australia, India, France and Italy, and agents in the rest of the world, selling our own and other leading machine tools, assure us of a good share of the market. Our success in France and Italy augurs well for the possible entry of Britain into the Common Market.

In many overseas markets there is a persistent demand for payment to be spread over a period of years, and we have not always found that the cover provided by the Exports Credits Guarantee Department is sufficient to enable us to get the business. Despite this, the volume of our exports is gratifying and well above the average for our industry.

ATRITOR DRYING AND PULVERIZING MACHINES

These machines form an increasingly important part of our output. Originally designed for simultaneously pulverising and drying coal for the more efficient firing of boilers and cement kilns, they are now also used for fine grinding and drying a wide range of other materials. Our output is divided approximately equally between these two types of application.

Sales, at home and abroad, require specialised technical knowledge and experience of the widely varying materials.

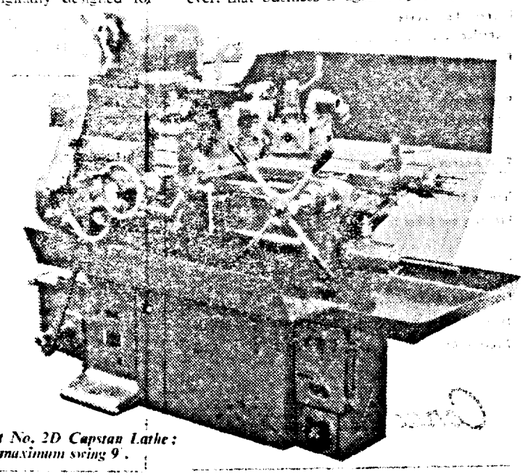
SUBSIDIARIES

BRITISH

The Sigma Instrument Company, makers of precision measuring and inspection equipment, enjoys an excellent reputation, but has not been as profitable as we would wish. However, I am pleased to say that prospects have now greatly improved.

The Holbrook Machine Tool Company is at full stretch meeting a sustained demand for their range of unusually accurate lathes. An extension to the factory at Harlow is under consideration.

The additional capacity provided by the acquisition of I. L. Berridge, Leicester, will contribute favourably to our overall results. Programme changes and plant rebalancing, including a 10,800 sq. ft. extension to their Wigston Works, are not yet complete.



Mudie's Electrical Company is filling our increasing needs for specially designed electrical equipment for the machines we make and sell.

This Company has an excellent site adjoining its factory on which we propose to build more commodious branch premises for the Birmingham area.

Our most recent acquisition was William Whiteley & Sons Limited of Huddersfield. We have for some time distributed their range of planing machines at home, and will now do so overseas. The Company's two excellent foundries, whilst helping our own production, also undertake work for other engineering concerns. Reorganisation of this Company's rather complex business is well in hand.

OVERSEAS

After the excellent results shown by Alfred Herbert (Australasia) Pty. Limited for their year ended June 30, 1961, there was a general reduction in demand. Latest indications are, however, that business is again improving.

Herbert No. 2D Capstan Lathe: maximum swing 9".

Alfred Herbert (India) Private Limited had reduced profits for the year ended December, 1960, but results for the succeeding year, although not yet finalised, are known to be better. Trading difficulties are created in India by financial and other problems inseparable from rapid national industrialisation. These we appreciate and shall maintain helpful relations with Indian authorities and customers.

Our two European subsidiaries Société Anonyme Alfred Herbert, Paris, and Società Italiana Alfred Herbert, S.p.A., Milan, continue to show improved results. Their strong positions will be invaluable to the Company in the Common Market.

RESEARCH AND DESIGN

Last June our New Applied Research Department was formally opened by the Right Honourable Reginald Maudling, MP, in the presence of friends invited from many walks of life—industrial, political, scientific, scholastic and commercial.

In my speech on that occasion I stated that this was only the latest stage of a programme of development commenced several years before. It was the focal point of our thinking and of the behind-the-scenes efforts of many individuals in our organisation. It demonstrated the many directions of our exploration and experimentation.

I pointed out that our basic research resources were adequate in view of the extensive facilities available to us through Government and other research institutions and laboratories with whom we have friendly relations, and also through those of our suppliers of materials and ancillary equipment. A case in point was our development, in close collaboration with one of our leading electrical companies, of the ingenious tape-controlled Datatrol equipment used with the Herbert/DeVlieg Jigmil.

I also stated that we attached the highest importance to the training of research and development technologists and technicians. Despite allegations of a shortage of graduates employed on research and development in our industry, we require the best brains available and have special arrangements for post-graduate training of suitable young men.

In our Company we appreciate the important place of research in our development work, that is, alongside the advanced design engineers producing machines and equipment of imaginative and practical design.

PROSPECTS

With the prevailing National and International uncertainty, it would be unwise to assume the mantle of a prophet. But I have indicated the various ways in which your directors are pursuing a forward-looking policy, and for the future I can only express my confidence in the Company's ability to maintain its leading position in the Machine-Tool Industry.

The value of orders in hand exceed previous records and, with increasing output from all our plants, deliveries are tending to improve.

We should soon know whether or not Great Britain is to join the Common Market. We are endeavouring to be ready, with the necessary changes and adjustments to our organisation, to meet either development.

To all members of our Board I wish to express my appreciation. During the year, they have carried an unusually heavy load which is unlikely to get lighter.

I also gladly acknowledge the loyalty and good work of our team of workers at all levels.

CLARKE, CHAPMAN & COMPANY, LIMITED

EFFORTS TO SURMOUNT DIFFICULT TRADING CONDITIONS

DAMAGING EFFECT OF RISING COSTS AND NARROWING MARGINS

The sixty-ninth annual general meeting of Clarke, Chapman & Company, Limited, was held on March 29th at Gateshead.

The Chairman (**Mr J. B. Woodeson, OBE**), after reviewing the Accounts, said:

Ladies and Gentlemen. It gives me pleasure to preside at this sixty-ninth annual general meeting of the company. As indicated in my Statement last year we have experienced very difficult conditions during 1961. It has been found impossible to pass on to our customers any of the recent wages and materials increases. Indeed, in order to maintain our order-book position it has been necessary for us to make substantial cuts in our selling prices.

GENERAL

Despite the considerable reduction in profit margins, our works capacity has remained fairly well employed during 1961. The overall reduction in our profitability has been due to two main factors; firstly to lower prices because of increased overseas competition, and secondly, to the manufactured output not reaching the level anticipated. This latter was due to a number of reasons, but I think in the main it was because of the many specialised products with which we had to cope. With the broadening of the range of our products there has been a greater degree of individually designed equipment, with the result that throughput of standard machines is decreasing and conversely the demand for non-standard equipment is increasing. The latter could well become an important part of our regular production in the future.

It has been necessary, therefore, to re-deploy our facilities, both in design and works, to meet these new circumstances. As an example, demand for deck cranes, unloaders, tensioning winches and large capstan gears is increasing, whereas there is a falling off in our orders for standard auxiliaries, both steam and electric.

The picture is the same in the power field. Small industrial boilers, which in years gone by were a large proportion of our power business, now constitute only a relatively small part thereof.

The bulk of our boiler department orders today comprises large-evaporation, high-pressure steam raising plant for central authorities and includes steam generators for nuclear power stations. As in the marine departments, these have necessitated a considerable degree of design and development work where large sums of money have to be spent long before a reasonable return can be expected.

Considering the range of our activities, our order book is substantial but due to the change in pattern of our products the diversity must be matched by revised productive facilities.

MARINE DEPARTMENTS

Despite the difficulties that have been encountered in the effort to increase our turnover, the marine departments have been very active during the year in developing many new facets of deck auxiliaries. Already a considerable volume of orders has resulted from some of these design and development activities. Our range of deck cranes has been considerably extended and these have reached a capacity of up to 20 tons. The various applications of deck cranes now include both grabbing and electro magnet handling methods.

I mentioned unloaders in my report last year and we have orders for eleven of these new type cargo handling units. These are to be fitted in both European and United States owned vessels. Further developments are in progress enabling us to supply these units for the handling of a wider variety of specialised cargoes.

This year, forward anchor gears have continued to increase in size and complexity and it is interesting to note that we have on order for 87,000 ton tankers seven of these large forward anchor gears which are of our latest turbine-driven type. We have designed our fully-automatic constant-tensioning winch to meet the exceptional requirements of the upper lakes of the St. Lawrence Seaway and this has resulted in a substantial increase in orders for this type of equipment. In conjunction with the Admiralty we have developed and have on order seven turbine-driven auto-tensioning winches, and also a number of similar Ward Leonard designs which have been successfully tested at sea. Both these designs have been the subject of enquiries from the Dutch and French Navies.

We have also recently booked an order for 24 large rendering winches for the N.A.T.O. transmitting station aerial with special auto-tensioning features for preventing mechanical stressing of the towers. The foregoing are a few of the many important new features which have actively engaged our marine departments in 1961. There are many others and you can rest assured that your Company is fully alive to meeting the varied and more advanced requirements of the markets with which it is associated.

BOILER DEPARTMENT

You will have read in the Press that a contract has been awarded for a 600 MW atomic power station to the Nuclear Power Group, of which your Company is a member. We have played a major part in the design of the steam-raising equipment for this station. This was a very advanced design in which the reactor and boiler units are both encased in the same reinforced concrete shell.

One of the major factors of this contract, so far as we are concerned, comprises many hundreds of tube elements and is most valuable in order to maintain continuity of work in our tube fabrication plant. It is estimated that the quantity of manipulated tubular heating surface involved in the boilers for Oldbury will be in the region of two hundred miles.

With regard to conventional steam-raising

plant the main bulk of our home business today comes from the Central Electricity Generating Board. The present trend is for very large units, so large in fact that the boiler equipment for the present-day power station amounts to many millions of pounds. As mentioned previously in reports, however, this also means a considerable reduction in the number of orders placed with the boiler industry.

Due to these circumstances your Company has come to an arrangement with John Thompson Limited of Wolverhampton whereby joint tenders are submitted by both Companies for these large central power stations for U.K. projects. This has been arranged with complete agreement of the main customers involved. Already we have seen certain benefits from these arrangements at the design and tendering stage and should orders result I feel certain that these advantages will continue during the contract stage.

The boiler department in conjunction with the research and development department is continually investigating new processes and designs on the power plant side of our business. This applies equally to nuclear problems as it does to conventional. In my own opinion it is vital that this research continues in these days of advancing design and material technology.

FUTURE PROSPECTS

In view of the damaging effect of rising material costs and pending wage claims it is extremely difficult to forecast the future. One thing is certain, that there is practically no scope for increased selling prices in our markets at the present time. This position is being tackled in the twin fields of increased efficiency and optimum output. These matters have been the subject of considerable thought and planning for some time and, subject to no further adverse circumstances, our efforts should bear fruit.

I would again like to close by thanking my colleagues, the staff and workpeople, for their invaluable assistance during this difficult year.

The report and accounts were adopted.

HADFIELDS LIMITED

FINANCIAL POSITION CONSIDERABLY STRENGTHENED

The seventy-fourth annual general meeting of Hadfields Limited was held on March 30th at Sheffield, **Sir Peter G. Roberts, Bt, MP** (the Chairman), presiding.

In the course of his review of recent negotiations and the future position of the Group, the Chairman said:

There is no doubt that the Hadfields Group of Companies has been short of cash for development for a number of years. When Millspaugh was re-acquired by Hadfields in 1955, owing to restriction on borrowing, it was not possible for Millspaugh to borrow on its own account. Therefore, not only did the development of Hadfields but also the development of Millspaugh fall upon the cash resources of Hadfields.

At the time of the last Annual Meeting, Hadfields had an overdraft of £1,395,000 and outstanding Debenture Stock amounting to £1,191,400.

In order that both Hadfields and Millspaugh should be developed as quickly and efficiently as possible, it was essential that new finance should be found. The injection of new money by Steel Trust had the effect of setting off Hadfields' overdraft and of leaving surplus funds of just over £800,000. This in itself however was not sufficient to deal with the Capital Expenditure required at Hadfields, much less Millspaugh.

In order, therefore, to strengthen the Hadfields' cash position and to bring in a strong partner to develop the Millspaugh side of the business, your Directors sold to Escher Wyss Ltd. 60 per cent of the Ordinary Stock of Millspaugh for £1,200,000, and also arranged for that Company's loan indebtedness to Hadfields of £1,260,232 to be refunded by the end of 1962. At the same time, the Canadian Subsidiary Company, The William Kennedy and Sons Ltd. was sold to The Black-Clawson Company for the sum of £250,000, payable over two years. These transactions, therefore, when the Loan from Millspaugh and the payment for Kennedys are received, will leave Hadfields with liquid funds of approximately £3,500,000. Against this, the Debenture of nearly £1,200,000 must be borne in mind.

Your Directors feel that the outcome of these negotiations has been satisfactory and will strengthen considerably the position of the 33 per cent holding in Millspaugh.

The present trading of Hadfields for the First Quarter of the current Financial Year, in common with that of some other Steelmaking concerns, has been disappointing. On top of this, Government Contracts, which in the past have filled a considerable capacity at Hadfields, have now virtually ceased.

FUTURE DEVELOPMENTS

There is no doubt that new Capital Expenditure will take some time to bear results, but I am hopeful that by 1964 benefits will accrue.

Your Board has decided, as a first priority, to extend and bring to the highest state of efficiency its business in Hardened Forged Steel Rolls, Extrusion Press Parts, Buckets and ancillary manufacturing services. It is expected that this will need the employment of some £1,500,000. Your Board at the present moment are considering the installation of the most modern and up-to-date Melting facilities.

We see further business in the range of Medium Forged Products and we shall proceed to develop this side of the business to the fullest possible extent.

The reputation of Hadfields stands high throughout the world and its name carries with it the goodwill of craftsmanship, quality and service. It is the intention of your Board to build on this reputation and to continue to provide employment for the skill and craft of its employees.

I am satisfied that if everyone engaged in the Business works with skill, loyalty and enthusiasm, we shall be able to improve the fortunes of your Company so that Shop-floor employees, Staff and Shareholders can share in the increased prosperity.

In conclusion the chairman paid tribute to Lord Dudley Gordon who had been Chairman for 16 years and a Director for 19 years.

As Chairman of Hadfields Limited until the close of the financial year at September 30, 1961, Lord Dudley Gordon made a statement on the Accounts for that trading period. The following are extracts from his statement:

At a Board Meeting held on October 11th, I asked to be relieved of my position as Chairman of the Board and Sir Peter Roberts was elected to succeed me. My colleagues were good enough to ask me to remain on the Board as an ordinary Director until the Annual General Meeting after which it is my intention to retire.

It is clear that the firm of Hadfields has entered on a new era of its existence. A great deal of work on planning for the future has already been done in a remarkably short space of time. This is not to suggest that there are no difficulties ahead, due largely to the present state of the National Economy, but, with new blood and new financial resources, every means is available by which those difficulties can be overcome.

The report was adopted and a total distribution of 4 per cent approved.

WESTERN SELECTION & DEVELOPMENT

MR C. J. BURNS'S STATEMENT

The thirty-second annual general meeting of Western Selection & Development Co. Ltd. was held on April 3rd in London. **Mr C. J. Burns,** Chairman, presided. The following is an extract from his Statement circulated with the Report and Accounts for the year ended September 30, 1961:

The Accounts now presented to Members reflect the changes consequent upon the acquisition of the Ghana Mines by the Ghana State Mining Corporation and the subsequent reduction of Capital by the return to Members of 1s. per share. Comparing the profit with the previous year I would point out that no dividends accrued to the Company from the previously held substantial holdings in the Ghana Gold Mining Companies; and further, the payment in respect of the "takeover" of those same Ghana Companies was not received until May, 1961, so that these funds were only available to this Company for some four months of the year under review. Profits were, however, as favourable as forecast last year. Your Directors recommend a dividend of 10 per cent less income tax.

GENERAL POLICY

Ghana Gold Mining shares had in the past represented a large proportion of the Company's portfolio. The policy towards diversification which has been followed over the past few years is now showing to advantage and is being further supplemented by the balance of funds received from the Ghana holdings. At September 30, 1961 quoted investments with a market value of £583,504 showed an appreciation of £77,548 over book values. Today the comparable figures are market value £672,100 and book value £581,016. In the present economic conditions obtaining, reinvestment must of necessity be gradual and sufficient funds are now available to take further advantage as opportunity arises of acquiring sound investments offering potential rewards in the future.

Our remaining interests connected with Ghana relate to the Bremang Gold Dredging Company, i.e. the royalty of 4 per cent on gold won from the Offin/Jimi alluvial areas and a debenture of £100,000 bearing interest at 6 per cent repayable in December, 1962. Both the royalty and the interest have been received to date.

The Accounts for the year under review to September, 1961 were not wholly comparable with the previous year. For the first five months of the current year the indications are certainly satisfactory particularly in the growth of dividend income. The Company can look forward to at least maintaining the current dividend distribution.

The report and accounts were adopted.

MANY AEI DIVISIONS AND TRADING COMPANIES EARN HIGHER PROFITS . . .

Set-backs in radio and television components and domestic appliances

The Sixty-Second Annual General Meeting of Associated Electrical Industries Ltd. will be held on April 26th in London.

The following are extracts from the circulated Review of 1961:

Many of the Divisions and trading companies earned higher profits. The financial results were adversely affected by difficult trading conditions for some products, and particularly by a serious slump in the market for radio and television components and by lower profits on domestic appliances.

The trading profit of £9,765,000 was £1,004,000 less than in 1960 and as interest charges increased by £878,000, the profit before charging taxation fell by £1,882,000.

In view of the reduction in profits and the company's cash requirements, the Board has decided to recommend to shareholders that the final dividend on the Ordinary stock of the company, to be paid on May 10, 1962, should be at the rate of 1s. per £1 unit of stock, less income tax at 7s. 9d. in the £1. The total amount, less income tax, is £1,312,000.

An interim dividend of 1s. per £1 unit of Ordinary stock has already been paid and if the proposed final dividend is approved, the total distribution of the Ordinary stock for the year will be 2s. per £1 unit of stock.

RISE IN WAGES MORE THAN OFFSETS RISE IN OUTPUT

Reductions in manufacturing costs achieved by marked improvements in manufacturing efficiency were offset by rising wages. The average number employed by the Group was virtually the same as in 1960, but the wage bill rose by 7 per cent.

EXPORTS UP BY NEARLY 6 PER CENT: PROFIT MARGINS SLENDER

Shipments to export markets in 1961 rose by nearly 6 per cent but profit margins on electrical equipment in world markets are slender. Orders received from abroad were slightly less than in 1960, largely owing to increased restrictions on imports in some territories and problems of long-term credit. The opening up of new markets compensated partly for the falling off in orders from those traditional markets which experienced economic set-backs.

The results of the second half of the year were materially worse than those of the first half. The Government's decisions in the middle of the year affected interest charges and important sections of the business. End-year credits on major contracts have, in past years, more than offset the adverse effect of holidays in the second half of the year, but in 1961 this was not so.

IMPROVEMENT IN IMPORTANT SECTORS

Trading results improved in sections of the Company which caused anxiety in earlier years. The selling prices of cable continued to be below the 1959 level, but the results of the Cable Division improved considerably. The manufacture of all telephone cables was transferred to Telephone Cables Ltd. which had a successful year. The turnover of the Telecommunications Division increased by nearly 25 per cent and a modest profit was earned. The reorganisation of the lamp and lighting business yielded increased efficiency and profits. Turnover and profits in the furnace business increased.

Problems of over-capacity in some of the divisions manufacturing heavy plant cannot be solved entirely until the expanded programme of the CEGB becomes effective, but these divisions generally maintained their turnover and there was only a slight fall in profits. The future results of the Traction Division will be affected by the reduction in orders to be placed by British Railways.

Increased profits were earned by the Electronic Apparatus Division where there were many new developments in both military and industrial work. The profits of the Instrumentation Division were lower than in 1960; expenditure in developing scientific apparatus was heavy and the profits of the meter and X-ray departments were disappointing. A new company, Davy-AEI Automation Ltd., was set up jointly with Davy-Ashmore Ltd. to apply automation to the processing of steel and non-ferrous metals.

CREDIT RESTRICTIONS CAUSED £2M. SET-BACK

Profits of Divisions and trading companies affected by the serious set-backs experienced in 1961 by the television and domestic appliance industries were over £2m. less in 1961 than in 1960. This is the main reason why there was a fall in the Company's total profit, despite improved results in important sections of the business.

The slump in the television market caused heavy losses in the Division manufacturing radio and television valves and cathode ray tubes. The total demand for cathode ray tubes by television set makers in the UK in 1961 was about 40 per cent of the number sold to them in 1959. In view of excess production capacity, impending technical developments and changes in ownership in the set-making industry, the Board decided to link up with a leading set manufacturer. Accordingly the AEI interests in valves and tubes for the entertainment industry were merged with those of Thorn Electrical Industries Ltd. in a new company, Thorn-AEI Radio Valves and Tubes Ltd. Despite the continuing depression in the television industry, the progress of the new company is already justifying the action taken.

In view of the formation of the new company, the Radio and Electronic Components Division has discontinued the development of transistors for the entertainment business. Other activities of the Division including dry batteries accumulators and various radio components are being managed by the Telecommunications Division.

Credit restrictions and other Government measures severely depressed the domestic appliance market and caused lower trading profits to be earned by AEI-Hotpoint Ltd. The effect would have been worse but for Hotpoint's success in increasing their sales in spite of the reduction in the total market.

FINANCE

The Group's total capital expenditure in 1961 was £7,731,000. The Company's bank overdrafts and acceptance credits increased during the year by £13,428,000 to £22,734,000. This includes £6,265,000 for AEI-John Thompson Nuclear Energy Company Ltd., which will be liquidated on the conclusion of the Berkeley contract, and £946,000 for overdrafts of overseas companies. The Board does not propose to issue any additional debentures or stock at the present time.

The large increase in the Group's financial requirements is almost entirely due to increased working capital. There are several reasons for this. Annual turnover has increased in the last three years by £32m., and so many large contracts are carried out that working capital (stocks, work in progress and debtors, less creditors) represents over 50 per cent of annual turnover. It has become more and more difficult to obtain satisfactory terms of payment for exports; a contract for heavy plant may take several years to complete and throughout the manufacturing period the Company has often to find the whole of the working capital. The introduction of larger and more efficient generating and other equipment has aggravated the working capital problem, as the value of single contracts has increased and the time taken to complete them has lengthened.

ORGANISATION

The organisation of the Company was strengthened during the year by the appointment of Mr L. J. Davies, CBE, as Director of Research, and of Mr A. C. Main as Director of Manufacturing Services. An AEI Home District Office Division was formed during the year to provide an integrated selling organisation for all the products of the Divisions.

ONE THIRD OF AEI'S OUTPUT SOLD OVERSEAS

Export.—Effort in Europe was especially directed towards increasing the sales of domestic appliances, industrial equipment, including small motors, and of specialised products such as scientific apparatus, AEI-Gala maintains a branch office at Zurich and has formed a selling company in Italy.

Trading in Asian markets suffered from the shortage of foreign exchange but important contracts were received from Hong Kong, Malaya, and new markets opened up in Indonesia. In New Zealand the volume of business obtained by AEI(NZ) Ltd. was well up to expectations. AEI (Canada) Ltd. faced competitive conditions, with purchasers tending to buy from Canadian manufacturers.

Success in the sale of capital equipment was achieved by Australian Electrical Industries Pty. Ltd. and the subsidiary companies in Central and South Africa.

Overseas Manufacture.—In Europe, the results of three Subsidiary companies in France and Germany were encouraging and their turnover increased. The First Electric Corporation of South Africa improved its performance markedly. Steady progress was made at the vast heavy electrical factory at Bhopal for which AEI are consultants to the Indian Government. The reduction of our exports from Britain to India has been off-set by a 30 per cent increase in output by the AEI manufacturing company there. The trading results of Australian Electrical Industries Pty. Ltd. are disappointing. The factory, jointly owned by AEI and E. K. Cole Ltd., which manufactured television sets and cathode ray tubes, was closed down. Profits of Siemens Edison Swan (Canada) Ltd., were less than in recent years, but the factory operated by AEI do Brasil Ltda had a successful year.

Associated Electrical Industries Limited

BANK OF SCOTLAND

YEAR OF INCREASED ACTIVITY

COUNTRY'S RECURRING FINANCIAL CRISES

LORD BILSLAND ON NEED FOR MORE COMPREHENSIVE AND FAR-REACHING MEASURES

The Annual General Meeting of the Proprietors of the Bank of Scotland will be held on April 17th within the Head Office, Edinburgh.

In the course of his circulated statement, the Governor, **The Rt Hon Lord Bilsland, KT, MC, DL, LLD,** recalled the measures introduced by the Government to combat the adverse balance of payments position which arose in July, 1961 and continued:

The measures can be said to have had the required effect of restoring the country's Gold Reserves but not of providing a permanent cure to the cause of recurring crises. The level of exports is still inadequate and the recent disclosure that Government spending in the financial year just ended has exceeded revenue by a substantial margin indicates that other measures of a more comprehensive and far-reaching nature are necessary if the country's financial position is to be put on a lasting firm foundation. It has been amply demonstrated that the control and restriction of credit cannot for long contain the effects of inflationary Government action. It is to be hoped that the formation of the National Economic Development Council and the co-operation of all interests in a review of our affairs will result in the formation of a sound economic policy.

We have encountered much difficulty in endeavouring to apply restriction on advances during the latter part of last year. In the first five months of the year our advances increased substantially and certain commitments were entered into which have required to be honoured. Since July 1961 we have rejected many requests for advances from both old and new customers and business which we would like to have handled has gone elsewhere. This is mentioned merely to illustrate one of the practical effects of the present type of credit restriction imposed upon the banks and to emphasise that it is not always easy to explain to an old customer why his reasonable request for accommodation has to be refused. Our branch managers have had many awkward situations of this kind to deal with.

The easing of the country's financial position since last July has been recognised by four successive reductions of one-half per cent each in Bank Rate to its present level of 5 per cent. The latter reductions have been described as not only to check a further inflow of foreign funds attracted by our higher rates of interest, but also to take account of internal economic circumstances. It may be therefore that we can look forward in the near future to a less restrictive attitude in internal financial policy. Positive indications concerning this will require to await the Chancellor's budget statement.

EXPORT FINANCE SCHEME

In recent months the banks have agreed to participate in a scheme to provide finance at a fixed rate of interest for the export of capital goods to be paid for by the purchaser in instalments over a period of 3 or more years. The scheme, in which the leading Insurance Companies are participating, will be operated in conjunction with the Export Credits Guarantee Department which will cover the risk of default on the repayment instalments of the credit granted. Finance of this kind has been made available by the banks hitherto when required but the rate of interest charged has varied in relation to movements of the Bank Rate, and the period within which repayment is expected has usually not exceeded five years. The scheme provides for the extension of the period of repayment which is now necessary, the banks providing finance for the first five years at the fixed rate of 5½ per cent and the Insurance Companies providing the finance for the period beyond, which may extend to a further ten years, at the fixed rate of 6½ per cent. It is hoped that the scheme will enable manufacturers of large capital goods to obtain export orders which would otherwise be placed elsewhere. While this objective is no doubt desirable, it is to be noted that the country's balance of payments situation will not be immediately helped by the scheme—indeed the initial effect may well be the reverse. In view of this and the need to assess carefully the credit risks involved, the scope of the scheme will no doubt be subjected to strict supervision. The Banks and the Insurance Companies, however, deserve to be commended on their willingness to become parties to this scheme, designed in the national interest, at what may well be some cost to themselves.

BALANCE SHEET

The Consolidated Balance Sheet reflects again a year of increased activity. Deposits, which have throughout the year been in the average greater than the previous year, are approximately £9,500,000 up at £191,975,590. This is a particularly satisfactory feature of the Balance Sheet. Note Circulation on the other hand is some £600,000 lower at £27,630,851. I have already referred to the upward tendency of banking advances which now amount to £86,869,080. There has also been an increase of approximately £600,000 in amounts advanced on Hire Purchase Agreements. The ratio of banking advances to Deposits and Notes in Circulation is now 40 per cent but is not yet high in comparison with current banking experience. The Special Deposit with the Bank of England has increased by £1,100,000 to £2,800,000, mainly because of the increase called for in July 1961, but partly also on account of the Bank's higher Deposits. Investments have been realised during the year as a result of the increase in advances and now amount to £44,557,896. This figure is as usual less than their aggregate Market value. The Bank's liquidity position continues to be strong, the total Cash and Balances at the Bank of England, Balances with and Cheques in course of Collection on other banks, Money at Call and Bills Discounted amounting to £73,336,040.

The profit experience of the Bank for the past year has been favourably affected by the increase in advances and by a higher average rate of interest. There have been further increases in costs and taxation and the outcome is that the Consolidated Net Profit is £46,390 greater at £1,088,007. In view of the Chancellor of the Exchequer's request that dividends should not be increased at the present time the dividend is being maintained at 17 per cent for the year, requiring after deduction of Tax £655,987. There is transferred to Reserve for Contingencies £200,000 and £150,000 is transferred to Reserve Fund bringing it up to £6,300,000. The Pension Fund allocation is again £80,000 and there remains a balance of undivided Profit carried forward of £270,442.

HIRE PURCHASE SUBSIDIARY

A further expansion has occurred in the business transacted by North West Securities Limited and in order that the capitalisation of the Company should bear a reasonable relationship to its increased commitments, the Share Capital was increased during the year by £500,000. The trading experience of the Company during the past year has, in common with the general experience in the industry, been disappointing. The higher cost of borrowed money and the need to provide for Bad and Doubtful Debts on a conservative basis have resulted in a small loss of £2,233 being incurred which has been taken account of in the Bank's Consolidated Profit statement. The outlook for the current year is more encouraging and improved results are anticipated.

CENTRALISED ACCOUNTING

Very satisfactory progress has been made in the development of our centralised electronic book-keeping system. Well-equipped air-conditioned premises, designed for the purpose, have been made available in Edinburgh in which a powerful new computer has been installed. This has superseded our earlier equipment. The new computer is capable of a greatly increased volume of branch recording and a programme is in hand to introduce a total of 28 branch offices to the system in the near future.

In our pioneering of this new and labour-saving system of electronic book-keeping we have had the whole-hearted collaboration of the manufacturers of the equipment. We have reached a stage now, however, where the speed with which we would like to develop the system is being retarded by lack of immediate availability of certain equipment necessary at the branches which will become linked to the system. This will be overtaken in time and meanwhile we are about to instal another machine capable of reading the new magnetic ink markings appearing on all our new cheques and of sorting these cheques at a speed of 1,600 per minute. This is the forerunner of a nation-wide system of automatic cheque sorting.

ALBRIGHT & WILSON

Strength of Chemical Group demonstrated in a difficult year for industry

SIR SYDNEY BARRATT, CHAIRMAN OF ALBRIGHT & WILSON LIMITED, INCLUDED THE FOLLOWING POINTS IN HIS STATEMENT FOR THE YEAR 1961:

GROUP RESULTS

All our principal subsidiaries succeeded in expanding their sales but costs continued to rise and the pressure on profit margins grew more severe, particularly in the second half of the year when profits were also reduced by start-up expenses of some major plants. As a result of our merger with W. J. Bush early in 1961, the accounts show an increased trading surplus. If, however, Bush had also been included in the 1960 figures the surplus would have shown a reduction of 4½% in 1961. This result may be regarded as not unsatisfactory for a difficult year.

	1961 £	1960 £
Sales	53,000,000	42,500,000
Trading Surplus (before depreciation)	8,432,000	7,863,000
Net Profit after tax	2,954,000	2,654,000
Capital Employed	44,443,000	35,915,000
Ordinary Dividend —times covered	20% 2.3	20% 2.5

Note: 1961 sales and profits include a full year for W. J. Bush, acquired in March 1961.

U.K. COMPANIES— INCREASED EXPORTS

Sales to the home market remained at about the same level as in 1960 but all our United Kingdom companies increased their exports which rose by more than one-sixth to over 25 per cent of total U.K. sales. In particular, exports to the European Common Market showed a rise over 1960.

All the United Kingdom companies were affected by the pressure on profit margins and overall profits were lower than the previous year even with the additional turnover.

DIFFICULT CONDITIONS OVERSEAS

Electric Reduction Company of Canada has maintained the volume of its sales to its traditional markets and productivity has been improved. Its new plant at Port Maitland, Ontario for the manufacture of phosphoric acid, triple superphosphate and other agricultural chemicals started up in the second half of the year. Difficult conditions continue in Canada and we cannot expect more than a slow recovery in the economics of our Canadian company.

In Australia most secondary industries, including Albright & Wilson (Australia), were placed in a difficult competitive situation by the removal of import restrictions. However, in the last few months there were encouraging changes in the Government's attitude; many tariff increases were granted including one on sodium tripolyphosphate.

W. J. BUSH— BENEFITS OF MERGER

The merger with W. J. Bush was completed in March 1961 and its entry into the Group greatly strengthens our position in the fields of essences, flavours and perfumery; it offers opportunities for rationalisation of manufacture.

CAPITAL EXPENDITURE— A RECORD YEAR

Capital expenditure in 1961 at £8,000,000 was the highest in any year of our history, and was more than double the 1960 figure. About two-fifths of the total was spent overseas, mainly at Port Maitland in Canada. In the United Kingdom, Solway Chemicals' production capacity for low-cost sulphuric acid, with cement as co-product, was increased by nearly 70 per cent. Marchon Products' capacity for manufacture of sodium tripolyphosphate, by a process of which the economics are very favourable, has been raised to a level well in excess of the current United Kingdom market, to cater for exports and any increase in home demand. Midland Silicones completed a methyl chloride plant and a further direct-process silicon reactor and Albright & Wilson (Mfg) built a large new Calgon plant. In addition, there was considerable expenditure on improving and expanding existing processes.

PROSPECTS FOR 1962

This year capital expenditure will not be as great as in 1961 and our liquid funds, £2,900,000 at the year end, together with the cash flow and further recourse to bank accommodation, should be sufficient for our requirements in 1962. All companies have again forecast increased sales and, in spite of some further rises in costs, the benefit from higher sales and a lessening of the burden from plant commissioning should offset the lower margins experienced in the second half of 1961. Profit for 1962 seems unlikely to differ significantly from that now reported.

The Seventieth Annual General Meeting of Albright & Wilson Limited will be held at the Company's offices at 1, Knightsbridge Green, London, S.W.1. on 2nd May, 1962 at 3 p.m.

The Annual Report was sent to stockholders on 4th April. Copies are available on request to the Secretary.

ALBRIGHT & WILSON LIMITED

CHEMICAL COMPANIES—INTERNATIONAL ENTERPRISE

MALAYA GENERAL COMPANY

INCREASED CROP

The Fifty-third annual general meeting of the Malaya General Company, Limited, was held on March 28th in London.

Sir Henry Birkmyre, Bt. (Chairman), in the course of his speech, said:

The crop for twelve months to October 31, 1961, amounted to 6,795,575 lb., an increase of 953,650 lb. for the comparable period in the earlier accounts. Similarly the crop per mature acre rose from 613 lb. to 664 lb.

The cost of production was 13.7d. per lb., as against 17.25d. per lb. for the previous comparable period. The average selling price, however, came down by 6.86d. per lb. to 19.57d. per lb. On the other hand, the average London Spot price for the twelve months to October 31st last was 8.11d. per lb. lower than for the previous corresponding twelve months.

Fixed Assets at £60 per acre as compared with £57 per acre are slightly higher, but this is due to the larger acreage in course of replanting. The expenditure on replanting which was done out of revenue was £77,134 as against £81,447. The scale of replanting was not reduced and the reduction is due to the shorter period.

PROFIT AND DIVIDEND

The Group profit for the period after taxation and depreciation is £92,427 for the year as compared with £100,106 for the previous period of fourteen months. I feel you will agree with your Board that these results are not unsatisfactory. Your Directors have pleasure in recommending a dividend of 14 per cent making 21½ per cent for the twelve months. This compares with 25 per cent for fourteen months, which is the equivalent of 21.4 per cent per annum.

Before leaving the accounts, it is only right that I should explain that the large sum received from Cess refunds was not in fact a windfall, but was the anticipated return from certain refundable Cesses, including the Government Replanting Scheme. I do not think our receipts under this heading during the current year will be as high as those for the period under review, but they will be quite substantial.

During the year I had the pleasure of visiting your Estates with Mr Pierrepont and Mr Gleeson, your Visiting Agent. As we expected, I am glad to report that we found your Estates in excellent order and the Staff everywhere in good heart and on their toes. Relations with the Labour were good, and a very high standard of work is being maintained. We were able during our visit to examine the possibilities of increasing yields by improved methods of tapping and of increased stimulation wherever this could be done with advantage and, of course, with safety.

BENEFITS FROM REPLANTING

You will have seen that almost one third of the total acreage is now immature, that is to say, replanted with high yielding modern stocks. We are already benefiting from this programme, and over the next few years crops from all three Estates will improve quite materially. As an illustration of this, the crop for the first four months of the current year is 2,457,000 lb., as compared with 2,317,000 lb. for the same period in the previous year.

During the latter part of the year under review Rubber prices improved, and for the first few months of the current year they have been between 78 and 85 cents, which shows us a satisfactory return. We must expect increased competition from Synthetics in the years ahead and in this the price factor is all important. Accordingly, our policy as producers of Natural Rubber is to continue our efforts to improve yields and thus reduce our costs of production. Your Board is confident that satisfactory progress in this respect will be maintained.

It is a source of great satisfaction to us all that conditions in the Federation remain so stable, and thanks to this it is possible to lay plans for the future with some degree of confidence.

The report and accounts were adopted.

THE MERCHANTS TRUST LIMITED

Extract from statement of the chairman, **Mr G. P. S. Macpherson, OBE,** circulated with the report and accounts for the year to January 31, 1962:

SOURCES OF INCREASED REVENUE

Revenue before taxation rose from £745,172 to £803,630, a substantial increase though not on the scale of last year. The increase is attributable to higher dividends on our British investments received during the first half of the year before the Chancellor's request for restraint, to increased American dividends mainly received near the end of the year, and to the larger amounts of Double Taxation Relief (included in gross revenue) in respect of American dividends. The increase in Double Taxation Relief has, of course, meant an increased charge for Profits Tax, but the substantially higher figure for that item of £42,000 as compared with £30,000 last year is partly due to the increase in the rate of Profits Tax from 12½ per cent. to 15 per cent. It is strange how infrequently the incidence of Profits Tax is criticised as, at the present rate, it is equivalent to a gross charge of no less than 24½ per cent.

PROPORTION OF REVENUE DISTRIBUTED REDUCED

Had it not been for the Chancellor's request for restraint, your Directors would have recommended a higher dividend as justified by the increase in revenue during the year. Their recommendation to pay at the same rate as last year means that the distribution this year will amount to only 83¼ per cent of available revenue as compared with 87¼ per cent. for 1961. It is the Directors' intention to revert when possible to a fuller distribution of annual earnings by way of dividend in accordance with the policy expressed to shareholders in previous years; but in their view the importance of the matters which influenced the Chancellor to make his request was such that shareholders would readily accept the maintenance of last year's rate of dividend at this time.

CURRENT YEAR'S PROSPECTS

During the current year profits are likely to suffer from the adverse effects of increased competition and narrowing margins throughout a wide range of industry and for this reason I would expect our sterling income to show some reduction. On the other hand the rising industrial activity in the United States can be expected to result in further increases in dividends from our dollar investments. Though it is likely that results will fall short of the President's forecast of a substantial increase in the gross national product of the USA during 1962-63 and of a rise of some 23 per cent in company profits, there is clearly a welcome improvement in the US economy. This should provide a stimulus for international trade and should benefit the British economy as it should help the export trade, the increase of which has been deemed by the Government, a prerequisite for its re-expansion of the economy. In general, it appears likely that after the pause we have experienced expansionist forces may again operate for a period in the world.

The prospects of British entry into the Common Market and of the freer trade proposed by the President of the USA are stimulating; their realisation will necessarily involve searching reappraisals of the outlook for many established companies; the rewards for the discerning investor should be very satisfactory.

DISTRIBUTION OF INVESTMENTS

During the year there was a comparatively small reduction in the amounts invested (£260,000) in the United Kingdom and net increases in the amounts invested in Australasia (£291,000), and Europe (£322,000), and of minor proportions in the USA (£88,000) and Canada (£37,000).

On the basis of market valuation, the proportion of investments in the USA is now 29.7 per cent against 27.6 per cent. The reclassification of certain investments due to the withdrawal of South Africa from the Commonwealth (which accounts for 1.5 per cent) and the increased investment in Europe (now amounting to 2.8 per cent) have resulted in an increase in investment in "Other Countries" from 2.3 per cent to 5.3 per cent. Of the 5.7 per cent shown as investment in the Commonwealth, 3.6 per cent is invested in Australasia.

Although the percentage in British investments shows a fall from 62.4 per cent to 56.9 per cent, there was an actual increase in the valuation of our holdings after allowing for the net disinvestment referred to above, since the figures are calculated on the larger valuation of £17,700,000 as compared with £16,167,000 last year.

The number of Ordinary Stockholders is now 4,150 as compared with 3,800 last year.

	1962	1961
Valuation of Investments at January 31st	£17,699,960	£16,167,219
Net Asset per 5s. unit of Ordinary Stock	25s. 1d.	23s. 2d.
Dividend on Ordinary Stock	19 per cent	19 per cent
Priority Percentage	15-83¼	15¼-87¼

THE PROPRIETORS OF HAY'S WHARF

RESULTS REFLECT EXPANSION AND DIVERSIFICATION

The Fifty-fourth Annual General Meeting of The Proprietors of Hay's Wharf, Limited, was held on March 29th in London, **Sir Rupert De la Bere, Bt, KCVO,** the chairman, presiding.

The following are extracts from his circulated statement for the year ended September 30, 1961:

The results for the year are encouraging. In spite of some adverse factors, nearly every section of the Group has increased business, and has made its contribution to the improved results for the year. Last year I forecast the maintenance of a reasonable level of profit and an expansion of the activities of all sections, and I look forward to a continuance of this trend.

An important merger was effected with Chambers Wharf and Cold Stores Ltd. and the old-established cartage business of Samuel Taylor & Sons Ltd. was purchased during the year.

As announced recently in the press, a conditional Agreement has been entered into for the acquisition of Nathan Agran Limited.

ACCOUNTS

The Consolidated trading profit, before Tax, for the year, which includes six months profits in respect of Chambers Wharf and Cold Stores Ltd., amounts to £547,345, an increase of nearly 47 per cent over the profit for 1960 (£372,556).

PUBLIC WHARVES AND STORAGE

There was a welcome increase in the tonnage of goods in store, with a consequent improvement in earnings. However, the improved level of profits does not yet show a satisfactory return in relation to the volume of business, and your Board is looking for a further improvement in the profitability of Hay's Wharf Ltd. over the next few years. The results for the six months to September 1961 of Chambers Wharf and Cold Stores Ltd. came fully up to estimates.

The problem of rising costs has been the general experience of warehousekeepers throughout the country, and substantial increases in rates and charges were announced during 1961 in many U.K. Ports, and rates and charges in the Port of London have regretfully, but necessarily, been increased from January 1, 1962. The new levels of rates and charges should put certain important classes of traffic, the profitability of which has been marginal, on to a more realistic basis; but strong action will be needed if the new margins are not to be eroded by further increases in costs.

LIGHTERAGE

The lighterage trade generally suffered an unusually severe and prolonged depression due partly to the loss of transhipment business from the Port of London to the Continent. The start of the present financial year is encouraging in that figures for the first four months show an improvement.

BOTTLING AND BONDED STORAGE

The demand for bottling and bonded storage services continues to increase, and new plant was installed to increase output. Profits from this section, including those of Agence Continentale et Anglaise, showed a satisfactory increase. A new company, Strathleven Bonded Warehouses Ltd., has been formed to undertake the construction and operation of a bonded bottling store in Scotland.

PROPERTY

Net rental income from the group's investment properties continues to improve, and demand for good office accommodation does not slacken.

There will be opportunities for further profitable development, some immediate prospects under investigation, and some of a more distant nature. Exploratory discussions have been held over the past year with adjoining owners, including the Provost and Chapter of Southwark Cathedral, and with the City of London Real Property Company Ltd., in connection with the possible redevelopment of about four acres of land lying between Southwark Cathedral and the River.

SHIPPING, FORWARDING AND TRAVEL

This section showed improved results, which is gratifying in view of the keener competition and narrowing of profit margins experienced during the year. In addition to the normal travel facilities, Pickfords and Hay's Wharf Shipping and Forwarding Co. Ltd. are operating inclusive tours and holidays in various parts of the continent under the name "Sun Holidays" and a greatly increased number of passengers will be carried during the current year. The Continental Express group of companies achieved an overall improvement. Agence Continentale et Anglaise, Brussels, returned record profits, and other Continental companies, operating from Calais, Aachen and Vienna are also making progress.

STAFF

I place on record my sincere thanks, and those of your Board, for the hard work, goodwill and co-operation shown by all members of the staff, both at home and overseas.

CHAIRMAN'S ADDITIONAL REMARKS

Addressing the meeting, the Chairman said: Since the publication of the Report and Accounts the Company has issued £1,000,000 of 6¾ per cent Debenture Stock 1984/87 placed at 98½. This finance should be adequate for the immediate needs for the developments already approved by your Board. The report and accounts were adopted.

BAKELITE LIMITED

HIGHER VOLUME BUT LOWER PROFIT

The following is a summary of a statement by the Chairman, **Mr Stanley Adams,** circulated with the 1961 Report and Accounts prior to the thirty-sixth Annual General Meeting of Bakelite Limited which will be held in London on April 26th.

Mr Adams said that sales by weight for 1961 were the highest in the history of the company but the value of sales was reduced because of pressure on selling prices which, together with rising costs, had caused a reduction in the profit for the year.

The trading profit for 1961, after charging £158,608 for reduction in value of stock in trade, amounted to £852,924 (£1,350,808). After deducting Debenture Stock interest and taxation there remained a balance of £442,490 (£644,679) which, added to the balance brought forward and other year-end adjustments, gave an available surplus of £942,956 (£901,910).

The Directors have transferred £388,608 to reserves and recommend a final dividend of 11½ per cent, making a total payment for 1961 of 17½ per cent, the same as for the previous year.

TRADE REVIEW

Bakelite's well established thermosetting products were again in reasonable demand, although there was some falling off in the quantities sold. Phenolic moulding materials continued their important role in many directions and the newer light-coloured thermosetting materials were making progress in domestic equipment where such colours help to generate "product appeal."

Despite competition, the demand for WARERITE decorative laminated continued to increase in the building, furniture and transport industries and the public was becoming increasingly aware of the value of these materials. Wide use was also made of industrial laminates in mechanical, electronic and other electrical equipment.

Requirements for polyethylene continued to increase with the growing demand for prepackaged commodities. Further progress was also made in developing the use of polyethylene for telephone and other electric cable insulation. Demand for vinyl material was well maintained and is expected to expand.

Export sales achieved a modest improvement over the previous year and this was regarded as reasonably satisfactory in the light of the highly competitive world supply situation.

RESEARCH AND DEVELOPMENT

During the year the company intensified its work in promoting the increased applications of plastics materials in various industries. The introduction of new polyethylene resins and compounds made possible the production of film with better appearance for presentation packs and further techniques for the use of epoxide resins were developed.

New finishes and patterns for WARERITE were introduced and new grades of industrial laminates have been developed to meet present day requirements in electronic equipment.

EXPANSION PROGRAMME

The current programme for the expansion of production facilities for laminated materials and thermosetting resins was virtually completed during 1961 and further plant was provided for the continuous compounding of p.v.c. resins.

Future plans provide not only for increasing capacity when necessary in both the thermosetting and thermoplastic fields but also for the constant improvement of the plant to ensure that it incorporates the most modern production techniques.

PERSONNEL

Mr Adams expressed appreciation to all employees for their loyalty and efforts throughout a difficult year and in particular to the senior staff whose special qualifications and long experience contributed so much to the achievements of the company.

THE DAVID BROWN CORPORATION LIMITED

FURTHER NOTABLE PROGRESS

MR DAVID BROWN'S REVIEW

The eleventh annual general meeting of The David Brown Corporation Limited was held on March 30th in London. The following is an extract from **Mr David Brown's** review:

When I reported to you a year ago I told you of our heavy capital investment programme and of the reorganisation of our manufacturing units into three main groups, each with a substantial measure of independence. I am glad to be able to tell you that both policies have been amply justified by results. The Group profit before taxation of £996,792 represents a further notable stride along the road back to the high level of profitability attained in the years prior to 1956, and was obtained from sales to customers which were more than 15 per cent greater in money terms than in the previous year.

The group of companies headed by David Brown & Sons (Huddersfield) Limited which are engaged in the Gear, Machine Tool and Foundry Industries had another excellent year, and output in many departments was limited only by productive capacity and labour available. At the year end this group of companies had orders on hand the value of which was 20 per cent above the already high level reached at the beginning of the year.

For David Brown Tractors Limited also the year was one of expansion. With their new and highly successful range of tractors, which represent in our opinion the finest value for money obtainable anywhere in the world, they more than held their own in this extremely competitive industry, achieving in the process an increase in turnover of over 20 per cent as compared with the previous year. Although its activities are of course on a very much smaller scale than those of the two other groups, Aston Martin Lagonda Limited also increased its sales by over 40 per cent as compared with the previous year and so was able to improve deliveries of Aston Martin DB.4's to customers at home and abroad.

FINANCIAL POSITION

You will see from the Consolidated Balance Sheet that the book value of the net assets employed in the Group as a whole now amounts to over £8.6 million. The comparable figure at June 30th 1951 when your Company published its first Accounts was just over £4 million, and this increase in our net assets to more than double the figure of 10 years ago gives some indication of the expansion which has taken place during the period. The fact that our net current assets have not expanded in the same ratio over the same period is, however, a measure of the extent to which the Group's retained profits have been ploughed back into fixed assets. During the year under review we spent some £820,000 on new plant and equipment in addition to £180,000 on land and buildings and £300,000 on increases in our trade investments, and at the end of the year our commitments for further capital expenditure amounted to approximately £970,000. It is for these reasons that your Board is still unable to recommend any dividend on the Ordinary Capital.

OVERSEAS INTERESTS

Our main overseas interest is, of course, our investment in Foote Bros. Gear and Machine Corporation of Chicago. The financial position of Foote Bros. remains very strong and we are well satisfied with our investment in this important American gear manufacturing concern, the long range outlook for whose major product lines, supported by certain of our own specialities, is, in our opinion, very encouraging.

David Brown Precision Equipment (Pty) Ltd., our wholly owned subsidiary in South Africa, operated profitably during the year, as did our Australian and Spanish associated companies, Richardson David Brown Gears Pty. Ltd. and David Brown Engranajes S.A., in each of which we have a minority interest. Only in India, where a series of unforeseen difficulties delayed the start of production by our newest associated company, David Brown Greaves Private Limited, did progress fail to come up to our expectations.

FUTURE PROSPECTS

Since the close of the last financial year we have opened a new factory in Sunderland to meet the increasing demand for our range of 'Radicon' Speed Reducers and our Machine Tool Division has moved from its former premises in Manchester (which it had completely outgrown) to a larger factory in another part of that City. These developments should substantially increase the future profit-earning capacity of the Group, but both have inevitably involved some disturbance of production in the short term In spite of this, however, the turnover and earnings of the Group as a whole for the first six months of the current year have been maintained at the levels achieved last year, and in the absence of unforeseen circumstances I have every hope that the results we shall place before you a year hence will be no less satisfactory.

The report and accounts were adopted.

THE CHARTERED BANK

108TH ANNUAL GENERAL MEETING

The one hundred and eighth annual general meeting of The Chartered Bank was held on April 4th at the Bank's head office, 38, Bishopsgate, London, E.C.2.

The Chairman of the Bank, **Mr V. A. Grantham,** presided.

Mr W. G. Pullen, chief general manager, read the notice convening the meeting and the report of the auditors. With the consent of the stockholders present, the report and accounts, which had been circulated previously, were taken as read.

The Chairman then moved that the report and accounts for the year 1961 be approved and that a final dividend of 7½ per cent, less income tax, on the increased capital of £6,600,000 be declared; an interim dividend of 7½ per cent, less income tax, having already been paid in September, 1961, on the then issued capital of £5,500,000.

The resolution was seconded by Sir John Tait and carried unanimously.

The retiring directors, Sir Harry Greenfield, CSI, CIE, Sir Charles Watt Miles, OBE, Sir Paul Benthall, KBE, and Sir John Tait, were re-elected directors of the Bank.

Messrs Deloitte, Plender, Griffiths & Co. and Messrs W. A. Browne & Co. were reappointed auditors, and their remuneration was fixed.

A vote of thanks to the directors, general managers, branch managers and the staff at home and abroad for their successful conduct of the affairs of The Chartered Bank Group was proposed by Sir Robert Scott, GCMG, CBE, and seconded by Mr Joseph Nissim.

TRUST HOUSES LIMITED

DEVELOPMENT PROGRESS

The Fifty-ninth Annual General Meeting of Trust Houses Limited was held on March 30th in London, **Sir Geoffrey Crowther,** the chairman, presiding. In the course of his circulated statement the chairman referred to the board's decision to change the company's accounting date from March 31st to September 30th and continued:

The profit in the half year to September 30, 1961, was actually larger than in the previous full year. This does not mean that there was any sudden improvement in the profitability of the business; it simply reflects the fact that we make all, and more than all, our profit in the summer.

An interim dividend of 1s. 0d. per share was paid in January, 1962, and a final dividend of 3d. per share is recommended in respect of the six months now accounted for, which will be paid to all ordinary and trust shareholders, including former Lockhart Group ordinary stockholders. This will make a total of 1s. 3d. per share for the six months, as compared with 2s. 6d. for the previous 12 months. In order, however, to take account of the extension of the current period to 13 months and to make the change-over to the new accounting date with as little disturbance as possible to the flow of shareholders' income, we are paying, at the same time, a special interim dividend of 3d. per share. We expect to pay a second interim dividend in respect of the new period in September or October, 1962, and to recommend a final at the time of the Annual General Meeting in March or early April, 1963. These will in future be the regular dates.

The offer to acquire the stock of Lockhart Group Ltd. was not made until December 15, 1961, and the figures in the present accounts do not reflect this acquisition. I explained the reasons for this offer in the letter that was sent to you at the time and I will therefore add on that score only that we were gratified to get such a large response and that we have increasing reasons for confidence that the merger will bring great benefits.

The Dragon Hotel at Swansea opened in May and the Hertford Hotel at Bayswater Road, London, in August. The business we are doing in both exceeds our expectations.

Two more projects are now in the stage of active construction, the Wessex Hotel at Winchester and the new hotel-in-the-air on the site of the old Queen's Hall, in Langham Place, London. Both will be finished in 1963. We hope that construction of our big new hotel at Sheffield will be started this year. The new motor hotel at Alveston in Gloucestershire will open in 1962, and we have three or four more projects for motor hotels close to important highways in various stages of preparation.

We are also pressing on with the development of our existing houses. Among the large projects that are now in hand are Windsor, Newbury, Chichester, Shrewsbury, Aldeburgh, Peebles, Long Melford, and Buckingham.

We are continuing with the policy of removing from the list of Trust Houses a few of the smaller houses which are devoid of any particular attraction and which either are unprofitable or else fail to bring in a profit commensurate with the administrative burden that they place on head office. Since the last annual report we have sold our houses at Harleston, Pocklington and Langport, and have given up our leases at Coventry and of the Wellington Hotel, Minehead.

The report and accounts were adopted.

ASHANTI GOLDFIELDS CORPORATION

ANOTHER RECORD YEAR

The sixty-fifth annual general meeting of Ashanti Goldfields Corporation Limited was held on April 4th in London.

Major-General Sir Edward L. Spears, Bart, KBE, CB, MC, FInstD (Chairman) presided and, in the course of his speech, said:

For the fifth year in succession, tonnage mined and gold ounces produced are a record. In the current year our programme is to increase production to 480,000 tons and 402,000 ounces. We hope to make about the same profit as last year in spite of the exactions imposed on us in the last Ghana Budget.

The technical position of the mine is stronger than ever—with over 3,000,000 tons at an average grade of 18.73 dwts in the reserves, and continuing excellent development results.

Profit before Income Tax, but after charging £370,902 Minerals Duty paid to the Ghana Government, was £1,869,762, an increase of £130,805. We have provided £687,000 for Ghana Income Tax, and £47,138 for U.K. Tax on investment income. An Interim Dividend of 1s. per share was paid in September, and we now recommend a Final, again of 1s. per share, but on the Capital as increased last September.

Commenting on current prospects, the chairman said: I do not think the outlook is as unpromising as it appeared a few months ago. If Ghana can get through her immediate financial difficulties, I think the President and his advisers will realise increasingly that their ambitious development schemes cannot be achieved without Western capital and technical help. I hope, therefore, that their tendency will be to endeavour to create a more favourable climate for private enterprise, and this can only be done if existing enterprises like the Corporation are fairly treated.

The report was adopted.

EDUCATION AND COURSES

B.Sc. (ECON.)
LONDON UNIVERSITY
U.C.C., founded in 1887, successfully prepares students for this Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts.—Prospectus giving details of Courses for other London Degrees, G.C.E., Law Exams., etc., from Registrar, University Correspondence College, 60 Burlington House, Cambridge.

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Write, Dyrannhaug Secretary, Dalesk's, 158 Holland Park Avenue, W.11. PARk 4654.

EXPERT POSTAL TUITION
for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G972),

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30, Queen Victoria Street, London, E.C.4. Established 1910.

BUSINESS AND PERSONAL

NORRIS BROTHERS LIMITED, designers of Donald Campbell's "Bluebird" car and hydroplane, offer their services to companies requiring the application of original thought to their problems in Research, Design and Development.—62 Church Road, Burgess Hill, Sussex.

THE CHARTERED INSTITUTE OF SECRETARIES
Employers requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dep. E), 14 New Bridge Street, London, E.C.4.

EAST-WEST TRADE. Economic information and reports on all communist countries by professional (Ph.D.) Economist.—Box No. 1608.

DIRECTORY of trade office staff (inc. D and F.).—Consult Stella Fisher Bureau, 436 Strand, W.C.2. TEMple Bar 6644.

APPOINTMENTS

UNIVERSITY OF GLASGOW
ASSISTANTSHIP IN ECONOMIC HISTORY

Applications are invited for an ASSISTANTSHIP IN ECONOMIC HISTORY. Salary scale: £800-£950 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than April 30, 1962, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for appointment to a Lectureship or Assistant Lectureship in Political Science. The salary scale for Lecturers is £1,050 x £50—£1,400 x £75—£1,550; thereafter x £75—£1,850 a year plus £60 a year London Allowance; and for Assistant Lecturers £800 x £50—£950 a year plus £60 a year London Allowance; with superannuation benefits and family allowances in both cases. In assessing the starting salary consideration will be given to age and experience.

Applications, with the names of not more than three referees, should be received not later than May 4, 1962, by the Secretary, London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2, from whom further particulars may be obtained.

For other appointments see page 100

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

RESEARCH ASSISTANT required for bibliographical and library work in the Research Techniques Division. Salary according to age and qualifications on a scale of £525 x £25—£620 p.a. Acquaintance with statistics desirable. Applications, with the names of two referees, should be received by Professor J. Durbin, Research Techniques Division, The London School of Economics and Political Science, Houghton Street, London, W.C.2, not later than May 1, 1962.

UNIVERSITY COLLEGE, IBADAN, NIGERIA

Applications are invited for the following new posts in Faculty of Economics and Social Studies:—
ECONOMICS: One Senior Lecturer or Lecturer and one Lecturer.
GOVERNMENT: One Lecturer.
SOCIOLOGY: One Lecturer (applications invited from Sociologists and Social Anthropologists).

Salary scales: Senior Lecturer £2,275 x £75—£2,575 p.a.; Lecturer £1,200 x £75—£1,650 (bar), £1,725 x £75—£2,175 p.a. Appointments to commence as soon as possible. Passages paid for appointee, wife and up to five children under 11 years, on appointment, annual overseas leave and termination. Children's allowance and outfit allowances. F.S.S.U. Part-furnished accommodation at rent not exceeding 7.7 per cent of salary. Detailed applications (six copies), naming three referees, by May 6, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

UNIVERSITY OF WESTERN AUSTRALIA
LECTURESHIP/SENIOR LECTURESHIP IN COMMERCE

Applications are invited for appointment to a position of LECTURER or SENIOR LECTURER IN COMMERCE in the Faculty of Economics and Commerce. Applicants should possess a degree in Economics and professional qualifications in Accountancy. The successful applicant will be required to teach Accounting for the new degree course in Commerce and the appointment will depend largely on the qualifications and experience of the appointee.

The salary range for a Lecturer is £A1,750/100/2,450 per annum and for a Senior Lecturer £A2,450/100/3,000 per annum with superannuation similar to F.S.S.U. in both cases.

The appointee will be required to take up duty by the end of February, 1963.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *May 26, 1962.*

UNIVERSITY OF BRISTOL

Applications are invited for two posts in the Department of Economics from August 1, 1962.

An Assistant Lectureship (Grade III) or a Lectureship (Grade II).

One of these appointments will be in Economics and the other in Economic Statistics. The salary scale for Grade III is £800 by £50 to £950 p.a., and for Grade II £1,050 by £50 to £1,400 by £75 to £1,475 (bar) by £75 to £1,850 p.a., plus F.S.S.U. and Family Allowance. Further particulars may be obtained from the Registrar, The University, Bristol, 8, to whom applications should be sent by April 25.

UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited for (a) LECTURESHIP or (b) ASSISTANT LECTURESHIP in Public Administration in the Department of Government. Appointment for three years. Duties to be assumed by October, 1962. Appointee will assist in teaching of courses of study for Diploma in Public Administration and in teaching course in Public Administration for B.Sc. (Econ.) degree. Salary scales: (a) £1,050 x £50—£1,400 x £75—£1,850 p.a.; (b) £800 x £50—£950 p.a. plus pensionable C.W.I. supplement of £250 p.a. Entry according to qualifications and experience, but in case of Assistant Lecturers and Lecturers below merit bar consideration is given to age in fixing salary. Child allowance. F.S.S.U. Unfurnished accommodation at rental of 10 per cent of pensionable salary. Up to five full passages on appointment and on normal termination. Detailed applications (six copies), naming three referees, by May 31, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

UNIVERSITY OF DUBLIN
TRINITY COLLEGE
JUNIOR LECTURER IN ECONOMICS

Applications are invited for the post of Junior Lecturer in Economics, duties to be taken up on September 21, 1962. Salary in the range £760 x £45 108.—£902 10s. p.a., with membership of the non-contributory superannuation and life assurance scheme, and with marriage and child allowances.

Applications (four copies), giving full details of academic career, etc., and the names and addresses of three referees, should reach the Registrar, Trinity College, Dublin 2, from whom further particulars may be obtained, not later than April 24, 1962.

STC TRANSISTORS
STATISTICIAN

The Quality Assurance Department of our rapidly expanding Transistor Division wishes to appoint a Graduate Mathematician, who has specialised in statistics, to provide a general service to the Department.

The work will, however, particularly involve the analysis of scientific experiments and also the processing of data obtained from extensive reliability and life tests on a whole range of high quality semiconductor devices. A knowledge of computer techniques would be very useful, but some training in this respect could be given.

The Division is located at Foots Cray, a pleasant residential district, only 13 miles from central London.

The Company operates a wide range of benefits, including a NON-CONTRIBUTORY Pension Scheme.

Apply, stating qualifications, experience and salary required to W. J. YEOMANS, Personnel Manager, STANDARD TELEPHONES AND CABLES LIMITED, Foots Cray, Sidcup, Kent.

SECURITY ANALYST required by Investment Trust to assist Manager. A qualification in economics and statistics would be an advantage, with knowledge of accountancy. Written applications, giving full personal particulars to Box H 106 c/o Streets, 110 Old Broad Street, E.C.2.

SALZBURG SEMINAR IN AMERICAN STUDIES
SCHLOSS LEOPOLDSKRON, SALZBURG, AUSTRIA

Scholarships are offered for the following sessions:
SCIENCE AND AMERICAN LIFE
June 10 to July 7 1962
AMERICAN LAW AND LEGAL INSTITUTIONS
July 22 to August 16, 1962
THE ARTS IN AMERICA
August 19 to September 15, 1962

Lectures and Seminars at the post-graduate level. Admission is granted for evidence of ability and accomplishment. General age range 25 to 40.

For further information and application forms, please write promptly to: Salzburg Seminar, 58 Upper Brook Street, London, W.1.

UNIVERSITY OF SYDNEY
LECTURESHIP IN GOVERNMENT AND PUBLIC ADMINISTRATION

Applications are invited for the position of Lecturer in Government and Public Administration. Candidates whose special interests lie either in Politics or Public Administration will be equally considered.

The salary for a Lecturer is within the range £A1,730 x 105-£2,435 per annum, plus cost of living adjustments (at present £A44 p.a.) and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *June 15, 1962.*

There is a vacancy for a
STATISTICIAN
in the Economic research section of a leading CLEARING BANK.

Applicants should preferably be under 30 years of age and possess a good Economics Degree or equivalent qualification.

Full information concerning salary and conditions of service will be given on interview.

Please write, giving full details, to: Box E 131 c/o Charles Barker & Sons Ltd., 20 Cannon Street, London, E.C.4.

UNIVERSITY OF ADELAIDE
SENIOR LECTURER IN BUSINESS MANAGEMENT
LECTURER IN ACCOUNTING

Applications are invited for the above-mentioned appointments.

SALARY SCALES: Senior Lecturer, £A2,450—£3,100; Lecturer £A1,675—£2,450; with superannuation on the F.S.S.U. basis. The initial salary may be fixed within the appropriate scale in accordance with the successful candidate's qualifications and experience.

FURTHER INFORMATION: A potential candidate for either post should seek from the Registrar of the University or from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1, (i) General Conditions of Appointment, which include particulars of tenure, superannuation, removal expenses, invalidity and study leave; (ii) a statement giving further particulars of each post and of the work of the Department of Commerce, which will gladly supply any further information desired on request to the Registrar.

APPLICATIONS, in duplicate, should give information listed in the final paragraph of the General Conditions of Appointment, and should reach the Registrar, The University of Adelaide, Adelaide, South Australia, not later than *May 15, 1962.*

AUSTRALIAN NATIONAL UNIVERSITY
INSTITUTE OF ADVANCED STUDIES
RESEARCH SCHOOL OF SOCIAL SCIENCES
DEPARTMENT OF DEMOGRAPHY

Applications are invited for the position of *Research Fellow* or *Senior Research Fellow* in the Department of Demography.

The appointment will be within the salary range £A1,625-£2,850 for a Research Fellow or £A2,620-£3,160 for a Senior Research Fellow.

While appointments in these categories are usually for three years with possible extension to a maximum of five years, a shorter term may be considered in this case.

Reasonable appointment expenses will be paid for the successful applicant and his family.

The research interests of the Department include the broader historical and social studies of population movements as well as the more formal statistical aspects. Current research is focused upon Australia, New Zealand, the Pacific Islands and South Eastern Asia, but is not necessarily limited to these areas.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *April 27, 1962.*

UNIVERSITY COLLEGE, IBADAN, NIGERIA

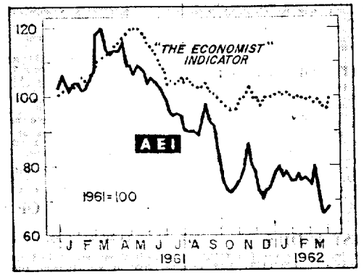
Applications are invited for the newly-created Chair of GOVERNMENT. Salary £3,000 p.a. Appointment, to commence as soon as possible, to retiring age, normally 60 years. Passages paid for appointee, wife and up to five children under 11 years, on appointment, annual overseas leave and termination. Children's, car and outfit allowances. F.S.S.U. Part-furnished accommodation at rent not exceeding 7.7 per cent of salary. Detailed applications (eight copies), naming three referees, by May 7, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

COMPANY AFFAIRS

The feature of the London Stock Market this week was the renewed interest in equities. This reached its peak on Wednesday when prices rose sharply on optimistic hopes about the economic prospects. Markets while still firm were quieter on Thursday. Over the week The Economist *indicator gained 9 points to 355.3 with store and building shares to the fore. Motors and engineering were other firm groups. Among the laggards tobaccos continued to lose ground but electrical shares such as AEI which touched a new low early in the week went ahead later.*

No Light for AEI

THE full report of Associated Electrical Industries reveals that the directors prefer not to look ahead to prospects for 1962—not surprisingly, perhaps, so soon before the budget. On figures alone, 1961 was pretty bleak, with net profits down from £4¼ million to £3¼ million and the ordinary dividend cut from 15 to 10 per cent. The setback is attributed mainly to the impact of credit restrictions on the tele-



Years to end Dec.	1957	1958	1959	1960	1961

vision and domestic appliance businesses which reduced their profits by over £2 million. But the pattern of profits was far from being uniform throughout the group.

Trading results on the cable side were "considerably better," though the return on capital was still inadequate. Profits from lamps and lighting improved, while a 25 per cent increase in telecommunication sales turned a "marginal loss" into a "modest profit." On the heavy electrical side, on which about half of the group's capital is employed, turnover was generally maintained, but margins were squeezed further; turnover and profits of the heavy plant division were "considerably up," while the steam turbine-generator division, which is one of the most important in the group, continued to be "profitable." Exports in 1961 reached nearly £50 million but margins remained slim.

Returns, both on AEI's sales and on the capital it employs, continued to fall despite some improvement in productivity in some sectors, for a 7 per cent increase in the group's wage bill more than offset other reductions in costs. Wages and salaries now absorb one-third of the group's total income, and were one reason why the group's retained cash flow was kept down to only £7 million. This little more than covered expenditure on fixed capital account and with increasingly large amounts tied up in working capital (primarily in large long term contracts) AEI is having to call increasingly on its bankers. In 1961 overdrafts rose from £9¼ million to £15¼ million and the group also had to borrow £7½ million on acceptance credits. The directors, however, do not propose to make an issue either of debentures or shares at the present time, even though there is little likelihood of any marked reduction in the level of borrowings in 1962. The exiguous return on capital employed would hardly form the background to a successful issue. The increase in bank interest alone explains almost half the fall from £9 million to £7.1 million in profits before tax. Lower interest rates may help the interest charge this year, but the bulk of the increase in overdrafts last year occurred in the second half.

The strain on its liquid resources does not hold out much hope of any early restoration of the dividend to 15 per cent. However, with the CEGB expanding its programme, and the problems of the tele-

vision tube business eased by the merging of AEI's interests with Thorn, it may be that the shares which touched a new low of 26s. 3d. this week offer the prospects of recovery, particularly if the budget helps to boost sales of consumer durables. Indeed in this week's rally the £1 shares improved to 27s. 9d. to yield 7.2 per cent on the 10 per cent dividend. But investors are not likely to look with much favour on these and other heavy electrical shares until there is evidence that profit margins and returns on capital employed are moving decisively upwards.

Albright and Wilson

BOTH sales and profits of the Albright and Wilson group rose in 1961, but only because the results of W. J. Bush, which was acquired in March, are included. Including Bush for 1960 as well as 1961 profits showed a fall of 4¼ per cent from £8,811,000 to £8,432,000. The companies operating in Great Britain, which export about a quarter of their output, maintained their sales in the home market and their exports rose by over a sixth, mainly in the latter half of the year. But the pressure on margins was severe enough to push profits earned in this country down in the face of the rise in turnover. The principal overseas subsidiaries also met strong competition; in Canada margins have been forced down, reflecting over-capacity among United States producers, and the removal of import restrictions has had a marked effect on chemical producers in Australia.

The chairman, Sir Sydney Barratt, says that trading conditions in the industry were among the most difficult in recent years

Indeed, compared with the results of most other chemical producers those of Albright appear reasonably favourable; this outcome probably reflects the fact that the balance of production makes it less susceptible to the squeeze on prices brought about by marginal cost selling from abroad. Sir Stanley says that the next twelve months must be "an uncertain and difficult period" for the chemical industry but, while he is reluctant to make any forecast, he says that present indications are that profits for the current year will not differ significantly from those in 1961, as higher sales, both at home and overseas, should offset the effect of selling at lower prices. The group is continuing with its expansion plans and this may enable it to hold on to its share of the market. Capital expenditure amounted to £8 million last year and at December there was still £3½ million unspent on authorised projects. But Sir Sydney says that the liquid funds of £2.9 million together with the cash flow and further borrowing from the banks should cover capital requirements in 1962.

Glaxo

WELL over half the sales of the Glaxo group of pharmaceutical producers are made abroad and the directors say that keen competition in foreign markets and lower prices in the home market are responsible for a fall of 6¾ per cent in trading profits in the six months to December compared with the same period of 1960, in the face of a rise in turnover of 8 per cent by value and even more by volume. In keeping with their earlier assurance that the interim dividend would amount to half the previous year's total, the directors have declared a payment of 7½ per cent.

The results for the second half of 1961-62 will obviously continue to reflect the pressure on margins. But past experience shows that Glaxo usually does better in the second half of its financial year than in the first, so that unless there is further decline in margins the fall in earnings may

Six months to	June 30, 1960	Dec. 31, 1960*	June 30, 1961*	Dec. 31, 1961*
	£000's	£000's	£000's	£000's
Trading profits	3,605	3,295	3,696	3,072
Gross profits	3,970	3,475	4,143	3,294
Taxation	1,920	1,759	2,184	1,750
Net profits	1,995	1,667	1,980	1,504

* Including results of Evans Medical.

not be steep and a dividend of 15 per cent should be covered almost three times. A year ago the yield on Glaxo's 10s. ordinary shares was a mere 2¼ per cent, but now, at 51s. 6d., they yield nearly 3 per cent.

Vauxhall Motors

LIKE other motor companies Vauxhall Motors, the British subsidiary of General Motors, found 1961 a difficult year. Net profits slumped from £7,159,000 to £4,329,000 even though sales were only £18 million lower at £118 million; the table shows margins on sales fell sharply from 10.4 to under 6 per cent. The new chairman, Mr W. Swallow, says that restrictions on sales of cars in the home market were not accompanied by any improvement in export sales and unit costs rose as production was cut back; this in turn made it more difficult for Vauxhall to compete effectively for overseas orders.

	1959	1960	1961
	£ mil.	£ mil.	£ mil.
Sales	130·1	136·0	117·9
Gross profit	13·5	14·1	6·9
Net profit	6·4	7·2	4·3
Gross profit/sales	10·4	10·4	5·9

Sales of cars and commercial vehicles fell from 245,981 to 186,388 units; export sales, although 18 per cent below the 1960 peak, still accounted for 56½ per cent. of the total. While sales to the Commonwealth and to North America fell those to Europe rose.

New Victor models were introduced only in September and they cannot have influenced the past year's profits significantly, though they had a good reception and should help Vauxhall to secure its share of any recovery in the British motor industry this year. Financially Vauxhall began 1962 in a better shape than most companies after a period of depression. With production adjusted to the fall in demand, stocks had been reduced, and though capital expenditure amounted to £13 million the company retained nearly £10 million. Thus, though liquid assets were £4½ million lower at £10¼ million, they were sufficient to cover outstanding capital commitments, which largely relate to the new Ellesmere Port factory.

Simon Engineering

LAST May the chairman of Simon Engineering, Mr R. B. Potter, expected the results of the group to be much the same as those for 1960. In the event the trading profits of this group of engineers and contractors, whose interests range from bakery plant to nuclear power stations, fell by a mere 2½ per cent from £3,429,000 to £3,341,000. There was a heavier charge for depreciation and tax and net profits fell by 10½ per cent from £1,332,000 to £1,192,000. The ordinary dividend is maintained at 27½ per cent with the cover at 1¾ times, slightly lower.

The results of this Henry Simon-Simon Carves group are difficult to interpret because a large part of its work in any particular year stems from contracts made in earlier years. The group has done well to maintain its earnings in the face of rising costs, and its extensive business overseas may provide some protection against a decline in orders at home. At the beginning of last year, Simon's order book was at a record high level, but shareholders must wonder whether it is so high now, as industrial investment fell markedly in the final quarter of last year. The 5s. shares at 31s. 3d. yield 4.4 per cent.

Alfred Herbert

THE order book of Alfred Herbert, the machine tool group, stands at a record level, £1 million higher than a year ago, and ensures eight to nine months' work ahead. Output is rising and is helping to preserve margins at a time of rising costs. It would seem reasonable, therefore, to expect that the pace of expansion in the year to October 31, 1961, when trading profits rose by 14½ per cent, should be sustained in the current year unless the fall in industrial investment goes appreciably further. The chairman, Colonel C. W. Clark, says that there was no decline in orders received by the group in January and the barest perceptible decline since.

It has been said that the machine tool industry will be vulnerable to foreign competition if Britain joins the common market, but Colonel Clark refutes this suggestion for Alfred Herbert. Almost 40 per cent of the group's output is exported, and it has done "unusually well" in France and Italy. Revaluation of the mark and rising German wage rates have helped to reduce the competitive advantage of German producers and Colonel Clark is optimistic about the group's prospects in the common market.

Bakelite

CAUGHT, like other plastics manufacturers, between rising costs and falling prices, Bakelite reported a fall of 37 per cent in its trading profits for 1961 from £1,351,000 to £853,000. Intense competition in the industry is clearly shown by the fact that though the physical volume of Bakelite's sales was higher the value of sales actually fell and stocks had to be written down by £159,000. The ordinary dividend, maintained at 17½ per cent, is now covered twice by earnings.

The chairman, Mr Stanley Adams, understandably offers no forecast of profits for this year, for current uncertainties in the plastics industry would make prophecy rash. The group has, however, completed its expansion programme and extended its range of products and there is a growing demand for the group's "Warerite" laminate from the furniture industry. Therefore, Bakelite may again sell a bigger physical volume this year—improved profits must require improvement in margins and the present intense competition in the industry suggests that this is unlikely before the end of the current year. The 10s. ordinary shares at 37s. 6d., yielding 4.6 per cent, may not fully reflect these problems.

THE MONEY MARKET

THE syndicate of discount houses raised its bid by 3d. to £98 18s. at last Friday's Treasury bill tender. This is a reduction of 1s. in the annual rate. The average rate of discount fell by 11.31d. to £4 8s. 1.16d., bringing the fall since Bank rate was reduced to 5 per cent to 9s. 6.41d. Total applications for the unchanged offer of £230 million bills fell by £16 million to £392 million, and the market's allotment of bills was 57 per cent compared with 48 per cent at the previous tender.

The reaction of the authorities to this further cut in the bill rate has again been strong. As in the previous week the market has again been forced to borrow from the Bank of England at the penal rate on two occasions. On Monday one or two houses borrowed a very small amount, and on Wednesday seven or eight houses were in the Bank for a moderate amount. On Tuesday the market just escaped borrowing from the Bank, and had to make full use of privilege money. The implication of this strong official pressure is that the authorities do not wish to see any further fall in rates at present.

In New York the three months' bill rate rose from 2.719 to 2.757 per cent.

(7) 25,000 workers had wage cuts (but over the whole of 1961 no worker had a net decrease). (8) Index of building costs. (9) Average for fourth quarter. (10) Using the revised retail price index based on January, 1962=100: February: all items=100·1; food=99·8. (11) Average for first quarter.

APPOINTMENTS

FORD OF BRITAIN

COMPUTERS

Ford of Britain is employing and developing the most modern and effective systems and techniques to assist in managing and operating its large scale activities. An important contribution is already being made by computers and considerable expansion in their use is planned. Exceptional opportunity is therefore offered to staff at both senior and junior levels on the following work :—

Systems analysis
Computer programming
Computer operations
Computer maintenance

Prospects in this expanding function in the vigorous Ford organisation ensure that the able man will make rapid progress. Applications, giving age and brief details of experience, should be addressed (with envelope marked " Ref CC ") to

MR. H. G. PEARMAN,
TRAINING AND RECRUITMENT OFFICE,
FORD MOTOR COMPANY LTD,
DAGENHAM, ESSEX

ACCOUNTANT

Medium sized Manufacturing Company have a vacancy for a young ACCOUNTANT.

The man required should be professionally qualified, and will be in charge of the Company's Accounts Department.

Must be able to take a wide view of all aspects of the affairs of a progressive Company.

Age group 25-35 years.

Starting salary around £1,200 p.a.

Applications, giving details of qualifications and experience, to Box 1612.

BEA Appointments

FORWARD PLANNING — **South Ruislip**

We are seeking two men of ability and initiative, with an objective and imaginative approach to the solution of commercial problems, for the Fleet Planning Branch.

MATHEMATICIAN : With an honours degree in Mathematics and at least two years' experience of the industrial application of OR techniques. He will undertake work on economic planning and control of future development, involving simulation studies, linear programming and other standard statistical routines, and will prepare reports for implementation within the Branch. Salary range £1176-£1627.

ECONOMICS ASSISTANT : to carry out economic assessment of future operating plans, undertaking special investigations of economic trends in particular groups or areas. He should have a degree or a professional qualification and practical experience of modern business or industry. Salary range £1048-£1417.

ELECTRONIC DATA PROCESSING — **South Ruislip**

Expansion of work commitments for our Emidec 1100 has created an opening for an additional Programmer in the Head Office team. Knowledge and practical experience of programming a computer for commercial or scientific use is desirable, and a degree in mathematics or related subjects an advantage. Candidates with other professional qualifications could apply, and applicants with a good educational record but no experience may be considered for vacancies on the operating side, with prospects of promotion to programming/supervisory posts after training and experience. Salary, commensurate with qualifications and experience, within a range £960-£1627.

Write, in confidence, to Personnel Officer, Head Office (EC) BEA, Bealine House, Ruislip, Middlesex.

BRITISH EUROPEAN AIRWAYS

CITY AND GUILDS OF LONDON INSTITUTE

APPOINTMENT OF DIRECTOR

The Institute invites applications for the post of Director to be responsible to the Director-General for the internal control of the work of the Institute. Applicants must be persons of good education, wide experience and

(a) possess a sound knowledge of the educational system,

(b) be interested in technical education and convinced of its importance,

(c) have had successful experience in executive control involving making day-to-day decisions and working to " deadlines,"

(d) be able to express themselves well both verbally and on paper.

Some of these requirements may be waived in the case of candidates having unusually wide or varied experience at a high level.

Candidates should be between 40 and 50 years of age. High salary consistent with the importance of the post. A generous contributory pension scheme is in force.

Candidates must make an initial application, giving a brief summary of their qualifications and career. Full particulars of the post and a form of application will be sent to those applicants with whom the Institute wishes to proceed further. Those with whom the Institute does not intend to proceed further will be so notified. Canvassing will disqualify. *Correspondence should be marked " Personal," and should be addressed to the Director-General, City and Guilds of London Institute, 76 Portland Place, London, W.1. The last day for the receipt of applications is April 30, 1962.*

CENTRAL ELECTRICITY GENERATING BOARD

SOUTH WESTERN REGION
SOUTH WALES DIVISION
Vacancy No. 71/EC/62.

Applications are invited for the superannuable N.J.C. appointment of ASSISTANT in the Testing, Efficiency and Combustion Section, Generation Department, Divisional Headquarters, Cardiff.

Salary: Grade 3, £730 to £880 per annum.

The successful applicant will be required to assist in routine calculations of plant test results, the compilation of test reports and the general administration of the Section.

A knowledge of advanced mathematics is essential, preferably to degree level, but a minimum standard of the Advanced Level of General Certificate of Education in mathematics will be considered.

Special application forms obtainable from the Central Electricity Generating Board, Personnel Department, Tyn-y-Jedwen Road, Gabalfa, Cardiff, to be returned by *April 16, 1962.*

STANDARD TELEPHONES AND CABLES LIMITED

MARKET RESEARCH

An ASSISTANT is required by our Private Communications Equipment Division, with a minimum educational standard up to "A" Level and with a fairly good knowledge of economics, to undertake the full range of techniques associated with market research.

Some commercial experience would be most useful and a technical background would be desirable, although this need not necessarily be formal. A knowledge of the structure of industry together with some experience of statistical and survey techniques is essential.

The Division is located at Foots Cray a pleasant residential district only 15 miles from central London.

The Company operates a wide range of benefits, including a NON-CONTRIBUTORY Pension Scheme.

Apply, stating qualifications experience and salary to

W. J. YLOMANS, Personnel Manager
STANDARD TELEPHONES AND CABLES LIMITED,
Private Communications Equipment Division,
Foots Cray, Sidcup, Kent.

PEP Requires RESEARCH OFFICER for work on Mental Subnormality in London area as part of major study of community mental health services. Degree in psychology, sociology or related subjects required. Post-graduate research or clinical experience desirable. Salary according to qualifications and experience. The Director, 16 Queen Anne's Gate, London, S.W.1.

For further appointments and other classified advertisements see page 93

A SMALL firm of ethical Management Consultants seek successor to MANAGING DIRECTOR. Applicant must have suitable qualifications plus ten years' consultancy experience and must be a sound administrator. His primary function will be to expand the turnover and increase profits. Prospects for above-average ability almost limitless. Capital investment desirable, but not essential.—Box 1613.

THE UNIVERSITY OF MANCHESTER

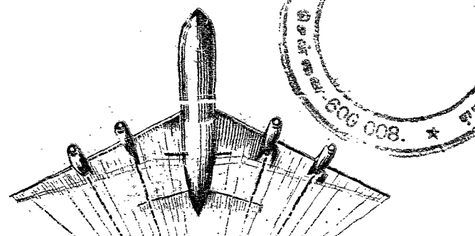
Applications are invited for the post of LECTURER IN ECONOMICS, with special reference to Banking and Finance. Duties to commence on October 1, 1962, or as soon as possible thereafter. Salary on a scale £1,050 to £1,850 per annum; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than April 28, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE THOMSON ORGANISATION LIMITED

requires

ECONOMISTS

for a newly formed unit within the Marketing Division

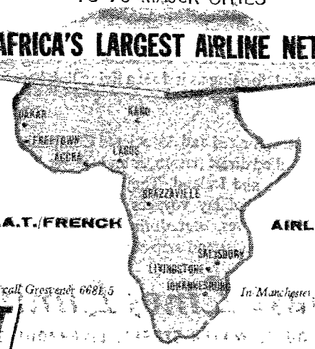


The work involves the collation, analysis and interpretation of published and internal economic and statistical information to assist management in developing the Group's wide interests in newspapers, printing, publishing and television.

Necessary qualifications are a good Honours Degree, preferably in economics or statistics, with two or more years' appropriate experience in industry, commerce or public service.

Since appointments may be made at any of several levels, commencing salaries will be by arrangement.

Please send letter of application, giving details of qualifications, career and present salary, to



Recruitment & Training Officer,
Thomson House,
200 Gray's Inn Road,
London, W.C.1.

See and be seen with

ROSS BINOCULARS

The proper enjoyment of any sporting event demands a pair of binoculars. And it goes without saying that they should be seen to be Ross binoculars—the most famous racing glasses in the world. The sportsman will find an unrivalled choice in our booklet "How to Choose and Use Binoculars", ask your dealer for one or write to us. Illustrated is the STEPRUVA 9 x 35. Price £38.5.1 including solid hide carrying case.

ROSS ENSIGN LTD., CLAPHAM COMMON NORTH SIDE, LONDON, S.W.4.

The Dry Fly palate

Styles of sherry vary considerably, but Dry Fly, a finely blended medium sherry, is designed to cover the widest possible range of tastes. It is delicious as an aperitif before a meal, served mid-morning with biscuits, or as an evening refresher. 18/6 a bottle.

Those who prefer a dry sherry should try CECILIA, a delicate Amontillado; and for sweet tastes—GOLDEN CHANCE, a rich Oloroso Cream. Both at 20/6 a bottle.

In The Economist this Week — April 14, 1962

THE BUDGET

Strictly Neuter

The Chancellor's jeremiad of Monday last plainly does not indicate a governmental faith in an expanding Britain; but by publicly stating his belief in an annual 4 per cent growth, he has put a strong weapon into the hands of the expansionists (p. 121).

The Measures in Detail (pages 167 to 172)

Mr Lloyd's second budget is much more **disinflationary** than he has admitted. In fiscal technique, apart from the stupid promise to abolish Schedule "A" tax on owner-occupiers, its measures are **sensibly framed.** The City is elated at the sweet reasonableness of the **gains tax**—but will have to watch the fine print in next week's Finance Bill. By consolidating the ten per cent surcharge on most items, Mr Lloyd has held on to almost all last year's "temporary" increases in **indirect taxes:** now he wants his flexibility to vary them restored. All the rest are "small changes" in a **small-minded budget.**

Faceless Britain?

What the "new middle class," which might vote Liberal and might not, is really like—or ought to be (p. 125).

Whistling in the Wood:

An **Anglo-German** conference at Königswinter provides evidence of harmony between the two nations on internal Western subjects and of disagreement on external ones. (p. 123).

Curly Pigs' Tucks:

Mr Maudling's formula may, or may not, succeed in solving the problems that are holding up **Kenya's** advance towards political independence. Either way, Britain will have to help economically, on a large scale, for a long time yet (p. 126).

NOTES OF THE WEEK (pages 128-137)

The Radcliffe Report: The state of Britain's **security** is hardly reassuring: but warnings about communists in the civil service unions need not be taken as a prelude to a witch-hunt.

Conservatives: The Central Office's inquest on Orpington has laid the blame for defeat on the pay pause, boredom, and a sense of purposelessness among voters. (See leading article on **"Faceless Britain?"**)

By-elections: Conservatives may extract a grain of comfort from the Stockton result, but Labour must not expect its new member's forecast—of a 200 Labour majority government—to come true. *Bogey score for Derby North.*

University Finance: Mr Brooke made small concessions to some of his critics, but he did not give the impression that Britain is doing enough to expand higher education.

Soviet Union: The postponement of the Summit ... diplomacy than the ... ing may have more to do with the ... state of Mr Khrushchev's he...

Europe: President de Gaulle has made concessions.

Geneva: The small nations are having their first, enlightening view of Russia in action at a disarmament conference.

Zanzibar: The discords between rich and poor that bedevil the clove islands have yet to be resolved.

New Guinea: The Dutch and the Americans differ about the best means of ensuring self-determination for the Papuans.

Cuba: Dr Castro is feeling the pinch of dollar denial.

Portugal: A little light is thrown on the state of the Salazar system by the students' strike in Lisbon.

Persia: The Shah would like more support from Washington than he is likely to get unless he holds fast to Dr Amini.

HOME REPORT (pages 144 and 145)

The Broadheath story: A moribund Worcestershire village may become a planning paragon—in spite of itself.

People love Eros: A **Piccadilly** redeveloped on Sir William Holford's plans will be more splendid, if less endearing, than the developers' first ideas.

AMERICAN SURVEY (pages 147-155)

The **steel** companies have affronted the President and the unions.

General Walker has faded away but Congress may not let the National Guard do the same.

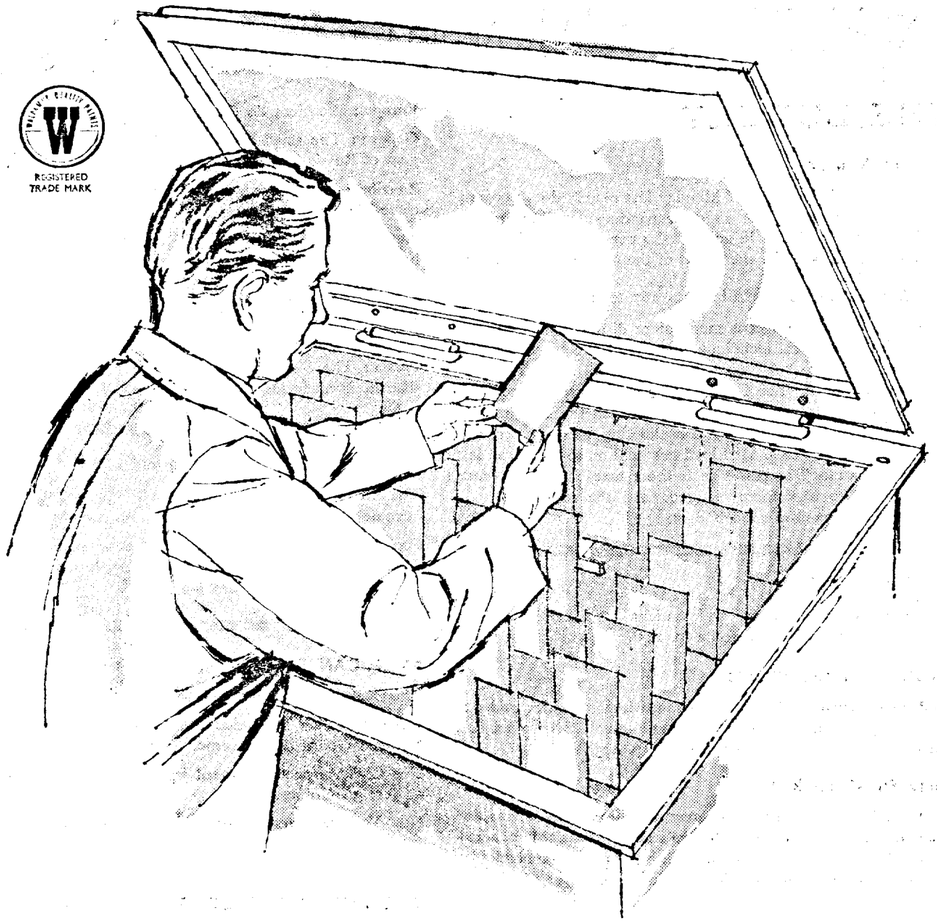
The **Civil Aeronautics Board** is trying to impose its own rules on foreign airlines.

New York **teachers** are striking but not altogether effectively.

THE WORLD OVERSEAS (pages 156-164)

Syria and Egypt: Egypt's view of Syria as a seductive houri who may prove all too willing and able to lure President Nasser back into a distasteful union hardly corresponds to the reality.

Canada: The Canadian finance minister has produced a budget that looks more puritan than electioneering.



BUSINESS NOTES (pages 173-187)

Markets: Apart from fears that the gains tax will make new issues more difficult, the Budget has had a remarkably small impact in the stock market. Its effect on the exchanges was barely perceptible.

Overseas Trade: Exports in March were mildly encouraging, but merchant exporters are far from carefree.

... After a heated exchange, selective pricing has been adopted in the coal industry.

Small Savings: A recovery in national savings can be expected this year.

REGISTERED TRADE MARK

A very Turkish bath

This is the Walpamur water vapour test. Sample panels of paint are sealed inside a humidity cabinet for as long as fifty days. Throughout this time they are soaked in electrically heated vapour, with the temperature varying between 42°C and 48°C. No bathroom or kitchen conditions could possibly match the severity of these. It is testing such as this—ruthless and ceaseless—which conserves the quality of Walpamur Quality Paints. And it is thus that The Walpamur Company, with its overseas factories and multiplicity of branches, maintains its position of pre-eminence in the world of paint.

We refuse to design your records system until we know your problem.

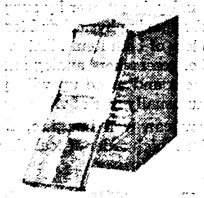
First, we wanted you to see what a blank KARDEX System card looks like.

Because when we sit down to talk about your records, that's where we'll start—from the beginning.

We'll want to know your problem first, so we can design a specific system to solve it.

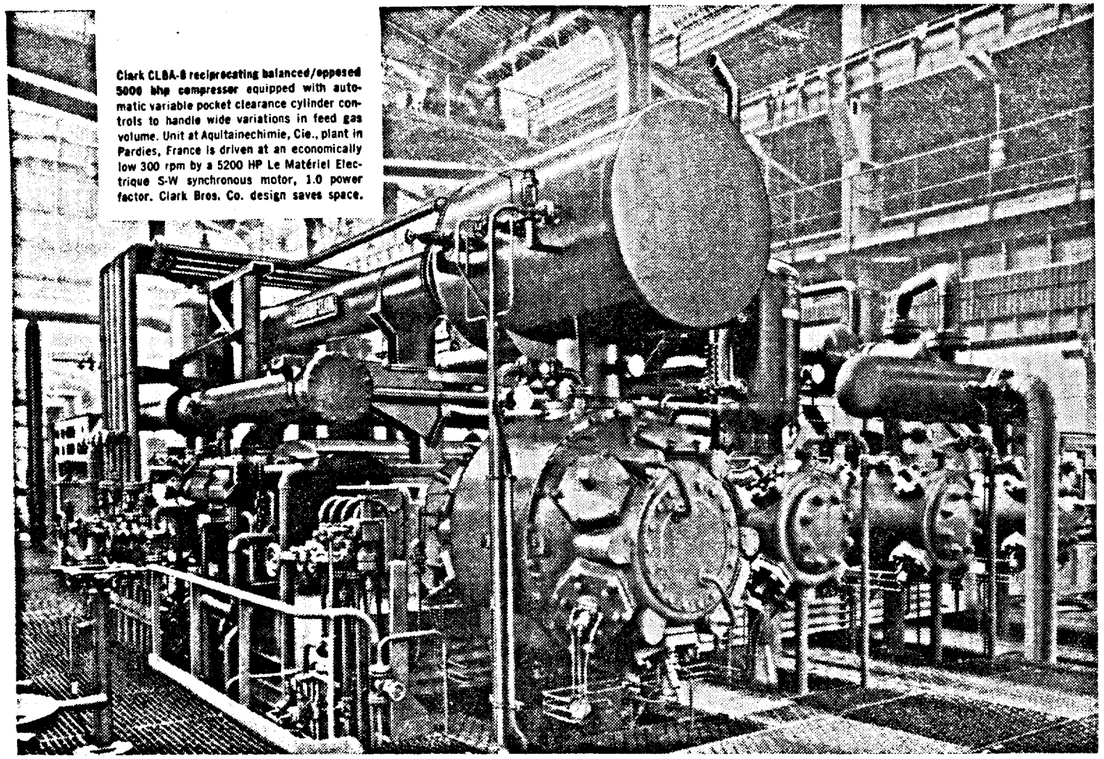
So pick a difficult one. Inventory. Personnel. Credit. Accounting. Production. Collections. Accounts Receivable. Purchasing.

Take your choice.



Or is it a problem that you think we've never even heard of? (Don't be surprised if we have. We've been in this business a long time.)

Whatever the problem, a KARDEX Visible Records System will give you better control of your business situations.



Just as an example, KARDEX can cut accounting time in half. It can make one record do the work of ten. It can make two cabinets do the work of a dozen.

A KARDEX system tells you what's going on, what *isn't* going on, and when.

Which is about all you can ask.

Remington Rand

Clark CLBA-8 reciprocating balanced/opposed 5000 bhp compressor equipped with automatic variable pocket clearance cylinder controls to handle wide variations in feed gas volume. Unit at Aquitainechimie, Cie., plant in Pardies, France is driven at an economically low 300 rpm by a 5200 HP Le Matériel Electrique S-W synchronous motor, 1.0 power factor. Clark Bros. Co. design saves space.

New ammonia production capacity for France

Four great firms combine their efforts to provide efficient compression for Aquitainechimie, Cie., unit

Ammonia production capacity in France was increased in June of 1961 when Aquitainechimie, Cie., put its new Pardies plant on stream.

The plant was designed by a U.S.A. firm, Chemical Construction Company, to produce 220 metric tons of ammonia per day from acetylene or natural gas.

In the main compression system the prime mover is a 5200-bhp, 300-rpm synchronous motor built in France by Le Matériel Electrique S-W. The compressor is a direct-connected 5000 bhp Clark Bros. Co. CLBA-8 reciprocating unit with double-acting cylinders.

It, and associated piping, was also produced in France . . . by Clark licensee, Ets. Dujardin et Cie.

Compensates for variable feed

For this installation, Chemico conceived of and Dujardin and Clark engineers devised and produced effective control sequencing that compensates for wide variations in gas feed. The device is automatic and so fast the compressor seems to anticipate change in feed volume.

At Clark Bros. Co., U.S.A. other designers matched characteristics of CLBA and prime mover by suggesting minor changes in physical and torsional parameters of both items. Later, Clark Bros. Co. researchers analog analyzed the system and came up with piping that is unusually free of vibration.

As you can well imagine, all this called for a high order of technical liaison between the American and French concerns. And such liaison was achieved. From initial start-up the entire system functioned perfectly.

Similar liaison is often essential

More often than not good liaison between engineers of several companies and countries is essential in bringing the large gas handling projects of the world into operation promptly. Clark Bros. Co. Overseas is equipped to provide such liaison . . . with fully-staffed technical centers in the U.S.A. and in England . . . with fully-equipped production facilities in Europe, the Orient and the Americas . . . with a world-wide network of sales offices. Write today for complete information.

ENGINES • COMPRESSORS • GAS TURBINES

Certainly not..

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself.

How to arrange 60 separate telephone conversations—on one line

The line is the new Commonwealth Cable which crosses the ocean bed from Canada to England. The 60 simultaneous conversations are kept separate by transmitting them via different high frequency wave lengths. Successful operation demands there be no seepage of the high frequency current. It is significant that Polysar* Butyl rubber was used in the cable insulation.

If you are planning a new process, a new product, or improvements to an old one, success can depend on your finding a new raw material. A most promising source may lie among the different types of Polysar synthetic rubbers, produced by the Polymer Corporation Limited.

Polysar Butyl is just one of the 40 types of synthetic rubber produced by the Polymer Corporation Limited. Within the world-wide Polymer organization there is a representative nearby, ready to advise you. A letter to the Marketing Division, Polymer Corporation Limited, Sarnia, Canada, will put him in touch with you.

CONRAD N. HILTON, President
Executive Office • The Conrad Hilton • Chicago 5, Ill.

What are they doing? Here is a section of the great market where brokers and jobbers deal in stocks and shares as other markets deal in butter and eggs.

A nation goes to market

On the floor of the Stock Exchange a country does its shopping.

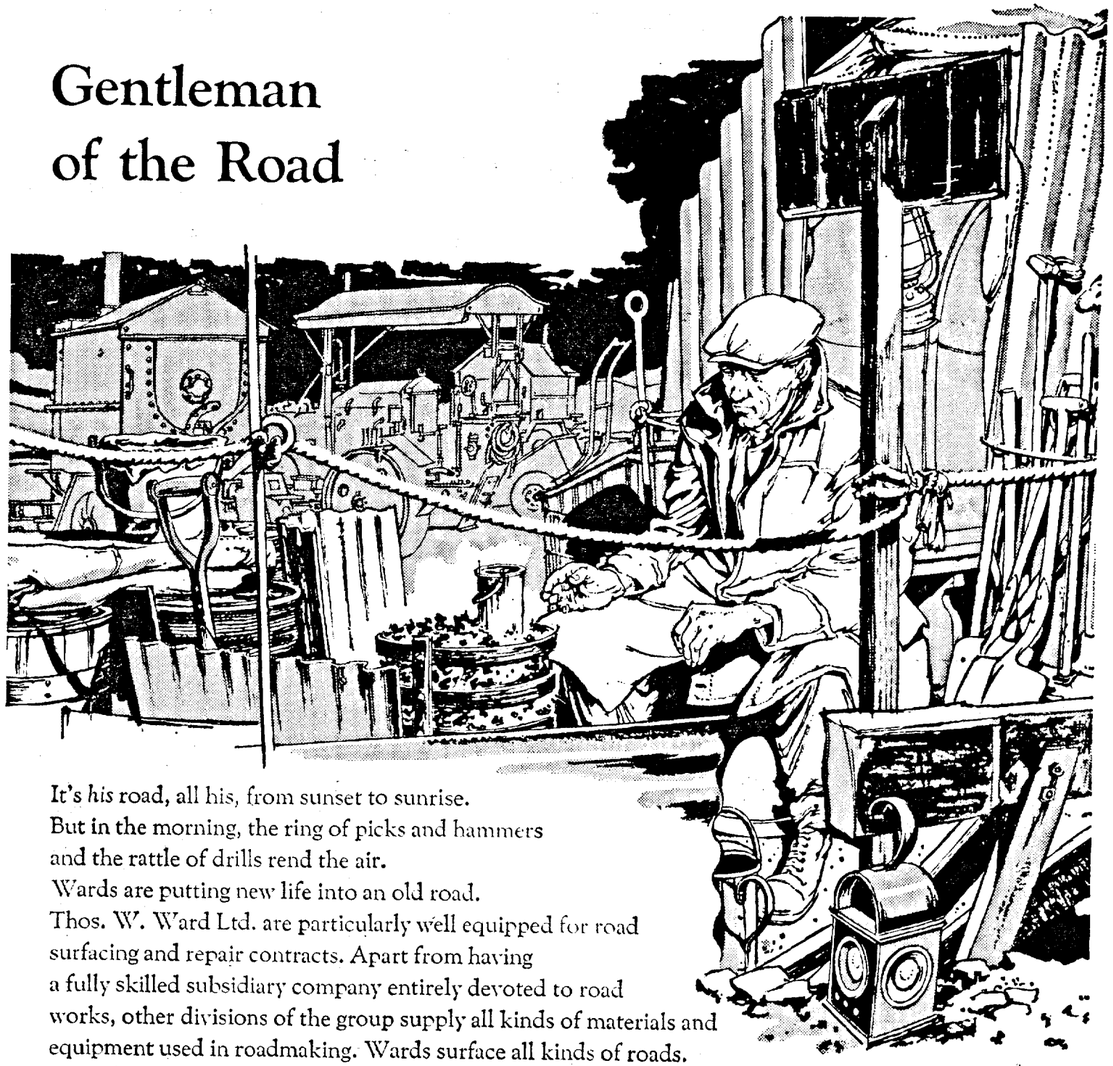
Here, in the heart of the City of London, the investments of millions of ordinary people are put to work. The things that are bought and sold are not chops or washing powders or spinach for the baby, but shares in the whole industrial and economic life of the country; a nation's housekeeping, made up of a tiny piece of factory, a pinch of textile mill, an ounce of shipyard, a touch of laboratory.

For the investment with which the Stock Exchange is concerned is far from just a way of "getting rich quick." It is the life-blood of this country; it is vital to the finance of industry, commerce, Government itself.

Here is a free market which makes it possible for industries, Government and public authorities to raise hundreds of millions of pounds every year on the best terms by the issue of shares and loans; a free market which is vital to investors so that they may sell as well as buy such securities; a free market which is our link with trade, industry and commerce all over the world.

Here is an organization that serves many a man who has never bought a share in his life; for insurance companies, pension funds, trade unions, banks, savings banks—institutions like these invest their funds (*our* money) through the Stock Exchange, and people who have money in any of these are indirect investors whether they know it or not.

Above all, here is an organization that serves *all* of us by creating a market without which employment and spreading prosperity and a rising standard of living would vanish like a puff of smoke.

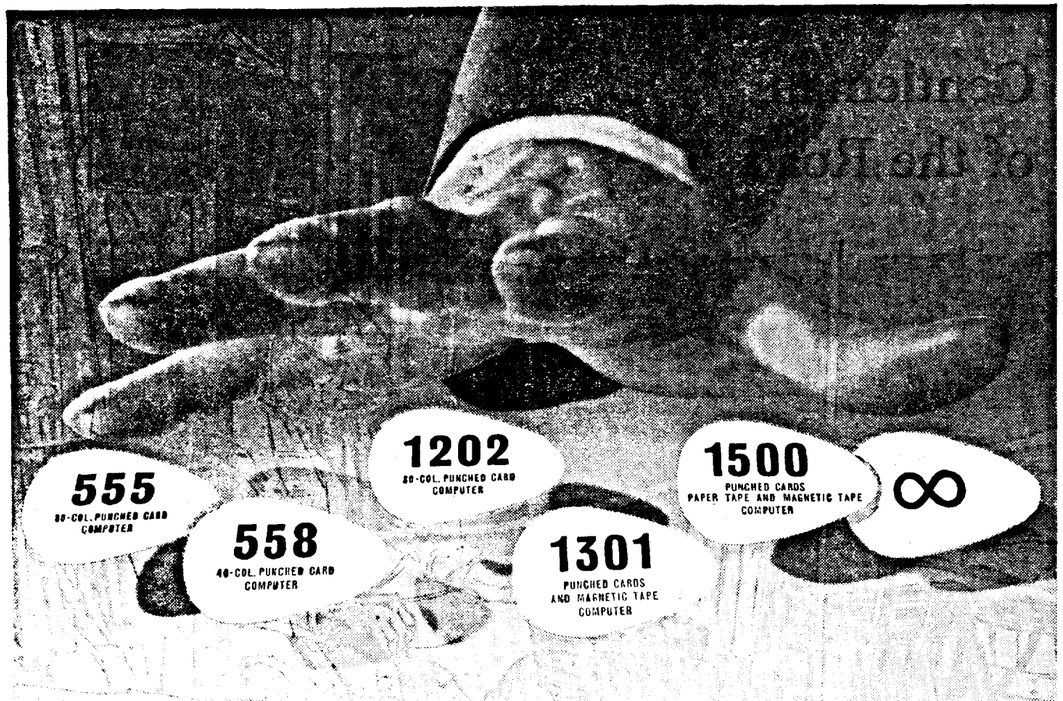


THE STOCK EXCHANGE
LONDON

"My word is my bond"

LIKE TO KNOW MORE? For more information, or a list of stockbrokers, please write to The Secretary, Room A13, The Stock Exchange, London E.C.2. Or you can watch the Exchange at work from the Visitors' Gallery and see a film about it. Open from 10.30 to 3.0, Monday to Friday, entrance at 8 Throgmorton Street.

In addition to but independent of the London Stock Exchange are the Council of Associated Stock Exchanges, with separate exchanges in 21 of the larger cities and towns, and the Provincial Brokers Stock Exchange, with members in about 110 other centres throughout the British Isles



Gentleman of the Road

It's *his* road, all his, from sunset to sunrise.
But in the morning, the ring of picks and hammers
and the rattle of drills rend the air.
Wards are putting new life into an old road.
Thos. W. Ward Ltd. are particularly well equipped for road surfacing and repair contracts. Apart from having a fully skilled subsidiary company entirely devoted to road works, other divisions of the group supply all kinds of materials and equipment used in roadmaking. Wards surface all kinds of roads. Broad highways and country lanes. Aerodrome runways and factory ramps. With their integrated organization, they can bring men and materials quickly to the job, anytime, anywhere.

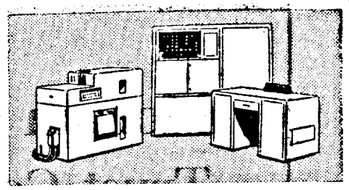
The only company with computing power for every size of business

I·C·T SPANS THE WHOLE FIELD OF DATA PROCESSING

Modern management now looks to data processing to signpost the way to greater profitability. I·C·T installations, operating in their thousands in over 51 countries, serve organisations ranging from the twelve-man firm to the giants of modern industry. Each I·C·T data processing system is made not from a mould but to the particular needs of the customer.

COMPUTERS. The I·C·T range of computer systems starts with the 1202, and then steps up to the 1301 and the new 1500. Both the latter can be had as punched card computers, and both can be expanded in different ways to undertake almost any data processing task in government or business. But if a very large and even faster computer is required—then I·C·T can supply that too.

PUNCHED CARD EQUIPMENT. There are three main groups of I·C·T punched card equipment: 21-column units for small jobs; the 40-column range which, with auxiliary machines and a computer, is the world's most powerful small-card data processing system; and the major 80-column series of punched card machines, with computing power available through electronic calculators and a plugged program computer.



✻ *To arrange for a demonstration of equipment, telephone your local I·C·T office. In London, there is a full complement of punched card machines at Hamilton House, Piccadilly, telephone HYDe Park 8080. The 1301, 1500 and other computers can be seen at Putney Bridge House, SW6, telephone RENown 3322.*

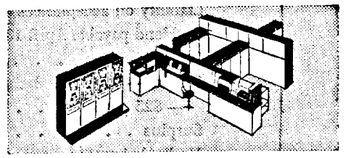
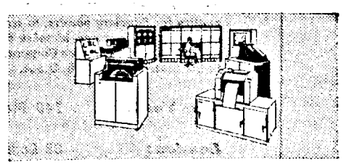
Specialists in data processing in 51 countries



555 brings computer versatility to I·C·T 80-column punched card equipment. Punched card input and output; magnetic drum storage. Plugged program permits complex concurrent calculations on each program step.



558 computing power for I·C·T 40-column equipment—the world's most powerful small-card data processing system. Input 540 cards a minute, punched output 135 a minute. Core storage for 256 program steps.

1202 provides computer power for a wide range of commercial and industrial problems, using 80-column punched cards. On-line input and output, drum storage 4,096 words for program and data.

1301 productive power places it in forefront of computers. On-line 80-column card reader, line printer and card punch, plus magnetic tape at 22½ or 90 kc/s. Drums, tapes and core store are all expansible on site.

1500 provides computer power embodying multiple inputs and outputs, plus vast backing store. Up to 27,000,000 characters on data records and 176,000,000 characters on data discs. Unique 10 kc/s magnetic tapes in combination with 33⅓ and 66⅔ kc/s systems.

• • •

∞ INFINITY where larger, more complex and even faster computer systems are called for, using a variety of peripheral devices, I·C·T are prepared to submit a detailed report, together with a specification to meet your individual requirements.

VOLUME CCIII - NUMBER 6190

Strictly Neuter

IN presenting his budget speech to the House of Commons on Monday, the Chancellor of the Exchequer said that he believed the work done by his National Economic Development Council should

> be related to a specific figure for annual growth in the gross national product. The collective target agreed in Paris by the OECD for this decade is one of just over 4 per cent a year. It will be for the council to decide whether their study should be based on that figure, or a larger one, and what period of years should be taken for this.

Mr Lloyd then proceeded to introduce a budget (examined in detail on pages 167-172) which recoiled in horrified caution before the perilous thought that Britain might expand in 1962-63 at much more than half of the target rate set by the Organisation for Economic Co-operation and Development—if indeed by that.

In accordance with its deplorable recent custom, the Treasury's estimate for projected national income in 1962-63, which must underlie Mr Lloyd's not very buoyant new revenue estimates, is again being guarded from outside eyes considerably more closely than is any state secret at the Admiralty; the independent commentator is therefore left to deduce what he can from Mr Lloyd's scattered hints about it. Mr Lloyd's method on Monday was to frame these hints in a way which sounded as chirpy as possible on the surface, but which in fact, when looked at more closely, seem more than a little depressing. His most publicised statement ("by this time next year total personal spending may well be up by 4 per cent in real terms") can be interpreted as meaning that he expects the increase between the old and new financial years as a whole to be only about 2 per cent; as consumption has fallen in the last six months, the projection seems to assume that by the spring of 1963 consumption may be only about 3 per cent higher than it was in early 1960—a planned increase in the real standard of living throughout most of this Parliament by under 1 per cent a year.

The Government expects investment to rise even more slowly than consumption in 1962-63, mainly because investment in private manufacturing industry is plainly due to fall. Mr Lloyd's gloss here was that "even in twelve months' time this kind of investment should remain above the level reached in 1960"; as this merely implied that it should not by then have fallen by more than 20 per cent below the level obtained in 1961, it seemed a particularly ingenious way of saying that the most important sort of economic activity in Britain should not, during the next twelve months, be decimated more than twice over. Whatever the Government's hopes (probably, but not certainly, fulfilable) for a big increase in exports this year, and whatever its forecasts (increasingly Delphic) about the possibility of some increase in stockbuilding, it was therefore surely a complete retreat from Keynesian economic thinking when the Chancellor concluded his jeremiad by saying that "by the end of 1962 the cumulative effect of all the factors I have mentioned could result in too great a call on our resources if we do not keep the balance right"—and decided that he could not therefore afford to give any extra stimulus to domestic demand or production in this budget.

The strange twist in economic thinking in Britain that has led responsible people to regard this restrictionism as orthodox will be discussed at the end of this article. Meanwhile, it is convenient to discuss first the political and

economic effects of the particular changes that Mr Lloyd has made. Politically, he got away with blue murder among his backbenchers largely by promising them jam tomorrow, in the shape of the future abolition of Schedule A tax on owner occupiers of residential property. The passage in which he announced this was surely one of the most remarkable in any budget speech in history. Mr Lloyd's thesis was that the recent rating revaluations had shown that owner occupiers were paying only a third or a quarter of what they economically should be charged, so he had decided that his successors (in 1963 or later years) should introduce legislation to let them off the rest of their present £50 million a year of tax payments as well ; the constitutional implications are decidedly odd, especially since after 1963 the Chancellor who may be called upon to pay for this Tory election gimmick might be a Labour one. A main economic effect will be to provide a further disincentive against building houses for rent (on which landlords will presumably still pay full income tax under Schedule D) as against houses for sale (whose occupiers will pay no income tax under Schedule A) ; that is precisely the opposite of the incentive which the sensible fostering of greater mobility within the economy should require.

The Chancellor has also placated Tory backbenchers by casting his tax on speculative gains in a form where—so far as one can guess—practically nobody will choose to pay it. Those in the top (17s. 9d. in the £) surtax bracket who can make a £100,000 profit on a property deal will still get their £100,000 if they sell their land three years and a day and their shares six months and a day after purchase ; but they will get only 100,000 two shilling and threepences if they sell then one day earlier. One effect will probably be to impose a quite unnecessary delay on various forms of housing and other building development. This does not mean that a few unfortunates will not be caught by the tax, probably often quite illogically ; but it does mean that the idea that this obnoxious flummery might inaugurate a love feast between Mr Lloyd and the Trades Union Congress is political moonshine, as politically-motivated taxes almost invariably are.

In order to please his most pessimistic advisers, the Chancellor has incorporated last July's 10 per cent surcharge into most of the permanent schedules of indirect taxes. He will now have power to increase indirect taxes again by another 10 per cent later in the year if he wishes, which is said to give him greater flexibility (greater flexibility, that is, to deflate, although less flexibility to revive). Apart from purchase tax the trio of taxes on which the surcharge is not being retained are pretty odd: those on fuel oil (presumably as a welcome half-admission that last year's tax on this was a folly), matches and mechanical lighters (presumably as a form of light relief), and betting at dog racecourses (presumably because the Chancellor still has not plucked up the courage to submit other forms of betting to a new tax of their own).

Like betting, the other and bigger current vice of smoking has also got off relatively lightly, except that the July surcharge is duly maintained. The Chancellor admitted that it would have been possible to impose a differentially heavier tax on cigarettes than on pipe tobacco or cigars, but complained that inveterate cigarette smokers would then probably buy the cheaper (nominally pipe) tobacco and roll their own ; it would have been a useful minor personal (and, occasionally, social) deterrent if he had forced them to do so. He also refused to try virtually to kill off smoking (and eventually the vast revenue he receives from it) by imposing the penal sort of duty that once stopped gin-drinking orgies. Some people will make the wounding allegation that the Government is now defending the pound sterling over some dead bodies.

By far the best feature of the budget—albeit the one that caused the loudest outcry from Labour—lay in the changes in purchase tax. The drawing in of that welcome £50 million a year from a tax on confectionery, soft drinks and ice cream has for many years been a perennial pre-budget recommendation by this newspaper. Mr Lloyd has wisely also raised purchase tax slightly on goods that have hitherto been subject only to discriminatorily low rates (such as furniture and clothing) and reduced it on goods hitherto subject to inordinately high rates (such as motor cars and carpets). In many cases this should provide a shot in the arm for important and modern growth industries, and remove an element of illogical cossetting from some others.

But the real issue raised by this budget is much more serious than soft drinks and ice cream. It is astonishing and depressing that so many intelligent men, outside the Government machine as well as inside it, have agreed with or fostered the Chancellor's decision to introduce such a restrictive budget this year. The explanation seems to be that busy men of or past middle age find special difficulty in adapting their thinking to changing circumstances more than twice in thirty years. Most civil servants and establishment figures with high influence today got used in their youth to the Keynesian thesis that, up to a certain stage, one could effectively reflate one's way out of depression or economic stagnation ; they then got used in the postwar Daltonian years to the equally true argument that, down to a certain stage, one could effectively deflate one's way out of balance of payments difficulties.

But for most of the past seven years—with brief intervals, of which early 1962 is not one—Britain has simply not been in such a stage. The accompanying table suggests with

PERCENTAGE CHANGE FROM PREVIOUS PERIOD
(At constant 1958 prices)

	1955	1956	1957	1958	1959	1960	1961 I	1961 II
Personal consumption and fixed Investment	+3·8	+1·8	+2·7	+2·0	+4·7	+4·7	+2·7	−0·3
Exports of goods and services	+6·5	+4·3	+2·1	−1·9	+3·3	+5·3	+2·9	−0·3

dogged awkwardness that since 1955, in every year save one, whenever the rate of increase in domestic spending or consumption and fixed investment has gone up, the rate of increase in the value of exports has gone up too ; whenever the rate of increase in domestic spending has gone down, the rate of increase in the value of exports compared with the previous year has gone down too. One can argue interminably whether the particular measures and time intervals used in the table are the right ones, but there is no way, so far as we know, in which the figures can be reshuffled to show that a squeeze on home demand in recent years has generally served to put exports up (as distinct, of course, from sometimes temporarily helping the balance of payments by causing stocks of imported commodities to run down).

There is a perfectly respectable economic explanation for

this. Up to the stage where an increase in marginal demand causes stocks of finished goods to be drawn down below danger levels, it is perfectly possible for the resource-pre-empting effect of such an increase in demand to be more than offset by its beneficial effect in causing labour and other factors of production to be employed more productively, either in their existing industries or else in the newer-fashioned (and generally capital-intensive) industries which go forward fast only in a period of domestic growth. In technical economists's language, up to a certain stage and during the present state of European industrial revolution, there is now clear evidence that marginal productivity per factor employed in the marginal demand industries tends to be significantly higher in an expanding economy, even within surprisingly short periods, than is average productivity per factor employed in a more stagnant economy—and when that situation obtains the argument that demand deflation makes an economy more "healthily competitive" becomes the precise reverse of the truth. The main danger arising from the failure of Mr Lloyd's advisers to recognise that fact again this year is that, if exports again fail to increase sufficiently in 1962, after another year in which demand has been excessively held down, these advisers will again tell him that this has been because his budget was insufficiently stern ; and the Treasury may set to chasing its own tail once again in a circular race that has become just as irritating as in its previous periods of fundamental and persistent error under Snowden, Chamberlain and Dalton.

How can this be avoided ? The best opening for escape this week lay in what should henceforth be called the Chancellor's "Ned pledge": his stated belief, quoted at the beginning of this article, that Ned should base its studies on the assumption that Britain can advance by 4 per cent a year or more. There is going to be a great deal of intra-Treasury and intra-establishment pressure towards pretending that the Chancellor never really stated this belief, or at any rate that he should not have done so. Nothing is therefore going to be more important than that expansionists should positively bully him into constantly reiterating it, and making it a central feature of his policy. Already it seems to have been sadly conceded that Britain should not direct its policies towards attaining such a target rate of expansion this year, although in future years Britain may now have to start growing at a time when export prospects are less buoyant and just after the level of new domestic investment has run down. Next year—unless pre-election considerations intervene—it will probably be argued that the policy of specific target-setting should not start until Ned has made a long-term survey to find what and where are the main special impediments to growth in Britain. There is little need to spend a long time on such a survey ; the most cursory inquiry from the doorman at the Treasury would inform Ned in which rooms and behind which desks these main impediments to growth are sitting.

Whistling in the Wood

Anglo-German harmony ends at the eastern frontier

Gentleness and consideration are traditionally shown by the German to the British participants in the annual series of Anglo-German conferences at Königswinter-on-Rhine. When it all started, twelve years ago, the British were considered rather decent to have come at all, laying aside their worldwide preoccupations for a weekend to share the anxieties of a country still, at that time, in tutelage and apparently broken.

Year by year since then German wealth and success have grown, and with them the confidence with which the pointed questions have been aimed at the chinks, which at times have gaped wide, in the English armour ; but the delicacy, the consideration of host for guest, has remained. This year, in the thirteenth annual conference, the British were asking questions, aimed for the most part at finding out what kind of European body politic it was that Britain had decided to try to join. The commentator of the Hamburg daily *Die Welt* has described the British participants as walkers just entering a dark wood, resolute, but whistling to keep their courage up.

At least, this time, the English whistlers found the inhabitants friendly and in no way disposed to tell them to clear out and get back to their Tudor inn for tea. No German voices questioned the desirability of Britain's adherence to the common market. The Carolingians were silent ; they must still be alive, but just now it is as if they had never existed. That sore subject, Suez, has faded into the mists of time. Not even Britain's economic softness is mentioned much. This may be because the west German performance in the matter of wages, prices, productivity and featherbedding has lately not been beyond cavil itself. The economic strictures of Professor Erhard and others have not spread great alarm (for which there is, indeed, no ground), but they have aroused in the west Germans an awareness of economic mortality.

Such an awareness makes for harmony, and a speaker at the end said that there had indeed been a vast amount of agreement on subjects domestic to the western world. But he added that this Anglo-German harmony stopped short at the frontiers of the West ; and this was certainly true of the frontier most commonly mentioned, that with communist eastern Europe. Here was the dark wood that the west Germans would not set foot in. Their propositions were

Appointments, Business and Personal notices, and other Classified Advertisements: pages 208, 209 and 210

negative: to do this would be wrong, that would be unjust, the other would end in disaster. Equally negative were their questions. What were British members of parliament thinking of to show off at the Leipzig Fair? What made the Lord Mayor of Coventry so complacent about the east German political system? Why was Herr Willy Brandt howled down when he addressed a meeting in London last month? Did the British, or did they not, support Bonn against Moscow, against Warsaw, against east Berlin? Were they aware of the obligations to promote German reunification, to reject a separate east German state, to refuse recognition of the Oder-Neisse frontier, accepted by the allies when the treaties of 1954 were signed?

These questions, with their implied reproaches, were answered sometimes defensively, in detail, and sometimes more boldly with a counter-question: What do you propose that we should all do? The British have got far enough down the path of appraisal of the east-west stalemate in Europe to put such a question, though not far enough to have much of an answer to it. The question implies that if the territorial order in central Europe cannot be changed by force, then it has to be lived with.

WHAT living with it will mean, the British have not worked out. Certainly they would go so far as to accept the Oder-Neisse frontier, if this were not such a sore subject with the west Germans. Their attitude to Berlin is governed by the feeling of responsibility for the liberties of the west Berliners, together with the belief that the Americans are right, and must be supported, in refusing to give ground to the Russians. The status of the east German regime they are inclined to treat as a domestic German question on which the west Germans, being allies, have to be allowed to make the running. Thus they adhere to non-recognition; but they draw the line at cutting off trade, and at stopping British travellers going there at all.

Taken together, these attitudes are not particularly coherent with one another, and they offer the German allies plenty of holes to pick. But, when asked what they would do, the west Germans simply had not got an answer to offer, and they rarely attempted one. Intellectually, they can see what the British (and the Americans, and the prevailing party in Russia) have come to see, that each of the two great alliances, east and west, is powerless to impose its will on the other without a general orgy of annihilation. Informed Germans in positions of responsibility, such as the men and women who take the trouble to attend the Königswinter conference, perceive perfectly well that this means that the Poles cannot be got out of Silesia, the German Democratic Republic cannot be overthrown, and Berlin cannot be restored as the capital of a single German state. They expect none of these things to happen, but they will not say so in public, much less accept these facts as part of the framework within which western policy has to be formed. West Germany's political leaders, of any party, have never brought themselves to make these admissions to their people. They would not now dare.

Instead, the forces of political competition drive them to ever more pointless assertions of intransigence, like the propositions of the Free Democrat leader, Herr Mende, on April 7th (not at Königswinter, but at a party meeting at Bad Neuenahr). Herr Mende is reported as having compared the Berlin wall with the walling-in of the Warsaw ghetto by the Nazis, and advocates of recognition of the Ulbricht regime with "states that once called on the Norwegians to recognise Quisling." He told journalists that a regional limitation of armaments in Europe would have to be accompanied by "self-determination" for Poland, Czechoslovakia, Hungary, and east Germany; and that the zone of control for such a plan would have to stretch from the Ardennes to the Volga. All this in elaboration of a policy of better relations with eastern Europe.

NOT only the English whistle in the dark, it seems. As a German speaker at the Anglo-German conference remarked, politicians are more afraid of their voters than journalists are of their readers. In private, or when he comes to Königswinter, as he often does, Herr Mende is a sensible man. The climate that causes sensible politicians to lead the public into realms of fantasy does not, however, make it easy to discuss courses of action for the real world. Such a discussion is perhaps made even more difficult than usual just now, within reach of Bonn and within earshot of the press, by the uncertainty about the domestic political future. Dr Adenauer's grip on affairs, it seemed to be privately agreed, is no longer as muscular as it was. A change of chancellor begins to look not so far off; there is uncertainty when and how it will happen, and what may follow. Such a time does not favour appalling frankness.

The Economist

APRIL 12, 1862

EVIDENCE OF INSANITY

¶ The proposal of the Lord Chancellor to exclude Medical Evidence in cases of Lunacy has startled the general public and has not a little annoyed many medical men. . . . Many of the reasons, too, that are commonly assigned for the proposed measure are absurd reasons. It is said that medical men talk great nonsense, and that nothing is gained by admitting their testimony save scraps of questionable theory and an abundance of hard names. . . . But we fear the argument proves, like many other efficacious arguments, more than it is wanted to prove. . . . Are any scientific witnesses exempt from the temptation of using wonderful words? Not many years ago a certain geologist stated that a certain substance was "argillaceous earth"; upon which Mr Justice Maule interposed and observed,—"*That*, gentlemen of the jury, is what *we* call clay." . . . The real basis for Lord Westbury's wise proposal is entirely different. It is that the question whether a man, in a legal sense, is sane or insane, is not a fact upon which medical science throws any light, or which a medical man has any special means of discovering. If we were discussing the cause of insanity in the past, or its cure in the future, the case would be different. . . . The principal questions in law are two. Is A B fit to manage his money? Did A B commit a particular act with a knowledge that he was doing it and a knowledge that it was wrong, or did he not do it? . . . The good sense of mankind presumes in favour of sanity. We must not deprive a man of his property without safe reason, we must still less remit the penalties of crime—that is, permit a legal lawlessness without sure ground. The ordinary knowledge of men's actions, dispositions, and ways is the best test in such an inquiry. It is not a topic of physical science, but a matter of ordinary observation. We ask architects why a house which has fallen did fall; we ask them whether a standing house will fall; when secret causes are investigated, we examine skilled witnesses; but when it is a question whether a house has fallen or not, we ask the people in the street. That is not a matter of architectural, but common knowledge. So with insanity.

Faceless Britain?

An impressionistic analysis of the "new middle class" from which the Liberals have lately drawn most of their new voters

IT takes a good, swinging by-election series for people to find out about Britain. Or so they think. All of a sudden politicians are on night trains brushing up their local knowledge ("No, it was the East division last time, Minister"), political correspondents are writing knowingly about the strange world "north of the Trent," and party agents drafted in from safe seats are hopefully ringing doorbells in the farthest housing estates. There is a heroic strain in all this, the stirring up of an instinctive provincialism, the feeling of going to the people in a way that the iron laws of general election psephology implacably discount. For a fleeting moment anything seems possible in this reviving England of the heptarchy—or Stanley Baldwin. In battered committee rooms men who ought to know better still talk about "personal votes," still get unnaturally flurried by the news that "the woodworkers have asked the Liberal to meet them," still argue wistfully that "polls don't matter to our chaps—we really think about the issues here." All in vain, or pretty much so. On the morning after it is invariably the pollsters (even those using a random sample) who claim the victory for themselves. The difference in regional swings across the country is still generally measured in terms of whether one or two more out of every hundred electors have or have not changed their votes.

No wonder the men on the night trains, from the Lord Chancellor downwards, get rattled and riled. They must be out of touch; even the provinces, the old reliables, are bitten by the bug. This is when Tories start to talk about "faceless men" and "poujadists," when Liberals wonder aloud about the "communal sense of the working class," when Labour leaders announce ingratiatingly that it is all right to own a car and still vote Labour. What they mean is that the elusive electorate has got away from them again. And what they fear (or most of them fear) is that the electorate has got something at the back of its head which it is not yet putting into words. Usually this means that no one has said the right words affirmatively (or pejoratively) enough.

THE best bet when the electorate goes all incoherent is that it is thinking about class. This is, of course, the great unmentionable of British politics; and still its central, consuming issue. The predominant party at any one time is that which successfully merges positive class issues with a persuasive classlessness. The idea of nationalisation could be read both ways in 1945; not so in the 1950s. In this it differed markedly from the welfare state, which the middle class promptly appropriated for its own and had written into Tory policy. By 1959 Labour found itself physically torn between the decaying industrial regions which still placed a class interpretation on the party's ethos (in Lancashire and central Scotland Labour actually gained seats) and those technologically-developed areas of the Midlands and the south-east where its image, as a result, could no longer be regarded as classless. It has still not broken out of this dilemma.

By contrast, the Tories' property-owning democracy had the right ring for the 1950s, except in council housing estates (as distinct from the actual new towns, where although—or perhaps because—rents are higher, decanted populations have a greater immediate sense of improving social status). Where the housing was dubious, consumer durables could always be put inside, or parked outside, property of all ages and conditions. "You've never had it so good" was, first time round, a whole flight of steps towards classlessness; the Tory escalator ran well—even occasionally too well for class-conscious Tories.

To a degree it was an escalator that ran best on inflation, overtime and earnings on the side. Where the urge for another status coincided with a soaring property market, as in the London suburbs, it meant over-commitment by the new, and particularly the young, middle class; this remains something rather less satisfactorily self-regulating than the hire-purchase cycle. The white-collar pay pause (or rather the halt to economic expansion which has caused a pause in real earnings too), together with the rise in inescapable costs like commuters' season tickets, obviously bit deeply at Orpington (see page 130 for the Tory inquest there). The impact has been greatest among younger married couples where the wife cannot go out to work and where the husband has little ability or inclination (or is forbidden by professional etiquette) to supplement his income. This, rather than the retired brigadiers and fixed-income widows, is the pressured middle class that Mr Macleod has to deal with now. It is still far enough below the old surtax level to be able to identify itself, at least temporarily, with the egalitarian opposition to Mr Lloyd; but its advancement depends, as it knows, on the personal returns from an expanding economy—and if the Tories are not giving it expansion now, it still read enough in the 1950s not to expect it from a traditional Labour party.

In old Tory terms these look like "faceless men"; in old socialist terms they are "traitors to the working class." Perhaps they are, although one day the old parties will learn that telling them so is not the best way to recapture seats. Many of them, either on their own volition or at one generation's remove in the 1930s, have voted with their feet in the modern migration from the heavy industrial areas into the south-east. Most of them were skilled or educated enough to leave what their parents thought quite comfortable jobs behind. It may be better pay that draws the grammar school boys (and national certificate holders) under the lace-net curtain that hangs from the Wash to the Bristol Channel. It may be—but it is normally swallowed up by a more expensive scale of living, or simply in rent. More often the biggest impetus seems to be a search for a new, more flexible, environment: not necessarily as a conscious step up in status but as a push towards positive classlessness.

This seems to be a projection (a more placid one) of the active resentment that the initial postwar generation expressed both at the established system they encountered and the parents they left behind. The middle-class education of working-class children, with its peculiar (although lessening) strains, contributes to the social withdrawal and to political evasiveness. All this does not necessarily take people to Orpington:

the bungalow suburbs are going up around all the big conurbations and towns. The same sense of aspiration, and often enough the same financial over-commitment to satisfy it, run well down the social scale. When Liberals proclaim hopefully that they will produce an Orpington in Middlesbrough, what would have sounded like sociological exaggeration a few years ago may now come surprisingly near the mark.

THE Liberals, starting from scratch, have recruited quickly from the new class, which now provides the biggest pool of floating voters there are. The other parties have been noticeably less flexible in their joints; when there are 150 strongholds on each side, the old guard has to be cosseted and placated. Even so, the contempt for facelessness is curious. The faceless men are certainly not as "sound" and "orthodox" in finance as Tory defenders of the pound would like them to be; and they do not visibly have the inner questioning about the enjoyment of affluence that Labour finds it hard to stifle. On the whole they want to join Europe—at least in the sense, as Mr Macmillan began to realise at Stockton, of Joining the Future. Probably (and no one can blame them) they want to tear down most of Victorian England and rebuild it—not as a municipally controlled environment but for people to live in with tastes like their own who will (they imagine) devote as high a proportion of income on housing as they do. At the moment they want more than the councils can provide, but can barely afford what the worst spec. builder can offer—and they feel cheated.

Some of their most positive aspirations lie—not unnaturally, and very hopefully—in education. They may not agree with the educationists about what is proper and balanced and desirable. They are not against examinations, but against bottlenecks disguised as examinations; they want technical education to be an education and not the grind of night school and day-release that they experienced; they are keeping their children on in the sixth forms beyond the Ministry of Education's preparations and expectations; they would like to see the universities jammed much fuller than now.

These ambitions tend to shade off (like Liberal policy) into muzziness when it comes to practicalities. There are few definitions volunteered of a reasonable rent or mortgage payment—assuming the right kind of houses could be built cheaply enough. There is less than entire trust in state education, but little positive movement towards fee-paying as a means of contributing to general expansion and better conditions. The political danger for the Conservatives now seems to be that the widening vistas, the release from the past (which means the past up to yesterday) are no longer being seen as visible Tory aims. The reiteration of what life was like in the 1940s is of as little help to the Government now as life in the 1930s was to Labour after 1951. Are there *Liberal* policies? The new class is not yet sure that there are—and, anyhow, at the moment it fastens more quickly on to discussion of aspirations, not policies.

Occasionally a mid-Atlantic conciousness speaks up for a new frontier of individual and community development. But the new, British forms this would take are never clear; if, for example, the concept of housing associations (people banding together to borrow and then finance and manage themselves the building of new estates) caught on, a lot of things in the pattern of British life could follow from it. Evasion conceals uncertainty. If this new class in Britain now seems faceless, its suburban gentility inexorably extending itself, its provinces evolving into standardised formulæ of existence and appearance, its political landmarks of the last decade becoming perceptibly submerged, it is because it has still to speak up for itself and the identity it is groping towards.

Curly Pigs' Tusks

Keeping Kenya from slipping back into economic, and therefore political, chaos is going to cost Britain more than it realises

HOWEVER skilfully he handled his black politicians, no Colonial Secretary could be expected to put Kenya right in seven weeks at Lancaster House. To his credit, Mr Maudling has produced both the framework of a new constitution for Kenya and a coalition government formed expressly for the purpose of working out its details. The Colonial Office now hopes (and, perhaps, prays) that the new government will report back by July 31st; if it does, there could be elections under the new constitution a few months later. The government that might then emerge would probably be given a prime minister and control (short of independence) over Kenya; and the date for actual independence would become a matter for negotiation between the Kenya government and the British Government.

Such a government would, if the present constitutional lines are followed, retain strong powers over foreign affairs and economic development. An upper house would watch the working of the constitution; so would six regional authorities, which would also control land and education. Both Kenya parties are thus ready to claim victory: Kadu (the Kenya African Democratic Union) maintains that its federal principles have won the day (which they have not); Kanu (the Kenya African National Union) that centralism is still the guiding principle (which it is not). The danger is that renewed competition between slogans will lead to renewed rifts among the politicians, all of whom would do well to accept what is the basis of Mr Maudling's new structure—a compromise between the need for strong powers at the centre and self-protective and administrative powers in the regions and the upper house. Mr Kenyatta's and Mr Ngala's tandem, hard enough to ride as it is, will be made more unsteady by the rivals (the Masai, the Somalis, the coastal strip politicians, and the disgruntled office-seekers) waiting in the wings. But even if Mr Maudling's efforts prove to have swept Kenya's political stables clean (and there is only a very faint chance that they have), there remains, overhanging all, the depressing story of Kenya's economy.

One way of looking at this begins with a tale told in the Commons on April 2nd by Mr Philip Goodhart, who informed members that the main form of economic activity in the New Hebrides was, until not long ago, the development of pigs' tusks in a circular shape. A tusk with three curls in it could buy three daughters of a chief. What was more,

> One of the troubles . . . is that it is very difficult for the pigs to eat and the women . . . used to spend some time in ancient days chewing grass and then spitting into the mouths of the pigs.

Modern economies, Mr Goodhart suggested, might find World Bank loans more palatable. Curiously, the debate was not about pigs, but about the new Colonial Loans Bill, designed to allow the Treasury to guarantee loans from the World Bank to dependent territories, up to a total of £150 million. At present, the maximum is £100 million and most of it is already earmarked. Special provision is made for the first time for loans to the east African common services organisation which, among other things, collects revenue and runs the railways, posts and telegraphs for independent Tanganyika, for Uganda (independent in October) and for Kenya Colony. A subsection provides for the New Hebrides: back to tusks.

These are most relevant to Kenya, which is likely to need (but not to get) every penny of the extra £50 million that it might now be possible to find through British-guaranteed World Bank loans. But even more chewed grass than this might not be enough to prevent Kenya from sliding some appreciable distance towards a subsistence economy after independence. The reason, plainly, is that Kenya's admirably developed, but sadly declining, curly banknote economy is the creature of the Europeans. Their abrupt departure could mean the collapse of modern economic activity there.

ALREADY the Kenya treasury is penniless and dependent on Britain for support. Mau Mau, let it be admitted, may have hurried British, French and Belgian legislators towards early decolonisation in Africa—but Kenya itself is now paying the bill with an empty till and an expanded white administration that, though excellent, may be too expensive to keep up after independence and too useful (for all Kenyans) to dismantle. Like the French client states so disparaged in orthodox pan-African circles, Kenya is likely to remain dependent on direct subventions to its budget from its ex-colonial ruler for recurrent expenditure. This will go on for some years to come, independence or no; it would be a departure from normal British (as distinct from French) practice, but it is likely to be necessary, in increasing amounts.

The contrast with comparatively prosperous Ghana and Nigeria is even more marked when the aggregate of available African skills is looked at: baldly, there are hardly any. In spite of accelerated Africanisation (Kenya quaintly still insists on calling it "localisation"), Kenya will be short of African technicians, as opposed to hastily-promoted administrators, for a long while yet. White men are likely to leave faster than they can be replaced by competent black men; compensating the old and training the new are both expensive tasks.

This problem, common to all new countries, is uniquely made worse in Kenya because Kenya will carry into independence a sophisticated administration and services unlike anything to be found in west Africa. Tanganyika, which might be described as a pilot project for the completely new situation Britain is faced with in launching Kenya, is already suffering a decline in its national income in which, admittedly, drought and flood have played a part. Kenya, where the essential factor, confidence, is far more scarce than in Tanganyika, is likely to be relatively worse off; already, out of its six million people, it probably has 300,000 people unemployed, stranded between the modern and the subsistence economies.

On top of this, Kenya will have to face the high costs of independence—including an army that may be indispensable, and a foreign policy. The thirst for education ("universal primary education" is the shibboleth; expanded secondary education the need) is as powerful in Kenya as anywhere else; the money for it likely to be more scarce. Speeding up the process of putting African farmers in the white Highlands without mortally wounding this golden goose is a problem likely to cost far more than is being spent on it now. For Britain, there must be the added expense of buying out the small farmers (not necessarily the plantation owners and companies) if these have to leave. But Kenya's people expect something much more cheerful. They know Nairobi and Mombasa and the wealth of the white farms; they are unlikely to be satisfied for long unless they advance towards, and not away from, these comforts. Even in a peacefully developing Kenya it would be necessary to devise means of sharing some of the white wealth: for all its value, the white economy in Kenya is largely self-devouring. The point about independence is that the majority of black Kenyans, relatively untouched by the European-built world, will now begin to suffer from a severe attack of rising expectations. Kenya's rulers will be hard put to it to keep their country from poverty, let alone satisfy these demands.

An immediate step that can be taken by the new national government in Nairobi, prodded by its present master, the Colonial Office, must be to present a really tough budget this May, while British control makes it easier to restrain the hot feelings that similar budgets have set off in Ghana and British Guiana. Tanganyika is likely to do much the same thing this year: keep a sharp control over expenditure and raise taxation to the highest point at which it makes economic sense.

For the Africans, the long-term step, apart from learning to live peaceably with one another, is their own idea: an east African federation. This would not make Kenya's problems disappear, but, by uniting its economy with Tanganyika's and Uganda's, it would make them much easier to solve. With such a scheme launched or on the way, the British Government might have to think seriously about massive aid to all three territories; as it is, Westminster is beginning to realise that Kenya, by itself, is going to be relatively one of the most expensive acts of decolonisation yet.

What has still to be fully realised is that, for the first time, it is probably going to be impossible to avoid carrying the expense over into the period of independence, with all the precedents for other independent and emerging countries that this might set. Last year the remaining British colonies received the same share of total overseas aid as did the vastly more numerous colonies in 1957; aid tends to be concentrated on this country's direct responsibilities. But it will not be possible to hive off economic responsibility for Kenya.

The reason for envisaging all this expenditure is that the alternatives (serious, Congo-like disintegration or a turning to communist "salvation") are, in the long run, likely to prove even more unpalatable. The need now is for a special investigation into the cost of keeping Kenya far enough away from curly pigs' tusks to prevent an east African disaster.

NOTES OF THE WEEK

BUDGET SPEECH

Not Dethroned

THE atmosphere in Parliament during the budget speech was partly affected by an accident: the preceding Question Time happened to have ended in a mood of childish but fairly good-humoured banter. For most of the time that Mr Lloyd was speaking neither party was quite sure out of which side of its face it would be laughing at the end, so reception was fairly quiet until the Chancellor announced the new tax on sweets and soft drinks. Then Labour, which is supposed to be the reforming party, erupted in delighted anger against what it presumed would be an unpopular innovation; for a short period the Chancellor had to resume his seat, while some of the loudest anti-American left wingers in the House led a noisy demonstration in favour of the coca-cola way of life. For a time this interruption seemed likely to help the Chancellor by rallying vocal Tories to his support, but Mr Lloyd soon got stuck in the mud of one of his less lucid perorations, and the final cheers were dutiful rather than adulatory. Nevertheless, Tory backbenchers, who are pleased with much of the detail of the tax changes, have in no way dethroned Mr Lloyd from his place of party esteem as a competent departmental minister. There has been no Tory revolt in favour of more expansion; the most sensible general remarks on the lack of dynamism in this budget have so far come from the Labour front bench.

Perhaps the people who deserved most congratulation on Budget Day itself were Independent Television News. The ITN has previously been streets behind the BBC in its coverage of most really big national occasions, such as the general election. On Monday afternoon its coverage of the budget—with comment from independent experts as news of Mr Lloyd's speech poured in—was streets ahead; it also set a new tradition which may become more important than many MPs, who were in the House at the time, may realise. For it is clear that some of the best informed newspaper comment on the budget next day sprang from opinions which editorial writers had formed when looking in on this programme.

NUCLEAR TESTS

Easter Egg

SHIPPING is to be warned clear of the waters round Christmas Island from next week onward. The first American nuclear test above ground for four years is expected in the last days of April. (Underground testing in the United States was resumed shortly after the Russians broke the stillness with their series of monster explosions last September and October). There have been reports from Geneva that the Indians, the Swedes and some of the other uncommitted delegates at the disarmament conference still hope to find a last-minute compromise formula on banning further tests. But the swift rebuttal from Moscow on Tuesday of the "last chance" appeal that Mr Kennedy and Mr Macmillan had sent to Mr Khrushchev was one more indication that no agreement on a ban was possible.

As the joint appeal pointed out, the American and British governments have made fresh attempts, since the new Geneva conference began a month ago, to meet Soviet objections to the draft test ban treaty that they formally tabled in the same city just a year ago. There is no reason to doubt that Mr Kennedy would have sincerely preferred a treaty to a resumption of testing, in spite of the advantages Russia had gained by its Arctic and Central Asian series of tests last autumn. At Geneva, however, Mr Gromyko and Mr Zorin have flatly rejected the whole principle of international verification; and there is no question of the United States Congress approving a treaty that lacked this element.

Mr Macmillan—who will be in America when the first of the new blasts echoes from mid-Pacific—and Mr Kennedy are philosophically aware that they are courting strong criticism; but the expectation is that the reaction of uncommitted opinion will be tempered by growing readiness to recognise that the West dare not simply let Russia enjoy all the military advantages that its superior secrecy brings it. The uncommitted have noted that even verification by the nationals of uncommitted countries is denounced by the Russians as an intolerable form of "espionage" while, in contrast, communist diplomats have been shown over the Cape Canaveral missile range.

At Geneva, the uncommitted delegations have been having their first, enlightening, experience of negotiating on disarmament with Russia. They have found Mr Zorin unwilling to give them a place on a steering or drafting committee, reluctant to discuss specific urgent steps such as a ban on the placing of nuclear weapons in orbit, and insistent that Soviet plans must be given priority in debate. His tactics this week got the conference into a futile slanging match about "war propaganda," which led Mr Dean, the American delegate, to ask if those volumes of Marxist holy writ that discuss the inevitability of war were to be suppressed.

RADCLIFFE REPORT

Unsecret Secrets

THE Radcliffe committee's report on security procedures (Cmnd 1681), cannot be castigated—except by the very woolly-headed—as a wicked attempt to stir up McCarthyite snooping. In fact, the report specifically, on its first page, takes issue with the undue importance that was attached to Communist party membership by the last investigation, conducted by a group of privy councillors in 1956. It believes that the activities of the professional Russion espionage service in Britain are much more dangerous. But it has annoyed some people by pointing out that the British Communist party has a disproportionately large number of members and sympathisers among civil service trade union officials. The minimum precaution that government departments are advised to take is to challenge such officials when it comes to granting access to secret plants or to negotiations directly involving men on secret work. The union officials' right to appeal, under the civil service "purge procedure" of 1948, will be retained. To those who say that this is an interference with elected union representatives' democratic rights, one answer is that union elections are sadly often not well-informed democratic occasions. All too often it is difficult for the ordinary union member to know (or, under the law of libel, for him to be told) that so-and-so on a list of executive candidates is a communist sympathiser. If he did know, he might vote to remedy matters.

The committee's chief findings on the Blake and Lonsdale cases are presumably in its top-secret chapters. But the unclassified portion is not exactly reassuring about

past practice in the Admiralty and elsewhere. The committee deplores "any impression [within departments] that . . . the security branch is the natural home of the incompetent." It calls for more active precautions: "It is not satisfactory just to sit back and feel unhappy." It rightly insists on departmental responsibility for security. Departments which believe that these nasty matters should be delegated to MI5 are bound to find themselves saddled in the end with the least efficient system of security, as well as with the most unpleasant sort of system to work under. There can never be an absolute guarantee against suborned traitors trying to take documents home to be microfilmed, but a lively sense of individual responsibility and watchfulness is discouraged by attempts to classify as secret many documents that are manifestly harmless or unimportant. One department is now said to have reduced its highly classified files by two-thirds after a detailed check; its example could be followed. The few real secrets are worth guarding for dear life; the large and fussy remainder are a waste of everyone's time, patience and, in the end, loyalty.

BY-ELECTIONS

What Stockton Means

THE Conservatives had reason to feel relieved about the result of the Stockton by-election. It is true that the newly-appearing Liberal again drew more than twice as many votes from them as from Labour; and that this, together with the remarkably high turnout (of over four-fifths of the electorate), brought about the expected increase in Labour's majority. But the table below shows that the percentage changes in each party's share at Stockton were much more like those in that other recent near-marginal Labour seat of Lincoln on March 8th than in the safe Labour seat of Middlesbrough East on March 14th. Once again, it has been shown that in seats that are near-marginal for Labour, Tory voters seem slightly less willing to desert to the Liberals than they are elsewhere; while Labour voters seem paradoxically slightly more willing to desert there. And, to compare Stockton with Lincoln, the net effect of the wave of excitement after Orpington seems to have been to enable the Liberals to draw 4 per cent more of the electorate from each side.

STOCKTON RESULT COMPARED

(Change in percentage shares compared with 1959)

	Con.	Labour	Liberal	Other
Stockton	−18·5	−8·5	+27·0	—
Lincoln	−14·7	−4·6	+18·2	+1·1
Middlesbro' East	−23·7	−0·9	+22·9	+1·8

Mr Rodgers, whose charm seemed on this occasion to be greater than his capacity for arithmetic, told his new constituents that if Stockton's net 5 per cent swing to Labour was repeated across the country, it would lead to a Labour majority of 200 at the next general election. As a matter of fact it would lead to a Labour majority of 55. And the interesting thing is that in five of the last ten by-elections the net swing to Labour has been within one per cent of this 5 per cent. In each case the net swing to Labour was the result of the Tories losing more votes to Liberals (or, at Bridgeton, to a Scottish Nationalist) than Labour did; at Pontefract, where there was no third party candidate, the net swing to Labour was only 2½ per cent. In a general election Labour would need a 3½ per cent net swing from Tory to come back to power. Frankly, if there were a general election tomorrow, we do not believe that Labour would quite make it; at a general election at least some proportion of those who have recently been swinging from Tory to Liberal would probably return to their old allegiance, and it seems doubtful whether many of those who have recently been swinging from Labour to Liberal would necessarily do the same.

Unless the budget has changed matters, the recent net swing of 5 per cent or so to Labour presumably becomes the bogey score for next week's by-election in the near-marginal Labour seat of Derby North: it would serve to increase Labour's majority from 2,407 in 1959 to between 5,200 (on a 60 per cent turnout) and 7,000 (on an 80 per cent turnout), with the Tory and Liberal again running fairly close together for second place.

EUROPE

Outsider or Arbiter?

PRESIDENT DE GAULLE is not easily persuaded to leave French soil. His visit to Turin on April 4th, for talks with Signor Fanfani, was a gesture. The French president is evidently keen to reach agreement at last on the future shape of political unity, or co-operation, for western Europe, and for the first time for some months he offered concessions. As a result France and Italy agreed on two, at any rate, of the sore points that have blocked the way to some form of political organisation for the six countries of the common market. The understanding was endorsed by Dr Adenauer, whom Signor Fanfani visited at his holiday place on Lake Como three days later.

One new formula assuages the chronic fears of France's partners that the proposed political arrangements may weaken the existing Brussels communities. The suggestion is that though the six countries' ministers (when wearing a political hat) may discuss economics if they want to, their recommendations to the European communities will have no binding force. A formula has also been devised to calm the fear that Nato may be undermined by new European defence arrangements. The big remaining difference between France and its partners concerns the projected revision of the political union in a few—say three—years' time. A form of words still has to be found to encourage the federalists to feel that they will get more supranationality then, while not actually committing reluctant gaullists to go further than they wish.

The meetings in Italy thus provide fair auguries for the next gathering of the foreign ministers of the Six, due on April 17th. But there is a flaw. The Dutch and Belgian governments have hitherto combined a determined federalist opposition to *l'Europe des patries* with an equally determined, on the face of it contradictory, demand that nothing at all must be done until the British are in the talks. Mr Heath's modest sally into the field of political unity, when he spoke to the council of ministers of the Western European Union in London on Tuesday, was calculated to help the Six to agree. Without going into details, Mr Heath supported both of the new formulae—the Nato one, and the need to preserve the existing communities. He also suggested that the moment was now near when it would be sensible to bring Britain into these political talks.

CUBA

The Other Berlin

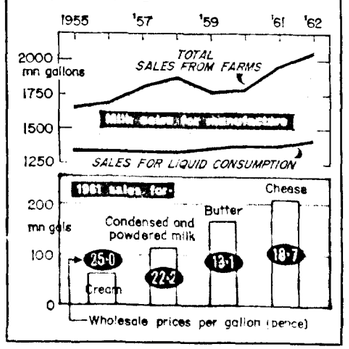
GALLANT little outpost, surrounded by the forces of a hostile ideology, in constant danger of withering on the vine: this is not Berlin, but Cuba seen through Russian eyes. The Cubans are finding it hard to keep their revolution going with no one to help them but the communists. The sentences passed in Havana on April 7th on the thousand-odd prisoners taken in last year's invasion are a measure of how badly Cuba needs dollars; the sentences amount to an offer to accept fines in place of imprisonment, on a stiff tariff running from $25,000 for a private to $500,000 for a senior officer.

Dr Castro remembers the hostile reaction to his last offer to ransom the prisoners well enough to realise that only the most urgent need for cash could justify renewing the offer—at triple the original price. But Cuba needs dollars to buy things it cannot get from the communist world. Lack of spare parts for lorries and sugar mills looks like cutting this year's production of sugar below the amount the Cubans had originally promised to export to the communist countries. The minister in charge of food rationing, Dr Rodriguez, engagingly admitted on March 24th that the Cubans were temperamentally unsuited to austerity; the number of applications for rations in Havana exceeds the city's total population by 100,000.

Cuba's other critical shortage is of men who know how to run an economy. It was this shortage that enabled the local communists, who are good at running things, to insert themselves into positions of power. Dr Castro now seems to be trying to limit their access to the topmost positions while using their skills at the next level down. The ministry of commerce, for instance, has recently been taken over by a com-

munist. But Dr Castro's attack on a number of the island's communists on March 26th for thinking that they had "won the revolution in a raffle" has been accompanied by the creation of a six-man secretariat to lead the Integrated Revolutionary Organisation, Cuba's single party. Only one of the six is an old communist; the others are faithful to Fidel. It looks as if Dr Castro still wants to wear his marxism with a difference.

PERSIA



Shah and President

An anxious Shah arrived in Washington this week on a visit to President Kennedy which, originally fixed for September, was advanced at the Shah's request. He was anxious on many counts. His prime minister, Dr Amini, pressing on for social reforms, is acquiring more power and independence than any prime minister before him since Dr Mossadegh. This is the cause of some friction: the Shah has even grown nervous lest reforms, pushed too far or too fast, should release uncontrollable forces that could upset the peacock throne. These fears can hardly be justified. If Dr Amini is to be dramatised then he fills much more obviously the role of the last hope of an old regime than the first hope of a new one. This is how the Americans see him and why the Americans support him. Yet the Shah must hurry to Washington to get his own views heard. These differ from Dr Amini's in that the Shah seeks more military assistance, while Dr Amini is concentrating on getting economic aid.

The Kennedy Administration must certainly be reluctant to pay more for the Shah's army, though the Shah may quite forcibly argue that reforms are, in their nature, disruptive and that therefore, if he is to support them, he must have his army strengthened against such outside dangers as Russian radio campaigns. President Kennedy is primarily concerned to smooth out the differences between the Shah and Dr Amini. If he humours the Shah at all it is likely to be as a mere softener for some pretty firm proposals. These are said to include the offer of generous American financial assistance for a genuine programme of reforms, subject to two provisos: Dr Amini must remain as prime minister; and aid will not be continued if reforms are not carried out. Persia needs $800 million (£285 million) in foreign aid for its third development programme, and most of this must come from the United States. The conditions that President Kennedy lays down must therefore carry some weight. Nor is his word even the last one. Congress will need some real evidence of useful spending if more and more aid is to be bucketed into Persia.

MILK SURPLUS

Apart from the occasional dumping of unwanted skimmed milk down mineshafts all the milk sold from farms to the Milk Marketing Board and not consumed in liquid form is sold for manufacturing. The guaranteed price paid to farmers for milk was lowered by 0.4d. after the 1962 Review to 3s. 1.85d. per gallon. The prices at which the Board sells milk vary considerably: the gross selling price for liquid consumption in 1960–61 was 3s. 8d. per gallon while the price realised by the increasing quantity of milk sold for manufacturing averaged only 1s. 6d. per gallon.

BUSINESS ECONOMISTS

Fixing Targets

Hotfoot last weekend from preaching the gospel in Dublin (where perhaps another Ned is in the wind?), M. Pierre Massé, head of France's planning machinery, addressed a hundred practising economists attending the Business Economists' Group conference on planning in Oxford. The main interest to those already familiar with the workings of the French system was the evidence of some recent changes in emphasis within it. The French planners now believe that behind their four-year plans must lie some much longer-term view of the economy (over at least ten years, and a study is being made which looks ahead as far as 1985). Secondly, they feel that in drawing up each four-year plan a choice of growth rates, rather than a single one, should be put forward to the politicians together with the implications of the different rates. At the same time, some reduction is to be effected in the number of working parties which contribute to the plan; this suggests that the French are discarding a little of the excessive detail which has hitherto gone into the fussier part of their target-fixing and planning.

How much target-fixing Britain's own National Economic Development Council will produce in its turn is still anybody's guess. But it unfortunately became evident at the conference that some people are going to try to persuade the Chancellor that it should be a good deal less, certainly to begin with, than the French go in for. Most of the discussion by British delegates at Oxford centred not so much on growth targets, the central theme of the French plan, as on the possible impediments to growth, such as immobility of labour and the taxing of capital. While there are obviously fields of investigation here for Ned, its primary task should be to breathe a spirit of expansion into the British economy; the main point of the Ned experiment will be lost unless Britain absorbs the psychological lessons to be learned from France's effective target setting.

CONSERVATIVES

Inquest on Orpington

The inquest carried out for Conservative Central Office on the Orpington *débâcle* by a well known firm of pollsters has apparently yielded some interesting, but not startling judgments. Contrary to some press impressions, it concludes that the personalities of the candidates did not exercise a decisive influence on the result; nor does it think that anti-semitism affected more than a few handfuls of voters. Instead, the Tories have been told that the principal issue which lost them votes was the pay pause. This is said to have been resented by voters, not so much because they were personally suffering themselves (although the teachers were and voted Liberal accordingly), but because they sympathised with others whom they felt were being discriminated against. This linked up with a widespread feeling among the middle income groups that while something had been done for the rich in surtax relief, and while the organised workers could look after themselves, nothing had been done for the new middle classes by the Government.

Sheer boredom with the Government also helped massively to bring on Mr Goldman's defeat. The Tories have been served notice that electors are no longer impressed by horror stories of the years of Labour misrule. After eleven years of Tory government most electors have forgotten all about it, and many of the new electors can hardly recall a time when the Conservatives were not in office. The report gives no indication of a positive swing to Liberal policies and confirms that Mr Lubbock gained most of his new supporters from those anxious to register a protest against the Government; disturbingly for the Tories, a high percentage of the protesters are said to have been young married couples, some of them voting for the first time.

The report does not believe that high mortgage rates were a really major factor in the Government's defeat. Somewhat quixotically the electors are said to have been more concerned over Government inactivity in the face of take-over bids. As for the common market, far from being a major issue, it is said to have played no role at all in the election; the Tories, says the report, lost no votes and the Liberals got none. Nor do the Government's Common-

THE WELCOME SERVICE

Yours for the asking in every major city . . .

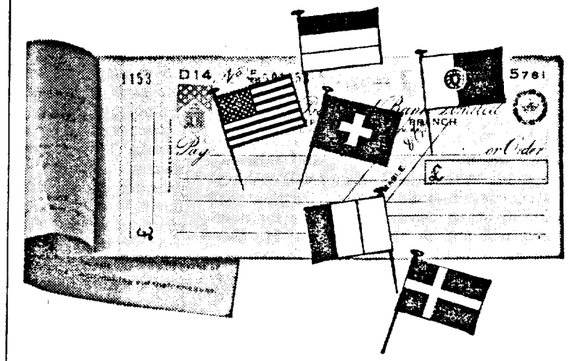
NEW!

"How can I help you?"

You don't speak the language of the country? Do you know where to get theatre tickets? Hire a car? Find a guide or interpreter? A shorthand typist? Do you know what's best to buy, and where to get it? — You have only to ask me: I'm the Air France Welcome Service hostess.

To help you enjoy your journey even more, not only on your jet flight, but also during your stay, Air France now introduce the new Welcome Service on its vast world-wide organisation.

Whenever you visit any major city served by Air France, you will find the Welcome Service with its staff specially trained to give you helpful information and advice; to simplify your stay and to make it more enjoyable; to help make contacts, and to assist you in so many other ways.



But the Welcome Service is only one of many Air France services created to help you on your way, services found everywhere on the largest air network in the world. Air France has adapted its famed hospitality "a la française" to the needs of every air traveller, and especially for you . . . that's why you are certain to *enjoy flying Air France.*

AIR FRANCE

In the Air France office, the Welcome Service can be readily recognised by its blue and white sign and the same insignia is worn by its staff: tell them your problems—they are your friends in a strange city.

THE WORLD'S LARGEST AIRLINE

CHECK WITH N·P

The Overseas Branch of National Provincial Bank is fully equipped to assist with all aspects of foreign trade and can arrange for a travelling representative to discuss with customers their own particular problems. Full details of the bank's services, together with those provided by the Government and various trade organisations, are given in the National Provincial booklet: "Services for Exporters". Copies are obtainable, free of charge, at any of the Bank's 1,550 Offices.

wealth policies seem to have cost it any support. Stories of irate imperialists flocking to the Liberal banner appear to be little more than imaginative fabrications.

The report's final conclusion is that people are suffering from a sense of drift and lack of national purpose. The Tories need to give an impression of greater dynamism to win the protesters back. After this week's budget that may not be easy; but one political course to which the Tories may now wisely turn is that of putting over in a more dramatic and imaginative way the case for the great adventure of trying to enter Europe.

UNIVERSITY FINANCE

Second Thoughts?

MR BROOKE made two concessions to his critics in last week's Commons debate on university finance and salaries. He promised that the Treasury will cushion future rises in building costs, so that the value of the non-recurrent grants for new places will not be badly eroded. He also announced that he would review the universities' financial situation in two years' time in the light of how the expansion programme was going. It is a legitimate university complaint that quinquennial programmes ought not to depend on interim reassessments; the chief factor underlying Mr Brooke's second thought is that by 1964, if not sooner, he will have to adapt himself to what one hopes will be the vigorously expansionist demands of the Robbins committee on higher education.

The Government's answer to the various international league tables of university entrants (in which Britain invariably languishes just above Turkey) turned out to be that in some continental countries a lot of the students do not last the full course. Of age groups actually graduating, he said, this country's 3½-4½ per cent is comfortably above France's 3½ per cent and west Germany's 2¾ per cent. But one answer to this is that the number of unflattering comparisons is still high; another is that one would prefer to have a society in which lots of youngsters have a chance to go to university, even if some are then weeded out there, than one where so many young people who would make perfectly competent undergraduates are not given a chance to try their paces at all. It is true that, as Mr Brooke argued, existing plans to raise the total of student places to 150,000 by 1966-67 means a rate of expansion (35 per cent in five years) which many vice-chancellors already jib at. But why help them to drag their feet and mutter about academic standards by undercutting the recommendations of the (financially conservative) University Grants Committee? And is there really any kudos to be got by claiming that the school-leaving "bulge" will be catered for—at recent university entrance rates? It would be appalling if it were not.

Some hopeful sixth-formers will be able to find their way to the colleges of advanced technology (6,000 extra places) and the teacher-training establishments (12,000 extra). This is something, but not by any means enough. Since the long-term prospects for rapid expansion are greater in the field of technical education than anywhere else, the Government is on safer ground in deliberately encouraging—by salary differentials—the present drift of junior university teachers into the CATs. This is not the disaster that certain professional spokesmen are making it out to be. But the danger of a collapse (for several reasons) in the teaching strengths of some of the second-rate civic universities will have to be checked: the way to do it is by making discriminating awards to those faculties and institutions whose difficulties in recruitment of teaching staff are proving particularly great.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries
Out next week:

CONTINENTAL SOUTH EAST ASIA

The review covers developments in Burma, Thailand, South Vietnam, Cambodia and Laos. The motive behind the recent Burmese coup and its likely consequences, are discussed. The increased benefits offered to investors in Thailand are described and the possibility of closer trade relations with Russia examined. The economic and social programme and the financial reforms announced by the South Vietnamese Government are detailed and their significance assessed.

ZANZIBAR

Clove Island Hitch

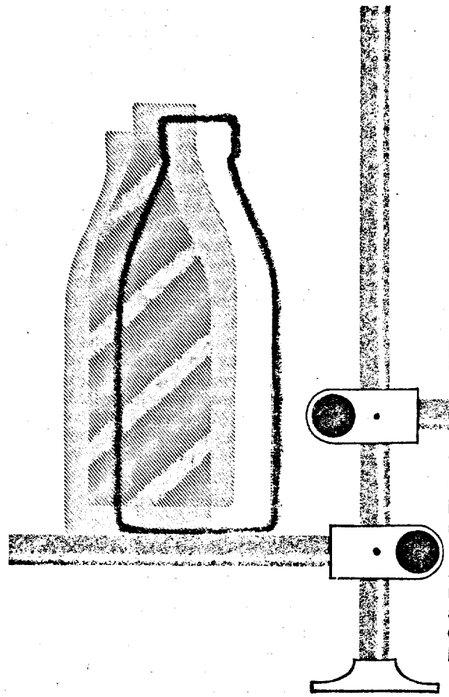
IN the few private hours left to him between conferences, a Colonial Secretary's bathtub dream might be to send a whole Lancaster House chamberful of delegates home, abruptly, and empty-handed. For Mr Maudling this more or less came true, willy-nilly, when, on April 5th, he announced at the Zanzibar conference that the result of their deliberations was to confirm the depth of the differences between them. Therefore, he could offer no real constitutional advance, no date for new elections, internal self-government, or independence. Minor franchise adjustments, and a delimitation commission, were offered (a crumb, in fact, for each side); beyond that, Mr Maudling implied, they had better return to their islands and patch up their quarrels before asking for more.

The Colonial Secretary could hardly have done anything else. Zanzibar's inhabitants are divided roughly in two—on the one side, comparatively wealthy and advanced Arabs, Asians, and mixed-blood Africans; on the other, poor, comparatively backward, Africans and Shirazis. This drew blood at the time of last year's elections. The party of the better-off is in power and against new elections; the opposition, certain that with a wider franchise it will win, wants elections as soon as possible. The divisions appear to be too deep to allow for real co-operation. Alliances with other politicians on the mainland (in Kenya and Tanganyika) cannot be avoided: so the result is a spread of the poison of discord to an east African body that already has as much of this as it can absorb.

SOVIET UNION

Suspense at the Top

PARLIAMENTARY surprises are not typical of Russian politics. The sudden postponement of a session of the Supreme Soviet is in the nature of things a puzzling event. The two houses of the newly elected Supreme Soviet were to have met on April 10th. Less than a week before, and without any explanation, the opening of the session was put off to April 23rd. The causes of this delay, however, need not be sought in the state of health of Mr Khrushchev. There are plenty of other possible reasons for the postponement.



When the Supreme Soviet meets after an election one of its tasks is to approve a new government. Mr Khrushchev's premiership is not at stake but, taking into account the debates of last year's 22nd party congress, the governmental reshuffle might prove both bigger and more laborious than usual. Another reason for delay may well be connected with news from Peking. Indeed, the Chinese set a precedent last month by delaying their own meetings of parliament and the party leadership. Since then, there have been persistent reports, reinforced by the contents of articles in both countries, of a search for compromise between the two communist partners at odds. A Sino-Soviet political truce would certainly be a prospect worth waiting for in Moscow.

Moscow's waiting game is even more likely to be the result of expectation of change on the non-communist front. Soviet papers have recently been writing as if they genuinely expected President Kennedy to put off the now imminent series of tests in the atmosphere. The Supreme Soviet provides a platform for Mr Gromyko, or even Mr Khrushchev himself, to make a major statement of foreign policy; and such a declaration is naturally affected by the state of soundings about disarmament and Berlin. Thus the parliamentary suspense may reflect a diplomatic suspense.

POTATO SHORTAGE

The quota game

HOUSEWIVES reeling at the price of a pound of potatoes this week (5d. to 9d.) have been encouraged to blame the

a quart into a PINT for U.D

Two warehouses, of similar floor area, and a staff of some 25 were needed to cope with U.D's storage requirements. Now with the installation of 'Kee Klamp' Pallet Racking, one warehouse only is needed, releasing 40,000 sq. ft. of floor area for other uses—increasing labour productivity by some 50%.
Another example of Kee Klamp storage 'know-how' which is so much in demand today. Key your storage to 'Kee Klamps'. Surveys and reports on specific storage problems freely available.

weather. But the Potato Marketing Board, in spite of all explanations to the contrary, has a lot to answer for. The board, going on its estimates of consumption in any coming year, allocates a quota acreage to each grower and charges him £1 an acre for the privilege; if he grows more than his allotted acreage, it charges him £10 a acre in "excess contributions." Since the farmer is guaranteed a price of about £13 a ton (at 9 tons an acre) for his potatoes, and may get as much as £35 or £40 a ton on the market in times of shortage, he is sometimes persuaded that the excess levy is worth paying, thereby creating the conditions beloved by the consumer but abhorred by the producer. This happened in 1960.

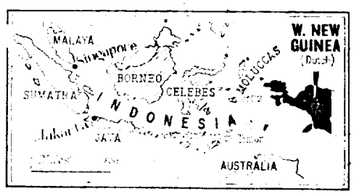
Alarmed at that excess, the board decided to step the registration fee up to £3 an acre and the excess contribution to £25 an acre. As a result of this deterrent (and the bad weather of last season) fewer farmers took up even the acreage allowed to them, and the net acreage under potatoes fell to 150,000 below the quota of 742,000. Some, however, persisted in the abhorred belief that people would still want potatoes in the winter of 1961-62, and grew their usual excess acreage, paying £140,000 to the board for it. Consumers (and chip shop proprietors) can draw their own conclusions about who are the bad boys this time.

The board has now had official approval for its increased levies; this year's conditions could therefore be repeated next year, when excess contributions may amount to £350,000 while even fewer acres are planted with potatoes. Once again, the board should make money and the consumer could still go short. At the very least, there is a strong case for allowing the transference of unused acreage quotas to farmers who are prepared to use them (the hop board already allows this). But, because the reallocation is said to be administratively "impossible," or else out of the board's control, the idea is not likely to be adopted.

ITALY

Presidential Starters

SIGNOR MALAGODI, the leader of the Liberal party, has expressed the hope that the new Italian president will resemble the late Signor Luigi Einaudi, who was president from 1948 to 1955. Many would share his hope; but elder statesmen like Luigi Einaudi are hard to come by. In the absence of a candidate of his stature, the deputies and senators who will meet in joint session on May 2nd to choose a successor to President Gronchi are likely to act primarily on the basis of political calculation.



This time these calculations are bound to be influenced by the fact that the presidential race is being run so soon after Signor Fanfani formed a centre-left government supported from outside by the Socialists. Although the president is theoretically above the political battle, inevitably the political loyalties of the new head of state will be held to give an indication of how much the "opening to the left" is to be either consolidated or undermined. If Signor Saragat, the Social Democrat leader, whose name was, by implication, put forward last week, were to be elected, this would be taken to suggest that the present government is not just a temporary deflection of course but the beginning of a genuine trend towards more progressive economic and social policies.

Among the Christian Democrats a number of possible presidential starters have already been mentioned; they include Signor Segni (foreign minister) Signor Piccioni (deputy prime minister), Signor Scelba (a former minister of the interior) Signor Merzagora (president of the Senate), and Signor Gronchi, who is not actually debarred from succeeding himself. Although these names cover the whole range of the Christian Democrat spectrum, their balance is towards the right. The task of choosing among them may gravely strain the fragile unity achieved by the party at its Naples congress in January—and perhaps to no purpose, since at neither of the two previous presidential elections was the official Christian Democrat candidate successful. It is not surprising that Signor Moro, the party secretary, is approaching the problem of the presidential election with some circumspection.

NEW GUINEA

The Umpire's Move

THE ball is back in the Dutch court after a smart bit of American umpiring. The next shot in the rally may take some thinking out, however, for the umpire's intervention was distinctly more favourable to the Indonesian challengers than to the Dutch defenders of what might be called the New Guinea cup. In fact, Mr Ellsworth

Bunker, the State Department man who served as mediator in the short-lived informal talks between the Dutch and Indonesians near Washington a fortnight ago, has now proposed a programme for the transfer of administrative powers in West Papua from Holland to Indonesia. The transition would last two years and would be supervised by a United Nations commissioner.

Although the Indonesians have never been keen to allow the UN any say in west New Guinea, Mr Bunker's proposals are close enough to Indonesian views, and they were accepted "in principle" on Monday by President Sukarno. On the Dutch side, Mr Luns, the foreign minister, was in London this week for the Western European Union meeting, and the Dutch cabinet was not expected to reach a decision on Mr Bunker's proposals until his return. It would be surprising, however, if Professor de Quay's government found these acceptable as they stand. The Dutch have promised self-determination to the Papuans, and it would be hard for them to enter into any arrangement that brushes this promise aside. Last week the Dutch lower house rejected Labour motions calling on the government to negotiate on the basis of a transfer of sovereignty and stop sending reinforcements. The voting may have reflected confidence in Holland's ability to defend its territory, after the rout of an Indonesian invading party on March 30th. The Dutch may be well advised, however, to take up Mr Bunker's proposals informally, and see if they can be broadened to give the Papuans more of a say in their fate.

PORTUGAL

Lisbon Teacup

ALTHOUGH too much ought not to be made of the incident, the resignation of the Rector of Lisbon university and the strike by his students is not without importance. Dr Caetano, an able and (by the standards of Salazarian Portugal) almost a liberal man, was for some years (1955-58) minister of the Presidency and widely spoken of as a possible successor to the ageing dictator. He lost his post for sponsoring the political relaxation that led to General Delgado's unexpectedly successful presidential campaign in 1958, and was honourably retired to the headship of the

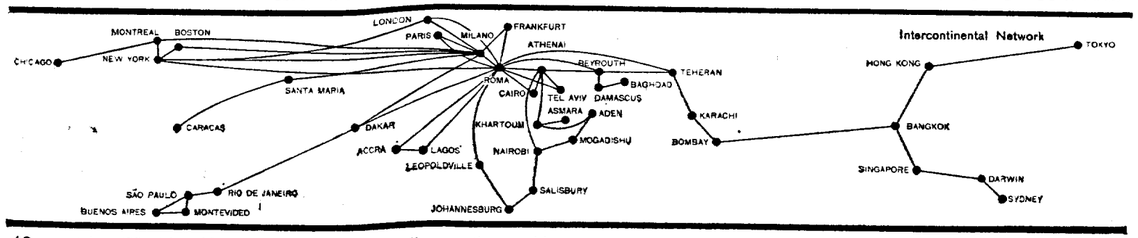
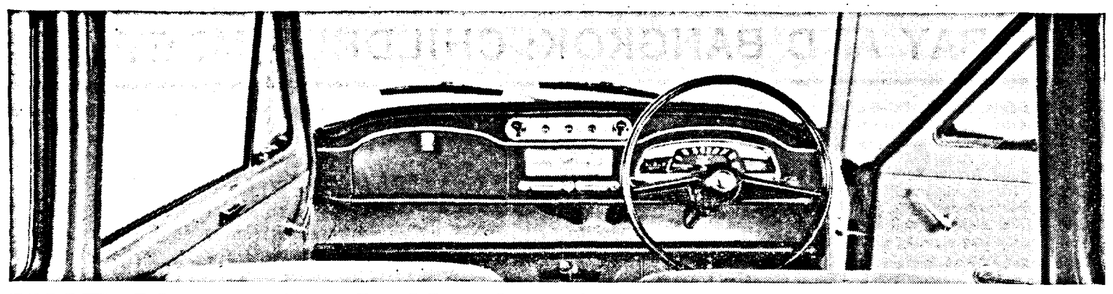
BOMBAY AND BANGKOK: CHILDREN MEET JETS

Men and Jets SUPER DC-8 S AND CARAVELLE S - two of the finest and fastest Jets in the world – flown by million-mile pilots, trained to perfection in keeping with this modern Jet Age.
The Winged Arrow Service All the warmth and atmosphere of Italy greets you the moment you step aboard – prompt, courteous hospitable ALITALIA service awaits you. ALITALIA's stewards and stewardesses are anxious to show you the true meaning of the Winged Arrow Service.
Be Budget - Wise Business meetings or congresses in distant places – sporting events - trade shows – group travel or family travel – businessman or tourist – ALITALIA offers you the most advantageous rates and most economical solution.
Air Freight City to City – Continent to Continent – fly your freight the ALITALIA way. Careful handling, speedy and punctual delivery at conveniently low rates. As far as cargo goes, ALITALIA goes all the way.
Think Ahead The modern traveller always plans and thinks ahead. Carefully planned itineraries afford you the opportunity to see more places at no extra cost. Think ahead - plan ahead – consult your Travel Agent, take his advice – realise what is to be gained in planning your trip.



ALITALIA AIRLINES



Do you believe in love at first sight?
This happened when ALITALIA invited members of the younger generation to visit various airports throughout the world in order to see for the first time, the ALITALIA Caravelle and Super DC-8 Jets.
They spent one full exciting day as ALITALIA guests and devoted a part of their day to drawing and painting the ALITALIA Jets which were leaving for other lands on ALITALIA's world-wide network.
The children's excited concentration can be seen in the picture taken at Santa Cruz and Don Muang Airports.

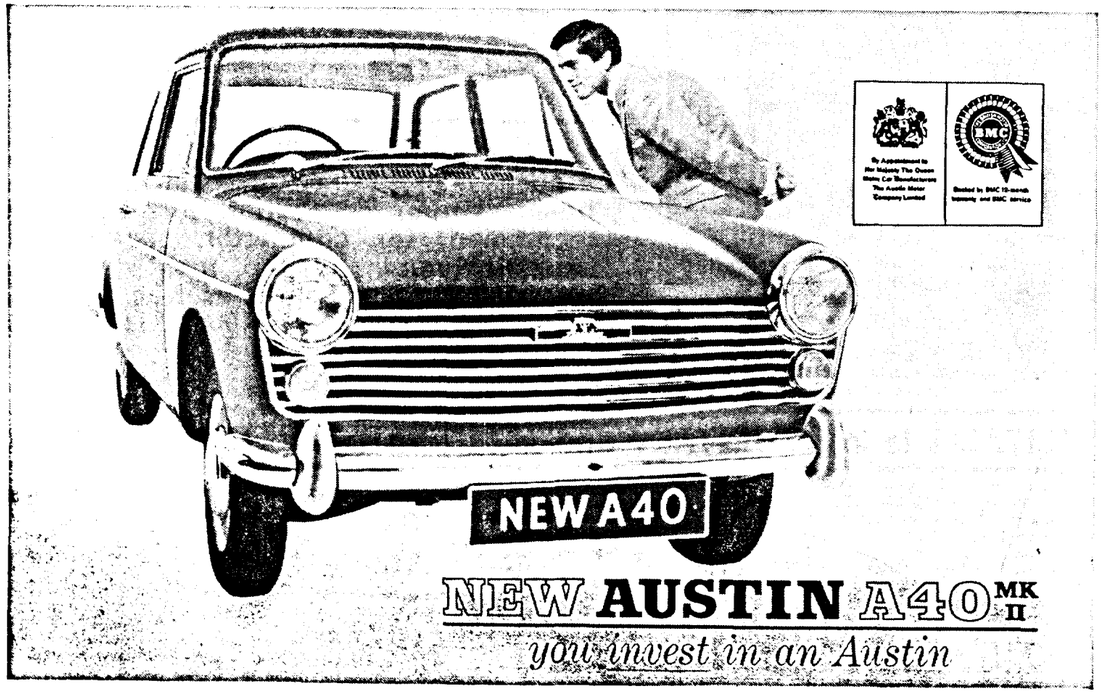
Starting May 20th: TOKYO
a speedy, profitable, interesting travel for business-man or tourist, for scholar or technician, for contractor, manager or expert, through all the most important cities of the Near and Far East: TEHERAN, KARACHI, BOMBAY, BANGKOK and HONG KONG.

ALITALIA is in all of ITALY and goes EVERYWHERE in the world

48 countries, 76 cities, 18.000 approved agents all over the world

THE NEW A40 HAS EXPANDED INWARDS

MORE INSIDE Get into an Austin A40 Mark II. Experience a new kind of comfort. Austin have laid on the luxuries with the completely restyled trim and facia. You can stretch at the back. Your long legs really find their length. You'd swear the A40 had expanded. First spell at the wheel clinches it. Start up the engine of the new A40. Purr into the seventies. You have more power. Greater acceleration.



NO MORE OUTSIDE The Austin A40 remains the same ideal size as the old one. All the expansion has taken place within. The A40 is still the ideal shape for parking and threading through tangled traffic. The price remains as small-car as ever. The A40's got the best of both worlds with these brilliant new features.

NEW Longer wheelbase (3¼") gives greater passenger comfort.
NEW Anti-roll bar on the front and telescopic rear dampers.
NEW Easy-action, wind-down windows.
NEW Fully hydraulic brakes on all four wheels.
NEW Completely restyled facia with glove-box lid/picnic tray.
NEW Trafficators that cancel themselves after cornering.
NEW Restyled, full-width radiator grille.
NEW S.U. Carburettor gives increased b.h.p.
NEW Fully folding rear seat gives more luggage room.

you invest in an Austin

university. He is thought to have many supporters in the army and the civil service, and a large following among the young.

This last point has, to some extent, been confirmed by the present disturbances. On March 24th the minister of education banned the annual "Students' Days" celebrations, on the ground that they might furnish opportunities for "subversive propaganda." He relented somewhat two days later in face of a storm of protest from the students, and gave them his permission to proceed, provided that their programme was submitted to the ministry of education. Then, on April 4th, he reimposed his ban. Dr Caetano went to the ministry the next day to present his formal resignation in sympathy with his students, two and a half thousand of whom assembled to cheer him for it. His resignation was followed by that of the heads of the faculties of law, medicine and letters, and of the head of the technical university. The ten thousand students went on strike, proclaimed "academic mourning," and held their celebrations in spite of the police, who did not interfere. At Coimbra, Dr Salazar's old university, more than half the students demonstrated in sympathy. Only Oporto was quiet—perhaps because this traditionally turbulent city let off enough steam in demonstrating in January.

A bald announcement that the head of the secret police has been replaced may have nothing to do with the affair; on the other hand, it may be the government's way of

punishing the organisation whose reports must undoubtedly have lain behind the denunciations of communist subversion by which the minister of education explains the whole business. Coming on top of the abortive coup at Beja, on New Year's Day, and Dr Salazar's other difficulties, these are signs of restlessness.

SKIM MILK

Too Many Cows

THE news that upwards of a quarter of a million gallons of skim milk may not, after all, be thrown down the shafts of disused coal mines for lack of anything better to do with it has soothed the violently provoked feelings of those who could think of several better things to do with it—like having it processed at cost in Belfast for the feeding of starving Asians; which is what is happening to it. But the Milk Marketing Board was right in its plea that it could do nothing off its own bat—and short of a deliberately "social" intervention by outside agencies—except throw it away. The surplus will represent only about 0.15 per cent of the total of skim milk powder production; and it would be hideously expensive to purchase extra machinery just to process these "top gallons" (about £3,000 worth of raw material) which the appalling weather of early spring may delay until they all happen at once. It would be many times cheaper to give more money to starving Asians directly than to set up surplus machinery to provide them with this processed skim milk. Politically, this is never an easy argument to put across—although Mr Macmillan did so, to some effect, last week.

None of this excuses the board (or the Government) for the fact that there should be so much skim milk in Britain at all. The Government is culpable because it has not reduced milk prices to farmers by as much as it virtually pledged itself to do last year. The board is culpable because no amount of "drinka pinta" (or even a quarta) will persuade the British public to buy up all the milk the farmers can produce as long as British milk costs as much in retail shops as it does under the board's present monopoly price (64d. a gallon for 3.7 per cent fat-content milk, bottled and delivered; most European milk is lower in fat—3.0 to 3.2 per cent at its cheapest—but even heavy adjustment for content, bottling and delivery would hardly equate the British price with Austria's 36.1d. or even France's 48.3d.; and almost exactly comparable milk in Italy —3.5 per cent in litre bottles—costs 56.3d. a gallon). The flood of milk that the board cannot sell as liquid goes to be processed into high-cost butter, and it is thus that the surplus of skim milk appears, for which the public pays even when the board gives it away free.

BOOKS

Marxism Reconsidered

Philosophy and Myth in Karl Marx
By Robert Tucker.
Cambridge University Press. 263 pages. 35s. (paper 12s. 6d.).

The First Russian Revisionists
By Richard Kindersley.
Oxford University Press. 266 pages. 38s.

THE core of Professor Tucker's book is an interesting, and in places brilliant, analysis of the idea of "alienation" in Hegel and Marx. Since the relatively recent publication of Marx's unknown youthful writings, this problem has been at the centre of much philosophical discussion in Europe and America (but has been almost ignored in Russia). Alienation, Marx wrote in the early 1840s, sets in when "man's own deed becomes an alien power opposed to him, which enslaves him instead of being controlled by him." This may sound as if it were taken from a sermon about man's soul being torn between good and evil; but Marx quickly moves from morality to history:

> This crystallization of social activity, this consolidation of what we ourselves produce into an objective power above us, growing out of our control, thwarting our expectations, bringing to nought our calculations, has been one of the chief factors in historic development up to now.

From this angle Marx went on to study and analyse the working of capitalism and found in privately owned industry the "power alien to the producers, enslaving them instead of being controlled by them."

Much has been written about the "contradiction" between this early Marx, the humanist philosopher, and that mature author of "Das Kapital," who "abandoned" the idea of alienation and so betrayed his idealistic self. Mr Tucker also favours the young Marx as against the author of "Das Kapital." Yet he argues convincingly that alienation is the central idea with both, and that, far from abandoning it, the mature Marx elaborates and translates it into his economic categories. Of the early Marx Mr Tucker thinks highly, contrasting his humanistic philosophy with Hegel's apotheosis of (spiritual) world conquest: "... the change that has occurred from Hegel to Marx [lies] in the conception and evaluation of the acquisitive drive. For Hegel ... [by that drive] ... freedom is achieved. For Marx ... the acquisitive drive is the force that ... de-personalizes" the human being. Mr Tucker holds, however, that in Marx's economics philosophy degenerates into myth:

> The myth of the warfare of labour and capital was Marx's final answer to the problem of man's self-alienation.

Economic historians may not so readily agree with this view of the warfare of labour and capital as mere myth. Neither the prosperity of the postwar period, nor the relative social peace the West has enjoyed these years, need conceal from us the fact that the century after the industrial revolution was filled with conflict between labour and capital. It may be refreshing to be told for a change that Marx is a "moral philosopher" or even a "religious thinker" and that communism is an "aesthetic ideal," for the usual argument is about Marx's immorality and the lack of any aesthetic quality in historical materialism. But it seems a little late in the day to deny Marxism, as Mr Tucker does, any validity and weight in the field of economic-political theory.

Mr Kindersley reminds us of the impact Marx's economic theory had on Russian

liberalism nearly seventy years ago. At that time in Petersburg and Moscow bourgeois liberalism spoke not with its own voice, but with that of Marxism. The author describes a group of important thinkers, so-called Legal Marxists (Peter Struve, M. Tugan-Baranovsky, Serge Bulgakov, Nikolay Berdyaev, and others) who, with much erudition, ability and verve, championed the cause of Russia's young and underdeveloped capitalism. The title of the book is misleading, because these men were hardly "revisionists" in the accepted sense, nor, if the title is granted them, were they the first. Their association with socialism was only fleeting, and they did not seek to influence the socialist movement as such. They stated the case for capitalism in Marxist terms and were echoed in this by orthodox Marxists, including the young Lenin. The explanation of the paradox is that Marxism was then the only economic doctrine to speak of the "inevitability" and the advantages of capitalist development in Russia; this followed from the classical Marxist scheme of things, in which the full development of capitalism was assumed as a precondition of socialism. Hence both the champions of capitalism and those of socialism agreed for the time being on the need for Russia's *embourgeoisement*.

Subsequently the "Legal Marxists" dispersed, some going into the Constitutional-Democratic party and other to Greek Orthodoxy. Their dispersal was symptomatic of a lack of viability in Russian liberalism. Mr Kindersley's scholarly reminder of their early activities, though it is somewhat pedestrian, will be useful for specialists.

Black and White View

The African Image

By Ezekiel Mphahlele.

Faber. 240 pages. 21s.

Pan-Africanism: *A short political guide*

By Colin Legum.

Pall Mall. 296 pages. 27s. 6d.

WHAT is the African personality? "A charming phrase," according to Mr Mphahlele, a black South African. "Always the same word, always the same fundamental requirement, Africa," writes Mr Legum, a white man from South Africa. Mr Mphahlele's gentle mockery complements Mr Legum's earnest attempts to understand: the white man sees the imposing, rational, structure from outside; the black man, in it, knows the confusion and the maze, the tacked-on improvisations behind the façade.

Clearly, and with admirable economy, Mr Legum devotes a mere 130 pages to working, in more or less historical sequence, through the tables of the pan-African law. He does not preach, he reports. It amounts to this: black men want to be regarded as equals in the world. This desire has led to an historical movement (like Zionism) based upon race and colour consciousness. Its founding fathers philosophised in the "diaspora" of America, the West Indies and, later, London and Paris. The urgent need is for an independent black ethos: no pan-Africanist (Marxist or not) wants to be run by Russians any more than by the "neo-colonialists" in the West. Anti-colonialism, continental unity, non-alignment, a deep yearning for black dignity (the word is often repeated)—these are the sources of pan-African togetherness. But tribes, trade unions, cultural divisions, reformist (as opposed to revolutionary) approaches and Dr Nkrumah all serve to keep Africans apart. Even so, Mr Legum concludes, the movement towards unity has strengthened, not weakened, during the past four years.

All this is put down simply, but unexcitingly. Mr Legum goes on to render his book invaluable (at least to his fellow Africanists) by tacking on 145 pages of appendices. These are the documents of black dignity, from Dr Edward W. Blyden's presidential address to the Liberia College in 1881 to Dr Azikiwe's address to the Committee of African Organisations in London on August 12, 1961. For this reason alone, Mr Legum's book should be read by anyone in the West who has any kind of dealings with Africa: his first half is a good guide through the beginner's difficulties.

All the ideas thus carefully built up and placed in logical, easily understood sequence can then be broken down by reading Mr Mphahlele: "the idea of the African personality can remain but a glorious myth," he tells us. Unlike Mr Legum, Mr Mphahlele is not reporting; he is emoting. But it is useful emotion if only because it casts doubt upon the orthodoxy of pan-Africanism that has been carefully built up by its high priests. The quality most lacking among pan-Africanists is doubt; Mr Mphahlele is too argumentative to provide answers, but he does offer doubt.

A South African who first exiled himself in West Africa, where he taught at Ibadan university, and is now living in Paris, Mr Mphahlele is far more westernised than the Africans he met in Nigeria. The point about him is that he might not mind this being said: unlike some of the more extreme cultists of *négritude* and the African personality, he is delighted with the intermingling of cultures that has taken place in South Africa. He recognises the enrichment that this has brought about. He speaks out against the "social anthropology" in some African writings, or the self-conscious "under-doggery" in others; as for the merging of cultures, "we are not ashamed of it." To Mr Mphahlele, first introduced to the "enchantment and power of European classical music" by a friend twelve years ago, much tribal African music belongs, on its own, "to the museum." But its rhythms can contribute to the newer, inter-cultural forms.

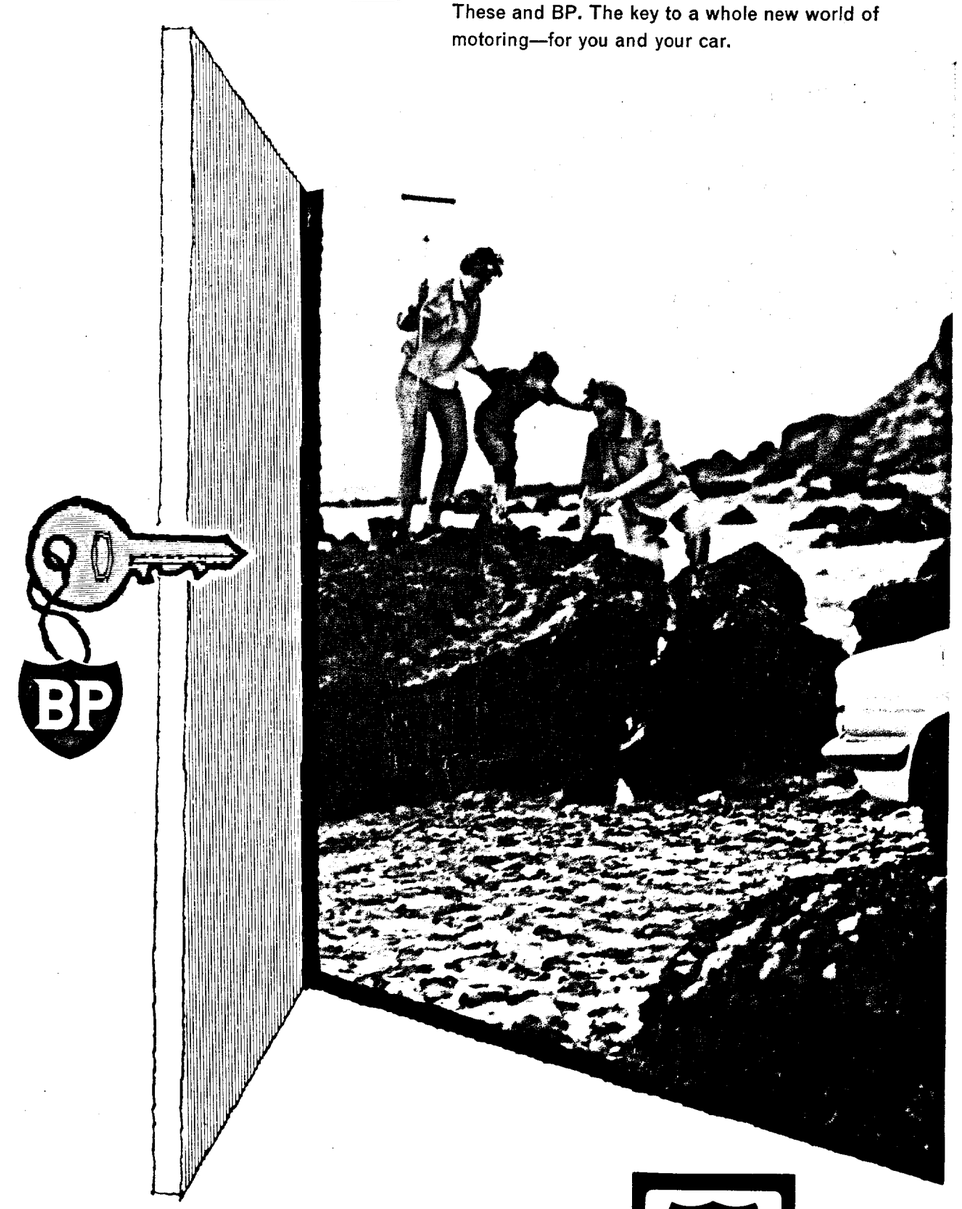
Sometimes pretentious, sometimes too fond of recounting old tales of life in South Africa, Mr Mphahlele nevertheless performs a service in shattering the bright surface of the African image; the more so in the second, literary-criticism, half of his book (a sort of thesis on the African as seen in literature). He is really further from the pure blackists of West Africa than they might like to acknowledge; as part of the far-advanced South African society, he is more like an American Negro. And this in itself is highly informative.

"I personally cannot think of the future of my people in South Africa as something in which the white man does not feature," he writes; nevertheless, he is bitterly critical of the white man's present behaviour in South Africa. He is also sure of his views on some of the South African writers who have been sympathisers: Alan Paton ("Man with a Halo"), Nadine Gordimer and Doris Lessing among them; Elspeth Huxley is found wanting. Unfortunately, Mr Mphahlele's scholarship requires patience to work through; the reward, at the end, might be a better understanding of why men like this exist.

"It is in one way an easy and almost instinctive thing to be a nationalist. You find yourself with your back to the wall, first; then, like a hedgehog, you draw your head inside and underneath those bristles you manufacture a kind of venom, as it were." This is disapproved of; the simple feeling of "being African" is not. Again, the pure pan-Africanist might like Mr Mphahlele's equation of Boris Pasternak with Paul Robeson (both have "not been allowed to say things that offend authority in their respective countries"); other nuggets, both for Mr Legum's Africans and for their detractors, are also there. For the moment, this irreverence is enough.

The American Enlightenment

Power, Morals and the Founding Fathers: *Essays in the Interpretation of the American Enlightenment*



By Adrienne Koch.

Cornell University Press. London: *Oxford University Press.* 172 pages. 16s.

DR KOCH is a well-known authority on the intellectual history of the American enlightenment; as she points out, this study is being renewed today by the series of ambitious publications of the papers of the Founding Fathers and their contemporaries. The present little volume, which consists of a re-working of some of Dr Koch's essays over the last decade, is thus very welcome, but one sees little reason why the author should attempt to put these studies, however tentatively, in the context of the "cold war." It is, of course, permissible to regard the American political tradition from the point of view of the extent to which it stands in contrast to Soviet totalitarianism, but for a scholar of Dr Koch's eminence this should imply an equal attention to both sides of the equation. It is fairly obvious that this has been lacking.

BP IS THE KEY

MAKERS OF FINE CARS AND THE WORLD-FAMOUS LAND-ROVER

Nevertheless, if one regards this as an irrelevant pinch of incense on the shrine of the current deities, one can still derive much profit from her reconsideration of the contributions to political thinking of Franklin, Jefferson, Madison, John Adams and Hamilton, which makes up the core of the book. She is particularly concerned to check the rehabilitation of Alexander Hamilton, which she feels has gone too far, and to point out that his economic insight was incomplete without the broader vision of his contemporaries into the essentials of free government. As a student of philosophy, Dr Koch is concerned to show how wrong are attempts to picture the American enlightenment as dominated either by the appeal to pure reason or simply by straightforward reaction to experience. It is her contention that the great Americans of the period, and in particular Jefferson, were notable for the degree to which they could apply the scientific notion of disciplined experiment to the field of political and social action. They saw, she says,

> the necessity for the constant balance and tension of power and morals. Franklin by his scientific and political activity first illustrated this balance in his underlying orientation of pragmatic wisdom. Jefferson contributed the most searching statement of the equal rights of man in terms that he intended to be a common human faith. Hamilton contributed the most searching statement of the strategic means for establishing the economic basis for a society that could operate as a unity in controlling the resources of nature to increase national productivity.

And the tension that arose out of the political structures of the first decade of the new republic was fruitful in shaping the institutions necessary to control them:

> Their dialectical opposition and argument, together with their strong personal qualities and great talents, resulted in securing the national interest for the common pursuit of happiness. The balance between Hamiltonian power and Jeffersonian morals was given further operational validity by the far-reaching political thought and moderating personal influence of Adams and Madison.

Error and Evocation

The Last Days of the British Raj

By Leonard Mosley.
Weidenfeld and Nicolson. 263 pages. 25s.

MR MOSLEY is exasperating. He cannot have read his proofs. He is full of mistakes, misstatements, inconsistencies and contradictions. Sir Francis Mudie becomes Sir John and then Sir Francis again and he sometimes gets his posting wrong. Mr Nehru is sent one moment to Oxford and to Cambridge the next. Mr Jinnah is made President of Pakistan instead of Governor-General and Wavell and Mountbatten are shown together as Viceroys when this is against all protocol. There are innumerable errors of this kind. More serious are errors that can be misleading: that the Sikhs built the irrigation system of the Punjab, or that there were 600,000 people killed in the riots of partition, or that the ratio in the Indian Army was 13 Muslims to 7 Hindus. Fortunately since most of what Mr Mosley says is not very new—it has been said by Campbell-Johnson, Maulana Azad and V. P. Menon—his errors do not matter. The little that is new is so unimportant that even that it should be wrong matters little, which is just as well since the author seldom gives an identifiable reference. When he quotes a conversation between third parties he does not name his informant and all files are to him just "Government of India Records."

Yet underneath the froth of error this book is worth reading because it has an extraordinary evocative power. Mr Mosley may get his facts wrong, but he always gets the atmosphere right. In his pages one gets everything: the increasing tension; the impending collapse; the frivolity of the Dickie Birds; the driving stamina and immense vanity of Mountbatten; the doggedness of Tucker; the total lack of understanding of Auchinleck in his fear for British lives after independence; the unrelenting ruthlessness of Jinnah; the slow piling up of Sikh anger; the exhaustion and the uncertainty of nearly everybody. This reviewer does not agree with his conclusion that delay would have saved lives; as things were at the time each week that dragged on would have meant more human misery and more deaths, for week by week the Government was ceasing to exist. Through all the mess two characters stand out stark in their dignity—Wavell and Gandhi: a soldier stoic in adversity; a saint wading through filth.

Officina Gentium

Scotland from the Earliest Times to 1603: *Vol. I*

By William Croft Dickinson.
Nelson. 416 pages. 42s.

Scotland from 1603 to the Present Day: *Vol. II*

By George S. Pryde.
Nelson. 367 pages. 42s.

IT it some fifty years since a textbook has been written on the history of Scotland. The gap has now been excellently filled by Professor Dickinson and the late Professor Pryde (who lived to see the page-proofs of his volume through, but not to see it appear). As the titles show, each author took full responsibility for one period; but they worked together, commented on each other's scripts, and ensured as much continuity of treatment as the very different histories allowed. Both authors are clear writers, with excellent styles, and it can be said straight away that the partnership has scored a success. It will be a long time before their textbook is superseded.

It is no easy task to write the history of Scotland. The early stages are ill-documented; and, as the story rolls on and documents become fuller, Scotland's history becomes more and more secondary to that of its neighbours and, in the end, to England alone. Professor Dickinson's volume describes what is, all in all, a most depressing story. It starts with interesting barbarism of which we know far too little, and gradually proceeds to the unhappy late middle ages, when the highlands were still hidden in barbarism and the lowlands showed all the faults of a feudal system and none of its merits. The Scots had incredible bad luck; they were landed with a monarchy which carried with it no aura of majesty, but only represented the triumph of one feudal family over another, and could have been saved only by a succession of strong kings; but what they had was a succession of minorities. All this Professor Dickinson describes with as much clarity as the subject permits, and with many shafts of illumination—witness his admirable comment on Macbeth's perfectly normal succession to the throne by way of murder: "All *more Scottico*, but made to appear wild and strange by the genius of Shakespeare." Professor Dickinson is excellent on the later and slightly less savage part of his period, particularly on economic growth and the power of the burghs.

Professor Pryde has met his difficulty straight on: since the union of the two kingdoms Scottish history is not (except in detail) political; it is administrative, economic, religious and cultural. This is what his book is about, and he has gone a little farther and subjected the political history of the first century to the social history. He has done it a little too much: one could have spared some of the space given to nineteenth-century local government for more of the struggles of the seventeenth century. But one must not complain: the history throughout is very clear, admirably backed by statistics, and right up to date: even the birth of Prince Andrew and of Dounreay are recorded—though the Toothill report unfortunately appeared too late for comment.

If there is one fault to find, it is that too little space is given to the diaspora, which is Scotland's prime triumph and success. It is not ignored, but is treated mainly in terms of mass emigration statistics and Governors-General. Scots are their own best export, and a thorough account of their permeation furth of the kingdom has yet to be written.

Mainly About the Pacific

The Great Sea War: *The Story of Naval Action in World War II*

Edited by E. B. Potter and Chester W. Nimitz.
Harrap. 478 pages. 42s.

THIS book, first published in America, is in part an adaptation of the large-scale co-operative enterprise entitled "Sea Power," which appeared in the same country about two years ago. Unless or until Professor Morison produces an *oeuvre de vulgarisation* to bring his fifteen volume history of United States Naval Operations before a wider public there is certainly a need for a shorter work—especially among

the United States' present European allies, who have not perhaps been very quick to appreciate the strategic significance of the Pacific campaigns and battles. So far, therefore, this book should be assured of a warm welcome, even though, in common with all histories written by a team, it is at times rather heavy going and lacks the sense of immediacy and the contemporary atmosphere that Professor Morison so brilliantly conveys to the reader in the best of his volumes.

Unfortunately, however, the editors have adopted an arrangement that makes it almost impossible to grasp the constant interplay of strategic and national interests between the prosecution of the campaign against Germany and that against Japan. Thus the U-boats are finally defeated as early as page 101 ; the surrender of Germany takes place 87 pages later ; and the whole of the rest of the volume is devoted to the rise and fall of Japan. The pervasive influence of the Pacific war on Mediterranean operations, and still more on the plans for the re-entry in western Europe, is almost completely neglected. Indeed one feels that it might have been better had the editors confined themselves entirely to the Pacific battles and combined operations. Those they describe with vigour and breadth of vision, possibly derived from Fleet Admiral Nimitz's personal experience in command of the central Pacific theatre. Particularly interesting and well told is the story of Admiral Halsey's pursuit of the Japanese decoy force with the whole of his fleet during the battle of Leyte Gulf in October 1944—which very nearly led to disaster overtaking the amphibious expedition to the Philippines.

In Britain, on the other hand, the long Atlantic struggle always took first place, and an American view of the reasons for the holocaust wrought by no more than a dozen U-boats off their east coast in 1942 will therefore command particular interest. The editors place the responsibility for the failure to adopt convoy at once squarely on the Eastern Sea Frontier command, and represent Admiral E. J. King, the Chief of Naval Operations, as an early and firm advocate of the convoy strategy. They quote him as saying that "escort is not just one way of handling the submarine menace, it is the only way"—without giving the date. However the letters that passed between Admiral King and Admiral Pound, the First Sea Lord, show beyond doubt that it was not until March 1942 that the former came to accept British experience ; and by that time a heavy price had been exacted.

One may not agree with the editors' view of the relative importance of the various campaigns ; but the book provides the clearest short account of the means whereby Japanese aggression was first checked, then repelled, and finally defeated.

Trial and Error

Canadian National Railways. Volume I: *Sixty Years of Trial and Error (1836-1896)*

By G. R. Stevens.

Clarke, Irwin, Toronto (1960). 532 pages. $8.00.

ANYONE interested in railways, in the relations of governments with business enterprise, or in Canada's history will find the story of the Canadian National Railways worth attention. This first volume carries that story from the first beginnings of railroading in Canada down to 1896. Written on the basis of extensive research and free access to the CNR archives, it gives a lively account of the origins of the many and various properties that were the early precursors of today's great publicly owned railroad. Technical trial and error, inevitable everywhere in the early days of railroading, was complicated in Canada by the importation of ideas into an environment where special climatic, geopolitical and traffic conditions upset calculations based on British experience. To the battle of the gauges was added the more formidable battle of British North American lines with American routes, their rivals for the traffic of the vast hinterland of North America.

Not that the earliest railways were main, through lines ; they were short portage railways, links in the great water routes to the interior, built to circumvent obstructions to navigation. Other railways developed as feeders to the waterways. Gradually more ambitious projects were realised, notably the Intercolonial Railway connecting the Maritime Provinces with the St. Lawrence valley, and the Great Western and the Grand Trunk, competitors for access to the west.

Calculations about traffic probabilities and the location of lines were complicated by question of strategy relating to the American border, by local ambitions and the claims of far away bondholders. Many lines were built, not to serve established communities, but on the basis of forecasts—or dreams—of what opening up new lands or new forests and mineral resources would mean. Governments and politicians at every level became involved both in granting charters and in providing assistance to support railroad ventures. Again and again cost estimates turned out to be far too low and traffic estimates far too high. Technical hitches and financial disaster were common. Contractors, promoters and politicians were frequently more intent on making money than on making railroads, while, despite wildly optimistic contributions made by many villages, municipalities and provinces, capital was perennially lacking.

This chequered history is enlivened by diverting illustrations, but the ten sectional maps leave the reader wishing for a general map laying out the whole geographic strategy of co-operation and rivalry in the struggle for the traffic of the continental hinterland.

Compare and Contrast

America in Britain's Place

By Lionel Gelber.

Allen & Unwin. 366 pages. 35s.

A CANADIAN and former Rhodes scholar of Oxford, the author is well equipped to assess the comparisons and contrasts between British leadership of a former world order and American leadership of this. His prewar study, "The Rise of Anglo-American Friendship," was a sound job, and his new book is better still: timely, objective, hard-hitting, original. His assessments of trends in America's domestic politics affecting its foreign policy since the war are excellent ; so are those of the changing Commonwealth's strains and stresses, of resurgent continental Western Europe, and of the tension imposed by the Suez affair, the advancing technology of defence-offence, and relationships inside the United Nations.

Mr Gelber prefers the British Parliamentary system of government and its attendant mechanics of policy-making to the Americans' versions, but wisely bids Europeans expect from the United States realistically the things the American political system must inevitably produce, and warns them not to be misled by desiderata based on European, British Commonwealth or other values. In a final chapter "Sources of Strength" he shows his lively levelheadedness at its best. This Canadian plea for Anglo-American unity merits serious study ; but the American printing and make-up of the book do not render that so easy as the author's work justifies.

LETTERS

Unemployed Machines

SIR—Society having solved the problems arising from the unemployment of men, the time has now come to tackle the problem of the unemployment of machines. In modern industry the cost of depreciation is playing an increasing role ; in some cases it exceeds the cost of labour, particularly if the cost of interest is added. It is extremely difficult, if not impossible, to make good the losses arising from idle time which has lasted for more than a very brief period, since output cannot be raised above rated capacity except for relatively short spurts. Losses through idle time can, therefore, not be made good by increased output later on.

The government's "Build and Stop" programme has brought idleness to a good deal of equipment on which big sums of capital have been spent. Industry is expected to bear these losses as a matter of course. I wonder whether, after the experiences of the last five years, industrialists will rush in to buy new equipment simply because the Chancellor has once again expressed his confidence in growth. Even a five-year programme to be produced by the NEDC may not have all the effect which people anticipate. The five-year period is bound to overlap the lives of parliament and a new government could not be expected to accept programmes established by its predecessor. If it did, this would be a complete novelty in British constitutional history.

I do not suggest that society pay for mal-investments, but I do think that some method should be worked out which would compensate industry for the unforeseeable changes in government policy. Many devices suggest themselves, such as special crisis depreciation allowances, repayment of taxes paid in previous years, a longer carry forward of losses, etc. I believe that the problem also needs urgent consideration because our joining the common market will have far-reaching effects upon a number of industries, the creation of which the government have either promoted for purely autarkic reasons or forced to move to "distressed areas" with uneconomic transport facilities. The recent new railway policy is already throwing up a number of these problems.

The United States is facing similar problems and President Kennedy has already made some positive suggestions as to how to deal with industries which will be unable to adjust themselves to the new free trade policy if it should come into force.—Yours faithfully,

GEORG TUGENDHAT

Greensted-juxta-Ongar, Essex

Algerian Quicksand

SIR—On page 1237 of *The Economist* of March 31st a reviewer writes: "By 1958 Frenchmen were no longer surprised—or greatly concerned—to learn that certain of their elite units crucified prisoners after amputating their hands and feet." I believe this to be quite untrue. Frenchmen could not have the reaction described because most of the French press had reported little or nothing of the methods that were spreading or had already spread through the army. Most Frenchmen were still refusing credence to reports of much simpler and more probable horrors. The particular fancy atrocity mentioned by your reviewer would be so laborious and befouling to carry out, that its occurrence, if it did occur, must have been very rare.

The real story is quite bad enough, consisting as it mainly does of: (1) shooting prisoners ; (2) knocking them about out of anger or sadism ; (3) systematically torturing them to get information ; (4) destruction of villages. It is obviously much easier to make a torturer of the average west European, including ourselves, than we thought. How to oppose it ? Not surely by misstating the real condition of opinion. Not only was there deplorable self-censorship of newspapers at the time mentioned under the government of M. Guy Mollet and his successors, but a great unwillingness to believe what information did get through. To this must be added that the conscript, once he got to Algeria, was faced with a rebellion in which no holds were barred. Not to mention this contributory fact when discussing acts of the French army seems to me intellectually dishonest. The ruthless and indiscriminate use of terrorism by the rebels has no doubt extenuating circumstances, and will be entirely approved by some revolutionary doctrinaires. But the facilities which it offers to would-be torturers on the other side for getting opinion where they want it, especially amongst the troops, is a factor that revolutionary realists should take into account.—Yours faithfully,

Paris 7e D. R. GILLIE

Now, Freedom

SIR—The article in your issue of January 20th contained a few errors about my country of Mauretania. First, Mauretania is not among the "black brothers." More than 80 per cent of the people are Arabs and the national language is Arabic.

Secondly we do not only "depend on an iron mine and a railway." Like other underdeveloped countries we have a large agricultural sector with fishing, dates, millet, sheep, cattle and camels. Our 800,000 people have 5 million sheep, 900,000 cattle and 400,000 camels.

Mauretania will in a few years at last be an industrial country. There is an iron mine in hand at Fort Gouraud and an equally rich copper mine at Akjoujt which has been given up by a French company. So you will see that Mauretania is not "saved from comparative poverty by its iron ore."—Yours faithfully,

AHMEDOU ABDALLAH

Grenoble, France

Smoking and Health

SIR—Perhaps those concerned to warn the public against the dangers of smoking and those concerned to guard free speech can be reconciled by taking seriously the quip at the end of Mr W. B. Reddaway's letter of March 17th. He suggested a type of advertisement—"suitably defined"—saying: "The physicians are convinced that smoking is dangerous, but if you want to run the risk, smoke Whiffers."

A suitable requirement could be that all cigarette packaging and advertising must carry a statement to the effect that "These cigarettes contain x mg. nicotine, and other substances which when smoked are noxious." (Nicotine content is, we understand, unambiguously measurable, and nicotine is known to be poisonous. In the light of research, the "other substances" might also be named, and their quantities stated.) Such a statement, in itself admittedly inadequate, should be supplemented by campaign of public education.

This proposal, while placing no restrictions, other than those of honesty, on the advertisers' freedom of speech, would induce the cigarette manufacturers themselves to provide that honest representation of their product which is always the basis of intelligent consumers' choice.—Yours faithfully,

A. R. JOLLY

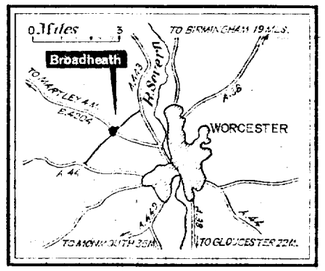
New Haven, Conn. E. C. DOMMEN

American Banks

SIR—In your issue of February 24th (page 708) with reference to Judge Clary's decision in the Philadelphia National Bank-Girard Trust Corn Exchange Bank case, your correspondent reports as follows:

> Most important of all was his ruling that, even if it [the government] had succeeded in proving that the merger did violate Section 7 of the Clayton Act, this section did not apply to bank mergers.

I do not believe that this is entirely correct. Judge Clary held that the 1950 amendment to Section 7 can apply only if the bank merger is consummated through a stock acquisition as opposed to an asset acquisition, and that the proposed merger between the two banks was of the latter category.



The significance of this, of course, is that if Judge Clary's ruling is upheld banks desiring to merge can choose the asset route and thereby avoid the proscription of Section 7—Yours faithfully,

Philadelphia, 2 JOHN W. FAWCETT, III

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

The Broadheath Story

The villages of southern England—if they are anywhere within commuting distance of a conurbation or expanding town—face their greatest invasion ever with the push of population out of the city centres. The steady drift of employment from the declining industrial areas of the north and west, which is likely to be powerfully reinforced when Britain joins the common market, suggests that this invasion is only beginning. The planning problems involved have to be settled in a welter of conflicting interests and resistances. How one village is tackling its future is now examined.

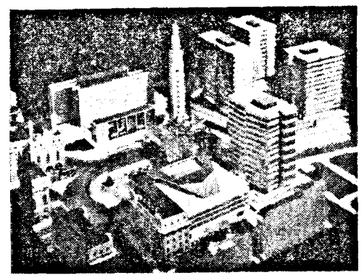
FROM OUR SPECIAL CORRESPONDENT

As far as it can be defined at all, the centre of the hamlet made untidily up of Upper and Lower Broadheath is the entrance to a farmyard on B4204, the road from Worcester, two miles away, to Martley, seat of the Rural District Council for the area. Such development as there has been since Sir Edward Elgar was born there is in strips of stylistically varied but uniformly unsightly detached houses in which 650 people pursue a vestigial community life, dominated by their need to get to and from Worcester each day across the teeming Severn bridge. Most of them are against any change that might reduce their share of the good views that compensate for the undeniable ugliness of their immediate environment. But changed it is to be, if the ambitions of the village's main landowners are allowed to come to fruition despite the combined weight of their tenants, the parish council and the official preservers of the countryside.

Inured to the look of Broadheath on the ground, the scheme's main mover, Mr James Campbell, was appalled by its look from the air while flying over his own farm in the village last year: he could hardly wait to get back on to the ground to set in train the comprehensive planning proposals which, after eight months of work, were finally published in February this year. The planners' intention is to end the present incoherent development (50 houses are at present waiting to be built between the existing spots of development) and to remake Broadheath into a self-contained and, as nearly as possible, self-supporting village of 3,000 to 5,000 people within the boundaries of the present built-up area, without encroaching on the green belt by which the villagers—and the county council—set such store.

To achieve this, they have planned an overall population density of 23 to the acre, made up of very high densities—up to 80—in high flats at either end of the village with more scattered housing in between, including 13 acres of open space around the fine church which should be, and would again be, the village's natural centre. Houses would be of several types, ranging from virtual mini-houses (a bedroom and a bed-sitter) to three-storey maisonettes; there would be a new primary school to replace the present "sub-standard" one—and it would have six acres of the open space which the present one lacks entirely. Fourteen acres, on the site of the allotment gardens at present worked by the parish council's tenants, would be set aside for industry of an unobjectionable type—perhaps the glovemaking for which the village was once renowned, perhaps something less centred in the past, such as plastics or furniture.

To implement all this, and to recast the village nearer to the ideal of safety in an age of fast through traffic by adopting the Radburn ideas of vehicle-pedestrian segregation, is going to cost some £4-£5 million—which is not going to be given away free by the merchant bankers who have so far displayed enthusiasm for the investment. It is on this point as much as on the misinterpretation by the villagers of the technical planning term "immigrant population" (most of them thought immediately of West Indians) that the fierce opposition of locals has been nurtured. They expect an increase in rates (there should, if all goes well, be a reduction), an influx of hooligans from Birmingham (though rowdies are the last people to think of taking up life in a rural overspill area) and a destruction of their own, snug daily round.



The local press has been burdened with letters-to-editors couched in less than moderate terms and, all too invariably, appeals to reason and common sense have been drowned by hysterical cries of "Profiteer!" and "Keep Broadheath quiet!" At a meeting of parishioners, only 21 people could be found to challenge the 117 who wanted no change in their dormitory; and a petition passed around the village by the specially formed Broadheath Preservation Society attracted over 500 signatures from the district's 613 electors.

Unprompted by this outburst of righteous conservatism, the Martley Rural District Council has thrown up its hands in despair at being faced with anything quite as radical as Mr Campbell's scheme undoubtedly is, and has sent the planning application on to the Minister of Housing, whose silence on the matter, in spite of noisy advice from both sides and the staunchly irrelevant opposition of Mr Gerald Nabarro, MP for the constituency, is impressive. But it is known that many of the Martley councillors (whose rate account would benefit marvellously) support the scheme; press opinion has been without exception favourable; and the minister cannot fail to take note of something which will help, if only in a small way, to fit into Worcestershire some of the 100,000 people from Birmingham whom he would like to see out of the conurbation.

For people who do not have to live in Broadheath the issues are fairly clear: on the one hand there is a comprehensive plan to house 4,000 people in aesthetically satisfying surroundings, to supply them with roads and services and a sense of community (and to give many of them jobs in that community), and to rehabilitate some idea of village life. On the other there is the growing litter left by refugees from the welfare state and by the state itself, a fortuitous collection of houses whose breadwinners are hardly ever at home, and the prospect of just the sort of speculative building that every sensible person ought to resist. Admittedly, somebody (not the villagers) expects to make a great deal of money out of Broadheath's 196 acres; but if they do not, and present planning policy has its way, the village will eventually have its change in any case—and that may very well mean higgledy-piggledy Surbiton-dreadful development housing only 900 people, most of whom will add to the rush hours on the Severn bridge, if not to the life of the village, and for whom roads, drainage, schools and services will have to be provided at the village's rather than the developers' cost.

People Love Eros

FROM OUR SPECIAL CORRESPONDENT

Not the least of the problems that accompany the disappearance of the British Empire is what to do with its hub. Since the destruction in the 1920s of Nash's Regent Street, Piccadilly Circus has had no pretentions to beauty: but nobody can decry the contribution to London life of its cheerful vulgarity. Between the pomp of St James's and the cosy squalor of Soho, the circus has succeeded in remaining an everyman's land. On Cup Final night or New Year's Eve it provides the one really satisfactory place where crowds can beat it up in good humour: it has the clear advantage over Trafalgar Square, its only rival, of being easy to get people out of when joviality seems likely to give way to violence. Even now, when one-way traffic zooms around the statue of Eros, visitors can nip under the noses of buses to lounge in the diesel fumes on the central steps, and the crumbling façades of the north-eastern side are conveniently disguised behind the battery of winking, leering—and even, on occasion, patriotic—electric signs.

But the time is overripe for redevelopment of the circus, and leases are falling in: save for the County Fire Office, Swan and Edgar's and the top of Lower Regent Street, the circus is to be rebuilt. Two years ago the Ministry of Housing put a stop to a first and supremely hideous project whose only merit, social or commercial, was to provide 16,338 square feet of illuminated advertising space. London County Council then called in its faithful arch-planner, Sir William Holford, to arrange a decent compromise between the interests of the developers, the Royal Fine Art Commission, the traffic people and all the rest. The key seems to have been found when the Minister of Transport brought in the one-way traffic scheme for Piccadilly, which cut out most of the flow of vehicles along the south side of the circus.

Sir William's job must have been more that of a diplomat than of a designer: but he has made a pretty good shot at what should be done. The buildings in his new drawings and models need not be taken too much to heart, in so far as they show a transformation from cheerful vulgarity to vulgar cheerlessness: the details of their shapes will obviously depend mainly on the architects hired by the actual developers, and on the extent to which the developers are prepared to accept something a bit better than the rough Holford outlines. But the grand design, confining traffic to the north side of the open space, is to be welcomed.

If the Holford scheme is ever completed, pedestrians passing through the circus on business will mostly be kept below ground: the large London Transport underground concourse that is already one of the best things about the circus will be vastly extended—and Sir William interestingly proposes that it should be supplemented with something like an Italian *albergo diurno* where people could wash, change, have a haircut or even a lie-down.

Above street level a bridge would link the new London Pavilion with the Monico site on the north and the Criterion site to the south. This would leave the ground-level piazza, fenced off from the traffic and with Eros as its focal point, as a pedestrian area almost an acre in extent. This is something that is badly needed at the heart of London: Sir William romantically suggests that it might be decorated with azaleas (like the Spanish Steps), and that in winter its centre (like Rockefeller Plaza) could be turned into a skating rink.

The scheme provides for offices, with shops below, on the Monico site; Sir William seems to place some confidence in the owners' appointed architects, and if (as has been reported) Dr Gropius has been advising City Centre Properties on this project, London may yet be the richer by a remarkable building. The Trocadero, Criterion and London Pavilion sites, it is suggested, could eventually provide not only shops, offices, flats, cinema, car parks, hotel, conference halls, and restaurants for all purses, but also retain the admirable little Criterion theatre auditorium and an art exhibition room. It will be a formidable problem to squeeze a sufficient payload of building into this area without overwhelming the whole design.

Those who had feared that the institutional approach to all this would only culminate in a humdrum puritan compromise will be relieved to see that the Holford project allows for rather more illuminated advertisements than there are now in the circus: if ever there was a case for brashness it is here. The proposed "vertical feature" intended to relieve the general horizontality of the design would only escape gentility if the advertisements it bears were bright enough; and the only touch of the twee that creeps in is the notion of putting on top of it, 180 feet above the piazza, an object recalling the ruff or "piccadil" that gave Piccadilly its name. But the tailors thus commemorated were the first speculative developers of this part of London, in the seventeenth century. It is not inappropriate that there should be some memorial to unbridled commercialism.

Productivity First?

FROM A CORRESPONDENT IN BELFAST

There is no productivity council in Northern Ireland—as Labour MPs never fail to reiterate when the economic troubles of the province are debated at Westminster. Mr George Brown made another song and dance about it a fortnight ago, and it is a sore spot in Belfast. The chief difficulty has been that the Unionist government does not recognise the Northern Ireland committee of the Irish Congress of Trade Unions, since the headquarters of the congress happens to be in Dublin. But now Mr Brown may be satisfied: all the signs are that Ulster will have its productivity council set up in time for the opening of National Productivity Year in September.

When the Ulster Labour Party raised the issue at Stormont last week the Minister of Commerce, Mr J. L. O. Andrews, declared stoutly that the government was fully in favour of a productivity council, and would give financial help, provided the initiative for it came from industry. This promise marked an appreciable change in the official attitude since 1958. The British Productivity Council and the General Council of the TUC sent a delegation to Belfast in September, 1958, to set up a local productivity council, but Mr Ivan Neill, then Minister of Labour, refused to participate when he saw that the unions insisted on nominating the secretary of the Irish TUC (as the ICTU was then called) as their representative.

This was a bad rebuff, but the unions did not give up. They have held seminars and week-end schools on productivity and related subjects both in Northern Ireland and the Republic. Their campaign may have helped to prompt the Association of Chambers of Commerce in Northern Ireland into trying to overcome some employers' reluctance; the association has asked both sides of industry to form a productivity council that would "be free of politics." One influential convert seems to be the new Minister of Labour, Mr Herbert Kirk. If the government does demonstrate that it puts the council above the political embarrassment of working with the ICTU, it will be a sizeable straw in the wind.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Labour's New Frontier

WASHINGTON, DC

THE more constructive leaders of both business and labour are thinking hard about the whirlwind of technological change that is sweeping through the United States. The hope of the Administration is that they will face it together instead of fighting each other. The Secretary of Labour, Mr Arthur Goldberg, predicted in January that better relations between managements and trade unions would soon be in evidence at the bargaining tables. And now for the first time in eight years the spokesmen of almost half a million steel workers have accepted a settlement without first calling a strike. But it is too early yet to say whether this time other bargainers will follow steel, the traditional bellwether, particularly since this week's blatant reversal by the steel companies of the assumption on which the contract was based—that it would not mean an increase in steel prices.

The test will come in about one hundred and forty separate and complex negotiations that will involve altogether almost two million workers—aircraft makers and airline employees, shipbuilders and transport workers, fabricated metal workers and schoolteachers, ordinary construction workers and builders at missile bases. President Kennedy has already had to take steps to put an end to a shipping strike that has been going on for almost a month and one effect of the steel settlement was a strike by aircraft workers who refused to accept, in lieu of more pay, welfare benefits such as the steel workers have got. Railwaymen seem sure to resist the changes which have been recommended in their work rules—and an attempt to change work rules precipitated the steel strike of 1959, which lasted for 116 days and cost about $6 billion.

A blast from the employers could do equal harm. Recently the president of the United States Chamber of Commerce sounded a belligerent trumpet-note by reviving the idea that trade unions should be liable to prosecution under the anti-trust laws. More brazen is this week's announcement by the United States Steel Corporation, the leading producer, that it is raising its prices immediately by an average of 3.5 per cent, to cover increases in costs since the last rise in 1958, a move which was copied immediately by the other companies. It is no wonder that President Kennedy is bitter and infuriated at what he calls the steel producers' "utter contempt" for all Americans (and for himself) in their pursuit of "private power and profit." He had praised the settlement for showing that the national interest could be protected through responsible and free collective bargaining, without any intervention by the government; this comment looks more than naive now that the industry has double-crossed both the Administration and the union.

In fact, of course, there had been intervention by the government and the summitry involved in the settlement was certainly not confined to Pittsburgh. The President was determined to prevent a repetition of the stoppage of 1959 with the help of Mr Goldberg who is extremely good at persuading people to talk over their differences. It was he who pasted the American Federation of Labour and the Congress of Industrial Organisations into their present somewhat fragile union and he enjoys the advantage, unique for a Secretary of Labour, of having been chief lawyer and chief negotiator for the steel workers' union before he joined the cabinet.

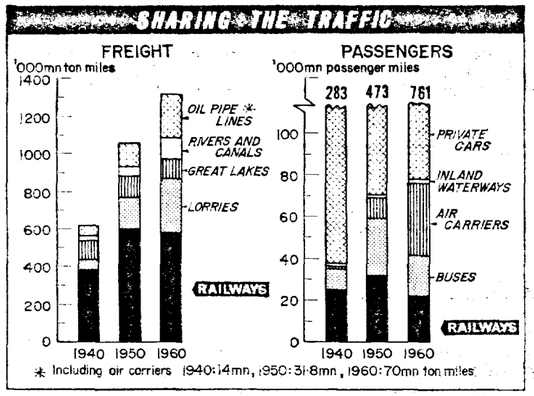
The steel settlement seemed a triumph for Mr Goldberg. It was also a triumph for automation. The Human Relations Committee, which was set up by management and unions after the last steel strike, used two computers to calculate the costs of the complicated fringe benefits that the employers offered and the workers finally accepted. The use of those machines was perhaps grimly symbolical for Mr McDonald, the president of the United Steel Workers; for he was also weighed down with the knowledge that one-third of his union's members were either totally unemployed or working only part-time. In the labour force as a whole, between thirty and forty thousand workers are being displaced by machines in an average week and this might suggest that the trade unions are in a weak bargaining position and therefore unlikely to launch strikes. But unemployment is a two-edged goad, for men already out of jobs may feel that they have nothing to lose if their union decides in favour of a work stoppage. Already there are murmurs that Mr McDonald was over-responsive to official New Frontier flattery, as another Labour leader called Macdonald was once accused of being overfond of having duchesses kiss his hands.

IN an interview published this week Mr Goldberg remarked that traditionally it has always been more difficult to maintain industrial peace in a period of economic recovery than in one of recession. The steel strike in 1959 cracked the back of a recovery and, while present talk is not about booms that flower in the spring, it is hoped that the steel settlement will smooth the way for a continued, even if modest, upturn. The economy is in a queer, mixed phase for profits are said to be higher than at any time since the Korean war and sales of 600,000 motor cars in March seem to promise a year to compare with the fabulous 1955; but there are more than 700,000 persons who have been out of work continuously for more than six months. The President has had to ask Congress to extend for a further year the temporary unemployment compensation provided last year, to cover over a million workers who will run out of benefits in the next twelve months.

And yet the trade unions are richer than they have ever been. They have billions of dollars in reserves and in pension funds. Mr McDonald is paid a salary of $50,000 a year by his steel workers. But, like the economy itself, the unions are sluggish in spite of their affluence. They are losing members, in spite of the growing labour force. They have managed to push up wages but prices have gone up too and the pace at which wages have gained has slackened greatly in the past few years. The unions' best way of holding and increasing their membership may be to offer the workers a prospect of more security in their jobs—which is the main achievement of the latest steel settlement. This in turn probably means following a different path from that of the coal miners' union, which acquired enormous financial strength but at the price of accepting the displacement of half a million of its members. The miners, however, were displaced by machinery over a period of forty years, while today's union leaders face a

situation in which that number of workers may be displaced in less than forty weeks.

The steel workers did not get a rise in pay though they may bargain again about wages around the middle of next year. But they did get more unemployment compensation from the companies, over and above what they get from the state; longer holidays with pay; better pensions and other retirement benefits; and an improved scheme for giving senior men who are laid off priority over newcomers when work is available once again, with moving allowances should their new jobs be in different places. Mr McDonald has said that the steel settlement sets a pattern which other industries might follow; it may also be a pointer to the future of relations between management and labour.



Mr Kennedy's Advisory Committee on Labour-Management Policy, which consists of union leaders as well as company presidents, has declared itself to be in favour of assuring workers of security in their jobs. At the same time it does not want to slow down the technological changes that lead to increased productivity, because it recognises that there is a need for the United States to price itself more competitively in world markets. The United Steel Workers have come out obligingly in support of President Kennedy's proposals for expanding trade through cutting tariffs and have stated that low foreign wages do not necessarily mean an inrush of imports, while Mr Goldberg has denied that high American wages are responsible for pricing the United States out of world markets.

American economists admit that they are losing sleep over the rising peaks of unemployment that are accompanying the present rapid increase in productivity. A difference of opinion about how to deal with this situation might easily cause a sharp divergence between the trade unions and both the employers and the Administration. The unions are unlikely to accept philosophically the co-existence of a gross national product of $570 billion, which is the somewhat optimistic target for this year, and unemployment still at a rate of between 4½ and 5 per cent of the labour force, compared with the present 5½ per cent. Nevertheless, very commendably and characteristically, the American unions accept that the present headlong pace of technological change should continue. What they ask is that employers should accept responsibility for the workers whom the new machines displace. This will not mean an end to strikes and lockouts, or at least not yet. But it can mean that the Human Relations Committee, which the steel industry created and which prepared the ground for this year's steel settlement, will become an important landmark for American labour on the New Frontier.

Just the Ticket?

MEDICINE for the ailing giants of transport is bound to be a complicated and politically explosive brew; it is no wonder that the President's message on transport did not reach Congress until last week—probably too late for action at this session. The spokesmen for water and road transport interests are already up in arms. The railways are, indeed, the main beneficiaries of the President's plan because many of them are near to bankruptcy and because they are shackled by a patchwork of obsolete regulations devised when they enjoyed a monopoly. Their falling share of freight and passenger traffic tells its own tale.

Mr Kennedy's general prescription for cheaper and better transport is less government interference, whether in the form of regulation or subsidies, and more competition. His most controversial proposal is that the railways should be given the freedom they seek to cut charges on nearly three-quarters of their freight: the bulk commodities—wheat, oil, coal and so on—which the waterways may now carry as cheaply as they like and the agricultural

and fishery products for which motor carriers enjoy a similar dispensation. The President proposes that these exemptions should be extended to all forms of transport; this would help the railways to regain some of the traffic which all common carriers have lost to unregulated, privately-owned transport. The abolition of the 10 per cent wartime tax on passenger tickets would also help the trains, buses and airlines to win back travellers who now go by private car. Equality among various forms of transport would be further served by making the airlines and waterways pay part of the cost of the facilities provided for them by the federal government and by abolishing, as soon as possible, all direct subsidies to helicopter services and small airlines. But to unravel the snarl of transport in cities and their suburbs the President considers that subsidies are in order, at least over the short term. He has asked Congress for $500 million to be spent in the next three years to help urban communities to acquire local systems of transport.

There is nothing spectacularly new in any of this. Mr Kennedy has not asked for a Department of Transport, although the Department of Commerce is becoming something rather like one. He has not asked for the railways to be given the right, which they want, to enter new fields of transport and he only hinted that the government would look more favourably upon railway mergers—though plainly he favours the technological improvements and consolidations which the railway trade unions are seeking to postpone. Policy on international air transport and toward the swollen shipping subsidies is still being reviewed. But there is a good deal to be said for the President's view that before further painful, but necessary, steps are proposed much more research is needed into the requirements of a cheap and efficient system of transport; particularly, there is need for a census of transport.

General Walker Fades Away

LAST week, in the very Senate Caucus Room where, a decade ago, Senator McCarthy signed his own political death-warrant by bludgeoning the Army's witnesses, former General Walker accused Mr Rusk, the Secretary of State, and Mr Walt Rostow, a distinguished member of his staff, of being concerned in an "apparatus" dedicated to "selling-out" America to the communists. But Mr Walker, unlike Senator McCarthy, made nobody's blood run cold; the embarrassment and pity were all for a brave soldier too inarticulate and incoherent to express, without prompting, his own fantastic suspicions and grudges. It is easy to see why his campaign for Governor of Texas is going badly.

Mr Walker resigned from the Army after being reprimanded and

NEW YORK by Queen
in a glorious long weekend!

You go aboard one of the great 'Queens' on a Thursday and are in New York on the following Tuesday. In between you have four carefree, invigorating days...tempted by magnificent menus...royally entertained...splendidly served. Whether you are business or pleasure bound, there is no better start or finish to your visit than this brief but bracing holiday at sea. It costs so little of the working week and pays such splendid dividends in rest and relaxation.

Long John

THE SCOTCH THEY DRINK IN SCOTLAND

Two exclusive presentations

The unique Long John range of SIX bottle sizes includes two exclusive presentations—the TREGNUM, three bottles in one, and the DOUBLE-DOUBLE, a convenient new pocket flask.

DISTILLED, MATURED, BLENDED AND BOTTLED IN SCOTLAND

Long John

relieved of his command for trying to impose extreme right-wing views on his men during the election of 1960; the present hearings, which have been straggling on since January, were arranged by Senator Thurmond, a right-wing Democrat, to air charges that the services' programmes for indoctrinating the troops are insufficiently anti-communist and that military men are being prevented from speaking out against communism. After last week's fiasco the hearings are likely to come to a quick and quiet end with no change in the policy of discouraging military men from meddling in foreign affairs and from taking part in extreme right-wing seminars on communism. But the Administration and the country are lucky that Mr Walker proved to be no McCarthy or MacArthur.

Next week the Army fights in another quarter—one in which even President Eisenhower was defeated. It has unveiled a modest plan to eliminate four divisions of the National Guard and four of the Army Reserve, with a view to increasing the efficiency and preparedness of the reserve forces. This new move in an old campaign to cut down the cost and improve the training of the reserves was inspired by the sluggish response when about 155,000 reservists were recalled last summer and autumn at the height of the crisis over Berlin. The operation was made more unsatisfactory by the feeling of many reservists that the system is highly unfair and the President must have been delighted to announce this week that, barring a new crisis, all these men will be released in August. But any step to reform the reserves—particularly the National Guard—treads on sensitive state corns; Congress has always refused to acquiesce in any cut. The National Guard is a sort of peacetime volunteer Army, useful for state ceremonial occasions and for local emergencies and under joint federal-state control; it brings a great deal of federal money into local communities and provides lush patronage for state political machines. Already the Governors and congressional representatives of the 21 affected states (some divisions are shared by more than one) are arming to repel the attack when hearings open in committee next Monday.

Poor Richard

ALTHOUGH there is little likelihood that Mr Richard Nixon will lose his current campaign, to be decided on June 5th, for the Republican nomination as candidate for the Governorship of California, everything he does at the moment seems to lessen his prospect of winning that Governorship in November from the Democratic incumbent, Mr Brown. A defeat then would also defeat Mr Nixon's hopes of a second try for the Presidency in 1968, when he would have someone other than Mr John Kennedy for his opponent. How much these hopes mean to Mr Nixon has been made clear by the publication of his book, describing "Six Crises" in his life, timed to underline his experience of the national and international scene for the benefit of Californian voters.

Unfortunately it also underlines for them, and everyone else, his introspective, tense approach to politics. In addition the book contains what appear to be two errors of fact; one relates to Mr Kennedy's knowledge of the preparations for the Cuban invasion and the other to the Hiss case, in which Mr Nixon first achieved nation-wide fame. As if all this was not damaging enough, Mr Nixon then suggested that Mr Kennedy was a "carpet-bagger"—a condemnation applied to Northerners who went into the South to profiteer after the Civil War—when the President was in California on an official and supposedly non-political visit.

Thus Mr Nixon not only offended Democrats whose votes he needs next November—Republicans are in a substantial minority in California—but also drew attention to the political implications of the President's visit. This did no harm at all to Governor Brown who, appearing everywhere with Mr Kennedy, reflected some of his glamour—a quality which Mr Brown himself lacks. But he does seem to have recovered from the attack of ineptness which got him into so much trouble in 1960 and 1961. Moreover, the Democratic organisation in the state is now united behind him—as the Republicans are not behind Mr Nixon. Mr Brown still lags below Mr Nixon in the local public opinion polls, but he has almost caught up. If he keeps his campaign to state issues, where his record is constructive and where Mr Nixon has no experience, and if there are no unexpected developments in what is certain to be a closely-fought contest, then Governor Brown's chances of giving Mr Nixon his first beating in his home state are good. Mr Kennedy will certainly be back to help again, for not only will Mr Nixon in effect be running against the President, but also there are 8 new congressional seats, as well as 30 existing ones and a place in the Senate, at stake in California next November.

Birds of Passage

FROM A SPECIAL CORRESPONDENT

As every gamekeeper knows, to clip a bird's wings you must first catch it. And that is the difficult part, as the Civil Aeronautics Board has discovered. For several years the board has been trying to catch a number of foreign airlines which it believes have been systematically robbing the nests of American carriers, notably Trans World Airlines and Pan American Airways. But every effort of the board to bag the offenders failed. Finally, last autumn, the CAB devised a scheme to net all the foreign airlines at once; it announced an "Investigation into the Terms, Conditions, and Limitations of Foreign Air Carrier Permits." Every foreign airline which served the United States was made a respondent; each was asked to submit comments and testimony on a proposed change in the CAB's rules which would enable it to limit the part played by foreign airlines in the American travel market.

Most of the foreign airlines either ignored the board's proceeding entirely, or sent frosty notes saying that the CAB's investigation seemed highly irregular, particularly since the rights of foreign air carriers to serve the United States were granted in most cases under long-standing diplomatic agreements. Of the airlines which did respond four—SAS, KLM, Sabena and BOAC—promptly flew to the federal courts to challenge the board's right to lay hands on them. But the court test, which is still undecided, did not stop the CAB from going ahead with public hearings.

At these testimony favouring the board's proposal to regulate the frequency and capacity of foreign airlines' services was presented by Pan American and TWA, as well as by the CAB's own Bureau of International Affairs. Expert witnesses gave evidence that foreign governments controlled the frequency and capacity of services flown by American airlines. They named six offenders: Argentina, Venezuela, Chile, New Zealand, Korea and the Philippines. Argentina, said the CAB, "has consistently disapproved US carriers' proposed schedules to which it objected either because of frequency, capacity or type of equipment." The Argentine equiva-

lent of the CAB is so strict that on one occasion an American airline was refused permission to reduce its services on the grounds that the existing service was in the public interest. At present no comparable restrictions are placed on any foreign carrier by the United States.

The CAB made only a part of the case which it might have presented. No mention was made, for example, of the British refusal to permit Northwest Orient Airlines to serve Hong Kong, although the bilateral agreement between the United States and Great Britain provides for this. As a result BOAC's lawyers were not challenged when they said that American flag carriers are not discriminated against by any British aviation authority.

If the board had confined itself to the issue of discrimination no foreign carrier could have parried its arguments effectively. But for reasons best known to itself it decided to put into the case two other vexing international matters. One was the refusal of most foreign airlines to supply the board with statistics on the origin and destination of passengers. The foreign carriers, supported by their governments, have refused in the past to supply this data on the ground that the information would reveal a great deal about traffic other than that directly to or from the United States. Under the board's proposed change in the rules the foreign carriers would have to supply this data or risk losing their operating rights in the United States.

A second, even more questionable, issue involved an interpretation by the board of America's bilateral agreements on air services. The issue is whether small airlines, such as SAS, have the right to carry large numbers of passengers from the United States to European cities such as Paris and Rome by way of Scandinavia. The board's view is that SAS should confine itself mainly to traffic between Scandinavia and the United States and KLM to carrying people between the United States and Holland and so on. The proposed new rules would enable the CAB to reduce a foreign airline's service to the level which the board considered proper.

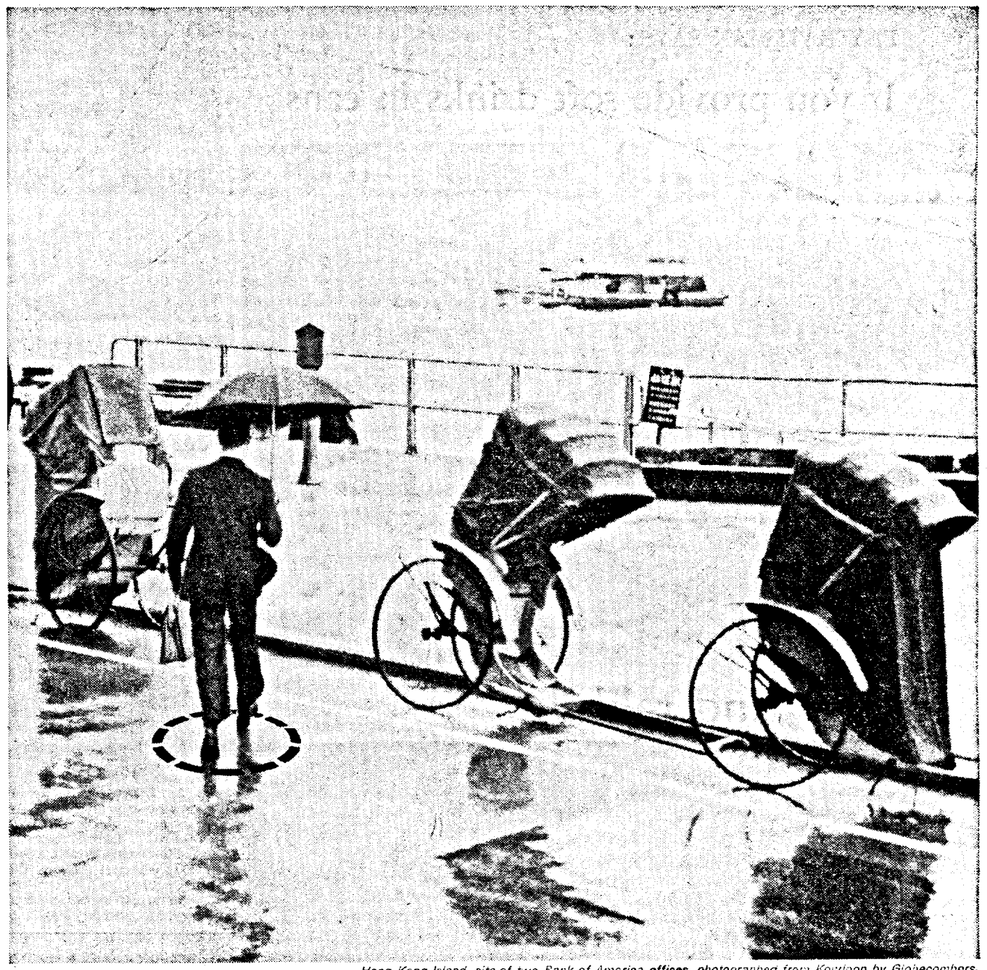
These two contentions, along with an effort to show that Pan American and TWA were being hit hard by unfair foreign competition, were strongly disputed by all the foreign lines which took part in the investigation. If the CAB wants to match foreign governments on a basis of restriction for restriction, there is no question but that it can do so. But if it wants to impose unilateral interpretations or bilateral agreements on the foreign flag carriers, this is likely to lead to a rapid proliferation of the very abuses to which the CAB objects so strongly. Yet unless it is prevented by an adverse ruling from the courts, the board will probably put the new rules into effect by the end of this year.

Teachers Learn to Strike

By the narrowest of margins—2,544 to 2,231—New York City's teachers defied their union president on Tuesday night and voted for an illegal strike for more money. On Wednesday, although the majority of schools were open, there were teachers on the picket lines outside and children running wild inside some of them. This is the second strike by teachers in the city's history (there was a one-day walk-out in November, 1960) and the largest school-system in the country is involved. The United Federation of Teachers, which recently won the right to represent the city's 40,000 teachers in wage negotiations, is affiliated to the main trade union movement. But in spite of its name, the union is far from united on the issue of a strike. Moreover, only about 15,000 of the teachers belong to the union: many of the rest are affiliated with organisations, such as the National Education Association, which regards a strike as below the dignity of the teaching profession and a betrayal of its responsibility to the children. About half of the teachers stayed on the job.

The negotiations are crucial for the UFT, which is a small organisation (80,000 members) compared with its giant rival, the NEA, which has nearly 800,000 members in the whole United States. Victory in New York—the only major city where the UFT has won bargaining rights—would stimulate the recruiting of new members all over the country by showing that trade union methods work. The UFT has a good case; teachers in New York are paid less than many in nearby communities which compete with the city for staff and they work under what are often harrowing conditions. The union is asking for $53 million in increases, compared with $27 million offered by the Board of Education. The negotiations are also of great interest and importance to the American Federation of Labour and Congress of Industrial Organisations, which is extremely anxious to establish itself in the growing white-collar and professional occupations now that the number of industrial workers is declining. It has sent both organisers and money to New York.

The challenge poses awkward problems for Mr Wagner, the Mayor. The schools account for the largest item in his city budget, $650 million in this fiscal year, of which the state is providing $196 million. For a politician there is an even more painful question. The Board of Education, which has secured a court order against the picketing, declares that the strikers have forfeited their jobs under the Condon-Wadlin Act, which provides that a government employee who strikes is punishable by instant dismissal and, if rehired, may receive no salary increase for three years. But such penalties, if carried out, would disrupt the schools and alienate the Mayor's labour supporters. There is a further complication in a confusing dispute over the state's financial contribution; no doubt Mr Wagner, a Democrat, hopes to shift some of the blame to Governor Rockefeller's Republican shoulders.



Anti-Nuclear Fission

FROM A CORRESPONDENT IN NEW YORK

As yet there is nothing like Britain's Committee of 100 in the United States. So far the American peace movement has been a tame affair, consisting of a number of marches, a few big rallies and some sparse sit-downs, all organised according to the *New York Daily News*, by "Red Hitler's little helpers." But interest in peace groups is growing and there are hundreds of them.

The National Committee for a Sane Nuclear Policy is by far the best-known and probably the largest. It believes in multilateral disarmament and in traditional forms of protest. It bombards members of Congress and newspaper editors with letters and organises educational campaigns to arouse the country to the dangers of nuclear bombs. It claims to have its greatest following among the intellectuals—the people who, their critics say, like to hear themselves talk.

There is now, however, considerable disenchantment with SANE's high-flying approach, even in the multilateral camp. Recently a rather unorganised but large—10,000 or so—group of young mothers have begun their own protest, the Women's Strike for Peace; this has staged demonstrations in Washington and in Albany, New York, and thirty-five women, including Mrs Martin Luther King, have been in Geneva talking to delegates to the disarmament conference. It is all very well for a politician to sneer at students and beatniks but quite another thing for him to laugh at a young mother. But the latest tendency, particularly among young people, is towards more radical forms of protest, usually involving some form of non-violent civil disobedience and advocating total unilateral disarmament. A good unilateralist believes that the Russians will come pouring across national boundaries when the United States disarms but that a stiff dose of sitting down will send them hurrying home, an idea which is too much for most Americans.

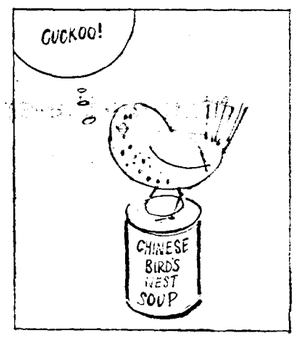
FAY BATEMAN SAYS:

If you provide soft drinks in cans

and rabbits

and still more cans



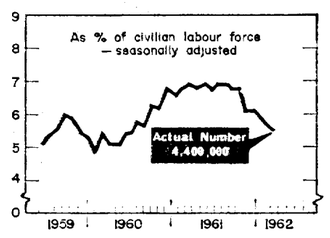
why then you'll have a proper party — one the children won't forget. The rabbits may be old-fashioned, but fizzy drinks in cans are novel enough. Three years ago they were a gleam in a designer's eye. Now they're everywhere, to the delight of children and the relief of mothers and shopkeepers —who don't have to bother any more about disposing of the empties.

WHERE NEXT? At parties. Draught beer used to involve buying a small barrel. But now you can buy seven pints of draught in a single can. It's easier to pour, easier still to drink, being (like all beer in cans) in tip-top condition. So that now for the draught beer drinker too, this is the day and age of the can.

WHAT NEXT? Very reassuring on the home front, and invaluable in offices, is a new aerosol (appropriately named 'Mouthpeace') which will clean and disinfect a telephone receiver at the touch of its elegant button. Another boon to office workers is the new 'Cleantype' aerosol, which sprays the insides of typewriters and makes cleaning quick and easy.

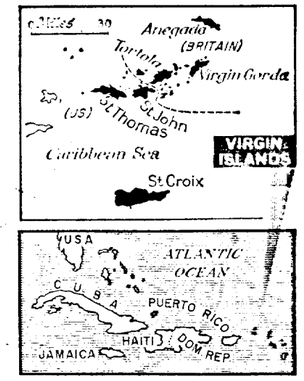
THINKPIECE: Poor misguided bird, more of a cuckoo than even she suspects. But for all traditionalists these days (and the cuckoo is a very traditional bird) life can be very surprising. More and more things are packed in cans, from canelloni to window cleanser, bird's nest soup to artificial snow, and every visit to the shops is packed with new surprises.

However the radical members of the peace movement talk about doing their job so well that even the New York police will sit down with them, although anyone who has ever seen a New York cop will doubt that. The other day one of them snarled in court:



"I hope all those guys get the death sentence." But just the same the police are helping these left-wingers to get better treatment from the press. A few weeks ago six thousand people protested in Times Square ; a handful sat down in violation of the rules for the demonstration and the police waded in with, it is alleged, their night sticks swinging. One man who was standing on the sidelines was clubbed and went to hospital with a punctured lung. This was front page news and two days later, when 32 people sat down in front of the Atomic Energy Commission's New York office, this again was reported widely.

The radical section of the peace movement is a fractured affair, prone to intramural squabbles over ideology and methodology. It is dominated by pacifists, by a few anarchists and by some Democratic socialists ; they argue interminably about such questions as how organised an organisation should be and about whether to sit in, sit down, stand up, walk in, row in, sail in or climb on. The group lacks a spokesman of Lord Russell's stature and he has refused to be lured into taking part in demonstrations on the American side of the Atlantic. Intellectuals and artists who have long espoused the cause of the radical left contribute money but refuse to allow their names to be used or to take part in a sit-down.

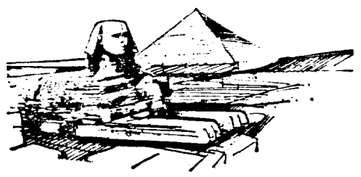


Nevertheless the Committee for Non-violent Action, the nearest thing to the Committee of 100 and the sponsor of last year's march from San Francisco to Moscow, creates a big noise in a small way. Its members are tough nuts and they include not only the scruffy-looking types but a striking professional model and her well-to-do husband who went to Princeton. Members have sailed into the atomic testing areas on the Pacific Ocean and threaten to do so again this spring ; they do not hesitate to engage in other forms of civil disobedience and to go to prison for it. This month the Committee is sponsoring three peace walks which will converge on Washington at the same time. One of them will be a racially integrated advance through the South, a sort of two-in-one action which, the radicals hope, will tie in neatly with the established and effective southern sit-in movement against the segregation of Negroes.

UNEMPLOYMENT

In March the number of Americans in work — 66,300,000—was a record for that month. But the increase in employment and the decrease of 160,000 in unemployment are little more than to be expected at this time of year and the amount of long-term joblessness still cause concern.

Virgin Territory



PRESIDENT KENNEDY'S request to Congress for greater independence for the Virgin Islands seems designed mainly to bring America's colonial policy up to the standard it sets for the rest of the world. While some of the islanders would like to have a vote in American presidential elections and to be represented in the United States Congress, there is little sign of any really strong demand for more self-government among the 30,000 people, 80 per cent of them Negro, who inhabit the 50 islands containing 133 square miles of land which the United States bought from Denmark in 1917. Ten years later the inhabitants of the new Territory became American citizens and they now elect eleven senators to a single chamber legislature of their own. Mr Kennedy wants these legislative districts to be reapportioned and he wants the Virgin Islanders to elect their own Governor. The present one, appointed by the President last year, is a local businessman, who was the Territory's spokesman at Democratic party meetings in the United States.

CONGRESS is likely to take some time considering Mr Kennedy's request and it seems sure to be linked with the matter of giving similar privileges to the people of Guam who are said to be as ready for self-government as are the Virgin Islanders. But Guam is an important American base in the Pacific Ocean and this complicates its situation—although this is a complication from which the Virgin Islanders, so close to Cuba, are not necessarily immune for ever. Nor is Congress happy about Mr Kennedy's proposal that the Virgin Islands Corporation, set up in 1934 to develop the islands economically and financed by loans and grants from the federal government, should be transferred to the territorial authorities for $13 million, the book value of its assets. It is argued that this is far below their real value and that they should be sold to private interests for what they will fetch.

These assets include water and electricity facilities on St Thomas, land on which sugar cane is grown and the only sugar mill in the islands on St Croix. The Governor would like to increase the output of electricity, as he would be able to do if the corporation came under the control of the territorial government. Better technical education is also needed to add to the skills of the workers and President Kennedy has asked Congress to authorise the island authorities to issue revenue bonds to pay for schools, roads and other improvements. The standard of living and the level of income is higher than in the rest of the Caribbean area—which does not say much. Wages are low but there is little actual unemployment although underemployment is widespread. The Governor's aim is to bring more industry to the Territory and thus to diversify an economy which now depends almost entirely on the tourist trade, with 165,000 visitors coming in each year. About fifty commercial undertakings are already operating in the islands and tax concessions are available for new industries. They are also able to bring in raw materials and components cheaply from other countries since the maximum import duty is still only 6 per cent of value under the original agreement made with Denmark when the islands were bought.

THE WORLD OVERSEAS

Syria through Egyptian Glass

FROM OUR SPECIAL CORRESPONDENT

CAIRO

PRAY God not again, was the shuddered response of sophisticated Egyptians when, last week in Cairo, it seemed conceivable that Syria might once again seek some form of marriage with Egypt. But this instinctive recoil was misleading on at least two counts. First, at the back of people's minds was the awareness that President Nasser's devouring love for his former northern region might, if the opportunity were there, lead them all into fresh adventure. The United Arab Republic is as exclusively a one-man band as ever. Second, it is only in Egypt itself that it could be so easily taken for granted that Syria might yet come back with arms outstretched. Egyptians incline to an image of Syria as an expensive whore, beautiful but damned, who seduced their leader once, and might do so again. Once outside Egypt, with its sense of unquestioning superiority in the Arab world, the image begins to crack.

As speculation piled high on speculation last week, the Egyptians talked in terms of two possible plebiscites. The first would be in Syria. While elsewhere rumours flashed round about what was contained in the unpublished Homs agreement concluded on April 1st by unidentified Syrian military factions, the Egyptian press, following events gasp by gasp, reported flatly that the agreement provided for a straightforward plebiscite on union with the UAR. The truth it seems was a good deal vaguer, and any union in the air is a much less binding proposition than as interpreted by Egypt. But the Egyptians, last week, looked beyond the Syrian plebiscite to one at home—on whether the Egyptians themselves would want the Syrians back or no. Guesswork on how this would turn out—if it were held and, for argument's sake, were allowed to be free—becomes wonderfully academic. One of the hardest things for an outsider to make out is whether the general indifference with which the Egyptian public treated Syria's break-away in September should be taken at its face value, or whether, as seems perhaps more probable, it was a case of Egyptian pride covering a natural sense of humiliation and outrage. Except among the very generous, who sincerely regretted the failure of democracy in Syria (even while interpreting it as a failure of right-wing reaction) and looked with distaste at a dreary future of coups d'état, and, also, except for the many more who are deeply alarmed by President Nasser's domestic policies, Egyptian satisfaction at the collapse of the Syrian government was humanly indecent.

As the fissures appeared in the Syrian army's unity, President Nasser's most disillusioned critics spoke of Egyptian help being given to Nasserite elements in Aleppo, and of Egyptian military concentrations at the ready at Alexandria. Government officials, indignantly denying all such rumours, had logic and good sense on their side; virtues that could, of course, be irrelevant. Egyptians who, for whatever reason, regretted the failed experiment in Syria tended to put some at least of the blame on the Americans and the British, and, for good measure, the Russians, too. Their complaint was that the reluctance of the big powers to rally round Syria with diplomatic and economic support made clear their lack of sympathy with the act of secession. The big powers did not, so ran the argument of dissident Egyptians, want Syria to have a life of its own but would have preferred it to remain part of the United Arab Republic. Hearing this charge one could feel, for one wild moment, that Britain might have come full circle from the days when every action was interpreted as yet another effort to unseat or undermine President Nasser. But the moment quickly passed; well-planted suspicions of British meddling and anti-Nasserism are not yet ripe for uprooting.

EGYPTIAN dismay at the thought of a new involvement with Syria was much more than just a question of hurt pride. After the breakaway in September the Egyptian regime went through what may have been one of the most uneasy phases it has had. Learning a lesson from what happened in Syria, the government began to suspect that in Egypt, too, the well-to-do might be whispering treason into the ears of their friends and relations in the army. This fear was the basic cause of the cat-and-mouse pounces which, at the end of last year, gave the Egyptian police state some of the characteristics of much beastlier European equivalents. A group of people, whose only apparent crime was to be rich, were put in prison for a few months; many others have had their property sequestrated, and have somehow to make do on a small monthly grant from the authorities. Powerful families which, although they had already lost most of their land and a lot of their money, still retained much of their authority, found themselves broken. Anybody with something "wrong" about him—be it that he was rich, a Jew, or a Christian—began to move about more fearfully. Close friends suspected each other as informers.

But, reasonably enough, it was against the army that the sternest precautions were taken. Commands were switched round, some officers imprisoned (the numbers suggested vary from 50 to 200, the lower figure being the more likely), others were sent abroad to diplomatic missions. The small Egyptian contingent was withdrawn from Kuwait because it was feared that the Jordanians were getting at the officers. Well-off families were asked, casually enough, about their relatives in the armed services. There were two factors to be balanced. Without any doubt, army officers have so far done better than anybody else out of the Egyptian revolution; a military uniform has been the best, and indeed almost the only, way to a seat in the cabinet, the presidency of a bank, or any other plum job. But to counter this, many of these young officers, mostly of middle-class origin themselves, as they went up in the world have married or made alliances with upper-class families. It has been remarked that several of Egypt's serving officers live after a fashion that is well above anything possible on army pay. The fear was that some of these young men might have become more concerned with what was happening under socialisation to their fathers-in-law or cousins than with their own worldly success.

So the army was sieved and lightly purged, and the tension began to slacken. A mixture of lethargy, sense of humour, and inefficiency saves Egypt from becoming a really vigilant police state. The jokes, some of them pretty sick, about the president, the army and the police, go on all the time, and many people, but not those with most "crimes" against their name, get bored with being afraid. "There's no freedom of speech in Egypt," announces an Egyptian in a crowded restaurant to the alarm of his guest. There was unease in Egypt this spring, but there were also signs that the government was smoothing its claws. Not the least of these was the sacking last week of all military officers from several important newspapers, and the restoration, amid acclaim, of professional, and honest-minded, journalists.

The decision on April 7th to end the French spy trial and let both French and Egyptian defendants go free was primarily a sign of a wish for better relations with France after the Algerian ceasefire; Egypt, concerned like other underdeveloped countries about the European common market, does not want French hostility as an additional obstacle to possible future economic negotiations. But the process of the trial itself was significant in that the defence lawyer, speaking out boldly, was able effectively to shatter the feeble and unconvincing case for the prosecution.

After the alarums of last winter, and with an infinite burden of work involved in the nationalisation programme, most thoughtful Egyptians are deeply disinclined to foreign adventure. Egypt feels itself alone in the Arab world, but does not allow this to worry it over much. The feudal governments, it thinks, will fall sooner rather than later. General Qasim is dismissed as a man who is not serious, and certainly not stable. The link with Morocco within the Casablanca group does not amount to very much. Even with the new Algerians, the present sunny climate may begin, after a time, to get chillier. M. Ben Bella and other Algerian leaders were given slap-up VIP treatment when they visited Cairo last week, disrupting the traffic and raising a cheer or two. But Egyptians will privately admit that they find the Algerians far too like Frenchmen for their liking; with their love for Paris they may never, thinks Cairo, turn into good Arab socialists.

Probably, despite its economic difficulties, its dependence on police methods and the substantial and growing volume of internal criticism, the present regime in the United Arab Republic is likely to outlive that of most of its neighbours. But to an outsider it seems obvious that the chances of survival would be lessened at once by any irresponsibility or over-ambition on foreign ground. The doubt is whether President Nasser himself thinks along these lines. For the time being a sort of truce seems to have been established between Damascus and Cairo. The risks that might follow if this truce were to be broken haunt some of the president's staunch, but objective, supporters.

Syria Looks at Itself

FROM OUR SPECIAL CORRESPONDENT

DAMASCUS

HAUNTED mildly by the bleakness of public disapproval and urgently by the fear of what their own comrades may be plotting, the faceless ones in the Syrian high command are finding responsibility harder to discard than to seize. Only the commander-in-chief, General Zahreddin, allows his face to be seen and he only because, as a Druze and a man of no great authority, he is not an object of dangerous jealousy. Since it became obvious that the army is too much in a state of anarchy itself to hope to govern the country singlehanded, senior officers have distractedly been trying to give their *coup* a semblance of legality, and themselves a sheltering barricade of civilians. But few civilians are ready to be caught in so fishy a net. The idea of a government of technicians melted away as the top civil servants and professionals refused to be drawn, although several of them have allowed themselves to be nominated as members of committees that will at least keep the country going and enable the soldiers to postpone making possibly disastrous decisions. The repectable politicians were equally reluctant to come in on the army's terms, and although there were others eager enough to serve on any terms they were not the ones the army wanted. By Wednesday it looked as if a civilian front of a kind would soon be erected; but nobody expects the army to retire very far behind it.

As the haggling between army and politicians continued, Damascus was quiet even for this gentle Arab city. Armoured cars cordoned off the vulnerable radio centre, and although the curfew was reduced to four hours people were inclined to stop at home. In Aleppo too all was quiet, but barbed wire barricades impeded movement from the poorer Moslem districts where Nasserite fervour is strongest and where scrubbed walls testified to last week's Nasserite slogans. Sad and rather cross disillusionment is general: with Nasser, with the last government and above all with the army for its unthinking high-handedness in plunging the country back to pre-union muddle. Syrians ask themselves why they should be cursed by a "mercenary" army eager only for power, and note that so many Syrian officers have been retired for political reasons that most of the senior ones left are under forty.

Guesses about the numbers who would like a return to union with Egypt vary wildly from 15 per cent of the population to 85 per cent. Possibly the most intelligent theory is that men who work with their hands still support Nasser and all he stands for. The Kudsi government earned little respect; although it promised to maintain and even improve Nasser's social benefits, its right-wing tendencies are deeply suspect. Unrest was growing, particularly in rural areas, where some former landowners had illegally repossessed their land, and ousted peasants could find no voice among the deputies—who recently passed, in two minutes, a law raising their own salaries from 750 Syrian pounds a month to 2,500.

The army, searching for any way to dilute its own responsibility, talks with heartfelt desire of Arab unity. At his press conference on Tuesday General Zahreddin promised a referendum on some form of unity with "liberated" Arab countries—which he specified as Syria, Egypt, Iraq and, after a moment's hesitation, Lebanon. But if one thing in the present cloud of unknowing seems certain, it is that no future Syrian government would agree to any form of union that covers domestic as well as foreign affairs. Since it is almost equally certain that no other Arab country would agree to take on Syria without insisting on some power of management over its turbulent internal life, the referendum if ever held may not be very meaningful.

General Zahreddin has put the following order of priorities: transitional government to "reorganise national life," then a referendum on a new constitution. In the meantime, all possible decisions have been passed to six committees which function under the titles of national economy, finance, land reform, information, Arab questions and international relations. Since the committees have been told to report by April 20th, they will have to work pretty smartly. Presumably their reports will be filed. A committee has also been

set up to study whether political prisoners should be tried. General Zahreddin admitted to not more than 20 politicians under arrest —the total, including army officers who did not manage to get away (to Egypt as well as to Switzerland) may be around a hundred.

After all the bargaining that has gone on, and with the army choking over the power it so recklessly swallowed, the transitional government could turn out to be more than military yes-men. But their limits of action will be strictly defined. Despite its blatant disunity, the left-wing faction within the army is believed sufficiently strong to insist on three general principles: the maintenance of social reforms in the letter as well as the law; an international policy of less deviating neutrality than hitherto; and in Arab affairs an attempt to move closer to Egypt and possibly Iraq—and a corresponding cold-shouldering of Jordan and Saudi Arabia. One of the compelling reasons why the army threw out the Kudsi government was its belief that it had turned too far towards the West and might consequently be hazarding the army's constant supply of military equipment from the East.

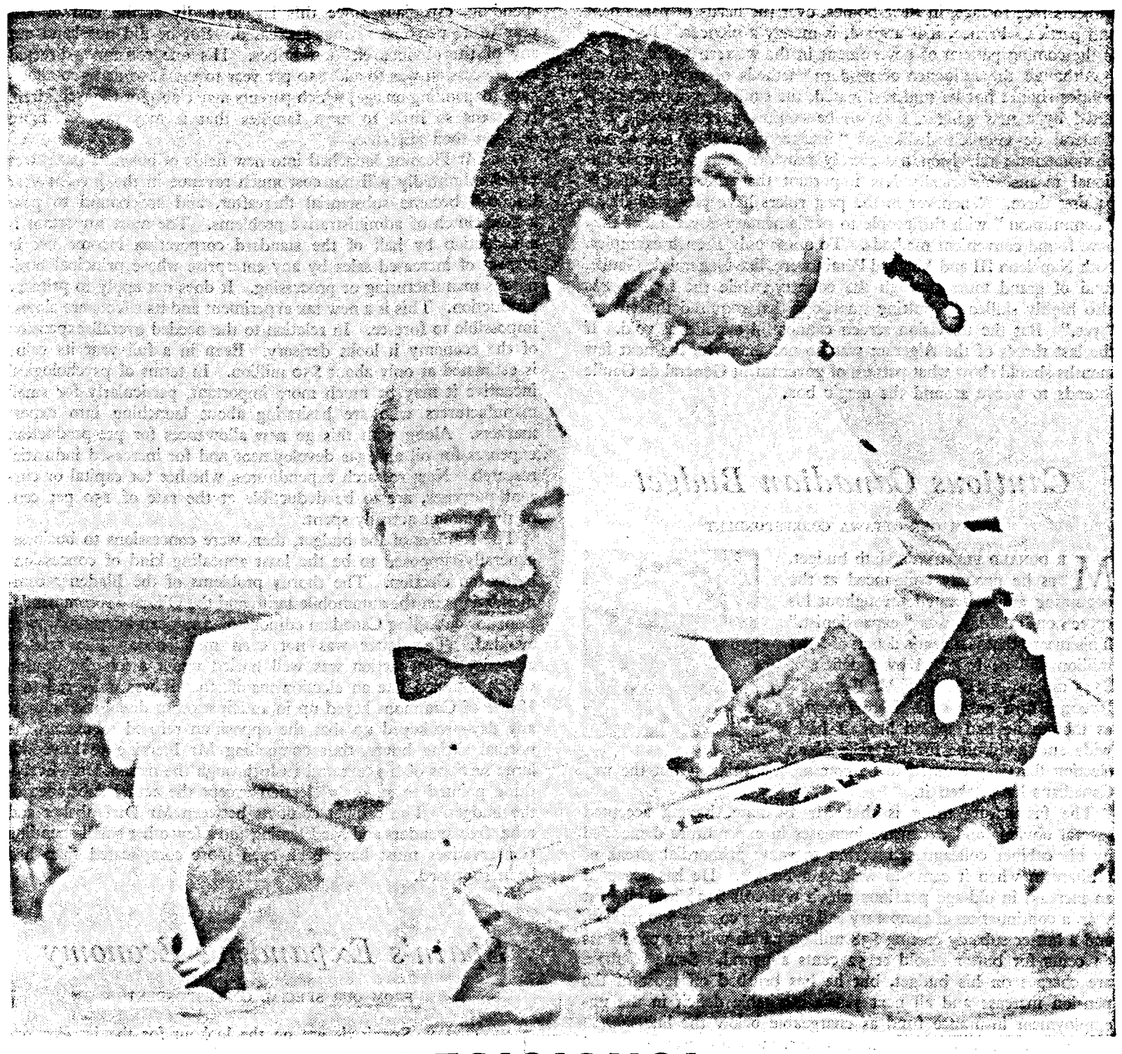
Without too much faith, Syrians hope that the army has proved to itself that with no Shishakli yet in sight it cannot play games with the government and win. Preparations go on for military parades on April 17th, the day that celebrates French evacuation. Perhaps by then the people trying to run Syrian affairs will have faces if not yet a policy.

Rule by Referendum

FROM OUR PARIS CORRESPONDENT

GENERAL DE GAULLE, having once again won a referendum, has decided against holding a general election as well. Instead, he is appointing a new prime minister, M. Georges Pompidou, who is expected to take office on Monday. M. Debré, the faithful scapegoat, is to go just when the end of the Algerian war began to hold out the promise that his office might begin to be pleasant. His successor, a stocky, smiling man of 50, an historian by training, a critic by hobby and a banker by profession, entered public life under General de Gaulle's auspices. He was on the general's staff after the war. He returned as *chef de cabinet* when the general seized the premiership in 1958. But when General de Gaulle moved to the Elysée, M. Pompidou, though always available, went back to the general directorship of Rothschilds.

Obviously the French Left will make capital out of the "rule of the Rothschilds." But there is more of interest and significance to be found in M. Pompidou's relationship with the general. M. Debré, faithful as he was, was a politician, a parliamentarian for all that his party is so committed to General de Gaulle. M. Pompidou is not even in parliament. He is the private secretary, the *chef de cabinet*. It seems unlikely now that it will be possible to argue that the premier has effective views of his own. Thus the appointment of M. Pompidou as prime minister is part of a general reinforcement of presidential rule, a process the background of which is sketched below.



"The referendum is entering into our customs . . . no doubt the nature and working of the republic's institutions will be deeply affected." This trend, foreshadowed by General de Gaulle in his broadcast on April 6th, is probably more significant than the result of the referendum on April 8th. Broadly, this was a foregone conclusion. Obviously the overwhelming majority of the French nation was fed up with the Algerian war and hostile to Salan's secret army. Once the Communists decided that the question put offered them no choice but to switch from a hostile to a positive vote, it was clear that the *non* votes would be much less numerous than on previous occasions. The rest was a question of fractions.

Last Sunday's referendum was the third during the Fifth Republic. The number of abstentions had risen substantially between the constitutional referendum of 1958 and last year's first Algerian poll (from 15 to over 22 per cent). It now rose by another 2 per cent. The number of spoilt ballots, on the other hand, has doubled. This is largely due to the campaign of the small Socialist party (PSU), which suggested this way out for people determined to express their approval of peace and their hostility to the regime together. But such a sophisticated attitude was bound to have only a marginal impact. Finally, out of an electorate of nearly 27 million, about 19.3 million registered a valid vote and less than 1.8 million of these were *non*; 9.3 per cent of the valid poll was all that the advocates of French Algeria could muster. The Communists having strictly followed their party's instructions, the *non* was this time deprived of its big battalions. The point can be illustrated in the Paris area. In the smart districts (7th, 8th and 16th arrondissements) the proportion of the negative vote was maintained. But in the red belt of Paris, where the anti-gaullists used to be strong, the *oui* votes beat all records.

As usual with a plebiscite, the vote is both clear and ambiguous. The isolation of the Secret Army (OAS) is plain to see. But support for the regime cannot be so easily perceived among the mass of ambiguous *ayes*. Since it had been predictable, the result brought little new to General de Gaulle beyond a personal triumph. In particular, it did not provide an answer to the question he had left purposely open, namely, whether a general election should follow immediately upon the referendum. On this topic the gaullists split into two schools of thought. One suggested that parliamentary capital must be made rapidly out of the euphoria induced by peace in Algeria. The gamble on Franco-Algerian co-operation may fail. On the assumption that the French public would soon find out that the end of the war did not mean an end to their economic burdens or even a cut in defence expenditure, the sooner the elections were held the better.

ALL this, according to the second gaullist group, paid too much attention to parliament. The present obedient chamber had still more than a year to run and should be left in peace. A governmental reshuffle and a change of prime minister would be good moves because they would emphasise the fact that the general, not parliament, ran the country. General de Gaulle must be left undisturbed to get on with his job both at home and abroad. As to elections, there was plenty of time to tackle them later. In deciding to appoint M. Pompidou, General de Gaulle has endorsed this view.

The two schools of thought illustrate two gaullist temptations. The general has never made any secret of his distaste for parliamentary hindrances. There are two ways of avoiding these restrictions. One is to pack the chamber with a sufficient number of disciplined and obedient deputies. The other is to cut down the importance of parliament still further. The new "custom" of the referendum is designed to reinforce this process. Indeed, if the interpreters of the gaullist doctrine are to be believed, the referendum and television will be the two major instruments of a new method of government. By a miracle, they argue, General de Gaulle's return to power has coincided with the spread of television in France. The magic box enables the ruler to address his

DECISIONS! DECISIONS!

He can buy up a mile of Mayfair or a stretch of Shaftesbury Avenue without batting an eyelid. But when it comes to deciding between the Stuffed Olives and the Anchovies he's stumped, flummoxed, helpless.

If you've eaten in a P & O - Orient dining room you'll know how he's feeling. How can a man make snap decisions when each dish looks (and tastes) more delicious than the last? How can he bark out an order when the stewards are so smilingly courteous, so obviously willing to wait till he's satisfied?

He's been basking in this state of indecision ever since he chose the lazy way out and took the roundabout sea route to those yearly Los Angeles talks—via Naples, Bombay, Colombo, Sydney and the vast and sunny Pacific. He's spent whole mornings wondering whether to have a swim in that glittering blue pool or exercise his new-found sea legs in one of those shamelessly invigorating deck games. Then of course, just when he's made up his mind (to do both) it's time for another delectable, challenging meal. Oh, well, there's always tomorrow!

P&O-ORIENT LINES

subjects face to face, in their homes, over the heads of parliament and parties. France, it is argued, is merely a pioneer. Telecracy is the coming pattern of government in the western world.

Although the influence of modern methods of propaganda on politics should not be underestimated, the gaullist prophets, fascinated by a new gadget, seem to be confusing cause and effect. General de Gaulle's dislike of "intermediaries" is not a new phenomenon; television has merely provided him with an additional means, historically less important that the radio, of bypassing them. Whenever in the past rulers have preferred direct "communion" with the people to parliamentary government they have found convenient methods. To quote only French examples, both Napoleon III and Marshal Pétain were, like General de Gaulle, fond of grand tours through the country, while the former was also highly skilled in putting questions that required the answer "yes." But the television screen cannot fill a political void. If the last throes of the Algerian war do not interfere, the next few months should show what pattern of government General de Gaulle intends to weave around the magic box.

Cautious Canadian Budget

FROM OUR OTTAWA CORRESPONDENT

MR DONALD FLEMING'S sixth budget, as he proudly announced at the beginning and reiterated throughout his speech on Tuesday, was "expansionist." This means that last year's deficit of $791 million will be followed by a deficit of $745 million in 1962-63 if Mr Fleming's forecasts turn out right. If this sounds as though he had spread himself high, wide and handsome for the sake of an election that is presumed to be coming soon, that is not the way Canadians have taken it.

The fascinating thing is that Mr Fleming, having accepted several obvious and expensive increases in expenditure demanded by his cabinet colleagues, reverted to some primordial streak of puritanism when it came to writing a budget. He has accepted an increase in old-age pensions which will cost $130 million next year, a continuation of temporary rail subsidies costing $70 million, and a butter subsidy costing $38 million which will pay producers 64 cents for butter resold at 52 cents a pound. Some of these are charges on his budget, but he has brushed off most of the pension increase and all next year's inevitable deficit in the unemployment insurance fund as chargeable below the line.

Since Mr Fleming had yielded so far, most observers expected him to go to the limit and give his Conservative colleagues the tax reductions they would have liked. But at this point he evidently stuck his heels into the ground. Although he confidently prophesied a seven per cent increase in gross national product over 1961, he budgeted for an increase of little more than six per cent in revenues, and his tax changes added only $54 million to the deficit of $695 million which he foresaw for the coming year. With this addition, his forecast deficit for the coming year is at least less than the year just past. Canada, said Mr Fleming, was enjoying "rising prosperity, more jobs, greater opportunities and rapid economic growth." But he added,

> We must not be complacent. We still have unused capacity in our industry. The reduction in unemployment must be carried much further. The balance of payments needs to be still further improved. Fiscal policy must continue to provide stimulus to the economy.

This was the theoretical basis everyone had expected. Upon it he might have justified income tax cuts to stimulate consumer spending, especially since this lagged badly at the end of last year while personal savings increased. But he did not hand out any of the obvious election bribes. His one consumer-directed tax concession was to add $50 per year to the $250 or $500 allowance (depending on age) which parents may claim for their children. It means so little to most families that it may provoke more derision than applause.

But Mr Fleming launched into new fields of business incentives which admittedly will not cost much revenue in the present year but will become substantial thereafter, and are bound to pose a new clutch of administrative problems. The most important is a reduction by half of the standard corporation income tax in respect of increased sales by any enterprise whose principal business is manufacturing or processing. It does not apply to primary production. This is a new tax experiment and its effects are almost impossible to foresee. In relation to the needed overall expansion of the economy it looks derisory. Even in a full year its value is estimated at only about $50 million. In terms of psychological incentive it may be much more important, particularly for small manufacturers who are hesitating about launching into export markets. Along with this go new allowances for pre-production expenses for oil and gas development and for increased industrial research. New research expenditures, whether for capital or current purposes, are to be deductible at the rate of 150 per cent of the amount actually spent.

The features of the budget, then, were concessions to business, generally supposed to be the least appealing kind of concessions before an election. The thorny problems of the Bladen recommendations on the automobile tariff, and the O'Leary recommendations for curtailing Canadian editions of American magazines, were avoided. The latter was not even mentioned. The relative austerity of the action was well buried under a lengthy oration which sounded like an election manifesto. It was delivered to a House of Commons keyed up in anticipation of dissolution almost any day—so keyed up that the opposition refused to extend the normal sitting hours, thus compelling Mr Fleming to leave out large sections of his text and rush through the remainder. Everything pointed to an early election except the actual substance of the budget. The cabinet conflicts between Mr Diefenbaker and other free-spenders and Mr Fleming and a few other small-spending Conservatives must have been even more complicated than had been supposed.

Spain's Expanding Economy

FROM OUR SPECIAL CORRESPONDENT

INEVITABLY, Spaniards are on the lookout for the implications of rumours that America is preparing to cut its military and aid expenditure in Spain. The rumours appear to be ill-founded. Washington has decided only to terminate direct grant aid at the end of June, and this decision is primarily a tribute to the efficacy of the economic prescription drawn up for General Franco's government in 1959 by experts from the United States and the Organisation for European Economic Co-operation. The grant aid programme was required to finance priority imports of industrial raw materials, some capital goods and essential foodstuffs—$490 million have been made available for this purpose since 1954—and Spain can now pay for such imports out of its own foreign currency earnings. Spain will continue to benefit from the "Food for Peace" programme, under which agricultural commodities are supplied for distribution by the *Caritas* relief agency (whose critics, incidentally, accuse it of gross religious discrimination), and to receive long-term loans from the Export-Import Bank for the purchase of capital equipment; loans from this source increased from an average of $10 million annually in 1955-59 to $49 million and

LIFE SELLS FOR BALLANTINE'S

From the producers of Ballantine's Scotch Whisky come these comments on their use of LIFE International and LIFE En Español:

"*Pride of product is one of the great stimuli of industry, inducing thinking executives to greater efforts! We at Ballantine's think this way and we are happy to proclaim our wares around the world thoughtfully, occasionally amusingly we hope—and always sincerely. LIFE seems to us to be a medium which matches our own product—genuine and lively—and in which we are proud to make regular appearances.*

"*It is doubtful if there is an article in international commerce so universally found as Scotch Whisky and, as everyone knows, there are no bad Scotches—some are better! Ballantine's are proud to claim to be in the latter category, and proud to appear in LIFE which is of great merit for those who wish to sell to the discerning.*"

And Ballantine's know how to *reach* "the discerning"—for that describes the readers of the International Editions of LIFE. Business and community leaders everywhere turn to its pages regularly to know what is being said and done, advertised and sold. This gives LIFE its great selling power.

LIFE can sell for you, too. For more information about LIFE International and its advertising edition for Europe, as well as LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, TIME & LIFE Building, New Bond Street, London W.1.

$58 million respectively in 1960 and 1961; this, too, reflects Spain's improved economic position.

As recently as last summer, OEEC observers could note that "the stagnation of economic activity which followed the decisive action taken in July, 1959 has been rather prolonged. . . ." As lately as January, some Spanish officials were inclined to dissent from the "over-optimistic" report on Spain's position and prospects which had just been published by Don Jesús Prados, of the Banco Central, well known for his championship of the common market. But it is now clear that the Spanish economy has made impressive gains in the last nine months. The national income was 498 billion pesetas in 1961, a real increase of 3.7 per cent over 1960. Agriculture contributed little, if anything, to this expansion—although the cotton crop increased by a spectacular 76

Rien ne va Plus?

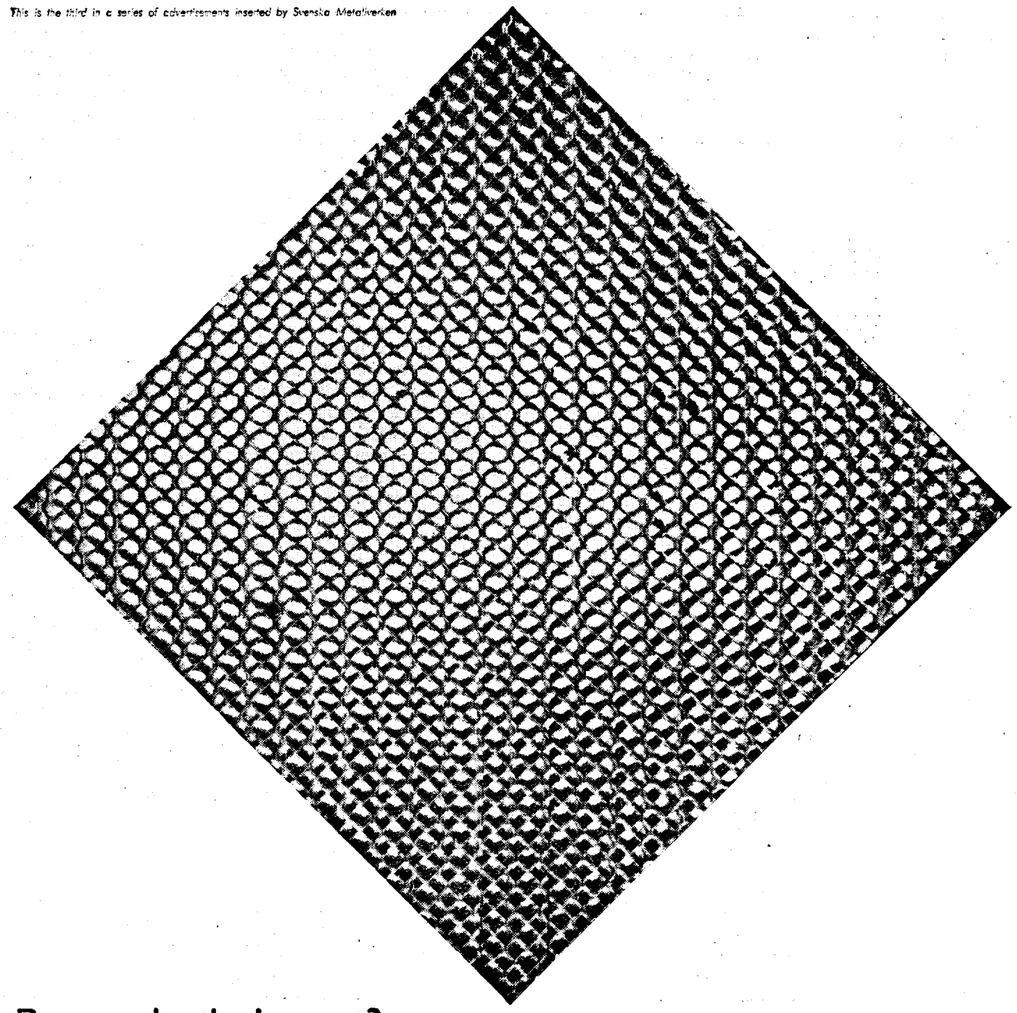
FROM OUR PARIS CORRESPONDENT

How wise General de Gaulle was in pressing for the withdrawal of French troops from across the Mediterranean. The troubles now brewing on France's southern front illustrate his strategic foresight. Tongue in cheek, or beak, the *Canard Enchainé* last week used these terms to assess gaullist military ambitions in Europe and, simultaneously, introduced its readers to the yet unfinished conflict between tiny Monaco and its giant neighbour and protector. The vision of a Monégasque armada of luxury yachts getting ready for battle, or of French gendarmes storming the Monte Carlo casino, is rather melodramatic. But then this earthly paradise, this principality the size of Hyde Park, where tax collectors fear to tread, lends itself to melodrama.

The conflict came into the open on January 23rd during a stormy interview between Prince Rainier and his French minister of state. But the roots of the disagreement go back to 1955. It may be recalled that the principality's finances were then threatened with a major crisis by the impending bankruptcy of the *Banque des Métaux Précieux* (since then renamed *Société Monégasque de Banque*). French interests came to the rescue and, as part of their salvage operation, bought 74,055 shares in a company called *Images et Son*. That company is the owner of a commercial radio station, Europe Number One, which has since become most successful. Bought for peanuts, its shares are now valuable, particularly since the French government, which owns 35 per cent of the shares, is keen on getting a majority holding. (The war of the waves, resulting from the government's desire to get complete political control over broadcasting, is a fascinating, but separate, subject.) Prince Rainier concluded that he had made a bad bargain and, on January 16th, passed a decree quashing the sale of the 74,055 shares. Thereupon M. Pelletier, the French minister of state (and, by the same token, the prince's premier and minister of foreign affairs), reminded the prince that, according to the treaty of 1918, Monaco's legislation must not harm France's political or economic interests. Their discussion was neither princely nor diplomatic; in short, it was unprintable.

The sequel was swift. Prince Rainier asked for the recall of his French minister. At the same time, knowing that he could not hope to repeat David's victory over Goliath, he withdrew the controversial decree. This would have been the end of the affair if France had not seized this opportunity to bring out its grievances about Monaco's general development. The sky-scrapers now dominating Monte Carlo are a striking proof of rapid change. Revenue from gambling—the 10 per cent on the receipts of the *Société des Bains de Mer*, which runs the famous casino—is no longer the main source of Monaco's wealth. In recent years this haven from taxation has acted as a magnet for foreign capital, particularly for funds repatriated from former colonies and protectorates.

Deposits have risen in Monaco's twenty-four banks, and Prince Rainier has encouraged this process of foreign investment; a Monaco economic development corporation has been set up, and a former American vice-consul picked to run it. Dozens of new firms spring up every year. United States Tin and Johnson & Johnson, Bayer and Gaggia, Coca-Cola and Interarmco have made their appearance. Offices and factories rise vertically on the limited land available. By last year the price of a square yard of building land had risen to between £250 and £350. With expansion came political ambitions. Prince Rainier was reported as seeking the rank of ambassador for his envoys and even as hoping for a seat at the United Nations.



France found these Monégasque dreams of grandeur disturbing. It was displeased by the prospect of an uncontrolled Tangiers on its doorstep. The French ministry of finance complained that the combination of tax privileges with a customs union gave firms in Monaco an unfair advantage. French producers of plastics, chemicals, jewellery and light engineering products grumbled about unfair competition. After the Pelletier incident France brandished the dread weapon of a threat to abolish Monaco's tax privileges.

"Anything but French taxation" was the prince's anguished reply. The Grimaldi dynasty was suddenly thrown back on the support of its loyal subjects. In January, 1959, possibly under the influence of the winds blowing from France, Prince Rainier had chosen to dispense with his parliament or national council. Last month he ended this period of "dictatorship." But the return to democracy should not be taken too seriously. Out of Monaco's 21,000 inhabitants, less than 3,000 are fully-fledged Monégasques. In any case, foreigners and aborigines alike will rally around the prince in defence of fiscal freedom.

Negotiations with France have broken down. On Wednesday the French government officially gave the six months' notice necessary to suspend the 1951 convention governing relations between the two states. Yet there is no reason to believe the fell rumours that Prince Rainier, thirty-third of the Grimaldis, will be the last to rule or that *chemin de fer* will have to be played by candlelight after the French have cut off the electricity. Monaco lives by the grace of its giant neighbour, which could starve it at will; the prince is bound to compromise. M. Pelletier's successor as minister of state is therefore likely to have the right of closer control over the country's affairs, and Monaco will probably offer Paris some financial compensation for the tax privileges it enjoys.

This is not a land of real drama. When the croupier calls that *rien ne va plus*, he knows that it is a fiction, that the tension will last only a moment and then everything will start all over again. Princess Grace has now been persuaded to return to the screen by her favourite director; but Monaco is a setting more for Gilbert and Sullivan than for Hitchcock.

per cent, production of cereals, olives and oranges fell—but industrial output rose by 5.6 per cent.

In the past, the expansion of Spanish industry has been hindered by insufficient electric power production, shortages of steel and cement, the lack of skilled labour and management, inadequate private investment, a level of foreign exchange earnings too low to cover imports of desperately-needed capital goods, and the autarkic bias of the country's rulers. In the last three or four years most of these weaknesses have been overcome, and Spain's industrial pattern has been transformed from one dominated by textiles into one in which the metallurgical, chemical and building industries, and power production, are predominant.

In 1961 Spain generated 21,000 million kWh of electricity (12.9 per cent more than in 1960) and produced 2.3 million tons of steel (an increase of 21 per cent) and 6.1 million tons of cement (up by 16.9 per cent). Aided by a record influx of tourists, who brought in the equivalent of more than $420 million, and emigrants' remittances totalling well over $50 million, foreign currency reserves rose from $600 million to $860 million. Spain's foreign trade balance was, however, upset by a small decline in exports and an increase of about 35 per cent in imports. Final figures are not yet available, but statistics for the first three quarters of 1961 indicate that the proportion of Spain's imports accounted for by capital goods and raw materials fell sharply. Spanish officials explain that higher food imports were necessary to compensate for domestic crop failures. Foreign observers in Madrid are, on the whole, satisfied that precious *divisas* are not being spent frivolously, though the more thoughtful of them would be happier if higher priority were given to imports calculated to expand Spain's industrial capacity.

Most wealthy Spaniards still prefer to buy real estate rather than invest in industry, but private shareholding is growing. (In its absence, Spain's much-maligned mixed banking system has performed a vital role). Autarky was buried in the rubble of the pre-1959 economy. The shortage of skilled labour is the main obstacle Spanish industry now has to overcome, and it is aggravated by two factors: inadequate educational facilities and the high rate of emigration. As the educational system is dominated by Church-owned fee-paying schools, education is largely the prerogative of the rich and the small bourgeoisie, and youngsters are orientated toward ecclesiastical, legal, administrative and other white-collar employment rather than technical training; more than a million Spanish children of school age receive no formal education, and even officials put the illiteracy rate at about 11 per cent. France, Belgium and Holland have nine times as many technical students, per million inhabitants, as Spain, and west Germany has fourteen times as many. Emigration can only be reduced by raising Spanish rates of pay (which are lower than those of Japan), but government economists say that inflation is already feared as a consequence of pay increases granted in recent months to members of the armed forces and civil service and limited categories of industrial workers. Moreover, in the eyes of some observers, emigration acts as a political safety-valve. A western diplomat in Madrid recently told your correspondent: "I can only attribute the extraordinary passivity of the Spanish workers to the fact that the most assertive and ambitious of them emigrate."

The development of the Spanish economy during the next few years will inevitably be conditioned by the attitude of the European Economic Community, which absorbs nearly half Spain's exports. Total exclusion from the EEC would harm Spain grievously—and the harm could be catastrophic if the Community admitted Britain, which takes another 15 per cent of Spanish exports. Association with the community would impose severe strains, but should invigorate those industries that have shown themselves most capable of expansion; articulate Spaniards are very nearly unanimous in favouring the adoption of a national development plan whose purpose would be to minimise the strains and maximise the competitiveness of the economy.

A *Comisariado de Desarrollo Económico* was established in February under Sr López Rodó, a leading member of the influential *Opus Dei* wing of General Franco's administration. In principle, the *Comisariado* will not draft its own development proposals until the somewhat sinaitic handing down of the eagerly-awaited recommendations of the World Bank (IBRD), now expected to occur at the beginning of May. In fact, Sr López Rodó has already been to Washington for consultations with the Bank, and, according to well-informed sources, a tacit agreement exists whereby its report will contain no recommendations that might be unpalatable to the Spanish government. No time need, therefore, be lost in implementing them.
