with Chrysler Airtemp—genuine Air Conditioning

Every business with a use for air cooling and conditioning equipment can call on the vast technical resources of the Chrysler Organisation. Every business can take advantage of Chrysler's 25 years of experience in this field.
Chrysler Airtemp Equipment cleans the air. Filters it. Removes dirt, fumes and smells. Warms or cools it as necessary. Then gently circulates it. A wide range of Airtemp units is available and there's one that is tailor-made to solve your particular problem. You'll be suprised how simply it can be fitted into your premises.

INTERNATIONAL

CRISIS OF CONFIDENCE

Lord Home's nostalgia for the days when Britain really ruled the waves and the Great Powers ruled the roost does not accurately reflect either the past or the present. This is not only unwise at a juncture when Britain is likely—because of Rhodesia—to be especially exposed to United Nations criticism, but dangerous; if indulged, it will divide the non-communist world still more deeply (p. 13).

Nor is Britain behaving any more wisely in appearing to shelter Africa's "white south" from reality—especially since France and Belgium are ceasing to exact such a policy as the price of association (p. 14). Portugal—like the president of Guatemala (p. 23)—has reproved Britain and the UN equally (p. 19). Pressure by M. Spaak and the United States on the Union Minière might bring Mr Tshombe into line if Britain co-operated (p. 20) but the Cabinet has yet to brace itself to face Sir Roy Welensky, either about Katanga or Northern Rhodesia (p. 19).

And meanwhile the American Administration is meeting a right-wing attack on the United Nations head-on (p. 34).

CRISES IN EUROPE

Common Market: The Community's internal negotiations have resulted in an agreement about equal wages for women and a ...omise on the control of cartels (p. 23). But German policy ...i holding up the adoption of a common agricultural tariff ...22).

Britain's attempts to secure entry to the common market have their part to play in the current difficulties of the Canadian cabinet (p. 41).

France: General de Gaulle is still caught between the armed forces' implicit threat of disobedience and France's overwhelming need for peace in Algeria (p. 42).

Germany: Probings in Moscow may, it is to be hoped, lead to talks on Berlin (p. 20). To expel an east German journalist from Britain can do something to help (p. 22).

Holland's excellent labour-management relations make a nice, peaceful contrast to all this (p. 43).

CRITICAL POINTS IN THE MIDDLE EAST

Lebanon has just turned a nasty corner (p. 41).

Neither **President Nasser** nor **General Qasim** looks forward to 1962 with much confidence (p. 18).

CRITIQUE OF AMERICA

The American trade union movement, surprisingly united at the moment, is preparing for a battle with the steel industry (p. 33).

The Treasury and the Federal Reserve Board have established a partnership in the money market (p. 37).

The House of Representatives is ready for a heavy session (p. 34).

The St Lawrence Seaway is doing better, but not as well as it should (p. 38).

Government employees are to get more pay in New York and perhaps in Washington (p. 38).

62 IN BRITAIN AND EUROPE

HAPPY NEW YEAR ?

Britain, in the last year outside Europe, is likely to be running under a handicap imposed by the Government itself (p. 11).

Money troubles: inadequate, though not insignificant, progress has been made to meet strains on the international exchanges. Special expedients may be needed for the pound this year (p. 49).

Slow markets: Continental stocks seem overpriced (p. 55), in New York investors are scratching around for the remaining under-valued shares (p. 55), while in London quick profits will be few and far between (p. 54).

Slack Britain: unless the Government changes its tune, a rise of only one or two per cent in production is likely (p. 51).

Steel output in 1962 is unlikely to be up on last year (p. 57).

Slackening Europe: members of the Six may be lucky to achieve their forecast of a four per cent rise in production (p. 52).

HOME

DEEP FREEZE

The postal workers' go-slow has been reinforced by the weather freeze—some of the disruption could have been avoided (p. 20)—but may not do much to thaw the wage freeze (p. 18).

Guiding light: if the Chancellor has an idea of the right amount for this year's wage increases, he should proclaim it (p. 18).

FAIR PROSPECTS

The hot war for higher education—and the need for bigger universities and technical colleges sooner (p. 16).

Professional status for teachers? (p. 24).

Town halls—the case for a pay rise (p. 25).

Suburbia embattled—the campaign for the Home Counties (p. 26).

SECOND WIND

Imperial Tobacco is allowed to retain its stake in Gallahers—but the Government fails to explain why (p. 58).

What are knighthoods for? (p. 20).

RR radiator on BMC cars has become a possibility (p. 58).

Ukase for the Yewkai—a new name for the Old Country (p. 24)

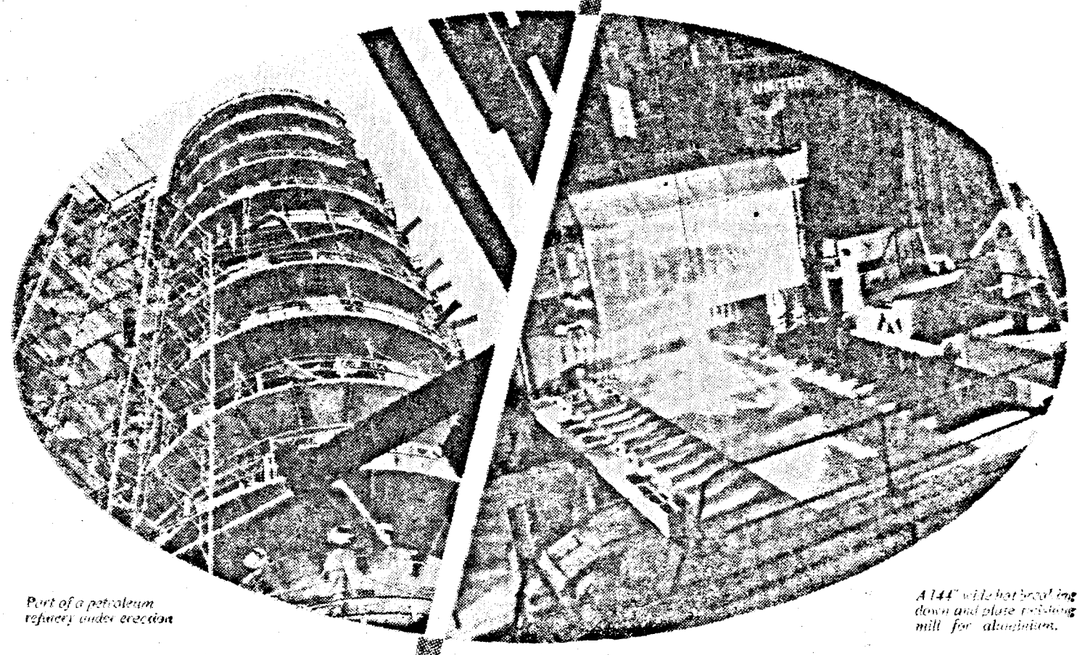
Sunday Telegraph

NEWSPAPER OF THE YEAR

ITV AWARD

The Sunday Telegraph was born last February—the first new Sunday paper in 40 years. Today it is acknowledged as the greatest success story in Fleet Street.
This achievement was crowned on ITV just before the New Year, when the Sunday Telegraph was given the 'NEWSPAPER OF THE YEAR' award. This is what was said:



"The main award must go to the Sunday Telegraph. When it started it set out to be a newspaper on a Sunday, and all in all it has justified the belief that news could be found. When it started its features and its review pages were pretty dull—they're much livelier now. When it started no one could be sure it could survive—today Fleet Street is wondering if all its competitors will."

The newspaper of 1961 was the Sunday Telegraph. Make it your regular Sunday paper in 1962!

IN THE FIELD OF

INDUSTRIAL EXPANSION

MALTA is magnetic

Malta offers so many incentives to industrialists who seek expansion

- **LOW COST FACTORIES ON SERVICED SITES**
- **LOANS OF UP TO 33⅓% AND GRANTS OF UP TO 33⅓% (AND IN SPECIAL CASES UP TO 50%) OF FIXED CAPITAL ASSETS**
- **100% ON TRANSFER OF EXISTING PLANT**
- **TEN YEAR EXEMPTION FROM INCOME TAX**
- **EXEMPTION FROM CUSTOMS DUTY ON CAPITAL EQUIPMENT**
- **CUSTOMS DRAWBACK ON RAW MATERIALS AND COMPONENTS USED IN PRODUCTS FOR RE-EXPORT**

Malta's tremendous attraction lies in its perfect location—the very heart of the rich markets of Europe and the Middle East, so easily accessible from the Island's modern airport, new deep-water quay. Other benefits include a new power station and large labour force.
Over twenty organisations have already taken advantage of this generous scheme. Why not you?

PACING JAPAN'S ECONOMY

The Japanese economy has been growing tremendously fast in the past ten years and it has taken considerable effort on Fuji's part to continue setting the pace. It has meant keeping the Company's four modern mills working all the time to continue producing 20% of Japan's steel. It has meant multiplying our capital eighty-fold and our pig iron and steel production four-fold in the past decade. It has meant expansion and modernization—Fuji's Hirohata works being the most modern in Asia. It has meant importing tremendous quantities of coal and iron ore from Africa, Asia, Australia, Canada, the United States, and South America. And, of course, it has meant setting higher and higher standards for quality. Those are a few things that setting the pace has meant to Fuji. Why not share the benefits of our growth?

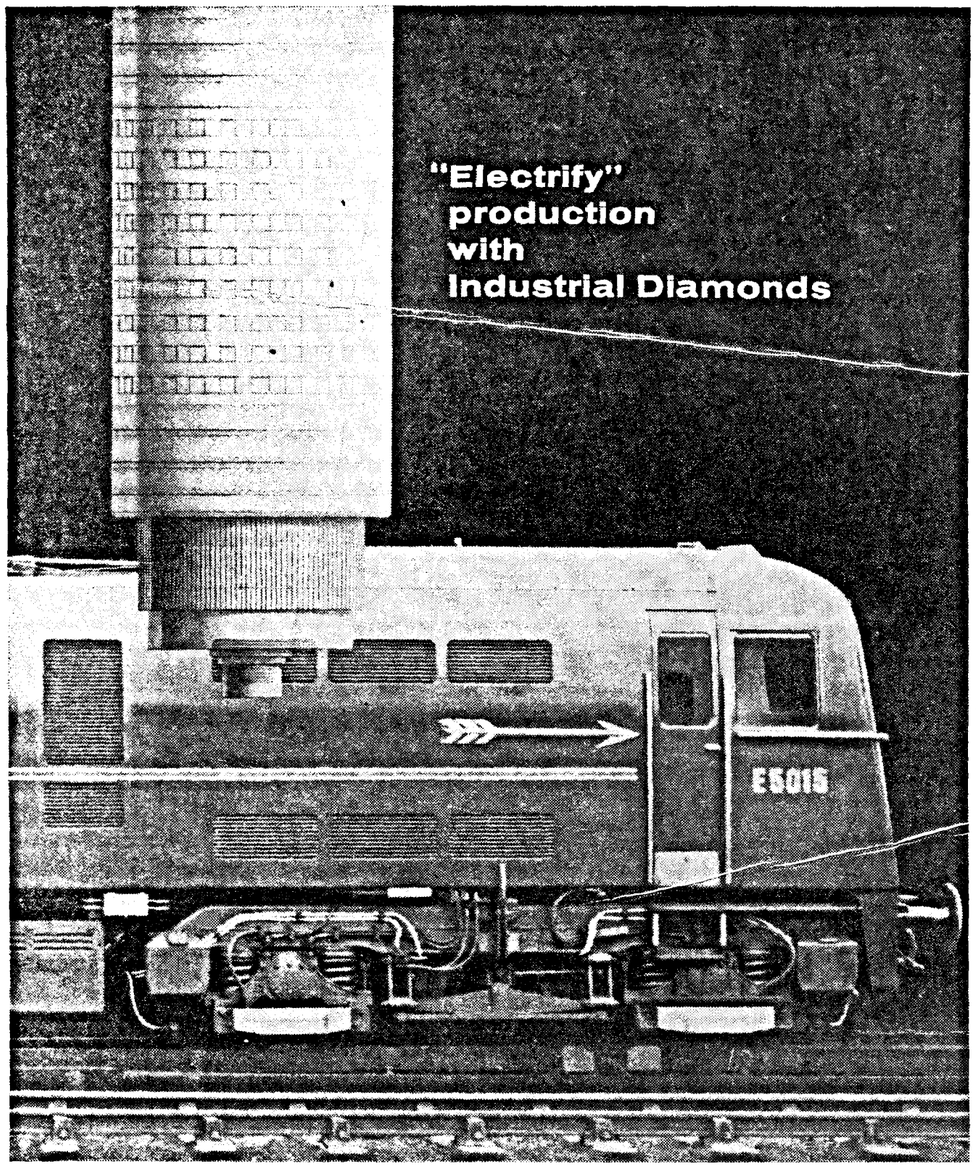
Secret of the first shoe that's as comfortable as a bare foot

Whether you're planning a new process, a new product, or improvements to an old one, success can depend on your finding a new raw material. A most promising source may lie among the different types of Polysar* synthetic rubbers, produced by the Polymer Corporation Limited.

For instance, there's never been a shoe that could really compete in comfort with walking barefoot—not until a newly developed process using Polysar SS-250 Flake made it possible. It produces a shoe with a microcellular sole moulded directly to the shoe upper. It's light. It's cool because it breathes. It's more flexible, more resilient. It's soft and at the same time tough. The result—a shoe that's as cosy as an extra skin.



Polysar SS-250 Flake is just one of the 40 types of synthetic rubber produced by the Polymer Corporation Limited. Within the world-wide Polymer organization there is a representative nearby, ready to advise you. A letter to the Marketing Division, Polymer Corporation Limited, Sarnia, Canada, will put him in touch with you.

1962 IN BRITAIN AND EUROPE
Bleak Outlook?

THE economic prospect before British and overseas businessmen in 1962 is discussed, under separate and detailed heads, on pages 49 to 56 of this issue. Unhappily, the conclusion must be that Britain is likely to limp only painfully through what should be its last year before integration with Europe. The maddening thing is that this gloomy guess rests less on one's assessment of the probable movement of impersonal economic forces than on one's misgivings about the economic policy that is likely to be followed by the Government.

This is not a new year in which the economic doctors seem to be differing wildly in their prognoses, so much as in their prescriptions. If the soothsayers were asked to start from the assumption that the next budget will be an entirely neutral one, most of them would probably guess that there may be some increase in Britain's real national income in 1962, but only a very small one (say 1 or 2 per cent) indeed. As industrial production now—in early January of 1962—can be barely if at all above its level of two years ago, while capacity to produce most certainly has been increased by two years of high investment, it should at once be obvious that this likely rate of expansion looks insufficient. In these circumstances the orthodox Keynesian advice for the coming budget—the sort of advice that one would expect Lord Keynes to give if he were suddenly to return from Valhalla to the Treasury—would surely be that Mr Lloyd should seek to widen the Exchequer deficit and thus raise total demand within the British economy.

Quite obviously, however, Mr Lloyd, without any such departed spirit to guide him and with the experience of recent years weighing heavily on his mind, is at present looking in precisely the opposite direction. Instead of preparing to give some mildly stimulatory reliefs away in his budget, the whole tone of his recent speeches suggests that he may intend to put £100 million or so of new taxes on. Here is a pretty damp and dragging economy, he says, and it is incumbent on me to dampen it further. When a statesman seems to be preparing to do something so very unpopular, he must have reasons that seem good to him for supposing that such a policy is right; it is therefore logical and proper to have greater inhibitions about criticising him than one would have about laying into a politician who was preparing to do something popular which he knew in his heart to be wrong. But at least Mr Lloyd, and all who think like him, should be begged at this new year to think again through the reasons for his present apparent prescription.

He seems to have three such reasons. The first is his fear that any revival of home demand would suck resources away from the all-important export drive. Nobody would deny that this can happen. When production is running at absolutely full capacity, it is obvious that any additional home demand must suck resources away from somewhere—and the export drive is one of the "somewheres" that can then suffer badly. Even when total production is not running at absolutely full capacity, there are some individual firms who will be fully engaged, and a reduction in home demand may enable them to shorten their delivery dates (and thus increase their sales) to export markets. But whereabouts on the cycle below full capacity production does Mr Lloyd assume that Britain stands now? At a pure guess, we would say that in present circumstances each £100 million of reduction in home demand might lead to perhaps a £10 million increase in exports and perhaps a £90 million cut in other production. If this guess is of approximately the right order of magnitude, this particular

form of export encouragement begins to look very expensive, even in the short-term; certainly some more direct form of encouragement to get British exports out of their rut (see pages 49 to 51) would seem to be better for the whole world economy. But it is the longer-term effects of this policy that Mr Lloyd particularly needs to consider now, in the light of Britain's experience in the last few years.

There are two ways in which resources can be shaken free for the export drive or any other desirable form of production. One way is by holding down total demand—in which case the industries that suffer most are, necessarily, those that would otherwise expand most rapidly as national income grew. The other way is to concentrate on shaking resources out of forms of production that are at present plainly inefficient; the main force that should be used to shake them free is the deliberate encouragement of competition—by cutting tariffs and other shelters for the inefficient (including watching very carefully the shelter that can arise from sheer, unchallenged bigness), stopping subsidies to lame dog industries, abolishing legal sanction for the enforcement of resale price maintenance and the like. Nobody who looks dispassionately at the record of the British economy can doubt that there has been far too much reliance on the first sort of sanction in recent years, and too little reliance on the second. It is significant that the industries where lengthy delivery dates are said to be a factor in holding back exports are nearly always manufacturers of specialised engineering products, in which Britain's capacity for production has increased by less than Europe's capacity in recent years. If Mr Lloyd's method of "making room for exports" this year is the method of the tough budget, cutting off the top of total demand instead of seeking to cut out the bottom sorts of sheltered inefficient production, he will be perpetuating this long-term weakness. If his method is that of encouraging competition—causing some permanent bankruptcies among firms that have been aided by special restrictions or subsidies for far too long, and some temporary unemployment among their workers—he will deserve to be much more widely supported.

EXACTLY this argument applies to the wages pause. The second reason why Mr Lloyd seems determined to hold down total demand this year is his fear that, as demand and production rose, employers with bigger orders on hand would bid up wages; of course they would, but of course many wage increases of that sort should be welcome. Except in conditions of blatantly overstrained production and hyper-inflation, the harmful ingredient in wage increases appears only when there is some extraneous "above-the-market" element which raises every firm's labour costs—pushing up the costs of firms that do not need more labour by the amount of some flat national wage increase, and obliging the firms that do need more labour to impose their (perfectly economic) bidding up on top of that national increase.

In recent years, unfortunately, nearly every national settlement with a big trade union has included some such above-the-market element; this is a direct result of the way in which our system of wage arbitration and conciliation works. When this happens, an automatic species of cost inflation has appeared, which may have little connection with the current state of demand. There really is no inconsistency in saying that the country, in such circumstances, should resist increases in money incomes that add to costs, while agreeing to increases in demand that lead to increases in production (and through those increases in production to increases in real income). It is generally true that a boxer who carries a growing amount of weight behind his punch is more likely to win international honours than a boxer who carries much less; but that does not mean that Mr Floyd Patterson's performance would be improved by loading a sack of coals on his back, and then saying that he should cut down his steak dinner because some boxers suffer through carrying a different kind of surplus weight as a result of over-eating.

THE third reason why Mr Lloyd appears to want to hold down demand this year is his belief that foreign holders of sterling will be impressed by such sternness. Now, there is no doubt that some foreign holdings of sterling are affected by foreign bankers' general state of confidence in the British Government's policy: in particular, at present, by confidence (or lack of it) that the Government will not run away into cost inflation before every strike threat. But, except when there are real fears of imminent devaluation in the air, the most direct determinant of whether foreigners will hold sterling is obviously the return or interest rate that they can get for holding it. That is why there is a good case for saying that Mr Lloyd should maintain high interest rates in 1962, and reflate demand through his budget.

As things are, there is a pressure group for softness over British interest rates, both in the City and elsewhere; and there is also an even more obvious pressure group for softness in British wages policy, in the shape of some national newspapers and all trade unions. So the danger for 1962 is that Mr Lloyd will be less stern than he ought to be about interest rates and wages policy; and that he may then feel it right to make up for this by being stern in his budget. He may then be tempted to invent, and even believe in, certain "confidence-creating factors" which he may suppose that foreign bankers are particularly looking out for in his budget: the necromantic status symbol of an overall Exchequer balance, for example, or a much-publicised swinging of Mr Henry Brooke's axe, not merely against Government waste, but against some forms of public expenditure that economically ought to increase more than proportionately with national income.

These prognostications may be too gloomy. Provided Britain gets into Europe, 1962 could bring with it one great saving grace: the Government might then find itself committed, towards the end of the year, to bring down British tariffs in the biggest single freer trading swoop that any major manufacturing country has ever dared to accomplish throughout commercial history. At long last the Government might then learn the lesson which one suspects it now most needs to imbibe: namely, that the arguments which it at present interprets as signs that Britain requires a greater deflation of total demand are often in fact a straight misreading of the signs that Britain requires a greater encouragement of competition. But profiting from this lesson, in turn, will depend on how far Britain can carry with it into Europe a glowing eagerness for expansion, a driving urge for competitiveness, to offset the signs of cartel-mindedness that are at present reappearing there as well as persisting here; the temperature reading of the Government's prescience at the onset of this new year can hardly be called very hopeful.

Brave Old World

If Britain, at next week's Washington talks, presses Lord Home's ill-founded arguments for curbing the UN's active role, international violence will be made more, not less, likely

"WHY," asked the Foreign Secretary in his speech at Berwick on December 28th, "is there a crisis of confidence in the United Nations? The answer is that, for the first time since its foundation, a number of countries have voted publicly and without shame in favour of the use of force to achieve national ends."

Lord Home was referring to the fact that four of the eleven members of the UN Security Council had been prepared to condone India's aggression against Goa, which he described as "a direct breach of the Charter. . . . When the UN approves that, it could be, as Mr Adlai Stevenson said, 'the beginning of the end'." The crisis, said Lord Home, had been foreshadowed by the growth of the Assembly's "new and dangerous practice" of passing "reckless" resolutions, "in particular on colonialism," which "revealed an almost total lack of responsibility." The "double standard" adopted by many of the newer member states forced him to ask whether there was to be one rule for the communists, who dealt in fear, "and another for the democracies, because their stock in trade is reason and compromise?" This was "evidence of a serious falling away from the principles of the Charter." It placed Britain in an "appalling dilemma."

How, asked Lord Home, could the UN be saved? He called for "a determined effort by ourselves, and those who feel like us, to bring the UN back to working the Charter as it was meant to be." He recalled that its 51 founder members had "laid the whole emphasis on the organisation of peace through collective security," expecting that the great powers "would deal together with any breach of the peace by the smaller powers."

The argument thus summarised—fairly, one hopes—deserves careful attention and dissection. Some of Lord Home's points clearly require correction too. The Security Council voting on Goa was, alas, by no means the first instance of UN members condoning the use of force to achieve national ends. Nor can such a minority vote be described as "approval" by the UN. Nor is it easy to recognise the picture of the Assembly's latest resolutions on colonialism as "reckless" and "irresponsible" and reflecting simply the voting power of the newly independent countries.

The resolution of the present General Assembly calling for a rapid end to colonialism was carried, on November 27th, by 97 votes to none, with the support of the older Commonwealth countries, the United States, and twelve west European countries; Britain, France, South Africa and Spain abstained. Russia withdrew a much less moderate draft on finding that the Asian and African members in fact would not back it. The resolution condemning South Africa's racialist policies, and urging it to change them, was carried by 97 to 2, with the support of every west European country except Portugal. Another draft, mainly backed by African states, and envisaging sanctions against South Africa, failed to get through—largely because India and a dozen other Asians would not back it. Of the two main resolutions on South West Africa, one was carried without a division; the other by 90 to 1 (Portugal), Belgium, Britain, France and Spain abstaining. The resolution condemning Portugal's failure to comply with its UN obligations on colonies was carried by 90 to 3 (Portugal, South Africa and Spain), France and Bolivia abstaining. The Arabs put up a moderate resolution on Algeria, which was carried without opposition, and an immoderate one on Oman, which failed to collect even half of the Afro-Asian votes.

Lord Home's complaint that "democracies" were discriminated against "because their stock in trade is reason and compromise" rang false in the context of Goa. Dr Salazar's stock in trade consists too largely of explicit denunciations of democracy and a proud rejection of compromise. And would this complaint ring true in a wider context? Where the colonial powers have bowed to reason—in India, Malaya, the Philippines, Burma, West Africa, Tanganyika—they (as well as the world at large) have enjoyed improved relations. It is where they have gone on trying to expectorate into the wind of change that unpleasant things have been flung in their faces.

IS the Foreign Secretary's version of the UN's original nature any more accurate than his picture of its present state? His recall to fundamentals suggests a nineteenth-century nostalgia for the brave old world in which the great powers kept (or supposedly kept) the pax Metternichiana. But there is more in the founding fathers' Charter than one might suppose from Lord Home's selective emphasis on law and order and the primacy of the great powers. Mr Hammarskjöld, in the introduction to his last annual report—a political testament which all foreign ministers might profit by reading—pointed out, as one of the UN's fundamentals, the fact that the 51 founding governments asserted "the equal rights . . . of nations large and small." Their stated purposes, moreover, included the furthering of self-determination for all peoples. Those members that were colonial powers promised "to take due account of the political aspirations of the peoples" of their dependencies, and to help them to develop "free political institutions."

It would be charitable to suppose that lack of acquaintance with these Charter provisions accounts for such flat statements as Lord Home made at Berwick, attributing the Congo's troubles simply to the "premature grant of independence to a country whose people were totally unprepared." Such a

statement implies that the colonial power's only fault was granting independence too soon; it contains no breath of criticism of that power's neglect of its promise to take account of the dependent people's aspirations and to help them build their own political institutions.

The Charter declares the first purpose of the United Nations to be, in part, "... to bring about by peaceful means ... settlement of international disputes or situations which might lead to a breach of the peace." One does not need to be an Indian to identify Portugal's continued authoritarian rule over Goa long after the transfer of power in British India, and Portugal's absolute refusal to discuss a settlement other than the status quo, as a situation likely to lead to a breach of the peace. Without pleading any justification for what India did by force last month, one may yet ask whether the member nations, in requiring themselves not to use force against each other, did not implicitly accept a joint responsibility for devising peaceful but effective means of adjusting the world to changing realities?

The preamble to the Charter announces a determination "to ensure, by the acceptance of principles *and the institution of methods*, that armed force shall not be used, save in the common interest" (our italics). It has never been seriously argued that the aim of this outlawing of war was to perpetuate the status quo of 1945. Any such argument would not only be absurd in itself; it would also flatly conflict with much else that the Charter contains, and which implies a world of substantial change, particularly in colonial matters.

HERE lies the most durable of the dilemmas of the United Nations. And, without doubt, it is a very real dilemma. A century ago, when Italy won its national unity, its struggle was supported by liberal opinion everywhere—and notably in Britain. Is the UN Charter to be so construed that, if it had applied at the time of the Risorgimento, the organisation would have been bound to condemn Cavour, Garibaldi and Napoleon III, and to uphold Austrian, Neapolitan and papal authority? Neither the letter of the Charter, nor the known intentions of the UN's founders, supports such a construction in favour of the petrifaction of the status quo. On the other hand, it is quite certainly the UN's clear purpose to prevent international violence, or failing that to restrict it. To approve the use of armed force to achieve national aspirations would be to open Pandora's box; the nations have signally failed to find an agreed definition of aggression, and could not possibly find one that distinguished aspirations justifying the use of force from aspirations that did not justify it. Any attempt to do so would be perilous indeed.

Between the two extremes of barring all violent change in the status quo and of opening the door to a calamitous free-for-all lies a huge void. Should it not be a major objective of all who are concerned with shaping UN decisions to seek to fill this void by "the institution of methods" that could secure a peaceful transformation of obviously explosive situations before the ultimate resort to arms occurs? Mr Hammarskjöld's concept of a UN executive capacity clearly pointed in just this direction. Lord Home's thinking, equally clearly, points the opposite way. To confine UN executive action to conciliation, as the British Government now seems to wish to do, means to leave the void aching—and thereby to make resort to violence more likely, and the scale of the likely clash larger.

It is not difficult to discern the reason for this new British anxiety to curb the United Nations, at a time when there is some vigorous thinking in Washington about means of strengthening it. Hitherto Britain's colonial position in Africa has enjoyed relatively gentle treatment in the UN. Now, however, with the screws tightening on the Katanga secessionists, Tanganyika newly independent, and Portuguese repression in Angola exciting general reprobation, the spotlight is moving inexorably toward Rhodesia, where Britain faces its most painful test of disimperialism. The Rhodesian federal government is already embroiled in an exchange of demands, accusations and denials with the UN secretary-general. And the UN Assembly, just before its Christmas recess, placed on its agenda an item—to be discussed when it resumes on January 15th—calling for a report about the present status of Southern Rhodesia.

A particularly difficult phase in Britain's relations with the UN is about to open. Some manœuvring for tactical position is, naturally enough, to be expected. But one can only hope that the manœuvring at the London end, and the British arguments in next week's discussion of the UN's future with the Americans, will not take the shape—negative, restrictive, founded on misinterpretation of known facts, and almost calculated to lead into blind alleys—that the Foreign Secretary's speech appeared to foreshadow. He said at Berwick, of the UN's new Asian and African members, that "unwittingly they play the communists' game." They?

Eight and Twenty Blackbirds

Divided, Africa's 28 states are a source of danger to one another, and to the world

NOW the pie is open, but Africa's 28 independent non-white states sing not in harmony. And there are about another 28 territories on the continent which could achieve sovereign independence. "Balkanisation" is becoming an obsolete word: it should be "africanisation." A dangerous enough place in 1961, Africa continues to get more dangerous. And like other quarrels, the quarrels of Africa attract bigger birds, the vultures and the eagles.

That is why the United Nations is in the Congo. Strife of that kind, with each side calling for support from outside powers, could occur again in countries unprepared for independence, or unable to sustain it: Angola, Mozambique, Spanish Guinea, perhaps Kenya. The small ones, like Gambia, French Somaliland, or Basutoland, tempt take-over bids—as do artificial new states with rich resources and little population, like Gabon or Mauretania; there is more than one Katanga.

Plenty of room exists for argument between independent African countries. Ethiopia and Somalia, Ghana and Togoland, Morocco and Mauretania—each is a pair of tethered fighting-cocks, any one of which might soon begin to draw blood. Again, one of Africa's many great dividing-lines lies between French-speaking and English-speaking Africa. To the Ghanaians, most of the French-speaking African countries are half-way dependent, being ruled by French "neo-colonialists." Certainly some of these featherweight countries, like Niger or the Central African Republic, amount to no more than a few small towns and vast empty expanses of jungle or semi-desert. Necessarily, they depend heavily on France to run their administrations, balance their budgets, and provide their armies.

Because of this, even Nigeria still seems too suspicious of French motives to apply for associate membership of the European common market—although such a move might lead other English-speaking African states into closer union with their French neighbours. The economic division between that part of Africa associated with the common market and that part likely to stay outside it is an added irritant. There are more. Many frontiers mean much smuggling. The comparative wealth of some African countries—Ghana, for instance—is a cause of resentment to others.

Sufficient though they may seem, these are not the only reasons why Africa should seek unity. Most of the new countries, especially in west Africa, revolve around the route to the capital and the port at the coast. Their trade is with their parents in Europe; to speak from one state to another on the telephone they must channel their calls through London and Paris. Economic planning is possible across state boundaries, but it would be easier in west Africa if the boundaries did not exist. Because of this, Africa will have a better chance of developing its economy if it is more united—just as it will never be safe from local quarrels while it remains so divided.

This is why most Africans talk of African unity. Dr Nkrumah's dictum, that Ghana's independence is "meaningless" so long as the continent is divided as it is and parts of it are still colonised, is not without foundation. Although many educated Nigerians and French-speaking Africans oppose Dr Nkrumah's flamboyance and his methods of government, few of them seem to think that he is wrong when he calls for pan-African unity.

THERE is, however, a difference of approach. The five countries that met at Casablanca at the beginning of 1961—Ghana, Guinea, Mali, the United Arab Republic, and Morocco—have a radical approach to African unity, as to most problems. In President Nkrumah's phrase, they seek first the political kingdom: their belief is that political unity must come first, before inter-territorial divisions can be ended.

Virtually all the rest of independent Africa (excepting, of course, South Africa) got together at Monrovia in May, 1961, and decided that existing political boundaries must be respected. Before political unity could be thought of, they said, practical bonds must be established. They spoke of road and telecommunications networks, schools of French and English, a common market, and a common currency. Some members of the Monrovia group think that this sort of thing may lead to political unity, but that it probably will not—the Nigerian prime minister, Sir Abubakar Tafawa Balewa, seems to believe this. But others—Dr Azikiwe, or the Nigerian foreign minister, Mr Jaja Wachuku, for instance—seem to think that a more unified Africa is inevitable in the long run.

The Monrovia approach, however, is essentially conservative. Since May, both the Monrovia and the Casablanca groups have decided, at a bunch of separate conferences, to forge links among themselves. In both cases little has been done, although many plans have been made. Now the heads of state of the Monrovia group are to meet at Lagos from January 25th; their hope is that some at least of the members of the rival group can be persuaded to attend. To this end there has been much coming and going in west Africa. In December, Sir Abubakar visited President Sékou Touré of Guinea and President Houphouet-Boigny of the Ivory Coast went to see President Modibo Keita of Mali. The President of Mauretania, Mukhtar Ould Daddah, paid a call on President Nkrumah—who, earlier in the year, spent some time knocking down a specially-built brick wall on the border between his country and Upper Volta.

There are faint hopes alive in Lagos that the coming conference will bring about a rapprochement between the radicals and the conservatives of Africa. This is in fact unlikely unless the Casablanca radicals decide that their best tactics are to work within the opposite camp. And even the tenuous kind of unity that could come out of a conference of heads of state would be no more than what Mr Dunduza Chisiza, of still-dependent Nyasaland, calls a "federation of intellectuals." Mr Chisiza's point, that pan-Africa is a long way ahead because it has yet to be instilled into the minds of ordinary Africans who, in the main, still see no further ahead than their tribes, has also been taken by some Nigerians and French-speaking Africans. They look to federations of federations—an Africa divided into five great economic regions federated with one another and themselves federations of states. More may well be heard of such a complex scheme at Lagos.

Paradoxically, the most potent drive to African unity exists in Europe, where, according to pan-Africanists in Accra, the neo-colonialists plot and scheme to divide Africa. This drive is the result of Africa's most explosive and terrifying division of all: between the black-ruled north and the white-governed south. In Katanga the two giants have, for the first time, met in a head-on clash—and the echoes are certain to be heard in Lagos. Whatever the British Government thinks it is doing in Katanga, and Rhodesia, it appears, in Africa, to be supporting the white south. When Africans in Lagos, or even Dakar, look at this part of their continent, their rawest nerves are touched: to them, it seems, Britain and Portugal, France and Belgium, are acting in concert to preserve their own Deep South for white domination. Deference to Dr Verwoerd has the same effect.

The tragedy of this is that none of the former colonial powers has any real long-term interest in placating Dr Salazar or Dr Verwoerd—although the Conservative party may feel that it has an interest in placating Sir Roy Welensky. The British Government's recent record in Africa was good until events reached Rhodesia. It seems now to be spoiling the record in the interests of placating European partners who themselves, almost unobserved in London, are moving out of the era of hidebound colonial thinking. It is easy to be cynical and say that the result of this is to push the African leaders who will meet at Lagos into closer co-operation: a more likely result is that the dangerously divided Africans will come to place even less faith in being looked after by Europe than South Americans divided put in being watched over by America.

Report on Robbins

A progress report on the work of the committee which is examining what Britain should do to reform its system of higher education

Keele: now a full university

ONE day a campaign medal may be struck for the Robbins committee. To be in the cockpit of the top people's debate on higher education (the War of the Oxbridge Succession) has its risks. Stormed at by donnish shot and shell for the past year, the committee must be wondering whether the ammunition supply is ever going to run out. Its brief communiqués speak of absorbing a hefty onrush of memoranda, engaging the big guns in twice-weekly hearings and still finding strength to descend on Scotland in the rigours of December. Expeditions are being planned to the United States in April and Russia in June. But how is the war really going? It looks (from a safe reportorial distance) as if things are only just beginning to hot up.

The central issue is over numbers: when all is said and done this will be what matters in the Robbins report. If the expansionists can win their battle, the objectives of the other reformers, in securing the wider conferment of university status, raising the reputation of the general degree, starting new institutions like liberal arts colleges, cutting down the wastage of potential talent (particularly among the women), and strengthening the academic higher command by overhauling or superseding the University Grants Committee, must eventually be added unto them. And if a balanced but flexible system of higher education can be evolved in this way, then the whole problem of the curriculum and specialisation in the sixth forms of schools will also be capable of solution.

There are now just over 175,000 student places for full-time higher education in Britain: about 110,000 in universities, 30,000 in teacher-training colleges and the rest in colleges of advanced technology, technical colleges and art schools. Anything up to 10 per cent of these places are taken by Commonwealth and foreign students, and despite the growing pressure of the 17-plus population at home it is actually in Britain's interest to maintain and even increase the facilities for overseas entrants in its own programme. If one takes the normal first-degree course to be three years and then makes allowance for the increasing length of post-graduate courses, it is apparent that no more than 6 per cent of British children (50,000 a year) achieve a higher education of any kind and no more than 4 per cent make their way through the universities proper.

The nub of the expansionists' case is that by 1980 the rising birth-rate, the rising number of children staying on at school beyond the age of 15 and achieving two advanced levels in the General Certificate of Education, and the rising middle-class expectations of working-class families generally will produce a qualified and active demand for 500,000 places in higher education: that is, 20 per cent of children in each age group will want to go on to it. There are obvious incalculables in this figure, but in the past these have invariably been under-estimated not over-estimated. The Canadians follow the 20 per cent formula, and all good British expansionists (following Crowther, Vaizey and others) should be pressing the Robbins committee to do the same.

If anyone thinks this is a wild estimate, either of the supply of potential students or of the prospective demand for teachers, administrators and technologists, they should read the Fabian Society's memorandum calling for between 700,000 and 730,000 places by 1980. And if anyone imagines that even the 20 per cent formula can be attained without draconian measures, they should reflect on these facts: current expansion plans will provide only an extra 100,000 places in the present decade (and the Committee of Vice-Chancellors and Principals is jibbing mightily at the thought of going faster). This means that the effort in the second decade, the 1970s, which is what the Robbins committee is really asked to determine, will have to be twice as great if those who possess the ability to pursue a higher education are going to be allowed one.

WHAT does this entail in providing new institutions? A new university is doing well by present standards if it provides 3,000 places in its first ten years. To the extent that this rate of growth is governed by genuine academic standards it must be respected; to the extent that it signifies the administrative and financial difficulties in starting from scratch in a cathedral town and constructing split-new faculty buildings, laboratories, and student halls of residence it needs to be looked at again. One would like to hear of more people telling the Robbins committee that, abroad, two universities can actually co-exist in the same conurbation, that laboratories and other facilities are grossly underoccupied in the vacation months (although Oxford and Cambridge bursars know how to pack in paying customers between June and October), and that halls of residence are not the only guarantee of a lively interchange of minds.

Outside the donnish firmament there is a better grasp of realities. The Association of Teachers in Technical Institutions says stoutly that the enclosed academic community "is neither necessary nor desirable." It would prefer to concentrate on providing common room and student society facilities on the campus and positively encouraging the students to live in the outside world. This is good sense. At the outset of a crash programme it is far better to have students who "belong" to a university only from nine-to-five o'clock each day, and even a shift system, than no opportunities at all. The graces can come along later. If this sounds old-fashioned, Oxbridge dons who sniff at the Scottish system

should have a word with industrial employers (and the General Medical Council).

In any event, the Robbins committee should find the technical colleges and teacher-training colleges more ready to experiment and expand. This is where the chief effort should be made and where financial outlay would bring the quickest return, at first in vocational training and later in a more rounded education. First, there must be a rise in status, and one that makes a real impact on parents and school teachers who still cling to the belief that the high road to success is only through the university gates. The colleges of advanced technology are beginning to make their mark all round: they should be granted degree-giving status right away (not even the Committee of Vice-Chancellors and Principals denies this). This, in turn, ought to encourage the advancement of some other technical colleges, which can equally be helped by the growing emphasis on "sandwich courses" in co-operation with industry—provided, of course, that the aim is to widen syllabuses, not to provide purely vocational training at the behest of a dominant local firm.

The teacher-training colleges are more of a problem. They happen to be the most tightly enclosed educational institutions in the country, but none of the published memoranda submitted to the Robbins committee is entirely happy about them. What one would really like to see is a breaking down of their cloister walls and a steady development into multi-purpose colleges, both to sharpen the intellectual atmosphere and reduce the caste-complex that the profession has been developing. Their entrance standards are improving: at present 35 per cent of their students had two or more passes at "A" level and a further 25 per cent one pass. So, too, are the quality and quantity of the research work they are doing. Initially there are grounds for bringing them much more into the life, and partly under the wing, of their nearest university. But the aim ought to be to raise them to a full degree-giving status of their own: the present pressure towards a degree-holding teaching profession in England should be capitalised on. In any large town the three nuclei of a teacher-training college, an up-and-coming technical college, and perhaps a new liberal arts or commercial college should provide the foundation of a first (or second) civic university. Obviously this kind of higher educational development will cause serious staffing difficulties, at least initially. It is good to see that the National Union of Teachers, in its evidence, is looking ahead to short-term and part-time secondment from the schools—both to relieve the shortage in the new institutions and to provide closer links between secondary and higher education.

ONE of the more important issues that the Robbins committee has dragged into the light of day is the tolerance of an unnecessarily high wastage rate among even the existing highly-competitive university entry. A paper submitted from the University of London Institute of Education shows that between 13 and 15 per cent of non-Oxbridge students in England and Wales fail to stay the course, and that the rate is probably even higher in Scotland. At Oxford and Cambridge it is as little as 4 per cent. Figures of this kind are invariably seized upon by the restrictionists to show that the new type of Redbrick entrant is pretty hopeless and that to let more people in would be a disaster. But the facts are rather different. The minimum entrance requirements of all universities are well above those before the war, and in many faculties have actually risen out of sight of the minimal two "A" levels. There is disquieting evidence that a shortage of second-year places in science and technological departments means that students who are fully abreast of their work are still thrown out: this is known as keeping up standards. Many dons are inclined to talk about 10 per cent wastage as inevitable, and this is even echoed outside. The case rather seems to be that a great deal more research needs to be done into methods of selection and dismissal, and possibly that faculty decisions at Redbrick should be reviewable, with more general considerations of progress and circumstance given a full hearing, as at Oxbridge.

TWO issues have emerged about the University Grants Committee itself. The first, generally agreed, is that the committee needs reinforcing, both because of the growing routine demands on its full-time staff and because the universities as a whole could benefit from more central research into education, administrative and even new building problems. The second issue is whether the UGC should remain directly tied to the universities alone or whether it should become the basis of a supervisory body embracing all higher education. This is an important point, not least because of the £50 million in public funds annually put at the disposal of an authority which is not responsible to Parliament. There seems to be a good case for disturbing the equable relationship between the UGC and the universities as little as possible. If this is so, then the colleges of advanced technology might be happy to evolve a similar guardian and intercessionary agent of their own.

There is also a school of thought that would put the lot under a Government department, either the Ministry of Education or Lord Hailsham. This hardly seems a happy solution, either in terms of potential political supervision or of the understandable preoccupation of the Ministry of Education with the vast problems in its present sphere. The best approach may be to let the UGC (and any new counterparts) stay in business, but to set up a permanent brains trust for higher education to watch over the whole scene, encourage fresh ideas, ensure co-operation with the schools and fit new institutions like commercial colleges into the structure as they develop. Something like parity between academic and non-academic membership is to be desired. Whether any members of the Robbins committee will volunteer for the job is, of course, another matter.

NOTICE

to Postal Subscribers

It is possible that this issue of *The Economist* will reach postal subscribers later than usual. The explanation is that the Post Office staff is "working to rule" (see our note on page 18). This means that they have been told by their trade union not to show any "goodwill" to their employers or customers—e.g. they will not show any undue hurry to catch outgoing trains or 'planes—until their wage dispute with the Government is settled.

NOTES OF THE WEEK

PAY PAUSE

Post to Pillar?

THE postal workers' go-slow has started 1962's wage battle on a note of serious farce. The union is issuing communiqués saying that its members are loyally doing their jobs as badly as possible. The Post Office is issuing counter-communiqués saying that on the contrary many of its people are working very well and that the current delays in the mail are mainly due to the weather. And Mr George Woodcock has told a rally of postmen and postgirls, who were hardly expecting such oratory, that it is they who will "save the working people of this country" by thus "standing in the forefront of the battle" and showing "that the only thing to make the Government reconsider the pause is force."

The reasons for the union's and the Post Office's cross-talk are easy to understand. Both know that many postal workers would have been loth to obey a union call for a full-scale strike, although fewer workers are averse to a form of action that can actually increase their current earnings (by necessitating more overtime). It is in the union's interest to exaggerate, and the Post Office's to minimise, the very real delays which obstructionism by even a minority of post-workers can cause. Mr Woodcock's heroics are easy to understand also. Being a moderate man, he must wish to achieve the appearance of breaking the pause before the greater militants of the union movement have recourse to full-scale (and possibly unsuccessful) strikes.

Even if the postal go-slow did not hold up a single weather-bound mail bag, it could, as it happens, be strategically well-sited to achieve this appearance, both in place and time. In place, because everybody knows that some post office workers are going to get a wage increase anyway, when the report of the Civil Service pay unit comes out. In time, because Mr Henry Brooke is due to meet representatives of other civil service unions soon, and is expected to foreshadow some increase for them. In ten days' time, too, London Transport is to make its reply to the wage claim by the London busmen. London Transport is probably the weakest of the managements of the nationalised industries just now; on past form, it is likely to be aching to be able to break the pause, and then say that other people did this first. The next two weeks are therefore liable to see a new rash of newspaper headlines proclaiming weakness by public authorities on the wages front; and Mr Woodcock could then draw attention to the postal delays, saying *"post hoc, ergo propter hoc."*

Mr Woodcock: moderate heroics

Delays which may really have been largely due to one sort of freeze would then be given credit for having broken another.

Light under Bushel?

IN these circumstances, the Government may find itself obliged to take quick action to try to dispel the appearance of having thus been driven from post to pillar. "Quick action" could mean obliging Mr Brooke to give another very dusty answer to the civil servants after all; this is still quite conceivable. Or it could mean taking the first wraps off the Government's so-called long-term wages policy; presumably something may even be heard about this before the weekend, for Mr Lloyd is due to meet the TUC about his planning council this Friday. Unfortunately, it looks as if there has been a muddled wrangle in the Cabinet about what this policy should be. Last weekend an extraordinary story began to appear that perhaps Mr Lloyd thought that the safe average increase for wages this year might be around 2 per cent; but that he may not announce this figure, for fear that this safe average increase would promptly be interpreted as the minimum increase that ought to be granted to everybody. There would be a wonderful dottiness in this decision: to indulge in wages planning but not to tell anybody about it, to turn on the guiding light but only under a thick blanket of secrecy where nobody would be able to see it. Presumably even the present Government cannot really mean to do this.

The obvious and right course is to turn on the guiding light now; and to make it a real and specific one. Let the Government say, if it believes this, that the safe *average* increase for wage rates this year is only 2 per cent; but let it make it quite clear that this means that in deficit industries without any real shortage of the labour needed to run economic services the safe increase for 1962 is less than this: indeed is nought. And let it say specifically and publicly how this formula should apply to the London busmen—and to the miners and railwaymen—instead of risking another inflationary debacle as over the electricity claim.

MIDDLE EAST

The Sorry-go-round

GENERAL QASIM and President Nasser, the Arab world's two revolutionary leaders, have equal and opposite reasons to contemplate 1962 without much complacency. President Nasser is relying on the strength of his name and character to get away with reforms that are hated by most men of influence in the United Arab Republic; General Qasim is carrying out policies that might win general approval if they were initiated by somebody who had not already forfeited so much respect. Both the Egyptian president and the Iraqi prime minister rely on the support of armies whose loyalty is no longer unquestionable.

The two leaders have become linked by the tenuous bond of their discomfort and isolation. For the time being, Cairo is overlooking the dawning friendship between Baghdad and the new Syrian government; it has also become more ambivalent in its attitude towards General Qasim's ever-repeated claim to Kuwait. In Cairo and Baghdad alike, almost everything that is now happening in the Middle East is bundled into the same package marked with a large anti-imperialist (alternatively, in Cairo, an anti-reactionary) label. The Egyptians have been able to quote the Kuwaiti ambassador to Cairo in support of their thesis that last week's military movements in the Persian Gulf were part of an imperialist conspiracy that was wider and more sinister than the protection of Kuwait. The Iraqis, for their part, have discerned the same hand behind the recent flare-up in Kurdistan, the British tactics in the Gulf and the quarrel with the oil companies; the coincidence of all these events points, in their view, to a conspiracy between the rebellious Kurds and the anxious, money-grubbing imperialists.

On Sunday, General Qasim told a Baghdad newspaper that fighting had again broken out in Kurdistan. During the autumn, Kurdish guerrillas led by Mullah Mustapha Barazani were forced into temporary retreat after ruthless bombing of the Kurdish villages by the Iraqi air force. The British too, in the years when Iraq was under their control, used punitive bombing against the independent-minded Kurds, but on a different principle, giving advance warning so that the property could be

destroyed without slaughtering the villagers. Last year's attacks were different; even so, the quiet that followed has not lasted long. Once again the Iraqis are claiming that the revolt has been crushed; the Kurds may possibly know better.

Troubles to the north and south of the country are, according to General Qasim, bound up with the government's dispute with the Iraq Petroleum Company. The Iraqi minister for oil, Dr Salman, ended a private visit to London with a press conference on Tuesday. He pointed out that the law of December 12th restricting the oil companies' operations to less than one per cent of their concession areas, was only a beginning; since the two sides had failed to agree satisfactorily on any of Iraq's twelve demands, other laws were already in the making. Dr Salman did not go into detail, but maintained with some persuasiveness the justice of his government's case and excused its actions by arguing that the oil companies had been disingenuous and patronising. With the opposed attitudes far apart, the IPC has called for arbitration without, one supposes, much hope of getting it.

PORTUGAL

Lisbon Earth Tremor

CAPTAIN VARELA GOMES'S unlucky attempt to launch an armed rebellion against Dr Salazar at Beja, in southern Portugal, on New Year's Day ensured Dr Salazar of attention, outside Portugal at least, for the address read on his behalf to the National Assembly on Wednesday. But what was definite in the speech was not new. Dr Salazar still does not intend to recognise the Indian conquest of Goa as final. He regards the United Nations as a failure, speaks of Portugal being "among the first" to leave it (this is something less than actually leaving) and intends to refuse co-operation with the organisation; but Portuguese co-operation has not been exactly conspicuous for some time. He appreciates Britain's efforts to deter Mr Nehru from the invasion of Goa, but deplores his ally's reluctance to resort to arms in his defence, and therefore proposes to re-examine those parts of the treaty that seem to bind Britain to defend Portugal's colonies. He carefully did not say that the alliance was at an end. There was no hint of any greater realism in Portuguese foreign and colonial policy. In short, the whole speech can be seen as an effort to reassure and rally the regime's supporters, little more.

The unsuccessful *coup* at Beja may have been prompted by right, or wrong, reactions to Dr Salazar's disastrous colonial policy. Either way, it is of interest as the first recorded rising in arms within Portugal against Dr Salazar (an intrigue against him among senior officers was easily defeated last spring). It is as yet far from clear how serious the attempt was. If the various rumours that there were attempted uprisings at three other places in Portugal, including Lisbon, are true, then it suggests that the underground opposition to Dr Salazar may be more active and more, if not better, organised than has hitherto been supposed. The fifty or so civilians who are said to have followed the small officer group in the assault on the barracks at Beja are officially alleged to have been workers from the industrial areas near Lisbon: taken in conjunction with Beja's reputation for left-wing sympathies, it suggests that a new element has joined the active opponents of the regime.

Pioneer rebel: Capt. Varela Gomes

The cancellation of the mass demonstration that had at first been intended to accompany Dr Salazar's speech does something to confirm this. Tens of thousands of demonstrators were to have been brought to Lisbon by special train: but Dr Salazar appears to have decided that even hand-picked proletarians can no longer be relied on to demonstrate on the government's side. His spokesmen deny that there has been trouble in other places than Beja; but all army officers' leave has been cancelled, and "preventive measures" were taken this week at barracks, police stations and other vulnerable points.

CENTRAL AFRICA

The Twist

AGAINST the beat of the war drums at Kipushi, on the border between Katanga and Northern Rhodesia, the political dance is like the newest in the West: the Twist. You wiggle the posterior as if drying yourself with a towel, whilst stamping out an imaginary, or actual, cigarette end with one foot. On Wednesday, December 27th, for instance, the Rhodesian federal government denied charges made by the United Nations that arms and soldiers were being allowed to cross the border. At the same time, the Rhodesian government said it was "particularly alarmed" at an alleged appeal by U Thant for tanks and howitzers to use in Katanga. On the 29th the acting secretary-general of the United Nations, U Thant, denied having asked for any howitzers or tanks. The Rhodesian office in London, asked to substantiate the charge, has pointed to a news agency report that Brigadier Rikhye, the UN military adviser in the Congo, had said on December 16th that more artillery and tanks were needed.

The importance of all this squabbling is that it underlines the lack of faith many Africans and Asians have in Sir Roy Welensky's protestations that he favours the re-integration of Katanga into the Congo. Their suspicions already extend to the British Government, which is put in a double difficulty by U Thant's request on December 28th that UN observers should be admitted to points on the Northern Rhodesian side of the border, to check whether arms and mercenaries are crossing. This may oblige the Government to face the question whether it is answerable for the Northern Rhodesian border or not. If it accedes to the request, a political row seems certain. If it refuses, Afro-Asians and others will take the refusal as confirmation that there is something to hide. (A request made to Portugal, to allow UN observers into Angola for the same purpose, is not likely to be seriously thought about at all.)

Mr Tshombe himself seems to be in no hurry to keep the agreement he made at Kitona on December 21st. He then promised to send 15 deputies to the central Parliament in Leopoldville; only seven arrived. He said the agreement should be ratified by the Katanga Parliament, but cried "illegal" when President Kasavubu called for a Katanga provincial parliament to be held at Kamina, in central Katanga, rather than at Elisabethville (Kamina is in UN hands). Mr Kasavubu's call was partly a ploy designed to show that Mr Tshombe's parliament is no more than a rump organisation: it should have 60 members, but more than half of them have deserted it. Contacts between UN and Katangan officials were cordial this week, but the commanding officer of the mercenaries, Colonel Falques, threatened reprisals against his Swedish prisoners if anything happened to two captured mercenaries.

The Turn

ACROSS the border in Northern Rhodesia the British Government has avoided an inquiry into allegations that the disturbances between July and September last year were put down with brutality; instead it has issued a long official denial in reply to the United National Independence Party's charges. This official statement does, however, admit that the disturbances were due to dissatisfaction with Northern Rhodesia's proposed new constitution, as announced in June; it also admits that some members of the security forces had to be disciplined, that there may have been "bullying on a few occasions," and that some houses were burned down. It argues, convincingly that UNIP members started it all.

A new version of the June constitution is long overdue, but this has become part of the Katangan, and whole central African, problem. The British

Government will need a courage it has not so far demonstrated in Rhodesian affairs if it is to act in pursuit of its own highest interests, undertake constitutional change at a pace the African population will accept, and face manfully the unpleasantness with the United Federal party that could be put off, but cannot be avoided.

Mother Goose

THE exchange of verbal fire at the end of the year between the United Nations and the Union Minière is a reminder that the future of Mr Tshombe's government, and for that matter of the Congo generally, turns in large measure on how much backing the Union Minière gives him. Holding the purse strings, as it does, it is in a position to sustain him in independent affluence or to guide him towards co-operation with Leopoldville.

Reports that M. Spaak, pressing on bravely with his policy of reconciliation with the United Nations and the Congolese central government, has been urging the Union Minière to hand over some of its taxes to Leopoldville instead of paying them all to Mr Tshombe, therefore make good news. The Belgian government has denied the reports. It is not finding it easy to swim against the stream of Belgian public sympathy for Mr Tshombe. Indications remain that the reports are true.

Unfortunately there have been few signs that the Union Minière is prepared to take notice of M. Spaak on his own. Some of its officials are reported as saying that Mr Tshombe would rather gut its installations than see a chunk of profits paid to the Leopoldville government. Would he? That would be killing the goose that lays his golden eggs. This week the United States has indirectly added its weight to M. Spaak's persuasions. Here is an opportunity for the British Government to do something specific for a Congo settlement. A word in the ear of the important British shareholders of the Union Minière might tilt the balance. In the long run, after all, the company's own future will be secure only in a united, peaceful Congo.

WEATHER

Winter Wonderland

No doubt official publications will continue to describe the British Isles as "of temperate climate" long after this week's great freeze-up is forgotten, or at least relegated to the sort of folk-memory that likes to sentimentalise about Frost Fairs and skating on the Thames. No doubt, too, most official bodies will take the description at its face value and neglect to make provision for anything of the same sort again; so that next time it snows all over Britain, and the temperature drops below freezing for three or four days, the entire country will once again be plunged into the damp and miserable chaos with which it greeted 1962.

It may seem unfair, for a newspaper which is always urging British Railways to run themselves economically, to castigate them for some of the things that happened this week. It would be absurdly uneconomic, a railway spokesman has said, to undertake vast anti-freeze-up precautions in order to avoid perhaps 24 hours of acute inconvenience a year. But would it? It is clear from the experience of countries wiser or less temperate than ours, that there are ways of seeing that points do not freeze; that conductor rails do not short out; that signalling systems are not so unprotected as to require a man riding on the engine-front to direct trains. The London underground, whose ability to keep running (with spasmodic

Edinburgh's solution: the electrified Mound

delays) prevented the worst chaos, spends £100,000 a year on frost precautions. For a nation with a subsidised railway system, the cost against which such rarely-used precautions should be measured is not the cost of lost custom to the railways during a freeze-up; as most people have to travel anyway, there is not much custom lost. The real measure, apart from personal inconvenience, is the cost of working hours lost and commerce disrupted. If every central London worker lost on average two hours office or factory time this week—and over the week as a whole this seems unlikely to be an overestimate—the cost of this factor alone, in central London alone, must have been at least £1½ million. Add to this the cost of disruption of movement of goods, and the economic case for installing even "elaborate and rarely-used precautions" on crowded lines no longer appears to be quite such an absurd one.

KNIGHTS AND OTHERS

Honours without Profits?

THE New Year Honours list was a pretty conservative one (with both a small and a big C). In some respects, this "small c" conservatism was a pity. One would like to see this odd public prize-giving of between 4,000 and 5,000 awards a year—a prize-giving which no other country has—turned to hard national profit in encouraging the export drive: knighthoods and other honours for leading lights in firms that have expanded their exports particularly notably, with citations explaining that they have done much better than other and bigger firms in their industry. No doubt this would cause great annoyance and envy among bigger lights in the same industry. But that is not an objection; it would be the objective. Another traditional radical complaint against the honours list—that it is too heavily weighted with knighthoods for civil servants—is, however, unfair. Most civil servants who get their Ks nowadays are of a quality that would attract a higher salary in outside industry; this is pre-eminently true of this year's batch. The only possible cause for annoyance arises when a civil servant receives the accolade and then departs to get a higher salary in outside industry before he reaches full retirement age—but unless one is to invent reversible knighthoods, it is not very clear what can be done about that.

Mr Macmillan has continued his habit of recommending even more honours for Conservative party workers up and down the country than other Conservative Prime Ministers have done; it is typical (and rather engaging) of him that he has not been deterred—as most timider politicians would have been—by the recent publicity given to the figures dug out by an American researcher relating to his generosity in this respect. Since these rank and file Tories presumably enjoy getting their awards almost as much as Labour hugely enjoys criticising Mr Macmillan for giving them, a good time is had by all—with no possible harm to the rest of us. Near the top of his political honours list, Mr Macmillan has continued to award more knighthoods to long-service (mostly class of 1945) Tory backbenchers whom he has not included in his administration, often because they have been too right-wing for him; rebel Tory motions on Africa always read nowadays like some medieval roll of chivalry.

Outside Parliament, where honours are plainly a recognition mark of achievement rather than a consolation prize for failed-Cabinet-status, more difficult problems arise. In Fleet Street, the newspaper success story of 1961 was the establishment of the *Sunday Telegraph*. But the success story of the past quarter of a century or so has been the rise of its daily stable-mate, and the successful, estimable and urbane managing editor of the *Daily Telegraph* (an ex-*Times* man like so many of the top *Telegraph* people) is the new newspaper knight—which raises again the old, real question whether the active editors of independent national newspapers ought properly to be offered, or to accept, these marks of official esteem.

BERLIN

First Foot

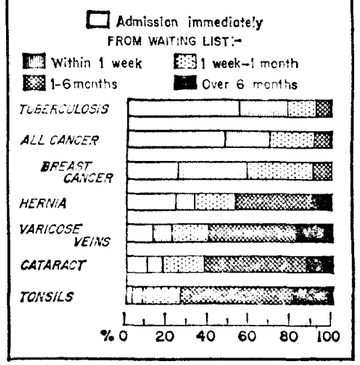
HAVING called on Mr Gromyko on Monday to wish him a happy new year, Mr Llewellyn Thompson, the American ambassador in Moscow, went back to

YOU'D be short of mod. cons. without the vital metal

Steel

The street is the best washroom that many people have in countries where they simply haven't enough steel to go round. In Britain we enjoy the advantages of plenty of steel – enough for all the domestic equipment that makes for civilized living. Steel, not only for baths, but for automatic boilers, washing machines, cookers, refrigerators, sinks, cisterns. For labour-saving gadgets of all kinds. But none of these would be very much use without the background of power supplies, transport and manufacture – all dependent on steel. Anything that has to be strong or springy, tough or hard, proof against heat or elegantly and intricately shaped, can be made of steel – and generally is. And Britain's steel industry supplies steel of the right quality, in the right quantity, at the right price. We use 6¼ cwt. of steel per head every year. That much, and more, is being produced by our own steel industry, with a comfortable margin for export. Year by year new plant is being put in, new methods are being adopted, efficiency and economy are increasing. Britain's steel industry is playing its part in providing a sound basis for a healthy economy. THIS IS THE STEEL AGE

BRITISH IRON AND STEEL FEDERATION



the Soviet foreign ministry on Tuesday to resume the "probe" of the Soviet position on Berlin. This is the first formal move in that direction since the conversation between President Kennedy and Mr Gromyko on October 6th, three months ago, before these talks were side-tracked by the confrontation of tanks at the Friedrichstrasse crossing-point. How close the "probe" is getting to real negotiations can be judged from the questions Mr Thompson presumably put to Mr Gromyko.

He asked Mr Gromyko, it is fair to assume, whether the Russians stand by the unofficial suggestion they let drop after Mr Khrushchev's talk to the west German ambassador on November 9th. This proposed that the Soviet Union should come to terms with the West about the future of Berlin, and then make sure that Herr Ulbricht respected the arrangement by embodying it in a peace treaty between Russia and east Germany. Probably Mr Thompson also asked whether, as an alternative, the Russians would simply promise that there should be no interference with western access to Berlin, if the West let the Russo-east German peace treaty be signed without protest. The first alternative would presumably involve negotiating the western position in Berlin afresh (the lawyers could be left to argue whether this meant a "new status" for the city, or just a reaffirmation of the old one). The second would, in effect, leave things as they are for the time being.

Recent events in Berlin itself may have some bearing on the matter. On December 30th, the Americans announced that the Russian commandant in Berlin was to be excluded from the western half of the city in retaliation for the refusal of east German border guards to let American officials into the eastern half of the city unless they showed their identity cards. But to keep the Russian commandant out of west Berlin further weakens the (already rickety) western argument that the city is a quadripartite entity. The quadripartite status established in 1945 is, in turn, intimately linked to the postwar occupation rights which the West at present claims to be the legal basis of its garrison in the city. If the United States is moving towards an acknowledgment that the city is for all practical purposes two, the thesis that the occupation regime is still in force looks much less convincing. In that case, there is a strong argument for sitting down with the Russians and working out an up-to-date agreement defining western rights.

WAITING FOR ADMISSION

Figures compiled by the Registrar-General (HMSO 17s. 6d.) show how long health service patients have to wait for admission to hospital. As one would expect, patients needing "cold surgery" (those with varicose veins, hernia, etc.) tend to wait the longest, whereas the majority of cancer patients are admitted within a week. It is unsatisfactory that 9 per cent of cancer cases have to wait over a month; presumably a diagnosis is sometimes not made until after admission. The figures are also analysed according to whether the admission is to a teaching or general hospital and according to which hospital region.

A Krahl for a Wall

THE same desire for retaliation that led the Americans to keep the Russian commandant out of west Berlin has led the British Government to require the departure of Dr Franz Krahl, the correspondent in London of the east Berlin paper *Neues Deutschland*. Since the western powers do not accept east German passports, an east German who wants to visit the West, otherwise than as a refugee, has to obtain a substitute in the shape of a temporary travel document from the allied travel office in west Berlin. The Nato countries have agreed that, in retaliation for the restrictions on movement in Berlin imposed by Herr Ulbricht's wall, these documents are to be denied to east Germans and existing ones are not to be renewed. Dr Krahl's expires next week, and with it his right to reside in Britain.

One can understand the urge to launch a kick, even a rather indirect one, at Herr Ulbricht's wall. Most of the Nato countries took similar steps in 1960, when the east Germans interfered with Berlin traffic for a time, and it might be argued that the measure had a marginal effect in persuading the east Germans to stop being awkward. (The west German threat to stop trade between the two parts of the country was a far more potent persuader.)

But this resort to the principle of an eye for an eye looks less impressive when it is realised that, apart from one news agency colleague who was away and is not being allowed back, Dr Krahl will be the only person affected so far as Britain is concerned. The east Germans who deal with commercial matters in London are to stay because their expulsion would amount to an economic embargo on east Germany. In any case, the objection to Herr Ulbricht's wall is that it blocks the flow of people, information and ideas between the two halves of Germany, and between East and West. Is it really worth while, when so many lights have gone out over Europe, to snuff out even a dim flicker in the name of "retaliation"?

EUROPE

Forever 1961

IN fudging up a legal fiction which enables them to delay, but not disastrously, the passage into the next phase of the common market due on January 1st, the six governments of the common market have shown themselves pragmatists. Not for the first time they have proved willing to improvise —by no means the conventional British picture of European functionaries quibbling over the literal interpretation of texts. Under the Rome Treaty, passage into the "second phase" of the common market has to be agreed unanimously; and if this is not done on time, the move is postponed for a whole year. In fact the bus was missed, but rather than lose the year the Six decided on December 30th to stop their imaginary clock and carry on their agricultural discussions until they agree, as if 1962 had not arrived. Once reached, the farm agreement will be retroactive to January 1st. The ten per cent cut in the common market's industrial tariffs due on New Year's Day has already been made anyway.

The immediate threat to the momentum of the common market has thus been dodged, but the manœuvre cannot conceal the differences that still exist between Germany and its partners. The tendency exists in Bonn to attribute the hold-up to French intransigence about technicalities. But in fact the three main agricultural exporters—France, Italy and Holland—have been declaring with one voice that it is time Bonn stopped procrastinating and made a move to put the common market in agriculture into practice. The dispute touches on some essential common market principles. In one argument—about escape clauses—the Germans are seeking the right to shut off imports from other members on their own initiative and with virtually no control from Brussels—a challenge to the whole idea of agricultural free trade. They want the common fund which is to support prices, finance farming improvements and subsidise exports, to be financed from national budgets and not from the community's levies; and they expect most of the money to go to German farms. In foreign trade they are anxious to maintain their bilateral relationships with outside countries—a handy instrument of west German trade policy generally—instead of a common trade policy.

Dr Adenauer, who is being pressed to lower the protective wall that shelters his peasant voters, deserves sympathy in his predicament, though not much. Before the west German elections in September he was believed to have given the French to understand that they could expect concessions afterwards. The reduction in his majority in the Bundestag has made it more difficult for him to move.

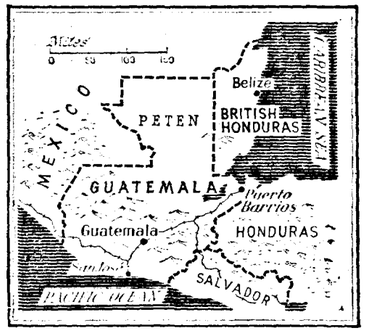
Fortunately compromises are in the air on many aspects of the matter. But some further concessions still seem needed from the German side. Herr Schwarz, the west German minister of agriculture, has been insisting that time is needed to adapt the antiquated structure of German farming. But the need for adaptation has been well known for many years. The common market has itself demonstrated that there is no medicine like competition for hastening such necessary changes.

Competition Without Tears

AGRICULTURE was not the only contentious subject which the Six had to decide on before the guillotine fell on New Year's Eve. Agreements on a common anti-cartel policy and on the first steps to harmonise social legislation were also regarded by some countries as preconditions for the advance into the second, freer tariff, phase of the common market. And decisions on both questions were in fact rushed through the marathon meeting of ministers.

The nub of the social agreement is that equal pay for women shall be introduced throughout the community by 1965. The new rules on cartels, although better than continuing with no rules at all, will disappoint liberals who hoped for a bonfire now of private restrictions on trade. In the treaty of Rome there is a fairly strong statement of principles—outlawing a number of cartel practices, like price agreements, if these disrupt the common market, and declaring that it is a bad thing for any one sector of industry to be dominated by one firm or by very few. Earlier this year the European commission recommended some stiff medicine for putting these principles into practice: registration of all agreements, and a ban on any whose innocence could not be demonstrated. This would roughly match the position in west Germany, with its relatively strong anti-monopoly law.

No other member country, however, has a law of comparable strength or an economics minister as keen on competition (except in agriculture) as Dr Erhard. When the commission's plans were put before the ministers in the autumn, the French did their best to water them down. Cartels should be banned only if they could be shown to cause damage, they claimed. And more effort should be made to curb dominant concerns—a hit at the Ruhr giants. The Federation of British Industries, in a sighting report last July on the common market, also took a stuffy view of the commission's bold ideas.



The ministers have now amended the proposals in the direction of the French (and British) view. All agreements affecting trade within the common market must be registered by the middle of this year, but the "abuse" principle—that they will be voided only if they are distorting trade—is to be accepted instead of the outright ban. If it thinks "abuse" is taking place, the commission can disqualify an agreement and impose fines if it continues. Everything will thus go on depending on how liberal-minded the commission is. Though it is to consult the national governments, it will have the last word in deciding whether Europe is to unite by competition or by cartels—a crucial point for 1962 and beyond.

CENTRAL AMERICA

Curiouser and Curiouser

IN publicising his country's claims to British Honduras, President Ydigoras Fuentes of Guatemala has managed to embarrass the State Department and, just conceivably, Lord Montgomery too. The field-marshal has denied that he offered to mediate between the British and Guatemalan governments; all he did, he says, was to report on his chat with President Ydigoras last month. Washington's involvement is more curious still. On New Year's eve, President Ydigoras reminded the United States of an alleged promise of mediation made in return for Guatemala's help in training Cuban rebels for the unsuccessful invasion of Cuba in April. Until now, it has been the Guatemalan government's habit to deny the existence of any such training camps.

Since a seventeenth-century shipwreck landed a band of English pirates on its shores, British Honduras has been a source of dispute first with Spain and then, after the end of Spanish rule, with Guatemala. British possession was recognised in 1859, but a British commitment, made at that time, to help provide a route from the Guatemalan capital through British Honduras to the sea never came to anything. The colony is certainly the poorer for the omission. A hundred years on, this is less relevant than the fact that the Honduranian leaders have, after initial hesitation, come

down against union with Guatemala. The territory, flat broke and now laid physically flat by last year's hurricane, is already on the way to self-government. In August, the prime minister, Mr George Price, said roundly that under his direction the colony would never become part of Guatemala. Since then, the Guatemalans have been talking in terms of some kind of federal association, and negotiations on these lines were in the air.

But in his new year speech, General Ydigoras dismissed the usefulness of continuing talks that had gone on, he said, for 150 years. He also implied that he had no use for the United Nations, and that he sympathised with Portugal, not with India, in Goa. The general may be right that further talks are useless just now. He is a demagogic right-wing extremist, and Guatemala under his charge would be an unhappy partner for any emerging

The Economist

JANUARY 4, 1862

THE FINANCIAL OUTLOOK

"Perhaps an Englishman at the present moment might be pardoned a little financial exultation. While France has just announced an annual excess of many millions in her expenditure over her income; while Austria is in a similar position, with the addition that her credit is well-nigh gone, and her borrowing power almost lost; while the Federal States no longer preserve the faintest *approach* to an equilibrium between their taxation and their expenditure, and are relying principally on loans extravagant in amount and uncertain of attainment,—there is not a breath of doubt or a shade of suspicion as to the power of England to raise a far larger sum than her present vast taxation—as to her power of borrowing any required number of millions—as to the ease with which all her ordinary wants could be provided for by an easy adjustment of our present taxation. . . . . Last quarter we showed that as yet there was a considerable deficiency in the revenue that it was less than Mr Gladstone expected that it would be . . . although there were many good grounds for thinking that the second half of the financial year would be considerably more productive than the first half. The deficiency has not been made up during the present quarter. . . . But if we look deeper, the prospect mends, though it is not free from some discouragements. The very serious deficiency in the Excise will, it is believed by those best competent to judge, be much diminished at the close of the quarter just commenced. . . . The Customs show an increase as usual. There has been a falling-off in raisins, owing to the state of the fruit trade; but everything else is prosperous—wonderfully prosperous. The income tax seems to yield less than was anticipated, principally because the Act imposing it was unusually delayed. That calculation was £7,687,000: the actual yield has been £5,938,000. Great efforts are being made to get in the outstanding arrears.

people. But in 1963 there will be presidential elections. Guatemalan elections are not always wholly convincing, still, it is a hopeful sign that Dr Arévalo, a former president now in exile in Caracas, has announced his candidature and may, it seems, even be allowed to stand. Under Dr Arévalo's presidency in the late nineteen-forties a start was made with social reform; there has been no advance since.

TEACHERS

Search for Status

UNDER the ægis of the College of Preceptors yet another movement is on foot to give the teachers a supervisory professional body along the lines of the General Medical Council for doctors. It is difficult to believe that it will get off the ground. Teaching remains a disparate job: it attracts a sizeable number of transients (particularly among married women), requires varying qualifications (the lowest of which is hardly impressive by other professional standards) and its members are already organised into a number of recognised and well-established bodies. No one can suppose for a moment that, for example, the National Union of Teachers, with a membership of nearly 250,000, would be inclined to renounce its interest in educational policies and standards and relegate itself simply to a salary pressure group: it would be very unwise if it did. It is certainly conceivable that, when and if the attainment of a university degree becomes the generally accepted standard for those in academic teaching posts, a teachers' council might be an effective (possibly too effective) body in imposing its criteria for full active membership of the profession. Until that time it will be necessary to have the qualification to teach set by the Minister of Education.

The inspiration behind the idea of a teachers' council is evidently the search for status that younger members of the professioh are anxious to acquire and the older ones to have restored to them. Last year the teachers found themselves making common cause against the Chancellor, not with the doctors but with civil servants, local government officers and other white collar workers. Some people may think that if a professional council were set up the leopard would change its spots, and its pay scales, overnight. But, after all, one of the features of many professions with powerful controlling councils—at the Bar, for example—is that practitioners have much smaller earnings at the beginning of their careers than at the end of them; it was not clear from last year's row that this was what most teachers ardently want. As for instilling a sense of corporate unity, it will be enough for the moment if the NUT and the National Association of Schoolmasters really do sit down together to make the new Burnham machinery work.

UK BRITAIN *Ambiguous Albion*

ONE of the few things that are always changing about this country is the name by which different people call it; another change is taking place behind the scenes at this moment, and it is right that puzzled people at home and overseas should be told about it. *The Economist* and some other less uniformly right-minded organisations have always preferred to call this country Britain (as in *Come to Britain, Buy British* and British European Airways) and have eschewed the traditional colonial, Commonwealth and foreign usage of United Kingdom—or Yewkai. The supporters of the name Yewkai are of two kinds. First, the accomplished hair-splitters. They are always eager to point out that the Isle of Man, after all, is part of Britain, but not of the United Kingdom, which is of Great Britain (that is, the Kingdom of Scotland, the Kingdom of England and the Principality of Wales) and Northern Ireland (which is not part of Britain). And the Republic of Ireland is part of the British Isles but not, whatever Mr Butler may think, of the United Kingdom. Whenever one puts any of these territories in the wrong country, one gets a shoal of letters to the editor about it.

Secondly, there are some people who insist that the full diplomatic style and title of the country must remain The United Kingdom of Great Britain and Northern Ireland for a severely practical reason: so that we may retain our precarious state of bufferdom between the Union of Soviet Socialist Republics and the United States of America in the United Nations Security Council. Call ourselves Britain, and we should be rubbing uneasy shoulders with the Republic (but not the People's Republic) of China, called China (or Formosa). In the General Assembly, where ex-colonial countries would certainly object to Great, we should be found in the company of Brazil; unless (French being the proper language of diplomacy) we were called, properly, *Grande-Bretagne,* when Greece would be our nearest neighbour. We should become non-U, unable (in company with the Union of South Africa and the once United Arab Republic) to sustain our social position.

Long ago, this puzzle became too much for the Foreign Office: our ambassadors are British, even if their staffs are expected to run United Kingdom Information Services. But the Commonwealth Relations Office until recently maintained the full glories of United Kingdom High Commissioners, Trade Commissioners, Information Libraries and Atomic Energy Authority. But now, all this is to change; although, perhaps to placate old Commonwealth hands (who are attached to the Yewkai in the same way as fifth-generation Australians, New Zealanders and English-speaking South Africans are attached to Home), great discretion, even secrecy, is being maintained about the fact that the change is being made. In the CRO's institutions abroad, we can now reveal, Britain this country are to be; High Commissioners are to be British and perhaps bold and brave as well. The decision is a sensible one: for its success, we should like to wish its sponsor the best of United Kingdom luck.

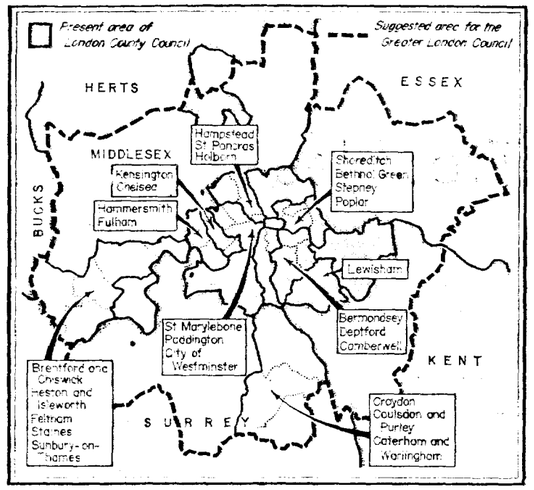
Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Town Hall Troubles

FROM OUR SPECIAL CORRESPONDENT

REVILED by ratepayers and harried by local politicos, the lot of the town hall official is seldom a happy one. Today as always, local government service offers security, a pension and the chance of advancement up a ladder of diplomas to the town clerk's seat of dignity: but the spread of pensionable prosperity to so many other professions has dimmed the attractions of the local civil service in recent years. The first—and to some the most surprising—proof that this worthy group of people has felt itself put upon has been the upsurge of trade unionism among them. The National and Local Government Officers' Association is the country's fastest growing union, and now has 183,000 members in local government as compared with only 147,000 ten years ago. (Members in the health service, electricity, water and transport bring its total strength to 273,500.) Over 85 per cent of local government white-collar workers now belong to Nalgo—from town clerks to office boys, as the union's officials are fond of saying. Even if one discounts the union's natural desire to emphasise those points that will reinforce its current pay-claim, the findings of a recent inquiry among its members are disturbing for those who believe in the need for efficient local administration.

Between January and November, 1961, over 20,000 of the 215,000 local government officers in England, Wales and Scotland changed their jobs. Some 8,000 of these moved from one authority to another, which is a normal process for officers on the way up the promotion ladder. Some 5,000 left the service on death, retirement or marriage. But 7,000, and perhaps more, went into jobs outside local government service. Of the posts that fell vacant, two-thirds were still vacant in November, despite some expensive advertising by the authorities concerned. In county boroughs and boroughs with a population over 75,000 nine out of ten of the posts that had fallen vacant during the year were still unfilled in November. There are alarming stories of prosperous, fast-expanding industrial cities with shortages of up to thirty men in the engineering department. There is a serious national shortage of public health inspectors. Planning officers, faced with drawing up forecasts for the quinquennial ministerial review of the prospects for their town, cannot find assistants; overwork is no defence if they muff their figures.



Shortages at the lower end of the scale of responsibility are harder to pin down—all the more so because the union's survey appears to be the first piece of systematic research ever done into local government staffing problems. But the most serious development seems to be the falling off in the quality of the youngsters entering local government offices. The time-honoured principle has been that school leavers would start work as junior clerks at the town hall and, by obtaining their professional or technical qualifications as they go along, gradually rise into the senior grades. About 40 per cent of local government white-collar staff are in the grade which includes general clerks, in which the maximum pay is £630 a year (bank juniors can fairly easily get promotion into the £950 a year range): bright lads with their General Certificate of Education, who would once have worked their way up out of this grade, are now tempted by higher pay elsewhere.

The next senior grade (43 per cent of the service) includes the administrative, technical and professional staff, earning between £645 and £1,480. There can be little incentive for a qualified accountant, engineer, surveyor or solicitor to stay in a service in which he is limited to a salary scale between £960 and £1,310. Just over 3 per cent of local government staffs are classified as chief officers (the odd 13 per cent are unskilled people), including town clerks who have little cause to complain—the top salary is £4,500, depending on the size of the authority. But obviously competition for promotion to this level is hot. As yet there is probably no weakening in the talent available for the very top jobs—the generous local government pension arrangements would make it unprofitable for a man over 55 to leave the service except for a really large salary in outside employment. But the present standard of recruits arouses severe doubts for the future.

NOT only have some councils been obliged against their will to employ junior office staff who have not passed their GCE. Some of them, in default of qualified applicants, have given jobs to men with inadequate technical diplomas or experience. Some authorities have regraded vacant posts in order to bring them into a higher salary scale, or offered applicants inducements in the form of cars or houses. The evil of this is not that such inducements are immoral, but that they make it necessary to give the same to everybody else, and thus put a concealed burden on the ratepayers. A further burden that may fall on ratepayers is the need, in the absence of qualified men in the town hall, to bring in expensive consultants from outside to do jobs that should be done by the regular staff. In a few cases, such are the disparities in pay for qualified staff, contracts for such jobs have included clauses against the poaching by the consultants of personnel from the local authority.

Nalgo's solution for these anomalies and shortages is predictable—local government officers should get more pay. Its survey shows that the shortages are not concentrated in particular technical departments, or in areas of high employment (in fact, since promotion in local government depends on holding down jobs in areas where things are active, the poorer country districts sometimes have the worst staffing problems). The pay differentials offered by a dozen large authorities are all small, and are designed to meet high local rents rather than to attract staff by bidding up the rate. The union, which normally keeps well clear of lining up with any side in politics (it has no political levy and does not affiliate to the TUC), has taken the lead in talks with other white-collar unions on how to beat the pay pause. But its time-honoured tactic has been to act on Parliament by approaching friendly members of parliament of both parties: when the pause is over it will have a formidable case.

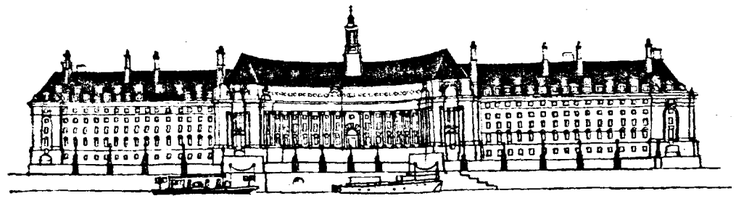
Battle for London

Amalgamations: some specimen boroughs

THE Middle Saxons, East Saxons and their allies are aroused, and the word has gone out from their witanagemots that the Greater London Council is to be resisted to the last ditch. A top-level conference of the affected counties will be held on Tuesday. This may surprise Mercians and Northumbrians who (like the best planners) regard the whole lot as Londoners anyway. It may also amuse the London Labour party to see, in the very hour that the trumpet has sounded for the Tory suburbs to march to the siege of county hall, the flags of parochial revolt fluttering in all the debatable lands. But it is only what was to be expected: the one time when English local government springs into life is when some antiquated institution is condemned to die.

Middlesex is not Rutland: but its claim to survive as an independent entity, a state within the greater London state, is, if anything, even less well-founded. The county has apparently decided to concentrate its attack on the Government's educational plans for the London area. It does not see why, if central London is to retain an *ad hoc* education authority, the name of Middlesex should not be continued by a similar body.

This could be good tactics, for the chief bit of common ground in the counties' alliance is to preserve the present educational set-up. The Government's expanded boroughs may, or may not, make good educational authorities at the primary and secondary school level; but certainly for higher education, where the need is to exercise a general surveillance over the whole London area, the obvious recourse should be to the Greater London Council itself and not to shadowy counties.



If it is difficult to believe in the local patriotism of Middlesex, the Herbert commission at least paid Surrey the compliment of being "a very homogeneous county both socially and politically." The effect of this, inevitably, was that "Surrey looked at everything through Surrey eyes"—as it still does. Last February Surrey cast a protecting arm round its threatened territories with the flat assertion that "there can be little community of interest between Esher and Barking or Banstead and Tottenham"; Esher and Banstead, it was intimated, identified themselves wholly with such rural playgrounds as Hambledon and Dorking.

It is all a matter of degree. The best argument for setting up a strong Greater London Council is precisely that authorities in the surrounding area have turned their backs on London itself and the problems of the region that (except for Esher and Banstead) it dominates. Surrey, like the other threatened authorities, attempted to turn the Herbert commission's flank by contending that planning problems involved a far wider region than even the new Greater London. This is true: but the only way that Surrey and the others proposed to cope with these problems was to throw everything back into the lap of the nine counties and county boroughs in the region, with the Minister of Housing and Local Government keeping an eye on matters from time to time. If (as it should) an effective regional planning authority is eventually to emerge it will have to be along much more purposeful lines.

Another resistance of a kind is developing inside the metropolitan boroughs themselves. This, too, is pretty much as expected. The Government's mergers have worked out reasonably well in terms of rateable value: only poor Lewisham (which, as it happens, is the one of the three unmerged authorities in the whole area) is likely, with a rateable value of £14 per head, to qualify for deficiency grant. Public discussion, as in the messes of merged regiments, has therefore revolved round the names of the proposed hybrids. Thus St. Marylebone and Paddington ("Marypad?"), having looked doubtfully at each other for months, now have to consider Westminster too.

But the major point that the Government has to answer is why it means to tolerate vast and amorphous bodies in the outer ring without following through and making real sense in the centre. The map shows the contrast between, for example, the gerrymandered-looking group running from Staines in the west to Chiswick, and snugly-affluent Chelsea-Kensington. It seems as if the Government has done just enough merging to transfer most local government powers to the new boroughs, thereby leaving the Greater London Council with too little authority to intervene effectively in housing, roads or planning. On the other hand there is a danger that some, at least, of the suburban mergers could develop in practice into rather inefficient minor counties. Better Middlesex again than that.

If the opponents of the Government's policy are to secure any useful adjustments before it is too late they ought to concentrate on this kind of issue, rather than refight the Herbert commission hearings, as many of them seem tempted to do. But the most welcome adjustment would be a Government assurance that the Greater London Council will be given the authority that the Herbert commission recommended and that it palpably needs.

Smallpox Scares

FROM OUR SPECIAL CORRESPONDENT

THE notification of two cases of smallpox, both involving Pakistanis recently arrived in Britain, has provided some of the more vocal and fervent guardians of the public health with what may seem to be a good reason for giving the Immigration Bill a swift passage. Health checks, it is argued, must be carried out on every entrant who has not got a clearly verified certificate of immunisation against the more unpleasant of the infectious diseases; and anyone in the least suspect must be sent back before he can infect the whole of Britain.

The history of smallpox outbreaks in this country over the past ten years hardly supports the fears of a major epidemic begun by two cases: in the whole of that time there have been 204 cases, of which 22 were fatal. Of these, 192 occurred in the three years 1951 to 1953 (19 fatal), 135 in 1952 alone. Of all these cases, only 6 were importations of the type which is now causing so much apparent concern, and in the big outbreak of the mild form of smallpox in 1952, not one case was imported. To try to establish an enormous administrative machine to catch these viruses at the point of entry would be impracticable: one cannot put every arrival into quarantine for 16 days in case he develops smallpox, even if sufficient trained men could be found to mount so fantastic an operation.

Nor is there any way in which vaccination certificates (which are required by Pakistan and most other non-European countries as a condition of exit) could be verified: vaccination is ineffective in about a fifth of all those vaccinated, and where it is effective the immunisation conferred may last less than two years—or more than 20—and most certificates are valid for three years or more. They are, in addition, not difficult to forge. The fact must be accepted (as it is by the local health authorities in the big ports) that occasionally, out of the millions of people who visit Britain every year, one will come in suffering from an unpleasant disease which cannot in the ordinary way be immediately spotted; and if it were, it would be inhuman to send the sufferer back rather than take him in and treat him.

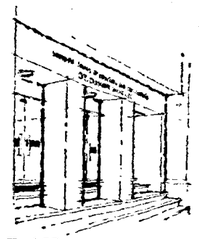
IN fact, smallpox and other infectious diseases are dealt with reasonably efficiently. At the first suspicion by any doctor, the local medical officer of health must be informed, and he in turn will probably call in one of the consultants who serve on the Ministry of Health's smallpox panel. If the diagnosis is confirmed, the case is isolated, and the task of tracing contacts is begun. This is a difficult, expensive and time-wasting process, and can fail to catch everyone involved if the sick man has been longer than a few hours in the country. But on the evidence of the past ten years it is enough to prevent epidemics.

Naturally the most effective way of escaping infection is by immunisation; but this is not easy in a population of 53 million. Vaccination itself has its limitations, and many people object to it or are prevented from taking advantage of it on conscientious or medical grounds: when vaccination was compulsory in Britain, before 1948, nearly 80 per cent of the population found some excuse for avoiding it. The acceptance is actually higher now that it is voluntary—over 30 per cent, and rising. This is a fair level, considering that two other immunisation treatments are being simultaneously campaigned for: those for poliomyelitis (in which acceptance is high, perhaps because scares are more frequent) and diphtheria.

EIU Quarterly Economic Reviews

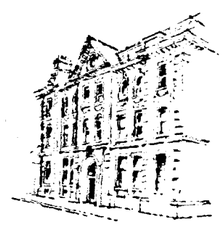
covering 57 countries or groups of countries

Out this week:



PERU, BOLIVIA AND ECUADOR

Political events have been predominant in the three countries in the past three months; the Review discusses:



Sr. Beltrán's prospects of success in the forthcoming Peruvian presidential election against a background of export success and growing foreign aid and investment—some moderately encouraging developments in Bolivia despite continuously recurrent crises—some of the implications of the change of presidents in Ecuador.

Further details from:

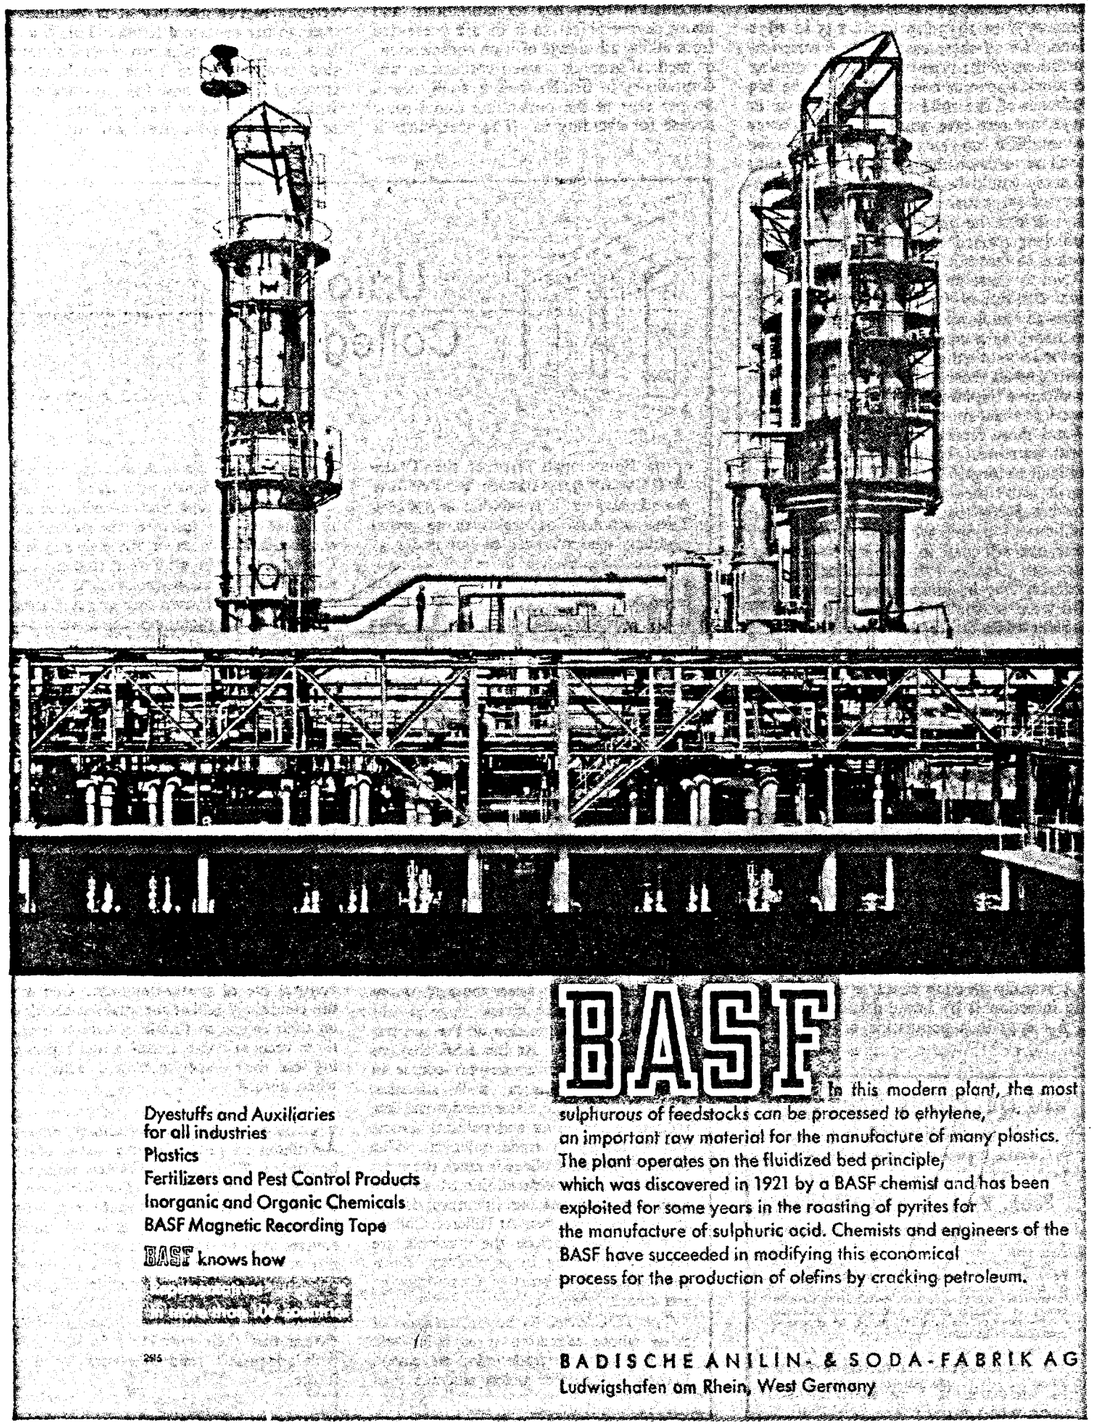
60 East 42nd St., New York 17 Tel: Murray Hill 7-6850

To LSE . . .

Union Colleges

. . . or Ruskin

THE Educational Trust of the Trades Union Congress has sent out details of the scholarships it is offering in 1962-63. These scholarships are open to union members who are over 20 but under 36 years of age, though in certain circumstances the trust will consider applications from people up to 41: they will enable union members to enter for full-time courses—not only at Ruskin College and the London School of Economics but also at Hillcroft College (for women only) at Surbiton, and at Coleg Harlech in Wales.



The first test is an essay of between 1,000 and 2,000 words on one of six topics: Do candidates think "stagnant affluence" is a fair description of Britain today?; "trade union democracy"; unofficial strikes; the structure of the trade unions. Less provocatively, applicants can write about the place of art and cultural activities in the union movement, or give the arguments for and against Britain's entry into the common market. Next May the TUC educational trust will interview the writers of the most promising essays and from this short list select those to whom scholarships will be given.

What kind of education do the successful handful get? At the LSE they go through an intensive one-year course in elementary economics and statistics, economic and social history, industrial law, political organisation and political theory, and contemporary trade unionism. The course at Ruskin College is much the same as at LSE, but with additional subjects such as public speaking, literature, drama, and foreign languages. At Hillcroft College and at Coleg Harlech the curricula are broader and bring in psychology, European history, the history of art, philosophy, and comparative religion.

The TUC naturally hopes that most of those whose education it pays for will return to serve the trade union movement. Perhaps more LSE union students than Ruskin students go back into the movement, since Ruskin opens the way to Oxford scholarships and to administrative jobs in, for instance, the probation and welfare services or the Ministry of Labour. But then all Ruskin students do not go on trade union scholarships. Many of them pay their own fees or get grants from local education authorities, while an appreciable number (like Mr Tom Mboya of Kenya) come from trade unions overseas.

Union members can also get scholarships for education tours such as the annual scholarship from the English-Speaking Union which enables a British trade unionist to make a six weeks' tour of the United States. They can apply for the travelling scholarships offered by the Imperial Relations Trust whose chairman is Dame Florence Hancock, a former president of the TUC. With these scholarships trade unionists can spend six months in either Canada or Australasia where, under the guidance of a local university, they can study the dominion's trade unionism, its industrial and social problems, and the cultural life of the community. One of the conditions is that the students should on their return to Britain remain at least three years at home, lecturing and reporting on their experiences and activities when abroad.

DESPITE all these opportunities, trade union education is, in a sense, only beginning. When the TUC's new rationalised scheme (explained in *The Economist* of June 3rd) starts in 1963 there may well be an increase in the number of full-time courses open to trade union members. In this way the unions can both give a unique opportunity to intelligent people who for one reason or another have failed to be selected for education by the state, and ensure that their movement is supplied with adequately trained leaders for the future.

LETTERS

Rhodesia

SIR—In your issue of December 16, 1961, it is stated: "The Europeans, led by Sir Edgar Whitehead, the prime minister, seem—to their credit—to be willing to meet nearly every African demand except the two most important—the demands for more land and for universal suffrage."

At the last congress of the governing party, the United Federal Party, it was unanimously resolved that all discrimination based on race must be removed, and the Government of Southern Rhodesia is in the process of implementing this resolution as rapidly as it can. This process will certainly include the early repeal, or the drastic amendment, of the existing Land Apportionment Act, which will remove all colour restrictions on the ownership and use of land throughout the country; and although this stage has not yet been reached, it should be appreciated by all fair minded people that time is required for preparing the necessary legislation and for working out all the implications of the move, so as to minimise hardship and to ensure protection to primitive people who still need economic protection in a competitive world.

The demand for universal suffrage is quite a different matter. It is believed by the Government, and by all but a handful of white Rhodesians, that there is nothing discriminatory or unfair about the existing qualified franchise. If democracy means "one man one vote," which I refute, then it is contended that very little of Africa, and certainly not this part of it, is ready for democracy. The fact that the black nationalists are vocal in their demands for universal suffrage does not prove anything. What is wanted in this country, as in every country, is not black government or white government but good government. This requires reasonably high standards of education and integrity in public life. The Government is spending every penny it can afford on education, and the standard is rising steadily. But there is a long way to go, and the Government sees no reason why it should be stampeded, by either internal or external forces, into extending the franchise more rapidly than the people can be fitted to use it. After all, we do not have to look far beyond our borders to see some of the results of such action.—Yours faithfully,

J. H. HUMPHRIES

Salisbury

How Many Fiestas?

SIR—When your correspondent in Barcelona listed (in your issue of December 23rd) the number of *fiestas* in Spain, he chose to overlook the fundamental motive for their existence, and the extent to which this particular day has been perverted from its original intention.

The purpose of the religious *fiesta* was to commemorate a specific Catholic event, such as the celebration of a Saint's day, and this was done through devotion and meditation. For this reason all unnecessary physical or manual work was strictly forbidden. Nowadays, however, the true value of such an opportunity has been vitiated by the very authorities who sought its initiation—that is to say both the Church and the State.

In spite of being able to exult in political parades commemorating the Spanish people's liberation from tyranny by the present regime, the average Spaniard is still so impoverished that any opportunity to supplement the scant monthly income is eagerly welcomed. The result is that the time of the *fiesta* is neither dedicated to prayer nor to party but to the individual.

The actual use of time varies with the different Spanish provinces. The acceptance of a part-time job is a scheme generally favoured by the Catalans, Basques, and Galicians, while the Andalusian, and more usual, remedy is to combat despair with *vino*—thus giving a Bacchic euphoria, or what the tourist feels is a typical Spanish joy of living.

It should also be mentioned that the local district holidays, or *fiestas mayores*, are often the only occasions when people in humble communities can afford some entertainment organised exclusively for themselves. To make these possible, contributions by the whole neighbourhood are made weekly throughout the preceding months. Even though this type of *fiesta* may last several days the actual celebrations only take place in the evenings, after a full working day. Similarly, the guild holidays have become staggered, with so many tradespeople taking an enforced day off every week, instead of the whole of one trade taking a national holiday.

This state of affairs is due to two commercial reasons—firstly, the impractical long hours of the normal working day (the *siesta* still exists in principle if not in practice), and secondly the failure of business administrations to pay satisfactory wages. In a recent economic survey, Spain was allotted the lowest standard of living index of all non-communist European countries.

The connivance between the State and the Church mentioned by your Barcelona correspondent is, in fact, a mutual condonement of each other's failure to improve both the spiritual and financial position of the nation. There is hope that the Church is increasing its influence in national affairs through the ministerial representatives in the *Opus Dei* society.

One last point is worth making—if your correspondent chose to examine the murky caves under the meretricious maritime esplanade in Barcelona he would find crowds of destitute people huddled round those huge *paella* dishes (a typical tourist dish), and no one ever thinks there that it is *fiesta* time.—Yours faithfully,

F. L. B. MACNEILE-DIXON

London, W1

Airports for London

SIR—In your issue of December 30th you report that this year London Airport is expected to break even, but that the higher landing charges imposed last April will still be necessary in order to finance the loss of about £1 million a year being made at Gatwick. It seems worth asking why this loss occurs and ensuring that the policy of the Ministry of Aviation is not such as might increase it.

The theory behind the development of Gatwick was good: that the same airport should be used for winter fog diversions and for seasonal summer traffic. In practice, however, Gatwick has been available for only about 50 per cent of the occasions when London Airport has been fogbound. Hurn has had to be kept ready for diversions with consequent duplication of staff and facilities.

Another reason why Gatwick makes a loss is that the geographical limitations of the site mean that the runway can never be long enough to take big jets. Thus few airlines can run all their services from Gatwick. Moreover, the maintenance facilities are limited, because being sited on the boundary of a New Town it was pledged that they would not be extensive. Airlines are noticeably loth to move to Gatwick.

It would seem that it would have been more economical to have kept Hurn (with its good weather record) for all the long-range diversions while being satisfied with something much cheaper for the other services. For example, Blackbushe, Biggin Hill, Eastleigh and Ford have all been closed since Gatwick was opened, and would all have been suitable.

It is no use crying over spilt milk, if it were not that the Ministry of Aviation seem to be contemplating spilling more. It was announced just before Christmas that they are making a survey for a possible second runway at Gatwick. Again the limitations of the site would restrict this to 6,000 feet—suitable for medium to small planes, Continental traffic, in fact. Yet it has been estimated that the cost of this second runway would be the best part of £4 million—ten times as much as Silver City spent building their own airport at Lydd. In view of the success of Southend airport and the fact that Luton airport is crying out for just the traffic that the second runway at Gatwick might cater for, surely it is worth questioning whether the extra expenditure at Gatwick would be justified. Would it not merely increase the annual losses and result in still higher charges at the State-owned airports?—Yours faithfully,

BRENDON SEWILL

Charlwood, Surrey

BOOKS

Scientists Turned Moralists

Einstein on Peace

Edited by Otto Nathan and Heinz Norden. *Simon & Schuster* New York, (1960). 720 pages. $8.50.

Has Man a Future?

By Bertrand Russell.

Allen & Unwin. 10s. 6d. *Penguin* 2s. 6d. 128 pages.

THE ethical and political opinions of a great scientist or mathematician are not necessarily of a value comparable to his achievement in his chosen profession, but the prestige of his name can be of great importance for the propagation of such opinions. In recent times several personalities who have become world famous in fields of mathematics or the natural sciences have subsequently devoted themselves to problems of morals and the governing of mankind, and their fame has caused them to be listened to with respect even when they have had nothing very original to say or when their arguments have been strangely deficient in the logic characteristic of their scientific work.

Among these scientists turned moralists Einstein was long pre-eminent. From the early twenties until his death in 1955 he figured before the eyes of the world as a militant pacifist—except for the period of Hitler's rule in Germany, when, to the consternation of his "absolute" pacifist associates, he deviated so far from his antipathy to war as to join with Szilard in writing a letter to President Roosevelt urging him to go ahead with the making of an atomic bomb. This volume, published in 1960 in America, is a kind of anthology of his correspondence and public statements in all periods of his life dealing with questions of war and peace, together with a running commentary by the editors and inclusion of some letters and statements by other people either in support of or in disagreement with Einstein's views. It is of value to have all this material sorted out and gathered together in one volume.

Born in Germany, Albert Einstein adopted Swiss citizenship at an early age, but took an academic post in Berlin shortly before the outbreak of the war of 1914; after Hitler came to power in Germany he became an American citizen. He was a Zionist and always regarded himself as first and foremost a Jew. From the beginning he had an intense dislike for the German nationalist mentality. In the twenties he became a champion of the League of War Resisters, who were pledged to refuse military service in countries that had conscription. From 1933 onwards he predicted Nazi aggression and urged that western countries should build up their military strength to oppose it. After the war, however, he declined to recognise any threat to peace from Russia and became a campaigner against the "militarism" of the United States, though his proposals for Soviet participation in a "world government" to supersede the United Nations were met with a sharp reminder from Moscow that the idea of a world authority was an imperialist trick.

When asked by a Japanese pacifist how he could have brought himself to recommend the making of the atomic bomb, he replied: "While I am a convinced pacifist, there are circumstances in which I believe the use of force is appropriate—namely in the face of an enemy unconditionally bent on destroying me and my people." By "my people" Einstein meant the Jews, and his words might be taken to mean that only genocide can justify the use of force. But Einstein advocated armed resistance to Germany long before there was any question of the total physical extermination of the Jewish people; on one occasion he declared that in a Europe dominated by Hitler "life would not be worth living." The pages of this volume give the impression of a man who preached, quite sincerely, a lofty moral code for the conduct of nations from whose fortunes he felt himself detached, but who reacted in a very human and passionate way when the fate of his own people was at stake.

Two days before Einstein died, he signed, together with ten other eminent scientists, a statement drafted by Bertrand Russell (and reproduced in "Has Man a Future?") which argued that "a war with H-bombs might quite possibly put an end to the human race"; that any agreements that might be reached in peacetime not to use H-bombs would be violated in the event of war; and that the only sane policy was therefore the total abolition of war. In his new book, Lord Russell develops the argument that human survival requires the entrusting of all major weapons to a single world authority of irresistible power.

He does not, however, deal at length here with the problems involved in bringing a world government into being; he is content to glance at the difficulties rather than to offer a set of solutions. His greater concern is with the first step towards security that could be taken in a still anarchic world of sovereign states. Some of the items on his list are almost wanly familiar: the halting of nuclear tests; the prevention of the acquisition of nuclear arms by more countries than already have them; the bringing under international control of all launching of missiles into orbits round the earth; the conclusion of a deal guaranteeing West Berlin's freedom and free communications with the west in return for western recognition of the East German government. Lord Russell permits himself little more than a brief flicker of unilateralism, in the shape of a rather parenthetical suggestion that Britain should become neutral between East and West in order to be in a better position "to inspire wise action."

Neutrals are cast for starring roles in his scheme of things. They should, he proposes, take the lead in getting the United States and the Soviet Union to declare publicly that nuclear war would be a common disaster ("I do not see how either side could incur the odium of refusing to sign"). They should invigilate, during a first period of about two years, over an agreement that all provocative actions would be avoided (Soviet interference with Berlin's affairs, or American with Cuba's, being cited as examples of such action); that hostile propaganda would be "discouraged," and east-west contacts expanded in order to moderate each side's vision of the other as "monsters of wickedness" and to "increase mutual knowledge of each other's case." A small international conciliation committee, in which neutrals would hold the balance, should be set up, starting with only advisory powers, but acquiring in time "such moral authority as would make its proposals difficult to resist." Lord Russell's suggestions would seem to call for further debate; in the first instance, perhaps, the international "Pugwash" meetings of scientists and others, to which he draws much attention in this book, might serve as an illuminating forum.

Homo Sovieticus

The Soviet Economy

By Alec Nove.

Allen and Unwin. 328 pages. 25s.; paper 15s.

THE Russians, are they human? Most books about Soviet politics and economics assume they are not, and tend to fall into either demonology or idealisation. What separates Mr Alec Nove's new work from the crowd is his skill in avoiding these two traps. This is perhaps the most balanced attempt yet in the English language to describe the Soviet economy as it is—not as a continuous miracle of growth, not as a prison camp in which economics is the slave of political decree, but as an imperfect economic system, worked by human beings who are wrestling with economic and organisational problems with mixed success. It is the kind of picture that will not be welcome to crusaders on either side of the iron curtain, but which ought to be read by them both.

What emerges from this sane and perceptive analysis? Not, of course, an economic system exactly like our own. Russia's economy is centrally planned and largely state-owned, and where western economies excel in providing variety, choice for the consumer and good distribution, Russia's central achievement is a crash rate of growth in the basic industries. Western economies waste resources through failure to invest and through depressions that leave capacity idle; Russia wastes resources through indiscriminate expansion, and because the means for communicating consumer wants to industry are so primitive. The hierarchic society stands contrasted with the open one.

But more and more of the problems of the Soviet economy—which the Russians are discussing more and more keenly—are familiar. There is the sheer complexity of planning every detail of a vast industrial society, the problem of allocating supplies and varying them to suit demands. Though this is still done mainly by quantitative allocation of supplies for preordained purposes, incentives have to be given to managers and workers, and use made of the price mechanism. Despite the direction of labour, a market in labour (and with it unemployment) exists. And critics inside Russia are constantly looking for ways of making the system more flexible still.

Mr Nove does not try to answer the great speculative question—how far the loosening-up process will go in future, and how far this will bring major political change. But by analysing the Soviet economy as it is, instead of as some would like it to be, and others fear it is, he shows how relevant these questions are.

His style is uncompromising, a compressed crystal of thought, relieved only by an occasional flash of the humour inherent in the subject—like *Krokodil's* charming caricature of the nail factory whose staff achieves planned production in record time by producing one enormous nail. But though the reader is required to make some effort, it is well worthwhile. The book is designed to introduce the non-specialist, with some interest in economics, to the Soviet economy. It does so and opens up new horizons at the same time.

The Twist

The Coil of Life

By Ruth Moore.

Constable. 426 pages. 40s.

THE article by Dr Crick and his colleagues in last week's issue of *Nature* on the genetic code for proteins has rightly aroused a great deal of interest in that fascinating chemical DNA [deoxyribonucleic acid]. It also makes this book particularly topical. Anyone who wants to know more about the nucleic acids, which surprisingly were discovered nearly a hundred years ago but whose unique importance has only become apparent in the last ten, could not do better than read this book.

It is a substantial but very readable account, in the best tradition of popular science, of the development of chemistry, organic chemistry, genetics, bacteriology and such other branches of science as are necessary to an understanding of the structure and significance of DNA. It is accurate and has welded into it many quotations from the authors of important discoveries, and it must be the product of wide reading and hard work. The sprinkling of helpful illustrations needs a special word of praise; in the later, more difficult, chapters the diagrams are outstandingly useful. To single out the best from the good is difficult, but the chapter on the Abbé Mendel's mid-nineteenth century experiments on inheritance is certainly one of them, and the details will probably be unfamiliar to many readers.

It is not very clear why the author went quite so far back in history—in fact to Lavoisier in the eighteenth century—for her beginnings, and the early chapters on Bichat, Liebig, Schwann and Pasteur add little but bulk to her story. Some people, too, may complain of her romantic approach, of some purple writing and of the intrusion of that overworked adjective "famed." Anyone who did a little chemistry at school ought not to find the subject too difficult, and, at the other extreme, only those scientists who are working on cellular chemistry themselves are likely to know all of it already.

There is no doubt that DNA is a chemical to fire the imagination. Its structure is a double spiral, and in this spiral it seems to hold the secret of individuality; along its lengthy molecule the theoretical genes, Mendel's units of heredity, acquire a material existence; it alone accounts for the infectiousness of viruses; it is the stuff that can be altered by fall-out and by X-rays so that future generations may be harmed; it is presumably fundamentally involved in the wild uncontrolled growth of cancer; and finally, because of its powers of self-replication, it raises the question of what is living and what is non-living matter.

And yet, despite its governing role in the cell, it is elegantly and parsimoniously built from only six constituents: phosphate, a sugar and four nitrogenous bases. Since all DNAs, from animals, plants, bacteria and so forth, have the same general composition, their individual differences seem to be determined by the varying sequence of the four nitrogenous bases, and as the molecule contains upwards of 2,000 of these bases in all, the possible number of different arrangements is astronomical.

Dr Crick's article deals with a possible way in which sequences of bases in DNA can determine the arrangement of the amino-acids during the synthesis of the protein molecule. From experiments in causing mutations in a virus he produces cogent evidence that a sequence of three contiguous bases codes a particular one of the twenty different amino-acids. A mutation can be either a deletion or an interpolation of a base in the DNA chain. A single mutation altered the virus's properties, but both a deletion and an addition, if near each other, left the virus's properties almost unaltered, as did three deletions or three additions. This is only a fragmentary description of the sort of work being done; but it is clear that it may soon lead to a knowledge of which particular sequence of bases on the DNA chain stands for a particular amino-acid—an essential step in understanding the conversion of the genetic code into actual bodily characteristics, which are determined by the make-up of individual proteins.

Some nucleic acids have now been synthesised. The great dichotomies—plant/animal, organic/inorganic, living/non-living—have a habit of melting away the closer one gets to them; but, in unravelling the spiral, scientists have now gone a considerable way towards the creation of life.

Successful Non-Intervention

England and Italy, 1859-60

By Derek Beales.

Nelson. 208 pages. 18s.

IN a disarming preface Mr Beales acknowledges the labours of his forerunners in the field of Risorgimento studies, and modestly justifies his own work by pointing out that, with the exception of Mr Mack Smith, no English scholar has, up to now, been in a position to exploit the wealth of

both English and Italian documents dealing with British policy towards the unification of Italy. So valid is this claim that Mr Beales can be congratulated on having produced a most desirably up-to-date and comprehensive account of an important chapter in Britain's foreign policy, on exploding one more textbook myth, and on having contributed to an understanding of the operations of the mid-Victorian political system.

He sets himself three questions: "what, and especially how 'pro-Italian,' was England's policy? How was it arrived at? And what was the importance of England's Italian policy as an issue in the domestic political crisis of 1859?" His answers, briefly, are that public opinion, to which, said Napoleon III, British government was enslaved, was predominantly pro-Italian and (much more powerfully) anti-French; that the operation of these contradictory sentiments equally hampered the pro-French Palmerston and the anti-French Queen Victoria in their attempts to launch a "forward" policy; that, paradoxically, the resulting indecisiveness of British diplomacy furthered the Italian cause more than active assistance, in the forms of, for example, guarantees of Piedmontese gains in 1859 might have done; and that the Italian question did not cause the fall of the Derby government or the victory of Palmerston. Mr Beales also points out that the success of British non-intervention in 1859-60 misled the Cabinet into supposing that such a policy would always be justified by events—a supposition that was brusquely exposed as false by Bismarck in 1864, when the Schleswig-Holstein question arose. All these are useful things to know.

Of all the personalities involved, Lord Palmerston emerges the best. Mr Beales has a weakness for the old rogue, and it is easy, in this context, to see why. No British statesman of the time had a stronger grasp of the essentials of the international situation, and was less sentimental and at the same time more upright in the application of liberal principles to that situation. His Crimean and Athenian excesses were behind him; one is left regretting that British timidity and humbug were so consistently to frustrate his old age. One also regrets that he was matched with such a character as the French Emperor. Napoleon was at his zenith, and the dexterity of his Italian policy was even superior to Cavour's; but repeatedly he alienated British opinion and made the task of his would-be allies, Palmerston and Gladstone, impossible by his apparent duplicity, which made it seem that the whole Italian affair was a plot for the aggrandisement of France; though it is only fair to add that he received little encouragement to behave more considerately. But the English were in a high-flown mood: Napoleon was an illiberal foreign despot of shady reputation and dangerous name. It was all too easy for him to wound delicate insular sensibilities.

Mr Beales writes tamely, but briefly. He furnishes an excellent bibliography. His book might have been better had he interwoven his account of the Risorgimento with his main subject, rather than putting it all in his first chapter, to which one has constantly thereafter to refer; but otherwise this is a model piece of miniature history.

Towards the Charter

The Northeners: *A Study in the Reign of King John*

By J. C. Holt.
Oxford University Press. 286 pages. 42s.

THE term "Northeners" was used by the thirteenth century chroniclers to describe the baronial resistance to King John. Mr Holt's book starts from this superficially simple fact. But it is more than a study of local interests, or even of a party within the barons; it is a detailed examination of the events leading to Magna Carta.

Mr Holt shows that a small group of northern barons did indeed form the hard core of resistance to the king; and that, for various reasons, these men were either in debt to the crown or otherwise hard pressed; the "discontented baronage" becomes a factor in politics. He also argues that John's defeat at Bouvines led directly to Magna Carta: "like John the Northeners were gambling, they on the failure of the campaign, he on its success. The Northeners won. The road from Bouvines to Runnymede was direct, short, and unavoidable." At this point the composition of the baronial party changed; the Northeners were joined by others and were submerged in a "wider flood of protest." Magna Carta was thus forced upon the king by a larger group; only eight out of the twenty-five commissioners were Northeners. This fact helps to explain why John was able to split the baronial opposition so soon, repudiate the charter, and move to supress the north in the last year of his reign.

The reasons for the north becoming the centre of baronial resistance are complex. One was geographical; not until the eighteenth century was England secure on its northern frontier. But another explanation, Mr Holt shows, lay in John's own actions. The forest laws hit the north particularly hard, the king's administration was harsh, and more important still John visited the north every year of his reign except four, whereas Richard had never been farther north than Sherwood. It is possible to see in the resistance a provincial reaction to centralisation, a reaction to an attempt by the king to integrate the north. It is not without significance that one of the most prominent rebels, Eustace de Vesci, was a son-in-law of the Scottish King William the Lion, and that Scottish help was given to the rebels.

This is a scholarly account of a complicated subject, which is at the same time readable—not an easy achievement.

Timeless Tome

Principles of Economics

By Alfred Marshall.
Ninth edition, with annotations by C. W. Guillebaud.
Macmillan, 2 vols., 892 and 895 pages. £6.

THE proper approach to these two handsome and weighty volumes is one of reverence, both for the great Marshall and for the scholarship of his nephew in preparing this edition. Volume I is a reprint of the eighth edition (using good sized print) and volume II contains the notes. These notes show from which edition each sentence in the eighth (and last) edition of 1920 was dated, indicate all changes of substance that were made before a passage reached its final form, and reproduce the material from earlier editions that did not appear in the eighth edition.

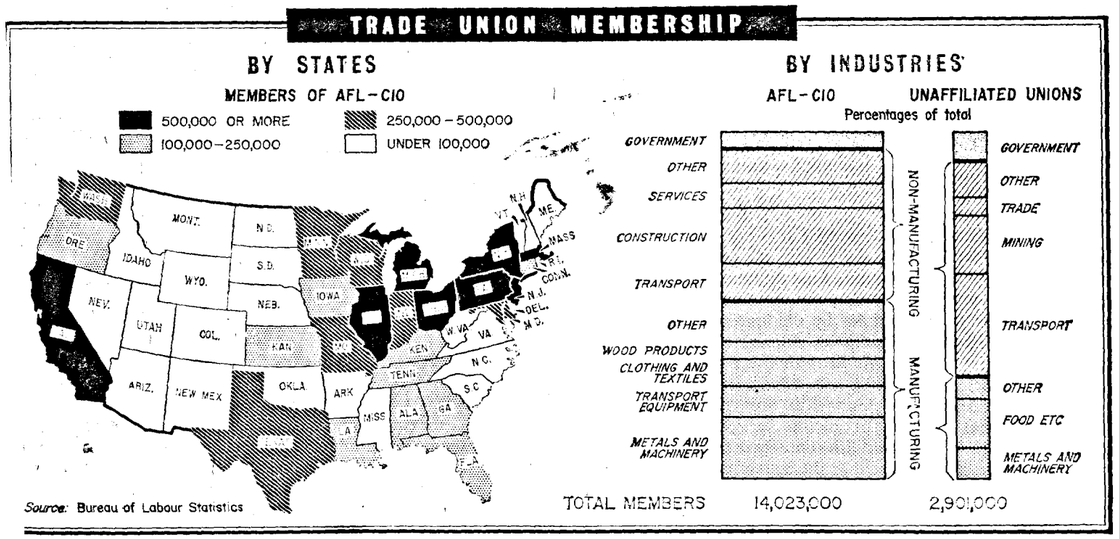
It is, unfortunately, fatally tempting for the modern reader to undervalue Marshall's work. His original contributions to economics were so important that they are an essential part of the subject today and it is easy to forget their provenance. Furthermore, Marshall's exposition often seemed rather woolly, even though it was based on acute theoretical analysis, because he was aiming at the general reader. Lastly, his work sometimes makes rather dull reading, for he was a Victorian and, not unreasonably, wrote like one.

To say that the book is old-fashioned, however, is not to say that it is out of date. It is, indeed, a classic and should be read as much today as in the past. Marshall was wise as well as clever and included nothing which he could not illustrate by examples that are important in real life. Too many of his successors are clever without being wise.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Labour Bounces Back



FROM A SPECIAL CORRESPONDENT

AMERICAN labour's confidence in its own future has a way of bouncing up and down with all the elasticity of a yo-yo. Before the American Federation of Labour and Congress of Industrial Organisations held its biennial convention last month amid the gilt and marshmallow splendours of the vast Americana Hotel in Miami Beach, there was much unhappy speculation about how long the six-year-old merger between the two trade union groups would endure and whether, if it crumbled, this would be much of a loss. Mr Walter Reuther, the highly articulate leader of the industrial trade unions, which cut across craft boundaries, proclaimed publicly his conviction that the unity of labour was more nominal than real and the old-line craft unions in the construction and metal trades were equally frank in pronouncing the fruits of the merger to be sour. A lack of any discernible sense of mission, stagnation in the search for new members, high levels of unemployment and the shrinking requirements for workers in factories, communications, transport and other traditional union strongholds, as a result of the spread of automatic equipment, all reinforced the fear that it might be time to add an RIP to the initials AFL-CIO.

But an astonishing lift out of the miasma of pessimism was effected at Miami Beach, thanks in large measure to a forceful reassertion of leadership by the man who had been the chief architect of the merger six years before—Mr George Meany, the federation's blunt, belligerent president. Improved machinery for ironing out their conflicts was agreed upon by the craft and industrial unionists, who have been at odds over questions such as which workers should do certain jobs, and the chances for turning to more constructive purposes the energies which all the big unions have been pouring into civil war seem brighter than they have for some time. Mr Hoffa, who leads the exiled International Brotherhood of Teamsters, set up a field headquarters in the Eden Roc Hotel, a couple of miles down the Florida Gold Coast from the Americana, but his expeditionary force made no converts. It is perfectly plain that, as long as Mr Meany heads the federation and Mr Hoffa heads the teamsters, that giant but scandal-tainted trade union will remain out in the cold. A good deal was also done at Miami to ease the tensions that had developed between the federation and the Negro community over racial discrimination in many trade unions. However, the prospect of lasting amity in this field is not bright; Negro trade unionists feel that the colour bar at work is coming down far too slowly.

President Kennedy told the convention how much both he and the country owed to labour and came away with a promise from Mr Meany that the federation would "co-operate 1,000 per cent" in helping to enact the President's controversial plan for a flexible tariff policy to permit American trade with the European common market to expand. The convention endorsed this promise in a formal resolution but it larded its support of freer trade with enough escape hatches and cushioning arrangements to satisfy all the protectionist elements in the trade unions in such industries as the needle trades, textiles, glass, pottery and electronics.

The real difference between the President and labour is over Mr Kennedy's appeal for wage restraint. It is true that the Administration is even more reluctant to say exactly what it means when it asks labour not to over-reach itself in collective bargaining

than the British Government is to define its concept of "modest increases." Nevertheless, Mr Kennedy's general line is that improvements in wages and other benefits should be restricted to those earned through increased productivity and that a broad cut in the 40-hour basic work-week would be a mistake in the light of intensified competition abroad and of Mr Khrushchev's threat to bury the West on the production front.

The AFL-CIO's rejection of any go-slow policy at the bargaining table stems from two great fears. One is worry that the present economic upturn will run out of fuel by the middle of this year unless the trade unions and the government take more vigorous action to stimulate mass purchasing power and to step up the pace of economic growth. The other is labour's certainty that automation means the wiping out of millions of jobs in a period when one American worker in every seventeen is already out of employment. A warning that a new recession may begin in the second half of 1962 has been put in the hands of all trade union leaders by the federation's economic analysts. Their prediction is that the current recovery will flatten out in about six months, with unemployment down only a little from the November level of 6.1 per cent of the labour force and with nearly 15 per cent of the country's industrial capacity still idle.

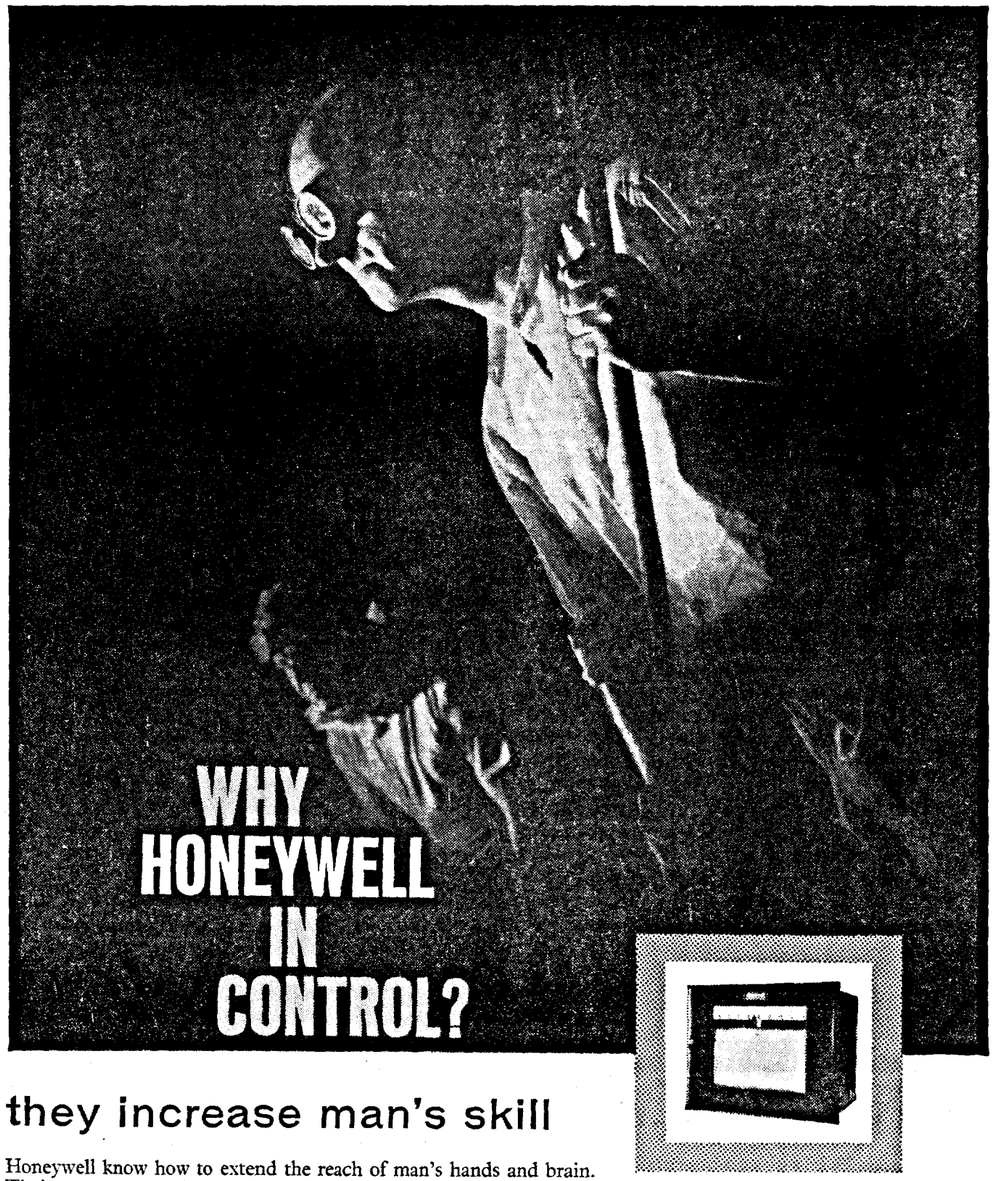
Mr Reuther, who heads the federation's economic policy committee, estimates that the United States lost 20 million man-years of work and $40 billion of gross national product in the last eight years through under-use of its human and material resources—a loss of more than $8,000 for every American family. Even more forbidding are his figures on how many new jobs must be created to keep everybody at work in the nineteen-sixties. He sees technological progress jolting 28 million workers out of jobs in the next ten years. In addition, the flooding into the labour market of young people born since the last war will increase the number competing for employment by 13.5 million, even after allowing for all who die or retire. Under this computation, the economy will have to bring new jobs into being at the rate of 80,000 a week every week for a decade if there are to be enough places to go around. This is the equivalent of creating a new company as big as the General Motors Corporation every five weeks.

LABOUR'S formula for making the economy climb more swiftly toward the goal of "more for all" involves a combination of unshackled collective bargaining to put more money into consumer's pockets and of an "expansionary" federal spending policy, under which balancing the budget would be less important than the achievement of full employment. Industry and the powerful coalition in Congress of southern Democrats and northern Republicans feel that this course would simply foster inflation, discourage investment and reduce the number of jobs.

The first big test of these conflicting viewpoints will come in the middle of the year when the contracts expire between the major steel producers and the United Steel Workers of America. The union has announced already that its chief stress will be on winning a four-day, 32-hour week, with no cut in the pay its members now get for 40 hours. Last autumn, when the steel companies were putting into effect the third and last of the increases in labour costs called for by the agreement they signed under pressure from the Republican Administration to end the 116-day steel strike of 1959, Mr Kennedy asked them to hold the price line as a defence against a new inflationary spiral.

The President coupled his plea with an assurance that he would be equally vigorous in urging the union to be moderate in its wage demands in 1962. This is a ticklish commitment even if increased productivity were to be accepted as the measuring rod of moderation. The companies contend that the annual long-term gain in productivity runs at about 2 per cent; the union argues that with new technology 4 per cent is a more accurate (and still conservative) figure. The prospect is that steel, the last big labour battlefield of the Eisenhower era, will become the first big battlefield of the new frontiersmen. Mr Goldberg, the present Secretary of Labour, who as the steel union's general counsel played a leading part in negotiating the 1959 pact, will be in the position this time of having to clarify what the present Administration considers to be a non-inflationary agreement.

Congress at the Ready



PRESIDENT KENNEDY has spent the year-end holiday preparing the heavy batch of messages with which he proposes to keep the Eighty-seventh Congress busy from the moment it starts its second session next Wednesday. As far as is known his only completely new proposal will be for the sweeping changes in tariff policy which have been outlined in general terms in a series of stimulating speeches. The President is said to hope that this trade Bill has gathered enough momentum already to sail through Congress before the protectionist lobbyists catch up with it. At least the reorganisation of the Democratic majority, the first business in the House of Representatives, where the Bill must start, does not seem likely to delay matters.

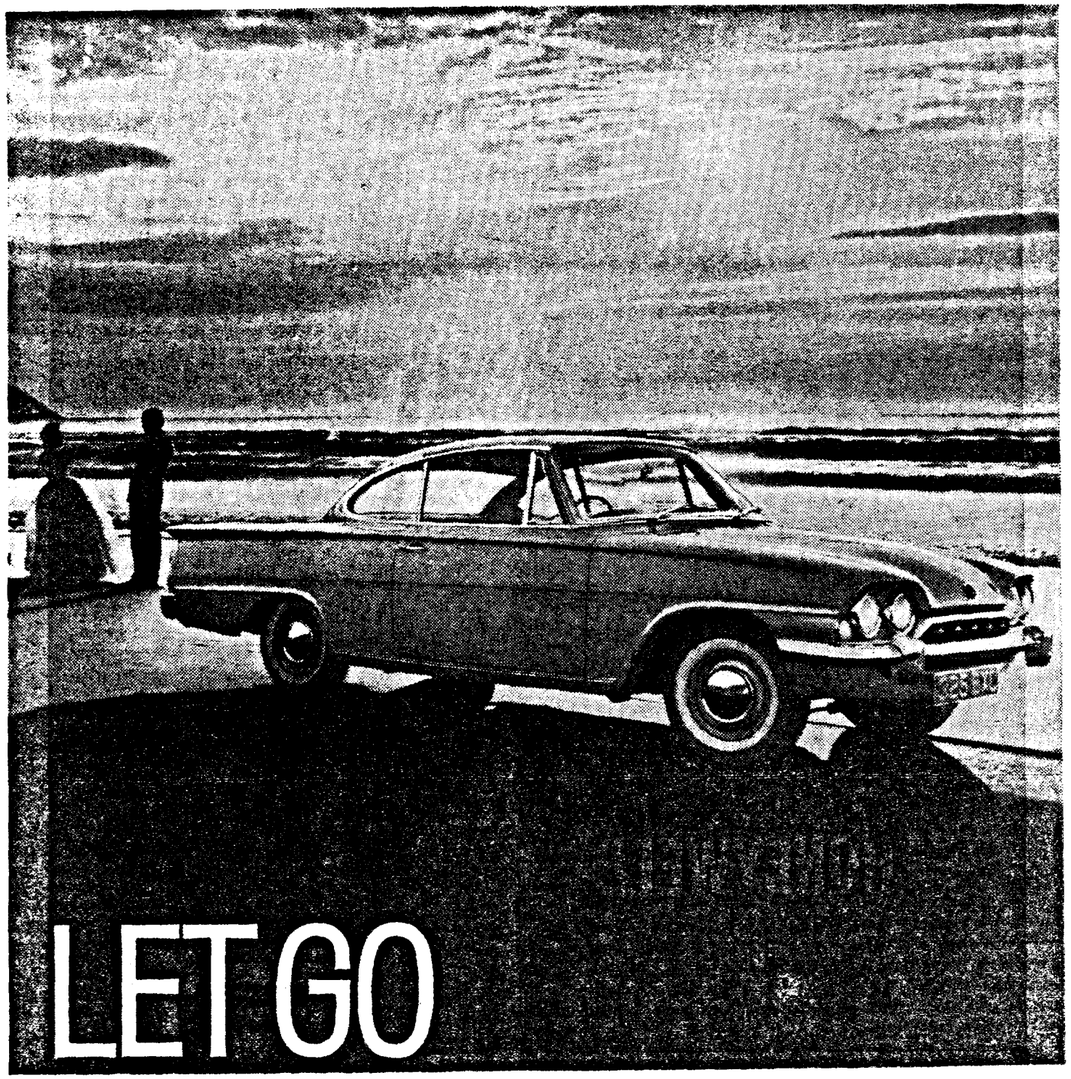
It is now accepted that the new Speaker, to succeed Mr Rayburn, who had been Speaker almost without interruption since 1940, will be Mr McCormack of Massachusetts and that he will be succeeded as majority leader by Representative Albert of Oklahoma, with Representative Boggs of Louisiana probably taking over from Mr Albert as Democratic whip. Mr Boggs, who has specialised in trade policy, will certainly do his able best for the tariff Bill. But neither Mr McCormack nor Mr Albert, both of whom represent regions which have suffered economically from imports, are as sympathetic to this legislation as the President would like; otherwise both have had satisfactory, although not outstanding, voting records from the Administration's point of view, except that Mr Albert, a Southerner, has supported racial segregation. But neither of the new leaders has the prestige, the firmness and the experience which enabled Mr Rayburn to discipline the House so strictly.

The President would, it is presumed, have preferred one of these offices to go to Representative Bolling of Missouri, a younger, more energetic and more liberal man who was close to Mr Rayburn and is congenial to Mr Kennedy. But without the President's active help—and probably not even with it—Mr Bolling had no hope of overcoming the claims which the established custom of succession gave to Mr McCormack and Mr Albert. If Mr Kennedy had tried to flout these claims he would have cancelled out any good that might have come from Mr Bolling's more progressive leadership, by dividing the Democratic party and arousing Congress's resentment against presidential interference. In particular any opposition to Mr Albert would have alienated the southern Democrats whom Mr Kennedy is wooing at the moment since without at least some of their votes little of his programme has much chance of success. Mr Bolling is now standing down although he may yet head a new steering committee which is suggested as a way of gingering up the uninspiring leaders of the Democrats in the House.

Bailing out the UN

INSTEAD of taking shelter from the right-wing storm over its support for the United Nations in the Congo, the Administration has announced firmly that it means to ask Congress for permission to buy up to half of the $200 million in 25-year bonds to be issued by the UN. This request will guarantee a wide-ranging debate on American relations with the UN in the next session of Congress and will give the government a chance to

they increase man's skill



Honeywell know how to extend the reach of man's hands and brain. Their process controls make his judgement more certain, help him to maintain product quality right down the line. Their heating controls give him freedom to choose or to change indoor 'climate' just as he wishes. And with their computers he can do eight jobs at once . . . Small wonder that Honeywell are in such demand to increase the speed and the skill with which men can work. This is now not merely a success story—it's a world wide tradition.

Honeywell Controls Work Everywhere

THE ELECTRONIK—symbol of Honeywell's international leadership in process control—is one of more than 13,000 controls and control systems supplied by Honeywell.

HONEYWELL CONTROLS LIMITED

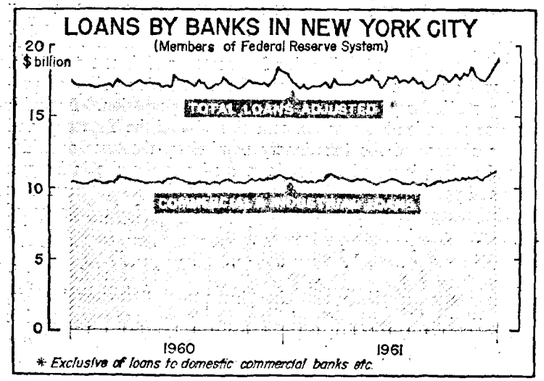
Sales Offices in the principal towns and cities in the United Kingdom and throughout the world.

Honeywell
First in Control

put its side of the argument—something which has not been done as frequently or as clearly as it might have been. An example of most unfortunate confusion is the State Department's decision this week to soften many of the hard things said last week by two of its spokesmen—Mr Mennen Williams and Mr Carl Rowan—about the *Union Minière du Haut-Katanga* and the money being spent by the Tshombe government to influence public opinion in the United States.

The case for buying United Nations bonds has been well put by Mr Harlan Cleveland, the able Assistant Secretary for International Organisation Affairs. The UN's books are $104 million in the red primarily because certain countries—the Soviet Union, France, Belgium and the Arab states—have refused to pay for military operations which they dislike. The interest on the bonds and their repayment will be met out of the regular UN budget. The particular charm of this arrangement is that the recalcitrants will thus have to pay their share or run the risk, in time, of losing their votes in the General Assembly. (There is some doubt, which it is expected that the International Court will dispel, as to whether assessments for special military operations are similarly binding upon all members.) For the United States, which has been paying 47½ per cent of the cost of the Congo operation, there is the additional attraction that its final share would amount to only 32 per cent—the present amount of its contribution to the regular budget. (In all, over the past sixteen years the United States has contributed $1.2 billion of the $2.7 billion which the United Nations and its agencies have spent.) The only part of Mr Cleveland's argument which seems unfortunate is the suggestion that, if the bond issue is a success, the Administration will not have to ask Congress for more money immediately for the Congo. This would be perfectly just, as the United States has overpaid in the past, but it may be misunderstood abroad; in any case, by July the deficit may eat up most of the proceeds of the bonds.

More important than such financial details is the underlying question, which the Congo has brought to a head, of how much it is in the American interest for the United Nations to continue to exist. Mr Cleveland argues vigorously that it would be a great blow to the United States if the communist countries were able to starve the UN but, if the argument in Congress and the country is to be won, the President himself will almost certainly have to enter the battle.



Co-existence in the Money Market

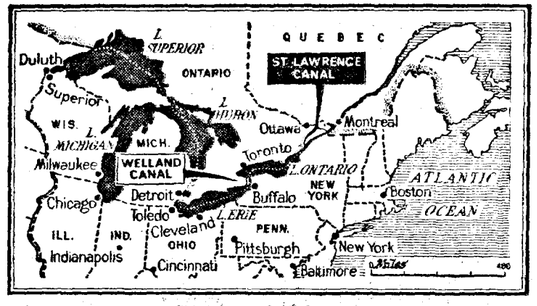
NEW YORK

USUALLY money becomes scarcer with a rise in business activity but only now, fully ten months after the recession ended, is the first discernible sign appearing on the New York market of the increase in interest rates which shows that money is in tight supply. In other periods of expansion the Federal Reserve Board demonstrated its zeal for combating inflationary pressures by rationing credit so stringently that the cost of borrowing soared; this time the Fed and the Treasury, which shares the responsibility for the current deviation from past patterns, express confidence that enough credit will be available and that any increase in rates will be gradual. Their recent success in maintaining a stable structure of interest rates cannot be denied, yet the financial community is doubtful whether they can continue to temper fluctuations and to avoid a curtailment in credit.

Sceptics have already been confounded by the extent of the co-operation existing between the Kennedy Administration and the Federal Reserve Board, headed by Mr William Martin. A year ago a clash was considered inevitable; Mr Martin was being attacked by Mr Kennedy's economic advisers for his alleged bias towards tight money, while the Fed and its supporters were critical of the Democratic party's traditional affinity for easy money and, by inference, for inflation. Instead of a rupture, however, there has been a convincing—and apparently enduring—display of peaceful co-existence. The Fed has supported the Administration's desire to provide credit for domestic expansion without inviting an outflow of funds to foreign countries, by keeping short-term rates of interest from falling to the extremely low levels reached in earlier recessions. In additional contrast with its past performance, the central bank is still expanding the credit base as economic activity rises, justifying this by the fact that there is still unemployment and excess productive capacity; to defend the dollar the Fed is prepared to allow the demand for credit to push up interest rates, at least moderately.

Some critics claim that the new harmony has been achieved only at the expense of the Fed but Mr Martin, a dedicated public servant who has championed the independence of monetary management since his appointment by Mr Truman in 1951, dismisses the notion that he has bowed to the dictates of Mr Dillon, Mr Kennedy's Secretary of the Treasury. Admittedly, the Fed made the initial gesture last February when it formally abandoned its "bills only" policy, the practice of confining its open market operations to short-term Treasury bills. But this olive branch was hardly a surrender, for adherence to "bills only," which tends to exaggerate swings in interest rates, had weakened within the Fed itself with the recognition that the international status of the dollar was as much a factor in the formulation of credit policy as were domestic conditions. So the central bank ruled out a sharp decline in rates, which its anti-recession easing would have induced, by dealing in all maturities. While the Administration also had hopes of a simultaneous decline in long-term rates to encourage investment in mortgages and in business, little change was registered largely because the recession proved short-lived and demand for capital, particularly in the first half of the year, was heavy.

Although the Fed may have made the more overt moves, the Administration did its part in bringing about what has been described as a "new balance" between monetary and fiscal policy. In taking over some of the burden that had formerly been shouldered by the central bank alone, the Administration limited its contra-cyclical spending to about half the amount incurred in the 1957-58 recession and did the bulk of its financing in the short-term area, thus shoring up interest rates. At the same time it made use of advance refunding to put more outstanding obligations into the long-term area and thereby prevented a shortening in the average maturity of the national debt. The Administration also resorted to jawbone tactics (the Fed, in this respect, was more restrained) to dispel inflationary fears and worked out a series of agreements with foreign bankers to minimise the spread between interest rates in New York and abroad.



The balance may shift somewhat more ostensibly in the effort to provide funds for growth. According to government officials, the 1959 recovery was thwarted by the abrupt change from extreme deficit to surplus in the Eisenhower Budget accompanied by a comparably sharp reversal from easy to tight money. The Kennedy team, which did not permit the deficit to get out of hand, believes that its milder transition will not interfere with the rise of the economy. Its deficit financing is to be completed next week with the auction of $2 billion worth of one-year notes (only $500 million of which will be for new money) and the sale, on terms which will not be announced until the results of the auction are known, of another obligation to raise $1 billion to $1.25 billion in new cash. Both will bolster the structure of short-term interest rates and once they are out of the way the government will not be competing with private borrowers for funds, so that the Fed can make credit more readily available. Mr Martin's recent statement that the Fed has no intention of "choking off the flow of credit and forcing rates artificially higher" makes clear that he is in agreement. At present the net free reserves of the banks, which govern the growth of credit, stand at $427 million, far more than the central bank has permitted in past periods of expansion.

Professionals in the money market, who are suspicious of unorthodoxy and fearful that the Fed's independence is (or will be) in danger, cannot reconcile a moderate rise in interest rates—and plentiful credit—with an expanding economy and a deficit in the balance of payments. They argue that the Fed-Treasury partnership has succeeded only because the demand for bank credit has been unexpectedly sluggish. This demand is now strong and could be explosive; thus it might bring a sharp rise in rates along with a restriction of credit. In addition, while the Treasury will not be doing any fresh borrowing over the next six months, it has to refinance the huge amount of short-term debt it has floated and this will be an added pressure on the rate structure. And a sudden tightening of credit, which could stifle the economic upsurge, is also possible if the deficit in the international balance of payments worsens and if there is a fresh outflow of short-term funds.

It will not be easy to carry out the unorthodox policy of providing credit for growth without encouraging inflation. But with close co-operation between the central bank and the Treasury, and in the absence of the inflationary psychology that was so widespread earlier, it may be possible to moderate the rise in interest rates and promote productive investment. This does not mean that the influence of the market or the discipline of the balance of payments can be ignored; indeed, if the dollar comes under pressure or if inflation looms, the Fed—with the support of the Treasury—will revert to orthodoxy. But they are showing a willingness to experiment and, though the market remains dubious, the success achieved by effective teamwork last year suggests that the gamble is worthwhile.

Seaway Under Way

THE St Lawrence Seaway, the great system of locks, canals and deepened channels to enable ocean-going vessels to sail into the heart of the North American continent, has done considerably better in its third season than it did in its second. But this does not mean that it has come up to the expectations with which it was opened in the spring of 1959; these are now recognised to have been based on over-optimistic calculations. Over 23 million tons of cargo were carried through the seaway proper, the St Lawrence Canal section, in the season which ended when the waters froze in December and 30 million tons through the Welland Canal, increases of 13 per cent and 6 per cent respectively over the 1960 figures. On both sections the increases in eastward (downstream) traffic were much greater proportionately and were offset

by decreases in upbound cargoes, which fell this year largely because of the low level of activity in the steel mills of the Great Lakes and because they were employing more low-grade iron ore from Minnesota, now made usable by a special process, instead of higher-grade ores from Labrador and other foreign sources. Eastbound traffic benefited from heavy shipments of wheat from the plains of both Canada and the United States. Bulk cargoes of this kind are by far the most important freight on the seaway.

Even with this year's improvement traffic was still running about 35 per cent below the amount originally forecast for 1961. This means that the toll charges are covering costs of operation and maintenance but not the interest and amortisation on the cost of building the seaway—$471,000,000—which is supposed to be paid off in fifty years. Thus there is likely to be pressure for higher tolls when the rates come up for review in 1964. The experts who have faith in the seaway, however, hope that by then it will be doing well enough to make it unnecessary to raise charges even though traffic is not now expected to reach its maximum of 50 million tons a year before 1970.

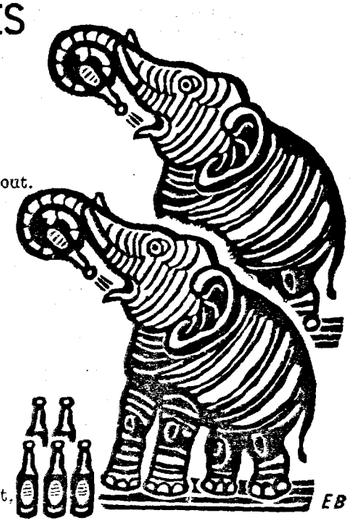
By 1964, these experts hope, not only will the channels through the western section have been deepened, but so also will the ports. At present ships with the 27-foot draught for which the seaway was designed cannot carry full cargoes all the way from Minnesota and Wisconsin; nor can they get into all the ports. But everywhere lakeside cities are improving their approaches, dredging their harbours, building up their docks and ancillary services and training labour to meet the complaints of shipping companies and shippers about delays and inefficiencies in unloading and distributing cargoes. Moreover, these ports are advertising their advantages both at home and abroad and the Department of Commerce is now backing their efforts, unpopular as these are with the eastern and southern railways and ports. Already traffic through the St Lawrence coming from or going overseas is up to about 6 million tons this year compared with 700,000 tons in 1958. This development should continue as shipowners and their crews and the businessmen who export and import become more accustomed to using the seaway.

Worthy of Whose Hire?

PRESIDENT KENNEDY must envy the ability of Mayor Wagner of New York City to rush through, in a few days, big increases in salary both for himself and other high city officials. Whether this speed was prudent is another matter. The main objections of civic groups are not so much to the increase in the Mayor's pay to $50,000 a year—as much as the Governor of New York State and half as much as the President himself—as to the $35,000 a year for the five Borough Presidents; under the new city charter, which goes into effect next January, they will have considerably less work to do. Mr Kennedy's need to attract good men

AESOP-TO-DATE

The Early Bird and the Elephants



A singing Bird did so entrance
A pair of simple Elephants
That they implored the songstress tell
What was it made her sing so well.
It must at least be Guinness Stout
That brought such rapturous twitt'rings out.

Alas! the eager pachyderms
Found that her diet was of worms,
And though at first they were upset,
They said "We'll trill like Birdie yet,"
And started singing semitones
On Things they dug up under stones.

At length one day at crack of dawn
Their trumpetings announced the morn.
The neighbourhood so rudely stirred
Not only gave them both the bird,
But further concerts they implied
Might end in elephanticide.

The Moral: Nature knows what's best.
And that's where Guinness stands the test.
For barley malt and yeast and hops
Make this a drink that's really tops.
And music-makers can go far
On several Guinness to the bar.

EB

Guinness
is good for you—and me
G.E. 3675.B

into government service is as great, if not greater, than Mr Wagner's but in Washington the obstacles are not so easily surmounted. Last week the President made a bid for public support by appointing a committee headed by Mr Clarence Randall, a Republican, to recommend by January 15th how far the federal government should go toward making the salaries of high government officials comparable with those paid by private enterprise.

To go the whole way might mean adding as much as $2 billion a year to a payroll of about $13.6 billion. The Civil Service Commission has found that salaries of government workers in the lower ranks are as high as those paid by industry, sometimes higher. But the men in responsible jobs could earn twice as much if they worked for private employers ; a man like Mr McNamara, who was paid $300,000 a year by the Ford Motor Company and now gets $25,000 a year as the Secretary of Defence, is an extreme example. And there are risks in serving the government as a number of the newest—and some of the brighter—workers in the State Department found this Christmas when 500 jobs had to be abolished because Congress had failed to appropriate enough money for them.

The increases which the President is actually contemplating would cost eventually an annual $1 billion or so, but only a modest start is proposed for the coming pinched fiscal year. (In any case, a big splash would be unfortunate when the trade unions are being asked not to press for big increases in wages.) The salaries of Cabinet members would be raised from $25,000 a year to $30,000 or a bit more and those of civil servants in the highest grade from $18,500 to $25,000. There would be smaller rises in lower grades and the smallest of all in the lowest ones, as a sweetener for Congress which tends, particularly in election year, to look with more sympathy on pay increases for the lower paid (and more numerous) workers than on what seems to be very large increases for the comparatively well-off. The organised government workers are already preparing a big drive in Congress for higher pay. This is still the only road to general wage increases, even though the Administration has just laid down new and more progressive rules for the treatment of the trade unions to which about a third of the 2.4 million federal workers belong.

Fertilising the Atmosphere

FROM A CORRESPONDENT IN DENVER

ADDING carbon dioxide to the air has been found to be a great stimulator of growth for plants in greenhouses during cold weather. When a greenhouse has to be kept closed during the daytime plants exhaust the available carbon dioxide very quickly and virtually stop growing. Experiments at Colorado State University have shown that adding CO_2, up to levels of 550 parts a million, hastens the growth and increases the yield of carnations by as much as 38 per cent. Growth in roses was stimulated by only 9 per cent, but the improvement in quality was "tremendous." The chief experimenter, Mr Holley, says that deficiency of carbon dioxide has now become the limiting factor in winter growing (when greenhouses are ventilated, as they are in the summer, the natural supply is sufficient). Scores of experiments with other greenhouse crops, such as tomatoes, cucumbers and so on, are beginning to be made all over the United States.

The atmosphere's average natural content of CO_2 is a little more than 300 parts a million and is thought to be increasing slowly as a result of man's activities. But it can go as low as 207 and as high as 362. The growth of plants slows down greatly when the proportion of carbon dioxide falls to 200 and stops entirely at 125. The carbon dioxide added to the atmosphere in a greenhouse must be pure, since the slightest trace of carbon monoxide or of unsaturated carbons can ruin plants. Mr Holley recommends that it should be introduced by means of a lump of dry ice, an unstoppered source of liquid carbon dioxide, a small charcoal fire or even a floor mulch of decomposing corncobs or other organic material.

Helium Goes Up

UNTIL recently both the supply of helium and the demand for it were almost a government monopoly. It is to bring in private commercial interests that the price has been pushed up from $19 to $35 a thousand cubic feet. This is what the Department of the Interior, which has been providing practically all the helium not only for the United States but also for the whole free world from its own five extraction plants, is now charging its customers ; they need helium mainly for their work on government contracts. Non-inflammable, non-poisonous, helium is a conductor of sound, light and heat, does not react to any other chemical compound and can be reduced to lower temperatures than any other substance. It is used in missiles and atomic reactors, for welding aluminium and other metals and in cryogenics (the study of the effects of exceptional cold). As a result of all these modern needs for helium, once used only as a safe inflator for balloons, demand has been going up recently by 15 to 20 per cent a year. In 1960 600 million cubic feet were sold, virtually all that was produced, and by 1970 at least twice that amount will probably be required.

To meet this growing demand the Department of the Interior is now encouraging private operators to produce helium. It is normally found mixed with natural gas in the mid-continental oil fields ; in the past as much as 4 billion cubic feet a year have been burnt with that gas instead of being extracted before the gas is consumed. Such waste can no longer be afforded, especially as it is nearly twenty years since an important new helium-bearing gas field was found in the United States and as there is practically no known source of helium elsewhere outside the iron curtain. The department is now guaranteeing to buy all the output of private operators who conserve helium by separating it from the gas before it is sold. This helium will either go into current use or be put into storage underground in an exhausted natural gas field in Texas ; the department hopes to build up a reserve of 52 billion cubic feet by 1985. It is paying from $11 to $12 a thousand cubic feet to these suppliers. The difference between this and the new selling price of $35 will cover the department's costs, particularly those of the storage programme, which includes pipelines to collect the helium.

So far three contracts have been signed with private firms to build new helium plants, all in Kansas ; between them they will provide the government with 2.3 billion cubic feet a year of helium for 22 years. Together these contracts will cost the government about $34 million a year ; it has authority from Congress to borrow $47.5 million a year from the Treasury for the purpose and would like this to be increased. In theory the new selling price should make helium an attractive proposition for private firms to sell directly to industry and one company is beginning to do so. It is tapping an Arizona field of natural gas that is particularly rich in helium though useless for other purposes ; this will produce about 65 million cubic feet of helium a year for commercial sale. But so far no other company shows any desire to enter into competition with the government.

THE WORLD OVERSEAS

Mahomet on the Heights of Abraham

FROM OUR OTTAWA CORRESPONDENT

MR EDWARD HEATH arrived here on Tuesday night for discussions about Britain's negotiations with the European Common Market ; his talks are continuing as this is written. Probably his main object is to persuade Canadian ministers to let their officials play a more positive role as consultants to the British negotiators as the Brussels talks proceed. He must have found that both ministers and officials are very reluctant to tender any advice about Canadian interests which might appear to make them consenting parties to British decisions. If Mr Heath makes any dent in this rigid policy of aloofness, it is likely to be well concealed, though it might be no less important for that.

Mr Donald Fleming is taking part in the talks after all, although as recently as ten days ago there were few Canadians who believed that he would now retain the finance portfolio which he has held since 1957. The general belief that Mr Diefenbaker was determined to move him was fed during the last few months by widespread press reports whose source can be traced directly to Mr Diefenbaker himself. Intending to make a complete reorganisation of the cabinet, starting with the replacement of Mr Fleming as minister of finance and of Mr Davie Fulton as minister of justice, Mr Diefenbaker decided just before Christmas to take his whole cabinet to Quebec City where the Governor-General, Mr Georges Vanier, was in residence. These arrangements were deliberately well publicised. But they started to fall apart even before the Christmas holidays were over.

By Boxing Day Mr Diefenbaker had received renewed protests from the financial community against the removal of Mr Fleming, and it is understood that these were repeated by Mr Fulton at a private Boxing Day meeting with the prime minister. By the morning of Wednesday, December 27th, when Mr Fleming was summoned for a long meeting, Mr Diefenbaker had probably already decided to abandon his plans for reorganising the ministry. But it was too late to abandon the ponderous safari to Quebec. So the mountain combined its two proverbial tricks: it moved to Mahomet in heavy labour and brought forth a mouse at his feet. Mr Vanier approved a couple of minor cabinet appointments and two formal honorific additions to the privy council.

Obviously something went wrong. Apparently Mr Diefenbaker reversed his plans even before his Wednesday morning meeting with Mr Fleming. But that encounter, lasting nearly an hour and a half, has seized the public imagination. It took place in the prime minister's office and reporters were on hand to record Mr Fleming's expressions before and after. They had no doubt that it was a stormy encounter. As soon as it was over Mr Diefenbaker passed out the word that no change was to be made at the finance ministry. But only time will tell how much authority Mr Fleming retains along with his office.

For Canadians the significance of these events lies in their influence on the timing and substance of the election campaign expected this year. Mr Diefenbaker flew his first kites about reorganising the ministry and replacing Mr Fleming several months ago when his principal idea was to sacrifice a scapegoat for the blundering attempt to dismiss Mr Coyne from the Bank of Canada last summer, the unpopularity of the government's opposition to Britain's common market negotiations, and the series of budget deficits. His manœuvres in these usually intimate cabinet disputes can be reported with unusual confidence thanks to his established habit of using a few favoured correspondents and friendly newspapers to hoist trial balloons for whatever he is thinking of doing. He certainly believed three months ago that he could enhance the popularity of his government by getting rid of Mr Fleming, and there was every sign that he meant to do so in good time for an election before the middle of 1962.

In one sense of course every prime minister always has the next election in mind. Men, besides being born equal, are political animals. If some are more equal than others, some are also decidedly more political. But it is difficult to think of anyone more political—or for that matter more equal—than John Diefenbaker. The obviousness of his tub-thumping whistle-stop electioneering tours in recent months may have marked a change of pace rather than of principle, but it persuaded most Canadians that the election campaign had already opened. So when Mr Fleming was still in office in mid-December the logical conclusion, supported by the strong representations in his favour known to have been made by the financial community, was that Mr Diefenbaker had decided he was more of an asset than a liability. There is indeed private evidence that their disputes were patched up at least once in this period.

The revival of equally inspired newspaper stories just before Christmas therefore suggested that the dispute had moved to new ground involving the pre-election programme and the finance minister's authority to keep departmental spending projects within some kind of overall budgetary control. Mr Fleming has been given very little chance to do this in the last year. He may have even less with an election close at hand which not only whets the appetites of his colleagues but undoubtedly touches responsive chords in his own highly political make-up. The legislative programme to be submitted to Parliament when it opens on January 18th has still to be decided. Its nature may indicate both the sort of terms on which Mr Fleming keeps his office as finance minister, and also the likelihood of a quick election before Easter or a postponement till next autumn.

Greater Syria, Pocket Edition

FROM OUR MIDDLE EAST CORRESPONDENT

BEIRUT

THE abortive *coup d'état* in the small hours of Sunday, December 31st, was the most startling event in the Lebanon since the 1958 disturbances ended. The attempted *coup* was the work of an extremist group, the PPS, formed in 1932 under the name of Parti Populaire Syrien with, as its principal aim, the creation of a unified "fertile crescent" in the area that now comprises Iraq, Syria, Lebanon, Jordan, Israel and, oddly enough, Cyprus—"the star within the crescent." The PPS has had a chequered career. Banned in 1937, it re-emerged in 1944, and was suppressed again in 1949, when its leader, Antun Saadeh, was executed. It remained active underground and strongly supported President Camille Chamoun throughout the disturbances of 1958, when it was reliably reported to be receiving arms from the

government of Nuri Said in Baghdad. As a reward for its support, President Chamoun licensed the group under the new name of Nationalist Social Party. Since then it has operated as an activist right-wing movement of a slightly dotty kind.

This lunatic fringe aspect was strongly in evidence last weekend. The movement was spearheaded by two army captains and 40 men. After keeping a pre-arranged rendezvous with PPS adherents in Beirut, they kidnapped several senior army officers, made a vain attempt to storm the ministry of defence and the post office and were promptly suppressed. The kidnapped officers were released unconditionally. The only obvious result of all this effort was, inevitably, the third suppression of the movement, a police round-up of several hundred known party members, and the discovery of considerable quantities of illegally stored arms and ammunition, including machine guns.

The suppression of the PPS can hardly be anything but salutary for the Lebanon. Memories of 1958 are still vivid, and the public at large is nervous of extremism of any kind. The farcical nature of the *coup* has thoroughly discredited the movement, and the authorities have promised condign punishment for the ringleaders. Nationalists here and elsewhere in the Arab countries lost no time in pinning responsibility for the conspiracy on the unfortunate British embassy here. What British interest PPS rule in Beirut could possibly serve is difficult to see, fatally easy though it is to link the *coup* with recent British military movements in the Middle East. The only possible substance for this current allegation reaches back to 1958, when the British Government certainly favoured the re-election of President Chamoun and thus may be said indirectly to have entered into a relationship with the groups supporting him. The lesson of that failure has, however, been thoroughly digested, and even those most supicious of British motives might have the charity to assume that any British-supported operation would have been conducted on less idiotic lines.

At all events, the Lebanese are congratulating themselves on the promptness with which the threat to national stability was nipped in the bud. Congratulatory telegrams are still pouring into the palace of President Chehab at the village of Sarba, north of Beirut. A notable inquirer was the Syrian president, Dr Nazim Kudsi, who has just come to power himself as the result of an army *coup*. The conspiracy has also been denounced in both Cairo and Baghdad ; so, just for once, we have an issue on which practically all Arabs seem to agree.

LA TÊTE À L'OMBRE ET . . .

Les Pieds au Grand Soleil

FROM OUR PARIS CORRESPONDENT

NOWADAYS, if a Frenchman were set to write an essay on the elephant, he would not write the elephant's love life as he was supposed to do in the old days ; it would be " The elephant and the Algerian question." It is Algeria that is uppermost in French political minds nowadays, and the Algerian passages that were most attentively listened to when the President broadcast to the nation on December 29th. General de Gaulle's contrasts between the recent political and financial stability and the merry-go-round of the past were adroitly done, and effective as far as they went. But he could not announce, as some had hoped, any concrete steps leading to peace in Algeria. He did declare that " one way or another " France must put an end to this drain on its men and resources. He added that he " still " believed a mutually acceptable agreement to be the best possible solution. He concluded, however, that whatever happened, 1962 would witness the gradual withdrawal into Europe, and modernisation, of the bulk of the French armed forces. Two more army divisions and several air force units will begin their evacuation this month.

The reduction of the French forces in Algeria is politically significant. The presence of the bulk of French forces on the other side of the Mediterranean has been a major factor in shaping French policy. In the 43 months since General de Gaulle's return to power, his Algerian policy has been determined by two contradictory aims: the desire to end the war, and thus consolidate his position at home and abroad, and his reluctance to provoke a major crisis between the state and the armed forces. What a distance separates the early declarations that all Algerians are " fully fledged Frenchmen " from the current talk of a " sovereign and independent " Algerian state. The road is marked by successive refusals of the Moslem insurgents to accept gaullist terms and by French inability to impose such terms on the Algerian population. The

Paris, December 19th

Algerian leaders have changed in status from rebels to potential partners. Negotiations broke down at Evian and Lugrin last year on, apparently, the question of future sovereignty over the Sahara. In September, only a few weeks after the Lugrin breakdown, General de Gaulle suggested that this was not a major obstacle after all. Critics who claim that a bargain could have been struck at half the price now offered, if only concessions had been made in time, forget, however, that these unfortunate delays were not caused only by miscalculations about rebel strength. General de Gaulle's strange relationship with his army was equally a cause.

In May, 1958, the armed forces converted a settlers' revolt into a successful insurrection, brought the Fourth Republic to its knees, and chose General de Gaulle for the succession: and all in the name of French Algeria. But, once their choice had been confirmed by a massive popular vote, the Algerian policy of the new ruler gradually departed from that of the kingmakers. Some officers rebelled, others chose passive resistance, others still resigned themselves to discipline. In order to avert a rebellion of the whole officers' corps, General de Gaulle decided that persuasion and ruse were a better method than surgery. He used promotions and reshuffles, promises and threats, ambiguous homilies uttered on tours of officers' messes, to cure the army of its Algerian fixation while avoiding an open clash. Last year, on November 23rd, officers and NCO's from France, Algeria and Germany were summoned to Strasbourg to hear General de Gaulle's views on the world crisis and on France's need for a national strike force. The French parliament, a wit observed, had been replaced by the Strasbourg assembly. But it is easier to calculate the votes of parties at the Palais Bourbon than to forecast what the military officers will do.

Many of these officers are known to put their Algerian " vocation " well before any Berlin crisis, imaginary or real, in the scale of importance. Others are sceptical of France's ability to build and maintain its own independent deterrent. Others again see a danger to their profession in a modernised army, which would not require the present huge officers' corps swollen by the long years of uninterrupted colonial warfare. Nevertheless, during the Algiers mutiny last April, most of the professional soldiers simply

waited to pick the winning side ; and only a tiny minority have rallied to General Salan's OAS (*Organisation de l'Armée Secrète*) since then. On the other hand, the OAS, even enjoying as it does the sympathy of the bulk of the European population, could not act with such impunity in Algeria without a good deal of complicity within the armed forces. Now that the OAS is trying, with some success, to extend its methods of intimidation into the home country, where its popular support is very thin indeed, the relative impunity that it seems to enjoy in France raises the question of complicity at all stages within the machine of state.

Wishing to show the OAS that a *coup* would be faced with popular resistance, trade-union and left-wing organisations called an anti-fascist demonstration in Paris on December 19th. A popular demonstration in France raises inevitably the problem of communist participation. Yet the feeling that something had to be done to stop the rot was such that even the union to which the majority of the Paris police belong asked the minister of the interior to authorise the demonstration. The minister's reply was the mobilisation of tremendous forces, including special squads, to break it up. Thousands of Parisians who were brave enough to get near the Bastille on that evening learnt that the police had been ordered to use their truncheons. About a hundred, treated in hospital, discovered by physical experience that the government's effectiveness is greater in breaking up a popular demonstration than in tracking agents of the OAS.

The brutality used on this occasion has stirred up much feeling. The liberal case has been well put in *Le Monde* by M. Fauvet, who accused the authorities of " objectively assisting " the OAS. He reminded the government that the people on whom it was using its truncheons in December were the very same it had called upon for rescue in April, and whom it may very soon have to call upon again. His basic contention was that, in the exceptional circumstances created by the Algerian war, the government will not be able to crush the OAS and keep the army under control unless it can show that it has the articulate backing of the nation and the support of its " organised forces," whether parties or trade unions.

If it were to follow these precepts the government would be betraying the gaullist conception of power. In the gaullist pattern, the people are intended to approve, applaud, and express confidence in the ruler's wisdom. In a crisis their voice may be used as background music, for instance to help General de Gaulle in his exchanges with the recalcitrant military. But to let parties or unions influence policy would mean behaving like any other regime and might push more officers into the ranks of the OAS.

For such a design to work, the instruments of state power must be disciplined and obedient. It remains to be seen whether General de Gaulle can settle the military question *en famille*, while pulling the army out of Algeria. A couple of weeks ago, the official mood was one of euphoria. The President was then preparing to announce, in his New Year message, an imminent cease-fire resulting from a general agreement with the Algerian rebels, the details to be completed by further negotiations. While these proceeded, advantage would have been taken of popular satisfaction to alter the constitution, by an overwhelming vote, to strengthen the President's powers and fill the new assembly with neo-gaullists on a platform of peace. Unhappily, no such auspicious disclosures could be made in the presidential message. It is now said that the secret negotiations with the insurgents are held up by three stumbling-blocks: military bases, which mean in effect Algeria's future international alignment; the status of the European minority, which involves the social structure of the new state ; and sovereignty in the transitional stage, an issue that reflects the mutual mistrust accumulated by the seven years of war.

If and when these obstacles are overcome, the army's obedience will be put to its real test. Without an agreement, and assuming that the evacuation of the French troops from Algeria continues nevertheless, the government will drift towards a partition of Algeria ; a large proportion of officers may decide not to treat the partial evacuation as a sufficient cause for revolt, and the relationship between state and army may remain for a while unresolved.

Holland's Industrial Peace

FROM A CORRESPONDENT IN HOLLAND

THE remarkable peace that distinguishes Dutch labour relations had its origin in the dark days of the wartime occupation, when the common resistance and the common concern for the future created solidarity between employers and employed. The Foundation of Labour, a private institution, composed half of trade unionists and half of employers, was founded then to provide a framework for reconstruction and a better postwar deal for working people. In it the two sides of industry have continued to meet informally to discuss their problems, and though they have differed, they differ without acrimony and their personal relations are excellent. The foundation was soon recognised by the government as the principal advisory body on wages and social matters generally ; and it has succeeded in averting major labour troubles or, where trouble threatened, in devising compromises.

Since its establishment the foundation has had to deal with more than three thousand " cases," and in most it has reached a unanimous opinion, to which the government has lent a ready ear. These have referred to wages, productivity, job classification, merit rating, dismissal problems, fringe benefits, social insurance, joint consultative committees, vocational training, unemployment relief, sick funds and the like. Mixed committees, composed of members of the foundation and government officials, have often been set up to expedite recommendations. And since these have mostly been adopted as binding decisions by the Board of Government Conciliators, the government's " executive " in wages and kindred matters, the foundation's influence has been big. In addition, if an agreement on wages or labour conditions is reached independently, it has to be discussed with the foundation ; but here, too, agreement has usually been quickly reached.

With such achievements to the foundation's credit, it seems a pity that part of its work is now being handed over to the Social-Economic Council, in which government, employers and workers each have one third of the representatives. In the social-economic council there is always a danger of domination by the government, in practice though not in theory. And one may ask: " Why change a winning team ?" The important work of the board of government conciliators is also to be transferred—to a new Wages

Council, which is to work within the framework of the social-economic council. Reasons for this change, too, are hard to find, except that the Dutch are perfectionists.

This social-economic council is the apex of a "corporate" pyramid, set up some ten years ago, but still not fully accepted by Dutch opinion. Under this scheme, the whole of Dutch industry, trade and services was to be grouped in comprehensive horizontal and vertical structures. The horizontal bodies, called *Bedrijfschappen,* in principle group all similar firms (for example, all paper, or all rubber enterprises) under an industrial board. The vertical bodies, called *Produktschappen,* are to link all enterprises handling the successive stages of a given product. The social-economic council is supposed in theory to supervise the whole system; but in practice many branches of industry are unwilling to join it. Fortunately the government has so far refrained from making these corporative bodies compulsory though the social-economic council recently recommended a system of semi-compulsion. Dutch labour relations being what they are, there is no need for a structure that is in sharp conflict with the liberal Dutch outlook.

A much better contribution to good labour relations is made by the Enterprise Councils (*Ondernemingsraden*), set up under an act of 1950, in all enterprises with more than 25 workers. These councils do not interfere with management policy, but they often give good advice on labour and social problems; and they provide a forum where management can communicate new policies and ideas and obtain a closer contact with the elected shop leaders.

Dutch wages are still controlled. After the war a centrally planned wages policy was applied to all sectors of trade and industry. This led to general wage increases, and its inflationary effects became embarrassing; in 1959, therefore, the non-socialist cabinet introduced a system of "differentiated wages." The fixing of wages was transferred from the authorities to the industrial branches themselves, with the bargaining left to employers and workers, though with the government keeping watch on the sidelines. One of the criteria laid down by the government, in transferring responsibility for wages policy to industry, is that any rise in wages must be related to a rise in productivity or, where this is not applicable, to a rise in profits or in national income.

These new arrangements have given workers even larger pay rises than they got under the old system. Taking 1954 as 100, wages between 1955 and 1961 have risen as follows: 106, 111, 125, 131, 134, 146, 156. Further increases this year are certain. At the same time fringe benefits have been improved. The 5-day working week has become almost general. Children's allowances have been (and will be further) increased. Old age and widows' pensions and orphans' allowances have been put on a satisfactory basis. Dutch wages have still not reached the Belgian standard, but they are now approaching the European average. Holland is no longer the "island of cheapness" of a decade ago.

Higher wages and better labour conditions are mainly attained through collective bargaining, which leads to agreements of one to two years' duration. Government approval is required, but it is mostly granted automatically, unless the agreement conflicts with the government's anti-inflationary policy.

The Dutch trade union federations are strong bodies, embracing some 40 per cent of the working population. They are divided on political and religious grounds:

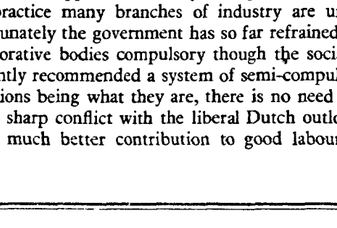
NVV (Socialists)	500,000	members
KAB (Catholics)	407,000	"
CNV (Protestant)	222,000	"

Each of the three federations embraces a range of industrial unions. The federations are well managed. They exert a considerable influence on the political parties, and they have a joint consultative council which enables them to co-operate on most matters of importance. The Dutch employers are organised in a neutral, a Catholic and a Protestant federation. These, too, co-operate, if anything, more closely than the trade union federations.

Despite the partial failure of the corporate system, described above, the Dutch economy has greatly benefited by the loyal way in which employers' and workers' organisations have played the game. Will this near ideal situation continue indefinitely? There is no doubt some pressure from labour for a bigger slice of the national cake, but even under the present non-socialist government, the pressure is not unduly heavy. The labour leaders are not rash men. They are alive to the fact that a good real wage is best assured by a sound economy in which costs are not screwed up excessively; and that the Netherlands, being more dependent than most countries on international trade, has to keep its costs in check.

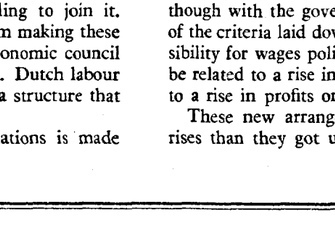
Battle of the Cars

FROM OUR PARIS CORRESPONDENT



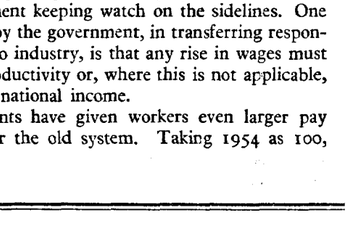
"THE future of the car industry in the common market? Ultimately, there will be just one firm, General Motors . . ." The French motor tycoon who said this may have been joking; but the French manufacturers are seriously aware of the growing competition from the United States and of the new vistas being opened by collapsing trade barriers. For the French motor industry, 1961 was a year of transition and readjustment. The tremendous expansion of exports was halted in mid-1960 by the drop in sales to the United States. Since then, efforts have been made to recover some of this lost position, to consolidate sales in Europe and to find new outlets overseas. Last year, production was approximately one-and-a-quarter million cars, or 100,000 less than in 1960. This year, it is hoped to approach the one-and-a-half million mark, but it will not be easy. To prepare for battles on both the home and foreign fronts, three of the Big Four in the French motor industry have recently introduced entirely new models.

All the newcomers are small cars, with engines of less than 1,000 cc. In general, the factories are designed to produce small cars that are economical to run. Most Frenchmen do not go in for conspicuous spending on cars. A successful business man, or a cabinet minister, will run a Citroen DS; though these initials in French give this elegant car the sound of a goddess, it only costs £1,000 in Paris.



By British standards, cars in France are cheap to buy and expensive to run; Frenchmen have to pay the highest price for petrol in Europe as well as an annual tax—the *vignette*—based on the capacity of the engine of their car. This may explain the lasting success of that utilitarian hunchback on wheels, the Citroen 2 cv. It costs just over £350 and is cheap to run and repair; it is roomy, and it can stand up to any road. Renault, which has stopped producing its old 4 cv, is now enthusiastically entering the small car market. Its new R3 and R4 models are in the same price range as the Citroen and combine some of its qualities with numerous others, such as freedom from greasing.

Citroen's answer to this was to have been its Ami-6, but the price, nearly £500, puts it into a different category. Probably, Citroen will not bother about the sales of the Ami-6 until its new factory, at Rennes, swings into full production and the price of the new model can be cut. Thus, the battle for the cheap utility market is not yet at its height. In the field of medium-priced cars, however, battle may be joined fairly rapidly. The reigning model, the Renault Dauphine, has had, so far, to meet the price competition of the more powerful Simca Aronde. Now it will have a direct competitor in the Simca 1,000. Renault have denied rumours about the scrapping of the Dauphine with the sound argument that it is still, by far, the most popular French car (400,000 were produced in 1960 and 167,000 in the first half of last year). Nevertheless, rumours persist that Renault is going to bring out either a substitute for the Dauphine or, with an eye to the European market, a slightly more powerful model.

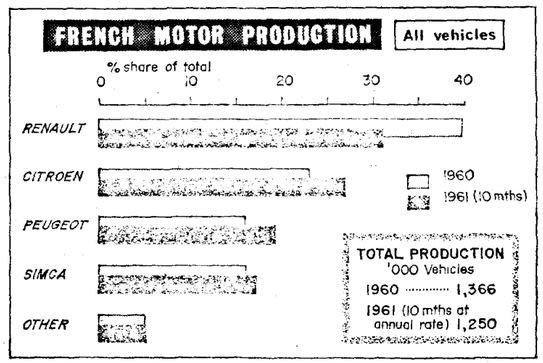


The French motor industry can no longer concentrate on the home market. Encouraged by the government, exports have grown substantially in the last five years. In 1959, after the devaluation of the franc, sales outside the franc area jumped to the record figure of 468,000 (including 22,650 commercial vehicles). This total fell to 448,000 (37,575 commercial) last year and is less than 400,000 this year. Renault, the main leader of the export drive, was the worst hit by the fall in exports. But it has found new markets in Latin America, where Dauphines are now being assembled in Brazil, Argentina and Mexico. In Italy, too, the agreement with Alfa-Romeo on the assembly and sale of the Dauphine has now been extended to the new smaller model.

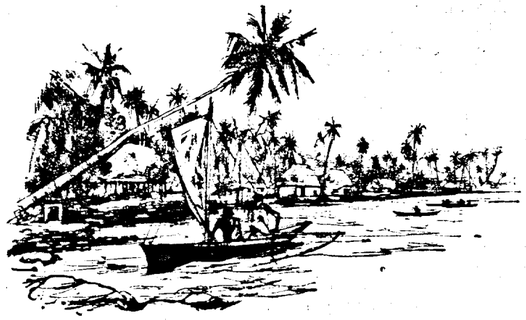
Renault 4L

Simca 1,000

Citroen Ami-6



IF the French output of cars is to reach its planned target of 1.85 million by 1965, exports should, by that time, absorb over 600,000. New registrations totalled 761,650 in 1960, of which 613,000 were private cars. Home sales have thus recovered from the 1959 recession, but they now have to face increasing competition from imports. The small Fiats, Anglias or Ford Taunus now to be seen on French roads are a reminder that sports cars and American limousines are no longer the only foreign cars coming into the French market. Only 11,000 cars were imported into France in 1959. The figure rose to 25,600 in 1960 and were expected to reach 70,000 in 1961. There is nothing to substantiate the suggestion often made in Paris that imports will reach and settle at double that figure, particularly as foreign competitors improve their distribution networks and as tariffs come down; moreover one big producer—Britain—may move on to the right side of the preferential wall.



Increased competition will, of course, shake up the whole European motor industry. In France, there is still room for amalgamation in the field of commercial vehicles. In the private car industry, any further concentration would mean that the national giants would devour one another, unless some foreign ogres joined in the struggle. The four giants account for practically the whole of France's car output. (Citroen now owns a quarter of the shares of Panhard, which assembles Citroen vans.) What are their prospects?

Renault, which accounts for more than a third of French output and for more than half of exports, is a nationalised industry. It should now be able to increase its share of the lowest price market, but may have difficulty in selling the Dauphine. Citroen—in which Michelin (tyres) have a majority holding—has assured sales for the DS. Its future will depend on the extent to which the Ami-6 can gradually replace the old Citroen 2 cv as a steady seller, thus providing scope for the new works at Rennes. Peugeot is still partly a family affair. It did not introduce entirely new models this year, but its latest product—the 404—has been a great success and should enable the company to keep its position as France's second exporter. Simca has shared Renault's misfortunes in the American market and the success of its new model is, therefore, particularly important. Simca, incidentally, is the only French firm with strong foreign ties; Chrysler owns about a quarter of its shares and Crédit Suisse is the nominee holder for another quarter. Rumours of a possible merger between Simca and Citroen have not been entirely silenced by the companies' denials.

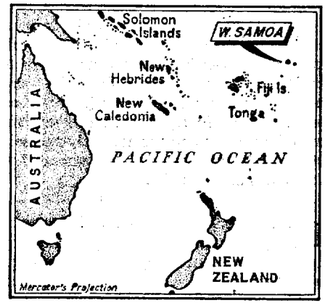
France's motor industry is entering the battle for sales with modern plant and up-to-date equipment. The industry's spokesmen are now repeating their usual pleas for better roads and cheaper petrol. They claim that cheaper petrol would be beneficial in two ways. Car-owning is fairly widespread in France, with about twelve vehicles a hundred inhabitants, or one car for every third family. But many cars are old and their annual mileage is low (the average is just over 5,000 miles, which is half the rate in Germany). Cheaper petrol, and more motoring, would increase the rate of replacement. It might also change the structure of French production by removing the premium on small engines and so helping sales in foreign markets.

A fear often expressed here is that British, German and Italian investment plans now look more ambitious than the French. It was Paris that produced the idea of co-ordinating the various European car expansion plans. But so far, this idea has made little progress. As M. Dreyfus, the chairman of Renault, pointed out: "competition is not trench warfare; it is a war of movement."

Balance Sheet in Samoa

FROM A CORRESPONDENT IN NEW ZEALAND

THE first sovereign Polynesian state was inaugurated on Monday when Western Samoa became independent. New Zealand has occupied this island territory since 1914, and has administered it either as a mandate or a trusteeship since 1921. Although progress towards independence has on the whole been smooth and amicable, there has been heart-searching among New Zealanders about their country's record in Samoa.



In the plebiscite last May, a substantial majority of the Samoan voters voted for independence on January 1, 1962, on the basis of the constitution that was adopted in October, 1960. This result, however, was largely achieved through the last-minute efforts of the members of the Legislative Assembly, which adjourned so that they could go back to their villages and persuade the voters to give affirmative replies to the two questions on the voting paper. These asked the voter whether he agreed (a) with the written constitution, and (b) that the country should become independent on January 1, 1962, on that basis. Some felt that these questions were badly framed, since few Samoans had any idea what the written constitution was all about, and although most of them wanted independence some time, they do not feel that their leaders are yet ready for it; but there was no opportunity to express this point of view on the voting paper. Thus the average Samoan simply felt that since he did not want to be a slave, he had better vote Yes to both questions.

It is certainly true that there are, as yet, no leaders of real competence among the Samoans, although there may be some in the making. None has had the training or the education to fit him to understand the problems of government, let alone solve them. In general the people have been contemplating uneasily the time when the present ministers would be in full control of their destinies. And though the Samoan leaders will undoubtedly expect the promises of continued generous financial help that successive New Zealand prime ministers have made to be fulfilled, there is hardly less doubt that they will be disinclined, now they are independent, to take outside advice.

New Zealand must, to a great extent, accept responsibility for this state of affairs. In its anxiety to push the Samoans into self-government at the earliest possible moment, it has paid perhaps more deference to the desires of the local politicians than the welfare of the people as a whole might have required. Its efforts have been more political than economic. For many years it has been the practice to draw up glowing reports about the country's progress, which read convincingly to those who have little knowledge of the real state of affairs. Visiting UN missions have, to a large extent, adopted the same practice. (One member of a UN mission began his reply to a speech of welcome in one of the outlying villages with the words, "I am immensely impressed with the progress this country has made and with its readiness for self-government." At the time of speaking he had been in the country for less than 24 hours.)

Despite the self-flattering phraseology of the official reports, New Zealand has always looked on Western Samoa as a backwater to which the best officials should not be sent. Apart from a few conspicuous exceptions, the territory has been advised and supervised by New Zealand mediocrity and not by New Zealand ability. Even those who showed some promise could not afford to stay in the Pacific for more than one three-year tour of duty; to be in line for promotion in New Zealand one had to be on the spot, and not in the forgotten obscurity of the mandated territory. New Zealand's valuation of its Samoan service has been demonstrated by the recommendations of successive governments for honours and awards. Since 1949 not one British subject living and working in Western Samoa has received an award, except for Sir Guy Powles who was High Commissioner from 1949 to 1960. Only five Samoans and one Frenchman have been honoured, three with the CBE.

Yet there is something on the credit side of the New Zealand administration. Considerable financial benefits have gone to the Samoans. The biggest gift was the property known as the Reparation Estates. This was a vast undertaking, based largely on cocoa and coconut plantations, which had been built up by German capital and German technical ability on lands bought from the Samoans. After the first World War these estates were given to New Zealand to help defray its share of the cost of the war. They were managed profitably for many years, but not a penny of the profits was used for the relief of the New Zealand taxpayer, and a year or two ago the whole undertaking was handed over as a free gift to the Samoan government. The value of the gift was substantially more than £1 million, or £10 a head to every man, woman and child in Western Samoa. (The population, then about 106,000, is now put at 113,000.) In many other ways as well New Zealand has given financial help to the Samoans; in particular it has promised a sum of £400,000 for education in the next five years.

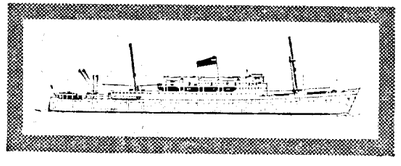
Despite the avowed intention of the Samoan leaders to restrict very severely the right of New Zealanders to enter the country after independence—and in fact some of them speak of prohibiting New Zealanders altogether—New Zealand continues to receive Samoans freely with only token restrictions in the way of immigration requirements. There is a Samoan colony of some thousands in Auckland, many of them now naturalised New Zealand citizens. Many Samoan children go to New Zealand to be educated, either privately or by virtue of scholarships granted by the New Zealand authorities. Many of the Samoan immigrants run into trouble when they are released from the discipline which binds them firmly under the *matai* system at home. But there has been no movement to exclude Samoans from New Zealand, and many of them are eagerly looking forward to migrating overseas to the land they regard as El Dorado.

In carrying out its mandate New Zealand's biggest fault has been its failure to give the Samoans technical and administrative training. On the other hand, it has much on the credit side; it has not been ungenerous financially, and its efforts to help its protégés have not always received much encouragement from the Samoans themselves.

SPECIAL OFFERS TO SUNSHINE SEEKERS-

HOLIDAY TOURS TO SOUTH AFRICA

First Class Mailship Return Fares from Southampton to South Africa will be reduced by ONE THIRD for outward sailings between March 22nd and June 28th (except May 17th), and also for all mailship sailings during November. TOURIST CLASS passengers travelling by any of the last five weekly mailship sailings in 1962 can enjoy a reduction of 20% on their return tickets.



ALL THESE REDUCED RETURN TICKETS ALLOW A STAY OF ONE MONTH FROM THE DATE OF ARRIVAL AT CAPE TOWN.

MADEIRA AND THE CANARIES

Our weekly mailships to and from South Africa stop alternately at Madeira and Las Palmas, and we can offer accommodation to and from these islands at most times of the year. If you wish to fly one way we can arrange it for you. A British United Airways plane leaves Las Palmas every Monday morning for Gatwick.

15-DAY SUMMER CRUISE

The 17,000 ton "BRAEMAR CASTLE", recently re-fitted and redecorated, is making a 15-day cruise, leaving London May 19th and returning June 3rd — calling at Lisbon, Barcelona, Palma and Casablanca. Fares from £90 (all one class).

the going's good by

UNION-CASTLE

THE BIG SHIP WAY TO THE SUN

Every Thursday at 4 p.m. one of the eight big mailships leaves Southampton for the Cape; also sailings from London to East Africa and South Africa.

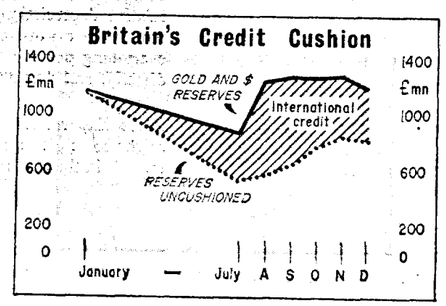
THE BUSINESS WORLD

IN BRITAIN AND EUROPE 62

THE YEAR BEFORE EUROPE

THE EXCHANGES

Expedients for the Pound?



At the opening of 1962, the biggest question facing the international business community can be put quite bluntly. Will the pound and the dollar be worth the same at the end of the year as they are at the beginning—and will the whole structure of the international exchange system that has been built up since the war survive intact? Every forecast of economic activity, every analysis of stock market prospects, is now being hedged with this currency proviso. The feeling that recent strains on international payments may force some sort of climax in 1962 is sharpened by the so-called time limit set by Britain's projected entry into the common market.

The common market issue in fact complicates an already delicate currency situation in two ways. It tends to increase speculation, and notably speculation on still uncertain contingencies; it also means, for Britain, that any contemplated changes in trade or currency arrangements must be weighed with special care against their likely reception in Europe. Reasoned discussion of these matters is going to be more difficult than ever this year; so a discussion of the widest range is desirable, before anyone who mentions devaluation is assumed to accept or even recommend it.

A lot of work has been done on the international currency defences in the last eighteen months. Progress towards an adequate system of international credit, which alone can in the end uphold the present system of fixed exchange rates, has been frankly disappointing to its proponents; and the continuance of general uncertainty about exchange rates has shown that practical men are unconvinced too. But even so, progress has been made in international finance—the New York-London gold bridge, the short-term "Basle" assistance between central banks, and the scheme for limited lending by surplus countries to the IMF.

Even with its present tenuous resources the Monetary Fund did last year assume in practice some of the functions of an international clearing—as did the European central banks for the brief period in which they agreed to hold each other's currencies. International credit cushioned not only the fall in Britain's reserves in the first half of 1960 but also their rise in the second half—when, more unusually, the machinery of IMF also cushioned an outflow of reserves from Germany. There could be no less revealing figures of the course of the exchanges in 1961 than official gold reserves; and although to some extent this simply means that the analysts have rather more difficult sums to work out, it also means that more attention is given today to underlying payments trends, elusive as these are, and less to the count of immediate cash reserves—now that these are more easily fortified.

One clear official success has been against speculation on a depreciation of all currencies against gold. It was always clear that provided national monetary authorities stood their ground together, no weapon in the hands of speculators could force them to pay more for gold than the price they chose to set. The experience of the past few months, in which worries about the dollar have again been widely voiced but interest in gold has nevertheless waned, has been encouraging, if not yet conclusive. Holders of large funds have shown themselves notably less willing to harbour an asset that brings in no return. And except through gold there is no practical way of speculating against the dollar and sterling at the same time. This explains the relative calm on the surface of the exchange markets at a time when uneasiness is so widely voiced.

Speculators therefore find it much more difficult to overturn the currency apple cart by themselves. But what if it is threatening to collapse under its own maldistributed weight? The easy task for 1962 would be to counter a speculative run on the dollar such as took place in October, 1960, when the basic balance of payments was improving. The difficult, and more likely, contests would be to defend the dollar if its basic balance continues to deteriorate, as seems likely at a

time of rising business activity and to defend sterling if its basic balance does not improve by more than can be attributed to the opposite, downward course of business activity here. Despite this temporary improvement, sterling seems a bigger worry than the dollar. One still feels that a country running a current surplus of $4 billion and with gold reserves of nearly $17 billion should be able to look after itself. In particular, no one should doubt the potential influence, on long-term as well as short-term capital flows, of a rise in United States interest rates *vis-à-vis* Europe.

Britain has achieved a considerable reduction in its current deficit this year, and the final figure of perhaps £120-£140 million may be little more than the current receipts lost in the persistently favourable balancing item—the literally invisible invisibles, whose existence has now been acknowledged even by the Bank of England. In the first nine months of 1961 as a whole, when the flow of short-term capital must have been outward on balance, total unrecorded receipts at £222 million more than covered the deficit on recorded current and long-term capital transactions—so that by this measure, Britain was in basic balance.

Bare balance, however, is not enough ; nor is a small surplus anything to be proud of at a time of restrained business activity. Britain needs to earn an appreciable basic surplus in order to repay the large sum (£386 million) it still owes to the International Monetary Fund, and to fortify the reserves from its own earnings. It is likely, too, that the change in the system of agricultural protection that will be necessary after Britain joins the common market will add to Britain's import bill, as Commonwealth countries will certainly press for the higher food prices on the British market to be paid to them too. On the other hand, there should be no reason to expect any additional strain as a result of liberalisation of capital movements. On the contrary, Britain ought to attract capital from Europe, provided it maintains relatively high interest rates and provided its currency is not suspect. It is quite impossible to say now what the net effect on the balance of payments in 1963 might be. The sums being done on the Continent with every item on the debit side have little worth. But they are being done by observers who are already worried about sterling as it moves into a more competitive world.

HERE are all the ingredients of another sterling crisis, and it is a common view that this might well coincide with a crystallisation of the common market negotiations in the early summer. It is useful, as well as ominous, for a crisis to be so well docketed in advance. It gives the authorities good time for their preparations. A crisis may never arise, but preparations cost little. What should they be ?

1. **Another short-term credit ?** This would clearly be of questionable value, given Britain's existing commitments. It should be considered only if the balance of payments had by then continued to show good signs of improvement, so that the credit was needed simply as an extra cover for Britain's entry into the Community. An improvement of this kind is far from unlikely. Cost comparisons in the past few months at least appear to have moved favourably to Britain ; new facilities are due to be announced very shortly for easier and, one hopes, cheaper export finance ; and there has been a distinct sharpening of British manufacturers' interest in European markets. All this gives good ground for hope. But equally the absence of a decisive improvement in so short a time cannot be ruled out. What then ?

2. **More deflation ?** This routine response to payments difficulties would almost certainly be a false remedy this year. " If external stability can be maintained only by economic stagnation at home, people will begin to wonder whether such external stability can be sustained." This is the gist of a comment from Continental central bankers themselves, in a recent working group reporting to the European Economic Commission. Neither Britain nor the United States will make any impact on real confidence by running their economies at an artificially low level. It is on wages and costs that the eyes of monetary analysts are now, rightly, turned.

3. **Devaluation ?** If sterling were an ordinary currency, a small devaluation would doubtless have been considered before now—and might even have been thrown in last July to give a direct external push alongside the stern measures of domestic retrenchment. But sterling is not an ordinary currency ; and in practice a straight devaluation to a new fixed parity would pose immense difficulties, quite apart from the question of prestige. To be decisive, and to minimise the appalling task of stopping a withdrawal of sterling balances, any devaluation of sterling would therefore need to be unexpectedly and artificially big—as was the devaluation of 1949. But, by definition, such a devaluation would cause intense anger, and quick retaliation, among countries whose currencies would then appear overvalued. A new parity for the pound would inevitably look either too high or too low.

4. **Floating rates ?** For these reasons, depreciation of either the pound or the dollar would be almost sure to come by way of a wider margin of fluctuation around existing parities. True, this is against the rule of IMF ; but the IMF formula of " adjustable pegs " is plainly unworkable once any adjustment takes place—witness the convulsive upheaval caused by the minor revaluations of the mark and guilder last March. Now a floating pound would very probably float off the dollar, too. No one can predict what would emerge from the resulting turmoil, but it would almost certainly (a) cause great disturbance to traders, who would no longer know what their foreign business was worth to them, and would find that the cost of forward exchange cover had become prohibitive ; (b) invoive a big run-down in sterling and dollar balances—into appreciated gold ; (c) annoy the common market countries, who would be horrified at the thought of floating rates within the common market, and, having seen how the small upvaluations by Germany and Holland had checked their domestic growth, might be very reluctant to accept any appreciable competitive disadvantage against their outside competitors. Thus the end-result could be a pretty small relative depreciation of the pound and dollar, questionably worth the disturbance caused. This is the case for doing everything possible to achieve the desired boost for exports directly, and " cold."

5. **Direct Export Aids ?** The best and most straightforward way might be to give a straight 10 per cent subsidy to all British exports in the next two years. This would be a formal breach of postwar international conventions, whereas a devaluation would not. Yet the direct export subsidy would in practice be less disruptive for Britain's competitors in two important ways: it would involve no general currency upheaval and it would involve no element of protection in the British home market—there must be no question of any special tax on imports. The export subsidy would be designed as an alternative to throwing world exchanges into upheaval and as a way of maintaining the momentum of freer trade.

Britain could thus put a good case for a special, temporary export subsidy, and so could the United States, as the other country which is inhibited in making currency adjustments by its international responsibilities. But clearly, in this of all years, an expedient of this kind should not be carried through against the violent opposition of Britain's European partners. Such opposition, however, could hardly be raised against some other forms of official encouragement. Favourable facilities for export finance—which are expected to be announced in Britain later this month—and direct or indirect tax incentives to exporters are both to be found on the Continent. Britain can respectably claim that it is simply, and belatedly, coming into line. The prospect of a new round of hidden subsidising of exports is admitted distasteful ; and it would be preferable on all counts for Britain to get sanction for an open export subsidy, on the understanding that this would later be dismantled together with the specific and less open subsidies prevailing on the Continent. But, one way or another, Britain should almost certainly attempt a special direct boost to its exports this year.

This remedy is frankly an expedient. If the payments disequilibrium between the Anglo-Saxon and the Continental countries were to prove enduring, it would be necessary in time to consolidate special export subsidies in formal devaluations. The argument for taking the " cold " way (or rather halfway—with no check to imports) is based on more than the special danger of upsetting the exchanges in this particular year. It is surely true that as economic barriers between countries come down and economic co-operation between them becomes closer, exchange stability should become easier to maintain. It will need, without doubt, much larger swings in international credit than are provided for now ; the idea of some form of Reserve Pool is slowly gaining ground, and it is still worth trying to move towards it before, rather than after, a great exchange upheaval. There is no compulsive reason why such an upheaval must come in 1962. But conscious efforts may be needed to prevent it. Continental governments and bankers will need to take the most enlightened view of their stake in exchange stability. Britain and the United States will need to keep the sharpest eye on their competitive drive and on their wage costs. It is to this critical trend that this survey now turns.

THE ECONOMIES

BRITAIN

Slightly More Competitive?

ONE would like to be able to deduce from the stability of British export prices last year, in comparison with those of its major competitors on the Continent, and from the fairly encouraging recent run of export orders in the engineering industries, that Britain has become markedly more competitive in the world market since early 1961. One can, certainly, reckon on an increase in the volume of British exports this year: it is surprising that this has not shown up before. And it does appear that British exporters are competing rather more effectively with those of Germany, where even apart from the effects of revaluation there has been a rise in export prices following upon large increases in wages. But comparisons with some others of the Six are less favourable.

Moreover, the slight improvement in comparative economic performance has occurred because European momentum has slowed down, not because the rate of growth that Britain finds manageable is catching up. During 1962, certain of the common market countries are reckoning that their annual rate of growth in national product might fall back to about 4 per cent. Others forecast much higher rates ; all could prove optimistic. But it is salutary to recognise that such a rate of growth, achieved here in the first half of 1961, was felt by the Chancellor to be more than sterling could stand.

A sufficient shift in the posture of British industry towards emphasis on exporting, admittedly, is the condition of relaxing those constraints on the economy's rate of growth. The evidence of export prices, unfortunately, may be a little too encouraging. The recent run of these indices may simply imply that Britain and the United States are now having to meet a general international price level that has emerged for many kinds of manufactured prices, above which any country simply cannot sell. Some of the Continental exporters, at any rate, have evidently had much more leeway to meet that price level than Britain ; they achieved significantly larger increases in their total export volume, at slightly rising prices, than Britain did at stable export prices.

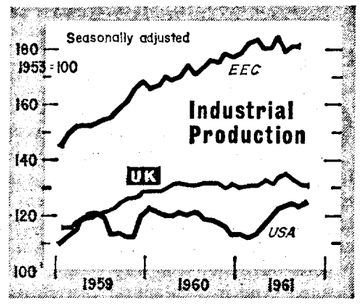
Britain, however, roughly matched the large increase of intra-market trade between the member countries with its own large increase in exports to Western Europe: it had some significant successes with engineering exports, for example, into Western Germany. This is a creditable achievement against competitors enjoying some internal trading advantages: though the slackening in West European growth is likely to reduce progress for both in this market this year. If the even greater business optimism now current in the United States is justified, it should somewhat enhance the opportunities for exports there this year, which had always seemed likely to improve because of re-stocking. Prosperity in America may also indirectly improve buying power among the primary producing countries of the sterling area. The Continental countries, so far, have gained rather more from recovery in the United States than have British exports : but any recovery of demand within the sterling area countries gives obvious advantages to Britain.

IF no more, Britain's pay pause has stretched out the current round of wage negotiations, and could possibly have affected salaries, which of late years had been rising the faster, rather more than the negotiated levels of wages. The labour market has become a little softer, though the effect of this is localised. Civil employment is up from the beginning of last year, and output slightly down, so that labour productivity has not improved ; labour costs and capacity costs per unit of output, therefore, have probably increased. But on these movements in costs, Britain may still be faring better than Germany—though fuel prices here have risen, and the

businessman is still denied the very cheap imported fuels to which many of his competitors on the Continent have access.

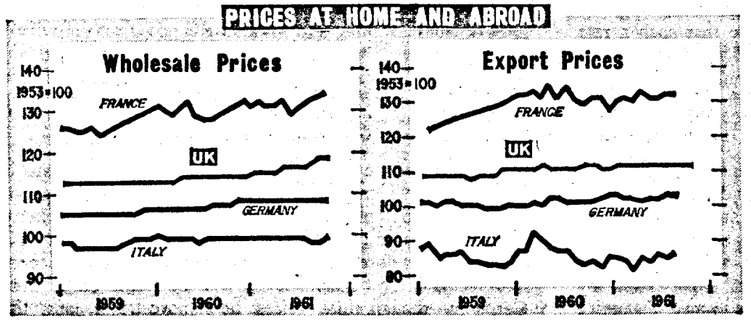
A more positive improvement in relative costs could perhaps only come if Britain were to achieve a more significant growth in total output this year, which would improve its unit costs. That will depend mainly upon how soon and how much the Chancellor feels able to relax his disinflationary pressures. The main effects of the July measures in checking the growth of consumption have probably passed ; with incomes somewhat larger this year than last, and with a likely upturn in hire purchase buying, one would expect some small renewed growth in personal spending this year even without relaxation. The reduction expected in private investment may more than offset increases in public investment. Though stocks of certain materials such as steel seem likely to be run down further during the first half of this year, in general one would expect stocks to be rising from now on—which would imply a renewed increase in imports.

Allowing for a moderate rise in exports, the indications for aggregate demand might call forth a rise in output of perhaps 1-2 per cent. That would hardly make much difference to the employment of capacity throughout the economy, which probably grows by 3 per cent or more each year ; so it cannot be expected to offer much further improvement in labour and capacity costs. The past six months have proved neither of the polarised attitudes frequently taken about the balance of internal demand and export performance in this economy. It cannot yet be said that this time the authorities, by seeking to cut back demand at home, have yet forced any impressive increase in exports. On the other hand, the improvement in export orderbooks does not bear out the industrialists' argument that a highly prosperous home market is vital as a springboard for export.



In Whitehall some official experts still argue that there are some sectors of industry, particularly in the capital goods industries, where capacity is overloaded ; and certainly for particular items of plant and machinery some firms are again having to quote pretty long delivery dates. Continued pressure upon these sensitive areas of industrial capacity comes from an investment boom which everyone believes to be virtuous, but which is hardly bringing very impressive returns, on which has been superimposed an export drive to which these engineering industries ought to contribute and are contributing quite largely. Their rate of booking new home orders has fallen away somewhat of late, and this indeed may have helped them to cope with their solid orderbooks for export.

EUROPE



Year of Readjustment

For the European Continent and particularly for the common market countries, 1962 promises to be a year of readjustment. For the Six, expansion will be slower than in 1961, when it already lagged considerably behind that for 1960. The development of total demand will hinge essentially on consumer demand: moreover, stocks of goods are at a high level which could delay the impact of this demand upon actual production. Industrial output, except in France and Italy, is showing scarcely any sign of improvement. Inflationary pressure has been further strengthened by the rise in incomes during 1961 ; and on the whole, wage increases have outstripped any increase in productivity. During 1962 the European labour market may soften from its present level of high demand ; but this seems likely to show mostly in cuts in hours worked, rather than in any fall in the numbers employed.

Official estimates on the Continent are still suggesting that gross national product among the Six may possibly show an increase of about 4 per cent over the 1961 figure ; the 1961 figure seems to have been about 5 per cent above that for 1960. In Germany, Holland and France, output is forecast to rise by 4 per cent, although the French Plan aims at a 5.5 per cent increase. Progress in Belgium may be slower ; in Italy it should be faster. The official outlook, therefore, is for a slower but more uniform rhythm of expansion during 1962.

These official forecasts, however, already look optimistic against some of the current indices. In Germany, where a rate of growth of about 4½ per cent this year is officially forecast, seasonably adjusted figures suggest a levelling of industrial output since the second quarter of the year. Output in France and Holland is probably at present rising less than is forecast. The most important fact is the changed rate of output in Germany. Since the beginning of 1961 demand for producers' goods has been falling off. In certain sectors no progress has been recorded, while there has been a recession in the iron and steel industry. Orderbooks, however, are still well filled, thus giving assurance of moderate progress in the first half of 1962. From information obtained from heads of firms in France and Italy, it can be inferred

that they hope to maintain the present rate of output.

Is demand likely to justify these hopes ? In Germany, the volume of retail business is continuing to grow at between 6 and 7 per cent, and in France at 5 per cent ; but in both countries 1962 is expected to show less advance than 1961. An increase of 5 per cent in consumer expenditure is forecast for Germany, and of 4½ per cent for Holland and France, while in Italy it may maintain the same vigorous rate of expansion as in 1961. Both economic forecasts and budgetary estimates point to a more rapid expansion of current demand by public authorities than in 1961. Military expenditure has risen in both Germany and Holland, and increased agricultural subsidies must be expected in both Germany and France. Pay rises are either expected or have been already approved for the beginning of 1962.

Fixed investment in Germany, following its three-year boom, is expected to rise by only 4 per cent this year, against 9 per cent in 1961, and 12 per cent in 1960. In Holland the rate of increase is expected to compare with that of 1961 ; firms are under pressure to overcome the shortage of labour. Investigations in both France and Italy lead to the conclusion that 1962 may see a slightly slower rate of investment in these countries than in 1961. In building (and construction) demand continues to grow. There has been, however, a general falling off in the number of building licences issued, except in Belgium. In general, because of slackening demand, there appears no pressing need for an extension of productive capacity. At the same time the contraction of profit margins has cut down scope for self-financing of fixed investment.

The shortage of labour in Europe is, however, becoming acute. In France, Holland and particularly in Germany more jobs are available than the number of registered unemployed. The numbers employed in Germany, contrary to most expectations, increased once again by 500,000 in 1961. In spite of the slowing down of the rate of expansion of demand, firms on the Continent as in Britain are tending to maintain the numbers employed, first by reducing hours of overtime and then the number of working hours.

On the export side, forecasters agree in expecting another slackening in the rate of expansion. This had of late been most noticeable in trade between the Six, which in 1961 was 17 per cent up on the previous year. Exports by the Six to North America suffered relatively less than British exports as a result of the recession in the United States ; they also reaped the advantage of the American economic recovery more quickly than British exports were able to do.

Inflationary pressure is likely to persist in the Six. The current phase is characterised by wage rises above the level justified by advances in productivity. Between January 1960 and the end of 1961 the rise in gross hourly wages appears to have been 12 per cent in Germany and Holland, 11 per cent in France and less than 8 per cent in Italy. This compares with an increase in manufacturing industry in Britain of just under 8 per cent. In 1960 the upsurge of Continental wages was to a considerable extent offset by increased productivity ; the same was not true in 1961.

On the Continent as in Britain, costs are rising by more than businessmen can afford to increase prices. Decreased profit margins will have serious effects on the financial results of businesses. Short-term borrowing there, admittedly, is facilitated by an easy money market. The volume of loans granted to the economy is rising steeply, 17 to 18 per cent up in France and Germany. The capital market is less tight than in the United Kingdom and bond yields are now in most cases lower, though bank finance is still expensive for many firms.

Inflation seems most pronounced in Germany, France and Holland ; firms in these countries may offer weaker export competition for British firms than in the past. One might expect, also, a relatively faster expansion of imports into these members of the Six, and thus a reduction of their present external payments surplus.

UNITED STATES

Peaks in Prospect

The American economy over the past year moved through three separate phases : the ending of the recession, which proved to be one of the mildest on record ; a rapid and broadly based recovery ; and, after a pause, a new expansionary wave. This performance was generally in line with expectations, of businessmen and economists, and of Wall Street and Washington. Because the majority forecast prevailed, a good deal of weight is being placed on what can be termed the standard prediction for 1962, which looks for a continuation of the expansion that is now taking place. According to this forecast, gross national product should increase by 6 to 8 per cent over the 1961 estimate of close to $525 billion, with industrial production recording a commensurate rise. But almost all of the increase is expected during the first six months, after which many forecasters expect a pronounced levelling off. Myopia is a common affliction of prophets, but the outlook is also clouded by the mid-year wage negotiations that are expected in the steel industry. Most forecasters are counting on a rebuilding of steel stocks fairly quickly ; if there should be a prolonged strike (though this is regarded as unlikely), economic activity would decline. But even if there were just a short strike, or no stoppage at all, the prevailing view is that the demand for steel, and steel output, will contract during the second half of the year.

Whether economic activity can show a new lease of life after the momentum now provided by a rising level of Government and consumer spending is exhausted will depend largely on business outlays for new plant and equipment. Government and consumer spending will still be rising, but at a markedly slower rate ; if the economy is to continue moving ahead, business, which will be adding to its stocks over the next six months, must also embark on a big expansion of spending on capital goods.

Business outlays are usually volatile and not easily determinable, because many elements are involved—the level of demand, the extent of profits, the ability of the Government to enact its proposals to liberalise depreciation reserves and provide a tax credit for corporate outlays on capital goods, the state of the money market and the general mood of the business community. The latest surveys of corporate intentions indicate only a moderate increase in investment outlays over the 1961 level, but even the standard forecast contem-

plates a rise of about 10 per cent, which would bring them close to a new peak. But if demand absorbs excess productive capacity, which is now shrinking fast, and makes further inroads into the ranks of the unemployed, which is conceivable, it may generate a wave of business exuberance, leading to an upward revision in capital spending plans.

One of the most propitious signs of such a rise is that the expansion appears to be embracing the entire field of durable goods, which in recent years has marked time, while consumer lines and the technological industries forged ahead. Car sales reported for the latest two months are extremely encouraging, and suggest that a 7-million car year in 1962 is well within the bounds of probability, and mounting orders are reported by machinery and machine tool makers. This suggests that the character of the rise will be more solid, and hence more durable, than the previous short-lived boom.

It will be prosperity laced with problems, including the potentially explosive issue of steel wage negotiations, the need to reduce the deficit in the balance of payments, and the difficulty that business finds in maintaining or increasing its profit margins. Nevertheless, the standard forecast could turn out to be a modest one, even if there should be some pause during the third quarter. Washington has certainly provided the essential ingredient, an ample supply of credit, to fuel a boom, and with the budget moving into balance, the Administration feels it can avoid the sharp move to tight money that helped to choke off the last business recovery. An inflationary threat exists and prices could begin to rise as the economy continues with expansion, but the inflationary psychosis prevalent in the late fifties has faded, and, unless it returns, there is a good chance that the economy can enjoy growth without inflation. With a little luck and some restrained guidance from Washington, prosperity may carry over well beyond the next twelve months.

THE MARKETS

LONDON

Equities and Competition

EQUITY prices, as measured by the leading indicators, are almost exactly at the same level as a year ago, the fall in the capital goods stocks being cancelled out by the rise in such defensive shares as insurance, banking and property, and in consumers goods issues. In the last few weeks, British equities have moved very little, while Continental stocks have been falling and dollar stocks rising. The British investor is temporising, digesting the lessons of last year's fluctuations, which carried *The Economist* indicator, now standing at 364, up to a peak of 427 in May and lowered it to 343 in October. The first and most certain lesson was taught by the collapse of the boom in early summer; since then, no rational investor has been able to justify the indiscriminate purchase of equities either as a hedge against inflation or in simple pursuit of economic growth. A second though less firm lesson came in the autumn when investors showed that, despite a bleak economic outlook, they would not accept that equities at roughly three times their prewar prices were over-valued. As the Trustee Act gave special support to equities early in the autumn, it does not follow that 280-300 for the *Financial Times* index and 340-360 for *The Economist* indicator represent an unbreakable floor for equities, but the economic outlook would have to be black indeed if resistance could not be sustained at around these levels.

These two lessons have taught investors and dealers alike the old virtues of selectivity, where investment performance rests not on buying the averages but on skill in picking out companies which, on their management record, can still thrive amid competition. The possibility that Britain will enter the common market has made this search the more urgent.

So far, however, the change of mood has not led to many purchases, nor to any wholesale thinning-out of less eligible stocks. Economic uncertainties, associated with the Government's policies, have frustrated the first, and the exposure of capital losses has inhibited the second. The insurance companies, having built up their equity portfolios, have been broadly content to stand pat, though they will take up rights at attractive prices or cut down their Unilevers when Wall Street hoists them to a price/earnings ratio lower than the institutions are prepared to accept. In 1962, at least, an institutional peg for the industrial market is not likely to come so much from the insurance funds as from trustee investors and pension funds. And this influence is likely to be more diffused in effect and less decisive in impact than was the buying of equities by insurance funds in the fifties.

Another radical switch by the institutions to equities cannot in fact be expected when gilt edged offer 6½ per cent and the yield on blue chips averages just over 5 per cent. As the outlook for industrial profits turns sour, the assurance of a fixed income is regaining some of its attraction for investors; and open hints that the authorities would like to place less reliance on monetary policy have encouraged the feeling that the gilt-edged market may at last have passed bottom. Yet the immediate outlook, inevitably, remains clouded by the uncertainties over the Government's wages policy and the contingent threat to sterling. For these reasons, it is difficult to feel confident that gilt-edged will rise steadily in 1962. But the investor who is willing to take a three-year view should see some merit in gilt-edged at present prices. Successful defence of sterling and reviving British exports could have a sharp effect on gilt-edged prices and bring in Continental as well as British investors.

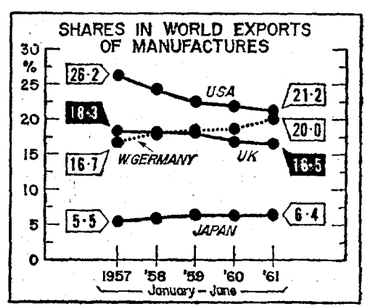
The chances of quick gains in the gilt-edged or in the industrial markets do not look bright but they would, in any case, be overshadowed by the threat of a short-term capital gains tax. Apart from the take-over gamble the investor can look outside the general run of British equities for speculative opportunity: gold shares as a hedge against sterling and the dollar; tin shares, because the rise they have already enjoyed may not fully discount the profits that will be reported this year; copper shares, as a political gamble; and the high-yielding oil shares, not because the companies are earning fat surpluses but because cash is accumulating with the slow-down in capital spending.

The prophet's caution may give too gloomy an appearance to the outlook for British equities, but until the impact of the Government's policies is more certain, caution is justified. But it need not run to the extreme of supposing that the British economy, and with it British equities, are incapable of competing in Europe. By Continental and American standards, dividend yields on British equities look high (though the comparison is not quite a straight one because of taxation) and at least the investor is given some notion of the earnings he is buying. Once the European and American investors are convinced that a British company can prosper in competition, the prices of the "Leylands" and "Jaguars" of the British market could receive another sharp boost.

Speculative operations are, however, garnish to the meal. The problem in British equities is to choose the meat in a year when profit margins are likely to fall further, when industrial profits are heading downwards and when some dividends may be in danger. This week's lists of "shares for 1962" have followed last year's successes in concentrating on companies closely connected with consumer buying. The argument is that, wage pause or no wage pause, no present-day government will hit really hard at the elector's pocket; so, since the "Marks and Spencers" and the "Boots" have already done outstandingly well, this may be the time to buy the "International Teas" and the "Butlins." But equities in the retail trade, the finance group and the immediate consumption industries have already had good rises and, for the moment at least, consumer spending seems to be tailing off. Keeping with the fashion in investment can be profitable; but following it can be expensive for those who buy near the peak.

If he accepts the proposition that the British economy will recover and that exports will rise, the investor with patience might well consider what opportunities may eventually be presented by the cyclical equities in the capital goods industries. These remained right out of fashion last year and prices fell sharply. Pressure on the profit margins of such companies is still intense but they would be among the first to benefit from any sustained effort to raise productivity. The snag is the waiting—in the obvious example of steel, demand is not likely to pick up for at least six months. If it revives later, steel profits will be showing the benefit just as a general election approaches. In some other capital goods industries, investors have every reason for doubts about the adequacy of management.

This has a general bearing on investment decisions. As always, the problem is to judge the ability of management, and this is not directly associated with bigness. It could well be that 1962 will see more turning away from the big groups towards medium-sized companies. The best of these are not second-grade companies because they do not figure in the top hundred ranked by assets. The point is that they often make better use of their assets than the big fellows. In all equity investment this year, the investor will have plenty of homework, satisfying himself that earnings yields on the shares he chooses compare respectably with the current gilt-edged yield and that their rate of return on capital employed has been rising—and not falling as it has for too many British companies.



NEW YORK

What is Undervalued?

WALL STREET appears to share the widespread view that while business activity and corporate profits will hit new heights in 1962, the boom may lose momentum before the year is out. Thus, the expectation is that equity prices, which rose substantially during the past year, will climb somewhat higher in coming months but that a downturn will start in advance of the decline in business. Certainly, stock prices, as measured by the Dow Jones industrial average, are displaying some of the symptoms of fatigue usually associated with a fairly advanced bull market. The market began rising in November 1960, while the economy was still receding, and in the past 12 months it has gained almost 25 per cent; but it has been able to make little headway since the summer, and a rise of similar magnitude seems improbable in 1962, unless the economy performs much more impressively than Wall Street expects.

In fact, the rather stable appearance of equity prices hides some rather violent shifts in investing preferences. A mass exodus from electronic issues occurred last spring and summer, accompanied by a shift into consumer-oriented stocks, such as discount houses, foods and soft goods; now the consumer issues are being deserted for cyclical stocks, including motor, oil, metal, and chemical issues. These shifts have not seriously disturbed the general level of prices, which suggests that investors are both faithful to equities and have been demonstrating considerable prescience about the business outlook. Indeed, the market has been an extremely good forecaster of economic conditions, and its current pause, at so high a level, reflects both confidence about the immediate future and uncertainty over the longer run.

Moreover, the present show of discrimination is due, in part at least, to the high prices and low yields that are on offer. The market has, indeed, discounted a considerable expansion, and it is doubtful whether investors will push up prices any further without concrete evidence of higher profits. At present, the Dow Jones industrials are selling at over 20 times current earnings and yielding less than 3 per cent, which are historically high ratios; if the economy in 1962 performs according to expectations, a 10 per cent rise in stock prices could take place without any marked change in the ratios. So the emphasis is on picking undervalued issues, which are few and far between, and on the cyclical stocks that have not been able to show much improvement in earnings during the past periods of expansion. There is still surprisingly little interest in fixed income obligations, even though yields are attractive; but if the rise in business activity leads to a greater disparity in the spread of yields between stocks and bonds and if Wall Street begins anticipating a general economic decline, then switching from equities into bonds may take place. For the moment, at least, the shifting is from one stock group to another in the belief that the outlook invites cautious selection but not blind buying.

EUROPE

Around the Bourses

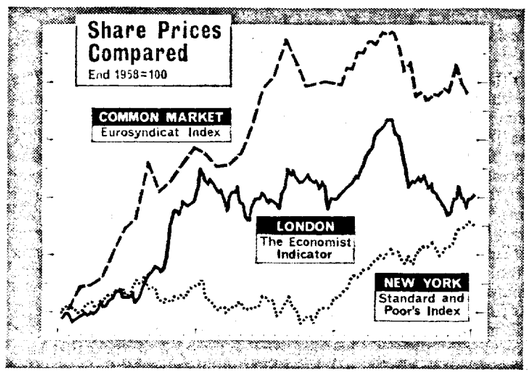
THE great re-evaluation of Continental European securities which began with the initiation of the common market in 1958 was broadly completed in 1960, when Continental bourses went on booming while London and New York were in the doldrums. In 1961 the Continental stock exchanges paused too—and by then Wall Street (though not London) was rising steadily. Broadly, movements in Continental share prices in 1961 have reflected the problems as well as the promise of the common market; and the problems, both political and economic, have been growing. One significant new characteristic of the European bourses is that while national trends continue to be important, there has been a growing recognition of trends common to particular industries throughout the common market area. This has been exemplified by the general weakness of chemical securities in the second part of the year in all common market countries at the same time.

The future of the common market countries still holds the promise of great dynamic development. It has been increasingly realised, however, that this development has been anticipated at times with exaggerated optimism; and that instances of over-capacity or over-employment are bound to occur, and at some points to be acute. For 1962, this means specifically that the very high productive capacity that has been built up will perhaps not be fully employed; and that the slackening in the rate of expansion which began around the middle of 1961 may go on for some time this year. This, of course, is true only in a general sense, as the circumstances of individual industries vary. The lag in the rate of growth means, just as it has meant in Britain and the United States, lower profit margins, increased competition and growing needs of capital by companies which can no longer finance their investment plans entirely by ploughing back profits.

Another important factor for the European bourses is the currency scene. Between 1958 and 1960 this was virtually unclouded for the common market countries. Now it must be recognised that the revaluation of the German mark and the Dutch guilder last March restored the state of general uneasiness about money which has recurred periodically in Continental Europe ever since the first world war. True, the fear of devaluation which plagued many currencies in the years before and after the war has now given way to speculation on an opposite movement, of upward revaluation. But in this field constant speculation in any direction is disturbing in itself. Moreover, revaluation has created difficulties in the two countries that have taken the plunge; in both Germany and Holland exports and profit margins have been harmed.

These difficulties would be less worrying if monetary inflation had been prevented at

the same time. But, far from this, the major problem in most common market countries for 1962 is how to curb an inflationary movement, which was definitely re-born in 1961. Increases in prices, wages, and the spending drive of the consumer show that inflation is a major factor again.

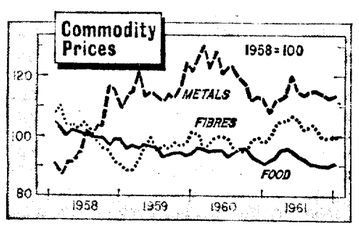


Another underlying worry on a national basis, is the political factor. Apart from Holland and Luxembourg, all common market countries face major political problems. In France everything is dominated by the future of Algerian negotiations. In Germany, apart from the Berlin situation, the succession to Dr Adenauer remains a major query for the future. In Italy, the permanently unstable government of the Christian Democratic Party creates recurrent possibilities of a leftish coalition. And in Belgium, the government lacks support for its economic reforms, and public opinion is split on many important issues.

LOOKED at from these angles, the general price level of common market securities seems high. Moreover, if one excepts a few international concerns, the information available on earnings of companies does not give the investor any precise idea of what he is buying. But from all the guesses that can be made, the expected rate of growth of the common market economies has been very heavily discounted in present share prices. This does not mean, of course, that all securities are overpriced, and it is certain that with improving information some attractive opportunities will appear frequently.

The possible entry of Britain into the common market will certainly draw more and more European attention to London securities, at least those which give the impression that the company will benefit from greater European competition. Moreover it is possible that the fall in prices in the London stock market in the last few months has made many British shares more attractive than their Continental counterparts—with the important proviso that the British Government is successful in solving its present payments problems; Continental opinion looks closely in this context to what happens to wages. Foreign buying on European bourses is now a dominant factor in price movements of most securities. It is a constant observation that nationals of one country keep selling the securities which are being bought from abroad—as indeed is bound to happen if foreign participation is to increase.

Another fundamental factor in the investment reckoning is that many common market companies now enjoy much better management, thanks to the development of a younger class of managers who have been trained in American methods and are extremely conscious of the importance of development research, commercial organisation, and public relations. This is reflected also in the rapid growth of European investment trusts, which in a short space have contributed to a marked widening of Continental equity investment and play a growing role in improving the relations of stockholders with directors. They have developed investment research organisations which begin to have a reasonable knowledge of European companies and encourage a more intelligent approach towards investment.



Growing selectivity will therefore be required for the investor who wants to buy himself an interest in the common market. He must consider both the industry where the investment is made and the company in that industry more than he considers the country and the political problems of that country, however serious they may look. The "European" trends are becoming markedly more significant than simply national ones.

New fields of investment will gradually emerge, as happened in 1961 in both hire-purchase and supermarkets. These new fields will usually offer considerable attraction both for European and non-European investors. Growing interest is also commanded by second line companies; but in this case extreme care must be taken, for low marketability may make it very expensive to unload.

COMMODITIES In Better Shape

AFTER a depressing year, primary producers are better attuned psychologically and economically to the level of prices they can expect in 1962. For commodities, year ends do not make satisfactory bench marks: over the past year *The Economist* commodity price indicator fell less than one per cent; foodstuffs fell and fibres rose fractionally, while metals showed a gain of 2½ per cent, mainly because tin succeeded in destabilising itself upwards earlier in the year in spite of the Tin Council's attempt to thwart the rise. But 1961 was the most turbulent and for most producers distressing year for commodities since before the war. During the year the general level of prices has fluctuated by about 6 per cent, but for several months, commodity prices have been, as they are now, within one per cent or so of their lowest point since the devaluation of sterling.

Producers' costs are higher—Commonwealth sugar producers, for example, whose guaranteed price is related to their costs, have obtained a further price concession this year which has produced the seeming absurdity of higher sugar prices in this country at a time when world prices have slumped to their lowest level since the war. However, the failure of some attempts at stabilisation and other upheavals in commodity markets have made primary producers button up their coats without hoping that the depression of 1960 was a passing chill. There has been a general reduction in prices guaranteed to cocoa and oilseed producers in Africa. A serious attempt to regularise coffee production is promised and western Treasuries are looking askance at the mounting cost of protecting their farmers.

Although prices of industrial materials are little higher than a year earlier, stocks of many are lower. The economic recovery in the United States has improved the prospect for metals, which nevertheless remains fairly bleak. Lower stocks of both wool and cotton should help to keep prices firm, though the textile industries are unlikely to find 1962 enchanting.

Primary producers have the promise of a reasonably sustained rate of growth in industrialised countries and, one would hope, a steady rise in living standards in poorer areas. Against this must be set the considerable slack in productive capacity that must be taken up before that expansion will make itself felt. The effects of surplus capacity caused by high prices and post-war scarcity have probably not fully worked themselves out. But the timing and strength of increased demand for commodities caused by economic expansion cannot be foreseen; in 1961 prices were probably more "normal" than primary producers would care to admit, but producers will be unlucky if they are dealt quite as harsh a blow this year.

BUSINESS NOTES

STERLING

Funds Flowing Back

THE foreign exchange market was quite untroubled by the fall of £85 million in Britain's gold and convertible currency reserves in December, which after the end-year loan repayments of £67 million to the United States and Canada denotes a residual fall of £18 million. The last £17 million of debt under the Basle arrangements was repaid to Switzerland, but this was exactly matched by a Swiss government loan. Britain nearly always loses foreign money in December. A year ago the true outflow was £21 million; in December 1959 it was £19 million, and there was even a net outflow in December 1958, on the eve of convertibility. Last month the reserves took the strain not only of the usual end-year window dressing by commercial banks and corporations as well as by central banks, but also of the sudden scare that blew up at the beginning of the month first over the Chancellor's misreported references to devaluation and quickly afterwards over a sudden flurry into the Italian lira, which gave the Exchange Account one very bad Friday.

In fact the authorities almost certainly regained reserves in the last days of the month, and this kept the net loss down. Withdrawals for window dressing ceased just before Christmas, and since then some of these balances have been returning. This accounts for the firmness of sterling this week, though business has not been large, even after the new year holidays. The release of money from balance sheet purposes has also been reflected in a return of offerings of dollar deposits in Europe, and the rate for three months Euro-dollars has eased from 4 to 3½ per cent. In its December bulletin, the Bank of England gives the first official figures of conversions of Euro-dollars into sterling. After July foreign banks in London again found it profitable to switch these deposits into loans to local authorities and hire purchase companies, even after meeting the cost of forward cover; the amount of these assets held against foreign currency liabilities rose by £30 million in August and September together and by another £20 million in October. Subsequently the margin of profit on such operations narrowed, but the shading in Euro-dollar rates has encouraged further conversions into sterling in the last few days.

* Figures approximate and adjusted slightly on basis of new information in Bank of England bulletin. † Allowing for £17 million from Swiss government to fund debt to Swiss National Bank.

Some private funds have also taken a renewed interest in gold; the London price, which had been falling steadily from late November to the end of the year from its support price of $35.20 to below $35.14, has edged up a shade in the past week, to $35.15½. The market is a little more active than in the stagnant weeks at the end of the year, though by previous standards business is still far from large. The Bank confirms in its bulletin that after the end of July it sold a "moderate" amount of gold "to prevent the price rising to the point at which gold purchased in the United States could be sold at a profit after shipment across the Atlantic."

Bank Rate Tangle

THE bulletin gets into something of a tangle on the subject of the two reductions in Bank rate. "The authorities had at this time [end-September] to consider how large an inflow of foreign money to expect as a natural reversal of the earlier outflow." They seem to have decided—the bulletin has a rare relapse into circumlocution here—that there was still scope for a further replenishment of normal working balances; "but there was nothing to be said for too large and too rapid an inflow of short-term capital." So a cut in Bank rate was made, unexpectedly early; and: "It was followed by a considerable inflow of investment funds. . .." The second reduction in Bank rate, in November, had no such perverse effect—but that was because the curve of confidence had taken a downward shift. It is to be hoped that the Bank will turn a deaf ear to the irresponsible talk about a further cut in Bank rate now, which indeed has sensibly been ignored in the gilt-edged market. The Bank itself gives warning in its bulletin that immediate improvements in the balance of payments as a result of the restrictive measures give rise to the risk that "the vigorous pursuit of longer-term policies, designed to secure increased efficiency and flexibility of the economy, will be relaxed." No doubt the Bank of England would claim that Bank rate was not a part of the "longer term policies"; the Minister of Labour probably takes the same view of his preserve.

STEEL IN 1962

A Waiting Year

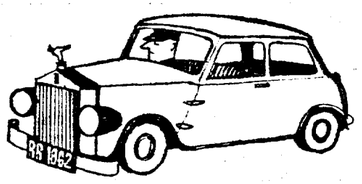
"IF a view had to be hazarded," says an article in the Iron and Steel Federation's *Review*, "it would probably be that production in 1962 as a whole may not exceed the 1961 level, although by the end of the year the trend of output should be moving upwards." For the first time in years, the Federation does not project a figure for crude steel production; to do so, it says, would merely "compound uncertainties"—and there are plenty of them. What happens, in particular, to stocks, which after last year's destocking and a swing of over 2 million ingot tons between 1960 and 1961, still represented about 4 months' supply at the year-end?

It is only too probable that what the Federation describes as "a wildly destabilising swing in steel stocks" has not spent its force and that 3 months' supply is to be regarded as a future norm, or even optimum. A month's supply, in terms of crude ingots, represents nearly 2 million tons. Output last year fell by 2¼ million tons to 22.06 million tons, and the best guess that seems possible now is that output over 1962 will not be very different, even if by the end of the year steel operations have improved

GUIDE FOR INVESTORS

THE security prices and yields, in London and New York, which appear on pages 78 and 79 of this issue, now include leading French, German and Dutch stocks each week and leading Canadian, Australian and Japanese stocks, alternating each fortnight with a selection of Italian, Belgian, Swedish and Norwegian stocks. *The Economist* indicator and the *Financial Times* indices now appear in Company Affairs (this week on pages 77 and 80). After the year-end revision *The Economist* indicator now includes International Computers and Tabulators, City Centre, Rank Organisation and Associated British Foods. Courtaulds, United Molasses, Furness Withy and Babcock and Wilcox have been removed.

to an annual rate of, say, 24 million tons. There will certainly be ample capacity to meet the demand for any product—an end-year capacity figure approaching 29 million tons (with important new units coming in at Richard Thomas & Baldwins, Colvilles, Steel of Wales, Consett and English Steel) shows how far the industry has already succeeded in planning for over capacity. One consequence should be a more even and economic work load, once this further stock adjustment is out of the way. But it would need an important relaxation of official policy to produce any jump in output—as distinct from slowly gathering forces of improvement—during the second half of the calendar year.



The implication for steel companies' profits in their financial year to next September is obvious; the only factor in mitigation is the possibility that investment allowances may steady the further fall in net earnings. So far, this prospect has not led to any cancellation, as distinct from an extension of timetables, for any items in the industry's development programme. The *Review* looks at the suggestion that the British economy might be becoming less "steel intensive" and reaches consoling but qualified conclusions. The use of steel grew only half as fast as industrial production between the first quarter of 1960 and the first quarter of 1961, mainly, it says, because of a short-term shift in the pattern of demand in favour of industries using little steel as against industries using much steel. For the longer run, "steel intensity" should increase, though the *Review* sees understandable cause for concern about the use of steel in manufactured exports. It is going to be difficult to persuade this industry, caught at the end of one phase of expansion by a sharp fall in demand, to think expansively on to the next stage. And its arch-persuader, Sir Robert Shone, is now leaving the cause of expansion in steel for the bigger cause of expansion in the economy as a whole, pursued by cries from the steel masters that a pricing formula based on operating at least to 90 per cent of capacity is hard on them when the working rate falls below the datum.

BMC AND ROLLS-ROYCE

Mini-Rolls?

GIVEN the British Motor Corporation's proclivity for collecting brand names, it was inevitable that the announcement of talks between it and Rolls-Royce on the feasibility of technical collaboration should be followed by suggestions that BMC was planning to buy the car division of Rolls-Royce, or even that the two companies would merge. The Delphic ambiguity of the second sentence of BMC's statement encouraged such speculation, by saying "that in view of the economies to be gained by large-scale production and the ever-increasing importance of quality in the world's car markets there is a *prima facie* case for such an investigation." From this to seeing a Rolls-Royce made by BMC, using components common to other cars, is but a short step in the journalistic mind—especially when BMC has recently been so successful with its Princess 3-litre saloon, which is no more than the Austin A 110 with a coachbuilder's finish. And the Princess limousine, which uses a lorry engine, now has a good share of the prestige market.

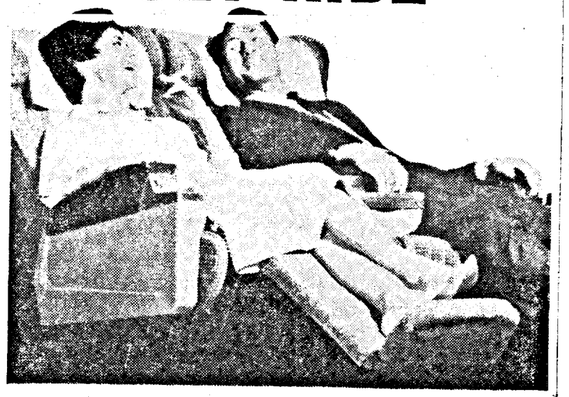
The success of these cars will have helped to weaken the belief that any change in the character of the Rolls-Royce would destroy its appeal as a car that brings prestige. And the halving of Rolls-Royce's

sales on the home market since tax relief was ended on expenditure of more than £2,000 on a car in last year's budget must be making Rolls-Royce wonder how long it can afford to go on making cars. Now that the aero-engine business is no longer as lucrative as it used to be, the company can hardly manage to retain its car division for the prestige it provides. So there might be sound business logic as well as journalistic imagination behind the suggestion that BMC might take over Rolls-Royce cars, and treat them as the most expensive part of its already wide range.

On a strictly engineering basis, Rolls-Royce and BMC might have more in common outside the car field. Both make diesel engines for commercial vehicles, and Rolls-Royce probably does so on a larger scale than BMC; its engines are used in many diesel railcars. Rolls-Royce's diesels are rather more powerful than BMC's; and now that BMC is expanding its heavy lorry business, it might want to use Rolls-Royce engines. On the research side, BMC is working on small gas turbines, and might be able to benefit from Rolls-Royce's experience of bigger ones. But cars seem to be the primary subject of the two companies' discussions. If they should end by turning the Rolls-Royce into little more than another BMC radiator grille, one might regret the change. But the character of Rolls-Royce has already changed much since its reputation as a hand-built car was established; and apart from its own V-8 engine, there might be little of exceptional technical merit to be lost in a merger of designs.

IMPERIAL TOBACCO

Who Gets Slapped?



IN deciding that Imperial Tobacco can retain its shareholding in Gallaher the President of the Board of Trade gave three reasons for rejecting the view of the Monopolies Commission that the public interest would be best served if Imperial Tobacco divested itself of this holding. First, he thought it right to draw attention to the "commission's references to the responsible attitude adopted by the Imperial Tobacco Company and to the special regard which the company has paid to the public interest." Secondly, competition in the cigarette trade, already recognised by the commission as being intense, "has, if anything, grown" since the commission reported. Thirdly, Imperial Tobacco has assured him that it regards its undertaking "not to interfere in the management of Gallaher as binding for the future." The Board of Trade has, however, accepted the commission's other recommendation that Imperial Tobacco should terminate the bonus agreements under which it secures advertising and display facilities at its customers' premises and Imperial Tobacco has agreed to do away with these agreements "as soon as reasonably practicable," which in practice will mean by the end of next October.

Imperial Tobacco's share of the market is now about 60 per cent. In 1959, according to the commission's report it amounted to about 63½ per cent. To that extent competition has grown; certainly this is a trade where the dominance of a single firm has not prevented its bustling rivals, Gallaher and to a lesser extent Rothmans, from making headway. Competition has been expressed in heavier advertising expenditures and the promotion of new brands rather than in prices. Resale price maintenance has been the order of the day within the trade and the majority report of the commission accepted Imperial Tobacco's argument that it did not operate against the public interest. Though Wix has offered gift coupons with "Kensitas," competition has not been so fierce as to lead to an outright coupon war similar to that in the 1930's. Nor, incidentally, has it brought the cigarette card back. Imperial Tobacco may be a price leader but it does not wield the big stick.

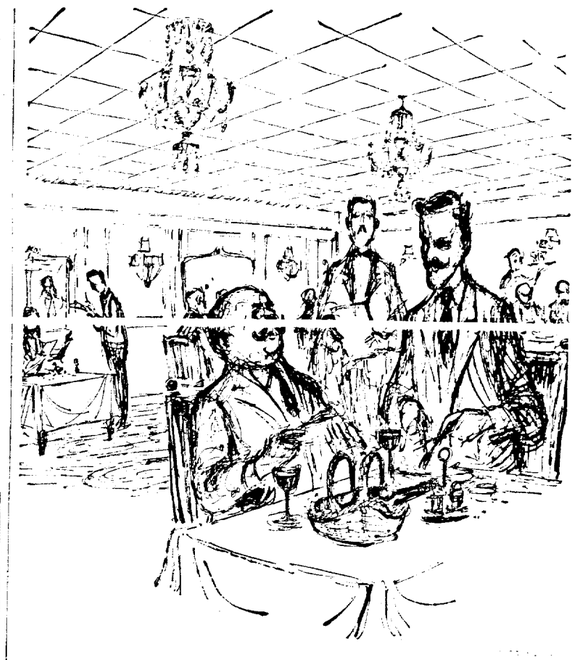
For Ever Mum?

IN leaning upon the commission's argument that Imperial Tobacco has not influenced, or sought to influence, the Gallaher management in its conduct of the business the Board of Trade has in effect rejected the qualifications made by the commission which in its view were sufficiently important to justify the sale of the Gallaher

WORLD'S MOST COMFORTABLE JET RIDE

QANTAS 'RELAXACHAIR'

*with separate adjustable leg rest**



When the jets came in and cut flying times in half, the "Sleeperchair" vanished in the revised economics of jetline operations. Enthusiastic travellers agreed it was a small price to pay for progress—sitting up for four hours was infinitely preferable to stretching out for eight. But now Qantas brings you the "best of both worlds"—the unbeatable speed of 707 V-Jet travel plus the unmatchable comfort of the Qantas "Relaxachair" with a separate adjustable leg rest. Of all the world's jetlines, only Qantas offers you this kind of seating comfort that lets you stretch out and relax and really enjoy the smooth peace and quiet of jet travel at 10 miles a minute. For the world's most comfortable jet ride, fly Qantas.

* Qantas "Relaxachair" with the separate adjustable leg rest is exclusive to Qantas and becomes available to all Qantas first-class V-Jet passengers, at no extra air fare, as follows: "Southern Cross" route (Australia via the U.S.A.), December 18; "Kangaroo" route (Australia via India), and Far East services during January.

QANTAS

AUSTRALIA'S ROUND-THE-WORLD AIRLINE

Qantas in association with Air India and B.O.A.C.

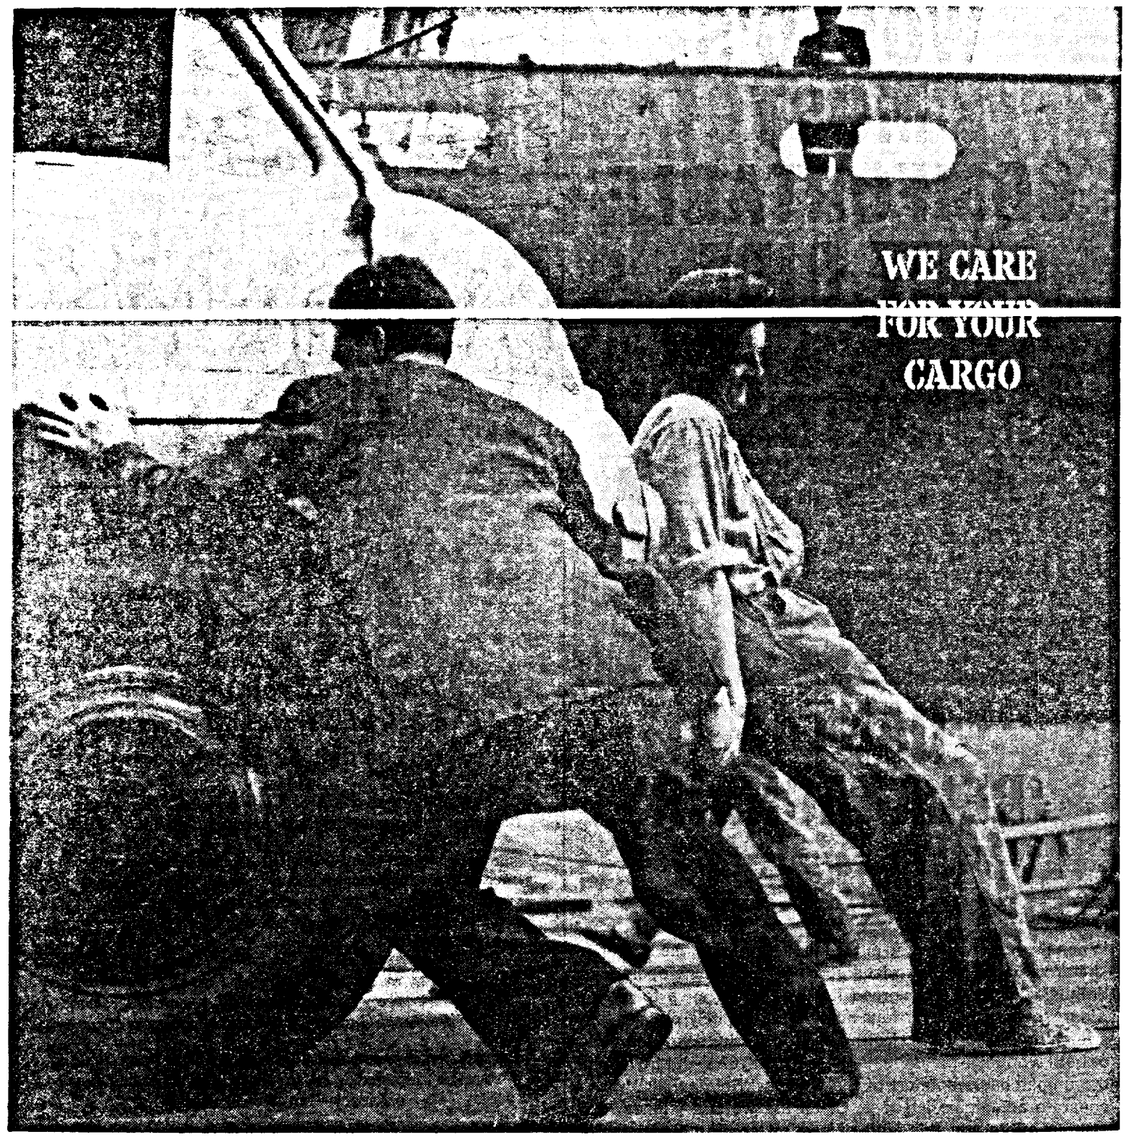
Did I hear you mention 'The Silent Service', Fortescue?
You did, Sir Henry...

I presume you were referring to the bearded Commander behind us, who is consuming his oysters with such evident relish.

Personalities were not involved, Sir Henry. I was merely directing your attention to the greatly increased air of quiet luxury our favourite restaurant has acquired since Cullum have installed acoustic tile ceilings.

Waiters padding softly . . . the disturbing "slurp" of soup reduced to a minimum, you mean? Wonderful, I agree. Even a cascade of crashing crockery would now scarcely distract one from the delights of Gaston's Sole a la Bonne Femme!

Remarkable, is it not, that Cullum's ceilings, by eliminating so much unwanted noise, are not only an aid to business efficiency—but also digestion!



But then, as we know Fortescue, Cullum are a very remarkable organisation. No wonder they installed over 2,000,000 sq. ft. of acoustic tiles, last year alone!

shareholding. These were, first, that the stimulus to efficiency provided by Gallaher's thrust would have been even greater if Imperial Tobacco had not been cushioned, through its shareholding, from the complete loss of profit on trade ; secondly, that it was not necessarily either in the interests of Britain or of competition within the trade if the shareholding frustrated (as it was originally designed to do) the incursion of foreign manufacturers, mainly American, into the British market. (One of the ironies of the Board of Trade's decision is that just a few days before it was announced American Tobacco sold Wix to Gallaher and that the stake it thus secured in Gallaher shares has reduced Imperial Tobacco's holding from 42½ to 37 per cent of the issued capital.)

The commission's arguments on this score have not lost any of their force simply because the Imperial Tobacco directors have bound themselves to continue to treat the Gallaher shareholding as a trade investment. This, in effect, would appear to bind them never to vote their shares nor to interfere in any way with the Gallaher management. At the moment Gallaher is an efficiently run business and its shares are a profitable investment for Imperial Tobacco, contributing roughly three points of its net equity earnings of about 40 per cent. But it may not always be in the interests of Imperial Tobacco shareholders that, as far as Gallaher is concerned, their directors should remain permanently mum. If Gallaher fell on evil days, what then? Would the Imperial Tobacco directors then sit back, content that the degree of competition had diminished ?

If Imperial Tobacco had been forced to sell its shareholding, the marketing of the Gallaher shares would not have been easy. The stock market's relief that this shadow had been removed was measured by the net rise of 2s. to 41s. in Gallaher. Tax complications may have stood in the way of either a free distribution or the sale of the Gallaher shares ; but the government could surely have provided some accommodation on this point. The easy way out of not doing anything is, moreover, no excuse for rejecting the findings of a competent body designed to examine the working of single-firm monopolies. In the past the government has often tinkered with recommendations from the Monopolies Commission. But this is a direct rebuff, which damages the commission's standing and which could inhibit any future recommendations it may make in the field of monopoly to which the government has already restricted it.

DIAMONDS

A Stone is Cast

In his statement to shareholders in Consolidated African Selection Trust last week, Mr Chester Beatty had some unseasonable things to say about the diamond ring. He alleged that CAST had received unfavourable prices for its diamonds and inferred that it had been asked to pay inflated charges for their handling. De Beers controls this romantic, yet hard headed, international cartel. It produces in its own mines a large proportion of the world's diamonds ; through purchasing contracts with "outsiders" it gained control over all but a tenth of the market. After 1900, a series of discoveries in other parts of Africa threatened to undermine the De Beers diamond syndicate's virtual monopoly of production in southern Africa. The discovery of diamonds in Sierra Leone in 1930 was nearly the last of the major finds. CAST, already producing diamonds in Ghana, obtained an exclusive licence to mine diamonds in Sierra Leone, but from the outset marketed all its stones through the De Beers selling organisation. De Beers completed the ring by making marketing agreements with practically every other sizeable producer.

At the end of 1960, however, most of the five-year agreements with outsiders fell due for renewal. At the same time, nationalism in Africa and diamond discoveries in Russia threatened the ring. Since the beginning of 1961, all diamonds from Ghana have been put outside De Beers' control and newly independent states have difficulty in controlling illicit production. But through a government sponsored buying agency, De Beers now handles diamonds won by native diggers in Sierra Leone. This year, De Beers has also opened an agency on the Ivory Coast. Two years ago Russia agreed to channel its exports through De Beers' Central Selling Organisation. The contract was renewed at the end of 1960 and has recently been extended for a longer period. De Beers has therefore come more or less successfuly to terms with the new powers in the diamond field.

But among the former members of the ring, CAST, in which De Beers controls about a sixth of the equity (the powerful American Metal Climax-Selection Trust mining group holds a third) chose to defect. Under the terms of the previous contract, CAST disposed of its stake in De Beers' marketing company and contracted to sell the bulk of its production to a large American merchant. A breach with the CSO after such a long association called for comment. Mr Beatty treated shareholders—and interested observers since so little is known about how the cartel operates—to a detailed account of the events leading up to the rupture:

> "During 1957 I formed the view that we were not obtaining the best prices for our diamonds . . . in the case of the valuable Sierra Leone gems, our price was considerably below market value. Following negotiations lasting over eight months amendments were agreed which are estimated to have increased our revenue by £2.7 million. . . . Regarding our Sierra Leone production . . . we had hoped to sell the bulk to the Central Selling Organisation. . . . On a two year contract covering about £10 million worth of diamonds we offered 4 per cent or £400,000. . . . The Central Selling Organisation informed us that it would require 12 per cent or £1.2 million to handle the contract we proposed and despite an attempt to compromise no agreement could be reached. At this stage we started negotiations with Harry Winston Incorporated, the well-known firm of New York diamond merchants, and found this firm willing to accept the conditions for a two-year contract which had been rejected by the Central Selling Organisation."

CAST did not want a guaranteed market, and evidently thought that, at the price demanded, it should dispense with the De Beers umbrella. The CSO's service—maintaining a reserve fund to support prices and grooming the diamond trade by careful regulation and a little private policing—is certainly not cheap. About 150 firms are allowed to purchase diamonds from the CSO. Allocations are controlled to ensure that both high quality gems (in great demand) and lower qualities (not in such keen demand) are cleared. The distribution of diamonds among the various diamond centres is regulated by the same process, which is meant to ensure that diamonds get into the "right" hands.

The Winston deal might give that firm a larger allocation (approximately 5 per cent of the world total) than it would otherwise obtain. It will certainly throw De Beers' careful arrangements out of gear. Another possible source of weakness is that although it now handles Russian diamonds and a large proportion of those produced by African diggers, De Beers cannot control their production. In the ring, producers have a quota of sales related to their productive capacity. In a slump, the quotas may be reduced but not to a point where the mine would be put out of production. CAST's output in Sierra Leone now amounts to only half that of native diggers. The political risk —its ordinary shares yield 18 per cent— is at least as pressing as the commercial risk. For security, a two-year contract with Winston cannot be compared with a five-year contract with De Beers. But with record diamond sales of £96 million last year and higher prices apparently obtainable elsewhere, De Beers' policy might conceivably be considered too costly and conservative for a producer like CAST. However, the government of Sierra Leone is now considering whether it should compel the sale of all diamonds produced within its borders to its purchasing agency, managed by De Beers.

BANK PROFITS

Still Higher Profits

BANK share prices rose by nearly 30 per cent during 1961 as a whole, as measured by the *Financial Times* index, and although at the close of the year they were 6 per cent below the mid-May peak, this was one of the year's best performances in the stock market. While the first of this year's results, from Martins, was unexciting, Thursday's interim statement from Barclays showed that this bank at least has improved significantly further on its outstanding results of 1960. The stock market is expecting no increase in dividends, beyond those foreshadowed by the Midland and National Provincial at the time of their capital changes, as the banks would be loth to go against the Chancellor's wishes. But the results from Barclays suggest that another increase in dividends might otherwise have been forthcoming—and that there will be a particularly large surplus available next year. The discount houses, by contrast, have had a more difficult year. On Thursday afternoon the Union Discount company announced a slight fall in published profits, from £575,924 to about £566,000 after tax; the year's dividend is unchanged at 12½ per cent.

Barclays' published profits which in 1960 rose by 31.6 per cent to £5,452,000, easily the highest of any bank, have now increased by a further 11.4 per cent to £6,074,000 which is more than double the figure of four years ago. The dividend is unchanged at 13 per cent for the full year. Last summer's rights issue of one-for-eight entails an equivalent increase in the amount of the distribution; but the allocation to published reserves is still no less than £2,586,000, compared with £2,163,000 for 1960.

On Monday Martins, as usual the first to report, announced only a marginal rise in disclosed profits, from £1,420,000 to £1,449,000, and an unchanged final dividend, maintaining the total at 15 per cent. The rise in disclosed profits was in fact smaller than the coming cut of £37,000 in the bank's prospective dividend from Mercantile Credit, the hire-purchase finance house in which, like the Westminster, it has a 20 per cent interest; this dividend is not paid until January.

The banks are now reporting their third successive year of bumper profits. In 1959 total disclosed profits rose by 24 per cent and in 1960 by a further 28 per cent. The average increase for 1961 will plainly be a good deal smaller. Other large banks, and notably the Midland and Lloyds, have suffered bigger setbacks from hire-purchase than Barclays; and the extent of the increase in both earning assets and average interest rates slowed down markedly in 1961. The average level of net advances in 1961 was 9 per cent higher than in 1960, while in that year the increase was 24 per cent over 1959. The average level of Bank rate in 1961 was 5.67 per cent compared with 5.35 per cent in 1960; it was only 4 per cent in 1959. At the same time the higher interest rates have produced a further small switch to deposit accounts, which rose by 4.9 per cent on an increase in gross deposits of 2.2 per cent. Deposit accounts are still, however, only 36 per cent of gross deposits. The general debit clearing in 1961 rose by 1.9 per cent, the smallest increase since 1952, and below the increase in deposits—which suggests that the velocity of circulation actually declined last year.

Admittedly, the banks' costs also continue to rise. The 5 per cent salary increase granted in July of 1960 has now been effective for a full year, and in addition there were some further increases in 1961 to senior staff and new entrants. At the same time the clearing banks continued to increase the size of their staffs in 1961 and the banks are on the verge of very expensive electronics programmes. A very rough guess indicates that over the next twenty years the capital outlay on electronics equipment by the banks could amount to over £60 million. The banks may not be wholly sorry for their opportunity to tuck more back into reserve this year.

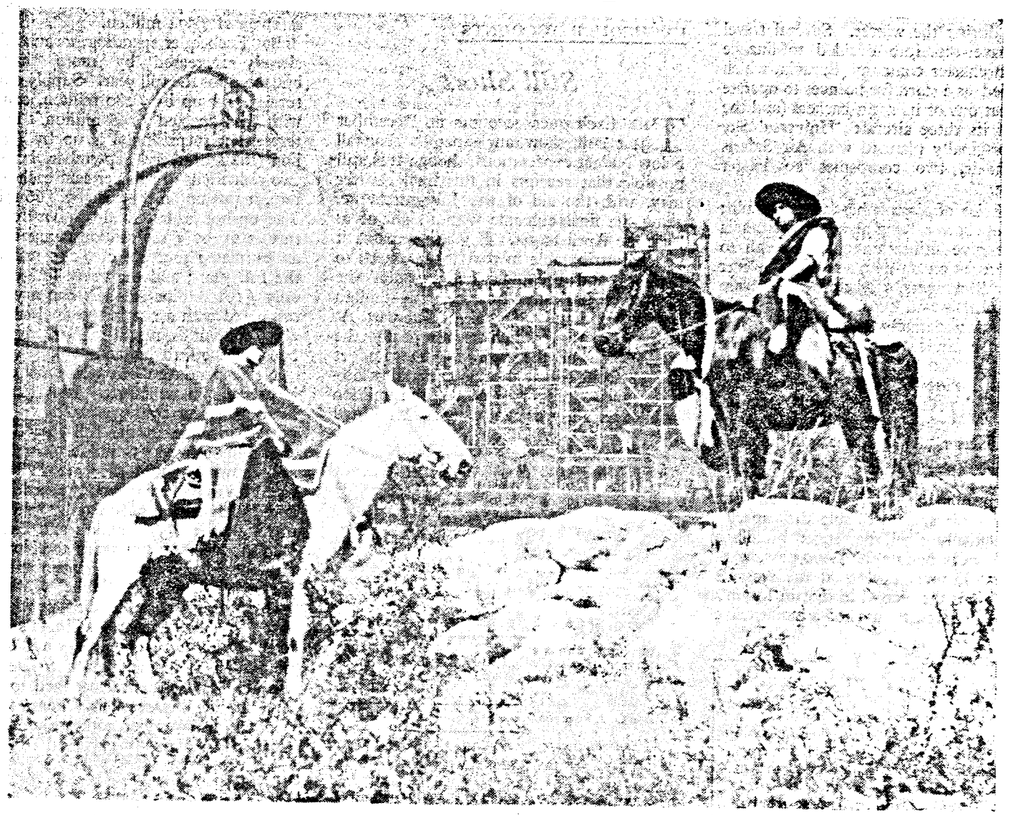
BOATING

Consolidation—in Concrete?

BOATBUILDERS are parading for the Daily Express International Boat Show after a year in which they felt the edge of the depression that hit the motor industry; perhaps because theirs is more truly a growth industry, perhaps because they make something not at all utilitarian—and so a more tempting purchase—the output of most established firms fell only slightly. Boats in the middle price range—£1,000 to

£3,000—seem to be those hit worst; cheap boats remain a strong market, and so do those bought by the truly affluent. Stiffer competition for sales has pushed a number of small firms out of business; and some firms that had come in with little idea of what a good boat needs have now disappeared. Even among the makers of a technically successful product, it appears that a newcomer like Dowty has had to content itself with selling about a tenth of its original target of 4,000 speedboats a year; it now seems to be placing as much emphasis on the sale of its jet-propulsion units to other boatbuilders as on that of its own speedboats.

This year will, the boatbuilders hope, prove rather better; some report a sharp increase in the number of enquiries that they are getting from potential buyers, even though actual orders show less sign of rising yet. Nobody knows just how many boats are built in Britain in a year, except that it must run into tens of thousands. Among dinghies about 5,000 were built to the designs of Jack Holt alone last year; Fairey, which makes cruisers and motor boats as well as dinghies, sold around 1,000 compared with 1,100 in 1960. But it sold more expensive motor cruisers in 1961.



Technically, the most interesting innovation at the show is the concrete hull being exhibited by Windboats. Concrete has been used for boats before—originally as a means of overcoming the steel shortage in the 1914-1918 war—but it never became commercially established. Windboats is keeping its construction method secret; but the hull is about one inch thick, and presumably uses much the same type of reinforced concrete that would be employed for a thin shell roof. The advantage claimed for concrete is cost; Windboats put this at two-thirds of the cost of a glass fibre boat. The topsides, however, seem a little wavier. Glass fibre itself still grows in popularity; now that builders are more generally recognising that a chemical process is involved, and that this means working under rather different conditions to building in wood, the results are proving more satisfactory. Medium-sized sailing yachts and motor cruisers are now often built of glass fibre; but they still look the same. Boat design is not something that changes fast; the catamaran, still becoming more popular, and the small cruiser with bilge keels remain the only innovations of the past few years.

INDEPENDENT AIRLINES

A New Approach

THE collapse of several small independent airlines last summer and autumn has caused consternation among travel agents. This is not merely because some of them had stranded and infuriated passengers on their hands at the height of the holiday season. Unless they employ a foreign operator, they can sell a packaged holiday only in association with a named airline that has already been given a licence for the flights, a long-winded process that involves planning up to twelve months ahead. These

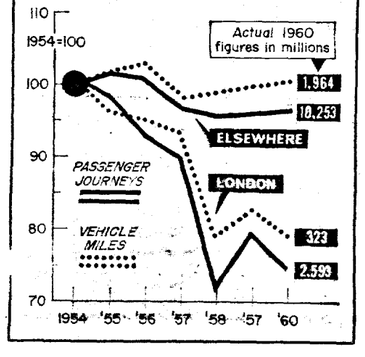
Chemicals come to the Pampas

Two hundred miles up the broad Paraná river from Buenos Aires lies the town of San Lorenzo, overlooking the *pampas*—the seemingly endless wheat and cattle plains that were once Argentina's only source of wealth. Here, a stone's throw from fields of maize, a group of chemical plants is taking shape. Soon it will be pouring out raw materials for commodities ranging from textiles to plastics; and in the not-too-distant future new plants will be added to transform oil from Argentina's sub-tropical North into polythene and polyester fibre.

This £10 million enterprise is only one of many launched by I.C.I. of England to nourish manufacturing industries throughout the world. I.C.I. plants making polythene, blasting explosives, dyestuffs and heavy chemicals serve the newly emerging industries of India. In Australia and New Zealand, scores of chemical products that once had to be imported are now made in quantity by an I.C.I. subsidiary; and I.C.I. associate companies meet many of the chemical needs of Africa. To these overseas activities there is to be added a new complex of chemical plants near Rotterdam, which will supply plastics, petrochemicals and related products to the highly sophisticated industries of the E.E.C. and the E.F.T.A.

The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1



ICI

tours depend for their low cost on chartering entire aircraft at rates lower than the cut-price seats offered on the scheduled airlines; some of this coming season's are in hazard because certain airlines went out of business during the winter. Several travel agents have therefore decided to finance their own charter company, Euravia, which has applied, as a start, for licences to operate flights that one of its main backers (and the owner of its three aircraft), Universal Sky Tours, originally planned with Air Safaris and Tradair, two companies no longer operating.

The choice of aircraft has been difficult; the kind of charter flying planned by Euravia does not give utilisation good enough to meet depreciation on new aircraft, however efficient. Passengers, on the other hand, are growing choosy and expect at least a pressurised and moderately speedy flight. The compromise choice has been three of the smaller type Constellations, bought from the Israeli airline El Al because these had the advantage of being in regular service, regularly maintained, up to the moment of sale. The new airline's base is planned at Luton airport, using the road link along M1. Luton Corporation is undertaking, in return, to put the airport on a 24-hour operating basis and to double the capacity of its relatively small passenger buildings so that they can handle the 1,000 passengers a day that Euravia expects at the season's peak. This is the second feather in Luton's cap since the airport launched a major drive for more traffic, its first being KLM's decision to use it as a bad weather alternative to London's Heathrow.

BRITISH BUS TRAVEL

Travel by bus is a declining habit in Britain, as more and more people provide themselves with their own means of transport. The trends shown on the chart continued into the first half of 1961. London Transport has been losing its bus passengers faster than its provincial counterparts and the country bus services have done; traffic congestion may be one reason, but the availability of an alternative public transport system in the underground is another that does not apply elsewhere. Travel on London Transport trains was static from 1957 to 1960, but rose slightly in the first eight months of 1961.

EXCHEQUER ACCOUNTS

Still Short

THE Exchequer accounts at December 31st still show an apparent shortfall below budget expectations, though it is still possible that receipts in this final quarter may, with the aid of the July surcharge, bring the final outcome within sight of at least the April target. If a gap remains it will be attributable in part to the check to incomes and economic activity that the Chancellor has himself engineered—though higher spending has also played its part. At December 31st, which is seasonally the worst time of the year for the budget accounts, the deficit after debiting all below-line expenditures was only £102 million smaller than a year ago, whereas Mr Lloyd budgeted in April for an improvement of £325 million, to bring the overall deficit to only £69 million—which with the £130 million expected from the July surcharge would be transformed into overall surplus.

NINE MONTHS' OUT-TURN

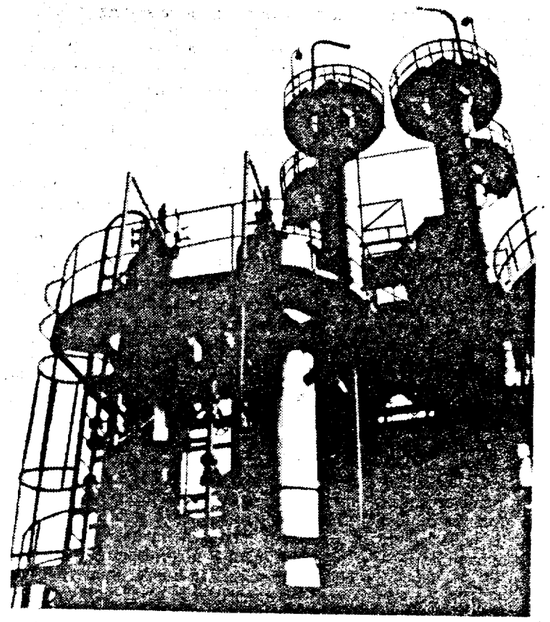
(£ million)	April 1, to Dec. 31, 1961	Change on April 1, to Dec. 31, 1960	Expected change in full year on 1960–61 out-turn
Revenue			
Income tax	1,126	+129	+296
Surtax	63	+ 6	+ 20
Death duties	188	+ 20	+ 4
Stamps	72	+ 5	+ 4
Profits tax, EPT & EPL	263	+ 54	+ 62
Total Inland Revenue	1,712	+214	+386
Customs and Excise	1,958	+135	+120*
Motor duties	55	+ 12	+ 29
Other revenues	222	+ 69	+ 39
Total Ord. Revenue	3,947	+430	+574*
Expenditure			
Interest on debt	553	+ 35	− 1
Sinking funds	27	+ 1	+ 1
To Northern Ireland	66	+ 6	+ 3
Miscellaneous	12	+ 7	+ 14
Total Cons. funds	658	+ 49	+ 17
Supply Services	3,846	+280	+198
Total Ord. Expend.	4,504	+329	+215
Above-line balance	−557	+101	+359*
Net below-line outlays	−489	+ 1	− 34
Total deficit†	−1,046	+102	+325*

* Not adjusted for expected £130 million from 10 per cent surcharge on revenue duties. † In second and third columns. (+) indicates reduced deficit.

In the nine months to end-December, receipts from income tax were fairly buoyant, and they are £129 million up on the corresponding period of 1960. The bulk of these payments are still to come, and despite the pay pause, the final increase could come close to the budget estimate of £296 million. All the other items in the revenue account, except motor duties, are ahead of schedule. But the increase in customs and excise in the first nine months of the fiscal year is so far only £15 million ahead of the April estimate of £120 million more for the full year. At this pace it seems unlikely that the Chancellor will get the whole of his extra £130 million from this source. Total ordinary revenue is so far up by £430 million, and well placed to overtake the April estimate of £574 million.

But Exchequer spending, meanwhile, has already increased by more than was budgeted for the full year. Supply expenditure is now up by £280 million, compared with the expected £198 million. Debt interest, not surprisingly, is up by £35 million (though at end-September, before the two reductions of half per cent each in Bank rate, it was up on the year by £66 million). The upshot is that total ordinary expenditure is up by £329 million compared with an estimated increase of £215 million for the full year; and the above-line deficit is only £101 million smaller than a year ago, compared with a rise in the final surplus of £359 million estimated in April, before the boost of the little budget.

Net expenditure below-line, by contrast, is pretty well on target. It is almost the same as a year ago, compared with an expected increase in the full-year deficit of £34 million to £575 million. Colvilles has still drawn none of the £30 million provided for in the estimates; Richard, Thomas and Baldwins has taken only £26 million of its allotted £58 million; and Exchequer loans to overseas countries total only £25 million of an estimated £49 million. On the other hand the Public Works Loan Board, for which no lending provision was made in the estimates, has in fact lent the local authorities some £15 million—£10 million in the three months to December. The building societies managed to borrow £44 million before their scheme was suspended in November, rather more than the Chancellor originally expected for the full year.



CONSUMER EXPENDITURE

Rising Rents?

ACCORDING to some commentators, the 1960 family expenditure survey for Britain records a steep rise in rents. The evidence for this, however, is far from convincing. Admittedly, the dozen households with incomes of £50 or more a week who rented unfurnished accommodation paid on average £3 a week (surely not excessive?) while the thirteen comparable households in 1959 paid only £2 10s.; but households with £30–£50 a week recorded a smaller average rent than a year before and for all households renting unfurnished accommodation the increase had been little more than a shilling a week.

AVERAGE WEEKLY HOUSING EXPENDITURE
(shillings)

	1959	1960
Pensioner households	18·2	17·4
Other households with income of head :—		
Under £30 a week	28·9	30·1

A century of experience backs up IHI's chemical-plant capability

With its 100 years of heavy industrial experience, IHI is fully qualified to undertake the design and construction of a large variety of chemical processing plants and components. From preliminary survey to continuing after-service, IHI's 17,000 highly trained employees offer efficient and economical handling of all your chemical plant requirements. Also at your service is the IHI Technical Laboratory, with a research staff of 300, specializing in the design of new processes and products and in improving production methods.

IHI is Japan's leading heavy-industry company. Its many-sided operations include the design and manufacture of all kinds of heavy equipment—from ships, engines, and boilers to heavy machinery for use in the chemical, construction, iron and steel, power generating, and mining industries. Brochures outlining IHI's capabilities and informative "IHI Letter" will be sent on request.

PLEASE HELP SPASTICS

NEW YORK EVERY FRIDAY, SATURDAY AND SUNDAY

Admittedly, too, at the top of the income ladder there was a handful of families paying a pound or two a week more for furnished accommodation ; but it was a higher imputed rent for those owning their own houses and much higher repair costs (which had been obviously under-recorded in 1959) which put up the total housing expenditure of the more well-to-do.

The 1960 survey caught, in its random net, some wealthier people than the 1959 survey ; the average expenditure of the hundred or so households where the head got upwards of £30 a week had risen from £33 to £51 a week. The richer families taking part in the 1960 survey had better houses and spent considerably more on women's clothes, furniture and cars. There is nothing wrong about having a mink coat or a Bentley mixed up with the weekly shopping list, provided their inclusion is not regarded, as it so often is, as representing a rise in the cost of living. This is a phrase that Humpty Dumpty might well have had in mind when he said, "When I use a word, it means just what I choose it to mean—neither more nor less."

Let's Eat Out

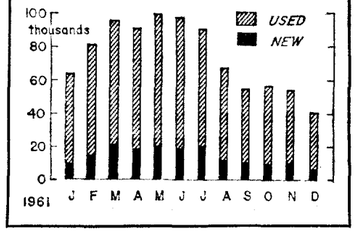
ONE of the things on which money goes, where there is more of it about, is eating out. A man with £30 a week does not spend twice as much on feeding his family at home as one with £15 a week, but his spending on meals out is likely to be more than double. The chickens turning on a spit, steak houses, the crop of Chinese restaurants in the provinces and the transformation of Lyons teashops into quick-service grill rooms—these are symbols of the growing prosperity of the British people. Yet it is not easy to find just how much they do spend in restaurants, hotels and pubs—when it comes to recording such items in the family expenditure survey an extraordinary coyness overcomes people.

CATERING TURNOVER IN 1960
(£ million)

	Sales of :— Meals & refreshments	Alcoholic drinks	Cigarettes & tobacco	Total turnover
Hotels & holiday camps	46·2	41·3	5·9	179·1
Public houses	33·2	559·9	103·0	711·5
Restaurants & cafes	176·2	19·3	24·8	241·1
Fish & chip shops	48·5	...	2·6	52·4
Canteens & catering contractors	69·3	1·2	25·7	102·3
Other catering establishments*	7·9	1·6	1·1	14·0
TOTAL	381·3	623·3	163·1	1,300·3

* Refreshment cars on trains, hostels, refreshment bars in cinemas, theatres, etc.

Last week, however, the Board of Trade published the results of an inquiry into the catering trades in 1960, which showed that their main receipts came to £1,300 million, nearly half of which represented sales of alcoholic drinks. Even so, this survey is incomplete, for it excludes smaller hotels and boarding houses, catering establishments operated by mainly retail organisations and registered clubs. And the results, which are summarised in the table below, may be blurred here and there by difficulties of classification.



More than half of all drinking, it would seem, is done outside the home or office, since the total expenditure on drink in 1960 is estimated to have been about £1,060 million. Of the total sales of meals and refreshments, it is perhaps surprising that fish and chip shops account for one-eighth and, in spite of the hamburger competition, seem to have lost relatively little of their popularity over the last decade, although their numbers have declined. These shops have remained almost entirely in the hands of independents, and even so far as ordinary cafés and restaurants are considered the multiples have not increased their grip, accounting for just less than a quarter of the takings in both 1950 and 1960. On the other hand, independently operated canteens have become much less important.

The catering trades covered by this inquiry had a combined turnover of nearly one-sixth of that of the retail trades. How many of their clients are business and how many personal would still seem to be anyone's guess. The official guess is that one-tenth of wines and spirits drinking and one-twentieth of eating out in restaurants is done on the business account.

FEWER CARS ON CREDIT

December is usually the year's low-point for the motor trade, but this time new and used car contracts recorded by Hire Purchase Information were at their lowest level for four years—10 per cent below December, 1960 and 31 per cent below December, 1959. Motor dealers believe, however, that things will improve this year when three-year contracts made in 1959 and two-year contracts made in 1960 mature at the same time—they have obviously been reading Mr Cuthbertson in *Economica*.

Contracts registered with HP Information

ADVERTISING

How Captive an Audience?

THE television advertising industry—comprising programme companies, agencies and advertisers—has only a short time before it must decide how, in the future, it will assess the value of its product, the TV commercial. The present contracts with TAM expire at the end of June, and although in practice it seems they will be extended a further three months, it will take that long to set up any new or extended system of assessing television audiences. The Joint Industry's Committee for Television Advertising Research (JICTAR) is currently considering ways and means. In addition to the methods used by TAM—meters attached to the sets of about 1,000 carefully selected households plus viewing diaries, or Tamlogs, kept by the obliging inhabitants—the committee is looking at various interviewing techniques, which may provide a more highly defined picture.

In the past year both the London Press Exchange and J. Walter Thompson have been examining the degree of attention paid to the screen by housewife viewers at different stages in the evening and how this is affected by such commonplace activities as preparing food or sewing. Not surprisingly, results show that concentration increases during the peak period of viewing, when chores and meals are over and most housewives can sit down and look the telly square in the face rather than out of the corner of their eyes. The most important conclusion to be drawn from the J. Walter Thompson survey, now published in full, is a greatly increased emphasis on the value of peak time and a corresponding decrease in the apparent "value for money" of advertising time bought at off-peak periods.

The main aim of this survey was simply to find out what housewives were actually doing when their television sets were switched on. According to their description of their actions at the time immediately before the interviewer's knock they were classified as "paying full attention" to ITV, as "viewing but doing something else" (e.g., reading a newspaper), or as "present in the room but not viewing" or absent from the room. Advertisers know as well as anyone that it is easier to hit a sitting target, and this evidence of the restlessness of their main quarry, the housewife, in the earlier part of the evening should make media planners take another look at the placing of their allocations—and programme companies at their fees. On the present scales of charges, based very largely on TAM evidence, the rates are roughly in proportion to the supposed size of audience—sometimes varied by incentives to use off-peak time, which is anyway reckoned to be cheaper per thousand viewers. In spite of this, on the JWT evidence, if the audience to be reached is qualified by its degree of likely awareness, the cost per thousand rises for off-peak time. It appears that in winter there is virtually no difference between the two periods in the cost of reaching fully attentive viewers while in summer off-peak time is, for this purpose, actually more expensive.

EXPORT CREDITS

Third Line Reserves

FOR the first time the Export Credits Guarantee Department has revealed the forward schedule of repayments due to Britain under export credits that the department insures. This information has become public through a backdoor route, the December bulletin of the Credit Insurance Association, which acts as a broking firm in credit insurance. The table shows the spread of instalments due between 1962 and 1969, to a total of £253 million. The concentration in the early years reflects first the high proportion of shorter credits—even though short-term credits up to six months have been entirely excluded—and also the fact that the longer credits are more important now than they were a few years ago. These credits cover the period of manufacture or construction, so that a seven year maturity schedule does not necessarily reflect more than five years' credit from date of shipment. The special new credits for ten years and more that are granted in special cases direct to the buyer with an ECGD guarantee are not yet reflected in these figures, as the scheme was brought into play only last summer. But it seems clear that the comparable schedule in a few years' time will be significantly more extended. Further innovations in export financing facilities have been discussed by the insurance companies this week, and the Government has promised a statement when parliament reassembles on January 23rd.

AMOUNTS DUE UNDER ECGD GUARANTEES
Datum—June 30, 1961.

Year	£'000	Year	£'000
1962	99,838	1966	19,078
1963	55,577	1967	7,391
1964	39,225	1968	2,537
1965	27,326	1969	1,906
			252,878
Section III direct government loans—1962 onwards			171,819
			424,697

In a different category, the new figures also give a cumulative total of total economic assistance loans granted from the Exchequer under section III of the Export Guarantees Act—£172 million was outstanding in mid-1961. These figures have an important part in the sterling balance sheet—though perhaps as third line rather than second line reserves—and the ECGD should be pressed to publish them regularly.

EXPORTS

The American Touch

CHAUVINISTS who see something sinister in the sizeable American stake in British industry might do well to read the results of a survey published by the US Chamber of Commerce of the export performance of 120 US manufacturing subsidiaries in the UK. This shows that, compared with 492 big exporters that were surveyed by the FBI last year, the US firms as a group send a rather higher proportion of their output abroad. Nearly 20 per cent of them exported over half their production in the first half of 1961, as against 12 per cent of the FBI sample. About 30 per cent of both samples of companies exported between 25 and 50 per cent of production and 36 per cent of the American-owned companies sold between 10 and 25 per cent of output abroad. The 23 companies which directly exported over half their output were all manufacturers of specialised capital goods or of consumer durables with a relatively small market in Britain. The whole group of American subsidiaries, however, showed a slight decline in the percentage of output exported in recent years. It is clear that increased spending in Britain has helped to mop up goods that might otherwise have been exported.

Their parent companies, again, have been setting up other subsidiaries abroad, particularly in Europe. Of late the British government has been less particular about the type of industry set up here with US finance ; in the days of the dollar famine it encouraged those that would not only save dollars at home but also earn them abroad.

This combination of factors suggests that the days when circumstances were particularly favourable to the US subsidiaries as exporters are now over ; but most of them still seem likely to remain fairly successful salesmen both here and abroad. Nearly all the 120 US subsidiaries considered in this survey were small-to-medium-sized concerns ; their relative success as exporters points to the more fully developed international sales organisations of their parent companies. Many, such as the pharmaceutical companies, benefit from intensive research carried out in the United States. Most of them are relatively young enterprises, and their concentration in the more capital intensive industries also plays its part in making American subsidiaries over here more productive than the average medium-sized British firm.

SHORTER NOTES

Leak was the word Mr Paul Chambers used to describe the events that led him hurriedly to announce ICI's terms for the merger with Courtaulds and to explain them at a press conference on Monday, December 18th. The two companies in a joint statement avoid the word in saying that they have instructed Messrs William Charles Crocker, solicitors, to investigate "the allegation of a premature disclosure of information regarding the negotiations between the two companies." The solicitors have retained the services of Commander L. J. Burt, formerly the head of the Special Branch of Scotland Yard, to assist in the investigation.

★

The two biggest shoe concerns in this country, Saxone, Lilley and Skinner and the British Shoe Corporation (controlled by Mr Charles Clore through the Sears group), have, after long expectation, announced that they have entered into discussions with a view to a merger.

★

The Hotpoint division of Associated Electrical Industries has cut the price of its refrigerators and washing machines by 11 per cent. The chairman, Mr Craig Wood, says that this move is intended to give the company a bigger share of the appliance market. This strengthening of competitive pressure in the industry follows the apparent failure of Prestcold's efforts to associate itself with AEI.

★

M. Samuel is offering 1,582,400 ordinary 5s. shares in Samuel Properties at 20s. each. Samuel Properties holds 4 per cent of the equity of City Centre Properties and half the capital of Samuel Estates, which has extensive properties in Mayfair. For the year to June 30th next a dividend of 9 per cent is forecast.

J. Henry Schroder is to acquire the remaining 30 per cent holding in Helbert, Wagg. Schroder bought 70 per cent of the Helbert, Wagg equity in May, 1960, and will issue 198,000 fully paid £1 ordinary shares at 80s., which is 8s. below the current market price, for the minority holding. This purchase will result in the complete amalgamation of the businesses of these two merchant banks.

★

Last week a ban was placed on the import of Egyptian banknotes into Egypt, allowing foreign holders one month's grace to repatriate their notes. Earlier a ban was placed on the export of notes from Egypt. This means that all dealings in Egyptian notes outside Egypt are completely unofficial. There is still a market in London, however, quoting 9s. 6d. to one Egyptian pound—a discount of over 50 per cent. Tourists buying Egyptian pounds in Egypt receive a premium of only 23 per cent through official facilities.

★

The Ministry of Aviation is showing willingness to learn from past mistakes. In the tenders invited for a hotel at Prestwick airport, the Ministry states that the rent to be paid will be a percentage of gross takings.

COMPANY MEETINGS

SOUTH DURHAM STEEL & IRON COMPANY

REASONS FOR REDUCED PROFITS

GOVERNMENT DECISIONS ADD HEAVY BURDEN

PROVISION OF SHORT-TERM FINANCE ARRANGED

MR B. CHETWYND TALBOT'S STATEMENT

The Sixty-third annual general meeting of the South Durham Steel and Iron Company, Ltd., will be held on January 31st at Caxton Hall, Westminster, SW.

The following is the Statement of **Mr Chetwynd Talbot, TD,** Chairman and Managing Director, circulated with the report and accounts:

In forwarding to you the Reports and Accounts for the financial year which ended on September 30, 1961, I include my address to shareholders which will be made at the Company's Annual Meeting in London on January 31, 1962.

The financial results for your Company's past year show the gross profit, including £24,835 income from investments, amounting to a total for the year of £7,087,989 compared with £8,088,461 for the year 1959-60.

The decrease of £1,000,472 is accounted for by:

(a) Increases in costs of coal, fuel, oil, wages and other items during the year without adequate compensating adjustments in selling prices by the Iron and Steel Board.

(b) A fall in demand for heavy steel products during the last six months of the financial year.

(c) The World demand for steel pipes has fallen considerably and the few contracts secured have been subject to very keen competition by foreign producers.

It will be noted that the net level of profit after deducting Directors' Fees, Pensions, Depreciation and Interest Charges amounted to £2,121,661 compared with £4,482,706 in 1959-60.

CAPITAL EXPENDITURE

In commenting on the Balance Sheet figures as at September 30, 1961, you will note the capital expenditure incurred during the year amounted to £9,912,590. Of this total, approximately 32 per cent was secured from your Company's resources by way of sums set aside for depreciation and transfers to reserves. The capital commitments as at September 30, 1961, still to be expended on development work amounted to £3,750,000.

You will note that, compared with amounts at October 1, 1960, the value of stocks and work in progress has increased by £1,007,530 and debtors have increased by £144,858.

At September 30, 1961, Loans of £15,500,000 from Barclays Bank Limited and the £20,500,000 from the Finance Corporation for Industry Limited had been absorbed.

CAPITAL AND APPROPRIATIONS

Under the terms of the Trust Deed, holders of £227,488 of the £8,000,000 6 per cent Second Debenture Stock 1978-83 exercised their option to convert halt their Stock into £1 Ordinary Shares at par on March 31, 1961. These conversions resulted in an increase in the Issued Share Capital of £113,744 with a corresponding reduction in the Second Debenture Stock.

During the financial year under review the Capital Reserves have been increased by £900,000 following the practice of previous years of setting aside the tax relief applicable to the Investment Allowances on the current year's capitalised expenditure.

This sum has been deducted from profits for the year along with transfer to taxation provision, reducing the balance of profit after taxation to £1,021,661 compared with £2,232,706 for the previous financial year.

PLATE MILL PLANT

I stated in my Remarks twelve months ago that the slabbing mill and plate mill at the South Works became fully operative during the month of December, 1960. Naturally, with a plant of such intricate nature, initial troubles were encountered due chiefly to faulty design in shearing equipment on the heavy and medium plate lines. These difficulties are in the course of being overcome and the potentialities of these two units are in accordance with your Directors' anticipations with regard to the level of output of steel plates referred to in my Remarks in previous years. Your Directors have accordingly decided that no useful purpose is served by retaining under the heading of fixed assets the slabbing mill and the heavy plate mill at the North Works, which were closed twelve months ago on the commencement of production at the South Works, and these two units at their depreciated values have been written off from Capital Reserves. Considerable modern electrical equipment from these two mills is being incorporated in the wide flange beam mill at Cargo Fleet.

TECHNICAL IMPROVEMENTS

At the time the steel plant at the South Works was being developed, output was based on the performance of steel furnaces of similar size which were operating in the United Kingdom. By incorporating improvements of a technical nature it has proved possible to increase the individual output per furnace by approximately 50 per cent. This achievement has been secured without the usage of tonnage oxygen, a plant for the production of which will be available to suit your Company's requirements early in 1962. Taking these factors into consideration your Directors are of the opinion that the increased level of ingot production at a considerably reduced cost at the South Works will be sufficient to supply the order load of the heavy and medium plate mills in the immediate future. It is the intention of your Directors to retain the steel plant at the North Works as a reserve capacity for ingot production but at the same time to write off from Capital Reserves the depreciated capital value of this plant.

PENSION SCHEMES FOR STAFF

It will be noted that the amounts charged for Pensions and Life Assurance Schemes in the Profit and Loss Account have increased in the case of staff by £2,744 and for workmen by £19,367. These increases are chiefly attributable to the introduction of the National Insurance Act 1959, which came into operation in the first week of April, 1961. The Company's pension funds were adequate to provide the equivalent pension benefits required by the Act and the members earning £12 per week or over were "contracted out" of the State scheme.

To provide additional pension benefits the Company inaugurated a Voluntary Supplementary Pension Scheme on a graduated basis, for the male members of the existing Pension and Life Assurance Schemes earning at least £12 per week, in which the contributions of the employees and the Company comprise an equal amount. In effect 87 per cent of the members of the existing Pension Schemes took advantage of the greater benefits to be secured from the Company's Supplementary Scheme which on retirement at the age of 65 years will ensure a yearly increase of 50 per cent over the present rates of the National Graduated Scheme.

INCREASED COSTS AND REDUCED EARNINGS

I advised shareholders twelve months ago that the policy of appeasement adopted by the Minister of Power in accepting the demands of the National Coal Board for increases in coking coal prices was not only of a discriminatory nature but was bound to have serious reflections on the earning capacity and the future competitive ability of the Industry in export markets.

Further, in his Budget last April, the Chancellor of the Exchequer introduced a revenue

tax of 2d. per gallon on heavy oils and the majority of coal tar fuels utilised in steel production. These two misguided and ill-judged decisions have added a burden approaching £20 million on the costs of iron and steel production. The additional consequential increases for electricity charges and other consumable materials have added an amount of £7 million. Twelve months ago the Industry negotiated wage increases and alterations in working hours which added a further £11.5 million on to production costs. Together with increases in insurance and pension contributions and other items it is estimated the overall increases which the Industry has been required to shoulder approximate £40 million a year. As far as your Company is concerned these additions represent an increase in cost in excess of 35s. per ton on the finished production of steel plates, sectional material and rails, against which an increase in prices of one per cent for deliveries into the home market only was secured in the latter part of June. In effect these increases have caused a reduction in earnings during the financial year of approximately £1 million and are largely responsible for the decrease in the level of gross profits compared with the previous financial year.

THE IRON AND STEEL BOARD

The Industry gave its support to the creation of an Iron and Steel Board during the introduction of the 1953 Iron and Steel Act. Up to the early months of 1959 it is reasonable to say the Board and the Industry worked in harmony to improve the efficiency of the Industry, to encourage development, and to ensure reasonable margins were secured between production costs and selling prices for purposes of finance and avoidance of over-heavy borrowings for development purposes. It is entirely due to the attitude of the Iron and Steel Board, as at present constituted, on their insistence to apply an unrealistic rate of 90 per cent of working capacity and interest on money at 9 per cent in price fixation that this relationship has greatly deteriorated. The refusal of two Executive Members of the Board—the Chairman since July 1, 1961, only operating half-time—to adjust their attitude to the changed conditions which have been encountered in the last 15 months is rendering a serious dis-service to the future prosperity of the Industry and is tantamount to misleading shareholders who have invested money in the Industry.

There can be no criticism that the Industry since its return to Private Enterprise in 1953 has not made every effort both to expand production and at the same time to make itself highly efficient. Therefore those in positions of responsibility, who by their industry and foresight have secured this condition, are surely entitled to final decisions as to whether the levels of prices are adequate to ensure the future prosperity of the Industry.

TRADE DECLINE

The level of ingot production for the year 1961 was forecast twelve months ago at a figure of 24.5 million tons with an estimated steel-making capacity of 27 million tons. During the last six months there has been a steady decline for steel products, particularly in the range of heavy steel products manufactured by your Company, which has necessitated the original forecast to be reduced to a level of ingot production of some 22 million tons for the year. It is no easy matter to determine when the demand for steel may return to the levels of 1960 and the earlier months of 1961, but it is the considered view of the Industry that ingot production for 1962 is unlikely to exceed 21.5 million tons, though overall capacity will by the latter part of the year approximate 29 million ingot tons. This reduction in demand which is only equivalent to 75 per cent of capacity working may continue for a period which it is difficult to forecast and is further evidence of the unrealistic appraisal of the Iron and Steel Board of their approach to their insistence that 90 per cent of potential capacity should be taken as the yardstick in assessing the prices of steel products.

STEEL PIPE

During the last twelve months there has been no change in the number of enquiries circulating for steel pipes for the conveyance of oil and gas. Your Company has managed to hold its own in Libya and the Persian Gulf against intense competition from Continental and Japanese makers. The Canadian market has dried up for the time being and from recent experiences it is evident it is the Canadian policy to award what contracts are circulating to Canadian producers even though prices delivered to site for a similar quality of steel pipe are some 12½ to 15 per cent above the prices quoted by your Company.

THE INDUSTRY AND THE COMMON MARKET

The Industry has advised the Government that if and when the United Kingdom indicates its decision to join the European Common Market the Industry would favour entry into the European Coal and Steel Community under the terms and conditions of the Treaty of Paris in preference to any other arrangements so far as ECSC products are concerned. At this stage I do not think I can say more than to advise you the Industry is making a close study of the issues involved. Membership of the ECSC would appear to include the cessation of the present arbitrary powers exercised by the Iron and Steel Board with regard to determination of steel prices in the home market.

FINANCE: PLANS FOR THE FUTURE

I advised you twelve months ago that the South Works at Greatham had been virtually completed twelve months in advance of the date indicated in my Remarks in January, 1958. This, I consider, is a great achievement both on the part of all contractors and of your development and engineering staff. The earlier completion dates have necessitated payments of retention moneys on plant some twelve months in advance amounting to some £2,330,000. Under normal working conditions and with the increase in values as compared with four years ago, it has been found necessary to increase the sums required to finance stocks and work in progress. During the course of construction of the South Works and the wide-flange beam mill at Cargo Fleet, improvements have been incorporated to ensure greater efficiency in production.

The additional finance amounting to £6 million is required to meet the earlier payments of retention moneys, for working capital and improvements in plant efficiency, divided more or less evenly over the three items concerned, and the unexpected recession the Industry is now experiencing.

Since the close of the financial year, negotiations have been completed with Barclays Bank Limited and the Finance Corporation for Industry for this additional finance to be made available to the Company on a short-term basis.

In order to repay these borrowings and to provide further permanent or long-term finance required by the Company, your Directors intend, during the next 18 months, to raise new capital to the extent of approximately £10 million.

DIVIDEND DECISION

Your Directors have given careful consideration to the dividend policy for the financial year under review. To maintain the existing final rate of 8 per cent would necessitate drawing on the balance of the Profit and Loss Account to the extent of £57,600. Under existing conditions, which include the attitude of the Iron and Steel Board with regard to prices, the high level of Bank Rate and the continuing low level of demand for steel products, your Directors consider the continuation of the annual rate of 12 per cent, first established in the 1958 financial year, cannot for the financial year under review be justified. It is with great reluctance your Directors recommend that the final payment should be at the rate of 6 per cent, making with the interim dividend of 4 per cent, a total for the financial year of 10 per cent. The South Plant is now completed and is in a position to take full advantage of a high level of output at an economic cost when the demand for steel increases to the levels which the Iron and Steel Board and the Industry have forecast in order to meet home consumption and export over the years ahead.

THE BOARD

During the year Mr J. E. Shepherd expressed his wish to retire from his capacity as Assistant Managing Director of the Company. Mr Shepherd joined the Company in 1923 and during the 38 years of his association with the Company he has given most valuable service. Though I have lost a colleague whose advice I always readily sought Mr Shepherd had the foresight to instruct a younger generation to take over when the time for retirement arrived. I am pleased to say that Mr Shepherd has agreed to be available for consultation in a financial capacity of the Company's affairs.

It has always been the policy of your Company to promote to the position of Executive Directors the members of the Company's staff who have distinguished themselves in the execution of their responsibilities. I informed you twelve months ago that the planning and design of the South Works had been executed by our own development and engineering staff, and therefore I feel you will join me in expressing your congratulations to Mr S. Scott and Mr S. H. Walker on being elected Directors of the Company.

By an understanding agreed with the Finance Corporation for Industry in 1957, FCI requested the right to appoint a nominee as a Director of the Company. Accordingly Sir Duncan Anderson was elected to the Board last August.

In concluding my Remarks I would like to place on record my tribute and that of your Directors to the loyal services of our staff and workpeople during a year in which all their efforts, for reasons outside our control, have tended to be frustrated. I am confident we can look forward to their co-operation which has been readily given over a long number of years and, together with all managers, are hoping the days of normal working will not be long delayed.

MID KENT WATER COMPANY

ANOTHER YEAR OF CONTINULD PROGRESS

MR A. W. WHITE'S REVIEW

The Annual General Meeting of The Mid Kent Water Company was held on December 28th at the offices of the company, High Street, Snodland, Kent, **Mr A. W. White, FCA,** Chairman of the Company, presiding.

The Chairman said:

In presenting to you the Directors' Report and Statement of Accounts for the year ended September 30, 1961, it gives me pleasure to record another year of continued progress in the Company's Undertaking.

The revenue from water rates and charges amounted to £439,385. The balance of the Revenue Account carried to Profit and Loss (Net Revenue Account was £144,888, and after providing for charges, gross interest on Debentures and Debenture Stock, Dividends at the statutory rates on the Preference and Ordinary Capital, and the appropriation of £38,000 to Renewals and Contingency Account, a balance of £79,793 is carried forward to the next Account.

The accounts show an increase of £42,840 compared with the previous year's in the revenue obtained from water charges etc. Some of the reasons for this increase are the increased scale of charges levied from April 1, 1960, which was effective for the whole year as against only six months of the previous year, the increased quantity of water supplied by meter because of the comparatively dry summer, and the record number of new connections to the Company's mains.

NEW MAINS AND WORKS

During the year approximately twenty miles of new mains have been laid and 2,209 new supplies afforded. The total number of supplies for all purposes at the end of the year was 74,992. The estimated population supplied was 246,876, and over 99 per cent of the dwellings within the Company's statutory limits of supply, covering 776 square miles and comprising 1,309 miles of mains, have piped supplies of water.

New works completed during the year included the Linton reservoir, a new depot and office at Wye, boreholes at Denton and West Kingsdown and trunk and distribution mains as required.

New reservoirs at Aylesford and Trosley are in hand, and new works proposed include a reservoir at Biddenden, a new pumping station at Harrietsham and a new depot and office at Charing.

Capital Expenditure has been and will continue to be curtailed as far as possible because of prevailing conditions, but some new works are essential to enable the Company to fulfil its statutory obligations and provide for the continuing substantial increases in the demands for water for domestic and other purposes.

I am pleased to report that the Company's resources were adequate to meet the exceptionally heavy demand which resulted from the dry summer and the high rate of development throughout the area supplied.

DOMESTIC FINANCE

The consolidation of the 10 per cent Original Ordinary and the 7 per cent Ordinary Stock into 5 per cent Consolidated Ordinary Stock authorised by the Mid Kent Water (Financial Provisions) Order 1960 was effected on April 1, 1961, and from that date the authorised capital and borrowing powers of the Company were increased as shown in the Statements of Capital and Loan Capital.

It is anticipated that it will be necessary to raise additional capital during the coming year.

In furtherance of the Directors' policy of combining maximum efficiency with economy, the programme for the extension, modification and improvement of the works and distribution system has been continued, but some desirable but not imperative works have been deferred. All the works, reservoirs, mains and properties have been properly maintained.

The staff have efficiently met the increasing demands made upon them, and the Directors join me in expressing thanks for their loyal and willing service.

The report and accounts were adopted.

J. GLIKSTEN & SON LTD.

Timber Producers and Importers

Extracts from the Report for the year ended 30th June, 1961

	1961	1960
	£	£
Capital and Reserves	5,064,995	4,491,909
Group Profit before Taxation	1,023,648	1,246,059
Taxation	482,487	574,688
Ordinary Dividend (32½%)	209,016	179,156
Net Current Assets	3,634,913	3,361,577

Building and Plant Extensions continue particularly in connection with the door factory in Hull and the Dwinasi Sawmill in Ghana.

Group Sales were similar to last year but there is a falling off in profitability. However, the benefits arising from improvements in production facilities and other developments give rise to confidence in the long-term prospects.

LONDON CITY & MIDLAND PROPERTIES LIMITED

Further Acquisitions and Increasing Income

Extracts from Sir A. S. Comyns Carr's circulated Statement

	1961	1960	1959 (9 months)
Book Value of Properties ...	£4,850,377	£4,301,828	£3,528,643
Net Revenue	£393,745	£343,899	£204,812
Profit before Tax	£180,759	£162,977	£90,288
Ordinary Dividend...	27½%	25% (equiv.)	15% (equiv.)

The Board has recommended a free bonus issue of 1 for 10 which has been approved. It is intended that, as a result of the increase in income already assured and other income which should arise for the first time, the dividend for the current year should be at the rate of at least 27½% on the capital as increased by this issue.

When a Revaluation of properties takes place there will be a substantial surplus over Book Value available for Capital Reserve.

ANGLO-ECUADORIAN OILFIELDS, LIMITED

The 43rd Annual General Meeting of Anglo-Ecuadorian Oilfields, Limited, was held on December 29, 1961. The following are extracts from the Chairman's circulated Statement.

The year to March 31st last saw no progress towards the achievement of the Company's contractual right to refined product prices sufficient to give it a reasonable return on its investment, together with exchange for crude oil imports at the prevailing official rate of exchange.

The consolidated trading profit for the year was £285,735 compared with £273,353 for the preceding year. Although there was a reduction in the provision for Ecuadorian pensions there were substantial increases in development expenditure and the provisions for the depreciation of fixed assets.

I am sorry to say that as a result of the increased costs of exchange for crude oil imports, materials and services, in terms of Ecuadorian currency, combined with higher labour and operating costs in Ecuador, the Company is at the present time trading at a loss.

The Company has made constant and intensive representations to the authorities concerning the vital necessity for it to be furnished with its foreign currency requirements at the official rate of exchange.

I sincerely hope that these representations will result in an early betterment of your Company's position, which is vital not only to the Company but to the Ecuadorian economy as a whole. Stockholders will be advised of any progress made.

Meanwhile under these circumstances your Board have reluctantly decided that a dividend could not be declared.

DORMAN LONG & CO. LIMITED

REVIEW BY MR E. T. JUDGE

FLUCTUATIONS IN STEEL DEMAND AND RISING COSTS: STRUCTURAL STEELWORK MORE COMPETITIVE

The 72nd Annual General Meeting of Dorman Long & Co. Limited will be held in London on Wednesday, January 31, 1962. The following are extracts from a statement by the Chairman, **Mr E. T. Judge,** circulated with the Report and Accounts.

After transferring £1,000,000 to Fixed Assets Replacement Reserve of Dorman Long (Steel) Limited (last year £1,000,000) and charging depreciation based on historical cost, the group profits before taxation amount to £7,333,000. Deducting from this the profits of subsidiary companies applicable to outside shareholders (£50,000 before taxation), there is left £7,283,000 which arose broadly as follows:

	1961		1960	
	£	%	£	%
Bridge building Engineering & Chemicals	2,294,000	32	1,982,000	24
Iron & Steel	4,989,000	68	6,255,000	76
	7,283,000	100	8,237,000	100

The Bridge building and Engineering results depend on contracts completed during each year and for this reason may be expected to fluctuate from year to year. Although the engineering works are fully employed, prices remain keen and lower margins can be expected on contracts in progress.

Whilst new plants at the iron and steel works commissioned following the completion of the third stage of the Company's developments contributed considerably, cost increases had a serious impact on the iron and steel results during the year.

DORMAN LONG (STEEL) LIMITED

The Company's output of steel for the year to September 30, 1961, was practically the same as last year, being 2,234,347 ingot-tons compared with 2,274,472 tons and 1,892,219 tons of rolled steel—a record—against 1,881,688 tons. The above comparison is misleading unless the variation in level of operations during the year is taken into account. The percentage variation in production for the first quarter of 1960/61 compared with 1959/60 was +15.5, for the second quarter +4.8, for the third quarter −4.2 and for the fourth quarter which includes the summer holiday period −15.1.

The near capacity working achieved in the early part of the financial year temporarily softened the impact of the coal price and wage increases in the autumn of 1960 but most plants were working short time during the latter half of the year, with an inevitable upward swing in the cost per ton of product, aggravated by these cost increases.

DEVELOPMENT AND STEEL DEMAND

The Iron and Steel Board in restricting the increase in prices in June last year must have been influenced by the high level of trade in heavy steel earlier in the year. At the same time they suggested that by speedier technological advance the industry could reduce costs.

The industry has consistently shown a high degree of responsibility in striving for improvement in efficiency and productivity. In the last fifteen years it has absorbed a large part of the increased cost it has had to carry in respect of dearer raw materials and higher wages. It has taken pride in its ability to do so.

Technological advance depends not only upon human effort but in the case of the iron and steel industry on substantial capital investment.

When new developments are proceeding and there is a recession in trade there is inevitably concern as to whether serious over-production of steel will arise. The present weakened demand is largely the result of Government credit policy and is in marked contrast to the general trend over many years when a ready market has existed for the steadily increasing quantity of steel manufactured. If any industry needs to take a long and steady view of the future it is steel. The high capital cost of development and the protracted period required for new plant to be installed and be fully operative make it essential to take the long view. Decisions must not be unduly influenced by annual variations in demand, aggravated as they are by the violent fluctuations in customers' stocks with which the industry is bedevilled.

The forward view for the industry as a whole and for the company is surely favourable if efficiency in production is relentlessly pursued. If the country is to continue to advance as an industrial nation and sustain a high standard of living, steel consumption must resume its expansionary trend, albeit at a less spectacular rate than in recent years. However, it appears unlikely that the current financial year, certainly the first half, will show any improvement in steel demand as compared with the latter part of the past financial year. There might be a deterioration unless stability is quickly re-established and the national economy confidently moves forward.

British industry in many fields must re-equip to meet the highly competitive conditions immediately ahead. Steel will be required not only for plant but on a quite substantial scale for industrial buildings.

STRUCTURAL STEELWORK MORE COMPETITIVE

Recent improvements both in the materials available and in the techniques employed have given the structural engineer the opportunity to use steel economically in many buildings where a short while ago reinforced concrete prevailed. The competitive position of steel rests upon the consulting engineers and architects ensuring at the outset that full use is made of these advantages.

The demand for universal beams and columns was maintained at a high level throughout the financial year but the demand for other heavy structural steel weakened appreciably in the last quarter. A restricted range of universal beams and columns is now being rolled by other makers. With our much wider range and the revision of the British standard specification for structural steel sections whereby universal beams and columns will be accepted as the standard, superseding the less efficient standard joist, we feel confident in our ability to maintain our preponderant share of what should be an expanding trade.

An important development is the introduction of high yield point steel which will enable structural steel engineers to reduce building costs. The economies in weight which are possible, and the resultant lower transport costs, will help particularly in international competition for exports of fabricated steelwork. Efficient but cheaper methods of fire protection of steelwork have been developed.

The availability of universal beams and the new high yield point steel, along with advances in fabrication methods and site erection techniques, together with a generally more aggressive attitude resulting from recent less favourable trading conditions, all help to justify a more confident view of the future for structural steel construction.

This is of real significance for Dorman Long with its large stake in the manufacture of structural steel and in structural engineering generally.

PRODUCT DIVERSIFICATION

The company has also been diversifying its products and increasing its interest in lighter steel manufactures. A completely new factory for the manufacture of plastic coated sheets has been built at Newton Aycliffe, Co. Durham, where commercial production is now beginning. This product has attracted much attention for cladding industrial buildings and has interesting possibilities in other directions. We are sure this venture has a bright future.

Production of a special reinforcing bar in high yield steel is being undertaken and our Wire Department has been equipped for production of the high tensile wire required for prestressed concrete. These two developments are designed to keep abreast of the steel requirements of customers in the reinforced concrete field.

Our Stage IV development programme now in hand has been planned taking a view that in the future the company may have to operate at less than full output more frequently than in the past. When the programme was announced it was emphasised that it was not primarily for expansion, though some increase of capacity would result. The chief objective was improvement of the company's competitive position through increased efficiency and a rationalisation and expansion of facilities for light rolled product manufacture.

The statement concluded with a review of the activities of Dorman Long (Bridge & Engineering) Limited, Dorman Long (Chemicals) Limited, Redpath Brown & Co., Limited, Tees Side Bridge & Engineering Works Limited, The British Structural Steel Company Limited, Dorman Long & Amalgamated Engineering Limited and Dorman Long (Ghana) Limited.

the united steel companies limited

Extracts from the Annual Statement of the Chairman, Sir Walter Benton Jones, Bt., to the Shareholders

The statement is addressed specifically to the nearly 50,000 shareholders of the company. It is an endeavour to examine in every man's language the factors which may determine the prospects of steelmaking in the next few years. It is a vital subject for those in every country who have provided steelworks and for those who spend their lives in them.

The statement implies that in general the world conditions and developments described affect all steel companies in this country and the statement, so far as it is a report, is made with this wide background.

PRODUCTION. At the annual meeting on the 26th January, 1961, trade prospects were reviewed. It was stated that production over the first three months had been maintained and for the rest of the year, on the assumption that general industrial activity did not decline, it was expected that the Company's output would be maintained at a satisfactory level. For the year as a whole production has not been much lower than was expected, but in the last quarter of the year it fell considerably.

RESULTS BEFORE TAX. It was also stated that as a result of cost increases which had been imposed and for which there had been no compensating increase in prices, the results before tax for the current financial year would be 10% to 15% lower than for last year. In a statement published by the directors at the time of the declaration of the interim dividend, a greater reduction was forecast.

The actual reduction has been 24% compared with last year.

ACCOUNTS. The accounts follow the customary form which includes full explanatory notes. In addition, as in recent years, there have been attached an Analysis of Income and Expenditure, a Statement of the Employment of Capital and two graphs, one showing annual rates of output and the other net earnings for previous years.

The Directors' Report reviews in detail the Company's affairs and I shall not comment on them further, except to say that apart from the increase in cost arising from falling production, the increase in imposed costs is estimated to have been £3½ million. In the same period the latest review of maximum prices by the Iron and Steel Board did no more than offset reductions made a year earlier.

PROSPECTS. Last year the steel industry had reached a high peak in production. Since then demand and production have fallen. Our Company has had the same experience. Our prospects also will be influenced by the factors which will affect the steel industry as a whole, though in varying degrees.

STOCKS. It may surprise you to learn of the large volume of steel which is held in stock in this country by consumers and merchants. It is at present about six million tons, which is equivalent to thirteen weeks' make. When demand falls consumers reduce their stocks and this makes it worse for producers. As a result the makers of steel have to reduce production to a greater extent than the fall in demand. When demand recovers consumers replenish their stocks and this assists producers to increase their make faster than the rise in demand.

In the years following the credit squeeze which began with the increase in the Bank Rate to 7% in September 1957, stocks were reduced and output fell. Here are the output figures:

Ingot tons		
	1957	21,699,000
	1958	19,566,000
	1959	20,186,000

In 1960 it was 24,305,000, the highest output which it has ever reached. Stocks had recovered to 6,375,000 ingot tons and undoubtedly this replenishment made a contribution to this high output.

Steel demand became weaker at the end of 1960 and during 1961. It has diminished every quarter and the final estimate of the output for 1961 is 22,000,000 tons. Since 1960 stocks have been reduced and this reduction continues. The reduced demand during 1961 has been accentuated by the present credit squeeze.

It is not possible to judge by recent past experience of variation of stocks and its effect on production how soon recovery in demand for steel may begin.

EXPORTS. But you may ask, if the demand for steel at home has gone down and perhaps because of the credit squeeze, is it not possible to sell more steel abroad? Indeed, the motive behind the credit squeeze is to induce us to try to sell more abroad, in other words, to try to increase exports.

In the year immediately preceding the Second World War, that is in 1938, the quantity of steel exported directly in terms of ingot tons was about 2 million tons. By 1945, in consequence of war conditions when we had to turn all our steel into requirements of war, it went down to 700,000 tons. By 1946, that is after the War had ended, it jumped up to 2,300,000 tons.

With considerable fluctuations it rose to nearly 4 million tons in 1957. It went down again in succeeding years but in 1960 it reached 4 million tons again. In 1961 it is estimated that it will be well over 4 million tons and this will be a record.

However, steelmaking capacity throughout the world is increasing rapidly, plans for further increases are large and competition is very keen.

With regard to our own Company, we have traditionally exported about 10% of our production and every effort is being made to increase this proportion to offset the fall in home demand. Last year we exported products to the value of just over £12 million out of a turnover of approximately £140 million. Our export trade now covers a broad range of products with the main weight in heavy steel and railway materials, and in the higher grades of steel which although much less in weight are accompanied by a much higher value.

WORLD INCREASING CAPACITY. You may have read of the building of new steelworks in various countries throughout the world and you may wonder if foreign countries may not become more self-supporting. This is their aim and competition is becoming keener. But it is surprising by how much the use of steel has increased in recent years, and it may be that there will be room for growing capacity.

THE COMMON MARKET. The Common Market is a subject which is occupying our daily attention and the attention of many other countries.

The great weight of opinion in the British Steel Industry welcomes the Government's decision to apply for full membership of the European Communities. In reaching this conclusion it is believed that in the main membership will bring advantages to our major customers, the British steel-using industries, and obviously anything that benefits them helps us.

The consolidated accounts for the year ended 30th September, 1961, showed:

	1961 £	1960 £
Excess of income over expenditure, including extraneous items	17,275,000	22,582,000
Consolidated surplus after taxation	11,061,000	12,849,000
Balance available for appropriation	5,750,000	7,780,000
Increase in ordinary share capital	20,000,000	—
Dividends paid or recommended less tax	4,048,000	3,588,000
Rates of ordinary dividend (1960) on 30,000,000 shares	—	18%
(1961) on 50,000,000 shares	12·3%	—

Copies of the full Statement are available from the Secretary, The United Steel Companies Limited, The Mount, Broomhill, Sheffield 10

THE STRAND HOTEL LIMITED

The fifty-fourth annual general meeting of The Strand Hotel Limited was held on December 29th in London, **Sir Samuel Salmon,** the Chairman, presiding.

The following are extracts from his statement which had been circulated with the report and accounts for the year ended September 30, 1961:

The profit for the year after taxation and the other items shown in the Accounts is £206,452, compared with £209,067 in 1960, which was a record year. You will notice also that the trading balance is much the same as last year's, and I am pleased to be able to say that the volume of business is in fact greater. The Board recommends a dividend of 21 per cent for the year on the Participating Preferred Ordinary Shares.

Operating costs during the year have been higher, mainly because of an exceptional increase in wages, a particularly significant factor in an industry which has a large element of personal service. Increased business and savings from greater efficiency have gone most of the way towards covering these costs, so that our charges have been raised by only a modest amount; they are still low in relation to the high standards of comfort and service we give.

The Ariel Hotel has been operating for less than a year but we are pleased with the results so far. The building of our new hotel in Birmingham, the "Albany," is progressing satisfactorily; it reached the stage of "topping out" in October, and should open towards the end of 1962.

The report and accounts were adopted.

DANNIMAC (MANUFACTURING) LIMITED

The 49th annual general meeting of Dannimac (Manufacturing) Limited was held on December 29th in London, **The Rt Hon Lord Keyes** (the chairman) presiding.

The following is an extract from his circulated statement:

The year's results are satisfactory and reflect the substantial increase in turnover achieved during the year. The Group's trading profit shows a gratifying increase on 1960, being £532,716 against £381,604.

At the Annual General Meeting in 1959 I made it clear that the Board had no intention of increasing the dividend in the near future owing to plans for expansion. Pursuant to this policy the Directors recommend that the Dividend for the year be maintained at 7½ per cent less tax.

The Company continues to be the largest manufacturer of ladies' rainwear in Europe and serious consideration has been given to the challenge of the Common Market. On investigation, your Board feels that whilst considerable expenditure will be involved the opportunity exists for future expansion.

Group turnover for the eight months of the current year shows an increase compared to 1960. Forward orders taken for the 1962 Spring Season are again on a very satisfactory level. Your Directors are confident that in the absence of unforeseen circumstances the results of the present year will be satisfactory.

The report was adopted.

JOHN GALLOWAY AND COMPANY LIMITED

INCREASED VOLUME OF SALES AND HIGHER TRADING PROFIT

The Twenty-seventh Annual Ordinary General Meeting of John Galloway and Company Limited will be held on January 29th at the Registered Office, Balerno Bank Paper Mills, Balerno, Midlothian, when **Mr John Galloway,** Chairman and Managing Director, will preside.

Mr Galloway's Statement to the Shareholders, has been circulated to them with the Directors' Report and Accounts and reads as follows:

TRADING RESULTS

The end of 1960 and the first few months of 1961 was a period during which the Papermaking Industry in general experienced a high level of activity though thereafter trading conditions were not so favourable. In so far as your Company is concerned, however, during the year under review, sales, both in quantity and value, showed a considerable increase over those of the preceding year. This was particularly gratifying since the alterations to our No. 1 Paper Making Machine had necessitated a complete closure of this unit for the months of August and September, 1961. During the year we had sufficient orders to work as much overtime as was possible and we were thus able to minimise the effect of the loss of production from No. 1 Machine. At the very beginning of the Financial Year the selling prices of some of our papers were increased but almost at the same time we were faced with another wage increase.

ACCOUNTS

The profit, after taxation, amounts to £102,390 being an increase of £20,869 over that of the previous year. This is accounted for partially by an increase in trading profit of £12,807 and partially by a reduction of £8,062 in the charge for taxation arising from increased allowances on Capital Expenditure which for the year reached a figure of over £200,000. The debit for depreciation has been increased by nearly £18,000.

The Board recommends that the profit after taxation should be dealt with as follows:

Transfer to the reserve for depreciation on buildings £5,000 and to write off expenses of the issue of bonus shares in January, 1961, of £1,919.

Keeping in mind the wishes of the Chancellor of the Exchequer, the Board have decided that the amount of the Ordinary Dividend should be the same as that paid last year. The Final Dividend will therefore be 7 per cent which, with the Interim Dividend of 3 per cent already paid, makes 10 per cent for the year. This is equivalent to the 20 per cent paid last year when the Ordinary Share Capital of the Company was £225,000. The bonus issue of one new Ordinary Share for every Share held to the Ordinary Shareholders has, of course, increased the Ordinary Share Capital to £450,000.

After charging Preference and Ordinary Dividends this will leave unappropriated profits amounting to £63,529. In order to simplify our accounts, a more modern treatment of reserves in our Balance Sheet has been adopted this year and we now show the Profit and Loss Account Balance and General Reserve under the one heading—Revenue Reserve. Therefore at the close of this Account the Revenue Reserve stands at £172,045.

CAPITAL EXPENDITURE

Shareholders may remember that in my last Review I stated that in recent years a comprehensive scheme of alterations and additions had made our No. 2 Paper Making Machine into an efficient modern and fast unit. I also indicated that No. 1 Machine would soon be brought to the same high standard. The close of the Financial Year coincided with the end of the first phase of this work which took two months to complete and which I am confident will prove the considerable expenditure to have been well worth while.

Of the total amount spent on Machinery and Plant, more than half has been incurred on No. 1 Machine. Additions to our buildings accounted for £22,639, being mainly the cost of an addition to our Finishing House where paper is sorted and despatched.

EXPORTS

The negotiations for the entry of the United Kingdom into the European Common Market which are at present being undertaken by the Government, have been welcomed by the Paper Industry generally. For many years this Company has exported Esparto Papers to the Continent in spite of high tariffs imposed by these countries. Any reduction of these tariffs can only help to improve the situation and make our papers more competitive in Europe.

For a number of years Australia and New Zealand have together been our best customers within the Commonwealth. Recently however the Australian Government has imposed high tariffs on imported papers and the New Zealand Government has restricted imports by the introduction of a licensing system. It is to be hoped that these countries will soon solve their internal problems and see their way to easing restrictions.

Regular visits overseas by members of the Board and of the Sales staff are part of the Company's policy; these are continuing and by this means many valuable contacts overseas are being maintained.

DIRECTORATE

I very much regret that I have to report the death in February, 1961, of Mr F. D. H. Macdonald who was Sales Director of the Company. He had served the Company well for more than 30 years and was very popular with customers and colleagues alike.

It is just a year ago that I reported to you on his tour of Australia and New Zealand where he made many contacts from which we hope to benefit in the future.

PERSONNEL

The past year has not been an easy one for our staff and work people and I should like to take this opportunity of expressing my thanks to them for the way in which they have carried out their duties. Although production was cut back in August and September during the machine

alterations, the management were able, by means of interdepartmental transfers, to avoid paying off any employees.

As papermaking machines run faster and are improved by instrumentation and other technical developments, so does the job of operating them become more and more complicated. In order to provide the necessary skilled operatives in the future, arrangements are at present being made for the setting up of training schemes for our work people.

FUTURE OUTLOOK

The effect of the Chancellor's restrictive measures has been apparent during the latter part of this year and until some easing of the restrictions is permitted it would be unrealistic to hope that trade will improve. The policy of improving and adding to our Buildings, Machinery and Plant over the years has made the Mill an efficient modern unit which, provided more orders are forthcoming, should enable us to maintain our position. At present full time is being worked in the mill but it has not been necessary to work overtime on production.

I have always believed that consistent high quality counts more than anything else in the winning of orders. I know that everyone at Balerno will do their utmost to maintain our reputation as High Grade Paper Makers.

J. H. FENNER & CO. (HOLDINGS) LTD.

The annual general meeting was held in Leeds on Wednesday, 3 January, 1962.

These extracts are from the joint statement to the shareholders by the Chairman, Mr. C. Bradshaw, F.C.A., and the Deputy Chairman, Mr. S. B. Hainsworth, F.T.I.

The consolidated profit of the Group, after providing for depreciation and taxation, amounts to £436,656, compared with £373,223, for the year ended August 31, 1960. We manufacture mechanical power transmission equipment.

Last year we were happy to report a significant advance in the level of the profitability of the Group and we feel it is a matter for considerable satisfaction that this higher level has been maintained in what has been a difficult trading year.

The accounts contain a provision for a centenary bonus as promised to certain employees.

During the period ended August 31, 1961, we have been heavily involved in the rehousing and expansion of production facilities at three of our manufacturing divisions. Apart from the heavy cost of re-equipment, this programme has involved some dislocation of production schedules with consequent reductions in the turnover and profitability of those divisions. The work of reorganisation is now almost completed and we have confidence that, in these sectors of our business, the results for the coming year will reflect in some measure the benefit of the work which has been undertaken.

In all other divisions of the Group's activities, we are able to record increases in the volume and value of sales in both home and export markets. The higher figures have been achieved in the face of increasing competition from other manufacturers, both in the U.K. and abroad, and against a rising tide of tariffs and quotas in countries which have traditionally been importers of our products.

In common with other industrialists we have been faced with continuing reductions of profit margins resulting from the steady upward spiral of some material and all labour costs. In the face of these pressures, the profitability of our Group enterprises has been maintained only by holding our position in the forefront of research and the development of production techniques, our insistence on manufacturing the best products of their kind, and our providing for maximum service to our customers.

Fenner

into a second century of progress

Our Report last year indicated that we were then on the threshold of substantial expansion of the Group's productive and research establishments, and major progress has been made in this regard during the year ended August 31, 1961, resulting in capital expenditure of over £500,000, all of which has been financed out of profits of past years which were retained in the Company for this very purpose.

The Consolidated Balance Sheet of the Company demonstrates the continuing soundness of the Company's liquid position.

During the year it was only with difficulty that we kept pace with the demand for the products of our iron-goods division. More and more users are making the Taper-Lock bush their standard by which fitting times are judged and the range of products containing this easy fixing device continues to widen. Torque-Arm speed reducers, which have the advantage of being shaft-mounted, are also being applied in new directions.

In Western Europe our plans are developing, and they are based on the knowledge and experience we have gained in trading there over many years.

As already stated, we are happy with the strenuous year's work which is behind us. We are now in a position to take advantage of any increases in demand which should come our way on the basis of the products we have available and those that are coming along. The things we set out to do a year ago have been done.

We have completed the reorganisation of our overseas affairs and are now in a position to take further steps forward in that area, too, as opportunities offer.

We believe that it is our business now to prepare this Company so that it is ready for whatever comes our way when we move, as we think we may, into the European Economic Community. We are under no illusions about what is likely to happen to us. We know that the price we shall have to pay for the greater market to which we shall have access will be more competition. We will have to pit ourselves against the brains and the energy of the Western Europeans and that, industrially, is no easy task.

BRITISH FEEDING-MEALS COMPANY, LIMITED

The thirty-fourth ordinary general meeting of British Feeding-Meals Company, Limited, was held on December 29th in London, **Mr A. H. Philpot, OBE,** Chairman and Joint Managing Director, presiding.

The following are extracts from his circulated statement:

In the year ending September 30, 1960, the parent company had a very difficult time indeed with the depressed state of the fish meal trade, due to excessive Peruvian exports. Happily, due to better co-operation between Peruvian producers, the situation has gradually improved during the year under review. In fact, at the time of writing this report, the fish meal market is quite firm. Our sales of Seemeel Concentrates to the merchant trade expanded considerably during the year and are currently running at record levels.

In order to have available increased authorised capital, it is proposed to raise the authorised total of 1s. ordinary shares by 1,460,000 to 6,960,000.

We are recommending the issue to each shareholder of one ordinary 1s. share credited as fully paid for every four 1s. Ordinary shares held, and in addition your directors are considering a Rights Issue in the New Year in order to increase the cash available in the Company.

The report was adopted and the increase in the authorised capital and the one for four scrip issue were approved.

ST. MARTIN PRESERVING COMPANY

The thirty-third annual general meeting of the St. Martin Preserving Company Limited was held on December 29th at Maidstone, **Mr R. N. Scott,** presiding.

The following is an extract from his circulated statement for the year to March 31, 1961:

After providing for depreciation and taxation there is a profit of £105,204 as against £98,596 for the corresponding period last year. Having in mind our plans for expansion it has been decided to conserve funds for the immediate future, and accordingly your Board recommends a dividend at the rate of 7½ per cent.

The Board has decided to make important changes in methods of marketing and distribution. These changes will necessitate considerable investment and expenditure in equipment and the means of marketing and distribution.

Our subsidiary Company, Foster Clark Limited, which had a loss for the period ending March 31, 1960, has during the year to March 31, 1961, made a profit. Our subsidiary company, Atholl Houses Limited, has continued to make its contribution to the Group's profits.

Your Board is of the opinion that consolidation and digestion of the acquisitions that currently comprise your Group, together with our new plans for marketing and distribution will more than offset the difficulties and decreasing margins available, and is confident that our wide range of products, successfully exploited, will enable your Group to secure an increasing profitable share of the grocery trade.

The report and accounts were adopted.

BARCLAYS BANK DCO

ANNUAL GENERAL MEETING

The Thirty-sixth Ordinary General Meeting of Barclays Bank DCO was held on January 2nd at 54, Lombard Street, London, EC.

Mr Julian Stanley Crossley, the chairman, presided.

The Secretary, Mr E. W. Bithell, read the notice convening the meeting and the auditors' report to the stockholders.

With the concurrence of the stockholders present, the report and accounts and statement by the chairman, which had been previously circulated, were taken as read.

CHAIRMAN'S ADDITIONAL REMARKS

The chairman said that he would like to mention one or two matters which had arisen since his statement was issued, the first being that Sir Frederick Crawford, GCMG, OBE, who until recently was Governor of Uganda and who had also served in Northern Rhodesia, Kenya, Tanganyika and the Seychelles had been elected a member of the Rhodesian board. The Bank was delighted to be able to maintain in this way a personal association which had been so much valued in the past. Mr P. M. Moulding had been appointed a Local Director in Nairobi and Mr H. V. Gilby Regional Manager in Uganda in succession to Mr W. Scott.

The chairman then said that he was very sorry to have to refer to one more major disaster affecting the Bank's territories since the hurricane and tidal wave in British Honduras had caused such shocking damage. This time it was the famine in Kenya caused by drought and the ravages of army worm followed by the worst floods the country had experienced in this century. Tanganyika and Somalia had also suffered famine conditions due to drought or floods. He felt sure stockholders would confirm the action of the board in making, on their behalf, a substantial contribution to the relief funds both for Kenya and British Honduras. Natural disasters apart, the year 1961 had not been a happy one for the Commonwealth. It had to be recorded, with deep regret, that South Africa ceased to be a member as from last May. Inevitably, considerable uneasiness had been caused in many Commonwealth countries by the proposal of Great Britain to join the Common Market, despite the safeguards for Commonwealth interests stipulated for in the negotiations. It was thus hardly a propitious time for the introduction of a highly controversial Bill to limit immigration into Britain from other parts of the Commonwealth and it was hardly surprising if some of its members showed feelings of anxiety lest Britain were turning her back on them.

The chairman then referred to the Bank's claim for compensation for loss of its Egyptian business, regarding which he had regularly been obliged to report a lack of progress. Since the end of the Bank's financial year, however, the claim had been argued before the Compensation Commission, who had now made a provisional award. Whilst nothing had, as yet, been received, a payment of something over 20 per cent of the award could be expected in the near future. The Bank had received a fair hearing throughout and accepted the basis on which distributions were being made but whatever the outcome, nothing, unfortunately, could restore the business in Egypt in which such great pride had been taken and which had its origins almost a century ago.

THE FUTURE

Turning to the future, the chairman said that stockholders would not blame him if he refrained from any attempt to forecast trends for the current year. He would not pretend that the outlook in all the principal countries in which the Bank did business was "set fair," since they would hardly believe him if he did. Throughout a great part of the world today it must seem that, even where storms were not actually raging, there was more troubled water than smooth. The Bank, nevertheless, offered a type of service which was necessary in any community aspiring to economic progress and had been able, in some places, to make quite a notable contribution to that progress. There seemed no valid reason why it should not still have a useful part to play. There could, however, be no doubt that until the economy of the United Kingdom itself could be placed on a sound basis the whole of the sterling area would be subject to sudden strains which must, to a greater or lesser degree, adversely affect the economies of most of its member countries.

Expressing a warm welcome for the renewed interest being shown by the authorities in the subject of decimalisation of the currency, the chairman said that he thought this was a constructive proposal of far-reaching importance. Although the bill for the initial cost would need courage to face, the need for decimalisation could, he believed, only become more pressing with the passage of time, while the cost was hardly likely to become less. Small coins in circulation weighed approximately 20,000 tons, or well over 1 lb. weight per head of the adult population. It was to be hoped that a consequential reform of the currency would remove this largely unnecessary burden weighing down and wearing out the trouser pockets of the average Englishman.

Finally the chairman said how pleased he was to see Mr Tuke at the meeting once again. It would be the last occasion on which he would be present as chairman of the parent Bank. He hoped no one would be in danger of breaking the fifth commandment—failing to honour father and mother—or of forgetting what the Bank owed to Barclays Bank Limited and its successive chairmen. On behalf of all he offered to Mr Tuke sincerely felt good wishes on his retirement and thanked him for the close personal interest which he had always taken in the affairs of the DCO.

FORMAL BUSINESS

The chairman then moved the adoption of the report of the directors and the statement of accounts and the payment of a final dividend of 5 per cent actual on £17,000,000 Ordinary stock, less income tax at the standard rate of 7s. 9d. in the £.

The motion was seconded by The Hon Sir Geoffrey Gibbs, KCMG, deputy chairman, and carried.

The retiring directors, Mr Julian Stanley Crossley, Captain Derek Fitzgerald, Marshal of the Royal Air Force The Rt Hon The Viscount Portal of Hungerford, KG, GCB, OM, DSO, MC, and Sir James Wilson Robertson, GCMG, GCVO, KBE, were re-elected.

In terms of special notice given, Col The Rt Hon Lord Robins KBE, DSO, and Mr A. C. Barnes, DSO, OBE, were re-elected directors of the Company.

On the motion of The Rt Hon Lord Cornwallis, KBE, MC, seconded by Mr P. H. Pearson, the auditors, Messrs Deloitte, Plender, Griffiths & Co., Messrs Price, Waterhouse & Co., Messrs Peat, Marwick, Mitchell & Co. and Messrs Cooper Bros. and Co., were re-appointed.

VOTES OF THANKS

A vote of thanks to the staff, proposed by Mr R. D. Smith, a director, and seconded by Sir Frank Newson-Smith, Bart, was carried unanimously and was responded to by Mr R. G. Dyson, a general manager.

A vote of thanks to the chairman was proposed by Mr A. W. Tuke and unanimously accorded after which the proceedings terminated.

HOLT PRODUCTS LIMITED

(Manufacturers of Car Chemicals)

WIDENING RANGE OF PRODUCTS

The annual general meeting of Holt Products Limited was held on January 4th at Winchester House, Old Broad Street, London, E.C.

The following are extracts from the circulated statement of the Chairman, **Mr Douglas R. Holt,** for the year ended September 30, 1961:

Once again your Company has achieved record results in the year under review

The profit before taxation was £330,455 (£266,792). A net profit of £159,531 added to the balance brought forward, leaves a total of £373,332 available for appropriation.

The Directors recommend a final dividend of 35 per cent less tax on the Ordinary Shares. This makes a total for the year of 50 per cent which is the same as last year and leaves the sum of £354,957 to be carried forward. In making this recommendation the Directors have in mind the Chancellor of the Exchequer's request for dividend restraint, but in normal circumstances consider that the profit achieved last year would have justified the payment of an increased dividend.

Your Directors propose a scrip issue of ordinary and "B" shares of 1 for 2.

CURRENT TRADING

During the year your Company has continued to expand both its Home and Export business. The research and development programme carried out by your Company has enabled them to introduce many new products during the year. Sales of established products have been maintained and in many cases increased. The extension to our Factory has been completed and is in full operation.

Our French and Dutch companies have continued to expand their activities and sales.

Your Directors are considering the future financial needs, manufacturing facilities and selling organisations, that may be required to expand and consolidate your Company's position within the Common Market.

For the first part of this current year, trading has been maintained and the Directors anticipate, subject to unforeseen circumstances, that the Company will continue to make satisfactory progress.

The report and accounts were adopted and at a subsequent extraordinary general meeting and separate meeting of the Ordinary shareholders the proposed capitalisation of reserves and scrip issue were approved.

THE MURRAYFIELD REAL ESTATE COMPANY LIMITED

REMARKABLE GROWTH

The sixty-third annual general meeting of The Murrayfield Real Estate Company Limited was held in London on December 28th. **Field-Marshal Sir C. J. E. Auckinleck, GCB, GCIE, CSI, DSO, OBE, LLD** (the Chairman), presided and in the course of his Speech said:

I would like to comment upon the accounts which have more than fulfilled the expectations of last year and have completely justified our policy of creating ultimate income-producing investments which provide a substantial capital equity. The growth shown is remarkable and very satisfactory, even though it has for another year been deemed prudent not to recommend a dividend.

The projects listed last year have all advanced satisfactorily and in addition other well chosen transactions have been undertaken, some of a very substantial nature. When reviewed in relation to the accounts, these fully confirm your Company as one of the leading Shop Investment Companies in the Country.

Your Company has now completed developments at Basildon, Bromley, Kingston, Sheffield, Northfields, Dudley, Glasgow, Lichfield, Liverpool and Woking.

Investment properties are now held in London and Suburbs, Birmingham and Suburbs, Glasgow and Suburbs, Oxford, Tunbridge Wells, Smethwick, Bilston and other leading towns in England and Scotland.

Town Centre redevelopment schemes and negotiations are proceeding at Dundee, Preston, Greenock, Huddersfield, Wallsend, Inverness and Cardiff.

Other such schemes are in an early stage of development in leading towns throughout England and Scotland.

Negotiations are in hand for a considerable number of transactions and your Board is confident as to the quality of these properties, which will in time prove to be very satisfactory investments.

MERGER WITH CITY CENTRE PROPERTIES

I reported last year on the important step we had taken in exchanging shares with City Centre Properties Limited, which created a close association between the two Companies and ensured satisfactory and adequate financial arrangements for completion of developments. This association has worked extremely well and enabled very substantial progress to be made.

Early in 1961 it became apparent that the Chancellor of the Exchequer would be seeking wide powers to restrict credit facilities and it was deemed wise by your Directors to consider most carefully what steps they should take, not only in relation to the National Economy, but also in regard to the tremendously important and far reaching developments they were undertaking throughout the United Kingdom. As I reported last year competition has never been greater, much of it being very speculative, often at unrealistic prices.

Your Directors were drawn to the conclusion that it would be in the future only the large and well organised property companies with well secured credit facilities that could adequately and efficiently undertake the task of redeveloping our badly planned and out of date towns and cities. The Murrayfield Real Estate Company's stake in the redevelopment of town centres is probably second to none and it was considered in the best interests of our Shareholders and the many local authorities with whom we have agreements, to secure that this growth and progress should not be hindered.

To this end negotiations were opened with the Board of City Centre Properties Limited to explore the possibilities of effecting a complete merger of interests. In May 1961, agreement was reached as to a merger on a share exchange basis.

I and my fellow Directors are well satisfied that this agreement is a wise one, and that our shareholders' interests have been fully considered in that, whilst current income may of necessity be restricted, they may happily expect a greatly improving future, enjoying not only the benefit of your own Company's present growth and potential, but the immense overall investment of the properties of the City Centre Group as well.

It remains for this agreement to be finally cleared by the Inland Revenue and I had hoped to be able to report at this meeting that this had been received, but although a long delay is not anticipated, I cannot yet do so. In due course, when the Inland Revenue decision is known, a circular will be sent to all shareholders giving full details of your Directors' recommendations.

This has been an outstanding year in the affairs of your Company.

The Report and Accounts were adopted.

RIM (MALACCA) RUBBER ESTATES

EXTREMELY SATISFACTORY RESULTS

The fifty-first annual general meeting of Rim (Malacca) Rubber Estates Limited was held on December 29th in London, **Mr H. A. Kinney, FCA** (the chairman), presiding.

The following is an extract from his circulated review:

The accounts of the company for the year ended June 30, 1961 show a profit of £75,954 which is extremely satisfactory when it is borne in mind that the crop was sold between October, 1960 and September, 1961. The relevant statistics are: Crop harvested 3,004,500 lbs. (2,698,800 lbs. in 1960), Nett realised price per lb. 21.25d. (27.68d. in 1960), Estate cost per lb. 12.97d. (13.42d. in 1960), actual expenditure on immature areas less grants and replanting reserves £14,123 (£12,571 in 1960), Dividends 27½ per cent (32½ per cent in 1960) and yield per tapped acre 638 lbs. (551 lbs. in 1960)

Having referred to the operations on the Rim and Mentri estates and to the progress of the subsidiary company, Anglo-Johore, the chairman concluded:

Subject to no unforeseen happenings I confidently predict an increase in crops and a reduction in cost of production for the current year. As to the sale price obtained one would have to be not only a soothsayer but a reliable one at that to predict this. At current prices we shall be able to show a reasonable profit though not as good as the year under review.

The report and accounts were adopted.

EDUCATION; BUSINESS AND PERSONAL

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ., B.Sc.Econ. (three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ. B.Sc. Economics exams. 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—*Write, Organising Secretary, Davies's, 158* Holland Park Avenue, W.11. PARK 4654.

B.Sc. (ECON.)

LONDON UNIVERSITY

U.C.C. founded in 1887, successfully prepares students for this Degree (obtainable without residence), which is a valuable *qualification* for those seeking executive appointments in commerce or industry, government or municipal posts.—*Prospectus, giving details of* Courses for other London Degrees, G.C.E., Law Exams., etc., from Registrar, University Correspondence College, 60 Burlington House, Cambridge.

THE CHARTERED INSTITUTE OF SECRETARIES

Employers requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dept. E), 14 New Bridge Street, London, E.C.4.

APPOINTMENTS

THE London School of Economics and Political Science invites applications from men graduates for appointment to an Administrative Assistantship. The successful candidate will be responsible to the Bursar for some part of the functions of his department, particularly those relating to building plant and operations, the supply of furniture and equipment, and building maintenance. The starting salary will be on the scale £800 x £50—£950 a year, plus £60 a year London Allowance, with FSSU benefits and family allowance.

Further particulars should be obtained from the Assistant Secretary, the London School of Economics, Houghton Street, Aldwych, London, W.C.2.

UNIVERSITY OF GHANA

DEPARTMENT OF ECONOMICS

Applications are invited for the posts of (a) SENIOR RESEARCH FELLOW, who should be particularly competent in advanced research methods; and

(b) RESEARCH FELLOW or JUNIOR RESEARCH FELLOW.

Salaries: Senior Research Fellow, £G1,750 x £G75—£G2,200; Research Fellow, £G1,050 x £G50—£G1,400 x £G75—£G1,850; £G1,600; Junior Research Fellow, £G900; £G950 20 per cent. addition for non-Ghanaians. Entry at appropriate point. Appointment normally five years in first instance.

Outfit allowance £G60. Car allowance £G150 p.a. Family allowance for non-Ghanaians for each child in West Africa £G50 p.a. or, if under age of 21 and being educated outside West Africa, £G100 p.a. Maximum five children. Part-furnished accommodation at charge not exceeding 7.5 per cent of salary. F.S.S.U. policies maintained if already held, or superannuation on similar basis.

Passages for appointee and family on appointment and normal termination. Annual leave with three overseas return passages in every four years for non-Ghanaians and one every three years for Ghanaians.

Applications (six copies) with full details of qualifications, experience, etc., and naming three referees, to be sent before 31st January, 1962, to the Assistant Registrar (London), University of Ghana, 15 Gordon Square, London, W.C.1, from whom further information may be obtained.

For other appointments see pages 83 & 84

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor; that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks or large sizes of black-faced type may be stopped or lined at the Editor's discretion.

COMPANY AFFAIRS

Equity prices were firm at the beginning of the new year in the London stock market. So, too, were gilt-edged prices, helped a little by further talk of a cut in Bank rate. Some of the rises that took place in the industrial market immediately after New Year's Day were the result of the various forecasts made about the shares which should do well this year, which focused attention on shares in industries closely in touch with the consumer. Equities in the capital goods sector remained out of favour and steel shares, in particular, were depressed by the first batch of statements from the spokesmen of the industry.

South Durham's Capital Problem

IN the first dealing days of 1962 the £1 shares of South Durham Steel and Iron fell to 20s. 3d., less than half their 1961 peak and a third of their peak levels in 1959 and 1960. With the dividend cut from 12 to 10 per cent the shares still offer 9.9 per cent, a higher yield than any other steel share. Ordinary shareholders, of which the Finance Corporation for Industry is one, will look in vain in the full report and chairman's statement for an indication that the shares are likely to regain some of the lost ground in 1962. The directors must, on the other hand, hope that some recovery will be made, for they intend to raise about £10 million of new capital in the next eighteen months.

South Durham's development spending is reflected in the £20½ million loan from FCI (due to be repaid between 1963 and 1967) and the increase of £10 million to £15½ million in the loan from Barclays Bank. This bank loan is £2½ million more than the maximum borrowing limit mentioned in the 1959-60 report. Since the end of the financial year arrangements have been made with FCI and the bank for additional short-term finance amounting to £6 million.

As a result of these big loans South Durham's ordinary capital is extremely highly geared and at September 30th loans and debentures amounted to £43 million against an ordinary capital of £13.9 million. Thus the directors are faced with a tough problem, for it will be difficult to raise further prior charge capital, while a rights issue would offer little attraction to shareholders when the shares are standing so close to their par value. The effects of this high gearing was seen all too clearly in the results for the year to September 30th when higher interest charges were a contributing factor in the fall in gross profits before tax from £4.5 million to just over £2 million. The chairman, Mr B. Chetwynd Talbot, puts most of the blame for lower profits on the sharp in costs and the inadequate level of steel prices.

Shareholders may gain a grain of comfort from the fact that the new South Plant at Hartlepools is now completed and, in the words of the chairman, "is in a position to take full advantage of a high level of output at an economic cost when the demand for steel increases." But the outlook for steel pipes for the oil and gas industries, into which a proportion of South Durham's plates are made, is still clouded. The company has managed to "hold its own" against competition from the Continent and Japan in Libya and the Persian Gulf, but in Canada the market has "dried up."

United Steel

IN his valedictory statement as chairman of United Steel, Sir Walter Benton Jones says that output in the year to September 30, 1961, when United's production of ingot steel fell from 3,284,000 to 3,184,000 tons, was not much lower than expected a year ago. Demand began to fall off early in 1961 but it was not until the last quarter of the financial year that this was reflected in a marked drop in output and the effect of working below capacity was felt in several major departments. The value of sales was practically unchanged at about £140 million but rising costs squeezed margins so that gross profits fell by nearly 29 per cent, from £22,102,000 to £16,812,000. Sir Walter analyses the current influences on steel production—the running down of stocks by consumers, the growth of world capacity and competition in export markets—and though this makes the immediate prospect depressing he describes himself "for the long and not so long view," as a confirmed optimist.

After the rights issue, which raised £10 million, the directors expected to finance the group's capital development programme without raising any further capital. In 1960-61 the group spent over £20 million on capital account but the cash flow fell from £17.6 to £16.4 million. The big question now is how much further the cash flow will fall, for unit costs will remain high so long as the plants are working below capacity. The directors have simply deferred part of the capital development programme and this will considerably reduce the rate of capital expenditure in the next two years. In coming to this decision the directors have faced up to the changed situation in the steel industry in this country resulting primarily from the continued destocking by consumers. Their assessment has been that "it may be that the expansion in the industry as a whole has raised its capacity to a level which will be in excess of normal demand for some time to come." The £1 ordinary shares now stand at 37s. 9d. xd to yield 6½ per cent on the dividend of 12.3 per cent.

Dorman Long

STAGE IV of Dorman Long's development programme has been planned not so much to increase capacity, except in light rolled products, as to increase the efficiency of the plants. Benefits from the development programmes and improvements in the techniques of using structural steels, to compete more effectively with reinforced concrete, no doubt played some part in restricting the fall in Dorman Long's gross profits in 1960-61 to 12½ per cent, from £8 million to £7 million. They will play an increasingly important role in the future. Developments on the structural steel side include high yield point steel; at the same time, Dorman Long is adding to its interests in lighter steels. In 1960-61, about 68 per cent of Dorman Long's gross profits came from iron and steel, in which heavy structural steels predominate, and the remaining 32 per cent from engineering, bridge building and chemicals; this compares with 76 per cent from iron and steel and 24 per cent from the other interests in 1959-60. The demand for universal beams and columns was well maintained through 1960-61 but in the last quarter the demand for other heavy structural steels weakened appreciably.

In his statement, indeed, the new chairman, Mr E. T. Judge, shows the marked variation in the output of rolled steel in the four quarters of the year with increases of 15.5 and 4.8 per cent in the first and second quarters balanced by falls of 4.2 and 15.1 per cent in the third and fourth quarters. Under-capacity working towards the end of the financial year and a rise in costs which was not balanced by the increase in steel prices brought Dorman Long's profits down, as happened to other steel producers. Profits seem likely to fall further in 1961-62; Mr Judge does not anticipate any improvement in the demand for steel, at least in the first half of the financial year.

This may well reduce the 1961-62 retained cash flow below the 1960-61 level of just over £6½ million. This covered Dorman Long's capital expenditure of £5.3 million but its outstanding commitments are estimated at £6.8 million and an FCI loan of £2 million is due to be repaid by December 31, 1962. Dorman Long may not require new money immediately, but it seems possible that new capital will have to be injected before the five years development programme, originally estimated at £43 million, is completed. This is one reason for the current yield of 8½ per cent offered by the £1 shares at 23s. 3d. xd on the maintained dividend of 10 per cent.

Fairey

FAIREY'S answer to the bid by Bristol Aeroplane and Westland Aircraft of two of their ordinary shares each for every three in Fairey has been a prompt "No." Whether it will be a decisive "No" will depend upon the reaction of Bristol and Westland (or possibly another bidder), for the arguments put forward by the Fairey directors are so strong that Fairey shareholders would be ill advised to part with their shares at the price of 21s. 3d. imputed to them by the Bristol-Westland bid. Immediately, the Fairey directors promise to match the bid in income by forecasting a dividend of 15 per cent for 1961-62. They make no estimate of profits for that year; but they say that the forecast dividend will be well covered by earnings. They add, moreover, that gross profits in 1962-63 will be not less than £800,000 and that within the following two or three years "profits should be running at a rate in excess of £1 million per annum."

Such estimates must be conjectural and these are based on the assumptions first that the Ministry of Aviation will guarantee a sufficient volume of orders for guided weapons developed by Fairey (under a new agreement these will be produced and owned jointly with the British Aircraft Corporation) and secondly that the negotiations for a Nato contract by the Belgian subsidiary, Avions Fairey, will be brought to a successful conclusion. Under the agreement with BAC, Fairey would receive for a period of ten years 50 per cent of the profit derived from the development and manufacture of certain guided weapons, while Fairey's share of the Nato contract would be about £12 million spread over four or five years, with the greater part of the profit from the contract coming in the late years.

As a back-stop to the profit estimate, the Fairey directors have revealed that a revaluation of land and buildings puts their value at nearly £4 million, nearly four times their book value of just over £1 million. On this valuation, the net asset value of each Fairey share is 47s. 4d. and if the company's claim of £1.6 million for compensation for the expropriation of the Great West Aerodrome is successful the net asset value would rise to 55s. 2d. per share. These estimated asset values are not irrelevant to the decision that Fairey shareholders have to take, for in an honest recognition that their management of the group in its new form is still very much on trial the Fairey directors say that if the profit forecast for 1962-63 is not fulfilled they will "invite shareholders' views on a distribution of assets" and that in any event a distribution of any proceeds from the Great West Aerodrome claim will be considered. This week Fairey ordinary shares have risen to 23s. 9d. and this is above the value of a bid which promised to bring Fairey shareholders right back into the aircraft industry—a move that the Fairey directors indicate is not likely to prove either profitable or advantageous.

Mecca-Forte

THE proposed merger between two of the biggest and probably the two liveliest catering groups in this country, Mecca and Forte, has fallen through. From the outset in October when the directors said they were negotiating it was clear that there were some formidable obstacles in the way of a complete merger. First, Forte is a private company. It is always difficult to value the shares in such a concern and what may have seemed to be a satisfactory price from Mecca's point of view may not have looked so satisfactory to Mr Charles Forte, who through a merger would be giving up some measure of control over the undertaking. Secondly, Mecca has both voting and non-voting ordinary shares and the issue of voting scrip to Mr Forte would have tilted the balance of control in the Mecca organisation. The directors did not say why they failed to agree on the merger terms but they emphasised that the abandoning of the plan would not affect "the friendly relationship which has existed over many years."

The failure to agree raises the possibility that Forte will independently seek a quotation on the stock exchange, a move that would make any future merger negotiations easier. But that is no consolation to the speculators who gambled on the prospect that the merger with Mecca would go through. Their buying had carried the price of the Mecca voting stock up from 44s. in October to 71s. It had fallen back to 64s. 6d. by last Friday but after the directors had said the merger was off it slumped to 51s. 3d. At this price the shares still yield only 2 per cent.

Watney Mann

HALF of the 50 leading stocks that make up *The Economist* indicator were lower at the end of 1961 than they were at the beginning. Among those that achieved the biggest rises and produced a small rise of one per cent in the indicator as a whole was Watney Mann. Its price rose by 40 per cent, beaten only by Legal and General (up by 83 per cent) and Midland Bank (up by 46 per cent) and equalled by United Drapery Stores. Brewery shares have been one of the best performers in 1961 and many of the trading results from this industry that have been published in recent weeks have justified the confidence of investors. None have done more so than Watney Mann, which achieved in the year to September 30th a 13 per cent increase in profits after depreciation from £6,984,000 to £7,872,000. These results were certainly up to expectations, reflecting not only a rise in beer consumption and a small increase in prices but benefits from the mergers of the past two years.

This is confirmed by Mr S. H. Combe, the chairman of Watney Mann, who says that the past financial year was one of consolidation and internal reorganisation. Much of this has been centred on meeting the increase in demand for the container draught, "Red Barrel." Capacity has been increased at some of the recently acquired breweries, such as Phipps at Northampton, Ushers at Trowbridge and Wilsons at Manchester. Pursuing its policy of decentralisation Watney Mann has acquired Morgans Brewery in Norwich following the merger of Steward and Patteson and Bullard & Sons. This will not only leave Watney Mann better placed to supply East Anglia, but arrangements have also been made for "Red Barrel" and other Watney Mann beers to be sold in Steward and Patteson and Bullard's houses.

Capital expenditure and additions to trade investments absorbed £5.4 million in 1960-61, of which just about half was covered by the net cash flow. Stocks rose sharply from £9 million to £11½ million and the group's net liquid assets fell from £6.5 million to £1.8 million. Watney Mann is planning to spend heavily again in the current year, not only on the brewing side, but in building up its other interests in wines and spirits, Coca-Cola and motels. At the end of September capital commitments already totalled £3 million. The need for fresh funds was pressing and recently Watney Mann placed £5 million of a 6½ per cent debenture, 1987-90. Placed at 96½, the £25 paid stock was dealt in this week at 25.

The issue of further prior charge capital raises the capital gearing still more and this makes the ordinary shares particularly attractive when profits are rising. Mr Combe makes it clear from his statement that the latest results only partially reflect the benefits arising from integration and reorganisation and the heavy capital expenditures. A further increase in profits, however, is well discounted in the current yield on the £1 shares of only 3.3 per cent, as is a dividend higher than the payment of 18 per cent for 1960-61 (which would have been raised but for the Chancellor's request). The recent strength of the shares, which now stand at 107s. 9d., has in part anticipated the fact that the shares will be more attractive to small investors when they are split into 5s. units and, on balance, it would perhaps be unwise to expect the shares to perform as well in 1962 as they did last year.

THE MONEY MARKET

AT the last Treasury bill tender of the old year the syndicate of discount houses again lowered its bid, by a further 2d. to £98 13s., and the average rate of discount rose by 9.54d. to £5 8s. 0.72d. per cent, bringing the increase over the past two tenders to 1s. 7.89d. Total applications for the £250 million of 91-day bills on offer rose by £82 million to £396 million, with no 63-day bills on offer, and the market received 51 per cent of its application compared with 52 per cent in the previous week.

Credit conditions in the week straddling the turn of the year have been erratic. On the Thursday before the end of the year two or three houses were forced to borrow a small amount from the Bank of England at Bank rate. On Friday credit was comfortable and the end-year pressures were not fully felt until Saturday, the last working day of the year, when the authorities provided a large amount of special help. Credit was very easy on Monday, January 1st, and the authorities sold a large number of bills to absorb the surplus credit. Conditions then changed abruptly with the postal delays adding their share of uncertainty, and authorities provided large amounts of help on both Tuesday and Wednesday.

APPOINTMENTS

CALTEX

THE BAHRAIN PETROLEUM COMPANY LIMITED, BAHRAIN

MATHEMATICS TEACHER

A teacher of mathematics is required by the Bahrain Petroleum Company Limited for its Apprentice Training School in Bahrain (Middle East). The apprentices and other adult students are Bahraini Nationals and the language of instruction is English. Instruction will be up to G.C.E. "O" level standard in classes of 25-30.

Applicants should hold a degree in Mathematics together with a teaching certificate and should have had at least three years' experience of teaching mathematics to G.C.E. "O" level.

A commencing salary of £1,680 per annum is offered together with free air-conditioned accommodation and a living allowance. An initial kit allowance, medical attention, paid home and local leaves (passages paid for the former and generous assistance towards the latter) are also provided, with participation in Pension and Provident Fund Schemes.

Suitably qualified men should apply to Caltex Services Limited, Caltex House, Knightsbridge Green, London S.W.1., quoting ref. "M.T."

Ford

FORD MOTOR COMPANY LIMITED has made significant progress in developing the most modern techniques to assist management in formulating policy and controlling the Company's operations. The positions to be filled are suitable for men with experience or special interest in any of the following work :—

Industrial Economics
Cost Control—Manufacturing or Commercial
Procedures and Systems Analysis
Financial Planning—New Products
Sales and Market Analysis
Computer Programmers

Applicants are expected to be competent in their own field and at the same time to possess the personal qualities to merit early promotion to broader responsibilities. Prospects and salary depend entirely on results, and there are no restrictions on rate of advancement. The minimum qualification is a good honours degree or an appropriate professional qualification. The upper age limit is 35; there is no lower age limit provided the ability and will to succeed are apparent.

Men who can fulfil the strict requirements for these positions are invited to send brief particulars, indicating alternative dates and times at which they can be available for interview at Dagenham, to:

H. G. Pearman,
Training and Recruitment Office,
Ford Motor Company Limited,
Dagenham, Essex.

Please mark envelopes C/109E

Esso

CO-ORDINATION AND ECONOMICS DEPARTMENT

Is looking for a young assistant—an economics graduate not more than 25 with a 1st or upper 2nd. He is to help in work on general business trends, energy studies and petroleum economics. For the right man this would be an excellent starting point in our business and there would be early opportunities to branch out into other fields of activity in a range of company departments. Write giving brief initial details to: Head of Recruitment, (Reference 394), Esso Petroleum Company, Limited, 16 Charles II Street, London, S.W.1

Pressed Steel Company Ltd.

In view of the increased use of Data Processing the Company now wish to appoint a

COMPUTER PROGRAMMER

Applications are invited from those whose qualifications and past experience give them an appreciation of how best to use a machine with a large random-access store to extract Management information during the processing of a large variety of inventory and production data. The successful candidate will be responsible for his own programming work and that of his assistants.

This vacancy arises at the Head Office of the group at Oxford—one of the most desirable areas in the country—and is of outstanding interest because of the wide variety of the work, and the opportunity it provides to join an expanding Organisation.

Write, in strict confidence giving full details of education training, experience and salaries earned, to the Staff Officer Pressed Steel Company Limited, Cowley, Oxford.

For further appointments and other classified advertisements see pages 76 and 84

Young Chartered Accountants

required

(age 25 or under)

for unusual opportunities in the production departments of an Iron and Steel Company. Applications from young men wishing to gain management experience should be made in writing to the General Manager (Production) Dorman Long (Steel) Limited, The Grange, Eston, Middlesbrough, Yorks

THE UNIVERSITY OF SOUTHAMPTON

Applications are invited for the post of Lecturer or Assistant Lecturer in Accountancy. Candidates should have a university degree and should hold a professional qualification in Accountancy. Salary Scales: Lecturer £1,050 x £50—£1,400 x £75—£1,850 with an efficiency bar at £1,475. Assistant Lecturer £800 x £50—£950. The initial salary will depend on qualifications and experience.—Further particulars should be obtained from the Secretary and Registrar, The University, Southampton, to whom applications (6 copies from United Kingdom applicants) should be sent not later than 10th February 1962.

ECONOMIC AFFAIRS REFERENCE SERVICE

CENTRAL OFFICE OF INFORMATION (ECONOMIC UNIT) requires an Information Officer (unestablished) to write reference information papers and provide factual briefing for overseas use on British and international affairs. Desirable qualifications are a university degree in economics or related subject, research experience, and the ability to present factual information concisely and accurately. Candidates may be asked to produce examples of written work. Salary £1,282—£1,490.—Write, giving age, full details of experience and qualifications, to Manager (PE/427/PC), Ministry of Labour Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

THE Institute of Bankers have a vacancy for an Assistant Secretary. Applicants should have a degree of a United Kingdom University—or appropriate professional qualification—and experience of banking or kindred matters. They must be vitally interested in education and experienced in administration and public speaking. Age should be 31-35. The post is progressive and pensionable, with commencing emoluments in the region of £1,500 p.a.—Apply in writing, by 1st February, 1962, to the Secretary, The Institute of Bankers, 10 Lombard Street, London, E.C.3.

ECONOMIST

Male graduate in Economics or Statistics required as the Senior Assistant in an advisory department of an international food manufacturing company with headquarters in London. The person appointed will be expected, after collation and analysis of relevant material, to make market appraisals for many products both in the United Kingdom and overseas. Age limits 25-35 years. Previous experience in this type of work and a knowledge of French are desirable. The salary and the prospects are good and a Pension scheme is in operation.—Applications, giving details of age, academic qualifications, experience and any special research interests, should be sent to the Personnel Officer, Liebig's Extract of Meat Company, Limited Thames House Queen Street Place, E.C.4

SENIOR EXECUTIVE MARKET RESEARCH

Leading Company needs executive with experience of consumer surveys administration and interpretation of data. He will control a department and must be able to sell research services. For the right man this could be a very worthwhile opportunity.—For details write Box 1579.

GALLAHER LIMITED

makers of

SENIOR SERVICE CIGARETTES

STATISTICAL APPOINTMENTS

Applications are invited for the following new appointments:

1. **A GRADUATE IN ECONOMICS (including statistics) OR MATHEMATICS** to join the Statistics Section at the Head Office in London. His main duties will be the interpretation of market research surveys and analysis of statistical data relating to a wide range of the Company's activities.

Candidates, male or female, should be between 25 and 30, and preferably have a market research background.

2. **A GRADUATE IN MATHEMATICS, ENGINEERING OR SCIENCE,** with a sound knowledge of statistics, to be responsible for the statistical services at the Company's Manchester group of factories (J. A. Pattreiouex Ltd.). His duties will be principally concerned with quality control and process investigation and will offer great scope to a graduate interested in the application of statistics to production processes.

Candidates, male, should be between 25 and 30. Salary according to age and experience. Excellent Company Pension Scheme.

Please apply in writing to Personnel Adviser, Gallaher Limited, Granite House, 97-101, Cannon Street, London, E.C.4.

THE NUFFIELD PROVINCIAL HOSPITALS TRUST

wish to appoint a Senior Research Fellow to undertake the research study of the initiation and execution of hospital building projects. The aim of the work will be to make a critical examination of existing methods for the administration and design of hospital building projects to ascertain the degree of success of existing methods in obtaining suitable buildings with speed and economy and to make recommendations for their improvement. The Fellowship, which is being financed by the Trust, will be for a three-year period and will be located at the Building Research Station, Garston, Watford. A salary in the range of £1,600 to £1,800 per annum will be paid. Candidates should have experience of research in the fields of operational research, economics or social or industrial administration.

Applications should be made to:—**Director, Building Research Station, Bucknalls Lane, Garston, Watford, Herts, by 20th January, 1962.**

TUBE INVESTMENTS LIMITED
ECONOMICS OFFICE

require an Economics Graduate, age not more than 27. He should have an Honours Degree in Economics with some Statistics and preferably at least 2 or 3 years' experience in Industry or Commerce.

Send brief details to:

Head of Economics Office,
T.I. (Group Services) Ltd.,
The Adelphi,
John Adam Street,
London, W.C.2.

MARKET STATISTICS

A vacancy has arisen for a Statistical Officer in the Market Research department of a leading company concerned with the production of Castings, Forgings, Rolled and Extruded Products in aluminium.

The successful candidate will be a graduate in either economics or commerce or have equivalent qualifications, and will be between 27 and 32 years of age. He will have a specialised knowledge of statistical analysis, and some years' experience in the market research field. Above all he must have initiative, and the ability to provide statistical information in logical and understandable patterns.

The position will be based in South Bucks and will carry a starting salary of around £1,200 per year. The prospects for advancement are very good indeed for a man of the right calibre.

Applications, which should give full details of qualifications and experience, will be treated in the strictest confidence, and should be sent to Box 1576.

THE REED PAPER GROUP

has two vacancies in the Market Research Unit. They are for a

Senior and an Assistant

Market Research Executive

Applicants should have a qualification in economics or other relevant subjects and for the senior position experience in industrial or related fields.

The Unit's activities include investigations into both home and overseas markets for the many products of the Group, and will give opportunities for original and stimulating work, coupled with attractive starting salaries.

Excellent conditions of service include a non-contributory pension scheme and provision for assistance with house purchase.

Appointments tenable in London.

Applications, which will be treated in strict confidence, should be addressed to:

The Group Personnel Officer, Albert E. Reed & Co., Ltd., Larkfield, Nr. Maidstone, Kent.
quoting reference MRE/MRU/88.

BRADFORD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited for the post of SENIOR LECTURER in the HISTORY and PHILOSOPHY OF SCIENCE.

Candidates should be well-qualified scientists who have made a specialist study in the History and Philosophy of Science and/or who have had experience in teaching in this field.

The person appointed will be required both to organise and to teach classes in the subject as part of the programme of General Studies for students in most departments of the Institute.

Salary scale, £1,800 to £2,000 per annum. Previous industrial and research experience at a suitable level will be taken into account in fixing the commencing salary.

Further particulars and forms of application may be obtained from the Registrar, Bradford Institute of Technology, Bradford, 7.

HENRY PATTEN,
Clerk to the Governors.

For further appointments and other classified advertisements see pages 76 and 83

MARKET INVESTIGATION

As a result of an expansion of their activities in the Market Investigation field, Urwick, Orr & Partners now have several vacancies for additional Research Officers.

A degree in economics is advisable; a sound knowledge of investigating practice and statistical method is essential. The Marketing Unit is concerned with market investigations, forecasting and economic intelligence activities both in the U.K. and overseas. The current pattern of work shows a bias towards the industrial and consumer durable fields.

Initial duties will include the collection, synthesis and interpretation of information and the preparation of detailed reports to clients in many and diverse types of industry.

Suitably qualified and successful male Research Officers will be given the opportunity to transfer to Urwick, Orr & Partners' Consultant staff on completion of a reasonable period of experience.

Age should be about 25-30, female applicants 25-35. Sound Marketing experience would be advantageous but an enquiring mind is an essential qualification. Starting salary would be up to £1,500, with regular progress beyond this figure, according to merit.

Apply to Urwick, Orr & Partners, Ltd., 14, Hobart Place, London, S.W.1, quoting reference MI/TITE/E on the envelope.

AUSTRALIAN NATIONAL UNIVERSITY
Institute of Advanced Studies

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for a RESEARCH FELLOWSHIP in the Department of History. The field of Research will be British and/or Australian History. There will be opportunities for teaching.

The salary will be within the range £A1,625-£A2,450. Appointment will be for three years with possible extension to five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid, and assistance with housing is provided.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth, (Branch Office: Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *16th February*, 1962.

UNIVERSITY OF NEW ENGLAND
ARMIDALE, N.S.W.

FACULTY OF AGRICULTURAL ECONOMICS

Applications are invited for the following positions:—

ASSOCIATE PROFESSOR OF STATISTICS.

Salary £A3,300 per annum. Will be responsible for tuition in Statistics to undergraduate and graduate students in the Faculty of Agricultural Economics and to Arts students undertaking a minor sequence or single course in Statistics (Economics).

SENIOR LECTURER or LECTURER IN STATISTICS.

Salary within the range £A2,550 x 95—£A3,000 for a Senior Lecturer and £A1,730 x 105—£A2,435 for a Lecturer with commencing rate determined in accordance with qualifications and experience.

Salaries are subject to a cost of living adjustment at present amounting to an additional £47 per annum. Provision is also made for travel and removal expenses, superannuation benefits, travel grants and full pay for study leave. Under the staff housing scheme an advance of up to 90 per cent, or more in special cases, may be made towards the cost of purchasing or building a house. Residential Fellowships may be awarded to a single person by one of the University Colleges.

Further information may be obtained from the Secretary, Association of Universities of the British Commonwealth, (Branch Office: Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *31st January*, 1962.

APPOINTMENT REQUIRED

EXPORT MARKETING MANAGER

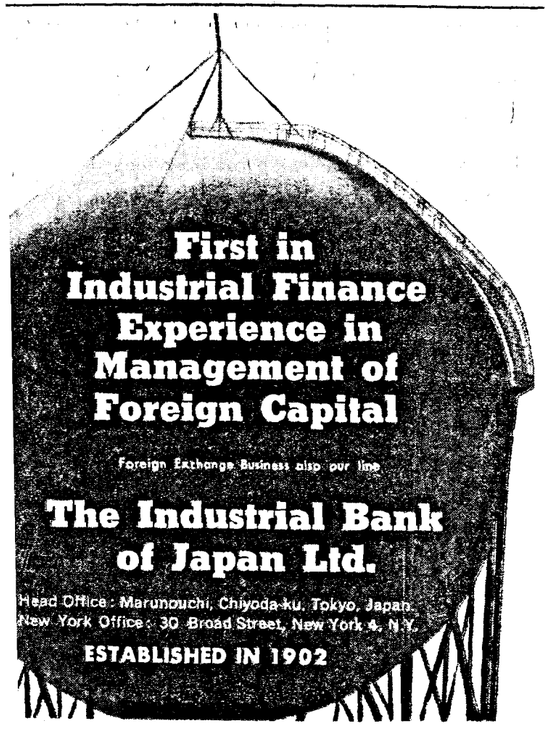
APPOINTMENT SOUGHT BY

Export Executive with successful sales record who now holds overseas managerial post with leading British manufacturer. Aged 36 and feels his experience, interests, energy and administrative ability now provide qualifications to achieve his ambitions in this field.

Experience mainly confined to Eastern and African Export Markets but with thorough practical knowledge of shipping, advertising, office management, sales planning and promotion; in particular the marketing of branded proprietary articles especially foodstuffs and confectionery.

This applicant's desire for advancement is limited by his specialisation in and dedication to export work and his understanding of the conditions peculiar to export markets convinces him that this is the field where his value is greatest. An attractive alternative would be a Deputy position with a view to eventual promotion.—Box 1577.

The Emperor Penguin



This dignified bird, which in captivity seldom lacks an appreciative audience, in its natural habitat suffers a rather unique handicap.

Laying a single egg—and lacking nesting material in the Antarctic wastes—the egg is balanced on its feet and held securely by a fold of skin on the lower part of the body

Whilst Coast Lines Limited cannot parallel the wonderful manner in which Nature provides, in their own field they provide services without equal. To-day Coast Lines organisation operates scheduled passenger and cargo lines, coastwise tramps, holiday voyages, wharves and stevedoring, road haulage (bulk liquids and dry goods) and ship repairing.

HOW MUCH FOR FARMERS?

GUIDE TO CONTENTS SEE OVER

The Economist . 22 Ryder Street . St. James's London SW1

The moving and storage of materials with efficient and time-saving handling equipment can decimate overhead costs and increase productivity considerably. Lansing Bagnall, the largest and most experienced manufacturer of materials-handling machinery in Europe, design and develop methods and equipment that cut the cost of handling and the time involved. Each machine is specially designed and built for individual companies and their specific handling problems; as no two handling problems are alike, it takes the knowledge and craftsmanship of Lansing Bagnall technicians to achieve the right solution. One Lansing Bagnall fork lift truck, for example, operated by one man, can cut the time of any handling operation by 25% and increase the storage capacity of existing buildings by 30%.

Lansing Bagnall offer the most efficient and comprehensive after-sales service in the industry –available for the whole life of any truck. Recognise your need for improved handling–and Lansing Bagnall will show you how it can be done, promoting greater efficiency and economy for you. Write, or if urgent telephone, for advice on any problem of handling and storage. Lansing Bagnall will recommend, without prejudice or commitment, the most suitable solution.

INTERNATIONAL

BOOK OF BEASTS

Dodo: Sir Roy Welensky's white-dominated Central African Federation will not survive as it is. The British Government has allowed itself to be compromised too far. The time has come to give a liberal constitution to Northern Rhodesia, even at the cost of quarrelling with Sir Roy—and Conservative back-benchers (p. 103).

Locust: Nor are Sir Edgar Whitehead's liberalising policies in Southern Rhodesia likely to save the day there: it is far too late in the years (p. 138).

Tiger: China's latest pet-of-the-year is likely to be a bookish and old-fashioned animal, poring over statistics and the problems of food production, instead of winning glory in heavy industry (p. 135). A book taking a different view of China is reviewed on page 121.

Sacred Cow: The Congress party may be unusual in having only one stomach, but it seems able to digest most of India's contradictory elements, in spite of competition from communists and high tories (p. 136).

Political Animal: President Kennedy may not be treating Congress with his present cool patience for very much longer (p. 125).

TESTS AND TRIALS

Berlin: The West will not lose this trial of strength by giving a minimal recognition to the east German regime in return for a durable agreement on the status of Berlin. In the long run it may lose if it does not do so (p. 107).

Britain and Europe: The common market's agricultural programme, and with it Britain's application for membership, may be running into difficulties, but it is too early for its foes to write the effort off (p. 109). British relations with west Germany are somewhat happier as a result of the Macmillan-Adenauer meeting (p. 135).

France: General de Gaulle is now required to curb his right-wing extremists if he is to have peace with the Algerian nationalists (p. 111).

West Papua/Irian: The vast distance from Jakarta to New Guinea, and a province to conquer the size of France, make it possible for the New Guinea problem still to be solved before President Sukarno goes to war (p. 109).

The Balkans: Macedonia again (p. 115).

Italy: Signor Saragat's political skill may be severely tested in the coming political crisis that he proposes to launch (p. 111).

IMF: Limited though it is, the latest addition to the Fund's resources should strengthen it in times of speculative emergencies (p. 146).

STATE OF AMERICA

Laos: An emergency which seemed, originally, to provide a test of Mr Khrushchev's intentions now seems to test Mr Kennedy's control over his dependants (p. 110).

Moon: Americans are to be sent there for the sake of national survival as well as national pride (p. 126).

Money: This year's defence Budget will be the biggest ever but not as big as it might have been (p. 128). Much-needed reforms on the American Stock Exchange are being speeded up (p. 128).

Distinctions: Los Angeles stands out as the largest city with no more than two daily newspapers (p. 131): Mr Rockefeller still hopes to stand forth a President (p. 131).

HOME

MAKE-UP

Two of Mr Lloyd's three suggestions to the Trades Union Congress for a wages policy are barren: the third, although much more fruitful than what has gone before, treats the facts too timidly (p. 105).

Which?'s car tests, or the claims of British manufacturers—which? (p. 150).

Courtaulds have rejected ICI's bid: their counter-proposals will have to offer a hard alternative (p. 147).

All so-called 'flu is not influenza (p. 112).

FACE LIFT

The Government needs a comprehensive science policy, to make sure that public money for research goes to the best scientists and not to the smoothest talkers (p. 143).

London's office boom should be curbed by taxation, not indiscriminately halted by a total ban (p. 119).

COLD DOUCHE

More Welsh railways are to be closed by economic pressure: the closures are being resisted by sentiment and nationalism (p. 120).

The apprenticeship system needs a most thorough overhaul: the Minister of Labour's ideas are welcome, if inadequate (p. 110).

Colvilles' new steelworks in Scotland will be a heavy liability unless demand improves (p. 149).

MUDPACK

Government support for farmers this year will cost £78 million more than was expected: future policy (in Europe or out) must be to help them (and the taxpayers) to get out of uneconomic business (p. 106).

A new report on milk marketing rattles too few farmers' churns (p. 114).

The post office work-to-rule has brought Britain's services down to normal American standards (p. 109).

FOOTNOTE

Mr Clore wants to increase his interests in our feet: and, square or pointed, he should give them a profitable twist (p. 144).

Police: the trudge away from the parish pump? (p. 112).

Detailed contents on page 103

Mallory 'sound power'

is changing your world

The amazing 'Sound Power' generated by Mallory batteries has triggered off a host of modern miracles. Instance the many types of 'invisible' hearing aids, some so tiny they can be contained in spectacle frames; transistor radios small enough to slip into a pocket or purse; paging receivers which will fit into a buttonhole.
All benefit from Mallory size which permits truly miniature design and Mallory 'Sound Power' which ensures a steady flow of energy—a constant volume of sound. Fade-proof in store and in use, Mallory batteries are giving designers the power to reshape the world around us in so many different ways. The greatest battery design development for more than eighty years, they can be of great help to all manufacturers who wish to make their own products smaller and retain full power.

Is this why some of your competitors are stealing an export march on you?

To many of Britain's leading manufacturers, BEA air freight is not an "emergency only" affair—it's a normal, routine move in the business of getting firmly entrenched in European markets.
To the bread-and-butter advantages of incomparable speed, savings in packing cost, lower insurance rates and great reduction in pilferage and damage troubles, BEA air freight adds the jam of extra prestige and good salesmanship.
Seeing that you can get all this at a cost which—in terms of overall despatch costs—is sometimes little if any higher than you are paying now, would it not be wise to study the facts and figures of BEA air freight with a new and imaginative eye? Ring your local BEA Office, or your usual shipping agent.

BEA's new 300 m.p.h. Armstrong Whitworth Argosy freighters, with Rolls-Royce Dart engines, are starting regular scheduled cargo services to Paris, Milan, Dusseldorf, Frankfurt, Copenhagen & between London, Manchester, Glasgow and Jersey. The Argosy's large nose and tail doors allow quick loading and unloading of heavy and bulky freight.

Now you can contract hire the *RentaFord* way!

Perhaps your company operates only a handful of cars, vans or trucks. Or it may own a considerable fleet. *The ownership of transport, in whatever quantity, means that a great deal of your capital, a great deal of your senior executives' time, and a great deal of worry, is tied up in basically unproductive activity.*

But now Ford inaugurate the RentaFord plan. It is available to every company in the Country from the largest to the smallest. It will release the capital and senior executive's time now tied up in transport. It will cut out worry.

WHAT IS THE RENTAFORD PLAN?

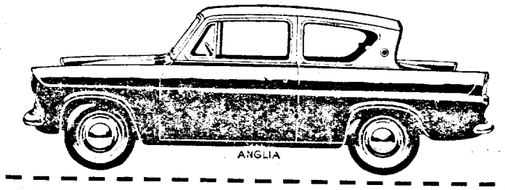
The RentaFord Plan means simply that instead of using capital to buy transport—and your own resources to maintain it—you rent it, using current income, and exploiting, to your advantage, all the knowledge, experience and servicing capacity of the RentaFord dealer.

WHICH VEHICLES ARE AVAILABLE?

Every type of Ford can be rented . . . Popular, Anglia, Classic, Consul, Zephyr, Zodiac, and the full range of Thames trucks and vans. If you wish, you can have your company's colours and name specially painted. You can even have special bodies built.

TELL YOUR BOARD ABOUT

RentaFord



OPERATED BY FORD DEALERS

CHECK THESE BENEFITS—

- The most obvious advantage is that you cover all your transport costs from current income.
  So you release capital for productive investment.
- Moreover the RentaFord plan, operating with consolidated monthly accounts, enables you to budget your transport costs with reliability.
  So at any time you know exactly what your transport is costing.
- The RentaFord plan relieves you of the burden of keeping detailed records of outgoings, depreciation etc. for tax and budgeting purposes.
  So you save on administrative costs.
- The problems of depreciation, maintenance, replacement and mileage payments to salesmen for the use of their own cars are all time-consuming and often the cause of controversy. The RentaFord plan can take complete care of them.
  So your executives are freed for profitable work.
- The RentaFord plan is particularly effective at ensuring regular maintenance, and replacement in the event of emergency breakdown. And, of course, with nation-wide Ford Sales and Service it makes no difference where the emergency occurs . . . a Ford dealer cannot be far away.
  So your fleet is always up to strength—and a credit to you.

FIND OUT, DISCUSS, DECIDE

- The RentaFord plan presents an important opportunity to set your transport operations on a truly efficient and economical basis. There are Ford dealers in your area operating the RentaFord plan, who will be delighted to consult with you on your special requirements, and give you and your board all the information you need to reach a speedy decision.

For further details of the new RentaFord plan please fill in and post this coupon to: Ford Motor Company Ltd., Dept. R.11c, Cheapside House, 135 147 Cheapside London EC2

German Fairs 1962

The six German fairs invite you cordially. Here firms from all parts of the world show the latest of their production. The six fair cities, closely adjacent to each other under the aspects of modern traffic and adjusted as to dates, form a big efficient trading center for your visit. Markedly individual in organization and character, the six fairs complement each other as to offer and circle of visitors. Here you find your purveyors, here you win new customers. Above all you have the pleasant opportunity for personal contact with business partners from many countries which you otherwise can only establish by extensive travel. An excellent service facilitates your work.

"But dad, it's a wow!!"

"You've got wow and flutter on the brain, Son, since you got that new record player for Christmas"
"Oh! that—that's Hi-Fi stuff. This wow's different—it's carbon"
"A carbon wow?"
"No, Dad. A carbon bush"
"And as you will one day learn, Son, good wine needs no bush"
"But good wine's not self-lubricating, Dad"
"Tell that to Mr. Marples, Son"
"Well, it's certainly not heat-resisting; and this carbon bush is both self-lubricating *and* heat-resisting"
"Wonderful what they get up to these days isn't it?"
"Sure. And there's lots more I could tell you about carbon"
"Such as?"
"There's carbon in aircraft, carbon in motorcars, carbon in trains, carbon in ships"
"Sounds like the Charge of the Light Brigade to me—cannon to right of them, cannon to left of them, cannon in front of them. You certainly have been doing your home-work, Son. Old Squirt will be pleased"
"Home-work my foot, Dad. I've been reading the Morganite Carbon advertisements. Carbon seems to be everywhere—like Morganite Carbon Limited"
"Congratulations, Son. You're beginning to show a fine perciptence"
"Er... thanks. Oh—and Dad?"
"Yes, Son"
"They say there'd be no telephones without carbon"
"Do they sound glad or sorry, Son?"
"Proud, Dad. Just proud".

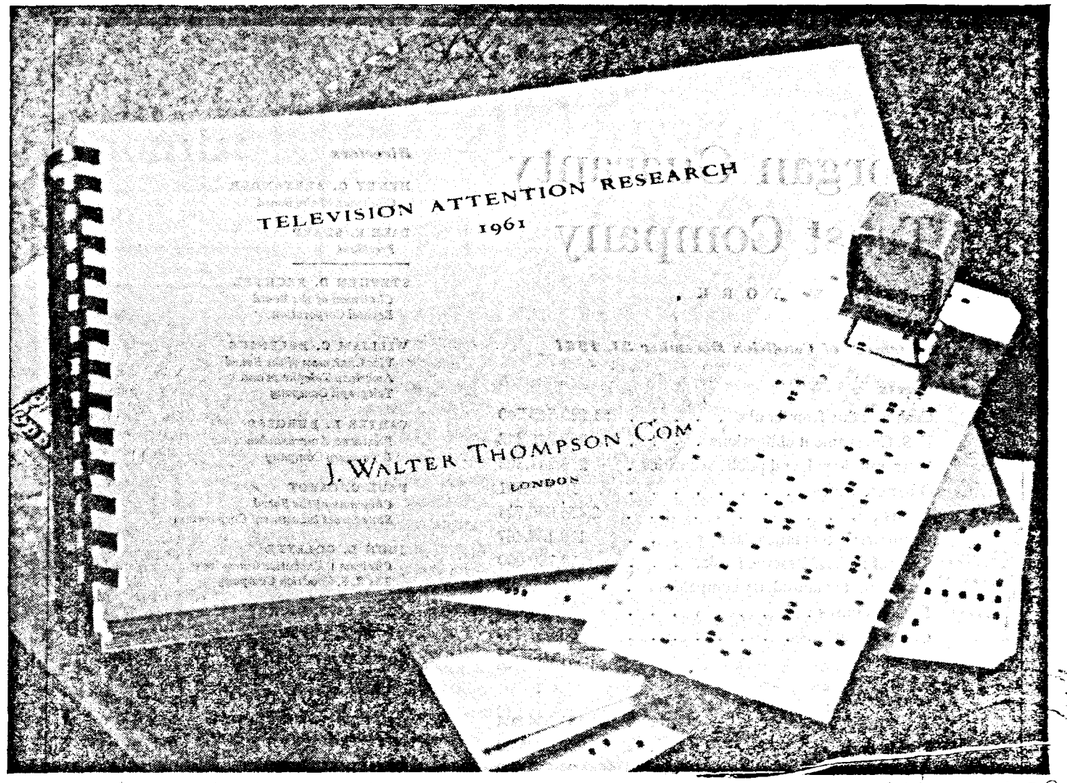
WHAT'S THE DIFFERENCE?

NONE...THEY'RE ALL AS ONE!

"...all as one!" What *exactly* does that curious phrase mean?

CDT • CNR • Weir • Dujardin • Mitsubishi-Zosen. Like Clark Bros. Co. itself, each of these firms is, in its own right, accorded greatness among the world's manufacturing enterprises. And each retains its own independence, fulfills its own destiny.

Despite their independence, all five of these firms . . . and Clark . . . *are* as one. For each manufactures Clark compressors under a most remarkable technical liaison arrangement. Provisions of this arrangement insure that every part of every compressor built by any one of the five . . . or by Clark . . . are of identical design and fully interchangeable. This is not simply a matter of tolerances. It includes a full exchange of technology and it includes, as well, every aspect of high quality.



It means that you can fully rely on every Clark unit, no matter which of these concerns builds it. It means that you can fully rely on every Clark part, no matter from which of these concerns you buy it.

For complete information about the centrifugal and reciprocating compressors and other Clark equipment now being produced under these unique Clark manufacturing arrangements, contact:

Television advertising: How some new research really pinpoints housewife viewing

Most research studies into Television have simply classified housewives as viewers or non-viewers. "Television Attention Research 1961," a book published last week by J. Walter Thompson Company, goes a great deal further.

It is true of all media that the advertising carried communicates with its audience at various levels of intensity. It is equally true that up till now it has been difficult to research these levels. This research, in this particular medium, has gone further than anything before it. It does not, in any degree, set out to measure the effectiveness of T.V. as a medium, but analyses the housewife audience in terms of their varying degrees of attentiveness at various viewing times.

Of course all kinds of things interfere with the levels of attention in viewing (over and above the obvious ones of disinterest in the programme and switching off). The average housewife will bath the children, make meals, mend clothes: all that we all know. The value of this research is that for the first time it puts a measure on the actual extent to which these sorts of activity conflict with her T.V. viewing.

The survey has shown us that the attention housewives pay to T.V. programmes varies widely at different times during the evening. And, more important, is not a constant proportion of all those housewives claiming to "view."

We think this piece of research will be of the utmost interest to every media planner and programme company. We decided to publish it because we know from its reception by our own clients and by our own executives, marketing and creative people that it repays a wide professional readership.

"Television Attention Research 1961" was prepared by the British Market Research Bureau for the J. Walter Thompson Company Limited. It is a spiral-bound document, 11¼ by 8½ inches deep. It includes all details of pilot research and the main surveys with definitions, comments, appendices and questionnaires. It costs 12 guineas.

Please write for a copy or copies to the Librarian, British Market Research Bureau Ltd., 47 Upper Grosvenor Street, London, W.1.

VOLUME CCII - NUMBER 6177

A Message for Sir Roy

PAINFULLY, the British Government has its foot caught in the central African trap. It cannot move without being torn by the sharp teeth of either Sir Roy Welensky or Messrs Banda, Kaunda and Nkomo; it cannot stand still without suffering the tightening wrath of the anti-colonial world. It can do nothing without danger, for unless it treads carefully it may set off a bloody black-white war: the federation of Rhodesia (and Nyasaland) is but a few shots away from an Algerian kind of tragedy. This is the excruciating situation in which the British Government finds itself after fifteen years of decolonisation. Since the second world war Britain has granted independence to 600 million people; now the independence of action of the British Government itself is compromised by fear of what the white Rhodesians—fewer people than there are in Nottingham—might do.

It has been most severely compromised in Katanga. The declared policy of the British Government is to support the unity of the Congo and to oppose the secession of Katanga under Mr Tshombe. This is also what the federal government says it wants. But the federal prime minister, Sir Roy Welensky, has long thought of Katanga as a buffer state between the black nationalism of the north, and his own white nationalists; if, as he says, he has not supported Mr Tshombe, it is permissible to say that he has done little to oppose him.

Indeed, in a statement issued on December 27th, the federal government spoke of its "policy of strict neutrality in regard to the provision of military supplies, equipment and personnel" to Katanga; and on Tuesday, when it refused transit to 27 out of 36 recruits for Mr Tshombe's army, it explained that this was because the 27 lacked visas. On Wednesday the federal ministry for home affairs said that the country's immigration laws "do not concern themselves with what the individual traveller intends to do when he reaches his country of destination." No wonder the UN finds this kind of neutrality unhelpful. About Katanga, the interests of the British Government and what Sir Roy may understandably think are his government's interests do not coincide. Just as in the past a look behind the humbug of "multi-racial" constitutions in, say, Southern Rhodesia revealed all the devices for retaining white control, so, now, a clearing away of cant shows the Rhodesian government as an opponent of anything that might put a black nationalist government in charge of the parts of the Congo that touch its borders.

Yet, although Northern Rhodesia is a British protectorate, Britain has no control of the 1,200-mile border between Northern Rhodesia and Katanga. Sir Roy, by his own admission, has not much more, but a theoretical division of functions is apparent: the federal government is the master of its own army and its own borders, while Britain, for international purposes, takes the blame. A fortnight ago the acting secretary-general of the United Nations, U Thant, asked Britain (not the federal government) for permission to station observers along this border. But it was the federal government that, on January 4th, said "No." London declined to transmit all of Sir Roy's comments to U Thant; instead the British Government invited U Thant to visit Salisbury and, on January 9th, was turned down by him.

A British Government possessed of more backbone would not need to be so deferential to Salisbury. According to the Monckton Report on the federal constitution, issued in October, 1960, the federation cannot be a "full inter-

national person" so long as Northern Rhodesia and Nyasaland remain British protectorates. In fact,

> The federal government can assume international commitments and participate in international negotiations only to the extent to which the United Kingdom Government are prepared to authorise them and other states are prepared to treat with them; and even in these circumstances it is the United Kingdom Government who remain ultimately responsible in international law.

If the consequences of deference to the federal government were no more serious than an academic judgment that the British Government was letting a dependency behave like a sovereign state, then things might not be too bad. But in fact what is happening is that Britain is being branded as a scheming "colonialist" power in an age when neither quality is popular. There has been an embarrassing difference with the Americans over what to do about Katanga. In the eyes of most Africans and Asians Mr Macmillan has sometimes been seen as too closely friendly with Dr Salazar, Dr Verwoerd and Sir Roy Welensky for comfort. It is manifestly unfair to link these four names—the four countries concerned are run on different lines. But, fair or not, the names are linked, especially whenever the rearguard action of colonialism is spoken of. The name of the British Prime Minister should not be on the list; only the communists can be glad that it is.

DIFFICULTIES also beset the British Government because of the arrangements within the federation; here, too, the problem is that everywhere except in Nyasaland the political power is still in the hands of the white minority—a thing that, in 1962, cannot persist. Here, it is not altogether just that Britain should take the blame. Southern Rhodesia has, in fact, been in control of its own internal affairs since 1923. Its leaders have lately shown an admirable willingness to sweep away racial discrimination; at the same time they are apparently determined that power shall not be transferred to an African government in the discernible future. Britain could not directly contest their determination unless it were willing in the last resort to send in troops, which it is not. Yet Southern Rhodesia is, in the eyes of the world, still Britain's responsibility—and it is Britain that will be arraigned when Southern Rhodesia's affairs come up before the United Nations next week.

In Nyasaland, too, trouble is brewing. Dr Banda and his Malawi Congress party are in control, with 90 per cent of the population behind them; since they came into office in June they have shown themselves to be intelligent, responsible men. They are biding their time, but sooner or later Dr Banda will make a bid to take Nyasaland out of the federation; and Sir Roy will doubtless decline to accept Katanga as a precedent for such a move. The British Government, committed to holding the federation together, and yet valuing Dr Banda and seeing the sense of working with him, will be pulled two ways. Dr Banda might join in a federation of Rhodesia and Nyasaland—but not while Sir Roy is prime minister, and not while the federation is a white institution. From his point of view, only breaking up and starting again would do.

Most agonising of all is Northern Rhodesia. To recapitulate: In February, 1961, Mr Macleod, then Colonial Secretary, designed a constitution that looked as if it might put the African nationalists and white liberals into joint control of the legislative council. Sir Roy objected and managed to bully Mr Macleod (or was it Mr Macmillan?) into a deal, concluded in June; a constitution giving Sir Roy's United Federal Party the better chance of winning control of the legislature was to be put in place of the February constitution; in return Sir Roy would withdraw his threats of embarrassing action (he is said in Whitehall to have threatened to declare the federation independent and even, at one desperate stage, to have said that he would march into Northern Rhodesia and arrest the Governor).

The June constitution was soon seen to be a disaster. The international outcry apart, violence broke out in the protectorate and it took until October to quell it. It became obvious that, in an age where it makes no political sense to put down colonial peoples by force, the least that could be done in Northern Rhodesia was to go back to the February constitution. In September the British Government opened up the whole question again. Mr Maudling's decision is awaited.

Mr Maudling, who has made a good start as Colonial Secretary, probably knows what he ought to do in Northern Rhodesia. He cannot be unaware of the difficulty of persuading some members of the Cabinet to brave the back benches and Sir Roy and go ahead. Mr Maudling ought to be wished all courage in his attempts. Letting the United Federal Party down in Northern Rhodesia may, as Sir Roy fears, mean the end of the federation he has built; but this federation is, in any event, doomed.

The trouble is that many members of the Conservative party do not yet understand this. There is a deal of sympathy for Sir Roy among middle-of-the-road Tories who think he is right both about the United Nations and about Katanga; others still stick to the belief that only he has enough stature to lead the white Rhodesians to a more liberal approach. But, however true that was, Sir Roy has now done this job—well enough. He has failed, however, to make any attempt at all to come to terms with the African nationalists—another thing that only he, by stature and personality, could have done. Now it is too late; any pacification of the black nationalists of Rhodesia will be prevented, not made more feasible, by Sir Roy's continued political leadership. The matter is one, of course, for Rhodesia's voters, and Sir Roy (whose doctor has told him to rest), to decide. But it no longer makes sense for Whitehall to trim its policies to his bidding.

It is important to say this because some conservatives remain honestly convinced that Sir Roy is still the best, indeed the only, man for the job. He was. He is no longer. Nevertheless, it must be recognised that more Tories believe in Sir Roy than there could ever be in any Rhodesia lobby, or in any copper men's pockets. These are the men who, for the nation's sake, have to be persuaded that, frankly, the time has come to face the music in central Africa. There is still an appalling danger that the whole thing might blow up this year. The British Government must find the courage to give a liberal constitution to Northern Rhodesia and, as civilily as possible, to make plain to Sir Roy that his assistance in the international sphere is no longer required. It is sad, even tragic, but any other way might be disastrous.

Half-Brass Tacks

The Chancellor's overtures to the coy trade unions on wages are still too unspecific

THE Treasury burned its midnight oil this week preparing the special letter which the Chancellor of the Exchequer sent to the Trades Union Congress on Wednesday. The hopelessly divided TUC then decided that there was "again nothing new in it," and put off for yet another week any decision about joining Mr Lloyd's planning council. Actually, some things were more or less new in this slightly-better-than-usual letter. Mr Lloyd's advisers have provided him with an estimate that production per head might increase by the normal (and unsatisfactorily low) recent average of about 2½ per cent during 1962; unless he stimulates demand slightly one would have thought that even this guess was a bit optimistic for 1962, but it is good to know that he now has some target figure for expansion in mind. Against the background of this presumed 2½ per cent increase in production per head, he asks the TUC which of three alternative courses for wages policy they think would be best.

One suggested course would be to "devise a formula" for measuring increases in productivity in each industry, and tying increases in wages to that. Mr Lloyd agrees that "there might be difficulty and protracted argument about the formula." This is an understatement: the whole of this first idea is absurd. It would mean that in any industries where a lot of money is spent on installing new and productive capital equipment—such as in office employment, if the computer age begins—wage rates should rise like the deuce; while in industries where more labour is needed (sometimes precisely because labour-saving machinery has not been invented and therefore cannot be installed) wages would tend to rise by less. Until people realise that movements in different industries' wage rates must depend on their relative needs for labour, not on movements in some magic productivity formula, national economic thinking has not progressed beyond the nursery school stage.

The second suggested course is that "the Government and both sides of industry should accept the fact that only a limited sum can without inflationary effects be distributed by way of wages and salaries during 1962." On the basis of a 2½ per cent increase in production (although Mr Lloyd's letter refrains from naming this sum), the amount available for increased earnings from wages and salaries would presumably be around £400 million in 1962; but this would mean that wage and salary rates (as distinct from earnings) must go up by much less. The Government recognises, however, that if it announced any such wages fund formula—if it said, in effect, "the country may have some £300 million available for wage and salary increases, come and get it"—there "might be the feeling of first come first served, and an acceleration of claims." There might indeed.

The only practical course is therefore the third of Mr Lloyd's suggestions: that "the Government and both sides of industry should accept an understanding that the overall rate of increase in wages and salaries in 1962 should be kept within a stated [percentage] figure." Presumably this means that earnings from wage and salary employment should not increase, on average, by more than 2½ per cent during 1962; once again, the average increase in wage and salary rates (as distinct from earnings) would have to be less than this. But, again, Mr Lloyd refrains from saying this. He merely expresses his fear that under this course "the percentage stated might be regarded as the minimum in each case and not an overall maximum." This would be awkward because, as he points out, the "stated [percentage] figure" must:

> provide for the exceptional cases where there are sustainable claims for special treatment. It must also be realised that some industries cannot afford any increases at all, if they are to remain competitive.

But he does not say specifically which these "industries that cannot afford any increases" are.

In the end, if a wages policy is to succeed, Mr Lloyd will have to make his guiding light specific, and relate it bravely to the large named industries that should give below-average increases (or none). When he does, he will probably have to accept the fact that in some of the industries concerned, the country may have to stand up to strikes. Even if the TUC, after long argument, does join the new planning council, it will then indulge there in equally long argument about what the council should say. Perhaps in some passages of this week's letter to the unions, Mr Lloyd does get nearer to passing on the plain facts of economic life. But always, when he appears to be on the point of saying something specific about some specific case, he draws back. How much longer can this circumlocution go on—this jangling down on to half-brass tacks?

The Economist

JANUARY 11, 1862

DEFENCE AND THE COLONIES

The peaceful issue of our differences with America has happily changed the immediate defence of Canada from a pressing necessity into a speculative contingency. But it revives a question which seriously occupies the minds of our practical statesmen,—which is likely to occupy them, but which the ordinary busy public can but very rarely be induced to consider:— Ought we or ought we not to defend our Colonies in time of war? The case of Canada on the present occasion was a perfectly clear one. Whether we should or should not undertake to defend Canada, is a serious and a difficult question; but it is indisputable that so long as we do undertake to defend it we must defend it. It may be right or it may be wrong to induce our distant fellow-citizens to rely exclusively on our remote aid; but so long as we do induce them thus to repose upon our promises, we must perform those promises. Yet we should be warned by the practical instance before us to consider the evident consequences of the engagements by which we are bound; we should seriously consider whether we can or cannot perform those engagements in time of need, and whether we are not really injuring both our Colonies and ourselves by entering into them. . . . The tendency of war since Napoleon's time is not to disperse itself through the extremities, but to concentrate itself at the vital parts. In the case of a French war, we could not detach a force for the defence of Sydney, or Otago, or Canterbury. We should want our men here. The effect would be this: We should have denuded ourselves of a force sufficient for a peace establishment in the Colonies, but not enough really to defend them. We should have sent away soldiers whom we should want extremely; and we should neither defend the Colony nor the mother country. We should have dispersed men over the world who would have been invaluable if concentrated at home; or should have scattered them in small detachments over remote Colonies which they could not defend, and which, by the operation of our policy, would be too enervated and unwarlike to defend themselves.

How Much for Farmers?

The whole basis of aid for British agriculture is going to have to be reorganised, whether we go into Europe or not

When the Chancellor made his famous statement of July 25th, inaugurating the pay pause, he said that the Government "will have to look critically at the level of agricultural support during the 1962 review." Since then the news that support even during this financial year will cost the Exchequer £78 million more than originally estimated (£67 million of the excess being for meat) should have made the adverb "critically" an understatement. But, immediately, there does not seem to be much that Mr Lloyd can do about it. Under the 1957 Agriculture Act, the Government is committed each year to a global guarantee of gross farm income. In effect, it is allowed to try to cut its support by a maximum of just over £30 million a year, and even that only after a year when farmers' costs have not risen (which they always prove to have done). So all that the Government can do in the 1962 review, which is due to start very shortly, is to make full use this year of the small cuts permitted to it under the 1957 Act. Even this will cause the farmers to roar angrily that the Government has cut them back far too much; but it will leave the Chancellor looking sadly at still-inflated expenditure estimates, and feeling that he has not cut nearly enough.

In the longer term the lesson of this year's experience is that the present system will certainly have to be changed very radically—will have to be changed, that is, even if Britain does not get into the European common market. Not everybody has realised this, but Mr Soames himself has now admitted as much. The advantages of the present (1957 Act) system were supposed to be (a) that the consumer had the great benefit of being able to buy the cheapest possible British or imported food on an absolutely free market (although the British farmer himself secures a deficiency payment direct from the Government whenever the price actually paid to him falls below a stated figure); and (b) that the Government, although obliged to see that farmers' incomes as a whole did not fall by more than a certain percentage, would at least be able to vary its pattern of support so that British farmers were encouraged to produce less of the things in which British production was most obviously uneconomic and more of the things in which it seemed that British production could expand reasonably economically. For ten years now, beef and lamb production have been favoured in accordance with argument (b) because they have been relatively more economic than most other guaranteed products. Hence the further large fillip given to these products last spring, and the stupid but vague promise to maintain guarantees for them in 1962. As events have shown, these increases were not intrinsically necessary to secure production of the amount of beef and lamb that British housewives wanted, but they seemed more desirable than any other increases in support prices at the time.

Now that events have disproved the assumption that "increases in supports for beef and lamb, at least, are always right," the whole system is in a mess. It has been shown this year that in every commodity—even these two—British farmers, operating on their present scale, are now liable to produce more than can economically be absorbed on a British market that is also left open to imports from abroad. One of three things must therefore follow. Either, first, if we continue with the present system, the Chancellor is likely to lose all control over his budget estimates for subsidy payments—because he will always be liable to have to finance a glut of something, even if the Ministry of Agriculture has triumphantly managed to shape the pattern of support prices in a way that makes the gluts appear in the "relatively less uneconomic things" like meat. Or else, secondly, Britain will have to cut down free imports of food from overseas; in that case prices to the housewife will go up considerably, and the main imports we will be restricting will be imports from the Commonwealth. Or else, thirdly, it must be accepted that the number of farmers in Britain (or, if we are operating in a European system, within Europe) should be reduced, and the global guarantee of gross farm income withdrawn.

Of these unpleasant alternatives, which should be chosen? No doubt, initially, the British people will try to disguise from itself the real meaning of whichever course it takes. Even if the common market negotiations had not intervened, one's guess is that the Government's next step might have been to supplement (and eventually try partially to replace) the deficiency payments system by operating a system of genuine support prices—i.e., intervening with direct government purchases of non-perishable foodstuffs when prices fell below a certain level. This might be sensible and useful for ironing out purely seasonal gluts; but, eventually, as a system of support, it is almost bound to lead to the Government piling up large surpluses of particular commodities, as the Americans have often done. The result is always that a Government then resorts to import controls in order to clear its stocks.

If we do go into Europe, and if the common agricultural policy there makes any headway at all, this support price system might well appeal even more strongly to the Government as a halfway step to Europe's system. For example, the French *Office du Blé* at present buys all wheat in France and sells as much as it can at home at a fixed price; it then tries to sell the surplus in export markets at the lower world price, but with the loss financed by a levy on farmers who have sold their wheat for domestic consumption at the full internal price. The object of the common market agricultural policy, which is now experiencing such wracking birth pains, is to bring these domestic support prices to a common level in Europe.

But now we come to the snag. If Britain goes into Europe it is committed to struggle to see that these European support prices are fixed at a level which is not so far above the world market level that Europe is condemned to eating only its own expensively-produced food while excluding by stringent import controls cheaper food grown in the rest of the world (especially in the overseas British Commonwealth). In other words, Britain is committed to seeing that these European and British support prices should be as low as possible; which means in turn (it would be honest to admit this

straightaway) recognising that some of Britain's and Europe's less efficient farmers must move out of farming. And if Britain does not get into Europe, exactly the same problem will face us, albeit more abruptly and alone.

For, to repeat, the lesson of this year's beef and lamb fiasco is either that Britain, even if outside Europe, must accept a further reduction in the amount of its resources that are tied up in agriculture—or else that it must impose restrictions on imports of food in order to keep the present global guarantee of total income to British farmers in being without huge Exchequer bills. And we would look pretty silly if we stayed out of Europe because we could not secure fair play for Commonwealth farmers, and then proceeded to deny it to them in our own isolated market. Moreover if we fail to enter Europe, we will have to be ruthless in trimming uneconomic production out of our whole economy.

As one of the industries that would suffer in this process, agriculture has every right to be liberally treated for a transition period, but no more than that. The best fundamental reform for a Britain outside Europe might be to say that a (gradually tapering-off) proportion of present annual government payments should be earmarked for aiding existing farmers, if necessary by voting a straight annuity or pensioning-off payment to some of them; but that, once this cushion was in place, they and all future farmers should have to sell their products on a free market—subject perhaps to some system of evened-out support for some prices at times of seasonal glut, but not to eternal subventions.

A short while ago, any such ideas—of switching some agricultural subsidies from being support payments into being pensioning-off payments for farmers who cannot make a living on a free market—would have been treated as heresies suitable only to freer trading cranks like *The Economist*. Now some surprising people are coming round to them. In a new Fabian pamphlet* Lord Walston, who might well be Minister of Agriculture if a Labour government returned, gives his blessing to some such idea. He would be in favour of gradually cutting the level of agricultural support, but "buying out [some] existing farmers for a cash payment or, preferably, an annuity; or, hand in hand with the progressive reduction in [support] prices, a rising pension payable until death, in return for which the freehold of [or, for tenants, the tenancy rights in] the farmer's land would pass to the Government or a government agency, but the farmer would be given security of tenure until his death." Perhaps inevitably, Lord Walston's idea is that these annuity payments should also be accompanied by a system of long-term contract prices that would almost certainly tend to be higher than free market prices, and that would thus still keep a surplus of farmers in being; and he appears to want all the land thus released by marginal farmers to be reorganised into bigger and more efficient farms—which, until and unless these more efficient British farms could produce as cheaply as New Zealand's, would be illogical (it could mean that the Government subsidised a larger volume of uneconomic production from fairly inefficient farms instead of a smaller volume from grossly inefficient ones).

But here, at least, is a notable burgeoning of ideas on the intelligent left; and it is almost certain that, behind the scenes, some people in the Conservative government must be starting to cast their thoughts in the same directions, after looking at this year's subsidy bill. Is it not possible now to thrust these ideas further forward? The time has come for some radical rethinking indeed.

* "The Farmer and Europe." 30 pages, 3s. 6d.

Qualis Modus Vivendi?

If a live-and-let-live solution is to be sought in Berlin, it had best be spelled out precisely and formally

Since October 17th, when Mr Khrushchev put off his time limit for a peace treaty with east Germany, the countries concerned in the Berlin dispute have been living in the quiet eye of a hurricane. In the past ten days a burst of movement among statesmen and diplomats has suggested, like a stirring of leaves, that the circling storm may be about to return. Berlin has been discussed by Mr Gromyko and Mr Llewellyn Thompson, the American ambassador in Moscow, on January 2nd, by Herr Erhard and Mr Dean Rusk in Washington on Monday, and by Dr Adenauer and Mr Macmillan in Bonn on Tuesday.

Mr Gaitskell and Lord Home have been to the city to see the wall, and Mr Gaitskell has produced a proposal (promptly dissented from by Dr Adenauer) to allow the east German government the modest degree of recognition involved in letting it take part in an international organisation to control the access routes to Berlin. The west German foreign ministry has spent the first days of the new year poring over a curious Russian memorandum handed to its ambassador in Moscow which suggests, apropos of Europe's problems, that everyone except Russia is beastly to the Germans in his heart.

It is clear that the Berlin crisis of 1962 is not the same as it was in 1961. The range of possible outcomes has not exactly narrowed; but the extreme possibilities have become, if not less likely, at least less apparently imminent than they seemed when Mr Khrushchev revived the crisis last June, announcing that he intended to settle the matter, one way or another, by the end of the year. In the first place, the possibility that the crisis might lead to negotiations about the whole problem of central Europe, as a result of which west Germany would begin to regularise its relations with its communist neighbours, and a start could be made on limiting armaments and tension in the area, has gradually diminished until it is now almost invisible. Dr Adenauer, by the time he went to visit President Kennedy in Washington on November 20th, had succeeded in persuading the President that negotiations should be limited to the question of Berlin itself—that is, to the preservation of the western position there.

This limit on the scope of negotiations might just possibly be removed if the situation took a sharp turn for the worse: if, say, a sudden decision by Mr Khrushchev to sign his separate peace treaty with east Germany were followed by an east German attempt to assert control over the access

routes. But, unless this happens, west German objections appear to have ruled out for the time being any attempt at a general pacification of middle Europe, though this remains the only way of removing the threat to Berlin definitively. In particular, Bonn has rejected with special vigour the idea of local experiments with arms control; and Dr Adenauer's response to Mr Gaitskell on Monday shows that the Chancellor is ready to give Herr Ulbricht just about as much recognition as the well-known signal got from Nelson at Copenhagen.

In the second place, the possibility at the other end of the spectrum—the danger of war—has also somewhat receded, though it has certainly not disappeared. This is partly the result of the decision Mr Kennedy took in the summer to send substantial American reinforcements to Europe. This and other American measures persuaded Mr Khrushchev both of the importance the Americans attached to Berlin, and of the scale of the military operation that would be needed to wrest it from them. Nevertheless, a danger undoubtedly remains. Both Mr Khrushchev and Mr Kennedy have allies and advisers who stand out against compromise and, to avoid one, are willing to call the other side's bluff. Two bluffs called equals one war over Berlin.

This fading at the edges of the spectrum does not in any way mean that the outcome of the Berlin dispute has now been settled by a process of elimination, and that everyone can stop thinking. The phrase currently being offered, in various pronunciations, is *modus vivendi*. In plain English, it is widely accepted (at least in the West) that the best way out of the crisis lies in an agreement to live and let live, which allows each side to protect its primary interests. But the Latin, as often happens on these occasions, conceals an ambiguity. The proper retort is *qualis modus vivendi*—what kind of an arrangement to live and let live? In particular, should it be a tacit understanding, or should parts of it, at least, be spelled out in international agreements?

The tacit variety would probably take the shape of a gentleman's agreement, arrived at by formal diplomatic discussion at any level from that of ambassador upwards, but not formally committed to writing. In this agreement, the hope is, the Russians would undertake not to interfere with the western position in Berlin, at least for the time being, and to see that the east Germans did not interfere with it. The West, for its part, would smile as brightly as it could while Moscow and east Berlin signed a separate peace treaty. For the western powers, the advantage of such an arrangement is that it would leave matters in Berlin exactly as they are—for a while—without the awkwardness of renegotiating the legal basis of the western garrisons, or of giving Herr Ulbricht so much as a wink from a western eye. But the disadvantage of a gentleman's agreement, which seems overwhelming, is that it depends on both partners staying gentlemen; the people of west Berlin would not know from day to day how long the Russians intended to abide by it.

Dr Erhard, the west German minister of economics, has been telling Mr Dean Rusk this week how much it costs the west German budget to keep the economy of the allied half of Berlin alive. This cost has just been increased by a decision to grant tax reliefs to people working temporarily in the city. The only way these material costs can be minimised (and, far more important, the morale of the Berliners maximised) is an attempt to reach the alternative kind of *modus vivendi*: that is, a more formal agreement in which the future of Berlin, and the allies' rights of access, would be publicly spelled out in documentary and thus more durable form. This was presumably the motive behind Mr Gaitskell's proposal.

Two objections can be made to a solution of this sort. One is that it would mean negotiating the whole status of Berlin afresh, and would thus make it possible for the Russians to argue that the allied occupation rights dating from 1945 had lapsed. But to judge from some of the things the Americans have done recently (excluding the Soviet commandant from their sector, and halting a bus load of sight-seeing Russian officers last Sunday) the West seems to be admitting that the status of Berlin has changed a good deal since the postwar days of quadripartite occupation. In any case, it would always be open to the western powers to argue that a freshly negotiated status was a reaffirmation of their former rights, not a substitute for them.

The other objection to a formal new Berlin arrangement is that it is hard to see how the east Germans could be prevented from taking part in it, at some stage and in some form. One can understand Bonn's dislike of this, and no doubt the West would try to keep the east Germans' participation as small as possible. For instance, it is reported that Mr Gromyko hinted to Mr Thompson on January 2nd that the Russians might agree to designate east German officials on the access routes as "agents" of the Soviet Union. But some of the arguments that have been put forward for refusing even a minimal degree of recognition to Herr Ulbricht are so strange that they must not be left unchallenged.

It has been alleged, for example, that even a little bit of recognition of the east German regime would enable Mr Khrushchev to claim that he had achieved that decisive "breaking of the West's will," which is said to have been his chief objective all along. The straight reply to this is to ask exactly who would interpret a partial acknowledgment of the facts of life in Europe as a collapse of will power. The real test of will, as the world knows, is over the continued freedom of Berlin. There is something equally fey about another assertion—that to let Herr Ulbricht take part in an international agreement on Berlin is tantamount to abandoning the hope of reuniting Germany one day. It is time someone drew attention to the demarcation line between the question of recognition and the question of reunification as they affect east Germany. To recognise a government (especially in the muted form under discussion) is not the same as admitting that its control over the territory it presently holds is permanent. One might look at the attitude of the western powers towards Dr Salazar's regime in Portugal, and his claim that the "overseas provinces" are inalienably Portuguese.

There are good reasons, largely to do with the morale of the German people, why Herr Ulbricht cannot be granted total baptism (as it were) in the waters of international recognition. They are not reasons for insisting that international arrangements for access to Berlin should be without east German participation, and thereby should be made difficult, if not impossible, to work at all. Such arrangements might mean a dipping of the east German little finger in the waters. To condemn west Berlin to prolonged uncertainty about its future, simply in order to dodge this finger's-worth, would be a disservice to the people of the city; it might, in the end, shorten the life of free Berlin by destroying its will to survive.

NOTES OF THE WEEK

POST OFFICE WORKERS

Battle for Mount Pleasant

The Postmaster-General's estimate that no more than 20 per cent of postal staff have been working strictly to rule this week is virtually confirmed by evidence of normal deliveries in most provincial centres. Even among football pool punters only a small minority failed to get their coupons in last Saturday. But the union's tactical strength has been fully demonstrated in London itself, mainly because so many operations have been centralised there for efficiency's sake and any tendency to go slow in a single department has immediate repercussions throughout the system. First, Mr Bevins was forced to divert mail from the central clearing office at Mount Pleasant for sorting at provincial offices, and to insist on extended overtime throughout London. This kept first-class (3d. stamp) mail moving fairly well for some days, and even reduced the Mount Pleasant arrears from 5 million to under 2 million letters by mid-week. But on Wednesday the Post Office temporarily suspended London's parcel post in order to use the parcels staff for letters.

This has been taken by the union as a confession of serious difficulties, although one of the chief factors in Mr Bevins's mind seems to have been the mounting cost of overtime. Many London staff are expecting to take home pay packets of well above £20. For those who are working hard to make up for their colleagues' working to rule, this is fair enough; for the others, it is not. Some time public employers are going to have to consider suspending those who do go slow if this enticing fashion of earning-more-while-you-deliberately-slack spreads. The straightforward one-day strike on February 5th, threatened by the shipbuilding and engineering unions, invokes no such problem; it must, in fact, prove absolutely pointless for all concerned.

Plainly Mr Bevins can afford to use his parcels staff in London only for a short run in order to get the main arrears of letters worked off. But if provincial diversion continues to work as it has done so far, the rate of ordinary mail delivery during the period of go-slow should settle down at very little below the normal expectation of service between, say, large cities in the eastern United States. This cannot yet be construed as quite such a weighty imposition as some industrialists make out (advertising circulars apart). The real cost of a surrender to the Post Office union, which, as Mr Bevins said on Wednesday, "would run like wildfire throughout the public sector" and industry at large, would be much greater than the present price of irritation and delay.

EUROPE

Doubting Thomas

Not content with the gleeful thought that the common market is at last running into difficulties in Brussels, the opponents of British membership are indulging in another hope. Assertions by Mr Heath in America and Mr Macleod in Britain—that the interests of the Commonwealth and the European Free Trade Association must be protected—are being interpreted as a new backsliding by the Government. Don't take British membership for granted, gloats the *Daily Express*. It's not in the bag yet.

How much substance is there behind these alarming noises? In Brussels the Six are making piecemeal progress towards agreement about agriculture, but it is much too slow. Serious discussion, it is now clear, started far too late; the technicalities are taking time. True, the concessions are being squeezed out of Bonn bit by bit, and even if agreement does not come soon, the common market is not going to collapse. What is disturbing is that even a temporary failure may hold up the negotiations with Britain.

Fortunately, ideas of a new retreat by the British Government still look far-fetched. At this stage, when the main negotiation is about to begin, a repetition of assurances about the Commonwealth and Efta seems entirely natural. At home the Government is bound to be uneasy about the evolution of Tory feeling so long as its pressing African problems give trouble. Certainly it has no wish to see the rumbling doubts about Europe, which have been erupting lately in the correspondence columns of *The Times*, acquire political force. In Brussels it does not want the substance of the talks to be prejudged by the assumption that Britain will join whatever happens.

That substance—as Sir Roy Harrod and Mr Douglas Jay have pointed out repeatedly—boils down to how to provide markets for exports from the undeveloped countries when Britain joins. It is a problem that can be met in a right and a wrong way. The wrong way, tried without success in 1958, is to try to preserve existing Commonwealth privileges in the British market. This way would knock a hole in the common market system and thus offend the Europeans; it would discriminate against the Americans and thus arouse their opposition too. The right way is to make British membership the starting-point for a new effort by both Europe and America to pull the barriers down. This, as Professor Meade has pointed out, is the new opportunity opened up by America's awakening interest in freer trade. It gave point to Mr Heath's visit to Washington last weekend, at a time when the United States Administration is putting the finishing touches to its new trade legislation.

NEW GUINEA

Dim Deadlines

Dr Subandrio, the Indonesian foreign minister, announced on Tuesday that President Sukarno would decide in the next week or ten days whether to negotiate with the Dutch about West Papua. The odds, he said, were against negotiation because the Dutch position was "so vague." Was this a fairly open invitation to the Netherlands to use the announced period by coming forward with something more specific? The Indonesians can hardly have failed to notice the movement of Dutch opinion towards quick disengagement from New Guinea that was clearly shown in the parliamentary debate at The Hague on January 2nd and 3rd. In that debate widespread support was expressed for the idea of opening discussions with Indonesia without setting any conditions, an idea openly canvassed by the prime minister, Professor de Quay. (The Labour party went still further, demanding that Dr Luns, the foreign minister, should be removed from

Professor de Quay (left), Dr Luns

office on the ground that he was not the right man to reach agreement with the Indonesians.)

Certainly it would seem wrong to interpret the reference to "a week or ten days" as an ultimatum. The pressures on the Indonesian president for swift military action mounted sharply in the wake of India's occupation of Goa, and he has duly been responding with a series of menacing gestures, which have gone down well with mass audiences. But the appointment of a general to command the "Irian theatre," and of a governor who, Dr Sukarno claims, is already secretly installed on Dutch-held territory, does not reduce the logistical difficulties involved in an attack on West Papua.

From Jakarta to West Papua is about as far as from London to Newfoundland or Cairo. West Papua is no Goa-sized principality, but a territory the size of France. It resembles Goa only in containing a population of no more than 700,000. This population is thinly scattered around a territory largely empty and almost entirely lacking in communications; and so are the Dutch defending forces. Although the Indonesians have local military superiority, West Papua is no easier to conquer than it is to defend. Neither of the contesting governments can want a protracted campaign. There may thus be more promise than appeared at first sight in the attempts made by U Thant to persuade both parties to engage in some "quiet diplomacy" on the top floor of the UN building in New York.

LAOS

Boun Gloom

Presenting arms: Prince Boun Oum (right)

PEACE in Laos, it was generally agreed after Mr Kennedy and Mr Khrushchev met in Vienna last June, depended on Mr Khrushchev's willingness to keep the promise he made there to encourage the formation of a neutral Laotian government. But it now turns out to depend on Mr Kennedy's ability to keep his side of the bargain. The 14-nation Geneva conference on Laos, which assembled last May, more or less finished its work of drawing up an agreement on Laotian neutrality in December. Since then it has been waiting for Laos's three-quarter line of princes—Boun Oum (right wing), Souphannouvong (left wing) and Souvanna Phouma (stand-offish centre)—to form a coalition government of national unity that could add its signature to the agreement.

The princes, who agreed at Zurich in June to form such a government, and back home in Laos in October that Souvanna Phouma should be the prime minister, were asked by the Geneva conference on January 5th to get a move on and finish the job. It has become clear that Boun Oum, the prince who was thought to be obedient to the Americans' will, is the culprit. He has been deliberately avoiding further meetings with his fellow princes, because he wants the ministries of defence and the interior to go to right-wingers.

On January 7th Washington, which agrees that neutralists should get these posts, announced that it was withholding payment of the monthly cheque of $4 million it pays to Boun Oum's government to back up the currency. The result has been, first, to force the government to stop the purchase of foreign exchange and, second, to extract an offer from Boun Oum to meet the other princes in Geneva. The American ambassador in Laos has steadily urged Boun Oum (and, more important, his minister of defence, General Phoumi Nosavan, who is the prince's guiding spirit, if the term is appropriate) to reopen negotiations. But there are persistent reports that members of the American military aid group in Laos have encouraged the prince and the general in their obstinate desire to hold on to half a country, rather than merge their fortunes in a government of national unity. It is strange that Laos, which was designated as a test of Russian sincerity when President Kennedy took office, should have proved to be a test of Mr Kennedy's control over his own allies and subordinates.

BRITISH CONSTITUTION

Lords into Commoners?

WHEN the second Lord Stansgate sought last year to remain plain Mr Wedgwood Benn, MP, Mr Butler said that this could be considered only within the ambit of a much wider investigation into possible reforms of membership of the House of Lords. Labour was unwilling to join in this wider investigation, because of its traditional fear that if the membership of the Lords became less obviously absurd the House might insensibly become more respected—and therefore more powerful. This unwillingness was a pity. There was at least one minor question that could usefully have been studied to everybody's advantage: namely, whether the time has not come when a small number (say, a dozen) of nominated "peers of Parliament" on the Opposition front bench should be paid an ordinary parliamentary salary. Apparently any investigation into such ideas has been finally thwarted for this year by the crabbiness of some backbenchers, who would not tolerate any discussion of salaries for any peers until there has been another increase in MPs' own salaries in the Commons.

Given this unwillingness of some Labour backbenchers to think unmyopically, however, Mr Macleod has wisely eaten Mr Butler's words; and he has now apparently agreed that the coming joint committee of Lords and Commons should concern itself only with anomalies arising out of the enforced disfranchisement and disbarring from the Commons of reluctantly enrolled peers. The best reform would be the simplest one: all peers should be allowed to resign from the Lords and contest seats in the Commons if they wish. Whether such resignations from the Lords could be temporary or would have to be for life would then be a very minor matter, depending on one's touchiness about the principle of fair shares. This reform would not only restore justice to the ex-Mr Wedgwood Benn by allowing him to stand again as candidate for Bristol South East. Perhaps eventually, if the prospects for the Conservative succession remained as uncertain as they are at present, Lord Home or even Lord Hailsham might be induced to consider returning to old pastures—although no doubt each would at present sincerely deny any such possibility, as firmly as distinguished Americans regularly deny that they could ever be candidates for the Presidency.

Just conceivably, therefore, Mr Benn's private struggle could have a much more important effect on the whole course of British history than anybody foresaw when he started it.

APPRENTICES

Wholesale Reforms?

MR HARE is certainly right to tackle the engineering, shipbuilding, printing and building industries about the need to modernise their apprenticeship arrangements. But one's guess is that he is not going to be nearly radical enough about it. The trades on which the Minister is concentrating provide the bulk of the apprenticeships and learnerships in Britain—places that are taken up by no more than one-third of the boys and less than one-tenth of the girls leaving school in any one year. In this sense they have a good record compared with other industries; but their arrangements are invariably so hedged around with special interests and restrictive practices that the acquisition of a skill by the traditional means has become increasingly less attractive to the school-leaver and less valuable to his employer as a test of real proficiency.

The changes that Mr Hare has in mind include the reduction of the normal training period (chiefly, that is, the time spent watching a journeyman on the job and brewing his tea) from five to three years; relaxing conditions on the age of entry (it is not necessarily an asset to the prospective apprentice to spend an extra year idling at school until he is 16, and there should also be scope for some older men to retrain into

skilled jobs); and improving the quality of the training itself. Last January's white paper on technical education acknowledged that, whatever might be done for the aspiring technologist, the opportunities for the craftsman and operative left a great deal to be desired. The extension of day release as a right for young workers who wish it and the encouragement of block release courses and group apprentice-training centres, are matters on which the initiative and the provision of the actual college buildings must come from the Government itself.

The biggest immediate field for establishing higher general training standards might be in setting up government-sponsored centres (on the French model) for employees of small firms, whose present chances of doing other than working their way up by the hard night-school grind are discouragingly small. Two years ago the Government decided to open eight small centres (total capacity 300 places) to provide first-year apprenticeship training for boys already accepted as apprentices by their firms. One would like to see an imaginative development of this scheme, particularly in areas like the west of Scotland where the number of apprenticeships is below the national average and where youth employment opportunities are still poor. The local unions would be on bad ground if they sought to object. As a second step, a real incentive would be provided to all apprentices if, as the building employers have proposed, wage negotiators would agree that all apprentices who have actually passed their final craft examinations should automatically be given higher pay and status than those who have merely "done their time."

FRANCE

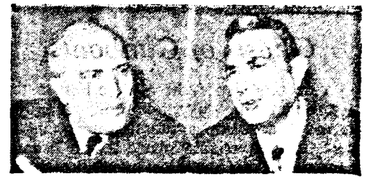
Jam When?

ANY day now, the pundits said in December, General de Gaulle would be able to announce real progress in his peace talks with the Algerian nationalists. It seemed that there were no outstanding differences of principle between the French and nationalist leaders, and not many about tactics. But the prospect has darkened enough to inhibit both the French President in his broadcast of December 29th, and the Algerian government in exile,

Algerian leader (Mr ben Kheddah) and host (King Hassan)

which met in Morocco from January 7th to 10th. It now begins to look doubtful whether the French government is in a position to make a settlement until it has brought under control the right-wing terrorists who at present defy the police with their bombs and murders in metropolitan France, and who have almost destroyed public authority in Algiers and Oran.

In the statement issued at the end of their meeting, the Algerian leaders announced that they would now themselves act against the European extremists, who "are trying to lead the Algerian Europeans into an adventure which might compromise their future in Algeria and their legitimate interests." In other words, the Arabs have grown unwilling to make allowances for the violent feelings of the settlers, or for General de Gaulle's need to conciliate them (if only to keep his army quiet). They are prepared to put off peace until the OAS (Organisation de l'Armée Secrète) has been brought to heel. General de Gaulle's intransigents are now a liability to him in negotiation, and not in any sense an asset.



Any day now, the pundits are saying this month, there will be a new *coup de force* by the OAS. The neo-fascist underground is showing a tendency to a split between the supporters of full-scale, "*Algérie française*," integration, and those who would settle for the partition of Algeria between the European settlers and the indigenous populations. But neither policy is compatible with General de Gaulle's wish to put an end to the Algerian war.

Other happenings are more disquieting. Explosions of the handy do-it-yourself explosive called *plastique* continue to plague Paris as well as Algeria—M. Sartre's flat narrowly escaped wreckage on January 7th. OAS and FLN (Algerian nationalist adherents) continue to murder each other, policemen, and whomever they choose—in the past few days the OAS have selected a communist civil servant for death, the FLN a French magistrate in Algiers. The OAS has organised several daring thefts of arms from military bases in France. Alarmed at last, the authorities handled a communist-inspired demonstration in Paris on January 6th with unaccustomed restraint, and have visibly been collecting forces in the capital to deal with any attempt at a right-wing coup. France and Algeria never needed peace more. But as things are going now, the will-o'-the-wisp seems likely to elude capture for a while yet.

ITALY

Saragat Gambit

SIGNOR FANFANI'S lightning visit to London next Wednesday will allow Mr Macmillan to discuss European problems with a European statesman who is known to sympathise with Britain's wish to join the common market. What is in doubt is

Signor Fanfani, Signor Moro

Signor Fanfani's own position. According to present plans (though the details may be changed) sentence of death on his government is to be pronounced by the Social Democrat leader, Signor Saragat, when the Christian Democrats' congress opens in Naples on January 27th. The sentence will presumably be carried out (that is to say, Signor Fanfani will resign) when Parliament reassembles on February 6th; but complications arising out of the internal organisation of the Christian Democrats after their party congress may cause some delay.

This curious advance planning of a government crisis is part of the current manoeuvres in Italian politics designed to make possible that ancient and often-frustrated design, an "opening to the left," which in its turn would allow the formation of a government more broadly based and stable than recent Italian governments have been. Signor Saragat announced on December 29th that he would withdraw his parliamentary support from Signor Fanfani on the opening day of the Christian Democrat congress. (The Republicans are planning to do the same.) It was understood when the Christian Democrat cabinet was formed in March, 1960, that if any of the three small centre parties (the third is the Liberals) supporting it in parliament withdrew its support, Signor Fanfani would resign. In any case, deprived of Social Democrat and Republican votes he will have lost his majority. Signor Saragat's avowed object is to relieve Signor Fanfani of his present governmental responsibilities so that he can appear before his party congress as leader of those Christian Democrats who favour an opening to the left.

Whether Signor Saragat's gambit will work remains to be seen. It may have received the support of Signor Fanfani himself; and Signor Moro, the party's secretary-general, is on record as saying (on television on November 22nd) that there was no stable alternative to a "centre-left formula"; in this the Nenni Socialists would promise their support to a centre coalition on conditions that have yet to be agreed with the Christian Democrats—and may prove unacceptable. Possibly, Signor Nenni's outspoken criticism of the Communists after the 22nd Soviet party congress may have made his support more acceptable to more Christian Democrats. All the same, those among them who believe that Signor Nenni is still dangerously polluted by his communist connections will fight hard for their view. The forthcoming party congress may well be turbulent, and could mark a turning-point.

MIDDLE EAST

Ghosts of Gunboats

At fleeting glance, the Middle East might be entering 1957, not 1962. A snowstorm of accusations tumbles indiscriminately on "imperialist" heads, with Britain marked out for the most generous share. The colour for all the suspicions is remarkably thin: the British military movements performed, with an eye on Kuwait, over Christmas; the unsuccessful revolt in Lebanon on December 31st; Kurdish and other troubles of the Iraqi government. None of this, to a westerner, suggests an imperialist master mind at work. For the past five years, one of the principal aims of British policy in the Middle East has been to drive home the sensible, if unexciting, point that Britain is now trying to make the best of existing situations, not to overturn them. Most Arabs kept their minds, and their memories, open. Now, judging by the wild charges pouring out of Baghdad and Cairo, and to a lesser extent being echoed in Beirut and Damascus, many Arab leaders believe, or at least find it expedient to seem to believe, that Britain is at its old tricks again.

In this context, the usefulness of the recent British and American notes to the Iraqi government is questionable. On January 3rd, the British ambassador to Baghdad handed over a note that, in a friendly way, urged the Iraqi government to resume its negotiations with the Iraq Petroleum Company and to accept its call for arbitration. The United States, apparently, presented a similar note. This mild diplomatic concern is perfectly proper, and in a situation less corroded with suspicion and ill-will it might even have had some possible usefulness.

But as things are the Iraqi prime minister, General Qasim, in his Army Day speech on January 7th, chose to represent the notes as old-fashioned intimidation, backed by British "military concentrations and fleet movements." Nonsense this may be. But if General Qasim is set on taking over the heroic role of the leader of a small nation bullied by big outsiders—a part played a good deal more convincingly by President Nasser in 1956—it seems necessary to avoid helping him by providing any evidence of political pressure. The strength of the oil companies does not lie in the support of powerful governments, but in their economic utility and in the powerful interest of General Qasim, however near the brink he gets, to stop short of doing anything that might lose him the oil revenues altogether. The danger is that he may miscalculate where the brink lies.

POLICE

Towards Amalgamation?

Even Dr Watson would have taken the hint by now; it looks as if the Royal Commission on the Police, whose report is due fairly soon, may recommend the amalgamation of the multitude of local borough and county police forces into a much more coherent, and in some aspects a national, organisation. If so, its recommendations will be thoroughly welcome. The Government must be bold enough to accept the full logic of the mobility and technology employed by the modern criminal. Since the pay of the ordinary constable was increased on the commission's urgent recommendation a year ago, two priorities remain. The first is to raise the police, and particularly the criminal detection departments, into a thoroughly professional, expert force by attracting men of high educational and executive calibre. The second is to break down the traditional barriers to inter-force co-operation. Small amalgamations have taken place in the past (usually over some standing committee's dead body) and many existing arrangements between neighbouring forces, and between local police and Scotland Yard, work well: but there is disconcerting evidence that delays and prejudices still persist—solely to the criminal's advantage.

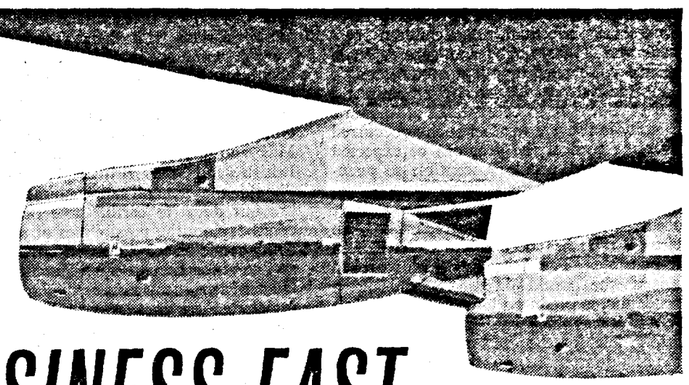
The political overtones (and genuine dangers) attached to the creation of a single, national police force make any such proposal unacceptable. But a scheme like that propounded to the Willink commission by the Inns of Court Conservatives for broad amalgamations on a regional basis might even be better in terms of efficiency, and would also preserve a basic element of non-political control. The Inns of Court Conservatives suggested 11 regions, the London metropolitan area being the largest and Wales the smallest. Scotland ideally should have one, or at the most two. Each region should have a strong, independent commissioner and an *ad hoc* police authority, on which the larger local councils would be represented, to look after establishment questions and senior appointments. But all the regions, like the Metropolitan Police at present, should be answerable on policy issues to Parliament through the Home Secretary.

One would prefer not to hive off the CID into an entirely separate national force, although the present system could certainly be strengthened. Local pride might be pacified by retaining county and borough control of traffic police—although eventually the motorway era will make even this anomalous. The chief need is to give scope for the effective deployment of manpower and scientific aids to prevention and detection, and equally to give senior officers the incentives, status and salary that can come only from ending watch committee rule. The Popkess case in Nottingham and the Kilmarnock appointment row should have helped to drive the lesson home.

INFLUENZA

Epidemic or Not?

Not all the hundreds of people who have gone sick in the last few weeks are suffering from influenza. In the last week of 1961 the number of deaths from influenza had increased to 146 from 84 in the previous week, but this does not yet constitute an epidemic. In the week ended February 11th last year—at the height of what was recognised as an epidemic—the number of influenza deaths was almost ten times as many.



There have certainly been local outbreaks of flu this winter. In November, for

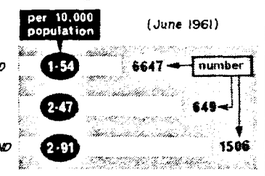
instance, it swept through the north of Pembrokeshire, affecting schoolchildren particularly. But coughs and sneezes, even when accompanied by a temperature, are by no means always caused by an influenza virus. They are to be expected at this time of year, and severe weather such as occurred over the turn of the year can be expected to kill off old people susceptible to pneumonia and bronchitis.

Where true influenza outbreaks have occurred this winter and been identified, the virus B type has been found to have been responsible. The Asian flu which marched across the world in 1957, causing a pandemic, is produced by a variant of virus A, and it was this virus A2 that was mainly responsible for the epidemic in Britain in the first quarter of 1959 (though some of the outbreaks in that period were caused by virus B) and again last year. The winter of 1959-60 was virtually flu-free. Usually virus B produces a milder form of flu than virus A, whether the Asian variant or not, but in the 1959 epidemic there seems to have been little difference in the symptoms or severity of the illness whichever the virus responsible.

CARIBBEAN

Outposts of Empire

SOFTLY the British Government is trying to turn away the wrath of General Ydigoras Fuentes. The Guatemalan president's reiterated threats to break off diplomatic relations with Britain, and the fiery New Year message in which he called British Honduras a concentration camp and the British prison warders, have been countered by a polite note on January 5th inviting the Guatemalans to come to London in April or May and talk things over with both the British and the British Honduranians. Should the general allow himself to be brought down to earth, these negotiations could explore the possibilities of some kind of economic association between Guatemala and an autonomous British Honduras. The Guatemalans themselves seemed to be thinking along these lines last year, but the hurricane that smote Belize in November swept away the hope of doing anything about it at the time. Since then, the whiffs of good sense have looked like disappearing in the general's chauvinist steam.



Britain is also under fire in its other enclave on the American mainland, British Guiana. But here the colony has its own gunman. Dr Cheddi Jagan, who has been British Guiana's prime minister since August, declared himself thoroughly disillusioned after a trip to London and Washington at the end of the year. On December 18th Dr Jagan petitioned the United Nations Fourth Committee for its assistance in bringing British Guiana to immediate independence. Although he sought to strengthen his case by comparing his country with Israel, several Arab delegates were among the 15 sponsors of a resolution asking Britain to start negotiations with Dr Jagan about the colony's future. This inoffensive suggestion is now on the agenda of the General Assembly, which meets again next week.

But Dr Jagan is not cross with Britain alone. He has also spoken out against the United States for its failure to provide the money he has asked for. Dr Jagan estimates his country's immediate financial needs at £200 million, divided between public and private investment. With the future of the West Indies Federation hanging perilously on a decision yet to be made by Trinidad's prime minister, Dr Eric Williams, the Caribbean may before long be dotted with tiny former colonial territories, many of them feeling, no doubt with some justice, that they could manage well enough on their own if only they could be given just one massive financial send-off.

THE BOOKIES' BOOM

By June 1961 the crop of betting offices in Great Britain since the 1960 Betting and Gaming Act was 8,802 and the number of bookmakers' permits current was 9,944. Scotland was nearly twice as well supplied with betting offices as England; this may be because postal cash betting was legal in Scotland before 1960, and illicit betting may have been commoner in Scotland, so that experienced bookmakers were ready to open shop as soon as the Act came into force.

Betting Offices

Towns with less than 2,500 population per betting office

MILK MARKETING

Small Change

THE Thorold committee's report on the remuneration of milk distributors is a distinctly placid document. It does not unduly worry itself with the thought that Britain's liquid milk prices are almost the highest in Europe. The chief adjustments it recommends concern the payment of allowances at specific points in the distributive process, which might make minor improvements in economy and efficiency. The report favours the continuation of government control (through the milk marketing boards) over the first-hand selling price of all milk, over distributive margins, and over the retail price of pasteurised milk (which means some 70 per cent of the total liquid supply). It recommends decontrol of the retail prices of quality grades of milk, including the high butter fat, homogenised and sterilised varieties, and another look at the prospect for general decontrol of retail prices in five years' time. But it shies away from the recommendation that many people had expected—that, even while prices to farmers remain fixed, there should be freer competition in the distributive process lower down. The committee has been impressed by the steady concentration of milk distribution into a smaller number of hands: it does not believe that decontrol would lead dairies to compete in cutting retail prices and improving retailing efficiency. Some people would say that the control itself has helped to breed this trend towards monopoly, and find it inconsistent that the trend should now be cited as a reason for continuing control.

Perhaps the committee's most pertinent suggestion is that more milk should move directly from the farms to the retailer; it complains that under the existing system of allowances there is little incentive to by-pass the depot. The committee wants to see a fixed over-all margin for all dairymen, and gradually to end the allowance to the small man who cannot do his own processing or pasteurising. This prospect has brought the most anguished protest from the dairymen's national association. But, in general, not enough milk churns are rattled by this report.

BALKANS

Nerves

BALKAN nerves are easily set on edge. Recently, for instance, references in Skoplje and Belgrade to the "Macedonian minority" in northern Greece have produced lively reactions in Athens, where it

is held that no such minority in fact exists. Macedonia had seemed in danger of losing its status as the classic hot potato of Balkan politics. Greco-Jugoslav relations have improved steadily in recent years; and whenever some local enthusiast in Skoplje has sounded off about his brethren in Greek Macedonia, he has been heavily sat upon by Belgrade. Last month, however, the official Jugoslav spokesmen seemed to back up the latest references in Skoplje to Greece's "Macedonian minority." Naturally enough the Greeks took offence.

Greece's reaction seems to have been sharpened by a feeling that the Balkan situation as a whole had been unsettled by Albania's open breach with the Soviet block, and that Belgrade's resuscitation of the Macedonian question might have something to do with a general reappraisal of its Balkan—and even Soviet—relations. There is no other evidence to back this supposition, but the Greeks, under constant pressure from Moscow to loosen their Nato ties, are understandably nervous.

Meanwhile the Albanians, in spite of increasing economic links with China and an abundance of morale-boosting messages from Peking, show signs of a hankering for friends nearer home. This week the official party paper said Albania would like to establish diplomatic relations with any western country willing to do so. Feelers have already been put out for the establishment of a legation in Vienna (Albania already has formal relations with Austria); and after Christmas Tirana suddenly agreed to repatriate some 600 Greeks who had been carried away as hostages by the communists during the civil war. This unexpected gesture may well find a response in Athens, where the need for a new look at Greece's relations with Albania was already widely felt.

TRISTAN DA CUNHA

Scientists' Sortie

BEREFT of its human population, lava-spouting Tristan da Cunha offers an unusual study both in the habits of volcanoes and in those of birds and beasts when left to their own devices. The challenge has been taken up by a scientific expedition of twelve men, who are being sent to the island next week by the Royal Society, assisted by the World Wild Life Fund. Tristan's volcano, though small, is of exceptional interest in that it is now alive and growing after being deemed extinct for nearly 4,000 years. Thus much may be learned about it that is hidden from students of bigger, but less persevering, volcanoes elsewhere.

While the scientists, splendidly detached, declare that they have no human interests, their findings may well be important to people who have to live in other volcanic regions. They are also bound to affect the Colonial Office's ideas about whether Tristan da Cunha could or should be resettled. There is, besides, a humane interest in what kind of animal farm those herds of cattle and sheep and the donkeys, cats and hens that the islanders had to abandon have concerted with the wilder creatures. That the island's black rats should not become its bosses will be one of the expedition's several animal cares.

LETTERS

Iran

SIR—In an article entitled "Gift for Dr Amini," which appeared in your issue of December 2nd, you state that Dr Amini has been given "a royal gift" in the form of a decree from HM the Shah to carry out a specific six point programme . . . "that protects him from the opposition's demand for elections and a parliament."

It is important to bear in mind that in view of the opposition of the National Front and all responsible citizens of Iran it has now been conceded that no such *farman* or decree has actually been issued by HM the Shah personally. The document you had in mind appears to be only a transcript of the Shah's statements as prepared and signed by Mr Hirad, the Shah's private secretary.

HM the Shah is under oath to maintain and uphold the provisions of the Iranian constitution according to which no authority except parliament can enact laws. Thus neither the transcript of the Shah's verbal statements nor even an authentic *farman* can authorise the government to legislate or to violate the constitution in any other way. To do so would be tantamount to destroying the constitutional monarchy of Iran and any minister or ministers responsible for such violations should, of necessity, face the full consequences of their action. It is the sincere hope of the National Front that in such constitutional matters a greater sense of responsibility will be displayed by all concerned.

As for the motive behind the so-called decree you state "the decision to govern by decree is based on a conviction, long held by Dr Amini, that Persia is not ready for full democracy."

Dr Amini, if you recall, posed during his campaign against the government of Dr Eqbal and Dr Sharif-Emami as the champion of free elections and full democracy. Now he would seem guilty of either misleading the people or of resorting to outright opportunism. Dr Amini, when he first came to power, tried to govern with some public support and thus tried to avoid an open clash with the National Front. However, failing to hold elections within the period of time stipulated in the constitution, and after banning the July demonstration of the National Front, he has been inclined to seek only the support of certain ruling cliques and has tried to rule by decree.

Your correspondent's observation that ". . . Senior officials, including the Prime Minister, have tended more and more to link the name of the front with the outlawed Communist Tudeh Party" goes a long way to show the sort of antiquated and unfair methods of suppression that the government is using against its opposition. To associate a national movement which is supported by the overwhelming majority of the Iranians with communism is a claim that the communists themselves dare not make in their wildest dreams. But extravagant as the charge may be, it is not likely to cover up Dr Amini's unpopularity. So long as the people oppose him, his government rests on shaky foundations, and no royal gift—of a white elephant or anything else—can help him.—Yours faithfully, KARIM SANJABI

Chairman, Executive Committee,
Teheran The National Front of Iran

London Buses

SIR—"London Transport seems already to be letting it be known, through the usual backdoor route of the Labour Correspondents, that it is itching to pay higher wages in order to be able to employ still more busmen to operate still more of its less economic routes." (*The Economist*, December 23rd.) May I comment?

1. London Transport has already made an offer to the Transport & General

Workers' Union of a "scarcity allowance" for bus drivers, the shortage of whom is much greater than that of conductors. This information was released to the press in an official statement which was widely published, and can scarcely be described as a "backdoor method."

2. Despite overtime working by the crews, London's bus services at the present time are not at full strength owing to a continuing shortage of operating staff and London Transport is doing all it can to make good this shortage so that the proper number of buses required to carry the traffic can be operated. The main impact of this shortage is on the profitable and heavily used major bus routes, particularly those operating from the north-western and south-western suburbs up to Town. It is wrong, therefore, to suggest that in London Transport's efforts to attract more staff it is doing so merely to operate "still more of its less economic routes."—Yours faithfully,

R. M. ROBBINS
Chief Public Relations Officer,
London Transport Executive
London, SW1

[If the "main impact of this shortage" is on the heavily-used and most profitable routes, why on earth does not London Transport transfer staff to them, from its admittedly unprofitable routes? This is the whole point on which criticism of it rests.]

Brave Old World

SIR—In your issue of January 6th you appear to have come down solidly in favour of those who believe in the now popular African slogan, the god-given right to one man, one vote. Though when the Almighty made this pronouncement is not clear, and the fact that the gospels seem to be slanted in quite the opposite direction causes little concern to those who believe in this creed!

The Utopia to which your correspondents look forward appears to be a world dominated by majorities both on a national and, as far as the United Nations is concerned, on an international basis. In other words, in any country the majority race or tribe has the right to impose its will and the majority decision in the UN must always prevail. Such a world would see Britain reduced to the status of a small off-shore island of Europe and the white nations of the world permanently subservient to the coloured. This may satisfy some of our liberal thinking "do-gooders," but many of us are sufficiently old-fashioned to believe that this country still has a major role to play in world affairs.

The real danger ahead is not that of a world divided as today between East and West with the South (Africa and South America) uncommitted, but a world divided strictly between white and coloured. This trend is already evident, indeed the common market represents a getting together of the whites; should, in future, China emerge as the leader of the "true democracies," then there will be a clear division between white and coloured which would present the world with one of the greatest dangers it has ever had to face. Only two organisations can bridge this gap: the Commonwealth and the United Nations. If it can face the stresses and strains of the next few years, the Commonwealth may very well succeed. The United Nations now seems to be acting, however unwittingly, as the vehicle for pushing the Afro-Asian nations into the communist camp. Aggressions against Goa may be followed by "anti-colonial" moves against Kuwait, west New Guinea and British Honduras. The stationing of UN observers in Northern Rhodesia could be followed by UN troops and pressure to "liberate" the country from the Federal Government.

This could be followed by similar action against Angola and Mozambique—then, who knows, Panama may have to be "liberated" from American "tyranny" and the negroes in the United States encouraged to set up their own state, as only then could they be regarded as first class citizens. By this time the European ex-colonial powers will have been so weakened that they will be fit for "true democracy" and the internationalists will at least have achieved their aim.

Who then will have "unwittingly played the Communist game"?—Yours faithfully,

House of Commons PATRICK WALL

Moving the Cash

SIR—The considerable increase in highly organised robbery of very large sums of money in transit from central banks to large business organisations has very properly given rise to correspondence in the press.

The skill and audacity with which these crimes have been organised, and the success of many of the attempts, make it plain that these same qualities must be matched by engineering and technical skill of the first order if this outbreak of lawlessness is to be halted. The larger the size of our major industrial organisations the larger the sums involved, and therefore the larger the possible coup. The problem is therefore likely to be a growing one and will not diminish. Thus far the only counter-measures that have received much public attention have been limited to a not very profitable public debate on the wisdom or otherwise of arming bank guards in charge of such consignments.

Since large sums in transit are always covered by insurance, and apart from the inconvenience to customers it is the insurance companies that are the real losers, I write to suggest that there already exists in the insurance world a parallel set-up providing a pattern that might well be adapted to cover the transit of money.

As is well known, the major insurance companies have for many years operated jointly the Salvage Corps, a private brigade of trained men with the very sensible objective of salvaging goods from warehouses and factories that have caught fire. This body of men has in the course of the years saved the insurance companies many millions of pounds in claims. Surely it would be a relatively simple matter for the leading insurance companies, who are having to meet these heavy claims for robbery, to get together and organise a security delivery service, not only staffed by top quality and highly trained uniformed staff but operating specially designed armoured (but not necessarily armed) vehicles. Far too much money is being conveyed in vans not intended for that purpose and inviting trouble. Even the security vans in operation are often out of date in design. Moreover, the police are short of manpower and chronically overworked.

The initial cost of such a service to the insurance companies would obviously be considerable, but the ultimate saving might well be immense. Moreover, the greater peace of mind enjoyed by both bank executives and their clients might even persuade the latter cheerfully to share part of the burden by way of a slightly higher premium.

—Yours faithfully, A. DOUGLAS MILLARD
London, WC1

Blackbirds

SIR—You speak (January 6th, p. 14) of "Africa's non-white states." Will you not give a lead to the disuse of this silly but nowadays prevalent adjective? Black, brown, copper, coffee, beige, yellow are colours; and when there is need to distinguish persons, races or nations whose pigmentation differs noticeably from that of the Nordic minority, what is wrong with the adjective *coloured*?

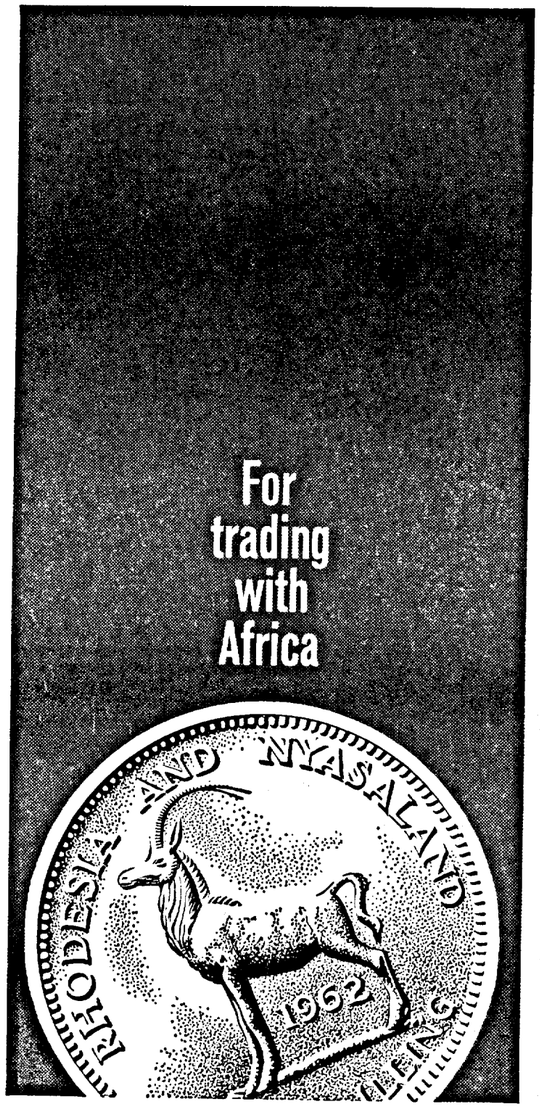
I myself happen to be a pale, uneven pink, like most Englishmen. I am resigned to being called white (like Montrachet or café au lait). But if I were a blackamoor or a Kanaka, with a skin to be proud of, I should think it condescending, if not positively disparaging, to be described as *non*-something else.—Yours faithfully,

London, SW3 JOHN CARTER

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries
Out next week:

AUSTRIA



Although there is some pause in expansion in certain capital goods sectors, the Review suggests that increasing consumer demand will carry the boom well into 1962.

However, this will be accompanied by a continuing rise in prices. Against the background of a non-expansionary budget, the Review discusses the current proposals to stop the wage-price spiral—particularly the recent Raab-Olah agreement.

Austria's application for an economic arrangement with the Common Market is appraised in the light of the Russian demarche.

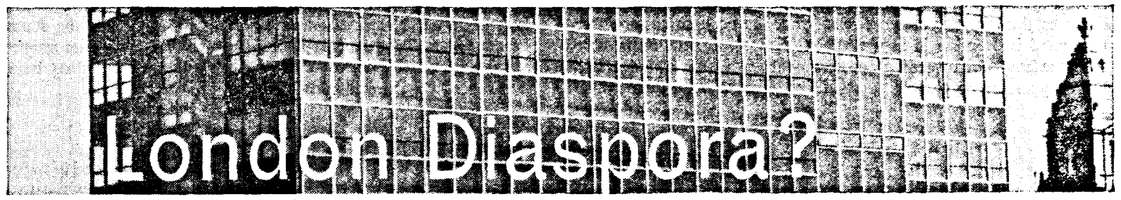
World beater!

TRIDENT—WELL IN THE LEAD

Hawker Siddeley Aviation's multi-million-pound investment, the 600-mile-an-hour de Havilland Trident with Rolls-Royce Spey by-pass jet engines, has started flight trials well within programme date. The Trident is Britain's high-speed medium-capacity short-haul airliner, in production for service with British European Airways by 1964, and, designed to suit world airlines which carry sixty per cent of all passenger traffic. Far ahead by reason of successful world-wide experience with the Comet, the Trident will introduce entirely new standards of speed, comfort, spaciousness, regularity and economy.



HAWKER SIDDELEY GROUP

18 St. James's Square, London, S.W.1.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

London Diaspora?

FROM OUR SPECIAL CORRESPONDENT

LONDON'S office population, in the central area alone, has been growing by some 15,000 a year for the past decade. It is probable (and the railways intend to provide the commuter capacity) that it will rise even more rapidly in the next ten years. The proposals for limiting this growth, issued on Monday by the Town and Country Planning Association, deal with a familiar problem. The London County Council produced a plan for decentralisation in 1957, and the TCPA itself held a conference in 1958 at which the practical advantages of dispersal, experienced by over thirty big firms that had taken the plunge, were proclaimed abroad. These were the days of persuasion. Not surprisingly, boom and congestion have gone on unabated.

There are two issues that need to be faced now. The first is London's immediate problem. The Minister of Housing and Local Government, Dr Charles Hill, is confronted by the accumulated troubles of the years. But the second issue is even more important. Membership of the common market will initially increase the drift of employment and population to the south-east, and may eventually establish a radically different structure of British industrial and commercial life. The primary need in Government planning is to settle the future of London and the south-east region: to reconsider what size and pattern of commercial concentration are both necessary and tolerable for a successful juncture with Europe. This is Dr Hill's opportunity. The best place for him to start is in the centre of London.

No plan for central London can succeed without a sure grasp of what central London's business is. This is not always apparent in the higher reaches of idealised planning. Even the TCPA's argument is vitiated, to some extent, by the absence of estimates or even good guesses on how much of London's office growth has been healthy and necessary, in the sense of expanding the city's commercial function, and how much has really been superfluous and unhealthy. Subjective judgments have made "prestige" a dirty word: among political planners it sometimes seems that any new office block making a profit (that is, adding to the "property boom") is morally wrong. The office boom began in the early nineteen-fifties with the delayed reconstruction of the bombed City. Its chief stimulus has not, at least until recently, been profit from speculative building but the direct dependence of industry upon government: this is particularly so of the newer, science-based industries whose development has often been by Government contract.

These, and other, firms have moved in or increased their establishments as, in the nineteenth century, the railway companies moved in to Westminster to lobby Parliament. At the same time, the practice of commercial and marketing operations has altered to meet the new needs of the times. It is more essential than ever to be in close and constant touch with the credit and banking facilities of the City, to have advertising agencies on tap and to send directors and salesmen to the one airport in the country that actually connects with the outside world. One suspects that a good many flagging firms, which have not yet geared up to sell in Europe or to survive European competition, ought to be moving into London now. Any plans to control office employment must therefore be as flexible as possible. They should not bar incomers (which quotas and development certificates would tend to do). Neither should they encourage firms that have settled down lock, stock and barrel to sit pretty for ever.

The factors that make an emigration out of London tolerable and even desirable depend on communications and costs. Part of an office operation can do very well in a new town, or in the suburbs (although some are becoming congested themselves) or even in Lancashire and Newcastle if it can be sure of a direct-dial telephone service, a telex service (how many public telex offices are there in Britain?) and good air and rail communications for senior staff. It cannot be said that this necessary infrastructure for dispersal exists at present. It should, however, be becoming apparent to managements that the shortage and soaring cost of good office staff in central London can be substantially reduced by moving out to suburbs (where wages are affected by the lower price of housing and transport) or to new towns, particularly to those where industrial growth has lagged behind population increases and the spread of secondary education. But it is still easier, and still not too expensive, for firms to carry on a number of inessential operations in London itself.

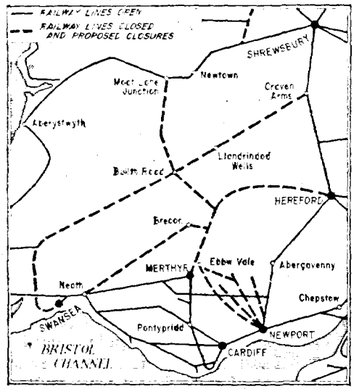
The public cost of failing to put the squeeze on these inessential operations is increasingly obvious. There is a cultural cost which London has begun to pay, sometimes architecturally but even more important in the deadness of its heart when the evening rush-hour has left Cannon Street and Waterloo. (This is already true of Birmingham as well.) The financial cost is also clearer, even to local councils rubbing their hands at the thought of bigger rateable values. The Greater London Council will be confronted with a massive roads programme: the subsidy for the Victoria tube, if it is built, may have to cover the full capital cost of £55 million. The best argument for redeveloping British Transport Commission sites near the railway terminals is that this will help to reduce congestion elsewhere. But before plumping for vast public projects the demand for office space can be thinned out.

THE TCPA wants to advance on two fronts. First, it wants planning controls: these include the abolition of owners' rights to increase the cubic content of offices on rebuilding, stricter zoning of new development, the withdrawal on expiry of temporary consents for the use of residential buildings as offices, and the consideration of a quota system. Secondly, it wants to stimulate decentralisation by the Parisian system of a levy on new floor space (repayment being made to owners demolishing buildings) and by charging a special central London payroll tax on every employee above the first twenty.

The most flexible and discriminating instrument is obviously the payroll tax, which could operate reasonably well with a zoning

policy both inside London and (to avoid office sprawl) on the periphery. The same effect might be secured from a special rate on offices, paid to the Greater London Council. It seems preferable to set a system of this kind in operation before imposing rigid upper limits to the quantity of office space that the economy as a whole may need in London in future years. At present it is impossible to gauge how much weeding-out firms will do of their own accord: but they should be given a powerful incentive to bend their minds to the task. It ought not to be entirely negative. Dr Hill's comprehensive planning (if and when it comes into being) must give a high priority to office development in the new towns and potential counter-nuclei to London (Southampton-Portsmouth, Swindon, Northampton, Norwich) on which the coherent life of the south-east region will depend. If Britain does enter the common market he should be able to count on some "prestige" building being transferred to Düsseldorf at least.

Railway Patriots



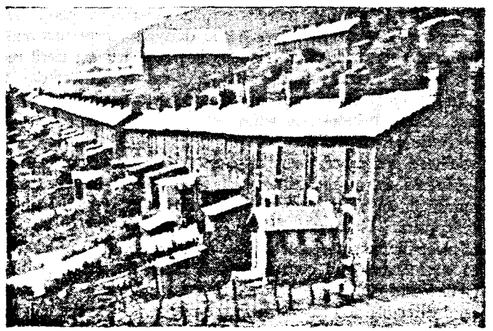
FROM OUR SPECIAL CORRESPONDENT

BRITISH RAILWAYS was intended, from its inception, to be self-supporting and a public service—and these two states are inherently incompatible. Even before what are darkly called "Beeching's cuts" aroused the ire of distressed branches of the National Union of Railwaymen, the British Transport Commission came down, with some hesitancy, on the side of profitability. The hesitancy may help to explain why BR has been losing £100 million a year. While the main lines, the "crack" trains, are still comfortably profitable (although now threatened in the north by cheap air flights), on the rural branch lines never before has so much had to be provided for so few.

The ending of this rural bliss has antagonised placid Englishmen who, despite being taxpayers, are primarily Titfield-Thunderbolt worshippers and Bluebell line preservers. Even more incensed are those touchy patriots the Scots, Welsh, and Cornishmen. No more trains north of Perth or west of Exeter is a cultural and national, rather than a mere economic issue.

Now, when in many places the ratio of bus to train users is as high as 14 to one, the public service aspect of rural branch lines is at an end. Their remaining traffic is in railwaymen on free passes or reduced fares, die-hard anti-motorists and the very few whose convenience is actually better suited by rail than by road. These last passengers think, almost to a man, that British Railways does not take them into account. But where even the introduction of three-car or single diesel units will not sufficiently reduce operating expenses, or where (as in some Scottish lines) it would be cheaper to give away motor-scooters to all the passengers than to run a train, closures have to come.

All Wales has now been alerted by the plan to close four lines connecting the county town of Brecon, in mid-Wales, with the outside world in the shape of Neath, Newport, Hereford and Moat Lane Junction (for Shrewsbury). This concerns passenger traffic; much of the system will remain in use for freight (for which the permanent way standards are lower and therefore cheaper, and which is not subject to the rigid scheduling which makes passengers so costly a cargo). The objectors naturally claim that a tightening up of British Railways' efficiency would remove the losses on these lines. They err: on a strictly comparable system, between Oxford and Fairford, a case study showed that the existing passengers would either have to persuade three times as many people to use the trains rather than their cars, or they would have had to pay three times as much in fares themselves if the line was to remain open.



IN the Western Region, British Railways lose no less than £7 million a year on passenger services, in spite of the high profitability of such trains as *The Bristolian, The Capitals United Express* from London to Cardiff and Swansea, and the twice-daily Pullman to Bristol. Of this, £287,000 can be saved by the discontinuation of the Brecon passenger services and, in addition, an average of £76,000 a year will not have to be spent on capital improvements: together with savings already made on past closures and restrictions, well over £500,000 a year will be subtracted from the red side of the balance-sheet.

Nor is this the end of the intended saving: as the map shows, several other lines in Wales are due for "examination for profitability," and it is likely that most of them will eventually be abandoned, leaving what is known as the "inverted E" of main lines linking Chester and Newport, Chester and the West Coast, Shrewsbury and Aberystwyth, and Newport and Swansea, in keeping with BR's avowed intention of confining its services to links between large towns.

In fact, most of the objections so far voiced have had nothing to do with the usefulness or otherwise of the four lines affected, but have been confined to pleas to "save Wales from English vandalism," "cut Dr Beeching's salary," or "buy the lines for Wales and show British Railways how profitable a branch line can be." (British Railways, as it turns out, would be more than happy to sell the lines to anybody who offered them a fair price; but they point out that the running of 160 miles of track with paid staff is less likely to be profitable in private hands than is the Bluebell line's four-and-a-half miles of amateur maintenance.)

Since the lines will continue to carry freight, staff redundancy will not be as severe as the objectors would like to make out; and all those affected will be offered other BR jobs. Nor does the National Union of Railwaymen harbour nearly as much resentment over the proposals as Welsh pride hopes it does: at the last closure, in Monmouthshire, a threatened strike turned out to be nothing but the groanings of a few.

Nowhere does there seem to be a reasonable argument for continuing the services (of which there have always been too many in Wales). If precedent were needed, it might be recalled that a similar outcry greeted the closing of the Merthyr, Tredegar and Abergavenny line in 1958, and that when this newspaper wrote to the chief objectors asking whether their dire forebodings of ruin and humiliation had been proved true, they replied—precisely nothing.

South Wales valley: end of the line?

BOOKS

One Man's China

The Wall Has Two Sides: *A Portrait of China Today*
By Felix Greene.
Cape. 416 pages. 25s.

THE truth, as the Japanese film *Rashomon* pointed out some years ago, is not the same through different eyes. Through the eyes of Mr Felix Greene, the truth about China approximates to the truth as Field-Marshal Montgomery saw it but differs wildly from that of some other observers. A passage from Mr Greene's book, quoted on the wrapper, is characteristic:

> There is a prevailing opinion in the West that the Chinese are being threatened, brain-washed, or bludgeoned into work of national industrialisation; that a small group of power-hungry Communist leaders have fastened themselves on to an unwilling and resentful population and are driving them fiercely forward against their will. I believe this picture is the very opposite of the truth.

Mr Greene's picture of the new China is of a people carried forward by a spontaneous surge of enthusiasm, of a leadership taken by surprise by the scale of the commune movement (if we are to accept the opinion he expresses on page 118. Mao Tse-tung himself did not really intend the communes to start when they did), of a country in which everything, from justice and hygiene to education and technology, is constantly improving. His work is the outcome of painstaking observation and leg-work and of research that is accurate within its limitations. He is able, not merely to quote official Chinese communist statistics, but also to describe, in precise detail, just how a rural commune is organised and what kind of technical innovations emerge out of the ideas boxes of assembly works.

There is clearly a good deal of valuable information in "The Wall Has Two Sides," and Mr Greene's China cannot be dismissed out of hand as a benign hallucination. It deserves, as well as needs, critical examination. It is hard to conceive that he is writing about the same country as, for instance, the French journalist Lucien Bodard in his "La Chine du Cauchemar" (*Gallimard*, 1961). M. Bodard, who was born in China, wound up many years of Far Eastern reporting for *France-Soir* with a long stay in China in 1959-60, his second visit in recent years. M. Bodard's China lives up to his title. It is a nightmare world of human beings driven up to and beyond the limits of endurance by a peasant emperor determined to prove that no miracle is impossible if undertaken by the people or in its name. When the absurdity of turning peasants into scientists and professors into manual labourers wrought its own failure, Mao was pushed aside, and the fanatical ideologist, Liu Shao-chi, took over the Stalinist dragooning of the Chinese masses.

Can M. Bodard and Mr Greene really be writing about the same things? Although M. Bodard is a less accurate writer than Mr Greene and does not name, much less classify, his documentary material, his thesis is supported by the great mass of communist sources and further confirmed with every new twist of the Sino-Soviet dispute.

Mr Greene does not mention M. Bodard's work and may not, indeed, be aware of it; it does not appear to have been published in English. He cannot, however, be absolved of the charge of leaning on authors who have taken the same view of the Chinese revolution as he has, such as Professor C. P. Fitzgerald (one of the most distinguished), and of tending to ignore evidence that appears to weaken his case. Thus he minimises the importance of the hundreds of thousands of Chinese refugees in Hongkong (on page 337); similarly, his bibliography does not mention Suzanne Labin's impressive collation of refugee evidence in "The Anthill: the human condition in communist China" (*Stevens*, 1960).

To be fair to Mr Greene, one ought to measure his work by his own yardstick. As a British writer living in the United States, he has rightly been dismayed by the sterility of public policy on China and by the consequences of feeding the American public with propaganda in the enforced absence of real reporting about the most populous country in the world. He has set about to remedy the deficiency, by seeing for himself and by presenting the Chinese communist side of the story, which is almost totally ignored in the United States. (His book includes an ingenious chapter entitled "The Chinese Case" which lists, with deadly effect, the grievances of China—before and after 1949—against the West.)

The task was worth undertaking, but Mr Greene has fallen into the pitfall of accomplishing it too well. Even if one concedes that Americans have been fed on a surfeit of horror stories from continental China and exhorted to see Mao as absolute evil and Chiang Kai-shek as absolute good, was it necessary for Mr Greene to gloss over the early rigours of the communist regime or leave uncorrected the grotesque picture of Formosa which he puts into his chapter on "The Chinese Case"? If the American reading public needs such corrective treatment, the same is not necessarily true of the British.

No Need for Keynes?

United States Fiscal Policy, 1945-1959.
By A. E. Holmans.
Oxford University Press. 356 pages. 40s.

EXPERIENCE has taught reviewers to approach PhD theses with apprehension. Too often their subject has been chosen chiefly because it has never been done before rather than because the author has any particular feeling for it. This book is very different. Its subject is certainly one that deserves extensive study and Mr Holmans is passionately interested in it. He has written a fascinating account of the growing influence of economic facts upon American fiscal policy during the first fifteen postwar years.

It appears from the preface that the author paid his first visit to the United States in 1957. He is to be congratulated on having been able to absorb all the documentation and to soak himself so thoroughly in the period from a distance. There are not many moments when someone who had been close to the sources of policy all the time could have added significantly to what he has to say.

Mr Holmans starts by reminding us that, when the war ended, there was little confidence in Europe that the United States would be able to prevent another slump or to confine it to moderate depth or duration. He concludes that "the conduct of general economic policy . . . belied the worst of the fears." But because the conditions experienced were so different from what was expected "the effectiveness of American counter-cyclical policy on really unfavourable terrain remained untested," and he still has his fingers crossed about the future. He feels that a more flexible fiscal policy than was achieved in the 1940s and 1950s—and a more flexible one than is often politically possible in democracies—will be needed to maintain adequate control over aggregate demand if the inflationary tendencies, which he noticed when he finished his book more than a year ago, continue.

The rest of the world may no longer catch pneumonia when the United States catches a cold, but we still have to button up our overcoats if we are to avoid a nasty bout of 'flu. And it is therefore Mr Holmans's detailed account of how each tax bill finally passed and his comments at the end of each annual, or biennial, chapter that give his book such value.

If he finds himself sometimes falling back upon luck as the most important ingredient of the success (comparative though it may have been) in achieving stability in any particular year, he is only saying what many observers on the spot have found themselves reduced to saying. And he recognises that the greatest piece of luck of all is the existence of the "automatic stabilisers," none of which was introduced with any idea of their stabilising effect in mind. On the revenue side both the progressive income-tax and the corporation profits tax, on the expenditure side the agricultural subsidies

and unemployment compensation, have the effect of increasing the budgetary surplus in good years and the deficit in bad ones. In most years no conscious counter-cyclical policy is felt to be needed, which is probably fortunate in a country where Keynes is still a naughty word in business circles.

Mr Holmans may underestimate the importance to other countries of the American experience with the progressive income-tax. He explains that "the length of the time lags which American institutions introduce into discretionary changes in fiscal policy" makes automatic stabilisers so important to the United States. But he does not comment on, though he notices, the fact that during the months in which a tax bill is being debated new statistical evidence will provide quite a new estimate of where the economy is going. On those occasions the bill passed in July may be, with the approval of the Administration, very different from what it would have been in April.

It is hard to imagine any American economist, committed over the years to one party or one point of view, writing as objective an account of these years as Mr Holmans has written. That is not to say that he does not show his political sympathies. But he is fair in his assessment of the performance of the Republican Administrations even if he would rather like to be unfair and to judge President Eisenhower and his advisers on their words alone—a trap that it is easy to fall into.

Mr Holmans knows how to tell a story and how to put a book together. He has style and he has humour. He is a new writer on economics of great promise.

Last Years of the Ancien Régime

Europe in the Eighteenth Century, 1713-1783

By M. S. Anderson.

Longmans. 375 pages. 25s.

THE first volume in this new "General History of Europe" series is also the first extended work by an English hand on eighteenth century Europe for a quarter of a century. It is an impressively scholarly work, closely argued, with enough interpretative ideas to keep serious students in dispute.

Curiously, Mr Anderson has been halted in 1783: perhaps this is to allow his successor room for manoeuvre in the demolition of the *ancien régime*. He will find the charges well laid and the fuses smouldering. While insisting that, in some respects, this age was "closer to the thirteenth than to the nineteenth century," Mr Anderson shows how precarious the structure was becoming. The weight of administrative changes and fiscal demands superimposed on a rigid social system was crushing. Politically, the *ancien régime* destroyed itself. Social forces did nothing to underpin it: growing towns and increasing trade were catalysts long before the factory system appeared. Ideas, not through their own worth, but by their liberating effect, destroyed the justification for those very changes which the rulers were making in the name of efficiency and progress. Ingeniously, Mr Anderson shows how the growth of knowledge about the extra-European world was crucial in loosening traditional loyalties. The New World provided both the noble savage and the successful revolution, while the reception of Confucius, rather than the more mystical Lao Tzu, from China eased the discrediting of revealed religion. But it is difficult to accept his view that the Roman Catholic kings, in destroying the Jesuits, removed the one instrument that might have reconciled the new with the old beliefs. It is doubtful if even this resilient corps, despite its dextrous accommodations, could have complied with Diderot's cry of *élargissez Dieu*.

It is a great advantage that the author of this volume is an expert in eastern European history. But it is possible that it has led him into an exaggerated emphasis on the position of Russia in European affairs. His insistence that the rise of Russia to the status of a great power "is the most important single fact in the history of the period" seems strained. The evidence presented suggests that it was the collapse of the powers on Europe's eastern "frontier"—Sweden, Poland and Turkey—rather than the gathering strength of the Czarinas that drew Russia into Europe in this period. Certainly, the powers continued to act as though they could manipulate and ally with the new power to their own advantage and the discomfort of their rivals.

It is dangerously easy to criticise the form and balance of a textbook. This is an excellent analytical treatment of a very complicated society in the process of dimly perceived dissolution. But it is likely to be very tough going for those "university students, sixth forms and the general reader" at whom it is avowedly aimed. At a time when few historians attempt narrative and fewer succeed, we must be grateful that as much as a third of the book is devoted to chronology. But even here, when we are allowed out of the laboratory for a breath of fresh air, we are always being summoned to make some significant observation of a relevant kind about the events before us There is not a single human being in the whole work who seems ever to have been alive, let alone been capable of laughing or weeping. Not many readers coming to the eighteenth century through this avenue are likely to hear the bells ringing out for the capture of Quebec in the bald statement that it was the "result of the most remarkable amphibious operation in British history," or to be led to the scene where Maurice de Saxe, the victor of Fontenoy, was crowned with laurels at the Opera, from a mere recital of the great bastard's battles. The chapters on culture are excusably slight; but it is in line with the pervading gloom that not a single German rococo architect is mentioned. This is, indeed, an eighteenth century in which Balthazar Neumann or Johann Michael Fischer might never have existed. Illustrations would have helped to distract attention from the paucity of the maps, which do nothing to justify the publishers' claim that the volumes will contain "plenty of sketch maps."

One must hope that student and general reader alike, after the rigours of this austerely nourishing diet, will allow themselves an occasional *bonne bouche* from Sir Harold Nicolson's jolly "The Age of Reason."

French Colonial Ideas

Assimilation and Association in French Colonial Theory, 1890-1914

By Raymond F. Betts.

Columbia University Press. 237 pages. 37s. 6d.

THE French were almost as absent-minded as the British in acquiring their overseas possessions and only in the adolescence of their second empire did they start to debate the problems of imperial rule. In the nineteenth century their belief in the brotherhood of man and esteem for the Roman tradition made them want to mould Asians and Africans in their own image. Their policy was to assimilate: subject peoples were to be culturally and administratively absorbed. Then, at the turn of the century, they began to have second thoughts. The exciting new scientific theories of evolution and natural selection stressed the fundamental differences in races. At the same time the French observed that the British in India were getting, by unbrotherly indirect rule, a better return for their money than was France in Indochina. So "assimilation" was dropped in favour of "association," whereby native institutions were encouraged in moderation, the better to secure native interest in making the territories pay.

Professor Betts's elegant essay traces all the nuances of thought by which French colonial theorists arrived at this mundane conclusion, only to be outpaced by its brilliant practical exponents—Gallieni and Lyautey. Once such men got the bit between their teeth practice raced ahead of theory. Still, the breathless analysts had occasionally their flashes of insight. Even in its finest hour—as evinced by Lyautey in Morocco—"association" was recognised by some of them as merely a built-in version of the older protectorate idea. And others thought they saw annexation as its only logical end. "The genus is annexation, the protectorate is the species" wrote the unflinching Louis Brunel.

There was never of course a perfectly clear departure from the assimilative trend. As Professor Betts remarks: "the ghost of assimilation lingered on." Judged now, this haunting appears to have been a benign one since the Frenchman's most enduring and enviable colonial achievement has lain, after all, in transporting his language and culture to so many distant lands.

Strangely enough, the fact that France had no real need of *colonies de peuplement* blinded the writers of the period under survey to the danger of indigenous people clashing with European settlers. This problem, the only acute one in today's devolution of empire, is not mentioned in the body of this book, though a note suggests that August Billiard, for one, was aware of it. Not the least useful parts of this neatly turned out study are its good notes and bibliography. These form quite a treasury of reference for those who can pay the price.

What About the Workers?

The Worker in an Affluent Society

By Ferdynand Zweig.

Heinemann. 285 pages. 25s.

TWENTY years of a welfare state and full employment have, as is well known, wrought profound changes in the life of the British working classes. Detailed documentation of what precisely is taking place is still lacking, however, and in the absence of hard fact a great many myths about the new working class have sprung up. The more extreme left in particular, which has long equated middle class prosperity with the obstacles to socialism, has tended to interpret the rising living standards as evidence that the true working class was disappearing and was being replaced by a new class of status seekers.

In his fascinating new study Dr Zweig goes a long way to demonstrate the superficiality of this interpretation. His book is based on a series of interviews with some hundreds of workers and their wives in five large firms, including Dunlop and Mullard. Dr Zweig is a shrewd observer. Although some sociologists might quarrel with his very personal approach, which is based more on intuition than scientific method, there can be no doubt about the value of his findings. He has covered considerable ground, from attitudes to the job to changing family habits, and it is on this latter subject that he provides his most fruitful arguments.

Dr Zweig describes how higher living standards, along with better living conditions, earlier marriage and the ubiquitous television set, are producing a much more self-centred type of working class family life. The traditional working class father, whose word was law but who was seldom at home to exercise his rights, is fast disappearing. Instead, a greater sense of partnership is developing (Dr Zweig calls this the "feminisation of the man"), whereby the responsibility for the home and the upbringing of the children are shared equally. The author then goes on to argue the new point that this constitutes an actual withdrawal of the British working man back into the family nucleus. It has already meant that there is less working class gregariousness and rather more social isolation of the workers from their mates. The old solidarities of extended family, street and trade union branch have been replaced by a more intense married life and a set of impersonal relationships built up around television and other mass media. Together with this, Dr Zweig notes what he calls a marked "revolution of rising expectations." The majority of the men that Dr Zweig interviewed were very ambitious both for themselves and for their children. Thus, he argues, as the worker of today is cut off from his old feelings of class solidarity, he tends to express these ambitions in terms of a desire to obtain better conditions for himself, rather than for society as a whole.

All this has, of course, quite a bearing on the problems now besetting the Labour party. For if Dr Zweig is right, and the indications are that he is, then the question for the Labour party is not how to provide itself with a new "middle class" image. It is instead how to become a new focus for the individual ambitions of the many men who described themselves to Dr Zweig as "working class but not poor." An astute Labour politician who reads this book might well decide that the clue lies in the field of education, for forty per cent of the men interviewed were non-readers, and this at a time when education has become the very stepladder to success. Dr Zweig's advice would probably be to make "working class—but well educated" the slogan for the sixties.

Quot . . . Tot . . .

Does Pornography Matter?

Edited by C. H. Rolph.

Routledge. 119 pages. 18s.

IF pornography is defined as the publication of writings, drawings and photographs deliberately and solely designed to stimulate sexual excitement, little is probably produced in this country and access to it is difficult. There is plenty of what can be called semipornography, where the author's pornographic intention is mixed with other ones. But of serious writing about pornography there has been very little since D. H. Lawrence's essay in 1930.

The six authors of this book (Mr C. H. Rolph's contribution is mainly a summing up) have managed to produce a splendid clash of disharmony. In a historical survey, Lord Birkett does not attempt to answer the question asked in the book's title and contents himself with saying that in all civilised countries the state suppresses pornography and punishes it. Sir Herbert Read joins the two churchmen in viewing it with horror and as a symptom of a sick society. Dr Soper has extreme opinions; he believes that pornography has strong links with alcoholism, makes an important contribution to delinquency and is a prime cause of prostitution. Dom Denys Rutledge thunders too, but he will find few to agree with him that both his own essay and family planning literature are pornographic.

Among these heated polemics it is a relief to find Mr Gorer's and Dr Gosling's cooler and more thoughtful appraisals. The pornographer's customers are, as they point out, immature, and indulgence in such reading is a solitary and private occupation. Mr Gorer doubts if this indulgence is any more likely to lead to crime than is a regular diet of murder stories. But even he would try to keep pornography away from the young. The young, however, will often go to considerable trouble to find erotic excitement in the most unlikely places—even in the Bible.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

In Step with Congress

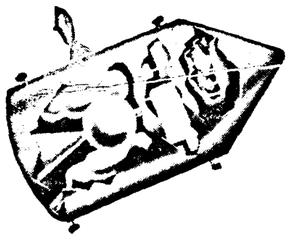
WASHINGTON, DC

PRESIDENT KENNEDY seemed determined to play the cool American in his message on the State of the Union. He pressed no panic buttons and raised no false hopes. World tensions will continue and there can be neither brinkmanship nor appeasement. Neutrals can be nuisances but Mr Khrushchev has his troubles too. The President's proposals for dealing with domestic ills, with unemployment and with the economic growth which is impressive by every yardstick except that of what needs to be done, were pitched in the same modest key, even though they were intended "to fulfil the world's hope by fulfilling our own faith." Job training and tax incentives, rehabilitation rather than relief, medical insurance and improved schools: what disciple of Lloyd George would not approve? Here, it seemed, was a young man with both feet on the ground, sensitively aware that he had to deal with a conservative Congress and correspondingly determined to have no truck with Utopias.

After eight years of President Eisenhower many Americans were in an adventurous mood when they elected Mr Kennedy. Many more of them are now, if his tremendously high popularity rating is a criterion. These Americans look on him as a man who might blaze a trail to new frontiers, not as a cool political calculator. Even though he insisted that he and Congress were not rivals for power but partners for progress, some well-wishers persist in regarding him as a Saint George for the congressional dragon—and the maiden he is to rescue first is a Negro. She and her fellows should be guaranteed, at once and effectively, the right to full equality with their white fellow citizens in school, in employment, in housing, in travel, in voting.

To the President's liberal supporters—their spokesman is the left-wing group, Americans for Democratic Action—his failure to press Congress on this issue has been the great disappointment of the past year and is likely to be the great disappointment of the present one. They believe that he should use his overwhelming popularity as a lever to force through Congress what both he and the public want. The ADA does not accept the excuse that the President has had to hold back on civil rights for the sake of other measures, that if he alienated the Southerners in Congress by insisting on pro-Negro legislation, then he would lose what is in any case his very precarious majority on matters which are more urgent. The liberals argue that the Southerners will vote for Bills they are interested in, whatever the President does about civil rights.

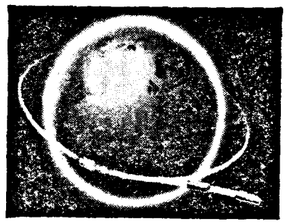
Whether in fact the President provides the "dynamic, crusading leadership" which the ADA demands may depend on the Legislature's attitude at this session towards the new trade policy which he wishes to adopt, to meet the challenge of the common market in Europe and "to build in partnership a new trading community in which all free nations may gain from the productive energy of free competitive effort." From what happens to this Bill Mr Kennedy may decide either that he really can work with Congress or that he must fight it as Presidents Truman and Roosevelt had to do. But the problem goes deeper than Congress's attitude to this or that presidential proposal.



Mr Kennedy said in his message that the country's urban areas containing three-quarters of the population should be represented at the Cabinet table; meanwhile they are under-represented in Congress. Its outlook is rural, southern and conservative and its leaders are ageing men who have achieved positions of dominance through seniority rather than merit. By and large Congress favours spending for defence (but not necessarily for civil defence) and for little else. Its predominant mood is suspicion: of civil rights for Negroes, of lower tariffs, of the United Nations and of outlays on public welfare, including health and education. Mr Kennedy was elected President by the people but the people as a whole did not elect the chairmen of the congressional committees who block the road to progress.

Liberals ask if it is too much to expect the richest country in the world to educate its children properly and the chairman of the Federal Reserve Board asks why the richest society on earth cannot get its income and expenditure into balance. There is, of course, nothing to stop Mr Kennedy playing the man in the middle. But if he did so he would risk being accused of abetting the deferring of decisive change until the twenty-first century, in a world that may not wait so long. It is highly unlikely that Mr Kennedy's temperament really prompts him to try waiting so long either. If his cool patience gains him little there may presently be fireworks both at home and abroad.

Meanwhile, "the one unchangeable certainty is that nothing is certain or unchangeable." The goal of American foreign policy—"a peaceful world of free and independent states," with the state "the servant of the citizen and not his master"—may not be reached even in the President's lifetime, let alone in his term of office. But the search for it will be "the greatest adventure of the century."



"I Don't Know If It's Solid Enough To Hold Both Of Us"

Out of This World

"Is our policy that space is for peaceful purposes fooling anyone but the American public?"—Mr Trevor Gardner, former Assistant Secretary of the Air Force.

WASHINGTON, DC

THE United States has plans to put Americans into space as well as into nuclear shelters. The two projects are not wholly unconnected for military survival as well as national pride are regarded as being at stake in the celestial olympics that the Russians began last spring. President Kennedy says America is going into space because "whatever mankind must undertake, free men must fully share." The Vice President, Mr Lyndon Johnson, who is chairman of the Space Council, says that Americans in space will contribute to their country's military strength as well as being symbols of its determination to maintain world leadership. The new Everest has to be tackled not just because it is there but because the Russians are already on its slopes.

Probably some time this month the United States will attempt to put a man into orbit around the earth, as the Russians did for the first time last April, and during the year it will send a space probe near Venus and try to land a seismograph on the moon. All this and other heavenly satellites, too, will cost American taxpayers about two billion dollars. This year the Russians may send an unmanned spacecraft round the moon and back to earth. Neither the United States nor, it is believed, Russia has a rocket powerful enough to get men on to the moon just yet but the United States will try to land three Americans there before the end of the nineteen-sixties, at a cost estimated at between twenty and forty billion dollars.

The United States has launched 64 satellites to Russia's 15 and has 33 now in orbit to Russia's three. Russia's rockets are more powerful, because they were built to carry heavy warheads which then went out of fashion with the invention of far more awful but also far lighter ones. Thus what was actually a military blunder gave the Russians their lead in space; the United States hopes to shorten or eliminate this by putting a fully fuelled rocket and a spacecraft containing three men into orbit separately, and then joining them together in outer space to provide power for the trip to the moon. The first generation of American satellites and space probes were modestly called Pioneers, Explorers and Discoverers but the sky is soon to contain Mercuries and Apollos launched by mighty Atlases and Saturns.

Perhaps only a touchy ancient Greek would call this *hubris*. But some eminent American scientists do feel that these rather feverish and extremely costly preparations for sending men into space disregard the fact that there is very little that a man can do in space, or on the moon, which cannot be done better and more cheaply by instruments. The extreme vulnerability of the human frame when plucked from its own narrow environment adds immensely to the already formidable difficulties of space exploration; if manned space flights are insisted on when ingenious robots are available, the only really honest defence of them is that *one day they may have great military significance.*

Meanwhile, the risks involved are very considerable. The deceptively sleek-looking rocket is in fact still in a crudely belching early stage that will undoubtedly appear almost unbelievably clumsy to future space explorers. Essentially, a man is riding a missile: a missile, moreover, that was designed initially to carry a warhead, not a human being. It would probably be much safer to be shot from a cannon. Fire and explosion before the thing takes off remain possibilities. When successfully launched the spacecraft may go into orbit and refuse to come out of it again, in which case the unlucky astronaut might circle the earth until he died; or the craft could go on irretrievably into space forever. There are risks from radiation, from meteorites and from the effects of weightlessness. It is not yet known how three Americans on the moon will be able to launch themselves back to earth when hundreds of highly skilled helpers will have been needed to send them from earth to moon; or how they and their craft are to survive re-entry of the earth's atmosphere at four hundred miles a minute and a consequent estimated temperature of six thousand degrees Fahrenheit, which is about half the temperature on the surface of the sun.

It has been found necessary to cite other arguments for a costly space programme besides the American determination to wipe out the humiliation of trailing the Russians into orbit. Dr Edward Welsh, the executive secretary of the Space Council, claims that the programme will make the gross national product grow faster. Mr Lyndon Johnson says that shooting men to the moon provides much-needed jobs for thousands of Americans who remain on the ground. This argument seems to regard space as a sort of gigantic common market into which surplus American production can be poured, without incurring the headaches of tariffs or competitive imports; New England and New Orleans are already benefiting from space spending. Mr Webb, the head of the National Aeronautics and Space Administration, describes the exploration of space as the cutting edge of a whole new technology that is advancing at a meteoric pace.

The United States will experiment this year with two types of communications satellites able to receive and transmit messages—about thirty of them placed 500 miles above the earth, or three 22,300 miles high. Mr Adlai Stevenson has raised the sobering prospect of the United Nations being televised to all the world and Mr David Sarnoff, the chairman of the Radio Corporation of America, forecasts even more sombrely that a billion people may watch soap-opera simultaneously. The communications satellites are expected to be privately owned, under government supervision. In all, some five thousand companies and research organisations are now engaged in space business. There are big financial risks, for the government is the sole buyer of the huge booster rockets, taller than the Statue of Liberty, which will be scrapped if someone invents a better engine or a new fuel. Certainly not all of the companies will succeed. But the survivors hope to be the leaders of a vast new industry and meantime the rewards are big as well as the risks. Most of the work is military but the civilian contracts let by NASA often run to many millions of dollars.

Some of the Germans working on space rockets in the United States have explained that when they were making buzz-bombs at Peenemunde they were thinking primarily not about destroying London but about going to the moon, which they now seem to regard as an ideal place to fire missiles from. Some Americans also think about the moon in terms of its possible use as a military

Persuaders in the Open

FROM A CORRESPONDENT IN WASHINGTON, DC

WHEN the Ways and Means Committee of the House of Representatives closed public hearings last year on President Kennedy's proposals for new tax legislation, it had heard two hundred and fifty witnesses in a month. To the innocent, this might seem to be a heartening example of spontaneous public participation in a democracy. But it is hard to imagine two hundred and fifty citizens in odd corners of the country suddenly deciding to fly to Washington and help Congress to write a tax Bill. In fact, the phenomenon showed the Washington lobbying industry in one of its finest hours. Lobbies—organised pressure groups—knew what these people represented, marshalled them, arranged their appearances, coached them and perhaps wrote their testimony for them. The same thing happens whenever Congress considers any major issue; this week when the legislators came back to work, the lobbyists were waiting for them.

The constitutional "right to petition" is guaranteed in Article I of the Bill of Rights. The distinction between a citizen petitioner and a lobbyist is that for the lobbyist petitioning and organising petitions is a living. As a professional, he is subject to regulation by law but it is an extremely gentle restraint. The Regulation of Lobbying Act of 1946 is intended less to regulate than to provide information for Congress and the public on who lobbyists are, what interests they represent, where their money comes from and where it goes. The Act applies to both organisations and individuals "principally" engaged in seeking to influence legislation. They must register and file financial and other reports with Congress; failure to do so may mean five years in prison, a fine of up to $5,000 or even both. But there are almost no provisions for enforcing the law and those who comply do so either because their consciences prick or because they are afraid of being caught.

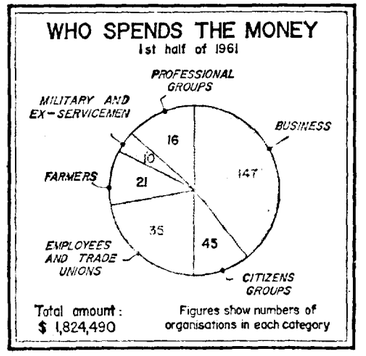
There are at any time between two hundred and fifty and three hundred organisations registered as lobbyists, and about five hundred individuals, some of whom work for these groups and some of whom operate independently. The organisations acknowledge spending about $4 million a year. They cover just about every kind of legislation that interests Americans; the alphabetical leader is the Active-Retired Lighthouse Service Employees Association. But most of the work and spending is done by a few big groups; the United States Chamber of Commerce speaks for business, the American Federation of Labour and Congress of Industrial Organisations for the trade unions, the American Farm Bureau Federation for farmers and the American Legion for ex-servicemen. Every day of every year they work at lobbying. Major but transitory issues bring new groups to the fore. The American Medical Association shot to the top of the list in the first half of 1961 when it spent $147 million mainly to oppose bringing medical care for the aged under the social security system. Congressional lobbies are usually either conservative or liberal and members of each group work with other like-minded ones. The Farm Bureau, for example, helps the AMA to fight "socialised medicine." The AFL-CIO devotes great energies and resources to promoting the medical care Bill.

TOP TEN SPENDERS
($ thousand)

	First half, 1960	First half, 1961
American Medical Association	46·1	146·9
AFL-CIO	62·9	68·0
American Farm Bureau Federation	50·3	57·5
American Legion	33·5*	55·4
American Trucking Associations	38·1	49·2
National Farmers Union	37·3	45·4
National Education Association	77·9	39·2
U S Savings and Loan League	35·1	38·1
American Steamship Committee on Conference Studies	21·8*	35·7
Internat. Assn. of Machinists, District Lodge 44 (AFL-CIO)	39·3	35·2

*First quarter only.

As well as registered practitioners of the art, there are those who do not register because they insist that they are not "principally" so engaged. There are free-lances and fly-by-nights. There are lawyers who feel that they are only doing legal work for clients and could not by any conceivable cost-accounting be proven to be principally lobbyists. Only congressional lobbyists (and foreign agents) need to register. The executive departments and regulatory agencies swarm with people seeking to influence policy or to win favourable decisions or material rewards such as billion-dollar contracts. The White House lobbies in Congress. Any embassy is in a sense a lobby in Washington for its national interest. But by definition, a lobbyist works on Congress; the word is derived from the lobby of the House of Commons where members meet constituents.



Countless millions are spent on legislative lobbying—far more, certainly, than is shown in the reports—but the amount invested in direct corruption can be counted in pennies. Much goes into campaign contributions and political assistance to Senators and Representatives. The lion's share, apart from staff salaries, goes on what may be called "educational activity." The main business of the lobbies in Washington is to use all means of communication to mould public opinion and to bring this to bear on Congress. If a lobby can convince members of Congress that they will be committing political suicide by opposing the lobby's aims, so much the better. On big, long-fought issues, opposing pressures tend to cancel each other out.

Lobbyists spend a great deal of energy doing favours for Congressmen and making themselves useful—not, of course, out of sheer goodness of heart. The lobbyist finds a sponsor in Congress for the Bill which he is promoting. He finds witnesses to support it in committee hearings, usually writes their testimony and coaches them on how to answer questions. He may plant friendly queries with helpful members of the committee. He tries to assist the staff of the committee in the preparation of a report on the Bill which will give it a good send-off on the floor. When the Bill reaches this stage, the lobbyist may write speeches for members who favour it and brief them for the debate. He counts votes, tries to stiffen the backbones of wavering and brings pressure from their districts to bear on opponents of the Bill.

Apart from these chores, which are known as "legislative engineering," the lobbyist tries to lighten the financial burdens which afflict almost all members of Congress. He may contrive to make a direct contribution to election expenses or may help a Congressman to secure one from a wealthy disciple of the lobbyist's cause. He may arrange a speaking engagement for which the Representative or Senator will receive a fee. To keep on friendly terms with key legislators, the lobbyists take them on fishing trips, find them tickets for a sold-out Broadway show or do some of the string-pulling which saves the legislator trouble. This means that the lobbyist must know the members, their political problems, constituencies, inclinations and weaknesses.

Each lobby has its eye on its opposition, which helps to keep everyone honest. Lobbyists are also under pressure to be discreet. A representative of an oil company did himself no good last year when he undertook to find guests, at $100 a head, for a Democratic party dinner and used the name of the Secretary of the Interior (whose department regulates many aspects of the petroleum industry). A lobbyist for natural gas interests got into real trouble a few years ago when he offered a Senator a campaign contribution which the Senator chose to feel was meant to influence his vote on a Bill involving federal regulation of natural gas.

Today, the main function of lobbying is making a case. The lobbyist is more likely to be running a large office resembling a publishing house than to be pouring bourbon whiskey down a legislator's throat and sliding large sums in currency into his pockets. Lobbying, once covert and corrupt, has not outlived that reputation. But today it is open and generally honest, and anxious to be recognised as a respectable and even essential part of the legislative process—which it is.

Continued from page 126

base and they think about space as a satisfactorily vast parking place for super-weapons. In the United Nations, the United States and Russia have agreed in principle that it is desirable to keep outer space at peace even if all hell breaks loose on earth. It is proposed to eschew territorial claims to celestial bodies and to register all space launchings with the United Nations. The United States fears that the Russians may use their big rockets to claim the moon and to put atom bombs into orbit. The Russians meanwhile have objected to American satellites in " their " skies, because a satellite can photograph at regular intervals those portions of the planet that pass 300 miles beneath it and then toss the film safely back to earth. It is not yet possible to shoot down satellites from the ground, but it may be possible to cause an explosion close enough to the satellite to destroy it or, still more ingeniously, to put a small artificial sandstorm in orbit to fog the film. The United Nations Committee on Peaceful Uses of Outer Space (28 countries including Morocco, Chad, Sierra Leone and Mongolia) will evidently have some pretty problems set before it.

It is with an eye to such prospects that the United States Air Force is engaged in a polite but indubitable tug of war with NASA for ultimate control of the space programme. How the struggle will go may be indicated by a recent statement by Dr Welsh that it is the policy of the United States that activities in space be devoted to peaceful purposes but that these include maintaining peace with the rockets and satellites from the Department of Defence.

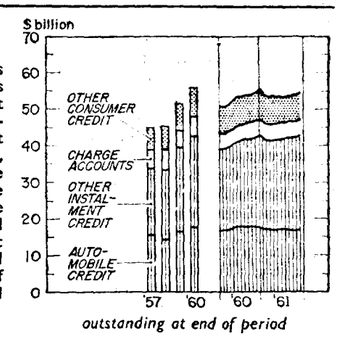
Defence Repackaged

THE Budget which President Kennedy is to present to Congress next week will provide for total expenditures of over $90 billion in the fiscal year beginning on July 1st. Of this, $50 billion at least will be for defence, some $3 billion more than in the current year (itself running above 1961 by about the same amount) and the largest military Budget in peacetime history. It is thought that it would have been even larger if the President had not insisted on reductions at the last minute ; this suggests that in the final analysis his irresistible resolve that the country should have all it needed for defence, whatever the cost, may have given way slightly to his immovable determination that his total Budget should be balanced.

Nevertheless, according to the experts outside as well as inside the Department of Defence, this military Budget is the most efficient and fundamentally the most economical in recent years. Its size is explained by the growing threat to the national security, by the need to compensate for past deficiencies and by the new Administration's desire for more flexibility and variety in its military operations. Plans are now being made for five years ahead, not on a year-to-year basis as in the past ; this long-term thinking is one of the civilian business methods which have been introduced into the department by its new Secretary, Mr McNamara. Just as important, and more offensive to established military tradition, is his " package programming " approach to this year's Budget. In the past a total sum has been fixed by the White House and divided up between the three services, which each then allotted its share to various projects almost as it saw fit—and not necessarily as was in the best interest of the national defence as a whole. This year the complete military undertaking has been separated into seven functional sections—strategic retaliatory forces, continental defence, sealift and airlift, research etc.—and only after it was decided what was needed in each package were the contents divided up among the services. Thus the rivalries between the services no longer obscure the comparative effectiveness and cost of competing weapons ; nor should unnecessary duplication or unfortunate omissions be able to go unnoticed.

All this involved months of negotiation, at the end of which several hundred decisions had still to be made by Mr McNamara personally, both to settle inter-service conflicts and to get the total down to a figure which he was willing to present to the President. Mr McNamara's was apparently the " anti-anti-missile-missile " ruling under which the Nike-Zeus is not yet to go beyond the experimental stage in spite of its recent successes ; he has also stopped the scheme for Minutemen to roam the country on railway wagons and has put all these missiles into fixed concrete pits. Civilian control is now clearly established at the Pentagon but even Mr McNamara still has to subdue Congress.

Wall Street under Fire



NEW YORK

THE highly critical view taken of the American Stock Exchange —the second largest in the country—in a report to the Securities and Exchange Commission, which was made public last week, was not entirely a surprise to Wall Street. But the report's extensive documentation of abuses and the evidence of widespread laxity came as a shock which is speeding up far-reaching reforms. The report was only the first in a series which the SEC plans to publish in the course of its investigation, which began last spring, and Wall Street fears that further attacks and individual prosecutions may be on the way. But Washington seems to be sticking to the principle of self-regulation, and it is probable that the opening cannonade, which did not make any specific recommendations for changes in the way the exchange is run, was designed to spur the financial community to reform itself. This is already being done. Just this week the ASE endorsed the call of its own Levy committee for a new constitution and for the election next month of ten new members to the governing board ; this will reduce the power of the insiders who have dominated the exchange in the past. Other steps to expand its permanent staff and strengthen their authority to deal with the transgressions of members are considered inevitable.

The key point made in the SEC report is the dominant part played in the exchange by the specialists—members who act both on their own account to maintain an orderly market in certain securities and as brokers on behalf of others. The ASE has always been run by its specialists and because they are interested in a growing volume of trading they have emphasised the desirability of securing the listing of new securities and neglected the proper supervision of the market. This attitude prompted Mr McCormick, the president of the ASE who resigned recently under fire, to devote most of his energies to expanding the list of securities quoted on the exchange and thwarted efforts to give adequate policing powers to the permanent staff. As a result abuses—such as the distribution of unregistered shares and profits made from advance

CONSUMER CREDIT

The excellent business done by motor car dealers in November brought with it the biggest increase in instalment debt for eighteen months, when allowance is made for seasonal factors. The figures for November are calculated on a revised basis which shows that instalment credit declined during the first part of 1961 by less than had been estimated earlier.

knowledge of listings—were allowed to flourish in an astonishingly open fashion. Some officials of the SEC think that the specialist can be dispensed with, but they will probably be satisfied if restrictions are placed on his activities. It is not simply a matter of adopting new regulations but of seeing to it that those already adopted are enforced; this calls for ridding the exchange of its present leaders.

Although the investigation has been centred on the ASE, which is regarded as the adventurous market, the club-like atmosphere which the SEC criticised there is also characteristic, to some extent, of the staid and well-policed New York Stock Exchange. Some of the activities of the NYSE's specialists may also be questioned, as well as its practice of not announcing the transgressions of its members (or their punishment) unless these lead to expulsion from the exchange. The SEC report puts so much stress on the public nature of the security markets today that even the NYSE would be ill-advised not to re-examine the safeguards which it has set up to protect the public.

Stop Press

FROM A CORRESPONDENT IN LOS ANGELES

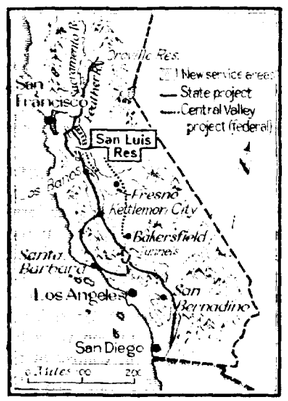
LAST week, with startling suddenness, the number of daily newspapers serving the Los Angeles metropolitan area—the second largest in the country—was cut from four to only two. The *Los Angeles Mirror*, an evening paper, has been consolidated with the morning *Los Angeles Times*, which is also owned by the Times-Mirror Company; and the morning *Los Angeles Examiner* has been absorbed into the evening *Los Angeles Herald-Express*, whose name is being changed to the *Herald-Examiner*. These last two papers belonged to the Hearst Publishing Company. The reason for the holocaust is one familiar the world over: in recent years costs have been rising faster than revenues. In the case of the Hearst publication the news is not very surprising, since the *Examiner*, with a daily circulation of 381,037, has long limped behind the *Times*, with its 548,702 readers. Moreover, the Hearst publishing empire as a whole has fallen on difficult times—it reported substantial losses in both 1959 and 1960—and the lopping off of uneconomic operations is logical. The 58-year-old *Examiner* clearly belonged in this category.

The disappearance of the *Mirror*, after thirteen years of publication, was more unexpected. Its circulation stood at 301,882, compared with 393,215 for the *Herald-Express*, and it was the personal creation of Mr Norman Chandler, the president of the Times-Mirror Company. This is a flourishing and profitable firm which also owns a broadcasting station in Los Angeles, operates a large commercial printing plant, publishes paperback books and, through its investment division, manages property holdings and a portfolio of securities. But for some time, it now appears, the *Mirror* had been a serious drain upon the earnings of this highly diversified operation. No such cloud overshadows the surviving *Times*, which is one of the most successful daily newspapers in the country, comparable in size and amount of advertising to such other giants as the *New York Times* and the *Chicago Tribune*.

Both the *Los Angeles Times* and the new *Herald-Examiner* seem certain to benefit from the disappearance of their rivals. This aspect of the situation and the simultaneous deaths of two newspapers in the first week of a new year have not escaped the notice of the Department of Justice and of Congress. Mr Celler, the chairman of the House Judiciary Committee, has already announced plans to investigate the closing of the two papers to find out if this represented concerted action between the two publishers, in violation of the anti-trust laws. He is also disturbed by the fact that a city of 2.5 million people, with a metropolitan area of almost 7 million, has been reduced to one morning and one evening paper. It is certainly something of an anomaly that this should have happened in fast-growing Los Angeles. But if the Chandlers and the Hearsts say that they cannot make a go of four papers, it is difficult to see where new local competition may come from. The city is also served by two national newspapers—the *Wall Street Journal* and the *Christian Science Monitor*—and the *New York Times* is to begin printing a western edition in Los Angeles later this year. There are also a number of flourishing daily papers in the mushrooming suburbs.

Rockefeller Still in the Ring

BEFORE Christmas a story was circulated in New York that Mr Rockefeller, the Republican Governor, had decided to retire from public life, partly because of the loss of his son and partly, the story suggested, because his decision to seek a divorce would be a heavy handicap, not so much in his campaign for re-election this year as in his drive for the Republican presidential nomination in 1964—his real goal. Mr Rockefeller hotly denied the whole tale and the programme which he laid before the State Legislature in Albany last week is clear evidence that the Governor is still very much in politics. His message dealt mainly with increases in social welfare: a higher minimum wage for workers in the state, more medical benefits for the elderly, higher workmen's compensation, more vigorous war on racial discrimination and more aid for housing and education. When the Governor sat down there was very little clapping from the Republicans who control the Legislature; later a spokesman for business said sourly that the programme would add $147 million a year to the cost of doing business in New York.



Such social benefits ought, however, to endear the Governor to low-income groups, such as the Negroes and Puerto Ricans in New York City, and they might even secure for him the endorsement—or the benevolent neutrality—of the local Liberal party; this would increase Mr Rockefeller's chances of being re-elected by a margin large enough to impress the professional Republican politicians who have so big a say in the choice of the party's presidential nominee. Four years ago Mr Rockefeller defeated Mr Harriman by a margin of more than half a million votes but the going may not be so easy this year. Then the control of the Democratic party by political bosses who made no secret of their disregard for public opinion worked for Mr Rockefeller. Now Mr Wagner, the Democratic Mayor of New York, has made the issue his own. He was re-elected in November in the teeth of the opposition of the old-line Democratic leaders and at his inauguration for a third term he pledged himself to give the city better government and the party better leadership.

The Kennedy forces, who need to carry New York for the President in 1964 and would like to cut Mr Rockefeller down to size this year, have given the Mayor an important tool for his house-cleaning: control of the federal patronage in the state. He has set about his task with uncharacteristic vigour; the Democratic boss of Brooklyn, Mr Sharkey, has lost his place as majority leader of the City Council and there are plans for dislodging him and two other bosses at next summer's party elections. A real difficulty, however, is to find a Democrat to take on Mr Rockefeller next November. Mr Stratton, an able young Congressman from Schenectady who is being gerrymandered out of his seat by the Republicans, has entered the lists but he is not well known. Conceivably Mr Wagner himself may be drafted for the job of giant-killer, although he would probably prefer to stand for the Senate and although no Mayor of New York City has ever been able to keep out of political trouble sufficiently well to be elected Governor.

Trial by Water

THE greatest achievement of Mr Brown, the Democratic Governor of California, whose hold on his office is to be challenged this year by Mr Nixon, is the $2 billion Feather River project, which is to bring water from the northern part of the state to the thirsty South. Mr Brown must have been greatly relieved last week when the federal government decided not to throw a spanner in these good works. The possibility of this arose because both the state and the existing federal Central Valley project needed a reservoir near Los Banos and had decided to share the only suitable site. Under the agreement signed last week the state is to have just over half of the storage capacity and pay just over half of the $430 million which the San Luis Reservoir will cost. The real question, however, has been whether the federal government would insist upon restricting the use of all the water which will pass through the reservoir to farmers with 160 acres or less of land. This has been standard federal practice for sixty years; the aim is to prevent speculation in land and to encourage small family-sized farms.

In California, however, many farms are ten or more times larger than this and it is argued that small units are not feasible economically. If the 160-acre restriction had been applied to the state's water which will pass through the San Luis Reservoir on its way to farms further south and to fast-growing cities such as Los Angeles, San Diego and San Bernardino, Governor Brown's whole scheme would have been endangered. But on the advice of his department's solicitor and with the concurrence of the Department of Justice, Mr Udall, the Secretary of the Interior, has decided that the 160-acre restriction will apply only to 500,000 acres of farmland between Los Banos and Kettleman City, which will be served by federal water from the reservoir; it will not apply to the 2 million acres to be irrigated by the state water project. This decision may, however, be challenged in the courts and in Congress by advocates of the 160-acre restriction.

They ought to be mollified, however, by another accompanying decision of Mr Udall's which shows that the Administration is by no means abandoning the 160-acre rule. Several very large land-owners in the 1.5 million-acre Kern and Kings area, between Fresno and Bakersfield, who receive water from the federal Central Valley project, have been counting for years on being able to evade the restriction by offering to pay their share of the project's cost in less than the usual time. Last week Mr Udall reversed an earlier ruling of the Bureau of Reclamation and declared that if they wish to go on receiving supplies of federal water they will have to sell their excess acres.

Who Controls the Banks?

NEW YORK

THE main function of the Comptroller of the Currency is to supervise the 4,500 nationally chartered banks in the United States and this function is bringing him into direct conflict with the Department of Justice under the Kennedy Administration. Mr Ray Gidney, a hold-over from the Eisenhower regime, resigned in November after a dispute over how bank mergers should be dealt with; now his successor, Mr James Saxon, a Democrat who would not accept the post until he was assured that he would have complete independence in carrying out his duties, is involved in an irate argument with the department over its anti-trust actions against national banks. Three banks in New Jersey have been accused of conspiring to fix uniform charges for their banking services and seven Dallas banks have been ordered to appear with their records before a grand jury in Texas, presumably to determine whether they also have conspired to fix fees and lending charges. Mr Saxon criticises the Department of Justice for not telling him about these actions beforehand and goes on to question their propriety. He has disclosed that the anti-trust division has asked him for information on a number of other banks and reports that he is unwilling to co-operate unless he is consulted about what the department is doing.

The department, professing to be mystified by Mr Saxon's attitude, insists that the investigation—and prosecution—of alleged violations of the anti-trust Acts by the banking system are entirely its affair and have nothing to do with the Comptroller. The lawyers, who feel that they have evidence that banks are conspiring to fix interest rates at artificially high levels, want the courts to decide whether they are right. Uniform lending rates and service fees—for checking accounts, managing trust funds, acting as a custodian—are common in many communities, although there are variations between regions. Bankers, however, contend that this uniformity is the result, not of price fixing, but of competition and that this has the effect of forcing interest rates down. Nevertheless, commercial banks in many rural areas pay much less on savings accounts than do those in major cities and the department suspects that price fixing is taking place.

If the anti-trust division can prove that conspiracy exists it may seek to challenge the major commercial banks on their uniform prime lending rate—the minimum rate charged on loans to the biggest and most credit-worthy corporate customers. This rate has been attacked in Congress as being an administered price adhered to by all the major lenders and the department would have political backing for any attempt to abolish it. Mr Saxon has the wholehearted support of the banking community in his counter-attack on what he terms the "anti-trust zealots" for engaging in fishing expeditions. Moreover, he may be justified in feeling affronted. But since the Comptroller's jurisdiction does not extend to the anti-trust field, Mr Saxon's independence is clearly still limited even though he may be free to exercise his regulatory authority over banks more effectively than was his predecessor.

SHORTER NOTES

A completely automatic underground train went into operation in New York City with the beginning of the new year, carrying passengers on the short "shuttle" between Grand Central and Pennsylvania stations; for the first six months it will also carry a completely idle driver. This was one of the provisions which the Transport Workers Union insisted upon in its new contract with the city transport authority. The contract, which avoided a city-wide strike on New Year's Day, also provides that there shall be no lay-offs during its two-year life.

* * *

The 10 per cent federal excise tax on gambling brought in $6,682,000 in the fiscal year which ended on June 30, 1961. Indiana ($959,000), Illinois ($834,000) and Kentucky ($765,000) brought in more than Nevada—supposedly the gamblers' paradise—where only $597,000 was collected.

The Year of the Hungry Tiger

FROM OUR CORRESPONDENT IN HONGKONG

In the last week of the Year of the Ox (1961), Peking admitted with awkward casualness that, for the first time since "liberation" 12 years ago, the National People's Congress had missed its annual democratic convocation and would not assemble until March in the current Year of the Tiger. This was hot news indeed, even if conservatively played down in the pages of the *People's Daily*. More significantly—and without any official mention—the full-dress party meeting which, by top directive in 1957, was written into the Mao constitution as an annual obligation was also quietly discarded.

Observers of the China scene in Hongkong—who, like Marie Corelli's ambivalent devil in "The Sorrows of Satan," must confine their scrutiny of paradise to gloomy keyhole squinting—saw more than coincidence in the revelation that, in that same week, Mr Li Fu-chun, the chairman of the state planning commission, went personally to Peking airport to greet a "mission of distinguished statistical experts." This rare protocol honour so underlined the importance of the visiting mission that it probably helps to explain the government's failure to unfurl the party's glorious banners at a dutiful People's Congress.

There seems to be no doubt that the party's planners are still having serious trouble with their figures. The wretched Li Fu-chun would have lost his job in any decadent capitalist society. His bureaucracy has clearly not yet recovered from the shock of discovering that the results of the second five-year plan and the blueprints for the third one (1963-67) were based on faked and wishful statistics, including particularly grotesque misrepresentations of grain production in 1959. Hence, one surmises, the prudent omission of any hard figures from all the party's proud proclamations of "the glorious and triumphant" leap backward to agriculture in the Year of the Ox. The Chinese, in fact, have never announced the targets for the past year, although Mr Po I-po, chairman of the state economic commission—another bungler whose head would have rolled under either a Kennedy or a Khrushchev—has assured the trusting faithful that most of these anonymous targets were reached or improved upon.

Presumably, China's planners have decided to enlist the services of some professional experts before they deluge the shaven heads of the parliamentarians, when the prorogued Congress reassembles in March, with a torrent of revised statistics and percentages and a flood of belated balances and estimates. It may well be that Comrade Li Fu-chun needs the moral support and sanction of an independent, authoritative cost-accounting check before he presents the blueprints for the next five-year plan—indiscreetly committed to a deadline of July, 1961, by Mr Chou En-lai at the beginning of the Year of the Ox.

It is a notable, even a romantic fact that the visiting statistical experts whom Comrade Li Fu-chun draped with chrysanthemum blossoms at the airport hail gaily from Hungary. This observation is not intended to question the development of mathematics as a science on the banks of the blue Danube, or even to suggest that statistical talent for party purposes is now deficient in Moscow. At a time when Peking is organising a joint-stock shipping company with that proud maritime power, Albania, preference in the search for external cost-accounting aid might well settle realistically in Budapest rather than in the Kremlin.

Despite—or because of—the absence of succulent statistics from the dry handouts of the Year of the Ox, it is a reasonable deduction that the Year of the Tiger will see no industrial leap forward. Traditionally, this year should be one of ferocious, bounding, roaring progress, with the tiger burning bright in the factory furnace instead of crouching low over the abacus or the adding machine. But until accurate estimates of the coming harvest, and even reasonable assessments of the last harvest, are available, tigerish leaps forward on the industrial front must remain reckless and ill-advised.

Overseas food purchases must, apparently, persist. Some agricultural authorities here predict that, assuming that the reports of natural calamities have not been grossly exaggerated, China cannot expect bumper harvests for another four years. Already China's grain import commitments through the Year of the Hungry Tiger and up to 1963 amount to approximately 10 million metric tons, which—as the Hungarian statisticians may well be now pointing out—can add only 40 calories to the estimated 1,900 calories a head which the teeming population consumes daily.

Irresponsibly, one is reminded of Comrade Hilaire Belloc's advice:

And mothers of large families (who claim to commonsense)
Will find a Tiger well repay the trouble and expense.

Anglo-German Interests

FROM OUR BONN CORRESPONDENT

Dr Adenauer was conspicuously at pains to please his British visitors this week. The Prime Minister and Lord Home had made it plain that they did not expect the Chancellor, who was 86 last week, to be cooling himself at Bonn airport after nine o'clock on a January night solely in order to greet them; but there Dr Adenauer was, a few minutes before ten, when the RAF Comet landed nearly half an hour late. Earlier that evening the Chancellor had invited British journalists to the Palais Schaumburg for a nice cup of tea, over which he told them, among other things, how highly he thought of the Foreign Secretary. It was Lord Home, the Chancellor enthused, to whom much of the credit should be given for a further extension of Anglo-German understanding: for Lord Home had the gift of being able to see and explain things clearly—" and if I may say so, gentlemen," the Chancellor added, grinning sagaciously, " that is a rare gift among British statesmen." Dr Adenauer's own efforts to engender a friendly atmosphere for the talks were reinforced—not altogether fortuitously—by many amiable newspaper variations on the theme of Britain's thickening ties with Germany and Europe. Pondering the discordant noises emitted by some British papers on the eve of the Prime Minister's departure for the Rhine, *Die Welt's* Bonn commentator remarked

reassuringly that such cheap anti-German sentiment was no longer taken seriously by serious politicians, "thanks chiefly to the British royal family, the British Government and Britain's leading politicians."

Dr Adenauer, who explains things more clearly than he can sometimes see them, told the British correspondents why he thought it proper that the Federal Republic should thus be in the mood to please the hesitant islanders—even to the point of being ready once again to help to reduce the worries caused them by having to find £70 million worth of marks a year to maintain their army on the Rhine. Flourishing a sheet of paper on which he had just jotted down the subjects he intended to raise in his private talk with the Prime Minister, Dr Adenauer said that the first consisted of the single word "unity." And so, in the event, Dr Adenauer spoke broadly next day. He did not touch upon the only issue that could be settled bilaterally—the problem of a German contribution to the upkeep of the Rhine Army—until he had reviewed recent Soviet moves which in his opinion clearly demonstrated that there was little hope for the time being of the West being able to achieve a satisfactory *détente* with the Soviet Union. His catalogue of significant misdemeanours included Moscow's recent warning to Denmark and Austria; its demand for the extradition of General Heusinger and, of course, the unaddressed and unsigned memorandum handed to the German ambassador on December 27th, in which it is pointed out how much the Federal Republic has to gain from quitting the Atlantic alliance. Dr Adenauer scarcely mentioned his deepening concern at the condition of France. Yet it was surely much in his mind while he spoke of the necessity for accelerating the economic and political unification of Europe, including Britain. And so eventually to the point that, in the circumstances, Germany was ready to reconsider its decision of 1958 that after three annual payments, each of £12 million, there would be no further German aid for the Rhine army.

MR MACMILLAN, who had brought along some simple face-saving proposals of his own, tried to pin the Chancellor down to a definite political decision; and he appears to have succeeded, more or less. In the wider talks that followed, arrangements were made to work out details for the substantial though indirect relief of Britain's Rhine army currency problem. The Anglo-German committee that is to be set up under ministerial guidance for the purpose of settling these details will begin its delicate task in Bonn on January 22nd. It should then soon be apparent how generously Dr Adenauer's Olympian political decision is going to be translated into tangible deeds by his ministers of defence and finance (neither of whom took part in the Bonn talks) and their several experts. At this lower level there are some strong advocates of parsimony. This year's federal defence budget, they point out, is already due to be so steeply increased as to make yet heavier taxation unavoidable. According to some Bundeswehr observers, the civilian "tail" of the British forces in Germany is grotesquely long and should be ruthlessly docked. At the ministries of economics and finance there are those who maintain that Britain could profitably cut its foreign spending on obsolete military bases elsewhere, and that British industry could, if it put its house in order, earn the required German currency by increasing its exports to Germany. The Prime Minister was ready to counter these arguments, citing the forthcoming White Paper on defence expenditure, the pay pause and the export drive as instances of the honest effort Britain was making to pull its weight.

The total figure of the promised relief of the British foreign exchange burden has yet to be finally determined in committee. There is good reason for believing that the Germans are ready to shoulder half—some £35 million a year, that is to say—for the next two years. According to the joint statement issued before Mr Macmillan returned to London on Tuesday night, a substantial part of it will derive from "the additional purchase of arms in the United Kingdom on a considerable scale." Other sources are likely to be found in leasing to the Bundeswehr training areas and storage facilities in Britain. The British negotiators would like the federal government to help pay the Rhine Army's "tail," which is composed largely of German civilians. Unhappily, the undignified argy-bargy is not altogether over and done with.

Indian Elections Are Different

FROM A CORRESPONDENT IN BOMBAY

Mr. Nehru

Dr. B. C. Roy

Mr. Krishna Menon

WITH general elections five weeks away, political debate, one might think, should be raging in India. It isn't. The campaign has been on for at least a year; political activity and interest are, by British standards, at fever pitch. But of the argument and assessment of policies expected in a European election campaign there is barely a sign.

The political struggle is real enough. But its parameters are different, and ideology is among the least of them. The determinants of Indian politics are three: the overwhelming position of the Congress party, which holds power at Delhi and in all the fifteen states; the tensions between the states and the centre, and among the individual states themselves; and still, unhappily, religion and caste. Congress is still far from being a political party in the European sense, and its unshaken grasp of the levers of power helps to prevent any such development. Formally it is dedicated to the socialist pattern of society; in practice, anyone who wants to get anything done is well advised to be on good terms with it, and that includes every business man anxious for a permit or licence.

The socialists in Congress thus have some strange bedfellows. A large part of the party's funds comes directly from big business. Some of the big firms have announced that they would simultaneously back their ideological fancy, the Swatantra party. This led Mr Nehru to declare indignantly that Congress would have no part of their tainted money. So far his party's treasurers have not seen their way to agree. The contradictions extend to individuals: the party was led to victory in last year's mid-term elections in Orissa by an energetic young business man, distinguished not only for his wealth but for his leftist views. In almost every state, Congress is riven by factions, whose feuds are fully reported. During months of such reports one barely recalls a mention of ideological differences. The struggle is one for office and its rewards.

Equally, desperation has led to some strange electoral groupings among the opposition parties. The rightist Swatantrites have been flirting with the Praja Socialists in various states, without success. In North Bombay, the two are electorally allied against Mr Krishna Menon (who, as a Congress candidate, nevertheless has the willing support of the Communists). In Punjab, there is a mutual non-aggression pact of all opposition parties, which thus extends not only from right to left, but also from the determinedly secularist to the determinedly religious (Hindu) Jan Sangh and (Sikh) Akali Dal—the last two being also by nature mutually hostile. the Swatantrites have only just failed to conclude an arrangement with a secessionist party already ideologically and electorally allied to the Communists.

Not only parliamentary but state assembly seats, too, are at stake next month. In each state the opposition parties are determined to prove they could better the state's position against its neighbours or the central government. Each wants public projects sited in its territory, and when Delhi is regrettably unable to announce fifteen such at a blow, there is further grist for opposition mills. Conversely, Congress leaders are quite ready to point out that the local pork barrel may be fuller if the rulers in state capitals and in Delhi are kith and kin.

Of two states, Madras and West Bengal, it has been said that the former acts as if it were separate from India, the latter as if it were India. This last is a reference to West Bengal's autocratic octogenarian chief minister, Dr B. C. Roy, who recently raised some eyebrows by negotiating a massive loan from the World Bank without a by-your-leave to Delhi. In Madras, the secessionists' demand for an entirely independent Tamil-speaking country is fantastic enough ; but local feeling imposes a real restriction on Congress freedom of action. For instance, any attempt by Delhi to impose the intended national language—the north Indian Hindi—on any of the four southern states, or (inconceivably) any sign of local willingness to assist such an attempt, would at once shatter Congress power in the south.

INTER-STATE disputes are sometimes expressions of linguistic loyalties, sometimes of real interests ; both are equally potent. Two states are at odds over border pockets which are linguistically misplaced, three over river waters. West Bengal denounces Assam's treatment of its Bengali-speaking minority. In no case can the state government afford to take a strictly rational attitude, even if it wanted to.

The politics of religion and caste could perhaps be called ideological politics, since they implicitly strike at the very concept of the secular state. If Congress's efforts to eliminate these factors from the political struggle matched its words, they would be heroic indeed. Congress did take a major step last autumn, when it broke its anti-communist alliance in Kerala with the Muslim League. And recently it has been made an offence to appeal for votes on religious grounds. But it still happens. In north India, Congress faces a strong challenge from the Jan Sangh, the political wing of the semi-fascist Hindu organisation that spawned the murderer of Gandhi. (To be fair, the Sangh's philosophy is milder than that of its parent body ; it even claims some Muslim members.) There are two lesser Hindu parties. In Punjab, the Akalis will appeal as Sikhs for Sikh votes. In Kerala, the Muslim League is active. On top of these, covert communalism is widespread.

These pressures have their effect on Congress, which has not been over-successful in its avowed attempts to provide a fair number of nominations for the minorities ; while the latter, in turn, have responded in communal fashion, demanding seats in proportion to their numbers. Within the Hindu ranks, caste is still important in some areas. In Mysore, for instance, two castes only share the political plums. Kerala's Praja Socialists are drawn very largely from one group. In several states caste and faction lines within the local Congress organisation tend to coincide.

Ideological conflict, as Europeans understand it, must operate within this powerful framework. The significant warring groups are three: the Communists ; the Congress leftists ; and the Swatantra party. Communist strength lies mainly in industrial West Bengal and among the peasants and intellectuals of Kerala, which, fortunately for the anti-communists, will not elect a state assembly next month. But, in the parliamentary contests, the record of the Congress-Praja Socialist state government may aid the Communists, who are at present following the line of co-operation with the national bourgeoisie promulgated by the 81 communist parties at Moscow in November, 1960. But their efficiency may be affected by their internal differences over this tactic, and about the Chinese aggression on the northern frontiers, which also tends to damage their public image.

At the other extreme the Swatantra party, headed by the former governor-general, Mr C. Rajagopalachari, offers a well-articulated brand of high toryism. But it is not solely a party of the rich and the feudal elements. Its make-up allows of concern for the countryman who has not shared the past decade's rise in urban incomes. The party's chief value is that of a gadfly. "Rajaji's" abhorrence of statism, his denunciation of "permit-licence-raj," may rest on *laisser faire* premises simply untenable in India today, but his often justified criticisms are not disposed of by the accepted habit of shrugging them off.

For obvious reasons, the Congress socialists are the most significant group. Mr Nehru might be called their leader, with Mr Krishna Menon and Mr K. D. Malaviya, the minister for mines and oil, doing the spadework. Leftism within the ruling party has recently been invigorated by the self-styled "ginger group," and at least numerically increased by the remarkable number of Soviet sympathisers who have lately discovered an allegiance to Congress. Co-operation with the bourgeoisie apparently is being undertaken on two fronts.

The election in itself does not promise any change in Indian policies at home or abroad. The Congress manifesto is the mixture as before. Even if Congress suffers at the polls it can hardly suffer enough to be forced into concessions. Mr Nehru is plainly in no mood to give ground to the right and the religious fanatics. However, the often accepted picture of Indian policy emerging immaculate from the head of the prime minister is only part of the truth. On such major issues as the language question, extension of prohibition, land tenure ceilings, or the concentration of capitalist power, he could not just impose his wishes if he wanted to. It is hardly less false to see his foreign policy as a projection of the malign influence of Mr Krishna Menon. The idea of Jawaharlal Nehru as the empty vehicle of any other man's policy is a curious one, and only such assumptions make the "Menon" theory of Indian policy tenable.

Thus it has been suggested that the occupation of Goa was an election stunt to save Mr Menon's seat in North Bombay, or a sop to his Afro-Asian friends. Mr Nehru has vigorously denied that there was any thought of the election in the timing of the Goa move ; but only a few days ago he was using it openly as an election counter (declaring the best answer to western critics to be a massive vote for Congress). Omitting other powerful motives, let us suppose both these applied. Why are they to be attributed to Mr Menon ? Mr Nehru, faced with increasing criticism of his inaction, had other elections to win beside North Bombay ; and he does not need Mr Menon to inspire him with pity for Angola. The more rational explanation is that on this and all other issues Mr Nehru, though freer than other politicians, is still subject to multifarious pressures. Only because these pressures take forms unfamiliar in Europe do we fail to see that they are there.

What the Locusts Ate

FROM A CORRESPONDENT IN RHODESIA

FOR all the pace of events in neighbouring territories, the climacteric has not yet been reached in Central Africa. Nyasaland is well on the way to black self-government after the Malawi Congress party's massive victory in the general election last August, which among its other results destroyed the United Federal party's claim to represent the "moderate" African. Dr Hastings Banda's public pronouncements since he took office have been, for the most part, friendly, even generous ; it is only when he speaks of the federation that the old bitterness creeps in. He is reported to have remarked, after watching the Union Jack being lowered for the last time at the independence ceremonies in Tanganyika last month, that the same scene would be enacted in Nyasaland before long. In fact a secession by Nyasaland would bring new problems in its train ; but these are brushed aside by Dr Banda's followers, among whom there are already murmurs about election pledges unredeemed.

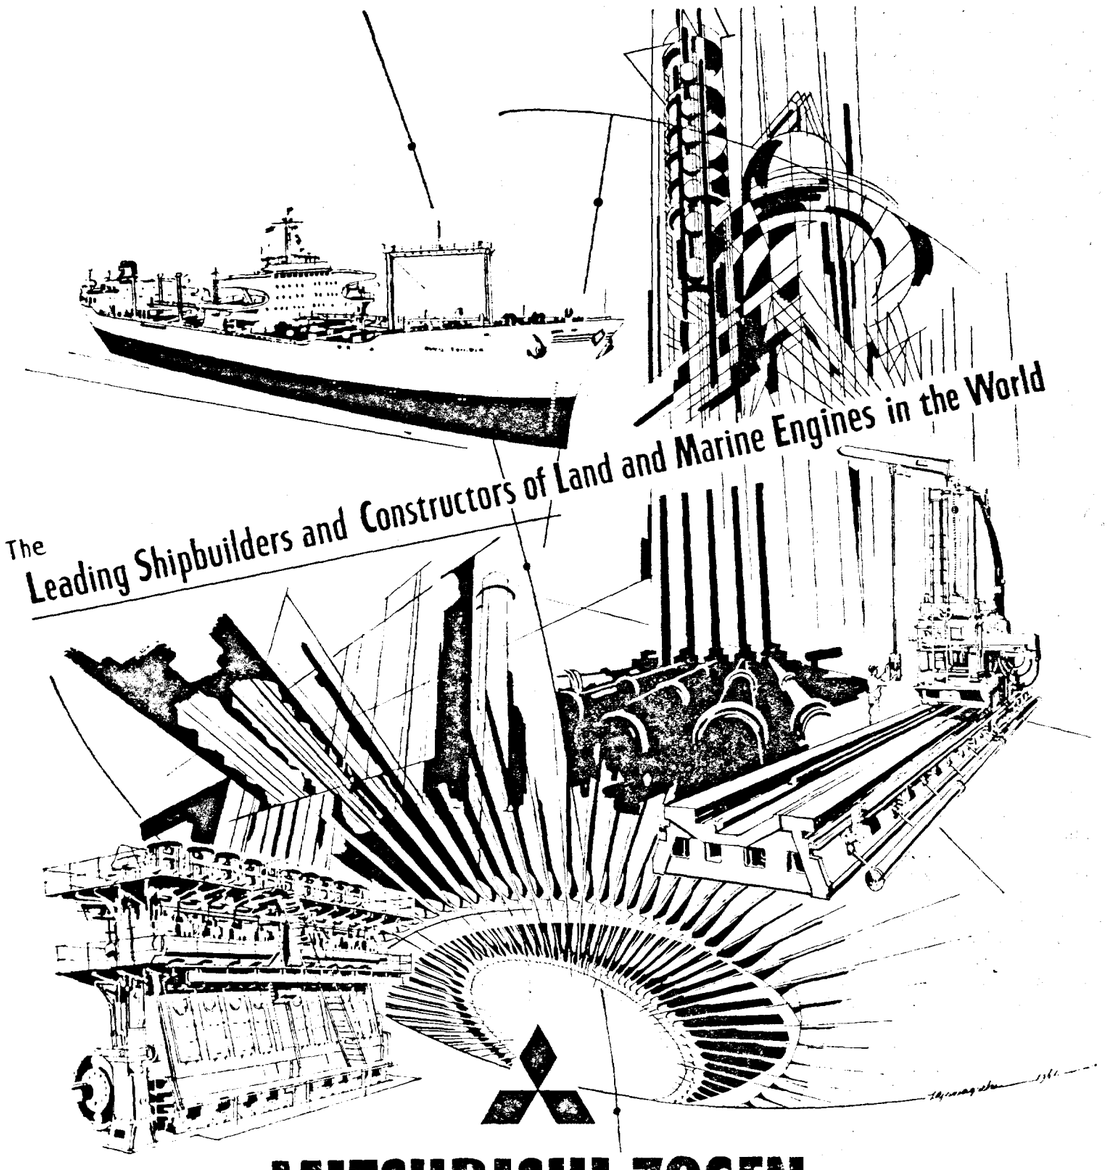
For Northern Rhodesia 1961 was the year of the locusts. Two abortive attempts to frame a constitution that would be accepted with the minimum commotion failed to please anyone and led to widespread violence by the younger men in the United National Independence party. Mr Kaunda's hold on them is not as firm as it should be, but he has some reason to feel that he was scurvily treated by Mr Macleod. It is too late now for Mr Maudling, Mr Macleod's successor, to make a completely fresh start. His own new proposals cannot be long delayed ; and it is widely expected that they will represent some concession to African opinion, a reversion, perhaps, to something like the original February plan, which had the virtues of being comprehensible and of seeming to be fair. The amended proposals achieved neither.

APART from the likely reaction in Salisbury, any step in this direction is bound to incur the displeasure of the ruling power in Barotseland, the large slice of Northern Rhodesia which lies astride the Zambesi River. Sir Mwanawina Lewanika, the Paramount chief (or *Lutunga*, as he is now called) is in much the same position as a prince in British India twenty years ago watching with a sense of foreboding the steady growth in power and confidence of the Congress Party. Nationalism and paramountcy go ill together. The Lutunga's feudal and oppressive regime has survived almost unchanged for nearly a century under the special protection of the British Crown, a state of affairs which he is very anxious to perpetuate when the changes come, as they must, at Lusaka. Political activity is not welcomed in Barotseland. The tribal courts there spend much of their time harassing and gaoling any nationalist leaders who come within their reach, and the High Court of Northern Rhodesia, on appeal, spends less time in releasing them. The wind of change has barely touched this backward territory of marshland and bush where men must still approach their Paramount Chief on their knees.

At a quick glance Southern Rhodesia presents a brighter picture. The new constitution has been ratified, and Africans will have their own representatives in the Legislative Assembly for the first time. Fifteen seats out of a total of 65 may seem little enough, but to those who remember the mood of white Rhodesians only a few years ago it represents a considerable, if reluctant, step forward. For it is here, among these uncomplicated, industrious people of very limited horizon, that one finds the greatest resistance to African advancement. After the success of his July referendum Sir Edgar Whitehead's approach to multi-racialism grew bolder ; it had been timid enough before. He has embarked on a programme of legislation designed to persuade the African that he has a stake in the country. The Land Apportionment Act, that potent symbol of white privilege, has already been amended in a minor way, and a complete repeal is promised. Some of the indignities imposed by the colour bar have been removed or muted ; the "courtesy campaign," organised by a group of progressive women, has had some success. An African may now dine in most of Salisbury's best hotels, enter any cinema, swim in the central baths. But these concessions, made often with ill grace after angry debate, have left him unmoved ; they do not touch his poverty or his menial status. As long as the present enormous disparity in the standard of living of the two races remains, the brash and ignorant white artisan will continue to regard himself as the social and intellectual superior of every African.

That economic advancement is basic to any policy of partnership is recognised by members of the government ; most clearly, perhaps, by Mr A. E. Abrahamson, the able and enlightened minister of labour. He has shown courage and understanding in dealing with recent industrial disputes when he has entered the dusty arena and spoken to African strikers in their own language. At the same time he has reminded employers of their obligation to pay a reasonable wage, although the present high incidence of African unemployment makes industrial bargaining a very one-sided affair. Last autumn's campaign by the TUC to secure a country-wide minimum wage of £25 a month fell completely flat and has not been heard of since.

While Sir Edgar Whitehead has been preparing the electorate for more liberal measures he has kept a sharp and hostile eye on the African opposition. No one was very surprised—least of all the Africans themselves—that after the new constitution was ratified the prime minister should, on December 9th, move without delay to ban the National Democratic party and cripple all nationalist political activity. It has been done before (the African National Congress was banned in 1959) and no doubt will be done again if the militants show signs of gaining mass support. It is true that the tactics of the NDP have been inept. They played into Sir Edgar's hands by organising factitious demonstrations which seemed remote from the realities of Rhodesian politics, and he moved swiftly against them. On the television screen that night Sir Edgar, describing the crisis through which the territory had just passed, and justifying his ban on the party, looked extremely pleased with himself. The legal position, of course, is impeccable. The law may be an ass, but it can kick very hard. On the eve of the season of goodwill a Rhodesian citizen was gaoled for seven years for throwing a handful of stones at the police. One stone had struck a superintendent on the leg. For the record perhaps it should be said that the superintendent was white and the accused was black.



For all this, Sir Edgar does want to see African advancement—on his own terms, which would ensure white control for a very long time to come. He and his United Federal Party have recently launched a *Build a Nation* campaign, with a fanfare of press publicity. In the light of other events it looks, at the moment of writing, like the latest Voice and Vision gimmick.

African University Problems

FROM A CORRESPONDENT IN SIERRA LEONE

PRESSURE is growing, in many fields of life, for co-operation among the independent states of West Africa. The first preoccupation of most of these countries after independence was to loosen all ties suggestive of a colonial status. Inter-territorial projects which still have any connection with the Colonial Office, or with the former central British or French administrations, were among the first to come under question. But tendencies are now appearing for the independent African countries to combine in supranational projects which call for collective thought and planning.

The International Seminar held in December in Sierra Leone on Inter-University Co-operation in West Africa, and sponsored by Fourah Bay College (the University College of Sierra Leone) and the Congress for Cultural Freedom, falls into this category. Historically, this college was for long the only institution which granted degrees (pass degrees of Durham University). In 1925 Achimota was opened and after some years produced a handful of engineering graduates of London University. Most of the other institutions gave diplomas. Towards the end of the war and soon after, the Asquith and Elliot commissions laid down blueprints for the development of university education in British West Africa. The French were proceeding steadily with the development of

Dakar University, which was taken under the wing of that of Bordeaux in France.

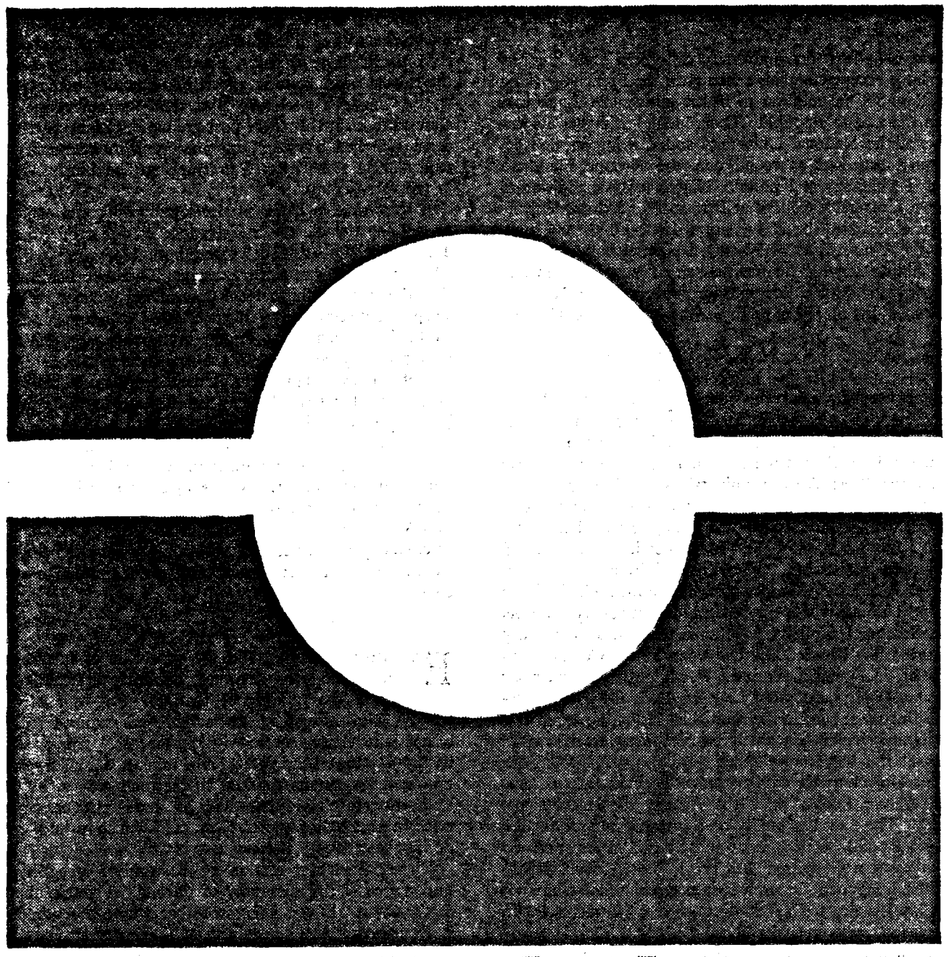
Today there is at least one university college in each English-speaking territory except Gambia, a faculty in the French-speaking Ivory Coast Republic in addition to Dakar University, Lovanium University in the Congo Republic (Leopoldville) and two institutions in Liberia, the National University and Cuttington College. Ghana has just instituted a second one, the Kwame Nkrumah University of Technology at Kumasi. Nigeria has, in addition to the well-known University College at Ibadan, founded the University of Nigeria at Nsukka, the University of Ife, both already functioning, and the Universities of Northern Nigeria and of Lagos, both at the planning stage. The impetus behind these latter universities in Nigeria came from a distinguished commission on Nigerian education chaired by Sir Eric Ashby, Master of Clare College, Cambridge.

REPRESENTATIVES attended the seminar from nearly all the universities and colleges in English-speaking and French-speaking West Africa, together with eminent university people from Britain, France and the United States. Sir Eric Ashby, in an early speech, urged the West African universities to develop a dual loyalty, first to their own society and next to world standards of higher education. This second loyalty has in the past been safeguarded by the links which most West African colleges have formed with metropolitan institutions. The links of Fourah Bay with Durham, and of Dakar with Bordeaux, have been mentioned. Those of the present University of Ghana and of University College, Ibadan, with London University have gone through an extremely fruitful and rewarding decade. The University of the Congo draws most of its staff, including its eminent Rector, Mgr Gillon, a lay priest and a nuclear physicist, from Louvain. Even the new universities strive to link up at least in their initial stages with over universities. The University of Nigeria at Nsukka, very much a child of Dr Azikiwe, the Governor-General, has formed a link with Michigan State University through the auspices of the International Co-operation Administration (now the Agency for International Development). The new University of Ife has even gone further and formed faculty links with Indiana and Cornell in America and Heidelberg in western Germany. All these West African institutions have thus integrated themselves into world scholarship. It is in the first loyalty, that to their indigenous society, that a certain amount of tension sometimes develops.

What is needed, as the seminar recognised, is an intellectual community in West Africa as a supporting base for a university and as an independent critic of national affairs, which at the same time develops creative activities in the arts and humanities. Professor Edward Shils of King's College, Cambridge, and Chicago University, who has studied the development of intellectual communities in three other continents, was lucid about the African situation, which he and his associates are studying now. The universities play a great part in the development of this type of community and by means of conferences, exhibitions, competitive festivals and extramural activities, territorial limitations could be overcome. Means of surmounting the language barrier between French-speaking and English-speaking territories were discussed, and it was suggested that in each territory the other metropolitan language should be compulsory at some stage in the educational ladder. This would mean that most West African students would be trilingual, since they already possess an indigenous language.

Differences between the French and English university systems are many but not, it was felt, insurmountable. One paper gave concrete suggestions for co-operation between universities in printing and publishing. It sometimes takes time for new universities to realise how essential for educational development are university printing and publishing outfits, which foster groups of writers and scholars, and provide for the particular needs of their local students. Suggestions were discussed for the exchange of students and staff, recruitment of expatriates, planning for common standards and the division of labour in specialised teaching and research. One speaker made a necessary plea that the universities should be allowed to train their own post-graduate students instead of seeing them snatched away by the numerous international fellowships, studentships and scholarships temptingly held in front of graduates in emergent countries.

A field that is likely to develop rapidly, and which appeared to call for the closest co-operation, was that of African studies. The French-speaking delegates, both black and white, doubted whether this subject was necessary. They felt that African studies should permeate the normal curriculum and not be put aside as a separate discipline; as they said, they could not find "European studies" as such being taught in European universities. (They were probably not aware of the new faculty project at the University of Sussex.) However, as the English-speaking West African universities felt strongly that the subject should be developed the French-speaking delegates gallantly agreed to consider it.



One of the clearest statements on the need for African studies is to be found in the report of the Ghana University Commission, published last summer. As a subject, it may be self-eliminating; yet to introduce it is one way of ensuring the pursuit of research into African history, and into aspects of the scientific and humanistic, chiefly linguistic, field which can otherwise be elbowed aside by the mass of more easily accessible knowledge of European civilisation.

EXTRAMURAL studies, and the expansion of extramural departments, were seen as one way in which these institutions could take part in the training of that essential layer of leaders and workers who through age or lack of opportunity could not satisfy formal university entrance requirements. This, with teacher training, technical and professional schools, secondary school education and, at its most basic, literacy campaigns, all formed the broad framework against which an intellectual community would arise in succeeding generations, and which would cross-fertilise existing and future universities.

The final plenary session of the seminar recognised the great importance of the autonomy of universities within the framework of the state. It was suggested that where the governing bodies were not composed exclusively of university teachers they should be responsible for explaining the needs of the university to the government and for interpreting to the university the demands which the nation makes on it; but that they should leave to the academic body such functions as the admission, teaching and examination of students, the appointment, promotion and tenure of academic staff and the allocation of funds to the different categories of their budgets.

This broad resolution reflects the present relationship of the university to the state in West Africa. The various heads of state take a particularly keen interest in their country's universities. Leaders like Dr Nkrumah, Dr Azikiwe and President Senghor of Senegal feel that the universities must not fall out of step with their nationalistic aspirations. While realising this, the conference was also aware of the state control of French universities, of the University Grants Committee's financial control of British university development and of the multiplicity of governance of American universities and colleges. These controls had not led to friction and had mostly worked well because of maturity, identity of interests of controller and controlled and a fundamental belief in the liberty of the individual.

The formation of a committee to prepare an Association of West African Universities was advocated by the 42 university administrators, scholars and educators present.

status symbol

A year ago a new symbol made its appearance on the industrial scene—the emblem of Engineering Finance Limited. It heralded a new method of financing major items of industrial equipment over a period related to their useful working life.
Since then EFL has helped many companies to improve their competitive status—some by comparatively modest re-tooling exercises, others by big-scale development projects running into six figures. For all of them, this new method of machine life finance has meant that they are better able to meet the challenge of competition, at home and abroad, now and in the future.
If you have a re-equipment problem perhaps Engineering Finance can help you too. We will be pleased to send you a booklet giving fuller details.

THE BUSINESS WORLD

First in Science

THE group of senior scientists who advise the Government on research policy must have weighed carefully the implications of their recent advice to Lord Hailsham that the present organisation for dealing with civil science needs overhauling. To say that the present organisation is unobtrusive is an overstatement—many will be surprised to learn that any exists. Since the Government came to appreciate the leavening value of science in the economy, its main concern has been to get the results of science applied in industry. It has paid less attention to how the scientists themselves were spending their time, especially those inhabiting the deep academic pools where basic research is mysteriously conducted. The Advisory Council on Scientific Policy thinks it is time that the Government did inquire more closely into these activities and attempt a task so far shunned—to say what should come first in science.

The council's reasons are simple. Pure science, running in the universities at a cost of perhaps £30 million a year, is beginning to require some large pieces of capital equipment costing from £250,000 up to tens of millions of pounds. These installations are usually financed by a direct Government grant, being too big to be covered by the normal five-year budget of the University Grants Committee. The way these grants are allocated, and the people to whom they are given, make the Government the arbiter of scientific research in this country whether it wishes or not. So Lord Hailsham's advisers think it right for the Government to make up its mind in advance which are the main lines of scientific development—taking science in its academic sense—that it wishes to see followed. They suggest that the responsibilities of the Advisory Council of Scientific Policy should be widened to provide "the mechanism for arriving at decisions on major priorities."

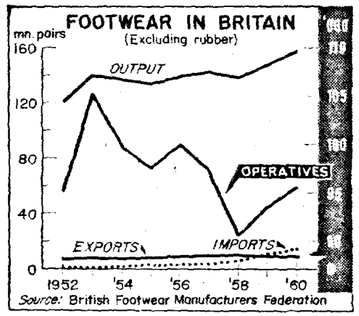
Such advice may well seem like striking at the roots of long and honourable traditions of scientific freedom in this country. It will be pointed out that research cannot produce results to order; the history of science is not a smooth race, but a confused affair with odds-on favourites discovered to have broken wind and outsiders streaking up to the front from nowhere. Scientists succeed in adding something to the sum of human knowledge by following their noses, not by working to any preconceived programme. And many younger men will certainly feel that the Advisory Council on Scientific Policy reads too much like a membership list of the scientific establishment to inspire confidence in its ability to get the priorities right. All these points are well taken, and need not be disputed.

But the fact remains that when the Government grants £10 million for a proton synchroton, or allots £1 million for research reactors for universities, some Peter has to be robbed to pay Paul, and Peter ought to be able to state his case, or have someone state it for him. When resources are limited, grants for new radio telescopes mean, for example, that some other university department has to do without the modest computer that it has long wanted to complete its studies, and other scientists up and down the country go without useful but unglamorous pieces of equipment that are too expensive for their universities to buy, yet not quite impressive enough to win direct Government aid.

Indeed, the council's report suggests that some scientists are growing disturbed about the Government's influence on the direction of science, with more than a hint that they find it capricious. An earlier report on the management of research made out a strong case that fundamental research inside Government establishments should cease; the proper place for this, it was argued, was in the universities. But this argument comes up against the difficulty that appears to have led the Advisory Council to recommend an official policy for science—the size and cost of some of the equipment required and the need to employ it fully all the time.

When the country can afford only one or two major installations, who should get them? Should they go to the university that has made outstanding progress in a particular field, like Manchester with high-speed computers? Should they be grouped in a separate establishment to which everyone can have access, like Harwell's new research centre for thermonuclear fusion or the National Institute for Research in Nuclear Science with its £10 million proton synchroton? What if the whole venture is so big that it can be tackled only with international co-operation, like space research or experiments in nuclear physics calling for the kind of monster machine installed in the international laboratory at Cern in Geneva? These are not academic questions; Manchester University is getting a £3 million computer; the Government is planning to site three nuclear research reactors where two or three universities can have access; and it is being strongly advised to merge the three independent teams now working on radio astronomy into a single, perhaps an international, organisation to co-ordinate all the work—often competing—with radio telescopes, including the two new ones recently approved by the Government.

Such major decisions can be taken only by the Government, but it now makes them, if at all, with incomplete knowledge of the state of scientific research, of the new ideas that look



interesting, of the fields where research is becoming overdone, and of the programmes that need re-organising. The present arrangements encourage the suspicion that massive Government aid goes to the best advocates and not necessarily to the best scientists.

But if the assessing of priorities is to be done at all, it must be done properly. Lord Hailsham, as Minister for Science, is responsible only for certain types of civil research, and even so he has no control over expenditure. The organisations that he oversees, the Atomic Energy Authority and the various research councils, get their funds by individual bargaining with the Treasury. A system of priorities would have to weigh new reactors at the Atomic Energy Authority against, say, new facilities at the Department of Scientific and Industrial Research, or extra allocations to the University Grants Committee. If research is to be organised over a broad front, Lord Hailsham needs some say in what goes on inside the Ministry of Aviation's aircraft and electronics research establishments. In the construction of a supersonic airliner, to take one example, the Ministry of Aviation is embarking on one of the biggest civil scientific ventures this country has ever tackled, on the basis, so far as the evidence goes, of the sketchiest research.

Considerable re-organisation has gone on during the past few years inside the Government's own civil research establishments, the latest candidate being the Nature Conservancy, now about to be merged into a more comprehensive group examining the country's natural resources as a whole. The battle to get industry to support its own research associations is far from won; the latest counterblast here is a complaint from industry that the Government gives these associations a mere £1.8 million a year because they lack the glamour of other candidates for scientific pump priming. But the idea of arranging all these candidates for public assistance in order of scientific importance presupposes a comprehensive science policy of the kind that no government has yet framed. It had better do so before we are swept into a science budget and a full blown ministry for science.

No Business like Shoe Business?

To all appearances, Britain's shoemakers and shoe salesmen as well as the general populace were never better heeled. More than 160 million pairs of shoes were delivered by manufacturers last year. After the traditional and necessary January clearances some, including many of the pointier reminders of a style that started a boom, will remain unsold. But although several competing fashions have trodden on one another's toes, confusing manufacturers, retailers and public alike, 1961 seems to have been a fairly satisfactory year for the shoe trade. It was hardly out of the way before Mr Clore made his long expected bid for Saxone, Lilley and Skinner.

To be lord of the manor of Oxford Street is to be heavily involved in a trend. But it is not easy to be sure what the trend is. It is said, for instance, that the prosperous young generation gets through or discards considerably more footleather than its seniors did in their day; yet consumption of shoes per head (neat if not conclusive short-hand for the trend in demand) has not risen much since the footslogging thirties. In the past twenty-five years, consumption of leather shoes appears to have risen by a mere third of a pair to just over three pairs a person a year. Production has grown steadily but not dramatically since 1950; expansion at 1½ per cent per annum does not put British shoe manufacturers in the top league for growth. Productivity has risen; the labour force in shoe factories has tended to decline, and output has increased to nearly 1,750 pairs to each employee, compared with 1,250 ten years ago. It is not a bad performance and it has been helped by a revolution underfoot, in which rubber and compositions have largely replaced dear soling leather. By the middle of last year, only 5 per cent of children's shoes, 16 per cent of ladies' and 46 per cent of men's shoes had leather bottoms.

As yet, only the styling and colour of uppers shows much change in this country. But Du Pont, Courtaulds and Japanese fibre-plastic interests threaten, however distantly, the dominance of calf leather in uppers, which needs skilful handling at all stages. The use of lasts may be affected by new processes such as heat setting, by which the period that shoes spend on the last may be cut from days to minutes, and thus save heavy capital outlay. Shortage of female labour is persistent. In several factories, conveyor belts—shaped like horseshoes—have been introduced into closing and lasting rooms; the shoe factory today is nothing like the craftsman's shop. Labour disputes involving the industry's one major union are uncommon and the introduction of new techniques does not appear to be a prickly problem.

Manufacturers of boots and shoes have been shrinking in numbers. In four years, membership of the British Footwear Manufacturers Federation declined by 40 to fewer than 400, and the number of largish firms has increased. It is, however, an industry still predominantly of small units with an average

* Based on balance sheet values.

of just over 200 operatives a firm, and less than a dozen with more than a thousand. A fair number have stock exchange quotations, which have reflected the industry's prosperity in recent years or provoked takeovers from Mr Clore and others.

Most of the bigger companies are represented in the high street by their own retail outlets or stockists. C. and J. Clark, Norvic, Lotus, W. Barratt and British Bata control a considerable number of stores. The majority of smaller firms however must sell to wholesalers or the multiples. At the last census of distribution, there were more than 14,000 shops stocking shoes which seems more than enough. The expanded British Shoe group will control nearly 2,000 of them. Manufacturers with strong brands, like C. and J. Clark, sell to independents and department stores; they do not generally sell unbranded shoes to multiples, and the multiples who have shoe factories normally sell their own shoes or shoes bought from outside manufacturers which they sell under their own name. There is no sign of decline in the number of shoe shops. No revolution, apart from some half-hearted attempts at self-service in a limited number of shops, better display and attempts at improving stock control, has occurred in shoe selling. Yet the business has been consistently prosperous (a common figure for the gross profit margin is said to be 25s. to 35s. a pair) and multiple retailers have not been noticeably setting the pace; independents have so far held their own.

THIS is where Mr Clore came in. The major upheaval in retailing has come from him, though he began with the different idea of chasing under-exploited site values. But after acquiring Trueform, Freeman, Hardy and Willis, Dolcis, Manfield and Phillips, Mr Clore was in leather, not bricks, and his bid last week through British Shoe Corporation (the shoe division of his Sears group) for Saxone, Lilley and Skinner will make him the top name in shoes, if one can keep count of them all. Mr Clore had long been buying Saxone shares in the market, pushing them up from 19s. to 30s., until his position was impregnable and he could command the goodwill of the Saxone board. Their support, with his already large holding, ensures success for Mr Clore.

The terms are for an exchange of British Shoe ordinary shares and a debenture stock (with cash as an alternative) for Saxone ordinary shares, providing a market value of approximately 30s., in line with Saxone's recent price. The offer involves seeking a quotation for British Shoe of which only the preference shares are now quoted. Earnings amounted to about 65 per cent on British Shoe's £7 million ordinary capital in 1959. Ordinary shares will presumably make up the bulk of the consideration, but the debenture will give additional gearing to enlarge British Shoe's earnings on its ordinary capital. No firm value can be put on British Shoe ordinaries for the time being. Saxone, Lilley and Skinner will continue as a separate entity under its existing management, but clearly without definite economies in mind, the merger would hardly be contemplated. There is, indeed, a wide disparity between the rates of return on capital employed by the two concerns. In 1960, British Shoe earned about 35 per cent on assets valued in 1953, 1956, and subsequent additions at cost. Saxone's return in the same year, taking freeholds at up-to-date valuation and leaseholds at book value, was only about 8½ per cent.

If there are too many shoe shops, with no chance of better selling methods, some of them could be sold to extract their full property values. That would leave plenty of scope for modernising the rest. The 51 shops in Oxford Street that sell shoes (Mr Clore is the prospective owner of 16) may all be necessary and more profitable than shops in suburban high streets—but somewhere rationalisation seems desirable, if not in Oxford Street, then elsewhere.

The merger will weight British Shoe slightly more towards manufacturing; even so it will control less than 8 per cent of Britain's production. It is a large net buyer of shoes, and not least of foreign shoes, imports of which have cut like a knife through exports. Changes already under way in the structure of the industry will become marked. Small manufacturers will be put under greater pressure by the big purchaser. He will buy abroad when styles or prices attract him. Whether the smaller shoe manufacturers are capable of merging into effective counter groups is a question involving leadership in other hands than Mr Clore's. After the Saxone merger, Clarks will probably still be the largest manufacturer in this country. They and other large manufacturers—of which Norvic and Lotus are examples—might follow the Clore line in their own way.

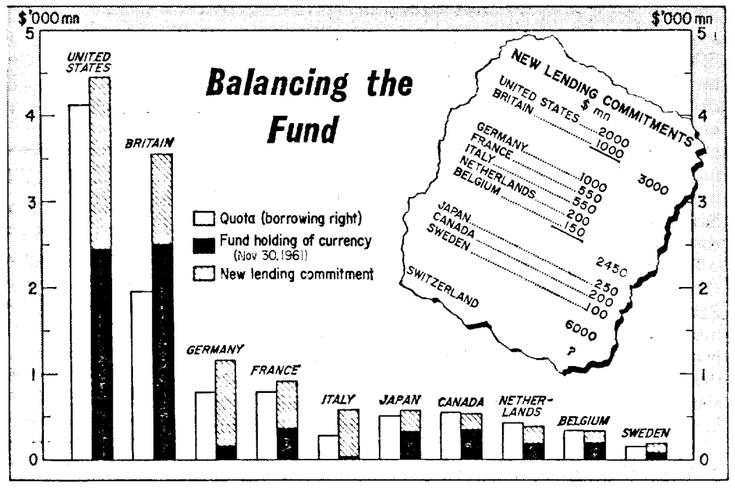
Rules for the Lenders' Club

THE scheme for supplementing the resources of the International Monetary Fund has now been formally approved and published, with no last-minute surprises. It is embodied not only in a decision of the board of the Fund but also in a letter recently sent by M. Baumgartner, the French finance minister, to his fellow finance ministers in the new lenders' club. This dualism runs right through the new arrangements; the French have ensured that the voice of national governments is heard not only through their representatives on the Fund board, who sit round a table with the managing director, but also directly, as a body which the managing director must, to put it no higher, consult. In this way, the scheme does involve, as was to be feared from the outset, a weakening in the international authority of the Fund, just as a troika system would weaken the United Nations Secretariat. At the same time, the new scheme is a notable step forward, both in its practical significance and as a foretaste for the future; the pity is that this has been partly overshadowed by all the argument about power and influence.



Club Members. "The need for additional resources," the IMF is anxious to reassure anyone who may have got other ideas from Professor Triffin or M. Rueff, "arises not from any failure of the monetary system," but simply from the broader spread of convertibility, which makes sudden large movements of short term capital funds more likely. But the formal criterion under which the managing director will ask the lenders' club to activate the additional resources is indeed a need "to forestall or cope with an impairment of the international monetary system." This is for the big stuff. Ten industrial countries are the club's founder members, but any country can join. All it need do is put itself down for a minimum of a hundred million dollars in freely usable money.

Club Procedure. The club will lend only to its own members—other members of IMF will continue to draw on its ordinary resources, more of which will now be available to them. When a club member asks the Fund for a drawing that may entail a call on the "supplementary resources," it will consult the managing director first and the other club members second. If the managing director then makes a proposal for calls on the special credits, the club members will confer, and "inform" (as M. Baumgartner's letter puts it) the managing director of the amounts of their currencies which they consider they can make available. If, unexpectedly, the club members disagree, a favourable decision will require a two-thirds majority by number, with no vote for the prospective drawer, and a three-fifths majority weighted on the basis of commitments to supplementary resources. The next step will be to decide how much will be put up and by whom: the totals that have been agreed are simply maximum commitments, for which some countries (including Britain) have to provide by legislation. Division of the actual credits among the participants will depend on their respective external payments positions and reserves at the time; it is open to individual countries, on balance of payments grounds, to opt out altogether or to ask for a reduced contribution; in this case the other participants will consider whether they can make good the deficiency.

Club Perks. These credits are a highly attractive central banking asset. They are gold guaranteed; they bear interest in gold, at 1½ per cent a year plus a fixed payment of one half per cent on each borrowing. And repayment terms are as favourable as any bank could wish. The maximum term is five years, but repayment will normally be earlier, phased with the borrowing country's own repayments to the Fund. Moreover, a lending country can ask for earlier repayment still if it gives notice of a "balance of payments need"—and the Fund will give "the overwhelming benefit of the doubt" to such representations. Repayment here will be in a currency which is convertible "in fact" (this covers the Japanese yen), or in gold; and if necessary the other club members may be asked to put up more money to finance this. Repayment in the ordinary way will where possible be in the creditor's own currency.

Club Reform. Thus although the new facilities are being provided through the existing articles of the Fund, they do mark an important advance in the form of its operations. Hitherto the Fund has had a fixed stock of currencies, paid in not according to countries' positions in world payments but simply on the basis of their trading size. The new arrangements for contingent, returnable contributions conform to the principle of—and could be a first step towards—a true international clearing system. Moreover, contributions under these credits will be acknowledged by certificates of indebtedness, and it seems that some countries sensibly intend to include these in their official statements of reserves. The certificates are non-negotiable, and may be transferred only with the consent of the Fund; if this limitation were later to be dropped, the world would have its international currency.

Club Spirit. This is therefore a step along the right road. It is still a small step. For the specific purpose of meeting an American drawing it is clearly far from ample. The United States has a quota of $4.125 billion, and because it starts with a big creditor position at the Fund its total drawing potential is nearly $6 billion. Yet the Fund's total holdings of common market currencies, at present under $1 billion, will be increased by a maximum of less than $2½ billion; and the other members of the club would not find it easy to meet their commitments at the moment—Japan indeed is expected to draw on the Fund very soon. On paper the scheme can therefore be made to look inadequate, and the formal provisions for consultation through all the different channels could be forbidding. But in practice they need not be; and at the critical point, the specific lending commitments need not be the last word either. The worth of any such scheme depends on the enthusiasm not of the likely debtors (that can be taken for granted) but of the creditors. Perhaps even they may in time recognise the appeal of interest-bearing gold.

BUSINESS NOTES

ICI—COURTAULDS

Any Room for Countermove?

BY the middle of next week, Courtaulds will have to produce counter-proposals that satisfy Mr Paul Chambers; if they do not, his bid (3 ICI shares for 4 Courtaulds) will hold the field. The Courtaulds' board a week ago broke silence with two statements of importance. The first was that after seeking advice from Baring Brothers they would not recommend acceptance of the bid if it is made. The second was that they had put "certain proposals" to ICI for the "further strengthening of the man-made fibre industry." On this, Mr Chambers abandoned a press conference fixed for last Monday afternoon and ICI stated that Courtaulds had sent proposals for solving the problems of man-made fibres "other than by a complete merger of the two companies" and had suggested that "all matters of principle could be settled within a week or ten days."

What can be expected to emerge dramatically new after long discussions between the two groups have seemingly got nowhere? It would be extraordinary if variations on this theme "other than by a complete merger" had not been tried extensively already. For example, one can ring all sorts of changes with a pooling of the component parts. Suppose that all the chemical-based synthetics were to go to ICI, which has been the leader in this field and Courtaulds the follower; what would Courtaulds make of its already exessive capacity in rayon and its side interests in paint? It is not solely on the fibres side that it has lacked a chemical base; the new competition in transparent film (with ICI busy on a caprolactum plant) is another portent for Courtaulds' future.

It seems, indeed, that the respite that the Courtaulds' board has won may not avail to avert a fight. It would be well for shareholders in both companies to understand what the fight will be about. For Courtaulds' shareholders, it is simply a question whether their board can do markedly better for them in the future than they have in recent years—and better than ICI could do too. Many of the weaknesses in the company's structure are long-standing and may be irremediable; at least they could not be remedied (for example, in developing chemical-based products) without time, great investment and bringing out ICI's full commercial opposition. It is quite unconvincing for the board, having recently cut the interim dividend, to make so much of the signs of improvement by which they justify an unchanged dividend for the year. No doubt trade has improved, but the troubles are troubles of structure, not of the incidental movements of the textile cycle. "Great confidence in the future prospects of the company," which the directors proclaim, will need to be spelled out in convincing form if shareholders are to turn down the ICI bid.

What, on the other hand, of the assets that ICI is offering to buy? The logic of a complete merger in all synthetic fibres, film and paint, is evident enough. How the assets and earnings work out respectively for the two companies would puzzle any accountant, since book values and depreciation are on totally different bases. It will be asserted that the ICI offer is too low. But shareholders in ICI might ask whether it may not be too high. If the torpid weight of Courtaulds is, in the end, acquired by ICI, it will be long before it is trimmed and assimilated. What happens to ICI's growth meanwhile?

THE EXCHANGES

Bank Rate and Sterling

FEW people in the City doubt that the Bank of England would like to reduce Bank rate quite soon—though even some observers who habitually dislike high interest rates are asking whether it can really be safe to do so before a major improvement in Britain's external payments has been achieved. The main factors in the Bank's mind are probably (a) the Government's grip on wages; (b) the prospect of an impressive budget surplus in April; and (c), perhaps decisively now, the immediate behaviour of sterling. The possibility of pressure on the pound later this year is a rather different consideration, as the Bank still tends to give weight to the rather odd argument that going down makes it easier to go up again later. But plainly, the Bank would be taking a big risk if it made a cut while there was still any doubt about sterling's strength at this, its most favourable season.

On this kind of reckoning the Bank is presumably fairly well satisfied with sterling's performance in the first fortnight of the new year. Foreign money withdrawn in December for balance sheet purposes has clearly been flowing back, and until the middle of the week sterling has been in continuous demand. By Wednesday, however—with dealings for delivery on Friday, after the Bank rate decision—the growing expectation of a Bank rate cut provoked some precautionary selling of sterling from the Continent. These expectations have also brought a flood of offers to the local authority mortgage market, and at a weak 6¼ per cent, seven day money became cheaper than bank overdrafts. Foreign as well as domestic money had been returning to this market, and conversions of Euro-dollar deposits for this purpose caused a slight widening of the forward exchange discount to the equivalent of 2.9 per cent in annual interest cost—above the reduced differential between Treasury bill rates in New York (up to 2.82 per cent) and London (5.43 per cent). By midweek a covered swap of Euro-dollars into local authority loans was no longer showing a net profit. After Thursday's "no change" in Bank rate, sterling was again in demand.

One factor said to have impressed Continental opinion in favour of sterling this week is the formal approval of the IMF plan—but Zurich is surely not contemplating another $2 billion credit for Britain this July. The plan has more immediate significance for the dollar, which has in fact been stronger against some Continental centres, including Milan—but apparently for local reasons. The price of gold in London continues to edge up very slowly, to $35.16 an ounce in mid-week, compared with the low point of $35.14 in late December. Demand has been moderate.

IN THE MARKETS

Buying Gilt-edged Long

THE outstanding feature of the London stock markets this week has been the strength of gilt-edged. The early months of the year, it is worth remembering, are usually the best for this market, as they are for sterling. But this week demand has been particularly strong, and, most interestingly, it has been concentrated not on short bonds, which one would expect to benefit from anticipation of a Bank rate cut, but on long-dated and even undated stocks: the long "tap" stock, 5½ per cent Treasury 2008-12, has attracted particularly large demand, notably from insurance companies.

The gilt-edged market has in fact been talking less confidently about Bank rate than the daily press—which in turn has influenced the foreign exchange market. And the discount market, for three successive weeks, actually reduced its bid for Treasury bills and raised the rate by a total of nearly ½ to 5⅛ per cent, in an attempt to improve its margins following the downward pressure on the bill rate in the last quarter of 1961, when the discount houses were deter-

mined to rebuild their bill portfolios. The discount market would not necessarily be surprised by a new cut in Bank rate—but its actions so far have plainly not been dominated by the possibility.

The strength of gilt-edged is based on a longer view, that the chances of avoiding another economic crisis this year have marginally improved. One did not exactly expect the IMF plan to prompt buying of War Loan, but it evidently moved at least one foreign investor in this way, and the better tone in sterling duly gave confidence to domestic investors. On home economic policy, the City cannot yet be convinced that the Chancellor will be able to carry through his wages policy, but it did feel on Thursday that at least he had gained the initiative.

This was a favourable background for the triple offer of £5 million each by Bristol corporation, Buckinghamshire and the West Riding of Yorkshire in identical 6½ per cent stocks, 1971-72, offered at 99½. The offers were comfortably subscribed on Thursday —the lists were specially kept open until afternoon for country applications postmarked the previous day—but there was no wild rush. A total of £15 million is substantial for the corporation market, and this appears to have kept off the stags. They were active enough however in the issue by Samuel Properties, in which an offer of 1,582,400 shares at 20s. each attracted 60,000 applications worth £52 million.

Decline on Wall Street

A correspondent cables :

DESPITE many signs that economic expansion in the United States is gathering momentum, stock prices have been under pressure since the first week of the new year. The worst fall came on Monday when the Dow Jones average dropped below the 700 mark for the first time since October. The subsequent rally was feeble and there are no signs that the profits taken in December and the proceeds of sales made this month are being reinvested. Even Wednesday's announcement of a two for one split in Ford shares and an increase in the dividend failed to reverse the trend; profits were taken in Ford and the Dow Jones average closed at 706, reflecting a fall of almost four per cent since the end of last year.

There are a number of explanations for this reversal of form, not least that the stock market often refuses to behave as the majority of forecasters predict it will. Revelations of malpractices on the American Stock Exchange made by the Securities and Exchange Commission this week were not calculated to bolster confidence and this was certainly a factor in the sharp fall in prices on Monday. But the decline began well before the report was published and it is clear that although practically every business indicator is rising investors continue to be worried about prospects in the second half of the year when some levelling off in economic activity is expected. The possibility of a steel strike and doubts about the level of business spending are also casting their shadows. Although most of the institutions suggest that they will continue to add to their stake in equities, they are not rushing in to buy now when selling is in the vogue; the chances are that they may be able to pick up the stocks they want at lower prices later. Even so, the bull market still seems to have some life left in it and in a thin market prices could turn up quite sharply if demand improves.

CAPACITY INQUIRY

Undaunted Expansionists

THE National Institute of Economic and Social Research, in its annual inquiry into the use of labour and capacity in the metal-using industries, interviewed 112 firms employing nearly 30 per cent of these industries' workers. In November, output of the motor and aircraft industries was running 4 or 5 per cent above a year before ; output in mechanical engineering had risen by over 5 per cent ; but in electrical engineering the increase was only 3 per cent and output of metal goods other than engineering products had actually fallen. The motor industry was using a lower labour force on a slightly longer week ; conversely, employment in engineering had risen, but hours of work had fallen slightly. The Institute roughly calculates that output per man-hour had increased over the twelve months by about 3 per cent in engineering and 5 per cent in motors.

The inquiry suggests that the motor industry was working at 70 per cent of capacity in November and the engineering industries at 80 to 85 per cent—much the same as a year before, with capacity keeping pace with output. Producers of heavy plant, machine tools, electronic equipment and office machinery still had little or no spare capacity ; those with a lot of spare capacity were mainly engineering firms making components for cars or ships. The motor industry said that output could be stepped up by 18 per cent without taking on extra labour, but only by working 15 per cent longer hours ; the engineering industry's estimate was a 7 per cent increase with 3 per cent longer hours. To utilise all their capacity, the Institute reckons that the engineering and motor vehicle industries would need 300,000 more workers.

Nearly all motor producers and one-half of the engineering firms interviewed said that output was limited by demand. The other half of the engineering firms mostly pointed to shortage of skilled labour as the limiting factor. Motor manufacturers expected an upturn in the spring and to deliver 9 per cent more vehicles to the home market this year and 22 per cent more overseas ; they were proceeding with their major expansion plans but had slowed them down. Engineering firms expected an increase of 5 per cent in home deliveries this year and a slightly larger one in exports ; their plans for expansion, undaunted by the recent poorer showing of orders, were in line with their expectations about output. If this inquiry is a true barometer, additions to capacity, except in heavy electrical engineering, promise to be at least as big this year as last.

BANK SPEECHES

Last Words

BOTH Sir Harold Bibby of Martins and Mr Anthony Tuke of Barclays, who have this week led off, according to custom, the annual rite of bankers' speechmaking, address their stockholders and their wider audience for the last time. This is a year of wholesale change among top bankers ; Sir Oliver Franks of Lloyds will next week also be making his valedictory address, and Lord Aldenham of the Westminster has already departed. The new chairmen are Mr John Thomson at Barclays, Mr Harald Peake at Lloyds, Mr D. A. Stirling at the Westminster and Sir John Nicholson at Martins.

Mr Tuke's parting words are perhaps rather more restrained than those with which he has provoked and sparkled his audience in past years ; his one novel (and very sensible) suggestion is for an extra week's holiday with pay in exchange for the four statutory bank holidays. On general financial policy, neither he nor Sir Harold Bibby has any liking for the control of economic affairs through varying interest rates, and both share the customary banking view that the trouble would be avoided if the Government spent less and ended budgetary inflation—even though the recent re-attainment of overall balance in the budget, for which the City clamoured for so long, has clearly had no such magic touch. On export finance, Mr. Tuke favours "some more comprehensive scheme to carry the longer dated maturities" but immediately adds "with which we, as bankers, are not and do not wish to be directly concerned."

Among the few items of new information about banking operations, Mr Tuke reveals that the big run down in gilt-edged and the shortening of the life of the remaining portfolio is recognised as permitting a rather less ample cushion of inner reserves, and £5 million has been transferred this year to published reserves, apart from £2 million from the year's profits. Sir Harold Bibby's interesting item of banking news is that "our personal loans have shown an improvement as regards arrears." If there is one plea to the incoming chairmen it is—more about banking, please.

STOCK DEALINGS

Dogs and Mangers

THE council of the London Stock Exchange is suggesting a change in its rules designed to channel more business in overseas securities through its jobber members. Under the present rule, brokers are allowed to execute orders for overseas securities with the British agency of a foreign firm of brokers provided that they have previously offered the business to jobbers in the London market. This rule was not being strictly observed. But it is now proposed to replace it by one prohibiting brokers from offering business in overseas securities to any of the agencies and branches in this country of foreign firms. If this rule is confirmed, it will mean that a broker with an order to execute in an overseas security would either have to go through London jobbers or to deal directly with an overseas firm in its own centre, not through its British agent. Such agencies in the City, which provide statistical and information services as well as dealing facilities, are not well pleased with the proposed amendment and they have been making strenuous protests.

If the rule were to be vigorously applied, it might have some unwelcome consequences for members of the London Stock Exchange. Big investors, institutional and private, often deal with these agencies directly, without going through their brokers, and the new rule would make them more inclined to do so. So far, too, the agencies have worked within a gentleman's agreement by not publicly advertising their services ; the new rule might tempt them to think again. The suggested amendment, indeed, seems to combine too much tenderness towards the jobbers with no great certainty that more business in overseas securities would pass through their hands. In accordance with customary practice, the rule has been posted to allow time for representations before it is confirmed. The point of principle here is that the narrow interests of some members of the Stock Exchange may not conform with the wider interests of the investing public. It would not do the London market any good if it were to give even the slightest impression of trying to keep business to itself at a higher cost for the investor.

STEEL

Stuck with Strip

THE strip-making plant that Colvilles has built in Scotland is one of the biggest, and economically the most dubious, parts of the steel industry's expansion programme. Now that the cold reduction mill at Gartcosh has begun to process bought-out strip—the hot rolling mill at Ravenscraig that will supply it will not start production until the autumn—Colvilles is getting uncomfortably near to the problem of selling a product for which the local demand is minute relative to its capacity of 500,000 tons a year. With the 250,000 tons of hot-rolled strip that will be sold as light plates or sheets, the company is initially adding 750,000 tons to its existing capacity of about 2 million tons ; the full potential of the hot strip mill is around 1½ million tons. Colvilles' present operating rate is about 65-70 per cent ; unless demand has improved by the autumn, the new plant will be a pretty heavy liability. It is hardly surprising that Colvilles needs the £30 million that it has not yet drawn of the £45 million the Government offered to lend it ; the total cost of its venture is likely to exceed £72 million.

The rise in the price of Scottish coal, which has added £900,000 a year to Colvilles' costs, is the latest burden that it has to bear for its situation ; it has produced talk of trying to import American coal, or of using oil. Other Scottish industrialists

Profits Fall

TRADING profits of 454 companies publishing their reports in the last quarter of 1961 (largely a reflection of trading results in the year to September 30th) fell by 6¼ per cent from £333½ million to £312½ million. This is the first time since the third quarter of 1958 that industrial profits collated in this office have fallen absolutely. The sharp fall of one third in the trading profits of the motors and aircraft group was the principal culprit, but engineering profits were 4½ per cent lower ; miscellaneous manufacturing showed practically no change. These results swamped the higher profits earned in the consumer industries such as brewing, clothing and footwear and shops and stores. The detailed figures for all industrial groups will be published next week.

It has been clear for many months that profits are falling, except in the direct consumption trades, and this year's analysis of reported profits will produce a string of minuses. In the current quarter, in particular, steel companies will drag total industrial profits down. Equally important, the rate of return on capital employed has been falling—in the latest quarter, the net rate for the 454 companies fell from 9.4 to 7.4 per cent—and there is little chance that this trend will be reversed in 1962. This prospect, plus the fact that net equity earnings in the fourth quarter fell by 13½ per cent, from £117 million to £101 million and that net ordinary dividends, paid on a total issued capital increased from £502 million to £554½ million, were only fractionally higher at £53¾ milion, will keep a brake on share prices.

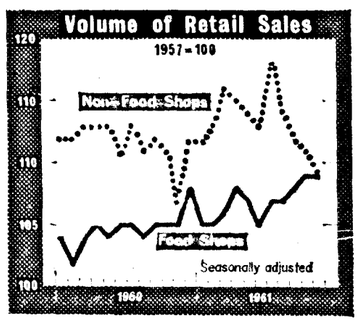
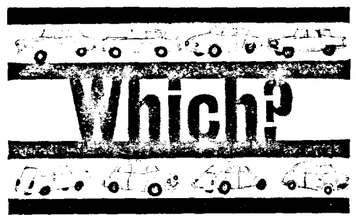
are not falling over one another in efforts to build factories that might use Colvilles' strip; the industrial renaissance that was supposed to follow its availability remains a pious hope. The only big local consumer of strip will be Pressed Steel, and even if the new Rootes small car reaches capacity production, it does not expect to use more than 100-125,000 tons a year. As no firm likes to buy all its steel from one producer, Colvilles cannot hope for all this market. The British Motor Corporation's truck and tractor factory at Bathgate might use another 20,000 tons a year. A pricing system that sets a uniform price—except for £1 off in South Wales and 10s. on in northern Scotland—gives Colvilles no help in getting local sales; their only advantage is the technical superiority of a freshly rolled steel. Much will have to be sold in England, and the transport cost of £2 or more a ton will come out of Colvilles' pocket.



CONSUMER SPENDING

Go-Slow Shopping



NOVEMBER was an even duller month for shopkeepers than had first been thought. According to the Board of Trade's final estimates of seasonally adjusted sales (1957 = 100), their value fell from October by a full point to 114 and their volume by 1½ points to 109, the lowest level since the beginning of the year. Most kinds of shops seem to have had a quieter time; even the food trade slackened slightly.

Shopkeepers selling durable goods reckoned their business was still declining in November, although only gently. Among them, furniture dealers seem to have the least to grumble about; their turnover in November was 6 per cent higher than a year before whereas that of other retailers in the group continued rather below the 1960 level. Credit sales of household goods shops in November moved in line with the total business of these shops and outside ordinary retail trade, there was little change in the trend of new credit business; as a result, total instalment debt fell again by £11 million over the month.

Slackness in the shops and motor showrooms might have deflected money into the

service trades. But there was little sign of this by the third quarter of last year, for which full figures of consumer spending are now available. Admittedly, after taking account of price changes and seasonal factors, spending on housing and fuel rose a little but barely back to the level of the final quarter of 1960; and spending on other services was unchanged. Only clothing purchases were at a record level; the volume of total spending was 1 per cent below its peak in the previous quarter but 1½ per cent above a year before.

THE Consumers' Association's first test of cars is its most ambitious and probably most irritant report. To suggest that the Volkswagen is technically superior to small British cars, though import duty makes it too expensive for *Which?* to recommend it as a "best buy," will not be well received by British manufacturers. The detailed catalogue of faults shown by British cars when they were bought (back in April, 1961) or developed in 12,000 miles is damaging evidence, though *Which?* seems to have been unlucky in some of the cars it bought. The worst trouble on the eight cars tested (Austin Seven and A40, Ford Anglia and Popular, Morris Minor 1000, Renault Dauphine, Triumph Herald S and Volkswagen) was the need to replace the gearing twice and the clutch once on the Austin Seven—which led CA to buy a second car. This did not suffer from the same fault. The Triumph needed to have its gearbox and all steering bushes replaced once, the Minor suffered clutch failure, and the Anglia's gear lever came off—apart from more minor troubles such as failure to keep out water from which even the Volkswagen suffered when it was new. *Which?* concluded that the Anglia was by a small margin the best value among the British cars, slightly superior to the Austin Seven.

One weakness of this valuable addition to the information for the potential car buyer is that *Which?* cannot afford to buy enough examples of each car to ensure that it gets a representative view of all their qualities—good and bad; and if it did it would have an almost impossible task to test them all. But it might be able to drive the cars for more than 12,000 miles to gain some experience of the durability of the main components, and this may be done later. There are, however, other improvements in the tests that could be introduced sooner and at little cost. The first report

gives the impression that the CA's testers have sought to measure more than they could. They have, for instance, produced apparently objective figures that in fact may mislead on the handling characteristics of the cars tested—and which make the Volkswagen and Renault look better than they are.

Technical improvements will doubtless be made in later tests and reports; but such defects reduce confidence in the testing. Manufacturers are sensibly refraining from direct attacks on *Which?*, limiting themselves to pointing out that the tests were made on one car, and implying that they have got better since last spring. At the moment the only information *Which?* gives that cannot be obtained from the motoring papers may be the lists of defects experienced on one example of each model, and the comparative nature of the testing; in some respects CA's tests may be inferior. But they are independent and could be made more informative and authoritative; the sooner they are, the longer they will live.

DOMESTIC APPLIANCES

Hotpoint Cuts

AEI-HOTPOINT'S price cuts, announced last week, are pretty sweeping in appearance—an average of 11 per cent and some as much as 20 per cent—though some of them do little more than bring Hotpoint into line with makers of similar products. This is true of their washing machine, the Supermatic, which should now make even further inroads into the dominating Hoover share of the market. The most striking changes are undoubtedly in Hotpoint refrigerators, which in 1961 were weak sellers in a generally feeble market. Now a 3.7 cubic foot Special model, for example, cut from 47 to 39 guineas (why guineas, in this age?) should prove competitive even against cheap imported appliances, while most comparable British makes are decidedly undercut.

The reductions have presumably been timed with an eye to the seasonal habits of the trade; the big refrigerator retailers place orders at this time of year, against the peak selling season of April to June. But stocks are overflowing so that even late orders are likely to be met with prompt delivery; this may blunt the immediate effectiveness of the Hotpoint move. Hoping to maintain a constant volume of work, the refrigerator makers have become shy of revealing the exact number in the pipeline; but it is certainly higher than a year ago, when 322,000 were in stock; the figure may well now be around 350,000. All this means that the other manufacturers are going to find it hard to stick to their present determination not to embark on another round of price-cutting.

Part of the AEI cuts takes the form of a 2½ per cent reduction in wholesalers' and retailers' discounts. This is not a complete novelty; apart from the unofficial reductions

introduced by cut-price traders, some of the smaller firms like Lec and Morphy-Richards already offer a 22½ per cent rather than the more usual 25 per cent discount. It is reasonable enough to expect retailers to accept a smaller margin in an effort to get the stickier appliances on the move again and none has so far complained to Hotpoint.

PATENTS

Old Japanese Custom

PLAGIARISM, an old Japanese custom, dies hard, long after original reasons for it have disappeared. Japan used to arouse the wrath of western manufacturers by selling cheap, shoddy copies of their products; now they are selling cheap, good quality copies. Ronson Products, the British subsidiary of the American firm, which last week won a case in a Japanese court against four firms who had used a patented gas lighter device as well as apeing Ronson's design and trade-mark, found the offending lighters were of reasonably high quality. It has not been unknown for a British manufacturer to complain about a Japanese copy which on examination proved better than its model.

The success of the Japanese camera and radio industries shows that the "made in Japan" mark is a positive asset where a well-designed and well-made product is able to prove its good quality. It is absurd that the Japanese wool textile manufacturers, for instance, do not offer their perfectly good low-priced cloth for what it is, instead of making bad blood by passing it off under a supposedly Scottish name in the American market.

Officially, piracy is unfashionable. The Japanese government is well aware that such practices hardly encourage the country's wider acceptance as a bona fide trading partner. Three years ago Japan thoroughly revised its laws on patents, trade-marks and published designs; it is now no longer necessary to ensure publication in Japan in order to be protected by the law there. More effectively, certain Japanese industries have co-operated with their British counterparts in setting up design registers against which any would-be Japanese export can be checked. This works satisfactorily in printed textiles and pottery, where a copied design is easily identifiable; less so in the case of fabrics where differentiation lies in subtleties of weave. Here, legal proof is virtually impossible, and foreign manufacturers often have to accept what they cannot prove to the contrary—that the similarity was accidental.

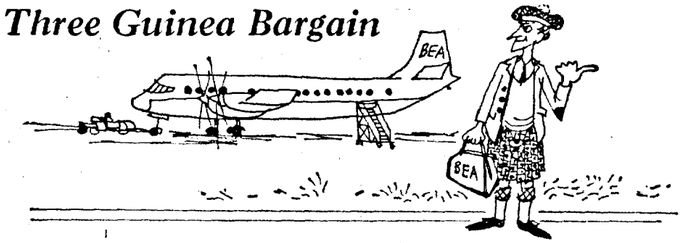
TRANSISTORS

Economies of Scale

TRANSISTORS, more than any other single component, have been the symbol of growth in the electronics industry. Their production has soared here and in the United States; this has been followed in America by bitter price cutting and sharply falling profits. There are signs that the same pattern is being followed, though in a gentler fashion, in this country. In the past twelve months, Associated Electrical Industries has closed its transistor factories; English Electric, Automatic Telephone and Ericsson Telephones sold their jointly owned transistor company to Mullard, and now the General Electric Company, one of the bigger transistor manufacturers, has signed a pooling agreement with Mullard. Like the valves they replace, transistors are specially responsive to economies of scale, as indeed are most electronic components, and there is no place in the industry for a medium-sized producer. But the kind of agreement being discussed by GEC and Mullard, with the probable setting up of a jointly-owned subsidiary, is also typical of the ways in which GEC is trying to streamline its management by calling on the expertise of other, more successful producers in the same fields.

NICKEL

Plenty to Spare



LAST year was not a happy one for international stabilisation schemes, cartels or private monopolies in commodities. The International Nickel Company of Canada, which appears to control about 60 per cent of nickel production outside the Sino-Soviet block and is the acknowledged price leader in the West, brought its new Thompson mine in Manitoba into full production in 1961, raising the group's annual capacity by more than 75 million lbs. Sales have hardly responded. Net sales proceeds (including those from other metals won in conjunction with nickel) were lower in the first half of 1961 than in the corresponding half of the previous year, though they recovered to the 1960 level by the end of the third quarter. At the end of June, however, Inco raised the nickel price, from £600 to £660 a ton in Europe. Disposals of nickel by the United States stockpile authorities through International Nickel were only slightly below their 1960 level, and the reported increase in the group's deliveries must have been small.

Much of the nickel produced at Thompson must still be on the group's hands—it has not yet disclosed how far it has reduced production below capacity. This view finds support from the chairman's review of the industry in 1961. Consumption throughout the free world last year ran at about the record level of 1960. Excluding Cuba, capacity for producing 625 million lbs was available. About 500 million lbs were consumed, and to the apparent surplus must be added the 45 million lbs released from the American stockpile. To top this, Cuba, which had facilities for producing 50 million lbs when the Americans left, was selling nickel in Europe. Mr Wingate believes that Cuba's capacity will shortly be doubled.

International Nickel is accustomed to

CHEAP FLIGHTS

Three Guinea Bargain

THERE are rumours that the British Transport Commission may not, after all, proceed with its appeal against British European Airways' new three guinea night flights to Scotland (the BTC did not lodge an appeal against similar flights to Belfast). This would save the Minister of Aviation from a possibly embarrassing job of arbitrating between the railways and BEA if the railways could show that they were losing a substantial amount of traffic.

The new services, which started in November, hinge on mail and newspaper contracts received by BEA which are not of themselves sufficient to make the nightly flights profitable. Some passenger revenue is needed to break even; the low three-guinea fare was planned to coax a regular trickle of people to make the journey in the middle of the night. It is a few shillings below second class rail travel, and the flights have been so successful that BEA has had qualms about whether the passengers crowding them might not, after all, be air travellers who might otherwise have paid the normal air fare of about £5 9s.

There is some evidence to show that the majority of them have been attracted from the railways (including at least one member of *The Economist* staff). The short flight of about an hour makes spartan flying conditions with no refreshments more tolerable than a long train journey and at least one passenger (not our man) is known to have walked from the airport and thumbed a lift into London rather than take the 5s. airport bus.

taking the long view in nickel. Evidently it did not budget for anything like the sale of Thompson's full output in 1961. Though this vast capital absorber has reduced the group's liquid resources, they stood at $70 million at the end of 1960. But stocks had risen to $179 million while the group's deliveries of its own nickel actually declined in that year. In 1961, European consumption of nickel slackened, but after a slow start the United States absorbed more. In Mr Wingate's view, consumption will continue to rise gradually in the free world. Yet something better than a gradual rise seems to be needed. In 1960, it may be recalled, nickel consumption increased by 68 million lbs.

FINANCING INVENTIONS

From Banks and Insurers

INVENTION is becoming an estimable profession in Britain ; it can now be financed by insurance companies, the Industrial and Commercial Finance Corporation and merchant banks, which makes it almost established. This unexpected combination has been brought together by Sir John Benn, chairman of the UK Provident Institution, in Technical Development Capital, of which he is chairman, to provide capital for the commercial development of inventions. The ICFC and 32 companies have so far subscribed £1,800,000 of the £2 million of equity capital in sums ranging from £200,000 to £25,000. A project like this might seem unusual for the more staid City institutions, but Sir John Benn reports that it was received with enthusiasm. The long-term nature of the returns that can be hoped for—and the risk of losses—seem to have been no deterrent.

The new company will in principle develop inventions that have already passed the first stage of research ; in practice it will be more flexible than this, and will consider inventions at an earlier stage. To limit itself to inventions where initial work had been done might have cut TDC off from the main source of ideas that lack support, even though this is a field in which the National Research and Development Corporation is active. Technical Development Capital will provide an alternative place to which inventors can bring their brainchildren ; as an organisation solely devoted to developing them, it may have some advantages over the corporation.

TDC may well collaborate with the NRDC or commercial organisations in developing the inventions it takes up; this will help to spread its resources among more inventions—initially they are rather meagre for the expensive work of development, though they can be increased by debenture issues. Ideas may come from small companies as well as individuals, or a company may be formed to develop the invention ; here the ICFC's experience will help it. But TDC will have to take a closer interest in management than the ICFC likes to do, for it will have to control the work it is paying for. It is starting with a full-time technical staff of one—its technical director, Mr Edward Hawthorne. But its directors include Sir John Baker, professor of engineering at Cambridge, and it can use the ICFC's staff of engineers, as well as calling on outside advice. Eventually it will build up its own staff as it find what it needs.

CAPITAL MARKET

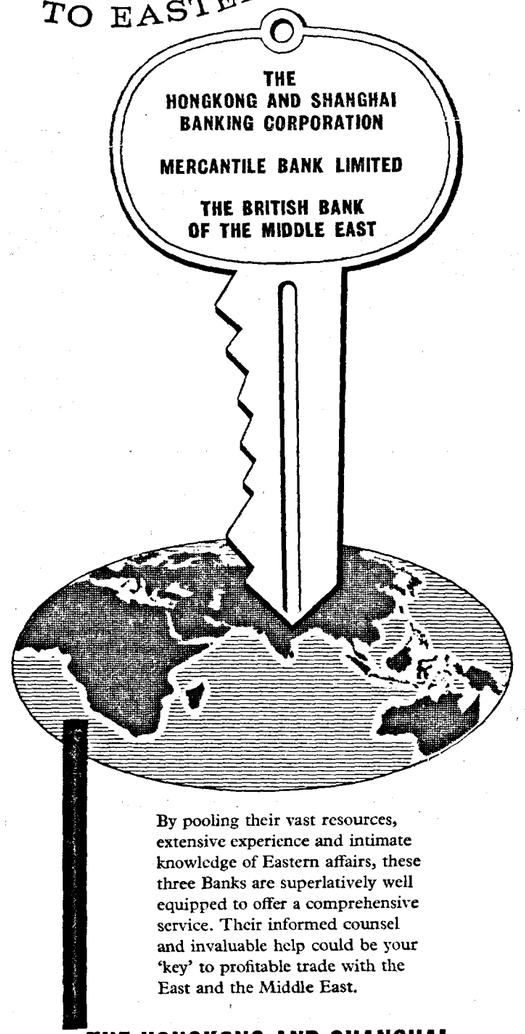
New Figures for New Issues

MEASUREMENT of new issues has always presented numerous problems of definition (as *The Economist* knew many years ago when it made its own estimates) and the merit of figures published monthly by the Midland Bank and quarterly by the Bank of England has been their consistent basis since they were started in 1919 and 1928 respectively. Now the Bank of England series has been revised, as the old statistics are "not well suited to the general scheme of new financial statistics now being assembled." The new ones have been

Belgium's Banking Reform

BY A CORRESPONDENT

WHY was the reduction in the discount rate of the Belgian National Bank a fortnight ago so small—one quarter of one per cent, leaving the rate at 4½ per cent compared with 3½ per cent in Italy, France and the Netherlands, and 3 per cent in Germany? The money market in Belgium is anything but tight, and the authorities are anxious to encourage investment. It is true that they are already doing this directly, in part through differential interest rates. The slow growth of the Belgian economy was long attributed to the lack of private industrial investment; this prompted the government to give interest rebates on loans to acquire equipment, erect new industrial buildings or to modernise existing plants. These rebates can rise to 4 per cent per annum for approved projects, and further aid is obtainable if the investment is in one of the defined "development areas." The interest rate rebates, however, do not as a rule cover the total loan, or run for its whole period.



There are special allowances, too, for depreciation. Fiscal regulations governing mergers and the sale of industrial assets have been relaxed and the authorities are empowered to assist research and development. In the past three years investment plans to a total amount of 48,778 million Belgian francs, almost $1,000 million, have received aid in one form or another. Moreover, these measures have notably attracted foreign investment to Belgium; in the first nine months of 1961, this reached 4,855 million Belgian francs.

The Belgian government is satisfied with the success of its policy so far, but there is no reason to believe that this has encouraged the authorities to maintain high interest rates in the market. More important here is the adoption of a significant structural change in the banking system. Since the end of the war, the Belgian commercial banks have had to keep 65 per cent of their total deposits in Treasury paper, so that their opportunities for credit creation have been limited. The reform does away with this restriction; the banks are still bound to maintain their present holding of Treasury bonds, but are not liable to cover increases in their deposits by new purchases of Treasury bonds. At the same time, the monetary authorities have been given power to force the banks to place a portion of their deposits with the National Bank.

But reform goes further. Attempts to create an effective money and bill market in recent years have not been wholly successful, partly because rates for loans and advances and also rates paid on deposits have been strictly tied to official Bank rate, and were sometimes wholly out of line with market realities. The new scheme breaks the link between Bank rate and the rate of interest paid on deposits in commercial banks, which will now be determined through negotiation between the monetary authorities and the Association of Belgian Banks. The new rates applicable from January 1, 1962, are being discussed and a major change in Bank rate would no doubt have caused complications.

Another possible explanation of present monetary policy could also be found in the balance of payments. In 1960, Belgium registered a comfortable surplus of $98 million on current account and a surplus of $124 million for net monetary movements. In 1961, however, while exports have reached record levels, imports have also risen appreciably so that the surplus on current account will be reduced. Should capital movements also be unfavourable, the central bank might conceivably look to relatively high rates to keep foreign funds in Belgium. But total external reserves are still ample, and it is likely that a further drop in interest rates will occur early in 1962, once the banks' deposit rates have been worked out.

KEY TO EASTERN TRADE

By pooling their vast resources, extensive experience and intimate knowledge of Eastern affairs, these three Banks are superlatively well equipped to offer a comprehensive service. Their informed counsel and invaluable help could be your 'key' to profitable trade with the East and the Middle East.

Wise Investing . . . .

Through Research

Many investors have for years relied on luck or a hunch to select a promising stock. Although this is still common, and is sometimes profitable, the modern investor realizes that there is only one way to choose investments wisely . . . through research.

In most cases, assuming that a company is basically sound, the introduction of a new product is a good indicator of its economic future. And, the marketability of these new products is also important. The impact of a new product on its market and related fields will, in most cases, be the major determining factor of the future price of corporate stocks. To give our clients a complete picture of the status of industries in Japan, Nomura Securities employs accountants, economic experts, and scientists in its operation. With their knowledge of a company, and their experience in economic situations, they are able to evaluate objectively the effect of a new product on investment returns to the company and its shareholders.

Write to Nomura Securities for information on the Japanese stock market that is backed by facts . . . through research.

Their ability to understand the value of a new product in relation to its market will be invaluable in the judgment of the future price of the stock.

New York Office: 61 Broadway, New York 6, N.Y.

designed for use with other statistics of changes in the liabilities and assets of various sectors of the economy.

The new figures include estimates of all redemptions (whereas the old series took account only of redemptions linked with new issues) and so should give a better idea of the net amount of new capital raised in each period. They also register new issues as and when calls are made, not as in the old series, on the date of the first subscription. The new statistics will exclude issues by the nationalised industries; in fact, there have been none since 1956. Another important change is in the distinction between United Kingdom and overseas borrowings: formerly these were classified as far as possible by the destination of the funds; now the criterion will be where the borrowing company is registered. Hence, the new statistics will include subscriptions by overseas residents to issues that are classified as being made in this country.

The Bank of England has broken down new issues into various industrial and commercial groups. By using both the Bank's and the Midland Bank's figures the statistician should be able to discern the trends in borrowing requirements for most of the major industries in this country. From the accompanying table of the revised figures it is clear that new issues remained comparatively stable at just over the £250 million mark in the mid fifties but increased sharply later. Not surprisingly, the figures show a sharp decline in recent months from the peak level of last summer. This trend seems likely to continue in the current year, with companies deferring their capital programmes and with the stock markets uncertain about the prospects for profits.

TIN COUNCIL

Precarious Existence

THE second international tin agreement has been completely ineffective since its inception last summer; but it seems not to have been "definitively" in force either. To bring the new agreement properly into being, ratifications or proper acceptances must be deposited by nine consuming countries holding 500 votes and six major producing countries with 950 votes represented at the United Nations conference on tin in 1960. If insufficient ratifications were not forthcoming by the end of 1961, a meeting of the Tin Council had to be called. That meeting was convened on Wednesday: among consumers, the council was one member short, and of the producers, Bolivia failed to meet the deadline. Congo (Leopoldville) had handed an instrument of ratification to a British ambassador. It is not clear what that instrument is worth.

A meeting of the council was already on the cards for February 14th to discuss pro-

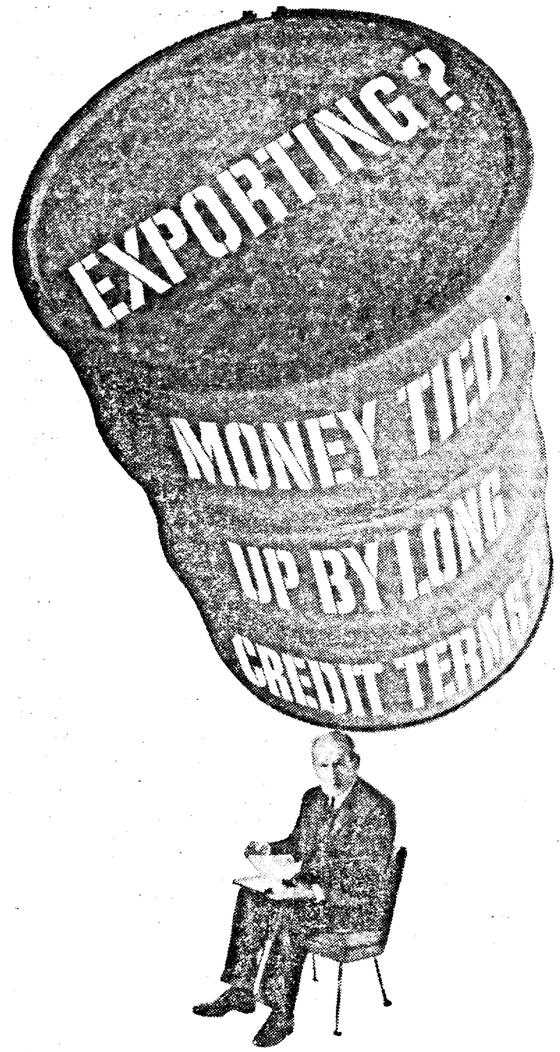
INSURANCE

Records and Claims

MEMBERS of the life offices' associations underwrote ordinary life sums assured of £2,673 million last year, 15 per cent more than in 1960. Premiums from this new business, including annuities, rose by £19 million to £160 million. In the industrial branch new sums assured rose last year from £398 million to £416 million. Demand for assured pension schemes and the group life cover that is normally linked with them seems to have been even more brisk last year than in 1960 when interest was stimulated by the extension of state pensions. Sales of individual policies, however, may not have been much larger. Immediate annuities did well; but deferred annuities, securing in the main assured pensions, account for the bulk of this type of business. Total annual premium income of the life offices, excluding industrial assurance, probably exceeded £525 million last year, of which £160 million related to deferred annuities. Industrial assurance premiums brought in about £190 million.

New money for investment by ordinary life and annuity funds amounted to at least £450 million and to about £80 million for the industrial assurance funds. There appears to have been a change in emphasis in investment policies away from equities and a good proportion of the new money will have gone into fixed interest stocks and mortgages. Offices that have built up a substantial stake in equities in the past have probably managed to offset last year's depreciation in fixed interest stocks with something to spare even though the leading indicators of ordinary share prices showed little change over the year.

Underwriting profits from fire, accident, marine and aviation insurance were as hard to come by last year as in 1960, when the leading offices were, on the average, just in the red, after meeting overhead expenses and tax. The small reduction in British fire losses was more than offset by an increase in fire wastage in North America, where British insurers also met a substantial part of the $85 million bill for hurricane "Carla" and of the $50 million bill for other windstorm damage. The devastation in British Honduras from hurricane "Hattie" will probably cost them £7 million and last winter's flooding in the West Country and South Wales resulted in claims for over £6 million.



Motor insurance was again unprofitable but higher premiums are now being charged in some areas. Jet and other aircraft crashes are unlikely to have left much, if any, surplus in aviation business. Indeed, the only department in the non-life business that did well was marine. The premium income on the non-life business of the insurance companies rose by about £50 million to more than £750 million and the steady growth in interest earnings helps to explain why insurance shares claim such high investment status in a period of exiguous underwriting profits. No doubt the further rise in interest income has been sufficient to cover dividends at the 1960 rates with useful margins, and increases are freely discounted in current share prices.

ducers' requests for a higher price range for the council's currently moribund price stabilising agency, which consumers rejected at the last meeting. Bolivia apparently persuaded the council to continue in session to discuss this matter, which seemed sensible. However, the current session of the United States Congress, which holds the key to American stockpile policy and hence to prices, began only on Wednesday. The first interpretation of Bolivia's move was that either it wished to gain some assurance about prices before accepting the agreement, or perhaps wished to push through a rise in the support price within the agreement, which could influence the level at which American releases might be authorised. It may be recalled that there have been threats to withdraw from the tin agreement and to establish an independent buffer fund. There seems little point in tying up funds in an international scheme pledged to support tin at a lower level than producers thought proper. All the money in the international buffer fund is provided by producers.

URANIUM

The AEA Drives a Bargain

THE Atomic Energy Authority has agreed after nearly a year of bargaining to take an additional 12,000 tons of uranium concentrates from Canada but at prices that are little more than half those first demanded. The contract is expected to be announced when Parliament reassembles after the Christmas recess; its origins lie in a letter of intent signed by the AEA for this extra tonnage some years ago, before the Authority discovered it was embarrassingly overstocked with enough uranium to meet all requirements to 1970. It only agreed later, and with reluctance, to take up its option on the extra tonnage to save the Canadian uranium industry from closing down in 1967, when existing contracts expire.

The price agreed is said to be $5 a pound, against the $8 a pound that that Canadian government wanted. The Canadian demand would have been in line with the prices now paid by the United States government to its own home producers, and would have been a fairly sizeable reduction on the $11 to $12 a pound that the mines get under their outstanding contracts. But it also happens to offer the most efficient Canadian mines a profit of in some cases more than 100 per cent. The best mines could break even at $3 a pound, could show a profit of sorts at $4 a pound, and make a comfortable if not a lush living at the $5 a pound offered by the Authority. The AEA has been generous in the circumstances, considering that it is currently taking a heavy loss on its own stocks and considering also that it would probably have struck a better bargain had it been able to negotiate direct with the producers and not through the government selling agency, Eldorado. Eldorado will now allocate shares in the 12,000 ton contract among those mines that it wants to keep open, probably on a cost-plus basis since not all can break even at $5; the mining companies hope, however, that it will also make these quotas transferable so that they can be bought and sold between companies, which would still allow them to concentrate production on the lowest cost mines.

BUILDING SOCIETIES

A Difficult Year

LAST year was difficult for building societies. They had to raise their rates to check withdrawals and the increase in profits tax narrowed the margins out of which reserves are built up. The little budget suspended the government's house purchase scheme, shutting off one source of money for new advances. The societies have been rationing mortgage advances and will probably have to do so throughout this year. Yet despite the difficulties some of the leading societies, such as the Abbey National and Woolwich Equitable have made headway of a steady, rather than spectacular kind; and that is the kind of progress that satisfies managers now.

In 1961, Woolwich again advanced £34½ million (including £5½ million lent under the government's house purchase scheme); Abbey National's advances were only £500,000 lower at £68½ million (including £11 million under the house purchase scheme). Both societies paid out more in withdrawals to investors; Abbey National's net investment receipts were slightly higher at £28½ million, against £27¾ million, and those of Woolwich slightly lower at £12 million, against £13 million. After rates were increased in the autumn, the net inflow of funds to both societies picked up and helped their liquidity ratios. At December 31st, Abbey National's liquidity ratio, taking investments at book values, was 16.6 per cent, against 15.3 per cent a year earlier and the Woolwich figure was 13.2 per cent, against 12.3 per cent at the end of its financial year on September 30th. The leading societies are anticipating no reduction in rates and no increase in them, unless the rates on national saving certificates and defence bonds were to be raised. Then they might think again; but they would prefer the stability of 3½ per cent net on shares and 6¼ per cent on mortgages.

PILOTS

Flying is Tiring

PILOTS have argued for a long time that it is more tiring to fly an aircraft in short hops, with frequent take-off and landing, than it is to cruise over the North Atlantic with an automatic pilot. They did not succeed in convincing the Government when it was introducing new regulations about pilots' flying hours that it should therefore prescribe shorter duty periods for pilots on short flights, like those operated by BEA, than for pilots on long routes like those flown by BOAC, but investigations recently carried out for BEA by Air Ministry doctors suggest that there is much in what the pilots say. Russian doctors have already produced evidence that the pilot of a jet is under greater physical stress than pilots of slower aircraft; those from the Air Ministry consider that there is also more strain and fatigue flying in regions where navigation aids are few and far between and where traffic control at airports is below international standards. They are now suggesting that the length of time a pilot spends on duty should be worked out on a points system taking into account the type of aircraft he is flying, and the region.

The report has been criticised for vagueness and lack of detail, in particular about specific routes, but BEA seems to have reacted favourably to the principle of a points system. A tired pilot is a dangerous pilot who faces the most difficult part of the journey, the landing, at the end of his stretch of duty. BEA limits its Comet pilots to four stops in a row, so that they are on duty for considerably shorter time than the statutory limit of hours they are allowed to fly.

SHORTER NOTES

Britten-Norman, the designer of the Cushioncraft, has formed a joint subsidiary, with J. Samuel White, Cushioncraft, to make and market air-cushion machines. Britten-Norman will hold 60 per cent and White 40 per cent of the £100,000 capital; production will be carried out at White's Somerton factory, starting next autumn with the CC-2 model exhibited at the Boat Show.

*

In last week's issue of *The Economist* it was stated that the Finance Corporation of Industry was a shareholder in the South Durham Steel and Iron Company. Although the FCI exercised its option to take up 2 million shares it sold this holding late in 1959.

*

In December, 1961, for the eighth consecutive month the value of units sold by unit trusts, at £2,192,000, was appreciably higher than the value of units repurchased, totalling £703,000. The value of net purchases was almost £1½ million compared with £1¼ million in November, when there were five offers by trusts compared with two in December. Over the year net sales of units totalled £7,356,000.

COMPANY MEETINGS

BARCLAYS BANK LIMITED

MR ANTHONY TUKE LOOKS BACK ON THE LAST DECADE

INTENSIVE INDIVIDUAL COMPETITION STILL THE MOST POTENT FACTOR

THE PROBLEM OF EXPORT FINANCE

The Annual General Meeting for the year 1962 of the Stockholders will be held at the Head Office of the Bank, 54, Lombard Street, London, EC3, on Thursday, February 8, 1962.

The following is the Address by the Chairman, **Mr Anthony William Tuke,** which has been circulated to the Stockholders. *Copies of this Address and of the Annual Report & Accounts were posted to Stockholders on Wednesday, January 10th, but may be delayed by difficulties in the Post Office.*

THE YEAR'S RESULT

During this past year our deposits, which are the raw material of our business, have been running at higher figures than in 1960, the average increase being about £80,000,000. We began the year with a high and rising level of advances, but with the prospect of lower rates of interest following the reduction in the bank rate to 5 per cent which had been made in December, 1960. I wrote a year ago that prudence required us to check the rate of increase in our advances, and in the first six months of the year that policy began to take effect, but only slowly. Between January and June, 1961, advances rose by £87,000,000, compared with an increase of £99,000,000 in the first half of 1960. This increase was only made possible by further sales of investments to the extent of £48,000,000. Then in July came the Chancellor's new measures, which required us to take yet sterner action to check the growth in advances; indeed some reduction became necessary if we were to find the additional 1 per cent of Special Deposits and also build up sufficient liquid assets to meet the seasonal tax payments which are now falling due. Thus our experience as between the two halves of the year was precisely reversed. In the first six months we had rising advances but a lower level of interest rates, and the second brought a higher rating structure but a fall in advances, which was very steep in August and September. This fall was no doubt due primarily to pressure by the banks on their customers in earlier months, which necessarily needed some time to become effective, but I do not think this abrupt reversal of the previous trend was entirely due to the action of the banks. The most potent influence on our lendings at any time is our customers' desire to borrow, which is reflected not only in reduced or increased overdraft facilities but also in reduced or increased use of existing facilities. To the extent that customers decided after July to draw in their horns, for example to carry lower stocks of raw material or indeed of manufactured goods on borrowed money, to that extent would their bank borrowings be very quickly reduced. Whatever the cause, the pressure on the bank's liquidity, which had been very uncomfortable during the early months of the year, was suddenly relieved.

In spite of the pressure on their liquidity during the first half of the year, the banks had not in fact on any monthly make-up day failed as a whole to hit their target of 30 per cent. Individual banks, including ourselves, showed up a percentage fractionally below this figure on occasion, and it can never be guaranteed that this will not happen. A heavy and unexpected payment in the clearing to other banks on the final day may upset the most careful calculations but in that case the other bank or banks should have an unexpected surplus and the amount of liquidity in the banking system as a whole would remain unaffected. Provided that all banks aim at the 30 per cent target with equal care and accuracy, the banks as a whole may be expected to hit it, subject always to the possible intervention of the authorities to draw money out of the banking system into the maw of Government: a manoeuvre which, one hopes, they would be hardly likely to carry out without warning at that particular juncture.

I said last year that, with the same resources, used in similar proportions, and with the lower interest rates which then seemed probable, we could hardly hope to show quite so high a profit in 1961 as in 1960. In fact our deposits have increased very substantially, as I have stated, and in spite of the fall in the later months the average of our advances in 1961 was higher by £72,000,000 than in 1960, the average rate of interest also being slightly higher. These factors taken together have enabled us to show a distinctly better profit after absorbing the additional taxation imposed by the 1961 Budget. The whole of the increase has been added to the carry-forward but it should be borne in mind that a full year's dividend on the new capital at the current rate would require an extra £200,000 next year.

CAPITAL AND RESERVE ACCOUNTS

In order to improve the relationship between our capital and our liabilities and to give ourselves rather more elbow-room in relation to our fixed assets, which continue to increase rapidly, we have during the year carried through another issue of new ordinary capital on favourable terms, and we have thereby added approximately £5,000,000 to our capital account, and £7,500,000 to our reserves in the form of a share premium account. We have also added nearly 5,000 to the number of our ordinary Stockholders of whom there are now nearly 70,000. The new capital ranks for the final dividend which we are now recommending but it can have made little contribution to the profits of the year. In addition to the £7,500,000 to which I have just referred, we have further augmented our Reserve Fund by a transfer from Profit and Loss Account of £2,000,000 and also one of £5,000,000 from Contingency Account which we consider it no longer necessary to retain in our inner reserves. These transactions bring the total of our capital and published reserves to £84,000,000, an increase of £19,500,000 on the previous year. The new issue leaves us with less than £5,000,000 of authorised capital unissued, and it is for this reason that we are putting forward a special resolution to add a further £20,000,000 to the authorised capital, which would give us a proper margin for future use as occasion may require.

If I remind Stockholders that since the middle of 1958 we have reduced our portfolio of investments from £526,000,000 to £261,000,000, on a falling market, it will be readily understood that losses have been incurred in the process, especially as we have been careful not to concentrate our sales on the shorter end of our maturities; in fact the average length of our portfolio is considerably shorter now than it was in 1958. There is however a happier side to this picture. Now that our portfolio is so much reduced, and this particular shock has been taken without much diminution of our inner reserves, we feel that the improved situation can be reflected in the transfer from Contingency Account to the published reserve. It is of course true that the money taken out of Government Securities has been invested in other assets which carry risk, namely advances, which have gone up from £404,000,000 to £783,000,000 in the same period, and that it is possible to lose 100 per cent of a particular loan, which cannot happen in the case of a short-dated government security. The difference is that our advances are spread over more than 400,000 borrowers of all sizes and shapes. Individual accounts may and do go wrong and a whole trade may be involved in a slump, but as a general rule the community pays its debts and the interest on them. When it comes to investments it is a case of "when father slides we all slide." The whole question of our inner reserves is again under investigation, and in certain quarters there is pressure for their disclosure. Even our critics admit, I think, that we sometimes have to expose ourselves to the cold winds of misfortune, which is not always of our own making, and I would claim that we are entitled to provide ourselves with a good wardrobe of warm underclothes to wear when bad weather is threatened. On the other hand

it is not necessarily in anyone's interest that we should be subjected to the public gaze when we are in the act of putting them on and off.

TRADE INVESTMENTS

Our fixed assets have increased during the year by over £5 million, which almost exactly corresponds with the increase in our issued capital. Over £2 million of this has been invested in premises where, in addition to the continuing need for modernisation of our older buildings, there is growing up a need for more space, and particularly for more counter space, to enable us to handle our continually growing business. Our trade investments show an increase of just over £3 million, which is due in the main to our having taken up our proportion of a "rights" issue of new shares by Barclays Bank DCO.

I must also report that during the year there has been a change in the form of one of our principal minority investments in overseas banks. The Imperial Bank of Canada, with which our small Canadian subsidiary was merged six years ago, and in which we have therefore since that time had a considerable shareholding interest, has in its turn been merged with one of the largest Canadian banks, The Canadian Bank of Commerce. We welcome this move as improving still further the value of our investment in Canadian banking, but the making of a sound investment, though of great importance, is not our primary object in acquiring a series of minority holdings in overseas banks, operating in areas where their business does not compete with our own interests through Barclays Bank DCO. We also hope by this means to build up an increasingly fruitful mutual agency business with the banks in which we are interested, though it is not possible nor desirable that a relationship of this kind should exclude the maintenance and development of friendly relations by both parties with other banks in their respective territories.

INTERNAL DEVELOPMENTS

Two years ago I referred to our purchase of a computer for bookkeeping purposes. During the past year this machine, and the multifarious equipment that goes with it, was installed and put to work in premises specially adapted by our own staff, and on July 4th the centre was formally opened by the Postmaster-General, The Right Honourable J. R. Bevins, MP. We were thus the first bank in the country to carry out branch bookkeeping on a computer. By the date of the Meeting we expect to have linked to the computer centre five branches, carrying over 15,000 accounts, towards its ultimate capacity of 40,000. The successful launching of this venture has encouraged us to place an order for a second computer, like the first an EMIDEC 1100, which should be in action by the end of the year; and we have taken steps to expand that part of our organisation which deals with the conversion of branches from traditional to electronic methods of bookkeeping so that we may be ready to take full advantage of our increased capacity as soon as it becomes available. This extension of inhuman mechanical devices to save human labour is an essential feature of modern progress. To me, however, they have a regrettable aspect, in that they are destroying the traditional craftsmanship for which this Country used to be famous. Even in banking the human touch has had to be sacrificed in bookkeeping, however well we may succeed in preserving it at the counter and in the manager's room. I remember, in my young days, a ledger keeper of mature years going to his manager with his quill pen behind his ear to report that Mr So-and-So had changed his bookmaker again. I doubt if the computer will ever be invented that will perform a service of that quality.

Last year I referred to the new Credit Transfer system which was then in its early stages, and was being introduced by us and the other Clearing Banks to extend the facilities we could offer, both to customers and non-customers, for the transfer of funds and the settlement of debt. A matter of this sort takes time to arrange. The framework of the organisation must be firmly established; staff must be trained; and an interval must be allowed for our customers—from whom we have had splendid co-operation—to adjust their own procedures. The full scheme came into operation in October last, and the Credit Transfer system now deals daily with large sums of money which have previously been transmitted by a variety of other means. That the introduction of the new system was justified is clearly evident from the response we have already received, and as customers and non-customers make increasing use of it the monthly totals of the credit clearing grow. Continued expansion can be expected during the coming months when a respectable proportion of the bills which find their way into our homes are likely to have credit transfer forms attached, ready for those who wish to make use of them.

BALANCE OF PAYMENTS

Although we are able to report satisfactory progress, both in regard to the growth in the Bank's deposits and to the profits on its working, the year has brought us a number of disappointing and frustrating experiences, mainly attributable to the unsatisfactory state of our external balance of trade. So far as internal influences were concerned, the omens were favourable in the early months in one important respect: the Government, for the first time for many years, had set a good example by bringing in a budget which was, to all intents and purposes, balanced overall. There should therefore have been no further inflation from that source, which has in my opinion been the cause of most of our troubles since the war. Unfortunately there were also two adverse factors operating at this time, one internal and the other external: incomes were rising more rapidly than production, and our trade balance remained unsatisfactory. We were bothered by the extent of our adverse trade balance at this time last year but it was masked by the effect of transient capital transfers which were operating in our favour during the latter months of 1960. Perhaps I may be allowed to quote what I said on this subject in my Address a year ago: "There is no doubt that the strength of the sterling-dollar exchange in the summer and autumn of last year (1960), in the face of a less satisfactory export-import balance, was due to the pull of high rates in London against much lower rates in New York and elsewhere. But the money that comes to us in these circumstances is 'hot' (except in so far as it is permanently invested), and it is liable to leave us even more quickly than it came if the wind changes. It ill behoves us to lean too heavily on a reed that will break so easily." The wind did change early in the new year, owing to causes with which we were not directly concerned, such as abnormal strength in the German mark, and when both capital movements and trade balance pull in the same direction the effect can be catastrophic. In considering this problem it should always be

remembered that when one country gains gold some other country must lose it: the total world stock of gold can only be increased by the introduction into the system of gold which has been newly mined, probably either in South Africa or Russia. The amount available from that source in any one year is quite small in relation to the volume of world trade.

The extent of the fall in our reserves in the early months of the past year was masked by an arrangement between the central banks of Europe, known as the Basle agreement, to enable a stronger country to lend temporary support to a weaker one. These, however, were only short-term banking loans, and in July it was announced that a large new credit had been arranged with the International Monetary Fund out of which part at least of the Basle loans were liquidated. This again is only a temporary palliative, useful in an unexpected crisis but not a sound permanent basis on which to conduct the country's finances. It is a better plan to reduce the country's imports, even though that means reducing production, until such time as increased income is available from exports to pay for them. That may be said to have been the immediate purpose of the additional measures which the Chancellor introduced in July. In the main it was the mixture as before, including the dubious expedient of a 7 per cent bank rate, but there was a new and important feature in the imposition of a wage pause, necessarily applied in the first instance to the wages and salaries paid directly by the Government, but clearly intended to be of general application throughout industry and commerce, including the nationalised industries, one or other of which has too often led the way in starting a new round of over-generous concessions. The introduction of the short-term measures had an immediate effect in strengthening the value of the pound sterling in overseas markets, but to what extent this was again due to the ephemeral capital transfers I am unable to say. Moreover, in so far as the short-term debt is held by overseas interests, the additional interest caused by the 7 per cent bank rate imposed a further strain on our balance of payments as well as on the budget and tended to make our exports less competitive. The sterling balances, as they used to be called, amount to about £3,500 million; an extra 2 per cent on this sum would cost £70 million in a full year. We may hope that it will not last as long as that; indeed the rate has already been cut by 1 per cent, but this is not the whole picture as the large sums now being borrowed by Local Authorities directly or indirectly from foreigners do not seem to be included in the published figures.

Mathematically a decrease in imports is just as effective as an equivalent increase in exports. In present conditions this is good in the short run, but to treat the patient with lowering medicine is penny wise and pound foolish; in reality exactly the opposite result is required: a policy designed to promote expanded production of goods which can be sold at competitive prices. The latter qualification is most important. In a free capitalist economy, such as ours, it is of no use merely to expand productive capacity without reference to probable demand, as seems to be implied by some of the advice which one hears or reads on this subject. If for any reason the production of a certain commodity exceeds the demand at current market prices, either some of the product will remain unsold, as happened to coal; or the price of the product will have to be reduced, which will please the consumer but if carried beyond a certain point may ruin the producer; or the situation may be saved by a general inflationary rise in the price

level, which has happened many, many times since the war.

The short-term measures were intended to pull up the runaway horse, as a necessary preliminary to turning its head in the opposite direction. As a long-term plan the Chancellor has in view an economic development council, by means of which he hopes to secure agreement between the two sides in industry on the measures needed to increase productivity without inflation. This seems rather a forlorn hope, especially if the Council is to contain no independent members. But perhaps independence, if that implies impartiality, is hardly conceivable in regard to this highly contentious question. It must be conceded, however regretfully, that orthodox monetary doctrine, after ten years' trial, has not provided the answer, given the limitations which politicians impose upon themselves by the need to trim their sails to meet the winds of popular favour. Orthodoxy, in this sense, seems to swing between two extremes; the policy during the nineteen-twenties, when there was too much emphasis on the traditional City view, which demanded a stable pound at any cost, including deflation and unlimited unemployment; and the policy of the postwar years when there has been too much emphasis on indiscriminate economic expansion at the expense of inflation and an unstable pound. It is true to say that in the earlier period leading bankers, with one notable exception, and he an ex-Chancellor of the Exchequer, fully supported the official policy, on the old-fashioned principle that an honest man pays his debts in the same coin as that in which they were incurred. In the later period bankers have been much less happy, even when the swing of the pendulum has produced temporary stability. We have not yet found the true answer. Some better technique than either of these must be evolved. After having experienced the alternative method of central planning, few people would willingly accept again the physical controls and all the restrictions which are required to enforce the doctrine that the gentleman in Whitehall knows best. Yet it seems that some sort of central organisation of our economy may have to be accepted, if it can be conducted on the basis of voluntary co-operation between employers and employed, and preferably under some appellation which avoids the prejudice inevitably aroused by a term evoking such nauseating memories. But in the long run the most potent factor making for efficiency in production is intensive individual competition.

THE COMMON MARKET

It seems likely that an additional stimulus of this description may soon be provided as a result of our entering the European Common Market, which will open up new opportunities of expanding our business if we are prepared to work for them. In all that we do in this direction we must be careful not to inflict serious damage to our existing channels of trade with the countries of the Commonwealth, with many of which our Bank has a direct business connection. That would indeed be a poor exchange for an extended market in Europe. Neither must we break faith with our partners in EFTA. Subject to those provisos, I feel confident that our economy will gain from the new association. Some individual trades will no doubt feel the draught, at least until they have adjusted themselves to the change; others will probably benefit from the beginning. The banks will have their part to play in this transition by supporting generously projects which make for expansion and by treating with sympathetic patience those

of their customers who require time to adjust themselves to a shrinking market in their old lines. A greater volume of exports and imports between this country and the Common Market would naturally be welcomed by the banks both in the public interest and on account of the additional banking business it would stimulate. In anticipation of increased activity in this direction we have recently opened an office in Zurich where we propose to maintain a representative of our group of banks, for the purpose of developing our business links with our banking correspondents in Europe.

FINANCE FOR EXPORTS

Alongside the necessary tightening of our economy at home, we must not neglect the perennial problem of organising more substantial increases in our exports. There are in fact two problems. The first and more important is to devise means of encouraging the manufacturer to devote more of his attention to this side of his activities, which is often less immediately rewarding to him. That is a question for the Government and it is made more difficult by the existence of an international agreement that exports shall not be subsidised. The interpretation of this agreement seems to give rise to considerable misunderstandings in practice, and it is doubtless difficult to devise a method of encouragement which does not take the form of a subsidy. I cannot pretend to judge what would and what would not be regarded as a breach of the agreement, but I would suggest that in this matter a distinction can be drawn between a benefit which is calculated by reference to the volume or value of the exports themselves and one which is applied to the profits of the undertaking as a whole, which may or may not have been earned from its export trade. An exemption from liability to profits tax related to the proportion which export turnover bears to the whole of the company's turnover seems to me to be a possible method of approach to this difficult question.

The second problem relates to finance and directly affects the City, including the banks, though the Government is also concerned through the operations of the Export Credits Guarantee Department. This problem has two aspects, availability and cost, and a distinction must also be drawn between shorter and longer term credits. Until fairly recently the maximum period in practice was five years from the date of shipment, and the banks have generally speaking been ready to finance the whole of this business to the extent that the Government guarantee was available. We have been helped to carry a larger volume of these credits by special arrangement made in February last whereby at any given moment the instalments due to be paid during the next eighteen months are refinanceable at the Bank of England and can therefore be regarded as liquid assets. More recently, however, a demand has grown up for finance for more than five years, mainly for the export of certain heavy capital goods. This demand is due primarily to international competition, but it has a practical basis in the fact that the buyer needs to meet the instalments of his debt, in part at least, out of the produce of the plant purchased, and from this point of view in a period of five years is clearly far too short. In the case of, for example, a power station, the banks have taken the view that they have stretched their principles far enough in accepting repayment over a five-year period, and I believe that in the national interest the resources of institutional long term investors should be harnessed to provide longer term finance. Two or three such arrangements have been made on an *ad hoc* basis to carry the longer credits for certain specific export projects, but while these credits are long for the banks they in reality not all long enough to be attractive to investors such as the insurance companies for their funds, who quite properly wish to match their assets to their liabilities as to point of maturity. In any case the *ad hoc* approach to individual investors is far too laborious and time-wasting. The banks are fully prepared to come to finance their customers for the maturities in the first five years; what is required, in my opinion, is some more comprehensive scheme to carry the longer-dated maturities with which we, as bankers, are not and do not wish to be directly concerned. I believe, however, that the most helpful method of approach might be to invite these long term investors to set aside a proportion of their accruing funds over the next few years to subscribe for twenty or twenty-five year bonds carrying directly or indirectly the guarantee of the Government through the exports guarantee scheme and enjoying, if possible, the advantages of marketability. The money thus subscribed could be channelled, through some intermediate mechanism, to the financing of the longer end of all credits lasting more than five years, and as the instalments are in due course repaid it could be used over and over again for the same purpose. It would however be necessary, as cost is also important, that the money should be raised on reasonably favourable terms, which would not be available in the open market in present conditions.

In considering this export problem it should not be forgotten that the export of ten million pounds worth of risky for cash brings a credit of £10,000,000 of the equivalent foreign currency into our balance of payments immediately. The export of a power station costing £10,000,000 and paid for over ten years brings in only a small down payment immediately and less than £1,000,000 in the first and each subsequent year after delivery. In either case it is likely that some at least of the raw material will have to be imported and paid for in cash. In the first case the net immediate effect on our balance of payments is favourable; in the second benefits are deferred and the immediate effect is unfavourable. In the present state of our external reserves, we cannot afford to postpone entirely the effect of present debits when earning money in order to build up credits for the future. There will be a happy day when the credits roll in without any present effort, but can we afford to wait for it?

A CAPITAL GAINS TAX?

The Chancellor has let it be known that he is interested in the question of taxing as income certain short term capital gains. It must not be supposed that the case for this tax rests on the presumption that speculation is sinful and should be punished, though the Chancellor himself seems to be confused on this point when he says that he wants to tax short term profits which are more in the nature of speculation than investment. (See *Hansard* Vol. 645, No. 155, Col. 222). Gambling may be sinful, and it is certainly foolish when conducted beyond one's means, but every investment and business deal is speculative in some degree, in that the parties to it take a view as to whether they shall buy or sell, and whether the price is right. One of the main motives for a capital gains tax is no doubt envy in the minds of those who would not be

affected by it. Leaving motives aside, there is, I think, a case to be argued for a tax on capital profits made by individuals when those profits are made very quickly, assuming that we are talking of the realised profit between cost price and sale price, and that it is limited to certain classes of assets and does not include, for example, the house in which one lives and the furniture which it contains. If there is to be a general tax on capital profits, I consider that it should be quite separate from income tax and should fade out in a very few years. This principle is, I believe, recognised in Sweden. A tax on a so-called profit, which merely registered (perhaps only partially) a fall in the real value of the currency, would be a gross injustice. Unhappily this objection has greater validity here than it has elsewhere. It, of course, goes without saying that, to be fair, realised losses must be allowed to be set off against realised profits.

From a practical point of view I doubt if there would be much money in it for the Treasury. We must remember that professional investors, or many of them, are already obliged to treat realised capital profits as income and to pay tax accordingly. It is the private investor, the amateur, who enjoys his capital profits free of tax. Up till a few months ago there had been such a boom in equities during the last two or three years that even the amateurs had made money. Lately more sober and sensible views have prevailed and many of the paper profits on equities have been blown away. In normal times, when there are ups and downs in the markets, on the whole the professionals win and the amateurs lose. The Government then gets tax out of the professionals and does not have to give any back to the amateurs. Why should it not be content to go on having the best of both worlds? As a business proposition I would, therefore, reject a capital gains tax. But I can see that, to expiate his crime in raising the lower limit of surtax on earned income, a crime which should have been committed years ago, it may be worth the Chancellor's while to adopt it, provided always that it is limited to short term gains. It might even do some good if it had the effect of making income more desirable in itself and of diminishing today's passion for converting it into capital. The present state of affairs is without doubt unhealthy and we are all compelled to spend much too much time in considering what we call the tax angle on all our business dealings. Anything that the Chancellor can do to reverse that trend must be good for the community, and it might even be directly profitable to the Revenue. It will be most regrettable, however, if the necessary legislation is very complicated, as the Chancellor foreshadows; tax law is already in great need of simplification, and the principles which I have set out seem to me to be simple enough.

THE LAST TEN YEARS

In looking back over the past year and, as I am disposed to do at this moment, over the past decade, which marks the span of my chairmanship, and also as it happens of the period since we returned to control by normal monetary methods, I cannot help being impressed by the fact that, although monetary measures have not yet been made to work, great progress has been made in material prosperity and in the increased enjoyment of the amenities of life by almost all sections of the people of this country. I am not sure that the benefits have been quite fairly shared, though "fair shares" was one of the slogans of the early postwar years. That meant, however, at the time, that the weekly wage-earner was to have more than the rest of the community, because his share in the past was considered to have been less than fair. Even though the correction was required, it has certainly gone far enough now: any further improvement in the standard of living should be applied equally to all classes of the community, and that would be best done by a reduction in prices and perhaps increased leisure. In a Utopian dictatorship basic wages and salaries would be fixed and immutable; increases would be given only for proved individual merit. So far as leisure is concerned, if I were the economic director in this Utopia of my own imagining (a post which I would willingly undertake if I were ten years younger) my first act would be to introduce a third week's holiday with pay in exchange for the cancellation of the four statutory bank holidays. These holidays were instituted at a time when there was no fortnight's holiday in industry, in order that the working man might enjoy an occasional rest from his labours. Today the situation is very different. The enjoyment of the holiday is so highly organised that the beneficiaries often return more exhausted than they went out, and its period is often so much expanded that industry must lose considerably more than one day's production on each occasion. The exchange would, therefore, be to the benefit of both parties.

But, although the country as a whole is now enjoying a higher standard of living than ever before, I feel that we could have done so much better for everybody and especially for those living on fixed incomes if we had been prepared to take a firmer line in matters of public finance. The persistent feeding of inflation by unbalanced budgets, and the frequent fobbing off of a difficult decision by referring problems to committees, which had no responsibility for what flowed from their recommendations, all add up to a record of failure in the field of leadership. I am afraid that today everyone is disillusioned with both the leading parties in the State, except perhaps those of us who never had any illusions.

The great need of every nation, in every age, is leadership. The qualities required are hard to define but easy to recognise, and they do not seem to depend very much on the passing of examinations, though an intelligent leader must be better than a stupid one. And yet, before we condemn too severely any shortcomings which we see in those who have governed us in recent years, let us remember that most of the natural leaders of their generation and mine lost their lives on the battlefields of the Somme and Passchendaele. Those of us who survived have had to do the best we could in posts which were in many cases far above our natural capacity. We are now on our way out and the country's leaders during the next ten years, whether or not they prove to be of a higher calibre, will at least be drawn from ranks which have not suffered crippling losses in war. It may be that a new era has already dawned. In recent months the Government has taken a more courageous line, and, although they have been severely shaken by the irresponsible settlement of the ETU wage-claim, we must hope that they will not waver in their resolution, whatever outcries and even kicks and scratches they may have to endure. The chilx that has been spoiled for as long as it can remember is genuinely shocked when for the first time it learns that "no" means "no." After all that has been left undone, it may be inevitable that there should be a clash before order is restored.

CHANGES IN THE BANK

I must finally refer to the impending changes in the Higher Command of the Bank. During the past year certain plans, which have been evolving for some time, have begun to take effect. I have already written a letter to Stockholders to tell them that, with the consent of my colleagues, I propose to step down from the Chair immediately after the close of the forthcoming Annual General Meeting, and there is no need for me to say any more about myself except to express my sincere thanks to the many Stockholders, known and unknown to me, who replied in most kindly terms to my letter. I was very pleased but by no means surprised that many spoke also of the good service that they have received as customers. One of my correspondents, in referring to my propensity to draw upon the Classics, called my attention to a passage in the Epistles of Horace which I think sums up the situation very succinctly:

*solve senescentem mature sanus equum, ne peccet ad extremum ridendus . . .**

The poet is defending himself to his patron, Maecenas, for having given up writing verses: apparently the humble hexameter was counted as mere prose. For good measure I might perhaps add the line which follows:

Nunc itaque et versus et cetera ludicra pono.

I have never myself been guilty of versification, but *cetera ludicra* are calculated to bring a blush to my cheek.

As I hand on the torch, which seems to be burning brightly at this moment, the Bank has in Mr John Thomson a fresh runner, who will add a measure of youthful energy to the wisdom and experience gained in a lifetime of banking according to our Barclay ethos. I am very happy to think that such a successor is waiting to lead and serve the Bank in the years which lie immediately before us.

He will have as his deputy Sir Thomas Bland, whose banking experience has been of a similar character to his own, with a rather large and varied admixture of outside interests, some of which he is now surrendering in view of the greater calls on his time which the office of Deputy Chairman will impose. We congratulate him on the Knighthood which he received in the Birthday Honours on account of his public services, particularly as Chairman of the County Councils Association.

After a most distinguished career in almost every managerial appointment in the Bank, culminating in that of our Senior General Manager, Mr R. G. Thornton retired on pension in October last. He was succeeded in that office by Mr J. D. Cowen, and the vacancy in the ranks has been filled by the appointment of Mr D. E. Wilde. On his retirement we appointed Mr Thornton a Director, and the Board have been very pleased that he has agreed to accept election as a Vice-Chairman as soon as there is a vacancy arising from my retirement. With the other two Vice-Chairmen, Mr Cuthbert Fitzherbert and Mr Emlyn Bevan, who have been my close colleagues for many years, to complete the Chairman's team, there can be no doubt that I am leaving the day to day direction and management of the Bank in safe hands.

(* *Hor. Ep. I. I. 8.* When your horse is getting old, be wise and turn him out to grass in good time, lest in the end he stumble and people begin to make fun of him.)

MARTINS BANK LIMITED

COMMENTARY BY THE CHAIRMAN

SIR A. HAROLD BIBBY, BART, DSO, DL, LLD

INCREASED PRODUCTIVITY ESSENTIAL

The one hundred and thirty-first Annual General Meeting of members of Martins Bank Limited will be held at Head Office, Liverpool, on 9th February, 1962. In his statement circulated to members, the Chairman, **Sir A. Harold Bibby,** *Bart, DSO, DL, LLD, writes:*

THE BANKING SCENE

During the past year our activities in common with those of the other banks have again been largely influenced by the operation of government financial policy

In consequence, our advances compared with a year ago, have shown a fall of £2,365,875 to £165,605,837 in contrast to the steep rises of over £23,000,000 and over £37,000,000 in the preceding two years. It may be noted that we have not had a fall to record in this item between one year end and the next since 1956. We are confident that the needs of our customers have been satisfied despite the stringent tests which we have had to apply to applications for loans and advances. Our Personal Loans show an improvement as regards arrears. Our deposits compared with last year are practically unchanged although the average of the balances held throughout the year has increased by £13,000,000 which is on the whole gratifying under the present circumstances. The outcome of the numerous changes in Bank Rate over the past two years is that the average interest earnings rates for 1961 are just a little higher than for 1960 and with our increased level of resources we have been able to achieve an increase in gross profits tempered as has been the case for the past few years by a further increase in overhead expenses, again mainly in respect of staff costs.

The net profit for the year 1961 comes out at £1,449,194 against £1,420,261 for 1960; our subsidiary company, Lewis's Bank Limited, has again paid us a dividend of 10 per cent.

Our investment in Mercantile Credit Company Limited has suffered a set-back in common with others operating in the hire purchase field, but as a long term project it should prove beneficial to the bank and we look forward to steady progress in the future.

An interim dividend of 7 per cent was paid in July last and a final dividend of 8 per cent, less income tax, is recommended, making 15 per cent, less income tax for the whole year, as in 1960.

Your board has carefully reviewed these results against the background of the present economic situation and the recent official policies of restraint in the financial field, in the light of which it is recommended that the same rate of dividend be paid as in 1960 on the capital as increased by the rights issue that year, a decision which, I am sure, will also have the Chancellor's approval.

In addition to the dividend, appropriations from published profits have been made of £250,000 to Reserve for contingencies and £250,000 to Premises Redemption.

Our quoted investments, which stand at £44,698,345, continue to be valued at under market value and show a reduction of only £2,759,369 as compared with reductions of £19,570,000 in 1960 and £21,985,168 in 1959 when large increases in advances necessitated realisation of investments.

Liquid assets stand at £134,915,150 against £130,138,080 a year ago and in spite of the increase in the Special Deposit with the Bank of England from 2 per cent to 3 per cent, our liquidity ratio is at the comparatively high figure of 35.83 per cent.

REFINANCEABLE CREDITS

During the year a new banking feature known as Refinanceable Credits has been introduced to facilitate the medium-term finance of exports. Advances to approved borrowers for three years or more repayable by instalments and covered by Export Credits Guarantee Department guarantee are made by the Clearing Banks mainly by way of the discount of bills of varying tenor appropriate to the particular transaction, and the Bank of England is now prepared to refinance that part of the accommodation which is within 18 months of maturity. In our case, this means in practice that such portion is added to Bills discounted and is thus included in the bank's liquidity items. It will be observed that "Balances with banks abroad" is no longer being shown as a separate item; it is now included partly in "Money at call and short notice" and partly in "Loans, advances and other accounts . . ." in conformity with an agreement made recently between the Clearing Banks and the Bank of England to standardise practice for the purpose of comparative statistics.

The developments in mechanisation to which reference was made last year have moved steadily forward. The Pegasus II Computer is now fully operational for branch current account working in Liverpool and its scope in this respect is being gradually extended. Certain ancillary operations, such as share registration and trustee work, will in due course be added. We have also taken delivery of the first of several IBM Cheque Sorter Readers which marks an important further step in our progress in automation. Our specialist staff, responsible for these developments, is at present small in number but it is to be expanded to meet future developments. This small body, which was chosen from within the bank, has been faced with an exacting task and they are worthy of high praise.

THE CREDIT TRANSFER SYSTEM

The Credit Transfer System inaugurated in April 1960 for the improved transmission of payments entered its third and final phase of development on March 6th, 1961, with the introduction of the "third party credit." Any member of the public whether having a banking account or not can now use the counters of the Clearing Banks for paying in to the credit of any banking account in the British Isles. In its early infancy this new system is showing encouraging growth, which is being stimulated by a vigorous publicity campaign. The changes brought about in form, design and office procedures have been extensive and have involved lengthy negotiations between the representatives of the banks and many of the associations, representing amongst others the interests of hire purchase, insurance, local authorities, the nationalised industries, company registrars and other large scale organisations. Attention is, of course, also given to the needs of private individuals who in the aggregate constitute the largest single class of bank customers. The high degree of friendly co-operation evinced in these operations has been remarkable, due probably to the widespread recognition that the new methods are part of a general design towards automation. This new system is evidence of the desire of the banks to extend and improve the services rendered to the community.

STRENGTHENED BANK SECURITY

Constant and progressive thought has been given throughout the year to security measures for the safety of bank staffs and bank property.

I can assure our staffs that this is receiving earnest and effective attention.

By far the biggest risk of personal injury is to those members of the public responsible for the conveyance and custody of cash outside bank premises.

The amount of coin and notes in circulation has gone up in the ten years between 1951 and 1961 from £1,676 millions to £2,744 millions all of which in one way or another is at risk.

I regret that the powers given under the Payment of Wages Act 1960 are not yet being used to any great extent by employers for the crediting of wages to banking accounts. If this system were more widely adopted and greater general use made of the cheque book instead of carrying round large quantities of notes many of the opportunities for robbery would disappear.

The acquisition of new branches, where we can be of service to our customers, continues steadily and the extension and modernisation of many of the older branches has been of convenience to our customers and staffs alike. The financial provision needed for these works is very heavy and costs are continuing to rise astronomically.

In certain localities our staff position is still not as adequate as we would wish but overall there are encouraging signs that more young men and women of the standard we require are seeing in banking an interesting and rewarding career.

Personally, and on behalf of the Board, I have to record with deep sorrow the death in September last of The Hon Sir David Bowes-Lyon, KCVO, LL, who, for twenty-four years, served both on the General board and on the London board of the bank. We have suffered a very real loss and we greatly miss his invaluable service and his delightful personality.

During the year Mr E. Norman-Butler, TD, formerly a Joint General Manager of the bank, and Lt. Col. C. P. Dawnay, CBE, MVO, were elected to the London board and Mr I. A. D. Maclean joined the Manchester board. All will be valuable additions to our team. Mr Norman-Butler will continue to devote the most of his time to the affairs of the bank in London at 68 Lombard Street.

There have been several changes of note in the General Management of the bank: Mr D. O. Maxwell has been appointed Deputy Chief General Manager in succession to Mr G. R. Tarn who has retired after forty-eight years' distinguished service to the bank; Mr C. Whiteley has become a Joint General Manager and Mr J. A. Naisbitt, Joint General Manager, Special Duties; Mr L. G. Tunnah and Mr L. J. Walton have been made Assistant General Managers.

A YEAR OF CRISIS

1961 has been another crisis year. The Chancellor has again used the short term defences of high Bank Rate, which was raised from 5 per cent to 7 per cent in July last and has since been reduced to 6 per cent, of greater pressure of credit restrictions on the banks and of an increase from 2 per cent to 3 per cent in the Special Deposits lodged by the Clearing Banks with the Bank of England.

Once again the main weight of the Chancellor's restrictions on the financial sector has been thrown on the shoulders of the banks, from whose available resources has been removed in the form of Special Deposits the sum of £220 millions which would otherwise have been available for the legitimate business of lending by the banks.

Other financial institutions handling very large sums of money have not had the same restrictions placed on them. What applies to one should in fairness and equity be applied to all, no matter what fresh legislation this may entail.

The Chancellor also used his powers to increase taxation in certain directions. The net effect of all this has been a restoration of confidence in the pound and a recovery in the value of sterling, but these measures are not, unfortunately, a cure for the nation's financial disabilities.

The credit squeeze, freezing of dividends and the pause in wage increases continue as the official line. The first is being strictly enforced, rises or falls in dividends must largely depend on the profits or losses of the undertaking (profit margins are already being severely cut) but the demand for wage increases seems to be based on no logical grounds.

As productivity rises there is room for a fair proportion of the diminished costs to be passed to those engaged in the industry and such grounds for wage increases are generally accepted.

If the cost of living was rising rapidly as it did in the post-war period there would be a case for some support to cushion a drop in the standard of living, of which there has been no evidence during the past two or three years.

Today, the cost of living is reasonably steady in the essentials of life, such as food and clothing, and salaries and wages have already increased at a greater rate than productivity.

The new claims for wage increases and those in the pipeline are not based on either of these contentions. The claim is merely that others have had a rise so whether the industry can afford it or not and whether or not the degree of productivity has risen faster than wages, claimants argue that they are entitled to at least an equal rise merely to keep up with the Joneses.

The most glaring examples of this are in the nationalised industries which are either like the railways or the coal mines run at a crippling loss, or the monopoy industries, like gas, electricity and the post office which by enforcible high charges to the public manage to keep out of the red.

We are all now very well aware of the disturbing effects which are brought about by frequent alterations in our Bank Rate. As a result of the use of Bank Rate over the past few years it has become clear that the level of the rate has been rising and the outcome seems to be that a 7 per cent Bank Rate now is perhaps only as effective as one of 5 per cent would have been ten years ago. The flowing of "hot" money to and from the country is not good for our internal economy and the high interest charges we have had to pay to foreign holders of sterling must have added many millions to our external debt during these periods of high Bank Rate.

Under existing financial conditions industry cannot formulate a reasonably reliable forward policy on which to plan future developments.

I am hopeful that at long last something may be done as a result of the study the Chancellor is making of government expenditure with the idea of introducing major economies. I must point out, however, that in spite of all the previous promises of economies in the public sector, expenditure is to rise from £1,640 millions in 1960-1961 to an approved estimated expenditure of £1,840 millions for 1962-1963 which is not encouraging and which, of course, includes the financing of our nationalised industries.

For the first time for a number of years as the result of the two budgets in 1961 an overall budget surplus should be achieved. This coupled with increasing productivity which is not outstripped by rises in wages and salaries is the only basis in the long term on which we can internally keep solvent and combat inflation.

EXPORTS—A VITAL NECESSITY

Externally, our problem is equally difficult: as a nation with very few natural resources other than coal we must live by our brains and the skill of our hands. We can only improve our standard of living by increasing our exports.

I do not for one moment decry the efforts of the many manufacturers who are trying to find export markets and indeed I have been most impressed to note how very active they are all over the world in trying to develop old markets and find new ones. Unfortunately, it is still true to say that owing to the tariff protection afforded to large sections of our home market there are manufacturers who are quite happy to sell all they can produce at home without the trouble of having to face the rigours of the cold blast of world competition overseas. This generally easy life in the home market is doubtless one of the reasons why our productivity has not been forced to rise by economic compulsion. Between 1953 and 1960 the value of United Kingdom exports rose by only 39 per cent., whilst in Germany the rise was 160 per cent, in Italy 142 per cent, the Netherlands 87 per cent, and Switzerland 56 per cent. Internationally, the United Kingdom is among the high tariff countries.

During the year there has rightly been greater emphasis on finance for exports and the Export Credits Guarantee Department has gone to considerable length to see that facilities in the United Kingdom at least match those obtainable elsewhere. The banks are helping, in appropriate cases, with medium term credit (up to five years), but the exporter is still in some difficulty, even with ECGD support, in finding finance required for that portion of the requisite credit which is longer term.

It now seems to be generally agreed that a form of co-ordinating organisation for channelling finance for British exports would be desirable. Such organisations are to be found in a number of other countries, and they undoubtedly play an important part in smoothing the path for exporters.

In considering financial help for manufacturers it must be borne in mind that there is no hard and fast line in many manufacturing businesses between the export and home trades. The manufacturers of components are a surprisingly large percentage of the whole, be they supplying the shipbuilding, aircraft, road vehicle, electronic or other industries, and will be working for both the export and home markets. It is impossible to trace accurately which items finally find their way into the export markets, so it is not easy to lay down one rule for the home trade and another for the export trade as the two are interwoven.

It has taken a long time for the public to appreciate the advantages to be gained by our entering the Common Market. Today the overwhelming weight of opinion is in its favour, both on national and global grounds. Admittedly some sections of our industry will have to adjust themselves to meet the keen competition or cease to exist. In this growingly competitive world we must face up to the fact that it is only the efficient who will survive.

Of equal importance to a correct monetary policy is a campaign to increase our productivity and sales and to see that the fruits of increased productivity are fairly shared between capital and labour, after ensuring that industry retains a sufficient amount of profits to replace equipment and to provide adequate sums for research and to finance future growth.

The introduction of labour-saving devices in industry must always create a fear in the hearts and minds of men and women of loss of employment and we shall need all the skill of management to bring about the co-operation of labour and to provide essential ideas and direction which will be needed more than ever. I am glad to note that in this country the already wide range of facilities for management training is being rapidly extended.

A QUESTION OF PRIORITIES

In this era of full employment few industries can expand further for want of manpower and to make this available for the all important export trade an easing up is necessary in activities which are essentially domestic; office buildings, large shop development schemes, civic centres, to mention only a few, are all desirable in themselves but do not, as it seems to me, add commensurately to our productive capacity and certainly make heavy demand on materials, labour and finance.

MARTINS BANK
LIMITED

STATEMENT OF ACCOUNTS 31st December 1961

LIABILITIES

	£
Capital paid up	9,893,298
Reserve Funds	6,819,106
Current, deposit and other accounts (including Profit and Loss Account)	376,587,953
Acceptances and engagements on account of customers	21,902,612

LONDON DISTRICT OFFICE: 68 LOMBARD STREET · EC3
HEAD OFFICE: WATER STREET · LIVERPOOL 2

In our present difficult position a strict sense of priorities must be observed. To attempt to do everything at once, good as each may be, can only end in failure if we overrun our resources.

THE NATION'S HOUSEKEEPING

Till our balance of payments is put on a sounder basis we must restrict our home consumption and in this state of full employment, where extra hands are not available, the switch must be made from the home to the export trade.

We all very well understand the simple necessity of living within our income when it applies to ourselves personally or to our own business affairs. We all know that if we offend against this fundamental law the only result will be the bankruptcy court or even prison with a distressing reduction in our own standard of living.

But when this is stated in the enormous national figures we substitute for these simple understandable things different wording; we talk of the national economy, balance of payments, ratio of wage and salary increases to the national productivity and then the simple question and answer gets befogged in the mist of facts and figures which the ordinary man in the street and on the shop floor does not understand and it all passes over his head unnoticed and unheeded.

The Chancellor's proposal for a joint planning organisation consisting of representatives from the Government, industry and trade unionism has everything to commend it, if it will help us to understand and solve our national problems.

I believe that in the heads and hearts of most responsible trade union leaders you will find agreement on the need to increase productivity. I sympathise with them in their very real difficulty of interpreting this need to the rank and file and whatever help can be given them in doing so should be readily forthcoming.

No one owes us a living, let alone a high standard of living; only by the sweat of our brow and our own increased productivity, resulting in our ability to sell our goods abroad, are we entitled to the comforts and amenities which the majority in this country at present enjoy or to any further addition to our leisure and general well-being.

May I close on a personal note. I have had the honour of being your Chairman for the last fifteen years. Now, I am convinced the time has come for a fresh and younger mind to take over. May I thank you, our shareholders, for your confidence during my chairmanship.

For the past, I can look back with satisfaction at the progress of Martins Bank; for the present, may I thank most sincerely my colleagues on the Head Office and District boards, the General Management and all our staff for their support, encouragement and co-operation not only during the past year but also throughout the time of my chairmanship; for the future, the bank is in first class order to take advantage of all and every opportunity.

May I extend to my successor, Sir John Nicholson, every good wish in his task. We are all delighted he has accepted the invitation to lead the bank in the years ahead. He has our fullest confidence and we deem ourselves fortunate to have him at the helm.

I·C·T

INTERNATIONAL COMPUTERS AND TABULATORS LIMITED

This is a time when change and development stand as a challenge to the whole electronic industry. Your Directors are keenly aware of the need to secure for the Company every advantage which can be achieved from successful technological research and development and during the past year we have extended our operations in preparation for further advances in the electronic field.

The demand for conventional punched card equipment has been well maintained, and your Board holds the view that both in its own right and as an auxiliary for computers, punched card machinery will retain its place for many years to come. We are equipping ourselves to meet the much larger demand for computers which we expect to arise.

The Group Profit for the year, before charging interest, amounts to £4,295,000, compared with £3,767,000 last year.

From the circulated Statement of Sir Edward Playfair, K.C.B., for the year ended 27th September, 1961.

STEWARTS AND LLOYDS LIMITED

INCREASED COSTS MAIN CAUSE OF LOWER PROFITS

MR A. G. STEWART'S REVIEW OF 1961

The Seventy-second Annual General Meeting of Stewarts and Lloyds Limited will be held in the Merchants' Hall, 30, George Square, Glasgow, on Wednesday, February 7, 1962, at 12.15 p.m.

The Accounts for the 52 weeks ended September 30, 1961, have been circulated with a Statement by **Mr A. G. Stewart,** the Chairman, which reads as follows:

Mr J. C. Lloyd

By the death of Mr J. C. Lloyd on April 24th last year your Company lost an able and experienced administrator, and his colleagues on the Board a wise counsellor and a good friend.

Mr Lloyd joined the Company shortly after the first World War. He was appointed a Director in 1930 and for nearly thirty years was a Managing Director, in charge of Sales.

Mr Lloyd was a descendant of the Lloyds who founded the Birmingham side of the business in 1859.

ACCOUNTS AND FINANCE

As shareholders will have noted from the Statement accompanying the Final Dividend recommendation issued last month, the trading profit of the Group for the year ended September 30, 1961, amounting to £14,002,000 was £4,239,000 (23 per cent) lower than that of the previous year. There are three main reasons for this decline.

First and foremost, is the absorption without adequate compensating price increases of significant additions to costs in the United Kingdom owing to a higher charge for fuel, wages and salaries. These additions to costs amounted to £4.6 million, but higher prices sanctioned by the Iron and Steel Board for our price-controlled products in the home trade provided an additional revenue of only £660,000. I refer to this later in my Statement.

Secondly, there was a fall of 39 per cent compared with the previous year in our exports of tubes to the Oil and Natural Gas Industries. In my Statement last year, I referred to our success in the year then under review in obtaining orders for a number of pipeline projects and said that the volume of available business might not be as large in the succeeding year.

Thirdly, as a result of keen competition from overseas tubemakers, there was a fall in export prices for general purpose tubes.

It will be noted that a sum of £1.5 million has been withdrawn from capital reserves. This amount has been applied to reduce the book value of a plant originally installed for mass production. The change in the pattern of demand has meant that this plant is likely to be employed to a large extent on jobbing work and an opportunity is being taken to reduce its book value.

During the year capital expenditure on plant and equipment at home and overseas amounted to £10,200,000. Capital schemes were authorised to a total of £42,774,000 of which a large proportion was to provide for the major development of iron and steel capacity at Corby, which I referred to in my Address at the Annual General Meeting last year. At the end of the financial year, the balance of expenditure on schemes sanctioned by the Board amounted to £47,875,000.

As a necessary step in financing this large programme, an issue of 6,000,000 Ordinary Shares on a "Rights" basis at 44s. per share was made in May 1961.

We shall expect to find part of the further finance required from future retained profits. The extent to which we shall need further recourse to outside finance, and the form and timing of it, will depend on several factors chief of which are the Iron and Steel Board's price policy, the level of industrial activity and the phasing of our capital expenditure. We have, meantime, an assurance of adequate assistance from our Bankers. A further approach to the market is not expected to be required in the near future.

TRADING POSITION

Tonnages of steel tubes and spun iron pipes and castings despatched during the year are set out in the table at the end of this Statement.

(a) Stewarts and Lloyds Limited

I stated last year that, if the high level of activity in the building and capital goods industries continued, the demand for steel tubes in the home trade would be sustained but that the outlook was uncertain. Activity has happily been well maintained and home trade despatches of general purpose tubes were only slightly below those of the previous year. As there has been some de-stocking of this product, the maintenance of our despatches is satisfactory.

The demand for quality tubes continued buoyant, and sales of rectangular hollow sections for the structural steel market continued to expand.

The reduction in our exports to the Oil and Natural Gas Industries to the level of the year 1958/59, was largely caused by the lack of demand for major linepipe projects. Sales of other tubular goods for the Oil Industry were less seriously affected and there has been an appreciable improvement in demand for these tubes in recent months. We have, however, had to meet increased competition, particularly from Japanese tubemakers.

Our general export despatches showed a small decrease compared with the previous year. They would have been maintained but for a slackening in world demand at the end of 1960 for general purpose tubes, in which field we are fully competitive.

Steelmaking capacity at our three steelworks is now a good deal higher than we need for the requirements of our own tubeworks and, during the year, our total despatches of semi-finished steel and hot rolled strip reached a record level of 313,000 tons compared with 230,000 tons in the previous year. During the first half of the year there was a substantial demand from other steelmakers for supplies of ingots which took up most of the surplus ingot capacity at our steelworks. There was also a heavy demand during the first half of the year for semi-finished products from re-rollers, drop forgers and other steel users in the home market but demand then fell somewhat during the remainder of the year. As demand declined at home, however, we were able to step up our exports of semi-finished steel, though competition became increasingly severe and prices consequently fell.

Our Pipework Engineering Division increased its business.

(b) The Stanton Ironworks Company, Limited

The Staveley Iron & Chemical Company Limited with its subsidiary, The Sheepbridge Company Limited, has been grouped for administrative and operating purposes with The Stanton Ironworks Company Limited. A subsidiary company, Stanton and Staveley Sales Limited, has been formed to deal in the products of the Stanton and Staveley Group, thereby permitting economies in selling expenses.

Total despatches of spun iron pipes in the home market were 35 per cent higher in value than in 1960 before the acquisition of The Staveley Iron & Chemical Company Limited. The home market, however, remained generally weak. There was a satisfactory return to more profitable operations in other iron castings.

Although both the tonnage and value of despatches to the export market increased following the acquisition of The Staveley Iron & Chemical Company Limited, exports of spun iron pipes were disappointing. We have been able fully to maintain our participation in world markets, but it must be recognised that due both to the growth of local manufacture overseas and to the impact of competitive materials for water pipe service, the total export demand for spun iron pipes continues to contract.

Despatches of foundry pig iron in the home market declined by about 12 per cent but for the

greater part of the year this was fully compensated by an increase in sales of basic iron for steel-making. However, towards the end of the year there was a marked but not unexpected reduction in the requirements of basic iron and it became necessary to reduce the rate of production at all blast furnace plants.

(c) Tubewrights Limited

The new fabricating shop at the Liverpool Works is largely in operation. A concerted effort is being made to reduce costs and to promote the use of rectangular hollow sections and of tubes for many purposes.

(d) The Victaulic Company Limited

The value of despatches was greater than in the previous financial year but the value of orders received fell slightly from the record figures of 1960.

The transfer of the Rubber Works to Huntingdon is now being completed and we expect a substantial increase in orders for rubber rings during 1962. It is intended to specialise in the manufacture of rubber rings for joints for all types of pipes.

(e) Stewarts and Lloyds Plastics Limited

Turnover again increased during the year, with the water industry as the principal consumer. The Works will be transferred to the new site in Huntingdon during the present year and will have an increased capacity.

(f) Extended Surface Tube Company Limited

Steady progress was made by this new joint company during the year as new plant was commissioned and development work continued.

(g) Lancashire and Corby Steel Manufacturing Company Limited

The demand for cold rolled strip produced by the Lancashire and Corby Steel Manufacturing Company Limited in which we have a half share, declined during the latter part of the year, but the year's despatches at 57,000 tons were only 3,000 tons lower than in the previous year.

TRADING PROSPECTS FOR THE CURRENT YEAR

(a) Stewart and Lloyds, Limited

Steel tubes are used in virtually every industry. Prospects in the home trade during the current year, particularly for general purpose tubes, will therefore principally be determined by the level of economic activity. The indications are that there will be some diminution in the demand for general purpose tubes, since investment in housing is slowing down, whilst industrial building will almost certainly decline during the year.

As will be seen from the table at the end of this statement, for the products which we supply to the Oil and Natural Gas Industries we rely largely on exports. The overall demand for these products remains low and competition from makers in other countries, both in prices and quality and also in finance and credit, continues to be severe. I am confident, however, that we shall continue to obtain a satisfactory share of the available orders.

As regards our export trade in general purpose and boiler tubes, we look forward to another good year. I am glad to say that the prices of general purpose tubes have increased and we expect this improvement to be maintained.

(b) The Stanton Ironworks Company, Limited

At the year end there was an improvement in orders in hand for large diameter spun iron pipes, but the current rate of new bookings generally is below current production levels. Future activity will depend largely on Government credit policy and its influence on our principal customers for spun iron pipes.

Demand for foundry pig iron in the current year shows little change from the experience of last year but steelworks' requirements of basic iron from merchant sources have fallen away dramatically. As a result, it has been necessary to close down the blast furnace plant of The Sheepbridge Company Limited which has for some years been almost wholly devoted to the supply of basic iron.

(c) Costs and Prices

I drew attention last year to the fact that there had been no major price change affecting the Group products as a whole since the summer of 1957 and to the increased costs that the Group had consequently been compelled to absorb. In July 1961, the Iron and Steel Board sanctioned an increase of 1 per cent in home trade steel prices generally. It also agreed in January and July 1961, to some increases in maximum home trade prices for certain categories of Hot Finished tubes. The effect of these adjustments goes only a small part of the way to meet increased costs, even taking account of all that can be done to increase operational efficiency. This, together with their belatedness, is reflected in the figures quoted earlier in my Statement that against increased costs of £4.6 million, additional home trade prices sanctioned by the Iron and Steel Board provided an additional revenue of only £660,000 and, at the same time, export prices for general purpose tubes, were lower than in the previous year.

In my opinion, any policy which results in steelmakers being unable to earn an adequate return on capital employed has very serious implications for the future of the Steel Industry.

(d) The Common Market

The United Kingdom has applied for membership of the European Economic Community and has stated that it will apply at an appropriate stage for membership of the European Coal and Steel Community. If the United Kingdom joins these two bodies, tubes and cold rolled strip will come within the provisions of the European Economic Community and our other steel products will come within the provisions of the European Coal and Steel Community.

The direct effect of our joining these Communities is not likely to be very great. Our products have a comparatively low value per ton and transport costs are, therefore, a material factor in our delivered export prices. For this reason, it is unlikely that we will be able substantially to increase our sales into those European countries which manufacture the same products. Equally, it is unlikely that they will substantially increase their trade into our home market.

Nevertheless, under Common Market conditions, costs of production will be of even greater importance to our competitive position. This is an added reason why we consider it essential to proceed with our developments at Corby which will materially improve our costs of iron and steel production and so of tube production. Our developments at Corby will also result in an increasing proportion of our iron and steel production being sold in products other than tube and will, therefore, provide an alternative outlet in the event of a recession in the demand for tubes.

OPERATIONS AND DEVELOPMENTS

(a) Ironstone

The output of the Group amounted to 6,185,000 tons compared with 5,064,000 tons in the previous financial year. The reason for this increase is the inclusion in the Group figures of the output of the quarries formerly owned by The Staveley Iron & Chemical Company Limited. The demand for home ironstone has shown a downward trend in recent months and there is, at the moment, little sign of any improvement in demand.

Our limestone quarries at Wirksworth in Derbyshire had another record year with output at the rate of 22 per cent above that of the previous year.

(b) Blast Furnaces, Steel Works and Rolling Mills

Steel production continued at a high level in the early part of the year under review but fell in the last quarter to 80 per cent of the previous annual rate. At Corby, the new coke oven plant was completed and began operations. The installation of the prototype 100-ton LD/AC converter, to which I referred last year, is now completed and operations will begin very shortly. The modernisation programme for the heavy mills was continued and the new 34 in. mill was installed and brought into operation. The No. 2 strip mill has been reconstructed to give greater capacity and to provide heavier coils.

The first steps have been taken to implement the new development scheme designed to modernise and increase iron and steel capacity by nearly 500,000 tons at annual rates. This work should be completed early in 1965.

At Bilston, the major scheme of expansion and reconstruction has now been completed.

(c) Tube Works

Overall, the tube works operated on a short-time basis and tube production was about 10 per cent less than the record figure of the previous year mainly due to reduced demand for large seamless pipe and continuous weld tube.

The shortage of orders from the Oil Industry for casing and linepipe forced the suspension of operations at the end of July at one of the two rotary forge mills at Clydesdale Works until such time as demand improves.

Satisfactory proving trials were completed on the 16 in. Electric Resistance Weld plant at Shotton.

The two small size E.R.W. mills at Corby were heavily loaded all year and the third E.R.W. mill now being installed at Corby to meet this demand is progressing to schedule and should be in production by the end of 1962.

The Cold Drawing shops were also well loaded during the year and plans have been approved to lay down additional drawing capacity of 10,000 tons in a new plant at Corby. This plant will be combined with a finishing shop for stainless tube which is a fresh line of market development for the Company. This scheme should be ready by the spring of 1963 and will improve our ability to participate in the increasing demand for these categories of tubes.

(d) Spun Iron Pipe Works

At Stanton, the new plant for the production of spun pipes and castings in ductile iron, to

which I referred last year, has been commissioned and we are now able to offer spun iron pipes and castings for service uses beyond the range of ordinary grey iron.

OVERSEAS COMPANIES

South Africa and Central African Federation

The turnover of Stewarts and Lloyds of South Africa and its subsidiary companies was virtually unchanged compared with the previous year. However, profits after taxation dropped by 30 per cent.

One of the major reasons for this sharp fall is the continuing increase in African wages at a rate substantially faster than the general growth in the national economy. It seems probable that this trend will continue for some time to come. This situation, combined with a general overcapacity in the tube industry, makes it extremely difficult to give any accurate short or long-term forecast.

These developments have not been unexpected and the Works' modernisation programme which is now nearly complete, including the successful installation of the new welded tube mill, has been directed towards minimising their effect.

Australia

In November 1960, the Commonwealth Government took action aimed at curbing the boom and damping down inflation which showed signs of getting out of hand.

The action had a marked effect on Tubemakers of Australia and its subsidiary companies during the second half of the financial year which ended on June 30, 1961. In consequence, production, sales and profits, which had been buoyant during the first half of the year fell considerably and the figures for the full year were not as good as those for 1959/60.

The worst of the recession appeared to be over in June and from then on the trend has been one of steady improvement.

It is expected that Tubemakers of Australia's new subsidiary, Stanton Pipes of Australia Pty. Ltd., will make its first spun cast iron pipe at the new Sydney plant early in 1962. Construction of a similar plant in the Melbourne area has commenced.

New Zealand

The Steel and Tube Company of New Zealand and its subsidiaries achieved their highest volume of trade in the year under review. A strong demand for steel products continued throughout the period, but as a result of the serious drop in New Zealand's overseas funds, imports will have to be substantially reduced for the immediate future. Production of steel by Pacific Steel Limited is expected to start early in 1962.

India. *The Indian Tube Company (1953) Limited*

The Company had another good year. Despatches of all categories of tubes and of cold rolled strip were more than in the previous year and the demand for the Company's products continues to increase.

The construction will start shortly of the second Fretz-Moon mill which I mentioned last year.

Stewarts and Lloyds of India, Private Limited

The Company again had a record year. Sales of tubular structures showed a notable increase.

Canada. *Stewarts and Lloyds of Canada Limited.*

Stewarts and Lloyds of Canada was successful in maintaining the volume of our sales in Canada where demand has remained at much the same level as in the previous year. Increased competition has, however, resulted in lower prices and reduced profit margins.

Stanton Pipes (Canada) Limited

The spun iron pipe plant installed at Hamilton, Ontario, was officially opened in June. A satisfactory start has been made to build an order load for this plant, and it was put on to double-shift operation at the end of October.

Ireland. *Stewarts and Lloyds of Ireland Limited*

The Company has had another satisfactory year. Bookings and despatches both showed a small increase over the figures for the previous year.

The Company has made arrangements with an Irish company under which the latter will manufacture for it high density polyethylene pipe to be marketed entirely by our Irish Company.

THE BOARD

Sir Walter Benton Jones, who is due to retire at the Annual General Meeting, has decided not to offer himself for re-election. Sir Walter is so well known as a leading figure in the Steel Industry that you will appreciate how valuable to the Company his wisdom and experience have been during his twenty years as a Director.

Sir Frederick Scopes has also decided not to offer himself for re-election. Sir Frederick joined the Company in 1914. He was appointed a Director of The Stanton Ironworks Company in 1941, and has been successively Managing Director and Chairman of Stanton. He was appointed a Director of Stewarts and Lloyds in 1943 and subsequently became a Managing Director. Sir Frederick's wide knowledge of virtually every section of the Stewarts and Lloyds' organisation has been of great value to his co-Directors in the Company. We are grateful to him.

EMPLOYEES

Once again I would like to pay tribute to the work of our 50,000 employees during the year. Unfortunately there has been a measure of short-time working in some of the Works for reasons which I think all understand are not within our control.

We are very conscious of the anxiety that this causes and appreciate the sensible views that are prevailing in the difficulty.

These words of thanks to all employees are no formality, I can assure you. We have a very fine team of men and women serving us both at home and abroad, and the Shareholders owe to them their deep gratitude.

TONNAGES DESPATCHED

	52 weeks ended 30th September, 1961			52 weeks ended 1st October, 1960

WEBSTERS PUBLICATIONS LIMITED

LT-COL W. D. GIBBS ON ANOTHER SUCCESSFUL YEAR

The annual general meeting of Websters Publications Limited was held on January 8th in London. **Lt-Col W. D. Gibbs** (the Chairman) presiding.

The following is his circulated statement:

I am glad to report that the profits of your Group for the year ended August 31, 1961, again exceeded £100,000, and enable your Board to recommend a final dividend of 40 per cent which, together with the interim already paid of 20 per cent, makes a total of 60 per cent for the year, which is similar to the previous year.

It is gratifying to note that your Sporting publications "Racing & Football Outlook," "Week-End Special," "Racing Specialist," and Racing and Football Annuals maintain a high standard in their respective spheres and it will be appreciated that the success of these publications and of your Financial publications is achieved in the face of constantly rising production costs.

It will be recalled that in my statement last year I reported that the goodwill of "The Financial World" and "The Gold Mining Record" has been acquired by your Company's subsidiary (Investors Review Ltd.). It will be seen that this is reflected in the figure of goodwill appearing in the Consolidated Balance Sheet and these publications are contributing to the Group profits. It will also be noted that future taxation has now been completely reserved.

Finally, I am pleased to report that trading during the current financial year continues satisfactorily.

The Report and Accounts were adopted.

THOS. FIRTH & JOHN BROWN LIMITED

From the Statement of Sir John Green, Chairman, circulated with the Report and Accounts.

Group surplus before Debenture Interest, Depreciation and Additional Depreciation £5,420,170, an increase of £66,245. Taxation £2,063,330. Final Dividend 7½% making 12½% for the year.

Group assets nearly £35 million. Reserves and unappropriated profit at £14,637,539 are £1,794,222 more than last year. Current assets exceed liabilities by over £14½ million.

TRADING RESULTS

THE PARENT COMPANY

Results before tax show a decrease of £661,619. Turnover achieved was practically identical in value with that of the previous year. Selling prices of a number of products had to be reduced in spite of increased costs in order to obtain business.

WILLIAM BEARDMORE & CO. LIMITED

Profit showed some improvement as compared with the previous year. A dividend of 5% was paid to the parent company as against nil the previous year.

THE FIRTH-DERIHON STAMPINGS LIMITED

Substantial increase in turnover and profit again achieved. Company able to operate to its maximum capacity throughout the year despite fall in orders from the vehicle industry in latter months.

FIRTH-VICKERS STAINLESS STEELS LIMITED

This associated company had excellent outputs during the first nine months of the year and the results for the year are regarded as very satisfactory, particularly having regard to the increased manufacturing costs which it had to absorb.

CAPITAL EXPENDITURE

During the year £1,768,100 has been spent on land, buildings, plant and machinery by the Group.

THE PARENT COMPANY

Capital expenditure was £1,188,012 and covered new machine tools, Apprentice Training Shop, part construction of vacuum melting shop, and part construction of new 4,000 ton press, and series of medium presses.

WILLIAM BEARDMORE & CO. LIMITED

Capital expenditure was £371,894 and covered primarily completion of new roll hardening plant, new machine tools, and modifications to the melting shop pit side arrangements.

THE FIRTH-DERIHON STAMPINGS LIMITED

Capital expenditure was £201,874 and covered primarily the installation of new presses, 2,500 ton and 500 ton capacity, and furnace equipment.

FIRTH-VICKERS STAINLESS STEELS LIMITED

Capital expenditure was £1,445,016, the main items being extensions to Shepcote Lane hot mill, new descaling line, increased cold rolling capacity and new 12 in. strip mill.

THE OUTLOOK

The difficulties associated with the manufacture of heavy forgings and castings are not diminishing. The installed capacity for dealing with the available work in these categories is still adequate. The capital expenditure in this regard is designed to increase efficiency rather than capacity.

Demand for bars and billets during the first six months of the year was at a high level but the collapse of exports in the vehicle industry, together with the contraction in the sale of durable consumer goods, had the effect of reducing demand.

The demand for hardened steel rolls has remained satisfactory and exports of these products have increased. Stainless ingot production has fallen in line with Firth-Vickers' reduced requirements.

The full effect of increases in costs has not yet been fully reflected in profit margins. The latest increases in fuel and transport charges are additional. Further demands for increased wages and reduction in working hours are outstanding which, if conceded, will inevitably lead to a further rise in the cost of all stores, materials and services which the Group requires to buy. Under existing trading conditions it will be impossible to adjust prices to meet further rises in costs and margins will deteriorate still further.

It is difficult at this stage to forecast the trend of events during the current year, but the Company is well equipped to take advantage of any improvement in demand which may take place.

As a substantial income is derived from the Subsidiaries, Associated Companies and Investments as distinct from that derived from the trading activities of the Parent Company, the Board has decided that the Parent Company should be converted into a Holding Company. A scheme of reorganisation will be submitted to Shareholders at an appropriate date.

The Steel Company of Wales Limited

Highly Creditable Results Under Difficult Conditions

MR HARALD PEAKE STRESSES CONFIDENCE IN THE FUTURE

Extracts from the Annual Statement of the Chairman, **Mr Harald Peake,** to the Shareholders.

The year has been one of continued technical progress. But we have had disappointments resulting from the causes and effects of the national economic crisis, as well as from the breakdown of negotiations with the bricklayers' union. Sales and other income amounted to £133,040,159, a reduction of £10,055,580 or 7 per cent compared with the previous year, but yet the second highest so far achieved. The production of steel sheets was 96,600 tons lower than a year ago at 1,017,000 tons. Tinplate production fell by 100,000 tons to 791,000 tons compared with a year ago. The tonnage of our products exported was about the same as a year ago but the total value fell from £36,279,000 to £34,236,000 as a result of lower prices all round and a larger proportion of steel sheets being shipped.

Under the present conditions of national and international stress it is impossible to assess the prospects for the current year. But the Company is in a good position to take advantage of any improvement that may be experienced.

PROFIT AND LOSS ACCOUNT

The Trading Surplus before Depreciation is £23,252,739. This is £7,226,353 or 23.7 per cent less than last year and results partly from working below capacity, but more particularly from higher wages and increases in the cost of coal, oil and transport.

After charging Depreciation, Interest and Taxation, and putting £2,000,000 to Fixed Assets Replacement Reserve, the Balance of Profit for the year is £4,929,121—compared with £7,026,891 a year ago.

If the proposed final dividend is approved the total dividend for the year will amount to £2,450,000, or 2s. per share, less income tax, as compared with £3,062,500 or 2s. 6d. per share, a year ago. £2,479,121 out of the profit for the year will be retained in the business and added to the Revenue Reserve. This compares with £3,964,391 retained in the business last year.

The reduction in dividend will come as a disappointment to shareholders as it has to the Directors. If the results of the past year had been considered in isolation the maintenance of last year's dividend would have been fully justified.

On September 13, 1961, the bricklayers' strike started and although the Works were kept going by the praiseworthy efforts of foremen bricklayers and volunteers, the entire Steel Division was brought to a standstill on October 12th and did not restart until October 29th.

Bearing in mind the existing commitments of the Company, the Directors are unanimous in the view that it is not in the interest of the shareholders, either in the short term or the long term, to view the results of the year in isolation. They have also felt bound to take into account the effect on current profits of this unhappy strike.

BALANCE SHEET

The Fixed Assets Replacement Reserve has been increased during the year by £2,000,000 to the total of £16,450,000. Now that a substantial reserve has been created, your Directors have decided to abandon the theoretical calculation adopted in 1954 and to make such allocation from profits as may seem to them to be appropriate from year to year.

Profits retained in the Revenue Reserve now total £16,716,796.

It is satisfactory to record that on March 3, 1961, the Iron and Steel Holding and Realisation Agency sold to the public its holding of £40,000,000 First Debenture Stock 1980/85. There are four thousand seven hundred holders of this stock registered in our books.

The loan from the Iron and Steel Holding and Realisation Agency, which is due to be repaid by December 31, 1964, has been reduced to £18,000,000.

The Bank overdraft at the date of the Balance Sheet is £4,280,273. This is materially reduced at the time of the month when customers' accounts are paid, but it will be necessary for the Company to use to a rather greater extent facilities made available by our Bankers during the next year or two while capital expenditure is running at a high level.

Under Fixed Assets it will be seen that expenditure to date on plant not yet in production amounts to £12,214,338 compared with £5,216,421 a year ago. This marks the progress of the Fourth Development Plan as also do the commitments for capital expenditure shown at £17,000,000 compared with £29,000,000 last year.

FOURTH DEVELOPMENT PLAN

In February, 1960, a plan was approved to increase the capacity for steel ingot production from 3,000,000 to 3,600,000 tons per annum, with corresponding increases in the capacity for the production of tinplate and sheet steel.

The main features of this plan are:

1. Modifications to the ore preparation plant and to the two largest blast furnaces to produce the additional iron.

2. The construction of a fourth VLN steel converter and the replacement of four 230-ton by four 400-ton open hearth furnaces to increase steel production after providing for the closing down of the six old type 100-ton steel furnaces at the Port Talbot melting shop.

3. A continuous slab casting plant to supplement the production of the existing slabbing mill.

4. A new mill for tempering the steel coils, together with other finishing facilities, completes the programme in the Steel Division.

5. At Trostre a new continuous annealing plant and a third electrolytic tinning line and, at Velindre, a continuous pickling plant to increase the capacity to produce tinplate from 900,000 to 1,100,000 tons per annum.

These developments are due for completion by the end of 1962 and some parts of them are already in operation.

STEEL DIVISION

Ingot production of 2,633,000 tons is the second highest in the history of the Company but 144,000 less than in the previous year.

Taking the capacity of the Works at the 3,000,000 tons provided by the Third Development Plan, the Division has worked 88 per cent of capacity in the past year.

The financial year started well with a good supply of orders, and a record output of 60,156 tons of ingots was achieved in the week ended December 10, 1960. Early in 1961 it became apparent that the majority of our customers for steel sheets were heavily overstocked and their orders were for reduced quantities. As the year proceeded, further contraction of demand was experienced and in June, 1961, it was decided to close down the Port Talbot steel melting shop.

The operation of the Abbey melting shop has been made more difficult this year during the replacement of two of its twelve 230-ton open hearth furnaces by new furnaces of 400-ton capacity. At the same time improved types of roofs have been installed in the remaining ten furnaces. Difficulties arose over proposals to introduce a new wages structure and method of working for the furnace bricklayers. The Company's proposal to refer the matter to arbitration in accordance with the terms of the existing agreement was steadfastly declined by the Union representing the three hundred and fifty bricklayers affected.

If our Company is to compete successfully in the markets of the world it is essential that management and labour make a concerted effort to get the best possible result from the excellent equipment at their disposal. The full co-operation of our bricklayers can have a big effect on employment and prosperity in the town of Port Talbot.

TINPLATE DIVISION

Production for the year was 791,000 tons, being a reduction of 100,000 tons or 11 per cent compared with the previous year. Profit was lower than a year ago by 25 per cent, partly on account of the reduced output but mainly because of increases in wages and in the price of tin together with the additional tax on fuel oil imposed in the 1961 Budget.

Both the Trostre and Velindre Works were operating to capacity until the end of 1960. From January to mid-May, 1961, short time was worked and from June to the end of the year there has been a return to full-time working. Such unpredictable swings in demand highlight the difficulties of operating modern high production mills which supply a very sensitive consumer market.

A large amount of development work has been undertaken at both Trostre and Velindre throughout the year. This inevitably interferes with normal production and adds to production costs, especially during the commissioning periods.

NEWPORT DIVISION

Despatches of all grades of electrical steel sheets totalled 125,000 tons compared with 132,000 tons in the previous year. Shortage of orders has involved some short-time working since April, 1961. The main cause of this has been the reduced demand for domestic equipment using electric motors of fractional horse-power.

Exports to twenty-two countries represented about 18 per cent of total sales.

Profit has been lower than in the previous year because of reduced sales and of higher wages and other costs.

MARKET REPORT

During the past year a falling off in orders for the home market for both steel sheets and tinplate has coincided with more competitive conditions, and consequently lower prices, in the export market. As a result the Steel Division has worked at appreciably below its ingot capacity of 3,000,000 tons and the Tinplate Division below its capacity of 900,000 tons.

Consumption of steel sheets in the United Kingdom rose in 1960 by about 13 per cent over 1959. In our financial year to September, 1961, the fall was about 10 per cent on the previous year but consumption was still higher than in 1959. These changes in consumption are clearly related to the considerable changes in the demands of the motor industry both at home and abroad, and of the durable consumer goods industries which have suffered from the various changes in Government fiscal policy.

Consumption of tinplate in the United Kingdom was about 3 per cent less than in the previous year and increased capacity on the Continent caused the export of tinplate from the United Kingdom to fall appreciably. As a result we were able to export only 36 per cent of total production compared with 38 per cent in the previous year.

DIRECTORATE

Viscount Amory took up his duties with enthusiasm and his unexpected appointment in Canada has deprived the Company of a most valuable Director.

Shareholders will, I know, welcome to the Board Lord Cobbold whose unique experience of world finance and trade is certain to be of the greatest assistance.

Sir Robert Barlow, who retires from the Board by rotation, has attained the age of seventy. His knowledge of the tinplate industry is unsurpassed and I commend to the shareholders most strongly his re-election to the Board.

Earlier this year I felt in duty bound to accept the invitation to fill a vacancy, which could not be foreseen, as Chairman of Lloyds Bank in which I had served for several years before joining your Company. Accordingly I tendered my resignation as Chairman and as a Director. The Directors accepted my resignation as Chairman and invited me to remain as an ordinary Director. It is with greatest possible regret that I am retiring from the Chairmanship and I have gladly accepted the invitation to remain on the Board.

The Directors have appointed the Managing Director to succeed me as Chairman and I wish Sir Julian Pode all success on assuming the leadership of the Company which he has done so much to build up.

The Directors have appointed Mr W. F. Cartwright to be Managing Director, Mr David J. Young to be Assistant Managing Director, and Mr R. W. Evans to be General Manager of the Steel Division. Mr R. P. Tovey, in addition to his duties as Chief Accountant, will become Secretary of the Company. My relinquishing the office of Chairman is made easier by the knowledge that it will bring increased responsibility to these persons who have served the Company so well.

I should like to take this opportunity to thank the shareholders, the staff, the workpeople and the customers for the support they have given me during my six years as Chairman.

PROSPECTS

Writing my statement two years ago, I described the prospects as being "very good" and we were fortunate to show a Trading Surplus before Depreciation of £30,479,000.

Last year I said, "There are some signs of recession in world trade and, if the tendency were to spread, the results of our Company for the current year could suffer," and I ended, "The Steel Company of Wales can justly claim to have made remarkable progress. This progress will continue—and the prospects are good."

The circumstances which led in July, 1961, to the passing through Parliament of a second Budget within four months surprised the nation as a whole. I had hoped that we should have shown a Trading Surplus before Depreciation of about £26,000,000 and naturally I am disappointed that the actual figure was £23,253,000. Undoubtedly our results have been adversely affected by the large scale capital developments. Nevertheless, I regard the results, achieved under difficult conditions, as highly creditable to our staff and workpeople.

Shareholders will wish to know about the prospects for the future. Under present conditions I find it quite impossible to assess the prospects for the current year. We have started with a substantial reduction in production as a result of the strike of the bricklayers in October. It is impossible to quantify in money the cost of the strike but it means that we have much leeway to make up during the remainder of the year. Furthermore the effects of the national economic crisis are still with us although the recent reductions in Bank Rate are indications that the worst may have passed.

Whilst the Tinplate Division is better placed, the order books in the Steel and Newport Divisions are still suffering from the recession in the motor car and domestic appliance industries. Business in the export markets is more competitive than a year ago and prices are lower. In the short term, shareholders cannot reasonably look forward to larger profits—they may easily fall below that achieved in the year under review.

In the longer term, we are living in a steel age when sheet steel is increasingly replacing other materials in a wide range of industries.

If the threat of war can be removed and peace assured I believe that a new situation will arise in which there will be a ready market for all the sheet steel that can be provided by existing mills and by those now under construction.

In the Steel Company of Wales we have a skilled staff, good workpeople and first class equipment. I have confidence in its future.

Extract from Chairman's Statement

The Group net profit for the year, after providing for taxation and minority interests is £261,231, as compared with £250,461 for the previous year. Your Directors recommend a final dividend of 10%, less income tax, making a total distribution of 16%, less income tax, for the year.

Good progress has been made during the year on a number of property developments in the United Kingdom. Projects have been completed or nearly so in Walsall, Cleckheaton, Southampton, Flint, Wokingham, Ilford, St. Helens and Stroud. In all these cases lettings have proceeded very satisfactorily and the income will be reflected in next year's accounts.

Other developments are in progress at Shrewsbury, Chesterfield and Bedford and it is hoped that in 1962 we shall start on a new shopping scheme in Kilburn High Road, London.

Properties for redevelopment have been acquired in Lincoln, Ashby-de-la-Zouch and Garforth; and acquisitions are in progress in a number of provincial towns.

After commenting on the progress of the company's North American interests through its investments in Trizec Corporation Ltd., and Canbritam Development Corporation Limited.

Sir Brian continued: It is the aim of your Board that your Company should continue to develop as one of the leading property investment companies, with substantial first-class holdings in the major stable areas of the world. It must in the long run be a source of strength to have a spread of property investments in this way.

Your Board are confident that the large amount of development work now being undertaken at home and overseas, which is far larger than at any time in our history, will soon be reflected in the Profit and Loss Account; and we look forward to the Company's steady and continued progress.

Sir Brian also referred to his circular of December 27, 1961, in which were set out the details of the company's investment of $12,500,000 in shares and notes of Zeckendorf Property Corporation which is carrying out major works of property development in the U.S.A. and expressed his satisfaction at the outcome of the negotiations.

The report and accounts were adopted and a resolution increasing the Capital from £5 million to £6 million by the creation of 4 million new Ordinary Shares of 5s. each was approved.

NELSON FINANCIAL TRUST LIMITED

REVENUE WELL MAINTAINED

SIR DENYS LOWSON ON BALANCE OF PAYMENTS PROBLEM

The Annual General Meeting of Nelson Financial Trust Limited was held on January 8th at Estates House, 66 Gresham Street, E.C.

Sir Denys Lowson, Bart (Chairman), who presided said:

The Total Revenue of £154,080 for the year compares favourably with that of the previous year which amounted to £146,698 and the Net Revenue of £60,560 after taxation compares with £59,847.

The Directors are recommending the payment of a dividend for the year of 12 per cent, less tax, on the Ordinary Share Capital against 10 per cent paid last year and, if you approve that, there will be £94,377 to carry forward against £76,842 brought in.

The distributions require a total of 78 per cent of our revenue, Debentures taking 0-24½ per cent, the preference and preferred ordinary 24½ per cent-49½ per cent, and the Ordinary 49½ per cent-78 per cent.

As shareholders will have seen, the valuation of our investments at October 31st, last, is satisfactory considering the uncertainties of the times and the fall in security indices in this country. The valuation shows an appreciation over Balance Sheet figures of 59 per cent as compared with 52.70 per cent last year.

During the Company's year under review there has been a further deterioration in the country's economy. The gold and convertible reserves had dropped from £1,121 million in October, 1960 to as low as £876 million in July, 1961; since when there has been a material recovery. During 1961, there was also still a deficit on the balance of payments current account, though substantially at a lower rate than in 1960. This situation made it necessary for the Government to introduce certain deflationary measures in July last which are still in force.

The main problem is, of course, one of the balance of payments. The solution here has been made no easier by the fact that the surplus on the invisible items has fallen from £285 million in 1958 to as little as £35 million. In the past any deficit on the visible balance could be offset to a large extent by the surplus on the invisible items; but clearly now the invisible items are unable to make good the difference and the further outlook in this respect is not at all encouraging. If, therefore, we are to improve our balance of payments, it is more important than ever that every effort should be made to increase our visible exports, and this can only be achieved by keeping down costs and thus making our industry more competitive.

We have prepared our usual estimate of the revenue which we may hope to receive during the ensuing year and I am happy to tell you that this is satisfactory, and shows that our revenue should be well maintained.

The resolution for the adoption of the report and accounts was seconded by Mr Guy Montague Nelson, OBE, JP, and carried unanimously; and the proceedings terminated with a hearty vote of thanks to the Chairman, Directors and Staff.

WESTLAND AIRCRAFT LIMITED

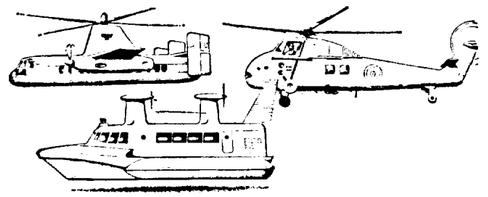
ONE OF THE WORLD'S LEADING SPECIALISTS, REMAINS CONFIDENT AS TO THE FUTURE OF THE HELICOPTER

CHAIRMAN'S STATEMENT

The following are extracts from the annual statement of Mr. Eric Mensforth, C.B.E., M.I.Mech.E., F.R.Ae.S. Copies of the statement can be supplied on request.

With a Group consolidated profit of £2,781,837, the first full year's trading after the merger of the British Helicopter Industry has been very satisfactory.

Integration of the Group's resources has progressed steadily. The organisation is strong, especially on Research and Development where it compares favourably with any competitor. Its foreign, particularly U.S.A. technical connections are most valuable.



British Government orders are still awaited for the Rotodyne—the World's First Vertical Lift Airliner. We are ready to commence production of this quite exceptional aircraft which could, given home support, produce an important volume of exports. The Belvedere, now in R.A.F. service, is the only twin engined helicopter in the Western World to give 'one engine out' flight safety. The turbine engined Scout, Whirlwind and Wessex are all doing well.

We have a leading position in the Hovercraft field with the 27 ton, 68 seater, SR.N2 now preparing for trials.

With the Westland Heliport still unique in London, Government decision to proceed with a larger one is urgently needed.

Normalair is busy with environmental control equipment for many important aircraft and missiles and with industrial breathing sets. Its air conditioning units are being fitted to a range of British Motor Corporation cars.

Westland Engineers has had an excellent year with doors, chalkboards and window balances.

SMITH'S DOCK COMPANY

COLONEL T. EUSTACE SMITH ON FUTURE PROSPECTS

The Sixty-third Ordinary Annual General Meeting of Smith's Dock Company Limited was held on January 9th at North Shields. **Colonel T. Eustace Smith, CBE, TD, DL,** Chairman and Managing Director, in the course of his speech, said:

We are satisfied that we have obtained a reasonable proportion of the work available in shiprepairing and we are well placed to ensure that this state of affairs continues. Since the end of the year under review, we have been able to secure in competition with foreign yards, a contract for the repairs to the Norwegian tanker "Fernmount." This contract involves the construction of a new centre section at South Bank which when launched will be towed to North Shields for fitting in place, and it is gratifying to consider how well the Company is placed to undertake such contracts.

In the current year the shipbuilding department will be reasonably employed but thereafter we have gaps in our programme. We have so far not been successful in obtaining further orders in spite of having submitted very competitive quotations.

During the first nine months of 1961, some 6½ million gross tons of shipping were ordered in the world, yet only 500,000 gross tons were ordered in this country, 430,000 gross of which were for British Owners. British Owners have been ordering at the rate of 2½ per cent of their fleet whilst other countries have been ordering at a much larger rate, with Norway at over 9 per cent. Exports are vital to this country but so are the invisible exports which are provided by a large British Mercantile Fleet. To compete in the difficult conditions of today this fleet must be modern but 2½ per cent of new ships is not even normal replacement. British Shipyards are just as up to date as the yards abroad and have shown in recent months that they can compete with foreign yards, on equal terms, that is with those countries who do not grant direct subsidies.

Surely the time has come when we should give some encouragement to our British Shipowners to at least maintain a highly efficient Merchant Fleet of the same magnitude as at present. Failure to do so will mean further loss of invisible exports, serious curtailments of insurance and the many ancillary trades connected with the world of Shipping, and a cutting down of the capacity of British Shipyards which are geared to the requirements of British Shipowners. The Government, through their Export Credits Guarantee Department, provide credit guarantees for foreign owners, and in the last few months the City has made great strides in providing the necessary finance against these guarantees. Should there not be similar organisation for British Shipowners who wish to build in this country, a Home Market Credit Guarantee Department? Surely the City would make great efforts to find the finance necessary. Whilst this would not solve all the problems of the shipowners, it might well provide that extra encouragement which is so necessary. The report and accounts were adopted.

STERLING ESTATES

The Thirty-fourth Annual General Meeting of Sterling Estates Limited was held on January 10th in London. **Mr Douglas Overall, JP, FAI** (Chairman), presiding.

The following is an extract from his circulated Statement for the year ended September 30, 1961:

Despite the reduction in gross rents of approximately £30,000 per annum resulting from the sale last year of leasehold properties by two of the Subsidiary Companies, the gross rental income of the Group has increased to £285,350 which, together with the income from the Associated Company and a surplus of £32,047 derived from the sale of property, results in a total income for the year of £329,099. Your Directors recommend a final dividend of 7 per cent, making a total of 12 per cent for the year.

Approximately £162,000 was expended during the year on the purchase of properties at Blackpool, Bristol, Kettering, Northampton, Putney, Shoreham, Southampton and Weston-super-Mare, also a site at Wokingham for redevelopment, on which work has already commenced. Expenditure on developments in hand at Weston-super-Mare and Sheffield totalled nearly £200,000. The development at Slough of a parade of six shops with offices over is virtually finished and lettings are being effected on satisfactory terms.

During the year a mortgage of £375,000 was arranged with a well-known Insurance Company on satisfactory terms; arising from this and the sales of property already referred to, the Bank Overdraft has been substantially reduced.

The report and accounts were adopted and the capital increased to £1,875,000 by the creation of 1,500,000 Ordinary Shares of 5s. each.

MITCHELL COTTS GROUP LIMITED

FAR-REACHING EFFECTS OF AFRICAN POLITICAL DECISIONS

The forty-second ordinary general meeting of Mitchell Cotts Group Limited was held on January 5th in London.

Mr H. C. Drayton (the chairman) presided and, in the course of his speech, said:

Last year I expressed the hope that our profits would be better for the year under review than for the previous year. I did point out the political risks we had to run in Africa, and unfortunately they have been as bad as we could have expected them to be, with the result that our results for the year are disappointing.

Our Group trading profit for last year did show a little improvement, but not as much as I expected, and after adjustments relating to previous years it is a little down—£1,058,000 compared with £1,117,000. Your Directors are recommending a final dividend of 6½ per cent on the Ordinary, making 12½ per cent for the year.

Today more than ever politics and economics get interlocked and the consequences of purely political decisions have far-reaching effects on the business life and trading prosperity not only of the various territories themselves but also of their neighbours.

Constitutional advance, discussion and argument in East Africa: a major political and constitutional change in South Africa: political argument about the constitutional future of the Rhodesias and Nyasaland: a flight of capital to a greater or lesser extent from them all: a severe Agency Law in Libya: these are some of the factors with which we have to contend and is a large part of the background against which we have been operating during the past 12 months.

During virtually the whole of our year under review there has been a continuing outflow of capital from South Africa. The total net withdrawal of capital during the period was probably something of the order of £80,000,000 to £100,000,000, the effect of which on the general economy might have been even more serious than it was but for the simultaneous creation of quite a large amount of credit. For example, advances by the Banks between January 1960 and April 1961 went up by about £80,000,000—an increase of about 25 per cent.

It is scarcely, therefore, surprising that towards the end of last June, a number of severe restrictions were introduced on the export of money and on imports and, at the time of speaking, these in the main still continue. They would seem to be having their intended effect in strengthening South Africa's reserves.

You will no doubt want to hear what I think the year to 30th June, 1962 holds for us. On the basis of such information as we have today in making what I hope is a reasonable guess of how the rest of the year will turn out, it seems to me that we have got one or two areas where we should certainly do better, one or two where I feel pretty confident that we shall not do as well, and for the remainder, I would expect there to be no very great difference either way. Putting it all together, I would hope for a modest overall improvement and I would ask for your sympathetic understanding when I use the word "hope" and not "forecast."

The report was adopted.

MERCANTILE CREDIT COMPANY LIMITED

INCREASED TURNOVER BUT LOWER PROFITS

HIRE PURCHASE AN ESSENTIAL SERVICE

The Twenty-eighth annual general meeting of Mercantile Credit Company Limited was held on January 10th in London, **Sir Mark Turner,** chairman, presiding.

The following are extracts from his circulated statement for the year to September 30, 1961:

A year ago I reported for the first time for many years an appreciable decline in our profits and I had hoped that our financial year which has just ended would have seen this downward trend reversed. In fact the profits before tax at £677,995 are £956,000 lower than for the previous year, and the profits after tax and minority interests of £345,082 are £400,000 lower, despite an increase in the volume of our business and in a year characteristically bedevilled by changes in government policy. In April I gave a warning that things were not easy and the reason for the decline is not hard to seek. Our problems can be summed up in the two words "bad debts," a problem facing this industry as a whole.

We are now paying for the exuberance of the industry in 1958 when all controls were removed. If we were re-examining now the accounts for the financial year ended September 30, 1959, we should have felt it appropriate to set aside a larger provision for the higher bad debt risk inherent in transactions extended in time and having substantially reduced down payments. The 1958 honeymoon opened hire purchase motor car facilities to a great number of people who had not enjoyed such facilities before. There was a boom in all types of consumer durables and many people took on commitments which were really beyond their capacity to meet. We have always prided ourselves as being a country of individuals who intend to honour their contracts, but over a very small sector of the community, there is unmistakable evidence that there are people who will lightheartedly engage in contracts without any intention of continuing their payments if it does not suit them to do so. A motor car involves the user with heavy operation costs and I think a number of people may have left that out of their calculations when estimating how much could be set aside to meet instalment payments.

Hire purchase as a service is essential to the community and I have no doubts whatever about its long-term soundness and profitability. The quality of business which we are now doing is better than it was. Terms are better, our staff is more experienced and, helped by our training school, is better qualified in the assessment of risks. There is still business on our books, however, which dates back to 1958, but I am convinced that in the future we can take care of the position with a provision of more normal proportions.

A very exhaustive appraisal was made of our portfolio and provisions were made which we believe to be realistic. We believe that the back of the problem has been broken. Although there is a reduction in the unappropriated profits to be carried forward to next year, our reserve position as a whole has been strengthened during the year, due to our having realised a surplus on the sale of 50,000 shares in our Irish subsidiary.

Referring to the company's non-hire purchase and overseas interests Sir Mark Turner said:

Kingsway and General Property Trust Limited.—This company continues to meet a natural need among our dealers, particularly in the motor industry, for short and medium term secured loans for property extensions and the like.

Mercantile Leasing Company Limited.—Now well established and meeting a very definite need among companies whose own financial circumstances make leasing more beneficial than buying for cash or on hire purchase.

Mercantile Credit Company of Ireland Limited.—We now have with us as partners the Provincial Bank of Ireland and our board in that country has been strengthened by the election of Mr John W. Freeman and Mr Patrick Bourke, respectively the chairman and general manager of the bank. This new association is already showing results to our mutual advantage.

South Africa and the Federation of Rhodesia and Nyasaland.—National Industrial Credit Corporation Limited, in which The Standard Bank has a 40 per cent interest, is conducted in close co-operation with the bank but difficult trading conditions and intense competition have led to narrower profit margins.

Interprovincial Building Credits Ltd., Toronto.—Our holding in this company remains at approximately 40 per cent of the equity capital. The company's annual accounts for the year ended February 28, 1961, showed an increased profit and progress is continuing during the current year.

I cannot conclude without a word to the executive directors, managers and staff of all the companies comprising the group. The response of all concerned has been splendid; their morale is high and their enthusiasm in their work and the future of the company is as great as ever.

The report was adopted.

Binding Cases

Binding cases for THE ECONOMIST *are available from* EASIBIND LTD. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold 13 issues of the normal edition together with the quarterly Index, or 26 issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is 12/6. Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* THE ECONOMIST, *but to—*

EASIBIND Ltd

COMPANY AFFAIRS

Gilt-edged stocks have been the liveliest sector of the London stock market this week. Partly on hopes of an early cut in Bank rate, prices have risen sharply and War Loan, on foreign buying, has gained a full point. Initially, uncertainty about the Government's intentions in economic policy kept the equity market subdued and The Economist *indicator lost 1.8 points to 361.8; but after the Chancellor's letter was published, prices improved. Against this trend, Leyland fell sharply on its results. Uniformly depressing statements from the spokesmen of the steel industry checked a rally in steel shares while bank shares were little changed.*

Higher Bank Profits

TOTAL disclosed profits of the "big seven" banks after transfers to inner reserves, rose by 11 per cent—exactly in line with the increase reported last week by Barclays, but well above the marginal increase at Martins. This followed the exceptional increase of 24 per cent in 1959 and 28 per cent in 1960. On dividends the banks toe the Chancellor's line, the only changes being those of the Midland and National Provincial, which stand by the forecasts made at the time of capital changes, and the minor rounding-up by Lloyds. But the scrip and rights issues made in 1961 raise actual distributions by 7 per cent; these payments had risen by over a fifth in 1960 and by a third in 1959. This year, the banks could find it difficult to avoid some setback in profits after this remarkable run. Increases in advances, the banks' most lucrative asset, now depend largely on deposits which are growing only slowly, and average interest rates could fall this year—though this is by no means certain.

This year the laurels for the largest increase in published profits go to the **National Provincial** with a rise of 19 per cent, compared with 25 per cent for 1960. The dividend is 14 per cent, which was the minimum rate forecast at the beginning of last year when the one-for-seven scrip issue was announced. Last year's dividend, allowing for this issue, was equal to 12¼ per cent. The **Westminster,** which had the best increase for 1960, is now second with a rise of 15 per cent. The dividend on its "B" shares is unchanged at 13½ per cent. Over the three years since the bankers got their commercial freedom the NP's profits have increased by 90 per cent, and the Westminster's by only a fraction less.

Disclosed profits of the **Midland** rose by 12 per cent. This rise, just above the average, was notable in view of the Midland Bank's subvention payment of £1.3 million to its hire purchase subsidiary, Forward Trust, though presumably this payment came out of hidden reserves rather than current profits. In line with past practice the Midland has made no transfer to write-down gilt-edged holdings, and uncovered depreciation on gilt-edged is now £4.03 million, which is an unchanged 1½ per cent of the total portfolio. The final dividend as forecast is 7½ per cent, which allowing for the one-for-three scrip issue, gives a total for the year equivalent to 14⅝ per cent.

In 1960 the Midland disclosed a relatively small increase in profits and fell behind Lloyds as well as Barclays in total profits. This year it is **Lloyds** that has lagged behind with an increase of only 7 per cent. Lloyds, which has the biggest hire purchase interests of the "big seven," collected £784,000 in hire purchase dividends in 1960; last year they fell by more than half to £315,000. The final dividend is rounded up to 11 per cent from last year's equivalent of 10⅛ per cent following the one-for-five scrip issue. A further scrip issue of one-for-six and an interim dividend of 4½ per cent are forecast.

The **District Bank,** with an increase in profits of 10 per cent, is for the third year running ahead of its larger northern rival, Martins. The dividend for the year is unchanged at 16 per cent. The **Royal Bank of Scotland** has also reported this week. Profits have increased from £1,034,000 to £1,095,000 and the dividend is up from 18½ per cent to 19 per cent, as was expected when the interim was increased from 8½ to 9 per cent.

Discount Houses

AS money dealers rather than money lenders (as the banks are) the discount houses are affected very differently by a sharp rise in interest rates, which causes an equally sharp depreciation in the value of the paper they have in stock—and must now finance at higher rates. The third quarter of 1961 was among the most difficult ever experienced by the market. The fourth quarter brought some relief, with its reduction, in Bank rate from 7 to 6 per cent, even though the houses had to accept some narrowing of running margins as their determination to increase holdings of Treasury bills edged the bill rate down, while the rearguard action by the Bank checked the concomitant decline in call money rates. It was the first half of 1961.

Thus over the calendar year as a whole both the Union Discount and Alexanders managed to show only marginal falls in profits, from £575,924 to £566,000 at the Union, and from £174,720 to £169,946 at Alexanders. These are creditable achievements. Both companies, expectedly, are paying unchanged dividends, of 12½ per cent and 10 per cent respectively.

The National Discount company, the other company which reports on December 31st, is also maintaining its dividend, at 10 per cent, even though the distribution of £335,808 is not covered by published profits of £317,034. Moreover, while the fall on last year's figure (£339,913) was in roughly the same range as at the two other houses, the National has again changed the basis of its profits computation. Losses realised on sales of securities in 1961 were met out of provisions retained towards depreciation of securities, whereas in 1960 corresponding losses were charged before arriving at the year's profit. And despite these sales, the National Discount again shows an uncovered depreciation in the market value of its securities portfolio, and indeed a higher one—£820,000 on a portfolio of £83.7 million, compared with a depreciation of £577,000 on a slightly larger portfolio in 1960. Yet in the year to December 31st most short bonds showed a market appreciation; the conspicuous exception was 5½ per cent Exchequer 1966, which came within the discount houses range last March.

Steel Profits and Development

Stewarts and Lloyds

REASONS for the fall of 23 per cent in the trading profits of Stewarts and Lloyds from £18,241,000 to £14,002,000 in the year to September 30th were given by the directors in the comprehensive preliminary statement, but Mr A. G. Stewart adds some further details with the full accounts. Increases in costs amounted to £4.6 million while price increases authorised by the Iron and Steel Board brought in only £660,000. Other contributing factors to the decline in profit were a fall of 39 per cent in the export of steel tubes to the oil and natural gas industries and a fall in export prices for general purpose tubes. In volume, however, the export of the latter showed little change while in the home market demand for them was sustained by the high level of building activity, though Mr Stewart expects some fall in demand in the current year.

Following the acquisition of Staveley Iron and Chemical, sales of spun iron pipes both in the home and export markets rose last year, but in neither market was demand strong. For the future the chairman expects the export demand for such pipes to contract further, reflecting the growth of local manufacture overseas and the increasing use of other materials for water pipes. At home orders for large diameter pipes had improved by the end of September, but the rate of new orders is now below current production.

Work is now beginning on the expansion scheme at Corby which should raise Stewarts and Lloyds' steel making capacity by nearly 500,000 tons. This scheme accounts for a big proportion of the outstanding balance of £48 million of expenditure sanctioned at the end of September. Against this the rights issue last May produced £13 million, but clearly more new money will eventually have to be raised. The company has an assurance of adequate assistance from its bankers and the extent, the form and the timing of further capital issues will depend on such factors as the Iron and Steel Board's pricing policy, the level of industrial activity, the size of the cash flow, and the phasing of the capital expenditure schemes. But £10 million of loan stock is due to be repaid in 1964. The current yield of 8.3 per cent offered by the £1 shares at 36s. reflects the prospect that it will be some time before Stewarts and Lloyds earns a full return on its new capital.

Steel Company of Wales

IN his valedictory statement as chairman of the Steel Company of Wales before taking up his duties at Lloyds Bank, Mr Harald Peake offers little short-term encouragement to shareholders still smarting from the cut in the dividend from 12½ to 10 per cent. Trading profits in the year to September 30th fell sharply from £30½ million to £23¼ million and net income after tax from £7 million to £4.9 million. These results, which are still the second best in the company's history, would have justified a maintained dividend, but the directors' decision to reduce it was influenced by the company's development commitments and by the effect of the bricklayers' strike on the current year's results.

Steel of Wales has been hit badly by the fall in demand for sheet steel and tinplate and by higher costs. Its profits were also adversely affected by additional expenditure incurred in bringing new plant into efficient production. The fourth development scheme is due for completion this year and Mr Peake says that "orders for all the major items were placed many months ago and any deferment of expenditure is impracticable." He is confident that the long-term prospect of selling the additional tinplate is good; indeed in the short term the prospect for tinplate seems brighter than those for sheet. The tinplate mills were working short time in the first months of the financial year, but since June they have been working to capacity.

Order books for sheet and electric sheet are still under the shadow of the recession in the motor car and domestic appliance industries at home, and abroad the markets are more competitive than they were a year ago. Not surprisingly, therefore, Mr Peake warns shareholders that profits may well fall further in the current year. This almost certainly points to a smaller cash flow than the £12¼ million retained in 1960-61 and £15¼ million in 1959-60. Steel of Wales's capital commitments have fallen from £29 million to £17 million, but the company expects to have to make greater use of bank loans, which amounted to £4¼ million at the end of September, over the next couple of years. By December, 1964, it must repay in full its loan from ISHRA, now amounting to £18 million. On the smaller dividend the £1 shares at 27s. 9d. yield 7.2 per cent and in view of the company's need to retain profits shareholders would be unwise to expect an early return to 12½ per cent.

* On capital as increased by rights issue.

John Summers

WITH the major developments and alterations to the Shotton works completed, John Summers's capital expenditure fell in 1960-61 to £5.8 million, the lowest level since 1955-56. But expenditure is likely to be higher again in the current year, for at September 30th capital commitments amounted to £13.3 million. Plans for the development of the Shelton Works are at advanced stage and may involve expenditure of about £18½ million in the next three years. This programme could just be financed by the cash flow, so long as retentions did not fall below the reduced rate of £6.4 million in 1960-61. In the past John Summers has financed the bulk of its capital spending from ploughed-back profits but faced with a net overdraft of £2.4 million, the repayment of £8 million of loan stock in 1964 and uncertainties about the level of earnings in the next two or three years, the directors are now taking the first steps towards raising new capital by proposing an increase in the authorised capital from £24¼ million to £30 million. This suggests that they are thinking in terms of a rights issue rather than a prior charge issue, but they emphasise that there is no immediate urgency for new funds as there are adequate overdraft facilities.

In his statement Mr Richard F. Summers, the chairman, acknowledges that an

8 per cent fall in trading profits in the year to September 30th last was less than had been expected; he attributes the increase in John Summers's deliveries partly to the wide range of sheet produced and to the growth in demand from the building industry. Mr Summers says that increases in wages and fuel prices added £2 million to costs and that the one per cent increase in steel prices brought in only £130,000 to offset these increases in 1960-61. With initial difficulties at Shotton now overcome, production costs within the company's direct control have been trimmed even though it is working well below capacity.

Mr Summers is less pessimistic about the current year than most steel spokesmen, reporting a good start to 1961-62 with record deliveries in November having "a favourable effect on production costs." Deliveries have not been maintained at this level, but while the chairman does not look for any immediate spectacular improvement in demand he expects that Summers will get "at least its fair share of whatever business is available." The £1 shares have lost 1s. 3d. since the proposal to increase the authorised capital was made, and at 44s. 4½d. yield 6.8 per cent.

Thos. Firth and John Brown

SURPRISINGLY good results from Thos. Firth and John Brown for the year to September 30th last largely reflect another big improvement in the profits of the Firth-Derihon stamping subsidiary and increased income from the 50 per cent holding in Firth Vickers stainless steel. The impact on the group's earnings of higher costs and lower profit margins was greater than Sir John Green had forecast a year ago—he then talked of an increase of at least £500,000 in costs—and he warns shareholders that the full effect has still to be felt.

On the immediate prospects for the group's products Sir John is equally sombre; the market for heavy forgings and castings grows no easier and the demand for forgings, boosted earlier by orders from plant manufacturers engaged in the steel expansion programme, is likely to fall; new orders are likely to be scarce in view of the present surplus of capacity in the steel industry. Demand for billets has also fallen sharply and short time is being worked in a number of departments. In stainless steels, too, Firth-Vickers is working short time. Profit margins already squeezed by increased costs have been squeezed further by intense competitive pressures overseas. Despite this setback after a period of growth, Firth-Vickers is embarking on a £4½ million programme to modernise its plate and wide sheet plants; this will take two or three years to complete. The Thos. Firth and John Brown group is committed to further expenditure of £1½ million but the emphasis will be on increasing the group's efficiency rather than its capacity. Finance should present no problem, for the group's net cash flow was maintained last year at about £2½ million and its liquid assets had risen to £7.6 million by the end of September. Having fallen by 2s. after the chairman's statement, the £1 shares at 42s. 4½d. are still close to their level a year ago. They yield 5.9 per cent, the lowest return among the steel companies.

International Computers & Tabulators

IN the numerous lists of recommended growth stocks for 1962 the shares of International Computers and Tabulators figured prominently and at 109s. 9d. they now yield a bare 2 per cent. The latest accounts and the first statement from the new chairman, Sir Edward Playfair, go some way to justify the market's esteem. The increase of just over 20 per cent in trading profits from £7,925,000 to £9,506,000 in the year to September 30th and of 12 per cent in profits before tax from £2,961,000 to £3,330,000 would have been higher but for the exceptional writing off of the heavy expenditure on training, systems study and "all the build-up of effort which is needed to launch new machines on the market." Research expenditure is already written off immediately. But the major factor in keeping a brake on current profits is the large amount (over 73 per cent) of ICT's output which is rented; this, as Sir Edward points out, means a deferment of higher profits.

The increase in the renting business has aggravated ICT's need for funds. A year ago it raised £10½ million by a rights issue and an issue of debentures; but this did no more than cover the repayment of a loan of £2 million from Vickers and the replacement of large overdrafts. In 1960-61 expenditure amounted to over £11 million against a net cash flow of £6¼ million, so that at September 30th ICT's overdraft still amounted to £2¼ million and its cash balance to only £819,000. The directors recognise that from time to time it will be necessary to raise further capital but for the moment they are making use of three other sources of short-term finance: acceptance credits; rental discounting on a small scale; and in the United States a credit from a leading New York bank in connection with ICT's purchases of electronic equipment from Radio Corporation of America. Sir Edward attaches great importance to the recent agreement with RCA, which provides for exchange of information in the electronics field as well as for the purchase of equipment, as one of the ways in which the expected growth in demand for computers will be satisfied.

The glamour of electronics has pinned a growth tag on ICT but the demand for conventional punched card equipment has been well maintained and the directors believe that such equipment will retain its place for many years to come both on its own and as an auxiliary to computers. In general, ICT's business continues to expand "at a satisfactory rate," but clearly it will be some years before the major benefit from current demands and from the 1960-61 increase of £3 million to £21.6 million in the value of machines on rental will be reflected in profits. The ordinary dividend for 1960-61, it should be noted, was simply maintained at 11¼ per cent on the capital as increased by the rights issue.

Leyland Motors

OVER the past few years the performance of Leyland Motors has been distinctly superior to that of its main rival in the heavy motor industry, Associated Commercial Vehicles, and the latter's 22 per cent increase in trading profits in 1960-61 had given rise to hopes of satisfactory results from Leyland even though it was known that Standard Triumph's losses would make a big dent in earnings. In the event a fall of 25 per cent in net earnings from £4.6 million to £3.4 million and in earnings per share from 75 to 39 per cent came as a surprise to the market and the shares fell back by 2s. 1½d. to 86s. 9d. to yield 4.6 per cent on the maintained dividend of 20 per cent, now covered 1.9 times.

The fall in net profits is more than accounted for by the post acquisition loss of Standard Triumph of £1.5 million, but after adding this back and the doubled depreciation charge of £2.9 million (against £1.4 million) trading profits for the year to September 30th last amounted to £11.2 million, against £10.6 million in 1959-60; this represents an increase of only 6 per cent. This hardly seems to accord with the encouraging report from Leyland of a big increase in overseas sales of diesel trucks and buses in 1961 with shipments up by 20 per cent over the previous year. Leyland's policy is to push up overseas sales in the belief that there is little scope for further expansion in the home market. The results suggest either a falling away in home trade or a sharp increase in costs.

The speech of the chairman, Sir Henry Spurrier, will be awaited with keen interest not only for an explanation of these disappointing results but for some indication as to whether Standard is now earning profits again.

ACV

A DETAILED preliminary statement from Associated Commercial Vehicles last month stole some of the thunder of the full report, for it showed a 21½ per cent rise in profits from £2,163,000 to £2,628,000 and a fatter order book than a year earlier. No allowance has been made in the profit and loss account for losses incurred in integrating Transport Equipment (Thornycroft) into the group after it was acquired last February; this involved the writing down of stocks as well as seven months' unprofitable trading and these losses have been dealt with in the balance sheet. The dividend is 16 per cent, as forecast, but as a result of issues of one-for-one rights and shares in the Thornycroft deal, the cover has been reduced from 2.3 times to just over twice.

The balance sheet includes the Thornycroft assets and Lord Brabazon says that full provision has been made for outstanding payments totalling £1 million. Expansion has put a strain on liquid resources; despite the £3 million raised by the rights issue, bank overdrafts rose from £1,279,000 to £1,703,000. In the year to September 30th the cash flow was only about £950,000 and capital commitments amount to £783,000. A reduction in the overdraft seems unlikely in the current year. Lord Brabazon is optimistic about prospects in the long term, though any marked rise in profits has to wait upon an increase in turnover in the home market, where in 1960-61 the credit squeeze had an increasingly severe effect. A year ago, the yield on ACV was 6 per cent; it is now down to 4½ per cent with the shares standing at 71s. 3d.

Westland Aircraft

SHAREHOLDERS of Westland Aircraft will be disappointed that the chairman's statement circulated with the full accounts appears to have been written before the joint bid with Bristol Aeroplane for Fairey Company was made. There is a brief addendum to the statement referring to the bid and its rejection by the Fairey directors, who include Mr C. H. Chichester Smith who has now resigned from the Westland board. The Westland directors say that in their circular the Fairey directors gave "certain information about Fairey not previously known" and that Westland and Bristol are "considering this matter further."

Trading profits of Westland for the year to September 30th rose from £2,583,000 to £2,782,000; the previous year's figures included only nine months' profits from Fairey Aviation and the Bristol helicopter division. It is not clear whether the increase can be attributed to a full year's earnings from these acquisitions; the chairman, Mr E. Mensforth, points out that "profits in the aircraft industry do not accrue from day to day and comparisons are therefore always difficult." The balance sheet shows that the improvement in liquidity in 1959-60 was only temporary; as a result of teething troubles on several helicopters, which resulted in delays in deliveries, stock and work in progress had risen by £2½ million to £12½ million at the end of September. These difficulties have apparently now been overcome, but at the accounting date the consolidated balance sheet showed an overdraft of £835,000.

For the future much will depend on whether the Government decides to place orders for military and civil Rotodynes. Probably the most significant event for the company last year was the licensing agreement with the Vertol helicopter division of the Boeing Company, for it is the Vertol 107 helicopter which BEA has decided to buy in preference to the civil version of the Belvedere on which Westland has now stopped working.

Apart from helicopters Mr Mensforth reports increased interest in Westland's hovercraft (which will soon be starting trials) while the production of Gannet aircraft and the Black Knight missile is continuing. Normalair has continued to expand steadily and Westland Engineering is adding to its floor space to meet the higher volume of orders, mainly from the building trade. The market's assessment of the company's prospects has changed little over the past year and at 15.3 the 5s. shares yield 4.8 per cent on the maintained tax free dividend of 9 per cent.

Peachey Property

ALTHOUGH Peachey Property still yield more than most property shares they are now in a less speculative category than they were two or three years ago when the company's profits came mainly from property dealings. The latest accounts, for the year to June 24th last, show some of the results of the company's two year investment programme, designed to ensure a stable minimum dividend with dealing profits providing the icing. In 1960-61, profits before tax rose from £689,000 to £1,015,000, including a £280,000 increase in investment income. The new chairman, Mr Farrow, is confident that this will rise further in the current year as recently completed new leases and a new block of luxury flats in Harley Street earn their full income.

Peachey also appears to have been stepping-up property sales recently but profits from them are variable and depend particularly upon the extent of completions before next June. Purchases of property have been smaller than hitherto, reflecting "competition and extremely high prices" but recently the group purchased for nearly £2 million over 800 flats and houses mainly in London and Birmingham. Most of the 500 flats have been purchased by a sub-group of companies, in which there are minority interests of slightly under 50 per cent. Mr Farrow does not say how this purchase is being financed. But Peachey is now linked with London Assurance, which secured one seventh of the Peachey equity when it acquired the three million 2s. shares which were the personal holding of the late chairman, Mr C. W. Hutley. This link has strengthened Peachey's investment status and this may now be improved further by the writing up of the 2s. shares into the more fashionable 5s. units. This is in effect a three for two scrip issue and on the increased capital the chairman forecasts a dividend of not less than 16 per cent, equivalent to 40 per cent, against 38¾ per cent for 1960-61. The 2s. shares, up 1s. 9½d. to 17s. 5½d. on the full report, give a prospective yield of 4.6 per cent.

Ranks

RANKS' formal offer for Hovis-McDougall accompanied the full report for the year to September 2, 1961. Hovis shareholders should be pleased with the offer of three Ranks ordinary shares for every five since the prospect of an increase of one third in their income is backed by a report of a successful year's trading by Ranks. It has overcome some of the difficulties arising from excess capacity in the flour milling industry by rationalising and reconstructing old plant, and the bakery division has been strengthened. Ranks' trading profits rose by 5½ per cent from £11,446,000 to £12,045,000; the resulting cash flow of £4.2 million covered the bigger capital outlays of the group. Fixed assets rose by £1½ million and new acquisitions were also reflected in the increase in stocks and debtors from £16.5 to £18.5 million. With capital commitments of £3.9 million the group has some way to go in modernisation but they present no financial problem.

Both Ranks and Hovis say that profits are now running at a higher level than a year ago; Ranks earned higher profits in the first quarter of the current year and Hovis profits for the year to March 31st will be higher than the £3,275,000 earned in 1960-61. Ranks Hovis McDougall, as the new group will be known, therefore expects to pay a dividend of not less than 14 per cent. Hovis shares now stand at 18s. 4½d. and Ranks shares at 30s. 6d. xd to yield 4.6 per cent.

THE MONEY MARKET

At last week's Treasury bill tender the syndicate of discount houses lowered its bid, for the third week in succession, by 2d. to £98 12s. 10d., and the average rate of discount rose by 7.09d. to £5 8s. 7.81d. per cent—bringing the total rise in the three weeks to 2s. 2.98d. per cent. The market received 38 per cent of its application compared with 51 per cent in the previous week. The discount houses now seem to be seeing how far they can push the bill rate up again—a reversal of the policy pursued in the fourth quarter of 1961 when they went all-out to rebuild portfolios depleted by heavy competition in the third quarter.

Credit has been short this week, and conditions have been confused by the postal delays. The London clearing banks have issued a warning that cheque clearings may be delayed. In the morning sessions the banks have made heavy precautionary withdrawals. Before the close, however, money has generally been on offer. In these conditions the authorities have been set a difficult task in judging the market's credit needs. On four days the authorities provided special help, but on Tuesday one or two houses were still forced to borrow a small amount at Bank rate.

APPOINTMENTS

CALTEX

THE BAHRAIN PETROLEUM COMPANY LIMITED

DATA ANALYSIS SPECIALIST

The Bahrain Petroleum Company Limited in Bahrain (Middle East) requires the services of a Specialist in Data Analysis for its Technical Services Department.

Applicants should possess a degree in Science, Engineering or Economics and should have had at least five years' experience in data analysis work involving the use of statistical methods and operational research techniques such as multiple regression analysis, factorial and other experimental designs, the setting up and calculation of optimisation problems as in linear programming. A keen interest and some experience in the application of digital computers to data processing problems would be an advantage.

Depending on experience and background, a commencing salary of between £2,000 and £2,500 will be offered together with free air-conditioned accommodation and a living allowance. An initial kit allowance, medical attention, paid home and local leaves (passages paid for the former and generous assistance towards the latter) are also provided, with participation in Pension and Provident Fund Schemes.

Suitably qualified men should apply to

CALTEX SERVICES LIMITED

CALTEX HOUSE, KNIGHTSBRIDGE GREEN, LONDON SW1

UNUSUAL ACCOUNTANCY APPOINTMENT

RECKITT & COLMAN wish to appoint an experienced accountant to advise their companies overseas about their accounting procedures, with a view to introducing changes where needed.

Enquiries are invited from Chartered Accountants with a sufficient knowledge of management accounting, costing, budgetary control and mechanised systems to make it appropriate for them to give advice to qualified company accountants, who may not have so much experience in some of these subjects.

The appointment offers an exceptional opportunity to an enterprising man, who would like to visit other countries whilst making his home in the U.K. Preference will be shown for men aged between 32 and 40, with a good liberal education.

Enquiries should be addressed to:

Personnel Adviser,
Reckitt & Colman Holdings Limited,
Dansom Lane, Hull.

DCL

MANAGEMENT ACCOUNTANT

The Distillers Company Limited wishes to appoint a man with an accountancy background to the Headquarters of its Industrial Group in London. The position calls for a wide interest in the theoretical and practical use of figures as applied to industrial problems with particular emphasis on the economic and financial aspects of new investment projects in the United Kingdom and overseas. This work will involve co-operation with senior executives in the Divisions and Departments of the Industrial Group. Study of techniques and practice in management accounting in the United Kingdom and other countries will be another substantial part of this job.

This is not a back-room appointment and is an opportunity for an energetic and able man to play a full part in the development of the Industrial Group's varied interests.

Candidates must be Chartered Accountants preferably with a university degree including economics as a subject. Reasonable ability to speak and read French and German is most desirable. The post will probably be filled by a man in his thirties currently earning about £2000 p.a. plus who aims at a senior financial/commercial appointment in three to five years' time.

Write: STAFF MANAGER
THE DISTILLERS COMPANY LIMITED,
21/22, BOLTON STREET, LONDON, W.1.

Quote reference: 201 E.C.

THE BRITISH ALUMINIUM CO. LTD.

Industrial Market Research

The British Aluminium Company has two vacancies in the Market Research Department. The department is responsible for evaluating new and existing outlets for aluminium at home and abroad. It also analyses and comments upon the sales performance of the company and assists in long-term planning. The vacancies are :—

Assistant Manager

Requirements : A man with a first or upper second class honours degree, preferably in economics. A knowledge of statistics would be an advantage. An essential is at least three years' experience in industrial market research. Age 25 years minimum.
The successful applicant will be capable of carrying through a major industrial market survey from first planning to final editing and publication, without supervision. This will involve intermittent travel in the U.K. and occasionally abroad. He will also share in all the other functions of the department, and will deputise for the Market Research Manager.
Starting Salary dependent on qualifications and experience, but not less than £1,200 a year. There is a pension scheme and other benefits. Prospects are excellent.

Research Assistant

Requirements : A woman with a good honours degree, preferably in economics, plus some experience of industrial market research. This must include practical experience of interviewing on industrial subjects. Knowledge of European languages would be an advantage. Age : at least 23 years.
The successful candidate will be chiefly engaged in assisting the other members of the department on industrial market surveys, and will be expected to work with limited supervision. There will be a fair amount of travelling within the U.K.
Starting salary according to qualifications and experience but not less than £850 a year, plus fringe benefits.

Applications, with brief details of education, qualifications and experience, should be addressed to The Staff Manager, The British Aluminium Co. Ltd., Norfolk House, St. James's Square, London, S.W.1.

FINANCIAL CONTROLLER

This is a new appointment in Central London with an old established Public Company employing some 800 people. The Company designs, manufactures and installs on site specialised equipment.

The selected candidate will be around 40, with adequate professional qualifications and first-class industrial experience, especially in management accounting. He will be required to participate in reorganisation and must be able to overcome the human difficulties associated with changing the methods used by many long-service staff.

Initial salary will be commensurate with responsibilities and is open to negotiation. There is a contributory Pension Scheme. Prospects include the possibility of a directorship in due course.

Reply in confidence, stating present salary, to Cook, Orr & Partners Ltd., 6 Buckingham Palace Gardens, London, S.W.1, who are advising on this appointment, quoting reference FC/1561/EC in the envelope.

ABRAC

A. BOAKE, ROBERTS & CO. LTD.

Member of the Albright & Wilson Group of Companies

seek a

GRADUATE TRAINEE

preferably in Commerce or Economics who will receive a comprehensive training throughout the Accounts Division. He will commence as an assistant on Budget Control and will gain an all-round knowledge of financial accounting and of the Company's activities.
The person appointed will be given every encouragement to qualify as a Certified or Cost & Works Accountant. He will also be given day-release facilities and assistance with study costs.

Applications to:

Staff Manager.
A. Boake, Roberts & Co. Ltd.,
Carpenters Road, Stratford,
London, E.15.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for the positions of RESEARCH FELLOW and RESEARCH OFFICER in the Research Techniques Division.
The RESEARCH FELLOW will conduct criminological research primarily on the *methods* on which studies of crime are based. Research issues include : the accuracy of research information ; techniques for eliciting information ; the potential of survey methods for the development of control samples ; the adequacy of existing methods of analysis for studying the causes of crime.
The position will involve responsibility for the development and the progressing of research projects and will entail liaison with public bodies and with those working in crime research.
Applicants must have a university honours degree (not less than second class) or advanced training in psychology or in sociology, and a working grasp of statistics. *Practical experience in social research is essential*, preferably including survey work with members of the public and the use of intensive interviewing techniques. A realistic concern with scientific method is essential.
The salary will be upwards of £1,700 a year, plus a London allowance of £60 a year and F.S.S.U. benefits. There will be full opportunity to publish findings.
The RESEARCH OFFICER will work on the same series of projects but will, in the first instance, be responsible to senior research staff. Applicants should hold a university honours degree, should have advanced training in psychology or sociology and a good grasp of elementary statistics. Practical experience in social research is essential.
Salary is in the range £750-£1,000 (plus London Allowance of £60) per year. This position offers opportunity to publish results, and experience in an area of basic importance to research (i.e., methods). There would be opportunity to work towards a higher degree.
Applications, which should be received by February 14, 1962, should be sent to : The Secretary, The London School of Economics and Political Science, Houghton Street, London, W.C.2. The following information should be included in the application—academic and other qualifications, with special reference to psychology, sociology and statistics ; practical experience in research, with a statement of the level of responsibility involved ; research interests ; reference to any publications ; age and other relevant biographical details.

FEDERATION OF RHODESIA AND NYASALAND

CENTRAL STATISTICAL OFFICE
STATISTICIANS

Applications are invited from graduates having university degrees with first or second class honours (or the equivalent) in Statistics or Economics with Statistics or in Mathematics with Statistics :—
Senior Statistician
Applicants who have at least six years' post-graduate experience, some of which has been in a position of responsibility, will be considered for posts at £2,000 per annum (men) and £1,600 per annum (women) on contract for three years.
Junior Statisticians
Applicants with four years' post-graduate experience will be considered for posts at £1,350 per annum (men) and £1,150 per annum (women). Applicants with less than four years' experience will be considered for posts at £1,150 per annum (men) and £985 per annum (women). General conditions will be the same as those for senior statisticians.
All posts on contract will be for a period of three years and return passages will be paid.
Medical aid scheme, low income tax, free education up to university entrance, opportunities for sport and recreation in excellent climate.
Application forms and further particulars from : The Secretary (R), Rhodesia House, Strand, LONDON, W.C.2.
Closing date : **January 30th.**

APPLICATIONS invited from Women Historical and English Graduates (25-40) with personality and interest in World Affairs to teach girls over 18. Stimulating work, international connections. Scope for initiative, good salary and delightful conditions.—Apply, Mrs. NEVILLE-ROLFE, HOUSE OF CITIZENSHIP, Aylesbury.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR

APPLICATIONS ARE INVITED for Honours graduates for the post of Assistant Lecturer in Economics.
The salary scale is £400 x £50—£950 per annum and in addition there are F.S.S.U. benefits and family allowances. The appointment will date from October 1, 1962.
TWO copies of the application should reach the Registrar, from whom further particulars may be obtained, *not later than February 1, 1962.*

Financial Journalist

Leading Sunday newspaper wants bright young financial journalist. Must have some knowledge of stock market and be able to write like an angel. Will be rewarded with wide brief, generous salary and excellent prospects.

Please write Box TE.320, c/o Hanway House, Clark's Place, E.C.2.

POSTGRADUATE STUDENTSHIPS IN USSR 1962-63

Applications are invited for twenty scholarships for study in Soviet universities for the academic year 1962-63. These awards are open to postgraduate students currently engaged in study or research at universities or equivalent institutions. Undergraduates now in their final year may be considered. Applicants must be of British nationality and have a working knowledge of the Russian language. Outline particulars and application forms, for which a stamped (4½d.) self-addressed foolscap envelope should be sent, are obtainable from the British Council, State House, High Holborn, London, W.C.1. Completed application forms must be returned to the British Council by February 16, 1962.

STATISTICIAN/ECONOMIST with good degree and preferably with some research experience required progressively post in sizeable economics department. The successful candidate will work in London on varied and interesting topics mainly within a framework of econometrics. ECONOMIST—with or without statistical qualifications—also required, carrying salary for both posts commensurate with qualifications and experience. Good working conditions, pension scheme, etc.—Please apply by letter to The Director of Administration, INTERNATIONAL WOOL SECRETARIAT, Dorland House, 18-20 Regent Street, S.W.1, marking the envelope "Confidential".

THE UNIVERSITY OF LEEDS
DEPARTMENT OF MATHEMATICS

Applications are invited for appointment as Tutor or Assistant Lecturer in Statistics at a salary on the scale £1,050 x £50—£1,400 x £75—£1,850 (efficiency bar at £1,550) a year for a Lecturer, or within the range £800—£950 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds 2, from whom further particulars may be obtained) not later than 1 February, 1962. Applicants from abroad may apply in the first instance by air mail, naming three referees, preferably in the British Isles.

THE UNIVERSITY OF LEEDS
DEPARTMENT OF MATHEMATICS

Applications are invited for appointment of Tutor or Assistant Lecturer in Applied Statistics at a salary on the scale £800 x £50—£1,400 x £75—£1,850 according to age, qualifications and experience. Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach The Registrar, The University, Leeds 2, from whom further particulars may be obtained, not later than February 1, 1962.

SCHOLARSHIPS ABROAD 1962-63

Applications are invited from British students for scholarships offered by Austria, Belgium, Czechoslovakia, Denmark, Finland, France, Germany, Greece, Iceland, Indonesia, Iran, Italy, Japan, The Netherlands, Norway, Poland, Portugal, Roumania, Spain, Sweden, Switzerland, U.S.S.R. and Yugoslavia. The awards are mainly for university graduates and are tenable for periods varying from one to twelve months during the academic year 1962-63. Full particulars and application forms, for which a stamped (4½d.) self-addressed adhesive label should be sent, are obtainable from the British Council, State House, High Holborn, London, W.C.1, or from any British Council office in the United Kingdom.

UNIVERSITY OF NOTTINGHAM

Applications are invited for a LECTURESHIP OR ASSISTANT LECTURESHIP IN INDUSTRIAL ECONOMICS, with special reference to Industrial Relations. Scales : Lecturer £1,050 to £1,850; Assistant Lecturer £800 to £950 ; initial salary according to qualifications and experience, plus membership of the Universities Superannuation Scheme and children's allowances. Conditions of appointment and form of application, to be returned by Saturday, February 3, 1962 from the Registrar.

For further appointments and other classified advertisements see pages 182 & 184

AUSTRALIAN NATIONAL UNIVERSITY
Canberra

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for appointment to a PROFESSORIAL FELLOWSHIP IN ECONOMIC THEORY IN THE DEPARTMENT OF ECONOMICS, Head of Department : Professor J. W. Nevile. The salary will be within the range £A3,250-£A3,750 per annum. Recognised travel and removal expenses are payable.
One year's study leave with travel allowances will be granted after each two years' service.
Four Professorial Fellows will be elected to undertake research in economic theory and to supervise and take part in post-graduate studies. The work of the Department of Economics has three main branches—economic statistics, economic history and economic theory. The present general interest of the Department is in processes and problems of economic growth and fluctuation, but the interest of the Professorial Fellows in Economic Theory need not be in this field.
Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close in Australia and London on March 12, 1962.

THE ROYAL COLLEGE OF ADVANCED TECHNOLOGY, SALFORD

MANAGEMENT STUDIES

The College is to set up a new Department of Management Studies and the Governors require a person of administrative ability as Head of Department who has already had relevant experience.
The future position regarding the salary scales applicable to Colleges of Advanced Technology is not yet finally settled, but it is anticipated that the salary attached to this post will be of the order of £2,750 to £3,000 per annum.
Applications, giving details of age, education, qualifications and experience, together with the names and addresses of not more than three referees, should be sent to the Registrar, ROYAL COLLEGE OF ADVANCED TECHNOLOGY, Salford 5, Lancs., by February 15th, 1962.

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS AND GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above Studentships and grants for Research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology, Sociology or the Economics and Organisation of Business, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The Studentships are normally of the value of £450 or £400. They are reserved for candidates who have obtained the decree of Bachelor or Master in this or any other approved University.—Applications should be sent not later than January 22, 1962, to the Registrar, the University, Manchester 13 from whom further particulars and forms of application may be obtained.

APPLIED STATISTICS

C. & J. CLARK LIMITED, Shoemakers of Street, Somerset, who have increased their production fourfold in the last twelve years, wish to appoint someone experienced in statistics to join their research and development department.

WE are looking for a mathematics graduate who will preferably have specialised in statistics elsewhere in commerce, who wishes to extend his experience and wants to apply statistical techniques to the solution of problems in a wide field. These will range from the design of industrial experiments to the design and analysis of population surveys. He should be aged up to 28 and his salary, dependent on his qualifications and experience will be in the range £1,000-£1,300.

Please apply, in writing, to the Staff Recruitment and Development Officer, C. & J. Clark Ltd., Street, Somerset, quoting Reference number JT 19 E.

STATISTICIAN

THE G.E.C. APPLIED ELECTRONICS LABORATORIES

Stanmore, Middlesex

We have a vacancy in the Statistical Services Group. The group provides a consulting service for the organisation and many of the problems encountered require the development of original methods for their solution. The services of an advanced digital computer are available if required.

Candidates should have a degree in mathematics, or its equivalent, with interest in modern techniques of statistics or operational research.

Applications should be made to the Staff Manager, quoting Ref. C.S.E.

DEPUTY CHIEF ACCOUNTANT

G.E.C. (Engineering) Limited invite applications from qualified Accountants for the new post of Deputy Chief Accountant at their Witton Works, Birmingham.

Candidates should be between 32 and 45 years of age and have post-qualification experience in industry, preferably in Engineering.

The post offers scope for advancement and will involve not only responsibility for the existing comprehensive accounting system, but also for the further development of that system in the field of Management Accounting.

The salary will be commensurate with the status of the appointment and applications should be addressed, in the first instance, to the Personnel Manager, G.E.C. (Engineering) Limited, Witton, Birmingham, 6.

WORK STUDY OFFICERS

NORTH THAMES GAS BOARD has opportunities for men in an expanding work study field.

Starting salaries within the range £1,075 to £1,300 per annum.

A sound basic training in Work Study together with a minimum of two years' experience in the application of Method Study and Work Measurement is required. Previous experience in engineering maintenance would be an advantage.

Applications, giving full details of age, education, qualifications, industrial training and experience, should be addressed to:

The Staff Controller,
North Thames Gas Board,
30, Kensington Church Street, W.8,
quoting reference EC/1046.

QUALIFIED ACCOUNTANTS

are required by

THE CAMEROONS DEVELOPMENT CORPORATION

which manages about 55,000 acres of tropical plantations near the coast of the West Cameroun together with large engineering and medical services.

Conditions of service are good with free passages, accommodation, electricity and medical attention; there is a bonus scheme and provident fund. Tours of duty are about 18 months followed by about 30 months paid leave in U.K. The Corporation runs two infant schools for children of management staff, and there are children's allowances.

Applicants should send a short biographical note to the
Personnel Officer, Colonial Development Corporation,
33, Hill Street, London, W.1.
quoting Serial No. 661

REPRESENTATIVE TRAINEE required for medium-sized packaging company in the North. Public school education or equivalent essential. Age 22-29 only need apply. Thorough training given with excellent prospects afterwards. Usual pension scheme facilities available.—Apply Managing Director, Box No. 699, ROBERTSON & SCOTT, 42, Charlotte Square, Edinburgh 2.

CAMBRIDGE UNIVERSITY
RESEARCH STUDENTSHIPS IN LAND STUDIES

A Harold Samuel Studentship, tenable from October 1, 1962, is offered for research in economic, legal or social matters relating to the use, tenure or development of land. Applications must reach the Registrary, The Old Schools, Cambridge, not later than March 15, 1962.—Value of the studentship and other particulars may be obtained from the Secretary, Board of Estate Management, 18A Silver Street, Cambridge.

THE UNIVERSITY OF LIVERPOOL
NATIONAL TRANSPORT FELLOWSHIP IN OPERATIONS RESEARCH

Applications are invited from graduates in science, engineering or economics for appointment to the National Transport Fellowship in Operations Research.

The appointment will be for a period of two years initially at a starting salary in the range £900—£1,300 per annum according to experience and qualifications.

Further particulars, and forms of application may be obtained from the Registrar, The University, Liverpool 3, to whom applications should be forwarded not later than February 15, 1962, quoting reference No. CVS/591/E.

RESEARCH DEPARTMENT EXECUTIVE

To be responsible to the Research controller for all research on a group of accounts, and to keep contact with all agency departments, advertising and independent research organisations.

A university degree would be useful, but attitude and experience are more important. Imagination tempered by commonsense is expected, and two years' "shop floor" experience with a field survey organisation is essential. The ability to use words clearly, verbally and in writing, is also required, and independent research organisations.

A good salary and matching prospects will be offered to the right man. Apply, in writing, please, to:

Mr S. B. Branning Research Controller, Hobson, Bates & Partners Limited, 155, Gower Street, London, W.1.

For other appointments see pages 181 & 183

SKELMERSDALE DEVELOPMENT CORPORATION
(New Towns Act 1946)

GENERAL MANAGER

Skelmersdale, Lancashire, has been designated as a New Town to take overspill population from Liverpool and Merseyside. The development corporation to be established soon will require a General Manager who will be responsible, as the chief executive officer of the corporation, for the supervision and co-ordination of all the activities involved in the development of the new town. The post will demand initiative, resource and organising ability of a high order.

Salary £4,200-£4,500. Contributory pension scheme.

Applications giving date of birth, education, qualifications and experience, and the names of two referees, should be made by February 17, 1962, to The Chairman-designate, Skelmersdale Development Corporation, c/o The Secretary, Ministry of Housing and Local Government, Whitehall, London S.W.1.

THE UNIVERSITY OF LEEDS
DEPARTMENT OF MATHEMATICS

Applications are invited for appointment as Lecturer or Assistant Lecturer in Pure Mathematics at a salary on the scale £1,050 x £50—£1,400 x £75—£1,850 (efficiency bar at £1,550) a year for a Lecturer, or within the range £800—£950 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach The Registrar, The University, Leeds 2 (from whom further particulars may be obtained) not later than February 6, 1962.

EDUCATION

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (1st. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ., B.Sc.Econ. (three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ. B.Sc. Economics exams. 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.172.

WOLSEY HALL, OXFORD

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Write, Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

GUIDE TO CONTENTS SEE OVER

"No. 3? That's the big one, isn't it?

Yes—the biggest outside the U.S.A.—as big as the other two together.

Sounds impressive—but you were going to say what you do with all the ethylene now you've got it . . .

It finishes up all over the place—about a third of it we turn into ethanol—industrial alcohol to you, and there's a whole chemical industry based on that. Two thirds ends up in plastics—polyethylene, polystyrene—and p.v.c. as well now that our new ethylene dichloride unit's in operation. And that's only part of the story—last year BHC made more than two hundred thousand tons of chemicals for industry.

That's something like production—you surely need big uses to keep pace with that.

Too true—and they're there all right as far as anyone can see. Increasing demands will keep us on our toes like this for years.

INTERNATIONAL

ONE MAN ONE VOTE

Next Thursday, the leaders of the independent (non-white) countries in Africa will meet at Lagos to talk about unity. A special survey of what unites (rather than divides) them in west Africa begins on page 203.

In the Congo, Mr Adoula seems to be getting somewhere (p. 210).

In Algeria, the first task is to end the slaughter (p. 209).

Sir Roy Welensky: votes in favour (p. 216).

"Guilty Land," a new book about South Africa, is reviewed on p. 220.

ONE COUNTRY ONE VOTE

The new African and Asian countries voting at the United Nations are no less likely to act according to their self-interest than are the older countries; the task is to channel this self-interest in the right direction (p. 201).

British and American officials met last week to discuss the United Nations—their contrary votes ended in a kind of understanding (p. 232).

Work for the United Nations to do: in Indonesia, p. 209; in Kashmir, p. 213.

ONE PRESIDENT—HOW MANY VOTES?

Before the United States Congress:

President Kennedy is trying to fit the national needs into a balanced budget (p. 226). His proposals for a new tariff policy are imaginative and far-reaching (p. 227).

He would like to give city-dwellers a fairer share in the government (p. 227).

The managers of the United States public debt received a slight setback this week in their manoeuvres (p. 230).

The two largest American railways have given notice of their intention to marry but the union may be forbidden (p. 231).

The Mormons are as successful in business as they are in missionary work (p. 228).

NO VOTE

Mr Khrushchev is not the undisputed master of all the communist world. Is he even master of his own house? (p. 207)—or master of the land where the tall corn grows? (p. 237).

His quarrel with China, via Albania, continues (p. 207).

The Greeks, meanwhile, hope to patch up their own quarrel with Albania (p. 234).

But east Germans and west Germans are still shouting at one another over the air-waves (p. 234).

BRITAIN AND EUROPE

The European Six have reached a potentially liberal—if immensely complex—agreement on agriculture: now they can turn their attention to the Anglo-Saxons (p. 199).

The British must learn to make do with less than a full feast (p. 200).

The Labour party finds that European policy is its greatest bone of its present internal contention (p. 208).

HOME

ROUNDABOUT

Courtaulds-ICI: Britain's two giant producers of man-made fibres are professing—and backing—two entirely different philosophies of manufacture (p. 241).

Who gets credited with the balance-of-payments deficits? (p. 254).

King's Lynn: an East Anglian town, under its own power, is trying to ease one of London's problems while increasing its own prosperity and population (p. 218).

Circuitous arguments about electronic computers for banks (p. 249).

Either the BBC or Independent Television must be claiming the others' viewers (p. 257).

BLACK SPOTS

Miners are producing more per head, partly because the coalfields are producing less: behind protection against imports, coal felt it had to declare a vintage year (p. 243).

Wage increases—for miners among others—are in the balance: but is the pause over? (p. 206).

Freight rates are sinking (p. 250).

DANGEROUS CURVES

In Parliament: immigration, Rhodesia, public expenditure and the common market will give the Commons a bumpy passage (p. 207).

A ban-the-bomb candidate in farthest Wales threatens to explode the anti-nuclear bubble (p. 210).

Smallpox: prevention rather than panic (p. 212).

Influenza: colds, flu, and the Christmas bonus (p. 220).

Industrial output: the index rehashed (p. 246).

CLEARWAY

Lord Snowdon, as a working journalist, can be a suitable recruit for Fleet Street (p. 208).

Education: more to pay—but how much? (p. 213).

Government employees have offered some lessons for trade unionists in private industry (p. 219).

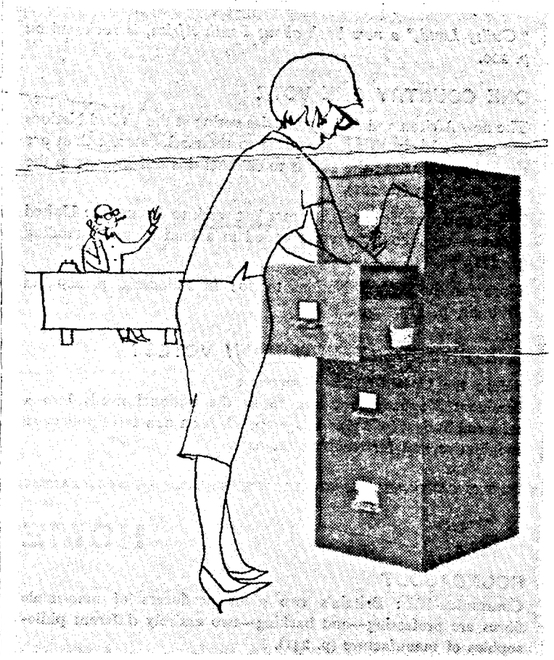
Detailed contents on page 199

LIVELY MINDS WRITE THE GUARDIAN...

JIGSAW PUZZLE EXPERT

A footnote in *Communiste*. A casual aside by a Soviet minister touring in Asia. A familiar word in an unfamiliar context in the columns of *Pravda*. Even the omission of an accustomed cliche, the non-appearance of an accustomed name... These are the pieces which Victor Zorza hoards until he senses their place in the jigsaw puzzle of communist diplomacy.

What are the communists up to, why do they do this, why don't they do that? If anyone can glimpse the overall picture, it is Zorza. His flair for anticipating trends in communist policy seems uncanny until one understands his method: careful analysis, followed by skilful synthesis. He hunts his clues methodically each day through virtually the entire newspaper output of the communist world: then he pieces them together with the skill which makes him probably the best-informed expert on communist affairs on the near side of the curtain.



Zorza is single-minded in his search for the overall picture - but his single-mindedness looks beyond knowledge to understanding. He believes firmly that the more we know about our awkward neighbours, the less awkward we shall find them, the easier we shall find it to share our globe with them.

Budd builds automotive Progress

Almost all automobile manufacturers—throughout the world—are concerned with two problems: excess weight and manufacturing costs. In 1912 Budd introduced the first all-steel auto body. Ever since we have dedicated our resources to building long-life strength into automobiles, at the same time trimming off excess weight and fabrication costs. Our business is the design and manufacture of automotive bodies and the tools to make them, chassis frames, wheels, hubs, and brakedrums. But our proudest product is technology—basic know-how skills specifically adapted to worldwide automotive needs both in established high-production markets and in growth countries determined to realize their national potential. The Budd Company has unique skills in engineering... metallurgy... tooling... welding ... testing ... research ... and production which have helped place Budd high among the world's 250 largest industrial concerns. Our customers and clients cover the free world. Write for information about Budd's automotive activities. THE BUDD COMPANY, INTERNATIONAL DIVISION, Philadelphia 32, Pa., U.S.A.

and what's so **very special** about this family meeting?

Some special facts about the Æ Group

- It supplies components to every major British engine manufacturer.
- It has an impressive record of growth.
- Its products include pistons, piston rings, cylinder liners, gudgeon pins, tappets, valve guides, valve seats, hydraulic mechanisms, gas turbine blades, circlips, gas seals, gland packings, superchargers, nitrided bushes, castings, machine tools, metallic packings, heat exchangers, radiators, space heaters, grilles, presswork.

Obviously a family with a passion for engines! Petrol, diesel and gas turbine. The paterfamilias is Associated Engineering, and the family is a group of 25 companies making components for prime movers to power anything from locomotives to lawn mowers. Their many factories and depots provide fast, efficient service to vehicle and engine manufacturers and the replacement trade in 118 countries.

A wide variety of engineering Besides being one of the world's leading suppliers of engine components, Æ undertakes pressings, castings and machining in great variety. It gives much time and investment to research and development. Its individual companies keep stocks to meet almost any demand—30 million piston rings and a million pistons, for example.

SAVING FOR EVERYBODY

GOOD RATE OF INTEREST.
EASY TO BUY, EASY TO HOLD.
INCOME-TAX-FREE CONCESSIONS.

National Savings Certificates (10th Issue)

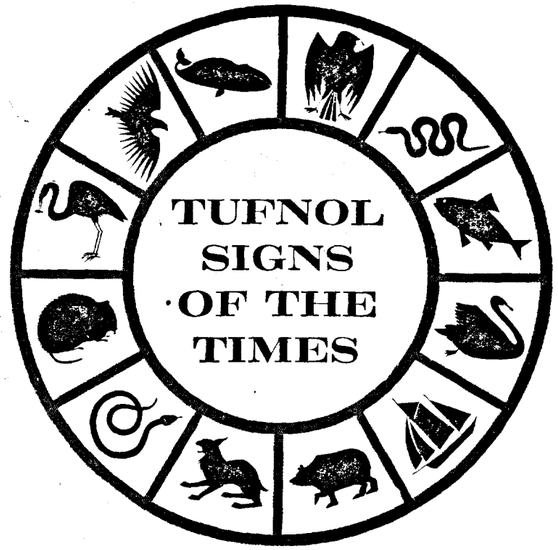
Each unit costs 15/-, becoming £1 in only seven years—equal to nearly 4¼% interest free of U.K. income tax and surtax, or nearly 6⅓% taxable at the standard rate of 7/9. You may hold 1,200 units.

Post Office and Trustee Savings Banks

You may deposit up to £5,000, with no restriction up to this maximum on the amount invested in any one year. Both husband and wife can each enjoy £15 interest free of U.K. income tax (but not surtax) each year on their Savings Bank deposit accounts.

Defence Bonds

5% Defence Bonds are on sale in £5 units, and after seven years yield a 3% bonus free of U.K. income tax. You may now hold £5,000 worth, exclusive of holdings of earlier issues. Ideal trustee investment.



Premium Savings Bonds

Thousands of prizes, from £25 to £5,000, free of U.K. income tax and surtax, can be won each month. Bonds cost £1 each, and the permitted holding is now 800.

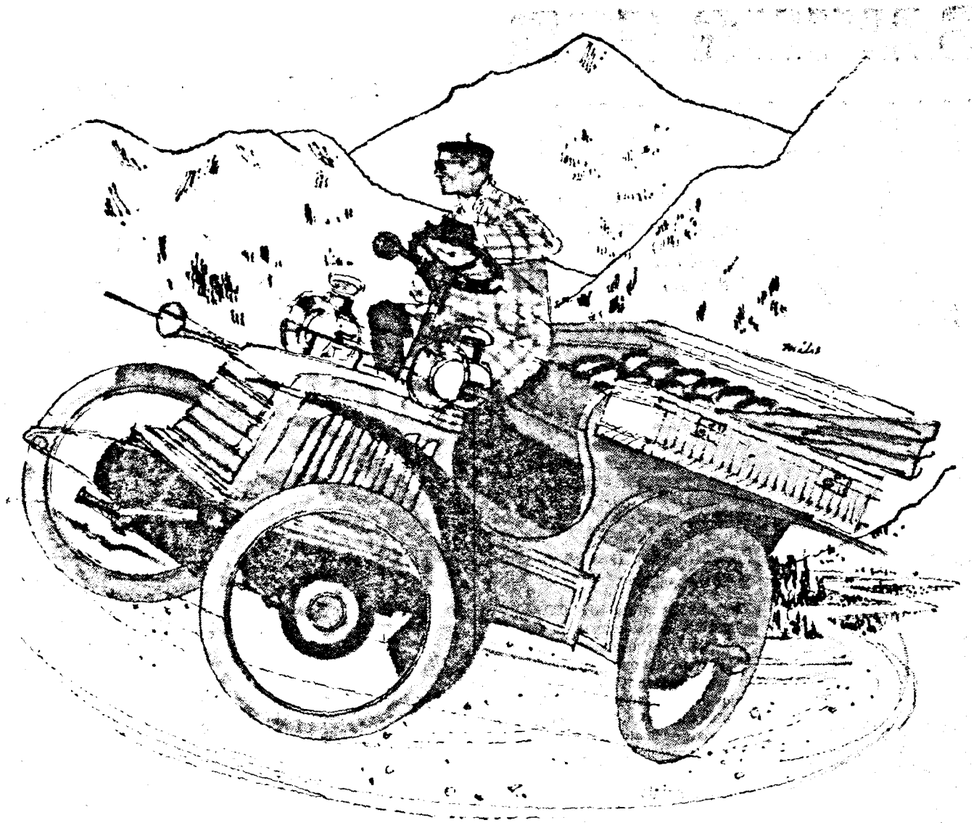
Heron-sign of Tufnol



Those people born under the sign of the Heron patiently wait until the right opportunity presents itself then seize it in a flash. That's why Heron men get to the top of their professions as chief purchasing officers, chief engineers, chief draughtsmen and chief designers. Heron men have a quick eye for spotting a material that combines the properties of many materials—a material that is light yet strong and hardwearing, resistant to corrosion and a good electrical insulator. They also find this ideal material is resistant to deterioration in storage and machines easily with ordinary tools. Most Heron men have already discovered this remarkable material—"HERON" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with predetermined properties.

All brands of Tufnol are laminated plastics, and *most* are available in sheets, tubes, rods, angles and channels. *Each* brand is formulated to satisfy specific requirements—*your* requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol.

'Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.

Through the Alps in 14 minutes?

M. Lecoq is the owner of a Panhard-Levassor (1903). Like all motorists with veteran and vintage cars, he is tremendously proud of her performance. Although she is not much of a hill-climber by modern standards, M. Lecoq claims that his Panhard can average 30 mph on a level stretch of good, straight French road. Yet soon he may be able to make an even more remarkable claim. If he could disregard speed limits and maintain his average of 30 mph he would be able to motor through the Alps in 14 minutes!

Within the next year or so a 7-mile tunnel will be completed through Mont Blanc, from Chamonix in France to the Val d'Aosta in Italy. This will shorten the motorist's journey from Paris to Milan by 194 miles, and cut the distance from Paris to Turin by 137. For the first time it will be possible to drive from France to Italy via the Western Alps at any time of the year.

Atlas Copco compressed air equipment and Sandvik Coromant drill steels are being used to drill the Alpine granite from the Italian side. And this is only one of the many major engineering projects in which Atlas Copco and Sandvik Coromant equipment has played a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

VOLUME CCII - NUMBER 6178

Europe Arrived

BY agreeing about agriculture, the six members of the European common market have passed the point of no return on their road to unity. When state secretaries and officials fall like ninepins rather than give up the quest for agreement, as they did on the last toiling lap of the marathon talks that ended before daybreak last Sunday in Brussels, it is a sign that something important is at stake. What was at stake was not the existence of the common market, which had already come too far and withstood too many trials to be in real danger of collapse. But the agreement of January 14th should put a stop to dawdling on the way. The problem of agriculture, the big unfinished piece of business in the treaty of Rome, which in recent months has threatened to block the entire forward advance of the European communities, is not to be allowed to hold up progress.

The common market has thus passed intact through the severest crisis in its four-year history. Encouraged by the boom in their economies, the Six have found it much easier to sweep away barriers to trade in industrial products than seemed possible when the treaty of Rome was signed in 1957. The almost total failure to make any progress at all in sweeping away barriers to trade in food, and in devising a common agricultural policy, has been equally manifest. When the common market treaty was drafted, the agricultural chapter—dealing as it did with deep traditions, entrenched vested interests, and the least flexible part of economic life—was left extremely vague. Four years of talk did not make it much clearer. Now the blank has been filled in with a timetable for an agricultural common market. Herr Lahr, the German chairman who took over in the last hours when his exhausted superior fell ill, has described the difficult negotiation as a second Rome treaty, adding gratefully that it would have taken national parliaments a year to work out.

With elation in the Brussels air, the common market thus passes into the next phase with little loss of momentum. The French threat to block further progress in the whole common market if no farm agreement was forthcoming has proved a formidable and effective weapon against the resistance of the German farming interests who will be the first to lose when the barriers come down. Now the threat is lifted, and the community can press ahead with the changes that were due on New Year's Day. The 10 per cent tariff cut due between the members on that day has been made already, and a whole series of internal measures of integration—on transport, cartels and social matters—has come into force. Now the institutions will gradually become stronger, with majority voting superseding unanimity on some matters.

The passage into the new phase also has great constitutional significance. This was the last occasion when the further development of the common market could be stopped by the vote of a single country. Henceforth, unless all the members agree to stop it, the treaty rolls inexorably on until the economic unification of the area is complete. Psychologically, as well as legally, no way back is visible. Any doubts that lingered about the common market's chances of becoming a reality should be set at rest. With these worries lifted, the Six may also feel free now to press forward with new schemes. An additional 10 per cent tariff cut, planned for New Year's Day on the old (accelerated) programme, but deferred by the end-of-year agricultural row, may be brought off in July. New energy can be brought to the plans for closer political co-operation,

launched in Bonn last July but overshadowed since by the mounting storm over agriculture.

What are the essentials of the agreement that has been reached? After all the bargaining, it is remarkable how much of the European Commission's original proposals has emerged intact. Over a period of eight years (7½ years from July 1st) a single market is to be created, protected in the main not by the tariffs, quotas and subsidies which national governments use at present, but by a system of supported prices, maintained by variable levies on imports from outside. The adoption of this plan is a triumph for Dr Mansholt, the liberal Dutch member of the Commission.

UNDER protectionist German pressure, a little water has been added to Dr Mansholt's strong Dutch brew. The transition period to the common market is—provisionally at any rate—to last until 1970, as the Rome treaty envisaged, instead of being cut back to 1968, as Dr Mansholt had proposed. Escape clauses have been introduced permitting national governments to block imports from other member countries if they get out of hand and damage home production. This will no doubt be, above all, an escape clause for apologetic use by the German government, when it has to sell the scheme to its angry peasants.

But even here the Brussels Commission has regained with the right hand what it has lost with the left. As with escape clauses for trade in manufactures, the Commission can order the government concerned to remove its emergency barricades,

Ox-power in Bavaria

subject to an appeal to the Council of Ministers. The Commission is made again the guardian of free trade principle.

Sceptics may well ask how important all this is when one—perhaps the—central issue remains unresolved: that is, the level at which the new common market food prices are going to settle. It is this that will ultimately decide whether the common market becomes a relatively low-cost region importing on a large scale from outside, or an inefficient high-cost overproducer dumping its surpluses embarrassingly on the markets of the world. It is this that will decide whether the farmers of south Germany or Belgium are to continue to farm by outdated, inherited methods, or whether Europe's living standards are to benefit from the farming revolution modern technology permits. The Six have agreed eventually to harmonise their prices somewhere between the present French and German levels; but the process is not to begin for another twelve months. The delay does not diminish the value of the new agreement, but it does mean that the battle within the community between liberals and protectionists is still unfinished. And much will depend on the pressure that outside exporters —America, the Commonwealth—can bring to bear.

Fortunately, now that the Six are over their own hurdle, they can turn their attention to the Anglo-Saxons at the gate. On Wednesday they reached agreement with an American delegation which has been on the doorstep since the New Year hoping to extract some kinds of guarantees for outlets for American farm exports to Europe. The Americans have not been wholly satisfied, but they got enough satisfaction to tie up the 20 per cent cut in tariffs, haggled out between the Six, Britain and the United States in the General Agreement on Tariffs and Trade. This agreement, intended to apply to all major industrial powers in Gatt, bears out Professor Hallstein's dictum that the quicker the Europeans unite, the more liberal they can be. It means that, in all likelihood, British industry will be faced on July 1st with a first invigorating tariff cut on imports from the whole world, six months before the first possible date for entry into the common market. And it sets the stage for the far bigger transatlantic tussle which seems likely if President Kennedy persuades Congress to follow his bold call for a new Atlantic partnership.

Where is Britain?

Never ask for too many impossible things before breakfast

WHAT effect will all this have on Britain's chances of getting into Europe? The worst outcome for this country would have been no agreement between the Six last weekend. The best outcome would have been an easy agreement between them. The excruciatingly difficult agreement eventually reached—which could have the effect of making some Europeans feel for a while that they do not want to discuss any more agricultural compromises, ever—falls somewhere in between. And the struggle has rubbed home the fact that there will be some fierce in-fighting—with excitable repercussions in British domestic politics—when the negotiations between Britain and the Six on the even more difficult subject of Commonwealth agriculture come to a head in the next two or three months.

But the actual details of the Brussels compromise are much less daunting for Mr Heath's team than some pessimists had expected. The bugaboo sort of compromise, which Britain had some reason to fear, would have had two heads. First there was the danger that, under German pressure, support prices for European agriculture might be pitched high enough to keep even the most grossly inefficient peasants of west Germany in nearly full production, and thus high enough to give an incentive to every other farmer in Europe to step up his output massively; the result of this incentive to a glut of overproduction would be to make the new Europe self-sufficient in many foodstuffs, thus leaving no room for imports of cheaper food from the Commonwealth.

Secondly, there was the fear that, in order to secure agreement on uneconomically high support prices, Germany might accept an open-ended commitment to pour into the European agricultural fund the import levies that are to be imposed on imports of food from outside Europe; the money in this agricultural fund is to be used to help backward farmers, to finance market interventions, and to subsidise exports from Europe of the surplus agricultural produce which high support

prices would generate. Germany would be the biggest contributor of these import levies among the present Six, because in the year to last March it imported over £500 million worth of food from outside the present European community, compared with France's imports from outside of about £270 million, Italy's of £225 million, Holland's of £170 million, and Belgium's of £100 million. But Britain in the same period imported some £1,270 million worth of food from outside the present European community, so that theoretically an open-ended commitment to plough import levies into the common agricultural fund could cost us between two and three times as much even as Germany.

In the event, however, the compromise reached about support prices is to defer at least until the 1963 harvest (and probably, in fact, for longer) the main decisions about how high they will be. And the compromise about the common agricultural fund has been to say that Germany should not pay more than 31 per cent of the contributions to the fund for the first three years, and that thereafter the amount from the import levies that should be ploughed into aid for European agriculture must be decided by unanimous agreement. This leaves Britain with a very reasonable framework within which it should be perfectly possible for it to negotiate, which is a great temporary relief.

It would be wrong to be over-optimistic about it. When the eventual political decision about European support prices is made, realists must suspect that they will still be high enough to give European farmers an incentive to gross overproduction, especially if and when the relatively efficient farmers of Britain and Denmark join the community and get an opportunity to share in these high prices. In all probability, if room is to be left for long-term contracts for the import of cheap Commonwealth food into Britain, these high support prices will have to be applied only to something like Europe's present quota of production, not to limitless extensions of overproduction in the future; and (after last week's all-night sittings) there may be loud squawks from some European politicians if Britain is tactless enough to point this fact out in the next few months, although every European agricultural expert must suspect in his heart that it is true.

NEVERTHELESS, last weekend's compromise provides another useful precedent, if only Britain can grasp it. In most matters where agreement has been reached, the compromise is rather more liberal than many people would have dared to hope a short while ago; in matters where reasonable liberalism would at present be politically impossible, the Six have simply agreed to defer decisions for a period. When that period has passed, it is reasonable to guess that the next round of decisions will again be rather more liberal than snap decisions on these matters could possibly be now. Any agreement that Britain manages to make with Europe this year will almost certainly have to be of this same pattern: we will probably be able to secure some safeguards for the Commonwealth and our other imperative interests straightaway, but others only for an interim period with a promise to discuss permanent arrangements later. The great question for 1962—and, indeed, for the economic and political future of the whole free world—will be whether British and Commonwealth statesmanship can rise to a sufficiently high level to recognise that this best *pis aller* will be good enough: whether the motto forced upon Britain in these negotiations will be to demand six impossible things before breakfast (like the Red Queen in Alice), or the wise man's precept "on occasion's forelock watchful wait" (which comes from *Paradise Regained*).

How to Use the UN

Rather than deplore or deny national self-interests, it is better to try to harness them usefully

ACCORDING to Mr Khrushchev, there are neutral nations but no neutral men. In the real world, however, the reverse is true. The real world is less simple than the Soviet leader's vision of two rival "camps" flanked by a third, "neutral" group. (Where, for instance, does Albania fit into that picture?) It is hopeless, in this real world, to try to find an exact definition of neutrality, a subjective term that must shift with circumstances. But there is an alternative term that can be more precisely identified: disinterestedness. Disinterested individuals are to be found; men who have won a reputation for ability to do whatever duty is laid upon them without regard to their own feelings. No such degree of integrity can be attained by a whole nation; nor can any national government be expected, in its external actions, not to look first at the interests of its people. Degrees of national interest range widely; but when a government judges a particular international question to be too remote to have any bearing on its national interest, it is liable to slide from objectivity into unconcern. Disinterested action can sometimes be expected from men; but not from nations.

Here is a starting-point for discussion of the future of the United Nations organisation. The disillusion that marks the present debate in Britain seems to arise from the crumbling of a double delusion. Some people had apparently assumed that the Asian and African states would, on attaining independence, soar like angels high above the sordid world of particular interests and scorn to use their new sovereignty for their own ends. Others, evidently, held that such altruism was the speciality of the older independent countries.

Both assumptions were, and are, baseless. Old or new, states are not altruistic. For all the verbal pieties uttered in the United Nations, its congregation strongly resembles that of a medieval church, to which the villagers came more to trade than to pray. It is useless either to deny that brisk chaffering goes on at the back while the ritual genuflections at the altar proceed, or to deplore the fact. It was ever thus: even in San Francisco in 1945. The horse-traders can neither be converted into, nor disguised as, angels. Real and fleshly, their interests are ignored only at peril.

But self-interest can be enlightened. Horses can be harnessed as well as traded: harnessed into teams that will pull the whole community out of bogs in which its members, each struggling separately, would only flounder and founder. And the whole UN experiment makes much more sense as an attempt, not to deny the reality of national interests, but to harness the force of these as much as possible for common ends.

The limitations in this direction are obvious enough. In principle, every citizen in a community has an interest in the existence of a clear code of law backed by an efficient police force. But, as Mr Kennedy said in defence of the UN in his message on the State of the Union last week, "No policeman is universally popular." Nor has any code of law ever been devised that did not leave some of those subject to it smarting under a sense of injustice. What is true of individuals is still more true of nations, in whose community the whole concept of obedience to a body of world law is still very tenuous. Even more tenuous, among nations, are the ideas of equality before the law and of acceptance, after debate, of majority decisions. In democratic countries, there has already been a rejection of the idea that powerful individuals should enjoy a privileged position and that voting rights should depend on tax payments. In the community of nations, as a letter on page 217 shows, this issue is still contested.

In the present debate about the United Nations, a debate that has given rise to last week's Anglo-American talks in Washington (discussed on page 232) and to much public disputation in both countries, the basic issue may be defined as follows. Ought the great powers to reassert in full the special privileges and responsibilities that they secured in the Charter; or ought they to accommodate themselves to the progressive encroachment on their position by other, physically weaker, countries, which now not only dispose of great numerical voting strength but have also enlarged their place in the UN's executive arm, the secretariat?

It is not seriously supposed that the latter alternative implies complete surrender. The two super-powers, at least, are too overwhelmingly strong to be imposed upon by any UN ruling that touches what they regard as their essential interests. The UN can be used to chivvy Russia about Hungary or America about Cuba; but international indignation on these issues would be expressed whether the UN existed or not. Britain and France, while more vulnerable to pressure through the UN, can be made to yield in the last resort only when the super-powers support that pressure, as they did in the 1956 Suez conflict; China is at present too much of a special case to fit into the argument.

But the argument primarily concerns matters which, as in the case of the Congo, do not directly involve the great powers, but which make them itch to get their hands on the UN's steering-wheel. In such cases, a conflict of interests can easily appear, not only between, but within, nations. All the powers had an interest in aligning themselves with the Afro-Asians' wish to see the Congo's independence secured; but Russia and Britain, in their different ways, were also to some extent partisans of fractional Congolese groups, American views were strongly marked by anti-communism in a sometimes crude form, and French views by antipathy to all UN enterprise. Thus direction of the UN Congo operation by a kind of concert of powers would have been impossible, even if it had been acceptable to the smaller nations. The Congo crisis, which has now provoked British hankerings to get back to the veto, had in reality already shown the powers' inability to run any international operation of this sort.

The British argument advanced before and during the Washington talks was that direction of UN action by the whole body of members led to both irresponsibility and dangerous vagueness; that the secretariat was thus either ordered to take precipitate action, or left to make its own decisions, the result in either case having an unfairly anti-colonial slant. The point about vagueness is valid in a general sense. Mr Hammarskjöld frequently stressed the troubles imposed on him by lack of clear mandates. But his and U Thant's Congo mandates have in fact come not from the 104-member Assembly but from the Security Council, in which the powers still wield their vetoes and Asia and Africa are still greatly under-represented. If, as one American proposal has suggested, the Secretary-General could draw clearer guidance from a group representing those few states that are actively contributing to the operation in question, the perils of a vague mandate might possibly be reduced.

As to the charge of irresponsibility, let the record speak. In the Council, no British government, since Suez, has judged a resolution so unacceptable as to provoke a veto. The Assembly's recent resolutions on major colonial questions have been backed by old and staid European states as well as by the supposedly rampageous Afro-Asians and Americans. As to the new Asian Secretary-General, he has already crossed swords ably with Mr Zorin of Russia, as well as with Sir Roy Welensky and M. Spaak; and President Kennedy, who was to pay him a demonstrative visit this Friday, went out of his way on Tuesday to commend his efforts to ward off a conflict between Indonesia and Holland. U Thant's key officials in the Congo, it might be further noted, are mainly westerners.

Even Lord Home, in his famous Berwick speech on December 28th, conceded that "the common sense of the Assembly" had defeated Russia's "troika" demand. He might have added that this humiliating defeat reflected both the Afro-Asians' rejection of Soviet designs on the UN, and a more general rejection by smaller nations of anything that would give the powers, as a group, more of a grip on the organisation. In so acting, the smaller nations were pulling together, regardless of ideological orientations, to secure a real common interest. They are not altruistically disinterested; and anti-colonialism is a lively interest for many of them. In this respect, the UN merely mirrors the world's fast-changing mood, and tinkering with its works will not moderate, though it may exacerbate, that mood.

If the UN ball is now more at the smaller nations' feet, there is of course no guarantee that they will not fumble it. They (like the great powers) are not a uniform abstraction, but a very mixed bunch; one useful distinction is between those that have contributed worthily, in men and money and diplomacy, to the Congo operation, and those that have given nothing but trouble. But enlightened self-interest suggests that no intelligent nation, great or small, would choose this moment to swell the ranks of the unhelpful—ranks in which colonialism's uncompromising defenders, and its loudest-mouthed and least constructive antagonists, have lately found common cause.

WEST AFRICA

NOW, FREEDOM

The leaders of freed Africa will meet in Lagos on January 25th. Most are from West Africa, where lines of physical, cultural and economic unity cross the political divisions. Here is how it works:

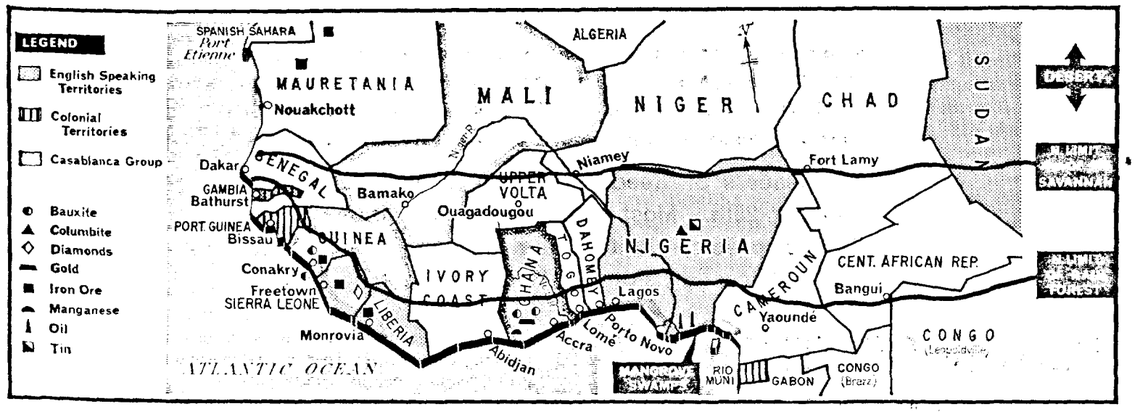
BLACK BROTHERS

In the last ten years the chief impetus to African independence has come from the great bulge of Africa as it stretches westward into the Atlantic. Today, save for the tiny enclave of Portuguese Guinea and the minute self-governing sliver of Gambia, the whole area from Port Etienne to the frontiers of Cameroun enjoys political independence. A dozen states achieved it between 1957 and 1961 in four dizzy years of constitutional upheaval. And out of the process has come a spectrum of states varying in size from Mauretania, where 600,000 people depend on an iron mine and a railway, to Nigeria with its population of nearly 40 million spread over a vast federation.

In wealth the scale runs from Ghana, where gold, bauxite, logs and cocoa provide an income of nearly $200 a head, to Niger, in whose desert lands, on the fringes of the Sahara, so many of the 3 million inhabitants live outside the market economy that no calculation of per capita income is possible at all. In style, too, the variations are remarkable. In Dakar, a wholly French city, the Wollof ladies wear the shimmering gauzes and elaborate turbans of the First Empire; in Lagos appear the sensible cotton dresses and canvas shoes of English seaside holidays. At conferences, polished rhetoric from the Sorbonne has to be translated into the language of Laski and Cole, while Liberia adds its inimitable version of the transatlantic accent.

Yet beneath all the differences—of scale, of wealth, of French or Anglo-Saxon culture imposed from outside—an inchoate but unmistakable desire for unity is strongly at work. It is bringing the leaders to Lagos. It appears in every statement of policy. It excites the young. It is a weapon in the political struggle—a holy faith for some, for others a pretext. But no leader can ignore it, and indeed it springs from facts that lie at deeper levels than the varied surface. The unities of West Africa are greater than its diversities.

First, the physical and geographical unities: the national frontiers tend to divide West Africa along vertical lines, the ex-British territories reaching up like grasping fingers into the ex-French hinterland. But the physical divisions are horizontal. Four broad belts traverse the bulge of Africa—the mangrove swamps of the coast, the rainforest behind, savannah country beyond the line of 60 inch rainfall, and, furthest north, the baked, infertile marches of the great desert. The various states owe their physical endowment to their position on these belts. Like notes or chords on the musical clef, some lie on one line, some traverse two. Nigeria covers them all. Wealth tends to increase as one goes from north to south. The poorest lands—Niger, Chad—lie almost wholly in the desert zone. Mauretania is saved from comparative poverty only by its rich iron ore. Senegal, Mali, and Upper Volta are largely confined to the savannah country. But the great Niger river creates more fertile zones as it winds its way from the mountains of Guinea in a huge arc before it turns south to Nigeria and the sea. On the coast, Togo and Dahomey are too small for prosperity, Sierra Leone too poorly endowed.



Otherwise, the wealthiest states are coastal communities. Not only are these the regions of flourishing tropical agriculture—producing cocoa, coffee, palm products, rubber, timber, bananas, citrus. Present geological surveys, though still incomplete, suggest that nearly all the mineral resources of West Africa lie not much more than 300 miles from the coast. Guinea's bauxite and iron ore, Sierra Leone's iron ore and diamonds, Liberia's fabulous Mount Nimba where the entire line of connected peaks is iron ore with an extraction rate of 65 per cent, Ghana's gold, manganese and bauxite, Nigeria's tin and columbite, all lie on the sea side of the savannah. The whole of West Africa is desperately short of supplies of energy, but once again the best hydro-electric sites are found in the main near the coast. Nigeria's proposed Niger Dam is up-country, but its big oilfields are in mangrove swamps at the very edge of the sea.

THE EX-COLONIALS

Then the underlying cultural unities—these, too, follow the horizontal lines of climate and vegetation, from the austere Moslem culture of the north, reaching only across the savannah country, to the lively, tumultuous societies of the coast, where native animism and the Christianity of the missionaries coexist not only in each country, but perhaps in each soul. And even this division masks a profound resemblance. Save among the Yorubas, everyone, until the day before yesterday, lived in tribal villages and practised subsistence farming based on communal land ownership and shifting cultivation. To this day, food crops are still produced in this fashion and the change to more intensive methods is hampered by immense uncertainties over tribal boundaries and rights of tenure. No state has yet completed a cadastral survey.

Above all, the whole area bears the common stamp of its colonial past. Even though the purposes of British and French colonialism were different—the British aiming rather vaguely at training for self-government, the French proposing deliberately but not very speedily to make a majority of assimilated French citizens—the consequences are remarkably similar. Both systems built up a very small educated urban élite, above all in the liberal professions, and did little for technical or popular education. Both put in those elements of "infrastructure"—roads, railways, ports—needed to develop trade with the metropolitan country. And both established the basic pattern of a colonial economy which leaps to the eye from every map of West Africa—all the lines of communication draining vertically down to the sea to the only big cities, all, with the exception of a few towns in Nigeria, seaports.

It is largely a derivative economy, outside investment creating the cash crops and the minerals needed in the industrialised West, export income creating the resources to buy back consumer goods from western suppliers—goods which would be sold locally either

by the big European commercial firms—VAC, SCOA—or by local Levantine and Indian traders. In extreme cases, where the local mine or plantation has been wholly owned abroad, the outcome was almost as though a small segment of a foreign economy had been set down on African soil. Investment came in, technicians came in, materials went out, profits and salaries followed them ; the gain to Africa was little more than the wages of local unskilled labour.

Since the war, this old pattern of exchange has changed decisively. France, massively, and Britain, more modestly, began to pump government capital into local development. High export prices for primary products and export taxes piled up large reserves in local marketing boards and stabilisation funds. Foreign firms began to pay income tax. Planning for growth became part of the equipment of practising politicians. Thus, when the rising postwar demand for political independence began to gain momentum, proposals for constitutional advance were almost invariably flanked by social and investment programmes. The nineteen-fifties were a decade of very general economic advance and most of West Africa underwent something very like a boom. As one government report disarmingly put it: "All around us churn the symbols of ever-growing gallant economic development."

Yet a decade of relative wellbeing has done very little to modify the old dependence. Now that primary prices are weak again, the growth in government revenues has slackened, and in such countries as Ghana and Nigeria ten years of brisk investment have drastically reduced the state's reserves while increasing those current expenditures—on political sovereignty, on health, above all on education—which revenues and reserves have to cover. Internal trade is still meagre, and the experience of Guinea suggests that no gain accrues from switching markets wholesale to the eastern block. Thus dependence on western trade and upon outside capital remains as heavy as ever. Indeed, in the micro-states left behind by France—Niger, Chad, Dahomey, Togo—only by direct subventions to the budget from Paris can even current expenditure be covered.

The desire to achieve greater economic independence is, therefore, common to most of the West African states and is a common feature in their economic plans—and all these states have either a plan, or an interim plan, or at least preliminary studies for a plan. The emphasis on greater production of food, on local processing, on internal lines of communication, on increasing internal revenue and saving—all these familiar gambits of planning "for take-off" have an extra post-colonial urgency in West Africa.

It is present, too, in some of the more political aspects of the new states' economic policies—in Senegal's desire to "Senegalize" its large commercial houses, in Guinea's establishment of state comptoirs, in Mali's state monopoly of basic imports, in Ghana's official timber monopoly and control of imports, in the very general desire of governments to have a share in the equity of the foreign enterprise they feel compelled to try to attract. The ambivalence in all their reactions springs from their awareness of a continued dependence which, though they must in realism recognise it, they yet find hard, emotionally, to accept. This ambivalence tends to govern their attitudes to the outside world and above all to the West.

THE WEST'S AFRICA?

All the new African countries—excepting Guinea—rely heavily on the West for money, manpower and markets. But none of them likes it

WHEN most of the leaders of independent Africa meet in Lagos next week—it is not certain that the "Casablanca" powers will be absent—their main theme will be the means of increasing co-operation between themselves: by improving communications, by co-ordinating policies, by examining, cautiously, ambitious projects like African development banks and common markets. Yet the reality they face in Africa—above all, in West Africa, the only region that is wholly independent—is not one of interdependence and co-operation. On the contrary, there is almost no inter-African trade and the whole area exhibits an extreme dependence upon the outside world, above all on the West. And this dependence is a factor making not for co-operation but for division between African states.

Its scale is still massive. Only in Guinea have large-scale aid, trade and technical assistance from the eastern block filled some of the vacuum left by France's angry departure in 1958. Ghana, too, now looks east as well as west, but the final agreement over the Volta project leaves western aid predominant, and Ghana's western commercial links remain close. In fact, Guinea apart, no West African country conducts less than 80 per cent of its foreign trade with the West and the share of the old metropolitan power is usually above 50 per cent. Indeed, in some of France's ex-colonies it is still 90 per cent.

All draw heavily on trained western manpower. In countries with a longer educational tradition—Senegal, Ghana, western Nigeria—the number of expatriates actually working *in* the administration is dwindling rapidly. In most of the ex-French states, however, French officials still play a crucial part. And all the states depend heavily upon outside experts coming in under contract to man specific and technical services, to help staff the universities and to supplement a teaching body wholly inadequate to meet the area's bounding educational ambition. Nigeria, for instance, faces the need to secure 7,000 "teaching years" a year from abroad in the next decade. There are exceptions. Guinea, by compulsion, and Ghana, by choice, are using more experts from the eastern block. Some have arrived in Mali as well. But in general a western orientation is still the rule.

Again, Guinea apart, every form of economic assistance comes overwhelmingly from the West. The British give modest support in the shape of small preferences on some tropical products. They

Ivory Coast: Houphouët-Boigny | Liberia: Tubman | Nigeria: Sir Abubakar

With about two dozen others, they will meet at Lagos next week

also provide a certain amount of technical assistance—115 experts are serving in West Africa under such schemes—and some governmental grants and loans: a £12 million loan to Nigeria on independence and a £5 million grant towards its educational programme, to Ghana a £5 million loan for the Volta project. The United States has embarked on more ambitious aid with an £80 million grant to Nigeria to assist its forthcoming plan, and a £13 million loan to the Ghana government for the Volta together with a loan of £40 million for the projected alumina smelter company. About $13 million has been promised to Liberia. The $2.5 million project in Guinea has more political significance than its scale suggests. The west Germans, too, are appearing on the scene with loans of nearly £10 million for Liberia. But the colossus of African aid-giving remains France.

It is difficult to get into proper perspective the complexity and scope of French economic assistance. Most tropical products entering France enjoy sizeable preferences—the range runs from 8 to 15 per cent—which are being extended to cover entry into the whole common market. In addition, some imports, Senegal's groundnuts, for instance, and the robusta coffee produced in the Ivory Coast, are given guaranteed quotas in the French market at prices which in some years have been as much as 50 per cent above the world price. Some Africans claim that the French, by selling back their manufactures at equally inflated prices, end by profiting from their own "generosity." But ex-French West Africa is no longer a closed French monopoly now that common market manufactures enjoy similar rights of entry.

This loss of the old monopoly makes all the more remarkable—and possibly the more precarious—the scale of France's direct aid. To the ex-French territories of Africa (including the old states of French Equatorial Africa) the figure is now about $300 million a year. To it should be added the contribution of the common market fund (Fedom) which has now risen to around $100 million a year, an immense sum. It does not include military assistance. Algerian expenditures are not part of it. Some of it goes in direct subventions to the current budgetary expenditure of the poorest states. French deputies grumble. French critics demand that the money be diverted to the Dordogne or Seine-et-Loire. Yet, so far, each year the bill is met and the capital floods out—to the roads, schools, hospitals, power schemes and urban development of ex-French Africa. It is one of the largest gift horses in history. African opinion is passionately divided on the issue whether a close examination of its teeth will or will not reveal a "Greek presence" down its throat.

This general fact of extreme economic dependence upon the West is divisive in two senses. In the first place, especially among the younger educated groups—junior ministers, up and coming young civil servants, university lecturers, in short the likely African leaders of tomorrow—it raises the question whether political independence is genuine and whether the "western imperialists" have really gone for good. An obsessive concern with colonialism is in any case inevitable so long as colonial control remains a reality in Africa. Algeria, Angola, Katanga, Rhodesia—with the Union of South Africa behind them on the lowest rung of the Inferno—play on nationalist nerves as constant irritants, and the fact that these troubled areas are all linked in one way or another with the French and the British throws tragic shadows of suspicion across British and French relations with West Africa where, Guinea apart, the record has been wholly tolerant and constructive.

Can the French, who torture Algerians and explode nuclear

Ghana: Nkrumah | Guinea: Touré | Mali: Keita

They may not come

devices in the Sahara, have genuinely innocent intentions when they pay half the running costs of an unviable Niger Republic? Can the British, who are accused of being "on the side of Mr Tshombe and Sir Roy Welensky," really mean no harm with their Nigerian defence pact? Such are the questions which, in the context of colonial deadlock in other parts of Africa, West Africa's extreme economic dependence helps to arouse in African minds, especially the younger ones. Thus when Dr Nkrumah denounces "neo-colonialism" and looks for eastern aid as a symbol of "positive non-alignment" he appeals to nationalist sympathies far beyond Ghana's frontiers. Younger Nigerians, for instance, may reject his personal claims to any kind of African leadership. But they find his ideas more congenial than Sir Abubakar's caution. And knowledge that this mood exists certainly played its part in Nigeria's severance of relations with France.

One might even go so far as to suggest that this issue of "neo-colonialism" is one of the chief points of division between the radical Casablanca group (Guinea, Ghana, Mali, Morocco and Egypt) and the Monrovia grouping, which includes virtually all the other independent African states. In fact, the differences are a little blurred. Both groupings aim at greater economic unity—and by the same routes of development funds, common markets

and so forth—and if the Casablanca group talk of giving up political sovereignty, there is no sign at all of their doing so between themselves. Both groups denounce colonialism. If Monrovia is less vocal on neo-colonialism, Mali fails in ideological purity by remaining a member of the franc zone and being associated with the common market. Cynics might say that it is "revisionism" that chiefly defines the Casablanca powers, Morocco eyeing Mauretania; Mali, Senegal; Ghana, its neighbours; Egypt the Moslems and the Horn of Africa. Yet the truth probably is that mood rather than fact keeps the two groups apart; dominant, perhaps, is Casablanca's radical dislike of extreme dependence on the West.

OR AFRICA'S WEST?

Nor is the issue one simply of dependence. So long as ex-French Africa enjoys close, preferential relations with France and the common market, while the ex-British territories do not, trade barriers are introduced into Africa which reflect not African so much as European arrangements and interests. Europe continues to project its economic divisions into an area from which its direct political influence has been removed. Inevitably, Britain's proposed entry into the common market has exacerbated this aspect of West Africa's relations with the West, and has created an uncomfortable situation in which the African powers seem to be left with two unsatisfactory choices—either to get rid of division at the cost of continued dependence or to avoid dependence at the price of further division. The ex-French territories derive such formidable economic advantages from their association with France and the common market that they will hardly abandon them. Yet the solution for such states as Nigeria and Ghana—which, in European eyes, seems quite straightforwardly to lie in joining the association—runs counter to their profound hostility to the idea of a "Euafrican" union in which, so it seems to them, Africa will inevitably play the subordinate part, hewing wood and drawing water.

This dilemma may not be a dominant theme in next week's meetings in Lagos. Britain's negotiations with the Six have not yet reached the point of forcing the issue. But once its entry is assured, either its ex-colonies in Africa must find ways of coming in as well, or Africa's divisions and resentments will harden along the old colonial frontiers.

Much at this point will depend upon the form of association which is worked out between western Europe and its old colonies. The existing forms of preference and co-operation, worked out under the Treaty of Rome, have to be renegotiated this year. If they take the form of close, formal political association and narrow, highly preferential economic ties, it seems doubtful whether the ex-British territories—not to speak of Liberia or Guinea—will be ready to seek association on such terms. The divisions and hence the political malaise will persist.

But this outcome is not inevitable. Proposals have been put forward—in Germany, the Low Countries, and the United States—with the purpose of securing no less aid to West Africa but of providing it on a non-preferential basis. Free entry to Europe for tropical products, general price agreements for commodities such as coffee or cocoa, Atlantic aid to supplement the French effort, particular assistance designed to diversify those economies (Senegal, for instance) in which production now depends upon artificial French prices and quotas—such measures, taken together, would leave the ex-French territories no worse off, but would progressively end their condition of lopsided dependence and open up the existing advantages to the neighbours on equal terms. Local barriers could then come down and greater inter-African co-operation be secured without loss of essential western assistance.

It would seem the path of political wisdom in the West to build its future relations with Africa on such a generous but non-preferential basis. The desire for African unity cannot be exactly measured. Yet no one can doubt its political force. Nor does the last year leave any doubt about the havoc it can create when it washes up against supposedly "neo-colonialist" obstacles. Any settlement that could be twisted to imply African subordination to European interests would have in it the seeds of its own disintegration. It would be wiser to begin with the postulate of unity—in Africa as in Europe—and build on it the only relationship that can enjoy a secure political base.

NOTES OF THE WEEK

WAGES PAUSE

The Red Tape Letter

THE pay pause has now entered the stage where nobody quite knows what any given statements mean, certainly not the makers of them. Mr Henry Brooke wrote to the civil service unions this week that he hoped that he could allow civil service wage claims to go to arbitration after March 31st next; but that in these arbitration proceedings the Government would "strongly argue" that arbitrators should not award increases out of line with the Chancellor's guiding light about probable increases in national production (i.e. presumably the average of their awards this year should be rather less than 2½ per cent, with no awards at all for any grades where there are no recruitment difficulties). The civil service clerks proclaimed that this letter meant that they had won a complete victory for "unfettered arbitration" of the traditional sort, and promptly called off their threatened go-slow. Next day some officials of the Post Office union said the letter did not mean this at all—which one hopes that it certainly didn't—and they continued their work to rule after weighing up the phraseology at a formal meeting on Thursday. On Wednesday, too, the economic committee of the Trades Union Congress met once again to discuss the Chancellor's invitation to join his National Economic Development Council. They at last decided to put in another recommendation to the full TUC leadership that they should join this national planning body, but only on condition that Ned does not do any planning of wages—which is just what the top council of poor Ned was originally supposed to help to do.

Miners and Busmen

IT seems clear, however, that the fate of the economy this year will mainly depend, not on what ministers write or on what TUC committees recommend, but on what chairmen of nationalised boards do in response to the Oliver Twist tactics now being deployed against them. On Wednesday the miners' union turned down a wage and reduced hours offer for day-wage (i.e. non-piece rate) men of a particularly complicated sort. The guess must be that, when all factors are taken into account, it would raise the average earnings of the men concerned by around or over 3½ per cent. Nevertheless, the union is to go back and ask Lord Robens for more after another meeting of its executive next week.

The Government cannot have been entirely happy even about Lord Robens's offer of this week. It is almost certainly above the average for Mr Lloyd's guiding light, and it is again a flat national offer for day-wage men in an industry where regional needs for recruitment differ widely (nobody wants to attract any more miners into unprofitable pits in Scotland, even if there may be a case for increases in the East Midlands).

But Lord Robens was in a stronger position to bulldoze the Government than most other nationalised chairmen. When he was transferred from Labour's front bench to the Coal Board in 1960, it was on the understanding that he would have a very free hand in all policy matters, provided he could bring the Coal Board's accounts back out of deficit by 1962. At the time of the last miners' wage increase it was said that any further wage increases would depend on this balance being achieved. Now, thanks to the fuel oil tax, to an increase in productivity following large scale mechanisation, and to his own ebullient management he thinks that there is just a possibility that the board may get back into balance by the end of this year, provided everything in the industry goes almost unimaginably right and even after this offer of a wage increase has been made. His offer certainly stretched optimism to the limit; but all that need be said now is that it would be quite wrong for him to consider going beyond it—and, in particular, he should do nothing to encourage a rise in piece rates per unit too, but should point out that stability in these rates will allow earnings to rise directly with productivity.

In another nationalised industry the London busmen this week once more asked for higher pay all round. London Transport turned them down—but not without giving the union's chief negotiator the impression that things might be different if the pause could somehow be considered over. The best that can be hoped for here is presumably a settlement on lines that London Transport has already mooted: a special so-called scarcity allowance for drivers in central London, but no more for conductors or other workers. The worst thing that could happen for the whole economy would be if Mr Cousins pushed London Transport into granting an inflationary increase for all his busmen after all. The trouble is that nobody is yet convinced, despite this week's welcome show of firmness, that London Transport does not really want to grant this. (Doubters will not have been encouraged by the tone of their letter to *The Economist* on page 115 last week.)

SOVIET UNION

Meaning of Molotov

WILL he, won't he? The Molotov game has now lasted for two weeks, yet it is still uncertain whether the old Soviet leader will return to his Viennese post as Soviet delegate to the International Atomic Agency. An article in *Pravda* on Wednesday attacking Mr Molotov's "dogmatic stubbornness" has thrown fresh doubt on his future. The fascinated interest in the West in the whole affair shows how difficult it is to get accustomed to the idea that the penalty for political defeat in the Soviet Union need no longer be jail or execution. But Mr Molotov's case is not unique. According to reports from Moscow, while the two marshals—Voroshilov and Bulganin—in the defeated anti-party group

In or out? Mr Molotov

have been retired, Messrs Malenkov, Kaganovich and Saburov have each some minor job. Mr Shepilov's function is unknown, but Mr Pervukhin is still the Soviet envoy in Berlin.

The various contradictory statements about Mr Molotov's destination that have been made by officials of the Soviet foreign ministry have given rise to the idea that the Soviet leaders have not yet made up their minds what to do with the anti-party group. This sounds very possible. Already during the twenty-second Soviet party congress in October one could distinguish differences on this subject. Many speakers asked that the offenders should be expelled from the party, and even that they should be held responsible for their "criminal" acts. Others, Mr Mikoyan in particular, insisted that the matter should be treated politically, not as a matter of criminal justice. Tolerance, in this context, must not be confused with Stalinist sympathies. On the contrary, it may well have been prompted by the desire to avoid any more political trials on the Stalinist model. In any case, if the Soviet leadership has not yet decided how to deal with the defeated opposition, there is no need for surprise that hesitation about Mr Molotov's foreign posting should be apparent. What is curious is that if a great debate is really going on, Mr Khrushchev should be in west Russia and Mr Mikoyan in west Africa.

But might not the controversy go deeper? After all, it is known that on the eve of the party congress Mr Molotov sent the central committee an essay criticising Mr Khrushchev's policy of co-existence in terms that Mao Tse-tung could have endorsed. And the Sino-Soviet controversy shows no sign of abating. Has Mr Molotov found important supporters for his case in Moscow as well as Peking? It is necessary to get used to the fact that the first man in the Kremlin is no longer the undisputed leader in the communist world or even necessarily unquestioned master in his own house. The phenomenon is not really new; but analytical reflexes are still conditioned by the Stalinist experience.

RUSSIA AND CHINA

Deepening Quarrel

IN their wide-ranging verbal duel on the theory and practice of marxism, Moscow and Peking both seem to be attacking with increasing determination. And the fact that the Chinese can call on such uninhibited and pugnacious allies as the Albanians has helped to expose the gravity of the quarrel. The latest Albanian attack, published early last week in *Zeri i Popullit*, is a quite skilfully argued presentation of the whole range of issues over which Peking and Moscow are at odds. In particular it bitterly attacks "Nikita Khrushchev and his group" for being in favour of total disarmament and for attaching more importance to peaceful co-existence than to the struggle against colonialism and capitalism. The article also directly challenges Mr Khrushchev's right to make the views of his party (in any case, it maintains, opportunistic and wrong) compulsory for all other parties.

This hard-hitting effort by the Albanians was implicitly endorsed later last week in Peking, when the Chinese signed a new series of trade and technical aid agreements with the Albanians and when Mr Chou En-lai warmly praised their "correct leadership." The hand of Mr Khrushchev's sworn enemy could hardly have been taken more openly or more pointedly. On Monday the Chinese themselves weighed in with a statement put out by their central committee on the "despicable persecution" of the United States Communist party. In this savage attack on the Kennedy administration, Mr Kennedy is compared with Tojo, Mussolini and Hitler and is credited with the intention of launching a world war in order to destroy the socialist camp and rule the world; peaceful co-existence with such a government is, by implication, impossible. On Wednesday, in its attack on Mr Molotov, *Pravda* also thundered back, at the Albanians by name and the Chinese by implication, with the assertion that peaceful co-existence was "absolutely necessary" because a world war would be suicide.

Clearly, the Sino-Soviet quarrel does not arise from trivialities. But at present Peking and Moscow are carefully avoiding quarrelling with each other directly, and they have strong reasons for keeping up this circumspection. What is tricky is the interaction of Mr Khrushchev's internal battle with the anti-party group on his external quarrel with Peking. In both disputes the issues are basically the same, so that in his struggle with his domestic opponents, Mr Khrushchev may find himself being pushed further than he really wants to go in his dispute with Peking.

POLITICS

Stormy Session?

PARLIAMENT will return next week to what may well be a very stormy session indeed. The storm signals were

hoisted before the recess with the announcement that the Government is to introduce a guillotine procedure for the remaining stages of the Commonwealth Immigrants Bill ; the smallpox scare is not likely to make debate on this measure any more cool-headed or collected. But much bigger rows may almost immediately engulf it. Within the Conservative party there seems certain to be an eruption over whatever the Government does about Northern Rhodesia (see page 216 for the eruption in our letters column, from Rhodesia and elsewhere, about the article on Central Africa which we ourselves published last week). Between the parties battle is looming over Mr Brooke's expenditure axe. When the Chancellor introduced his economy measures last July, he said that he would do his utmost to keep current Government expenditure for 1962-63 at not more than 2½ per cent in real terms above the original estimates for 1961-62 ; he estimated that this would leave above-the-line budgetary expenditure for the coming financial year some £125 million above the 1961-62 estimates, but it would also oblige it to be some £175 million lower than "it would have been otherwise." To secure £175 million of cuts in public expenditure is presumably liable to require some very large and controversial policy decisions indeed—including some affecting the social services.

Obviously, however, the really important policy issue of the new Parliamentary term will be what happens about the common market. During the parliamentary recess there has been some talk about the possibility that Conservative backbench opinion may be hardening against entry ; but nobody can really tell yet how far this is true. It is easier to pass some comments about how Labour's policy towards Europe seems to be evolving, because Labour has the engaging habit of fighting out even its Christmas holiday battles in public.

Labour and the Market

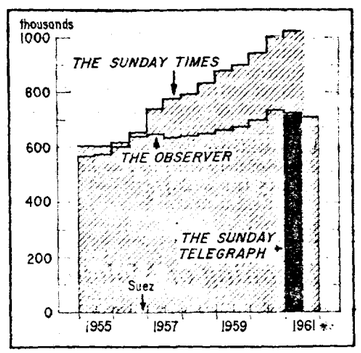
For pro-Europeans the battle within the parliamentary Labour party at present does not seem to be going too badly. Admittedly the Victory for Socialism group is planning a "Keep Britain Out" campaign, which from time to time will make the headlines. A manifesto is to be issued calling on the party to come out in open and wholehearted opposition to Government policy, and attempts will be made to show that membership of the community will inevitably fetter Labour's freedom to extend public ownership. Much will be made of the argument that Britain's entry into the community will exacerbate the cold war. However cogent these points may (or may not) be, they will hardly be enhanced by being made by such pillars of the left as Mr Stephen Swingler, Mrs Judith Hart, and Mr Zilliacus, who are among the leaders of Victory for Socialism. Their extremist followers, in any case, cannot be higher than twenty to thirty Labour MPs. Rather more significant is the overlapping group of anti-marketeers, made up of members of all shades of parliamentary party opinion, under the chairmanship of Sir Lynn Ungoed-Thomas. Their forty or so members include some prominent right wingers such as Mr Douglas Jay and Mr Will Blyton.

Opposed to these two groups is the Labour Common Market Campaign Committee led by Mr Roy Jenkins and Mr John Diamond. Mr John Strachey is an active member as are Mr Ness Edwards, Mr Roy Mason, and Mr Charles Pannell. The committee intends to concentrate on winning over other members of the parliamentary party, and when Parliament reassembles some prominent foreign socialists will be invited to speak at Westminster. Since many, although not all, of the committee's members are Gaitskellites, they hope that the leader is much more likely to listen to them than to their opponents. Quite apart from the difficulties Mr Gaitskell would experience in turning against his own supporters, he is known to be a mild pro-European. Mr Brown, who is never mild about anything, is also a common market supporter. Mr Callaghan and Mr Wilson are on the fence. Probably official party policy will remain unheroically perched with them there until some definite proposals are made by the Government. But if these are then in any way reasonable the party—touching wood, barring accidents and despite some vociferous dissentients—at present seems rather more likely than it once did to swing towards the policy of accepting entry in Europe.

LORD SNOWDON

Press Lord?

The one bit of sound, unanimous advice that Lord Snowdon has ever had from the great British press has been to get a job. Obediently, he has got a new job—in addition to his part-time post, advisory, uncontroversial, rather unsatisfying, and unpaid, with the Council of Industrial Design. His new job is still (it appears) largely advisory, but it is indubitably paid by that part of the great British press owned by Mr Roy Thomson.



Unfair to all?

Now the balloon has gone up, in the peculiar way that rivals in the great British press manage these things. On Sunday the *Observer* complained, in two articles, that Lord Snowdon's (rather vague) part in producing the *Sunday Times* new colour supplement (which has still to surmount its distribution troubles) was unfair competition: the very name of the Queen's brother-in-law would stampede advertisers into a race to buy space. Both articles were reprinted, verbatim but without comment, in *The Times* on Monday (overseas readers may like to be reminded that *The Times* has nothing to do with the *Sunday Times*: in fact, its machines are used on Saturday night to print the *Observer*). And at least one paper in the Beaverbrook empire has joined in the *Observer's* attack on the "Palace's advisers."

The Palace's advisers should not interfere. This has been all along a matter for the young man himself to decide. If he is going to do a real job of work for Mr Thomson his abilities will be worth the money he earns. If not, if he has been given any reason to feel that Mr Thomson intended to use him as no more than a gimmick, he could surely be trusted to know what to do about it. But the *Observer's* arguments of last Sunday hardly carry conviction. Space buyers are not an impressionable race: they will not support the *Sunday Times* supplement because Princess Margaret's husband is employed on it behind the scenes, but only if so many thousand impressionable readers are inclined to buy a quality Sunday paper for its snob value alone. One wonders how many of these people the *Observer* really believes still watch ITV's Sunday arts programme because the Queen's cousin introduces it. And, if it thinks there are many such, are they the kind of readership that the *Observer* wants, and can expect, to attract to itself ?

Behind the Protest

The chart explains much of the *Observer's* concern at the addition to a richer rival's armoury of what used to be called in the wartime rationing days an "adventitious aid to circulation." Although since it opposed Sir Anthony Eden over the Suez expedition it has fallen behind the *Sunday Times* in the competition for an expanding middle class (and therefore largely pro-Tory, pro-royalty) readership, its total circulation continued to mount upwards until the *Sunday Telegraph* appeared last year. In 1960, its expansion was still proceeding merrily, by 25.8 thousand to 703.7 thousand in the first half of the year, and then up again to 738.1 thousand in the second half. But since then it has fallen slightly, to 728 thousand in the first half of 1961, and to 715.2 thousand in the second half. Last Sunday it truthfully claimed that these figures still meant that its total circulation for 1961 was higher than that for 1960, and naturally its circulation in the last three months of 1961 was higher than in the three holiday months immediately before them ; but to report the figures in this way is to put something of a gloss upon them. The gloss was not really needed. One suspects that a check of this kind, or worse, has happened to all the other Sundays, except the *Sunday Express*. The general performance of the *Observer*, in the face of the challenge from the *Sunday Telegraph's* successful appearance, should not be such as to cause it to show any signs of waning morale.

* July-December circulation figures not available for *Sunday Times* or *Sunday Telegraph*

INDONESIA

Twelve of the Best

President Sukarno has made it harder not to take his aggressive intentions seriously by arresting twelve of the most prominent Indonesian dissenters. Certainly the arrests, which took place on Wednesday, lend greater credibility to the present preparations for military action against West Papua (Dutch New Guinea) than, say, the drilling of volunteers with bamboo spears and wooden rifles. A regime that feels the need to arrest such men as Dr Sutan Sjahrir and Dr Mohammad Rum—two of the most famous leaders of the Indonesian revolution—betrays its insecurity and proclaims that it really does mean business.

It could be argued, alternatively, that Dr Sukarno is merely using the New Guinea crisis as an excuse for levelling out such opposition as remains. Although the arrested men did not go into armed rebellion with some of their friends in 1958, all have been critical of Dr Sukarno's guided democracy. Dr Sjahrir and Dr Rum are the leaders respectively of the Socialist and Masjumi parties, which were banned in 1960. Suggestions in one report from Jakarta that the arrested men were lukewarm on the New Guinea question are absurd ; one of them, the former foreign minister Gde Agung, threatened to walk out of the independence talks in 1949 because the Dutch refused to hand over New Guinea immediately. It is doubtless true, however, that they disapprove of President Sukarno's threat to take the territory by force.

A report that Egypt will prevent Dutch warships from using the Suez Canal in the event of hostilities with Indonesia is part of the present war of nerves. An undertaking to this effect is said to have been given by Field-Marshal Abdel Hakim Amr, vice-president of the United Arab Republic, who is on a visit to Indonesia. If this undertaking has indeed been given, then President Nasser has promised to break another promise—for he pledged himself in 1956 to uphold the conventions governing the use of the canal in peace and war.

CARIBBEAN

Which Dictatorship?

Next Monday, at Punta del Este in Uruguay, Cuba will be in the dock before a jury of the twenty foreign ministers of the Organisation of American States. Latin American attitudes towards Dr Fidel Castro have gradually hardened, but the United States is still not sure of getting the two-thirds majority needed to carry its proposal that the OAS should impose sanctions against Cuba. The larger Latin American countries are in several minds about the wisdom, or utility, of this step, and although the persuaders from Washington are closer to diplomatic victory than they have ever been before, the verdict is far from certain.

In this context the United States has every reason to deplore the new distraction in the Caribbean. On Wednesday, during rioting in Santo Domingo, the Dominican council of state, which came into being only on January 1st, was overthrown and a junta of four civilians and three military men took over—by their own account for one year. Two weeks ago, the OAS lifted its sanctions against the Dominican Republic, while the United States resumed diplomatic relations and prepared to pump in economic aid. Now the State Department has labelled the latest turn of events in Santo Domingo a "backward step" and has talked of withdrawing diplomatic recognition. President Kennedy's comment last Monday that since the Dominican Republic was moving from its dictatorship on the Right, the western hemisphere could concentrate on removing the other dictatorship on the Left, turns out to have been unhappily timed.

Temporarily at least, the laborious effort to replace the 30 years of Trujillo family rule with a parliamentary form of government has failed. The council of state had pledged itself to hold elections in May, but President Balaguer, who had promised that he would step down when the OAS sanctions were lifted, showed every intention of hanging on. Earlier this week, the demonstrators in Santo Domingo were demanding that both he and, more significantly, General Rodriguez Echavarria, the chief of the armed services, should go. But the general was still in command to announce, on Wednesday, the president's resignation ; and though he is not a member of the new council, he is now assumed to be the man in charge.

ALGERIA

Fear Country

Already this month over 300 people have been killed, and more than 500 wounded, by terrorists of the OAS (European extremists) and the FLN (Moslem nationalists): such is the dismal record in Algeria. The terrorists of both sides maintain their pressure on the government (if that is the right term—it barely controls the principal cities any more). The FLN,

JANUARY 18, 1862

PRUSSIA AND PIEDMONT

Prussia stands now, and has long stood, towards Northern Germany in very much the same attitude as Piedmont stood towards Northern Italy before the advent of Cavour to power. Both Prussia and Piedmont had been regarded with a great deal of dislike by the absorbable States. Both had obtained and probably deserved a reputation for Northern stiffness and martinetism. Both had been looked upon with jealousy as unfit to constitute the nucleus of a great nation. Both had been regarded as the only possible nucleus, nevertheless. The main differences between the Prussian situation and the Piedmontese lie in two facts : —that Germany is not yet threatened by any overwhelming Power as was Italy by Austria, — and that Prussia has not yet produced any great Minister whose large policy could make all Germany eager to dismiss their small Dukes at once and to coalesce under his guidance. In fact, German unity, if it is coming, seems likely to come through the regular decomposition and recomposition of political Nature, while Italian unity was the fruit of a sudden fusion and reorganisation under excessive outward pressure. . . . Nor ought we to regret the slow progress of the Liberal cause in Prussia. So long as no Minister arises with ability enough to teach the Executive how to *gain* strength rather than lose it by dependence on the people, it is desirable that the instinct of respect for hereditary monarchy which is so strong in Prussia should directly strengthen the Administration ; —that the King's feeble powers as a statesman should be eked out by the respect of the people for his person. It is always a critical moment for a great State when first the people become the real initiative source of power, and unless, when that moment comes, the class of statesmen have been also produced who know how to govern the people *through* themselves, and yet to govern them, there is every danger of anarchy like that we see now in America. In Germany, the executive power has not yet learnt to rest on the people : and we trust that before it does so, the men will be forthcoming who know how to recommend a broad and honest policy to the approbation of the people, without looking to the people to carry it out.

strengthening its grip on the Moslem quarters, continues to ambush army patrols; the OAS exercises its own quasi-political authority over the European communities.

The operations of the European terrorists are now frequently directed against settlers who wish to retire to France while the going is good; such people, held to have betrayed the cause of French Algeria, are sometimes punished by death. The OAS is said to levy taxes on the Europeans, and has begun to order Moslems out of houses in European districts to make room for frightened Europeans who have moved out of Moslem areas. It has announced impending action on an even larger scale, and advised housewives of both communities to lay in two months' food supplies. The Arab leaders have retorted by declaring total war on the OAS. They have been severely provoked. But it is impossible, now, to say where provocation begins, so tight is the vicious circle. It is almost impossible to see how to break it.

The French government, uncertain of the loyalty of the armed forces, and knowing its representation in Algeria to be riddled with disaffection, struggles on its chosen way. A cabinet meeting on Monday discussed the problem of maintaining order in Paris and Algiers. M. Joxe, minister for Algerian affairs, has made an Algerian tour which may perhaps lead to some effective measures. But the main French hope remains a favourable outcome of the secret negotiations with the Algerian government-in-exile. About these, a mild optimism is appearing in Paris, and there are even hopes that by February the progress made will allow of an open resumption of talks. "The whole future of this country depends upon the co-operation of the two communities," said General de Gaulle more than a year ago; "without that I foresee nothing but chaos." Chaos has come. It will not be checked by the accustomed method of ignoring the subject. An effort to restore civilised intercourse between Europeans and Arabs is overdue. But who is to undertake it?

CONGO

Cher Cyrille

DR NKRUMAH, in a famous letter to the prime minister of the Congo, then Mr Lumumba, wrote:

> Cher Patrice . . . you cannot afford, my Brother, to be harsh and uncompromising. . . . Be "as cool as a cucumber" . . . and consolidate your position before you take the next step.

By taking this good advice the new prime minister of the Congo, Mr Cyrille Adoula, has come a long way. Mr Kalonji, who once declared his South Kasai province independent, is in jail; his followers are meekly represented in the central government in Leopoldville. Mr Gizenga, the Little Brother of Mr Lumumba, seems to have had the ground cut from beneath his feet by the cool Mr Adoula. His party has expelled him, his soldiers (some of whom, by one account, massacred 18 priests in northern Katanga three weeks ago) are divided for and against him; he has been dismissed as deputy prime minister. The Communist-supported breakaway of his Orientale province seems to be coming to an end. He may one day join Mr Kalonji.

Quite a lot of ground, however, still remains beneath the feet of Mr Tshombe, head of the breakaway province of Katanga. True, the rump parliament at Elisabethville seems to be on the point of ratifying Mr Tshombe's agreement with Mr Adoula to re-integrate Katanga with the Congo. But, according to most reports, paid white volunteer soldiers are still arriving in towns outside Elisabethville, notably Kipushi, on the Northern Rhodesian border. Because of this, the acting secretary-general of the United Nations, U Thant, has pointed out that there is no official state of cease-fire in Katanga, only a voluntary abstention by the UN forces; and that operations against the mercenaries will continue.

The triangular negotiations between U Thant, the British Government, and the government of the Rhodesias are still at the delicate stage: U Thant may send a representative to Salisbury, but no effective way of sealing off the Rhodesian border and at the same time satisfying the pride of both

Another freelance in adversity: Mr Antoine Gizenga

sides has yet been devised. Nor has the Union Minière company yet, it seems, been persuaded to pay a share of tax revenue and government dividends to the legal recipient, Mr Adoula's government. Britain and Belgium should continue to use their good offices with the company to this end: they could point to the success of Mr Adoula's methods so far, as an indication of where the company's long-term interests lie.

The Katanga secession is still a sore in the body of the young Congo state—but there is some hope. Mr Adoula is said to be contemplating the appointment of someone in Mr Tshombe's Conakat party to a high ministerial post in the central government. If Mr Tshombe is sure that he has a wide base of support in his home province he need not take fright from this, even though the post, that of deputy prime minister, has just been vacated by Mr Gizenga.

LABOUR PARTY

Jack the Bomb

THE Campaign for Nuclear Disarmament has always been unwilling to put up candidates at parliamentary elections. It knows that, if it did so, it would be likely to win only a derisory proportion (perhaps 4 or 5 per cent) of the national vote. Its preferred tactics have been to try to make use of the peculiar theoretical constitution of the Labour party: whereby, if the CND captured the support of a majority of the few thousand people who influence the casting of votes at Labour conferences, it has an opportunity to edge the policies of Labour leaders in a direction which it wants—even though it be a direction opposed by a majority of the 13 million people who vote Labour at general elections. One can question the morality of such take-over tactics—of a company which, in City terms, has an unduly narrow voting equity and artificially silly articles of association. But, obviously, in such circumstances, the directors have the right to use every opportunity to fight back to retain control.

Independent Sheppard

Just such an opportunity may now have presented itself to Transport House. In Pembrokeshire—where the sitting Labour MP is that outspoken anti-unilateralist Mr Donnelly—the local branch of CND apparently consists of independently-minded rural Welshmen, led by a Mr Sheppard (locally known as "Jack the Bomb"). The branch has announced its intention of putting up a CND candidate at the next general election. Labour's constitution decrees that any organisation which puts up a candidate against an official Labour man becomes "proscribed": i.e., nobody can belong to both it and the Labour party. It follows that, theoretically, Trans-

port House might now be able to say that anybody who wants still to belong to the Labour party (including about 40 unilateralist Labour MPs) must disown any connection with CND.

Naturally, Canon Collins has reacted very strongly to this threat. He has said that "the Campaign for Nuclear Disarmament is a democratic organisation and its local committees are bound by the policy agreed by annual conference" (i.e., the policy of not putting up candidates at democratic elections); there is no evidence that the Canon recognises that this doubletalk is in any way funny. Every effort will therefore be made to dissuade any CND man of Pembroke from standing; and, if any does, it will be argued that proscription must be confined to the Pembrokeshire branch of the CND and not to CND's national organisation. Probably, therefore, the Labour leadership will not seize this chance to cut off the incubus of its extreme left, even though it knows quite well that that extreme left is one of the main impediments in the way of its regaining power. But, if only the Gaitskellites were as ruthless as their opponents, how happy, both for them and for the structure of democratic politics in Britain, could be the reverberations of this explosion from Jack the Bomb.

SMALLPOX

Prevention or Panic?

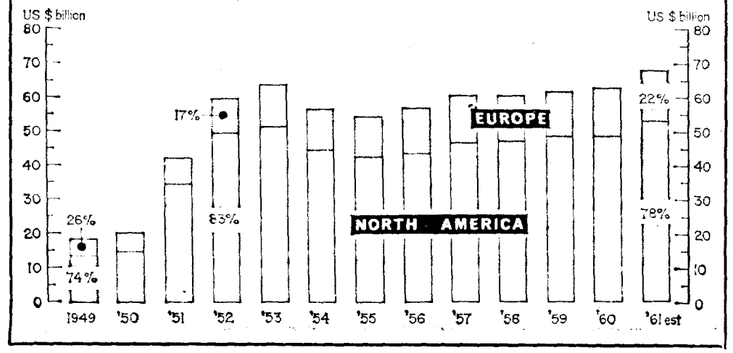
THERE have been two unpleasant side-effects of the present smallpox scare. One is the intensification of racial bitterness, directed particularly against Pakistanis because they started the outbreak. The second is a public clamour for vaccination which might cause local shortages of vaccine, and divert the energies of public health authorities from ringing off and vaccinating contacts of known and suspected cases.

The success of this method of control may be gauged by the fact that no one has caught smallpox from one of the first Pakistanis to arrive with the disease—the one who landed in England on Christmas Day and who has since died. So far, indeed, the total number of confirmed cases gives no cause for panic—17 with 5 deaths; but the incubation period is from twelve to sixteen days, so that more cases may arise among the contacts of the patients diagnosed this week—they include two more Pakistanis, who arrived in England with the disease, and a Pakistani child.

All travellers by air from Pakistan, where in Karachi alone over 250 people have died from smallpox since November, are now being vaccinated at London airport, unless they show evidence of recent successful vaccination, and are also being temporarily isolated. Thus the further imports of smallpox from Pakistan should by now have been blocked. But in preventing the spread of the infection already in England the public health authorities would be helped if the vaccination rate in the public at large were far higher. The generation that grew up before air travel increased the risk of smallpox being imported can be excused a low level of vaccination. But there is no reason save inertia—and occasionally conscience—why the coming generation should not have protection. Immunisation schedules have been prepared by the Ministry of Health that should enable children to have the widest possible immunity against dangerous infectious diseases with the fewest pricks and jabs. In these time schedules smallpox vaccination has its place, preferably when a child is four to five months old, along with immunisation against poliomyelitis and against diphtheria, whooping cough and tetanus in a combined injection. (Tetanus was wholly or partly responsible for 562 deaths in England and Wales in the 1950s—compared with smallpox's 22—and did not need Pakistanis as intermediaries.) The schedules include booster doses against all the diseases except whooping cough after the child starts school—revaccination against smallpox is recommended at 8 to 12 years—and are completed by BCG vaccination against tuberculosis for children over 12. Permanent protection against these diseases is not of course guaranteed by this procedure. But it may well lessen their severity, and in any case it is a far better course than panic.

CANTERBURY CONVOCATION

No Hanging Bishops



THE unanimous vote of the bench of Church of England bishops in the upper house of Canterbury Convocation in favour of abolishing the death penalty for all types of murder, or of suspending it for five years, will give a powerful impetus to the campaign against capital punishment. Bishops have many admirable qualities, but zeal for reform is not generally their strongest suit. This, of course, adds to the significance of their vote. The change in the attitude in the Anglican bench to capital punishment is marked. Not so very long ago, the late Bishop of Truro was campaigning not for the abolition, but for the extension, of the death penalty. In 1956, although both archbishops and eight out of the other nine bishops in the Lords, voted for abolition, they did so only with important reservations. Dr Fisher voted for abolition, but envisaged the retention of the death penalty for certain forms of murder. In Convocation, Dr Ramsey, who, incidentally, is showing himself just as skilled a chairman as Dr Fisher and a very much less loquacious one, sided with the abolitionists and made no reservations at all. This is not to say that a majority of the bishops would agree with Dr Mervyn Stockwood that the death sentence is "a denial of the Gospel," and that by imposing it the state "takes to itself the prerogative of God." They would rather concur with Dr Mortimer, the Bishop of Exeter, that the state does have the right to take life, but that it should not be exercised in the circumstances of present day England. The bishops' motion has great moral authority. Taken with the vote of the lower house of Canterbury Convocation last October, also favouring abolition, it means that the mind of the Church, at least in the southern part of the kingdom, is officially against the death penalty. York Convocation has not yet considered the problem, but a motion is on the agenda for the May meeting, and there seems little doubt that York will follow Canterbury's lead. And the effect of the opinion of the Anglican church on the views of Conservative backbenchers, although it is a force that moves slowly and sometimes mysteriously, can be surprisingly decisive.

Who Pays for Defence?

America still shoulders the main burden of Nato defence. But since 1952, when the Korean war boosted American expenditure, the European share has risen slightly. As the figures for individual countries show, the United States also spends a larger proportion of its gross national product on defence than any other country. In Europe, France and Britain carry the heaviest burdens.

Between 1953 and 1960 the defence spending of Nato countries has never been above the $64 billion spent in 1953. But forecasts for 1961 showed a sharp increase. For the United States, in particular, which accounts for three-quarters of the total, an increase of 10 per cent is forecast, bringing its defence spending last year to $51 billion.

	1960 Expenditure as % of GNP	1961 Forecast in $ mn

KASHMIR

Less Than All?

LIKE an underground river, the Kashmir dispute flows on through the years, never absent from Indian and Pakistani minds, but easily forgotten by others until it breaks surface again in full view. For more than ten years an American, Dr Frank Graham, has held quiet tenure of an office at the UN's headquarters as its special representative for the question. There has

been no UN debate since 1957; President Ayub Khan's request for a Security Council debate is his first approach to the UN on the subject since his military government took power in 1958.

The Pakistani request cites the tough talk indulged in at this month's Patna conference of the Indian Congress party by Mr Reddy, the party president; and India's swift and summary occupation of Goa last month is clearly much in mind. But President Ayub had announced his intention of an early appeal to the UN before the Indians moved into Goa. There has been a sad worsening of Indo-Pakistani relations since September, 1960, when Mr Nehru and the president met and signed the Indus waters agreement.

In 1958—before the military take-over—Pakistan accepted a suggestion by Dr Graham of a meeting of the two heads of government to discuss Kashmir; but India argued that there could be no useful discussion until the Pakistanis actually withdrew from the parts of the state they hold. On Tuesday, however, the Indian government, in asking the Council to reject the request for a meeting, pointed out that it was prepared to resume direct negotiation, and that President Ayub could take up at any time the invitation to visit India that Mr Nehru extended in 1960.

Hitherto the president has maintained that such a visit depended on some sign of change in India's attitude. But Pakistan's apparent readiness to see a Council debate adjourned until after India's elections next month suggests that its new move may be no mere propaganda exercise, but a serious attempt to break the logjam. The long postponed trial of Sheikh Abdullah, the Kashmiri leader whom India first backed and then jailed, must be reminding Indians of the painful side of their impalement in the mountain state; China's third-party encroachments there are another disconcerting factor. An eventual settlement by compromise, of resounding benefit to both parties, could be brought much closer if some Indian gesture now enabled the Pakistanis to trim down their long standing all-or-nothing claims.

ARGENTINA

Men of Principle

AS a master of the art of political flexibility, President Frondizi demands some of the same aptitude from his lieutenants. Last week, two important members of his cabinet, Dr Alemann, the minister of economy, and Sr Acevedo, the minister of works, tripped over the inflexibility of their convictions, and resigned. Dr Alemann, who has been in office only eight months, has been strictly faithful to his predecessor's policy of monetary control; Sr Acevedo has been trying to put some sense into the country's over-weighted and outdated railway system. Both men have made enemies, and neither recognised the expediency of calling a truce until after the congressional elections in March. Business men, if they needed to borrow money to see them through Argentina's holiday months, have had to borrow privately at exorbitant rates. The railway workers have been on strike. But last month, while Sr Acevedo was conveniently out of the country, a compromise settlement with the railway unions effectively put all the vital issues of wage increases and labour regulations into cold storage until the end of March.

The new minister of economy, Dr Coll Benegas, is a close associate of President Frondizi and has held various banking jobs, the last being representative in Buenos Aires of Crédit Suisse. The president has tried to lessen the dismay caused by the two resignations by insisting that the government's anti-inflationary policy will continue unchanged. So it may in the long run. The president's cautious twisting between rival pressures has, stage by stage, gradually brought his country some of the way towards political and economic recovery. The World Bank has sealed its confidence in Argentina's future with a loan of $95 million for hydro-electric development for Buenos Aires. After long stagnation, industrial production rose handsomely last year; the currency is stable and the unions, apart from the railways, are less intractable.

The armed services, too, have become less impetuous in their efforts to control public affairs. For some months now, Argentina has been spared any attempted *coups d'état*. But Dr Frondizi is not the man to underestimate the influence of his senior military officers. Last month, in the middle of all this financial stringency, Argentina's congress voted £100 million for the rebuilding of the navy. An order of priority that puts warships before, say, workers' houses is not unusual, and in this case it is, perhaps, particularly ungracious to quibble since the first orders for new ships have gone to Britain. But the timing still seems curious.

EDUCATION

Paying the Piper

WHAT should this country be investing in education? In a report on future needs, published on Monday, an independent committee under Sir Charles Morris, vice-chancellor of Leeds University, has produced some estimates which have been called expansionary, but in fact seem remarkably sober. The committee believes that Britain will have to increase real public expenditure on education by £40-£50 million a year for the next twenty years to cope with the rising birthrate, the revolution in working class expectations and the need to reduce the size of primary and secondary school classes. A rise of £50 million a year would in fact be rather below what has been achieved since 1951, in which time the proportion of the gross national product devoted to education has gone up from 3 to over 4½ per cent; it is also not out of line with the increase in spending that the Minister of Education has been talking

about in his plans for 1970. But it is possible that the committee has underestimated the likely cost of the real improvements it seeks.

Sir Charles Morris: sober expansion

The committee's second estimate is that recruitment to the teaching profession in England and Wales alone will have to run at something like 30-35,000 a year for the next decade; i.e., 7,000 a year above the present rate. The net increase the committee wants by 1970 (94,000) is slightly above other people's guesses, but the real argument over recruitment is chiefly about wastage: that is, the large number of young women who leave after four years or so to get married, compared with (up to now) the small number of married women who return later on. The Minister's recent campaign to get more married women back has begun to show some results: over 2,000 have responded so far — enough, numerically speaking, to release all the staff required to expand the training colleges to get more teachers. The committee ignores this trend, although it is the obvious point to push in making the most of resources that the country has already paid for. Again, it is worth emphasising priorities: 56,000 of the new teachers that the committee wants are for the secondary schools, especially to teach children who stay on voluntarily past the present compulsory leaving age. This is precisely the point that should be driven home in the Burnham committee when the time comes to talk about financial encouragement.

SYRIA

Somersault from Socialism

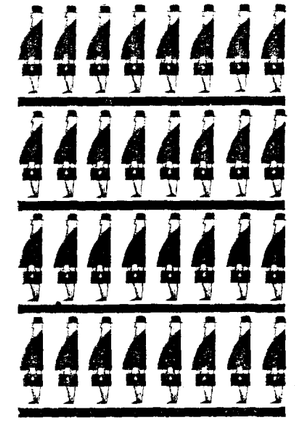
RIGHT at the start, Syria's new leaders have run into trouble. In Damascus and in Aleppo, students, and others, spent part of last weekend demonstrating against the general statement of policy made on January 8th by the prime minister, Dr Maarouf Dawalibi. Although phrased cautiously, this statement showed that the conservative-minded government is not prepared to make much concession to the infant socialism that came to life while Syria was the northern region of the United Arab Republic. True, the land reform law is to be retained, though there may be changes in the way it is carried out. But all nationalisation laws are to be repealed. This will affect the banks and the half-dozen or so large companies that have been taken over altogether by the state, and also those firms whose shares are still in private hands, but whose administration is now controlled by the government.

The demonstrators were probably less concerned with the prospect of denationalisation than with the omissions in the prime minister's proposals for social security. Dr Dawalibi promised the Syrian worker that he would be given priority in buying shares in reorganised companies, and he also committed the government to a programme of social reform. But his proposals are bound to seem colourless against the rosy hopes with which President Nasser has been encouraging under-privileged Egyptians, and which, not so long ago, were on offer to Syrians too.

Perhaps to offset the attack on himself as a "reactionary," Dr Dawalibi has joined

Under fire: Dr Dawalibi

forces with Cairo and Baghdad in denouncing "imperialist" conspiracies in the Middle East. On Sunday, the prime minister said that it was clear to him that the target of the recent British military movements was "nowhere but Lebanon and Syria." He also vigorously rejected any attempt, at present, to breathe new life into the Fertile Crescent dream. A couple of days earlier, King Hussein of Jordan had described the Fertile Crescent as a "reality"; to be in agreement with King Hussein these days is no position for an Arab leader who is already under fire at home for his right-wing opinions.



OLD AGE

Poverty's Extent

MRS DOROTHY COLE'S inquiry into "The Economic Circumstances of Old People"* is an odd mixture of very useful social research and (as we see it) very questionable political conclusions. It is based on 400 interviews with people over retirement age in 1959-60; and the main "conclusion" blazoned abroad is that while only 21 per cent of old people were then receiving national assistance, another 10 per cent were entitled to it and yet another 11 per cent were either borderline cases or "excluded from receiving help from the national assistance by the present regulations, which rather illogically protect some sources of income and capital but not others." It turns out, however, that about two-thirds of the 10 per cent who are listed as entitled to assistance but not receiving it were living with other people, usually their grown-up children or other relatives; so were most of the 11 per cent of "borderline" cases; in such cases assessments of entitlement to assistance are very difficult for any amateur researcher; and some of Mrs Cole's assumptions about what should be logical "disregards" of assets and income (don't count the value of any owner-occupied houses, assume that disregards under the earnings rule should also apply to income other than earnings) are decidedly questionable. From these assumptions, Mrs Cole concludes that, if the Government concentrated on raising national assistance rates and improving the mechanism for distributing it, some 40 per cent of old people would be receiving national assistance; so, she implies, it might be just as reasonable to concentrate on getting "the basic old age pension substantially increased." This implication, that one might as well spread several hundred million pounds worth of increased benefit over everybody in an age group if four out of ten of them badly need it, is a bit staggering.

The danger is that some of the pamphlet's questionable conclusions may detract from the real value of its genuinely pioneering research. For example, this research confirms that older people (often those who retired before private pensions became less ungenerous) are worse treated than younger retired people, and that the women in the sample tended to be much worse off than the couples or the men. There might well be a good case for making the next special increase in pensions apply only (or mainly) to those who reached retirement age before, say, 1956—which would mean, immediately, only to men over 70 and women over 65. Certainly, too, some private occupational pensions contain quite insufficient protection for widows' rights. And what appalling misery must be disguised in the statistics that those "who appeared to have little social contact (less than once a month) represented some 4 per cent of all old people"; and that (here, probably, lies the real substratum of intolerable poverty in our society) there were another 4 per cent of old people who "kept house alone . . . who had definite entitlement to national assistance but were without such help."

* By Dorothy Cole with John Utting, Occasional Papers on Social Administration No. 4. Codicote Press. 139 pages. 12s. 6d.

We apply science to the storage of clients A fortune lies buried in many industrial premises, in the form of storage space wasted or inadequately used. No two storage problems are alike, but the flexibility of the Gascoigne Kee Klamp Storage System, and the experience we have accumulated in installing it in factories of every type and size, enable us to introduce a new efficiency into the storage, selection and handling of virtually any materials. By the scientific analysis of space and store traffic requirements, and by tailoring a Gascoigne Kee Klamp System to meet them we can increase accessibility, eliminate congestion and accelerate flow, thereby saving time, frustration and money. We can even create new space for storage—half the size of a football pitch in one case!—by erecting a free-standing Kee Klamp platform. May we explain more fully how the Gascoigne Kee Klamp System can be of service to you? GEO. H. GASCOIGNE CO LTD 615 Gascoigne House, Reading, Berks. Telephone: Reading 54417.

AESOP-TO-DATE

The travelling Kangaroo

A Kangaroo from Dublin Zoo.
A female of the species,
Was put inside a sort of ark
And shipped direct to Regents Park
Where every prospect pleases.
But this marsupial had some doubt
If she would get her Guinness Stout.
And so she packed herself a few
Bottles of What is Good for You.

In England, when the Customs men
She failed to understand.
They searched her . . . ouch!
And in her pouch
They found the contraband.
Protesting was of little use
For ignorance is no excuse.

And so in future all beware,
When asked, "What have you to declare?"
Declare in accents loud and free—

Guinness is good for you—and me

A Message for Sir Roy

EDITOR ECONOMIST—YOUR EDITORIAL ON SIR ROY WELENSKY IS ILL CONCEIVED INACCURATE AND MISCHIEVOUS. FEDERATION IS ONLY STABLE STATE IN CENTRAL AFRICA AND CONTINUED APPLICATION WESTERN PRINCIPLES IS ENABLING IT TO STAY PEACEFUL AND TO STEADILY INCREASE STANDARDS AND RESPONSIBILITY OF ALL PEOPLE. THIS LARGELY DUE TO SIR ROY WELENSKY LEADERSHIP. DEPLORABLE RESPECTED JOURNAL *Economist* PUBLISHES SUCH IRRESPONSIBLE AND DAMAGING SUPPOSITIONS THAT CANNOT BE SUBSTANTIATED—N. S. FERRIS, CHAIRMAN UNITED FEDERAL PARTY; M. M. HOVE, MP; S. S. SAWYER, MP, CHAIRMAN SOUTHERN RHODESIA UFP; B. G. SPARROW; TIKILI; N. NYANGONI; J. W. MILLS, CHAIRMAN NORTHERN RHODESIA UFP; G. A. CHAZA; J. B. PATEL; J. W. SWAN, MP; G. MSUMBULWA, MLC; R. E. SAGAR; M. AYL; S. UDWIN, MP; R. RICH, MP; G. CUTHBERTSON; R. ALLANSON.

★

SIR—Your Message to Sir Roy Welensky is a shattering revelation of the expedience and cynicism which motivate *The Economist's* persistent hostility towards the Federation of Rhodesia and Nyasaland. I cannot deplore too strongly your irresponsible advocacy of policies based neither on principle nor reality but on a desire to appease the anti-colonialists at all costs. Equally deplorable is the encouragement which your mischievous analogy with Algeria will give to the Federation's extremists.

There may be—as *The Economist* seeks to remind its readers—fewer white Rhodesians than there are people in Nottingham. This does not make any less valid their determination to ensure, with the support of moderate Africans (whom we believe to be in the majority), that political power in the Federation shall remain in the hands of responsible men, black and white.

One of the Federation's chief aims has been to foster partnership between the races. Yet *The Economist*, while acknowledging that under Sir Roy Welensky's leadership white Rhodesians have become more liberal and racial discrimination is being swept away, declares that Sir Roy is no longer the best man for the job of political leadership and that the Federation is doomed. This seems clear proof that *The Economist* now rejects the concept of multi-racialism in favour of support for the racialist policies of the African extremists.

Your cynical and discourteous reference to "the federation of Rhodesia (and Nyasaland)" is in itself an interesting comment on the bias with which *The Economist* approaches the whole question of the Federation's future. Equally, responsible readers will question your motives in giving circulation—and attributing to Whitehall—the malicious nonsense that Sir Roy Welensky at one stage "threatened to march into Northern Rhodesia and arrest the Governor."

Can *The Economist* substantiate its surprising contention that "international outcry" followed the announcement of Northern Rhodesia's new constitution last June? There was violence in certain rural areas of Northern Rhodesia and a few incidents in the urban areas, but the action taken to quell it can in no sense be interpreted as the "putting down of colonial peoples by force," for it is important to remember that these disturbances were not spontaneous. As the recently published report of the Northern Rhodesia government makes clear, this campaign of violence was organised by officials and members of Mr Kaunda's United National Independence Party in an attempt to gain by violence what the party had failed to achieve by negotiation. In advocating the granting of constitutional concessions to UNIP now, *The Economist* is apparently prepared to condone the use of violence as a political weapon.

Your arbitrary statement that, in 1962, political power cannot remain in the hands of Europeans ignores the fact that in the Federation political power is increasingly being shared with Africans. We have set our face against the doctrine of the supremacy of one race over another, and surely it is as illogical for Africans to be granted political power simply because they are black as it is for Europeans to exercise power simply because they are white. I am sure your readers will agree that the deciding factors in determining the exercise of power should be merit and responsibility, not race. That this view may be unacceptable to the Afro-Asian block at the United Nations in no way undermines its validity and we in the Federation believe that the British people—if not *The Economist*—would wish their Government's policy at the United Nations and elsewhere to be based on what is morally right, however unpopular it may be in some quarters. Sir Roy Welensky made clear in his recent address to the Institute of Directors' annual conference his belief that there is nothing wrong with the courage of the British people and their leaders, and Lord Home's recent speech on the United Nations is further evidence of this.

You refer to Sir Roy Welensky being unlikely to accept Katanga as a precedent for Nyasaland's withdrawal from the Federation. Since the Federal government has never supported the secession of Katanga from the rest of the Congo, no question of "precedent" arises. The Federal Prime Minister has constantly sought to encourage the reintegration of Katanga into the Congo by means of peaceful reconciliation between the Congolese leaders themselves and all the Federal government's influence has been exerted towards achieving this aim. The Federal government has done everything legitimately possible to prevent the attempted solution of the Congo problem by the use of force. Contrary to the opinion of *The Economist*, the interests of the British and Federal governments over Katanga do indeed coincide, for the survival of a stable, pro-Western government in Elisabethville is as vital to Britain and the whole free world as it is to the Federation. Sir Roy Welensky does not regard Katanga as a buffer state between black and white nationalism but welcomes having on the Federation's northern border a territory whose leaders share our belief in inter-racial co-operation and the maintenance of law and order, and with whom we can enjoy friendly relations.

While control of the Federation's frontiers and immigration are Federal government responsibilities, the joint statement on December 29th by the Governor of Northern Rhodesia and the Federal Prime Minister shows that there is the closest co-operation and agreement on these matters between the British and Federal governments. The two governments are also in complete agreement that the onus to establish a traveller's bona fides should be decided in the metropolitan countries concerned. Several weeks ago the Federal government requested that this matter be examined by the British Government with those metropolitan countries mainly affected. This is now being done.

I believe that confidence in the political, economic and indeed moral judgment of *The Economist* will be severely shaken by your partisan and vindictive attack on the Federal Prime Minister and all he stands for, and that your call to "face the music" will be regarded as an invitation to surrender unconditionally to extremism. No one will deny your right to oppose the policies of Sir Roy Welensky, as indeed you have consistently done for a long period. Many who have disagreed with you have been permitted space to reply to your views. All of this is fair and proper. But when you take an obviously calculated step to besmirch the honour and purpose of a great Commonwealth statesman and encourage those who employ violence in pursuit of their political aims, I am bound to protest in the name of principle and fair dealing; which I now do with all the emphasis at my command.
—Yours faithfully,

A. E. P. ROBINSON
High Commissioner for Rhodesia and Nyasaland.

London, WC2

★

SIR—Your "Message for Sir Roy" is clear, unequivocal and potentially disastrous: "Welensky Must Go." Apart from the fact that, in the supposedly sober pages of *The Economist*, it is a surprising exercise of what Stanley Baldwin, similarly attacked by the newspapers, devastatingly described as "power without responsibility—the prerogative of the harlot throughout the ages," it is based on a profound misunderstanding of the situation in Central Africa.

To what end is Sir Roy to be sacrificed? To the destruction of the Federation, of which your approval is explicit. To the establishment of (black) African domination, under the slogan "One man, one vote," of which you approve by implication. In the international sphere, to the full-out support by Britain of the United Nations' effort and policies in the Congo.

These aims—let us, as you so rightly urge, cut out cant—can only be fulfilled against the direct will of the majority of the white population of the Rhodesias. These white Rhodesians are not a scattered few, as were the Kenya settlers, to be dismissed at first contemptuously and then with a hideous crocodile pity. The policy which you demand can only be imposed upon the Rhodesias by force—force of the kind that was used to batter Katanga into submission, but of enormously greater weight and (it must be added) greater military efficiency.

Whence is this force to come, and what will be its character? Are Salisbury and Bulawayo to be reduced to the present state of Elisabethville? Are we to see Indian Canberras (with or without British 1,000 lb bombs) swooping merrily over the centres of these cities, while Ethiopians winkle out the desperate resistance of old ladies and school children in the suburbs, and Swedish staff officers—relaxing after their arduous duties—watch unmoved while colonialist vipers, such as bank managers, shop assistants and public relations consultants, are dragged off to summary execution?

Is it conceivable that you contemplate with equanimity the repetition, on territory for which Britain still holds responsibility and where the majority of whites are of British stock, of episodes such as these, which have all occurred in Katanga recently? Of course not; yours is a liberal, humane journal, written and read by liberal, humane people, a long, long way away from central Africa. Those who will such an end as you desire shut your eyes to the means by which it is attained. It is time you were brought to understand what those means are; it is time you realised why, for example, a large part of the British electorate revolted against the proposal to supply British 1,000 lb bombs for the attack on Elisabethville. However desirable or expedient the end, the means were morally shocking. Your end is evil because your means are evil.

You say that people like myself, who believe in and support Sir Roy, for the simple reason that we believe his policies to be right, "have to be persuaded that, frankly, the time has come to face the music in central Africa."

"Face the music" is a brave enough phrase. Violence, murder, oppression, corruption, and the ruin of civilisation are dismal, ugly words; but in them is contained the music which you say must be faced—not for the moment, in London, SW1, but in Africa.—Yours faithfully,

London, SW1 JOHN CONNELL

SIR—We have had the United Nations in the Congo deciding that it must try to destroy President Tshombe because he is determined to protect the interests of his people from the excesses of racialism. Now, we have *The Economist* deciding that Sir Roy Welensky must go, because he, too, appears equally determined to protect the interests of his people, African and European alike, from similar dangers.

You seem surprised that Sir Roy should have "done little to oppose" Mr Tshombe, and take him to task for this. But why should Sir Roy be expected to act in opposition to Mr Tshombe's aims? Sir Roy has himself worked unceasingly for nearly a decade to build up a multi-racial partnership in the Federation—a partnership based on responsible citizenship and not racialism.

Beyond the border in Katanga, President Tshombe has been administering this province by means of European and African co-operation—another multi-racial society. Why should Sir Roy want to destroy this administration?

Is it really surprising, furthermore, that Sir Roy should prefer to have International Red Cross observers on his territory rather than representatives of the UN? He has seen the UN trying to impose a political solution upon Katanga by force. Who is to say that once on Rhodesian soil the UN would not, as suggested by my colleague Patrick Wall last week, interfere in the internal politics of Northern Rhodesia?

You say that "except in Nyasaland the political power is still in the hands of the white minority—a thing that in 1962 cannot persist." Are you suggesting that political power should be handed over to Africans regardless? If so, you forget that the majority of Africans in the Federation, like the majority of Europeans, look to the Federal government and Her Majesty's Government to protect them from exploitation by extreme racialist elements of either colour, black or white, whilst the political advancement of the Africans is allowed to continue in a peaceful and orderly manner.

Please do not refer me to Dr Banda's Malawi Congress Party and its "90 per cent of the population behind them." When I was in Blantyre a year ago, I saw the smouldering ruins of an African politician's home. His crime? He had dared to form a Christian Democrat party instead of supporting Malawi, and had attended a reception for British MPs the night before. Whilst this form of intimidation is rife in Nyasaland, I do not doubt the ability of Dr Banda's henchmen to secure him the support of 90 per cent of the population at the polls, any more than I doubt the ability of Herr Ulbricht's henchmen to do the same for him in East Germany.

Nothing I saw in the Federation, or have heard from those within it since, gives me the impression that "the whole thing might blow up this year." But all the achievements of the past will be destroyed instantly, if power is handed over to an irresponsible racialist regime.—Yours faithfully,

VICTOR GOODHEW

House of Commons, SW1

Brave Old World

SIR—The article in your issue of January 6th criticised the Foreign Secretary's speech at Berwick, but entirely ignored the real problem to which the speech was addressed—namely the lack of balance in the United Nations today, where the bill is paid by a minority, who in the main uphold the Charter, while the majority who control the voting in the Assembly regard the organisation very largely as an instrument for furthering their own ends.

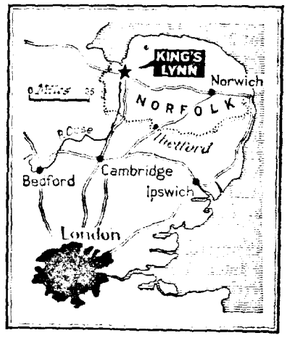
This was the ominous feature of the voting in the Security Council on Goa. Four members voted to reject Portugal's appeal against Indian aggression on the ground that this question was a colonial one, and opposed a resolution calling for a cessation of hostilities. You urge that this was not the first time that members had condoned the use of force. I cannot see that that makes the symptom less alarming. The voting in favour of Indian aggression—and the vote would have been far stronger in the Assembly—reflects the fact that many UN members vote on questions of this kind according to their prejudices and not according to the Charter.

We all know that this is what has bedevilled the situation in the Congo. The supposed shortcomings of Belgian colonial policy in the past do not alter the fact. The immediate cause of the present disaster was, as Lord Home said, the premature grant of independence by the Belgian government, who allowed themselves to be hustled by the anti-colonialists into abandoning a territory that was not prepared.

To return to the question of Goa, you draw attention rightly to the problem which must face any peace-preserving system, that of bringing about necessary changes without the use of force. In fact this problem is hardly soluble without the Metternichean concert of the great powers which you refer to so disparagingly in your article. The great powers acting in unison might by firm persuasion have induced the parties in a dispute to accept a fair agreement. What hope is there, when the party with the worse cause can always be sure of the support of Russia—at a price? But here too the change in the balance of UN membership has made matters worse. What chances are there likely to be for conciliation by the Secretariat, when its actions are conditioned by a majority which votes according to prejudice? Do you really think there could have been any chance of Portugal accepting a formula of agreement approved by the Afro-Asian nationalists?

Your article comes perilously near to arguing that the UN ought to have forced Portugal to surrender Goa, and that failing this it could not object to the Indian aggression, because Portuguese rule in Goa was offensive to the Indians. I fear that you, Sir, like the Afro-Asians, cast your voice according to your prejudices. A similar argument could unfortunately be easily applied by those with different prejudices to, say, Basutoland.—Yours faithfully,

CHARLES STIRLING



Alton, Hants

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

London to Lynn

FROM OUR SPECIAL CORRESPONDENT

THE only way to lift the burden of population and industry from the old back of London is to push people and their work into areas whose worries are of dearth rather than surfeit. There are still quite a few such places left in southern England, and the consequences of joining the common market should bring many of them to light. But London's overspill is ideally directed towards small, underpeopled towns in Norfolk and Suffolk whose elders have decided to quit the dreams of eighteenth-century greatness and revive their fainting boroughs.

But people and industries are loth to move: and small towns sleeping under the huge fen sky are often loth to accept them. Up to 1951 London concentrated on its new towns: since then, the Wen has had to depend on its persuasive tongue—sometimes with notable success, as at Swindon, but more often to no avail.

Under the Town Development Act of 1952 London is an agent for recruiting firms into a new area and producing the work-people. Generally, it helps to build the necessary houses ; meets, for ten years, half the deficit on the housing account rates which may come about as a result of the overspill ; pays part of the special grant (over 15 years) provided by the Government for each house in a development town ; and makes sure, through its industrial selection scheme, that the overspill town gets just the type of citizen it needs. For a poor town with potential, it is a fairy godmother. Not that many of the overspill towns see the process in that light: their sacrifices, their citizens think, merit any handout from London.

There are, however, exceptions. The most noteworthy of them is the ancient port of King's Lynn, lying on the Ouse and living off what remains of (200 years ago) the fifth largest port in Britain. In its approach to its own problems of stasis, underpopulation and the limitations that go with having small needs in an age of large contracts, Lynn has exhibited a rare intelligence and resource.

Lynn lies in the centre of one of the richest and most intensively worked farming areas in the world, with the fens to the west and the chalk and clay of high Norfolk to the east ; and it is an increasingly thriving point of entry for cross-channel traffic, much of it in timber (now that roads dominate communications, the town expects to regain some of the trade it lost when the railways destroyed its old waterway system).

Four years ago a large soup firm moved in to Lynn's new industrial estate, to join and be followed by other firms in the same line of business: frozen foods, fertilisers, canneries and the mill which processes the sugar beet grown in depressingly large quantities in Norfolk. The soup firm is the key to the current scheme for absorbing about 10,000 Londoners over the next ten years. When it began plans for expansion included the attraction of about 1,000 new employees, preferably from somewhere less intensively used than the Lynn area is ; Lynn itself, unhappy about the shortage of labour, and perhaps worried by the drainage away from agriculture which might come about, saw a solution to its own problems in the LCC's problem of overcrowding.

Then the soup firm decided on a policy change which would expand its operations by automation rather than by extra labour, and the scheme might have died had not other firms begun to ask about prospects in the area. They found, to their surprise, that the Board of Trade was unenthusiastic about their moving to Lynn and, being none of them very large, they found it difficult to resist its persuasion to go to official development areas. The Ministry of Agriculture was also unenthusiastic about an industrial Lynn, not so much because of land use (500 acres of mainly waste land will be taken out for development), but because the agricultural wage structure of west Norfolk might be adversely affected.

The overspill scheme was thereupon revived, and an immediate softening of attitude followed: two industrial development certificates were granted, even though the scheme was (and still is) embryonic. Lynn's offer to London was a departure from the normal: the borough offered to build 3,500 new houses over ten years and to provide industrial employment for the 10,000 tenants, if London would supply the tenants. The LCC accepted in principle, harbouring its own doubts about the high degree of co-ordination which would be required, but happy to be relieved of its usual responsibilities.

The scheme has not been undertaken lightly by the borough: for two years it has investigated the development of other overspill towns, evaluating housing schemes, measuring the social pressures involved and generally preparing for what will be something of a revolution for the 27,000 Lynnites. Not quite such a revolution as many of them think it, however: with no town of comparable size nearer than 40 miles away, Lynn serves a population of about 100,000, most of whom seem to be in the town on at least two days a week. A mere 10,000 Londoners will not make much impression on them ; nor will 16,000, which is the number Lynn hopes eventually to attract.

What is envisaged will also help to solve one of Lynn's worst problems: the redevelopment of the town centre. As things are at present, no large contractor can be found willing to undertake the small volume of building which is Lynn's annual target: and the town is therefore forced to make do with as much as small contractors from the area can manage, about 50 houses a year where it would like to see 150. As a result, much of the tottering Victorian jerry-building which mars a largely medieval and Elizabethan town remains unrazed and ugly. The proposed overspill housing, together with the town's real needs for its own citizens, should now attract a large developer, leaving ample capacity for the rebuilding of the town centre, to which it is thought most Lynnites will return.

So far much of Lynn's planning is in that stage in which things look either very rosy or extremely black: the details of roads, services and finance have yet to be fully worked out. At its rosiest, the scheme would revitalise Lynn, give 16,000 people their own homes, relieve the pressures on London and show a small profit. At its blackest, the town might be left with derelict ground, a heavy rate deficit and crippling stagnation: but that seems unlikely.

White Collar Stomp

FROM OUR SPECIAL CORRESPONDENT

Mr Dankworth and militants.

THE Royal Albert Hall, whose tiered galleries have done so much across the years to dampen its visitors' artistic or political enthusiasms, notched up another victory on Tuesday night. This was to be the apotheosis of white-collar trade unionism: after sixty years of staid existence the Civil Service Clerical Association, goaded into action by the Chancellor's unprecedented refusal to allow an arbitration tribunal to name the day from which a pay increase should come into force, had decided to make its power felt. Its members were to work to rule (junior typists, 30 words a minute and not a syllable more): and the slow-down was to be preceded by a mass rally, designed to prove for the benefit of those junior typists that trade unionism could be fun as well.

The sum of £5,000 was spent on hiring the hall and the motor-coaches to bring in the crowds: speeches by the union's leaders were to be leavened by Johnny Dankworth's 14-piece jazz orchestra (the leading traditional bands being busy with the pantomime season, the union was forced to go progressive in its music as well as in its politics). In all, 7,000 members filled the Albert Hall: down the road in Westminster, 3,500 more were waiting in the Central Hall. They were due for a thumping let-down.

Mr George Green, general secretary of the association, had spent the afternoon with Mr Henry Brooke at the Treasury: what he had learnt there caused him to step bravely out, between Dankworth numbers, and announce that the whole thing was to be called off. The Government, he said, was to restore unfettered arbitration from April 1st: this he interpreted as victory for the union ("What about retrospection ?" cried a barracker), and the rally could be transformed from a protest meeting into a victory celebration. Mr Green bears a marked resemblance to Mr Selwyn Lloyd, and it is debatable which of the two is the less inspiring orator—his brief report was vague enough to give those inclined to cheering a chance to cheer, while those wanting to boo failed to find a rallying point.

The general secretary rushed off to break the news at Central Hall as Mr Dankworth led into a fast number—but the magic was broken for good. As the teenagers clustered towards the band-stand, the adults sought the rainy streets and the buses home. In the foyer the militants greeted each other with prophetic satisfaction: "Sold down the river again, eh Charlie ?"

This, indeed, seemed a common reaction, and was perhaps an inevitable one. Trade unions in the civil service cannot be militant because of the middle-class attitudes of their membership. On the other hand they depend on people who are by temperament militant to do much of the ungrateful voluntary work of union organisation. These people have always chafed under the knowledge that they could not strike: but they always had an outlet for their energies before the committees and tribunals that settle their rates of pay.

When the Government appeared to close even this outlet, the moderate union activists feared lest their more militant colleagues should profit from the situation. The work-to-rule was an opportunity for both kinds of activist to work fully together. The abandonment of this militant policy, and the return to careful negotiation and arbitration, brings the conflict between militants and moderates back into the open. The jazzed-up fiasco of Tuesday evening at the Albert Hall will not strengthen the hand of the moderates, led by Mr Green himself. He had a narrow squeak in his executive next day.

MEANWHILE, militancy is paying off in two other unions that also contain their fair share of extremists and are led by moderates. The Post Office Workers' work-to-rule is, in the union's view, having just enough effect on the GPO's operations —and on the public—to keep up a steady pressure on the Government. It is also most welcome to many members of the union, since a great deal of compulsory overtime is being worked in many areas to clear the backlog of mail, with corresponding effects on postmen's pay. The Post Office Engineers are due to launch their work-to-rule as well next Friday (and are hoping to distribute their interpretation of the rules to branches despite their colleagues of the UPW). The POEU expressly states that its campaign will at first have almost no impact on the public, but will inconvenience the post office and cause it to pay out more cash than usual in overtime. In a diverting paragraph of its statement to the press, the union explains that its members in post office factories will not be asked to work to rule because, as piece-workers, their pay would be reduced—surely a new principle in industrial action.

The important lesson of the action by these three unions was summed up by a CSCA official who claimed that, whatever Mr Lloyd's faults in the eyes of the union, he had united it as never before (and increased the membership from 140,300 to 146,900 in 1961). None of these unions has ever indulged in industrial action before: coming into the field with no preconceptions, they have been able to evolve methods of annoying the employers without making their members suffer or making themselves unpopular with the public.

Most surprising of all, they have all three been able to secure an amazingly good press —for cases which are certainly not without flaws. Unlike most British trade unions, each of them has a full-time press officer whose word is taken by the top-level officials: one of these press officers will, at the drop of a hat, use the revolting expression "public-relations-wise." If this kind of thing spreads, employers may have to watch out.

The Snuffling Season

It may not be real flu: it may only be coughs and sneezes. But whatever it is, Britain has caught it. In the week ended January 9th, the last for which figures are available (and even these were held up by the postmen's work-to-rule) there were 477,000 new claims for sickness benefit throughout the country. Normally, the Ministry of Pensions and National Insurance expects under half that number in an average week in January, although there were 280,000 in the corresponding week last year. The January 9th figure is an increase of over 130,000 compared with the week ended January 2nd, and it is, in fact, the biggest single influx of claims since the height of the Asian flu outbreak in mid-October, 1957, when 567,000 new claims were received in a single week.

Health officials, beset by smallpox worries, have had less time to track down influenza viruses, if these are really doing the damage. But the figures show that there are more ways of losing a staggering number of man-hours in production than by enduring an official epidemic.

NEW SICKNESS BENEFIT CLAIMS (ALL CAUSES)

(in '000s)

Weeks ending	Dec. 12	Dec. 19	Dec. 26	Jan. 2	Jan. 9
London (2 regions)	35·5	29·0	16·6	61·2	92·5
North-West	30·6	27·7	17·5	67·5	97·2
North	13·6	11·2	7·5	22·8	32·6
Midlands	14·8	13·1	8·2	34·7	46·8
Scotland	24·4	19·4	15·1	16·3	36·2
Britain (12 regions)	189·5	160·9	103·8	341·6	477·3

The worst-affected areas this month, as the table shows, have been in London and the north-west region, including Manchester. In the first week of the new year deaths from influenza, bronchitis and pneumonia were highest in Lancashire, Cheshire and parts of Derbyshire: this could be a comment on housing conditions as much as on the incidence of local chills and ills. Sickness benefit claims are the best single indicator of a spluttering nation, but, if anything, they underestimate the time lost from work. They do not include those who go back to their jobs after only two days' absence, and many people, particularly salaried workers and married women, do not bother to claim at all.

What seems to have happened this month is that the peak of winter sickness (over 400,000 claims a week), which was reached in February in both 1961 and 1959, has arrived much earlier this time. The rise has been a very steep one from the Christmas holiday, and its statistical appearance was concealed in the first week (ending January 2nd) by the normal number of carry-overs from the holiday period. It has long been established that people do not want, or have no need, to go sick in Christmas or Easter week, and the table suggests that the reluctance was showing up in mid-December as well this year.

On the face of it, the Scottish holiday period now lasts for a healthy two weeks, not merely over Hogmanay alone. Christmas has its converts north of the border. The Scottish figures fell noticeably, if not as dramatically as the rest of the country's, between December 12th and 26th: they did not begin to rise until well after the New Year had been ushered in.

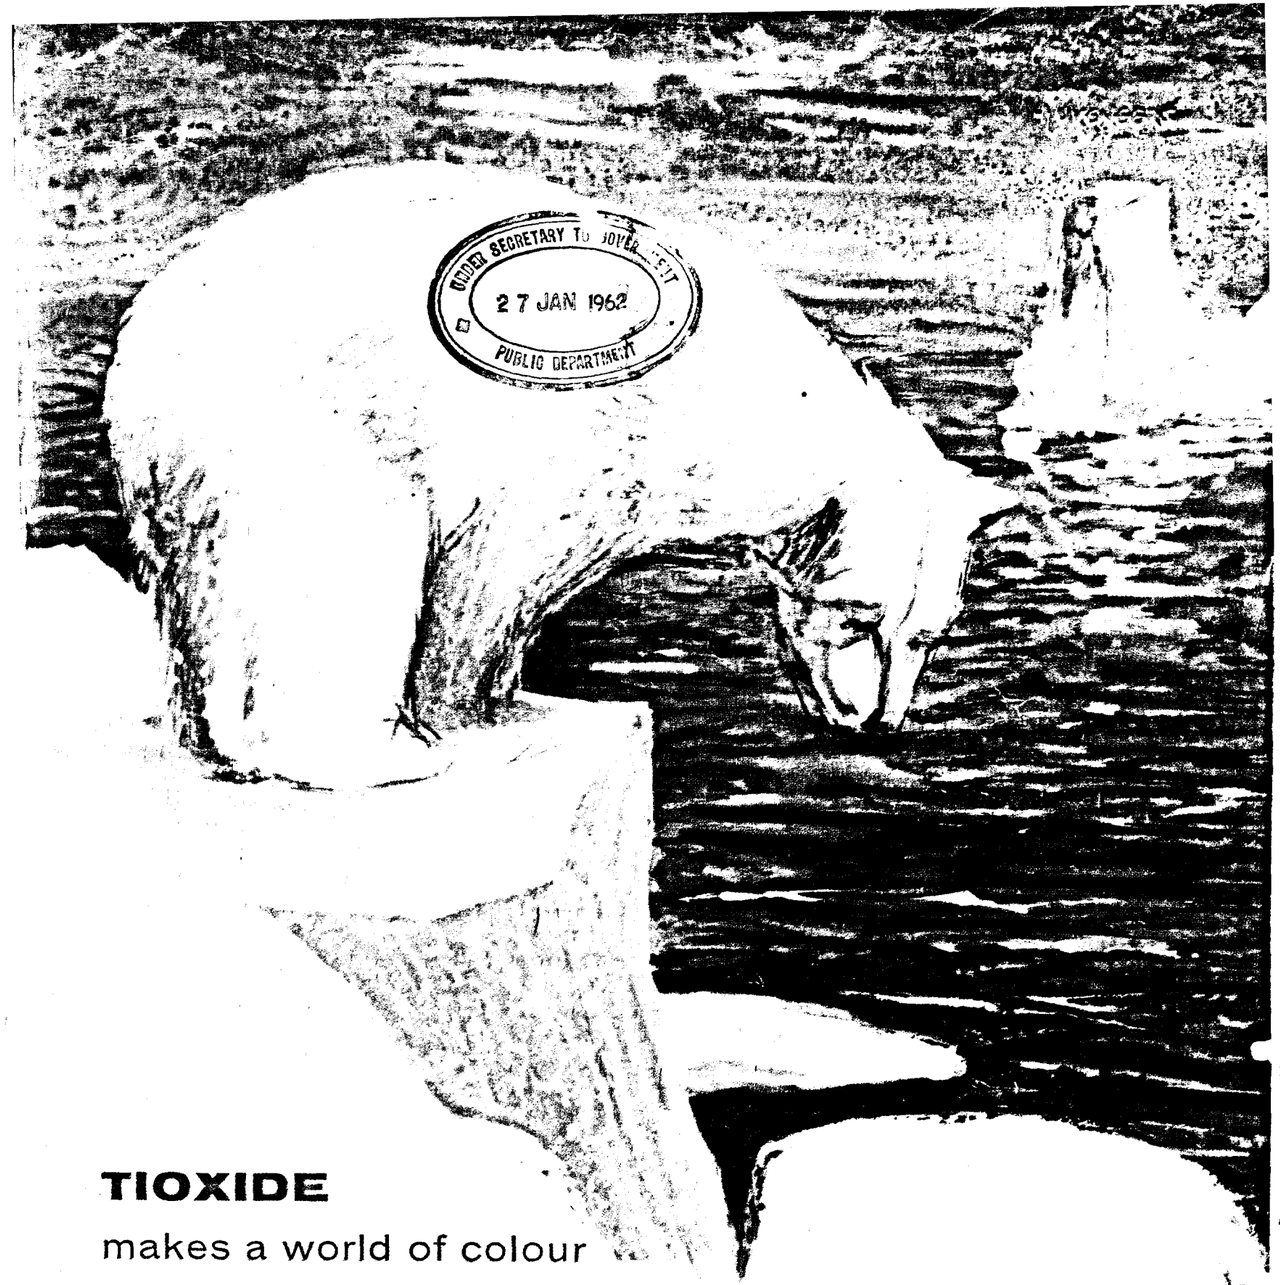
In the absence of identifiable flu viruses, it is reasonable to put most of the blame for all these snuffles on December's cold spell, followed by rapidly alternating warm and chilly snaps. What is evident is that the folklore of going sick would repay more serious official study. There is a psychological factor both in epidemics and apparently in choosing one's time to succumb to a normal cold in the head. Or is it merely the thought of those bonuses and office parties that keeps everyone clocking in until Christmas ?

BOOKS

Out of Africa

Guilty Land
By Patrick van Rensburg.
Cape. 224 pages. 18s.

White Madam
By Myrna Blumberg.
Gollancz. 160 pages. 18s.



It is the solace of exiles to write illuminating, polemical or vindictive books about their homelands, from which they have been rudely driven for their beliefs. Neither of these books is either bitter or vengeful about South Africa, and they fall happily into the first category of exile writing, throwing much light on a situation in which few Europeans can take more than an emotional interest. Of the two, Mr van Rensburg's is the more ambitious, Miss Blumberg's the more illuminating.

Patrick van Rensburg, an Afrikaner born, was brought up in an alien tradition: carrying his grandmother's name of Lagesse, he grew up as one of that strange band of brothers, the English-speaking South Africans, to whom every other race on earth is something tainted with inferiority. Like the rest, therefore, he hated and despised the Afrikaners who make up the greater part of South Africa's white population—only to embrace those hard, principled and Calvinistic people with fervour when he discovered that he was one of them. He joined their government service ; became a member of their diplomatic staff ; conscientiously conducted their apologias in the foreign country (ironically, the Belgian Congo) to which he was sent.

Here, by chance, he began to think, prompted by people whose detestation of South African racial policy was already high, and his disillusionment was rapid. He resigned, joined the non-racial South African Liberal party and shone briefly as the arch-traitor to his land and culture (while he helped to organise the British boycott of South African produce) before his final escape from South Africa in 1960 after Sharpeville and the following emergency.

Mr van Rensburg's description of his conversion (practically unaccompanied by alien proselytising) is the best thing in his book ; written with economy and a quite unfashionable sincerity, it makes it hard to believe that all South Africans with white skins are, as we all too easily imagine, monsters of intolerance and shut minds. He cannot be the only one to have seen this light ; and that he is a member of that very race for which most odium is reserved makes this account more heartening.

The other two-thirds of "Guilty Land" are taken up with a detailed summary of the legislative machinery which makes the South African racial situation possible, and a painfully explicit exposition of the role and requirements of white liberalism in the overthrow of nationalistic Afrikanerdom for which, as for the millennium, much of Christendom waits. His conclusions can bring comfort to very few among the white liberals whose task it has been, these twenty years past, to try to bring some reason and justice into the South African scene, for he will have none of the earnest adherence to accepted principles of justice and fairness. Seeking the limited victory first, he adjures us and the liberals to embrace the cause of black nationalism, to work with it, to be anti-white, to use that anti-white force

TIOXIDE
makes a world of colour

TIOXIDE titanium pigments are opaque, brilliantly white and used in an increasingly wide range of products such as paints, paper, plastics, floor coverings, man-made fibres, rubber, metal finishing and leather where their efficiency gives unequalled standards of performance. B.T.P. is the largest producer of titanium pigments in Europe, selling in over 60 countries and has plants in Billingham and Grimsby, in Australia, Canada and S. Africa and is associated with another in India.

fly BEA

SEE WHAT A GREAT DIFFERENCE THE RIGHT AIRLINE MAKES TO YOUR HOLIDAY

Your holiday is what you make it: what you do, where you go, how you get there. Especially how you get there. The right choice cuts time and money off your travel, time and money that can be spent on the holiday itself. A choice like going BEA – with all the advantages only a big airline can offer.

Why fly BEA? BEA is big enough to take your travel cares right off your shoulders, speed you to where you're going without delay, and keep your travel costs low. The column on the right shows you just how little flying BEA can cost. You have to be big – BEA big – to give this kind of service. To have 108 permanent offices – at least one in every important European city. To have 850 experienced full-time pilots, each trained to BEA's own high standards. To have frequent and regular scheduled flights to every part of Europe (to more than 75 different places including 16 a day in the summer between London and Paris). And to take you everywhere in a hundred-strong fleet of the finest and most modern aircraft – the Comet 4B, the Vanguard, the Viscount.

Your choice and how to make it. Your choice of airline is as important as your choice of place and hotel. If you're taking an all-inclusive holiday – then specify BEA.

Make sure you book through a BEA travel agent. This way you have the ease and saving of an all-inclusive holiday plus advantages BEA gives you. Any appointed travel agent – there are over 800 of them so you'll find one easily! – can help you arrange these all-inclusive holidays.

All you pay for all-in holidays flying BEA

BEA Appointed Travel Agent

(which he believes the strongest force in Africa south of the Zambesi today) to overthrow the current regime—and only then to think of liberalism.

Reluctantly, many of the most courageous liberals in South Africa will agree with him; it is the side of their dilemma easier to fall on. Between the apparently hopeless cause of bringing peace and enlightenment to this riven land and the attainment of the first of liberal ideals—that the underdog must be raised to equality—they will choose, possibly in a spirit of atonement for white wrongs, to risk their own destruction for the sake of the smaller end. That answer has the merit of heroism and self-sacrifice; but the true liberal, the humane worker for humane ends, cannot countenance it. Mr van Rensburg's thinking has been long and deep, and there is no doubt that his cast of mind will eventually lead him to that belief, by which liberalism exists, that if the world (and South Africa) is ever to be a better place, no compromise with prejudice, with blind emotion, with revenge and bloodshed, is permissible. But if it is possible to pick at Mr van Rensburg's conclusion, it is not easy to suggest an alternative: his own diligent examination of his people's history earlier in the book shows clearly enough that they will not give in easily. And it is certainly true that Africans' resentments are rising. Perhaps he is right; at any rate, the book is good enough to make one think he might be.

Miss Blumberg's book is a simpler proposition, but it combines the same qualities of economy and sincerity as make Mr van Rensburg's first 56 pages so compelling with the skill of a trained writer (she was the *Daily Herald's* correspondent in Cape Town during the first part of the emergency of 1960). It is the story of her imprisonment, without charge, without trial, without conviction, after the ferments that followed the slaughter at Sharpeville. It is, as the publishers crow from the cover, a very good "prison book"; but it is something more: not the unforgettable exposition of the "feel" of South Africa which they claim, but the testament of the true liberal which Mr van Rensburg, for all his passion and compassion, has not yet become. Miss Blumberg has those rare qualities of love and sympathy, not only for her friends and allies but for her enemies, too, that can make the least sinful of us ashamed of our meanness; and she has those other qualities of unsentimentality and clear sight that can make the best of us blush for our blindness. Hers is a very good book indeed.

East Anglian Fortunes

The Wealth of the Gentry, 1540-1660.

By Alan Simpson.

Cambridge University Press. 234 pages. 35s.

THERE has lately been a pause in the battle fought over the fortunes and role of the gentry in the century before the Civil War. But guerrilla fighting still continues, and Professor Simpson in these studies of some East Anglian fortunes, manages some effective sniping from his post at Chicago. When Professor Trevor-Roper distinguished between the rich "court-gentry" and the depressed "mere gentry," detecting in their antagonisms a fertile breeding-ground for rebellion, he passed lightly over the gentry of middling prosperity who, because their fortunes were sound, were "generally unobtrusive in national affairs." Miss Finch's Northamptonshire studies have already shown how much personality and chance can play in the rise and fall of families. Another regional investigation, pursued with the care, caution and liveliness shown by Professor Simpson, is very welcome, even if his conclusions are the sober ones that continuity is the keynote of Suffolk's agrarian history, that there is a presumption in favour of the prosperity of gentry families, and that so-called capitalist techniques merely mean "immemorial shrewdness."

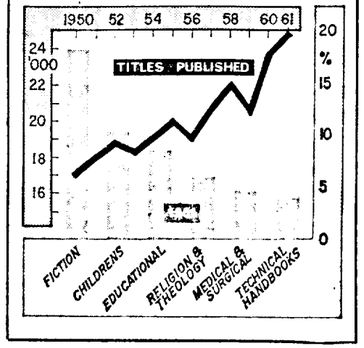
Professor Trevor-Roper emphasised how much landed fortunes owed to a transfusion of capital from office, law or trade. The three main families considered by Professor Simpson reinforce this view. The purchase of the Bacon manuscripts by the University of Chicago provided Professor Simpson with a rich vein of material on which he has based the longest and most interesting chapter of his book. Nicholas Bacon, the founder of the family, was a lawyer who obtained office under Henry VIII at the crucial moment of the dissolution of the monasteries and who rose to be Lord Keeper under Elizabeth. He was able to establish his sons by his first marriage as solid East Anglian landlords, and they were content to remain in that station. But he died before he could make proper provision for the sons of his second marriage, Anthony and Francis; and they pursued a feverish and notorious quest for office. The story of Thomas Cullum is that of a member of a small East Anglian family who became a London draper. Steadiness and moderation brought him a capital of £20,000 on the eve of the Civil War. With the aid of office under parliament he more than doubled this capital, acquiring a baronetcy at the Restoration, and handing on to his descendants a Suffolk estate which provided "a comfortable shelter for the seven baronets who succeeded him." Sir Thomas Cornwallis was a member of the court gentry for five prosperous years under Mary and, as a recusant, a member of the country gentry for the next forty-five years. But he survived well enough without selling land, living in a country house commonly reputed to have been built out of his profits as Treasurer of Calais.

Professor Simpson's most striking point is on the profits of farming. Whereas Professor Trevor-Roper considered that only on the best managed estates did income from land keep pace with a threefold inflation and lavish standards of expenditure, the East Anglian landlords here considered were much more successful. Profits from sheep-farming rose only threefold, but rents on the Bacon estates rose up to eightfold. Long leases were granted only by the crown and the church, and here the gentry were the beneficiaries. But it remains true that land was not the basis of great fortune. It is also significant that Professor Simpson's prosperous gentry played an insignificant part in national affairs: only Anthony and Francis Bacon played an active role in the politics of discontent. In this connection the career of Sir Charles Cornwallis, a younger son, in the reign of James I might have been investigated more fully. But this is a valuable book, for it takes a firm path throughout treacherous accounts, shows a welcome preference for light rather than heat, and combines meticulous research with wit and engaging modesty.

Scottish Law

British Justice: *The Scottish Contribution*

By T. B. Smith.



Stevens. 246 pages. 25s.

THE purpose of the annual Hamlyn lectures is to further the knowledge of law among "the Common People of the United Kingdom" so that they may "realise the privileges which in law and custom they enjoy in comparison with other European peoples." The present series, being the first to deal with Scots law, was naturally entrusted to its leading living publicist, Professor Smith. The independence of the Scottish system was guaranteed in the Act of Union of 1707, the constitutional effects of which are discussed in the last lecture. His aim is both to encourage any faint-hearted Scots to maintain that independence and to enlighten the ignorant English by pointing out where the two systems differ. Although in the last hundred and fifty years

MORE AND MORE BOOKS

British publishers issued 24,893 book titles, including new editions, in 1961: a record figure, but a welcome sign for many, the annual gain was smaller than the average over the last five years.

The same six subject classifications as last year took the highest percentages of the total and of these all but "educational" and "medical and surgical" slightly increased their share.

it has been much influenced by English law (usually, in Professor Smith's view, to its disadvantage), Scots law has on occasion made contributions in return, such as the doctrine of diminished responsibility, and could offer more if its merits were better known.

After an initial historical survey, the author describes the organisation of the civil and criminal courts and shows how the House of Lords, as the highest court of appeal in civil matters from both England and Scotland, has enforced a measure of assimilation. But in criminal cases there is no appeal beyond the Scottish courts, so that Scots criminal law has been immune from outside interference. It is largely judge-made law, but the claim of the Scottish courts that they have the power to declare new crimes today is viewed with muted misgivings. The system of public prosecution through the Lord Advocate and local Procurators Fiscal is well described, and a convincing case is made for the superiority of a system that avoids the prejudicial publicity associated with the English preliminary hearing before magistrates. On the other hand, the justification of the "Not Proven" verdict, the illogical alternative to "Not Guilty," is somewhat lame. Whether it ought to do so or not, the "Not Proven" verdict does in practice seem to "reflect unfairly on a person who has been acquitted."

In "the patrimony of private law" the merits of Scots law lie mainly in the field of obligations, where the law is simpler and probably more rational than its English counterpart. The law of property and of succession is admitted to need considerable reform, some of which awaits Parliamentary time. In one respect, however, reform unexpectedly overtook the author. The Companies (Floating Charges) (Scotland) Act, 1961 (based on English models), allowing floating charges to be created over the assets of a Scottish company, received the royal assent in July. Throughout, Professor Smith stresses Scots law's traditional links with the Romanist systems of the Continent, and concludes this lively and authoritative survey with the claim that, if Britain should enter the common market, the Scottish system could play the part of "an interpreter and reconciler" between continental and Anglo-American law.

Brollies into Europe

New Dimensions in Foreign Policy

By Max Beloff.

Allen and Unwin. 208 pages. 25s.

DID Whitehall bumble Britain's way into Europe in the past ten years? This is the question enticingly implied by Professor Beloff's latest book. It gives no conclusive answer. But it does, in a careful donnish way, describe in considerable detail the way our machinery of government has been changed or not changed to respond to the new European and Atlantic organisations. The first half of the book describes the development of the new organisations, the second the way British government was adapted for the new tasks—how delegations operated, how policies were formulated at home, how MPs were chosen to go to Strasbourg. There were no radical new changes in the machinery of government, but the existing structure proved, as so often in the past, remarkably supple and capable of taking on new tasks. Our Man from the Foreign Office would do his turn of duty on the Nato or OEEC delegation for a couple of years, between turns in San Salvador and Prague; others from the Board of Trade and Ministry of Defence were seconded to help. The method did not create great experts, but it did give a large proportion of the staff of the Board of Trade, for instance, some experience of international work. At home the system of inter-departmental committees—between officials and ministers—which was veiled in secrecy until the common market issue cast the limelight on it last year, proved a flexible instrument of co-ordination. If British proposals in the European bodies tended to be somewhat dim, at least they got there more punctually than some other people's.

But was the dimness itself partly explained by the attitudes and interests of this competent Establishment? Why did the bowler and the brolly become symbols of foot-dragging obstructionism in OEEC and the other bodies? The British, Professor Beloff emphasises, disliked any kind of supranational scheme that threatened the sovereignty of Parliament. War left their society more cohesive than ever; far from discrediting the idea of the nation it enhanced loyalty to it. The question he does not examine is how much the very function of civil servants—the fact that they would be the first to lose powers to supranational bodies, for example—inspired their caution. The bitter hostility of some members of the Board of Trade in 1959 to a common European commercial policy, which would touch the main job of the department, was a striking example. It contrasted sharply with the dawning awareness in the Foreign Office, whose job is to take in the changing outside world, that a more "European" British policy was needed.

Professor Beloff might have got farther, and brought more life to his thorough but pedestrian study, if, instead of generalising about organisations, he had touched on personalities. How important were Sir Frank Lee and Mr Thorneycroft at the Board of Trade in the inception of the free trade area? Personalities played their part again in the tragic breakdown of communications in 1958, when for at least a year the cabinet seemed not to have taken in the message the French were delivering forcefully in Paris: that they disliked the British project from top to bottom. Since 1959, the last year covered by Professor Beloff's study, the Prime Minister has, in his devious quiet way, put British policy into reverse, reshaken the existing machinery and picked from departments hitherto stuffy about ties with Europe a team of able negotiators dedicated to the task of getting Britain into the common market. Changing facts of power are responsible for the change. But when historians come to write the footnotes, and see how it took place, they may learn more from studying men—Mr Maudling and Mr Heath, Mr Figgures and Mr Roll—than machinery.

Moscow and the West

Ivan the Great of Moscow

By J. L. I. Fennell.

Macmillan. 400 pages. 50s.

BETWEEN the tenth and thirteenth centuries a considerable state was established in Russia, based at first on Kiev and then stretching far north and east into the forests and along the great rivers. Taking its religion and culture from Byzantium, it also made contact with Latin and Germanic Europe, and had an honourable place in the civilised world of the Middle Ages.

This first Russian state was destroyed by attacks from two sides, from the Tatar hordes of the east and from the pagan Lithuanians of the north-west. Swedish kings and German knights also made their contribution to its downfall. During the fourteenth century Lithuania, most of whose inhabitants were Russians, was becoming culturally a Russian state. In the same period, under the weakening Tatar overlordship, the central Russian principalities were gravitating towards the comparatively new city of Moscow. In the fifteenth century Lithuania and Muscovy appeared as rivals for the succession to Kiev, as rival claimants to "gather together the Russian lands." Much was to depend on the result of this conflict. It was to decide whether the eastern borderlands of Europe would be controlled by a ruler whose cultural links were with the west or by one whose outlook was formed by a combination of Tatar and Byzantine traditions.

The ruler whose victories marked the decisive stage in this conflict (though it was not brought to a successful conclusion until more than two hundred years later) was Ivan III of Moscow, the subject of an admirable and much needed biography by Mr Fennell. This book is essentially concerned with foreign policy, with Ivan's diplomacy and wars. In the last chapter something is said of internal political struggles and religious heresy, but even these are regarded largely from the point of view of foreign influences. Mr Fennell notes that Ivan III's reign is also important for the construction of the apparatus of a centralised state. But he does not discuss this at length, nor does he pay much attention to the social structure and antagonisms in Muscovy. This however is rather a merit than a defect, for the limitation of his theme enables him to do justice to foreign policy which, covering forty-three eventful years, is a formidable subject in itself.

Mr Fennell shows how Ivan subdued the city republic of Novgorod, linked by Baltic

trade with northern Europe and possessing its own great empire in the fur-bearing forests of the north-east. Novgorod was the only place in Russia where an equivalent existed of the urban middle classes of medieval Europe. By its suppression Ivan destroyed an incipient bourgeoisie no less effectively than the autocratic regime of his ancestors and himself had prevented the rise of a feudal nobility with corporate consciousness and institutions. The lack of either class determined Russia's social and political climate until modern times. Ivan then broke the power of the Great Horde, the main Tatar state based on the lower Volga. In this he was assisted by the rival Tatar state of the Crimea, and he was able to establish tolerable relations with the Crimeans' overlord, the Ottoman Sultan in Istanbul. Negotiations with Sweden, Moldavia and Denmark also strengthened his position for the struggle against the real enemy—Lithuania.

This careful account of Ivan's policy shows his single-minded devotion to the task of fighting Lithuania. At his death in 1505, Muscovy had gained vast territories, and though Lithuania was still strong, with Poland reluctantly committed to its support, yet it was already clear that Muscovy was the principal Russian state. From this fascinating and complex story there is perhaps one point that emerges with special clarity. This is that Ivan always regarded Catholic-ruled Lithuania as a greater enemy than any Moslem state, even Turkey. Appeals from Rome for aid against the Sultan left him unmoved. The Padishah might be the enemy of Christendom, and the Grand Duke of Lithuania Ivan's own son-in-law. But for Ivan, and for the Orthodox hierarchy which supported him, the hated enemy was in the West.

The Converts

Britain and the Common Market

By John Pinder.

Cresset Press. 144 pages. 12s. 6d.

Full Text of the Rome Treaty and an ABC of the Common Market

By Paul Minet.

Christopher Johnson. 218 pages. 12s. 6d.; paper 5s.

The Common Market

By Stuart de la Mahotière.

Hodder and Stoughton. 192 pages. 3s. 6d.

Europe at Sixes and Sevens

By Emile Benoit.

Columbia University Press. 296 pages. 37s. 6d.

IN the last few years there has been a certain remoteness and unreality about the many well-intentioned British books on European unity; the long descriptions of the Council of Europe, Western European Union and so on have had a pallid Anglican flavour, at a time when history was being made by the new Rome of the Six. Now, suddenly, the British conversion is beginning to release a series of books about the more exciting new religion. All the three British books are journalistic in a sense, put together quickly to catch the printers, but they do provide material for the public discussion now getting under way.

The best of the three is John Pinder's "Britain and the Common Market." Mr Pinder is a member of The Economist Intelligence Unit and a very good "European," so a reviewer in these columns has double reason for caution in assessing his work. But one does not need to agree with him to recognise that Mr Pinder has something to say. His book is an attempt to explain what the "Europeans"—the creators of the common market—have been trying to achieve during the past decade, and he interprets their tussles with Britain during the period as a clash of fundamental objectives. The portrait is, of course, sympathetic, an attempt to show that in going into Europe the British are not merely giving up an untenable position, but participating in a creative venture. And there will be those who will say that his handling of the Commonwealth problem makes it all seem too easy. But the book as a whole is none the worse for the strain of quiet enthusiasm that runs through it. This is the most effective "case for joining" that has yet appeared; and anyone who wants to grasp why Britain, after being at loggerheads with the continental countries for years, is now able to discuss its Commonwealth problems amicably with them, can find an answer here.

The other two British books are more superficial and show much greater signs of haste. But Mr de la Mahotière's paperback is a readable 3s. 6d. worth, even though it contains slips. Mr Minet's book is an odd mixture: an economic discussion of Britain's competitive position, and of the Commonwealth problem, a series of objections to joining by another author, plus the text of the Treaty of Rome, though without the vital protocols to it.

Professor Benoit's careful study is in a different class from these two ephemeral works. Americans, unlike the British, do not need to be told that the common market is a good thing. There have been moments when there seemed to be more "Europeans" in the State Department than in the chancelleries of Europe. But now the United States too is entering a new phase; like Britain before it, it has to decide how far it is going to become involved in the process of integration itself. President Benoit is one of the American "good Europeans" who knows Europe well, so his work could have a useful formative effect.

Finished before the negotiations between Britain and the Six got under way, and before President Kennedy took the decision to plunge into the trade battle, it is not a campaign manifesto. But it gives a full description of the dynamic economic development of Europe and discusses at some length America's economic interests in it—the dollar gap in reverse, the opportunities for investment in the common market, and the competitive position of American industry. Like British books about Europe, American ones have tended to be woolly, but more through excessive enthusiasm than through aloofness. This one brings the problem down to earth and focuses the American interests that are prompting reappraisal in Washington.

Independence with Dependence

The Canadian Identity

By W. L. Morton.

University of Wisconsin Press. 135 pages. Cloth $3.50; paper $1.50.

INTIMATE neighbour to a dynamic colossus, Canada has maintained its separate identity, pursuing a distinct, if never very clearly manifest, destiny. Inescapably involved in North American continentalism, it clings to membership in a worldwide multiracial, maritime Commonwealth. Developing in the shadow of a republic with a revolutionary tradition, dedicated to individual liberty and conformity to a uniform pattern, it has evolved as a parliamentary monarchy with sufficient elasticity to allow two cultures and innumerable diversities to flourish within one political nationality.

That Canadian history is thus not a parody of American history, but a unique human endeavour, in basic essentials a contradiction to American experience, is brilliantly explained in this small book. Professor Morton sees Canada as an extension, across the Atlantic, of the northern European frontier. While the United States realised its western destiny, Canada was left to work out a northern, transcontinental nationhood. From scattered French and British settlements a Canadian nation has emerged, with a national spirit that is neither French nor British, but totally Canadian in sentiment, "the characteristic product of a country resting on paradoxes and anomalies, governed only by compromise and kept strong only by moderation." The central fact of Canadian history has been the preservation and elaboration, in one "of the largest, harshest and most intimidating countries on earth," of an organic unity of state, society and individual that allows ultimate autonomy to the individual but expresses his sovereign obligation to respect and safeguard the autonomy of his fellows.

The United States achieved world power as an independent state while Canada was working out the idea of colonial self-government, a process out of which evolved the basis of today's Commonwealth. Ties with the Commonwealth and with the rest of the world remain a fundamental element in Canada's continued independence in North America:

> Canadian nationhood has at least put the proposition that association and equality are not incompatible terms.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Balancing National Needs

WASHINGTON, DC

AMERICAN Budgets are largely guesswork. It is not really possible to estimate revenue and spending six to eighteen months ahead. President Kennedy expects revenues to increase by $10.9 billion to $93 billion in the fiscal year which runs from next July to the following June. His experts predict that the gross national product will rise from about $540 billion now to between $580 billion and $585 billion in the last quarter of this calendar year to give an average, record figure for 1962 of $570 billion. But a steel strike or an insufficient rise in corporate profits could upset the calculations.

Mr Kennedy proposes to spend $92.5 billion, leaving a small surplus of $500 million. His experts explain that this will have a mildly restraining effect on prices but that the Budget as a whole will help, not hinder the economic upswing that began last April and, judging by past experience, should continue, perhaps at a slackening pace, at least through the late summer or autumn of next year. By then they expect the economy to have reached a calm plateau with unemployment at 4 per cent of the labour force, after the recent storms and stresses which have included unemployment at almost 7 per cent, a budgetary deficit of nearly $4 billion, and what the Secretary of the Treasury describes as the sharpest restriction of credit witnessed in this century; he holds this responsible for prematurely snuffing out the last recovery.

While the Budget cannot be called an inspired contribution to the making of tomorrow's world it does reflect a trend. About three-fifths of the proposed outlays are accounted for by defence at $52.7 billion, foreign aid and the conduct of foreign affairs at $3 billion and space research and technology at $2.4 billion. These three categories also account for three-quarters of this Budget's increase of $3.4 billion in expenditure over the current year. There is hardly any change in the total of domestic outlays though there are some shifts between categories: for example $800 million more for education, health and welfare, and $434 million less for agriculture. In the nineteen-fifties defence spending averaged $40 billion annually; during the nineteen-sixties it is expected to average $50 billion or more. But by deferring desirable new projects Mr Kennedy hopes to balance his Budget, primarily because of the need to reduce the deficit in America's international payments. He calls a balanced Budget "meeting the national needs within a responsible fiscal framework," but whether the national needs will in fact be met is even more doubtful than whether his Budget will really balance.

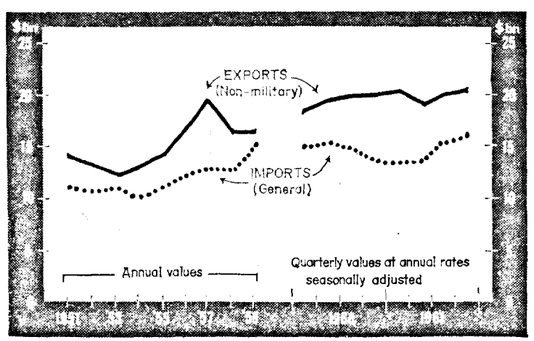
The public reaction to the President's State of the Union message was one mainly of tolerant scepticism: tolerant because the public likes Mr Kennedy, but sceptical because few believe that Congress will give him what he wants. For example, the President proposes to ask for power to cut taxes as well as tariffs. But Congress is very jealous of its authority over taxes and seems unlikely to give him authority to cut them to ward off recessions, although a recession would probably become a depression before Congress got round to taking such averting action itself. The President's modest proposal to increase the social security tax by half of one per cent to finance hospital care for citizens over sixty-five years old also apparently shocks many members of Congress, whatever it does to older voters. In his Budget Mr. Kennedy proposes to spend $1.5 billion of federal money on education, $900,000 less than on space research. But he would like to do much more for America's schools and colleges. In spite of the rising population the number of science students is actually falling, while Russia apparently manages to have plenty of scientists and lots of poets as well. Russia has more peasants and a smaller industrial base than America, but Mr Kennedy will spend $5.8 billion on agriculture and most of it will go to subsidising the incomes of farmers producing unmanageable abundance.

Few Congressmen want to see farm subsidies cut but most of them seem to think that America's schools are quite good enough—although Admiral Pirie pointed out recently that half of the boys recruited into the proud Marines do not know what July the Fourth signifies and are extremely hazy about the Declaration of Independence. Mr Kennedy has also suggested that Congress ought to do something to enable all Negroes of voting age and adequate education to vote. But the South is expected to defend the virtual disfranchisement of such Negroes although the Secretary of State has called race discrimination the biggest single burden that America lays on its own back in trying to carry out its foreign policy.

The cold war with Russia kept President Kennedy too busy in his first year to wage a cold war with Congress. But informed people are asking how long the pressures on and within him to realise his New Frontier can continue to co-exist with the hoary, traditional policies that this week he fooled nobody by professing to respect. Even if it is true that most Americans are currently hugging the middle of the road, some feel that Mr Kennedy should use his immense popularity to move them to support the bold progressive policies which he himself cherishes in his heart. It is argued that even if nobody at all were pushing Mr Kennedy should be pulling, because in the American system that is what the President is for. It is also argued that if he does not, the millions who idolise him now may become cynically indifferent to him as "just another politician."

"You Really Think You Can Charm Those Birds?"

One answer is that Mr Kennedy is a coolly pragmatic man who regards politics as the art of the possible and who is more interested in practical, if limited, results than in slogans, however fine they sound. He will always take a half or even a quarter loaf rather than risk having no bread.



Nevertheless, there is a growing feeling that to achieve things that would entitle him to go down in history as a "great" President, Mr Kennedy will have to challenge what President Wilson bitterly called "government by the chairmen of the standing committees of Congress."

This involves the State Legislatures as well as Congress's iron law of seniority, for these Legislatures create congressional districts and it is to such rural roots, especially in the South's one-party states, that the critics attribute much of Congress's alleged malfunctioning. (Mr Kennedy owed his own victory in 1960 largely to the big cities where more and more Americans live.) Elections to the House of Representatives are held every two years and next November the President could conceivably challenge the grip of the grassroots on national policies by giving support in the campaign to members of Congress who have helped him during the session. But the task is complicated by the fact that there are progressive sheep in the Republican fold and diehard goats in the Democratic one. Mr Kennedy must not cause the Democrats to lose more seats to Republicans than they will do in the normal course of an "off year" election. Another problem for the President is that if he gets into the November electioneering he may well find himself trapped in a maze of petty conflicts involving narrow local interests. But whether he chooses the November elections or some other occasion there is a gathering belief that sooner or later Mr Kennedy will be compelled to stand and do battle for what he believes in.

Quite a Dish of TEA

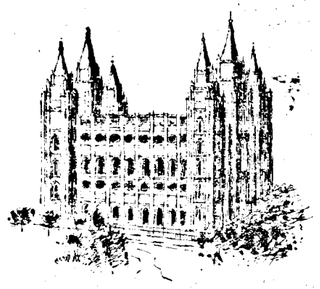
WHILE the details of the President's proposed Trade Expansion Act are not yet available—and they will certainly be numerous and complex—the outline in his address on the State of the Union provided quite enough to be going on with. Indeed, this "bold new instrument of American trade policy" is planned as a keystone not only for his foreign policy, in which economics are playing an ever greater part, but also for his domestic policy, which aims at providing growing opportunities for everyone. Such opportunities will be found abroad, particularly in the European Economic Community after Britain has joined (as the President assumes it will), so long as barriers are not put up against exports from the United States. And a steady increase in these exports, following the satisfactory trend of the last two years, is essential if the American balance of payments is to bear the strain of foreign commitments on the present scale.

What the President wants is far-reaching power to abolish duties altogether on items in which 80 per cent or more of the world's trade is shared between the United States and the enlarged common market; these are mainly industrial products and ones of which the United States exports more than it imports. On most other goods it would be possible under the scheme to reduce tariffs by as much as 50 per cent. The aim is to enable American industries to compete on equal terms with those inside the European Community and the reductions would only be made as part of a bargain in which reciprocal reductions were granted by that organisation. The negotiators would deal with broad classes of goods—drugs in general, for example—instead of only with individual items, a limitation which has hampered and delayed bargaining under the outmoded and expiring Reciprocal Trade Agreements Act; but the agreement concluded in Brussels this week shows that even in its last days that Act had not lost its usefulness.

The drastic new reductions in tariffs would only be gradual, spread over five years, and specially sensitive industries, such as textiles, would be in a reserve category and would not be affected. The President says that the old safeguards—escape clauses and peril points—will not be neglected and the Bill will provide for appropriate assistance to help businesses and employees which suffer particularly badly from imports to readjust their operations. It will be difficult to convince the critics that such aid can be effective, but Mr Kennedy is counting on this proposal to keep the opposition from gathering strength. To give his supporters fresh arguments he is having surveys made of the benefits which foreign trade brings to individual communities. There will be plenty of time for both sides to do their educational work, for under the present congressional schedule it will be weeks, if not months, before the Bill even reaches the first stage of committee hearings and even longer before Congress decides whether the President should be allowed to seize the initiative and the United States be allowed to compete in an expanding world.

Voice for the Cities?

RIGHT at the top of the President's proposals to increase America's strength at home is his renewed request for a Department of Urban Affairs and Housing; this would deal with the problems of the cities, at once the country's glory and its shame. Almost three-quarters of all Americans now live in urban areas, compared with about 40 per cent at the beginning of the century. Yet city-dwellers have no spokesman in the Cabinet to voice their frustrations; many of these arise because the governments of the states are controlled by rural groups which grudge every penny spent to fight the cities' slums and crime. The President's proposal is to transfer to the new department the functions of most of the federal housing agencies; it would be empowered to co-ordinate the rehabilitation and development of metropolitan areas and to help the cities to provide decent housing for all. But the preamble of the Administration's Bill hinted that the department should also be concerned with adequate transport, sites for industry, open spaces and cultural activities.



This ambitious view is one of the reasons why Congress failed to act on the Bill last year. Conservatives of both parties suspect that the change would mean, eventually, big new spending programmes and the erosion of local control. Republicans also fear that it may mean even closer links between the Democrats and the big cities which provided Mr Kennedy with his margin of victory at the polls. The other obstacle was the man in line to run the new department—Mr Weaver, the present head of the Housing and Home Finance Agency who, if he gets the job, would be the first Negro member of the Cabinet. Even liberal Southerners felt that they had to oppose the Bill and the Rules Committee of the House pigeon-holed it.

Mr Weaver is not only a Negro; he has also made no secret of his belief that both Negroes and whites should have equal access to housing built with federal funds or federal guarantees

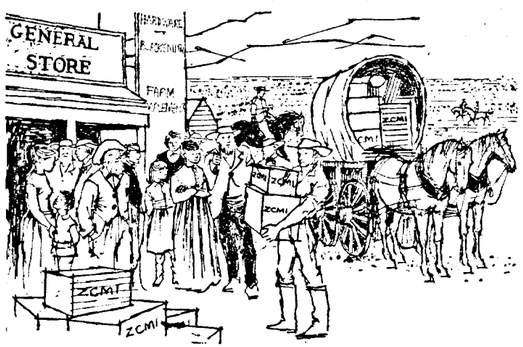
Business-like Saints

FROM A CORRESPONDENT
RECENTLY IN UTAH

THE visitor who returns to Salt Lake City after an absence of several years finds the headquarters of the Mormon faith astir with change. The pivot of the city is still Temple Square, where every day clean-cut, neatly dressed, pleasantly earnest young men conduct flocks of tourists through the meeting house with its enigmatic Star of David over the portico, past the temple, which only members of the sect may enter, and the column, commemorating the seagulls that in answer to prayer saved the first settlers from famine by eating up a plague of grasshoppers. Nearby is the tabernacle where pins are dropped to show the incomparable acoustics exploited by the Mormon choir.



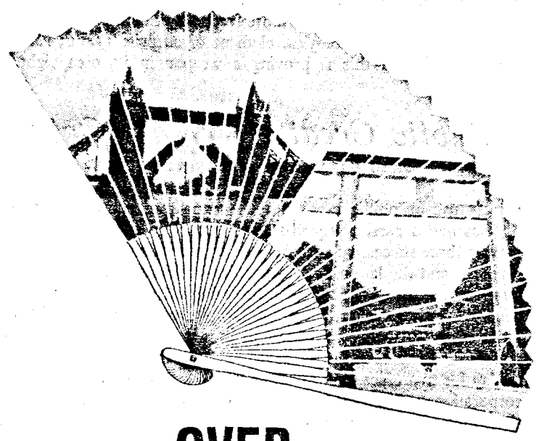
But across the street the visitor notices a million-dollar luxury motel, which the Mormons have built recently, in striking contrast to the nearby Hotel Utah, a nineteenth-century building in which the Church owns a majority of the shares. The hotel is to be enlarged by the addition of a 17-storey annexe and near it there is to be a Church-financed skyscraper to house the various offices of the Church of Jesus Christ of Latter Day Saints, to give the Mormons their full and proper title. It will be the tallest building in Salt Lake City. There are also plans for an 11-storey building for archives and a park for 2,000 cars, with four stories underground.

On Main Street the Church-controlled department store, Zion's Co-operative Mercantile Institution (ZCMI), which dates back to 1869 and is said to be the oldest in America, is undergoing a complete transformation. Inside, the shop has already been brought abreast of modern techniques of display, lighting and selling. Now the exterior, built in 1875 and with its pilasters and long, narrow windows a rare example of pioneer architecture, is being made over entirely, as part of a major architectural and structural reorganisation.

This will probably take a number of years to complete, but when it is finished Zion's Store will have 290 feet of modern, well-lighted windows for display purposes and a much larger car park. The plans also call for a 50-foot-wide landscaped plaza, with attractive lighting effects and show windows. According to the president of the firm, the new ZCMI will be one of the finest shopping areas in the country. Another innovation is on the way. After almost a century in business as a single store in the busy centre of town, ZCMI is branching out into the suburbs.

A few years from now, the city may have changed beyond recognition except for its religious shrines. But the more it changes, the more Salt Lake will remain the same in one respect—it will continue to bear the sharp impress of the Latter Day Saints. From the time that Brigham Young led the first band of settlers to this barren region, where they could practise their beliefs unmolested by the persecutions of civilization, the Mormons have dominated the city. Today nearly nine-tenths of the people of Utah are still Mormons and they represent about 40 per cent of all the members of the Church. There are also large concentrations of Mormons in California and Idaho (Idaho is about 43 per cent Mormon) and smaller numbers in the other states and abroad.

Besides their majority interest in the Hotel Utah and in ZCMI, the Saints also have a controlling interest in the Beneficial Life Insurance Company and the Utah-Idaho Sugar Company, one of the largest producers of beet-sugar in the country. The Zion Securities Corporation, the Church's financial arm, owns all the property adjacent to Temple Square (to prevent any offensive business from intruding, it is said), and much other property in Salt Lake City and elsewhere. Just last week the Mormons revealed plans to build a skyscraper in Manhattan to house their own activities and to provide office space for letting. For many years the Church was in the banking business and three members of the board of Zion's First National Bank, in which an interest is still retained, are Apostles of the Church. The Saints also own the local newspaper, the *Deseret News*, radio stations and a television station affiliated with the Columbia Broadcasting System's network.



The Mormons began by tilling the soil and their present holdings in agriculture are vast. They own over 600 farms, their crops and cattle being found from New Jersey to California and from Washington to Florida. They also own canneries, mills and a coal-mine. These enterprises are operated by the voluntary labour of Church members and the produce is returned to those members, either as a free gift in case of need or at substantial discounts from shop prices. At present Saints in all parts of the country are taking advantage of this facility to accumulate one-year stocks of food, clothing and other things which would be needed if there were a national emergency.

Self-help is the maxim by which the Saints live today, as they have always done. The sense of isolation from the rest of the world, instilled in them when they left civilisation to brave the wilderness, has remained. The Mormons are exceptional in that they avoid federal and state assistance as long as the Church can find work and sustenance for them. The various organisations of the Church do not claim the tax exemptions to which, in some cases, they would be entitled under the law.

Finally, the Mormons believe literally in the tithe, in addition to the usual forms of charity. A Church member in good standing is expected to contribute 10 per cent of his income annually to the common chest. Over the years the resources accumulated and, multiplied by shrewd investment, they have created a capitalist empire. No city in the United States is more adamant than Salt Lake City in its opposition to communism. And, as the many investments now taking place and financed out of the Church's own resources prove, none is more adept in the practice of capitalism. The Mayor of Salt Lake is Mr Bracken Lee, an enemy of the income tax who was a spokesman of the extreme right-wing conservatives long before they began to attract the following which they have today.

LONDON—
TOKYO

OVER
THE
POLE

ALSO VIA U.S.A. TRANS-PACIFIC TO TOKYO

Japan Air Lines add a delightful new flavour to flying on their twice weekly polar flights London-Tokyo. You can also enjoy this wonderfully different world of courtesy and serene beauty when travelling between Japan and West Coast U.S.A. Dainty kimono-clad hostesses pamper you with unaccustomed luxuries like *o shibori* hot towels. First class passengers have colourful, comfortable *happi* coats to wear. You'll find that relaxation comes easy aboard the big, swift DC8 International Jet Couriers of Japan Air Lines.

Also frequent services first and tourist class between Singapore, Bangkok, Taipei, and Okinawa.

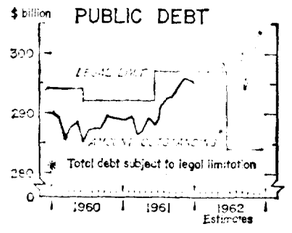
of mortgages. Mr Kennedy believes this too ; before he was elected he promised to wipe out such racial discrimination "with one stroke of the pen." But that stroke keeps being postponed, although the order has been on the President's desk for months. From his rather embarrassed comments this week, it seems that the order will not be issued until Congress has adjourned ; the belief is that this delay will make it easier for the southern Democrats to vote for the Department of Urban Affairs and for other Bills of even greater importance, such as that on trade legislation.



Surprise from the Treasury

NEW YORK

THE Treasury's influence over interest rates has just been demonstrated convincingly in New York's money market, where a minor borrowing operation has had major repercussions. In making what amounted to its last net borrowing of cash for the fiscal year ending next June, the Treasury decided on a two-stage programme: first it sold $2 billion in one-year bills at auction, which gave it $500 million in cash after paying off $1.5 billion to holders of a maturing issue ; secondly, the debt managers announced that they would reveal the terms of another financing to raise an additional $1 billion after this first operation was completed. With the central bank pursuing a policy of easy credit, the market assumed, quite correctly, that the Treasury was seeking to raise short-term interest rates, in order to prevent funds flowing abroad, and wanted to test conditions before deciding on the precise nature of the second stage. In the event, the auction itself did all the Treasury wanted, for the one-year bills sold at an average rate of 3.3 per cent, and the yield on the regular weekly auction of 91-day bills averaged 2.8 per cent, the highest rate since the onset of the recession in the spring of 1960 ; this gave yields in New York an advantage, on a hedged basis, over London.

Investors had bid up interest rates because they were certain that the Treasury would follow up the auction by tapping the short-term market again. But, having succeeded in their primary object, the debt managers evidently reasoned that it would be unwise to push up rates too fast ; this could have been misinterpreted as the beginning of a tight money policy and might have touched off a scramble for funds. So the Treasury pulled a surprise by reopening an outstanding issue of 4 per cent bonds maturing in 1969, offering to sell $1 billion at a slight discount to yield 4.04 per cent. This is well above the yield available on other issues of similar duration and was clearly designed to attract commercial banks. The issue was oversubscribed, but not by nearly as much as had been expected ; this reflects the general coolness of investors towards longer-term securities, however attractively they are priced. Moreover, bond dealers—and many of the big New York banks—felt that with its new offering the Treasury was taking advantage of a temporary situation, based partly on the market's anticipations, to achieve a minimal stretch out of the maturities of the public debt, and that this might hamper its ability to reconstruct that debt drastically, which is the long-range need.

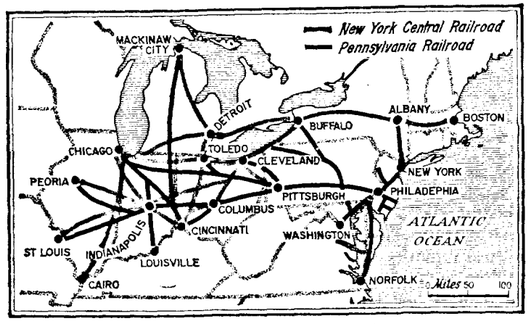
In spite of the disappointing result of this week's refinancing, the Treasury still maintains that it has freedom to manœuvre. Certainly the managers of the debt have shown themselves to be both flexible and adept in their efforts to influence rates and lengthen the average maturity of the debt. They will have a series of opportunities for doing so over the next few months, beginning in February, because a large volume of short-term obligations—part of last year's deficit financing programme to counter the recession—will be falling due. And, though the Treasury is no longer engaged in deficit financing, it is requesting Congress to raise the legal ceiling on the public debt, now fixed at $298 billion, and due to fall to $285 billion on July 1st, as a means of gaining even greater flexibility. The latest borrowing puts the total debt outstanding close to the ceiling ; the debt managers want more elbow room—a margin of at least $3 billion is what they like—to give them more freedom of choice and to allow them to use the psychological element of surprise again ; for the moment, at least, this is proving a weapon in its own right.

Public Credit—Private Gain

FROM A CORRESPONDENT IN NEW YORK

THE use of public credit for the benefit of private enterprise has had a particularly ill-starred history in the United States. During three successive periods—the eighteen-forties, the eighteen-seventies and the late nineteen-twenties—billions of dollars in state and local bonds, which had been floated to aid railway and property development, went into default. Despite this sorry record local government financing on behalf of industry is once again on the rise, in the form of industrial revenue bonds issued by communities to pay for manufacturing facilities which are then let to industrial corporations. The rent paid is the only security for the interest and principal. Last year some $88 million of these bonds were sold, compared with only $7.6 million as recently as 1957.

With total borrowing by states and local governments running at an annual rate of $8 billion, the portion going for industrial financing is not very impressive. Yet its rapid growth is viewed with alarm in many quarters. Northern industrial states resent the loss of industry to the southern communities which are doing most of the borrowing and a great many of the firms which underwrite municipal bonds fear that the historic exemption from federal taxation that is accorded to interest paid on state and local obligations may be jeopardised by this particular form of borrowing. Bills to eliminate tax exemption on industrial revenue bonds are pending in both houses of Congress and, though the Kennedy Administration has not yet decided to back them, its eagerness to plug loopholes in the tax laws may spur it to action. But it may be difficult to get enough votes in Congress to pass the measure if the northern states follow the South's example by financing industry in this way. Several states have recently amended their Constitutions to permit borrowing for this purpose and others are expected to do so soon.



Because the interest on their obligations is exempt from federal taxes municipalities can borrow much more cheaply than can corporations and when a big plant is being built the difference in interest costs may be substantial. The corporation renting the plant from the municipality pays no property taxes as it does not own the site. Finally, the rent may be deducted from the firm's taxable income as a business expense. For private industry this is an attractive proposition. But if past experience is any guide, a good many of the companies leasing municipal facilities will prove to be poor risks and the growing competition for industrial tenants may lead to concessions that will increase the prospects of default. However neither these dangers nor the argument that the system provides an unfair tax advantage for certain corporations seem to discourage communities which are seeking to win new industry, particularly if they have a lot of unemployment.

A majority of the underwriters are prepared to forgo the profits in this business if it endangers the principle of tax exemption. But enough underwriters are willing to work with local borrowers to ensure a rapid increase in these industrial revenue bonds and this, in turn, will make it hard for more scrupulous underwriters to stand aside. Last year a single issue exceeded the entire total of such bonds in 1959 ; it was for $25 million to enable the town of Cherokee, Alabama, to build a fertilizer plant for Armour & Company, the country's second largest meat-packer. This year underwriters expect another big increase ; the town of St Genevieve, in Missouri, which has only 5,000 inhabitants, has grandiose plans to issue $500 million worth of bonds to build a steel plant—if only it can find a tenant.

Rails Pair Off

AN old courtship which broke up three years ago was back on the rails last week with the announcement that the directors of the two biggest lines in the country—the Pennsylvania Railroad and the New York Central Railroad—have agreed to merge. With these two eligibles out of the marriage market, the way is clearer for some of the fourteen other mergers now before the Interstate Commerce Commission. This is because the New York Central, after it had called off talks with the Pennsylvania, was snubbed in all its efforts to find another partner. In its fear of being left out in the cold, it has been opposing the two other big mergers planned by eastern railways: that of the Chesapeake and Ohio with the Baltimore and Ohio and that of the Norfolk and Western with several smaller companies. Now this opposition seems certain to be withdrawn and most of the railways appear prepared to accept the emergence of three large systems in the north-east, the part of the country where the industry's woes are concentrated.

The new Penn-Central would be much the largest of these, with over 20,000 miles of lines running through the rich industrial heart of the country, over $5 billion in assets and annual operating revenues of $1.6 billion. As the map shows, there is scope for the elimination of duplicated lines and terminals ; preliminary studies suggest that the annual savings might exceed $100 million. In 1961—the worst year ever for the eastern railways—both probably lost money, the Central perhaps to the tune of almost $15 million. If the combination is finally brought about, control will rest with the Pennsylvania, financially the stronger of the two ; its shareholders will hold about 60 per cent of the shares of the new company. The ICC seems likely to take a favourable view of the merger in spite of the probable objections of the Department of Justice (which is opposing all the other fourteen) and, perhaps more important, those of the railway trade unions. The two lines employ over 120,000 men and as many as 25,000 may lose their jobs.

Like the railway industry itself, the government seems to have decided that the situation has deteriorated so far that stern measures are needed. The Administration has proposed controversial new "user" charges on two of the railways' competitors—the airlines and waterways. The ICC has repeated in its year-end report to Congress what it said last August (just after the New Haven railway finally collapsed into bankruptcy): that federal subsidies for suburban operations are necessary. In the country as a whole $485 million was lost carrying passengers in the year which ended last June (nearly $50 million of it by the Pennsylvania and the New York Central). Without help for the railways the cities which now enjoy suburban services may lose them just as cities which have never had them—such as Los Angeles—are building new ones.

Striking the Hours

UNLESS there has been an unexpected last minute settlement of the electrical workers' strike building has practically stopped by now in New York City. The construction companies claim that local laws forbid them to work without electricians to maintain proper lighting conditions, but there is little doubt that they have closed down in the hope that the other building trade unions will bring pressure to bear on the electricians. Under their existing contract they work a five-day week, six hours a day at $4.40 an hour with at least a seventh hour, and usually more, at $6.60 an hour. They are demanding a four-hour day with the same pay. The employers, refusing to negotiate on hours at all, contend that such a contract would double their electrical wage bill and would set off a round of similar demands from other unions in the industry. The companies point out that there is a shortage of electricians for installation and maintenance jobs and that the amount of work available is increasing all the time with the demand for air conditioning, electronic machines and so on in new buildings. To this the union replies that more and more electrical building components, such as switchboards, are being assembled in factories instead of on the site, that automatic equipment is reducing the man-hours needed for individual jobs and that in any case New York's building boom cannot last forever and where will the electricians be then?

This particular argument gives a very distorted view of what is nevertheless labour's main concern at the moment. When the President's Committee on Labour-Management Policy, composed of businessmen, trade unionists and representatives of the public interest, issued its first report last week on the impact of mechanisation on the demand for labour, the majority declared that for the sake of economic growth full employment should be achieved with a 40-hour week, and that a general reduction in hours of work should not be considered. But five of the labour members insisted that if unemployment did not fall substantially very soon there would have to be a general shortening of the work week.

In the steel industry, where this year's most important collective bargaining will take place, Mr McDonald, the president of the union, has called for a cut in the work week to 32 hours at the same basic pay. But it is suggested that Mr McDonald has done this mainly to dramatise his demand for greater security for his steel workers and that some other means of satisfying him can be found without an inflationary increase in labour costs. The Administration is exerting all its influence to bring about a settlement and to bring it about quickly, in order to keep manufacturers from building up extra stocks of steel in anticipation of a strike in the summer. Such a build-up has begun already and could bring a collapse in the demand for steel, once the danger of a strike was over and consumers began to use up their accumulated stocks ; this would disrupt the national economy almost as severely as a strike itself would do.

Correction:—In the article on congressional lobbying on page 127 of *The Economist* of January 13th, the figure given in the table for spending by the American Medical Association was correct but the figure in the text should have read $147 thousand *not* million.

THE WORLD OVERSEAS

Whose Horse?

FROM OUR WASHINGTON CORRESPONDENT

THE British and American officials who met in Washington last week to discuss the peace-keeping machinery of the United Nations held views that rather tended to cancel out—which may well be what the United States Administration expected to happen. Mr Stevenson and his associates on the American UN team, possibly with an eye to crises in places like New Guinea, would like to give the United Nations more operational coherence, as well as to dig it out of its current financial hole. The British team, possibly with an eye on places like Rhodesia, were opposed to investing an unruly international body with increased authority, at any rate until Britain's own colonial troubles are all happily over.

The two teams met just as the ever-shifting scenery in the Congo was being shifted yet again, with the apparent eclipse of Mr Gizenga, whom the American press delights to call the moody marxist rebel. The meetings, after having been gloomily interpreted as an admission of an Anglo-American chasm, terminated in a glow of well-lunched well-being and an inconclusive haze of "common aims," one of which, according to the State Department, was a determination to be "very realistic" about the United Nations. British critics of the international body can applaud the desire that was expressed to have it run economically and by a secretariat that is "truly international," meaning men in whose bosoms the flame of anti-colonialism does not burn so brightly as to consume all other considerations. Mr Adlai Stevenson and Mr Harlan Cleveland, his opposite number at the State Department, can if they wish stress that the role of the United Nations is to be an effective operational peace agency and that what it now needs is not extractions but more teeth. And the American Administration can present a suspicious Congress with whichever thesis seems most opportune at any particular moment.

Neither Congress nor the British Government wants to get out on an anti-United Nations limb. There will probably be an uproar in Congress about the President's intention to spend about four shillings for each American on buying United Nations bonds. But opponents of the plan for buying bonds affirm that they have no wish to have the United Nations die of malnutrition and that they are willing that the United States should continue to pay even a disproportionate share of the bills, as a direct contribution. Similarly, though the British Government had solicited the meeting in order to wave the United Nations Charter and express to the United States its anxiety over the allegedly irresponsible antics of the General Assembly, it did make it clear that Britain regards the United Nations, with all its faults, as indispensable. The Americans for their part agreed to join Britain in frowning on such lighthearted United Nations extravagance as members voting for big increases in the spending of specialised agencies to which they themselves do not contribute. The Americans also agreed not to support extravagant resolutions on colonialism.

Detailed consideration of a tentatively drawn American plan to furnish the Secretary-General with a sort of shifting cabinet composed of representatives of member nations supplying the money and the men for a United Nations operation, was put off to a future occasion. There are grave doubts, in American as well as British minds, whether such a plan would get past either Russia or the Afro-Asians—or whether, if it did, it would not simply enable them to get tough with the West. Some quiet Americans who support the plan do so because they believe that it can serve the West's purposes and that, if an attempt were made to use it against the West, the United States could stop it by getting tough with the international organisation. The same quiet Americans, incidentally, oppose United Nations bonds, and argue that it is better not to call on the Russians or anyone else to stump up, but that the United States should go on paying almost half the cost of the United Nations by itself, because who pays the piper can usually call the tune. (Such quiet Americans are not to be confused with ugly Americans, who are dead set against the bonds but for the different reason that they now see no way for the West to control the unruly General Assembly, and therefore think that the sooner the United Nations is abandoned as bankrupt, the better.)

The British official viewpoint seems to differ from that of both quiet and ugly Americans, by thinking that the West will always bow, however grudgingly, to a two-thirds majority vote in the Assembly, and that it is this that renders the American plan thoroughly dangerous (especially if one also happens to believe that while the General Assembly is willing and eager to make things hot for the West, never will it challenge Russia). Fearful Britons suspect the sort of cynicism that seems to be shared by both quiet and ugly Americans, holding that, at least in the western hemisphere, this cynicism may result in such un-British attitudes as wanting Guiana not to have its independence because Doctor Jagan is a left-wing socialist, but aspiring (it is said) to give British Honduras to Guatemala as a reward for Guatemalan assistance over Cuba.

AMERICANS who support the United Nations strongly deny the allegation that the General Assembly is racing headlong in an anti-western direction with the bit between its teeth. They feel that, as a late South African poet might have said, "the extreme anti-colonialists may have the bit, but it's the West that has the bloody horse." When they are told that the British Government fears that the General Assembly by pressing too hard on the colonial countries may produce "more Congos," those Americans tend to reply that the best antidote to that is for Britain and the United States to put pressure on countries that still have colonies, so that they get rid of them as fast as Britain is doing.

Provided things continue to go well in the Congo, and provided also that the General Assembly resists the temptation to behave as foolishly as its detractors say it will, Congress, after what promises to be a thorough exploration of the entire American relationship with the United Nations, seems likely to support the bond purchase plan. The American Administration hopes that the exigencies of British political life will enable Mr Macmillan's cabinet to make a similar decision. Congress is expected to give its assent despite very considerable dissatisfaction with what seems, to many Americans, to be wilfully contradictory United Nations attitudes towards Goa and Angola.

It is, however, unfortunate that much American thinking about the United Nations should be moulded by false reading of events in Africa. Mr Tshombe has been cast by some in the role of a staunch anti-communist. Others tend to look on Mr Adoula as a black George Washington, and both groups persist in believing that the Congo's "marxists" have a plan. The brutal facts about the former Belgian Congo—that terror and violence continue almost everywhere to stalk its darkened and foodless cities, and that the followers of Mr Tshombe, Mr Adoula and Mr Gizenga are young men adrift, their immature minds full of rubbish imbibed from western films—tend to get lost amid the ideological myths. Yet this is the sort of world the United Nations may increasingly have to deal with.

Canada and Nuclear Arms

FROM OUR OTTAWA CORRESPONDENT

SOME time before April 1st the Canadian cabinet will have to answer some embarrassing questions from U Thant, the acting Secretary-General of the United Nations, about its readiness to undertake not to manufacture or acquire or "receive" nuclear weapons. If the answer exacerbates old disagreements within the cabinet, it will be difficult to feel sorry for the ministers who have helped to bring this on themselves. The Secretary-General's question, which has not yet been sent out, arises out of Sweden's General Assembly resolution which was nicknamed "the non-nuclear club." It was supported by Canada, Norway, Denmark and Iceland. All the other Nato countries voted against it, though it is believed here that both Britain and the American delegate at the UN, Mr Adlai Stevenson, would have preferred to abstain. Mr Stevenson's negative vote was cast on instructions from Washington, and the British Government chose to follow suit. Since the resolution was carried easily against the major Nato powers, U Thant has to ask all UN members who do not now have nuclear weapons what conditions they would require before giving an undertaking never to accept them.

For Canada, as for most other countries, there is no difficulty about promising not to manufacture or acquire—in the sense of buying—them. The difficult part is the promise not to "receive" them on its territory on behalf of or in co-operation with another power. Canada has acquired American interceptors and Bomarc missiles, which require nuclear warheads, as part of the joint North American air defence plan. The military establishment, staunchly represented in the cabinet by its minister, the former Lieut.-Col. Douglas Harkness, argues with perfect logic that since Canada is already committed to joint air defence it is equally committed to the most effective means of protecting the American nuclear deterrent. The United States Administration, right down the line from the President through the State Department to the most fire-eating generals in the Pentagon, is unanimous in maintaining that this involves the use of nuclear warheads on the weapons stationed in Canada.

They would probably be installed already but for the opposition of one obstinate and sincere cabinet minister who happens to be Mr Diefenbaker's most trusted lieutenant and deputy. Mr Howard Green is a 66-year-old Vancouver lawyer of abstemious habits and unchallengeable rectitude who fought in the first world war and never went overseas again until Mr Diefenbaker made him minister of external affairs in June, 1959. His own temperament, which regards nuclear war with a typically Protestant moral horror, and his prejudices, which are ineradicably pro-British and suspicious of Americans, combine happily with the advice of the professional diplomats under him in rejecting the military thesis. In his determined opposition to Canadian use of nuclear weapons, Mr Green is very close to his distinguished predecessor, Mr Lester Pearson, who is now leader of the opposition, and like Mr Pearson he is unable to go nearly as far in the direction of neutrality as Mr Douglas, the leader of the New Democratic party. But he is convinced that each small addition to the nuclear club must make it more difficult not only to achieve disarmament, but even to restrain the competitive development of ever more frightful and unnecessary weapons of mass destruction.

This harmless generality covers a very specific objection to the giving of nuclear weapons to west Germany which Mr Green has never felt it proper to state publicly. One of the strongest reasons for Canadian hanging back is the fear of smoothing the way for an extension of German control of nuclear weapons. Theoretical plans for Nato control inspire no confidence here. It is doubted whether west Germany could be given nuclear weapons on any terms which would not compel the Soviet Union to give them to east Germany too. To do that, it is argued, would be for the West to take the responsibility of dividing the world into two armed camps. The United States assumes that this has already happened: the Canadian defence experts agree. But the Canadian diplomats under Mr Green's direction are determined to exploit every last chance remaining to the western world to prevent this from happening.

Mr Green could not have held out so long against the combined pressure of the Canadian military and the American diplomats unless he had been able to convince his colleagues that there was still a lingering hope for disarmament talks and for UN efforts to keep the peace. In both spheres he claims fresh hopes for 1962. As a result of the recent efforts at the UN, eight so-called "neutrals" will be present when the disarmament talks resume in mid-March. The delegates from the old committee of ten, split into representatives of Nato on the one hand and the Warsaw pact on the other, will for the first time feel the influence of outsiders who may challenge their intractability. However the eight newcomers appear in London, Paris, Washington, Moscow or Warsaw, they are regarded here as "a good bunch." (They are Mexico, Brazil, India, Burma, Egypt, Sweden, Nigeria and Ethiopia.) This revealing judgment helps to explain why Canada does not share the British fear about "the United Nations being swamped by inexperienced and irresponsible men from Asia and Africa." Canadian foreign policy experts are impressed by the calibre of the Afro-Asian representatives. They believe the shift of power towards these new states will make the UN not less but more workable, and they are diligently cultivating contacts with them.

MR GREEN'S tenacious hopes are threatened at home less by the military opposition than by Mr Diefenbaker's inclination towards ringing denunciations of Soviet wickedness. He has had favourable reactions to several speeches which Senator Goldwater might have been proud to make. The applause came primarily but not exclusively from ethnic groups with roots in eastern Europe. Mr Diefenbaker is very sensitive to the ethnic vote. But he is also acute enough to recognise the widespread public support for Mr Green's opposition to nuclear arms and persistent efforts to keep open channels of negotiation between East and West.

Adding up these conflicting forces with the probability of a general election within a year, it does not seem unduly rash to predict the Canadian answer to U Thant's questions about nuclear arms. Canada will readily agree not to manufacture or acquire nuclear arms. It will promise not to "receive" them from the United States unless a marked deterioration in international relations brings the chance of nuclear war much nearer. Such a declaration will enable Mr Diefenbaker to go on enjoying the best of both worlds until after his election.

This Desirable Residence...

FROM OUR ATHENS CORRESPONDENT

ATHENIAN wits have termed Albania "a country to let." "The last tenants," they say, "left, banging the door and cursing the landlord as an old-fashioned fossil." An option is still open to the Far East. But the rental of this European *pied-à-terre* might be too costly for this exotic client whose finances are known to be precarious. So some discreet bidding has begun among the neighbours.

Albania's ostracism from Europe's communist camp has indeed set off some curious reactions. Greece, which for years has been goaded in vain by the Russians to drop its grudges against Albania, today finds itself hoping for the survival of the Hoxha regime, as a guarantee of the Balkan *status quo* and an aid to keeping alive the long-standing Greek claim to Southern Albania. The Greek government has decided to revise its thoroughly negative attitude towards its north-western neighbour, and has informed both Jugoslavia and Italy—who also share a traditional interest in this minuscule ex-satellite—of Greece's direct concern in Albania's fate; it has given a clear implicit warning that any unilateral action against the isolated stalinists of the Adriatic coast would be actively opposed by Greece.

The new Greek attitude was prompted by the belief that any internal or external change of regime in Albania might prejudice Greek interests. Besides ensuring national security the Greek government is trying, first, to preserve Greece's rights over the fate of the sizeable Greek community in Albania and the hope of eventual annexation of some 5,000 square kilometres of southern Albania known as Northern Epirus, where before the days of fascism and communism the majority of the population was Greek. Second, it wants to preclude the return of Italy's prewar influence over Albania, a prospect which both Athens and Belgrade find thoroughly unpalatable. The Greeks fear that in seeking a way out of their present isolation the Albanians might take initiatives that would disrupt the *status quo* in the Balkans. The Italians have already increased their financial contacts with Tirana, while the Jugoslavs are strongly suspected here of scheming to bring about the dissolution of the present regime and the re-establishment of the old ideological relationship between Belgrade and Tirana.

These suspicious trains of thought have induced the Greek government to pursue a course that might encourage a direct Albanian approach to resume diplomatic relations, which were broken off in 1940 when Albania served Mussolini as a springboard for his attack on Greece. The new Greek attitude involves the tacit abandonment of the Greek demand that what is now a theoretical state of war with Albania should be terminated by means of a peace treaty. Athens has realised that its aloofness has deprived it of a diplomatic mission in Tirana which, if it did nothing else, would counterbalance the diplomatic presence there of the Italians, the Jugoslavs and, to a lesser degree, the Turks.

Return of the hostages

Greece's territorial claim is, of course, the chief obstacle to a resumption of neighbourly contacts between Greece and Albania. Feeling their isolation from Moscow's solar system, the Albanians have been using the Northern Epirus question *ad nauseam* to whip up local nationalism. The Greek government is aware of this and has spread the word that it would be willing to "set the issue aside" for the sake of a rapprochement. This would not be so hard, Greece having repeatedly affirmed that it would await an international settlement of this issue. The Northern Epirus question has in fact been pending for seventeen years on the agenda of the big four foreign ministers, next on the list after a German peace treaty.

The new climate in the Balkans was briefly brightened by an unexpected display of Albanian goodwill at the recent repatriation of some Greek hostages. The Greeks have welcomed the Albanian offer to repatriate all the Greek hostages taken to Albania by the fleeing Greek communist guerrillas. Preliminary negotiations to put the agreement into practice are being carried on by the Greek and Albanian delegations at the United Nations. The Greek government also used this channel to inform Tirana that the repatriation gesture was welcomed as a sign of goodwill. But any further step will have to be made by the Albanians. The Greeks are still equally shy of any initiative that might carry with it the risk of a snub, and of any that might give umbrage to the Soviet Union or to Jugoslavia.

Germany's Radio War

FROM OUR BONN CORRESPONDENT

WEST GERMANY'S first "all-German" broadcasting station, the Deutschlandfunk, has been in action since the beginning of the year. A pity that the subject is served so readily by a predicate suggestive of combat—"And how superficially," they would promptly add in Cologne. Yet for all that Dr Starke, the director of the new station, may avow to the contrary, west Germany's Deutschlandfunk has come on the air primarily to do battle with east Germany's Deutschlandsender. The wishful thinking of its identification signal—a bar from the old German song *Du Land voll Lieb und Leben* ("Thou land full of love and life")—is none the less engaging.

The Allied Control Council ruling in 1945 that broadcasting should be organised regionally was disregarded in the Soviet zone from scratch. The Communists' tentative arrangements for central inspiration have since developed into thorough control by the state broadcasting committee. Its thirteen members, all Communists, direct with characteristic singleness of mind the output of the German Democratic Radio's 3,000 or so workers, of whom some 300 are political advisers and commentators. The committee's offices are in the east Berlin suburb of Oberschöneweide; and the editorial staffs of all the east German radio stations, including the Deutschlandsender, work in the same building. Since it is the Deutschlandsender's special mission to speak to the Germans in the west, its broadcasts are vigilantly supervised by the press and agitation section of the western department of the Communist party's central committee. With obvious results. Transmitting on long, medium, short and ultra-short waves, the Deutschlandsender can be heard pretty well everywhere in west

Germany—and often in Scandinavia, Poland and Czechoslovakia—drubbing the "fascists" of Bonn and canvassing sympathy for the Communist party's blueprint for Germany's salvation.

The Deutschlandsender's malevolent chronicling of goings-on in the federal republic and its call to west Germans, particularly industrial workers, to hamstring and eventually depose their government, have provoked Bonn to retaliate—in its leisurely way. After months of dispute about competence, the Bundestag approved a law on November 29, 1960, setting up the Deutschlandfunk as a public corporation charged with organising broadcasts for Germany—"the whole of Germany"—and Europe. These broadcasts, it is laid down in the preamble, "should communicate a thoroughly comprehensive picture of Germany."

It has taken more than a year to get the Deutschlandfunk sparking; and, for technical reasons, the all-German beacon fire must burn low for the time being. Since January 1st, transmissions have been running daily from 4 p.m. till 1 a.m. The long-wave transmitter (1,986 metres) is situated at Hamburg, the medium wave (195 metres) at Mainflingen. It is hoped that by mid-year transmissions will begin at 5 a.m. daily and that by the year's end—the 50-kilowatt medium-wave transmitter having been strengthened by then to 400 kilowatts—the Deutschlandfunk will be audible not only throughout Germany but also in parts of Scandinavia, Poland and the former Habsburg territories where German is still widely understood and where the east German station at present harangues uncontested.

It was intended originally that the Deutschlandfunk should operate from west Berlin. But in deference to communist objections to the purposes to which Berlin is sometimes put by their opponents, Deutschlandfunk's administrative and editorial offices, as well as its studios, have been set up on the southern outskirts of Cologne—in a curious white elephant of a house built to the wishes of a local tobacco magnate with a liking for ostentation. Here the eloquent director-general, Dr H. F. G. Starke, is to be found these days from early until late, absorbed in planning a more ambitious future. As far as programmes are concerned, he is responsible to a broadcasting council composed of 22 persons representing the parliamentary parties, the employers, the trade unions and the confessions (Catholic, Protestant and Jewish). The council, which is statutorily obliged to assemble at least once a quarter, is meeting monthly during this initial phase, usually, by way of gesture, in Berlin.

DR STARKE says he is being given a very free hand—even when it comes to spending. He estimates that, once in full swing, the Deutschlandfunk will require an annual income of DM 24 million, just over twenty per cent of which will go to pay its 300 employees (at present only 90). Negotiations for raising the cash are now afoot between the federal and the *Land* authorities. No serious hitch is expected. For the cause is considered good; and the broadcasting companies of the *Länder* between them rake in DM 228 million annually from sound radio licences alone.

Dr Starke was born 46 years ago in what he and the Deutschlandfunk punctiliously call "central Germany," though most foreigners call it "east Germany," and the Deutschlandsender calls it the "German Democratic Republic." He went to school at Zittau, and to university at Leipzig. Before the war he was a member of the *Deutsche Allgemeine Zeitung* in Berlin. So he has come from thirteen years' work with the North German Radio (Hamburg) to his new job at Cologne with useful first-hand knowledge of the part of Germany that is his principal target. His broad plan is to give listeners plenty of music along with brief news bulletins every hour concerning activities of all kinds in both parts of Germany and, two or three times a day, some comment. There is, he says, to be no abusive tit-for-tat in reply to the Deutschlandsender's provocations.

Nobly conceived. Yet one wonders how long everybody will be able to stand the strain when even Dr Starke himself, in his inaugural address on January 1st, slipped into speaking of "the hideous Medusa mask of the Ulbricht regime." But this was not one of Dr Starke's most tactful days. At the end of his address he remarked, throwing syntax to the waves: "You will certainly be able to hear us in central Germany and one day also beyond the Oder and Neisse, where still more than a million Germans are waiting to hear a message addressed to them from the free part of Germany; just as the Deutschlandfunk will not forget the three million refugees in the Soviet zone of occupation who are not allowed even to think about their old homeland in the German east." The German east. What a gift to the Deutschlandsender—and some others!

•

Australian Subtlety

FROM OUR CORRESPONDENT IN AUSTRALIA

IT is hard luck on Mr Menzies's precarious government that an electorate which normally thinks of nothing but its own standard of living should suddenly have become concerned about West New Guinea. The great difficulty here is that the policy is too subtle for the average man to understand. Even if there had been a sustained effort to expound it over the last three years, it would still be difficult to grasp. To explain it now that the crisis seems to be upon us is impossible.

Public attitudes tend to be black or white, for or against, good or bad. But Australia's interest in West New Guinea does not lend itself to this treatment, since it is not clear-cut. On the Dutch side is the fact that the Netherlands has never surrendered sovereignty, which Australia, as a supporter of international law, must therefore respect. The Netherlands moreover, like Australia, is dedicated to leading the Papuans towards self-government, and it is agreeable to have a peaceful, stable and co-operative neighbour as opposed to one who is politically unpredictable. On the side of placating Indonesia is the fact that it is Australia's neighbour in perpetuity, whereas the Dutch could hardly be there more than another decade even if they were left to take their own time. Australia, moreover, is trying to get on well not only with Indonesia but also with Asia generally, and to support the old colonial powers is not the way to be loved. Another, newer consideration is that although it would be sad for the Papuans to be deprived of rapid advancement under Dutch tutelage, there would at least be no more embarrassing comparisons with the more solid but slower progress towards self-determination in the eastern half of the island. From the balancing of these pros and cons there has emerged an Australian policy that is, perhaps, best summed up by the brilliant cartoonist of the *Sydney Morning Herald*, Mr Molnar; he showed Mr Menzies deep in a club chair telling his new minister for external affairs, Sir Garfield Barwick, "Our policy is to wait and see, but firmly, I repeat, firmly."

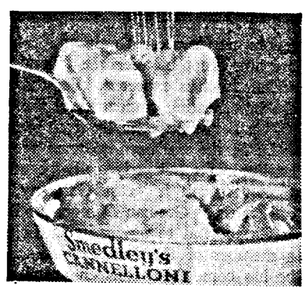
To be a little more specific, the policy extending back over the last four years or so has been to extract from the Indonesians repeated public assurances that they would not use force to gain West New Guinea; to support self-determination for native peoples in both halves of the island; to recognise any transfer of sovereignty agreed "without duress" between Holland and Indonesia—without fussing too much about the aforesaid self-determination; and just lately to urge negotiation on the parties—without fussing too much about the aforesaid freedom from duress. Even now the Australian government is not apparently convinced that an attack is imminent or that Dr Sukarno is not still attempting to get the place by threats rather than force.

The delicate position adopted by the government is a gift to the opposition. Several charges have been made: cynical dis-

FAY BATEMAN SAYS:

Now the hand that rocks the cradle holds a can!

Even the baby takes cans for granted



Time was when a dutiful mother would take out the mincer, the grater and the sieve. Sterilise them all – at length. And spend an hour or more preparing a single tasty spoonful for the baby's dinner. But these days, somehow, there just doesn't seem to be time for such finesse. So what does your up-to-date mother do?

Straight from the can

Well, she opens a can. Knowing that the contents are beautifully, hygienically and tastily nutritional. She heats the food in the can, feeds the baby straight from the can – and the baby flourishes.

All kinds of cans

The mothers flourish, too. Your modern mother uses cans for this and cans for that. Cans to help her reputation as a cook (the most exotic foods come ready prepared in cans). Cans to help out at parties. And aerosols to make light of her housework – these days they'll even clean the wallpaper for her. Cans save her time – and time is the most valuable thing she has. (If you don't count the baby.)

WHAT NEXT? Cannelloni, that superb and spicy Italian dish — made with pasta, mince, cheese and tomatoes—is now on sale in most grocers. In cans. If you haven't already discovered the joys of Continental food, Cannelloni is as good an introduction as any. It's just plain wonderful!

regard for the Papuans' right to self-determination—especially since Sir Garfield Barwick remarked too blandly that he saw no threat to Australia's territorial interests ; indifference to Australia's need for defence in depth through a friendly New Guinea ; weakness in diplomacy and weakness in defence, in spite of an expenditure of £A200 million a year. More will be heard about this question of defence. The prime minister's remark that no responsible Australian would suggest that his country should go to war without its major allies has shocked the *Sydney Morning Herald,* not only because of the inaction that it seemed to promise, but also because of the underlying assumption that Australia could not take military action on its own or defend itself against a substantial attack. Yet there is nothing new about the basis of Australian defence policy. It has been openly declared in ministerial statements that the most probable threat to Australia is that of a limited war in which it would act with its allies in fulfilment of its treaty obligations, and that in the ultimate, and at present unforeseeable, eventuality of invasion it would be saved by automatic American protection under the Anzus treaty. It is assumed that Australia is justified in spending a lower proportion of the national income on defence than its major allies because it is engaged in other tasks that have a defence significance—such as building up its population and industry. The southward creep of communism in spite of Seato, as well as the New Guinea issue, will make many people feel that some revision of these assumptions is now due.

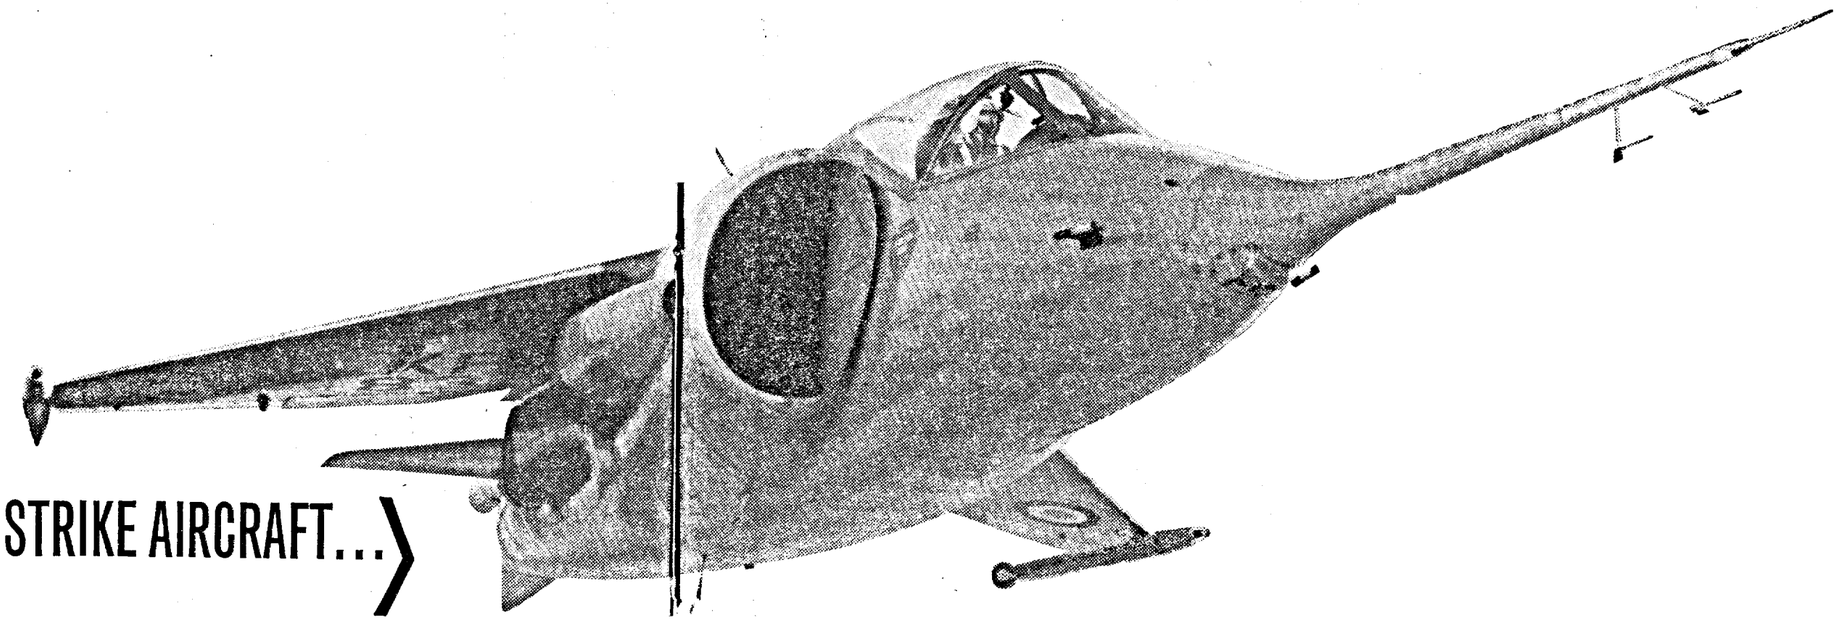
Russia's Green Pastures

EAST-WEST tension and inner communist controversy alike tend to find Mr Khrushchev stumping the vast distances of the Soviet Union, from Siberia to the Ukraine and now, on his latest trip, to Byelorussia, lecturing the peasants on the qualities of maize, peas and fodder beans. It is not really surprising that the Soviet leader, who in any case has a liking for talk (and earthy talk at that), should find so much to say about Russia's land problems. The lag of agriculture behind industry has been the major distortion of the Soviet economy, and Mr Khrushchev has repeatedly promised to eliminate it. It is no secret that members of the "anti-party group" have criticised as not worth the investment his devotion to the opening up of the virgin lands of the east. He can certainly claim some achievements. Despite the irregularity of crops in the drought-affected areas of Kazakhstan and Siberia, grain production in the newly reclaimed lands has risen, on an average, by about 30 million tons, and deliveries to the state by about 20 million tons. The new eastern regions have displaced the Ukraine as Russia's granary. The creation of state farms on the reclaimed land has helped to increase the share of the state in agricultural production. State farms now supply more than a quarter of the meat and eggs, a third of the milk and more than two-fifths of the grain purchased by the state. Mr Khrushchev can argue that he has strengthened his hand when he has to deal with the collective farmers. But the question remains whether the same investment would not have brought better yields if it had been applied in the traditional agricultural areas. The question is the more awkward since it coincides with a shift in policy towards more intensive farming.

Thousands of agricultural experts—from collective farm chairmen to such high dignitaries as Comrades Byelayev and Kirichenko —have paid with their jobs for the vagaries of Soviet farming. The latest victim is a posthumous one, Vassily Robertovich Vilyams (or Williams), a Russian of Welsh extraction, whose theories on grass crop rotation made him the greatest authority on Soviet farming before the war. Now his followers, branded as "priests of the ley system," are held responsible for the wastage of land resources. Speaking at the Moscow agricultural conference on December 14th, Mr Khrushchev claimed that out of a total ploughed area of 220 million hectares, 36 million hectares were under grass, perennial and annual, and 17 million were fallow. Adding to this 11 million hectares under oats, Mr Khrushchev reached a total figure of 64 million hectares, or as much as the area under wheat, that were being "wastefully" used. Since then the Soviet leader has been preaching, with his passion for detail, that lucerne and clover should be replaced by maize and sugar beet, where possible, or by peas and fodder beans.

As usual in these controversies, only one side gets a hearing. The "ley priests" have been branded as unworthy of the name of scientist. They have been told to mend their ways or leave their jobs. Their counter-arguments can only be deduced from Mr Khrushchev's accusations. Some Ukrainian chairmen of collective farms appear to have replied that they had merely been carrying out orders, thus implying that the man to blame was the one responsible for policy. The scientists seem to have taken another line of defence. To switch from grass crop rotation to a more productive system, they argued, without ruining the land, it is necessary to devote more resources to agriculture and, particularly, to step up the supply of fertilisers. In other words, if Mr Khrushchev's aim is more intensive farming, they have challenged him to provide the means. The Soviet leader's passionate rejection of criticism may well be due to the fact that similar arguments were used during the controversy over the virgin lands.

The structure of Soviet agriculture has altered greatly since the war. The first revolutionary change took place in 1950-51, when some 250,000 collective farms were amalgamated into less than 100,000 larger units. The process has gone on. In January, 1961, there were only 45,000 *kolkhozy ;* by now there must be fewer still. This concentration has several purposes. It is hoped to obtain a better control of the countryside as well as to achieve a fuller use of the available managers and equipment. It is also hoped that in the process the least efficient farms will be eliminated. To bring the average farms up to the level of the model ones—the so-called "beacons"—is now the dominant slogan. But while the collective farms become fewer, the state farms become more numerous ; there were 7,400 at the beginning of 1961. Some Soviet economists have advocated a rapid change-over to the state farm system throughout the countryside. But Mr Khrushchev, conscious of peasant resistance, wants the process to be gradual and to be a result of rising production. The immediate objective is "to catch up with the United States"—quite an ambitious goal, to judge even by the Soviet statistics in the accompanying table.



AGRICULTURAL PRODUCTION, 1960

	Total (Mn. tons)		Per head (Kilos)	
	USSR	USA	USSR	USA
Grain	133	194	622	1,080
Meat*	8·7	17·9	41	99
Milk	61·5	56·9	287	317
Butter	0·848	0·665	4	3·7
Eggs	26·4†	62·4†	124‡	347‡

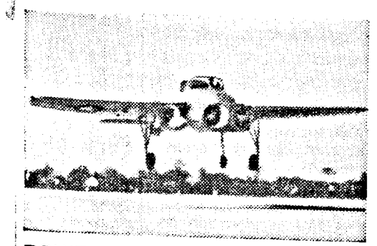
* Including poultry and offal, slaughter weight. † billion units. ‡ Units.

But the real gap is seen only when this table is set against the manpower figures. Employment in agriculture in the United States is put at 5.7 million, or less than 8 per cent of the total labour force. The 1959 Soviet census revealed that 31.7 million people, or nearly a third of the Soviet labour force, were still working in collective farms. To this had to be added 6.6 million people employed in state farms and other agricultural institutions. The comparison of productivity may be somewhat unfair. The younger and better educated people in the Soviet countryside have been migrating rapidly to the towns. There are also historical and other reasons for the lag. The fact, however, remains that the Soviet Union has not yet solved its peasant problem. This may explain Mr Khrushchev's concern for the general state of Soviet farming.

BS

THE WORLD'S FIRST VTOL STRIKE AIRCRAFT...

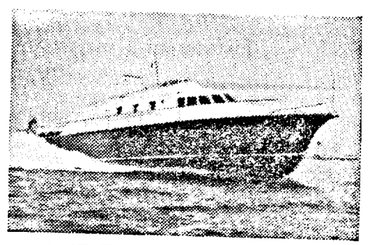
...AND BRISTOL SIDDELEY SUPPLY THE POWER



The Hawker P 1127 is a VTOL strike/reconnaissance aircraft designed for operational service. Its power for both lift and thrust is obtained from one engine—the Bristol Siddeley Pegasus turbofan. Not only is the aircraft revolutionary in its landing and take-off capabilities, but it has a range and speed which automatically place it in the front line of present-day tactical aircraft.

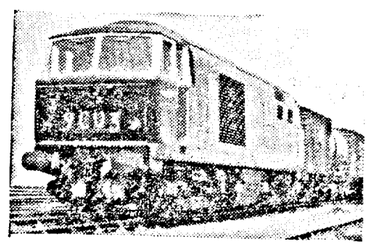
Simplicity is the keynote of the engine design—one engine for both lift and thrust, with installation, control and maintenance comparable with conventional aircraft.

The P 1127 has fully demonstrated the ease and certainty with which transitions from vertical to horizontal flight can be carried out. The versatility of the Pegasus lift/thrust engine has also enabled the aircraft to demonstrate how advantage can be taken of short air strips to take off with a substantial overload of fuel and weapons.



The Bristol Siddeley Pegasus is supported by the Mutual Weapons Development Programme for NATO.

BRISTOL SIDDELEY ENGINES LIMITED CENTRAL OFFICE: MERCURY HOUSE, 195 KNIGHTSBRIDGE, LONDON SW7
AERO-ENGINE DIVISION: PO BOX 3, FILTON, BRISTOL, ENGLAND. POWER DIVISION: PO BOX 17, COVENTRY, ENGLAND.



POWER FOR THIS

The Bristol Siddeley Viper turbojet powered the Bell X 14 research aircraft. The X 14 was the world's first jet-sustained VTOL aircraft to achieve transition from vertical to horizontal flight. The Viper family of engines ranges from 1,600 to 3,000-lb thrust and powers many different aircraft.

...AND THIS

Bristol Siddeley Proteus gas turbines power Mr Stavros Niarchos's 100-ft yacht, "Mercury," which has accommodation for 5 passengers and a crew of 11. Delivering 10,500 hp, the engines give "Mercury" a top speed of over 50 knots and a cruise range of 400 miles.

...AND THIS

Bristol Siddeley diesel engines power the 95 Hymek locomotives now entering service with British Railways. British Railways have ordered over 300 of these diesel engines and those already in service are averaging 14,000 miles a month over a variety of routes.

MAXIMUM PROTECTION...

for a man's family in the form of capital and income.

MINIMUM COST...

by combining two different contracts in one composite policy.

For as little as £2.8.0d. per month a man at age 30 can secure for his dependants a capital sum of £1,000 and, in addition, a maximum income benefit at the outset to the value of £9,000 payable in quarterly instalments amounting to £300 per annum. Full particulars of this Family Protection Scheme are available on request from

Battle for Courtaulds

TEN days of truce talks between ICI and Courtaulds have ended with the expected bang. Courtaulds still strenuously resists the proposal of a complete merger ; ICI rejects any of the compromise solutions Courtaulds put up, and has raised its offer to four ICI for every five Courtaulds, instead of three for four, improving the offer to preference shareholders as well. ICI's decision to raise the bid was taken after Courtaulds had rejected the first bid but before Courtaulds proposed the short truce. It was taken on the argument that the original offer was based on an estimate of profits substantially lower than Courtaulds, it has now become apparent, will earn in 1961-62, making possible the maintenance of the dividend at 2s. a share—a possibility that ICI does not appear to have thought likely in view of the cut in the interim payment, even though forward estimates were exchanged in the original negotiations. But, no matter how dubious the case for this higher price, it is the terms that matter. They will appeal more to Courtaulds' shareholders than to ICI's, and be difficult to resist, whatever support the Courtaulds directors bring for their contention that the revised offer "seriously undervalues the earning capacity of Courtaulds relative to that of ICI."

Money values will decide in the end ; and the ICI directors impute a value of about 44s. 9d. to Courtaulds, taking ICI after a fall of 1s. 6d. at 56s.; even on the fairest reckoning of the prospect, it is difficult to believe that Courtaulds could hope to sustain such a value as a separate entity. Both companies issued long statements on Wednesday to justify their own stand. But they speak from two different heights of Olympus. ICI's view of the friendly negotiations conducted with Courtaulds over some months—after occasional discussions, it suggests, over some years—was that they were "directed towards a complete merger of interest" and, Mr Chambers has said, the reconstruction of the board that would follow a merger. But Courtaulds, while saying that both companies aimed at eliminating duplication, shows that different methods were considered for achieving this aim:

> ICI felt that it was logical for all fibres to be under one general direction, while Courtaulds thought that it would be more practical and effective to tackle that part of the industry where there was overlapping of effort, namely the melt-spun fibre field. In consequence, amongst the many possibilities considered were : (a) merging the melt-spun fibres nylon and "Terylene" into one joint company; (b) merging the whole business. Courtaulds' representatives urged further examination of (a). ICI's representatives showed an increasing interest in examining (b).

Throughout the discussions, the outsider must feel, there seems to have been a lack of common ground between two sides set in their own ways and intent on their own ideas. After Mr Paul Chambers had announced his "final, final terms" of the three for four offer, it was only to be expected that ICI should reject a suggestion by Courtaulds that a study group should be set up to consider "all possible ways of strengthening the man-made fibres industry," and to report no earlier than the end of June this year. It was too late for further extended discussions about problems that had already been long discussed. But ICI did agree to consider two specific proposals put up by Courtaulds for discussion during the ten days' truce. These are defined in ICI's statement as either the "formation of a joint company to deal with all melt-spun fibres, ICI having the majority interest" or the "formation of a joint company to deal with all fibres, Courtaulds having the majority interest." The Courtaulds statement gives the proposals a less precise air, speaking of "the formation of a joint company or companies merging some or all of the two companies' fibre interests, the control of which would rest with Courtaulds or with ICI depending upon the range of products covered." A further proposal related to the sale of ICI of Courtaulds' half share in British Nylon Spinners—which ICI's statement did not mention. Both sides record that the discussions failed to produce any proposal acceptable to both parties—which seems a bland way of saying that ICI refused to accept any that Courtaulds put up.

WHAT years of discussion had failed to sort out, ten days of talk could not conceivably arrange. ICI and Courtaulds look at the man-made fibre industry from two fundamentally different standpoints. ICI is a producer of chemicals and is anxious to move forward into fibres to secure outlets for the materials that it produces from plants constructed at high capital cost. Courtaulds, by contrast, is a fibre manufacturer wanting to buy its basic raw materials in the cheapest market, though prepared, under "suitable contractual arrangements," to recognise the big capital investment that their production involves. This difference in approach colours the arguments on both sides, even in such specific matters as profits and prospects (though on these neither side is prepared to make precise forecasts until the formal documents are sent to shareholders). Courtaulds begins a long argument by admitting that "there are structural weaknesses in the industry which must be eliminated in one way or another" and ends by claiming that action taken to rationalise the production of acetate and viscose fibres and to introduce new fibres such as "Courtelle" and "Tricel" enable its directors to "foresee with confidence an increase in the profits of their fibre and textile business." The implication here, presumably, is that the structural weaknesses are mainly in melt-spun fibres, where ICI has the major interest—particularly in the

overlapping between nylon and "Terylene." Indeed, Courtaulds' directors refer specifically to the increasing degree of duplication of research and development effort and of expenditure on marketing in these fibres; by contrast they characterise their own "Courtelle" as "the most rapidly growing synthetic fibre in the world" and are almost as bullish about "Tricel." ICI, on the other hand, claims that its interests in the newer man-made fibres ("Terylene," half of British Nylon Spinners, plus capacity for producing the base materials for both and for some other fibres) already "far outweigh" those of Courtaulds; it puts its investment in man-made fibres and their base materials together at £100 million, which it says approaches Courtaulds' interests in all fibres, synthetic and rayon. It claims, perhaps surprisingly, that it is "better equipped than Courtaulds to discover and develop newer synthetic fibres"; and says that its total profits from the production of fibres and of the polymers from which the fibres are spun are already greater than Courtaulds' profits from all fibres, including rayon. These are large claims. But asset values depend on the date of the investments and on the figures at which they are carried in the books. Claims about the ability to develop products are easy to make but impossible to prove: ICI, as Courtaulds is not slow to point out, bought other peoples' research on nylon 66, "Terylene," "Orlon," and nylon 6; "Ardil" is not the happiest of memories. And if ICI's profits from polymers and fibres are so big, does this mean that fibre-spinners have done worse out of the bargain than the raw material producer?

These, the outsider can say, are *ex parte* statements made in the heat of struggle, where temperament and personalities can crowd the facts. But ICI's directors have been convinced that they should reject any proposal for a pooling of interests in which Courtaulds would hold the majority stake or for the compromise solution of a joint company limited to melt-spun fibres. Was this identical with the purchase of Courtaulds' half of BNS, giving ICI full responsibility for nylon and "Terylene" but no claim on the other newer fibres? Courtaulds object to a complete merger on the grounds that "over-centralised management could be a real danger"; that "the raw material supply would tend to dominate policies, the fibre making being regarded primarily as a tied market"; and that its own "commercial policies are more suited to the textile industry." Their argument seems to hint that the "structural weaknesses" lie primarily with nylon, "Terylene," and the surplus capacity for producing base materials for other synthetics. Clear of the melt-spun fibres, and able as a buyer to benefit from cheap base materials for acrylic fibres, with "the major difficulties overcome," Courtaulds argues that they could go it alone and earn higher profits.

Behind these statements there is a clash of industrial ideologies between Mr Chambers and ICI and Sir John Hanbury-Williams and Courtaulds. The ICI directors state their view quite bluntly:

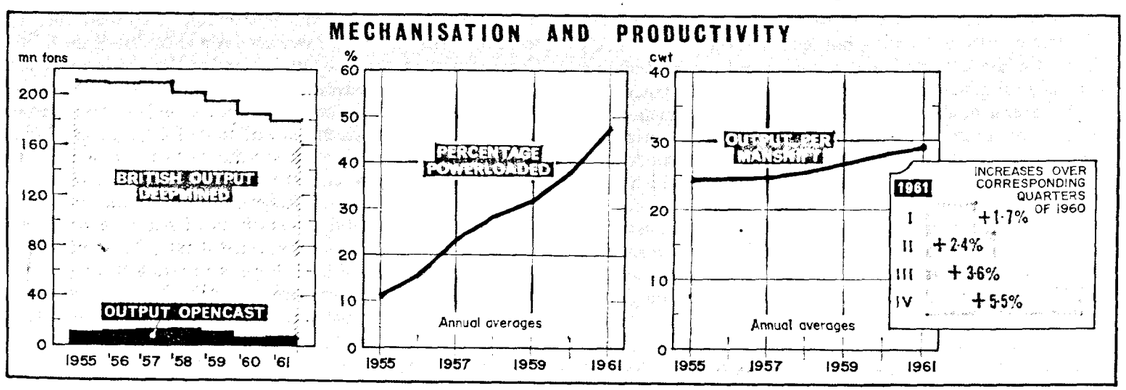
> . . . Not only should there be horizontal integration so that research and development on one fibre can be used to benefit the whole range but also there should be vertical integration between the manufacture of the polymer and the spinning of polymer into fibre because technical problems flow from one to the other. The Courtaulds point of view on the other hand is that in general the company spinning the fibre need not also be the producer of the polymer and may be in a better position if it buys polymer or other materials in the cheapest market and has not itself a major interest in polymer manufacture. This may be valid where the materials used are mainly natural in origin, as in the case of the older cellulosic fibres such as rayon. It is wholly unrealistic in relation to the new man-made fibres which are spun from complex chemical substances. In ICI's experience, its most efficient form of organisation for synthetic fibres, in particular for newly discovered fibres, and the one which produces the cheapest chemical materials and ultimately the cheapest fibre is one in which chemical production and spinning operations are in one ownership. The practice in the United States and in Continental Europe accords, in general, with the ICI point of view.

While agreeing with ICI that in a highly capitalised industry over-capacity cannot be of advantage to anyone (except possibly, some bystanding imp might query, to the consumer?), Courtaulds has its rejoinder ready, starched and pressed:

> To remain competitive constant regard has to be given to raw material prices. Courtaulds have always kept an open position, making their own raw materials only when market prices made it essential and then normally only making a part of their requirements sufficient to ensure competitive prices. ICI thinking has clearly been influenced by the trend towards integration of fibre making with the supply of the important chemical raw materials which has been apparent in the USA and Europe. This trend may prove to have been characteristic of a period in which chemical production was so profitable that the acquisition of captive outlets, even on expensive terms, might have been justified; but conditions are changing. As new and cheaper processes become more widely known, alternative sources of supply are becoming available. As one example, Courtaulds have lately obtained acrylonitrile, the chief raw material for "Courtelle," from alternative sources of supply at little more than half the price which they were paying to ICI.

Mr Chambers' view is that "in nine cases out of ten" the independent spinner would have had to pay "starvation prices" and would not be able to buy the base materials as cheaply as it could if it were linked with a polymer producer. The recent exercise of Courtaulds' freedom to buy base materials more cheaply from the United States for its new and faster growing fibres, in contrast to the captive market that nylon and "Terylene" present for ICI, may indeed have accelerated the merger negotiations.

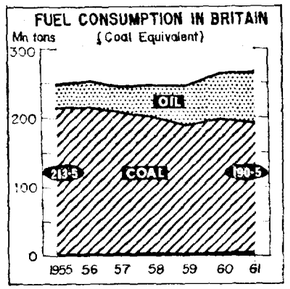
For those more inclined than Mr Chambers to distrust monopoly and to lean towards decentralised arm's length bargaining even in complex markets, Courtaulds at this point may seem to have the better of the argument. But it will not be liberal economists (even those who write weekly articles) who will decide the struggle; it will be Courtaulds' shareholders. Can they really believe that the Courtaulds directors, whose record of management in the past has been short of inspiring, will not merely do better than they have done in the past but better than ICI could do? Do they really believe that standing alone against the commercial opposition of ICI, to say nothing of that of the American and Continental giants in synthetic fibres, the Courtaulds directors can produce policies and profits that will hold the shares above their current market price of 42s. 4½d.? But what, at the same time, are ICI shareholders to think? Many of them were not happy about the manner in which this affair was first brought into the limelight. They cannot be happy with the prospect that ICI is bidding not simply for man-made fibres but also for a grab-bag of other interests as well, of which some appear to have been purchased at inflated prices. And they may fear the short-term consequences of a merger, in which the process of assimilation alone must for a time act as a drag on even the managerial talents ICI possesses and a brake on a rate of growth that certainly showed distinct signs of slowing down last year. ICI expects to earn higher profits this year than last and a steady increase in profits in the next two years; Courtaulds may say much the same thing. This, after all, will be battle; and after the seven or eight weeks are over, the combatants will not just shake hands and make it up. In an agreed merger the managers of ICI and Courtaulds could have worked together to sort out the problems; a merger won in battle may have to be built up from bitterness. If as seems likely, ICI wins, will ICI's shares be worth as much as they were before Mr Chambers threw the gauntlet down?



Rose Coloured Coal

An industry in which output comes from more than two thousand workplaces within several hundred production units, varying widely in efficiency, should obviously be able to increase its average productivity during any period when it is reducing production. But the increases in output per manshift that have now enabled Lord Robens to proclaim that British coalmining is now a high-productivity industry have not all come about simply by retreating from the most unrewarding corners of it. This strategic retreat is continuing to a greater extent than is now obvious: the process of concentrating output into faces that fulfil at least certain minimal criteria in terms of capacity is not as visible from outside the industry as was the closing of 163 mines between 1957 and 1961, but it could be of much greater, continuing importance. It is now beginning to have visible results in quickening the advance of labour productivity, which is the index to which the board is now anxious to draw—and pay—greater attention.

Concentration into the less inefficient pits and coalfaces is a matter of reorganisation that is accepted more easily at a time when output is being run down. The introduction of more and more mechanised equipment into the mines, which is one measurable positive development that the board can cite, might not necessarily be accepted as easily, particularly since powerloading equipment tends to upset the whole work cycle of mining, requiring reorganisation of jobs underground and some re-training of the miners to do them. But Lord Robens said this week that the board had never had less than full co-operation in the introduction of powerloading equipment; and whether or not this is also true of getting reasonable utilisation of all the equipment put in, he was able to record quite an impressive increase in the machines now working double-shift.



These machines, and the reorganisation of mining to make use of them, are now beginning to reap quite impressive rewards in terms of productivity. Last year deepmined output reached, at its peak, 30-31 hundredweight per manshift, which is the level that the board's last long-term investment plan reckoned might be reached by 1965. (It is only fair to note that it then expected to be mining 200-215 million tons a year at that level of productivity, not 190 million tons.) The advance mounted steadily throughout the year: in the first quarter productivity was up by 1.7 per cent compared with a year earlier, and in the last it was up by 5.5 per cent. Roughly speaking, labour productivity on the faces using powerloading is about twice as high as on those where coal is loaded (and in some cases cut) by hand. At the beginning of last year, the proportion of output powerloaded was about 40 per cent; by the end of the year it had reached 55 per cent. Once the "rich" ingredient in a mixture begins to predominate, its effect upon the average quality of the mixture builds up. This now seems to be happening with powerloading, backed up by the first results of concentration at the more productive coalfaces—and presumably, some results at least from the extensive reorganisation and major re-equipment of many mines on which several hundred million pounds have been spent in the last decade.

Some of Lord Robens's friends in Fleet Street have this week committed him rather more firmly to the hope of breaking even by the end of this year—which was his hope when he became chairman—than he might like. He wreathed this hope with a chain of provisos; the board might break even, he said, "if everything goes right for us." In 1961 it appears that the industry reduced its annual deficit to about £15 million—its operating profits, that is to say, fell that much short of covering its fixed interest on capital.

Reckoning upon some increase in pay for the miners—"the machines that have given us this extra productivity have to be remunerated, but there ought to be some reward for the people concerned too"—he is still confident of reducing the industry's current deficit pretty substantially.

Lord Robens said that the board has not finally agreed with the Ministry of Power and the Treasury on the "target" rate of return it ought to be able to earn over the present five-year term of trial for nationalised industries. His own aims for the industry, in non-quantitative terms, were to make coal "commercially viable"; to maintain the industry at its present size; to provide fair rewards for the manpower it needed; and to maintain "relative price stability" (which, sensibly enough, does not rule out selective increases for coal on which losses are made, like that mined in Scotland or sold to consumers). One economic aim of which he has spoken in recent years is that by the end of 1964 the board should be self-financing in capital investment. He said this week that this was not part of the task set him by the ministries; and indeed it ought not to be a very exacting requirement. The coal industry's period of peak investment in real terms must already be past. By the mid-sixties, with a capacity of 200 million tons a year (which ought to be qualitatively somewhat better than the capacity of 240 million tons a year for which it first designed its long-term reconstruction plan) the Coal Board might well expect to be able to keep its capacity stable out of proper provisions for depreciation.

Within the framework of his own argument, therefore, Lord Robens can call 1961 "a vintage year for coal"; he can record genuine progress towards the goals that he has proclaimed. The trouble is that this framework leaves out too many uncomfortable facts.

THE most important thing that happened to the coal industry in 1961 was that Mr Selwyn Lloyd put a sizeable excise duty on fuel oil. Other facts of note were that Mr Richard Wood continued to refuse private consumers licences to import coal from America, but approved the Gas Council's scheme for the importation of methane and for the building of a diagonal pipeline across England that could potentially supply several of the country's gas boards with much larger volumes of petroleum hydrocarbons than are originally planned. This may not denote ministerial single-mindedness in fuel policy; but it did emphasise the extent to which Lord Robens's marketing hopes depend on factors beyond his control. Another external factor, plus or minus, was the Government's decision to seek entry to the common market. That may or may not be to British coal's political advantage; liberalism and protectionism are at least as oddly mingled in Brussels as in Whitehall, when it comes to energy policy. But in spite of protective policies in most of the Six, coastal steelworks around Europe are getting sizeable imports of American coking coal on long-term contracts that the Coal Board would frequently be unable to match: Newport and Ravenscraig will have to reckon with the raw material costs of Klöckner at Bremen and Finsider at Taranto.

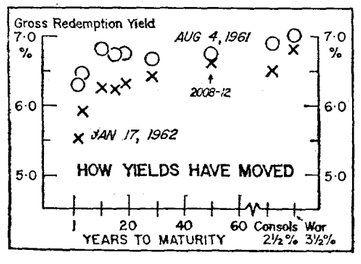
On detailed arguments with the steelmasters, Lord Robens declares that he will have a tale to unfold—early in February. He insists that assumptions that the British steel companies could generally import coking coal at significantly lower prices than they get it from British mines are grossly exaggerated. It is not easy to see how he will be able to demonstrate this, at least for most of the country's coastal steelworks.

This detailed argument may, when it comes, accord with the competitive image that coal is trying to present to the market; maintaining what it has decided is "the right" capacity, and within that capacity producing as much as it can sell. The board's idea of "the right" capacity has been set largely by the weight of its mounting overheads. Once deepmined output falls much below, say, 190 million tons, capital charges per ton would start pressing on the prices that the board needs broadly to maintain to have a chance of competing. Postulate that sales can be kept up to a level roughly in the region of that capacity, and all the arguments and efforts of the board make sense. Remove that assumption, and one would need completely to reshuffle the pack.

To the outsider, the only circumstances in which the Coal Board could be really confident of maintaining such a level of sales are either a much higher rate of general economic growth within Britain, and hence of total fuel consumption, or the continuance of as high a degree of protection of the British fuel market as exists now—perhaps both. Neither, cold-bloodedly, seems very likely. Since this year's duty was put on oil, sales of the black oils have no longer been growing at their earlier rate; they went up perhaps 10 per cent in 1961, against more than 25 per cent the year before, and the Coal Board reckons that oil simply captured the growth in the general fuel market, without encroaching further upon the board's own sales. It could be that the Chancellor last spring chose precisely the right level of excise duty to choke off the competitive advance of oil; but with newcomers edging their way into the oil market here, one would expect yet deeper discounting in black oil prices, and further inroads on coal's market, to ensue. Nor is it easy to believe that in two to three years' time, in the common market, coal can maintain quite as protected a position as it has here today.

The radical alternative to the Coal Board's present policies might have been retreat to a smaller core of its most efficient capacity, assisted by some writing down of capital, if the fixed-interest pattern has to be maintained, or by the introduction of some equity element so that the industry would not need to pay the same on its capital in good as in bad years. Fuel imports could have been allowed more freely, perhaps with a time-limited levy directed specifically to the retirement of uneconomic capacity and the retraining and re-location of redundant miners. Lord Robens has almost certainly considered those possibilities—which could not have depended on his initiative alone—and rejected them. They might not easily have fitted in with his hope of restoring this industry's morale; but they might have suited the British economy—and the developing pressures on the coal industry—better. As it is, one can only watch his and this industry's efforts with sympathy, but also with uneasiness.

BUSINESS NOTES



IN THE MARKETS

Sell Out for 21st Century

BEFORE the guns began to fire from Courtaulds and ICI on Wednesday afternoon the big event in the stock market was the ending of the government broker's "tap" of 5½ per cent Treasury 2008-12, the stock through which the authorities have guided—and for the most part held down—the gilt-edged market for fifteen months. The stock was issued at 95 in October, 1960, and the heavy sales of recent months have been at prices fully ten points lower. The disposal of £500 million (nominal) of so long dated a gilt-edged stock is itself a notable commentary on the new mood of the stock markets. The present tendency is almost for bad news to help gilt-edged, in so far as it increases the uncertainty over equity dividends and increases correspondingly the attraction of a fixed income. This is the weightiest factor, especially for institutional investors, and the stated inclinations of the new Governor of the Bank of England, as well as hopes of investment interest from Europe, provide more positive reasons for confidence, even though these are not necessarily conclusive in themselves.

Exhaustion of the tap in Treasury 2008-12s had to some extent been anticipated, and the price rise on Wednesday was relatively modest—⅝ to 85¾. At this price the gross redemption yield at £6 12s. 4d. is still markedly high in relation to other long dated stocks—nearly 4s. above the yield on both 3½ per cent Funding 1999-2004 and 5 per cent Treasury 1986-89, and nearly 6s. above that on 5½ per cent Funding 1982-84, which through the new tranche issued in the recent conversion operation is now once again the key long-dated stock in the authorities' hands. But, twenty-five years shorter than the 2008-12s, its damping influence on the undated stocks will be less close, so that these may be expected to respond more sharply to any real bull movement in gilt-edged.

For the moment investors are still moving circumspectly. Thursday's news that the economic committee of the TUC had at last decided conditionally to join the planning council was said to be responsible for the improvement in ordinary share prices; but more relevant for anyone taking a long position in gilt-edged may be the implications of this week's apparent softening in the wages front. Nor do the professionals of the gilt-edged market share some journalists' expectations of an early cut in Bank rate—as can be seen from their lack of speculative interest in short bonds or Treasury bills.

Last week's new issues have had a good start in the market. The heavily stagged issue by Samuel Properties has settled down at 25s., a premium of 5s., and the three corporation stocks that were issued together have moved from an opening discount of about ⅛ to a premium of the same amount. This week Bowater Corporation has announced an issue on the Swiss market—where a loan of 100 million Swiss francs for the World Bank at a coupon of 4 per cent has just been undersubscribed by the public. The Bowater issue is of 60 million francs (about £5 million) for a term of fifteen years, with a coupon of 4½ per cent and an option to convert one half of the loan into ordinary shares, at 10-15 per cent above the present price. The purpose of the issue is to fund bank loans raised in Europe for the group's Continental subsidiaries. Sir Eric Bowater confirms that while the group's sales rose in 1961 its trading profits fell; the directors expect to be able to maintain the dividend.

Wall Street Takes It Stoically

A correspondent cables:

WEAKNESS in equities is still evident on Wall Street where the Dow Jones average of industrials closed on Wednesday below 697, off almost 8 points for the day and at its lowest since October. Investors, while not turning to fixed income obligations, are showing no disposition to bid for common stocks even though business news continues favourable. The expectation is that available funds will eventually be placed in equities, which institutions now believe are much more reasonably priced than they have been for some time—but are apparently hoping to obtain at even lower levels. They point out that while margin requirements are at 70 per cent many speculators have been using foreign banks and other sources of finance which do not have to observe margin rules for purchasing stock, and that a substantial portion of the selling over the past two weeks has been touched off by these sources.

Some brokers also site the more attractive yields being offered on savings accounts. But it is absence of buying rather than heavy selling that has hurt the market. Practically every group from the blue chips down has been affected, although rails have managed to put on a good performance partly because of hopes of a change in Washington's attitude and partly on the basis of the obvious upturn in earnings. New York Central and Pennsylvania shares, however, actually turned down on the merger announcement although they had been rising in anticipation and other rails have been spurred by the news. But while the industrial market as a whole has behaved poorly since the year end, analysts feel that the drop is only an intermediate reaction and still continue to look forward to higher prices.

BANK SPEECHES

Common Market Views

SIR OLIVER FRANKS, in his last address as chairman of Lloyds Bank before he returns to Oxford, points to the "unmistakable change in the climate of economic opinion in this country" that has occurred in conjunction with the recurrence of familiar difficulties on the one hand and the prospect of entry into the common market on the other. This change is indeed reflected in Sir Oliver's own reminder of the dangers of an excessive preoccupation with fair play. "Distributive justice is a vital part of social morality. But to ensure the life of the community it is equally important to recognise that world trade is not a handicap event." Sir Oliver is a strong advocate of the common market, on the widest political grounds, which he believes need not involve separation from the Commonwealth. "If we have any genius in political affairs it lies in conjunction, not disjunction; in the ability to avoid the 'either-or' and find the way to 'both-and'." On the practical plane, the chairman of the District Bank, Colonel Marshall Brooks, notes from Manchester that the cotton industry is looking to "some gain from the possible equalisation of tariff protection" in Britain and Europe against Commonwealth producers—and he bravely goes on to plead, as does Sir Oliver, for liberal trading arrangements with the outside world.

Sir Oliver counters the suggestion that Britain will have to devalue sterling before it enters the common market, and stresses

that its exports can be fully competitive if only it takes the right measures domestically. This is certainly true, though Sir Oliver still puts prime emphasis on reducing the pressure of home demand; oddly, he barely mentions wages. But one can agree that the very defects in Britain's economic attitudes could, if recognised and acted upon, provide a springboard for a notable advance. "It is high time that the hidden reserves were drawn upon," Sir Oliver declaims, referring of course to those of the country, not of Lloyds Bank.

COMPETITION

More or Less?

At times such as this, when the "religion of competition" is being debunked and the virtues of amalgamation and co-operation in "highly capitalised industry" are being loudly proclaimed, the Registrar of Restrictive Practices may perhaps wonder whether the line of thinking that his activities epitomise—the pure milk of the competitive doctrine which Mr Paul Chambers thinks about adequate to rationalise eighteenth-century exchanges of apples and oranges—aren't just simply out of tune with today. His annual report to the President of the Board of Trade, somewhat philosophically, draws attention to the fact that restrictive trade practices agreements, outlawed by the Restrictive Trade Practices Court or simply abandoned "at the blast of the trumpet" are very often replaced by what are called "price information agreements" or "open price agreements."

These agreements, which may become registrable if they should happen to come into being as amendments of agreements formerly on the register, but are framed so as not to be liable to be brought before the court, are simply agreements to tell one's competitors what prices one charges. There may be many motives for and results of this altruistic practice. Obviously it could follow in a trade that buyers would begin to get identical tenders; and then, if the Registrar could convince himself beyond reasonable doubt that *post hoc, ergo propter hoc*, perhaps he could make a justiciable issue out of it. It is fair to say that the climate of public opinion and statute law in the United States is somewhat more sensitive to possibilities of trade restriction; but anti-trust prosecutors there have not done too well with the somewhat analogous doctrine of "conscious parallelism" in pricing.

It would be too pessimistic to imagine from this new development that the result of actions before the Restrictive Practices Court is simply to move the whole exercise of price fixing in most industries one step farther into the background. Agreements abandoned or held to be against the public interest are not invariably replaced by less formally restrictive understandings; nor are all understandings necessarily restrictive. It would be exaggerating to suggest that the tide of business thinking in Britain today—or in Europe—is towards accepting competition as a virtue in itself. But it may still be that in the next year or so true believers and sceptics alike are going to have this virtue thrust upon them. Some already have.

OVERSEAS TRADE

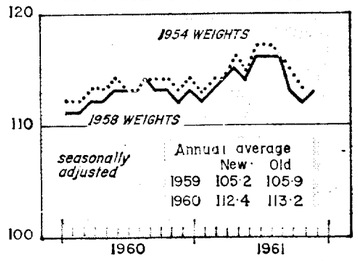
Exports in a Rut

British exports have still shown no signs of rising. It is still early, admittedly, for any stimulus given by the July measures to have worked through to export shipments; but pressures on demand and price margins in the home market should have begun to increase the attractiveness of exports a good deal earlier. In 1961 as a whole, exports rose by 3½ per cent, but the sad fact is that after a useful increase in the last part of 1960, the trend throughout 1961 was almost dead level—309, 305, 309, 305 run the seasonally adjusted averages in each quarter, in millions of pounds. December's figure, at £297 million seasonally adjusted, was in fact the second lowest of the year. But the apparent trade gap, at £39 million with exports valued fob and imports cif, was actually a shade lower than in November, as imports also fell sharply, to £350 million, the year's lowest. This is the one encouraging feature in the December returns. The rise in imports from August to October has not after all established itself as the beginning of a new upward trend, though the fourth quarter average is still a shade above that of the third quarter. Imports for 1961 as a whole

OUTPUT

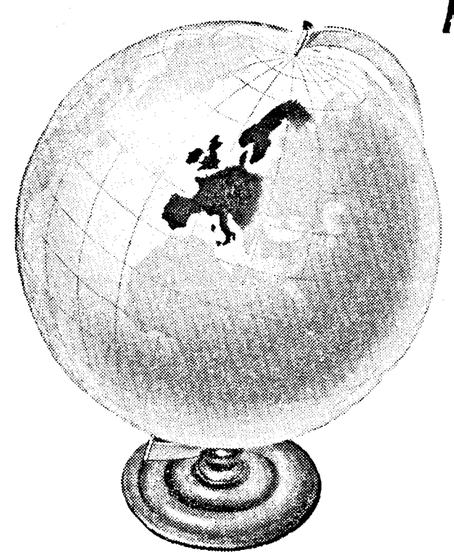
On a New Measure

According to the new official index of industrial production that was published for the first time this week, output recovered a little in November, coming back to the September level. This was the first monthly increase since June but hardly a surprising one; strikes at Rootes and the Steel Company of Wales had helped to drag down the index in October. Without these labour troubles, the index might well have stayed on an even keel from September to November.



Indeed, the Central Statistical office takes no notice of the apparent dip of one point in October, reckoning that its November estimate is "about the same as in the two previous months." Maybe this comment is fair enough even on the published material; but maybe it seems more appropriate when accuracy is not lost through rounding off the index to a whole number. A rise of as little as 0.2 (say from 112.4 to 112.6) lifts the published figure a whole point, whereas one of as much as 0.8 (say from 111.6 to 112.4) is registered as no change. The argument against publishing to a decimal point is that it infers a spurious degree of accuracy. But the dangers of mistaken interpretation through not so doing would seem greater. For instance, because the published index of manufacturing output did not change in November, can it be inferred that any buoyancy in output was outside manufacturing? Now that the index has been given a new lease of life, surely the time has come to let users, outside Whitehall, get the most out of it.

Revision of the index of production is inevitable and essential from time to time: the previous overhaul was done just over three years ago. The new index stems from the detailed results of the full census of production taken in 1958, the separate production series in it being weighted according to the value of net output in that year, instead of in 1954 as before. At the same time, some new and improved output series have been introduced. These changes have slightly reduced the rise shown for total industrial output since 1958. The general picture, however, has not been much altered: the detailed picture has. The new measure shows a smaller expansion for the chemicals and vehicles industries than the old, but a bigger expansion for textiles, clothing, timber and furniture trades.

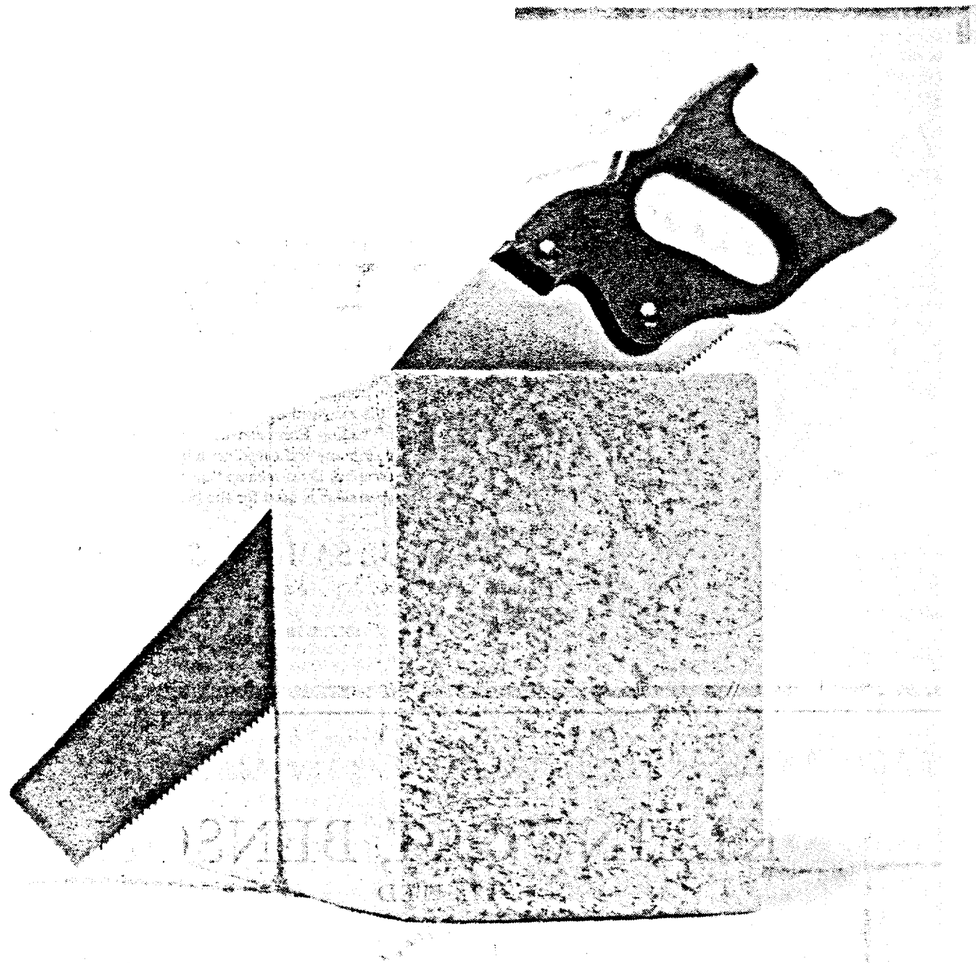


PRODUCTION INDICES—OLD AND NEW
(First half 1961; 1958=100)

Industry	Old index	New index
Mining and quarrying	95	95
Manufacturing industries	118	117
Food, drink and tobacco	110	110
Chemicals and allied industries	132	127
Metal manufacture	121	121
Engineering and electrical goods	120	121
Shipbuilding and marine engineering	85	86
Vehicles	119	116
Metal goods not elsewhere specified	117	111
Textiles	107	108
Leather, leather goods and fur	105	105
Clothing and footwear	122	124
Bricks, pottery, glass, etc.	119	120
Timber, furniture, etc.	108	113
Paper, printing and publishing	124	124
Other manufacturing industries	121	120
Construction	118	118
Gas, electricity and water	119	117

Index of Industrial Production: 1958=100

A MERCHANT BANK AT WORK



New European & General Investment Trust Limited

The rapid expansion of the economies of European countries, and the Common Market in particular, has focused considerable interest upon European investment. We recognised the need for a means to enable British investors to participate in European growth and development, and in consequence we formed in 1959 the New European & General Investment Trust. This was the first investment trust to specialise in European shares and to be quoted on the London Stock Exchange since the war. It is managed by us and we have the benefit of the advice of leading European bankers who are closely connected with many of the leading industrial companies in which the trust has investments: thus the expert knowledge of these specialists is used for the benefit of British investors.

Ordinary saw—extraordinary concrete

You can saw Durox Aerated Concrete as easily as you saw wood. You can nail it, screw it, bore it, grout it and chop it. With ordinary tools. Durox is light—about one quarter the weight of brick. Durox is strong. Durox is fire and frost resistant. Durox is so good as an insulant (thermal and acoustic) that additional insulation is rarely, if ever, needed. Durox sheds water almost as readily as a duck's back. Durox is the new building material, in densities 25, 34, and 44 lb/cu ft.

Durox Aerated Concrete is distributed through the various depots of Hall & Co. Ltd., Croydon. Details, specifications and performance figures from: Durox Building Units Ltd., Chantrey House, Eccleston Street, London, S.W.1. Sloane 7122. *A member of the Hall & Ham River Group of Companies.*

DUROX

were 3¼ per cent down on the previous year. The improvement here occurred in the early months of 1961, a little later than in exports.

As a result, the average monthly trade deficit for 1961 comes out at £47 million, which on an even valuation of imports and

UNITED KINGDOM TRADE

4th ,,	363	305	13	−45	

exports may indicate a deficit of around £10 million a month, or something over £100 million for the year. The actual estimate of the current balance of payments as a whole will depend largely on the authorities' success in recording invisible transactions.

THE EXCHANGES

A Doubtful Augury

DEMAND for sterling has again been curbed this week by selling in anticipation of a cut in Bank rate which the authorities are supposed to be considering because sterling is so strong. Such is the circle into which the foreign exchange market has talked itself. Sterling was strongly bid for either side of the weekend, but precautionary selling began on Tuesday, a day earlier than last week, and it seems unlikely that the authorities have taken in much foreign exchange this week, as they did in the first fortnight of January. They had the opportunity to do so on Monday, but the control declined to take it, and let the rate rise temporarily to $2.81\frac{3}{16}$. It fell back in midweek, but recovered immediately after Thursday's Bank rate decision.

The ebb and flow of international funds around the year-end is strongly reflected in figures of Germany's reserves. The repatriation of commercial bank reserves in December had made good about half of the earlier outflow of reserves from the Bundesbank: by end-December these were nearly 2 billion marks above their November low-point, following the July-November loss of around 4 billion marks. In the first week in January however the Bundesbank showed a loss of over 1½ billion marks, and a further substantial return of short term investments to the commercial banks is known to have taken place in the following week. The other notable movement has been in the Canadian dollar; the cross rate on New York fell to 95.60 on Tuesday but later recovered to 95.80. In his statement to shareholders at the end of last week Mr W. Earle McLaughin, president of the Royal Bank of Canada, castigated the "manipulated" rate as the worst choice of all. He regards a "true" floating rate as the best, but prefers a fixed rate to the present system.

Business in the gold market has been steady rather than active, with the London price remaining around $35.16 an ounce. In Paris the increasing threats from the OAS have now led to some precautionary buying of gold coins.

TIN

Revalued in Theory

THE first meeting of the second International Tin Council originally convened in July was dissolved in October last year when the producers' unanimous support of a £800 to £1,000 range for tin was defeated by an overwhelming majority of consumers' votes. The second and third meetings of the council were held on Wednesday and Thursday last week. Consumers met producers' demands more than half-way and the tin agreement now has a good chance of getting on its feet before the count reaches ten. At the second official meeting, called because insufficient ratifications of the agreement had been received by December 31st to bring it properly into force, members decided to allow the agreement to continue provisionally until the end of June. On the following day, they agreed to a floor price of £790 and a ceiling of £965 a ton for tin—said, with unwitting irony, to have become "immediately effective" last week.

BUFFER STOCK RANGE

	Floor price (£ a ton)	Middle range* (£ a ton)	Ceiling price (£ a ton)
New	790	850–910	965
Old	730	780–830	880

*Buffer manager can neither buy nor sell.

The buffer stock owns no tin. It sold the remnants of its reserve at £880 a ton before the current agreement began its precarious existence last July. It has no means, therefore, of enforcing its new ceiling. Not the least curious feature of the new scheme is its unequal price ranges. The price range was formerly subdivided into three £50 sectors. There is now an upper range of £55 and two lower ranges of £60. Also intriguing is the nearly exact correspondence of £965 a ton with the current price of 121 cents a lb in the United States, where £300 million worth of stockpiled tin is burning taxpayers' pockets. Congress has before it a request to release 50,000 tons.

By comparison, the cash resources of the £15 million international buffer stock are puny. At the higher support price, the buffer stock can absorb a correspondingly smaller quantity of tin. A larger buffer pool therefore seems necessary. Many people rashly assume that support at £790 a ton will never be needed. That makes the jump of £13 to £953 a ton in cash tin since the announcement of the new price range the more surprising. The buffer manager would presumably buy tin if the price declined to £850. But a consideration carrying more weight with speculators who were active this week was the possibility that the United States will not now authorise sales of stockpile tin below £965 a ton.

BANK MECHANISATION

Arguing about Electronics

THERE is no longer any doubt about whether the banks will introduce automation; the only point still at issue is "when" and "how." Some banks have been conspicuously quicker off the mark than others, and there was sufficient experience, here and in America, to justify the decision of the Institution of Electrical Engineers to organise a two-day exchange of views between bankers and electronics engineers to clear up some points of detail. The discussions started on Wednesday and the 200 delegates were still hard at it when this issue of *The Economist* went to press.

"Discussions," in fact, is perhaps a rather mild word for sessions that began sedately enough but became a good deal more animated. The bankers had agreed among themselves about the broad lines for automation—computers for handling accounts, robots for sorting cheques and magnetic ink as the common "language" which the whole system would use—and they came seeking the clearance of many points of detail. They were complaining about the peripheral equipment that the manufacturers supply with the key units—small gadgets that are neither fast enough nor precise enough to work with computers.

The banks, however, met criticism from the manufacturers. Why had they not financed research into automation? Why had they chosen a system described by many engineers, including two from the Post Office, as wilfully elaborate, extravagant and far from fraud-proof? The bankers grumbled privately that this was going over old battles; their choice had been made, for better or worse, and it had the virtue of being identical with that used in the United States, where the disasters predicted for it have not so far occurred. Underlying this snapping lay the main dispute between banks and manufacturers which neither seemed anxious to bring into the open, namely the price of all this equipment. The banks feel that they are asked to pay too much for some of it and are holding back their orders. They see no reason, to quote one specific example, why they should be asked to pay for American-designed equipment manufactured in this country twice what it costs bankers in the United States.

STOCK DEALINGS

No Bark from the Manger

WISELY, the council of the London stock exchange has decided not to go ahead with an amendment to its rules which would have prevented London brokers from deal-

ing directly with the British agencies of foreign firms of brokers. As amended, the rule would have had the twin vices of being harmful and ineffective. It would have given the impression that the London stock exchange was concerned to keep business in the hands of the jobbers and it would have encouraged some investors to deal directly with the agencies, without regard to their London brokers. Some of the brokers and agencies concerned made strenuous protests, and the customary waiting period that precedes the posting of a new rule allowed these representations full weight.

Last week's debate had the virtue of drawing attention to the original rule, that brokers should execute an order with the British agency of a foreign firm of dealers only after the business has been offered to jobbers in the London market. This rule remains in force. In the past it has not been strictly observed. Its object is to challenge jobbers to compete effectively with the foreign agencies and if it is widely disregarded, the council of the stock exchange must either police it effectively or withdraw it. The council is anxious to maintain the strength of the jobbing system and to demonstrate that London provides one of the most flexible stock markets in the world. The two aims may not always run parallel, as in this instance. But fortunately the council has in the end kept the broader interests of investors fully in mind.

SHIPPING

Bigger Cargoes—Lower Freights

THE New Year has started with tramp freight rates at a level well below the average for the whole of 1961. The Chamber of Shipping voyage charter index (1960 = 100) shows a fall of 8.1 points to 101.2, the average for the year being 106.8. The time charter index shows an even bigger fall of 11.8 to 99.4, the average for the year being 111.6. In December, too, the tonnage of dry-cargo vessels laid up increased by some 15 vessels and 90,000 tons gross, bringing the world total to 115 ships of 680,484 tons—about 1 per cent of the world fleet.

This recession is occurring at a time when seasonal influences are usually favourable; many shipowners are beginning to suspect that the large bulk carriers, which are coming on to the market in growing numbers, may be making their influence felt. A recent fixture of a 20,000-tonner with grain from the US Gulf to Japan was made at $9.25, following a previous fixture of a 12,000-tonner at $10.15. This is good business for the charterer, who gets quick and efficient transport at a saving of 90 cents per ton, while the bulk carrier owner does not do too badly, despite his higher operating and depreciation costs, because of the size of the cargo. Last week another 20,000-tonner accepted $9.20 for the same voyage, and several smaller vessels had to accept $9.50, which can scarcely be a profitable rate, particularly in view of the prospect of having to ballast away from Far Eastern waters.

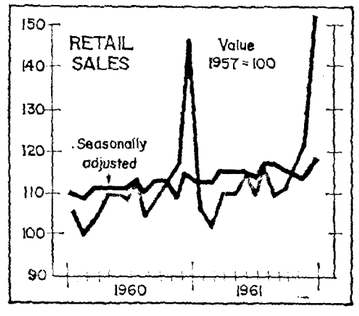
Another major influence affecting the grain trades in particular is the continued invasion of tankers, of which there is still a large surplus unable to find employment in the trade for which they were built. These also can operate as large-capacity grain carriers able to undercut the conventional tramp and still show a profit to their owners. It now seems that it is going to take a sustained and pronounced increase in demand for tanker transport to attract many of these vessels back to the oil trade.

CHEMICALS AND PLASTICS

Growth in Slow Motion

IN physical if not in financial behaviour, the chemical industry is passing through an unfamiliar period of constraint. Activity fell during the summer and early autumn in both the more modern end of the industry, as measured by the deliveries of feedstock for petrochemical plants, and the traditional section for which sulphuric acid production provides the pointer. The annual survey of sales trends in the industry, published by *Chemical Age*, puts the average increase in sales last year at 3.4 per cent—compared with an estimate of 13.7 per cent. for 1960. This check to growth has made the industry more cautious about its prospects for 1962; where the survey reported last year that it hoped for an increase of 9.2 per cent in sales during 1961, it is now prepared only to forecast a rise of 6.5 per cent for 1962. The biggest increases are expected from plastics, fertilisers, and heavy organic chemicals.

The forecast of a 12 per cent increase in the value of plastics sales seems possible; this industry goes in two-year cycles, and it was at the bottom of its last recession a year ago. Any increase in production has been delayed by the high stocks that had been built up in 1960, which fell slightly last year; but there should be little need to run them down further, so that higher sales can be followed by rising production. *Plastics* estimates that the total sales of 600,000 tons in 1961 were seven per cent higher than in 1960 by volume, but that in value they were about three per cent lower—the result of lower prices. In the last quarter of 1961, however, *Plastics* estimates that sales were already 10 per cent above the level of the previous year. With higher production likely in the motor industry during 1962 and new uses for plastics encouraged by their lower price, physical demand at least seems likely to go ahead, and if prices level out this would mean an increase in value too.



Forecasts of an increase in the sales of heavy organic chemicals may be no more than the consequence of these hopes for plastics; but it may also represent the industry's hope that the many new petrochemicals plants that were finished last year, or are due to come into use this year, will find a use for their capabilities. An increase in the sales of fertilisers is more a matter of confidence in the continued subsidisation of the farmer and the fertilisers than a judgment of business conditions. But even in this section of the industry, the fall in margins is thought more likely to continue than to be reversed.

RETAIL TRADE

Good and Not So Good

CONTRARY to suggestions from shopkeepers, they seem to have had a best ever Christmas. The decline in retail sales was apparently reversed in December with turnover rising more than usual. What is normal in December, however, is particularly hard to judge; it is not surprising that the Board of Trade is somewhat uneasy about its provisional estimate of 118 for seasonally adjusted sales (1957 = 100), compared with 114 in November and 115 in October. If this estimate is not subsequently revised it will probably be reckoned that the volume of business was back in December to its July level though it did not lift the fourth quarter above the previous quarter.

For the year as a whole retail sales appear to have risen by about 4 per cent. This is in line with the increase in pre-tax profits from £31,304,000 to £32,586,000 recorded by F. W. Woolworth for 1961. But a higher tax charge has left earnings unchanged to cover 1.4 times an ordinary payment rounded up from the equivalent of 1s. 9 3/7d. to 1s. 9½d. (or 35.8 per cent). These results disappointed the market and the shares showed a net loss of 1s. to 52s. to yield 3½ per cent. It seems clear that any increase in turnover secured by Woolworth has been barely sufficient to offset higher costs and it remains to be seen whether the two other big chain store groups, Marks and Spencer and British Home Stores, have made a better showing.

PER-CENT or PER-HAPS?

Fluctuations on the Stock Exchange reflect the uncertainty of the times. Better by far to invest in Abbey National where savings do not depreciate by a single penny and will earn a good return.

SAFETY Abbey National has the complete confidence of over 700,000 members. Furthermore, Shares and Deposits in this Society are Trustee Investments.

INTEREST The rate is 3¾% per annum on Shares with income tax paid by the Society. This represents £6.2.5d. per cent when income tax is paid at the standard rate. Build-Up Shares yield 4¼% —equivalent to £6.18.9d. per cent when tax is paid at the standard rate.

EASE OF WITHDRAWAL Should the need arise, sums up to £100 may be withdrawn on demand—larger sums at short notice.

Potterton heat bank or bungalow beautifully

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

Potterton have been making boilers since the year dot. Very experienced people. Very reliable boilers. Pick Potterton. It pays.

Is your Potterton file up to date? For all the latest information by return post, just jot "boiler information, please" on your letterhead and send it to us.

A Potterton FOA oil-fired boiler (output: 1,000,000 B.th.u./hr.) heats Barclays Bank, York. Supplied and installed by J. Shanksmith Limited.

And a Diplomat 100 (a domestic gas-fired Potterton boiler) supplied by South Eastern Gas Board and installed by C. Fletcher, Sons & Company Limited, Kingston, heats and provides hot water at an 8-roomed bungalow in New Malden, Surrey.

"Potterton" and "Diplomat" are registered trade marks.

BIDS AND DEALS

Glass and Groceries

WHILE the biggest merger of all remained in the balance, two other important deals were announced. The offer by **United Glass** of seven 5s. shares plus 10s. in cash for every two 10s. shares in Key Glassworks was comfortably above the pre-bid price of 58s. With United Glass at 17s. the bid is worth in all about £6¼ million and values each Key share at 64s. 6d. The terms involve a slightly lower dividend income for Key shareholders but this should be offset by the cash element in the bid while earnings attributable to Key shareholders would be about 20 per cent higher. On 1960 earnings, Key would contribute about one quarter of combined earnings but receive about a third of the total equity. Both companies have big plants in South East London while Key has another plant at Harlow and United one at St Helens. Their interests are complementary rather than competitive, with United mainly concerned with bottles for milk and stronger beverages and Key with food containers. The merged group will account for over a third of the output of glass containers in this country.

Moores Stores, the northern based grocery group, has been looking southwards and the acquisition in June, 1960, of the United Kingdom Tea Company considerably widened its stake in retail stores in the greater London area. Now this is to be doubled by the acquisition of 102 Mence Smith hardware shops owned by Timothy Whites and Taylors. These will be run by United Kingdom Tea which is also acquiring the Mence Smith warehouse. The Mence Smith stores will be turned over completely to groceries, though not necessarily to self service; at the last reckoning the number of Moores' branches switched to self service was 76 out of a total of 713. The sale by Timothy Whites has an interesting parallel in the sale by the Beecham Group two years ago of the retail grocery interests of its subsidiary, Thomas and Evans, to Wrights Biscuits, another rapidly expanding grocery business which has a 40 per cent stake in Moores Stores. Together these two companies, which both have Mr W. P. Webster as their chairman, now control over 1,600 branches. The shares of both have benefited from the Mence Smith deal, with Moores gaining 2s. 3d. to 39s. 3d. and Wrights Biscuits 3s. to 26s. The purchase price has not been disclosed; but the proceeds will be used by Timothy Whites to extend and modernise the 56 remaining Mence Smith stores which will in future concentrate entirely on hardware. The deal is clearly in line with Timothy Whites' policy of rationalisation, under which 47 uneconomic shops were closed in 1960, when the Mence Smith subsidiaries contributed only three per cent of the gross profits of the Timothy White group.

DECIMAL CURRENCY

A Compact Committee

THE committee which is to study the best and cheapest way of putting Britain's money on a decimal basis is a compact one—which it has to be if it is to fulfil the Chancellor's hope of reporting before the end of the year. Lord Halsbury, whose appointment as chairman was announced before Christmas, will be assisted by Mr R. G. D. Allen, professor of statistics in the University of London; Mr Vernon Ely, director of a department store in Wimbledon; Miss Anne Goodwin, chairman of the TUC; Mr J. M. A. Smith, part-time member of the Coal Board and until recently assistant managing director of Ford Motor; and Mr R. G. Thornton, who recently retired as senior general manager of Barclays Bank and is now a director there. This combines some notable expertise under the strong chairman. The one apparent omission perhaps is a wise layman with a feeling for style. But this should be an efficient, workmanlike committee, and it will no doubt have the benefit of spirited advice from Mr J. H. James, comptroller of the Royal Mint, whose plea for better coinage more than two years ago helped to rouse public interest.

COTTON TEXTILES

South Island Saga

NEW ZEALANDERS' eyes were opened by disclosure of the terms on which their government had in 1960 invited the British textile group, Smith and Nephew, to build a £5 million cotton mill at Nelson. The new subsidiary was promised up to 80 per cent of the home market for certain products. In return, it undertook to aim at "fair average prices" consistent with external prices, and some provision was made for examining the company's charges. New Zealand's government then changed, but Mr Marshall, the new Minister for Industries and Commerce, seemed reluctant to bow to mounting opposition to the arrangement. But it has prevailed and the compensation for terminating the contract has been put at £1 million, and might be higher. The abandonment of a half-completed mill will discourage manufacturers of other products, whom New Zealand might possibly wish to attract by similar inducements.

Opposition of retailers and farming groups, joined by Japan, whose claim to consideration is not negligible, forced the issue. Smith and Nephew could not accept a modification of the original agreement and a settlement has been reached after six weeks of discussion. The Nelson factory was to begin production of denim, winceyette, cotton wool and surgical dressings in May, and by 1969 its range would have extended to many other cotton goods. About 1,000 workers would have been employed; 35 British families had already been enlisted for the new venture.

Setting up abroad is a useful outlet for cotton groups that can find the capital. Many countries are establishing cotton mills and raising tariffs to protect them. South Africa, for instance, seems bent on replacing imports of most cotton manufactures. Such policies irk the British cotton industry, threatened by increasing competition in its home market, but if they cannot be avoided, manufacturing abroad appears a logical step. Last month, English Sewing Thread was associated with a cotton manufacturing project in Northern Nigeria and Calico Printers agreed to participate in a £5 million mill in Eastern Nigeria.

SHARE TRANSFERS

Waiting on the Government

THE final report has been published of the committee set up in 1959 under the chairmanship of Lord Ritchie of Dundee to see how the present system of share transfers could be improved. In December, 1960, it put forward recommendations for a new system of "transfer by stock transfer form" and since then an advisory committee has been examining the practical applications of this new system with the help of many of the bodies closely connected with share dealings and has satisfied itself that the new system is acceptable. The views of the Law Society and counsel's opinion have also been obtained and in the committee's words there seem to be no serious obstacles to the introduction of the necessary legislation. There are many in the City and elsewhere who will hope that this will not be delayed; at the Tory party conference last October Mr Anthony Barber, Economic Secretary to the Treasury, said that the Government was considering what legislation might be involved in simplifying the transfer of securities. One of the main advantages of the new proposals would be that the seller would have to sign only one document even if his holding has to be split between a number of buyers. His signature would not have to be witnessed although the seller's agent would have to fix his stamp to the form; the buyer would not have to sign the transfer form at all.

TRANSPORT

How to Choose Investments

THE criteria that should be used in deciding how much to invest in transport systems have managed to generate a good deal of dispute between the Ministry of Transport and the British Transport

Continued on page 257

What, No Creditors?

THE international balance of payments, it is taught in the textbooks, always balances; one country's deficit is another's surplus. Nowadays one wonders whether there are any surpluses left. Everyone is familiar with Britain's need to achieve a massive increase in its trade balance. The United States authorities point to the same need in their country: exports exceed imports by one-third, but the balance of payments is shown to be in chronic deficit. In Germany the actual export surplus is still very high, but export orders are reportedly falling away. The Dutch, too, complain of the handicap imposed by revaluation, and in France the big rise in exports of 1960 was not, to the authorities' concern, carried further in 1961. Japan is deep in the red; and even from the gold magnet of the world a respected financial journalist has drawn attention to "Switzerland's Dip into Deficit." The missing reports are of the counterpart surplus countries. Italy, Spain —one's list gets little beyond the Mediterranean. And because so many countries now feel that they are over-extended in their external finances, they are trying the impossible task of improving their relative positions at once. In this way, an artificial damper is being put on the pace of economic expansion in the non-communist world.

How has this ridiculous unsquaring of the circle come about? There are two main explanations. First, before one country's payments become another's receipts, some of them are clearly getting lost. Secondly, different countries nowadays fix their eyes on different things in their balance of payments—and each tends to make the most conservative and least favourable selection. This caution itself is seen by some people as a manifestation of inadequate international liquidity—if more countries felt their reserves were adequate they would be less obsessed with a possible deterioration in their external balance.

Balance of Which Payments? The balance of payments account is an exercise in double-entry book-keeping: the grand total of all payments is tautologically in balance, and it is the balance of selected items that is significant. The most common selection until recently was the balance of transactions on current account only; a surplus or deficit here indicates a strengthening or weakening of a country's external capital position, as measured by the balance of its external assets to liabilities.

By this measure, the United States is still by far the largest surplus country. Because, both for the United States and Britain, many of their long-term capital outflows are of a continuing nature and may, indeed, be closely linked with current exports themselves, attention has been increasingly drawn to a new entity which takes in long-term investment flows as well as current transactions, producing what is coming to be called the "basic balance"—the balance of all items except short-term capital transactions and the financing flows of gold and credit. Still more comprehensively, the United States has traditionally kept its eyes on the "net balance," which includes short-term capital as well and shows simply the net movement of gold reserves and foreign dollar balances.

Basic Here But Not There. Now clearly if one country looks at its current balance, another at its basic balance and a third at its net monetary balance, all from the most conservative standpoint, the chances are that all may show a deficit. Thus in 1960 the United States was deeply concerned about its large "net" deficit, which was swollen by the outflow of up to $2 billion of short-term funds; but Britain, to which much of this went, did not feel its balance of payments to be correspondingly strengthened. It worried rather about the yawning gap in its "basic balance," which includes the flow of long-term capital, which is a net outflow, but excludes the flow of short-term capital, which is a net inflow. The recipients of this long-term capital in turn were much less convinced of its permanent nature. The external reserves of overseas sterling countries together—their own "net" balance—rose during 1961, but their central banks and treasuries drew little comfort from the improvement, pointing out that it was derived not from current earnings, which they feel can be relied on, but from capital flows, which against a good deal of evidence are still felt to be more chancy.

This difference of view between contributing country and receiving country also tends, moreover, to distort the coverage of the "basic balance" itself. Thus when Germany made its big advance repayments of debt to the United States and Britain last year it naturally debited them as outflows of long-term capital; in the United States, however, these receipts were regarded as a windfall. This is one of the reasons why in the first three quarters of 1961 the three largest trading countries—the United States, Britain and Germany—could all point to a basic, true, adjusted-for-temporary-items deficit.

SWITCH IN OFFICIAL RESERVES
(January 1 to Sept. 30 1961; $ million)

	Gold and Foreign Exchange	Gold only
France	+746	+483
Australia	+441	+ 5
Switzerland	+426	+287
Britain	+320	−600
Italy	+289	+ 23
Germany	−300	+673
United States	−284	−346
Japan	−213	+ 25
Latin America	−255	+ 55
Netherlands	− 19	+130

Another unusual phenomenon in recent years has been a diverse movement in countries' foreign exchange reserves and in their gold reserves alone. This largely reflects an increasing preference for gold. Thus Germany has taken care to make all its special payments in dollars, leaving its gold reserves intact during times of strain and raising the portion of gold in its total reserves from 44 per cent. at end-1960 to nearly 60 per cent in late 1961—still the lowest among leading countries. An opposite movement has taken place in Britain, which lost gold heavily before July last, and received its IMF injection in foreign exchange.

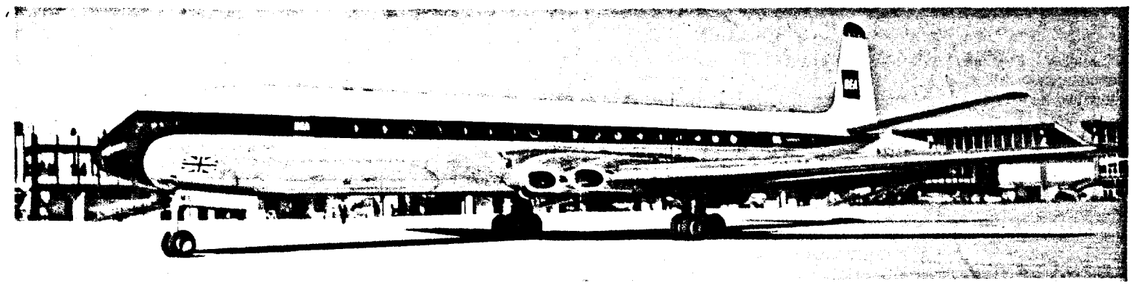
Invisible Disappearing Trick. One has suspected for some time that part of the recent loss in Britain's recorded receipts from "invisibles" (international payments other than for physical transactions in goods) represents simply a loss of records, rather than receipts, following the fading away of exchange control. The Treasury and Bank of England are at last realising the urgency of clearing up a technical question which carries such big policy implications, and are now making new efforts to identify the constituents of the consistently positive "balancing item." This is likely to show up hitherto hidden inward portfolio investment as well as receipts from current transactions. Both would strengthen the "basic balance."

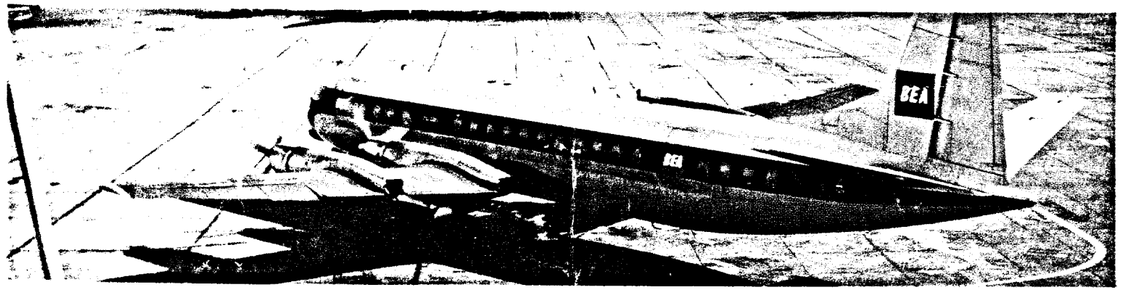
The existing statistical omissions have a distinct bearing on the "all countries in deficit" distortion. The clue was given in the analysis in the recent Bank of England bulletin of net invisible receipts of the main industrial countries. If one adds these up they are found to result in only a small net surplus—yet these countries are the great providers of "services" internationally. Countries outside Europe and North America have huge deficits on invisibles. On the statistics of the countries reporting in *International Financial Statistics* this deficit was $3,400 million in 1960. Thus, as the table above shows, recorded world payments for invisible transactions exceeded receipts by over $3 billion. This is only a rough figure, but it clearly shows that the missing billions are significant in relation to the supposed surpluses and deficits in world payments. Plainly, balance of payments statisticians in all countries are better equipped to measure payments than receipts. They should be urged strongly to get into better balance themselves; and the International Monetary Fund might do more in the way of reconciling balances of payments that do not add up.

GLEAMING WHITE, THE IBM EXECUTIVE ELECTRIC TYPEWRITER IS AT HOME IN THE PARIS SALON OF THE GREAT FASHION HOUSE OF CHRISTIAN DIOR.



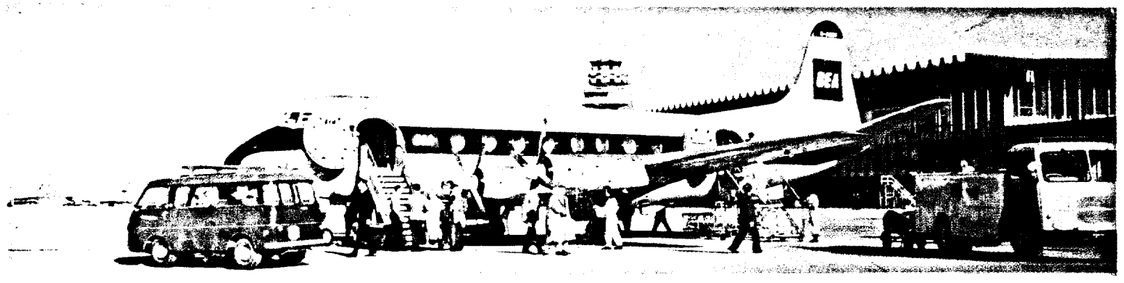
The dress—Christian Dior: the typewriter—IBM

Any woman who cares can tell a Dior original. The unmistakable line, the intuitive feeling for perfect proportion, are the marks of a great couturier. This ability to transform a few yards of fabric into a triumphant creation is Christian Dior's heritage to the fashion house that bears his name—one of the few to build high style into big business.

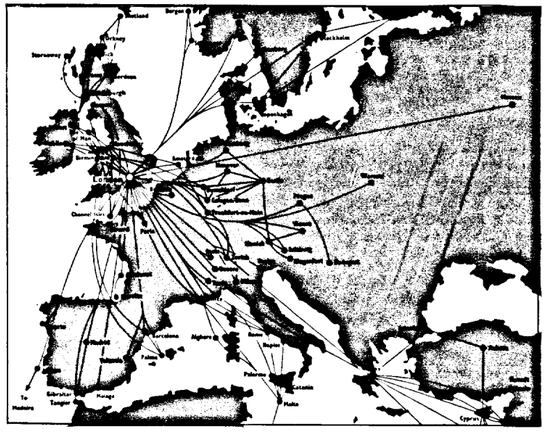


Many people will find it equally easy to recognize the IBM "Executive" Electric (*la Direction* in France) modestly posed in the foreground. Right at home in the House of Christian Dior, it is the typewriter used for correspondence of Dior executives.

In a typewriter, great design blends aesthetic satisfaction with performance. Proportional spacing of each character makes a line typed on an IBM "Executive" unmistakable, makes a Dior letter as handsome as a Dior gown. And since the design has been rigorously tested, carried out with finest materials and painstaking craftsmanship, the machine enables a secretary to perform at top efficiency.



IBM No wonder the IBM "Executive" Electric is hard at work all over the world in distinguished business houses such as Dior. The combination of beauty with efficiency is hard to match.



BEA FLIES YOU TO MORE PLACES

IN MORE UP-TO-DATE AIRCRAFT

BEA's fleet consists of four-engined Rolls-Royce powered Comet 4B, Vanguard and Viscount aircraft. They are flown and serviced by crews carefully picked for their training and experience. They serve all the business and holiday centres of Europe — over 75 in all — with frequent and regular scheduled flights.

BEA

EUROPE'S FOREMOST AIRLINE

Continued from page 253

Commission. The latest contribution on this subject comes from Mr D. L. Munby, reader in the economics and organisation of transport at Oxford, in a recent paper read to the Institute of Transport. He criticises the Government for seeking a criterion that would show whether the investment would be profitable—a yearning that seems to have been produced by the shock of discovering that the railway modernisation plan was unlikely to pay. He prefers the criterion used by the BTC, which starts from the assumption that the service is going to be continued, and then compares the expenditure and revenue that can be expected to result from keeping the service going on the existing footing or, say, changing to electric or diesel traction.

What Mr Munby helps to show here is that the troubles of the BTC over its modernisation plan were not the result of using the wrong criterion for planning its investments, but of putting the wrong figures into its sums—the increase in the estimated cost of the midland electrification scheme from £75 million to over £161 million is the most notorious example of this, but the neglect of American experience on the operating costs of diesel-electric locomotives may well prove more serious. Estimating the future is a hazardous enough exercise at the best of times ; it can be based only on experience of the past, and if this is not employed—as it was not—the estimate is no better than a guess.

Mr Munby ended with a look at the possibility of calculating the relative return from investment in roads or railways. The best method he can find for calculating the return from investing in roads is that used by the Road Research Laboratory for its study of the London-Birmingham motorway. He has his doubts about some aspects of this ; to an outsider, its calculations of the value to be put on the saving of businessmen's time from faster car travel seems odd enough. What if they choose to take it in the form of sleep ? When one has to deal with such intangibles, attempts to measure the return on investments in transport with precision—and then to base decisions on the advantage of one per cent in the yield—hardly make much sense. If one cannot see a big saving, the apparent advantage is only too likely to fall within the natural margin of error inherent in the whole "guestimation."

TELEVISION

Switching to BBC

BOTH the BBC and ITV take a statistically optimistic view of their own viewers ; the discrepancy usually, however, remains fairly constant, with the BBC over the past year claiming about 39 per cent of the viewers able to receive both channels and the commercial companies about 67 per cent. Now, with the total television audience estimated at 41 million people, of which 38.5 million can choose between the networks, the BBC's latest figures (for the last quarter) claim that 45 per cent of those able to choose viewed BBC. The corporation points out that this cannot be due entirely to the actors' dispute with ITV, because in October, before the strike began, its statistics already showed a 5 per cent gain over October, 1960.

The Television Audience Measurement figures, on which the commercial television contractors rely, agree that there was a swing towards the BBC during October and November, as indeed there had been to a less marked extent in the same quarter of 1960. TAM as usual apportions a higher share of the total to ITV : 64 and 61 per cent in October and November respectively, compared with the 57 and 54 per cent of multi-channel viewing attributed to ITV by their rival. Two different methods of audience measurement—meter versus interview with "aided recall"—are involved. But whatever the absolute percentages the real test of the BBC's increased powers of attraction will be whether they consolidate their gains when the star performers return to commercial television.

GERMAN SHARES

Quotation for Commerzbank

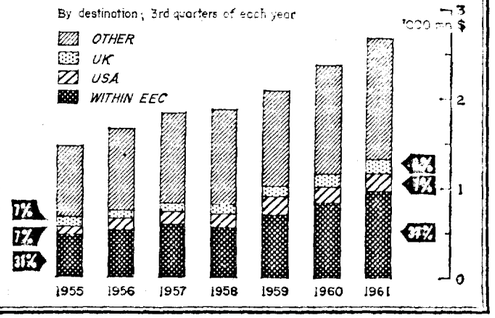
COMPLETING the first quintet of German shares to receive a postwar London quotation is Commerzbank, the smallest of the "Big Three" German banks. As with most of the other shares, dealings will be not only in the DM100 and DM1,000 shares but also in deposit certificates of DM10 nominal value. The latter will be made available through S. G. Warburg. On the basis of the German price of DM610 for the DM100 shares, the certificates should be dealt in at about £5 11s., to yield 2½ per cent on the forecast of a maintained dividend of 16 per cent. Commerzbank, like other German banks, has many more strings to its bow than its British counterparts, for besides its normal banking business it plays a leading part in dealing in securities, acts as an issuing house, is a sponsor of unit trusts and engages in hire purchase finance and mortgage lending. In addition, it holds a substantial stake in many leading German companies, including a 25 per cent interest in the two leading multiple retail stores, Rudolph Karstadt and Kaufhof.

QUOTED IN LONDON*

	Date of intro-duction	Price on intro-duction	Current price	Yield, per cent
Thyssen-Huette	July, '60	63/–	42/6	5·0
Bayer.....	Feb., '61	£73½	£59	2·7
Kundenkredit..	Nov., '61	96/–	96/3	3·0
Hoechst.....	Nov., '61	53/6	48/3	3·3

* All prices are for DM. 10 Deposit Certificates except Bayer which is quoted in DM. 100 shares.

As with most German companies its record of growth in both assets and profits over the past decade is impressive—as is the increase in the dividend rate from 6 per cent in 1952 to 16 per cent. But last year's profits may not have been as buoyant as those for 1960, partly as a result of the increases in the reserve requirements of the central bank, though over the year as a whole the volume of advances increased substantially. The shares offer a useful spread of investment in the German economy but as the table shows the prices of German shares have fallen sharply in the past six months, and investors must weigh the low yields not only against the political uncertainties but also against the evidence of a slackening in the rate of expansion in the common market countries.



BREAD

Bakers' Dozen

WHEN the bread subsidy was removed, some bakers believed that they would not get tenpence for a large loaf. Since last summer they have charged a shilling, but

Common Market Exports

The total value of exports from the Common Market has gone up by 82 per cent since 1955. Trade between member countries has increased even more : by 113 per cent. Although 7 per cent of the total is still going to the United States, the value of their exports to Britain has increased by less than a half and its share has dropped to under 6 per cent of the total.

the contraction in demand for bread appears to have got no worse. This week, Ranks' British Bakeries decided to put a further halfpenny on the price of a loaf in February; the small 14-ounce loaf will then cost about the same as a loaf twice its size before the removal of subsidies in 1956. Other bakers are expected to follow suit, if only from sheer force of habit. There will then have been four general increases of a halfpenny in two years.

Master bakers began to hint at a penny rise in the cost of a large loaf when wheat prices started to recover and the price of flour was raised towards the end of last year. Canadian wheat, of which over two million tons is taken by British millers, is still cheaper than in 1956, though at £29 a ton it is £2 dearer than a year ago. English wheat flopped to £18½ a ton last year and millers took advantage of the opportunity to build up their stocks. They normally absorb about 1¼ million tons. In the period July-September when the wheat trade was at its height, the price of English wheat was just over 10s. a ton dearer than a year earlier. It now costs about £4½ a ton more which has presumably given rise to the exaggerated talk about loaves costing 1s. 6d. British Bakeries is at pains to mention wages, national insurance and pension contributions and fuel bills in its recital of the factors that have influenced its decision. There is, however, a fair chance of greater consumer resistance to any rise in price above a shilling for a standard mass-produced loaf whatever the cause.

CONSUMER TESTING

BBC's "Which?"

THE idea of a television programme based on comparative tests of a whole range of products is one that has been tossed around the BBC for several years. Now the corporation has settled all but the final details of an agreement with the Consumers' Association by which it will produce a monthly television programme and a shorter sound radio version based on tests reported in the latest issues of CA's redoubtable magazine "Which?". This will give the BBC the opportunity to film the tests while they are actually in progress: will viewers have the joyous experience of actually seeing heavily advertised products collapse under test, like the gear lever that came away in the driver's hand during "Which?"s recent report on cars? This could explain the consternation with which the BBC's announcement was generally received among shops and manufacturers, although it may imply a certain lack of confidence in the ability of all products to stand up to public investigation. The importance of this venture, basically, is that it will transmit the results of "comparison shopping" to a really big audience, which it has never enjoyed, for example, in the United States. The BBC may have some fun, too, in offering viewers a chance to check some of the claims in ITV commercials.

Two points emerge from the long series of tests that Consumers' Association has now carried out on a variety of goods from toy trains to cars. The first is that while few of the products of big manufacturers (and so big advertisers) are wholly bad, many are marred by careless detail and others are unnecessarily expensive making them a poor bargain for the shopper who innocently believes that higher price means a better product. The second point is that the best product has often been one made by an obscure manufacturer. If the BBC's new programme carries this information to a mass audience that would never dream of subscribing to "Which?", then it may bring about a tightening in quality control inside British factories—which will in any case be necessary if they are to compete in the common market—and go some way to redress the balance between the big and the small advertiser. Is this what the programme's critics fear?

HOLLAND

Off the Boil?

A correspondent writes:

ALTHOUGH the Dutch authorities are already being urged in some circles to impose official curbs on spending this year, they have no present intention of doing so. The economy is still overheated, but it is becoming less so, and there are marked contrasts with the two previous postwar occasions on which Holland experienced an official curtailment of spending. The first was after the Korean war when Dutch external finances were dangerously weak; the second was in 1956-57, when a serious "liquidity leakage" occurred as a result of a sharp expansion in short-term municipal debt.

Today, Holland's external finances are strong—they were so strong last March that the guilder had to be revalued together with the mark. In addition to the official reserves of $1,730 million at end-November, the commercial banks still hold considerable funds abroad, though as a result of losses after revaluation these were run down from $507 million at the end of March to $333 million at end-October. The Dutch position in the International Monetary Fund is strong, and any amounts contributed under the new lending scheme will continue to figure fully in the Dutch foreign exchange reserves. Finally, the municipal floating debt has now been reduced to normal and there is no longer any significant increase in liquidity from this source.

For these reasons, although the Dutch authorities expect the current account balance to deteriorate, they hope to take it in their stride. If it wishes, the government can always drain the capital market by means of consolidation loans, and the Netherlands Bank has the power to apply quantitative restrictions on bank loans. Moreover, there are already signs of some slowing down in industrial investment, largely because productive capacity in several instances has outgrown the supply of labour and here and there even appears to be outgrowing demand. A spectacular example is Verolme's United Shipyards, which after a period of feverish expansion, has now officially embarked on a period of consolidation. It is therefore to be expected that Holland's boiling economy will soon enter into a natural cooling-off period.

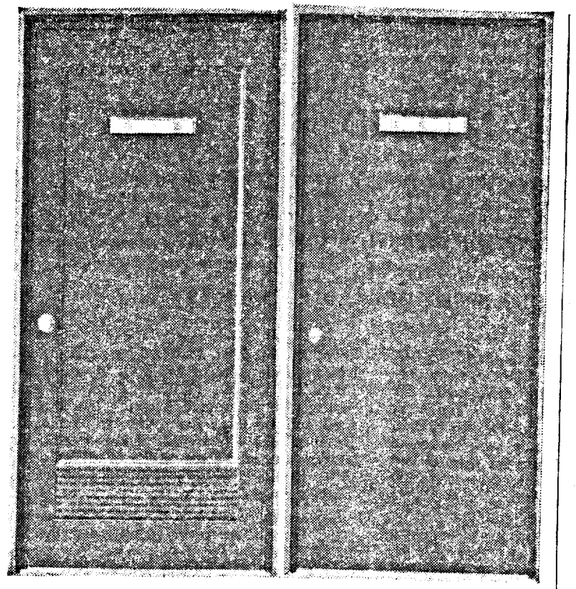
FISHING

Who Owns "Fairtry"

A NOTE in our issue of December 16th under the heading "Hands Across the Humber" discussed recent moves between the two rival groups, the Ross Group and Associated Fisheries, for strengthening their operations. We are asked to point out that the "Fairtry" ships are owned by Messrs. Chr. Salvesen & Co. Ltd. and not by the Ross Group and that "Fairtry" fish is caught and processed by Fresh Frozen Foods Limited, a subsidiary of Messrs. Chr. Salvesen & Co. Ltd. under their registered trade mark "Fairtry," while the Ross Group is concerned solely in the selling of the fish.

SHORTER NOTES

Further changes have been announced in the disposal of surplus rubber from the British and American stockpiles. After discussions with producers who objected to the changes made at the end of October, no sales will be made when the average price of grade one rubber is below 23½d. a lb in the preceding month, unless there is a danger of serious deterioration. Spot rubber has recovered from a low point of 22½d. to 24½d. a lb.



★

Trading profits of BTR Industries fell by 37 per cent from £1,416,000 to £880,000 in the year to September 30th and the ordinary dividend has been cut from 15 to 13 per cent. The fall in profits is due to the substantial losses made by the Microcell subsidiary.

Which door to profits?

These doors look alike; only the lettering makes them different. But behind one is a company president, behind the other a broom closet.

The rich profit of trade with Japan often lies behind such unfamiliar doors. Opening the right ones to the international businessman is the job of Mitsubishi Shoji.

This big general trading company represents 30 Mitsubishi companies in foreign trade. Products of Mitsubishi companies carrying the Three Diamond mark cover the entire range of light and heavy industry.

For 90 years Mitsubishi Shoji has been showing the international businessman the profitable way to trade in Japan. Its branches and affiliates are in all the world's trading centres.

these heroic-style Greek-type laurels **FREE**

— simply for saving your Company £5,000 a year or more

It wants only someone with an idea. The *someone* could be you. The *idea* could be any one of the many computer-based scientific management techniques used by C-E-I-R—techniques which have already saved literally millions of pounds for commercial, industrial, and government organizations.

In the world of business *now* are a number of young and middle-aged men who have gone to the top, and stayed there, because they saw entirely new (and some of them quite revolutionary) ways to step up company profits to heights once thought impossible. They weren't idle visionaries. They were people like yourself, with practical foresight. The foresight to discuss possibilities with C-E-I-R—pioneers in the use of computers for the solution of practical commercial problems, and the largest organization of its kind in the world.

Whether or not you are already conversant with the techniques listed below, ring up C-E-I-R about them—there isn't a business in the whole wide world which could not benefit from one or more of them. Just ring CHAncery 1551.

The well deserved laurels might yet be yours.

COMPANY MEETINGS

LLOYDS BANK LIMITED

SIR OLIVER FRANKS ON BANK'S CONTINUED GROWTH DESPITE RESTRICTIVE FACTORS

COUNTRY'S ABILITY TO MEET CHALLENGE OF OVERSEAS COMPETITION

ENTRY INTO COMMON MARKET WOULD SPEED DESIRABLE CHANGES

The Annual General Meeting of Lloyds Bank Limited will be held on February 9th at the Head Office, 71 Lombard Street, London, EC3.

The following is the Statement by the Chairman, **The Right Honourable Sir Oliver Franks, GCMG, KCB, CBE,** which has been circulated to Stockholders with the Report and Accounts for the year ended December 31, 1961:

This is the last time that, as Chairman, I shall be able to address the shareholders of the bank. It is with real regret that I lay down the office. As you know, I am retiring from the Chair because I decided that I should return to Oxford University.

It is a source of happiness to me that my colleagues have invited me to remain on the board and continue to serve the bank in this way. My years of office have been an enjoyable and most satisfying experience, for throughout I have received the support and confidence of the board, the general management and the staff of the bank. Your bank is a great business and anyone who is asked to assume the office of Chairman must always feel it to be a very great privilege.

You will know from public announcements that the board have invited Mr Harald Peake to succeed me at the conclusion of the forthcoming Annual General Meeting on February 9th. I wish him all good fortune and believe that under his direction the bank will continue to prosper and grow year by year. He has a wide experience of industry, particularly through his period of service as chairman of the Steel Company of Wales. He has been a member of the board since 1941 and was appointed a Vice-Chairman in 1947, a Deputy Chairman last April.

When these changes were in contemplation Sir Jeremy Raisman, GCMG, GCIE, KCSI, for many years Deputy Chairman of your bank, let it be known that he did not wish to be considered for the Chairmanship. It is good to know that Mr Peake will continue to receive from him the strong support which I have enjoyed.

The board appointed the Right Honourable Viscount Runciman of Doxford, OBE, AFC, DCL, DL, a Vice-Chairman last September. He has been a valued member of the board since 1932.

We have sustained a great loss during the year by the death of Mr L. B. Robinson, who was chairman of the Consolidated Zinc Corporation Limited. Death came to him in his prime and we greatly miss his wise counsel. He had endeared himself to all his colleagues.

During the year two members resigned from the board to fill public offices of high distinction. The Right Honourable Viscount De L'Isle, VC, GCMG, DL, left us to become Governor-General of the Commonwealth of Australia. He took with him all our good wishes. The Right Honourable Viscount Amory, PC, GCMG, a Vice-Chairman, resigned last September when he became High Commissioner for the United Kingdom in Canada. We are very sorry that public duty has taken him from us again so soon.

We welcome Field-Marshal Sir Gerald Templer, GCB, GCMG, KBE, DSO, and Mr Ian W. Macdonald as directors. Field-Marshal Sir Gerald Templer is chairman of the British Metal Corporation and before that had had a most distinguished career in the Army both in war and peace. Mr Ian Macdonald is chairman of the National Commercial Bank of Scotland, a bank in which we have a substantial interest and with which we enjoy close and friendly relations.

LOCAL COMMITTEES

During the year we have set up new Local Committees at Aylesbury, Guildford and Nottingham in pursuance of our policy, now nearly achieved, of establishing a country-wide network of these committees. Aylesbury has Lord Luke as chairman, with Lord Lloyd and Mr S. Broughton as members; Guildford, Mr H. L. Roy Matthews, chairman, Mr P. T. D. Guyer, member; Nottingham, Lord Netherthorpe, chairman, Sir Geoffrey Barnett and Mr R. L. Wessel, members.

We have lost by death Lieut.-General Sir Henry R. Pownall, KCB, KBE, DSO, MC, from our Pall Mall committee.

In the North-West Mr R. G. Smerdon, MC, and in Yorkshire Mr F. O. Faull, have retired from their membership of the respective committees after years of good service.

Field-Marshal Sir Gerald Templer was appointed a member of the Pall Mall committee in July of last year and became chairman at the beginning of January. Lieut.-General Sir Ian Jacob, GBE, CB, was appointed to the same committee in October 1961. In South Wales Sir Julian Pode, who has been a member of the committee since January 1959, was appointed chairman in February 1961.

I should like to say once again how much the bank is indebted to its Local Committees for the close and continuous interest they take in the work of the bank in their areas.

Mr M. T. Wilson, MBE, formerly Assistant to the Chief General Managers, has been appointed Assistant Chief General Manager.

Two Joint General Managers, Mr P. T. D. Guyer and Mr L. F. Andrews, have retired, and have been succeeded by Mr W. J. Ingamells and Mr A. T. J. Double. Mr D. H. Turner, General Manager (Executor and Trustee), has also retired and has been succeeded by Mr R. C. Battams. Mr Guyer, Mr Andrews and Mr Turner have each given service of a high order to the bank and we give them our good wishes on their retirement.

During the year, Mr E. J. N. Warburton, Chief General Manager, accompanied by Mr E. G. Woolgar, General Manager (Overseas), paid a long visit to the United States and Canada, this in addition to normal visits overseas by managers of the Overseas Department. Mr Andrews visited Scandinavia and Mr C. B. Howland, General Manager (Organisation), also went to the United States and Western Europe to keep in touch with progress in electronics.

I take this opportunity of congratulating Mr H. B. Lawson, MC, a Deputy Chief General Manager, on the added distinction of being elected the Vice-President of The Law Society.

CAPITALISATION PROPOSALS

Subject to the approval of the shareholders we intend, as has been announced, to increase the capital of the Bank by the issue of one fully paid share for every six shares held on January 5th. The sum of £6,961,901 from the General Reserve will be applied in payment of the additional shares, the Reserve then being brought to £26 million by the transfer of £5,961,901 from inner reserves.

We are thus able to carry yet a stage further the process of improving the relationship between our published capital resources and the total of our deposit liabilities. As shareholders will see from the special circular dealing with the capital operation, the intention will be, in the absence, of course, of unforeseen circumstances, to pay in August next an interim dividend of 4½ per cent actual on the share capital as increased. When the results for the year 1962 are known consideration will be given to the final dividend in the light of those results and of the circumstances then existing.

PROFIT AND LOSS ACCOUNT AND BALANCE SHEET

The profit for the year at £4,935,069 is £329,075 higher than last year and the dividends paid and proposed total 11 per cent which, on the capital as increased by the scrip issue in February, 1961, is the nearest practicable equivalent to the charge for dividend in the accounts for 1960.

Credit restrictions have been with us during the whole of the year under review. We were called upon in July and August to lodge additional funds on Special Deposit with the Bank of England equivalent to a further 1 per cent of our deposit liabilities. Variations in Bank Rate during the year have resulted in a small percentage increase in the average earning rates for overdrafts and loans. Considerations of national policy have continued to affect our ability to lend and the upward trend in our advances was reversed during the second half of the year. This fact, together with an increase in lodgments, has eased the strain on our liquidity and we have been able to end the year without any significant change on balance in our portfolio of gilt-edged investments.

The transfer of the business of our Eastern branches to National and Grindlays Bank Limited was effected on January 1, 1961, and therefore figures relating to these branches do not appear in this year's accounts.

Despite the restrictive factors under which we have laboured, the business of the bank continued to grow during the year. We have continued our policy of increasing our branch representation, which is essential if we are to be ready to meet the needs of developing and expanding areas. During the year we opened 39 new offices. This progress has led to the need for a considerable increase in numbers of staff, and both staff and other administrative costs have continued to rise.

It is with full appreciation of the responsibilities carried by all our staff that I express on behalf of myself and our board our real gratitude for all that has been achieved during the year.

LLOYDS BANK (FOREIGN) LIMITED

Our Foreign Bank and its subsidiaries, Lloyds Bank (Belgium) SA and Lloyds Bank (Cannes) SA, have again had a good year, with increased deposits and advances in all the countries in which they operate. The consolidated profits, after substantial transfers to inner reserves, have made possible the repetition of last year's dividend at the rate of 8 per cent.

Our continental business continues steadily to expand and these results have been obtained despite rising staff costs and another year's difficult trading conditions in France. It is satisfactory to be able to report that the consolidated published reserves and unappropriated profits of the Foreign Bank and its subsidiaries now exceed £1,200,000, the amount of its paid-up capital.

HIRE PURCHASE INTERESTS

In the year to September 30th last the Lloyds & Scottish group, in which we and the National Commercial Bank of Scotland Limited each have a 50 per cent interest, earned a profit of £739,000 against a profit of just over £3 million for the previous year, the dividend paid being 4 per cent compared with last year's 13 per cent. Unearned charges of £9.6 million were carried forward, a slightly larger amount than the year before.

This is disappointing, but in common with many of their competitors in the field of hire purchase finance, the group experienced very difficult trading conditions. The combination of circumstances giving rise to this situation, including the collapse in second-hand vehicle prices and the higher cost of money, are well known. The members of the Finance Houses Association have, however, now recognised the need for more realistic terms. Olds Discount Company Limited and Scottish Midland Guarantee Trust Limited, the main operating companies of the group in this country, have as from October 1st last been merged into one operating company under the title Lloyds & Scottish Finance Limited as was always intended. This and other steps taken by Lloyds & Scottish Limited, the holding company, should strengthen the administration and result in increased efficiency.

In addition to our participation in the Lloyds & Scottish group, we have an investment of approximately 25 per cent of the share capital of Bowmaker Limited. Their accounts for the year will not be available for a few weeks, but it will be remembered that in passing an interim dividend last June the chairman of the company referred to provisions that would have to be made that might absorb the amounts available for ordinary dividends in their financial year which ended on October 31st last.

LAST YEAR IN PERSPECTIVE

I see little purpose in reviewing in detail the economic events of the past twelve months. In broad outline they repeat the same dreary pattern we have seen several times before: another run on sterling; a series of measures to meet the crisis; the reduction of the economy to stagnation. For the moment it is all very important. Yet on a longer perspective these are only passing incidents, another skirmish in the apparently endless campaign to put this country's economy on a sound and stable footing. What matters is whether the campaign makes progress. If we simply pick ourselves up, dust ourselves off, and go on as before, nothing of lasting value is achieved. The really important things are those which are likely to shape our future in a more enduring way.

The year has in fact seen two developments which suggest that in years to come we shall be living in a very different world from that of the fifties. First there is our application to join the European Common Market. Whether in the end this is accepted or rejected, the decision to apply is clearly one of the turning points of our history. Most people in Britain, whether they support or oppose that decision, believe that things will be very different if we enter the Common Market; but I am sure that things will also be very different if in the end we do not enter it. In that event, our fortunes in the sixties and seventies will not be at all like our experience in the fifties. Our struggle to exist, our efforts to find an adequate market for our industrial exports, will become progressively harder and we should be likely to find ourselves driven closer and closer to barter, with British agriculture in the end as the chief sufferer.

From any point of view our decision to apply for membership in the Common Market is of the first order of magnitude. Then there has been a second development of more than transitory significance. I refer to the unmistakable change in the climate of economic opinion in this country. There is a new willingness to admit that the methods by which we have been conducting our economic life have not served us well. There is a general revulsion against stop and go as a way of life: the country has had enough of living on a switchback, with the general direction of movement felt to be, as on all switchbacks, downhill.

BRITISH APPROACH TO ECONOMIC AFFAIRS

It is easy from this changed point of view to criticise the government and point to mistakes for which the government must bear the responsibility, such as the weak budgets of 1959 and 1960 which helped to bring on the crisis and made it necessary once again to make drastic use of monetary measures. But it is more important to recognise that in many of its policies and attitudes the government has merely reflected the prevailing opinion, and given expression to deeply ingrained ideas about the proper way to run an economic system which have been common to all classes and are not to be found, or are not to be found in anything like the same degree, in any other country.

This distinctively British approach to economic affairs has been characterised by a readiness to think separately about ethical and economic considerations and sometimes to remember the former and forget the latter. So often the first question asked about any proposal is not "will it mean greater output?" nor "will it help us to meet foreign competition?" but "is it fair?" I am all for fair play. Distributive justice is a vital part of social morality. But to assure the life of the community it is equally important to recognise that world trade is not a handicap event: in export markets, payment is strictly by results.

When we separate ethics from economics and desire to do the decent thing without at the same time thinking what is the efficient thing, this produces static policies designed to impede change when only by change and adaptation can we hope to live. There has been too general an acceptance of the idea that the economic system exists to produce jobs rather than goods. It is this, as much as the normal political pressures common to all countries, which explains the readiness to bolster up high-cost industries by subsidies, even when the long-term interests of the people concerned would be better served by a carefully thought out scheme of re-training and a planned shift to some activity where productivity is higher and the market expanding. Of course, under the surface a great deal of adaptation has gone on. Ever since the war there has been a steady shift in the distribution of the labour force; away from textiles, mining and agriculture; towards the chemical and metal-using industries which now provide more than half our exports, and to services. But that process of redeployment has on the whole gone on without the encouragement of official policies.

IMPLICATIONS OF THE COMMON MARKET

It is sometimes claimed that the chief advantage of our entry into the Common Market, if it comes about, would lie in the alteration it would bring to our basic attitudes and problems. This is a delusion: by itself entry would not alter the problems. It would only prevent further procrastination in dealing with them and speed up changes which are in any case desirable and have to be made. But the decision to apply for membership is not primarily economic but political, just as the initial decision to create the European Economic Community was the expression of a political purpose.

I have always supposed that the group of men who worked out the Treaty of Rome were animated by a few very simple political ideas. They knew that Western Europe had been torn apart twice in their lifetimes by what they judged to be civil wars and they were resolved to forge so close a unity between their nations that they could never again tear themselves apart and fight. They believed that Western Europe still had a great part to play in the affairs of the world but could not make an

effective contribution if their nations always spoke with divided counsels and separate voices. They were sure that national barriers must be broken down so that men, ideas and goods could move freely in Western Europe, and they worked for growing mutual interdependence of commerce and industry in a common market. Of course the Treaty had an infrastructure or bargain basement. Deals had to be made to secure the consent of the peoples. West Germany had to see the large market for her industrial production and France a market for her agricultural surpluses. Deals like these were very important but they do not express the ultimate significance and purport of the European Economic Community.

In much the same way the negotiations consequent upon our application for membership confront us with political issues. They involve the view that the world is tending to large regional divisions, that the great nations are on a continental scale and that we can no longer go it alone effectively If we are to exert our full power and leadership we need to do it in a wider community, and by history and geography we are part of Western Europe.

Nor do I believe that these political considerations involve separation from the Commonwealth. If we have any genius in political affairs it lies in conjunction, not disjunction; in the ability to avoid the "either—or" and find the way to "both—and." The purpose of the negotiations, given the acceptance we have stated of the political implications of the Treaty of Rome, is precisely to find such an acceptable basis which will bring benefit to all. No doubt again there will be visits to the bargain basement during the negotiations and important matters will be discussed there—perhaps butter, or meat, or wheat. Finding reasonable answers on these or similar subjects is highly relevant to general acceptability but these issues are not in the end what the negotiations are about, even though they may take the most time and appear the most controversial.

EUROPE AND THE DEVELOPING COUNTRIES

Last September I had the good fortune to be invited to attend a conference at Bari at which some two hundred representatives of government, industry, commerce and the trade unions from the Six met to formulate policies on the relation of the Community to the developing peoples for submission to the European Council of Ministers. I listened to a most lively and interesting debate. There were those who thought that the primary concern of the Six should be with the newly independent peoples in what had been French Africa or territory under Italian trusteeship. They expressed a regional point of view on the relationship of the peoples on the two sides of the Mediterranean. But there were others, and these were more numerous, who insisted that the Six had a regional perspective on the whole world and that all the developing peoples in the several continents should be brought within the policy of the Community. And they went on to express the hope that, if present negotiations were successful and Britain joined the Common Market, the enlargement of their interests in the world which would follow would tend in time to still wider membership, even across the Atlantic, so that in the end the European Economic Community might be found to be a basis for the structure of the free world. In such an environment our interests in finding the way to "both—and" would be understood

POLICY FOR PRIMARY PRODUCTS

In this general context of the relationship of the industrialised nations of the Atlantic world to the developing peoples one or two points stand out as important for the Economic Community and for Britain. One is that, while a generous flow of aid and capital assistance is indispensable if the governments of the developing peoples are to provide the rapid material advance on which the aspirations of their citizens insist, in the long run of history trade is even more important than aid, and trade by its nature must be two-way. It is vital that the economic policies of the Common Market should provide for the progressive extension of the same liberal trading policies to food and raw materials as have been applied to industrial products. This issue is already to the forefront in discussions between the founder members. But it also goes to the roots of our economic relationships with Commonwealth countries.

By the repeal of the Corn Laws, Britain became the great free market for primary products. The economies of a number of countries, especially in the Commonwealth, have been shaped by the existence of this market. It is a policy which has served us well. In the nineteenth century we also practised free trade in manufactured goods but have since drifted into a position of high protection among the industrial nations. It is by the removal of this protective wadding that entry into the Common Market is most likely to stimulate our economy. On the Continent, history has taken a different course. The European nations have been traditionally protectionist but have now moved far towards free trade in manufactures, but as yet in manufactures only. If we enter the Common Market, this is bound to mean initially, subject to such exceptions as may be agreed in negotiation, that tariffs are imposed here on foods and raw materials which have always entered freely. From all points of view it is essential that the common external tariff on primary products should start as low, and be reduced as rapidly, as possible.

IS BRITAIN COMPETITIVE?

If in a year's time we were to become members of the European Economic Community, what are the implications for our own economy? In the outside world there are people who believe that Britain in its present state is no longer able to hold it own with other leading industrial nations. This view is perhaps held most widely in Western Europe, where it is often assumed that opening our frontiers to the products of the Common Market would lead to a flood of imports far exceeding any likely increase in our exports to those countries. Hence the suggestion we meet with so often, that a devaluation of sterling against the Western European currencies may prove to be a necessary condition of our joining the Common Market, in much the same way as the franc had to be devalued before France could withstand the competition of her neighbours and make an effective contribution.

As people overseas read the record, they observe that we have been losing our earlier share of the world export market in manufactured goods, even in sterling area markets where we have had the benefit of preferences. They contrast our slow growth in productivity with the rapid advance in most of the Common Market countries. They see too that we have been devoting a smaller proportion of our resources to productive investment. Incessant strikes, usually unofficial and often about trivial matters, and frequent stories of export orders lost through managerial indifference or ineptitude combine to create the impression that as a nation we do not bother to try. And the recurrent crises in the balance of payments, even though our imports are relatively cheap, reinforce the apprehension abroad that we are in a decline.

SOME INTERNATIONAL COMPARISONS

It would be silly simply to brush aside this pessimistic diagnosis. A case can be made and it can only be disproved by a really successful performance in exports. But I do not accept this diagnosis: I believe it ignores relevant facts and rests on a misreading of recent events. There is plenty of room for an alternative view and, without wishing in any way to under-estimate the job to be done, I think it worth while to set out some of the considerations to which I attach importance.

At the least it can be said that, if our rate of growth has lagged behind that of Western Europe, it bears comparison with those of the United States and Canada. And it is a fact that a "stagnant" Britain has up to now provided better living standards for its people than a "dynamic" Common Market. General comparisons of this kind are always difficult but a clear pattern emerges if we look simply at the diffusion of certain amenities and services which nowadays are accepted as material accessories to living. For example, we possess per head of population many more television sets and radios than the Common Market nations, more telephones, and more cars, with the exception of France.

We could say, then, that the striking recent progress in Western Europe is really to be regarded as an overdue making up of leeway. But to say this may only lead to the suspicion abroad that as a nation we are too much concerned with an easy and comfortable way of life, too little with other things. It is more important to point out that our economy has been getting along with only one-third more imports than before the war, and that we have been carrying a higher level of defence expenditure: we have also been contributing more in aid and loans to the developing countries.

BALANCE OF PAYMENTS PROBLEMS

Yet these are in the end only extenuating circumstances: none of them helps directly to rebut the pessimistic view of our ability to earn a living in open competition in the markets of the world. I therefore turn to factors which have a direct bearing on our balance of payments. The first point is that the deficit in 1960, which had its aftermath in the sterling crisis of 1961, was not in itself evidence of any cumulative deterioration. The import surplus of 1960 was of much the same size as that of 1955 and occurred in much the same circumstances. If one examines the various crises in the balance of payments since the war, it becomes evident that imports tend to outstrip exports when the economy is being run almost at capacity, with resulting strains on the labour force, an over-buoyant home market, and a general atmosphere of boom which encourages lavish additions to stocks.

All these factors were present both in 1960 and in 1955. The new element was the virtual disappearance between these years of a favourable balance on our invisible earnings and outgoings. It is difficult to generalise about this heterogeneous subject, but two points stand out as of special importance. The first is the rising trend of overseas expenditure by the government, which the government has now taken steps to arrest. The second is the increased burden of interest on our overseas liabilities which results from the high level of short-term interest rates. If we can reduce the pressure of home demand, and are thereafter prepared not to overstrain the economy, short-term rates can safely be reduced; and this alone will help substantially in strengthening the balance of payments.

A lowering of the pressure of home demand would both help to restrain imports and make an expansion of exports possible by lessening the pull of the home market on resources. The all-important question, to which only time can provide the answer, is whether our poor export performance in recent years can be sufficiently explained by excessive demand at home, with such concomitants as relative indifference to export markets, deferred and unreliable delivery dates and mounting costs of production. If so, the remedy is obvious and is in our own hands. My own belief is that this is broadly the case and that we can succeed if our will is firm and our purpose clear.

BRITISH AND GERMAN EXPORT PRICES

At the same time it must be admitted that there are those who think that the state of affairs in which we have been living, with money incomes steadily running ahead of productivity, has now gone on so long that we have priced ourselves out of world markets. This view surely ignores a great deal of evidence pointing in the opposite direction. No one would seek to deny that in the last few years there has been a weakening of our competitive position *vis-a-vis* the leading nations of Western Europe. But then history did not begin in the middle fifties. It is an instructive exercise to examine the information collected and published by the International Monetary Fund about export prices, expressed in terms of dollars to allow for changes in the exchange rates, and to look at the trends shown for various countries, not since 1955, not since 1949, but since 1938.

The impression one gets is that, whatever the source of our difficulties may have been, it has not been prices. What one finds is that on balance our export prices have moved in step with those of Germany, an important comparison since the external trade of Germany most closely resembles our own.

From 1954 to 1957 the indices for the two countries were almost identical at rather less than double the prewar figure. Since then, in spite of the rise in retail prices at home, our export prices have remained broadly unchanged. In the same period German export prices fell a little more than ours between 1957 and 1959 but have since been moving up again. And in early 1961 exact parity was again restored, at about double the 1938 level, by the revaluation of the Deutsche Mark. Both Germany and Britain, on this showing, have appreciably improved their competitive position in relation to manufactured exports from the United States, where prices have considerably more than doubled since 1938. These two countries have also noticeably improved their competitive position in relation to most of the other countries of Western Europe: with the latter, export prices have risen in much the same proportions as those of American goods.

It may be argued that such trends do not prove a great deal. Prices of the goods any country sells must necessarily be competitive or the goods would cease to be sold: that is a truism. A more significant question is whether, given the price of its exports, a country is retaining its share of the market; and, as we all know, we have not been doing this in recent years. This is not altogether new. Before the war, too, our *prices* seem to have been fully competitive, especially after devaluation in 1931, and yet our share of world markets dwindled. Indeed it has been suggested, as Professor Devons has reminded us, that British exporters might have done better to put up their prices and use the proceeds to improve their marketing methods and organisation.

The level of costs, not of prices, is the fundamental issue. Provided we do what is needed, whether it is to run our economy differently or improve our drive and salesmanship, can we hope to sell more at prevailing export prices? Or has our level of costs become so high that we are now hopelessly handicapped?

BRITAIN STILL A LOW COST PRODUCER

Surprising though it may be to many, one of the few recent attempts at international comparison of costs leaves little doubt that Britain still ranks among the world's low-cost producers. This conclusion was reached by a scientific enquiry conducted in 1960 by the well-known American business research organisation, the National Industrial Conference Board. United States companies among its membership with subsidiaries in Europe and elsewhere were asked to compare the production costs of their home operation with those of the overseas subsidiaries. The study therefore relates only to those industries where there is participation abroad by United States companies. In Britain, for example, the chemical and engineering industries were rather heavily represented; but these are also industries on which we rely for a large proportion of our exports, and it is stated that this bias does not seem to distort the picture.

What is the picture? It is that "on the average United Kingdom total costs were 85 per cent of comparable United States outlays"—a result, it should be stressed, due largely to cheapness of materials offsetting rather high labour costs. For Germany the corresponding figure before revaluation was 82 per cent, and after revaluation it was almost exactly the same as the British. For the countries of the Common Market as a whole the figure was 96 per cent; and since Germany accounts for nearly half the industrial production of the whole area, this implies for the other members of the Common Market taken together a level of costs higher not only than the German and the British but also higher than the American.

On this showing, it would seem that, so far as the general level of costs and prices is concerned, there is nothing to prevent us from meeting the challenge of overseas competition and regaining our former share of world markets. That will not happen unless we are prepared to put right the things we all know to be wrong with our economy; given that resolve, on the other hand, those very defects may be regarded as the hidden reserves that could enable us to mount a real export drive. But it is high time that the hidden reserves were drawn upon. The conclusion must be that the British have not as yet too much to fear from their overseas competitors; all they really have to fear is themselves.

FIRST RE-INVESTMENT TRUST LIMITED

SATISFACTORY PROGRESS

SIR DENYS LOWSON ON THE COMMON MARKET

The twenty-fourth Annual General Meeting of First Re-Investment Trust Limited was held on January 8th at Estates House, 66 Gresham Street, London, E.C.

Sir Denys Lowson, Bart (Chairman), who presided, said:

During the last twelve months the Company has continued to make satisfactory progress. The gross revenue has increased by some £30,000 to £183,812. This would have enabled us to pay an increased dividend, but for the Chancellor's request for dividends to be restricted. In the circumstances your directors are maintaining the total distribution for the year at 14 per cent on the capital as increased during the year by a one-for-eight Rights Issue at 30s. The Ordinary dividend distribution as proposed requires a total of 17.1—76.9 per cent of the total revenue earned by the Company; the Debenture Stocks requiring the first 6.3 per cent of the revenue, and our Preference Stock the next 10.8 per cent of our revenue. The new shares rank for the full final dividend of 9 per cent actual; and the surplus revenue for the year of £23,530 will be added to the carry forward which will thus become £140,904.

As will be seen from the Directors' Report the market value of our investments shows an appreciation of 85.3 per cent over the present book value. Our portfolio is well spread over some 400 different securities; the geographical distribution being: Great Britain 69.58 per cent, Commonwealth 9.23 per cent, United States of America and Canada 17.96 per cent, South Africa 1.44 per cent, Central and South America 1.66 per cent, and elsewhere .13 per cent. Whilst as regards categories: 3.8 per cent are in Bonds, Debentures and Notes, 3.24 per cent in Preference and Preferred Ordinary Stocks and Shares, and the balance of 92.96 per cent in Ordinary and Deferred Stocks and Shares.

THE COMMON MARKET

One of the most outstanding events of the past year must surely be this country's application to join the Common Market. The combined populations of the Common Market total nearly 170 million people, and if other countries from the European Free Trade Area also join, the numbers will increase to approximately 250 million, making a very powerful force which should have a great influence over world affairs both economically and politically.

In the past the volume of our exports to the primary producing countries, such as Australia, India, South Africa and the Argentine, has been affected to a great extent by the volatility of commodity prices. Furthermore, as these countries set up their own secondary industries, so they are able to satisfy their own requirements from their local production; rather than rely on exports from this country. In view of this, it is essential we should try to increase our exports in other directions; and Western Europe with its rapidly expanding market for consumer goods would seem to offer the best opportunity.

It is extremely difficult to forecast the effect on British industry of this country's entry into the Common Market as this will differ according to each particular industry. But obviously those industries protected at present by high tariffs will have to pay greater attention to efficiency to be able to compete. Provided, however, we can keep the cost of our exports competitive—and this can only be achieved by the co-operation of both sides of industry—I think the advantages of joining the Common Market should outweigh the disadvantages; though the period of transition may be somewhat disconcerting.

THE CURRENT YEAR

As regards this Company, I feel that our investments are well spread, and that we can look forward to the future with confidence. I am happy to tell you that from a careful estimate of revenue which we have prepared we shall be disappointed if when we meet you in twelve months' time there is any material variation in our revenue; in fact, some increase is even still possible.

The Resolution for the adoption of the Directors' Report and Statement of Accounts for the year ended October 15, 1961, was seconded by Mr N. C. Selway and carried unanimously; and the proceedings terminated with a warm vote of thanks to the Chairman, Directors and Staff.

United Breweries

LIMITED

YEAR OF CONSIDERABLE ACHIEVEMENT

MR H. L. BRADFER-LAWRENCE ON PROGRAMME OF INTEGRATION

The Second Annual General Meeting of United Breweries Limited was held on January 15th in London, **Mr H. L. Bradfer-Lawrence** (the Chairman) presiding.

The following is an extract from his circulated statement:

The first Accounts of the Group covered only the six months to September 30, 1960. The Accounts now presented cover a full year for all the companies which had joined the Group up to September 30, 1961. Therefore, the comparative figures shown in the Accounts, which are those required by Statute, have little significance. A comparison of the profits before taxation of all our companies for the two years shows an increase of approximately 12 per cent from £2,485,000 for the year to September 30, 1960, to £2,781,155 for the year to September 30, 1961; these figures are arrived at after allowing for the estimated annual cost of financing the cash consideration of companies acquired other than by an exchange of shares. After deducting, from the latter figure, taxation, the interest of existing minority shareholders and a full year's dividends (less tax) on the existing Preference capital, the estimated balance, amounting to £1,310,321, would cover dividends totalling 12½ per cent (less tax) on the existing Ordinary capital approximately one and three quarter times.

1961 has been a year of dynamic change in our industry and for your Company. The trend towards larger Groups by merger and acquisition has, of course, been going on for very many years, but recently the tempo has quickened. This year we have seen established very substantial Groups, which command for the first time really significant shares of the total beer market in the United Kingdom. We, ourselves, have considerably expanded our holdings in the North. We have also acquired substantial new wine and spirit interests, including shipping and agency businesses, as well as wholesale and retail companies.

SALES

The sales of our own beers exceeded those of the previous year by 8 per cent; which is well above the national figure for the whole industry. Increases were recorded by each of the principal trading companies. The sales pattern was somewhat uneven during the year being affected by a number of factors, including—as always—our unpredictable British climate. An unusually mild winter, especially in Scotland, enabled us to get away to a good start during the first six months; subsequently a typical summer somewhat retarded our rate of increase. The price increases, introduced last July in England and Wales to meet ever rising costs, followed by the 10 per cent increase in beer duty applied by the Chancellor over the whole of the country in August, created a temporary check; but their effect appears to have been absorbed. Current sales since October are above those of a year ago. We face 1961/62 with some confidence, provided, naturally, that there is no deterioration in the national economy, or reduction in personal spending power, upon which our business is so dependent.

One of the obvious economic benefits of forming a large Group is the ability to establish wider public demand for leading brands, and a substantial part of our sales increase derived from this source.

The expansion of our wine and spirit interests during the year has already been referred to. We now have a direct interest as shippers, blenders, bottlers, wholesalers and retailers in all the stages of this expanding business. Our various companies handle a number of nationally known brands and agencies, and export to over fifty countries.

Our soft drink investment is quite substantial and has increased with certain brewery acquisitions during the year. Sales, on a comparative basis, have again improved and some progress has been achieved in centralising production. The net return is disproportionate to the specialised work involved, and the position of this activity is being studied by your Board.

LICENSED PREMISES

We have increased our holding of licensed houses and wine and spirit shops during the year, apart from accretions arising from the various mergers which have taken place since October, 1960. Licensed premises, of all types, now number over 2,400. Considerable sums have been spent on improvements and new construction: 9 new public houses were opened during the year and a further 11 are currently under construction. The greater part of our additional purchases have been in Scotland and relate to premises with which our various Scottish companies have traded for a long time.

Our acquisitions have involved substantial cash considerations financed by temporary bank borrowing. An additional £2,000,000 6½ per cent Debenture Stock 1978-80 was therefore placed in December.

Based on last year's results, and bearing in mind our plans for the current year, your Directors decided to recommend a final Ordinary dividend of 7½ per cent, making a total distribution of 12½ per cent (less tax) for our first full year of operations.

HEWITT BROTHERS LIMITED

You will have seen the recent announcement that agreement has been reached with a view to Hewitt Brothers Limited joining our Group. Hewitt, its principal subsidiary, Moors' & Robson's Breweries Limited, and another subsidiary own some 485 licensed premises in those parts of South East Yorkshire, Lincolnshire and Nottinghamshire, with significant concentrations in Hull, Grimsby, Scarborough and Cleethorpes, where we are at present only sparsely represented. This acquisition would thus form an important extension of our principal trading area besides providing a firm base for extensive rationalisation of major business activities.

During the preliminary negotiations which led to the establishment of our Company in its present form, I agreed to be your Chairman for two years only. The Company is now firmly founded as a major unit of the brewing industry and I have, therefore, notified my colleagues of my intention to retire after the Annual General Meeting to make way for a younger man. Your Directors have invited me to remain on your Board, and to become the Company's first President.

The year which I have just reviewed has been one of considerable achievement for our Company. Your Directors wish, therefore, to express to everyone in our Group their gratitude for the fine performances which have contributed to such satisfactory results.

Addressing the meeting, the Chairman said:

Your Board have nominated as my successor Mr E. P. Taylor, our Deputy Chairman. Mr Taylor is a man of whom all of you will have heard, but not many of you may have met. His international record in the fields of brewing, finance and commerce generally is well known. He has been a main driving force in your Company's development since its inception in March, 1960, and I and my colleagues are confident that, under his guidance, we shall continue to prosper and develop as a truly national entity.

The report and accounts were adopted.

BASS, MITCHELLS & BUTLERS

LIMITED

The following are extracts from the circulated Statement by the Chairman, The Rt. Hon. Sir James Grigg, K.C.B., K.C.S.I., to be presented at the First Annual General Meeting to be held at the Grosvenor Hotel, Buckingham Palace Road, London, S.W.1, on Monday, 12th February, 1962.

In the past few years there have been numerous mergers and absorptions in the Brewing Industry, and control has in consequence been, to an appreciable extent, concentrated into fewer hands. A number of the smaller Brewery Companies, foreseeing threats to their independence from some of the more aggressive giants in the Industry and elsewhere, have sought and found more acceptable allies. In other instances old established family concerns, faced with the burden of Estate Duty, have been obliged to sell their interests outright. And finally there are cases of major companies coming together naturally in order to reap the fullest harvest from the combination of traditional excellence and dynamic management which between them they can provide.

The merging of the interests of Bass, Ratcliff & Gretton Limited, and Mitchells and Butlers, Limited comes under the last heading. That two companies bearing such honoured names in the brewing world should thus amalgamate is a major event. It has obviously been wholeheartedly accepted by the Shareholders of both concerns and I have every reason to believe that it has been welcomed by Customers, Licensees, Staffs and Workpeople.

It is of course fortunate that the interests of the two main subsidiary groups are complementary so that there can be no real areas of conflict. We must give the best possible value and service for money. In the long run the public will know exactly where to go to get these.

For my part, I have no doubt that between them the two major subsidiaries and their constituents are supplying products which are unsurpassed, either in range or in quality, anywhere in the country. What is more, each of them is spending large sums on developments which should ensure that there is no falling off in either respect. Perhaps it is permissible to remind ourselves here that the Excise Duty chargeable on Beer is a very large element in production costs, that it is graded in accordance with strength and, in consequence, falls with particular weight on the products of our Group. In spite of this our Beers have to sell at competitive prices against Beers carrying a less burdensome load of duty.

PRODUCTION

A comprehensive survey by outside experts into the production methods, capacities and efficiency ratings of all Breweries within the Group is at present in progress. This will focus attention upon, among other things, the possibility of operational economies and the objects to which money available for new capital investment may most profitably be directed.

At Mitchells and Butlers' Cape Hill installation the new Block Brewery is working well. Already it has achieved a high degree of industrial efficiency. The new Conditioning Tanks are well on their way to completion and these should guarantee a welcome improvement in storage facilities.

At Bass the main capital undertakings during the past year have been to instal more of the plant necessitated by the switch in public taste from the naturally conditioned bottled Beers—Red Triangle and White Shield—to Blue Triangle and Green Shield and, dovetailing with this, to develop increased capacity for canister Beer. The newly constructed Maltings compare favourably with any others in the country, and the economies already in sight are such that it may well prove to be worth while embarking on the installation of additional plant to meet the requirements of the Group.

MARKETING

A considerably enlarged distribution of Bass Blue Triangle and Worthington Green Shield has been achieved and, although we are continuing to supply Red Triangle and White Shield, they are steadily giving way to Blue and Green. There has moreover been a noteworthy acceleration of the sales of canister Beer, so much so indeed that we have some difficulty in present circumstances in meeting the demand.

Mitchells and Butlers' prestige is founded largely on its Mild Ale. This is a high-gravity product and its popularity continues to grow. Then, we are hoping that a wider distribution of Mitchells and Butlers' Export Pale Ale, which is already the most popular bottled Beer in the Midlands, will be possible.

To meet the expanding off sales of Wines and Spirits, we are extending our Stores at Burton, Wolverhampton and Coventry, and we have strengthened our sales organization in this sphere accordingly.

Over the whole field we are studying the possible benefits of more closely integrating our marketing efforts and improving the quality of our representation.

Close attention is being given to the problems of our Houses. Those not trading to good advantage are being sold or alternatively redeveloped, sometimes on our own, occasionally in partnership with others. The object of endeavour is of course to make the best possible use of all the properties within the Group.

ADMINISTRATION AND ACCOUNTS

The increase of £1,245,211 in Group Profit before taxation and before crediting the exceptional duty profit is 16.8% over the previous year, but most of this was earned before the Merger and before the benefits arising from this could be reflected. The two main constituent groups contributed to the increase in roughly similar proportions.

In spite of this increase your Directors have decided to recommend that the final dividend should not be increased beyond the 7% forecast at the time of the Merger. This is in accordance with the wishes expressed by the Chancellor of the Exchequer. It implies that the total dividends paid for the year are covered 2.3 times and that sums amounting to £2,371,320 have been placed to reserve from current profits.

The Group had at the 30th September last readily realizable resources of nearly £9 million. Part of these are earmarked for developments in progress or immediately foreseeable, but even taking this into account, it is a comfort to know that the Group is in such a strong financial position.

PROSPECTS

It is dangerous to prophesy, particularly at a time when so many uncertainties exist. To begin with, the new accounting year showed an upward trend in profits. But in the last few weeks there has been some slowing-up in our trade which is not surprising having regard to the duty surcharge, with its consequent increase of price and the tendency for earnings in industry generally to halt or even decline somewhat. Our prosperity is, of course, closely dependent on the level of the general industrial barometer, and this has undoubtedly been falling in recent weeks. We can only hope that the measures being taken to stop inflation will be successful and that the country may resume its march to full prosperity under healthier and more durable auspices.

Comparative Figures from the Accounts for the year ended 30th September, 1961

	1961	1960
	£	£
Group profit for year before Taxation	8,670,418	7,425,207
Profit on Stocks arising from Duty Surcharge	293,144	—
Taxation	4,546,634	3,699,123
Group Profit for year after Taxation	4,416,928	3,726,084
Interests of Outside Shareholders	45,154	85,270
Preference Dividends	202,617	150,477
Ordinary Dividends	1,797,837	1,656,949
Retained Profits	2,371,320	1,833,388

Copies of the full statement can be obtained from The Secretary, Cape Hill Brewery, Birmingham.

DISTRICT BANK LIMITED

FURTHER EXPANSION OF BUSINESS

FINANCING PROMOTION OF EXPORTS

LT-COL T. MARSHALL BROOKS REVIEWS THE ECONOMIC SCENE

The Chairman, **Lieutenant-Colonel T. Marshall Brooks, DL,** has circulated, with the report and accounts, his statement to the shareholders of District Bank Limited, prior to the 132nd annual general meeting to be held on Tuesday, February 13th, at the Head Office, Spring Gardens, Manchester. In the course of his statement the Chairman said:

You will see from the balance sheet that Current, Deposit and other Accounts show very little change from last year's figure.

Cash, Money at call and short notice, Treasury Bills, Bills of Exchange and Refinanceable Credits—our liquid assets—are £5,892,694 up in total on the year and the item Special Deposit with the Bank of England has risen from £5.2 million to £7.7 million consequent on a further call of one per cent of our total deposits.

Following the fall of £23 million in 1960, to meet the demand for advances, Investments show a further decrease of £4 million this year. All our holdings of British Government Securities are repayable at fixed dates and appear in the balance sheet at less than their market value.

Advances have shown considerable fluctuations during the year, with a strong upward trend in the first half and a corresponding fall in the second half as credit restriction became more effective. Although the year ended with the balance sheet figure virtually unchanged, the average amount lent over the year was £10 million higher than in 1960. The shift of emphasis which I mentioned in my last Statement continued in 1961 with a higher proportion of our lendings going to industry and trade, particularly to production concerned with exports.

PROFIT AND DIVIDENDS

After making the usual provisions net profit for the year at £1,192,456 shows an increase of £110,658 over the figure for last year. The further expansion of our business, the higher average level of advances over the year and higher interest rates have resulted in increased earnings, partially offset by increased expenses. With the amount brought forward there is a sum of £1,769,849 for disposal. Of this total £500,000 has been transferred to Reserve for Contingencies.

We recommend that a final dividend of 8 per cent should be paid, making a total distribution of 16 per cent for the year, the same as for the year 1960. After the appropriation to Contingencies and providing for the dividend payments there remains a sum of £681,849 to be carried forward to the next account.

DEVELOPMENTS IN BANKING

The year 1961 has seen the introduction of a campaign to encourage the use of the banks for the settlement of accounts—household, gas and electricity bills for instance—by people who do not have a banking account.

This scheme is the final stage of the Credit Transfer system which the Clearing Banks have been developing over the past few years, as a convenient alternative to payments by postal remittance, money order or other means. The advantages of this service are considerable, both for those who supply the goods and services and for those who pay for them, and already there are welcome signs that Credit Transfers are meeting a public need. Credit Transfers are complementary to the well proven cheque system and together they provide a comprehensive payments system which is probably without equal in any other country.

As a further step forward to encourage the fuller use of the banks for the everyday settlement of debts, I should like to add a plea for the abolition of the stamp duty on cheques. This was originally fixed at 1d. in 1853, and increased to 2d. during the first world war. The revenue produced is relatively small. This duty of two pence per cheque, although in itself perhaps only a trivial amount, is a deterrent to the extension of the banking habit among wage-earners which it was hoped would follow the passing of the Payment of Wages Act, 1960, an extension which would offer many advantages, including the encouragement of thrift and the avoidance of unnecessary handling of cash.

The Government has already simplified the duty on bills of exchange, and if they were now to remove entirely stamp duty on all forms used for the transfer of money I am sure it would be regarded as a wise and far-seeing measure.

BALANCE OF PAYMENTS CRISIS

The economic scene during the past year has been dominated by a balance of payments crisis which, it seems to me, has failed to arouse a corresponding sense of crisis in the nation. Possibly the frequency with which we have run into balance of payments difficulties since the war has inured us to the alarm call for more exports and less spending at home. Possibly the Government's measures of July were less stern than the nation was braced to accept and the sense of urgent purpose, which we need to make our continuing prosperity safe, was dissipated before it could become the prevailing mood.

We have seen the familiar remedies applied to hold back the demand for goods on the home market. Special Deposits were increased from 2 per cent to 3 per cent; the banks were asked to discourage certain classes of borrower so that advances concerned with exports might be kept up without any marked increase in the total of advances outstanding. Supplemented by the high bank rate of 7 per cent fixed in July, these measures were a repetition of the type of restriction used on a number of previous occasions.

It was, however, something new to see fiscal measures employed in what is intended to be a flexible manner. The surcharge of 10 per cent on indirect taxes was aimed at a reduction of consumer spending power and a corresponding increase in the budget surplus. Whilst past experience raises doubts about flexibility when it comes to reduction of any impost, events may prove this surcharge to be a useful instrument of economic control. Although it has tended to push up prices, it is not so discouraging to capital investment as measures of general credit restraint. Its withdrawal in due course could provide the stimulus for a move forward in national production without over-stimulating demand as happened after the measures of relaxation in late 1958 and early 1959.

In the longer view our situation improved, as the year neared its close, rather on the score of intended action than on action taken. The two long-term problems to be solved, which are interrelated, are the achievement of a permanent increase in the proportion of goods exported and the limitation of the growth of money income to an equivalent growth in total production.

PROMOTION OF EXPORTS

Even under conditions of credit restriction, bank advances for exports have been recognised as one of the categories especially to be favoured so that exports should not be hampered by lack of credit facilities. In the case of exports of capital goods it is often necessary to provide for payment extending over several years after the actual shipment of the goods. Such terms are beyond the unaided resources of most manufacturers, but with the support of guarantees by the Export Credits Guarantee Department it has been possible for finance of this type to be provided by the Clearing Banks, sometimes in co-operation with other City institutions, thus enabling the manufacturer to obtain prompt payment for his goods.

We, in common with the other Clearing Banks, have already undertaken a considerable volume of this medium-term export financing—i.e., lendings with repayment spread over three to five years—but there are limits to what may reasonably be done in this respect, bearing in mind the long-term nature and non-marketable form of the advances. A further problem is that in so many of these cases the banks are asked to commit themselves at an early stage in the negotiations, when a tender is being submitted to the foreign purchaser. Some time may elapse before it is known whether the tender is successful and, even if it is, the advance may not be required until many months ahead. Once the commitment has been accepted by the bank, however, it must be taken into account when other applications for finance are considered. Although we had seen no evidence of export contracts being lost because of a lack of finance, we welcomed the new system inaugurated by the Bank of England in February last under which the banks, subject to certain provisos, are permitted to treat as liquid assets any instalments of such loans falling due for repayment within the following eighteen months. This procedure will enable the banks to provide more medium-term finance for exports than they would otherwise have felt able to contemplate.

It must be remembered that exporting now on terms of payment deferred over several years does little to help towards the current balance of payments, although obviously these deferred payments will accrue in later years. Nevertheless there must be a limit beyond which the accumulation of extended credit would be undesirable on the grounds of national interest.

Even within such a limit, however, there is every possibility of a growth beyond the present figures to an extent which could be embarrassing to the banks if they had to carry the burden largely alone. There is also the question of certain important and valuable contracts where payment terms in excess of five years are required. Finance for such periods is really outside the province of the banks, but a valuable contribution to the solution of this whole problem of export finance, both long and medium term, could be made if the close interest in the matter now being taken by the insurance companies bore fruit.

One of the most encouraging features on the export front is the keen interest in the possibilities of greatly expanded exports to Europe shown by people already selling their products overseas. The recent National Convention of the Export Council for Europe held at Eastbourne was notable for the optimism with which these possibilities were viewed. Well aware of the importance of ensuring that the complex business of selling abroad should be carried through with the greatest efficiency, the Bank itself has been holding courses for branch managers to give them opportunity to discuss the various ways in which we can assist the exporter.

There is little doubt that the decision to negotiate for membership of the Common Market has already awakened a great interest in the new opportunities which membership would bring—as was apparent at the highly successful conference on the Common Market held in Manchester in October under the auspices of a leading firm of stockbrokers. Whilst the result of the negotiations must still be regarded as an open issue, the trading position of this country, if it should *not* become part of the Common Market, could be very difficult. British exports to the Commonwealth have grown but slowly for some time; competition in the sale of manufactured goods to the Commonwealth is already keen and our share of that trade is diminishing. The European Free Trade Area is geographically at a disadvantage compared with the Common Market: its total production shows a slower rate of growth and its disparate economies make the benefits of mass marketing difficult to achieve. Nor can we depend on the establishment of a permanent surplus of trade with the United States of America, since external trade is of much less significance to them than to us and fluctuations in their domestic market tend to produce disproportionate reactions in regard to the purchase of imports.

It appears, therefore, that our application for membership of the Common Market was a necessary move if we are to put ourselves in the best position for expanding exports. Such an expansion is essential not only to pay for the rise in imports, which must accompany a rise in total production, and to make good the reduction in net income from the various services which make up the "invisibles," but also to enable us to play some part in providing the capital needed by less developed countries. Even so, it is too easily assumed that the greater competition which membership would bring into our home market would automatically solve the other long-term problem of inflation.

CURBING INFLATION

There are already signs that the process of inflation may have begun to work in the Common Market as it now constituted. The rise in earnings has overtaken the increase in production in some countries and pressure on price levels is becoming apparent. Although we have from time to time taken faint comfort from the fact that other people's inflation was worse than our own, it is the cure for the ailment itself that we most need. Loss of protection for our home market may in due course keep down prices and improve efficiency through increased competition, but we shall fare better if we take preventive action now rather than wait until we are forced to accept a drastic cure. It is for this reason that the establishment of a National Economic Development Council is so welcome. The idea of a rational co-operative effort to expand production whilst maintaining a steady price level seems simple and desirable enough. Even though the timing and manner of presentation may have been criticised, the idea itself should appeal to all sections of the community if long-term advantage is to carry any weight as against immediate gain.

There are, after all, precedents at home and abroad which have shown that co-ordination of industry's plans can be effected without the rigidity of detailed controls and without losing the efficiency that is fostered by keen competition. It seems to me, therefore, worth putting to the test the idea of co-ordinating investment plans on a national scale, Government by itself cannot make the countless decisions as to investment, and lack of co-ordination within industry in the past has led at times both to a surplus of capacity and to critical shortages.

More important even than better planning of investment is the possibility that a sense of national purpose might evolve from this placing of the common interest in the forefront of industrial endeavour. If both labour and management do co-operate in some long-term thinking about industrial expansion, it is conceivable that a more rational approach to the long-term problem of cost inflation might be found. The urgent need for a new approach to this and other problems leads me to express the hope that the National Economic Development Council will become influential enough to play a major part in economic affairs.

Should the new approach to our problems, which the Council embodies, fail to work, there is still a chance that the policy of restraint may have some success. Smaller profit margins will in themselves encourage the search for greater efficiency in methods of production and in the use of labour. If the official forecast that expansionary forces will promote total demand in the early part of 1962 proves well founded—as we must hope—our export prices might then become more competitive since there is much new capital equipment which has yet to be put into full production. Whether the Common Market becomes our "home market" or not, greater stability of prices is fundamental to our economic progress.

THE IMMEDIATE PROSPECT

There are, then, grounds for taking a moderately optimistic view of the prospect for the next twelve months. The growth of the money supply seems to have been brought under control; the squeeze on profit margins should increase the resistance to a rise in the money costs of production and export markets seem likely to benefit from a rising volume of world trade. Whilst lack of positive incentives to export may be regretted, the pressure of competition may well be submitting the industry of this country to the discipline which could rescue us from the perils of a domestic market made unduly attractive by inflationary trends. The essential improvement in export figures is more likely of achievement through greater competitiveness in prices than from any other cause. Given stability of prices, our exports stand to benefit from any recovery in the U.S.A. and from the impetus given to European trade by prospect of Britain's membership of the European Economic Community. From both quarters a high level of demand should help the Commonwealth at least to maintain its overseas income.

Some of Britain's own industries, as for example the cotton industry, are of course looking for some gain from the possible equalisation of tariff protection as between Britain and Continental competitors. Commonwealth countries have not been slow to express their concern at this possibility. Whilst it would be over-optimistic to expect our competitors to view the problems of developing Commonwealth countries with the generosity displayed in the past by our own Government, there is, nevertheless, a growing recognition abroad that liberal encouragement of industrial exports from developing countries is a sounder basis for world trade and political harmony than perpetual grants in aid. It will take time to negotiate adequate provisions for Commonwealth exports in the newly prosperous Europe. But the Rome Treaty can be made to operate liberally; its preamble does "confirm the solidarity which binds Europe and overseas countries" and expresses the desire "to ensure the development of their prosperity."

THE ROYAL BANK OF CANADA

RETURN TO TRUE FLOATING EXCHANGE RATE ADVOCATED TO ENSURE MONETARY AND FISCAL INDEPENDENCE

MR. W. EARLE McLAUGHLIN, PRESIDENT, RECOMMENDS TAX REBATES TO EXPORTERS TO MEET CHALLENGE OF EUROPEAN COMMON MARKET AND POSSIBLE LOSS OF COMMONWEALTH PREFERENCES

The ninety-second Annual General Meeting of Shareholders of THE ROYAL BANK OF CANADA was held on Thursday, January 11th at the Head Office in Montreal. In his address **Mr W. Earle McLaughlin,** President, stressed the need for a re-examination of Canada's foreign exchange policy and urged a return to a true floating exchange rate, the adoption of which, he maintained, would not in any way mean commitment to a so-called "premium dollar." "Canada's experience is worthy of special attention in any discussion of exchange rates," said Mr McLaughlin, "if only because since the end of the Second World War she has experimented with all possible varieties of policy in this field. In this range of policy possibilities the most enlightening are the varieties of floating rate experienced since September 30, 1950. From that date until December 1960, Canada had a true floating exchange rate. From the 'Baby Budget' of December 20, 1960 to June 20, 1961, this true floating rate was abandoned in favour of what we might call a nudged floating rate. With the final Budget on June 20, 1961, a third variety of floating rate appeared with the announcement that in the Government's view, the rate should move to a 'significant discount' but there was no definition of the term 'significant' and no clear indication of the amount of discount that would be regarded as satisfactory. However, since that time, the Government has actively intervened in the market and the nudged floating rate has clearly given way to a manipulated floating rate."

MANIPULATED RATE UNDESIRABLE

"I do not believe that anyone really accepts the present system as a permanent exchange rate policy for Canada. Surely the alternatives to be weighed are either a true floating rate or a fixed rate which we are prepared to defend against pressures upward or downward. It is probably more important for exporters and importers to know their costs in advance than to have a so-called 'favourable' rate of exchange. However, because a true floating rate encourages breadth in the exchange market, it is not only more stable than a manipulated rate but exporters and importers can protect themselves against any rate movements by low-cost hedging operations in an efficient futures market. In contrast, the system of manipulation gives us the worst of both worlds. To the extent that the authorities are successful in forcing movements in the rate, general uncertainty thins out the market and may make it especially difficult and costly for exporters and importers to hedge against future movements. To the extent that a manipulated rate appears, at least temporarily, to have come to rest at some level, we are subjected to the speculative pressures that beset countries with fixed rates. On the one hand, we may find that as soon as the Government appears to acquiesce in some given rate of discount, postponed transactions are completed, timid capital comes out of hiding and we experience a massive inflow of foreign funds. On the other hand, we may find that the effect of some future announcement may be greater than expected, or other factors may intervene to force the rate down further and faster than the authorities would like. In this case, the flow of funds will be outward and any attempt to arrest the downward movement of the Canadian Dollar will require the release of gold and U.S. Dollars from our exchange reserves in embarrassingly large amounts." Examining a "fixed" rate as a possible alternative, Mr McLaughlin pointed out that the adoption of such a policy would inevitably lead to an exchange control age which would mean the end of economic freedom in a large and critical section of the Canadian economy.

"FIXED" RATES NOT NECESSARILY STABLE

"In fixing an exchange rate, no-one knows what the appropriate rate is until it is tested in the free market: and even a rate chosen wisely will remain the appropriate rate only so long as our merchandise trade, other current items, foreign investment and other capital flows, are unchanged. Changing the rate, when conditions change, can only cause more confusion. Instead of the smooth day-to-day adjustment of a true floating rate we may find that we have a so-called 'fixed' rate of exchange which is subject from time to time to shifts in value. Such a rate invites instability, uncertainty, and speculative excesses, and the movements of the rate may nevertheless fail to have the desired effect. If Canada were to return to a fixed rate, she would be faced with swings in her exchange reserves and consequent pressure on her exchange rate, similar to those now faced by the United Kingdom, Germany, Switzerland, and the United States. Canada simply does not have the economic depth to withstand such a buffeting. The only exchange rate policy suitable to the special conditions that exist in Canada is to return to a true floating rate. However, committing ourselves to a floating rate free of all direct Government interference does not in any way mean committing ourselves to a so-called 'premium dollar.' A return to a true floating rate would greatly ease the present and future difficulties of Canada's monetary authorities."

EUROPEAN COMMON MARKET

Discussing the European Common Market, Mr McLaughlin remarked that Canada would have to take steps now to meet the new competition and the possible loss of Commonwealth preferences. He noted that Canada's was a high cost economy, but that despite a high wage level, a key to future success was higher productivity and efficiency at all levels of business. "One of the greatest handicaps faced by Canadian exporters," he said, "was the Canadian tax structure," which he felt robbed exporters of incentive. He recommended a Royal Commission be set up to examine the whole range of Canadian taxation. At the same time he urged that attention be given to the possibility of tax rebates as incentives to Canadian exporters.

LIEBIG'S EXTRACT OF MEAT COMPANY LIMITED

GROWING DEMAND FOR BRANDED PRODUCTS

The ninety-seventh annual general meeting of Liebig's Extract of Meat Company, Limited will be held on February 8th in London.

The following is an extract from the circulated statement of the chairman, **Mr K. R. M. Carlisle:**

Last year I expressed the hope that profits would show some expansion, provided no shocks were forthcoming from primary activities overseas. In fact, as the year progressed further, it became apparent that, with the exception of excellent results in the United Kingdom, profits were not going to come up to expectations.

Substantial losses were incurred on production of canned meats and meat extract in Argentina and, to a lesser extent, in Paraguay, while profits from these activities in Southern Rhodesia and Tanganyika did not fulfil expectations. Returns from farming in Argentina, Paraguay, Uruguay and Southern Rhodesia were, however, slightly better in total than those brought into the previous year's Accounts.

Profits from the Continent of Europe were much lower than in the previous year.

The Group Profit before taxation was £2,059,031 being £129,000 less than for the previous year. Your Directors recommend the payment of a Final Ordinary Dividend of 11 per cent, less income tax.

OXO LIMITED

Trading in the United Kingdom, on every side of the Company's activities, was highly successful.

Sales of the OXO Cube were again greater than ever before and sales of products under the FRAY BENTOS label continued to expand. FRAY BENTOS Corned Beef has now reached the stage where it is the clear brand leader, commanding a greater share of the consumer market than all other brands together. Sales of Stewed Steak have progressed satisfactorily. New FRAY BENTOS products, particularly Steak & Kidney pie, the quality of which has been widely acclaimed, were successfully introduced during the year.

As regards marketing, we have been able to consolidate a leading place for ourselves, especially in the application of new merchandising techniques. Co-operation with all sections of the trade has reached a very high level, and the resultant organisation of sales promotion campaigns has enabled us to feature prominently in the all-important battle for product display.

The new methods of distribution to which I have referred on a previous occasion are now fully operative, and the service which we are able to give to our customers is widely recognised as second to none.

OXOID Culture Media continue to enhance their reputation throughout the world, and the manufacturing unit was re-organised during the year to meet the demands of increasing sales. Products under the OXOID name now serve humanity in no fewer than sixty-eight countries.

CONTINENT OF EUROPE

I referred in my opening paragraphs to the lower profits earned on the Continent, this despite higher sales. The reasons for this fall in earnings include higher administration costs resulting from substantial reorganisation, also heavy development and promotional expenditure in certain areas coupled with increased marketing and selling costs generally in the face of stiff competition.

Our products have been on sale in the Common Market countries for the greater part of a century and with the passing years their variety has increased. We now have a network of sales and manufacturing companies covering all the countries in question. We have thus been active on the Continent for some considerable time and it is unlikely that the Treaty of Rome will lead directly to any dramatic changes in our affairs. The scope for rationalisation and standardisation is however considerable and these aspects are being closely watched.

The Accounts for the current financial year are expected to include better results from the United Kingdom and Africa, but how we shall fare in South America, with its background of increasing costs, and on the Continent of Europe is as yet uncertain.

WILLIAMS DEACON'S BANK LIMITED

THE ECONOMIC SCENE: NEED FOR CLEAR THINKING AND LEADERSHIP

FINANCE FOR EXPORTS A MAJOR ISSUE

SIR ERIC A. CARPENTER'S STATEMENT

The Annual General Meeting of Williams Deacon's Bank Limited will be held on February 8th in Manchester.

The following is the statement by the Chairman, **Sir Eric A. Carpenter, OBE,** which has been circulated with the Report and Accounts for the year ended December 31, 1961:

From the Report in your hands you will see that during the year the Board suffered a very great loss through the death of Sir William Crawford Currie. Sir William had been a Director of the Bank for twenty-two years, for ten of which he held the appointment of Deputy Chairman. He was a man of unfailing good humour, and had a profound knowledge of the shipping industry. We shall miss his wise counsel and experience. In addition, Mr Leonard A. Elgood, who for more than fifteen years had rendered conspicuous service to the Bank, decided to relinquish his seat on the Board. I would like to record our deep appreciation of the services of both these Directors, whose experience and sound judgment have been invaluable.

During the year we have welcomed to the Board Mr A. H. Allman, Mr J. O. Blair-Cunynghame, Mr C. E. H. Charlton and Mr C. E. Harrison. The very wide business experience of these new Directors will add great strength to the Bank and in your name I offer them a very cordial welcome.

In February Mr Harold S. Kershaw intimated his desire to relinquish his duties as Deputy Chairman, a position which he had held for eleven years, and I would like to express my thanks for his loyal support and to acknowledge the satisfaction which it gives us to know that we shall still have the benefit of his experience as a member of the Board. Mr Kenneth G. Holden was elected Deputy Chairman of the Bank.

In November we heard with regret of the death of Mr Harold Bradburn, a former General Manager and Director, who retained his interest in the Bank's affairs to the end of his long life.

In July Mr Allman retired from the post of General Manager, a position which for the previous four years he had held with distinction, and I would like to place on record our appreciation of the very great ability with which he conducted the affairs of the Bank.

In succession to Mr Allman as General Manager we appointed Mr R. B. Mallory and Mr R. G. Upton, previously Assistant General Managers, and to them I offer my very good wishes for success in this office. I assure them of our wholehearted confidence and support.

In furtherance of our policy of expansion we have opened branches at Alvaston (Derby) and Wolverhampton, and new premises have been constructed at Moorside (Swinton). We have also acquired premises at Brighton, Winchester, Swindon, Gloucester, St. Helier (Jersey), Handforth (Cheshire), Allestree (Derby), Mapperley (Nottingham), and Sheffield (University Branch), where branches will be opened in the near future.

DEVELOPMENT OF CREDIT TRANSFER SYSTEM

During the year further progress has been made in the development of the Credit Transfer system. This service has now been made available to the public generally who can settle their accounts by payment over the counter of any bank provided that the name and the bank of the creditor are known. Some of the nationalised industries are already incorporating a Credit Transfer form in their quarterly accounts and this has proved of immense help. The system is spreading into industry and very soon the facilities afforded will be in widespread use for the settlement of industrial and commercial accounts as well as the ordinary bills of tradespeople and private individuals. The effect of all this is, of course, somewhat revolutionary and consequently may take a little time to become fully established, but what the banks are offering to the public is a low cost method of debt settlement, only made possible in expectation of the application of electronic accounting, now in its development stage. When added to the normal banking facilities available to account holders, the new system means that the banks are now providing the public with a money transfer service far removed from its former exclusiveness and one that will bear comparison with that of any other banking system in the world. We shall yet see many changes as we move to full electronic accounting in which the use of code numbers will play an increasingly important part, but given the full co-operation of the public we hope to effect the transition with a minimum of disruption for the ultimate benefit of all.

THE ECONOMIC SCENE

There can have been few occasions on which the outlook for the economy in general, but for bankers in particular, has been so fraught with difficulty and so obscure as to its outcome. Seldom has there been a time when clear thinking was more needed, and a decisive lead from those in authority more essential if we are to make realities of the wraith-like opportunities which surround us. There are many phases of our economic life to which attention could be directed. I propose, however, to concentrate on those items most closely related to banking and to focus attention on the issues with which we are faced at the present time.

It is perhaps symptomatic of the economy that nowadays we do not ask if there will be an economic crisis but when there will be one. This may well be the inevitable consequence of a system of government based on universal suffrage which politically apparently involves the maintenance of over-full employment. For those of us who realised the implications of the continuing deficit in the balance of payments with its adverse effect on the reserves masked as it was by an inflow of funds on capital account, there was only one answer even though there were several remedies. Of the measures adopted those which most affected the banks were the raising of Bank Rate to 7 per cent, a further call for Special Deposits of 1 per cent, and a directive from the Chancellor that advances should be restricted. The main factor in restoring the country's depleted reserves, however, was undoubtedly the granting of a loan of £535 million by the International Monetary Fund. From the reduction in bank advances, which in our case amounted to 10 per cent, it would appear that the measures as they relate to the banks have been successful. I think it should be realised, however, that advances had already reached a point where at least a pause was indicated, and at which, with a down-turn in the level of business activity, some reduction could be looked for, and it can be said with a certain amount of confidence that the present fall is as much due to natural processes as to any pressure which has been exerted in compliance with the Chancellor's admonition. But there are wider implications. If when bank lending has been restrained and advances have, in fact, been reduced to a level lower than expected, and when in spite of Special Deposits the banks have increased their Government investments and still remain comfortably liquid, there remains the need for a wages pause, and the balance of payments position stays unsatisfactory, then it would seem that of the action taken by the authorities, that applied through the Clearing and Scottish banks was to a large extent irrelevant. I feel that in these circumstances certain lending restrictions could be relaxed, and there is a good case for the return to the banks of a substantial proportion of the Special Deposits. I particularly urge this as I fear that if Special Deposits are retained when

they are not required, the value of the device will be much impaired when it is appropriate that restraints should be applied in the future.

PROBLEMS AGGRAVATED BY HIGH BANK RATE

The raising of the Bank Rate to the crisis level of 7 per cent has again focused attention on its efficacy as an instrument of monetary control capable of dealing with the recurrent balance of payments problems that have arisen over the past few years. The fact that it now has to be used so savagely is perhaps the best indication that most of its cutting edge has been blunted, while to regard its value merely as the administering of a shock to the economy is to underestimate the delicacy of the money mechanism which, like other finely adjusted instruments, is far more likely to be dislocated than corrected by a jolt. If our difficulties were merely those of the movement of money, something could be said for its use, which would be directed towards curing temporary imbalance instead of attempting to cure permanent maladjustment. The country's problems are concerned with our earnings and, far from being solved, are aggravated by a high Bank Rate, as interest payments on foreign holdings of sterling have in no small way contributed to the diminution of our once large favourable balance of invisible earnings.

On the domestic side it has been argued that those who wish to borrow capital at a fixed rate of interest should be made to pay a high rate for the privilege. In a period of inflation such as we have experienced in the past few years, however, even a very high rate of interest is insufficient to compensate for the loss of real worth of capital; it is a frustration to our exporters and seldom deters those engaged in making capital profit. In addition, if we are to enter the Common Market it will be of prime importance that we do not go in hampered by higher interest rates than those paid by our competitors.

PAY PAUSE OF NATIONAL BENEFIT

Although in any time of strain the axe falls first upon bank lending, this form of finance is in general for objects most essential to the national economy and for our part we do our utmost to ensure that direct or indirect exports are the least affected. But industry is run for profit and if the earning capacity is in any way restricted by however remote a control it is the least profitable side of business which is the first to be sacrificed. It is, I think, generally accepted that it is very much harder and less profitable to sell in foreign markets and consequently that exports are almost bound to suffer in a credit squeeze no matter how selective the banks may be. While wages remain high and the country is committed to a policy of full employment the home market is sure to have attractions for all except those dedicated people who seek the good of the nation above their personal gain. Restriction which retards production should give place to more positive action directed towards making it at least as attractive to sell abroad as at home, and not solely on the grounds of mere profitability, for exporting can be time consuming and frustrating and the maximum amount of help must be given to those who apply themselves to this end. To give exports priority over home demand is not a natural economic process and therefore extraordinary measures are required to accomplish it. It is in such conditions that our Continental competitors operate and we should become more alive to the possibilities which could be opened up. To attempt to maintain the wages pause until an increase in production and exports has been attained, is a very difficult policy for any Government to carry through, but I wonder if sufficient effort is made to explain to the wage and salary earners that in the long run they, as well as the rest of the nation, will benefit by a pay pause, if by this means we can maintain and increase the real value of wages and salaries. The solution to labour problems as well as balance of payment difficulties lies not in restriction but in expansion, particularly through additional investment, as this would increase the purchasing power of wages. No doubt the National Economic Development Council will give consideration to this aspect of the situation when evolving its wages policy.

DEPOSITS—A FUND OF GOODWILL

It is always a temptation in seeking prosperity to want the best of all worlds. It is also well known that those who do so often get the best of none. In the realm of finance the ideal would be to obtain the benefit of high interest rates when money is held, and to have a ready source of cheap borrowing when finance is required. As far as we bankers are concerned, however, it is obvious that the two are tightly interwoven as our power to lend is determined in normal circumstances by the amount of money that is left with us by depositors. It is, therefore, evident that if those who have money available insist on placing it elsewhere, there must be less available for borrowers. This applies particularly to industrial customers who very rightly turn to their bankers for short term working capital whenever the need arises but who are sometimes reluctant to leave with them credit balances on ordinary deposit account terms and succumb to the temptation to place them elsewhere at higher rates of interest. By doing so they are depriving other industries of the power to borrow and it would seem to me only commonsense that they should look to their real interest and realise that by leaving their money with the bank they are setting up a pool of resources and a fund of goodwill from which, in the day of their need, they may themselves benefit.

FINANCE FOR EXPORTS

At the present time the availability and cost of finance, over an increasing period of years, is a crucial factor in deciding whether or not we are going to be competitive in selling capital goods abroad and much emphasis is being placed on medium and long term credits. As equipment becomes more technically involved capital projects are increasingly expensive and the days have gone when exports of capital goods and civil engineering projects were contracts between companies financed from their own resources or by means of loans on the world's money markets. Invariably in these days they are either directly or indirectly Government sponsored and long term finance is, in effect, a loan to a foreign Government rather than the provision of working capital to our own customers. In ship-building and other capital goods industries I find we are able to compete in all respects including quality, price and delivery, but with the exception so far of credit facilities. Finance for exports is therefore a major issue, for although the Export Credits Guarantee Department has improved its cover for exporters, the provision of the actual finance is the real problem. The arrangements which have so far been made to provide finance for periods in excess of five years have touched only the fringe of the problem, and considerably more money will still have to be found if our exports of these goods are not to be hampered.

LONG TERM CREDIT

There is another aspect of the problem to which I would like to draw attention. The provision of long term credit is, of course, an inflationary element in the economy of this country and if undertaken on a large scale could have a serious effect on prices unless there were a corresponding increase in production, and it could be a means by which a foreign country exported its inflation. If the climate of our economy were such as to cause us to save sufficient to finance these exports, or to work sufficiently hard to meet the inflationary element with increased production of goods, nothing but good could be the outcome. We should increase our foreign exchange earnings, both visible and invisible. Experience has taught us, however, that this is not a likely development. On the other hand no country has a bottomless purse. Even the United States is worried about the outflow of gold and dollars, and Germany, since the re-valuation, is faced with falling reserves, and I would think that in the near future most countries will have to view with a little more circumspection the granting of long term credits if, at the same time, they expect the standard of living in their own countries to rise at the present rate. We are all anxious, of course, that development, in the new countries particularly, should continue at a fast rate and that we, in this country, should obtain our share of the relative export business, but we must be careful to see that the ambitions of the importing countries are kept within bounds and that, in particular, in the matter of credit one country is not played off against another. In the meantime this bank will do its utmost to meet demands of this nature which are made upon it.

THE COMMON MARKET

The Common Market overshadows all our scheming and planning and is probably the determining factor in our future prosperity. Federation with Europe, with all its implications of history in reverse, can hardly be other than disturbing to the structure of the Commonwealth, which might lead to the economic drift of some Commonwealth countries towards the United States. Nevertheless our future would appear to be bound up in Europe. Facilitated perhaps by their union, the Common Market countries have, in recent years, enjoyed a high degree of prosperity such as could be expected from a vigorous hard-working people recovering from the devastation of war and equipped, of necessity, with new machinery in modern buildings. That prosperity is now levelling off and my concern is that, having missed participating in the golden age, we shall now open our own markets to the Common Market countries while they are at the height of their enterprise. We cannot, however, undo the past and I feel that we must not jeopardise the long term position by taking a short term view.

I am not pessimistic about the future. Our national character should see us through the many difficulties which face us, the cure for which is the observance of the age-old economic law that we should not spend more than we earn.

The Bank continues to grow and to prosper and for this I would like to express on behalf of myself and of all my colleagues on the Board to Mr Mallory and Mr Upton, the General Managers, to their colleagues on the executive, and to all members of the Bank Staff throughout the Service, our best thanks for their devoted service.

CLYDESDALE AND NORTH OF SCOTLAND BANK

A HIGHLY SATISFACTORY ACHIEVEMENT IN A DIFFICULT YEAR

SIR HAROLD E. YARROW REVIEWS THE ECONOMIC SCENE

The 124th Annual General Meeting of Shareholders of Clydesdale & North of Scotland Bank Limited will be held on February 7th at the Head Office, St Vincent Place, Glasgow.

The following are extracts from the circulated statement of the Chairman, **Sir Harold E. Yarrow, Bt, GBE, LLD:**

Balance Sheet: Our deposits show a decrease of £1,882,551 compared with the position twelve months ago. At that time we had the benefit of substantial temporary balances on accounts which rotate on an annual basis amongst the Scottish banks. I am glad to be able to say, however, that, apart from that special feature and notwithstanding the factors operating against higher bank Deposits, the trend of our Deposits has been steadily upwards.

Our Advances to customers at £68,689,787 have increased by £4,954,199. The steady growth which I reported last year continued in the first half of 1961 and the level of Advances has been higher in the course of the year than it was at the balance date. It will be recognised that Advances fluctuate substantially from day to day but it must be said that since July the level has been affected overall by our endeavours to implement the policy laid down by the Authorities.

Our Net Profit this year shows an increase of £31,972. The Dividend of 20 per cent remains unchanged.

I am sure you will agree that these figures are highly satisfactory, reflecting as they do continued expansion in every department of the Bank's business despite the difficult conditions under which our operations had to be conducted throughout the year. Particularly heartening is a steady increase in the number of our Current Account customers which I am able to report. This is a matter of prime importance because it is to a spread of the "banking habit" that we must look under present conditions for growth in our deposits, and deposits are, of course, the life-blood of our business. It cannot be emphasised too strongly that in Scotland today as elsewhere there is no easier, safer or cheaper method of remitting money than through the banking system.

THE NATIONAL ECONOMY

After commenting on the intensified restrictions on bank lending which the Government imposed last July, Sir Harold said:

Of course the "credit squeeze" applied through the banking system was, as you know, only one of a number of monetary, fiscal and other measures adopted by the Government last July for the purposes which I have already indicated. These measures were successful in their first and immediate objective—the halting and reversing of a formidable flow of funds abroad which stemmed primarily from a lack of confidence in sterling—and the nation's gold and currency reserves have been rebuilt to more reasonable proportions. The increase owes too much for comfort, however, to the attraction of short-term funds through a high interest rate, itself a burden on the economy. These funds are notoriously volatile, and the level of the nation's reserves, on which all else hinges, will continue to be at the mercy of every rumour in the market-place until it rests on the much firmer foundation of a satisfactory balance of payments position. And the substantial and regular surpluses in international trade which that implies can be achieved in one way only, by a large and sustained increase in the volume of exports. Formidable though the task may seem in the present intensely competitive conditions of world trade, it is not, I am convinced, one beyond the ability of the nation to perform. One thing is certain, however; the required increase in overseas shipments will not be realised so long as an inflationary atmosphere, with its constant threat of rising costs and prices, persists. On this score, the Government cannot be criticised for taking steps to limit demand at home. Particularly welcome is its expressed determination henceforth to contain its own expenditure within the resources which seem likely to be available, for excesses in Government expenditure have undoubtedly contributed in no small way to inflation in postwar years. Limitation of domestic consumption, however, will not of itself ensure that the manufacturing capacity and resources thus set free will be diverted to the export effort. There is an ever-present danger that output will at best stagnate and may even fall. This tendency, I feel, could best be countered by a thorough review of the taxation system with a view to the adoption of firm but flexible—possibly even novel—fiscal measures which will encourage the most effective use of all the agents of production and perhaps offer some form of incentive to those who venture into export markets.

In the meantime, the matter is so important and of such urgency that it behoves everyone engaged in industry and commerce to take stock of his position to see whether there is not some contribution or additional effort which he could make. Too many manufacturers have been content for too long to rely on the rewards of an easy, often protected, home market, and too many workers have taken advantage of the blessings of full employment to exact increases in wages not compensated by an increase in output. What is now required is an expansion of production: not at any cost, but at prices as competitive as those of other countries; not of anything, but of the goods in demand in overseas markets.

If I have dwelt at length on the national economy it is not that I am unmindful of Scotland, with which as a bank we are intimately concerned, but rather that I sincerely believe the well-being of the country to be inextricably linked with that of the United Kingdom as a whole. Without minimising them, Scotland's peculiar problems—so ably investigated and reported upon recently by the Toothill Committee—are more likely to be solved and prosperity assured through the re-establishment of a healthy and expanding national economy than in any other way.

THE FUTURE

For the future, there are so many influences at work which could affect the climate of international trade in coming months, some favourably and some adversely, that it is difficult to predict its course even a short way ahead. However, I should like to end on an optimistic note, I do not think it can be overstressed that the country's position is inherently strong and that with resolute action on the part of all concerned it is well placed to surmount whatever difficulties may arise and to take advantage of every opportunity which presents itself.

THE LONDON SCOTTISH AMERICAN TRUST

The 73rd annual general meeting of The London Scottish American Trust Ltd., was held on January 17th in London, **Mr Ion H. T. Garnett-Orme** (the Chairman) presiding.

The following is an extract from the Directors' Report:

During the year, gross interest and dividends from our investments amounted to £365,099 against £343,979 for 1960, which represents an increase of 6 per cent. The proposed final deferred dividend of 11½ per cent would make a total of 18½ per cent against 17½ per cent for last year, the interim having been increased from 6 per cent to 7 per cent, before the Chancellor of the Exchequer made his request for restriction of dividends.

We consider the capital performance of our investments over the year to have been satisfactory. Our dollar holdings have increased in value very considerably, whereas our sterling investments have marginally declined—it is this and not a transfer of funds which accounts for the fact that, based on market value, the proportion of our funds held in North America has increased from 35 per cent to 42 per cent.

In the last Accounts, we reported that our net income had risen by 13 per cent which compares with an increase of 6 per cent for the year under review. In general, the continuing trend is for industrial companies in the United Kingdom to report declining profits and, in some cases, to reduce dividends. In our own case, increases in dividends from dollar holdings should balance any likely decrease in sterling.

The report was adopted.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

R. A. LISTER & CO., LIMITED

DISTRIBUTORS IN OVER 100 COUNTRIES

INCREASE IN PROFITS

The Annual General Meeting of R. A. Lister & Co. Limited was held on January 15th at Dursley. **Sir Percy Lister,** the Chairman, who presided, said: I am pleased to say that despite the difficult trading conditions our turnover was again a record. Our profit margins are lower but we have accomplished a slight increase in net profit. This has enabled us to plough back into the business approximately £250,000 by way of retained profits.

Turning to the Consolidated Balance Sheet you will see that there have been no great changes in the overall position since last year. There has, however, been a substantial increase in stocks from £4,800,000 to £5,600,000. This is due to the increased production flow and turnover.

IMPROVED RESULTS

For these improved results our thanks are to no small extent due to our well established Distributors in over one hundred countries including your own Subsidiary and Associated Companies as outlined on page two of the Report before you covering as they do some of the most important markets.

NEW PRODUCTS

During the year under review new additions have been made to the range of your well-known Diesel Engines whose application and usage for the supply of economic and reliable power continues to expand.

LISTER PORTABLE MOISTURE EXTRACTION UNIT

The demand for "Lister Portable Moisture Extraction Units" has exceeded expectations. Farmers have now been able to prove for themselves that hay can be made possessing the highest nutritional value more economically, and all their cereal and seed crops can be dried on the farm whatever the weather.

During 1961 there have been substantial extensions to your factories and production facilities at your four main Plants in Gloucestershire, Wiltshire and Lincolnshire.

LISTER-BLACKSTONE MARINE ENGINES

Despite the recession in world shipbuilding, your Marine Company has enjoyed another record year and have supplied their engines to the Admiralty and Foreign Navies, Ocean-going Liners and cargo vessels and a wide range of fishing craft. Lister Diesel Engines are being increasingly specified for pleasure craft because of reduced fire risks and their reliability.

The keen price competition emanating from Europe and Japan coupled with the growing tendency for protected production in many overseas markets will necessitate the continual study of production and selling costs if Britain's share of the world trade is to be maintained or increased.

The results to which I have referred reflect the efforts of all those in your employ both at home and overseas and on your behalf I would like to convey our thanks and appreciation for their loyal and invaluable co-operation. The report and accounts were adopted.

ALEXANDERS DISCOUNT COMPANY LIMITED

PROFITABILITY SUBSTANTIALLY MAINTAINED

The ninety-fourth Annual General Meeting of Alexanders Discount Company Limited will be held on February 8th in London.

The following is the circulated statement of the Chairman, **Mr John P. R. Glyn:**

During the year Sir Eric Gore Browne decided to relinquish the Chairmanship after 11 years. I know you will wish me to thank him for his devoted attention to the Company's affairs during this period. I am glad to say Sir Eric will continue to serve as a Director. Your Board appointed me Chairman and Mr Daniel Meinertzhagen Deputy Chairman.

For the first seven months of the year under review Bank Rate remained at 5 per cent. It was raised to 7 per cent on July 26th. On October 5th and again on November 2nd reductions of ½ per cent were made. With these events therefore I am glad to report that we have been able substantially to maintain the Company's profitability notwithstanding the net increase in Bank Rate of from 5 per cent to 6 per cent as between January 1, 1961, and the end of the year.

A final dividend of 7½ per cent is proposed for your approval, which together with an interim dividend of 2½ per cent will repeat last year's distribution of 10 per cent on the Company's ordinary capital.

You will see from the accompanying figures that the total holdings of Bonds and Bills have both been increased. Our Commercial Bill turnover has again shown a satisfactory rise.

An important factor in the justification for the London Discount Market is its ability to provide the maximum amount of flexibility in the handling of some of the varied financial transactions which take place in London. As a Market we must take all steps possible to provide this flexibility, the need for which will grow in the event of Britain's entry into the Common Market.

During the year I had an opportunity of seeing how the Money Market was developing in Australia. Despite a measure of control by the Authorities which we in London would find irksome, all the interested parties were unanimous in agreeing that the Market's development was facilitating short term money transactions in Sydney and Melbourne. It is satisfactory that some of the advantages which the Discount Market provides in London have been found worth while in Australia.

Much of the business of your Company is based on close personal contacts with our friends and customers, and the thanks of the Board and shareholders are due to Mr Dawkins and his staff for their unfailing and successful efforts in this respect. Our thanks, as always, are also due to all the Banks for their help throughout the year.

LANCASHIRE COTTON CORPORATION LIMITED

TRADING CONDITIONS HAMPERED BY LARGE IMPORTS

The thirty-third Annual General Meeting of the Lancashire Cotton Corporation Limited will be held in Manchester on February 15th. The following are extracts from the statement of **Mr R. M. Lee,** the Chairman, as circulated with the Report and Accounts for the year ended October 31, 1961:

The Group Trading Profit for the year is £3,353,531 compared with £3,761,879 last year The reduction in the level of profits is due to the unfavourable trading conditions which prevailed in the cotton textile industry during the second half of our financial year, to which reference is made below.

The Board has decided to allocate £200,000 to General Reserve and recommends a final dividend of 17½ per cent, *less* tax, on the Ordinary Stock, which is the same as last year, and with the interim dividend of 7½ per cent, *less* tax, paid in July gives a total of 25 per cent, *less* tax, for the year. The amount carried forward is £1,420,285 of which £525,647 is retained in the accounts of the subsidiaries.

Capital Expenditure of the Corporation (excluding subsidiaries) amounted to £1,560,000 and commitments outstanding at October 31st totalled £1,252,000. The major part of this expenditure will rank for a grant under the Cotton Industry Act 1959. No credit has been taken for these grants which we hope to receive, and any sums received will in due course be credited to our asset accounts. This expenditure is in accord with the policy which we have consistently followed of spending substantial sums in modernising our plant and equipment.

TRADING CONDITIONS

When I made my statement to you last year, I expressed concern about the volume of imports from countries with low wage standards and from others who, having disposed of their normal production in a stable home market, were willing to sell for export at lower prices the products of a second or third shift. Unfortunately these imports continued in increasing quantities.

Undoubtedly buyers over-emphasised their fears of shortages of goods following the closures which took place under the Redundancy Scheme. Orders were placed for very lengthy delivery and supplies were sought overseas.

Naturally the industry has continued to make representations to H.M. Government on the subject of these imports. Although the authorities have given help during the year I must state clearly that the help which has been received has always been too little and too late to be effective in promoting a healthy industry. In consequence capacity has continued to shrink even after the vast elimination accomplished by the Redundancy Scheme, and orderly planned production has been disrupted with unfortunate results on the regularity of employment and the efficient lowering of costs.

It is no doubt necessary and desirable for the Western World to assist Asiatic countries and others emerging as industrial nations, by importing some of their manufactured goods, but undue concentration on particular products is not in the interests of the countries exporting or of those receiving these goods. Moreover, the burden of helping those countries to develop should certainly be spread not only over a wide range of goods, but also it should be shared by all the countries of the Western World.

If the United Kingdom enters the Common Market, this industry will encounter very keen competition from European sources. So long as this is fair competition, we welcome it and do not fear it. But we cannot prevail if at the same time a large part of our home market is to be reserved for Asiatic cotton textiles produced under low living standards. We hope and expect that our Government will in the negotiations see that a fair share of these imports is taken by other nations in the Western World. If arrangements can be made for this to be done, then we have no doubt that the British Cotton Industry will meet the challenge and continue to play an important and vigorous part in the British economy, producing with high standards of efficiency and providing employment under good working conditions for a large number of people.

SUBSIDIARY COMPANIES

During the year under review we acquired all the capital of three new groups, namely Wm. Hutchinson (Yarns) Ltd., H. Rhodes & Bros. Ltd. and William Pearson & Company (Leeds) Ltd.

Wm. Hutchinson (Yarns) Ltd. has itself three subsidiary companies, namely Holybrook Dyeing Company Ltd., Sidgwick Silks Ltd. and Charlotte Fabrics Ltd., and is engaged in the production of fancy worsted and doubled yarns for the worsted, woollen and furnishing industries, and also specialises in producing exclusive high-fashion hand knitting yarns. Sidgwick Silks Ltd. produces brocade and ladies' evening wear materials, and are renowned for their design and production of wedding dress materials.

H. Rhodes & Bros. Ltd. has one subsidiary, Yorkshire Broadcloth Ltd., and these companies and William Pearson & Company (Leeds) Ltd. are engaged in the woollen industry, spinning, weaving and finishing fine cloths for the ladies' woollen apparel trade. The results of all these companies since acquisition are gratifying.

Flowers Breweries Limited

The Consolidated Accounts of the Group for the year ended 30th September, 1961 showed:

	1961	1960
	£	£
GROUP PROFIT PRIOR TO TAXATION	1,410,925	1,336,942
TOTAL DIVIDENDS	347,536	323,036
DIVIDEND OUT OF PROFIT ON SALE OF TRADE INVESTMENTS	—	40,000
ISSUED ORDINARY CAPITAL	4,000,000	4,000,000
CAPITAL RESERVES	4,751,412	4,767,647
REVENUE RESERVES	2,320,461	1,997,527

The Sixty-fourth Annual General Meeting of Flowers Breweries Limited *was held on January 15 in London, Sir Fordham Flower, the Chairman, presiding.*

The following are points from his statement:—

Rising costs have tended to narrow our margin of profit but against this can be reported further increases in the sales of Flowers Keg Bitter and a substantial rise in the sales of our premier bottled beer, Brewmaster.

Group profit before tax shows an increase of £74,000 at £1,411,000. Profits after tax are £660,000 compared with £721,000. The Board recommends a final dividend of 8 per cent. making a total of 12 per cent. for the year.

A reciprocal trade agreement has been entered into with Tennant Brothers Limited of Sheffield under which Tennant's "Gold Label" Barley Wine will be made available to our customers when supplies permit, and Tennants will stock Flowers Keg Bitter in a substantial number of their tied houses and supply it to their free trade customers.

Considerable redevelopment of the Luton Brewery is in progress and plans for further major improvements are being considered.

Very substantial sums have been expended on our properties during the year, and, with the opening of three new public houses, the group now owns 1,125 licensed premises.

Our Off-Licence company, Thresher & Company Limited, continues to expand its trade and shows a steady increase in profitability.

The report and accounts were adopted.

BROOM & WADE LTD.

CONFIDENCE JUSTIFIED

The Twenty-seventh Annual General Meeting of Broom & Wade Limited was held on January 17th at High Wycombe, **Mr H. S. "Dick" Broom, MBE, BSc, MIMechE,** chairman and joint managing director, presiding.

The following are extracts from his circulated statement:

Last year I said that we looked forward with confidence, and while our consolidated profits for this year at £971,637 are lower than those for last year, they still show that our confidence was justified. Your Board consider the results adequate to justify their recommending a final dividend of 17½ per cent which, with the interim of 5 per cent, makes 22½ per cent for the year on the old capital: the same as for last year and as forecast when the Rights Issue was made. The overall financial position of the Company is one of considerable strength.

Whereas last year we achieved a record profit, this year we have a record turnover and it is a matter of regret that it has not resulted in a higher profit. Here I must emphasise that we are feeling the pressure of increased costs and consequent smaller margins. During the year we have had the full effect of the reduced working week, the wage award granted in January, and though small as yet, the cost of the National Graduated Pension Scheme. All have to be paid for, particularly in the price of purchased materials, and despite our unceasing efforts for greater efficiency to counteract the effects of these higher costs, there is a point when they must break through. We shall, however, continue our efforts to nullify increased basic costs by still further improving production efficiency, and by increasing the volume of sales at home and abroad maintain the over-all profitability of the Company.

EXPORTS

Turning to exports and our Commonwealth companies in particular, I do not think it is sufficiently well understood that trading is not made any easier by, first, the credit restrictions imposed by Commonwealth governments, and second, the Customs difficulties placed in the path of U.K. exporters. However, this Company has always had to face up to market changes—for instance, India, which at one time was our greatest export market, is now manufacturing under licence—but by adjustment and change of direction we have been able to make up for falls in one market by increased exports to another. Consequently, we look forward to this country's entry into the Common Market; without the advantage of membership, the results of our Belgian company's activities give us reason to believe that when this Market is open to us we shall be able to improve on our export performance of the past years.

We start the year with an order book which is less than that of a year ago, but it is still very satisfactory and we feel sure that by improvement of product, competitive prices, and by our being in a financial position to meet credit competition, we shall more than maintain it. Another move to improve our sales penetration into all areas of the world is the placing of larger and better service stocks from which we shall be able to give prompter delivery of spare parts.

The report was adopted.

This announcement appears as a matter of record only.

Ladenburg, Thalmann & Co.

New York, N. Y., January 17, 1962

THE SOUTH BRITISH INSURANCE COMPANY LIMITED

(Incorporated in New Zealand)

REPORT OF THE CHAIRMAN, MR KENNETH B. MYERS, MBE

The annual general meeting of The South British Insurance Company Limited was held on November 30th at the Head Office of the Company, Auckland, New Zealand.

Mr Kenneth B. Myers, MBE, the chairman, in the course of his address, said:

REVENUE ACCOUNTS

All the companies in the Group continued to expand and total premium income was in excess of £13 million.

The overall loss ratio of 56 per cent is an increase of less than one per cent and can still be considered satisfactory.

Expenses were at a much higher level than we are accustomed to see. Measures taken during the year to expand into territories where formerly we had little or no business are partly responsible and there are already encouraging indications that some of these ventures will prove well worth while. With the Group provision for unexpired risks £1,400,000 higher, there was an overall underwriting profit of £728,943 which is more than £100,000 better than the previous year.

PROFIT AND LOSS ACCOUNT

The net Group income from investments at £799,660 exceeded the previous year's figure by over £125,000.

After deducting interests of outside shareholders the net profit for the Group increased by £183,000 to £1,381,740.

DIVIDEND

An interim dividend of 9d. per share was paid last April and the Directors recommend a final dividend of 9d. making 1s. 6d. per share for the year.

THE UNITED INSURANCE COMPANY LIMITED

The Company now holds 100 per cent of the issued capital of The United Insurance Company Limited. A great deal has already been achieved in arriving at a degree of integration in Australia, New Zealand and the United Kingdom. By this means a better service will be available to the policyholders of both Companies as well as providing increased opportunities for further growth.

NEW ZEALAND AND AUSTRALIA

You will be aware that the Company acts as Managers in New Zealand for the Fire and General Insurance subsidiary of the AMP Society and that the United acts in the same capacity in Australia. Both these subsidiaries of the AMP had a successful year and we continue to enjoy a very happy relationship with the AMP Society.

UNITED KINGDOM

The vigorous expansion programme inaugurated some three years ago in the United Kingdom is beginning to show results in a rapidly increasing premium income.

The report and accounts were adopted.

COMPANY AFFAIRS

Equities in the London stock market have shown no decided trend, but there have been sufficient buyers about to push The Economist *indicator up by 2.6 points to 364.4 in the week to Wednesday. The main feature in the gilt-edged market has been the ending of the government "tap" in the 5½ per cent Treasury 2008-12 stock. In equities, interest in Courtaulds and ICI reached a climax on Thursday when gains were recorded over a wide range of shares. Property shares have been weakened by rumours of building controls although Samuel Properties got off to a good start on Monday. There are signs that shares in the capital goods sectors are coming back into favour, with both Vickers and John Brown showing useful gains.*

Bass, Mitchells and Butlers

On an indicated dividend of 11 per cent, the 5s. shares of Bass, Mitchells and Butlers at 15s. 1½d. yield 3.6 per cent, covered 2.3 times. As the final dividend was kept down in deference to the Chancellor, the prospective return is certainly higher. The stock market puts BM & B among the leaders of the brewing industry, as is justified, first by the latest results and secondly by the indications that the chairman, Sir James Grigg, gives of the way in which the group intends to extract the fullest benefits from the merger. Essentially, this is an alliance between a regional brewer, Mitchells and Butlers, based on the Midlands and South Wales, and a national brewer, Bass, which has big sales in the free trade and other brewers' outlets and which can run its own scattered chain of public houses economically by making deliveries to them at the same time as to free trade outlets. Both sides of the alliance did well in the year to September 30th, contributing in "roughly similar proportions" to the 16.8 per cent increase in gross profits from £7.4 million to £8.7 million.

This was a bigger increase than many other brewers secured and it forms a good base for reaping the benefits of rationalisation—supported, too, by the holding of quick assets of nearly £9 million, against outstanding capital commitments of about £2½ million. The new financial year began well, with BM & B earning higher profits, but more recently the increase in beer prices and the wages pause have had an effect on sales. The real prospect for higher profits depends on securing quick economies from the merger. A comprehensive survey of production by outside experts is now in progress; the two companies' new capital installations are working well; and Bass is shifting the emphasis away from naturally conditioned bottled beers towards "all bright," pasteurised bottled beers and container draught, the demand for which appears to be outstripping capacity. The group is keeping abreast of the developments in continuous brewing. In distribution, closer integration is possible on the basis of regional depots and in some areas there is a possibility of selling or redeveloping public houses. Finally since the merger ties up more retail outlets, it enhances the group's bargaining strength with other brewers. BM & B will be one of the big seven or eight in brewing, a place that Bass or Mitchells and Butlers alone would have found it difficult to hold.

United Breweries

Following two years of rapid expansion, many shareholders in United Breweries must be wondering where the group is heading. It is trying to promote the sales of such brands as Carling lager, Jubilee Stout and Piper export ale on a national level; but so far it has not secured a national chain of retail outlets for these beers. At this week's annual meeting the retiring chairman, Mr H. L. Bradfer-Lawrence, told shareholders that "the strategy of our further development in the future is under continuous review" and there can be little doubt that the company is looking southwards to gain more outlets. Mr E. P. Taylor, the Canadian brewer, who has been the propelling force behind United Breweries' rapid growth, is succeeding Mr Bradfer-Lawrence as chairman and clearly he is hoping to extend the UB empire through further trading agreements and acquisitions. With the other brewers tightening their hold on trading areas, this can be a costly process, not least in financing; this is reflected in the low yields offered by most stocks with take-over prospects in the brewing industry.

In the first quarter of the current year United Breweries' trade showed a "satisfactory increase," but there are now signs that the price increases in the summer have begun to affect the sale of higher priced beers, though Piper ale is doing particularly well. The current year should produce further benefits from the internal reorganisation of the group. Its latest acquisition is Hewitt Brothers of Grimsby, where acceptances of UB's offer now amount to over 90 per cent of the ordinary shares. Part of the offer price was in a 6½ per cent convertible loan stock and in early dealings this week the price of this stock rose sharply to 112, which is 13 points above the minimum cash price guaranteed to Hewitt shareholders by Philip Hill, Higginson, Erlangers. It is to be hoped that shareholders waited until dealings began before disposing of their stock. At this level the initial conversion price in 1964 and 1965 is 16s. 3d., against a current price of 14s. at which the 5s. shares yield 4½ per cent. On this basis there are obvious attractions in the convertible stock, which is standing only 11 points above United Breweries' recently issued debenture, which had the same coupon but a slightly longer life.

Granada

Mr Sidney Bernstein, the chairman of the Granada Group, makes no forecast about profits in the current year, but the tone of his statement is generally optimistic. The group may do as well as in the year to September 30th last, when a trading surplus of £6.9 million (against £2.7 million) and a net profit of £2.9 million (against £1 million) were earned. It might, indeed, do better. Nine months of 1960-61 fell after the expiry of the networking agreement with Associated-Rediffusion; 1961-62 will be entirely free of this drain on profits. So far, the Equity strike has added to Granada's profits, as fees and costs of producing television programmes have been reduced; but if the strike drags on it could have an effect on advertising revenue. Television provides the major (but unspecified) part of Granada's profits; the 49 cinemas, the cafés and the shops owned by the group had a better year—the decline in attendances at Granada's cinemas was again less than the national average and Mr Bernstein feels that a stabilisation point may be in sight. But for the Chancellor's request, the directors would have paid more than 90 per cent for 1960-61, covered nearly 2½ times, and there must be a good chance that the 1961-62 dividend will be higher.

The return that Granada earns on its employed capital is remarkably high, at 88 per cent gross, but the yield on the non-voting "A" shares, at 55s., is still as much as 8.2 per cent. This return reflects the fear that profits from commercial television will not be so fat after the licensing agreements expire in 1964. Granada, like the other contractors, has to prepare for this possibility. It has interests in relay services and in one system of pay-television; it hopes to expand its activities in electronics; and recently it acquired a ten per cent holding in J. A. and P. Holland, the confectionery manufacturers. There is a clear indication that Granada may cast its net beyond entertainment, for Mr Bernstein declares that the group is willing to participate in suitable property developments and sees no reason why development should be limited in future to the entertainment business. The directors are clearly thinking ahead. They are also proposing that options on up to 100,000 "A" shares should be made available to executives of the company, but not to themselves.

Company Affairs continued on page 278

Gwent and West of England

If the Welsh were as confident about the result of Saturday's match at Twickenham as Mr Julian Hodge is of the continued growth of his companies, the England XV would be worried men indeed. The latest in a steady flow of documents from Cardiff contains the preliminary results of Gwent and West of England Enterprises. They accord closely with the minimum forecast given at the time of the placing last April, with trading profits amounting to £1,120.000 and profits before tax of £326.000. But a substantially lower tax charge of £110.000, against an estimate of £170.000. means that net profits at £216.000 are £70.000 more than forecast. The ordinary dividend has been doubled. 40 per cent against the forecast 20 per cent; at the time of the placing no mention was made of the dividend waivers to be made by Mr Hodge and his family through Hodge and Co. (Insurance). This company holds all the deferred capital in Gwent, on which an annual dividend of only 3 per cent is payable before 1965, and 54 per cent of Gwent's ordinary capital. The importance of the waiver, which covers all the deferred and most of its holding of ordinary shares, can be seen from the fact that on the dividends now declared the dividend cover is three times but it would come down to 1½ times if the capital ranked in full. Moreover, the latest tax charge, absorbing only 33 per cent of gross profits, is unusually low.

The Gwent results owe much to the performance of the subsidiary, Anglo Auto Finance which has done as well over the past two years as other hire purchase finance houses have done badly. This has been attributed partly to Anglo Auto's system of vetting new business ; this has kept its bad debts down to less than one third of one per cent of balances outstanding—a record which is the envy of the bigger finance houses. Talks appear to be going on with one of these houses to consider the possibility of a merger. The 1s. shares in Anglo-Auto at 10s. 9d. yield only 3.1 per cent ; but the low return has not deterred the intrepid and the shares enjoy an active market.

The 1s. shares of Gwent yield only 1.8 per cent even though they fell, for no clear reason, by 3s. 9d. to 22s. 1½d. after the results were published. The disparity in yields presumably owes something to the preferential treatment given to Gwent shareholders in new issues sponsored by the company. A steady flow of these is expected in 1962. The first is of the 1s. shares of Thomas S. Whitney and follows the usual pattern with a small amount of stock only being put on the market. Whitney is a garage business and a main Ford dealer ; at the placing price of 2s. the shares offer a prospective yield of 7½ per cent, but the dividend cover is slender. It remains to be seen if the shares will go as well as the two earlier placings ; these were L. Ryan Holdings, which at 17s. 9d. are almost double the August placing price of 9s. 6d., and Empire Rib which have gained 7½d. on the price of 3s. at which they were placed last month.

Colvilles

In the first half of the year to September 30, 1961, the high level of demand from the engineering industry helped to offset the decline in Colvilles' orders from one of its traditional customers, the Scottish shipbuilding industry. In the second half, however, both margins and output were squeezed, the greatest pressure on costs being exerted by higher fuel, transport and wage charges. Investment allowances of £3.1 million helped to limit the fall in net profits to 7½ per cent, from £4,980,000 to £4,607,000.

The directors of Colvilles say that "the current level of output is being maintained and is still profitable." If this means that output is running at the same level as in the second half of 1960-61 steel ingot production could drop by about 13 per cent to 1¾ million tons in 1961-62, and trading profits could run at about £11 million, against £13¼ million in 1960-61. The decline in profits has come at a time when much of the Ravenscraig development still needs to be financed. At the end of September, 1960, capital commitments amounted to £89 million. A year later £33 million had been spent and £61 million remained outstanding in capital commitments. The group had about £8¾ million in cash at the end of last September and so has to find at least another £52 million to complete the development programme. Of this the Government, having already lent £15 million, is committed to advance another £30 million. A decline in the cash flow (which amounted to £5.1 million in 1960-61) might therefore force the group to look to the banks for temporary accommodation. The £1 ordinary shares gained 3s. 10½d. to 47s. 9d. after the full accounts were published and yield 6.7 per cent on the maintained dividend of 16 per cent.

Richard Thomas and Baldwins

The only big steel producer still nationalised, Richard Thomas and Baldwins, suffered a sharp setback in profits in the year to September 30, 1961. Gross profits before tax fell from £11.2 million to £4.1 million and net profits were more than halved from £8.667.000 to £3,978,000 even though the tax charge was reduced from £2,311,000 to a mere £57,000. This reduction no doubt reflected investment allowances on the Spencer works. The directors cite three causes for the decline in profits : "considerable increases" in fuel and other costs ; a reduction in the volume of sales by 7 per cent as a result of competition which was so intense in export markets that RTB was selling its products there at "unremunerative prices"; and transitional difficulties arising from the development programme. The dividend on the ordinary capital held by ISHRA has been halved to 6¾ per cent. An unusual feature of the accounts is that the payments of £2,185,000 in interest on borrowings for the Spencer works and of £563,000 for training and planning for production at the Spencer works have been met by a transfer of reserves.

Liebig's

The results from Liebig's Extract of Meat failed to live up to the expectations entertained a year ago, for the rise in trading profits in the year to August 31, 1961, was only two per cent, from £2,951,000 to £2,987,000, and after higher depreciation and interest charges net profits fell by 16 per cent from £1,038,000 to £871,000. The biggest disappointment came from South America, where the canning and meat extract factories have to face rising wage and cattle costs ; in Argentina in particular trading has been hit by heavy taxes and unfavourable exchange rates. In Southern Rhodesia and Tanganyika returns were below expectations and an unprofitable fruit and vegetable factory has been closed. In Europe, too, profits have fallen ; higher sales were made, but only at narrower margins and the group had to spend more on reorganisation and promotion. The only break in the clouds was in Britain, where turnover in "Oxo" rose to a new record level and where Fray Bentos holds over half the market for corned beef.

Prospects for the current year are uncertain and the chairman, Mr K. R. M. Carlisle, says that it is too early to make any forecast of profits. Costs continue to rise in South America and though the Argentine government is reducing some export taxes the outlook there remains uncertain. Better results are expected, however, in Africa and Britain. The cover on the maintained dividend of 15 per cent has fallen to a little under twice and the 5s. shares at 16s. 3d. yield 4.6 per cent, as they did a year ago.

EXCHEQUER RETURNS

For the week ended January 13, 1962, there was an "above-line" surplus (after allowing for sinking funds) of £121,335,000 compared with a surplus of £41,004,000 in the previous 6 days and a surplus of £131,200,000 in the corresponding period of last year. There was a net receipt "below-line" of £3,317,000 leaving a total cumulative deficit to date of £1,004,545,000 compared with £978,080,000 in 1960–61.

THE MONEY MARKET

After lowering its bid (raising the rate) for three successive weeks the syndicate of discount houses submitted an unchanged bid of £98 12s. 10d. for the 91 day bills at last week's Treasury bill tender ; the average rate of discount was 1.78d. lower at £5 8s. 6.03d. The market received about 25 per cent of its application but it received a full allotment on its bid of £98 13s. 2d. for 90-day Friday bills (to cover Good Friday in three months' time) and this brought its average allotment to over 30 per cent, compared with 38 per cent in the previous week. Evidently some outside applicants had raised their bids in anticipation of a Bank rate cut.

Business in Lombard Street has continued to be influenced by the postal delays ; except for a short period at the end of last week credit has continued to be tight. On Friday some bills were sold back to the market but on Saturday the authorities provided a moderate amount of assistance. Special help has also been given again this week, but on Tuesday three or four houses and on Wednesday four or five houses were still forced to borrow a small amount at Bank rate. April bills have been sold at 5⅛ per cent.

APPOINTMENTS

Central Electricity Generating Board

Headquarters S.E.1.

THE DEVELOPMENT SECTION (POLICY) OF THE PLANNING DEPARTMENT

advises on some of the technical and economic problems in planning the generation system to meet future demands.

Vacancies exist to study problems in the following fields:—

(1) *long-term utilisation of national energy resources and supply and transport of fuel.*

(2) *economics and technology of coal, oil and nuclear generation developments.*

(3) *use of water resources, liquid effluent disposal and clean air.*

ENGINEERS ECONOMISTS FUEL TECHNOLOGISTS

with a degree or other appropriate professional qualification are invited to apply to the Appointments Officer, 24/30, Holborn, London, E.C.1, by 31st January, 1962. Quote Ref. ECO 6.

Successful applicants will work in close collaboration with specialists and research workers in these fields.

● *Salary £1,205 — £1,670.*

Pig Industry Development Authority

SUMMER VACATION RESEARCH SCHOLARSHIPS

The Authority invite applications from suitable students in Agriculture, Veterinary Medicine, Economics, Statistics or other appropriate subjects who are prepared to devote themselves to, or assist in, research into some aspect of the Pig Industry during eight weeks of their summer vacation.

The Scholarships will have a value of £65.

Further information and application forms may be obtained from:

The Pig Industry Development Authority, PIDA House, Ridgmount Street, London, W.C.1

JESUS COLLEGE proposes, in conjunction with Bracenose College, to appoint to a Lectureship in Economics, for three years in the first instance, commencing not later than October, 1962. The person appointed will be expected to undertake a total of not more than 15 hours teaching per week and the salary will be not less than £850 per annum, subject to the normal F.S.S.U. superannuation contributions. Rooms will be provided in Jesus College and the Lecturer will be given Common Room and dining rights at both Colleges. Further particulars may be obtained from the Principal, Jesus College, Oxford, to whom applications in duplicate should be sent together with the names and addresses of two referees not later than March 1 1962.

THE UNIVERSITY OF MANCHESTER

Applications are invited for one or more temporary posts at the grade of LECTURER in ECONOMIC DEVELOPMENT in the Faculty of Economic and Social Studies. The tenure of the appointment will be for a period of not more than four years. Applicants should have field experience, preferably in South America, South East Asia or Africa, or knowledge of China. Salary Scale £1,050 to £1,850 per annum; membership of F.S.S.U., and Children's Allowance Scheme. Applications should be sent not later than March 31, 1962, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

INDUS BASIN SCHEME

MANGLA DAM CONTRACT

Applications are invited from Chartered Accountants with considerable experience since qualifying in the Civil Engineering Industry, aged 35/50, able to control staff with tact and firmness. The successful applicant will be required to take charge of Accounting in connection with the supervision of a very large contract.

The nett consolidated salary, after deduction of Pakistani Income Tax, will be £3,000, with nett annual increments of £150.

Appointments will be for a period of two years with the option, subject to the approval of the Project Consulting Engineers, of extending them to four years after one year's service.

Free basic furnished accommodation with air conditioning facilities, free passages for applicant and family, medical and other concessions, also home leave with full pay approximately every 16 months for those whose contracts are extended.

Successful applicants will be in the employ of the Project Consultants, Messrs. Binnie, Deacon & Gourley, and will be required to take up appointments during the second quarter of 1962.

Written applications (superscribed "Chief Accountant Mangla"), with age and full particulars including salary of last or current appointment, and names of two referees, to be sent to:—

R. E. B. WILLCOX & CO.,
CROSBY HOUSE,
35-37 GREAT ST. HELENS,
LONDON, E.C.3,

not later than January 31, 1962. Interviews will be held in London in the week commencing February 5, 1962. If required to attend the applicant will be paid out of pocket travel expenses.

UNIVERSITY OF HONG KONG

FELLOWSHIP IN ECONOMIC STATISTICS

Applications are invited for a two-year Fellowship to be held at the University of Hong Kong, commencing in April or at latest May, 1962. The Fellowship has been established to enable a National Income Study of Hong Kong to be undertaken. Applicants should have experience of national accounts in other areas, preferably other British colonies. In addition, the Fellow will be required to assist in the teaching of mathematical statistics and for this purpose previous university teaching experience is essential.

The salary will be £2,150 per annum.

Existing superannuation rights will be maintained, if the applicant's own superannuation fund regulations permit, providing the total cost does not exceed a University contribution of 10 per cent plus the Fellow's contribution of 5 per cent of salary, furnished accommodation will be provided at a reasonable rental as for permanent university staff. Tourist air passages (or first class sea passages of no greater cost) will be provided for the appointee, his wife and family.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Hong Kong and London on *February 12, 1962.*

BRITISH COUNCIL

INDIA

EDUCATIONAL CO-OPERATION IN THE COMMONWEALTH

Applications are invited for the posts of (1) Visiting Professor of Economics and (2) Visiting Professor of Political Science at OSMANIA UNIVERSITY HYDERABAD.

Candidates must be British Graduates with appropriate qualifications and experience. Appointments to be taken up in 1962. Salary on a scale of £2,700 to £3,700. Overseas allowance. Children's and home education allowances. Free furnished accommodation. Installation grant. Medical Scheme. Outward car freight paid. Fares paid, and for family (including mid-tour passages for children in U.K.). Employers portion U.K. Superannuation paid. Contract with University and British Council for two years. Secondments from home employment may be arranged.

Write, quoting L.3/M/62) to Director, Recruitment Department, British Council, 65 Davies Street, London, W.1, for further particulars and application form to be returned, completed, within two weeks of receipt. A self-addressed, preferably adhesive, label would be helpful.

PHILIPS

PHILIPS

PENSION FUND

Two senior appointments are to be made in the Department responsible for the investment and administration of this recently formed privately administered Fund, which has an annual income exceeding £1,000,000.

Initially the successful candidates will gain a general experience in pension fund work, but it is intended that ultimately ONE WILL SPECIALISE IN INVESTMENTS and THE OTHER IN ADMINISTRATION.

Applications are invited from men aged between 25 and 35, with either a degree or an actuarial or similar qualification, who have had some years' experience of institutional investment work or pensions administration or both.

Letters giving details of age, qualifications and experience should be sent to:—

Personnel Officer,
(D.892/4),
Philips Electrical Industries Ltd.,
Century House,
Shaftesbury Avenue, London, W.C.2.

COLLEGE OF ADVANCED TECHNOLOGY, BIRMINGHAM

Appointment of

SECRETARY

Following the recent proposals of the Minister of Education, the College is in process of being transferred to an independent Board of Governors, and arising from this change, a Secretary for the College is to be appointed as soon as possible. The College is expanding rapidly, and is being planned to have 3,500 student places in full-time and sandwich courses, and a considerable development in post-graduate courses and research.

The Secretary will be responsible to the Principal for the organisation and control of the College administrative sections and those functions which are administered centrally including work for the Board of Governors, the Academic Board and Committees; and will provide an advisory service and help to the academic departments. An appropriate structure for handling the personnel, financial, building and general clerical services is to be created. The person appointed should have had the experience and training to enable him/her to devise and maintain such a system, and the personal qualities to ensure that it harmoniously serves the academic work of the College.

Candidates should preferably have had responsible experience with industrial, technical, scientific or academic organisations, e.g. on the administrative side of technical industries, in managerial posts in connection with research and development, design and contracting or industrial production, or in administrative work with higher academic institutions.

The post is comparable in status with that of an Academic Head of Department and the starting salary will be not less than £2,600 p.a., and will depend on experience and qualifications.

Forms of application and further details from the Principal, College of Advanced Technology, Gosta Green, Birmingham, 4. Forms should be returned within 18 days of this advertisement.

QUALIFIED ACCOUNTANTS

Qualified Accountants are required by the Colonial Development Corporation for its associated Companies overseas. Men of 28-35 with some management accounting experience who wish to be interviewed should send curriculum vitae to the Personnel Officer, Colonial Development Corporation, 33 Hill Street, London, W.1, quoting Serial No. 664.

ROYAL INSTITUTE OF BRITISH ARCHITECTS

Appointment of

MANAGEMENT ADVISORY OFFICER

The Institute is to make a new appointment for an officer to initiate management courses for practising architects throughout the United Kingdom. When these courses are under way the officer would then form the nucleus of a management advisory service.

The appointment is for either a man or a woman; the salary range is £1,250-£2,500, and the successful candidate may be started at any position on this range according to age and experience. Applications are required by March 1, 1962.

Application forms and further particulars are available from Mr Anthony Williams, Assistant Secretary, RIBA, 66 Portland Place, London, W.1.

RESEARCH OFFICER. For British Travel and Holidays Association. Applicant should be graduate in Economics, age 25-30, with at least two-three years' experience in market research. Salary according to experience.—Apply in confidence to The Financial Controller and Secretary, British Travel and Holidays Association, Queen's House, 64-65 St. James's Street, London, S.W.1.

THE INSTITUTE OF HOUSING

Applications are invited for the post of Secretary at a salary within Local Government Scale E (£1,860-£2,120). Commencing salary will be fixed according to qualifications and experience. The person appointed will be required to take up duties on or near July 16, 1962.

The post will be superannuable on conditions similar to those applying to local government officers.

Further particulars should be obtained from the Secretary, Institute of Housing, 50 Tufton Street, Westminster, London, S.W.1.

PEP invites applications for a post of Senior Research Officer for its study of the European Common Market. Applicants should have an Economics Degree and, preferably, specialised knowledge of agricultural economics and marketing and of international trade in agricultural products. Importance is attached to ability to handle and interpret economic statistics of agriculture and especially to facility in writing readable reports. Salary according to experience.—Applications, in writing, to The Director, P.E.P. 16 Queen Anne's Gate, London, S.W.1.

BRADFORD INSTITUTE OF TECHNOLOGY

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited from well-qualified SOCIOLOGISTS or SOCIAL HISTORIANS for the post of LECTURER in GENERAL STUDIES.

Candidates should have a good honours degree, suitable teaching experience and a keen interest in the social implications of science and technology.

Salary £1,600 to £1,800 per annum. Previous industrial or research experience, at a suitable level, will be taken into account in fixing the commencing salary.

Further particulars and forms of application may be obtained from the Registrar, Bradford Institute of Technology, Bradford, 7.

HENRY PATTEN,
Clerk to the Governors

DEPUTY DIRECTOR

IMPORTANT EMPLOYERS ASSOCIATION based on London requires a **DEPUTY DIRECTOR** with view to succession. University graduate preferred, age 35/45 years. Industrial experience desirable but not essential. Commencing salary to be discussed but not less than £3,000 per annum.

A superannuation scheme is in operation for all staff.

Applications should be addressed to the Association's President, Box 1580.

BRITISH IRON AND STEEL FEDERATION

The British Iron and Steel Federation, one of Britain's leading Trade Associations, which is concerned with a wide range of functions on behalf of the companies within the iron and steel industry, invites applications for the following posts:

International Relations Department:
This department, which is now particularly concerned with work on the European Communities, has two vacancies, one for a senior post and one for a more junior post. Knowledge of international (particularly European) organisations and an industrial or commercial background would be important qualifications. Applicants should possess a good knowledge of French; have other languages also if possible; be graduates, and be under 35.

Economics/Public Relations Department:
Two vacancies exist. The first is a senior post in connection with writing for the Federation's publications, the scope of which may shortly be extended, and other journals; the person sought is an economic journalist with a wide range of experience. The second is for a more junior post as an economist; the person sought is a recent graduate interested in a whole range on economic matters impinging on the life of a major basic industry.

Translation Section:
Three vacancies occur for senior work in this section. Applicants should have a full working knowledge of one or more of the following languages—French, German, Italian, Dutch and Spanish—and some knowledge of industrial and commercial terms.

Salaries, which would be according to qualifications and experience, would be fully comparable with those in similar employments elsewhere. Applications for these vacancies should be addressed, in the first instances, to the Finance and Establishment Department, Steel House, Tothill Street, London, S.W.1.

MANAGER wanted for University Bookshop (Nigeria) Ltd., leading educational and mail order book business in Nigeria. Managerial experience (preferably in textbook and cultural field and office management), drive, initiative and above all hard work essential to deal with large, rapidly expanding turnover. Salary £2,000. Generous allowances, including overseas leave. Applications, in triplicate, as soon as possible to C. B. Allport, University College, Ibadan, Nigeria. Further particulars may be obtained from London Representative, 40 Gordon Square, W.C.1. (Tel. Euston 8948.)

For further appointments and other classified advertisements see pages 280 and 282

LIBRARIAN and library staff with parts of the Registration Examinations are required by the Trades Union Congress. Further details and application forms from the General Secretary, T.U.C., 23/28 Great Russell Street, W.C.1.

P. D. LEAKE RESEARCH FELLOWSHIP

Applications are invited from QUALIFIED MEMBERS OF THE ACCOUNTANCY PROFESSION for appointment to a P. D. LEAKE RESEARCH FELLOWSHIP financed by the P. D. Leake Trust.

The object of the Fellowship is to provide university facilities for an experienced accountant to carry out research in subjects with which the accountancy profession is directly concerned and within the charitable object of the P. D Leake Trust, namely "to benefit and advance the sciences of accounting and of political economy, including the subject of public finance and taxation." Only accountants who are members of United Kingdom accountancy bodies which are recognised for the purpose of United Kingdom company law are eligible.

The term of the Fellowship will be for the year commencing October 1, 1962, and it may be held in the University of Birmingham, the University of London, or the University of Oxford, the location of the appointment being determined by the three universities concerned, in consultation, after consideration of candidates' preference and research interests.

The emoluments of the Fellowship will be £2,000, out of which the Fellow will be required to meet any consequential expenses of his appointment.

Further particulars may be obtained from the Assistant Registrar (Commerce and Social Science), The University, Birmingham, 15, to whom application must be made by April 30, 1962.

ASSOCIATED DEPARTMENT STORES, a voluntary group of 25 independent stores, require a Director to take charge of their new London Office.

The principal function will be to co-ordinate joint purchases made by the Group, and the Director should therefore be fully conversant with department store merchandising techniques.

Applicant should be experienced in dealing at director level with suppliers and capable of interpreting requirements.

Commencing salary £2,000 per annum.

Applications in confidence to:

The Chairman,
Associated Department Stores Ltd.,
James Selby Ltd.,
386/402 Holloway Road,
London, N.7.

STATISTICIAN

THE G.E.C. APPLIED ELECTRONICS LABORATORIES

Stanmore, Middlesex

have a vacancy in the Statistical Services Group. The group provides a consulting service for the organisation and many of the problems encountered require the development of original methods for their solution. The services of an advanced digital computer are available if required.

Candidates should have a degree in mathematics, or its equivalent, with interest in modern techniques of statistics or operational research.

Applications should be made to the Staff Manager, quoting Ref. CFS/E.

GKN

G.K.N. GROUP RESEARCH LABORATORY

The Liaison and Information Division invites applications for the following:

ECONOMIC ASSISTANT

in Commercial Information Unit.

Must be a University graduate with good qualifications in Economics or Commerce.

This vacancy will appeal to the Applied Economist who is interested in surveying and reporting on a very wide range of economic, commercial and industrial information. Some experience in this field is necessary and an ability to survey and analyse information in depth will be needed.

Age range 28-30 years.

The Laboratory is situated on the outskirts of Wolverhampton at the western fringe of the Midland industrial area and adjacent to pleasant countryside. The Laboratory operates a 35½ hour week, a pension and life assurance scheme, and working conditions are good.

Please telephone or write to the:

Personnel Officer,
G.K.N. Group Research Laboratory,
Birmingham New Road,
Lanesfield, Wolverhampton.

For further appointments and other classified advertisements see pages 280 and 281

BUSINESS AND PERSONAL

ELECTRICAL CONDUIT FITTINGS

American Corporation wants to buy control of a small to medium British firm cabable of expansion in this or allied fields. Write first in confidence to JAMES BOUSFIELD & COMPANY, Licensing Consultants, 2 Hyberry Lane, Amersham, Bucks.

WHITEHALL WINDOW

The private intelligence service, now in its 10th year of publication, bringing you every week accurate "inside information" (not speculative) on political, international and City affairs.

Subscriptions £6 6s. per year. Overseas rates on application.

Sorry, no specimen copies – the service is supplied to subscribers only. Trial subscriptions (3 months) £1 15s.

TOPINFORM LTD.,
1, Wardrobe Place, Carter Lane, London, E.C.4.

The first number of a new international bimonthly publication covering the whole field of consumers economy, interests and their protection appears today. The contents list includes news and comment on Consumer Economics, Education, Legislation, Expenditure, Research, Protection and Representation. CAB is available from: The National Co-operative Alliance, 11 Upper Grosvenor Street, London, W.1. Subscription 15s. yearly.

THE BRITISH ASSOCIATION OF ACCOUNTANTS AND AUDITORS LIMITED (Incorporated 1928). The next examinations will be held from the 22nd to 24th May, 1962. Membership can only be obtained by those who have passed the prescribed examinations. Copies of the Syllabus are obtainable from the Secretary, Stamford House, 2-4, Chiswick High Road, London, W.4.

STAFFORDSHIRE COUNTY COUNCIL

COUNTY PLANNING AND DEVELOPMENT DEPARTMENT

Applications are invited for the appointment in the County Planning and Development Department of Assistants in the Research section:

(a) *Planning Assistant* on either A.P.T. Grade II (£815-£960 per annum) or A.P.T. Grade III (£960-£1,140 per annum).

(b) *Junior Planning Assistant* on either A.P.T. Grade I (£645-£815 per annum) or A.P.T. Grade II (£815-£960 per annum).

The commencing salary and grading will depend upon *qualifications and experience*. Applicants should have an Honours Degree in Geography or Economics and should preferably have had research experience.

Facilities will be provided, including financial assistance to enable the persons appointed to undertake further studies in accordance with the Council's post-entry training scheme.

The Council are prepared to grant lodging allowance at 35s. per week for a period of six months and second class railway travel home every two months during the initial six months to married applicants maintaining a home outside the *geographical county*. Consideration will also be given to the granting of financial assistance in appropriate cases towards removal expenses.

Applications, giving details of age, education, qualifications, present and previous appointments, experience, and the names of two persons to whom reference may be made, should be sent to D. W. Riley, County Planning and Development Officer, 41a Lancaster Street, Stafford, not later than January 29, 1962.

Relationship to any member or senior officer of the County Council must be disclosed. Canvassing will disqualify.

T. H. EVANS,
Clerk of the County Council.

EUROPEAN COMMUNITY INFORMATION SERVICE

Publications Division requires British journalist, preferably with experience of writing on economic and industrial matters, to prepare articles, brochures, &c., in English. Good French essential. World resume in Luxembourg. Initial contract for one year; salary 25,000 Belgian francs per month. Applications to London Office: 23 Chesham Street, S.W.1.

TWO-DAY Conference on Finance and Investment in the Common Market, February 7 and 8. Community Rooms, London, W.C.2. To be opened by Lord Ritchie of Dundee. Particulars from: LIBERAL IDEAS, 70 Wood Street, Piccadilly, London, W.1. Tel: PADdington 6676.

Last Wolsey Hall students passed London Univ. B.Sc. Economics Entry 1958 and 1959 for G.C.E., Law, Statistical, other exams. Prospectus (mention examination) from L. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

SCHEDARIAL TRAINING, especially for University graduates and older students, personally and intensive 14-week correspondence. Organising Secretaries, Darcess, 158 Holland Park Avenue, W.11. PARK 3654.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, &c. Most study practical. Guaranteed coaching in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G.O.2),

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for the positions of RESEARCH FELLOW and RESEARCH OFFICER in the Research Techniques Division.

The RESEARCH FELLOW will conduct criminological research primarily on the *methods* on which studies of crime are based. Research issues involve: the accuracy of research information; techniques for eliciting information; the potential of survey methods for the development of control samples; the adequacy of existing methods of analysis for studying the causes of crime.

The position will involve responsibility for the development and the progressing of research projects and will entail liaison with public bodies and with those working in crime research.

Applicants must have a university honours degree (not less than second class), advanced training in psychology or in sociology, and a working grasp of statistics. *Practical experience in social research is essential*, preferably including survey work with members of the public and the use of intensive interviewing techniques. A realistic concern with scientific method is essential.

The salary will be upwards of £1,700 a year, plus a London allowance of £60 a year and F.S.S.U. benefits. There will be full opportunity to publish findings.

The RESEARCH OFFICER will work on the same series of projects but will, in the first instance, be responsible to senior research staff. Applicants should hold a university honours degree, should have advanced training in psychology or sociology and a good grasp of elementary statistics. Practical experience in social research is essential.

Salary is in the range £750-£1,000 (plus London Allowance of £60) per year. This position offers opportunity to publish results, and experience in an area of basic importance to research (i.e., methods). There would be opportunity to work towards a higher degree.

Applications, which should be received by February 14, 1962, should be sent to: The Secretary, The London School of Economics and Political Science, Houghton Street, London, W.C.2. The following information should be included in the application:—academic and other qualifications with special reference to psychology, sociology and statistics; practical experience in research, with a statement of the level of responsibility involved; research interests; reference to any publications; age and other relevant biographical details.

APPLICATIONS invited from Women History MA and English Graduates (25-40) with personality and interest in World Affairs to teach girls over 18. Stimulative work, international connections. Scope for initiative, good salary and delightful conditions.—Apply MISS SEVILLE-ROUFE, HOUSE OF CITIZENSHIP, Aylesbury.

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail UK and Canada £4 . 10 ; elsewhere overseas £5
By air see below

Subscriptions to many countries can be sent either by direct second-class airmail *or in bulk by air freight for onward posting from central distribution points.* Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

Pig Industry Development Authority

POST GRADUATE RESEARCH SCHOLARSHIPS

The Authority are offering post graduate scholarships to suitable graduates in Agriculture, Veterinary Medicine, Economics and Statistics or other appropriate branches of Science, who are prepared to devote themselves to research into some aspect of the pig, or who wish to receive a research training in this field of inquiry.

The scholarships will be available for two or three years so that study for a higher degree is possible. They are subject to annual review, and will have a value of not less than £500 per annum for graduates in Agriculture, Economics and Science and £750 per annum for graduates in Veterinary Medicine. There is provision for increments to these awards in appropriate cases.

A number of Fellowships of the value £900-£1,250 are also available.

Applications should normally be received by the Authority on or before March 15, 1962.

Further details are available from:
PIDA House, Ridgmount Street, London, W.C.1.

PEP is about to extend its work in the general fields of industrial adaptation and of training and education for developing areas. Applications are invited from graduates with suitable qualifications in economics, sociology or other social sciences. Both senior and junior posts are to be filled. For senior posts previous research experience is required. —Applications in writing to: The Director, P.E.P., 16 Queen Anne's Gate, London, S.W.1.

BIP BRITISH INDUSTRIAL PLASTICS LIMITED

WOULD IT BE BETTER IN PLASTIC?

Is the brick obsolete? No, never! Bricks built the Tower of Babel, and brickwork today is both fine-looking and functional. But how about plastic bricks? Wouldn't they be lighter on the hod, cleaner in the smog, even (dare we suggest) more durable?

It's happening already, of course. Not actual bricks (let's leave them alone); but in many other materials produced for the building industry plastics are proving their value, as sheets, blocks, coatings or infill foam.

British Industrial Plastics are keen to develop these new materials. What sort of thing? Architects and builders will be interested in a glassfibre streetlamp column, plastic moulds and shuttering for pre-stressed concrete work, and the admirable structural sheeting we make ourselves (this is an advertisement) called FILON. But every kind of manufacturer, in this age of prefabrication, will find a fountain of fresh thought at BIP: we have a staff to advise you (without charge) and another unit to help you design products (also free). We claim to know about these things because we process the raw material, build the press and tool plant and make our own range of products.

GO ON-ASK US!

WOULD IT BE BETTER WITH PLASTICS?

PLEASE GIVE US A PROD. We're out to help you, but our minds work faster if you'll tell us specifically what's worrying you. Or perhaps something ought to be worrying you. Is it good enough to boast: "Our cast-iron mangle, made in 1862, still going strong, what's wrong with cast iron?"

BRITISH INDUSTRIAL PLASTICS LIMITED, OLDBURY, BIRMINGHAM
A member of the Turner & Newall Group

HOME

AXES TO THE GRINDSTONE

Mr Brooke has whetted his axe and is sizing up the forest of Government spending on which he is to use it. The rationalisation of unemployment and sickness benefit, a reappraisal of the comparability principle in public service pay and a stern look at long-term defence commitments all merit his particular attention. No bad thing would be a band of under-foresters to thin the undergrowth of public extravagance (p. 297).

Courtauld's counterblast to ICI's improved offer presents some attractive figuring: but shareholders must weigh this against the past record (p. 340).

Mr Powell's "fewer beds in newer hospitals" reflects a welcome revolution in Britain's hospital services (p. 302).

APPEALING TO THE INSTINCTS

The Government's latest hopes of improving export financing rest on the City's charity: they take the profit out of export financing and leave the structure shaky (p. 337).

Need the licensing justices continue to refuse drink licences to chain stores on the ground of "need"? (p. 309).

SPRINGES TO CATCH WOODCOCKS

The Trades Union Congress has agreed to go into the Chancellor's economic development council just so long as it can ignore Ned's purpose—to equate incomes with productivity (p. 304).

The profits of Britain's steelmakers have been squeezed by surplus capacity: they still want to increase prices, and hope for freedom to do so when Britain enters Europe (p. 338).

Trapped by a recession, with heavy stocks on its hands, the motor industry has had a thin year of it (p. 342).

Mr Marples, taking a hand in the railway wage negotiations, has put his foot in it (p. 303).

CANNON TO LEFT OF THEM

After opening with a rattle of musketry, the two sides in parliament are sighting in for the big barrages ahead: some of them will be between regiments in the same army (p. 305).

The monarchy is getting a whiff of sour grapeshot from the cannoneers of Fleet Street (p. 306).

SPRATS TO CATCH A MACKEREL

Mr Butler's recruiting drive for more policemen will be worth every penny of £60,000—if it succeeds (p. 314).

Tesco's attempt at ground-baiting the customer by price-cutting has been defeated by the sportsmen who supply their goods (p. 346).

Standard-Triumph, swallowed whole, is lying heavy on Leyland's stomach (p. 365).

The Church of England broken down—statistically (p. 314).

INTERNATIONAL

THE MOSCOW ROAD

The enigmatic noises coming from the Soviet block echo an unfinished political tussle (p. 333), but they do not mean that Moscow has been diverted from its foreign policy aims. It is still the West's interest to talk, and not to wait till the next diplomatic freeze sets in (p. 299).

Bonn could play a useful part in such exchanges, but the west **German** Free Democrats, who would like this, are failing to use what influence they have in the present coalition (p. 310).

Should America resume **nuclear tests** in the atmosphere? If it does, Mr Macmillan and President Kennedy, when they meet in April, may discuss where. The alternative, a test ban, could be discussed in the talks on general disarmament due to start in March (p. 304).

DISAPPOINTED AFRICANS

Tanganyikans have found the gingerbread of independence unpalatable, once the gilt has been licked off (p. 329). In Tanganyika as in Kenya there is danger that extremists will gradually gain power (p. 300).

The absence of the Casablanca group, and even of some moderates, from the Lagos conference of African states, is a blow to **Nigeria's** efforts for African unity (p. 306).

A Bow Group pamphlet rightly warns Britain and the West to dissociate themselves from white domination in southern Africa (p. 306).

PRINCES AND PAPUANS

Dutch and Indonesian views on **Papua** are now close enough for agreement to be possible (p. 301).

Another meeting between the three **Laotian princes** has yielded no conclusive result (p. 310).

TIME AND TERROR

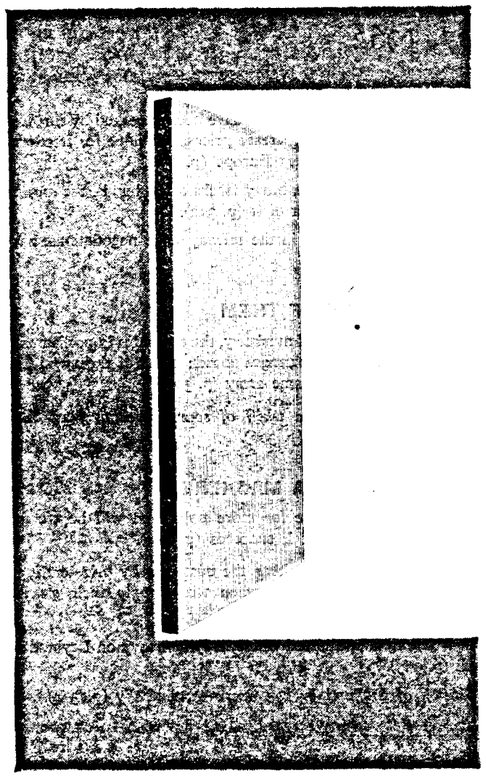
By the time the French government and the Moslem rebels reach an agreement on **Algeria**, it may be too late to enforce it (p. 305).

The Brussels talks on agriculture have delayed Britain's negotiations with the **common market** (p. 305).

AMERICA'S NEIGHBOURS

The patchy programme Mr Diefenbaker has submitted to the new **Canadian** parliament has not restored his popularity, but he will not necessarily lose the next election (p. 330).

Dominica has natural advantages and American support. But progress will have to be swift (p. 330).



TRANSATLANTIC PLANS

President Kennedy's **economic plans** may be prudent but they are not overcautious (p. 321).

Much of the talk in Washington of an **Atlantic Community** is designed to make the President's tariff proposals more palatable (p. 324).

The current congressional hearings on what to tell the troops will not be the McCarthyist revival that they might have been (p. 324).

Why you should read EUROPEAN CHEMICAL NEWS

Because it will tell you exactly what is happening in the EUROPEAN CHEMICAL INDUSTRY quickly and concisely – week by week

EVERY FRIDAY **ECN** WILL BRING YOU

News reports direct from experts on the chemical industry in Germany, Italy, France, Scandinavia, Benelux countries, United States and Japan.

Market intelligence reports.

Current prices of basic chemical products.

Technical news interpreted in business and economic terms.

General news, interpreted commercially.

Company finance news related to world business trends.

Essential reading today for all managers, executives, technicians and marketing men in the chemical industry, this new journal will also be of great value in financial circles and to all those engaged in the import and export of chemical products.

On Sale NOW

AND EVERY FRIDAY PRICE 1/-

STANTEC

STANTEC FACILITIES

A medium size computer forming the Central Processor of all the systems can be extended at any time to suit the users' requirements.

Storage: Magnetic Drum Store up to 8192 word capacity · Fast Access Ferrite Stores up to 8192 word capacity · Magnetic Tape Backing Store and/or Random Access Store.

Input media: Punched Paper Tape · Punched Cards · Keysets.

STANTEC EFFICIENCY

Of the 40-odd machines so far installed a remarkably high rate of efficiency has been experienced. Machines working a full 24-hour day have been known to run for over three months without needing attention. The average figures for Stantec Machines in service show an overall efficiency of over 95% of the total operation times. The Unit construction of these machines, and future machines, facilitates simple maintenance which ensures that the high rate of efficiency is maintained.

STANTEC APPLICATIONS

Stock Control · Production Control · Wages and Accounting · Seat Reservation · Aircraft Locating and Control · Scientific Research.

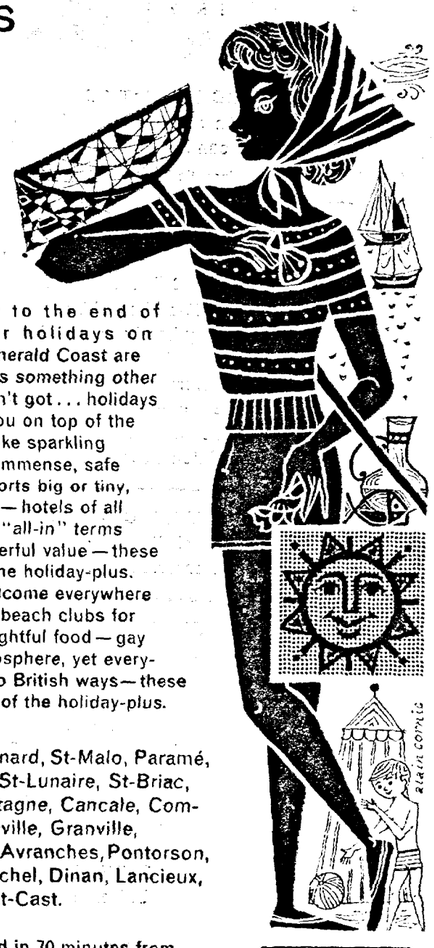
PROFIT IN THE BALANCE

THE profitability of many industrial processes depends on accurate methods of weight control. And as competition hardens, both at home and abroad, profit margins are becoming tighter. *Increased* profits come from *decreased* wastage and better use of manpower—direct results of *faster* handling and more accurate, sustained control of materials.

In view of this, more and more industries are turning to automation, using Avery weighing equipment with electrical and electronic control systems.

In the science of weighing control by electronic methods, Avery have proved, in widely varying applications, that there is no substitute for the combined accuracy and flexibility of orthodox lever systems provided with the means of giving a suitable electric output. Avery have perfected weighing mechanisms that take instructions from and give instructions to punched card and tape machines; thus providing fully automatic and foolproof operation in all kinds of weighing, batching, blending, continuous flow, totalising, testing, checking and recording processes. The use of electronics—especially the growing range of transistors—has enabled these ultra-sensitive weighing mechanisms, even at zero-energy, to operate controls, computers, electric typewriters and other business machines. Where a lower order of accuracy is acceptable and site conditions demand a more compact installation, Avery also supply load cells with the associated instrumentation and control systems.

By linking such modern sciences as electronics and solid state physics with two centuries of experience in weighing, Avery have achieved a combination that is profiting trade and industry.



A LETTER TO AVERY TODAY CAN INCREASE YOUR PROFITS TOMORROW

Avery will advise you at any stage of your present production or future development. Write for full information to

AVERY

In BRITTANY choose EMERALD COAST for you and yours

From May to the end of September holidays on *Brittany's Emerald Coast* are *holidays plus something other* places haven't got... holidays which put you on top of the world. Sea like sparkling emeralds—immense, safe sands—resorts big or tiny, gay or quiet—hotels of all grades with "all-in" terms giving wonderful value—these are part of the holiday-plus. Children welcome everywhere (supervised beach clubs for them)—delightful food—gay French atmosphere, yet everybody used to British ways—these too are part of the holiday-plus.

Choose: Dinard, St-Malo, Paramé, St-Servan, St-Lunaire, St-Briac, Dol-de-Bretagne, Cancale, Combourg, Donville, Granville, St-Nicolas, Avranches, Pontorson, Mont-St-Michel, Dinan, Lancieux, St-Jacut, St-Cast.

Fly to Dinard in 70 minutes from London, by Air France 100 seater pressurised Super G airliner, for just £17.13.0 (return tourist class fare). Every week-end from July 1st.

THE TRUCK THAT'S GOING PLACES...

When Leyland introduced their Power-Plus range, they knew it would be a record-breaker in the way of economy. A recorded increase in m.p.g., on some services of up to 33⅓%, has certainly proved them right...

...but there's more to Power-Plus economy than that. Shrewd operators have found that the Leyland 0.680 engine's extra power enables their trucks to complete normal two-day hauls in one. And that means a saving on drivers' subsistence allowance, tighter delivery schedules and, in the long run, a reduction in fleet numbers. Whether the last item is a good thing for Leyland is open to question. But it certainly is for the operator.

you need an I.C.I. plastic called 'Alkathene'

You can make things as flexible as film and as rigid as a twelve foot dinghy from 'Alkathene'. It's the brand of polythene made by I.C.I., who discovered polythene. Buckets, bowls and other housewares are tougher and lighter when they are made from it. Bottles and containers for drinks, detergents and liquids are cleaner and safer for it. Transatlantic cables are insulated with it—and carry more simultaneous conversations as a result. If you think that polythene can no longer surprise you, the Technical Service and Development laboratories at I.C.I. may be proving you wrong at this moment.

ICI *means progress in plastics*

'Alkathene' is the registered trade mark for the polythene manufactured by I.C.I.

VOLUME CCII - NUMBER 6179

The Impending Axe

WEDNESDAY'S debate in the Commons did not cast much light on how and where Mr Brooke is going to ply his axe on government spending for 1962-63. But at least his speech did indicate that he has some of the right ideas about the principles on which he should act.

It is pretty clear that the Government is locked in controversy as a result of Mr Lloyd's promise last July that its current expenditure in 1962-63 will be cut back by "£170 million below what it would have been otherwise." Nobody likes to contemplate the political row that will break loose if the vote on account next month shows that Mr Brooke has been axing more of the welfare state in order to achieve this. This week Mr Brooke rightly said that those who call for economies should have the courage to say where they would make them. Here, then, are *The Economist's* suggestions.

First—and most controversially—about the social services. The best and easiest social service in which to make economies might be sickness benefit, which is now costing the country—or, technically, the national insurance fund—about £155 million a year, much of it for the short-term sick. More than half of all British workers now get their wages or salaries paid in full or part by their employers while they are temporarily sick, and in such circumstances it is often left to the employee to decide whether to apply for sickness benefit from the national insurance fund as well ; if he does, the amount of it will generally be deducted from his pay, but the advantage he gets is that sickness benefit is not taxable and that he does not pay any national insurance contributions in any week that he is drawing it. The benefit should be made taxable straightaway, and when a sick worker gets his full wages made up by his employer he should pay full insurance contributions for that week. Claims for the benefit might then drop significantly. Simultaneously the Government should announce a longer-term scheme whereby employers would eventually be obliged to pay wages to all sick workers during, say, their first two weeks off work, and to cover the cost of this through private sick-pay insurance. Once this was done, there would really be no sane argument against imposing some board-and-lodging charge for the first two weeks or so which insured workers spent in hospital ; obviously, their absence from home would make a cut in household costs.

It would also be sensible to lay more of the cost of financing unemployment benefit on to employers, in a radical change designed to tie up short-term unemployment benefits and severance pay under one heading. When the Government moved to a graduated pensions scheme, the first effect was to increase the surplus of the national insurance fund. The same mechanism could be used for unemployment : the Government should tell employers that they can either contract out into private and approved severance pay schemes, or else they must pay a higher graduated contribution for a new state scheme. Any such arrangements, like those for graduated pensions, would probably require at least two years before they could become effective ; but there is one other unemployment fund change that should be made straightaway—although it would be very unpopular. The Government should say that unemployment benefit will no longer be paid to men on a short-time (say, three-day or four-day) working week for their day or days off work in that week, at any rate not after short-time working has continued for more than a month. There is no economic justification for the

present system whereby firms are encouraged to keep on the whole of their labour force for a two- or three-day week during a recession (drawing wages from Monday to Wednesday, unemployment benefit Thursday and Friday), instead of sacking some of them so that they can seek more productive full-time employment.

These changes could effect quite considerable economies for the national insurance fund, thus doing something to bridge the actuarial deficit it suffers through constant rises in old age pensions (and enabling it to pay more towards the health service). No cuts can possibly be made in the fund's outpayments for pensions themselves, but something could be done now to contain their future growth. The Government should set up a social survey to examine the average economic circumstances of those who retired (a) before 1955, (b) between 1955 and now, and (c) the prospective circumstances of most of those due to retire from 1963 onwards (many more of whom will be retiring under private superannuation schemes). This research would help to create the climate of opinion necessary to see that the next increase in pensions, when it comes, should go to the older groups who really need it rather than being spread right across the board.

The danger is that, failing such steps, the Government will decide that the easiest social services for politicians to cut this year are the family allowances, on the ground that only about 22 per cent of households (those with more than one child in full-time education or younger) get them. That is precisely why this discriminate service should not be axed ; it would be slightly less reactionary (though obviously also pretty undesirable) to cut the income tax allowances for children, which aid slightly better-off (i.e. income-tax-paying) larger families only. There may be a better case for charging more than the present 1s. (about half the real cost) for each school dinner, a service which now costs the Government about £49 million a year and which just over half of all school children choose to use ; this latter proportion is rising rapidly (by 2 or 3 per cent a year) because school meals are becoming a better and better subsidised bargain. Any rise in school meal prices could be sheltered for poorer families by the present rebate system which is already working fairly smoothly (7 per cent of children got the meals free in 1960). And it is right to voice the suspicion that the school milk service (which will cost the Government £12 million this year) is partly a prop to dairy farmers rather than to children's health.

But if the Government does make any economies in some of these social services for children—which, on balance, it should do—there are other services for large families which should actually be extended. For example, we would like to see more generous local-authority maintenance allowances for poorer children who remain at school after 15 ; and, in the easy task of thinking up new social services which one would like to start, one of the most attractive is the idea of grants towards reduced rail and road fares for once-a-year holiday travel for families earning below a certain (very low) net income per head.

Mr Brooke's second main head concerns administrative costs. The only way to secure long-term economies in these is gradually to abandon the Priestley Royal Commission's formula of so-called "scientific" comparability for public servants' pay. At present when there is a shortage of recruits to a particular grade in the public service, pay in that grade is rightly increased (although sometimes too laggardly—e.g., the police); but the system of "comparability" also requires the Government to raise salaries for grades where recruitment is ample. Let us take an immediate and controversial example. Teachers in Colleges of Advanced Technology have recently got a 17½ per cent pay increase, because more teachers need to be attracted to the CATs; university lecturers are expecting the same increase, but they should not get it. Instead any increase in Government payments for university lecturers' salaries this year should take the form of handing out different sums to different universities, with more money going to the less popular places with difficulties of recruitment (e.g., more, probably, to Leeds than to Oxford or Cambridge), and telling them to use this money to bid up whichever faculties' salaries they please (e.g., more, probably, for physics professors than arts ones).

THIRDLY, defence. Last year the defence estimates rose by some £40 million to £1,655 million, and the Government will do very well if the increase is not even larger this year. Service pay takes up one half of all defence spending ; and pay per soldier is certain to have to go up in future—to compensate for missing what, one hopes, will be the increasing attractions of ordinary British civilian life. The recurring struggle to persuade the Germans to pay more for the British Army of the Rhine has not made much progress this week. When the V-bomber force is recognised to be antiquated, some money should be saved on what is called "Britain's contribution to the nuclear deterrent." But Skybolt is not going to be abandoned by the Government at this stage, because it looks as if it may actually work.

In the event, therefore, there is probably only one major long-term economy which can sensibly be started this year, and it would be an emotive one: Britain should start to give up three or four bases overseas. The Government should stop building new married quarters in areas that are going to have to be handed over to Mr Kenyatta and others, and recognise that future policing can be done better from ships with marines. But meanwhile the ships or trooping aircraft have to be built or (like the commando carriers) converted. This is a field for long-term economies, rather than short-term only.

The fourth and final thing we would like Mr Brooke to do is to set up a group of what might be called whole-time "Treasury liquidators." This group of hatchet-men should spend the whole year moving from department to department, recommending which particular government services or forms of expenditure should be completely discontinued. Naturally this group should not decide major questions of government policy: such as the very real question whether, if we do not get into the common market, whole segments of Britain's system of agricultural support should be scrapped. But there must be many minor services, costing several million pounds a year, which were started under very different circumstances in the past and continue now because the department concerned has simply got used to providing them. The point about such services is that the recommendation whether to continue or discontinue them should be made by some outside body ; the decision is one in which the ministry concerned—which will often mean people working in the service under review—should often have virtually no say at all.

Moscow's German Aims

If anyone is letting go of the Berlin rope, it is not the Russians

ENIGMATIC Russia has been more mysterious than usual this winter. Admittedly, the mere thought of anything "going on" in Moscow—even when the Kremlin lies quiet under the snow, its great men away shelling peas in Minsk or sipping mint tea in Rabat—arouses mystification. Few things can cause more perplexity than Moscow exhibiting, if only for a week or two, the signs of a normal western condition of faction, cross-purposes, and dispersal of effort.

The vicissitudes of Mr Molotov's Vienna job have been only one of a string of intriguing portents, suggesting clashes of ideas, the labour of giving birth to policies on sensitive domestic subjects, strenuous and not wholly successful exertions to assert spiritual authority over communists in China, Albania, and elsewhere. Some of these signs are further discussed on page 333. The Western political leaders and their advisers are right to pore over them. They are wrong to hope that the communists' contradictions, however rich, will excuse the West from disentangling its own ; for this is most unlikely.

Just now the western countries are in some danger of thinking that because Berlin is quiet, because Soviet threats of imminent action in Germany have died down, and because Mr Khrushchev has been busy in other directions, the necessity for discussing Berlin with the Russians has disappeared. The Berlin crisis is assumed to have subsided; Mr Khrushchev, it is said, has lost interest in his threatened separate German peace treaty, and has told Herr Ulbricht that he need not expect its signature this year ; Moscow's relations with the east German regime are not cordial. Mr Dean Rusk, the American Secretary of State, at his press conference on January 18th declined to accept this view. Berlin remained dangerous, he said; for all that the Russian tanks had been withdrawn from the city, there was no sign of a change in the Soviet attitude ; he expected the "probing" talks in Moscow to continue.

All the same, the contrary idea has continued to gain ground. Based on a mixture of fact and fancy, it is in effect the old "do-nothing" view in a new dress. When the Russians are menacing, it would be wrong to negotiate under threats ; when they are quiet, there is nothing to worry about. Western discussion of the Berlin question went through the same cycle from the moment in November, 1958, when Mr Khrushchev threw down the gauntlet about Berlin, through the Eisenhower-Khrushchev exchanges to the day in May, 1960, when the summit conference in Paris crashed in ruins. Such a collapse is always, from one point of view, convenient. It restores unity. It lulls the suspicions that are always wakeful when great powers contemplate a bargain touching the interests of others (Germany, say) besides themselves. Leaders of middle-sized countries (like France), who fear to lose influence or importance if greater powers cease to be at odds, are reassured.

The trouble is that if this kind of harmony is put first, the alliance must deny itself any chance of resolving its disputes with its opponent, and is driven to the expedient, in the long run hopeless, of keeping everything as it is by the threat of war. Fortunately President Kennedy, though in his first year of office he has used rearmament and the threat of warlike retaliation to effect, has refused to allow himself to be denied the use of diplomacy—the right to explore and, if occasion arises, to negotiate. Evidently his ambassador, Mr Thompson, has not got very far in the two talks he has had with Mr Gromyko this month. At the second, on January 12th, he found an opponent little disposed to give away points, and asserting Russian wishes in their full rigour. This may be normal at such an early stage in a negotiation. Oddly, it has been called in aid as evidence of the supposed Russian "loss of interest" in an agreement.

WHAT it presumably does mean is that the Russians have not changed their ideas, and want to get as much of their own way as they can. At the same time, they want to talk. Mr Khrushchev, busy with maize and pulses, has let a (for him) unusual length of time go by without making any foreign policy speeches (his last was on December 9th). But the Russians have made a renewed effort to get Mr Robert Kennedy, the President's brother, to include Moscow in the world tour he starts next week. This has failed, but Mr Khrushchev's son-in-law, Mr Adzhubei, is to lunch with the President on Tuesday.

The burst of Russian explanatory zeal towards the Germans themselves, the objects of all this push-and-pull, is also worth attention. It opened with the memorandum handed by Mr Gromyko to Dr Kroll, the west German ambassador in Moscow, on December 27th. Because of some unkind remarks it contained about the inner motives of the policies of some western countries towards Germany, this document was dismissed by Dr Adenauer as *komisch* and by the Bonn Christian Democrats as a naïve Russian attempt to drive a wedge between Bonn and its western friends. Some optimists have even connected it with the supposed coolness (as if there had ever been warmth in that quarter) between Moscow and east Berlin.

But the document may equally have been a seriously-meant attempt to explain Moscow's German policy. West Germans who do not in the least dream of Tauroggen or Rapallo have suggested with some reason that Bonn is not in fact doing the alliance an unqualified service by rejecting out of hand the implied invitation to exchange views. The west Germans could exchange views with Moscow, on a matter that concerns them both, informing and consulting their allies; and why not?

Two long articles in the Moscow press last week (one by Mr Kudryavtsev in *Izvestia*, January 18th ; and one by Mr Nekrasov and Mr Mikhaylov in *Pravda*, January 19th) have continued the work of explaining what Moscow wants in Germany. The second and more earnest of the two reproduces much of the substance of the memorandum which Mr Gromyko handed to Dr Kroll. A new, though not novel, element in this article is the earnestness of its insistence that a regulation of German relations with Russia would be in the interest of west Germany itself.

But such a regulation would include a peace treaty, to which

the east German state would have to be a party. The Russians, like the other eastern Europeans, fear German expansionist forces and are desperately anxious to put a stop to German rearmament. What the Russians are after is plainly unchanged, and they have said it countless times: recognition, acceptance and security for the existing order in central and eastern Europe. It is to this end that they want their German peace treaty and their new status for west Berlin. How the West could meet these demands looks no easier than ever it did. For the moment—perhaps for a few months, perhaps not—the Russians have put aside the thunder and lightning in order to negotiate and argue. But they have not ceased to mean what they say, and it is still necessary to take them seriously.

Emergency Nations

Mr Nyerere may be fighting for east Africa's life; independence has given rise to popular demands that cannot easily be satisfied

ABOUT a month before Tanganyika became independent, an article by the prime minister, Julius K. Nyerere, appeared in a Dar es Salaam magazine, *Spearhead*. "The governments of these new countries," Mr Nyerere wrote, "must treat the situation as one of national emergency, comparable almost to that of a country at war." On Monday, a little more than a month after independence, Mr Nyerere stepped down from being prime minister. His new task, he said, was to build up the party, the Tanganyika African National Union, so that it would be active in every village and could act like a "two-way all-weather road" along which the government's plans and purposes could travel to the people, and the people's ideas, desires and misunderstandings could travel direct to the government. And on Tuesday the new prime minister, Mr Rashidi Kawawa, said, "Nyerere is the commander-in-chief and we are his troops. He is the father of the nation to whom we will continue to go for advice."

The suddenness of Mr Nyerere's decision suggests, however, that he has felt the pressure of too much advice from parts of his nation. As our correspondent explains on page 329, the sickness in Tanganyika is disappointment. For most people, independence has meant little more than a new flag, a lovely anthem, and the sight of their leaders doing rather well in big cars. The scapegoats, it seems, are the 100,000 Asians and the 20,000 Europeans who live the kind of life black Tanganyikans now aspire to. Sadly, a country of which so much has been expected does damage even when it goes slightly off the rails. Its racialism amounts so far to no more than a collection of harsh editorials, the expulsion of five Europeans for "disrespect," and a change of title for Sir Ernest Vasey (from finance minister to government adviser on economic affairs). Yet Dr Verwoerd was able to gloat over it in the Cape Parliament on Tuesday.

There are other pressures. Most of Tanganyika's 9 million people still live in the subsistence economy, worth about £8 a year for each citizen. The monetary economy brings in another £11 a year a head. But tribal Africans moving into modern life find themselves connected with the powerful Tanganyika Federation of Labour, of which Mr Kawawa was once president. This has borne heavily upon the new government: the first weeks of the first year of *uhuru* have been marred by an unofficial go-slow strike on the docks at Dar es Salaam, and political threats from some union leaders.

These hungry demands cannot quickly be satisfied. Sir Ernest has worked out a £24 million three-year development plan, ambitious by World Bank standards, conservative to the Tanganyikans. The politicians have no money to spend and little to do but talk politics. Talking, they have found Mr Nyerere too moderate: it is hard to bear the praise of the West and be a leading pan-Africanist at the same time. Unfairly, perhaps, he has been thought to be too sympathetic with Nigeria's conservative leadership under Sir Abubakar (discussed in a note on page 310); in fact his ideas are nearer to those of Dr Nkrumah, or Mr Sekou Touré of Guinea. The critics of Sir Abubakar, and of Mr Nyerere, say that their neutralism is too West-inclined; non-alignment has to mean a certain coolness towards the former colonial powers. As in Nigeria, the politicians want a republic; the hope must be that Tanganyika's first president is a Nyerere more firmly in charge.

Much of this was hinted at in Mr Nyerere's article in *Spearhead* in November. Older countries, he said, were able to spread their industrial growing pains over long periods; in any event, when there were no mass communications, people could not see the riches their neighbours had. Modern African expectations, aroused by nationalist parties, must be satisfied fast—and by governments that lack the men and the money to provide what is wanted. Further, African countries were not real nations, but collections of tribes, arbitrarily put together. It was a time of emergency, a time of war against Africa's three devils, Poverty, Ignorance, Disease.

Mr Nyerere's answer is the party. "There can be no room for difference or division," he wrote in November. Now, it seems, the national unity he used in winning, peacefully, independence from Britain needs to be welded once again for the new battle. Democracy, the new commander-in-chief says, is talking until you agree: he is going to start talking. If these ideas are put into practice, Tanganyika may very well become a state like Guinea, in which the party is the "soul" of the developing nation. The Tanganyikans will probably try to persuade themselves into schemes of voluntary labour, unpaid, like Mr Sekou Touré's *investissement humain*; in the villages the party leader will be the man to know. Tanganyikans will probably continue to seek—and honour—overseas investment, but it is also likely that a more socialist-looking economic plan will be thought up by Mr Kawawa's new government.

There are disquieting possibilities in all this if things go badly, but, all the same, Mr Nyerere's may be the only path. It is not necessarily the path to a communist state, but dangers there certainly are. Tanganyika cannot afford to alienate its

Europeans and Asians: as it is, the lack of technical skills and the costs of independence are likely to mean an actual decline in the general standard of living this year. And, as Mr Nyerere probably discovered last week-end, a one-party government contains built-in hazards for its leader, however idolised he may be.

ALL these dangers apply doubly to Kenya, a country whose politics gravely affect Tanganyika. (It is sometimes forgotten that Tanganyika is not an island: it has borders with Mozambique, Nyasaland, Northern Rhodesia, Katanga, Ruanda-Urundi, Uganda and Kenya.) Kenya's standard of life is highly unlikely to rise in the years immediately following independence; it is hard, in these circumstances, to give cheer to the white Kenyans, even those who agree to stay behind and call Africans "Mr" or Bwana. If they are caught in a trap—a trap that would be only partly of their own making—Britain should face up to the responsibility of compensating them.

Things may not go badly, however. A lot depends on who wins the present struggle for power in Kenya (just as a lot depends on how far Mr Nyerere succeeds in talking his party into agreement with his own high principles). The Kenyan battle will be fought at the constitutional conference which opens in London on February 14th. The argument will be between those who favour a strong government for an independent Kenya (men who probably read their *Spearhead*), and those who prefer dividing the country into half a dozen or so confederated states.

The Kenya African Democratic Union plan for a tribal confederation sets itself up as a panacea: the Somalis could have their autonomy; the coastal strip, bought from the Sultan of Zanzibar, could be fitted in; the Masai and the Abuluhya could be reunited across the frontiers of Tanganyika and Uganda; Zanzibar could be accommodated. But Mr Nyerere, who wants a federation of strong unitary states (Kenya, Tanganyika, Uganda, Zanzibar), believes that this kind of division would lead to strife as it has in the Congo: only a strong central government (based, as he would now say, on a strong unitary party?) can replace the pax Britannica.

His sympathies in Kenyan affairs lie with the Kenya African National Union. The trouble is that Kanu is split into at least three factions and that the faction leaders are, disastrously, engaged in a bitter struggle that looks like a shameless scrabble for office. It may be the kiss of death to say so, but it seems as if Mr Mboya's wing of Kanu is associated with Mr Nyerere's "moderates" in Tanu: east African federation would be quicker, and present a not unpleasant face, if everything were up to these two men. But Mr Kenyatta's "old guard" and Mr Odinga's own faction (supported, as are some of Mr Nyerere's opponents, by communist money) seem at present to be driving Mr Mboya out: if they succeed, and link up with more impatient men at Dar es Salaam, the future for east Africa, and its whites becomes bleaker. This does not mean that everyone in Kanu except Mr Mboya and his supporters must be rejected as evil: Kanu is not short of brains, organising ability, or popular following.

But there are many irresponsible men in it, and they have postponed the day of unity by putting fear into the hearts of minority tribes (including Europeans and Asians). These men, voracious seekers after power, make the disturbing voices being heard in peaceful, sunny Dar es Salaam sound like pale shadows of their Kenyan selves. The emergency in east Africa is on.

Towards Papuan Peace

Volunteers in Jakarta.

New Guinea no longer looks the insoluble problem it did

162 639

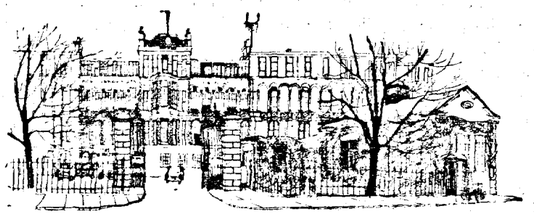
DESPITE much shouting (and even a burst of shooting, when Dutch and Indonesian vessels met in New Guinea waters on January 15th) the Dutch and the Indonesians have, in fact, moved a deal closer to each other during the past few weeks. Both have now responded—the Indonesians with some reservations—to the appeal for a peaceful settlement made at the turn of the year by U Thant, the acting secretary-general of the United Nations. There does not now seem to be any good reason why both sides should not take the last steps that would bring them together in negotiations about west New Guinea.

It is indeed hard to see what considerations, other than those of face and wounded *amour propre*, have been keeping them apart all this time. In terms of political survival, such considerations often seem of crucial importance. But far more is at stake than the survival of Dr de Quay's coalition or President Sukarno's guided democracy; the issue is one of peace and war. Moreover the military difficulties of attempting to invade New Guinea are such that the operation could not be as painless for the Indonesians as Goa was for the Indians. It would be easier for President Sukarno to launch a war than to predict its political and economic consequences with any confidence.

Even at this very late hour, the point of no return has probably not been passed. Negotiations are not merely desirable, they ought even to be politically possible for both parties, given some grains of common sense and good will.

Only two obstacles are, in the last analysis, left. One is Indonesia's insistence that any talks with the Dutch must deal primarily with the transfer of authority in west New Guinea from Holland to Indonesia; the Indonesians do not regard the principle of their sovereignty over the territory as negotiable. The other obstacle is Holland's commitment to self-determination for the Papuans. As they stand, these positions are irreconcilable. The Dutch, however, have tacitly (though not explicitly) retreated from self-determina-

tion by offering to negotiate without prior conditions. This might seem enough to satisfy the Indonesians, but with their long memories of abortive negotiations with the Dutch, it is not. The Indonesians will talk only if they have some guarantee that the Dutch will not stay on in New Guinea.



If the publicly stated positions are still divergent, the private ones are potentially much closer. The Dutch seem prepared to abandon their self-imposed mission in New Guinea so long as they can secure some guarantee of autonomy for the 700,000 Papuans. The Indonesians, for their part, are letting it be known that they would even admit in principle some kind of Papuan right to choose—so long as its application was preceded by a period of Indonesian rule ; it should be added that what they say is not free from ambiguities and qualifications.

The argument behind the main Indonesian proviso shows it to be less cynical than it appears. The Indonesians point out, quite rightly, that self-determination under existing conditions would merely play into the hands of a Dutch-trained Papuan elite, conditioned in advance to reject the Indonesian connection. The same argument could, of course, be used in reverse: a period of Indonesian rule would guarantee an "Indonesian" vote in any referendum. The truth is that the conditions for a fair and free referendum simply do not exist, and are unlikely to exist for a very long time, in a country as primitive as Papua. The interests of the Papuans should not, however, be lost sight of in the rush to get the Dutch out.

Here the United Nations has a part to play. Hitherto, the Indonesians have been willing to let the UN in only as a device to facilitate the transfer of power from the Dutch. It could be argued, however, that a period of UN supervision, which could perfectly well be combined with an Indonesian presence, would be the best way of finding out what the needs of the Papuans—and perhaps their aspirations—really are, and of facing the Indonesians with the responsibilities implicit in their claims. Because the Papuans have nothing in common with the great majority of Indonesia's existing population, these responsibilities will be of a special kind ; the Indonesian leaders have yet to show much awareness of this fact.

In any event, it seems clear enough that the Dutch are seeking an honourable and graceful way out and that the Indonesians are not at all anxious to fight if they can avoid it. Since UN good offices are, in fact, being used, the protagonists have at last gained a chance to shake hands on the neutral ground of the secretary-general's office. The elements of a solution are surely there for the taking.

Green Light for Hospitals

FOR once, for almost the first time in thirteen years, an official statement of policy on the health service looks forward to spending money on part of it instead of making economies. And the part of the service which is to be renovated is the part most overdue for renovation.

A year ago, the hospital boards were asked to produce long-term plans for hospital building, the first time that they had been encouraged to take a long look ahead. The plan published this week (Cmnd. 1604) represents the sum of their hopes and proposals in so far as they could be contained within the £500 million which is envisaged for capital spending in England and Wales within the present decade. In the same period the Scottish hospital authorities will be spending £70 million. The total of £570 million compares with £188 million actually spent on British hospitals since 1948. Nor will the rebuilding and modernisation of hospitals stop when it has been spent. By 1970-71 it is estimated that in England and Wales schemes costing £707,500,000 will have been started.

If the rebuilding goes forward as planned, and the Minister of Health seems confident that over the ten-year period as a whole it will, about 200 to 230 entirely new hospitals will be built by 1975, and about half of the 2,800 existing hospitals of England and Wales will eventually be replaced. Many of these are small and pleasant but inefficient to staff and to run ; others are large, grim relics of Victorian infirmary building. The new hospitals will usually have 600-800 beds, and they will be virtually all-purpose hospitals.

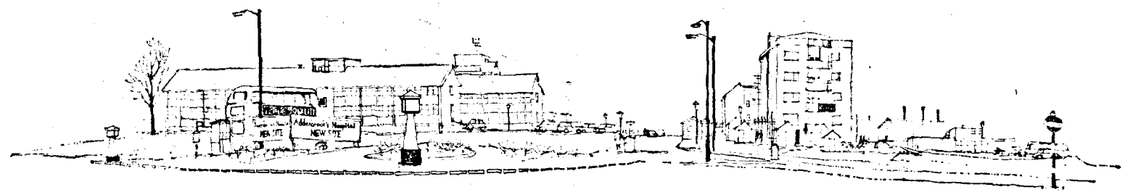
Will they also be more expensive ? Mr Powell is equally confident that the running costs of the hospitals will be kept well within the 2½ per cent a year increase in real terms that is envisaged for the health service as a whole. This confidence is partly based on the belief that more modern hospitals will not be so costly to run, but much more on the fact that, instead of expanding as a result of the building programme, the hospital service will actually provide fewer beds.

This is not an all-round contraction. As the accompanying table shows, over England and Wales as a whole the plan allows for more maternity beds, more beds for the old and more for the mentally subnormal (who used to be called defectives). But expansion in these fields has been far more than offset by a drop of at least 45 per cent in the number of beds planned for mental illness, as a result of the new methods of treating those who suffer from it. It is the running down of the mental hospitals, which at present contain about a third of all hospital beds, that is to enable Mr Powell to balance his books.

An important, indeed an essential, corollary of the new methods of treating the mentally ill is that care in the community will be provided for those who need support short

of full hospital treatment. It is a main virtue of Mr Powell's hospital plan that he is following it up with a request to the local health and welfare authorities to produce this year their own ten-year plans for expanding their services: for the mentally disordered, the old and mothers and babies. It is emphasised that the two sets of plans have to interlock closely with each other, and with the family doctor service—the first time, again, that a serious effort has been made to close the administrative divisions built into the structure of the health service.

Another virtue of the plan is that it is not static. Fifteen years ago, when the tuberculous might wait months before being admitted to a sanatorium, and the mental hospital population was increasing inexorably, few would have foreseen the transformation in these two special services today. Fifteen years hence, another breakthrough, in another specialty, may have outmoded some of the provision now outlined. Since, however, the hospital plan is to be reviewed every year, so that the service is always looking ten years ahead, changing needs can be taken into account.



HOSPITAL BEDS IN ENGLAND AND WALES

	Acute	Geriatric	Maternity	Mental illness	Mental sub-normality	Other	Total
1960	179,456	59,069	20,531	151,899	59,840	4,614	475,409
1975	168,550	65,860	27,020	92,090*	64,320	3,380	421,220

* Includes about 12,000 in general hospitals.

But what about changes in tastes among the patients, and possible changes in public willingness to pay for satisfying some of them ? Next month the Minister is holding a conference to enable voluntary effort to be brought in from the beginning in the replanning of the hospital and local authority services. But the conference will be concerned with fringe services only ; an aspect of voluntary effort that will not be discussed is the potential readiness of some people to pay part of the cost of hospital treatment in return for higher standards of comfort. Mr Powell has gone a long way with his slogan of "fewer beds in newer hospitals." But one of the blights for patients in public hospitals since the health service started has been that no extra comforts, apart from the uncertain chance of an amenity bed, could be purchased by anybody until the country could afford to provide them free for everybody (unless, that is, the patient could afford to go right over to being a private patient who pays for his whole expensive treatment in full). It is this that has held up the improvement in the hotel side of hospitals more than almost anything else.

If Mr Brooke's economy measures (discussed on page 297) did start to introduce the principle of getting hospital in-patients to pay some boarding charges in rare instances, they could provide an important addendum to the hospital revolution ; Mr Powell's "newer hospitals" would then be able to throw off altogether the institution-like and comfortless atmosphere which persists far too often today.

NOTES OF THE WEEK

WAGES

Off the Rails

WHO is trying to fool whom ? Mr Marples explained on Tuesday in the Commons why he had short-circuited the last stage of negotiations on railway wages by "asking" (which means "instructing") Dr Beeching to go to arbitration. In full bureaucratese, he proclaimed:

> The main purpose of this communication was to ensure that, without departing from the machinery established under the Agreement on the Machinery of Negotiation for Railway Staff, full regard should be paid to the financial and economic difficulties with which the nation, and the railways themselves, are faced at the present time.

This, however, is neither true nor useful. Arbitration at this stage *was* a departure from the machinery—and a good job too. As the railways made a loss of over £140 million last year, and expect to make an even bigger loss this year, any increase in railway wages will fall upon the Treasury—which really cannot be expected to sit aside until somebody presents it with the bill. But the departure was not towards the right destination. What the Government should have done about the railways was what Sir David Eccles did do about the teachers: say what total increase in the bill it will finance, and suggest how it would prefer the money to be distributed. In present circumstances the money should be used to provide extra inducements in areas where more railway staff need to be recruited (such as the Midlands and London), not spread evenly among all railwaymen across the country.

What the Government has done instead is to ask that the claim should be referred to an "unfettered" arbitration tribunal, before which the Treasury does not, apparently, even intend to present its case. Its hope, of course, is that the tribunal will set a pattern by saying that the increase in railway wages should fall within the Chancellor's suggested figure of a 2½ per cent increase in real national production in 1962. What the Government will do if the arbitration tribunal decides to recommend more than its maximum, heaven knows. But what it has probably done already is to make its overall maximum of 2½ per cent a minimum from which the arbitration tribunal will start. Now that the Government has stirred up a row by some sort of an "intervention," but has not made the intervention specific, this is likely to seem to the arbitration tribunal to be the easiest way out. And, as expected, the nationalised Gas Council has done the same. On Wednesday it offered an increase of 2½ per cent to its workers, but the unions are still going to come back and ask for twice as much.

Back to Guillebaud?

THE method of half-intervention and half-infirmity of purpose that the Government has chosen over the railways has made it practically inevitable that the National Union of Railwaymen should resort to its favourite tactic. On past experience, it has every incentive to say that the next stage of the bargaining should take place under the shadow of an impending threat of strike. When the NUR meets the other two railway unions on Monday—at a time when some of London Transport's underground railwaymen, and possibly busmen too, may be out on an unofficial one-day stoppage—a call may be made to set a date for a national railway strike. As the strike date approaches there will then be pressure on the Government to agree to give at once what, it will be said, "everybody expects it to give eventually anyway." Perhaps to say that railwaymen should have 2½ per cent on April 1st, and then to set an arbitration court to work to give them quite a lot more later. . . . The country would then be back to the atmosphere in which the Guillebaud award debacle took place two years ago.

Has the country really forgotten the lessons of that debacle? It was from that moment in February, 1960, that measures had to be taken to stop British production from rising, because this was the only way the Government could find of half-shutting the flood gates to inflation thus opened. In the intervening two years the Guillebaud settlement must have cost the country at least £1,000 million in production forgone. And the same thing will happen this time if again every wage negotiator in the country, and every speculator against sterling outside it, is shown that the Government will always run into wage inflation rather than risk running into a strike. Quite apart from the internal inconsistencies in the Guillebaud approach to wages on the railways (in particular, its assumption that the mass of rural railwaymen should be paid wages equal to those of workers in big towns, and thus above rates for other rural workers), obeisance to this approach is a signal to the world that Britain is not interested in any realistic economic management of its affairs: if one is to make any use of the price mechanism to get resources into the right places, one really cannot say that wages in unprofitable industries should be pitched at the same level as those in profitable ones, and then put the bill for this on to an ever-growing tax-financed loss.

PLANNING

Into Ned

NOW that the Trades Union Congress has agreed to nominate six members to the Chancellor's National Economic Development Council, attention had better be turned again to what this body is likely to find itself doing—and to whether it should be welcomed. If the top council of Ned works at all effectively, which *The Economist* still doubts, it will presumably find itself faced with three tasks. The first task will be to set targets: probably the pressures upon it will be to set a target for increases in national production higher than that which the Treasury by itself would approve, and in present circumstances many people will be rightly inclined to welcome that.

The second task will be to utter a truism: to say that if national production increases by only 3 or 4 per cent a year, total earnings can increase by only 3 or 4 per cent a year too, so that basic wage rates (which always rise more slowly than actual earnings) must go up by rather less. The TUC has said that it will join Ned only on condition that it need not utter this truism, or at least on condition that it can issue minority reports denying it; but if it goes on issuing minority reports saying that two plus two equals five, it is likely to be increasingly laughed at. The Chancellor's calculation is presumably that, as a result, the TUC will eventually come round to accept the majority's truism; just conceivably they may do so, especially if they do not succeed in the meanwhile in their efforts to secure inflationary wage increases (which means that the country has to be willing to stand up to strike threats). But alternative guesses are that, in such circumstances, either the TUC will walk off Ned in a huff, or else that—much more dangerously—the majority on Ned might agree to compromise by not rubbing home the truism either.

Danger in Disuetude?

NED'S third task will be to recommend the policies needed to bring about the increase in production for which it calls. Most of these policies will be unpopular; they will involve such things as agreeing to cut back the life of declining industries so that expanding ones can have enough resources to grow; and the employers, as well as the trade unionists, on Ned will not like recommending them. The real danger is that they then may not recommend them, and that this top council of Ned could become a pressure group saying plaintively that this or that unpleasant thing really need not be done. If it becomes an effective pressure group of this sort, the top council of Ned could be, not just a superfluity, but a major national disaster.

Half way between those who fear that it may be such a disaster, and those who think that it may lead a great national co-operative effort of revival, are those who think that this top council of Ned will simply fall into disuetude. That is what the equivalent council of employers and trade unionists in France—the *conseil supérieur*—has done. It has held only one or two real meetings in the whole fifteen years' history of French planning; and power has passed from it into the hands of the full-time economic technocrats on the *commissariat du plan*, who are to find their equivalent here in Sir Robert Shone's small staff just off Whitehall. To judge from the French analogy, an unfettered body of technocrats of this kind could do some very useful things for Britain's economy. But this does seem to be an odd way to be greeting the birth of poor little Ned: to say that the best service which its top council could render to the nation might be gently and quickly to drop dead.

NUCLEAR TESTS

Atmospherics?

QUESTIONS about the resumption of nuclear tests were rained on the Prime Minister's head as soon as Parliament reassembled on Tuesday. Mr Macmillan would add nothing to what had already been said in the communiqué issued, just before Christmas, after his Bermuda meeting with President Kennedy. Although he undertook to make a statement as soon as possible, it can hardly be expected that the Government will say anything more about making Christmas Island, in the central Pacific, available for American tests until the Americans have finally decided whether they want it. The final decision may not even be made before Mr Macmillan meets Mr Kennedy again late in April.

The American series of underground tests, initiated after Mr Khrushchev had launched his alarmingly big blasts last September, has been proceeding in relative quiet—in every sense of the word. And lately there have been only faint rumblings from the rolling debate in Washington about a resumption of atmospheric (above ground) tests. The technical part of the debate, based on an assessment of what Russia may have achieved by violating its pledge not to resume testing, and of what the United States could learn from explosions above ground that cannot be learnt below, has run its course. It is a political choice that now confronts Mr Kennedy.

He has to weigh up the likely impact of an American resumption of atmospheric tests on domestic and world opinion; the chances of impressing the Soviet leadership, and bringing nearer some progress on Berlin and other outstanding issues, by either resumption or non-resumption; and, of course, the now shadowy prospects of reaching agreement on a test ban. As to this last, on January 16th the Soviet delegate at the Geneva talks, Mr Tsarapkin, once again stressed Russia's refusal to negotiate a controlled ban separate from a general agreement on disarmament. But Mr Tsarapkin has been slow to find an answer to the Anglo-American suggestion that top priority should be given to the question when the whole field of disarmament comes up again at the eighteen-power conference that is expected to open on March 14th. Russia may not be as sure of the support

of the eight "uncommitted" nations that have been invited to this conference—Brazil, Burma, Ethiopia, India, Mexico, Nigeria, Sweden and the United Arab Republic—as Lord Home, for instance, might think.

NORTH AFRICA

Timetables

Circulating in Algiers

AT this stage it almost looks as though the Franco - Algerian negotiations will succeed in theory and fail in fact. The main obstacle to an agreement and a cease-fire is now that the nationalists know very well that it is probably beyond General de Gaulle's power to guarantee a peaceful transfer of authority, and certainly beyond his power to guarantee that the French army would work with a provisional government in suppressing the apparently inevitable European rising against a settlement. Success or failure should become apparent within a few weeks. But the question remains open whether the European extremists will try to forestall General de Gaulle and Mr ben Khedda, or whether they will use the outcome of the talks as a signal for a rising. In the meantime they continue their programme of murder and bomb outrages.

The hold of the OAS (Organisation de l'Armée Secrète) is very much stronger in Algeria than it is in France. General de Gaulle has overridden the protests of his subordinates against his decision to return two divisions to the mainland, and as a result security measures in Algiers and Oran may be somewhat hampered, though the real difficulty is the passive resistance of the bulk of the European population, whether it is motivated by fear or conviction. In France OAS actions are more dramatic than effective, and incidents like the kidnapping of a deputy for a few hours on Monday, and the destruction of the home of the editor of *Le Monde* on Wednesday, merely exasperate public opinion. The government has forbidden the press, on pain of confiscation of its editions, to reproduce any of the OAS announcements.

Nor is the general outlook improved by the collapse of the renewed Franco-Tunisian talks about Bizerta, which failed because the French would not set a date for the evacuation of the base. President Bourguiba's position is, indeed, sadly isolated; hence, perhaps, his strenuous activity in the African differences about the Lagos conference. The Algerian leaders are still in Morocco, waiting for the outcome of their negotiations with the French. With the Moroccans, they have set up a joint ministerial commission this week, to begin the work of creating a "United Arab Maghreb." This decision, presumably the result of the long talks between Mr ben Khedda and King Hassan that were held early this month, is the one bright patch on the North African horizon.

PARLIAMENT

Back to Work

PARLIAMENT got off to a quick and lively start this week when its members returned from the holidays. The Lords got straight down to business, and even inflicted two minor defeats on the Government—saying that Scotsmen ought to be allowed to drink until 10 p.m. on Sundays, and that physiotherapists probably ought to be paid more money. The Commons had a stimulating question hour—about wage claims, Kensington Palace, ICI-Courtaulds and all. The Prime Minister, grilled over his meeting with Mr Kennedy and Lord Home's manifesto at Berwick, succeeded in giving his foreign secretary some sprightly and loyal support—and even proved well-informed enough to floor Mr Callaghan by telling him Japan had a balance-of-payments crisis. With these accumulated pleasantries disposed of, the way was clear for the real parliamentary battle to begin.

Although Labour is to shuffle out its usual deal of censure motions—one has already appeared against Lord Home—the most advertised of its coming battles, that over the introduction of the guillotine and other procedural matters, seems likely to be sharp rather than prolonged. The Opposition, fearing adverse reaction in the country to a sustained display of parliamentary antics, appears to have had wiser, second thoughts about obstructing the Government at every turn. In this sphere much will depend on how skilfully Mr Macleod can combine zeal for government business with due regard for the rights of the opposition. The Government has escaped from the nemesis of its muddled Immigration Bill by the accident of the smallpox outbreak, but in the next three months of the session it will be subject to some severe strains.

Principal dangers are Africa and the common market. Everybody is waiting to see whether Mr Maudling will press on with the original plans of his predecessor for the Rhodesian federation; if he does—and it seems likely that he will—this will clearly be the focus of a right wing revolt of some proportions. The crunch over the common market, in the form of the terms for British entry, is also likely to come before the end of the session, but this will be a crunch for the Opposition too.

No open split in cabinet or party is likely over economic policy, but Tory backbenchers are uncomfortably aware that their electoral prospects are more dependent on success here than anywhere else. Once again, however, it looks as if strike threats are hurting Labour. The unexpected Tory gain reported in the latest *Daily Telegraph* Gallup poll—it suggests that the Tories are equal with Labour again—has given some Conservatives fresh heart. But if this recovery is to be kept up, most Tories assume that the Prime Minister will have to show more skill and acumen in the second half of the session than he did in the first—or than he appeared to show in his rather waffly television appearance on Wednesday night.

EUROPE

Time Lost

HOWEVER sound the reasons for postponing the next meeting between Mr Heath and his six colleagues from the common market until February 22nd, there is no doubt that the negotiations are getting under way more slowly than many people hoped a few weeks ago. The meeting between the seven ministers due on January 18th was held as planned. But it was brief and consisted merely of an explanation by the Six of their new farm policy, and an account by Mr Heath of his recent trip to North America. Time has obviously been lost through the long agricultural struggle within the community. The officials who have been studying the Commonwealth problem still have work to do.

What is inevitably disturbing as the weeks slip by is the worrying doubt whether serious negotiations will really get going once the studying has been done. There is a feeling in London that the moment for hard horse-trading may not come until analysis of the problems is complete and all the elements of the bargain are ready on the table. The approach seems reasonable. But once the studying is over, one side or other, or both, will obviously have to take the initiative to proffer solutions and set the bargaining process going. Circling round in the present friendly way is not enough.

If Mr Heath's hope of getting into the common market by the end of the year is to be fulfilled, the heart of the negotiations will have to be reached soon, and the quicker it comes, the sooner the inevitable bout of domestic criticism and excitement will be over too. A sample of such criticism came from Mr Harold Woolley on Monday in his presidential address to the National Farmers' Union. This attack on the whole idea of a common agricultural policy for Europe is extreme rather than representative; fortunately so, since it flatly contradicts both the view of Brussels about what Britain's obligations will be, and British policy. The Government's problem is to accommodate special interests within the framework of the European agricultural policy, not to buy peace and quiet by throwing the framework away.

ROYAL FAMILY

The New Image

THIS has become more or less open season for telling the royal family what it ought—and, even more, ought not—to do. Since the decision to send Prince Charles to Gordonstoun school, not Eton, is manifestly a father's choice for his son, it is, by that very criterion, quite certainly the right one. That is all that needs to be said about it. But now that "royal participation" has been promised to one commercial establishment, we are apparently required to expect a dreadful fuss from every other limited company competing in the same field. There have already been egalitarian moans that Prince Charles's parents should have sent him to a secondary modern school, because the majority of his age group will be going there. (Should he also leave with them to take a job at the age of 15?). This is the sort of argument that can be twisted to deny the royal family any rights or human interests that any particular newspaper leader-writer happens to oppose. The essence of having a successful monarchy and royal family—of having a "brilliant edition of a universal fact"—is that it should exercise its own choice and develop its own personality within the clear limits of constitutional practice. To order things differently is to have, and deserve, a meaningless charade.

Meanwhile, the Snowdons—this time at home instead of at the office. The real point to be made about the public cost of their future home is that a reputable Ministry of Works would not have let a building of Kensington Palace's merit degenerate into a condition where twenty years' disrepair in one part of it has to be made good to the tune of £85,000. Republics are apt to manage these things better. The facts of the case have not, however, saved the Snowdons from becoming prime game for Beaverbrook cartoonists. This breach with newspaper convention is calculated to set off a new competition over who and what can and cannot be safely lampooned: safely, that is, in terms of a reading public that wants to feel mildly scandalised but has a genteel aversion to Going Too Far. Cartoons of the royal family are not wrong; they are not even new. The Victorians indulged in them fiercely—especially in the middle part of Victoria's reign, when the first thrill of having a fresh young rose on the throne had worn off and before the years of veneration began for a doughty old lady. This looks like being an irksome phase in public manners, but nobody should get neurotic about it; it could even be a healthy phase if the new stir starts sensible people thinking again of what they reasonably and really expect of the modern monarchy.

LAGOS CONFERENCE

Afrique Française

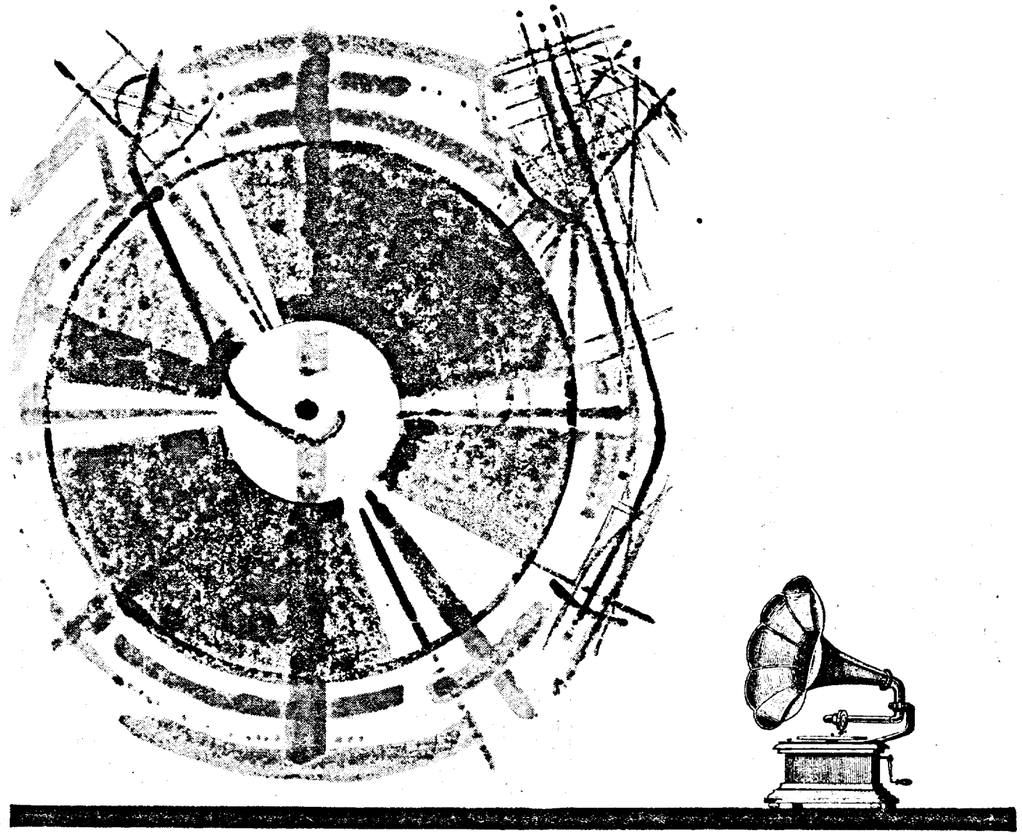
AFRICANS, in their desperate but ineffectual search for some kind of unity, are beginning to see an obstacle in their path in the dependence on France of the twelve former French colonies of the "Brazzaville Group." Just how much say President de Gaulle has in the affairs of these twelve countries is difficult to show, but it is being plausibly said by other Africans that their determined opposition to inviting the Algerian government-in-exile to the conference of African heads of state at Lagos this week was inspired by the knowledge that most of their bills are paid by France. The result has been the refusal of the radical "Casablanca" group of governments to attend the conference—although, of the five, Morocco had an additional reason for not attending in that Mauretania was invited; and Mali may have been shy about Senegal.

But Tunisia, Libya, and the Sudan were also estranged. Tanganyika, preoccupied with its own troubles and anyway more radically-minded than those who did come to Lagos, stayed away. Nigeria, hoping to assume leadership of Africa's conservative governments, was left with an emasculated conference. Even the announcement, on Monday, that Nigeria's defence pact with Britain was to be abrogated was not enough to give Nigeria the anti-colonialist stature many Africans would like it to acquire. For Britain, loss of the pact, over flying rights, air staging facilities, and all, is a small price to pay for the political gain. This is another reminder of the evanescence of arrangements tied to the grant of independence.

Until now, Nigeria's tactic has been to coax the ex-French African states into a greater show of independence; it remains to be seen whether the Nigerians (whose decisions will affect European, as well as African, unity) decide to give up their patient attempts to bridge the gap between French and English and succumb, instead, to the temptations of fiery politics of the Accra kind.

CENTRAL AFRICA

Bullseye



NOT all Conservatives bow to Sir Roy Welensky; neither, however, are all back-benchers likely to heed the Bow Group's sensible warnings in its latest pamphlet* on British policy in Africa. The group sees clearly the menace to British relations with most of the rest of the world that lies in deference to the leaders of Africa's white South—Dr Verwoerd, Dr Salazar, and (in a different category) Sir Roy Welensky. Northern Rhodesia, the group says, "is too important to be in the hands of unfriendly Africans" (as it will be if the inevitable transfer of power is too long postponed). The British Government should brave the inevitable storm and give Northern Rhodesia a clear African majority in the legislature, a step recommended by the Monckton Commission in 1960 but since shied away from.

What is more, Britain should "recover the initiative" in discussions with the Rhodesian federal government, whose public relations campaign in London has reduced constitutional talks to "a vicious dog fight." If Northern Rhodesia does get its African majority; if Southern Rhodesia dissolves race discrimination; and if three new, representative, governments sit down to review the federal constitution—then, the Bow Group says, "the three territories may be kept together for business and political purposes." The crucial decision, on Northern Rhodesia, may be announced next week; Britain's entire African policy may turn sour if Sir Roy Welensky's determination to keep the white minority in power is acceded to.

The Bow Group also says that Britain should support any schemes to restore the unity of the Congo. (It is fair to ask whether the meeting in Salisbury on January 18th between Sir Roy Welensky and Mr Tshombe of Katanga was held with or without the approval of the British Government, which will have the responsibility for its outcome.) Further, the pamphlet implies, moving much deeper into controversy, that the United Nations, warts and all, should be introduced into Angola, South-West Africa and eventually South Africa; and the West should actively dissociate itself from white domination in these territories. No member of Parliament is likely to agree with everything in this pamphlet; none, however, should talk about African policies (many more than those mentioned here are discussed) before he has read it.

Shell speaks the language of flowers

Sitting quietly with the other women of her village, she marks out a design which has a special meaning for the sarong-wearing ladies of Central Java. Each village has its own design, which is handed down from mother to daughter, and each design has its own meaning.

That part of the cloth which is not to be dyed, she covers with Shell Batik wax; her colours come from tree bark and iron sulphate. Ultimately, her cloth will be worn by one of the lovely young women of her village, and the message that the floral decoration carries will have been spelt out by Shell.

Wax is, in fact, one of the more eloquent Shell products. In lipstick, it can speak volumes of feminine appeal; contained in an eye pencil, it writes poems silently; in greasepaint, it moves audiences to tears or laughter.

Around the world wax can be found protecting food, or providing light for festive and religious occasions. While behind the scenes, it is in factories and workshops everywhere. Whether its destiny is picturesque or practical, Shell make it and make sure that it is always where it is wanted.

YOU CAN BE SURE OF SHELL

DRINK SALES

Beer for the Workers

LAST year two faint cheers went up from the drinking classes; that great liberal measure, the new Licensing Act, gave them, among other things, the just and sensible right to buy liquor from off-licence stores at any time of day. A first result was to make it more profitable for grocers and non-specialist shops to decide to sell drink. But chain stores and supermarkets that had been making plans to do so received a set-back last week when the licensing justices in Nottingham refused to allow Woolworths to sell liquor in their modern food hall.

The ground for the refusal was that there was no "need" for a new off-licence in the area: and it turns out that the new act still leaves complete discretion to local justices to decide what need means. The common man's view that "need" might mean "demand," as shown in a competent store's judgment of its market, is too simple for the lawyers, who have in the past made hilarious searches for witnesses prepared to swear that they have a positive need, not just for drink but for drink from a particular shop. So strict has been this criterion in some cases that even a Co-operative store with some sixty per cent of potential shoppers among its membership, was refused a licence last autumn. (In another area a co-op was granted a licence, which was rightly upheld after an appeal by rival vintners despite complaints that all the licensing justices were co-operators).

The two main classes of objectors to the granting of licences to chain stores and supermarkets are those cynics who believe that housewives cannot resist a bottle of gin when they see one, and those realists who fear the effects on the traditional—and sometimes very inefficient—corner off-licence. On their side is the system whereby applications for licences are heard by a panel of respectable bourgeois whose friends and neighbours are more than likely to be the ironmongers, drapers and grocers whose prosperity is menaced by cheap, efficient stores like the supermarkets. The absurd criterion of need should now surely be done away with, and replaced merely by a test of whether the applicant for a licence seems reasonably respectable. Secondly, the granting of licences should be removed from local justices and given to some remoter voice—perhaps to county court judges?

GYPSIES

Parish Pumpery

LAST Saturday the parish council of Darenth and the Dartford Rural District Council, both in the county of Kent, deprived 300 people of their settlement and livelihoods, damaged their property and even, in one case, insisted on the burning of a dwelling because it could not immediately be moved. The 300 were then

cast on the mercies of the county of Kent, and when last seen were living exposed to the worst of the weather, and obviously causing rather more inconvenience to the general public, on the verge of a main road. They were gypsies, and therefore (if the philosophy of some parish councils is to be believed) hardly human beings at all.

Darenth Wood, in which these people had lived for the past four years—unmolested by its late owners, the Church Commissioners—was last year bought by the Darenth parish council with the express purpose of evicting the gypsies. That they were a nuisance is probably true; that some newcomers moved into the site when a public row was raised about it (in the hope that the row might cause the site to be protected) is no doubt true also. But it is equally true that the two councils have behaved with a deliberate hard-heartedness which justifies the Vicar of Darenth's worst epithets ("damnable, callous and inhuman"). And they have achieved nothing except the partial satisfaction of their electors (1,000 of whom, sadly enough, were so far committed to this brazen racialism as to sign a petition for the travellers' removal). They have merely passed on the problem to a higher local authority—in this case (and this may have been a sop to the councils' consciences) an authority which has acknowledged some responsibility for the gypsies who seasonally pass through it.

Whose responsibility?

But there is very little the Kent County Council can do except direct the gypsies to the nearest National Assistance office while it thinks of the next move. What that next move should be is anybody's guess: what it might be is an approach to the Ministry of Housing and Local Government to reverse a decision made some years ago to deprive the owner of the nearby Lone Barn Farm at Charing of the right to let out his site to gypsies. It is high time that some governmental concern was shown for these people; perhaps this latest demonstration that Britain's treatment of gypsies is worse than that of most totalitarian countries will swing the balance in favour of Mr Norman Dodds's recent private motion asking for a national plan to ease their plight.

The Economist

JANUARY 25, 1862

LONDON'S SEWAGE WASTED

Numerous suggestions have been made and various plans have been adopted in particular localities for rendering available the vast masses of fertilising matter which are conveyed in the sewage water of our large towns. The great difficulty of utilising sewage consists in the large and somewhat unmanageable volumes of fluid which contain the fertilising elements. At one time it was proposed by persons whose opinions were entitled to consideration to evaporate this fluid, and so to reduce the bulk of the sewage to portable, or at all events to manageable quantities. No such plan has stood the test of practice. Again, it has been proposed to convey the sewage as delivered from the drainage into districts of market gardens or other highly cultivated lands, and there to dispose of it to the cultivators. . . . We are now executing a main drainage of the metropolis lying to the North of the Thames, and it has often been regretted that such a mass of sewage as will be collected by this operation should be discharged, to say the least uselessly into the Thames. Indeed, the plan by which the drainage of North London is to be discharged into the river between Barking and Woolwich has been seriously condemned as likely to cause a most injurious pollution of the river in that populous neighbourhood. It may not be the business or the duty of the Metropolitan Board of Works to do more than drain London and carry away the sewage water from her precincts. It would probably be unwise and improper in that body to embark in any scheme for the disposal of the sewage involving anything in the nature of speculation. It is the province of that Board to drain London, not to apply the money of the ratepayers in a work of irrigation, however well devised, or whatever may be the prospect of remunerative returns. But is it, therefore, the duty of the Board to act on the dog in the manger principle, by preventing private individuals, or a company of adventurers, from turning to profitable account the sewage which the Board simply throws away? Certainly not. On the contrary, every facility which the Board can give, consistently with its primary duties, to those who would take up the sewage where the Board leaves it, and turn it or endeavour to turn it to a useful purpose, ought to be given in a frank and cordial spirit. Yet what is the fact? It appears . . . that after the Board of Works had given every encouragement to the projectors of a scheme for applying the sewage of London to fertilising 20,000 acres of land below the Essex Marshes proposed to be reclaimed from the sea, and after having so induced them to spend large sums of money and much valuable time in surveys and preparations for an application to Parliament, a sudden resolution is passed to postpone the consideration of the project . . . so as to throw it over the next session of Parliament. Really such caprices may well furnish a handle to those who would discredit all approaches to local self-government.

PERSIA

Unhappy Alliance

EMERGING scarred, but seemingly victorious, from its wrestle to produce a new and more effective land reform act, the Persian government has been battered this week by a threatening wave of student demonstrations. Earlier this month, the cabinet approved a law that might—if it were to be honestly applied—transform the country's agricultural structure. This is not the first time a Persian government has tried to introduce land reform ; always in the past the laws have been gutted by parliament and their skeletons left to rot on the statute books. But now the Shah and his prime minister, Dr Amini, have done away with parliament ; the minister of finance, who opposed the law, has lost his job. If all goes to plan (and this week's riots add yet another element of doubt) the first distribution of land should start in about a month.

Under the new law, large landowners are to be limited to one village each. Those who now own several villages will be allowed 40 days in which to choose the one they want to keep ; the rest of their land will be sold to the government in ten annual instalments. Then, over a 15-year period, the government will resell this land to peasants working in the district. There are plans for setting up co-operatives to which the new farmers, if they are to benefit from the law, will have to belong. Several co-operatives have already been established in an area near the Russian frontier where, for reasons of obvious counter-propaganda, the distribution is planned to begin.

The government is accusing the landowners of having instigated the student riots that began in Teheran over the weekend and later spread southwards to Shiraz. Such an alliance is improbable ; but, in fact, both groups, for quite different reasons, are intent on ending Dr Amini's strong-man rule. Most of the students at Teheran university support the radical National Front. There was a time, early on, when the front backed Dr Amini ; but it is now pressing hard for elections and a return to parliamentary government. Dr Amini insists that the country is not ready for democracy ; and certainly the two governments immediately before his collapsed speedily because of the evident dishonesty of the elections that brought them to power. In neither election was the National Front allowed to compete. The bitterness, and the weakness, of Dr Amini's position is that he has lost public support at the time when he needs it most.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out this week:

WESTERN GERMANY

Trade in 1961 resulted in a record export surplus despite revaluation and persistent reports of weakening exports during the year. The Review analyses the reasons for this and assesses in some detail the prospects, both for the internal economy and for foreign trade, in 1962. Industrial developments are reported, and the direction and scope of Germany's rising development aid described.

LAOS

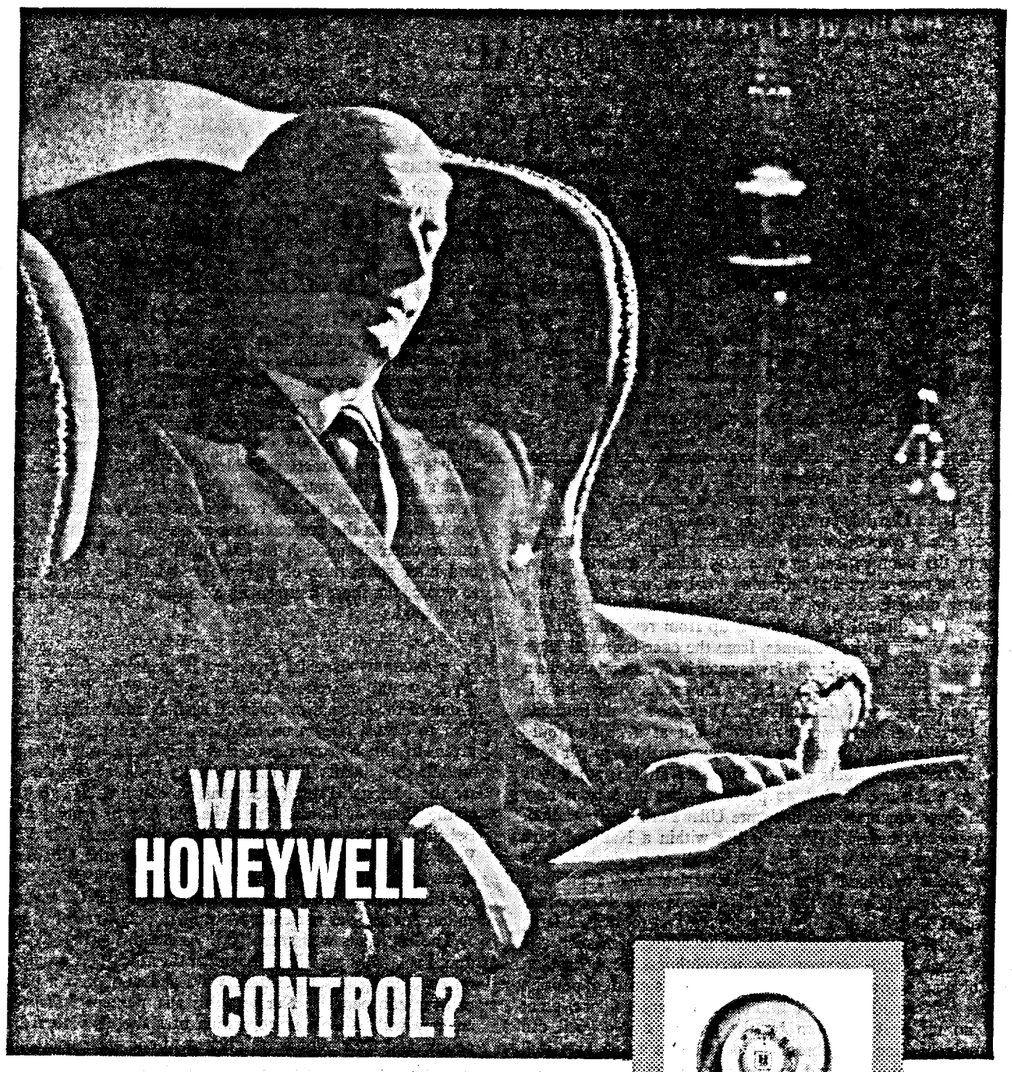
Wayside Halt

LAST week's meeting of princes in Geneva was intended to be journey's end in the Laotian crisis ; this week's statements make it look like just another wayside halt. The three princes—Souvanna Phouma (neutralist), Boun Oum (right-wing) and Souphannouvong (pro-Communist) went to Geneva at the urgent invitation of the British and Russian co-chairmen of the Geneva conference on Laos. The idea was that they should at last form a coalition government prepared to endorse the work of the conference. The delegates to the conference are understandably anxious to go home, having agreed on most clauses of a declaration on Laotian neutrality and of a protocal defining the functions of the three-power commission that is to ensure respect for the neutrality of Laos. Prince Boun Oum and his "strong man," General Phoumi, were generally unco-operative, and on January 19th they flew home again with little accomplished, after an indecisive wrangle with the other princes over the allocation of seats in the proposed government of unity.

Since then, Prince Souvanna Phouma has twice declared himself pleased with the outcome of the talks ; but Prince Boun Oum, back in Vientiane, has said there was no agreement. This week the frustrated Geneva conference seems to be returning to the bad early days of angry polemics, the chief Chinese delegate accusing the United States on Tuesday of having encouraged Prince Boun Oum's intransigence. There is, however, potential consolation in the thought that the three princes are to meet, yet again, in Luang Prabang next week. After so many slips one would not make a wager ; but if Souvanna Phouma's optimism is not misplaced, this could yet be journey's end.

GERMANY

Camp Followers



OUTMANŒUVRED after the polls by Dr Adenauer, the west German Free Democrats now seem to have suffered another reverse. When the present coalition between them and the Christian Democrats was formed in November, after seven weeks of bickering, it was understood that the Free Democrats would be given certain posts in addition to their four cabinet seats. A number of state secretaryships—top departmental posts of a semi-political nature—were to go to them as well, and Herr Mende, the party leader, who had refused a place in the cabinet, was to be given the chairmanship of the Bundestag foreign affairs committee.

Things have not gone according to plan. The Free Democrats have not got quite all the state secretaryships they wanted. And Herr Mende's appointment has been blocked by the Social Democrats, on the grounds that this is not the kind of post to be traded for a mess of coalition pottage. The difficulties will no doubt be patched over by the offer of alternative posts. But they do rub home the fact that the Free Democrats in office are not getting their way any more than they did in the bargaining before.

In foreign policy in particular, their impact seems to have been negligible. When the party chose to swallow its pride and join a coalition under Dr Adenauer it did so partly on the advice of the venerable ex-President, Dr Heuss, who felt that at a crucial time in east-west relations an influence for flexibility was needed inside the Bonn government. And the Free Democrats did succeed in inserting such praiseworthy provisions as the need for better relations with Poland, and for east-west negotiations, into the coalition agreement. But in practice Dr Adenauer and Herr Schröder have called the foreign policy tune ; and the Free Democrats have kept mum.

That is, perhaps, a pity. Any party in Germany which advocates a more flexible eastern policy is bound to attract people who want their country to be reunited ; and among these there are bound to be some wild men of the Right, who can be relied on to get more than their share of attention. In that sense the link between liberalism and nationalism, present in Germany since Napoleon's time, still has meaning. But on the whole the men now at the head of the Free Democrat party are not dangerous people who would throw up all Germany's western ties for the sake of a rash eastern gamble, but an amiable, if ineffective, group whose main argument against the Bonn establishment is that Europe does not end at the Elbe.

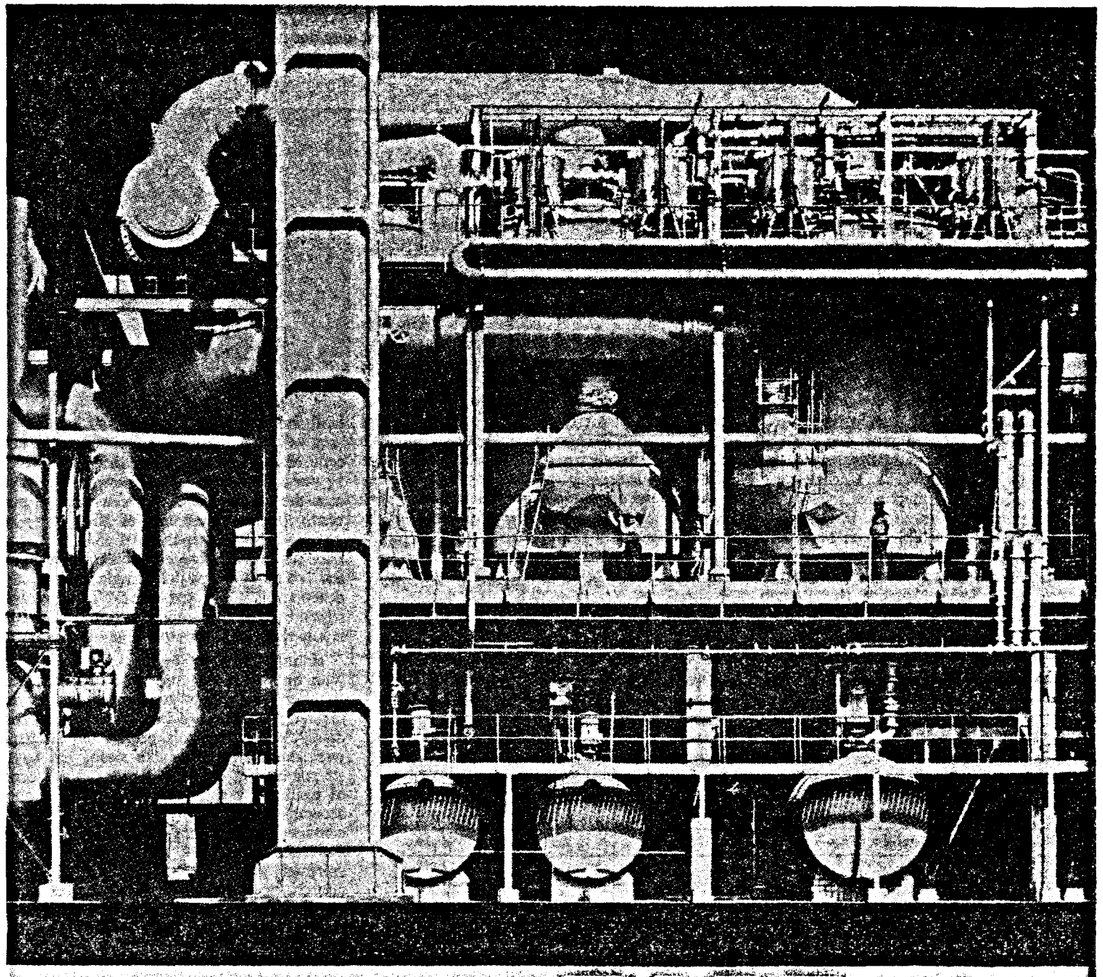
Mancunian Lakes

FROM OUR SPECIAL CORRESPONDENT

THAT Manchester, of all unlikely towns, should need water may seem preposterous to anyone brought up on the myth of its ceaseless raininess—just as preposterous as it seems to the inhabitants of the Lake District, on which the city is once again turning a covetous eye. Manchester is the largest bulk water supply authority in the country, selling over 105 million gallons a day, not only to its own users and adjoining local authority areas, but also to many other water supply authorities along the line of its aqueducts. This diurnal tide is drawn up from reservoirs in the Longdendale Valley in the Pennines, from the once-beautiful lakes of Thirlmere in Cumberland and Haweswater in Westmorland, via a giant aqueduct running somewhat below the capacity for which it was designed (at a cost of £22 million). The excess could be made up from current undertakings by 1965: but at a cost of only another £3 million, the capacity could be increased by 40 per cent (which Manchester considers will be necessary after 1970). It is primarily to make use of that 40 per cent that the city is now engaged in a parliamentary bid to secure Ullswater's expropriation.

It is not merely because Ullswater lies within a National Park that residents of the district, and others all over England and Wales and even in Manchester itself, have launched a protest: the creeping desecration of the countryside is well in evidence at the two lakes already used by Manchester, and tourism, a large part of the Lake District's income, suffers accordingly. Manchester has offered safeguards against any unsightliness at Ullswater, but the objectors (over 500,000 people have signed a petition against the expropriation, and 1 million is the target figure) point out that no undertaking given by the present city council can be absolutely binding on subsequent ones. One thing may well lead to another, they say, and in not many years Ullswater may be as little pleasant to be near as are Thirlmere and Haweswater.

The one thing is a pumping station to transfer up to 80 million gallons daily from Ullswater to the waterworks at Haweswater, some miles to the south. Haweswater is surrounded by fencing, open to visitors only by permit, edged by that muddy rim to which reservoirs are prone, and planted, in cabbage-like rows, with conifers. And that dire fate is the other thing to which the Lake District takes exception should Manchester decide to keep Ullswater clear of the pollution caused by motor boats, swimmers and natural vegetation (which, to be fair, the city has promised not to do). But some loss of amenity is unavoidable: Manchester's plan is to vary the level of the lake according to its technical needs. The overall average level is 476½ ft above Ordnance Datum, rising, in times of flood, to as much as 480 ft, but quickly subsiding. The city would like to hold the level, by means of a movable weir, at 478 ft for some of the time, but undertakes not to do so for more than a period of days together and never for more than 15 days beyond its occurrence in nature—about 30 days a year.



Last week there were floods in the Lake District, and Ullswater was three feet above its normal level. Three feet does not sound much, but on a gently sloping shore it consumes a good deal of that very space most valuable to visitors, the twenty or thirty-yard strip at the water's edge: many of the trees were standing in water, and most of the best picnic spots were covered, as they would be with the projected one-and-a-half-foot rise. A few days under water is enough to kill much of the lakeside vegetation, and after some time of this rise and fall it is not unreasonable to expect the shore between high and low water marks to become plain mud.

MANCHESTER'S chief argument is economy: few capital works would be required (nothing like what would be needed if one of the alternative schemes, such as an abandoned Cumbrian plan to dam a stream on Skiddaw, were adopted). The answer given to the objectors was that they were woolly-headed and muddle-thoughted. But that is hardly true: among their number are the National Trust (120 members of which are also members of the House of Lords, where the bill gets its second reading on February 8th); a Conservative junior minister, Mr W. M. F. Vane; Lord Lonsdale; several members of the House of Commons; and an Oxford professor whose feelings were strong enough for him to write that if the £10 he sent to the Ullswater Preservation Society was not enough they had only to ask for more.

The district is well stirred up. At Penrith (whose finest attraction, Pooley Bridge, will suffer under the scheme), a protest meeting on an evening miserable with wind and rain drew a packed hall of over 400 people. Nor was this all: perhaps inflamed by the analogy with Ahab's expropriation of Naboth's vineyard, Penrith people and their supporters queued to add their contributions to the fund from which three QCs are to be feed.

The objectors' indignation is strengthened by Manchester's unwillingness to reveal what alternatives it has examined; and it is not weakened by the memory that London, for all its sins, curbed its covetousness of Ullswater a hundred years ago and turned to the Lee and Thames for its water. Manchester has published a defence of its plans, and has even promised to reopen Haweswater. But the lakes people believe there are principles involved. Is a large town justified in expropriating countryside 80 miles away in order to meet its own commercial obligations? Is it appropriate for any authority to dictate the movements and actions of people in another part of the country, and to impair their sources of livelihood? Are National Parks available to any distant local authority which sees in them an economic source? (And not only Ullswater is affected: the present bill also envisages large works at Bannisdale in south Westmorland.)

The answers are not as easy as they seem to be. There is a clear

BASF

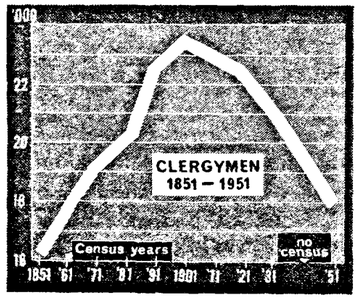
Dyestuffs and Auxiliaries
for all industries
Plastics
Fertilizers and Pest Control Products
Inorganic and Organic Chemicals
BASF Magnetic Recording Tape

BASF knows how

H_2SO_4 . . . sulphuric acid . . . an indispensable basic product for many processes in the chemical industry. A process whereby pyrites are roasted in a fluidized bed was developed by the BASF, and is now used by them in the manufacture of sulphuric acid. The reaction proceeds rapidly, the energy consumption being 60 to 70 kilowatt hours per ton. Welcome by-products of this elegant and economical process are 150 kilowatt hours electrical energy and 1·5 tons of steam at 390° F and 70 p.s.i.g. The BASF have received a number of applications for a licence from other chemical manufacturers.

BADISCHE ANILIN- & SODA-FABRIK AG
Ludwigshafen am Rhein, West Germany

case for the best use in the best place of scarce resources like water. It is desirable, and likely, that in a few years this country should develop a "grid" system for water comparable to that at present used for electricity; but Manchester's aggrandisement, whatever its motives, may not necessarily fit in with such a national supply system. There are issues here that do need airing.



Numbers or Exodus?

A FULLER statistical picture of the Church of England than has ever before been available emerges from the Church Information Office's latest glossy and expensive edition of *Facts and Figures about the Church of England*.* No new figures of church membership are given, those cited having been available since 1959; but these may be up, to judge by the 190,713 confirmations for 1960, the highest since 1935. Effective Anglican strength—the number of Easter communicants—is probably still around 2,248,000. Apparently the holiest parts of England, those with the highest percentage of communicants, are the dioceses of Bath and Wells, Carlisle, and Hereford. Half of all marriages solemnized take place in the Church of England.

The accompanying table from *Facts and Figures* gives the number of "receptions" into the church. In 1958, apparently, 3,771 converts were received from the Roman Catholic Church, and 6,959 from other churches. The actual form sent out to incumbents in 1957 contained this request: "Please give the best estimate you can of the number of persons known to you in the parish, including clergymen, who have joined the Church of England during the years 1954-5-6." Since the Church of England requires no permission from the bishop before a validly baptised person is "received," a more accurate table could possibly not have been compiled. It might, however, have been more satisfactory if these figures had been presented as an "estimate" and not as a statistic "subject to an error of 5 per cent." No figures are available for receptions into the Roman Catholic Church from Anglicanism, but the *Catholic Directory* reports 15,794 adult conversions for 1960 from all sources.

The decline in the numbers of the Anglican clergy appears to have been temporarily halted, but there is still a serious shortage. An alarming figure is the 760 candidates for ordination in 1960, the lowest since 1954. The peak was reached in 1901 with a clerical strength of 23,670, but today it is only 18,969, roughly the same as a century ago when the population of England and Wales was less than half its present size. Celibacy is a minority taste: 83 per cent of incumbents are married and only 14 per cent single. Among assistant clergymen the figures are 60 per cent and 38 per cent. The average age of the clergy is 52.8 and it is higher in rural areas. Bishops have an average age of 60, and suffragans 62. The Church of England has 65 deaconesses and 1,501 nuns. The average stipend for an incumbent is £790 and this is supplemented by stole and other fees.

Hannah More's Sunday schools survive with an attendance of 1,161,226, but the numbers are going rapidly downward, in inverse proportion to the number of motor cars. Anglican schools, pupils, and teachers were down numerically in 1960. In 1951 17 per cent of all pupils and 16.8 per cent of teachers were in Anglican primary and secondary schools. By 1960 these percentages had fallen to 12.8 and 12.7. Statistics cannot, of course, measure the spiritual strength (or weakness) of the church, but they do provide a useful basis for planning for the future. Action can now be based on facts rather than on hunches.

Years	Provinces	Numbers of persons received from: Roman Catholic Church	Other Religious Persuasions	Totals

Ten Thousand More

MR BUTLER'S recruiting drive for 10,000 policemen is to last six weeks and cost £60,000 in publicity (probably the watch committees would not stand for more). It is a modest investment beside the free service, or disservice, provided weekly by television serials like Dixon of Dock Green and Z Cars. The Home Secretary is sensibly, if belatedly, emphasising the sizeable financial inducement that has existed since the average constable's pay was increased to £1,000 a year in November, 1960. He needs the extra men for three reasons. First, there are still big-city forces which are dangerously below strength despite last year's net gain of nearly 3,000 policemen in England and Wales. Metropolitan London needs 2,500 and Liverpool, one of the provincial forces where the shortage is most evident, 250. The worst areas are invariably those where industrial wages are still high compared with police rates, and where the prospect of employing more civilian staff is limited by local shortages of suitable clerical workers.

Secondly, there are too many forces where the 44-hour week (nominally introduced in 1955) has never been implemented, and recently some forces which granted the extra fortnightly rest day have had to revert to the old system. The overtime pay may be welcomed by some constables, but in the long run police hours are a serious drag on recruiting. Thirdly, existing establishments need to be increased both to counter new criminal methods and to police suburban areas where population has risen markedly in the last decade. Mr Butler wants to get more men on the beat; equally important is the need to give men the chance to know a regular beat.

Britain has never had as many police as it possesses now: the strength of county and borough forces rose by over 10,000 in the 1950s. But establishments are steadily going up (by 1,500 in the metropolitan police area last year) and will continue to do so. The expansion of the police cadet training system is one solution: London has been taking 40 per cent of its recruits from this source. But there are dangers in relying too heavily on one segregated section of the community. In the present difficulties might not more use be made of special constables on light duties (with suitable payment) other than for lining the streets for visiting heads of state?

BOOKS

Eternally Deluded?

Socialism in the New Society
By Douglas Jay.
Longmans. 414 pages. 35s.

ALMOST always in the past thirty years, declares Mr Douglas Jay, the British public have wanted a left-centre government: that is, a government committed to the brand of Labour politics which he himself supports. They have usually failed to get what they want, either because they have been led astray by the Tory-dominated press or because they have been deluded about the true nature of socialism by the Labour party's loud-mouthed extremists.

On his reckoning, the only "fair" general elections in recent British history were those which Labour actually won—that of 1929 ("when the Beaverbrook and Rothermere interests were quarrelling with Mr Baldwin, and the Tory Press and Party nullified one another") and that of 1945 ("when Party propaganda in the Press had been muted for six years"). As for the elections of the fifties, they were lost because "an enthusiastic but naïve minority in the Labour Party" allowed themselves the luxury of appearing in public to be "doctrinaire, Marxist or divided."

In propounding this thesis, Mr Jay is obviously less concerned to weigh evidence than to pillory villains. It is a pity that his pillorying of the press sounds quite so exaggeratedly crude and, what is more to the point, not particularly constructive.

He describes the collapse of the *News Chronicle* and the *Star* and the take-over of the *Daily Herald* as having "brought the realities of Parliamentary democracy in the UK very near to the precipice," even as having given some plausibility to the communist criticism that the British electorate has no free choice. Yet, after this damning indictment, he can offer no other remedy than that we should support the few papers "which still hold the line" and resist any attempt by TV programme companies to be relieved of the obligations of political neutrality. He would not absolutely rule out "some sort of subsidised trust to defend freedom and variety in the Press," but thinks this should be avoided except as an ultimate resort.

Mr Jay's attack on the Marxists is equally unsubtle but much more sustained. Saint-Simon in France and Owen in England, he points out, were recognised as great socialists years before Marx evolved his theories, but neither believed in the wholesale state ownership of industrial property. What they did believe was that "social purpose" and "social justice," rather than "the blind forces of the market," should take a hand in controlling the production and distribution of wealth. It is high time, says Mr Jay, that modern socialists jettisoned Marx's "far-reaching and long-enduring errors" and returned to the simple belief in social justice—which he defines as meaning, in economic terms, the minimum of inequality that is workable if human beings are actively to use their talents.

How is this minimum of inequality to be achieved? Nationalisation cannot be the answer, we are told, since public acquisition of property must involve compensation and hence the immediate income claims of the individual owners are not necessarily affected. Far better, thinks Mr Jay, to use the instrument of public finance as an economic equaliser and to develop a steeply progressive income tax, rigorously heavy death duties, an effective levy on capital gains, and a massive expansion of centrally financed social services. The case for such policies is earnestly argued, but the book as a whole is disappointing. It lacks the sociological depth of Mr Crosland's "The Future of Socialism." Its economic analysis proceeds in stubborn isolation from the European common market (which Mr Jay never mentions save in parentheses). As for its political appeal, one cannot help reflecting how easily a "minimum of inequality" may be identified with a ceiling on legitimate opportunity.

No Rebel

Let My People Go
By Albert Luthuli
Collins. 256 pages. 25s.

MR LUTHULI'S autobiography, pedestrian, provincial and honest, is more than an indictment of white South Africans; it tells us where Africans have gone wrong, and are likely to go wrong—and it points to the share of the blame that the outside world, Britain especially, must carry on its shoulders.

The author is no born rebel. In a sane South Africa he would be a pillar of the multi-racial establishment. As a chief he excelled ("one of our best chiefs," the government man said). He is a genuinely devout Christian. He does not seem to have known grinding poverty: he works his small sugar farm, and his first successful campaign was aimed at getting a better deal for other African sugar growers in Natal. By comparison with many Africans in South Africa, he had it good; he did not see the inside of a jail until, in 1956, he was arrested with 155 others on a charge of treason. He is well educated, moderate, objective in his judgment, and deeply respectful of tribal tradition. "I do not think I am a 'Black Englishman.'"

He is very unlike the black nationalists in other parts of Africa. His belief in non-violence has been strong enough to persuade him to end a successful campaign for fear that it might turn bloody; he is courageous enough to condemn, in print, the burning of churches—even though he understands that this is a reaction against all white authority. His belief in non-racialism is the fabric of his book: the "my people" in the title covers all South Africans, black, white, Asian, and in between. He and his followers have until now been South African nationalists, not African nationalists; they have wanted a share in the country, not black ownership of it. It is a "might have been" that may never return.

But it is not only the present Afrikaner Nationalist government that has been unwilling to take the outstretched black hand Mr Luthuli describes. By the act of Union in 1909, Britain gave South Africa over to white ownership, with the non-white population as "the livestock which went with the estate." This is strong language for Mr Luthuli—and, to be fair, the architects of the Act of Union were not out of step with the thinking of their times. But Britain supported white South Africa for a long time. As Mr Luthuli shows, Smuts, a hero abroad, was in reality responsible for a "native policy" that is best described as an untidy preparation for apartheid.

For a long time, the Africans themselves have been neither ready nor able to oppose apartheid. Most of their leaders have rejected what Mr Luthuli calls the "easy" way—black racialism and violence; the mass of the people have only sporadically shown themselves capable of disciplined non-violent action (as with the bus boycott in Johannesburg, which Mr Luthuli admits was not organised by his African National Congress; it was a spontaneous act.) But why have there been so many failures? The book does not shirk the answers. Poor organisation, personal quarrels, let-downs by trusted men, divisions between radicals and moderates—all these have been responsible for an African National Congress ill-equipped to meet the might of the South African government. Worse, Mr Luthuli speaks of the resignation of some of his people, the acquisition by some of "a sort of slave-mentality, a sense that their lot was incurable and was best accepted." He speaks of ignorance and of a "widespread misapplication of Christian trust," a belief that God will bring freedom when He is ready.

True to the spirit of his Nobel Prize, however, the author is optimistic. He sees strength for non-violent resistance in the emergence as a political force of African women; in the many undoubted successes

of the African National Congress. Is this optimism justifiable? Can Dr Verwoerd's government be brought down by non-violent action on the part of an opposition that refuses the "easy" way? The aim, says Mr Luthuli, "is to bring the white man to his senses, not slaughter him." But bringing the white man to his senses without using violence will take longer if there is no help from the outside world—that is the conclusion the book draws. So Mr Luthuli calls for help, for the ostracism of the Nationalist Government, for boycott. He agrees that it would mean hardship for his people but says they are willing to pay the price. And, "It would be some small comfort to us if the 'civilised' world refrained from supplying the arms and ammunition" for the rule by force in operation in South Africa.

Ghana's Constitution

The Constitution and Government of Ghana. *Law in Africa No. 1*

By L. Rubin and P. Murray.

Sweet & Maxwell. 326 pages. £2 10s. 0d.

"THE Republican Constitution of Ghana," write the authors of this admirable work, "is, as far as we are aware, the only constitution in existence (or which has ever existed) which accords special recognition to the first President of the Republic, and confers special powers upon him. The reason is to be found in the history of Ghana's independence, and reflects the tendency of the people to endow with charismatic qualities their own Moses who led them out of the land of bondage." All students of public law and African affairs will be grateful for this clear and authoritative account of a constitutional experiment that is being observed with anxious attention everywhere.

Among the distinctive features of the constitution of Ghana (which is, incidentally, drafted with a clarity unusual in such documents) are (1) emphasis on the will of the people as its ultimate source of authority; (2) the concept of African unity, which entitles the Parliament in certain circumstances to surrender the national sovereignty; (3) the reservation to the people of the power to repeal or alter certain provisions of the constitution; and (4) the conferment of special powers on the Osagfeyo. Some provisions of the constitution are traceable to British influence—for instance, the emphasis on ministerial responsibility and the security of judicial tenure (except for the Chief Justice, who may be dismissed by the President). The Table of Precedence, which is included among the many interesting documents in the appendix, provides incidentally that although the Chief Justice ranks after the President, the Attorney-General takes precedence over all the judges of the Supreme Court. American influence is traceable in the recognition of the principle of judicial review and the indirect election of the President through an electoral college.

Although there is no formal Bill of Rights on the American model, Article 13 provides a Declaration of Fundamental Principles which the President is required to make before the people upon assumption of office. It is a difficult question whether this imposes a legal obligation. The authors produce a careful argument that it does, saying that "Any other conclusion would only mean that the people were misled when they approved the Constitution on the strength of the White Paper and Dr Nkrumah's broadcast" of March 1960; in this the Prime Minister of Ghana, as he was then, stated that

> The Constitution is firmly based on the Rule of Law and leaves no scope for arbitrary action or for discrimination against any individual or community.

Talent Without Ballast

The Life of Henry Brougham to 1830

By Chester W. New.

Oxford University Press. 469 pages. 50s.

MOST of Brougham's contemporaries regarded him as more than a little mad. Immensely clever, unfailingly articulate and quite indefatigable, he was often silly, usually undisciplined and always intolerable. The "march of mind" personified, he was not a human being. Even Peel made friends, but Brougham kept none of his; nobody ever loved him, and he loved only himself. Thick-skinned, excitable, brash and aloof, he alternated between the vapours of a hypochondriac and the violent high spirits of an unstable adolescent. In Greville's view, he combined "the most splendid talents" with a profound lack of "ballast." As a man, therefore, Brougham might seem a subject more suitable for the psycho-analyst than a staid and conventional Canadian historian like the late Professor New.

As a politician, he was an unrepentant intellectual, a careerist lawyer and an agitator of great power. Though loyal at least to the name of Whig, Brougham stood out even in the unreformed parliament as erratic and unpredictable, an oddity typical of nothing. The son of a petty Westmorland squire and a daughter of one of Edinburgh's academic dynasties, he had to make his way by sheer, thrusting ability. Thus, like Canning on the other side, he was envied, feared, courted and distrusted as a performer whose services the magnates of his party found indispensable. But in their eyes much of what Brougham did was almost unendurable. However effective it may have been politically, was it really desirable to exploit the affair of the adulterous Queen Caroline in 1820, or to stump Yorkshire ten years later, preaching reform?

Unlike some of his colleagues, Brougham took the Whig cry of "civil and religious liberty" seriously, partly because he could make something out of it but also because he believed in it. Indeed, for "the old drum-major of the army of liberty," any recruits would do, whatever their party affiliations. The slave trade and slavery itself must be fought, even with the help of Tory evangelicals. Collaboration with every sort of crank was worthwhile if this produced education for the masses, for the mechanics in their institutes, or for the Dissenters at London University, the "godless institution in Gower Street." Anyone who was against the system and its wickedness, who wanted parliamentary, legal or fiscal reform, who valued freedom of the press, the individual and his conscience, was Brougham's man.

Even in appearance, he was something of a pinchbeck Voltaire, with more than a touch of the Benthamite he never admitted to being. Morley said that Brougham launched "a thousand projects, all taking for granted that ignorance is the disease and useful knowledge the universal healer, all dealing with man from the outside, none touching imagination or the heart." But this strange, cold creature got results, and his successors owed a great deal to the pounding of "the steam intellect." When Brougham died in 1868, Mr Gladstone, one of his more surprising admirers, was about to take office as prime minister. The educational, judicial and other major reforms of his first government, the greatest of Liberal ministries, were all erected on foundations laid by Brougham, who could then conveniently be forgotten.

In trying to resurrect the whole man, Professor New had to contend with an opaque and elusive personality, a highly idiosyncratic political career in a difficult period, and an extraordinary diversity of activities. He struggled for thirty years, but he can hardly be said to have overcome all the obvious difficulties. Prosaic, careful, disjointed yet packed with information, this volume carries the story from Brougham's days on the *Edinburgh Review*, with its fulminations against the forces of darkness everywhere, to his reluctant acceptance of the Lord Chancellorship from Grey in 1830. Some of its failings can be remedied by Professor Aspinall's "Brougham and the Whig Party"; others may be mitigated in the promised sequel, by "another scholar." Meanwhile, this is the best early life of Brougham that we have.

The Man in the Desert

Lawrence of Arabia: *The Man and the Motive*

By Anthony Nutting.

Hollis and Carter. 256 pages. 21s.

TWO films dealing with the Arab revolt are in the making, and this seems to be the book of one of them, for Mr Nutting is principal adviser to its producer. He has consulted many of Lawrence's surviving friends (though not the most dispassionate of them, who is Colonel Meinertzhagen) and has produced an interesting assessment of the workings of an impish but tortured mind. But where the facts of the revolt are concerned, he has relied far too exclusively on the "Seven Pillars of Wisdom" and the Lawrence letters to be trustworthy.

The descriptions of British colleagues bear the marks of Lawrence's likes and dislikes, and the book perpetuates an account of the first year of the revolt that is based on his premonitions and hindsight, and misses the main drama of its start. This was the hideous though calculated risk, taken by London and Cairo in the teeth of the Government of India, and lasting for a whole year, that trained Turkish troops would be sent against ragged beduin at a point where Christian reinforcements were unthinkable, and that the Allies would lose Mecca, with disastrous consequences in India and Mesopotamia. A little more research into contemporary reports, including Lawrence's own, would have enabled Mr Nutting to add to a story that has too often been told from the highly personal angle that he reproduces.

His book is beautifully written as to style, but as to content often bears the marks of a rush job. Thus in Chapter I the Emir Feisul is forced to witness a public execution in Damascus on June 1, 1916, and thereafter spends "the next few weeks in solitary confinement," whereas on page 185 he attacks Medina on June 5th; the latter is right. And General Wingate is introduced as the man who "headed the British Military liaison staff with Sherif Hussein," whereas in fact he was Governor-General of the Sudan and Sirdar of the Egyptian army from 1899 to 1916, was fully employed in Khartoum, and was placed in charge, from there, of military operations in the Hejaz largely because the revolt was nourished, in its early stages, chiefly via Port Sudan.

The bibliography does not include the only dispassionate life of T. E. Lawrence hitherto published, which is Miss Flora Armitage's "The Desert and the Stars." This is a good book and it has the virtue of accuracy; Mr Nutting has little or nothing to add to it.

Russian Socialist

Alexander Herzen and the Birth of Russian Socialism, 1812-1855

By Martin Malia.

Harvard University Press. London: *Oxford University Press.* 495 pages. 55s.

HERZEN was born in 1812, but in the present context the date which counts is 1825, when the Emperor Nicholas I came to the throne after suppressing the "Decembrist" plot against him. He reigned for thirty years—a reign which one of Herzen's contemporaries called a thirty years' war against civilisation and good sense—and the book ends with his death. It is not precisely a life of Herzen, but his intellectual biography up to that date, eight years after he had left his native country for ever, and on the eve of his most active and influential years as the founder of the first uncensored Russian press in Russian history. From the time of his first arrest on the most ludicrous of charges in 1834 to his departure for Europe in 1847 he was in exile or under police surveillance—"the whole of his adult life in Russia passed at the mercy of an absurd tyranny."

Professor Malia analyses the ideas Herzen abandoned no less than those he retained. It was the age of romanticism in literature and idealism in philosophy, and the influence of Schiller and Schelling fused with the cult of the Decembrists to produce Herzen's vision of the liberated individual in a free society. There could have been no greater contrast between these aspirations and the reality around him. Nicholas's Russia bred Oblomovs, superfluous men; the active, the ardent, found their way to Siberia or to prison; co-operation with the autocracy was impossible; its power was arbitrary, its crimes monstrous; it stood for everything that was stupid, absurd, cruel. "There was no law or justice in Russia; there was only the arbitrary exercise of brute force, tempered solely by bribery."

Alienated from the society around them, the young idealists found consolation in identification with the Absolute, a heady and elastic concept in which self, humanity and the universe formed a single harmonious whole. This could not for long satisfy one whose objections to the regime were more than theoretical, and what was lacking—the formulation of a political goal—Herzen found first in the works of Saint-Simon; it is here that Professor Malia's second theme merges with his first.

The socialism to which Herzen looked has little in common with what the word stands for today, in whatever sense it is used; nor could it have had such a meaning in the context of Russia in the first half of the nineteenth century. The enemies of Herzen's socialism were not an exploiting capitalist class, but lawlessness and ignorance; its immediate goals were the overthrow of the autocracy and the end of serfdom. His democratic ideals arose not from observation of the plight of the masses, but from the frustrations of the privileged; they were a logical extension of the liberty, equality and fraternity of 1789. How disappointing the sequel in France had been Herzen himself did not realise until he reached Paris. There his profound patriotism was reinforced, his earlier faith in the youth and freshness of Russia revived. Russia was "free from the past, because our past is empty, poor, and narrow."

No brief review can do anything like justice to the depth and density of Professor Malia's book, and to the discrimination of his judgments. The material he has mastered, direct and collateral, is vast—one is almost tempted to say he has read too much, for the writing is at times overweighted and the going heavy; his digressions, for example, on the relation between empiricism and the diffusion of political power, or on messianism as a psychological compensation for self-conscious but thwarted nationalism, are stimulating. What one misses, perhaps, is the reflection of Herzen's uniqueness. Romanticism and idealism, hatred and contempt for the autocracy, were common to the critical intelligentsia of his day; what makes Herzen such a fascinating character is the mixture of passion and detachment, of ironic clear-sightedness and optimism, of generosity and venom. These features were more marked in his later life; will Professor Malia place us still further in his debt by carrying the story to the end?

Marginal Thinking

A Report on Marginal Costing

The Institute of Cost and Works Accountants.

Gee & Co. (Publishers). 77 pages. 10s.

ONE of the few things which economists know is that rational decision-making frequently requires consideration of the incremental or marginal cost of doing or not doing something. Ever since Alfred Marshall introduced "marginal cost" into the English language, first-year students of economics have learned about the concept and they now draw marginal cost curves in answer to practically every examination question, whether or not they are relevant. University teachers of accounting have long been teaching their students about marginal

McGraw-Hill Encyclopedia of Russia and The Soviet Union

Edited by Michael T. Florinsky

Never before has there been such a demand for accurate, readily available, and up-to-date information about Russia and the Soviet Union. To meet that demand, McGraw-Hill is publishing this concise, one-volume encyclopedia. The first of its kind, it is a comprehensive record of all aspects of Russian life from medieval times, through the 1917 Revolution, to the present.

From St Vladimir to Khrushchev, from the ballet to the cosmonaut, from Christianity to dialectical materialism, the wide range of this vital encyclopedia reflects the changing culture, politics, industry, science, and nature of the Soviet people.

Nearly a hundred internationally recognized authorities—twenty-five of them from Europe—have contributed to this reference book of unparalleled scope.

- **600,000 words**
- **624 double column pages**
- **Over 4,000 entries**
- **More than 400 diagrams, maps, graphs, drawings**
- **Price £9 3s**

McGRAW-HILL

costs too, and some of them spent a great deal of effort in the thirties in trying to demonstrate the usefulness of a marginal cost approach to their brethren in business.

All this may perhaps explain why it is surprising that this book was published as late as 1961. It solemnly expounds "the technique of marginal costing" as an aid to achieving "maximum profit" without betraying any recognition of the ideas of economists. Thus the economist can only pat himself on the back and pray that the new gospel will now spread rapidly.

The book tempts one to speculate whether the majority of accountants may not hitherto have sturdily resisted all attempts on the part of their business employers to think in marginal terms. If this has in fact been the case, a serious impediment to rational business behaviour must have persisted ever since the development of income tax fostered the development of the accounting profession. Perhaps this helps to explain the poor growth performance of the British economy, in which case the publication of this book might justify some optimism about the economy's future prospects.

OTHER BOOKS

DIVIDED BERLIN. By Hans Speier. *Thames and Hudson.* 201 pages. 25s.

With a postscript dated August 21, 1961—seven days after the erection of The Wall—Dr Speier's narrative of the communists' unrelenting bid for the whole of Berlin is satisfyingly up-to-date. It is also scholarly, well marshalled and lucid. Dr Speier subtitles his chronicle and conclusions "The Anatomy of Soviet Political Blackmail"; and they make sombre and uncomfortable reading. He is convinced that in the long run the artificially-contrived Berlin crisis is "a global issue," and that "success in the cold war against communism depends on the ability to exploit the political value of arms."

THE ECONOMIC DEVELOPMENT OF COMMUNIST CHINA, 1949-1960. By T. J. Hughes and D. E. T. Luard. *Oxford University Press* for *Royal Institute of International Affairs.* 235 pages. 25s.

This is the second edition of a concise and admirably balanced survey, which seems bound increasingly to become an indispensable bookshelf companion to all students of contemporary China, and in other fields besides economics. The authors start with useful chapters on China's traditional economy and the Chinese Communist party's economic objectives, and follow with a history of the first five-year plan, the "great leap forward," land reform and the communes, concluding with an assessment of future prospects in the light of China's population problem. The period covered now extends to the end of 1960.

MONEY INCOME AND EMPLOYMENT. By Erich Schneider. Translated by Kurt Klappholz. *Allen & Unwin.* 290 pages. 32s.

This is the second textbook by Professor Schneider, now Rector of the University of Kiel, to appear in an English version. Like its companion "Pricing and Equilibrium," it is a clear and rigorous exposition of current theory at a level suited to second or third year university students. There are many diagrams, some algebra and copious footnote references to articles in the learned journals. Scores a Beta Plus.

LETTERS

A Message for Sir Roy

SIR—It was not our intention to congratulate you on your editorial of January 13th, concerning the way Sir Roy Welensky bullied Mr Iain Macleod over the Northern Rhodesia Constitution. In our view your editorial revealed what has long been generally known and widely circulated. It was really no news here. However, because of the cheap protests from the United Federal Party, we feel we must express the feelings of the people who hate Welensky's Federation and the evils it has brought here.

In public, Roy Welensky has bullied both Britain and the United Nations as if he was as powerful as Kennedy or Khrushchev. The irresponsible and intemperate vituperations Welensky—the champion of federalism—has been making in support of the secessionist Katanga province of the Congo, are all too familiar with the world public. How could such a public bully not have bullied humble Macleod in private?

Please treat the United Federal Party's protests with the contempt they deserve. None of us here have taken UFP protests to you as serious or sincere, and no one believes their false denials. That Welensky is primarily responsible for Britain's failure to pull out the right type of constitution for Northern Rhodesia from the Colonial Office pigeon hole is an undeniable fact.

But Welensky and his UFP have in the past relied for their existence in politics on the qualified franchise—so that European voters have always overwhelmed the African voters. They will cease to exist politically when all Africans, or a substantial number of them, are enfranchised.—Yours faithfully,

M. MAINZA CHONA
National Secretary,
United National Independence Party
Lusaka, N. Rhodesia

★

SIR—Your message to Sir Roy Welensky is typical of the interfering theorist telling the practical man on the spot how best to do his job. These time and motion studies, designed to goad Africans on much faster towards Africanisation of all Africa have been responsible for much misery and loss of life on that vast continent.

Sir Roy wants to avoid Mau Mau as happened in Kenya. He wishes to avoid war as raged in the Congo, Algeria and Angola, and above all he wants to avoid the growth of a black dictatorship suppressing the freedom of all races as now in Ghana.

He is ploughing a difficult furrow between the nationalist Africans on the one side and members of the white Dominion Party, who have a Fascist outlook, on the other. His aim is a genuine partnership of black and white Rhodesians, eventually bowing to black rule as more gain experience and as leaders emerge.

If, as you say, "... there is still an appalling danger that the whole thing might blow up this year, ..." it is well to remember that articles condemning the white administration and praising African nationalism, tendering advice which is shortsighted and playing on emotions instead of presenting a balanced appraisal will have played their part in fostering the chaos that will follow.—Yours faithfully,

House of Commons, SW1 ROY MASON

★

SIR—Your five columns of letters last week were long on emotion and short on facts. What is the argument about? Ultimately about people, immediately about democracy. Democracy means rule by the people. The trouble in Africa is that the people, the vast majority of them, are black, uneducated and relatively primitive. It would of course be better if they were white, educated and sophisticated, and then we could have a nice little democracy like they have, say, in Portugal or France. But democracy says nothing about colour, knowledge, sophistication or property. It says that only the wearer knows where the shoe pinches.

The Africans of course are not ready for democracy. Who ever was? It is quite true that the transition to African rule would be smoother and the resulting government more efficient if there were more time to train more African politicians, administrators and civil servants. There was time. There isn't now. The time we had has been spent not in preparing Africans for government, but in keeping them out; and in destroying their faith in the white man's honesty and good intentions.

To offer an African a fancy franchise like that of the June constitution in Northern Rhodesia is immoral and fatuous. Africans are not fools. They look south at Luthuli and see that for 30 years he has knocked patiently and peacefully at the doors of constitutional progress. His reward was the shooting at Sharpeville. But in Cyprus, Nyasaland and Kenya violence has brought results.

If Africans were driven to use violence to get a square deal it would be a terrible thing. All the suffering apart, British troops would be called in and we should find ourselves fighting a colonial war alongside white Rhodesians, white South Africans, and perhaps a few Portuguese from Angola and mercenaries left over from Katanga.

Africans must be given power in Central Africa very quickly. Not because of what the UN think or what the Afro-Asian block think, not because of the possibility of violence, but simply because it is the right and proper thing to do. We are fortunate in that what is politically the most realistic course is also what is morally right. The first and minimum steps are a constitution for Northern Rhodesia which will allow the Africans a majority; and the abolition of the Central African Federation as it now is. Northern Rhodesia, copper mines and all, and Nyasaland, both of which are colonial territories, must be led quickly to full independence under predominantly African governments, free of any federal ties whatsoever.

What of the risk of a "Congo situation" developing? Why should it? The Congo situation was a unique result of a unique action, namely the creation of a political power and administrative vacuum. Provided power is handed over in an orderly fashion there is no reason why it should recur.

What of the risk to investment? There is a risk, but then investment is a risky business. Isn't that what investors get paid for? But probably very little will be lost anyway, for, as I have said, Africans are not fools and they have heard about economic growth and the need for foreign capital, and they know they have to go on living in the world. There may be some cases of genuine hardship among the non-Africans (don't forget the Asians), and it is shedding no crocodile tears to say that these people should be helped by the British exchequer.

I recently spent some years in Kenya and I know a bit about sitting in the evening with a gun under the cushion, I know a bus-load of Africans smells, I know about racial tension, about how white men in Africa talk and write and act and think and feel, and I know that the majority of them won't like living under an African government. But they will get used to it. It is the end of an epoch, not the end of the world. Life in Africa will still go on in its own delightful way.

Perhaps I may end in the words of the High Commissioner for Rhodesia and Nyasaland with the belief "that the British people would wish their Government's policy at the United Nations and elsewhere to be based on what is morally right, however unpopular it may be in some quarters." Amen to that.—Yours faithfully,

EX-COLONIAL

[We have received many readers' comments on our leading article (on January 13th) about Central Africa. Our correspondents have been almost equally divided between those approving and those profoundly disapproving our standpoint. Having printed a large selection of our critics in our last issue, we regret that space is not available for more letters than these this week.]

London Buses

SIR—In a footnote to my letter of January 13th you ask why London Transport does not transfer bus crews from unprofitable services to the profitable routes if the main impact of staff shortage is on the latter. Here is the answer.

Staff shortage in London has no uniform geographical pattern, as all London employers know; it varies considerably from district to district, although it is particularly bad on the western side generally. Drivers and conductors have to be based at garages as near as possible to their homes, and to transfer some of them to fill staff shortage gaps at a distant garage is neither practicable nor economic except within a limited range. Where there is a choice, as many buses as possible are based on garages with a good staff position.

Under statute, London Transport is required to provide adequate services throughout its area. With this obligation, there are bound to be some routes which, although meeting a real public need, will never carry sufficient traffic to make them a paying proposition taken by themselves; and many of them being wide-interval services are least able to bear a cut if any semblance of adequacy is to be maintained. Their continued operation, however, is made possible by the profitable services. That is one of the reasons why London Transport was formed in 1933; and the bus services as a whole pay their way, including full interest charges.—Yours faithfully,

R. M. ROBBINS
Chief Public Relations Officer
London Transport Executive

Brollies Into Europe

SIR—While I would not quarrel with your reviewer's very fair assessment (in your issue of January 20th) of my book, "New Dimensions in Foreign Policy," he does make one point of criticism which shows a misapprehension of the conditions under which the study of recent administrative history can be pursued, and which is of some general interest. He says that I might have "got farther" and "brought more life" to my study if I had "touched on personalities." Of course I agree with him and agree also that the future historian may gain more "from studying men than machinery."

But the future historian will have open to him all kinds of sources, British and foreign, which are closed to contemporaries. As I made plain in my preface, a study of this kind cannot be written so close to events without the assistance of persons in the public service. The price of such assistance must inevitably be acceptance of the principles of civil service anonymity and cabinet responsibility. Of course these are limitations, as I have pointed out myself more than once with reference to the official "civil" histories of the war. But these are limitations that are the price one pays for doing work of this kind at all.

It would be possible, of course, to do something quite different—to tell the dramatic story of Britain's relations with the European unity movement in the last fifteen years as it appears in the public record, embellished by what a competent journalist can no doubt find out in the clubs of Pall Mall and the pubs of Fleet Street. I would like to see it done. But it would hardly be a suitable venture for a professor of government and public administration.—Yours faithfully,

All Souls College, Oxford MAX BELOFF

Doubting Thomas

SIR—In a note of the week on January 13th you write as follows concerning the provision of markets for the under-developed countries: "the right way is *to make British membership the starting-point of a new effort* by both Europe and America to pull the barriers down. This, *as Professor Meade has pointed out,* is the new opportunity opened up by America's awakening interest in free trade." (All italics mine.)

The passage quoted is an interesting exercise in the art of distorting without actually telling lies—a practice now rapidly becoming known as "Marketmanship." The first of the above sentences tells the truth as you see it, and the second is strictly true, but the two together give a totally false impression. May I point out, unless Professor Meade himself gets in first, that, far from suggesting British entry as a starting-point, what he actually wrote was: "I for one doubt whether in the absence of such action our entry into the common market will, in the end, prove possible."

With distortion went suppression. If you had wanted your readers to assess fairly the possibility of success in the "new effort" you would have added that any change of policy in the direction of "pulling down the barriers" would require (under Articles 111 and 114 of the Rome Treaty) the unanimous agreement of the Council representatives of each of the countries of the European Economic Community, of which, if we go in first and negotiate after, as you suggest, there will probably be ten in all!—Yours faithfully,

London, WC2 WILLIAM PICKLES

Which Guide for Shoppers?

SIR—On January 20th you reported that the BBC is planning television programmes based on the findings of *Which?* This is the truth—but far from the whole truth, for the BBC has also entered into an agreement with the British Standards Institution to publish the findings of *Shopper's Guide.* It is intended that every programme in the series will give results from tests carried out by both the periodicals.—Yours faithfully,

D. R. VICKERS
Assistant Secretary
London, W1 British Standards Institution

SHERATON HOTELS

IMMEDIATE CONFIRMATION

EXCELLENT accommodations reasonable rates

From New York to San Francisco, from Montreal to Dallas, there's a Sheraton Hotel waiting to welcome you. Each is located in the heart of the city, near business districts, theatres and shops. In addition to fine food and superb service, Sheraton Hotels offer many extra values such as the Family Plan (children under 14 FREE when they share your room), air-conditioning, free TV and radio. If your ship or plane is delayed, Sheraton will hold your reservations. To get reservations at any Sheraton Hotel, see your travel agent or Sheraton's General Agent:

FRAMES TOURS LTD.,
25-31 Tavistock Place, London W. C. 1,
Telephone: Euston 3488.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Closing the Gaps

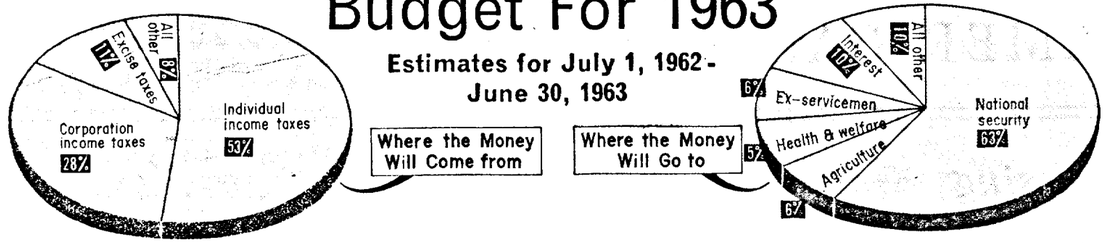
WASHINGTON, DC

THE economic policy makers of the New Frontier are pinning their hopes for 1962 on an old-fashioned business upturn. Indeed, President Kennedy's Budget, his Economic Message and the Annual Report of his Council of Economic Advisers are much more optimistic in their assumptions about the outlook than are the majority of businessmen and private economists, who have a good many reservations about the continued pace of the present expansion. The Administration, while concerned about its international balance of payments, appears convinced that the private sector of the economy will generate most of the drive needed to maintain domestic growth. It is counting on consumers and corporations to step up their demand for goods and thus to reduce unemployment, raise incomes and profits and furnish the added revenues required to balance the Budget.

It is not unusual for the Administration in power to take an optimistic view and the Kennedy forecast, while bright, is not without foundation. Despite the scepticism of the business community, the Administration's predictions for 1962, of a 9.5 per cent rise in gross national product, a jump of 23 per cent in corporate profits and a fall in unemployment from 6 to 5 per cent of the labour force, are in line with the gains achieved in previous expansions since the war. In recent months, moreover, the Administration's economic projections have been decidedly higher, and also decidedly closer to actual results, than those prevalent in private circles. If it is to be faulted, it is in the belief that business will not only be strong but that businessmen will also show unusual restraint in holding down prices.

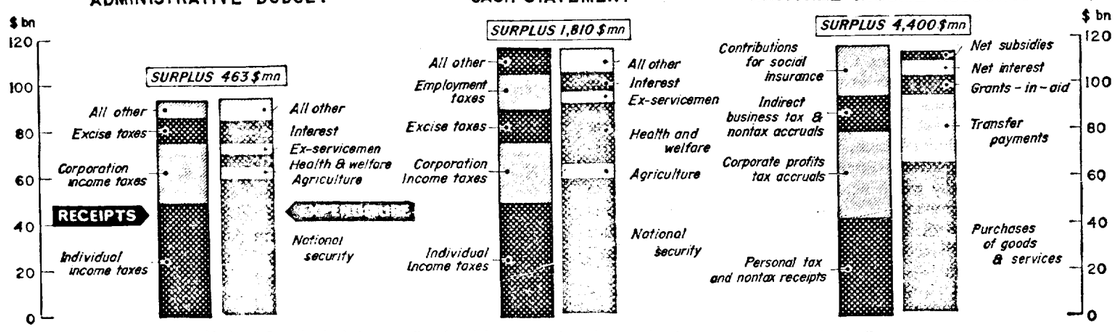
The Administration's show of confidence contrasts with its mood a year ago, when Mr Kennedy was proclaiming that "the American economy is in trouble" and when some of his advisers were considerably gloomier than he was about the recession and the sluggishness that they feared was a permanent economic affliction. Businessmen were then less pessimistic and began rebuilding stocks just as the Administration was ready with its plans for countering the decline. As it turned out, the diagnosis was more severe than were the remedies (Dr Paul Samuelson, Mr Kennedy's chief unofficial adviser, termed them "placebos"), mainly because to include large-scale government spending or a tax cut might have aggravated the weakness of the dollar abroad. In retrospect, this moderation was all that was needed. The series of concerted anti-recession measures devised by the Administration, and costing a comparatively modest $2.9 billion, helped to speed the recovery that was already underway. The major stimulant, which turned the recovery into expansion, came from the increase of $4.7 billion in military outlays which had not been envisaged originally as part of the anti-recession programme.

Not unnaturally, Mr Kennedy takes credit for the advance made last year, although just how much was due to the Administration's deliberate efforts is debatable. He continues to insist that the Administration must do all that it can to close the gap between actual and potential production and by so doing to attain maximum employment and a high rate of growth. He is not disposed to leave everything to chance but clearly he is seeking to give business every possible encouragement to continue the rise that is now taking place. Thus in outlining his plans for 1962, Mr Kennedy is both more confident and more moderate than he was last year and maintains the emphasis on military spending. Out of a total increase of $3.4 billion in the Budget for the 1963 fiscal year starting next July, the Administration plans a rise of $2.7 billion in expenditures on defence, space and foreign aid. Mr Kennedy is at pains to point out that this does not mean that domestic programmes are being slighted, since there is also to be a considerable shift of outlays in favour of education, medical care, housing and urban redevelopment.



These shifts, however, fall short of the basic reallocations of the nation's resources that many of the Administration's supporters consider essential to ensure growth; they tend to say that the New Frontier's plans for 1963 are progress at no more than a snail's pace. But the Administration's freedom of action is limited. It feels impelled to continue the military build-up; it is constrained by the persistent deficit in America's international payments which worsened materially in the second half of 1961; and it has to deal with a Congress meeting in an election year. In these conditions, it would be unrealistic to expect a major reorientation of the economy. Nor does the Administration think such a reorientation wise at present. Its main effort is directed towards ensuring that the momentum is maintained without encouraging the resumption of inflationary pressures.

THIS may be no more than a prudent man's progress but it is not a retreat to caution. For Mr Kennedy is advocating an increase in government spending to help to narrow the gap in production. To be sure, in a growing economy the stimulus provided by this increase may not be an important factor; if prosperity is maintained the surplus of the government's income over its outlays may even exert a mildly restraining influence. But in budgeting for an increase in spending the Administration is making it clear that, though it is relying on the private sector at the moment, it is not relinquishing its own responsibility for growth. This approach differs from that of the previous Republican Administration, which sought to hold down government spending and build up surpluses, without much success, during periods of prosperity. It is Mr Kennedy's belief that such a policy impedes growth and he is willing to spend more to accelerate the advance, arguing that if the economy does not respond, then the increased spending will act as a prop.

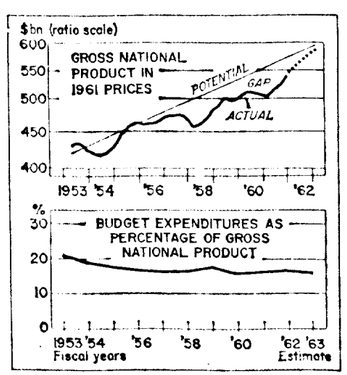


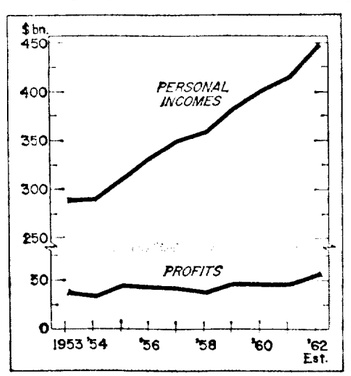
It is conceivable that the kind of expansion which the Administration envisages will create inflationary pressures. But Mr Kennedy and his team of advisers contend that even at the best this year the gap between actual and potential production will not be closed, so that excess capacity and unemployment will still be making themselves felt. As a result, wages and prices should not be exerting inflationary pressures except in those industries where "companies and unions possess substantial market power"; in these cases Mr Kennedy suggests that both sides should show restraint, while his economic council adds some general yardsticks indicating that wages should not rise above the increase in productivity. In this respect Mr Kennedy is repeating the exhortations expected from every President, and it remains to be seen if they are heeded. But his plans are geared to promote a higher

Budget For 1963

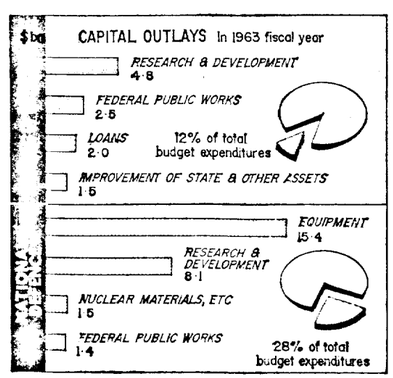
Estimates for July 1, 1962 - June 30, 1963

THREE WAYS OF LOOKING AT IT





National Security includes spending for defence, atomic and space developments and international affairs.



The **administrative,** or conventional, **Budget** covers primarily those activities of the government which are dealt with regularly by Congress; it excludes the trust funds which finance highway, social security and other programmes, and which have their own sources of revenue. These trust funds are included in the **cash statement** showing the government's total receipts from and payments to the public. The **national income accounts** record the government's purchases and its receipts from taxes at the time when the liabilities are incurred, which is when such transactions have their chief impact on the economy, rather than at the time when the money is paid over. Under all three calculations a **surplus** is forecast for the 1963 fiscal year, compared with deficits in the year which ended last June of $3.9 billion on the administrative basis, $2.3 billion on the cash basis and $2.2 billion in the national income accounts; for the current year all three are also expected to show deficits, of $7 billion, $8.5 billion and $500 million respectively.

The 1963 surpluses depend on Congress doing certain things; most important are that it should raise postal charges (which it may do at last this year) and modify the farm price support system. But even more these surpluses depend on the **gross national product** growing during 1962 at nearly as fast a rate as during 1961. For this will bring with it increased tax receipts from corporate profits and individual incomes during the 1963 fiscal year, in which total revenues are expected to go up by $10.9 billion. The increase in GNP will also mean that even though government spending will be higher in 1963 than ever before in peacetime, it will be falling as a proportion of GNP. Nevertheless, as the chart on the left below shows, GNP is not reaching the full potential that would be possible if the country's resources were being completely used; this potential output was last achieved in 1955 and its growth since then is calculated at an annual rate of 3½ per cent.

The American Budget does not distinguish between spending for **capital investment** and for current operations. This year, however, the President has picked out the items which will provide durable assets and other benefits for the future; these are shown in the chart on the right below.

rate of productivity throughout the economy; his new foreign trade programme and his proposed changes in taxes on industry are outstanding examples. In the Administration's view, this is the key to stable prices and wages.

In essence, the Kennedy stabilisation programme presupposes that the course of the economy is set for growth and aims at moderating any deviations from this rising trend. The President's report and the accompanying study by his council go far beyond the prospects of the current year to provide what amounts to a long-range blue print of actions to strengthen the economy and to meet specified targets. These are ambitious but attainable, in the opinion of his experts, and include lowering the rate of unemployment to 4 per cent of the labour force by mid-1963, achieving an annual increase in productivity of 4.5 per cent at some unspecified time in the nineteen-sixties and reaching equilibrium in the balance of payments within two years.

The targets are much more precise than the means of achieving them, but Mr Kennedy has seized the opportunity provided by a brightening business picture to introduce a series of proposals that will help to attain his goals. The first is the request for standby authority so that the President would have power to lower personal income tax rates should there be a recession; the second is for similar discretionary power to spend up to $2 billion for public works. In addition, Mr Kennedy suggests that the unemployment insurance system be strengthened as an additional buffer against an economic decline. There is no expectation that Congress, which is understandably jealous of its powers over taxation and the public purse, will act on these proposals during the current session. But in inviting an initial skirmish, the Administration is not merely throwing a sop to its liberal supporters; it is also, in fact, endeavouring to win public backing for more sensitive and flexible tools that would give it the choice of countering a recession by increased spending or lower taxes or by a combination of the two.

The breathing spell provided by an ebullient economy is welcome because it gives some clues to the Administration's long-range programme. But at this stage Mr Kennedy and his advisers cannot do more than provide a bare outline of the plans that are in store. For the troublesome deficit in the balance of payments is far from being erased and could take on an even more threatening aspect if economic activity falls short of the Administration's anticipations during 1962. Its forecast, after all, is predicated on a number of favourable actions being taken by Congress and does not allow for the possibility of either a prolonged steel strike or an inflationary wage settlement in that basic industry. These are variables that the Administration cannot control but by and large it is convinced that the forces of expansion are strong and widespread. Its immediate problem is not to cope with the next recession but to extend the present prosperity. On this score, it is anxious to provide a helping hand, with Congress's approval, to the private sector of the economy and to trust it to do the job.

Mills of Congress

THE President sent his trade expansion Bill to Congress this week with the statement that it represented a rare opportunity "to fashion out of the confusion of current events a clear and bold action to show the world what it is we stand for" and a claim that the measure, "designed as the expression of a nation," has bipartisan backing. It seems, moreover, to have a green light of sorts from Mr Wilbur Mills, the chairman of the House Ways and Means Committee. This committee must originate all revenue Bills and therefore holds the key this year to the legislation to which the President attaches the greatest importance: trade expansion, tax credits to encourage business investment and the placing of medical care for the aged under the social security system. It is not surprising that Mr Mills was the first congressional leader whom Mr Kennedy called to the White House on his return to Washington or that the White House has been particularly concerned to see that two vacancies on the Ways and Means Committee went to the more liberal-minded of the various possibilities.

As far as can be seen the committee, which supported the Reciprocal Trade Agreements Act in the past, seems likely to take a favourable view of the Trade Expansion Act and it is already at work on a somewhat altered version of the Administration's scheme to give tax relief for business investment. But unless Mr Mills has suffered a change of heart the medical care Bill, which has foundered in the committee before now, may never reach the floor. This would be the worst of all worlds for an Administration which regards this "bread and butter" issue as a vital factor in this autumn's congressional election; it would prefer to have the Bill defeated by the Republicans in an open vote on the floor. On the proposal to create a Department of Urban Affairs and Housing, which the Republicans and conservative Southerners on the House Rules Committee voted this week to bottle up, the President has a means of forcing the opposition into the open: he will submit the scheme as a reorganisation plan, which goes into effect within 60 days unless it is voted down in either House.

But even where Mr Mills is favourably disposed, he is likely to try the President's patience severely. Mr Mills is hard-working himself but reluctant to drive his committee and fearful of controversy, even though one pressure upon him—the risk that he might be challenged in his constituency by a notorious racial segregationist—has evaporated. The programme which he has laid down is leisurely—the medical care issue will not be reached until the summer—and there is always the risk that to obtain a probably unnecessary degree of agreement Mr Mills will make extravagant concessions of substance. Meanwhile the Senate will be kept kicking its heels for both Senator Byrd, the chairman of the Finance Committee, and Mr Mills have turned down with indignation the idea that the two groups might hold joint hearings or that the Senate Committee might get to work before the House group completes its part in this leisurely legislative process.

Kind to du Pont

WITH unusual speed the new session of Congress has already sent the President a Bill which he is expected to sign. But it is one which would have been passed last September had it not been that the longed-for adjournment might then have been held up by an explosive debate in the Senate, the only body which had not acted on this measure. It is intended to facilitate a final settlement of the anti-trust decree which requires the huge IE du Pont de Nemours Company to divest itself within ten years of its holding in the also huge General Motors Corporation—63 million shares, 23 per cent of the total outstanding; this, the Supreme Court held in 1957, tended to lessen competition. Last week the Bill, although it has now been passed without difficulty, set off the predicted chain reaction among liberal Democrats.

In the first place, they objected to acting on the Bill at all at this time, since a vote might look like a congressional directive to the Federal District Court in Chicago, which is still trying to decide how the divestiture should be accomplished; it is suggested that the judge may have been waiting to see what Congress would do. Under the law as it stood, if du Pont had distributed its GM shares, among its own stockholders, which is the most favoured method of settling the matter, the distribution would have been taxed as ordinary income at an average rate of 50 per cent. Not only would

this have been hard on the recipents but also many of them would have been forced to sell part of their holding to raise the money, which would have depressed the market value of both du Pont and GM. Under the new Bill any distribution to individual shareholders will be taxed as capital gains, at 25 per cent of an amount which will depend on the price originally paid for the shares.

Distributions to corporate shareholders will be taxed as intercorporate dividends at about 16 cents a share, except for the special case of the Christiana Securities Corporation which owns over a quarter of du Pont's common stock; it will pay about $4.30 a share since its tax will be based on GM's current value of around $55 a share. But this penalty was not enough to satisfy the liberals whose real objection to the Bill was that under it Christiana may divide its new GM holdings among its own shareholders. This, it is contended, should be forbidden because two-thirds of the Christiana shares are owned by members of the du Pont family and to permit them to take over the GM shares would merely perpetuate that control of the corporation by du Pont which has been declared illegal. In the Chicago Court the Department of Justice is arguing that Christiana, like du Pont, should be required to divest itself of all its GM holdings. But Christiana's lawyers maintain that the court has no power to order this since this company has not itself been convicted on anti-trust charges.

What to Give the Troops

IT was a right-wing Democrat—Senator Thurmond of South Carolina—who pressed for the hearings, which began in the Senate this week, on whether military men are being "muzzled" in their efforts to alert both their troops and American civilians to the dangers of communism. The star witness was to be General Walker, who resigned after he had been reprimanded and deprived of his command for filling up his troops with extremist nonsense; the aim was to display the Department of Defence (and the Administration) as being soft on communism and hard on true patriots. Should Mr Thurmond look like succeeding some Republicans might be tempted—as they were in the McCarthy era—to jump on the band-wagon.

But since then both the Department of Defence and the Senate have learned a good deal. The chairman of the subcommittee is Senator Stennis, a fair-minded Mississippian who wisely postponed the hearings until Congress reassembled so that they should not monopolise the headlines. And he has so broadened the inquiry that General Walker will not be called until its later stages, when much of the interest may have drained away. Answers are being sought to three questions of importance. One is whether the speeches of military men should be censored and whether the power to do this has been abused under the present Administration. The second is concerned with what is the best kind of instruction and education for the troops and the third with whether it is proper for men in the services to try to teach civilians about the issues of the cold war.

The proceedings got off to a dignified start with written testimony from two distinguished Republicans—General Eisenhower and Mr Lovett, a former Secretary of Defence—and the personal appearance of Admiral Burke, until recently Chief of Naval Operations and the good-humoured victim of sharp censorship early in the Kennedy Administration. All stressed that the civilian authority is paramount but, somewhat surprisingly, Mr Eisenhower argued that military leaders should be allowed to speak out, subject to general supervision; the former President admits that his views have changed now that he is no longer in the White House. Like the Admiral, General Eisenhower hinted that the present censorship is petty and over-zealous. But the advance clearance of speeches was strongly endorsed by General Lemnitzer, the chairman of the Joint Chiefs of Staff, and other eminent military men.

Where General Walker will come in is over the political education of those in uniform—a matter of great concern ever since the Korean war, when American servicemen showed so little resistance to communist brain-washing. Individual commanders have had considerable freedom to instil a love of democracy into their men; some, imbued by the fanatical ideas of the extreme right-wing, have gone about it oddly. The matter is being considered by a distinguished committee, but this will not report until the summer. Meanwhile General Walker will have his day in court. But if his recent impact on the country is any guide, the subcommittee is not likely to be bowled over.

Supra-Nationalism for Export

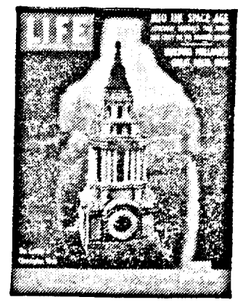
The first year of the Kennedy Administration has been, among many other things, the year in which large numbers of Americans have awakened for the first time to what has in fact been their European policy for the last twelve years. The awakening has been an uneasy one and some of its implications are described by a correspondent who returned recently from Washington.

EVER since the establishment of the Economic Co-operation Administration as the instrument for handling the Marshall Plan there has been in the American foreign aid agencies and more recently the State Department, as well as in Congress, an important and dedicated group of men who believed that Western Europe's only chance of economic progress and of resisting communism lay in the adoption of policies which would lead sooner or later to a definite and permanent economic and political union between all the major countries of at least non-Soviet Europe. Today this group is more powerfully represented in the commanding heights of Washington than ever before. At the head of the Treasury, the most sceptical of the major departments, now stands Mr Dillon, one of the most devoted members of the group. In the State Department, Mr George Ball, the Under Secretary, who used to be M. Jean Monnet's direct mouthpiece in Washington, and Mr Walt Rostow, the head of the policy planning staff, have both gone up in status recently as a result of the first shake-up in the Kennedy Administration. High up in the Central Intelligence Agency is Mr Richard Bissell, the key figure in the moves to push Europe into integration in the Marshall Plan period.

In the decisive position in Congress, the chairman of the Senate Foreign Relations Committee, Senator Fulbright, was busy advocating European federation even before the Marshall Plan was mooted. If he has recently become more notable as an "Atlantic Union" man, he sees no discrepancy between the two. It is perhaps even more important that in the lower levels of the Administration, where cables are drafted and committees manned, there are enthusiasts for the pure milk of M. Monnet's doctrine who make even Mr Ball—and perhaps M. Monnet himself—appear as moderating influences. Here they are certainly "*plus royalistes que le roi.*"

Thus it was inevitable that Britain's decision to apply for membership of the European Economic Community should be welcomed both publicly and privately in Washington. But this does not mean that there is any real understanding of, or sympathy for, the predicament which lies at the heart of the current negotiations. For these are men who have always been highly impatient of Britain's "dragging its feet" on the road to supra-nationalism. In their view, Britain is now doing what it should have been prepared to do a decade ago and, if the terms are not as good now as they could have been then, this is no more than Britain deserves.

In a sense, of course, the original American sponsorship of European integration was a departure from the deeply-felt commitment to economic non-discrimination at the time of the Bretton



LIFE SELLS FOR PHILIPS

Say Philips of Eindhoven about LIFE International Editions:

"*Great vehicles to build up a corporate image of a company and at the same time to sell products, because LIFE has the right make-up to appeal to the discriminating as well as the public at large.*

"*LIFE has always supplied us with a wonderful institutional background against which our local companies—operating in 58 different countries—can do their own product advertising.*"

The "discriminating" public referred to by Philips are the 5 million readers around the world who find LIFE International and LIFE En Español informative good reading every fortnight. For thirteen consecutive years, LIFE's editorial appeal, excellent reproduction and large size pages have provided Philips with a "wonderful background" to promote their company and their company's products. And LIFE's prestige with distributors all over the world has helped Philips create this background for local advertising.

LIFE can sell for you, too. For more information about LIFE International and its advertising edition for Europe, as well as LIFE's Spanish language editions for Latin America – write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond St., London W.1.

Woods agreements. Therefore the partisans of integration have felt obliged to treat with additional suspicion all other breaches with economic universalism—such as the Commonwealth and the European Free Trade Association. The Commonwealth in its economic aspects is their particular *bête noir* and it would be ironic, were it not also distressing, to hear Americans, who are obviously quite unsusceptible to the "magic of monarchy," arguing that the Crown and the ties of sentiment should be enough to keep the Commonwealth together without sordid tariff preferences.

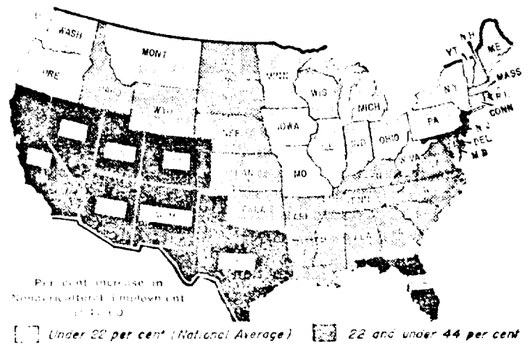
But if the Commonwealth must be left outside the door, so must Britain's partners in EFTA unless they too are prepared for the Treaty of Rome, the whole Treaty and nothing but the Treaty. For some of them suffer from another stigma: they are "neutrals"—the death of Mr John Foster Dulles has not rehabilitated this word—and as such they would be getting economic advantages for which they would not be paying the price of military and political co-operation. It is true that there are Americans—especially among those close to strategic and political realities—who doubt very much the advisability of still further identifying advances on the economic front with solutions for the military problems of the Atlantic Alliance. It is the economic men who tend to be so bellicose and the reason is in a sense an economic one.

When integration was first urged upon Europe, it was believed that nothing less would get Europe on its feet and that getting it on its feet (and off the Americans') was the best that could be hoped for. The recent growth in the economy of Western Europe—"the miracle of the common market" as it is viewed in some rather unsophisticated circles—was not expected. For the first time it has become possible that this growth might parallel or even outstrip that of a relatively stagnant United States. Thus, while the original moves towards integration were regarded as both an economic and a political gain for the United States, the territorial expansion of the common market is now felt to involve an economic cost to the United States for which it has the right to demand political offsets.

Britain can bring in an element of political stability lacking in the Europe of the Six and can add to the anchors designed to prevent any veering of the west German ship of state should the Russian breezes blow more softly again. For this after all is the object of the exercise. American policy in Europe derives from American policy towards Germany and has done ever since the war; to overlook this fact is to misunderstand what the argument is all about.

Since the Americans are doctrinally inhibited from advocating that concessions should be made to Britain's Commonwealth and EFTA partners within the framework of the common market, they talk of their new proposals for tariff reductions as though they could be a full substitute for the markets which these countries may lose. No doubt if the Administration were to get its way in full, the opening of American markets would provide important compensations; but whether it will is highly speculative. It is characteristic of the American political system that one has to ask for much more than one expects to get in order to get anything at all and that today anything, even tariff cuts, can be sold more easily if an anti-communist label can be attached to it.

Most, though not all, of the current talk of Atlantic Union or the Atlantic Community can thus best be seen as an attempt to give an ideological dressing to the programme for getting increased powers to cut tariffs. No doubt there are those who genuinely thrill to this idea; President Kennedy should not be counted among them. Indeed he has been rather careful to dissociate himself from the campaign in its favour, realising how disinclined Americans are to apply to their own affairs the supra-national principles they have urged so freely upon others.



War on the Range?

FROM A CORRESPONDENT IN DENVER

As a rule range wars are waged only on the television screen today but a clash between ancient custom and modern law has come so close to provoking a real-life one in southern Colorado that Governor McNichols made a special trip there to plead for peace. The area is part of that vast territory ceded by Mexico to the United States in 1848 after the Mexican war. One provision of the treaty was that the existing ownership of land, most of which originated in grants by Mexico, should be respected.

Industry Evens Out

Between 1947 and 1960 the number of non-farm jobs in America increased from just over 43 million to 53 million but, as the map shows, the growth was not uniform all over the country. Three states, California, Texas and Florida, which now provide between them one-sixth of all non-agricultural employment, had long been expanding industrially but in the other five states which grew at double the national rate such expansion is a recent development, mainly since the war; although still relatively small in the amount of employment they offer, these five states now have about 1½ million non-farm workers. The other states which exceeded the national rate of increase were not the ones where industrial growth had been found in the past; in the period under review the predominantly industrial states fell below the national average. In particular the Great Lakes region, which had become first in the number of manufacturing jobs in the prewar period, surpassing even the region which includes New York, New Jersey and Pennsylvania, actually lost factory workers between 1947 and 1960. This shows the impact of automation and technological change on the metal-working industries. According to Mr Seymour Wolfbein, the Deputy Assistant Secretary of Labour, these geographical changes in industrial employment bear out the thesis that an "evening out" of non-agricultural growth is gradually reducing the economic differentials between states. They also suggest that the classic pattern of internal migration may be altering, that to move from a farm job to a city one people may no longer have to leave their home states, to go from the South to Detroit or Los Angeles, for example.

One of these was the 1,038,000-acre Sangre De Christo grant made in 1844 to Narcisco Beaubien and Stephen Louis Lee, which is said to have stipulated that the original Mexican settlers and their descendants should always have the right to graze their animals, gather wood, fish and shoot game on the land. Since then the area has been split up into several ranches but there was no trouble until Mr John Taylor, a lumberman from North Carolina, paid $500,000 for 77,000 acres in 1960, sought to fence his property and ordered everybody off, as is usual elsewhere in the United States. He also sued the county commissioners for removing a fence which he built across a road that traditionally had been public and sought to enforce his rights of ownership in the federal courts.

Last Thanksgiving day Mr Taylor and two cowboys brought three battered and bruised Spanish-Americans to San Luis, the county seat, and accused them of setting fire to a house trailer and "shooting up" farm machinery. But the accused, in their turn, promptly charged the Taylor group with attacking them while they were on a harmless errand in search of a missing cow and Mr Taylor and his men were arrested and put in gaol. A crowd gathered and broke in the door of the prison and shots were fired. The sheriff prevailed on the rioters to go away without further violence but new trouble may break out at any moment as the controversy makes its slow way through the federal and state courts.

Traffic Doctor

FROM A CORRESPONDENT IN BALTIMORE

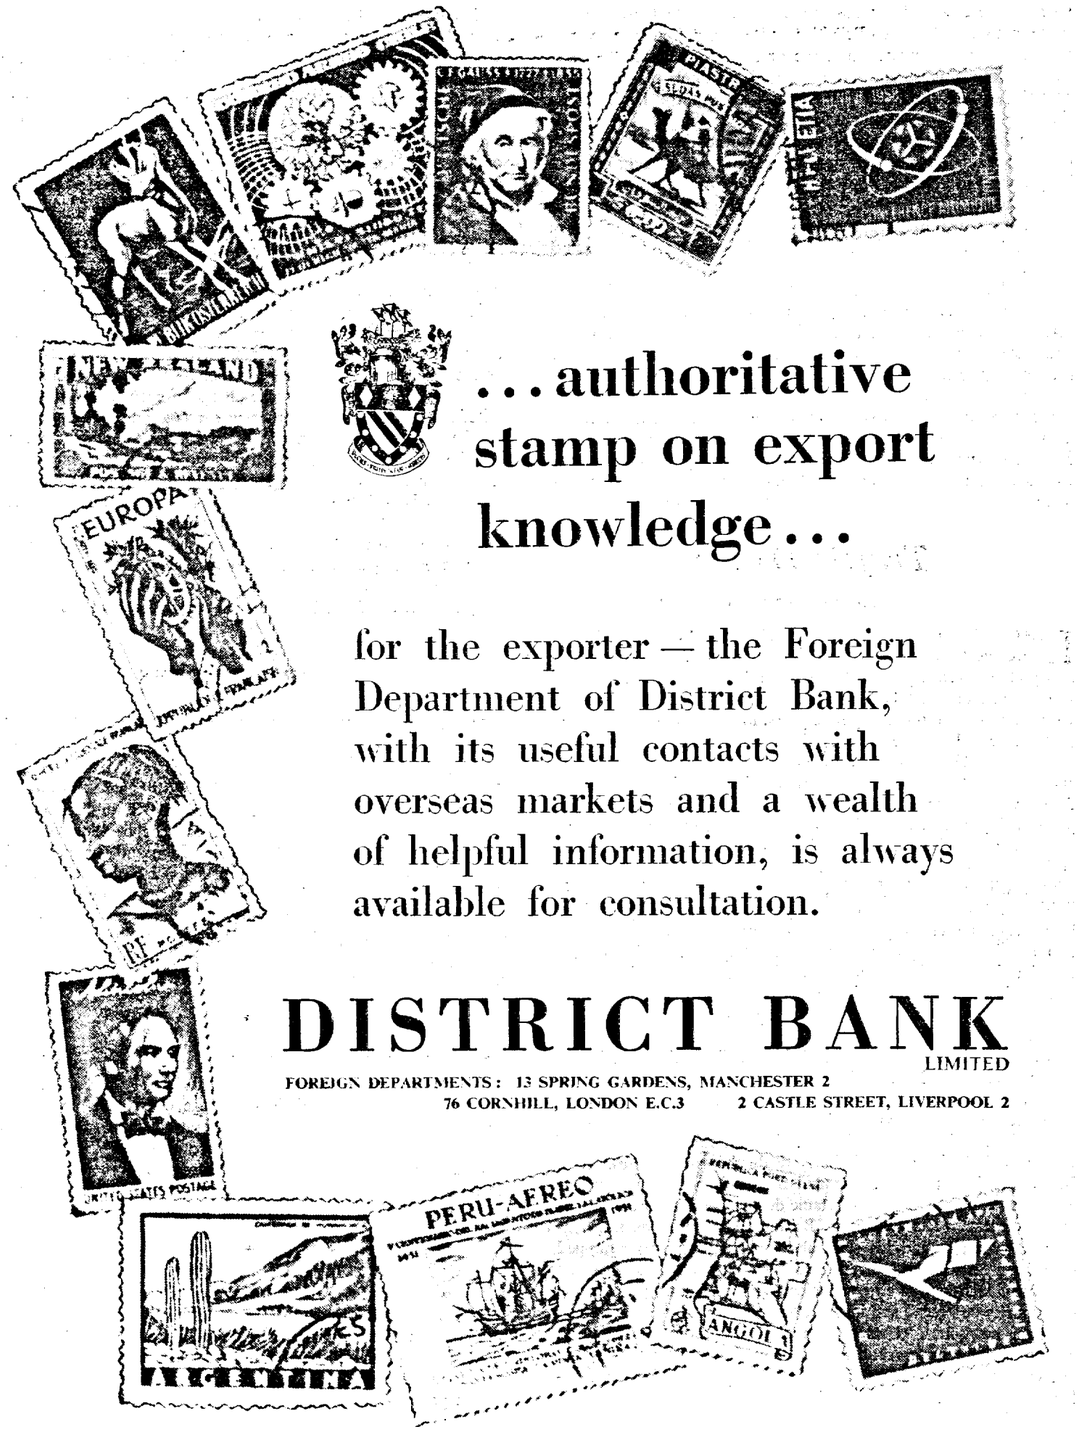
Last week a blunt-spoken former policeman, Mr Henry Barnes, became Commissioner of Traffic for New York City, with a salary of $27,500 a year and a free hand to sort out the world's worst traffic tangle. To Baltimore motorists whom he has ruled with a grip of iron for nearly nine years, his first day had a familiar pattern. Mr Barnes gave press interviews galore, told his staff that they would have to work three times as hard as they had before and decreed that the department should henceforth operate seven days a week, 24 hours a day, because traffic does not stop between 5 pm and 9 am. He asked who controlled permits for the street excavations which are New York's most evident hazard to traffic, and, when told that it was the Borough President's office, said "That will change." Judging by past experience, it will. In Baltimore Mr Barnes's forceful ways have convinced politicians, bureaucrats, motorists, policemen and contractors that it is usually better and easier to give him his head. Only once has he suffered a major defeat; this was at the hands of a women's civic group which still holds a spring fair athwart the town's main north-south street one day a year, but even they open one traffic lane in the rush hour.

Mr Barnes is entitled to be called the world's leading practitioner of a new science. He is traffic consultant to a congressional committee, to the government of Venezuela, to flocks of foreign and domestic experts who visited him in Baltimore and in the past he has advised on London's traffic ills. He has changed the faces of Denver and Baltimore and is likely to do the same to New York. Mr Barnes is not an engineer and indeed is not even a college graduate. He calls himself a "traffic doctor" and his prescriptions are not cheap. His budget in Baltimore has been as much as $2 million a year and his staff, about 200 strong, was equipped with some 80 vehicles. Every year his men used 15,000 gallons of paint (Mr Barnes is a great believer in lane-painting to increase the capacity of streets) and installed some 14,000 signs, about 2,000 of them new ones. Under his regime Baltimore has acquired 26,000 parking meters and no one knows how many blocks of one-way streets and alleys, as well as a reputation for fierce enforcement of no-parking regulations.

The crown of the Barnes era is the world's first electronic traffic control system which is to be completed in two years at a total cost of $7 million. More than 800 radar detectors hanging over the streets analyse the flow of traffic and report their findings back to a gigantic electronic brain at headquarters; this decides what combination of signals will keep things moving the fastest. Traffic signals costing from $4,500 to $25,000 for a single crossroads carry out the brain's commands. Almost 700 are now hooked into the master control system. Some of the signals are set to cut off all traffic for a few seconds at a time to give pedestrians a busy crossing to themselves—the now-famous "Barnes Dance" which is to be applied in New York.

Mr Barnes eats, sleeps and breathes traffic (the Traffic Department intercom is always on in his car, office or living room) and is impatient with civic aesthetics. Trees, statues, cobbled streets, picturesque trams or grass verges which slow up traffic are apt to be swept out of the way. Fires, football games and snowstorms, on the other hand, are challenges which he accepts with enthusiasm, appearing as if by magic to take charge of events, sometimes from a helicopter. Since Mr Barnes was brought to Baltimore, traffic on the city streets has increased, by his reckoning, 57 per cent. But the time needed in the rush hour to get from the city's centre to its southernmost boundary has been reduced from 45 minutes to 17. Outside rush hours it is possible to enter the city by a main road and travel to its heart without being interrupted by more than one or two red lights. In the process Baltimore has become a city of one-way streets, "buses only" lanes, meters, signs, poles, wires, lights and regulations. To those who complain Mr Barnes says, in effect, "You hired me to move traffic, and it's moving."

SHORTER NOTES



Mr Brown, the Democratic Governor of California, who has surprised no one by announcing that he means to stand for re-election this year, now seems certain to have Mr Nixon as his Republican opponent. Giving ill-health as his excuse, Mr Goodwin Knight has withdrawn from the race for the Republican nomination. A former Governor, he had been the best-known of Mr Nixon's rivals for the Republican nomination and was prepared to wage a vigorous fight. A few months ago Mr Knight charged that the Nixon forces were trying to buy him off with the promise of a high state job. There are still two other Republicans in the running, including one who speaks for the right-wing extremists who are so noisy in California, but neither is as dangerous to Mr Nixon as was ex-Governor Knight.

* * *

Electricians in New York City have now won a wage increase and a 25-hour basic work week, the briefest ever granted in a labour contract. Before their strike the electricians' basic work week was 30 hours. As they are guaranteed 5 hours of overtime a week (at time and a half) their earnings will fall only from $165 a week to $161. Indeed, as there is a severe shortage of electricians, they may well work even more overtime although the trade union has promised to speed up the flow of apprentices.

* * *

Last week saw the postscript to the great scandal over television quiz-shows, which attracted so much attention over two years ago. In a court in Manhattan ten winners of big prizes—including Mr Charles Van Doren—pleaded guilty to having cheated. All received suspended sentences. Mr Van Doren might have had to spend a year in prison.

THE WORLD OVERSEAS

Mr Nyerere's Decision

FROM OUR SPECIAL CORRESPONDENT

DAR ES SALAAM

IF anyone had been asked to prescribe a nightmare formula that would do most harm to the reputation of Tanganyika throughout the world, he could hardly have improved on the concoction brewed in Dar es Salaam this week. The simultaneous resignation of Mr Julius Nyerere, the prime minister, and Sir Ernest Vasey, the finance minister, removes the two men who by making known this poor country's example of national tolerance and peace had given it "the fairest name in Africa." But Mr Nyerere sees this formula quite differently: to him it is the strong medicine needed to restore his country's health.

The sickness in Tanganyika is one of disappointment. Despite frequent warnings from him and other leaders that independence last month would bring only the need for greater efforts, many of the country's nine million people are disappointed that no ripe fruits fell around their feet. The reverse in fact happened. Independence came at the end of a year which for the first time showed no increase in the national income, when a fall in sisal and other exports and in imports of consumer goods had cut government revenue, and when heavy rains and a drop in world prices had depressed farmers. The government was powerless to add sweetness to *Uhuru* and its calls for harder work

Inevitably this disappointment found an outlet in a burst of racialism. Europeans had seemed to dominate the independence celebrations and appeared to maintain a colonial arrogance. Asians had made no concessions to help African traders become established. With *Uhuru* past there was no landmark ahead. Ambitions to double the national income in ten years and complete a £24 million development plan in three years meant hardly anything in the villages. Any national purpose seemed lost and people turned selfish. Labour troubles began. Mr Nyerere bowed a little to this storm and signed expulsion orders against one Swiss and four British subjects accused of racial discrimination. For once he showed an inept touch and did not ensure that justice was seen to be done. He also summoned the national executive of Tanu for an airing of grievances and for the first session of policy making since self-government. It soon appeared that the grievances were widespread and diverse. For instance, why had the prime minister compromised with Mr Macleod and not insisted that the trust territory should become a republic at independence? There was a possibility that Mr Nyerere might have to face a direct clash with a section of the executive's 120 members (a section with no acknowledged leader as yet) and a fear that his cabinet would have to choose sides.

Mr Nyerere, always a better tactician than strategist, switched to another plan which he insists he had "nursed" for a long time. His party's vice-president, Mr Rashidi Kawawa, on his way to Lagos for the all-African conference, was called back. Mr Nyerere's decision to resign the premiership and devote himself to organising and "recharging" the party shocked the executive as much as it later worried civil servants and businessmen. It took him three days to get the party's approval. He then personally picked his successor, Mr Kawawa, and the new cabinet. At the press conference on Monday announcing his resignation, for all

Mr J. Nyerere | Mr R. Kawawa | Sir E. Vasey

his modesty and humour, he left the impression he was still very much the national leader. Next day a common reaction among Tanganyikans was pleasure that he had now "come closer to his people."

By removing the steam of complaint from the executive conference Mr Nyerere proved himself a shrewd tactician and by putting the emphasis on party reorganisation he gained a new initiative. At the same time, though discreetly, cabinet changes have prepared the way for a period of more ambitious planning. Sir Ernest Vasey, the odd man out in a government dedicated to "Pan-African Socialism," resigned on the grounds that he had not the qualifications for Tanganyikan citizenship. His retention as economic adviser will not hinder proposals to set up a development committee with a high-powered planning secretariat directly under the prime minister. In his tours to put new spirit into his people Mr Nyerere needs to replace negative racial envy with positive ambition (these are after all two sides of the same coin in an underdeveloped land). Additional development plans are, it is hoped, to be hurried through. These will be projects suggested by the districts and approved by the provincial or central government which will have to find overseas money to match the funds raised locally. Many in Tanganyika hope Mr Nyerere will spend his campaigning time watering the roots of these specific projects rather than making oratorial lunges at poverty, ignorance and disease. Although the UN Food and Agriculture Organisation has been praised for its five-year survey of the huge Rufiji river basin, published in seven volumes this month, a low priority is given to this £140 million plan. Tanganyika needs quick returns from small outlays and so far people have shown a distaste for farming under irrigation.

Mr Nyerere has of course taken a great gamble by resigning. He perhaps need not fear that his return to high office will be opposed by rivals. Mr Kawawa, who came to politics through trade unionism, is a capable and respected man, but he has never challenged the ex-premier's pre-eminence. If it is thought wrong to demote him after Mr Nyerere has finished his job of reorganisation, a republic can be swiftly declared and the two can sort out a division of powers as president and premier. But in two other ways the resignation has meant a setback: first to early hopes, already receding, of an east African federation of which Mr Nyerere has been the most active advocate. And, secondly, to overseas invest-

ment in Tanganyika. For all the reassurances of journalists, investors will now be wary.

A belief that a well-founded party is all important to stable government has prompted Mr Nyerere. As he explained:

> We do not believe it is necessary for us to copy the institutions of other countries. We do believe we must work out our own pattern of democracy.

He argues steadfastly that genuine democracy is possible in a one-party state with trade unions incorporated as an arm of the party. He is convinced this is the best pattern for a poor country. In measured understatement Mr Macleod once said of Julius Nyerere "This is no ordinary man." Mr Nyerere is now resting his hopes for his country's future on his people's, and the world's, confidence in the far from ordinary course he has chosen.

Dief's Uncertain Trumpet

FROM OUR OTTAWA CORRESPONDENT

THE new session of the Canadian parliament, which opened on January 18th, is still being called a pre-election session because the Diefenbaker ministry's five-year term runs out in March, 1963, and unless Mr Diefenbaker clings to office to the bitter end it is scarcely conceivable that there can be yet another (sixth) session of this 24th parliament. But the sense of immediacy which Mr Diefenbaker himself gave to the word "pre-election" in the later months of 1961 has strangely disappeared along with the stories of a big cabinet reshuffle and a new finance minister. "There is and has been no foundation at any time," said the prime minister in his three-hour speech on the Address, "for rumours of disagreement between the minister of finance and myself." Nor, evidently, for the heated atmosphere suggesting dissolution at least in April and possibly (without a budget) within a few weeks.

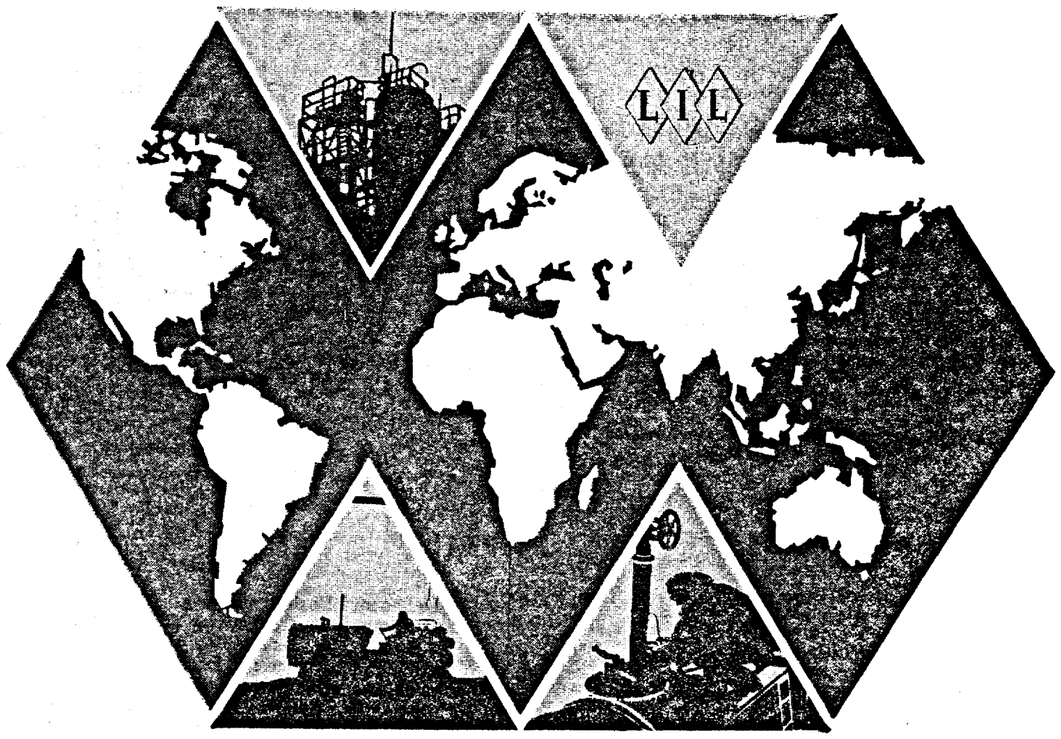
The government's programme is neither heavy nor impressive. The Speech from the Throne blandly said "comprehensive measures to put into effect the government's economic policies were enacted in preceding sessions." Both the tone of the speech and the bits and pieces of additional legislation proposed indicate that there is nothing much more to be done except to add a bit of paint here and an extra touch of chromium plating there. Some of the bits and pieces, notably a small subsidy (only $1 million a year to start with) for direct support of private industrial research on a continuing basis, are useful and well conceived. The bill which was introduced and subsequently withdrawn last year, requiring foreign-controlled companies and unions to disclose their financial affairs, has come back in a much more innocuous and undiscriminatory form; this now compels all substantial corporations and unions to compile a return revealing their financial secrets only to the government, but identifying their controlling interests by name and by residence in a form available to the public.

Mr Lester Pearson, who has demonstrated his extraordinary adaptability in his four years as leader of the opposition, took just over two hours to deliver a lively and scathing denunciation which suggested that he has learned much more from Mr Diefenbaker than Mr Diefenbaker has learned from him. He quoted the president of the Toronto stock exchange, who reported a few days ago that Europeans had come to feel that Canadians "must be an immature and juvenile people," only to contradict him. Canadians are not immature, he said. Given a sound and steady government they could tackle their problems and would do so after the next election. Mr Pearson added, "May it come soon."

Some of Mr Pearson's critics still think he is too mild as a Canadian opposition leader. Others think he has debased himself. But Mr Diefenbaker unblushingly goes on debating as though he were still leading the opposition or prosecuting a felon before a prairie jury. The anti-government *Ottawa Citizen* said his arguments in reply to Mr Pearson were such as "no good college debater would dare to use." The sober *Montreal Gazette*, a regular Conservative organ, attacks the one *bonne bouche* which obviously marks the Speech from the Throne as a pre-election programme. (This is an increase of $10 a month in old age pensions unaccompanied by any suggestion about how it is to be paid for.) It says, "for a government that is deep in debt and deficits to promise new commitments, large and lasting, is scarcely to accept responsibility. Yet this is the pattern outlined in the Speech from the Throne." The comment of the *Toronto Globe and Mail*, a traditionally Conservative paper which is becoming more and more critical of the Diefenbaker government, is headed "An Uncertain Trumpet."

Press criticism has already helped to produce a marked change of tone in government comments about Britain and the common market. Both Mr Diefenbaker and Mr Fleming are now denying that the Canadian government ever showed any hostility to Britain's entry. They only sought, they say, to do their duty by pointing out Canadian and Commonwealth interests and insisting on full consultation. But the government continues to get a bad press for its indecision about nuclear arms, and most public comment indicates a feeling that its programme for restoring economic growth is inadequate. For once the general tenor of press comment is reflected in the public opinion polls which show the Liberals ahead of the government and—more significantly—a downward trend for the government.

The crucial question of when the election will take place has to be answered by Mr Diefenbaker, whose greatest pride is in his judgment of public opinion. He is now wearing an air of greater assurance than at any time in the last eighteen months. If he believes that an increase in pensions and more payments to prairie farmers and various sops to local interests are enough to secure re-election, however critical the economists and bankers and eggheads may be, then he might still plunge for an early election. If he is not as confident as he appears, then his natural tendency to procrastination and his optimistic belief that something is bound to turn up may postpone the election at least until the autumn or even till 1963. Whatever date he chooses nobody can be sure that he won't be right.



Dominica's Slow Awakening

FROM A CORRESPONDENT LATELY IN SANTO DOMINGO

"THERE can be no land to compare with it in richness and beauty," said Christopher Columbus of Hispaniola, the island that is now divided between the Dominican Republic and Haiti. And indeed, the island has the qualities of a paradise. The fertile black earth steams under the Caribbean sun and rain. It produces without effort any tropical crop; and the highland belts will accommodate temperate agriculture. Well endowed with minerals, surrounded by rich fishing grounds, the islanders should be the richest and happiest people on earth. But their lot has been otherwise—neglect and poverty, ignorance and strife—since the island was discovered in 1492. The French-speaking republic of Haiti, the western third of the island, has the lowest income a head in Latin America; while in the east, the Dominican Republic is painfully emerging from one of the harshest of Latin American tyrannies.

General Trujillo's assassination last May has awakened hope. The timing was opportune. The United States has shown that it is determined to do what it can to make the Dominican Republic a show-piece of prosperity and democracy for other Latin Americans to compare with troublesome Cuba next door. (Even anti-

LIVELY MINDS WRITE THE GUARDIAN...

BIG GAME HUNTER

To Leonard Beaton, war is what happens when diplomacy fails. To his way of thinking, there is no such thing as a military operation pure of political undertones: it is all part of a bigger game, the world's game. Which explains why, when he joined The Guardian as Defence Correspondent, he insisted on doubling the role with that of understudying the diplomatic field.

Leonard Beaton's knowledge is immense – he has been known to set the Defence Minister gently right on questions of fact – but he looks beyond the immediate moves in the game to take the larger view. He is creative because he is far-sighted, and through his telescopic sights Guardian readers share a glimpse of the ultimate issues behind the day-to-day bluff and counter-bluff, note and counter-note

And at the same time his is a balanced view. The consequence of which is that Leonard Beaton's readers are neither startled into false panic nor lulled into the complacent belief that ours is the safest of all possible worlds.

LIVELY MINDS LIKE

THE GUARDIAN

communist Dominicans privately hope that Fidel Castro will stay in power for years.) The threat posed by the United States fleet lying off-shore in November was probably decisive in preventing the Trujillo brothers from staging a comeback. Last week, when General Rodriguez Echavarria seized power for a couple of days, the Americans showed that they were prepared to ostracise any new dictatorial regime, and to withhold the aid that they were just about to pour into the empty Dominican coffers. More important, they made it clear that they would not restore the Dominican sugar quota, nor let it share in the windfall of the former Cuban quota, until the country was seen to be taking definite steps towards constitutional democracy.

No Dominican regime could last long under such American pressure—unless, like Cuba, it turned elsewhere. Officials of the Dominican central bank expect American sugar purchases to reach $92 million this year. This would be more than enough to pay for all present imports, and sales to other parts of the world could yield another $15 million to $20 million. The money is needed desperately. A month ago the country had a total foreign debt of about $35 million with gross reserves of only $10.7 million.

Potentially, the prospects should be bright for rapid economic development. The fall of General Rodriguez Echavarria last week, after two days in charge, seems to have removed one of the major obstacles to political stability. The armed forces have shown, as the political opposition predicted, that they would not allow themselves to be used as the instrument of a new military dictatorship. There has even been fraternisation between the soldiers, armed to the teeth, and Dominican civilians, an unprecedented happening and a clear demonstration of the psychological need felt by the services to be on "the people's" side. This does not mean that other obstacles will not arise. The legacy of moral, social and political corruption left by the Trujillo era will not easily be overcome—and certainly not without sweeping social reforms. Dr Fidel Castro can also be counted on to make life as awkward as possible for any new regime; it is as important to him that a solution backed by the United States should fail as it is to Washington that it should succeed.

After nearly 32 years of Trujillo rule nobody in the republic has much political experience. The political groups are amorphous and fluid coalitions. The National Civic Union, which is generally regarded as the most influential political force, is led by Dr Viriato Fiallo, a respected and idealistic politician who has survived many years of imprisonment. (One of the party's founders is Dr Rafael Bonnelly, the new president of the republic.) The party is composed of middle class and professional men, most of them untainted by the Trujillo regime, together with some wealthy ex-trujillistas who have hastily jumped on the band-wagon and contributed generously to the union's funds. But it also contains a number of left-wing intellectuals, among whom the most prominent is Dr Jimenez-Grullon. In time, this able Marxist politician may form his own party, or look elsewhere.

Were it not for personal antagonism, he might have looked to the Dominican Revolutionary party which is led by an exile of 26 years standing, Sr Juan Bosch. Sr Bosch, who is closely linked with Haya de la Torre's Aprista movement in Peru, is one of the outstanding political figures in the republic. But his years in exile meant that he never lived under the worst years of Trujillo; and his call to "forget the past" is not appreciated by those who suffered. The position of the 14th of June Movement, the most left-wing of the major political groups, named after the date of the abortive anti-Trujillo invasion from Cuba in 1959, is difficult to define. Its leader, Dr Tavarez Justo, is like many of his followers, reserved, suspicious and politically emotional. He and his colleagues are widely accused of a desire for vengeance; he himself was tortured and imprisoned, and his wife was tortured and then murdered. The movement has often been described as pro-Castro, and certainly many of its younger members are much attracted by Cuba. But privately some of its leaders express concern over *fidelista* infiltration.

The Dominican Republic, a small country two-thirds the size of Scotland, has many potential advantages. With three million inhabitants it is not badly underpopulated. The present grim unemployment situation—nearly half-a-million totally unemployed and probably many more working only part time—offers the necessary labour pool for a sudden resurgence in the stagnant economy. Antagonism between classes is not strong, and racial prejudice is almost unknown. Except in the north-west, where a subsidiary of the United Fruit Company grows bananas, there is surprisingly little anti-American feeling—though, as recent isolated incidents show, attempts are being made to whip it up. The Roman Catholic Church is not, as in some other parts of Latin America, a powerful obstacle to reform. And, above all, there is no *latifundista* class to prevent effective land reform, since three-quarters of all the usable land belonged to the Trujillo family. Democracy is still a curious concept in a country where some of the peasants still refuse to believe that the old Trujillo is dead. The country has only just begun to think in these terms. But there is no doubt that the revolution of rising expectations has arrived and it would be unwise to mistake the prevailing left-wing mood of the country.

Beyond the Molotov Affair

Mr Molotov, it now appears, is not to return to his post in Vienna. With Mr Khrushchev back from Byelorussia (where some reports suggest that he went off his official route for a secret meeting with Mr Gomulka) and Mr Mikoyan returning from his African journey, the internal politics of the Kremlin can recommence at the top. Already there have been several important party gatherings since the party congress in October. At Christmas, party propagandists were summoned to a conference on ideology. On January 17th, high regional party officials gathered for a two-day conference on organisational work. The problem facing both meetings was similar: how to give the party rank and file, and the people at large, a version of the indictment of Stalinism which would not threaten the structure of present-day rule.

Mr Khrushchev uses the accelerator and the brakes in turn. The October congress undoubtedly gave Soviet society a jolt. Efforts are now being made to control the disturbance, but Mr Khrushchev's manœuvring is made difficult by the fact that Russia is no longer driven by a single pair of hands. The anti-party group itself, defeated but not eliminated in 1957, was a coalition. Mr Malenkov, only lately branded by Herr Ulbricht as an appeaser, cannot be equated with Mr Molotov, the proverbial Mr Niet. The victors of 1957, too, were an alliance; this is one reason why they have not yet agreed what to do with the vanquished. Thus Mr Khrushchev has to keep an eye on several fronts at once. He must reckon with the opposition of conservatives disturbed by his domestic reforms, and of party officials who share Mr Molotov's critical assessment of his foreign policy. But he must also beware of other critics who find his reformist zeal much too lukewarm.

It is the pressure of the younger Soviet generation that is, potentially, most important. Russia's educated young men, gradually awakening from political innocence, must now be asking very awkward questions: what were the men who sit in judgment today (Mr Shvernik, presiding over the commission investigating the crimes committed under Stalin, or Mr Khrushchev himself) doing when Mr Molotov and his companions were participating in Stalin's crimes? And what was it, precisely, that

was wrong with a system in which such crimes could be perpetrated? Questions asked by, say, Italian communists are bound to find an echo among Russia's younger generation. The appetite for personal liberty, too, grows with eating and, having whetted it, Mr Khrushchev does not want to be devoured in the feast.

To complicate matters further, the internal struggle has far-reaching foreign links. Mr Molotov's "Chinese" connection is well known. Chinese opposition has exceeded Soviet expectations. Mr Khrushchev's Albanian gambit at the October congress has failed: the Chinese have refused to toe the line and the conflict has gone on building up. The one rule still observed by the two chief opponents is that they do not insult each other by name, but use Albanians and Jugoslavs as substitutes. Moscow claims that the controversy is about the crucial issue of war and peace. Peking replies that communist strategy is at stake. Two recent extracts from the Chinese press point to the heart of the matter.

Warning, this week, the Americans not to rejoice prematurely because "dark clouds gather from time to time over the socialist camp," the *People's Daily* of Peking asserts that no force can arrest "the expansion of communism and of national democratic revolution in Asia, Africa and Latin America." Simultaneously, the Peking *Red Flag* denounces Mr Kennedy's desire that "socialist countries should live in isolation, devoting themselves entirely to their own construction and ceasing to help revolutions in oppressed countries." The Chinese paper adds that his hope is vain, because all "authentic Marxists" have always known that the two tasks are inseparable. The American president is clearly not the only target. If the Chinese are opposed to a Berlin settlement—they describe the American proposals as terms of capitulation—it is not because of Germany, but because the Chinese have always suspected that a European settlement would weaken Russia's revolutionary zeal on other fronts. Peking accuses Mr Khrushchev of national egotism, if not on a purely Russian scale, then on the scale of the European communist block. Moscow accuses Mao Tse-tung of adventurism, of hankering after "permanent revolution." Stalinism is obviously not the only bone of contention.

No Soviet leader can lightly contemplate an open breach with the Chinese party. Mr Khrushchev may well be preparing yet another international confrontation of communists. (A meeting with Mr Gomulka, if he has had one, would fit into such plans.) Would this explain the lack of haste that some claim to have noticed in the Russian negotiations with Washington? It could be argued that, on the eve of an important internal decision, Mr Khrushchev would not want to commit himself with outsiders; or equally, that an international deal would strengthen his hand among communists. The only safe conclusion is that the growth of a communist opposition to his co-existence policy has turned Mr Khrushchev into a more exacting bargainer.

The Languedoc Post

FROM OUR CORRESPONDENT IN SOUTH-WEST FRANCE

DEPRESSED by the weakness and flabbiness of the bulk of the Paris press—*cette presse*, General de Gaulle has said, *qui ne s'occupe pas des grands problèmes, mais seulement des petites histoires*—one can, happily, revive one's morale a little in the provinces. While only four Paris dailies sell more than 250,000 copies, nine "provincials" top this figure; and although most provincial papers are conservative, their conservatism is traditional and temperamental, a distillation of local sentiment, and not of the same *cru* as the opportunistic conformism and sycophancy that are the journalistic norm in Paris.

To study an example of French journalism at its most vigorous, one might go to Toulouse, home of the *Dépêche du Midi*. Not long ago the *Dépêche* gave its readers three educative free supplements—each of twelve full-size pages, illustrated in six colours—on political, industrial and agricultural aspects of European integration. How many other dailies—provincial or national, French or British—have made a comparable effort to impress upon their readers the significance of this watershed in world affairs?

Founded in 1870, a month after the Third Republic, the *Dépêche* (which added the *du Midi* to its name in 1947) is a pillar of that parliamentary republicanism which, for all its compromises and *combines*, made France a beacon of humanism and *savoir-vivre*. The radicalism of the *Dépêche* might once have tempted one to call it the *Guardian* of France, though its readers would find the *Guardian* too intellectual and insufficiently garnished with *faits divers*. Now that the *Guardian* has established itself as a national daily, a better comparison would be with the *Yorkshire Post*.

Like the *Post*, the *Dépêche* is a big-city daily with a substantial rural readership; each has a circulation area of some three million inhabitants. Both have companion evening papers; both are read by thousands of families that have taken the same paper for three generations; each is as fundamental a constituent of the life of its region as Yorkshire pudding or the *cassoulet toulousain*. Both papers have traditional political links, the *Post* with the Conservative party, the *Dépêche* (less formally) with the Radicals. Yet both have swum against the tide of party and mass opinion; the *Post's* opposition to Mr Chamberlain's policy in 1938 is matched by the *Dépêche's* opposition to the Fifth Republic in 1958.

The differences between the two papers reflect differing journalistic techniques which, although convergent in Paris and London, have retained their characteristics in the provinces. For example, more importance is generally attached to layout and typographical harmony in Britain than in France. The *Post*, although not blessed with a notably distinguished type-face, generally achieves a neat, harmonious front page. The *Dépêche* could be quite handsome typographically, if it tried, but it rarely does; and its front page is essentially a bill of fare with every story continued inside. In the British tradition, the *Post* rigorously separates news and comment, and considers that correspondents should be seen but not heard; in the French tradition, the *Dépêche* publishes an editorial, and sometimes the opening paragraphs of a feature article, on its front page, and hands the big news of the day to a star *rédacteur* who comments on the story as he tells it.

The editor of the *Post*, as of most British papers, acquires on his appointment considerable autonomy and something of the authority of a ship's captain: he stamps his personality on the entire paper and closely oversees the writing of the leaders. The editor of the *Dépêche* is primarily a brilliant technician, the captain of a team rather than a ship. The editorial writer on the *Dépêche* works in spacious independence in Paris, delivering his copy by teleprinter.

British journalists studying the accompanying table, in which the vital statistics of the two papers and their evening stablemates are compared, will be surprised by the low sales of the evening *Dépêche* (although, unlike the *Evening Post*, it has no local competitor); by the lower percentage of advertising in the *Dépêche* (it is limited by editorial policy); and by the relative unimportance of "Letters to the Editor" (French schools—and French grammar—are notoriously more successful than their British equivalents in inhibiting epistolary self-expression). They will be impressed by the Toulouse paper's high percentage of postal subscribers (a tribute not only to the *Dépêche* but to the French post office which delivers newspapers for less than a farthing a copy), and by its 21 editions (each of which contains a different four-page section of local news).*

Control of the *Dépêche* is concentrated in very few hands: 80 per cent of its shares are owned by Mme. Evelyne Baylet, who succeeded her husband as managing director two years ago. "We are fortunate," executives of the paper say, "not to have a pack of shareholders yapping at our heels every year for dividends. During the nineteen-fifties all profits were ploughed back and we were able to invest 1,500 million old francs (£1.25 million sterling at the pre-1959 exchange rate) in new equipment, all but 100 million self-financed." In consequence, on technical points such as the quality of its colour printing (used chiefly to illustrate documentary features and fiction in its Sunday magazine) and its facilities for the reception of *bélino* pictures from every world capital, the *Dépêche* outclasses not only the *Yorkshire Post* but two-thirds of the Paris press.

A more heterogeneous ownership might also have cramped the paper's style politically when, in the summer of 1958, it set out alone into the perilous wilderness of opposition to the alliance of the naive, the sinister and the apathetic that was then subverting French democracy. The *Dépêche* was the only non-communist daily to advocate rejection of the constitution of the Fifth Republic; and no one familiar with the temper and methods of French right-wing activists three years ago will underestimate the degree of moral and physical courage needed to sustain the paper in its course. A vicious smear-campaign accused its staff of FLN (Algerian rebel) and communist sympathies, and its circulation fell by ten per cent. Three bombs were exploded outside its offices; the life of its director, M. Jean Baylet, was threatened a dozen times. When, in the first year of the Fifth Republic, M. Baylet was killed in a car crash it was at first suspected that the Right had taken its revenge, but the suspicion was never substantiated.

For a few terrible days the outlook for the paper seemed obscure. Vultures appeared in Toulouse, eager to buy control and convert it to conformist respectability. Then Mme. Baylet, although not a journalist, took over her husband's chair and pledged that the traditions of the *Dépêche* would be upheld. "The *Dépêche*," she said, "is not an article of merchandise."

In the last two years the *Dépêche* has denounced more vigorously than ever the Algerian *ultras* and their mutinous military friends; it has campaigned for peace in Algeria and has urged Frenchmen to shake off the apathy that led them, in 1958, to acquiesce in the erection of a whole regime on one elderly man. Its mistrust of General de Gaulle's 1958 allies has been justified by the general's own subsequent disillusionment with them; and it has had the satisfaction of seeing nominally liberal and socialist papers which underwent a shotgun conversion to gaullism in 1958 scurrying recently in its wake. Its circulation has risen by just over ten per cent.

Today, the *Dépêche* is said to be one of the few French papers that are taken seriously at the Elysée. General de Gaulle is believed to appreciate firmness, and, as a military man, he would probably agree with Napoleon that *on ne s'appuie que sur ce qui résiste*. When he last toured the south-west a minor bureaucrat excluded a *Dépêche* reporter from the official motorcade. The *Dépêche* informed the president, via the local *préfet*, that it intended to ignore his tour and would tell its readers why. A little later an official limousine with motorcycle outriders arrived at the paper's office to collect the reporter and convey him closely behind the president's own car for the rest of the tour.

"The basic formula of the *Dépêche*," one of its editorial staff said, "is mutual trust. This may sound pretentious and false in France today, where the commonest verbs in popular use are probably *se ficher* and *se méfier*. But I am convinced that our readers do trust us far more than they trust most papers. Within the paper, personnel relations are good for the same reason. During the housing shortage the *Dépêche* put money into building ninety flats for employees; we have one of the oldest welfare and pensions funds in France; and if a chap goes over the road for a quick beer the management don't yell—they know all human beings get thirsty and they trust him to pick a slack moment. During recent crises, when there was a danger that parachutists or civilian fascists might attack the building, we all took turns guarding it with shotguns. The initiative came from the workers, not from the top. We wouldn't take risks like that for any old sheet; and that, you see, is the point—the *Dépêche* isn't just any old sheet."

* Thus the publication of a single 16-page issue of the morning *Dépêche* involves the printing of 96 different pages.

Trading with EUROPE

Now that negotiations have begun for Britain's entry into the Common Market, the Midland Bank announces further improvements in its extensive service for traders at home and abroad.

First, a newly constituted Panel for European Trade, consisting of officials of the Bank experienced in international business and economic affairs, has been formed to provide additional assistance to traders in developing markets abroad.

Second, Mr. Bruce Smith, a Divisional Foreign Manager of the Bank and a specialist in foreign trade, has been appointed to be responsible for "in the field" matters concerning European trade. He will spend much of his time on the Continent.

These two new developments, together with our existing services for the promotion of foreign trade, mean that we are well equipped to give all possible help to British businessmen moving into the European market, whether as exporters or importers.

We shall be pleased to send a representative to any part of the United Kingdom to join in preliminary discussions of problems and prospects. Our experts would also be available, if required, for "on-the-spot" discussions with businessmen visiting the Continent.

These services are available through any branch of the Bank. If you prefer to do so, write direct to the Panel at Overseas Branch or telephone MONarch 9944.

These services have been developed especially to assist businessmen to take full advantage of new opportunities in European trade. ***Please use them.***

THE BUSINESS WORLD

Export Financing Is Fun?

THE Government has succeeded in egging the City into providing bigger and cheaper facilities for export finance on its own resources, with no new official guarantees or official money. This no doubt is seen in Whitehall as the special virtue of the scheme, given the sharp distinction now back in vogue between commitments that happen to fall on the Exchequer accounts and elsewhere in the economy. This inhibiting pre-Keynesian guideline helps to explain why even after this fourth bite at improving the structure of export financing within fifteen months, this structure is still far from tidy and rests at points on unsatisfactory foundations. It helps to explain, too, why all the emphasis has been directed to those exports which Britain is supplying on medium and long periods of credit. Any worthwhile scheme for encouraging the more urgent exports for which Britain is paid on normal terms involves putting a burden on the budget, and that is nowadays cited, even before the international embarrassments, as a sufficient reason for rejecting it. This one-sided approach has had some odd results. Interest-conscious foreign buyers now have an incentive at some points to spread their payments over longer periods.

Within the limitations that are set by the authorities still remaining on the sidelines, the scheme is probably as good as could be expected. Indeed, one's main reservation is that the banks and insurance companies may have been persuaded into something that not all of them will regard as in their own commercial interest. In essence, the scheme provides greater assurance of export finance from these sources, and offers, for the first time, a fixed rate—at a level that at present distinctly favours the borrower.

For the banks, this is a new development in a field that has until recently been almost entirely their own. They have long given special priority to export finance, and maintain that they have never refused such finance for periods up to five years. This traditional limit for export credits, however, has been increasingly breached, and in October, 1960, in the first of the current round of relaxations, the Export Credits Guarantee Department agreed to waive its own limitation for insurance cover when this was needed to match terms granted by one of its counterparts abroad. In early 1961, the Bank of England put in its contribution by allowing the banks to count as liquid, rediscountable assets any such portion of their medium-term export credits that was due to be paid in the next eighteen months. This helped to ease the weight of the banks' export credits as a whole, but did not make them much keener on going longer than five years. Last April, therefore, ECGD introduced new facilities aimed directly to bring the insurance companies into financing the longer credits for major projects, normally of £1 million and over. It offered direct guarantees to the buyer for periods effectively up to fifteen years, with the financing to be spread between the banks, who would take the first five years' maturities, and the insurance companies, who would deal with the rest; these consortiums were to be arranged on an *ad hoc* basis.

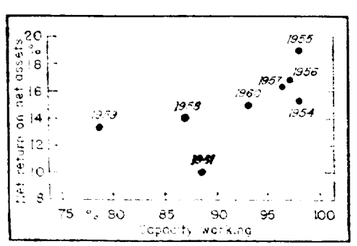
THE new arrangements build on these innovations in three ways. First, the insurance companies have streamlined and formalised their participation. Offices representing 95 per cent of insurance funds have agreed to put up their part of the money through a separate company. Secondly, they have promised up to £100 million over the next five years, in addition to the sums committed already. Thirdly, exporters are offered a fixed rate. This is to be 6½ per cent from the insurance companies, compared with 7½ per cent at present; and 5½ per cent from the clearing banks and Scottish banks—a major innovation this, as the banks have hitherto linked all their rates to Bank rate, and will still link the rate they pay on deposit accounts to it.

Now they are offering a rate fixed not only for the duration of the particular credit but for all such credits granted in the next five years. And the level of the rate is relatively low. Since even those large companies that have been charged only ½ per cent over Bank rate for their ordinary overdrafts have been paying one per cent over Bank rate for medium-term export credits, the new rate is 1½ per cent cheaper than the current rate and would become dearer only if Bank rate fell to 4 per cent. These arrangements apply to all credits of three years and more that have ECGD's guarantee direct to the buyer or the lender—which is available for credits of more than three years' term and more than £100,000. Smaller and shorter credits will be dealt with as hitherto.

The banks, unlike the insurance companies, are not setting any direct limit to the finance they put up. So far, the insurance companies have put up £20-£25 million for the longer credits and the banks £45-£50 million—which suggests that the average length of these credits is seven to eight years. The insurance companies have also participated in a refinancing of £9½ million of credits to Argentina announced by Baring Bros. this week. Since the new scheme takes in all credits of over three years, the average term can be expected to be shorter than for the longer guarantees alone, and the

total credit available on the basis of the insurance companies' £100 million should be a multiple of three or four—which allowing for down payments would be sufficient to finance contracts of a total of £500 million, or £100 million a year. This is not extravagant—total medium-term credits insured by ECGD may have exceeded £100 million in 1961, and certainly did so in 1960. Thus the new facilities, substantial as they are, could still prove insufficient. The money provided by the banks, it has to be remembered, will not for the most part be additional, but will replace, on more generous terms, existing facilities.

It could not have been easy for bank directors to commit themselves to providing finance at a rate which, if Bank rate returned to 7 per cent, would be 2½ per cent below what they would otherwise charge. Nor could insurance companies really justify, on strict commercial considerations, locking up their money at 6½ per cent for an awkward term when they could get as much or more from marketable bonds, of the British Government downward. The Government has successfully appealed to the patriotism of the institutions—and in the process it has taken the profit out of export financing. Is this really what it wants? Is this a sound way of maintaining the institutions' interest through the years? Is it a likely way of bringing in the pension funds?



There is a further point here. The virtue of establishing a specially favourable rate for exporters is to hive off this sector from the domestic structure of rates, so that these can be raised when necessary without an unwanted incidental effect on export costs. The present scheme, because it puts the burden of the fixed rate on ordinary commercial institutions rather than on the broad back of the Old Lady, could in practice have the perverse effect of adding new rigidities to domestic interest rates. Thus if Bank rate is raised above its present level in the next five years, export financing will become still more unprofitable compared with financing the home trade—and conceivably the authorities might see this as another reason for not "burdening" the City with high interest rates.

The right way of establishing a fixed rate for exporters would have been through official facilities. Other countries have a special Bank rate for exporters and there is much to be said for it. At the least, the authorities should give all export paper an element of marketability by being prepared to refinance it themselves, as the Bank of England does in a limited way for the banks and as ECGD could do for insurance companies. Nor should the authorities be afraid of extending finance at the outset where necessary, which they could do comfortably at the rate that for insurance companies is a patriotic concession. All these improvements are still possible, but they require greater confidence in the use of official institutions—and abandonment of the old delusion that official pounds are inflationary pounds. For the time being the Government has talked the City into it. But even the Germans have no such word as *Exportfinanzfreudigkeit*.

Setting Prices In Steel

One nonsense in a formula for steel prices set to provide a given return on capital at an assumed rate of capacity working is that formally, when demand goes down, it should put prices up. In 1958, when the British steel industry met its first period of recession under the regime of the present Iron and Steel Board, this was pointed out in these columns: the board accepted the fact that its formula could logically be stretched to this conclusion, but simply refused to do anything so silly. The second period of steel recession came last year. Before steel demand started falling sharply, the board had budged a little, raising prices to cover part of the higher prime costs that had come from increases in the prices of coal, oil and labour. But it did not, and still has not, put up the price because the industry is working well below the capacity assumed in setting its standard margins.

None of the steel companies that have been complaining about prices and profits last year has gone so far as to argue that when their rate of working dropped below 90 per cent of capital, at which the Steel Board's formula is set to give a 9 per cent return from home prices on the capital that would be employed in a thoroughly modern mill, their prices should have gone up (Though Mr Chetwynd Talbot seemed half to imply this). They have complained that prices were not put up in July sufficiently to cover in full the increases that had occurred in their prime costs. They have gone on—individually—to argue that the rate of capacity working at which companies are expected to earn the standard margins ought for the future to be adjusted downwards, because the total capacity that they are now engaged in installing will by 1965 leave a larger margin of spare capacity over and above estimated demand than is reflected in the pricing arrangements.

These are, on the face of it, separate contentions. It is true that the Steel Board did not increase prices last summer enough to pass on the full rise in steel's prime costs to steel consumers. The board assumed that part of these cost increases would have been offset by increases in steelmaking productivity. Unfortunately productivity did not increase; it fell, by about 5 per cent between 1959-60 and 1960-61. Thus the increases in prime costs were not partly offset, but actually exacerbated, by this and by the increase in unit overheads because plants worked still more below capacity. The two, in fact, very largely reflect the same thing.

American experience* suggests over recent years a fairly direct relationship between the percentage of capacity worked in the iron and steel industry and its rate of profit: for every ten percentage points less in average capacity worked, profits in the United States are estimated to have gone down by four percentage points on capital employed. It was queried then whether any similarly clear relationship seemed to apply in this country. The answer seems to be that one cannot, at any rate, rely on any such ratio from year to year. At least, 1960-61 was right out of line with the ratio that may roughly have held good from 1955-56 to 1959-60.

As the diagram shows, a comparison of the average percentages of capacity worked in the United Kingdom with the rates of profit on capital employed seems to suggest that in this latest steel recession, during a shorter and not quite as deep fall in the rate of capacity working, the resulting fall in profits has been much sharper than it was in 1957-59. A fall, from the financial year 1956-57 to 1957-58, of 9.3 points in the percentage of capacity worked was accompanied by a decline of little over 2 points in profits, reckoned as a percentage of capital employed; from 1957-58 to 1959-60 a further fall of 8.2 points in capacity saw a fall of only another percentage point in profits. Between 1959-60 and 1960-61, however, a fall of about 4½ percentage points in capacity brought the percentage profit on capital employed down by no less than 5 points. The figures on which this diagram is based, to 1958-59, are for the whole steel industry, while those for the past two years are for only the nine largest steel companies; but these companies make up by far the bulk of the industry, and the other companies' experience would probably not alter the average profit much either way. The fall of 5 points in profits last year, it must be emphasised, was from a rate of 15 per cent to one of 10 per cent; from 1959-60 to 1960-61 total profits (after depreciation, before tax) for these nine companies fell by more than a quarter, while capital employed rose by about a sixth.

Even including the two "off-line" years of 1955 and 1961, the correlation here is not too bad; for what it is worth, it suggests that a decline of ten percentage points in capacity, in British steel, over the period 1954-62, meant a reduction of two and a half percentage points in the rate of return. But 1961, according to that relationship, should have had a rate of return somewhere in the region of 13-14 per cent; so the actual 10.3 per cent attained is far out of line. Was there some sharp change in circumstances at the end of the sixties? Export premiums, of course, have gone. But the chairmen of the steel companies argue that 1960-61 was a year in which the practice of the board of covering in prices the increases in their prime costs—as modified by the assumed increases in productivity that did in those earlier years take place—changed, so that prices were in effect being set according to a different formula.

The steel companies and their shareholders, however, are vastly less interested in fitting statistical curves to their profits than in trying to get them up again. There is a fairly wide spread between the fortunes of individual companies, as one would expect. Richard Thomas and Baldwins, with a large part of the huge Newport investment paid for on their books but with no production yet coming from the plant, show the worst return on capital employed (4.6 per cent) and the biggest fall from the year before; Colvilles, similarly placed as regards the Ravenscraig strip mill, but with the steelworks that will serve it already established, still perhaps surprisingly shows the best return (15.5 per cent), though this, too, represents a whacking fall from the year before. South Durham, Dorman Long and Steel of Wales were well below the nine-company average, according to this reckoning, of 10.3 per cent; John Summers, Lancashire Steel and United Steel above it; Stewarts and Lloyds very close to the average.

It is generally agreed that market prospects for this industry this year are not encouraging. Any better confidence for 1961-62 must still be pinned to the hope that the Steel Board can be persuaded to cover more of their increased costs by raising prices now; the board has indeed said that it is examining its figuring on capacity, among other things. In large parts of the industry's business, demand cannot be very elastic to price; British customers have always displayed real if odd inhibitions about buying abroad, even if they could get foreign steel cheaper. So the industry may still be persuaded that it could improve its total return in the short run by increasing prices on a falling market—and could be right.

The run might turn out, however, to be a short one. True, most steelmakers are hoping for demand to turn up again late this year when stocks cease to be run down and when possibly the Government may think the economy can afford a little more activity. But from 1963 onwards the industry will probably have to face a steady dismantling of protection; and some European industries have been modernising their processes and plant perhaps rather faster, and accepting the logic of industrial location rather more, than Britain has.

The industry might answer this with Mr Geoffrey Eley's words in the RTB report this week, that joining the European Coal and Steel Community "will involve many changes, including a new method of fixing prices." This is, indeed, one prospect that warms some steel chairmen's hearts towards the entry into Europe—escaping that benevolent but stern governess, the board. This escape does, in fact, seem likely; whatever the terms of a merger with Luxemburg, it seems unlikely that the board, as it is, can survive, or its complex formula for trying to decide what a competitive price level ought to be in an industry where utterly free competition is not practicable.

It has to be said, however, that British steelmakers have never themselves showed any great desire for very vigorous competition in prices; and that the ECSC rules for "multiple basing-point" pricing lean somewhat more in that direction than the board's price policy in Britain ever has. Some steelmakers, again, have been assuming that, if what they want to do in future can be approved by ECSC, this ought to be sufficient to answer any criticisms about their behaviour when their conference rules come to be justified before the Restrictive Practices Court. Do they assume that their own pricing practices now, and what they might like to do later if freed of the board, will altogether suit the requirements of the community?

What does seem clear is that other countries, as well as Britain, are likely to have problems of surplus capacity by the mid-sixties, particularly for flat steel products. This might in any case, even if the board survives, make it impossible for British companies to maintain the understandings which make sure that maximum prices are minimum prices as well. Some British steel companies may rejoice in this new prospect of greater freedom in Europe to fix their own prices. But in the wider market, the simple idea of putting prices up when demand is going down may not do.

* "Capacity and Steel Profits," *The Economist*, December 16, 1961.

Different Fibre?

While the Government decides whether to step in as referee or not, fighting in the public arena is getting uglier.

COURTAULDS this week produced new estimates of future profits to support its resistance to the ICI increased four for five bid ; these, it admitted, differed radically from its chairman's prognosis when the interim dividend was cut in November, and also from the forward estimates it gave ICI in mid-December. It also made guesses, openly, at ICI's profits during 1961 (which ICI has not yet disclosed), and the future profitability of the other company. This has inevitably become the most vehement take-over struggle to ruffle British business since the British Aluminium affair. What began in "friendly negotiations" is now coming perilously close to a brawling match that makes last year's struggle for Odhams look like a gentlemanly three rounds of fisticuffs. Mr Chambers is unruffled: his immediate reaction to Courtaulds' estimates was as predictable as the Courtaulds' directors had hoped their figures would be telling:

> It is much better for everyone concerned to compare what is now said with what was said by the chairman of Courtaulds in July, 1961, and in November, 1961, when apart from the gloomy prognostications leading to the cut in the dividend, the impossibility of making reliable forecasts was stressed. Secondly, the revelations by Courtaulds that information regarding past and future earnings was exchanged in confidence with ICI is an indication of the advanced stage reached in the negotiations for a full merger. The figures given by Courtaulds then bear no relation either to the statement the previous month when the dividend was cut or to the "estimates" now given.

In the stock market the Courtaulds' estimates, reproduced in the accompanying table, misfired. The company's shares fell by 7½d. to 41s., still leaving them below the value of 44s. 6d. imputed to them by the offer with ICI at 55s. 9d. If, on these figures alone, the Courtaulds' directors hoped to demonstrate that their shares were worth as much as ICI's they must now be sadly disappointed men ; indeed, one still wonders, if Mr Chambers dared to raise the "final, final bid" to one for one, whether they would dare advise their shareholders to reject it. But in fairness to the Courtaulds' directors it must be emphasised that the stock jobbers this week had only half the story ; they do not yet know how badly ICI's profits in fact fared in the last half of 1961 and what estimate it will make about future earnings when its formal offer is sent out—and that is still probably a fortnight away.

Courtaulds' new estimates about its future were prepared by the directors in consultation with the merchant bankers, Baring Brothers, and the chartered accountants, Binder Hamlyn, and have been produced as evidence to substantiate the claim that the ICI bid seriously undervalues the earning capacity of Courtaulds. The directors are reserving their comments on ICI's offer until the formal documents have been despatched to shareholders. Oddly, the estimates miss out 1963-64 while the 1964-65 figure is qualified by the statement that if Britain joined the common market profits would be "unlikely to be reduced by even 10 per cent" ; ten per cent of £28½ million is still over £2¾ million in hard cash. The forecast of £23 million for 1962-63 is presumably on stronger grounds ; but it compares strangely with the "routine forecast of £18½ million which was disclosed to ICI on December 12th," even though ICI was then also informed that there would be a rapid increase from 1963 onwards. Sir Alan Wilson, the chairman designate, put a gloss on this alteration. He said that the estimate handed to ICI in December "solely as a general indication of profit trends" had been completed in September. He went on to say that "the same report forecast a profit of £22½ million for the twelve months to September 30, 1963, so that the latest estimate "merely advances the original forecast by six months," the acceleration having been made possible by the acquisition of British Enka last November.

How much weight will shareholders give to the statements made by the directors to back up these financial forecasts ? The strong increase in profits predicted in man-made fibres is attributed to: evidence of recovery already apparent from the short-term recession in the first part of 1961 ; continued expansion in profits from British Celanese and from "Courtelle" ; and, most importantly, the "vigorous and effective action taken to arrest and reverse the decline in profits from viscose yarns and fibres." This week's quarterly statistics for man-fibres confirm that there has been an upturn in rayon output. On the second point, the Courtaulds' directors say with complete assurance that British Celanese's profits will be about £4½ million in 1961-62, compared with £3¾ million in 1960-61. They add that as the capital and working costs of producing "Courtelle" are low in comparison with other synthetic fibres this side of the business is making profits of £700,000 a year even at this early stage of its development ; ICI has never denied that with this acrylic fibre Courtaulds has hit upon a winner, though its actual volume of output, so far, is still small. On the third point, the drastic reorganisation and rationalisation of the rayon industry must certainly have cut out unprofitable capacity

COURTAULDS' PROFITS BEFORE TAX

Courtaulds' interest	16·7	17·4	16·2	21·5	26·5

* Estimate. † Forecast.

and hence a growth in profits is not improbable. Technically, the development of high-tenacity rayon for tyre cords may now have achieved a successful defence against nylon in this major section of the industrial fibres market. But the size of rayon profits must also depend in part on wood pulp prices. Even though Courtaulds, through its own production of a sizeable proportion of its needs, has managed to bring pulp prices down significantly, the advantage of freedom to buy in the cheapest market carries with it some dependence on factors beyond one's control. Increases in profits are also forecast for British Cellophane, Pinchin Johnson (where a "major re-organisation is well advanced"), and Gossard ; some decline in the profits of British Nylon Spinners (through lower margins on higher output) is expected but its dividends, payable in equal parts to ICI and Courtaulds, are not likely to be reduced as there may be less need to retain such a high proportion of its earnings as in the past. These estimates are backed by a further statement that, outside fibres, the current value of Courtaulds' investments is equivalent to 30s. per share and capable of producing a distributable income of 1s. 5d. per share ; the directors are confident that the cash flow will provide all the additional fixed and working capital required and at the same time "allow for a policy of consistent and steadily increasing dividend distributions."

In their rejection of the bid the Courtaulds directors are now openly declaring that their company is now well past its worst difficulties, while those of ICI are still—indeed just about—to come. Sir Alan Wilson put it succinctly: "ICI shares are a depreciating currency." Certainly when ICI's profits for the last half of 1961 are published they are unlikely to make happy reading. Courtaulds, unusually even for this kind of public argument, offered two guesses at its rival's 1961 results, of which the most charitable was that the full year's figures might be down by 25 per cent on 1960. Mr Chambers had said the week before that despite further price cutting the corner is being turned in profits. He would probably agree that over-capacity in the world's chemical industry, and presumably freer competition in the common market, will bring prices down and make it much harder to earn profits in the sixties than it was in the fifties. He feels, however, that ICI can compete in prices in third markets with its European and American rivals.

ESTIMATED PRODUCTION
(Million lbs. of yarn)

	1958	1959	1960	1961
Cellulosic Fibres :—				
Viscose staple	202	238	255	220
Acetate staple	10	13	15	16
Viscose textile filament	46	57	63	55
Viscose industrial filament	62	71	78	65
Acetate filament	35	49	45	52
Total	*355*	*428*	*456*	*408*
Synthetic Fibres :—				
Nylon	47	60	70–75	75–80
Terylene sales	17	30	44	50
Others (incl. "Courtelle", "Acrilan")	1	6	19	22
Total production	*65*	*88*	*134*	*143*

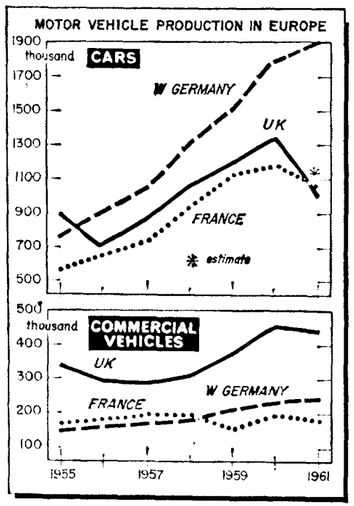
Terylene sale figures were provided by ICI; all the other figures are for production, provided as estimates by Courtaulds.

Within the more precise problem of the synthetic fibres industry, there may be more common ground between the two sides than has appeared—at least in diagnosis of the problems, though not as regards their cure. Existing patents are running out and new producers of nylon and polyester fibres are coming in. The biggest margins on nylon are past, though its output curve has not flattened yet. Terylene's most rapid growth may be passing, though its development and growth possibilities are not yet nearly exhausted. In "Tricel" and "Courtelle' Courtaulds believes it has two sturdy competitors.

From ICI's point of view, it makes sense to seek to protect and develop its investment in nylon polymer and terylene polymer and fibre. ICI's investment in nylon polymer is massive: through its agreement with British Nylon Spinners it receives whatever the rate of off-take of polymer a guaranteed return of 15 per cent gross on the fixed and working capital it has invested in polymer for nylon 66, plus a depreciation allowance of 7 per cent. This protects much of ICI's total investment in nylon from fluctuations, or the squeeze now perhaps coming in profit margins: Courtaulds is unprotected. Some Continental observers have seen the key to the struggle in the threat posed to the growth of nylon 66 by the development of nylon 6. Courtaulds' associate, Snia Viscosa, has developed a process for caprolactum, the raw material for nylon 6, which Courtaulds and several American and Continental big fibre producers as well believe is superior to any other. But there is some doubt now whether either ICI or Courtaulds are really prepared to put up a caprolactum plant in this country.

Both groups recognised weaknesses in the synthetic fibre industry, though Courtaulds' directors in offering to hive off nylon and terylene under ICI's control argued that rayon's troubles have been dealt with and that the current and future problems are concentrated in the melt-spun end of the industry. They said this week that ICI wanted the acrylic fibres such as "Courtelle" as well before giving any countenance to such a proposal. Both groups have plans to meet the industry's problems, but they have opposing industrial philosophies in the way with which they would sort the problems out. ICI, to protect its investments, wants to move forward closer to the consumer, gaining the technical advantages it believes are inherent in vertical integration of such science-based products. Courtaulds, on the other hand, would prefer to produce only part of its basic chemical materials itself, and to buy a large proportion at arms' length in the cheapest market. In a period when sharp price competition in petrochemicals seems likely to last for some time, this view may have obvious advantages: the groups probably differ about how long this period will last.

In coming to their decision, however, shareholders will not be swayed by nuances in an economic and technical argument about the best method of tackling the problems of the synthetic fibre industry. Their course of action will be determined, first, by the prices that ICI and Courtaulds can command in the stock market and, secondly, by the impression they have gained in the past and during the present struggle of the quality of the top management of the two concerns. What will happen to the price of ICI shares when its latest profits are published remains to be seen. But Courtaulds' directors are, in effect, asking the shareholders to reject completely the comparative images of ICI and Courtaulds managements in the past as any guide to the future. They are also asking shareholders to forget and forgive the cut in the interim dividend, which they now openly admit was an absurd mistake. At this late stage in the day, can the Courtaulds directors, able and fierce as some of them have proved themselves in the latest bout of in-fighting, create a brand new image, and will the Courtaulds shareholders perform the *volte-face* ?



BUSINESS NOTES

MOTORS

From Recession to Recovery?

LAST year was the worst that the motor industry has experienced since 1957. Production only just exceeded the million, at 1,003,967. And, partly because Rootes lost some 25,000 cars as the result of the long strike at its Acton body factory, the two bigger manufacturers accounted for a record share of output—72 per cent. The British Motor Corporation made 394,000 cars, compared with 508,000 in 1960, while Ford's output fell from 407,000 in 1960 to 327,000 in 1961. Vauxhall is the only one of the smaller manufacturers to admit to its production; it made 90,500 cars, 56,000 fewer than in 1960. One can guess that Rootes made about 100,000, Standard-Triumph a pretty ruinous 45,000, and the smaller makers 50,000 between them. All of which paints a sorry picture of an industry in recession: but it was made worse than sales would have justified by the stocks that the makers had accumulated in the last months of 1960, which meant that output was depressed until the spring —and one company, S-TI, nearly bankrupted itself.

The narrowing of the gap in output between BMC and Ford reflects the latter's avoidance of such a big increase in stocks as BMC seems to have suffered last winter, rather than any improvement in Ford's share of sales. So far as the home market is concerned, BMC held around 40 per cent of sales all year, while Ford's share has dropped rather below the 30 per cent it held last winter and summer. The gainers have been those of the smaller makers who have introduced new models. Vauxhall, which had seen its share fall from 6½ per cent in last January to 3½ per cent in August, seems to have picked up to around 10 per cent during the autumn with the new Victor to sell—and no Rootes cars to sell it against. The only indication of Rootes' competitive strength is still the 12 per cent share of the market that it held in August, before the Super Minx was introduced but after the price cuts on its old models. S-TI had shared the experience of seeing new models boost sales after it introduced the Herald 1200 last spring. Its share of the market doubled to about eight per cent by July, but this was a short-lived recovery; sales fell again in the autumn, with a sign of an increase in November.

Back to 66 per cent?

THIS year promises to give a 20 per cent increase in car production compared with 1961. The home market should prove rather better, perhaps allowing sales of around 800,000 cars—of which about 30,000 might be imported—compared with some 740,000 in 1961. All indications point to a desire on the public's part to buy more cars, rather than more domestic equipment or other durables; and any relaxation of restrictions on credit should release purchasing power. Stocks are low now, most makers and dealers having felt perhaps too strong a desire to avoid a repetition of last winter, and there should be scope to increase them by 30-40,000 during the year. Sales this month seem to fit into the expectations that the first quarter would be rather less good than it was in 1961, as buyers would tend to wait in the hope that the budget might remove the 10 per cent surcharge on purchase tax.

Export markets will provide the bigger part of the increase in sales. A rise of 100,000 from the shipments of 371,000 last year is a conservative estimate; by December they were already close to this rate. Stocks have been reduced so much in the past year that such an increase could be obtained with little improvement in sales; to sell as many cars in the United States as last year would involve shipping 50,000 more. And the new models that have been introduced and will be introduced later in the year will raise sales as well as making dealers raise their stocks. But for all this recovery, the industry is likely to average two-thirds of capacity working; and the expansion plans will be bearing fruit by next autumn. Unless the industry is right in hoping that 1963 will really see it back on growth from the 1960 level, profits will have a rather pinched look.

Commercial Vehicles on the Flat

THE only section of the commercial vehicle industry to show much sign of growth last year was that engaged in making vans for sale as cars. This helps to account for the increase in BMC's share of output from 34 per cent in 1960 to 44 per cent in 1961; while the total rose from only 439,000 to 443,000, its output went up from 150,000 to 194,000. Among the other big manufacturers, Ford's production fell from 95,000 to 88,000, and Vauxhall's from 106,000 to 95,000. In both cases BMC seems to have won sales by the greater appeal of its small vans; Vauxhall made 25,000 vans compared with 38,000 in 1960. It did well in trucks, however, building 70,000 instead of 68,000—which kept it well ahead of other truck manufacturers.

Exports have been a more expansive market for commercials than has that at home; exports rose about 15 per cent to 160,000, while home sales increased gently from 226,000 to about 230,000. But there seems to be less scope for a further increase in commercial vehicle exports this year than there is with cars; demand seems to have settled down on a plateau in the second half of last year, and shows little sign of shifting from it. But in the longer-run prospects the truck makers, who account for the larger part of the industry's exports—Vauxhall shipped more than 50,000 Bedford trucks last year, 71 per cent of its output—are in a strong position to compete in Europe once they get the chance. Bedford trucks are already selling in France at prices that worry the local makers, and British firms could certainly under-cut the European makers substantially if there was no duty barrier. For trucks—and tractors—are products that are made on a much bigger scale in Britain than anywhere else except the United States.

THE EXCHANGES

Sterling, Gold and the Franc

STERLING has been almost consistently firm this week. The spot rate has remained within the range of $2.8105-

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-seven territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE CHARTERED BANK

Incorporated by Royal Charter, 1853

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.

West End, London Branches: 2 Regent Street, London, S.W.1 · Branches in the United Kingdom at Manchester and Liverpool, in Germany at Hamburg, and in the United States at New York

The Eastern Bank Limited HEAD OFFICE: 2 & 3 CROSBY SQUARE, LONDON, E.C.3

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) · The Irano British Bank (Incorporated in Iran)

$2.8115, and the Exchange Account has almost certainly been taking in dollars on a fair scale. In notable contrast to the two preceding weeks, there was virtually no mid-week dip as operators speculated on a cut in Bank rate on the coming Thursday. A small movement of this kind was perceptible on Tuesday morning, but shortly afterwards expectations of a Bank rate cut were sharply reduced by the prospect of a rail strike. The Bank rate bears had moreover found their earlier operations expensive, having to buy back the sterling they had sold short at higher rates after the "no change" announcement.

The firmness of sterling continues to reflect the return of balances withdrawn in December, as well as the more favourable seasonal influences on commercial account. The German commercial banks appear to have been putting funds back into foreign assets on a major scale—Euro-dollars rather than sterling for the most part. The Bundesbank now shows a decline in its own reserves in the first fortnight of 1962 of very nearly 2½ billion marks, or $600 million, which more than offsets the rise in the closing weeks of 1961 and brings its total reserves, at DM 26 billion, more than 4 billion below their level last July.

The London gold market livened up suddenly at the end of last week as it received the biggest private demand since the excitements of late 1960. Guesses at turnover range around $10 million. Wisely, the Bank of England met the demand immediately at the prevailing price of around $35.16. This week activity has been much smaller, though still moderate. The source of the big order remains something of a mystery. It was routed through a Swiss bank, as are many transactions which are intended to remain anonymous.

One guess in the London bullion market is that the bulk of the buying originated in France, where the activities of the secret army organisation have stimulated a keen demand for gold coins—the napoléon, at 43 new francs, stands about one-third higher than its gold value. However, neither the activities of the OAS nor the long-expected resignation of M. Baumgartner as finance minister has made any mark on the strength of the franc in the foreign exchanges. M. Baumgartner's successor, 39-year-old M. Valery Giscard d'Estaing, has hitherto been his deputy, and seems to be well trusted in French banking circles. The French financial authorities are now beginning to apply a curb to credit expansion: last week they raised the minimum liquidity ratio which the banks have to maintain from 30 to 32 per cent. Total bank credit granted to the economy has risen from 48 to 70 billion new francs in the past three years, recently at an accelerating pace, and in the light of "certain tensions" that are now making themselves felt, particularly in prices and wages, the French authorities have felt obliged to apply the brakes.

IN THE MARKETS

Another Brew

With attention focused on ICI and Courtaulds and on brewing shares, little interest has been shown in other sectors of the stock market. Gilt-edged stocks have quietened down but remain reasonably firm. Industrial equities, on the other hand, have been unsettled by the possibility of labour disputes and the gains made before the weekend were lost afterwards and *The Economist* indicator lost 3.8 points to 360.6. Brewing shares were stirred into activity by reports that Charrington might be involved in a merger and its shares gained 16s. 6d. to 127s. 6d. in the three days' trading to Wednesday's close. When it was confirmed that Charrington was indeed engaged in merger discussions with United Breweries the shares moved wildly, touching 142s. 6d. before profit taking brought them back to 130s.

Up to now United Breweries, propelled forward by the Canadian brewer Mr E. P. Taylor, has extended its empire by taking over comparatively small breweries. This gave it a chain of retail outlets in the north and Wales; but to realise his ambition of being a national brewer Mr Taylor had to secure outlets in London and the south. Last year when he used the take-over tactic in offering to purchase Bristol Brewery Georges he was beaten out of the field by Courage Barclay and Simonds. Hence, he must have realised that his plans could only be furthered by an agreed merger with a big brewery in the south. This ambition now seems to be on the point of being realised, for the negotiations with Charrington have reached such a stage that the directors of both companies are speaking of a merger through a new holding company, to be called Charrington United Breweries, in which Mr John Charrington would be chairman and Mr Taylor deputy chairman. This amalgamation would result in a group controlling about 5,350 licensed premises, adding Charrington's spread in London, the south coast and the west of England to United's outlets in the north. The new group would rank among the big seven or eight in the industry though it would not be particularly endowed with cash resources. With Charrington standing at the present price it would be very costly for another brewer to try to stand in the way of the merger.

INVESTMENT

Decline Continues

New orders received by the engineering industries continued to fall in November. But the contrast between stable orders from export markets and falling orders at home became more pronounced than it had been in the previous two months. New orders from export markets were the same in November as they had been a year before, while home orders were nearly 15 per cent down. In September and October home orders had been only two to four points down; these latest figures suggest that the decline in the home investment boom that they rather hesitantly foretold is now upon us.

Production has stopped rising as the new orders fall. In the second and third quarters it had been about ten per cent higher than in 1960, but in October and November it fell slightly from the September level—though it was still higher than it had been in the summer—and seemed to settle down five per cent about the 1961 level. High production combined with lower orders has meant that the industry's orders on hand have continued to fall, and by November they were eight per cent below the peak reached in April 1961. But there are still more orders than there were a year ago, and the industry has a long way to go before it need fear any slump.

Industrial development certificates for new factory building are another indicator of investment showing a decline. But, after falling for nearly two years, they steadied out in the last quarter of 1961 at the same level as in the third quarter—though they were still a third lower than a year before.

INDEPENDENT AIRLINES

Together We Stand . . .

The two independent aviation groups that announced a merger this week, British United Airways and British Aviation Services, conceal between them the identity of what were once nineteen separate companies. The creation of Air Holdings Ltd. to take over their entire share capital is a measure of how much consolidation has taken place among privately owned airlines in a relatively few years, and perhaps also of how much still remains to be done. With the exception of Cunard, which owns Eagle Aviation, the new group now represents the whole of the shipping industry's investment in aviation. The roster of shareholders includes Blue Star, British and Commonwealth Shipping, Furness Withy and P. and O. Its total assets will amount to about £20 million.

Of the two groups, British United Airways is the nearer to what is understood by an established international airline. The term must be used with some qualification because although BUA has recently been awarded a substantial route network across Europe and Africa by the Air Transport Licensing Board, those awards may yet be reversed during appeals that have still to be heard. The main prop of British Aviation Services is the Silver City car ferry to Europe, together with two or three other small airlines and transport companies. Silver City, which has been backed for many years by P & O, was the inventor of car air ferries and has developed the business

CROSBY INCOME TRUST

RESOLVES A TRUSTEE DILEMMA

GOOD INCOME: MODERATE CAPITAL GROWTH

A dilemma that faces many Trustees is to keep a balance between the needs of present beneficiaries and the claims of remaindermen. The former often need a good, assured level of income. The latter may be best served by growth in the capital value of the trust fund.

Crosby Income Trust could provide a way out for the Trustee. It offers a high immediate income (consistent with prudent investing) and prospects of moderate capital growth. To meet these aims about two-thirds of the Trust funds are at present invested in good class ordinary shares and one-third in higher yielding preference shares—all of companies registered in the United Kingdom.

ABOUT CROSBY INCOME TRUST

The Trust is authorised by the Board of Trade and is therefore a "wider-range" investment under the Trustee Investments Act 1961. The spread of its investments can fulfil the need for diversification required by the Act. Continuing supervision of the investments is provided by the investment managers, Robert Fleming & Co. Limited. The Trustee is Barclays Bank Limited.

Formed in October 1960 the Trust was designed with the needs of Trustees very much in mind. All income for distribution is carefully assessed as such by the Auditors to the Trust, while bonus issues and other receipts of a capital nature are added to the Trust fund. The present net U.K. rate of tax paid by Crosby Income Trust is higher than that for many investment or other unit trusts. At present it is approximately 7/- in the £. It is the aim of the Managers to maintain this rate. Income is distributed on 31st March and 30th September after deduction of tax at the standard rate.

The market value of the Trust fund is already over £4 million and at 1st January 1962 the investments were:—

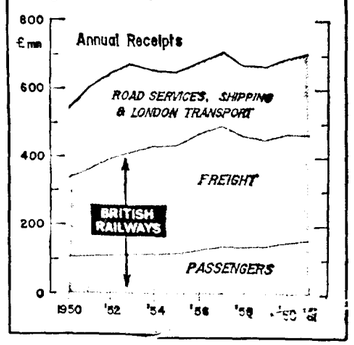
The Save and Prosper Group, 30 Cornhill, London, E.C.3. Tel: MANsion House 5467

with remarkable success, but its plans for widening operations received a set-back this winter when the Licensing Board refused applications for some new routes on the grounds that Silver City had no visible plans for new, modern aircraft to fly the proposed services. The biggest handicap of such a seasonal business as the car ferry which caters mainly for holiday makers is the difficulty of finding winter traffic. Silver City has never published its accounts; but British United Airways, which does, also runs a car ferry, Channel Air Bridge, and finds considerable difficulty in making this pay.



Brighter Prospects

SURPRISINGLY, in view of the poor results of many airlines, BUA expects to show a profit on its operations during 1961, rather bigger than the £400,000 recorded in 1960 when the group was still digesting its mergers, and even among the smaller independent airlines the prospects look brighter. The BKS company which asked for receivers to be appointed a few weeks ago, has had its licences confirmed by the Licensing Board; this means it will stay in business, while Tradair, which had to stop flying and seemed in danger of folding up this winter, has also been given enough new licences to start flying again in the spring. The significance of both moves is that the licensing board does not give or confirm licences unless it has some assurance that the airline is viable.

The new air licensing board has been decidedly tough this winter in demanding financial assurances from small independent airlines to avoid any risk of a repetition of last summer's debacle when holiday-makers were stranded because two heavily-booked independent airlines abruptly went out of business in high season. It has also ruled that travel agents must in future give both the name of the airline they are using for their holiday tours and the type of aircraft flown. This is to protect passengers from the kind of unpleasant surprise some of them have received when the modern aircraft they expected turns out to be an unpressurised veteran, airworthy perhaps, but decidedly uncomfortable for a long, hot flight in mid-summer. The bigger travel agents already give this information, but there are hundreds of smaller ones who believe that the less said about the way they intend to fly their clients the better. The licensing board's writ extends, however, only to British airlines, and a growing amount of holiday business is going to foreign operators, if only to avoid the tedium of applying to the board for a licence for each flight. But travel agents' brochures will look a bit odd if, from next year onwards, they name the airline and aircraft to be used for some tours but not for others.

TRANSPORT FINANCES

Thanks to a 6 per cent rise over 1960 in the receipts of London Transport (£88 mn.), Provincial and Scottish buses (£66 mn.), ships (£8 mn.) and "others" — mainly British Road Services — (£63 mn.) BTC's total receipt for 1961 was up on 1960. British Railways' annual receipts were, however, slightly lower (£464 mn.) and with rising costs and current wage claims this year's deficit for the commission is likely to be larger than last year's £101 million.

PRICE CUTTING

A Case of Militancy

FIRST blood went to Kayser Bondor this week in their action against Tesco for cutting fixed retail prices on some branded stockings and underclothes. They have been granted an interim injunction restraining Tesco from price-cutting; they are seeking to make this permanent and to obtain damages. The case was described as one between "militant price-fixers" and "militant price-cutters." Price maintenance has now become a rallying point for enthusiasts on both sides and seems to inspire appropriate vocabulary. Mr John Cohen, chairman of Tesco, said "We will continue to fight, with every weapon we can legally command, to reduce inflated profit margins in the trade." For him, and others of his way of thinking, the matter is a simple one: why should efficient retailers be obliged to sell at the same margins as less efficient ones when by reducing their own profit on individual items they can sell more of them, and at the same time benefit the consumer through lower prices?

The arguments put forward by Kayser Bondor are those generally advanced in favour of price-maintenance—that branded goods sold at fixed published prices are a guarantee of consistent quality; that the introduction of a free-for-all in retail pricing would lead to pressure on the manufacturer to reduce wholesale prices, which would in turn lead to a lowering of quality standards; that variable prices upset the consumer and in the end cause a reduction of total trade; that there are circumstances in which rpm actually prevents prices rising. And with the law as amended by the Restrictive Practices Act of 1956, the advocates of price maintenance have at present a weapon considerably stronger than their arguments.

BANK CREDIT

Six Points in Hand

SIX months ago the banks were wondering how they would be able to withstand the drain on their liquidity arising from the new year tax payments into the Exchequer. Today they are better cushioned than they have been since 1958. Their average liquidity ratio rose further in the five weeks to mid-January, from 35.3 to 36.1 per cent, leaving a margin above the minimum of no less than six percentage points. This further strengthening was achieved despite an upturn in advances, the first since the dramatic fall began in August, and despite a further small addition, of £3 million, to gilt-edged portfolios. The net increase in advances over the turn of the year was £15 million, and it would have been £30 million but for an adventitious repayment by State Boards; this compares with a decrease, on a true basis, of around £300 million in the five preceding months. One important element in the latest rise is the debiting of interest charges at end-December. The banks have made no formal relaxation in their lending policies, though the big improvement in their liquidity is presumably having some effect on marginal head office decisions.

(To State Boards)	53		− 15	− 11

* Excluding all transit items except ratio of advances to deposits; all ratios are of gross deposits.

It was an exceptionally big rise in liquid assets themselves, of £124 million, that produced the further increase in the liquidity ratio in January. The seasonal swing in the Exchequer accounts from deficit to surplus appears to have occurred a little later in January this year—possibly on account of postal delays. These delays are also evident in the banks' own figures of cheques in the course of clearing, which have not shown their usual sharp fall from the swollen pre-Christmas level.

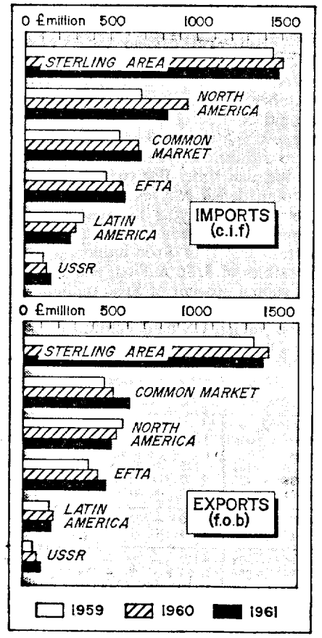
BERYLLIUM

A Story with a Moral

THE sad tale of the rise and fall of beryllium holds a lesson for everyone concerned with the proper management of science and the relations between science and industry. The Atomic Energy Authority has been experimenting with the use of beryllium metal to contain nuclear fuels for fifteen years or more. Beryllium has powerful theoretical attractions which suggest that a reactor incorporating it ought to have lower fuel costs than by using the only available alternative—stainless steel. But beryllium has equally powerful practical drawbacks; it is lethal to handle, it is as expensive as precious metals, it is difficult to engineer and tends to crack and corrode when inside the reactor. All these it was hoped to overcome with time and research; but as work progressed, scientists could be seen dividing inside the AEA into pro- and anti-beryllium camps.

For a long time the latter were a tiny minority carrying out research in stainless steel almost on sufferance. The original plans for the new generation of advanced gas-cooled reactors laid down that the prototype starting at Windscale this autumn would have 80 per cent of its fuel canned in beryllium and a mere 20 per cent canned in steel to keep the opposition quiet. Then the balance of technical opinion began to shift against beryllium; but not in time, it appears, to prevent the Atomic Energy Authority from signing (though not making public) a five-year contract with Imperial Chemical Industries in January, 1960, to supply beryllium metal in quantity for the atomic power programme.

The following month, *The Economist* wrote on the basis of substantial scientific evidence available inside and outside the Atomic Energy Authority that beryllium was unlikely to be used. It took a further twenty-three months to prove that prediction correct; last week the AEA cancelled its contract and ICI announced that the £1.5 million Witton beryllium works will close. The Authority will have to compensate ICI, to whom it is said to have guaranteed a return of 7½ per cent, and Armstrong Whitworth which fabricated the metal. Other contractors have already completed their orders.

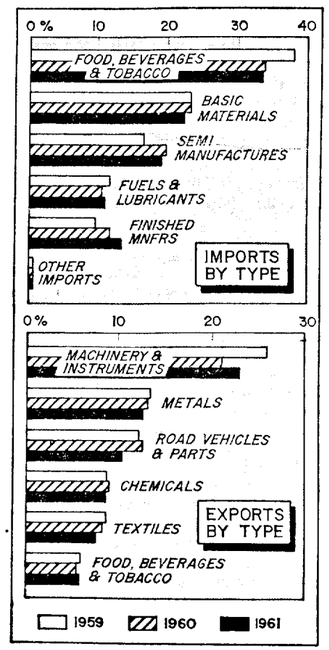


In one sense, the writing-off of beryllium is a fillip for nuclear engineering; no one would choose to use a material as awkward and dangerous as this if the same technical results can be achieved with less trouble, and the Authority claims that its research on stainless steel has produced a breakthrough in costs, which removes or at least reduces the original argument against the use of steel. But the story also illustrates the difficulty which exercised the Zuckerman committee on research that reported before Christmas—namely how to persuade those in charge of research projects to cut their losses in time. Dedicated research teams will never willingly admit defeat; the art in managing a big research institution like the AEA lies in sensing when research effort begins to yield diminishing returns and finding alternative outlets for the energies of the scientists concerned, before the survival of the project develops into a matter of honour rather than commonsense. The AEA has shown promptness and courage in calling a halt, for example, to some work on thermonuclear fusion that was beginning to turn sour. But in this instance it acted too slowly and too late, and must rightly bear the financial consequences.

WOMEN'S FASHIONS

Exports at the Top

TO write about London ready-to-wear clothes in the week of the Paris collections is to risk severe bathos. Nevertheless, the members of the Fashion Group of London recently achieved a minor climax of their own with the discovery that their export orders in 1961 exceeded those of the previous year by 25 per cent, with a



Britain's Trade in 1961

BRITAIN'S exports increased last year by £128 million or 3½ per cent to £3,682 million (valued fob), compared with rises of £225 million in 1960 and £154 million in 1959. Imports declined by the same proportion, by £143 million to £4,398 million (valued cif), compared with rises of £558 million in 1960 and £135 million in 1959. Re-exports increased by £17 million to £158 million.

The rise in exports and the fall in imports occurred in the first half quarter half of 1961; there was little further change in the latter part of the year. The main increases in exports were to Western Europe (+16 per cent), the communist block (+36 per cent) and Japan (+51 per cent); these gains were partially offset by a fall of 2 per cent in exports to primary producers, including those in the overseas sterling area and Latin America, and a fall of 14 per cent in exports to the United States—which however began to pick up in the summer. The fall in imports was the result of declines of 3½ per cent in foodstuffs and tobacco and of 7 per cent in industrial materials, partially offset by a continued rise of 8 per cent in finished manufactures.

Among finished manufactures, imports of consumer goods declined in value, because of a steep fall in imports of cars and motor cycles

total of £1,250,000. These 26 firms exist as a group only for export purposes, and have done so only for the past three years. In that time their twice-yearly promotional weeks, held in April and November (by which time fashion-conscious manufacturers have come to terms with couturier trends) have grown in attraction for overseas buyers. The word "fashion" should be emphasised — we have plenty of successful competitors abroad making cheap run-of-the-mill garments and in fact our exports of women's clothes are heavily weighted at the sophisticated, and costly, end of the trade. Expensive clothes, with the right glamour ticket, are often easier to sell than cheap ones; and ours are not as expensive as some.

This is a reciprocal business to quite a large extent. As we buy more American fashions for instance, they are still buying more of ours. The Fashion House Group of London have done particularly good business in Europe lately, with orders from there as the result of the last London Fashion Week totalling £360,000, compared with £100,000 from North America and £15,000 from the Commonwealth. The Scandinavians, it seems, are keenest on British fashions, followed by the Dutch and the Germans, with the Americans only fourth.

BANK SPEECHES

Personal Loans Run-Down

In his speech to shareholders of the Midland Bank Lord Monckton again gives rather more information about actual banking operations than do his fellow chairmen—though he is regrettably reticent about the bank's 100 per cent hire purchase subsidiary, Forward Trust, whose "difficult year" necessitated a subvention payment of £1.3 million from the Midland. Lord Monckton confirms that the bank has had to curb its special schemes for term loans for business men and farmers, and states that the amount outstanding through personal loans has been reduced to barely one half the highest figure reached. Since its introduction the scheme has covered nearly 350,000 accounts, on which an average of £150 has been lent—giving a grand total of £52½ million. For the past year the banks have been switching the distribution of their advances to industry, and Lord Monckton states that recent repayments have been absorbed by meeting the needs of borrowers in the priority groups, so that lending to other customers have still had to be restricted.

The Midland lent a record amount in export credits, and Lord Monckton is clearly in favour of the new facilities announced this week. But Mr D. A. Stirling, the new chairman of the Westminster, finds talk of a shortage of export finance "surprising" and feels that new efforts by the banks should be financed by releases of special deposits. He, presumably, finds the new scheme less to his liking. He complains that special deposits are unfair to the commercial banks, and asks when the Treasury is going to follow up its recognition that other lending institutions should bear their part of the burden. The bankers are wholly justified in their complaints of unfair treatment, but the right answer is certainly not to extend the labyrinth of control throughout the whole field. Mr Stirling, like Lord Monckton, reports a rise in foreign business; but the restrictions now in force on domestic trade "are likely to press more heavily on our 1962 profits unless some unforeseen improvement appears."

JAPAN'S DEFICIT

Turn of the Tide?

Now that Japan has at last secured its expected large credit from the International Monetary Fund, it seems possible that the worst of its balance of payments crisis is over. No actual drawing is being made on the Fund's limited resources: Japan has simply taken a stand-by credit of $305 million for one year. In a drawing of $28.3 million on the Fund by the Philippines announced this week, $11.2 million is to be in sterling, $11 million in D-marks, and $6.1 million in United States dollars.

Japan's underlying balance of payments, as the table shows, has improved steadily since August, and the adjusted falls in reserves of $67 million in November and $53 million in December, after allowing for drawings of $50 million in each month on a United States bank credit, were still a good deal smaller than the falls recorded in earlier months. In the past few months Japan has reinforced its reserves through a number of international credits, apart from the IMF facility. Last November three United States commercial banks granted a credit of $200 million, of which $100 million is still undrawn, and negotiations with other American banks for new loans totalling $120 million are in their final stages. Agreement has been reached in Frankfurt for the issue in west Germany of DM 100 million of Osaka City 15-year bonds; leading Swiss banks agreed last week to make credits totalling 30 million Swiss francs to the Bank of Tokyo for periods of two to five years; and a number of international oil companies have been extending dollar credits to Japanese importers and refiners.

Now that Japan's current account deficit is narrowing, the main danger to the balance of payments comes from the very large short-term liabilities which it has recently incurred. Both the US bank loan and the IMF stand-by credit are for only one year, so that the rather longer credits from west Germany and Switzerland are a welcome relief. In the first half of 1961 the inflow of short-term capital amounted to $592 million. This was more than sufficient to finance the current account deficit, so that the reserves actually rose on balance by $88 million. After the mid-year, however, this inflow of United States commercial credits and Euro-dollars dried up and the reserves took the full force of the current account deficit. In the final six months of the year the reserves fell by $427 million to $1,486 million—despite the improvement in the underlying balance.

The measures taken in the summer to restrain the domestic investment boom and to stimulate flagging exports have met with marked success: the trade deficit in December is expected to be no more than $30 million. If this improvement continues, the credits so far mobilised should prove more than adequate, and it is possible that the IMF stand-by will not be drawn on. However, under this weight of short-term foreign money in the economy the government planners are understandably cautious. Imports are expected to fall slightly in the coming fiscal year, despite the government's announced intention of sticking to the speeded-up plan for trade liberalisation: by October, 90 per cent of Japanese imports should be free of control. This seems to suggest that the measures taken in 1961 to curb domestic demand are likely to be kept on for some time. For 1961, Japan's current account deficit may exceed $1,000 million. For the fiscal year to March, 1963, the planners have made preliminary forecasts of a trade deficit of $100 million, a deficit on invisibles of $180 million, and a net inflow on capital account of $180 million, without making provision for the repayment of the $200 million US bank credit.

RAILWAY WORKSHOPS

Trimming Manufacture

The manufacturing activities of the railway workshops have always been something of an anachronism; now that the railway system is shrinking, they are having to shrink too. But the measures that the British Transport Commission announced last week will only reduce the present labour force of 110,000 by about 1,600; they involve stopping the production of coaching stock at Swindon and Eastleigh, and that of locomotives at Horwich, when present orders are finished. Some manufacturing will continue at Crewe, Darlington, Derby, Doncaster and Swindon. Most of the men in the workshops are in fact maintaining locomotives and rolling stock; though they will have fewer to look after, the switch to diesels may well mean that they find that they have more work to do. But the modernisation scheme—or, to be more accurate, the replacement of worn-out stock—has gone far enough for the end to be in sight, and this means a big fall in the rate of new construction. The present measures are likely to prove only the first; the BTC says it cannot forecast the position after the middle of 1963, when the 1,600 men being sacked will have gone.

Over-capacity is endemic in the locomotive and rolling stock industry. The private firms used to rely on exports for their livelihood, getting whatever home orders the railways felt inclined to give them—or that they were technically unable to do. Now exports are disappearing, and the home market beginning to shrink. Having to meet international competition, the private firms were rather more up to date in their methods and designs than the workshops. But the railways insisted that they were able to build locomotives more cheaply—which the companies maintained was the result of a costing system that put none of the overheads onto new construction. Some of this argument persists today in the complaints from the railway unions that the new regime at the BTC is favouring private industry in its new orders. But when the total amount of business available is shrinking, the workshops cannot expect to be immune—especially if the suspicion that their costs are really higher than those of private industry should be correct.

Return on New Capital

Industrial profits as a whole are falling, but there are still a number of companies, particularly in trades providing for consumers' needs, that are earning more. Only the exceptional company, however, in an exceptional industry—in retail trade, for example—is managing to earn a higher rate on the capital it employs. Such companies tend to be found not among the giants but among medium-sized concerns serving more specialised markets. Most companies, however, have shown a falling rate of return in the last two years or so and some, in heavy electrical manufacturing for example, have shown a prolonged decline which stretches out over five years or more.

The accompanying tables (based on 454 companies whose reports appearing in the last quarter of 1961 are analysed in detail on pages 370 and 371) compare the trend of returns on the net assets of ten selected industrial groups and those of all companies. A sharp reduction in output, as in the motor industry, has produced a steep fall in gross and net returns. But apart from the cyclical pattern in such industries as motors, domestic appliances and steel, it is apparent that a combination of high capital costs and competitive pressures on profit margins has put a brake on the rate of return that can be expected on new funds, especially in the capital goods sector of the economy. The market for such products has not expanded as quickly as companies expected when they planned their investment programmes. Competition has kept prices in check and profits and percentage returns have not been artificially boosted by inflation, as they were in the early fifties.

Expanding trade will help profit returns again but the rate of acceleration will not be rapid if competition, either national or international, remains fierce. New machinery may be more efficient than old, but it is becoming painful to pay for new investment first when falling profits are reducing the cash flow. The latest quarter showed no alarming decline in retentions. But the increase in net fixed assets, from £863 million to £1,015 million, and in stocks and debtors, from £1,202 million to £1,349 million, still needed much more than net new capital issues which, at the most, amounted to £93 million, taking the difference in capital and in capital reserves and subtracting scrip issues; in fact bank overdrafts rose by nearly £66 million and net liquid assets were run down from £134 million to £43 million. It may be that some companies will be able to reduce accumulated stocks this year and so ease the pressure on liquidity; but those with investment programmes still to complete face an awkward financing problem. At the moment there is a lull in capital issues but further ahead pressures are likely to build up again.

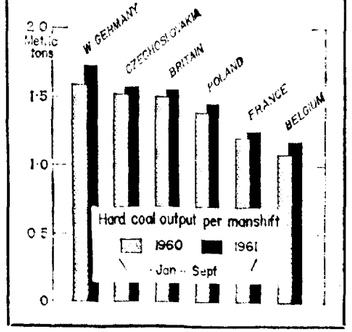
ALUMINIUM

Rolling Readjustment



THE aluminium industry in this country is growing out of the phase where each and every prospective customer for a few bits and pieces can go to the top for service. In America, where businessmen are less afraid of appearing blunt, a big aluminium fabricator recently told customers intending to place fairly large orders which it considered uneconomic to go elsewhere; orders below given quantities are simply not entertained. British Aluminium has moved more discreetly by lowering prices of rolled products to bulk buyers or those willing to accept standard lots. More will be charged for small parcels or non-standard shapes. The maximum reduction appears to be in the region of £18 a ton, or 5 per cent on the former price, and is therefore no flea bite. British Aluminium, whose parents are Reynolds of America and Tube Investments, holds well over a third of the market for semi-fabricated aluminium in this country. Alcan, a subsidiary of Aluminium Limited of Canada, is not far behind. But Alcan has quickly brought its price schedule into line.

The big potential outlet for aluminium and one that offers the greatest chance of quickly absorbing the prospective surplus of raw aluminium is in structural applications where aluminium is competing with other materials, such as asbestos and, more particularly, steel. At present the industry has a rigidly fixed price for aluminium ingot of £186 a ton. British Aluminium buys some of its material at this price from Reynolds, and Alcan pays a similar price to its parent. So far, the price cuts in America that followed devaluation of the Canadian dollar have not spread.

A drive to capture a wider market by an all-round reduction in prices will presumably be heralded by a cut in the ingot price. The current price changes are therefore revisions of existing schedules rather than a definite expansionary move. Fabricators can now expect to sell most of their output at lower prices, but the changes have probably been carefully tailored to realise offsetting savings in costs. Since aluminium is challenging steel it has seen fit to copy its policy of distribution through a wide network of steel stockists. British Aluminium was selling only 10 per cent of its output of rolled products through the 120 or so recognised aluminium stockists. It is believed that one side of the new pricing policy for aluminium is to offer greater incentives through discounts to the stockist. It is evidently hoped that stockists will co-ordinate small orders and hold larger stocks of aluminium.

How Mines Compare

Output per manshift in British mining has been rising impressively in the last few years. But so has productivity among other major European producers—and Britain does not top this league.

MAN-MADE FIBRES

Woollier Synthetics

FOR a dyed-in-the-wool Yorkshireman whose firm is one of the older members of the Bradford Wool Exchange to claim to have discovered something as good as the natural fibre is enough to dent a woolgrower's ingrained scepticism. In those circles, familiarity with an interminable string of man-made fibres claiming wool-like properties has so far bred mild contempt. But in November, John Earnshaw claimed he could put more crimp into a synthetic fibre than is possessed by the average sliver of wool, and Du Pont, the American chemical and fibre group to whose size and sagacity Mr Paul Chambers of ICI recently gave an unsolicited testimonial, has backed this claim with cash. Du Pont acquired the world rights to the process with effect from January 1st. A file containing the names of thirty or so manufacturers throughout the world who would like to make use of the invention has consequently been passed over to the Americans.

Crimp is crinkle: it is the main factor in making wool the warm, soft and attractive draper's delight that it is. Newhill and Earnshaw say that they can now give a staple synthetic fibre the "bulk" and elasticity of wool without its weight. Little is known about the "Airvel" process, though it has been admitted that the use of heat—long one of Bradford's special skills in wool manufacture—is at the heart of the process.

In the past, plenty of "bulk" has been imparted by other processes to continuous filament yarns, and some staple acrylic fibres apparently respond quite well. But nylon and polyester staple which is spun into yarn like a natural fibre had not been so successfully treated, though slivers of fibre have been crammed into a "stuffing box" and heated to set the resulting crinkles. This crimp, however, has an undeniable tendency to impermanence, and partially disappeares during the spinning process. The crimp in wool, on the other hand, appears to come from two components inside every strand of wool which are wound around each other like cables in an electric flex. When a strand of wool is straightened the crimp eventually returns.

Newhill and Earnshaw is now considering raising capital to develop its process more quickly under a non-exclusive manufacturing licence in this country. Nothing is known of the terms on which Du Pont acquired the rights to the invention, though it is hoped that royalties from the process will rival those of Terylene. Though "Airvel" should be a particular boon to the manufacturers of nylon and Terylene, the first fibre processed in this way will now be Du Pont's "Orlon." Test sales of processed "Orlon" hand knitting yarn will be made next month. This therefore appears to be something of a setback to ICI, which claims that it was not offered the new process. One other potentially strengthened addition to ICI's European competitors may have come with the eruption of the energetic Signor Mattei into the Italian textile industry. His state-controlled ENI corporation has acquired a controlling interest in one of Italy's leading manufacturers of wool and man-made fibres with the avowed aim of securing outlets for the group's petrochemical plants and the synthetic fibres derived from them.

SHORTER NOTE

There has never been a shortage of ideas of how best to reform Britain's money and Lord Halsbury's committee on the method and cost of a decimal system is now bravely inviting them. Write to Mr N. E. A. Moore, at Treasury Chambers, Great George Street, SW1 before the end of February and at State House, High Holborn, in March or April. But anti-decimalisers, duodecimalisers and *avant-garde* octalisers should presumably note the terms of reference.

THE COMMON MARKET AND BRITISH TRADE

MR DUNCAN STIRLING ON NEED TO PROMOTE EXPORTS

The Annual General Meeting of Westminster Bank Limited will be held on February 14th at 41, Lothbury, London, E.C.2.

The following is the Statement by the Chairman, **Mr Duncan Stirling,** circulated with the report and accounts:

It has already been announced that Lord Aldenham relinquished the Chairmanship of the Bank at December 31st last, having held this office since 1950. Gratitude and admiration alike will prompt the applause of our shareholders for his distinguished leadership in these years. They were years of great progress for the Bank in spite of the alternating forces of inflation and restriction, with wide movements in Bank Rate. We are fortunate in still having the benefit of Lord Aldenham's wisdom and experience on the Board and I acknowledge the honour of following him as Chairman. Mr John Francis Prideaux has been elected a Joint Deputy Chairman.

Our Annual Meeting will mark the end of Sir Charles Lidbury's life-long career devoted to the bank. He joined the staff of Parr's Banking Company sixty-eight years ago, and the legendary episodes of his early years, like his later crowning achievements, attest the dynamic force of his executive ability. His outstanding service as Chief General Manager for seventeen years until 1947 was recorded by the late Mr Rupert Beckett, our then Chairman, and now after twenty-six years as a Director, and at the close of a career which is likely to remain unequalled in our annals, he takes with him the good wishes and regard of all his colleagues.

Lord Leathers decided to retire from the Board at December 31st after fourteen years in which we had the benefit of his experience gained in business and in public life, and to him too we offer our good wishes in his retirement.

The appointment of two new Directors will come before our Meeting for confirmation: Mr P. T. Menzies is a Director of Imperial Chemical Industries, and Sir Edward Playfair recently left a distinguished Civil Service career to become Chairman of International Computers & Tabulators. Both have much to contribute to the strength of the Board by their knowledge and experience of public and industrial finance.

It is a great pleasure to congratulate our colleague Mr Malcolm McDougall on the honour of Knighthood just conferred upon him.

We are also delighted to congratulate our Chief General Manager, Mr A. D. Chesterfield, upon his appointment at the New Year as a Commander of the Order of the British Empire.

In the General Management, Mr H. W. Norris and Mr F. W. Hardstone who for many years have worked as senior executives under Mr Chesterfield, have been appointed Deputy Chief General Managers. Since the end of the year we have lost by retirement the good services of our Joint General Manager Mr F. G. Horwill after 48 years in the Bank. He had done admirable work in the administration of our Overseas business and in the organising of our staff training, and has earned our best thanks and good wishes. Mr W. W. Harris has been appointed a Joint General Manager.

Our Chairman a year ago referred to the danger to life and property from criminal raids on our premises. It is tragic now to record the death of the guard at one of our sub-branches in discharging his duty. Shareholders will share our grief and shock at this atrocious crime, and our sympathy with the bereaved.

BALANCE SHEET CHANGES

The comparative figures show the chief changes in the balance sheet, and the increase in the Reserve by £2 million is the amount transferred out of the 1961 profits. However, the two chief indicators of the Bank's business are the figures of Deposits and Advances and both reflect the impact of the restrictions imposed last July, but for which we would have expected greater rises. Special Deposits at the Bank of England (which it will be recalled are not allowed to be counted as a liquid asset) show an increase consequent on the levy being raised from 2 per cent to 3 per cent of deposits. Despite this the ratio of liquid assets to deposits was over 36 per cent, a strong position which we have deliberately built up against expected withdrawals in the early months of the year.

The satisfactory results for 1961 belie the difficulties of the year and we regard ourselves as fortunate to have done so well. Our foreign business has contributed notably to profits and has a special importance for us, and indeed for the country, but the restrictions now in force on domestic trade are likely to press more heavily on our 1962 profits unless some unforeseen improvement appears.

CONTINUED DEMAND FOR FACILITIES
