During the year thirty-three new branches were opened, in pursuit of the policy of widening our representation. The demand for banking facilities is still growing and our continued branch extension has been proved worthwhile by the increasing number of accounts on our books; we look for a steady progress in this. The acquisition, erection and equipment of new branches is an exacting business and, when added to the regular work of maintaining and improving old ones, it has meant a hard task for our Premises Department, which has been handled with great credit. Installation of up-to-date mechanical and electronic equipment has been on an increased scale, and much of it calls for expert operating skill; we must expect still greater developments in this interesting field, whereby we hope to relieve the staff of much routine work and to get through it more quickly. Indeed, the general increase in our whole business in branches and in departments has brought a hard year's work to our staff, and they have coped with it admirably. Much credit for their success must go to the cumulative gains from our staff training system and to the enthusiasm of those who teach as well as of those who are taught. Great care is given to attaining the best value in the concentrated courses which are run, and those who have seen our Staff Training College in operation can have no doubt of the valuable work done there.

Once again the Board can congratulate our Management, under Mr Chesterfield's continued good leadership, for the enterprise and success with which they have tackled a very busy year in our Bank.

FOREIGN AND ULSTER BANKS

In Westminster Foreign Bank we have been at pains to enlarge the scope of operations particularly with an eye to meeting our customers' awareness of the possibilities of enlarged Continental trade. In terms of Deposits the Bank is bound to remain far behind the great national French and Belgian banks; our aim is rather to develop and improve the services we can render and in this we believe there is a useful part to play.

There have been important constitutional changes in Ulster Bank, whereby the Senior Director, Mr Hugh Clark, has been appointed Chairman and the Board has been strengthened by the election of Mr C. A. Brett, Rt. Hon. Terence M. O'Neill, Mr F. J. O'Reilly, and Mr D. McC. Watson, with two appointments from Westminster Bank—Lord Aldenham and Mr Chesterfield. Mr Clark and his colleagues are to be congratulated on a splendid year's work which has expanded the business of the Bank and produced good results. Last December the paid-up capital of Ulster Bank was increased by £1,250,000, of which £1 million was a capitalisa-

tion of reserves, and 250.000 shares were subscribed for in cash by Westminster Bank, at £2 per £1 share. The issued capital is now £2,250,000 fully paid up ; there is £250,000 in Share Premium account; and £1,950,000 in published Reserve. The total of these is £4,450,000, being £1,600,000 more than a year ago. In the same operation the whole reserve liability of £2 million was cancelled by Court sanction.

BALANCE-OF-PAYMENTS CRISIS

The two outstanding events of the year were the balance-of-payments crisis of July and the decision to negotiate for the United Kingdom's entry to the European Common Market. The issues involved in each case have been fully described in official statements and public comment and they are widely known, it being notable that British exports have an underlying *importance in each case.*

The July crisis was precipitated by the loss in that month of £114 million in gold and convertible currency reserves—the largest monthly loss for ten years ; and this came on top of regular losses in the five previous months. The culmination was deferred by the Basle Agreement of March whereby central banks of leading countries agreed to hold each other's currencies in substantial amounts for short periods ; but, when it came, the crisis was the more severe and provoked a flight from sterling. The Government's measures to cope with the situation were loudly heralded in advance for their originality, but in the event those which immediately affected the banks had little novelty: an increase in Bank Rate from 5 per cent to 7 per cent : an increase in the proportion of deposits of London Clearing Banks to be frozen as Special Deposits at the Bank of England from 2 per cent to 3 per cent ; and a revival of the credit squeeze except to exporting customers, with a request to maintain a minimum of 30 per cent ratio of liquid assets to deposits—which means a much higher average ratio than 30 per cent.

BANKS FACE COMPETITION

When the financial restrictions were put before the banks they undertook to comply on the assumption that corresponding restraints would be respected by other deposit-takers and credit-givers. In recent years we have had to face competition from a number of sources for cash balances. An important one is the attraction of Treasury Bills themselves, and when the spare cash of industry is diverted to these it is effectively withdrawn from circulation in the banking system; the same applies to deposits with Trustee Savings Banks. Where the borrowers are commercial companies these balances do at least remain in circulation, but such non-banking concerns—some holding very large deposits—are neither required nor even expected to observe the same limitations as the banks in employing those deposits. It would seem reasonable that they should bear some share of the onerous part played by the banks as victims of first resort in these too familiar financial crises.

That this is recognised by the authorities, as well as by the Radcliffe Committee, is shown by the Treasury evidence to that Committee in 1957, which referred to proposals for meeting the point. We still await the revelation of these proposals with natural interest. For many years all business undertakings of important size have forgone part of "the glorious privilege of being independent" and as one of the London Clearing Banks we can hardly be accused of doing less than our share in this. It is in contrast with this curtailment that there is still practically no restriction on the general freedom to invite deposits from the public, and that there is no definition of a "bank." We may compare the law of the United States which prevents anyone setting up as a banker without a national or State charter, nor may hire purchase companies in that country take deposits from the public. We cannot fail to be concerned at the erosion of our main source of business by privileged competitors, and at the encroachment on our freedom by the Special Deposit device. This was introduced in 1960 as a temporary expedient, but no part of these Deposits has yet been released—quite the contrary.

A DISTASTEFUL TASK

The application of the July measures to our business may seem appropriate to the need to stimulate exports and check home consumption, but it is by no means always easy to classify industries as exporting or non-exporting, and a ruthless discrimination is bound to err. Moreover, in imposing these restrictions the Bank has the distasteful task of checking its own and its customers' progress. We greatly appreciate the way our customers have accepted this

SUMMARISED BALANCE SHEET

situation by adapting their needs to this renewed squeeze. We are, however, puzzled by hearing from more than one customer that they had permission to borrow abroad at short term for financing that very home trade which we are asked to discourage in order to create balances of foreign currency. Such borrowing would be a direct frustration of the efforts so laboriously made.

These admittedly short-term remedies, with the important pay pause, heavily supported by a large loan from the International Monetary Fund (£535 million) and a credit (of £179 million which was not in fact drawn upon) from the same source, did indeed quickly succeed in achieving a recovery in the sterling exchange—from a quotation of $2.78½ in July the rate rose to $2.81 11/16 by October. It is to be noted however that this strength of sterling was flattered by the weakness of the dollar ; and that much of the balances attracted to London by high interest rates was fugitive or "hot" money.

However, it is of much more importance than the incidence of these remedial steps that the weakness they were designed to cure is so acute and so chronic. Prevention has yet to be found, and though the problem is so old its solution has so far eluded all attempts. Certainly it is far too complex to be solved by any one sovereign remedy, but much more is required than the trumpet calls of exhortation. The difficulty is made greater by reason of sterling being a reserve currency in which so much of the world does its trade or reckons its values; only the dollar has a comparative importance. Sterling is therefore exposed to set-backs in many countries besides our own. But it is part of the function of a reserve currency to be bought and sold in a big way and the risks as well as the benefits—and there are benefits—have to be faced.

The United Kingdom's balance of trade is, however, by far the biggest factor affecting sterling, because both the multitude of transactions and their total volume are so vast. By their size and complexity these movements can create those sudden strains which make the balance so precarious. Our total trade exceeds that of any of the six Common Market countries; and per head of population it exceeds that of either Western Germany, France, Italy or the U.S.A. Yet our gold and foreign exchange reserves in proportion to imports are the least of any of these countries. Such an enormous volume of trade could not be carried on such slender resources without the elaborate commercial structure which has been evolved through centuries, and drawn so much international trade to British markets. The banks have an essential and irreplaceable part to play in this commerce and we may claim to carry our share of it. It is natural therefore that we should be sensitive to the restrictions imposed as a result of strains that are not of our making.

IMPORTANCE OF EXPORTS

The urgent need to promote exports in order to redress the unfavourable trade balance has provoked discussion of the availability and cost of finance for this purpose. A comparatively new feature is that exporters now require long-term credits to match the delayed payment for goods by overseas buyers who lack the sterling exchange to remit against delivery. In former days this would have been unnecessary because credit-worthy foreign governments would raise loans in the London market and so furnish a supply of sterling for their nationals. Thus the finance was provided by British holders of Foreign Bonds who also shouldered the ultimate exchange risk for payment of principal and interest on those Bonds. This form of international finance has been in eclipse for many years because of inflation, political instability abroad, and the weakness of our own payments position; the resulting gap has in fact been partially filled by the banks providing the funds, and the Export Credits Guarantee Department carrying a great part of the risk. Manufacturing companies have of course themselves borne the first slice, but the large sums involved have far exceeded their resources and they look to the banks for the main part.

We have granted substantial accommodation by way of these long-term advances; it is therefore surprising to hear it now said that there is a shortage of this kind of export finance. If there was it could surely be made good by some release of the Special Deposits mentioned above. It would be simple for us to employ sums so released in financing long-term exports without disturbing our liquidity ratio. It is true that the interest charge varies with Bank Rate so that the cost is liable to fluctuation, but this can only be a trivial part of total production costs. In fact, however, this question is under active consideration at the present time. It remains to be said that exports made on deferred payment terms can bring only a deferred benefit to the balance of payments: what is wanted is an immediate benefit.

COMMON MARKET

The Common Market negotiations have naturally aroused widespread interest because, if they are concluded with the entry of the United Kingdom, it will bring about a revolutionary, if gradual, change in British trade.

The negotiations rightly require a proper regard for this country's stake in our domestic agriculture, our Commonwealth trade and our relations with the European Free Trade Association. Outside these three provisos the whole range of business—importing, exporting and home trade—would be open to the opportunities or hazards of the Continental trade system. For some this would mean a much better market; for others, at the opposite end of the scale, the removal of protection against the harsh winds of competition would bring a severe test. The years of adaptation would involve a thorough reappraisal of our markets and production, and in this phase we believe the Bank can serve its customers with advice on trading facilities on the Continent and elsewhere, as well as in providing finance. We have made a point of keeping ourselves abreast of these considerations and they are under constant study by our Economic Intelligence Department and through the connections of our Overseas Branch and the branches of Westminster Foreign Bank in France and Belgium. Our information resources are readily at the disposal of any customer.

The preliminary moves of this Common Market prospect are already engaging the attention of the business community, but the Common Market is not to be seen as a commercial paradise even for those most qualified to trade there. All those Continental countries have enjoyed boom conditions fairly recently and it has yet to be seen whether these will be lasting or transient. It is specially noteworthy that there is for them, as for us, a difficult problem in agriculture—the most fundamental of all industries. And so the chances of success, if the United Kingdom does enter the Common Market, must be regarded with caution as well as hope. Incidentally the mood of expectation in British industry has given added stimulus to the prevalent trend towards the merging of trading companies; the services of Issuing Houses have been heavily engaged in this and in the raising of fresh capital, which has brought brisk activity to the stock markets.

In the meantime, however, nothing is more important than the pressing need to revive our vital export trade within existing market conditions. The severity of last year's experience was a sharp reminder that we cannot look for the prosperity that all desire except from our own exertions. The easy days of the seller's market seem far away and long ago; many important industries have in the last few months reported declining profit margins in the face of competition, and the struggle to keep costs down and to keep wages in step with production has an overwhelming importance. It is this which gives such urgency to the Government's suggestions for co-operation between both sides of industry in forming a realistic estimate of permissible increases in incomes. If the required co-operation is not achieved the chances of overcoming the economic difficulties that threaten us will be greatly reduced. By grappling successfully with the related problems of exports and costs we could transform our prospects; on the other hand another balance-of-payments crisis could make us look back on the troubled year 1961 as a halcyon time.

Æ ASSOCIATED ENGINEERING LTD

Manufacturers and Distributors of Pistons, Piston Rings, Cylinder Liners, Aluminium and Ferrous Castings, Turbine Blades, Machine Tools, Commercial Vehicle Radiators, Heat Exchangers and Presswork of all kinds.

The following are extracts from the circulated statement of the Chairman, Mr H. R. Moore : –

The year under review has been a very difficult one for the U.K. Motor Car Industry, which accounts for about one quarter of our total turnover.

In spite of a reduction of some 30 per cent in motor car production the total value of our supplies to the motor car manufacturers was only some 10 per cent less in 1961 than in 1960. Other main sections of our business were buoyant throughout the year, however, with the result that our total U.K. Group turnover showed only a small decline of 2½ per cent compared with 1960.

(1959 *and* 1960 *adjusted in respect of Capitalisation of Reserves in* 1961.)

Capital Expenditure. A total of £10,200,000 has been sanctioned on our programme of modernisation and expansion which will have to be financed over the next two to three years. It will not be possible to provide this sum fully from our own resources. It is accordingly your Board's intention, as soon as practicable, to make a further issue of Debenture Stock and also to increase the facilities available from the Group's Bankers.

Europe. As our entry into the European Common Market now seems likely to take place we have been giving a lot of thought recently to its effect on our Group. We feel that we are strong enough in this country to meet the competition that may well come from Continental producers and also to give them an extremely good run for their money on their home ground. We are convinced that we have adopted the right policy in acquiring our French and Italian interests and it is our intention to expand them to meet the growing European demand.

Current Outlook. Your Board feels that the difficult trading conditions of the past year will certainly continue during the current year, and probably into the succeeding year, before there is another real surge forward.

My colleagues and I are as confident as ever in the long-term prospects of your Group, and we are determined to see that it is equipped throughout the world with the best that we can provide in the way of brains and machinery.

Lord Monckton reviews the year for the MIDLAND

The one hundred and twenty-sixth Annual General Meeting of Midland Bank Limited will be held on 16th February, 1962, at the Head Office, Poultry, London, E.C.2. The following are extracts from the Statement to the Shareholders by the Chairman, The Right Honourable The Viscount Monckton of Brenchley, P.C., K.C.M.G., K.C.V.O., M.C., Q.C.:

Last summer Britain's economy was under strain and sterling was suffering severe pressure: the situation afforded another example of the disturbing "rhythmic alternation" in our country's affairs which I mentioned a year ago. Once more a serious balance of payments position gave its warning light. This time, in addition to measures aiming at the restriction of credit, the Government's remedies included fiscal action comprising surcharges over practically the whole range of customs and excise duties and purchase tax. The effect of the credit restrictions was exceptionally severe. Bank rate, raised to seven per cent in July, was still as high as six per cent when the year ended. Further Special Deposits were called for from the banking system, increasing these to three per cent of gross deposits for the clearing banks. At the same time the banks were required, individually as well as collectively, to observe closely the minimum ratio to gross deposits of thirty per cent of liquid assets, from which Special Deposits are excluded. And the banks were asked to curtail the rise in advances, particularly for personal consumption and speculative building and property development.

Other financial institutions were invited to exercise restraint on similar lines, but it was towards bank lending that the sternest measures were addressed. It is worth recalling, as we look back over the post-war years, that only for a brief period from the middle of 1958 have the banks enjoyed freedom from official restrictions on their lending operations. It is still more significant that the 1961 measures brought bank credit under restrictions even more drastic and far reaching than in previous post-war years.

There is no doubt that the situation as it developed by mid-1961 called for action that would immediately restore external confidence in the currency. This was in fact achieved by the steps already mentioned, combined with the arrangements made between central banks at Basle and by the large-scale borrowing and stand-by facilities from the International Monetary Fund.

These measures were successful in their immediate purpose of averting the threatened crisis. But temporary relief of this nature can be dearly bought. High interest rates put an added burden on the public finances and on the cost of capital investment, besides further diminishing any small net revenue from invisible items in this country's balance of payments. Again, the monetary restrictions can hardly fail to inhibit the steady growth of the economy on which ultimate success in the way of maintaining or increasing living standards depends. And as the Radcliffe Committee on the Working of the Monetary System concluded: "Monetary measures cannot alone be relied upon to keep in nice balance an economy subject to major strains from both without and within." These strains include the relationship between the rise in incomes and that in production and so it was necessary to appeal for restraint in increases in personal incomes which could have undermined further our competitive position overseas.

Even with the full armoury of monetary instruments in action, it cannot be claimed that we have yet found a means of containing inflation without arresting economic growth.

The insistent need to find an effective policy to overcome these difficulties calls for close and continuing study by some such body as the proposed National Economic Development Council. There are, however, it seems to me—two prerequisites for success in this task. The first is to establish such confidence as will command the co-operation and understanding of all sections of the community. The second is an assurance that its work can be performed against the background of a national policy which recognises that commitments of all kinds should not exceed available resources, and that these last can only be increased by effort, skill and initiative.

CHANGES IN ECONOMIC AND FINANCIAL CONDITIONS

Some of the difficulties of applying remedial measures result from the interdependence of domestic and external conditions. They are also made the more acute by fundamental changes in the environment in which the authorities have to operate. The heavy pressures on sterling, and periodic strain on the dollar, reflect these changes in international and domestic economic circumstances.

Industrial countries in Europe and elsewhere, which barely a decade ago were struggling to emerge from war-time disorders, have, with generous aid from the United States, now recovered to display new-found strength. With the extension of convertibility, other currencies besides sterling and the dollar have been in demand. Moreover, what were once dependent territories have emerged as new self-governing nations, with currency systems of their own. These and other countries with economies largely dependent on production of primary products, have also shown a determination to accelerate the development of secondary industry.

Within individual countries, too, financial systems have developed in new directions, sometimes affecting international monetary conditions. Other changes may be near at hand if Britain's entry into the Common Market is successfully negotiated, since this may be expected to involve adjustments of many kinds in business arrangements and important shifts in the pattern of trade.

Sterling plays a major part as a medium in world trade and the British banking system has for generations been accustomed to provide an international service in that field. I am confident that with the wealth of experience and the highly developed organisation at its command that system will readily adapt itself to any further changes in pattern.

In international, as in domestic monetary conditions, there are new circumstances calling for new methods of combating economic disturbances. Co-operation among central banks is by no means novel, though it was employed on a massive scale and with remarkable speed to assist sterling last year. The support for Britain provided by the International Monetary Fund was unprecedented in size in the history of the Fund. An extension of the resources and scope of the fund to enable it to provide greater assistance to members confronted with currency disturbances would seem to me one of the most constructive steps that might be taken in the field of international monetary policy. It is therefore regrettable that the most recent proposals for improvements in the Fund's facilities seem to be less suited to the needs of our times than might have been hoped. It would perhaps have been more realistic to have reviewed and adjusted the International Monetary Fund quotas which were fixed in the first place for a smaller number of member countries under very different conditions from those prevailing today.

DOMESTIC BANKING

Although the banks' lending activities were curtailed, they were able to move forward in improving services in other directions, notably by the extension of the credit transfer system so as to make it more widely available. In December last clearings of credit transfers amounted to £484 m.; this was little more than 2½ per cent of all cheque clearings, but represented about thirteen per cent of the total for the general cheque clearing. Despite this promising start, it would be unwise to assume a sustained high rate of growth in the new service over the years to come. It has to be borne in mind that in Britain, as in the United States, the use of cheques based on highly organised and smooth-working clearing arrangements has become well established in business and personal transactions.

Indeed, it can safely be said that the use of cheques would have become even more extensive but for the fact that the cost of the cheque to the user is loaded with a twopenny stamp duty. Quite apart from the deterrent to the prospective user, in order to collect a relatively small revenue—the tax provides about £5 m. a year—a heavy nuisance cost has to be borne; 600 m. cheques must be franked, and the sums debited, in amounts generally of a few shillings at a time, to the accounts of millions of bank customers each year. Nowadays an increased reliance on cheques could well be encouraged, not only on grounds of ease and simplicity in remittance, but also to lessen the risks inherent in transmitting currency which recent events have made all too familiar.

MIDLAND BANK AFFAIRS

During the year the paid-up capital of the Bank was increased from £24.2 m. to £40.3 m., in part by the capitalisation of £8.1 m. of reserves, and in part by the issue of eight million £1 shares at a price of £3 a share. Notwithstanding the decline in advances since July last, our volume of lending for 1961 as a whole was larger than in the previous year, and the level of interest rates was higher. This, with the general growth in our business, contributed to an expansion in earnings. Although salaries and other costs were also higher, our net profit is larger by £542,000 at £5,043,000. A final dividend is proposed of 7½ per cent less income tax, on the enlarged capital, following the interim dividend of 9½ per cent, less tax, on the capital as it was before the increase. This is in accordance with the expectations held out to shareholders at the time of the increase in capital last spring.

Our affiliated banks, the Clydesdale & North of Scotland Bank Limited and the Belfast Banking Company Limited, both show increased profits for the past year. The business of the Midland Bank Executor and Trustee Company Limited has expanded satisfactorily. The Forward Trust Limited experienced a difficult year and provision had to be made for bad debts arising from certain block discounting commitments. This was met by a subvention payment of £1,300,000 from the Bank.

The effect of the economic situation and the Government's policy in regard thereto was evident in the trend of our own figures. At the end of the first six months of 1961, the total for our deposits had risen, after fluctuations following a seasonal pattern but in the second half year the upward movement was checked. July as a turning point was still more evident in our advances figures. On June 30th they had reached £822 m., the highest level for the year and in the history of the Bank. During the following two-and-a-half months they fell by £70 m., and thereafter the downward trend continued slowly.

In pursuance of the Government's policy to restrict lending, we have, as on previous occasions in post-war years, met with co-operation and understanding from our customers, and I take this opportunity of thanking them for their forbearance. Many requests for support for sound development, which ordinarily we should have been pleased to grant, have had to be refused. It has been particularly disturbing for us to have had to curb the growth of our distinctive term-loan scheme for small businesses, long-term loans for farmers, and lending through our personal loans scheme. Indeed, during the past year we have seen the aggregate advanced under this last scheme falling steadily, until the amount outstanding has diminished to barely one-half the highest figure reached. Since its introduction the scheme has provided assistance through nearly 350,000 accounts.

The range and volume of assistance provided by the joint stock banks for exporters and the successive steps taken to improve facilities are not always appreciated. A large proportion of our ordinary lending goes to assist in the manufacture and preparation of goods for export, while in financing the international movement of goods our services are widely used. Where our customers have had to extend credit to overseas buyers, in the short- or medium-term, we have financed this to a record extent during the past year.

Over the whole field the volume of our foreign business again increased last year, by about six per cent, while the number of overseas payments made on behalf of customers rose by ten per cent. With the liberalisation of the currency allowance for journeys abroad and the increase in foreign travel for business and pleasure, this Bank's Travellers Cheques have been in great demand. Last year we issued nearly three millions of them, as compared with 2½ millions in 1960 and 1½ millions ten years previously.

In my Statement four years ago I referred to the special arrangements which had been made within the Bank for supplying information and general assistance for businessmen seeking to enter or extend trade with European countries. During 1961, our arrangements were carried further, particularly through the setting up of a Panel for European Trade. The Panel will ensure that all inquiries from customers and the public, but more especially those from commercial undertakings unable to maintain specialist departments of their own, will receive speedy and full attention. Senior officials serving on the Panel will devote much of their time to visiting the Continent in order to keep abreast of developments there.

OFFICE WORK AND ELECTRONICS

The numbers of current and deposit accounts opened again rose substantially, and I am pleased to report a further increase in the number of Personal Cheque Accounts, under our special scheme which provides "basic" cheque facilities at a low, pre-determined cost. We have continued our policy of establishing new branches and modernizing existing premises. During the year 60 new offices were opened.

With the growing volume of office work, we have intensified our efforts to make improvements in method and through further mechanisation. We are arranging to install two sorting machines and an electronic computer. The sorting machines will each be capable of sorting vouchers at a rate of up to 900 a minute. Our first computer centre will be established in the West End of London, where it will undertake the ledger-posting operations of sixty neighbouring branches.

MIDLAND BANK LIMITED

THE LANCASHIRE STEEL CORPORATION

INCREASED COSTS—FALL IN DEMAND—DIVIDEND MAINTAINED

Mr Philip E. Holloway reviews Corporation's activities and prospects for the future

The 32nd Annual General Meeting of The Lancashire Steel Corporation Limited will be held on February 14th at the Masonic Hall, Winmarleigh Street, Warrington.

The following is the review of the Chairman, **Mr Philip E. Holloway,** *circulated with the report and accounts for the year ended September* 30, 1961:

Before reviewing the results for the year ended September 30, 1961, I must first pay a tribute to Sir John James, who retired at the end of September after 30 years as Chairman of the Corporation and its Subsidiary Companies.

Sir John came to the Lancashire Steel Corporation as Chairman and Managing Director in 1931, shortly after the formation of the Corporation at a time when its affairs were at a very low ebb and the outlook for the steel industry generally was indeed dark. It is no exaggeration to say that, had it not been for his far-sighted and skilful handling of the situation, the company might well not have survived those early years. Since that time, under his wise guidance and leadership, the company has progressed and expanded to reach its present high state of efficiency.

As an expression of appreciation and gratitude for Sir John's outstanding services to the Corporation, your Directors feel it appropriate that he should be appointed President. A change in the Articles of Association is necessary, and a Resolution to enable this appointment to be made will be submitted to the Annual Meeting.

Sir John will be remembered not only for his outstanding business ability, but also for his unfailing kindness and interest in the well-being of all the employees and the close personal touch he kept with everyone connected with the group. We wish him a happy retirement and a well-earned rest after his many years in the industry. His interest in the affairs of the group is, however, as great as ever, and I am glad to say that his unrivalled knowledge of the steel industry is still at our disposal.

On Sir John's retirement, your Board did me the great honour of appointing me as Chairman of the Corporation and its Subsidiary Companies. It will indeed be hard to follow a man of Sir John's outstanding ability, but in facing the difficulties which lie ahead I am encouraged by the assured support of my colleagues with whom I have worked for so many years.

On taking up these appointments I relinquished the position of Managing Director of Lancashire Steel Manufacturing Company. Mr G. B. Thomas has been appointed to this position, and has also joined the Board of the Corporation. It will be my pleasure to propose his re-election at the Annual General Meeting.

I must also refer to Mr G. K. Rylands' retirement at the end of September, 1961. Mr Rylands joined Rylands Brothers in May, 1919, where he worked under Sir Peter Rylands until the latter's death in 1948. He was then appointed Managing Director of that company and Whitecross Company Limited, and continued in that capacity until his retirement. Our thanks are due to him for his services to Rylands Brothers for more than 40 years, for the great part he played in the re-organisation and development of that company and Whitecross, and for his valuable work as a member of the Board of the Corporation. Mr Rylands also played a leading part in the affairs of the wire industry for many years as Chairman or member of numerous Committees, and from December, 1948, as Chairman of the British Steel Wire Industries Association, later the Institute of Iron & Steel Wire Manufacturers. We wish him also a long and happy retirement.

Mr R. S. Bleckly has been appointed Managing Director of Rylands Brothers Limited and Whitecross Company Limited.

REVIEW OF PROFITS

I regret to report a fall of nearly £700,000 in the Manufacturing and Trading Profit for the year compared with 1960. Despite this disappointing result—the first reduction in profit since 1957, a year which was seriously affected by price awards determined by the Iron and Steel Board, and the lightning strike of the company's skilled maintenance men—the Manufacturing and Trading Profit for the year under review is still the third highest in the company's history. It is, in fact, only some £150,000 below the profit for 1959, which, until surpassed by 1960, was itself a record by a considerable margin.

The reasons for the reduction in profit this year are largely common to the steel industry as a whole. They are explained in greater detail later in this Statement.

"Other Income," i.e., Income from Trade and Other Investments, Interest on Loans, Tax Reserve Certificates, etc., is almost exactly the same as last year. It has now, however, been necessary to make overdraft arrangements with our bankers in order to finance the completion of our development programme. This will obviously have the effect of reducing considerably "Other Income" in the current year.

Partly as a result of the fall in Manufacturing Profit, the taxation liability shows a reduction of some £560,000 compared with the previous year. Another factor in this reduction, however, is the large taxation relief of approximately £475,000 (1960—£205,000) as a result of Investment Allowances on Capital Expenditure, which amounted to the exceptionally large figure, in our case, of £4,653,000. The Directors have thought it desirable to transfer an amount of £475,000, equivalent to the taxation relief, to Reserves for Replacement of Fixed Assets.

Although the Available Income shows a considerable fall for the year it still amounts to £1,532,000, and the Directors feel justified in maintaining the dividend on the Ordinary Shares at 11 per cent, the same rate as last year.

After providing for this dividend, the balance of £767,000 has been transferred to Revenue Reserves.

CONSOLIDATED BALANCE SHEET

As a result of the heavy capital expenditure during the year, the surplus of Current Assets over Liabilities, which was approximately £9 million at October 1, 1960, has fallen to just under £6,700,000, a decrease of some £2,300,000. This was, of course, to be expected—it was for the purpose of defraying the capital expenditure programme now in hand that the large surplus was built up.

The completion of our development programme in the next two years together with additional necessary capital expenditure will result in a further drain on our liquid resources, but I am glad to report that early in 1961 we arranged financial accommodation with our bankers which it is expected will enable this expenditure to be met without the necessity of raising permanent capital.

THE YEAR'S TRADING

Productions of the main sections of the steel works compared as follows with those of the year 1960:

	1961 Tons	1960 Tons	%	Plus/ Minus
Coke	423,000	355,000	+	19
Pig Iron	364,000	332,000	+	10
Ingots	598,000	599,000		—
Rods	354,000	385,000	—	8
Re-Rolled Products	62,000	66,000	—	6

The production of coke and pig iron for the year, in each case, constituted a record to date.

Unfortunately, the production figures are by no means reflected in the Manufacturing and Trading Profit, due to two main causes:

(a) **Increased Costs.** The increased charges for coal, electricity and freight which came into effect during the latter part of 1960, materially increased the cost of production throughout the year.

In addition, in April, 1961, the Government imposed a tax of 2d. per gallon on heavy hydrocarbon fuel oil, and later increased this in the Chancellor's "little budget" in July by a further 10 per cent. In common with other steel producers our furnaces were converted to fuel oil burning some years ago in view of the lower cost and advantages of oil and in conformity with the Government's policy to increase the use of liquid against solid fuels. The new taxes have resulted in an increase in our fuel cost equivalent to some 8s. per ton of steel.

Since September, 1960, therefore, cost increases, all of which are completely outside the control of the industry, have seriously affected our margins. Even taking earlier cost savings into account, the net cost increases over the past year are estimated to be well over 30s. a ton of finished steel. Against this the Iron and Steel Board has so far only awarded an increase in steel prices of 1 per cent—averaging, in our case, some 8s. 6d. per ton. And this only took effect from June 19, 1961.

In addition, during the last 18 months the industry has had to absorb the additional cost arising from an extension of the 42-hour week without loss of wages to workers not engaged in continuous processes.

We hear a great deal today to the effect that increases in costs can be offset by increased productivity. The steel industry has, since the war, spent vast sums on modernisation and extension to their plants, and this has undoubtedly enabled cost increases to be absorbed to some extent. Nevertheless, there must come a time when, short of large technological developments, continually increased charges on the scale of recent years cannot be absorbed, and it was certainly not possible to absorb them during the year under review.

(b) **Fall in demand.** A second factor which materially affected the year's profits was that, although demand for our products was maintained at a reasonably high level until the spring of 1961, in the summer a slackening of demand became apparent, due in large part to "destocking" as the financial pressure of the Government's credit squeeze made itself felt on users of steel and wire.

In a steel works the effect of a cut-back in the rate of production has a particularly marked and serious effect on costs. For a short time, therefore, in the hope that the fall in demand would be only temporary, production of billets at a normal rate was maintained, but the reduced demand continued and, with the consequent rise in stock and work-in-progress, production had to be curtailed and shift working reduced in some departments.

The fall in sales of finished products was naturally reflected in a fall in profits.

EXPORT

During the year, efforts were made to expand the sale of our products in export markets, but so far with only limited success due to the extraordinarily low prices which at present rule therein. It is almost impossible to match these prices without a reduction to a level approaching the bare cost of production.

I fully appreciate the need for increased exports so often stressed by Government spokesmen, but certain aspects of official policy do not help to achieve this end. With low profit margins at home it is clearly impossible to accept orders from abroad at unprofitable levels, and in my view it will be extremely difficult to meet the intense competition in the export market until home margins are restored.

DEVELOPMENT

Substantial progress was made during the year in our development programme, the position reached in the case of the larger projects being:

Iron and Steel

Ore Handling Scheme. The ore handling scheme at the wharf on the Manchester Ship Canal is now complete and in operation.

Coal Stocking and Blending Plant. It is expected that the first stage of this plant will come into operation in March, and the second stage in June, 1962.

Ore Drying Plant. This plant came into operation late in the year. It is already proving of great benefit in simplifying the handling of wet ores for direct use in the blast furnaces and will be invaluable for use with the new sinter plant.

Sinter Plant. Unfortunately, progress on the sinter plant has suffered due to late delivery of steelwork by some of the contracting firms; it is now scheduled to come into production in the autumn of 1962.

Steel Furnaces. It is expected that the third 250-ton furnace will come into production in the spring of 1962, and should have a marked effect on costs.

Conversion of the steel furnaces to "all basic" design continued, and, with the exception of two furnaces, is now complete. This has materially increased the furnace lives and consequently reduced the cost of rebuilding which is always a heavy item in a steel plant.

New Rod & Bar Mill. Unfortunately, the new rod and bar mill at Irlam has been somewhat delayed, but is expected to commence production in the summer of 1962. This mill will produce wire rod of the highest quality, and the extra capacity will permit us to modernise and improve the existing Irlam rod mill which was installed in 1933.

WIRE AND WIRE PRODUCTS

During the year Rylands and Whitecross spent £299,000 on capital and development projects, including the installation of further wire-drawing and other machines of the latest type and capable of the highest speeds; a new factory for the production of hinged joint fence ("Rylock"); the installation in the galvanising department of new and better methods of winding in order to produce heavier coils; and other improvements designed to widen the range of our products and increase our efficiency.

OVERSEAS DEVELOPMENT

Unfortunately, the installation of the wire rod mill which it was anticipated would be in operation early in 1961 at the works of our subsidiary company at Que Que, Southern Rhodesia, has been delayed by late delivery of equipment. In addition, due no doubt to the political conditions, there has been a severe falling off in trade generally throughout the Federation, and the two factors have seriously affected the company's operation. The rod mill is now expected to commence rolling in the early months of 1962, and will, I hope, improve matters considerably.

During the year, additional galvanising and other equipment has been installed, and the company is now in a position to supply a wide range of galvanised and bright drawn wire, and well placed to take advantage of a revival in trade.

The adverse trading conditions in the Federation have also affected the Rhodesian Iron and Steel Company, in which the Corporation are shareholders. The first development scheme of that company is now complete, and further developments are being explored.

I am confident that, given a satisfactory solution of the present political difficulties, there will be a prosperous future both for the country and the two companies in which we are interested.

PROSPECTS

In Sir John's review at the Annual General Meeting last year he said that "the prospects for the immediate future are somewhat obscure." This is even more true today.

Amongst the many factors which make it difficult to forecast the immediate future, I may mention that the steel industry at the present time has large surplus capacity which, due to the fall in demand, is far from being utilised, and that new plant now in course of construction or planned will considerably increase that capacity within the next few years—that "de-stocking" by steel users is by no means complete and that it is unlikely that they will again carry stocks to the same extent as in the past—that the Industry is labouring under increased costs which have not so far been offset by commensurate increases in selling prices—that further increases in costs, e.g. in transport charges and in certain coals are coming into effect in the new year—that strong opposition which may well result in industrial disputes or further increases in wages is developing to the "pay pause," and that the Restrictive Trade Practices Act will shortly affect to an unknown extent conditions in the wire industry.

The possibility that this country may enter the Common Market renders the longer term future uncertain, as the conditions under which steel is sold in that market are entirely new to the industry in this country, and, until they have been experienced, it is difficult to estimate to what extent they will affect the British steel industry.

There are, however, hopeful aspects so far as this company is concerned. At the end of August the demand for our rods showed some improvements, which I am glad to say has been maintained, and normal working is in operation in the two rod mills. We expect very shortly to be in a position to supply bars of all types for reinforcing work, and anticipate that this market will materially improve the load on the steel works. Furthermore, the development schemes to which I have referred, and which will come into operation during the year, will undoubtedly strengthen our competitive position.

I am confident, therefore, that given an opportunity to conduct our business on normal commercial principles, this company can face the future with reasoned confidence.

I must, however, warn Shareholders that the profits of the current year to date are appreciably below those for the corresponding period of 1960-61, and, unless there is a marked upsurge in demand in the immediate future, and an alleviation of some of the burdens under which we are labouring, the profits for the current year are unlikely to equal those of last year.

STAFF

During a difficult year, we have been well served by the loyal and devoted efforts of all our employees, on whom the company so greatly depends, and, on behalf of myself and the Board, I take this opportunity of extending our sincere thanks to them.

RICHARD THOMAS & BALDWINS LIMITED

Changed Market Conditions: Reduction in Profits

Europe's most advanced steelworks takes shape

Chairman reviews year of transition

The following are extracts from Statement circulated with the Accounts by the Chairman, Mr. G. C. R. ELEY, CBE.

In my Statement last year when discussing prospects for 1960/61, I remarked that the first months of the New Year had witnessed a general easing in demand for Steel Sheet and Tinplate and lower prices in export markets; that wages had risen; and that the price of coal, one of our main raw materials, had been abruptly increased, and that this was likely to lead to consequential increases in the cost of electricity and other services. Profit margins were being pared from both above and below, while turnover was being checked. I continued:—

"None of our present main development schemes will contribute materially to our profits during the current financial year so that, unless there is a recovery in demand, it would be unwise to expect our trading profits to be as high as they were last year. Indeed, they are likely to be lower. Out of these profits we shall have to meet higher interest and other charges on our large development expenditures at Llanwern and elsewhere."

In the event, the situation revealed during those first months worsened appreciably as the year advanced. In July the credit squeeze was tightened sharply with a resultant restriction on hire purchase finance for consumer goods. At the same time, bank rate was raised to 7%, which provided an immediate inducement for industry to begin running down its considerable stocks. The demand for steel fell rapidly, and export prices dropped until they carried little and often no element of profit. The drastic character of the change in the Steel Industry's prosperity is illustrated by the fact that the utilisation of British steel-making capacity is estimated as a whole to have fallen from 92% in the first quarter of 1961 to 78% in the third quarter.

TURNOVER AND TRADING PROFITS

In our own case, turnover during the year fell from £103,500,000 to £96,000,000, and Manufacturing and Trading Profits from £11,757,725 to £9,106,246. The principal causes of this severe drop were:—

1. During 1960/61, R.T.B. suffered exceptionally from being in a transitional period. For example:—
   (a) In changed market conditions we have still had to use unprepared blast furnace burdens at Ebbw Vale and Redbourn, with consequent high coke consumption. This will be corrected when our new ore preparation and sinter plants become operative during the latter half of our current financial year.
   (b) We were still operating a number of old-type steelworks and sheet mills in West Wales, Monmouthshire and the Midlands. In a time of high demand, profitable export prices, and reasonable margins in the home trade—such as ruled in 1959/60—these old-type plants were able to make a fair contribution to our profits. However, in a time of poor demand, low export prices, and weak margins in the home trade, most of these Works became a liability. As I report later in my Statement, we closed certain of these Works during the year.
   (c) Electrolytic tinning capacity at Ebbw Vale was insufficient to meet the changing demand for electrolytically coated plate in substitution for tinplate manufactured by the hot-dipped process. This is being remedied by the construction of our second electrolytic tinning line, which has just been brought into effective production and is amongst the most modern in the world.
2. The considerable increases in the price of coal and other materials, in wages and in many other costs—including the tax on heavy oils and coal tar fuels introduced in the Budget—which have occurred since September, 1960. These were only fractionally offset by the Iron and Steel Board's small increase in home trade maximum prices in June, 1961.
3. The reduction in our total volume of sales by over 7% and the intense competition in export markets, which resulted, as the period advanced, in quite unremunerative prices overseas. We have always been substantial exporters and our direct exports in 1960/61 amounted to nearly £19,000,000.
4. Keen competition in the home market, which forced down prices for secondary and subprime materials—inevitable by-products in our section of the industry—to abnormally low levels.

NET PROFITS AND DIVIDEND

Net Profit before taxation, after providing for interest and other expenses on all our normal development schemes, and for redundancy payments and stock losses on the closure of certain old-type Works, amounted to £4,054,020, by comparison with £11,188,733 in the previous year. The exceptional and gigantic scale of Spencer Works—involving more than doubling the Company's assets—has led us to decide that until it is completed and brought into production, charges associated with it—£2,748,339 in the current year—should not properly be borne out of trading profits. They could be capitalised, but we have preferred to provide for them out of our General Revenue Reserve.

The Net Profit applicable to the Group, after taxation—which was negligible owing to the relief provided by investment allowances—amounted to £4,113,496 as against £8,796,700 in 1959/60.

Our capital expenditure during the year amounted to over £80,000,000 (including £65,500,000 for Spencer Works) as against some £37,000,000 in 1959/60. The great bulk of this expenditure had to be found by borrowing and on this borrowing we have had to pay interest, owing to bank rate increases, at unexpectedly high rates. Excluding Spencer Works, our outgoings for interest amounted to £812,545, by comparison with £133,170 in the previous year. The interest charges in respect of Spencer Works amounted to £2,185,000. In the circumstances described, your Directors have recommended the payment of a final dividend of 2½% (9% last year), making a total of 6½% for the full year (13½% last year), and are allocating £1,950,000 to Fixed Assets Replacement Reserve and £2,200,000 to General Revenue Reserve. The surplus carried forward will be £8,540,605. Next year it is intended to discontinue the payment of an interim dividend and to decide on the year's dividend when the full results are known.

THE ACCOUNTS

Turning to the Consolidated Balance Sheet, I would call your attention to the fact that Capital Reserves stand at £23,367,473. General Revenue Reserve stands at £20,449,760, after charging the expenditure associated with Spencer Works and the provisions for past service pension contributions referred to below. Loans for all purposes increased from £9,571,476 to £81,800,000 and creditors for Development Schemes rose from £12,026,705 to £20,237,972. Bank overdrafts at £8,631,681 were lower than last year by £1,598,385.

At the beginning of the year, we transferred £1,900,000 from General Revenue Reserve to a provision for pension contributions in respect of past service. It is estimated that this will take care of the payments that we shall have to make during the next seven years in connection with the past service element of our pension schemes. The provision now stands in our Balance Sheet at £1,650,000 after having been debited with £250,000 for contributions paid out during the current year. The main feature on the Assets side of the Balance Sheet is the increase in Land, Buildings, Plant, etc., from £75,196,202 to £151,277,712. This is the broad measure of the year's Capital Expenditure after deducting depreciation.

The reduction of £50,000 in Trade Investments is accounted for by the repayment of a loan of £100,000 made to William Robertson Ltd. and calls of £50,000 on our shares in British Ore Investment Corporation Ltd. Further calls will become due on this investment, and these, together with a sum of £400,000 which we have guaranteed, may ultimately amount to £1,055,000.

THE FUTURE

As I have explained earlier, the steel industry is currently involved in a recession. This came on suddenly, was intensified by the various credit restriction measures, upset all previous calculations, and has outlasted expectations. Although it seems possible that the bottom has been reached, and that we may anticipate a return to more normal conditions towards the end of 1962, it must be remembered that substantial additional capacity will be brought into operation in Britain during the course of the year. Moreover, the rate of increase in productive capacity, both here and overseas, has for the time being outstripped demand.

In these circumstances, competition is certain to remain keen, and remunerative prices in export markets may be even more difficult to secure. Such factors make it unusually difficult to forecast the level of our trading profits in the coming financial year. It is clear, however, that there will have to be a considerable improvement in demand—and an increase in prices—if trading profits are to equal or to be better than those in the period under review. Our development schemes should come into production during 1962, but are unlikely to make any significant contribution to our trading profits before 1963. Out of the current year's trading profits we shall have to bear very large additional amounts for interest, depreciation and other charges.

The difficult conditions I have outlined present a challenge which we are taking up energetically—a challenge to reduce costs, to improve qualities still further, and to intensify our selling efforts throughout the world. As I have already indicated, it is now estimated that demand, at any rate in the immediate future, will be lower while productive capacity will be higher than was expected when we embarked upon our development schemes and subsequently enlarged them to meet the request of the Iron and Steel Board to increase output. Nevertheless, when our new capacity is in production and demand is once again expanding, we should reap an appropriate harvest. We have every confidence in the Company's long-term future, and in its substantial growth potential.

SPENCER WORKS

Construction of our new integrated steel works at Llanwern, Nr. Newport, proceeded steadily during 1961. The blast furnaces, cooling towers, gas-holders, coke ovens and huge hot-rolling and cold-rolling buildings have assumed their final shapes, and the plant and equipment is in the finishing stages of installation; 35 miles of railway track have been laid, and 20 miles of roads completed. The new Waltwood Reservoir has been finished and the imported ore conveying system has been completed and is in use. If work continues to go forward according to plan, production should commence during the first half of 1962 and the full productive capacity be available by the end of the year. Stocking of raw materials preparatory to the commencement of operations has already begun. Automatic control of the hot strip and cold reduction mills is being installed and improved efficiency should result.

OTHER DEVELOPMENTS

At Redbourn, the development scheme has taken longer to complete than was envisaged, but the ore preparation plant and the continuous billet mill should be in operation by the end of April, 1962. The Rotor furnace has been completed and experimental work is in progress. At Panteg the new Sendzimir mill for the cold reduction of stainless steel coils is in operation and progress is being made with the erection of the experimental continuous casting plant.

CLOSURE OF OLD-TYPE WORKS

I have already referred to the disadvantages of old-type works in current circumstances. During 1961 it became necessary for us to close the Dyffryn steelworks and billet mill, the Abercarn tinning plant, and the foundries at the Machynys Foundry & Engineering Works. Subsequently we have had to announce the closure of the Pontnewynydd Sheet Works and the Pontymister Steel Works and Foundries of our subsidiary company, Partridge, Jones and John Paton, Ltd.

TRIBUTE TO THE STAFF

The year under review has been exacting for employees at all levels. There has been sufficient battle on the normal business front fully to engage any organisation. When you remember that this unexpectedly strenuous fight has been against the background of our huge new expansion programmes, which have called for ceaseless flexibility and ingenuity in dealing with the flow of problems that inevitably accompany such changes, you will appreciate the sincerity with which I extend my thanks to your Managing Director, Mr. Spencer—a fighter if ever there was one—his executive colleagues, and to every other member of our organisation, both staff and operatives. Although, in common with the rest of the steel industry, we are moving through difficult times, I know that all employees will share my confidence in the future.

RTB

LLOYD'S PACKING WAREHOUSES (HOLDINGS) LIMITED

Statement by the Chairman

SIR ERIC A. CARPENTER O.B.E.

Reorganisation for future benefit

In his speech at the sixty-sixth annual general meeting of Lloyd's Packing Warehouses (Holdings) Limited on February 7, 1962, the Chairman, **Sir Eric A. Carpenter, O.B.E.**, will report with regret a Group Trading Loss of £527,912 reducing, after adjustments in respect of Taxation, outside shareholders' interests and pre-acquisition profits, to a Nett Loss of £468,886.

After transferring £100,000 from Stock and Contingencies Reserve and £50,000 from General Reserve, and adding £452,777, the balance brought forward from the previous year, there is an available balance in the Group of £133,891.

An Interim Dividend of 2½ per cent (less Income Tax) was paid on the Ordinary Stock in July, 1961, and your Directors recommend the payment of a Final Dividend of 2½ per cent (less Income Tax) on that Stock, making a total of 5 per cent (less Income Tax) for the year.

The Dividends on the Preference and Ordinary Stock already paid, together with the recommended Dividend absorb £59,400, leaving a balance to carry forward in the Group of £74,491.

Current Assets exceed Current Liabilities by £1,578,423, whilst combined Capital and Revenue Reserves total £1,629,919.

Directorial Changes.—On February 1, 1961, Mr J. Stone succeeded Mr Frank L. Chaplin as Managing Director and Mr H Dickinson was appointed Deputy Chairman. Mr J. H. Williams and Mr J. E. Dallas have resigned; Mr A. S. Blackwell and Mr E. K. Long (of Long & Crawford Ltd.) have been appointed to the Board.

Radio & Television Division.—A heavy loss of £582,038 was incurred in Regentone Products and led to the decision to stem further heavy losses by the disposal of the factory and plant at Romford, yielding a Capital profit of £83,619, and to arrange for manufacture to our specification on a contractual basis. Deteriorating conditions in the industry led to wholesale slaughter of prices and an exceptional incidence of bad debts, resulting in a greater loss than the interim statement anticipated. By strengthening management and diversification of merchandise, the Board anticipates ultimately good results.

Engineering Division.—Long & Crawford Limited have maintained a satisfactory turnover and profit. Much work has been carried out in the year under review providing for increased capacity and new developments from which it is confidently anticipated benefits will accrue in the current year.

Food Division.—N. Kilvert & Sons Limited have increased turnover at a satisfactory margin of profit. Their products, particularly Kilverts Pure Lard, enjoy a high reputation and the Board proposes to extend both the area of marketing and the range of products. Substantial initial advertising and sales organisation has been undertaken and considerable benefits should accrue.

Packing Division.—The further fall in textile exports has meant that capacity has not been fully employed, with consequent reduction in profits. Political conditions in Africa, the main market, give no promise of immediate recovery.

In machinery and other fields of packing, the general decline in exports has led to less demand for packing services. The Division has borne expenditure on the development of new techniques which will show profitable results.

Paper & Packaging Division.—Grove Mill Paper Company Limited, despite generally falling demand in the industry, has maintained turnover but at progressively declining margins. Major modernisation of plant has been carried out which, coupled with specialisation of production, will enable the unit to combat increasing competition.

The advantage derived from Packaging Products (Holdings) Ltd. has been maintained but taxation has diminished the immediate return.

Increased costs with no compensating increase in price has meant that F. T. Pillivant Limited, while maintaining turnover, have suffered reduction of profit. The concentration of T. A. Lever & Sons Limited and Alfred Eva & Son Limited has involved exceptional costs in removal and disruption of production but the new unit, Eva-Lever Limited, is well housed and equipped and improved results are anticipated.

Timber Division.—The year has been difficult and results disappointing. Profit margins have declined and substantial provision has been made for write-down of stocks. Management has now been strengthened and stricter control exercised over funds.

Transportation, Storage and Travel Division.—Transport and warehousing have satisfactorily maintained their level of profit.

The Travel section, closely associated with the transatlantic air and steamship carriers, has in common with them suffered severely from the decline in American travel. These circumstances coupled with weaknesses which experience of the Arthur Robson Group has revealed have resulted in a heavy loss. Steps have been taken to strengthen management, to exercise a greater control over finance and to reduce overheads substantially.

Summary.—The financial year, particularly in the second half, has been most disappointing. All Divisions have been adversely affected by trading and financial conditions, with consequent reductions in profit margins and the necessary provision of approximately £100,000 for Bad Debts. In addition the year under review has borne the considerable expenditure entailed by a policy of development to replace declining industries, the benefits from which will accrue in the future.

The Chairman was happy to state that Mr Stone had faced with courage and vigour his very difficult first period of office and under his leadership the Group as a whole has been trading at a profit since the turn of the financial year; he had no doubt that this improvement would continue.

The Chairman and his co-Directors extended to all employees in the Group sincere thanks for their loyal service throughout the year.

Registered Office: 20 Princess Street, Manchester 1

AGRICULTURE 1962

Extracts from the Annual Address by Mr Harold Woolley, C.B.E., The President of the National Farmers Union, delivered on January 22, 1962, at the Central Hall, Westminster.

Mr Harold Woolley, C.B.E.

Economic planning is very much in the national news. The Chancellor of the Exchequer has put forward a scheme for a National Economic Development Council, with the aim of so balancing the main elements in the national economy as to provide the greatest opportunity for steady economic growth, without the dangers and disruptions of recurring bouts of inflation.

We have been operating economic planning for a good many years in our industry and the Annual Review, which is much more than a price fixing operation, is the main instrument for this purpose. I should like to say a few words about the situation at the last Review, which was the first to take place after the full investigation which occupied the latter half of 1960 and the declaration of Government view which followed it.

The calculation of the Net Income of the industry was forecast at £359 million for the year 1960/61: on the basis of normal weather conditions it was estimated that the figure would have been £373 million. When this is related to output we see that net output compared with the immediate post-war years had increased by about 40 per cent and real income had increased by only 5 per cent. The corresponding figures for the nation as a whole were rather less than a 40 per cent increase in production and about a 45 per cent increase in real income.

The explanation for this disparity in the rate of progress between agricultural incomes and average national incomes is largely due to the fact that over that period of time we had absorbed costs on the review commodities to the tune of £200 million when most other industries were passing their costs on to their customers. It is also important to keep in mind that agriculture's increased output over the pre-war level is evaluated as being worth about £300 million a year, a factor of considerable significance to our strained national balance of payments. These facts seldom seem to be given due weight and are often not recognised at all by those who assume to themselves the right to lecture our industry. Neither do these people seem to realise that the saving of essential imports and the creation of trade at home is as great a service to the country as the earning of exports.

The final outcome of the 1961 Price Review was an increase of £14 million in the total value of the Guarantees against increased costs of £19 million on the review commodities. This was a more reasonable recognition by Government of the economic situation of the industry than has been the case for some time and I am sure, though some people thought differently, that the industry generally regarded this as a basis on which we were right in agreeing to the settlement.

BEST FOOD VALUE

Our method of support came under attack when the Supplementary Estimates were published and revealed an increase of £78 million in the estimate of the amount of Government support payment.

If we view the situation in perspective and try to consider where the joint balance of interest lies, we find that, taking our food as a whole, the element of food cost paid by tax-payers additional to the counter price has been running at about £260 million over the past eight years, which is slightly less than 2s. per head of the population per week.

Is this really a high premium to ensure plentiful supplies at low prices as well as to enable the country's largest industry to play its full part in invigorating and strengthening the whole national economy? There is no questioning the fact that, taking into account quality, quantity, opportunity of choice and value for money, the British public have the most advantageous food position of any country in Europe.

COMMERCIAL PROGRESS

When I spoke at last year's Annual General Meeting I said that we anticipated that the main emphasis in our work at Headquarters in 1961 would be in the field of commercial development. We already possess many of the component parts for the purpose of commercial co-ordination: our national producer marketing organisations, statutory and otherwise; our agricultural trading societies; the buying groups, and the groups which have been developed for selling some of our commodities, such as the County Quality Bacon Federation. I feel that great praise is due to the men who have shown so much enterprise and have thrown themselves with unsparing vigour into these efforts. I believe there is tremendous potential in these developments provided that they can be so geared together that the engine power is transmitted into maximum rate of progress of the whole industry. After a thorough examination of the matter by a Joint Committee of the NFU and ACCA we have recently launched a national commercial company, Agricultural Central Trading Ltd., under the Chairmanship of Sir Miles Thomas. Whilst the initial task of this Company is to make available to organised bodies of farmers and growers a wholesale purchasing business, there are potentialities for such a Company, in some commodities at any rate, to work in harmony with national producer marketing organisations in helping to organise and service commercial groups of producers to develop the pattern of their production to meet definite marketing objectives.

COMMON MARKET

Finally, let me turn to perhaps the biggest question mark hanging over 1962—the European Common Market. Our Government has taken the decision to try and negotiate terms which it could accept as satisfactory for this country. Government spokesmen have made it clear that such terms must meet several main considerations. The Prime Minister himself has said "I want to make it quite clear that the interests of agriculture, the Commonwealth and our partners in EFTA must be a precondition for any negotiations to be satisfactory." Specifically with respect to agriculture, he has said: "Our objective is to have a prosperous, stable and efficient agricultural industry, organised to provide a good life for those who live and work in the countryside. This represents the fixed decision of the nation."

We have made it quite clear that, in our view, the Government's pledges to the industry can be effectively implemented only through the continuation of the system of annual reviews. These reviews must entail, as now, an examination of the level of net income, changes in production costs, the trend of production and consumption and other relevant factors. They must be held on a national basis as a prelude to any review at Community level.

Secondly, we have emphasised that a common agricultural policy must provide that these annual reviews are the basis for determining firm price guarantees for the main agricultural products. Thirdly, the non-review commodities, especially horticultural products, which have received support through the tariff rather than by direct means, must continue to be effectively and adequately supported. Fourthly, that our producer marketing organisations should be enabled to play their full part in any new scheme of things.

We go forward into another year with our organisation in good heart and a special word of appreciation to all those who have worked so hard to revise subscriptions, particularly our County and Group Secretaries, and to our members for responding so well.

We must maintain our work on the political front and greatly increase our efforts on the commercial front while keeping clearly in our sights the real task of our industry and of the NFU, to make the maximum contribution to the wellbeing of our country and to obtain a fair reward for those whose livelihood is derived from agriculture and horticulture. It is as true today as it has ever been that "Agriculture serves the Nation."

ARTHUR LEE & SONS LIMITED

SATISFACTORY OUTCOME OF A DIFFICULT YEAR

The annual general meeting of Arthur Lee & Sons Limited was held on January 26th at Sheffield.

The following is an extract from the circulated Statement of the Chairman and Managing Director, **Mr G. Wilton Lee, TD, JP.**

It is my pleasure to place before you the Accounts for the financial year ended September 30, 1961. As I predicted last January, conditions changed completely as the year progressed and our profits declined accordingly. In the circumstances the trading profit for the year of over £1,300,000 must be considered good.

ACCOUNTS

After charging £430,618 for Depreciation and Additional Depreciation, the Group trading profit is £1,316,990, a reduction of 20 per cent on the previous record year. At first sight this may seem disappointing, but it is the second best year in the Company's history and was achieved under much more difficult conditions than those obtaining in the previous year. Taxation is again a heavy burden, taking 54½ per cent of our profits, i.e., 2 per cent more than last year, mainly due to the increase in the rate of Profits Tax.

We have paid particular attention to the question of Pensions, and this year have decided to set aside a sum of £100,000 towards the provision of Past Service Pensions.

The interest of shareholders in the Group has again increased substantially and now stands at £6,137,914. The excess of Current Assets over Current Liabilities is still over £4 million and liquidity has improved.

DIVIDENDS

You will recollect that in my Statement last year I said that in view of the exceptional results we would, in addition to the total dividend of 11 per cent, pay a bonus of 2½ per cent. The results in that year were outstanding in that they were an increase of 79 per cent over the previous year and we felt justified in paying this bonus, having in mind the fact that it was unlikely we should achieve similar results for some time in view of the prospects ahead of us. This year due to the fall in profits we decided to pay a Final of 7 per cent making, with the Interim dividend of 4 per cent, a total of 11 per cent, but to reduce the bonus to 1 per cent. Our reason for this is largely due to the reduction in profit, but also to the fact that we are passing through a very difficult trading period with uncertain prospects. Furthermore, we wish to conserve our resources as we are contemplating considerable capital expenditure in the near future and we do not wish to raise more permanent capital at a time when interest rates are so high.

FUTURE PROSPECTS

It is impossible on this occasion to be very optimistic about the immediate prospects as it would appear that the recession through which we are now passing will continue at least until the Spring. At the present time we are suffering from depleted order books and living in the hope that the Government will be in a position to relax the credit squeeze, which might result in a return of confidence and increased purchasing in the motor and consumer goods industries.

We feel that the only cure for our present troubles is a period of stability both in wages and prices. The present Government's policy of stop-and-go, coupled with increases in Profits Tax and Fuel Tax such as we suffered last year, are most discouraging to employers and damaging to trade generally. We hope that the National Economic Development Council will be sufficiently inspired to give that fillip to industry which it so badly needs.

Whilst therefore the immediate prospects appear only fair, nevertheless we face the long term challenge of changing conditions with confidence.

THE AVON INDIA RUBBER COMPANY

GROUP SALES AGAIN A RECORD

The seventy-second ordinary general meeting of The Avon India Rubber Company Limited was held on January 22nd at Melksham, Wilts. **Mr C. M. Floyd, OBE** (the Chairman), presiding.

The following is an extract from his circulated statement:

Group Profit for the year before taxation amounted to £482,086 (£476,171 last year); taxation takes £194,633 (after a credit of £28,836 in respect of previous years) compared with £236,922 last year, and the Group profit after taxation amounts to £287,453 (£239,249 last year). Of this total £2,558 is attributable to minority shareholders in our subsidiaries, leaving £284,895 attributable to the Company compared with £233,252 last year.

As Shareholders will know, the winter of 1960-61 saw a sharp recession in the Motor Industry, which affected your Parent Company's motor tyre sales. Further, the reduction in the sale of motor cars reduced our sales of other component parts and finally the Industry Wage Award of September, 1960, increased our costs.

Despite these adverse factors Group Sales were again a record and profits before taxation have been maintained. This has been made possible by our development and sale of other products.

In October we introduced the new Avon H.M. Safety car tyre. We believe this tyre makes a real contribution to safer motoring, and the reception given to it has been most encouraging.

Your Directors see no reason to qualify the expression of confidence made last year in the future demands for the high quality products of the Group.

The report was adopted and the final dividend of 7½ per cent making 12½ per cent for the year (same) was approved.

TEACHER (DISTILLERS) LIMITED

A GRATIFYING TRADING ACHIEVEMENT

The Thirteenth Annual General Meeting of Teacher (Distillers) Limited was held on January 23rd in Glasgow, **Mr R. M. Teacher** (the chairman) presiding.

In the course of his speech, the chairman said it would be remembered that their profit last year was considerably influenced by shipments abroad made in the previous financial year to ensure supplies for the Christmas period of that year, and which would normally have been reflected in that year's results. The Gross Profit earned by the Group at £913,785 compared very favourably with that somewhat inflated year, and on last year's figure of £737,003 an increase of £176,782. The net Profit attributable to the Group was £389,538 as against £334,497, an increase of £55,041.

The Chairman continued: In spite of the increase in the retail price of Scotch Whisky by the Industry in July, and the further imposition of the 10 per cent Surcharge Duty at the end of July, it is gratifying that the sales of Scotch Whisky continue their upward trend in the Home Market, and while costs continue to rise and competition becomes keener, your Board are pleased to report that again our sales of HIGHLAND CREAM show a substantial percentage increase over that of the Industry as a whole and for the past financial year to September 30th are more than 50 per cent better than for that period last year. Your Board feel, therefore, that the policy of maintaining the high quality of HIGHLAND CREAM until supplies were available to meet the demand, has been fully justified. While we are faced with possible further impositions, our new Plant at Craigpark here in Glasgow, and due to be in production shortly, should be of great benefit in offsetting rising costs.

EXPORT MARKETS

The Exports of Scotch Whisky abroad continue to show the growing acceptance and popularity of the product of this great Industry of Scotland still one of the leading dollar earners in the principal market of the United States, but more and more Markets are being affected by the economy of the countries. The United States has a tax discrimination on the import of Scotch Whisky in bottle, Canada the basis of assessment of duty, New Zealand has just recently pegged imports, and currency difficulties and duties tend to increase in South and Central America. We are, however, fully maintaining our share of the Markets, and in Australia our sales have further improved over those of last year following upon the removal of import restrictions in February, 1960. South Africa has also shown improved results and steady progress is being made in the European Market.

Results at the Distilleries have been most satisfactory and co-operation between them has been of material benefit. Production in the Industry continues to rise both in Malt and Grain Whiskies and this provides the forecast that the Industry is still confident that the growth in the demand for Scotch Whisky distilled and bottled in Scotland will continue if present conditions prevail.

The report was adopted and a final dividend of 9 per cent making 14 per cent for the year was approved.

COURTAULDS, LIMITED

Financial Statement

This financial review of your Company's present position and future growth prospects has been prepared by the Directors in consultation with their financial advisers, Baring Brothers & Co., Limited, and Messrs Binder, Hamlyn & Co., Chartered Accountants, in order to provide Stockholders with up-to-date information regarding the Group, its assets and its earnings. As Stockholders will be aware, the Directors have already announced that they must advise Stockholders not to accept an Imperial Chemical Industries Limited offer on the terms disclosed on 17th January, 1962, on the grounds that it would seriously undervalue the earning capacity of Courtaulds in relation to that of I.C.I. They have based this advice on information regarding past and future earnings of I.C.I. disclosed to them in confidence, which has not yet been made available to the public. This review does not contain the Directors' comments on the I.C.I. offer, which will be sent to Stockholders when the offer document is available.

Courtaulds tend to be regarded by investors as primarily a textile company, even though by far the greater part of their capital is employed not in textiles but in man-made fibre production, packaging, pulp, chemicals and paint. In these circumstances, this financial review of your Company's present position and future growth prospects has been divided into two parts, the first dealing with Courtaulds' own fibre and associated activities (including textiles) and the second with their other investments.

The major factors regarding Courtaulds' financial position, as disclosed by this review, are summarised below:

(a) **Total Group profits for 1960/61 and those forecast for future years are as follows:**

1960/61 actual	**£18.7 mn.**
1961/62 (final three months estimated)	**£17.5 mn.**
1962/63 estimated	**£23.0 mn.**
1964/65 estimated	**£28.5 mn.**

(b) The substantial increase in profits from Courtaulds' own fibre and associated activities is expected for the following reasons:

(i) The vigorous and effective action taken to arrest and reverse the decline in profits from viscose yarns and fibres.

(ii) The continued expansion in profits from British Celanese Limited and from Courtelle.

(iii) The recovery already apparent from the short-term market recession in the first part of 1961.

Profits before tax from this section of the business in 1962/63 are expected to be some 40-50 per cent higher than the £9.7 mn. earned in 1960/61.

(c) The current value of Courtaulds' investments outside their own fibre and associated activities is assessed at £120 *mn.*, equivalent to more than 30s. per £1 Ordinary stock in issue. On the basis of 1960/61 results, the distributable income from these other investments, even after allowing for substantial retentions of profit by the constituent companies, is equivalent to £5.62mn., representing 7 per cent (or 1s. 5d. per £1 unit) on Courtaulds' issued Ordinary stock.

(d) Total profits before tax for the year to March 31, 1963, are now forecast at £23 mn. This compares with an earlier routine forecast of £18.5 mn., completed in September 1961, which was disclosed to I.C.I. on December 12, 1961, together with a forecast dividend of 11 per cent for that year. At the same time I.C.I. were told that a rapid increase in profits from 1963 onwards was expected. The increased forecast now given is largely due to the acquisition of British Enka Limited in November, 1961, and the recent arrangements to take over the Lustrafil viscose yarn production which have made it possible to accelerate the rationalisation of the UK viscose industry.

(e) The value to be attributed to Courtaulds' issued capital should take into account both:

(i) The value of their own fibre and associated activities referred to in (b) and

(ii) The value of their other investments referred to in (c).

Dividends

Courtaulds are confident that the cash flow from the increased profits which are foreseen will be adequate both to provide the additional fixed and working capital called for by their future plans, and at the same time to allow for a policy of consistent and steadily increasing dividend distributions.

It is Courtaulds' practice to prepare long-term estimates of future results, and these have been carefully reviewed during the past few weeks in the light of all the information at present available. The figures of future profits used in this statement have been extracted from these forecasts, and are intended to indicate the trends which are expected by the Board to be applicable in the future.

1. FIBRES AND ASSOCIATED ACTIVITIES INCLUDING TEXTILES

Courtaulds' interest in Net Assets at Balance Sheet Values at March 31, 1961—£122 mn.

These can be divided into three main groups:

(a) Viscose Yarns and Fibres and Related Activities (including pulp, viscose chemicals and Courtaulds' weaving subsidiary).

Courtaulds' profits from viscose and related activities have suffered heavily in recent years from structural weaknesses within the viscose industry; in the year ending March 31, 1962, profits are estimated at only £5.1 million, compared with £12.0 million in 1955/56. Courtaulds have, over the past few years, taken vigorous and effective steps to deal with this situation. They have shut two of their older factories, absorbed and closed down Harbens Limited, taken over Lustrafil's production, and have acquired British Enka in order to achieve further rationalisation. This radical re-organisation of the industry, which caused large non-recurrent expenses, has eliminated idle capacity and duplication of overheads.

Products have been improved and lower raw material prices have been established. In pulp the Group's activities have been very successful. In the five years since Courtaulds' pulp producing subsidiary in South Africa was established, to provide part of the Group's requirements, earnings on the equity capital of £6 million have improved every year, amounting to over 25 per cent. for the year ended December 31, 1961. At the same time the price of pulp has been reduced by 15 per cent. The economy programme carried out by Courtaulds (Alabama) Inc. has put that company in a strong position to benefit from the better market situation now prevailing in the USA.

These measures have stopped the downward trend in profits from viscose and related operations and the Board are confident that already in the year ending March 31, 1963, a substantial increase in profits to more than £8 million will be obtained. This improvement in the viscose situation when taken together with the upward trend in other group activities will result in a major increase in overall group profits as shown in the table given later.

(b) **British Celanese Group** (including acetate yarns and fibres, related chemicals and other activities).

During the years prior to their acquisition in 1957, the profits of British Celanese had been falling sharply. Courtaulds have carried out vigorous rationalisation (including shutting down unprofitable activities), and

expansion has been financed from British Celanese's own resources. The profits of British Celanese reached their low point of £680,000 in 1957/58, the year of acquisition; at the end of 1957/58 the small Acetate Division of Courtaulds which earned some £300,000 in that year was purchased by British Celanese. In the year ended March 31, 1961, profits from the combined operation reached £3,788,000. Profits for the year to March, 1962, will be approximately £4,500,000 and as a result of steps already taken or planned, these should increase substantially in succeeding years.

(c) Courtelle and other synthetic fibres

Courtelle, the first British acrylic fibre, has had a remarkable success since commercial production started in 1959. Courtaulds' unique process, which was developed in their own laboratories, is believed to be the lowest cost process in the world both as regards capital investment and running costs, and Courtelle is expected to become one of the world's major man-made fibres. United Kingdom production is already proving profitable despite heavy initial promotion and development costs, and profits for the years to March 31, 1961 and 1962 have been running at the rate of about £700,000 per annum. For a new fibre to be making profits at such an early stage of its development is unprecedented. Continuing heavy promotion and development expenses will limit the increase in profits in the year to March 31, 1963, but thereafter as production expands both in the UK and abroad, the increase in profits should be rapid.

2. OTHER INVESTMENTS

Courtaulds' interest in Net Assets at Balance Sheet values at March 31, 1961—£70 million.

The table below shows Courtaulds' share of the profits of their subsidiaries outside the fibre and textile fields and the income from their trade and other investments for 1960/61 (except where otherwise stated).

	Current Market Value where quoted £ mn.	Income before tax attributable to Courtaulds' stockholders £ mn.
I. Subsidiaries:		
(Companies in which Courtaulds have a majority interest)		
British Cellophane Limited		2·64
Pinchin, Johnson & Associates Ltd., and Cellon Ltd.		·98
Gossard (Holdings) Ltd.		·22
Engineering Contracts, including receipts for know-how (1960/61—£1·85 mn.) annual average, say...		1·00
Others		·07
		4·91
II. Trade Investments:		
British Nylon Spinners Ltd.		2·40
Snia Viscosa	18·9	·31
Excess Insurance Company Ltd. ...	1·3	·02
Other—Quoted	2·3	·10
Unquoted		·21
		3·04
Usutu Pulp Company Ltd. (£2 mn. invested to 31.3.61).		Not operating on March 31, 1961
III. Government Securities and cash assets available for investment on an assumed average yield basis of 5½% per annum	*	1·10
Total		9·05
Deduct: Allocation of Courtaulds' administration expenses to cover management		·20
Net Income before tax attributable to Courtaulds' stockholders		8·85

* Note: The current market value of the Government Securities and cash assets available for investment at March 31, 1961, would be approximately £20 million. About £5 million has, however, been used since that date to purchase further investments the income from which is not included above.

If the above interests are considered as a separate entity, and on the basis of:

(i) a maintainable annual profit of £8.85 million as shown above;

(ii) present rates of taxation, including profits tax at 15 per cent;

(iii) subsidiaries distributing only half their profits;

the sum available would be equivalent to a gross distribution of £5.62 million representing 7 per cent (or 1s. 5d. per £1 unit) on the present issued Ordinary Stock of Courtaulds.

It is emphasised that the above distribution of £5.62 million is arrived at after allowing for retention of earnings by subsidiaries of 50 per cent and by British Nylon Spinners of 54 per cent.

In addition there are the normal retentions of the other trade investments.

The Directors, in consultation with their financial advisers, have made an assessment of the present value of the above interests and they believe that, in total, they represent about £120 million or 30s. per £1 of Ordinary Stock compared with their book value of £70 million. At this valuation, the distribution referred to above would give a dividend yield of 4.68 per cent.

Comments regarding the future prospects of the principal investments are given below.

(a) British Cellophane Limited

Profits of this company rose from £2.42 million in 1955 to a record £3.53 million in the year ended March 31, 1961. In spite of a temporary recession a profit of £2.9 million is expected for the year to March 31, 1962, increasing to over £3 million in 1962/63, and further expansion of sales and profits are forecast for future years.

(b) Pinchin, Johnson and Associates Limited, and Cellon Limited

At the time of acquisition, the Pinchin Johnson Group consisted of many semi-autonomous units, some of which were in serious difficulties. Major re-organisation is well advanced, including the merging of Cellon (following the acquisition of the minority interests in this company last year) with Pinchin Johnson. Profits in 1961/62, despite a recession in the automobile and consumer appliance industries, the company's main customers, have been running at the same level as those of 1960/61, namely just over £1 million per annum, and an increase to over £1.5 million is forecast for 1962/63.

(c) Gossard (Holdings) Limited

This Group was acquired in 1959 for £2,362,000. Appreciable re-organisation was found to be necessary to meet the more competitive conditions of the 1960s. Profits, which in the year of acquisition (1959) were £181,000, increased to £245,000 in 1960, and to just over £400,000 in 1961.

(d) Engineering Contracts

In 1958 Courtaulds decided to exploit their extensive engineering facilities and technical know-how by supplying complete factories to overseas countries. Contracts totalling £23 million have already been obtained and further contracts are being negotiated. Total profits from this source amounted to £1.85 million in the year to March, 1961. Although such business is by its nature spasmodic, an average profit, taking one year with another, of at least £1 million a year is forecast.

(e) British Nylon Spinners Limited

Dividends received from British Nylon Spinners have increased from £1.2 million five years ago to £2.4 million in the year to March, 1961. Although the British Nylon Spinners' management is expecting an increasing sales volume, some decline in profits over the coming years is forecast because of lower selling margins; nevertheless, it is their present intention to continue to pay the same dividend since they consider that it will no longer be necessary to retain such a high proportion of the Company's earnings.

(f) Snia Viscosa

This company, in which Courtaulds have a substantial minority holding, has a history of continuous expansion since the war and further major growth planned. Snia Viscosa is well placed to benefit from the resurgence of the Italian economy and to take advantage of new opportunities presented by the European Economic Community. Like so many important companies in the European Economic Community, its present market value is high in relation to the dividend income actually received.

OVERALL GROUP PROSPECTS

Group profit prospects are strongly influenced by the substantial recovery in viscose profitability which is now taking place earlier than previously expected, as a result of the additional steps taken by Courtaulds. The upward trend in profits from British Celanese, Courtelle and other activities is expected to continue. These factors, together with the recovery from the short-term market recession in the first part of 1961, are expected to result in an increase in Group profits

before tax to the record figure of around £23 million in the year ending March 31, 1963.

The profit trend can be illustrated as follows:

Group Profits before Tax and before Preference Dividends
Year to 31st March

	1955/6	1960/1	1961/2 (est.)	1962/3 (f'cast)	1964/5 (f'cast)
	(in £ million)				
Viscose yarns and fibres and related activities	12·0	5·6	5·1	8·5	9·1
Other fibres and investments (including subsidiaries) ...	5·3	13·1	12·4	14·5	19·4
TOTAL GROUP PROFITS	**17·3**	**18·7***	**17·5**	**23·0**	**28·5**
Minority Interests	·6	1·3	1·3	1·5	2·0
Courtaulds' interest in Total Group Profits before tax and before Preference Dividends	16·7	17·4	16·2	21·5	26·5

The 1964/65 forecast of profits results in an increase in the return on capital employed as shown in the Balance Sheet from 9 per cent for the year ended March 31, 1961, to 12¼ per cent for the year ending March 31, 1965.

* **Reconciliation:**	£ mn.
Total group profits as above	18·7
Additional profits credited direct to capital reserve ...	·9
	19·6
made up as follows:	
Viscose yarns and fibres and related activities	5·6
British Celanese	3·8
Courtelle	·7
Other investments—Courtaulds' interest	8·9
	19·0
Add: Minority interests' share of profits, less consolidating adjustments and minor items	·6
	19·6

European Economic Community

Courtaulds and their principal products are in a strong position to face the increased competition in the home market which will result if the U.K. joins the European Economic Community, and a detailed appraisal suggests that the profits of £28.5 million forecast for the year to March 31, 1965, are unlikely to be reduced by even 10 per cent on this account. In contrast, the chemical industry is more vulnerable to European competition.

Courtaulds are particularly well placed to take advantage of the opportunities which would arise from closer European economic integration. They have important manufacturing subsidiaries and associated companies in the principal European markets. They have already set up special marketing offices in France, Germany and Scandinavia. British Celanese are already exporting to Europe where the development of acetate fibres has been slower than in the UK and North America; increased expansion of these exports, particularly Tricel, is foreseen. A Courtelle factory has been established in France and the expected rapid growth in demand for this fibre in Europe will require substantial expansion of the present capacity. British Cellophane, with the largest and lowest cost production operations in Europe, are also well placed to compete there. In the long term, Courtaulds look forward with confidence to closer economic ties with Europe.

By Order of the Board,

H. L. LIGHT, Secretary.

January 24, 1962.

Copies of the full financial statement will be mailed to each of the 180,000 Stockholders as soon as printing and postal arrangements can be completed.

BRUNNER INVESTMENT TRUST LIMITED

FURTHER INCREASE IN REVENUE

SIR FELIX BRUNNER'S STATEMENT

The Annual General Meeting of The Brunner Investment Trust Limited will be held on February 16th at Aldermanbury House, London, EC.

The following is the Statement of the Chairman, **Sir Felix J. M. Brunner, Bt,** Chairman of the Company, circulated with the report and accounts for the year ended November 30, 1961:

I am glad to be able to report a further rise in our Gross revenue for the past year from £347,298 to £371,752. A year ago I stated that we hoped for a somewhat increased income. In July last we paid an interim dividend of 4 per cent. on the doubled Ordinary Capital against the equivalent of 3½ per cent. Your Directors have decided to comply with the Chancellor's request for restraint in respect of dividends and are therefore recommending a final dividend of 8½ per cent, the equivalent of that paid last year. This will involve a distribution of 74 per cent of our revenue as compared with 76 per cent last year.

NET ASSET VALUE

The valuation of investments as at November 30, 1961, is reflected in a net asset value of the Company's 5s. units of 17s. 3½d. as compared with an adjusted figure of 15s. 7d. the year before, after allowing for the bonus issue made during the year.

The short term economic outlook in this country at the time of writing this Report does not give cause for much encouragement. Many companies are experiencing a reduced turnover and lower profit margins owing to the credit squeeze and the recession in the steel, motor and other industries. It is therefore probable that our sterling income will be somewhat less during the current year, and although we may reasonably expect some increase in our dollar income, overall our total income is likely to show some small reduction.

COMPANY AFFAIRS

Overshadowed by the Courtaulds-ICI struggle and yet another brewery merger equities in the London stock market have not held the gains made before the week-end and The Economist *indicator has fallen by 3.8 points to 360.6. With less talk of an immediate cut in Bank rate dealers in gilt-edged have had a quiet week, but the growing prospect of industrial disputes has kept buyers away from both gilt-edged and industrial stocks. Tobacco shares have fallen sharply on further lung cancer fears. The full report from Leyland Motors led to a sharp reaction in its shares.*

Leyland's Burden

BECAUSE of Leyland's skill in producing commercial vehicles and in exporting a high proportion of them, its £1 shares have enjoyed the double distinction of having the labels "growth" and "common market" pinned on to them. But, having read the statement by the chairman, Sir Henry Spurrier, investors should now temper their enthusiasm. There are signs that they have already done so, for the shares lost 7s. this week to stand at 79s. 3d. and to yield 5 per cent, covered just under twice, on the maintained dividend of 20 per cent. The principal reason for the change in view is the effect that the acquisition of Standard Triumph International will have upon earnings and finances in the next two or three years.

Sir Henry's summing up of the STI acquisition is:

> We have acquired an organisation of considerable asset, which is a potential for making good profits within the next two or three years. In taking this concern under our wing we have almost certainly saved it from bankruptcy. I am optimistic as to its future, and finally in any circumstances it will not be allowed to affect adversely the parent organisation

With the exception of one director, the STI board has been reconstituted, involving Leyland in the payment of £66,000 in compensation to the directors, and 300 senior executives of STI have been replaced. At the time of the acquisition STI was making heavy losses (so that Leyland had to shoulder a post-acquisition loss of £1,471,000 for five months' trading) and its bank overdraft amounted to a quarter of its net assets. Sir Henry says that the economies effected have "changed the picture considerably"; that the application of sound and sensible engineering design on Leyland lines to STI's products "are beginning to yield the desired results"; and that as a result of measures designed to slash and to control "non-productive expenditure and extravagance, the situation now appears to be under control." STI's exports have improved but the home market remains depressed "with little sign of any early improvement." Sir Henry does not say whether STI is still operating at a loss; but the inference is that it still is. Leyland is not planning to replace STI's main lines of production; but it is introducing a new range of light commercial vehicles and trucks.

It will take time to get STI back on its feet and in the meanwhile Leyland has to carry a bank overdraft of £12¼ million, which arose out of the STI losses, the completion of the Hispano Suiza contract and the high cost of export finance. The Government's measures on export credits may help Leyland. But the interest burden will be high in the current financial year and though Sir Henry says nothing about the possibility of coming to the market for permanent capital it is difficult to see how Leyland will be able to avoid taking this action before long.

Another matter of concern for investors is that though Leyland continues to enjoy full order books and a record level of production, profit margins are falling. Costs have risen but Leyland has not raised its prices and, indeed, in some cases it has lowered them. Sir Henry makes no forecast about the future trend in these profits. If Britain joins the common market, they should ultimately grow; but immediately Leyland is carrying the burden of STI.

Ind Coope Tetley Ansell

COMPARED with the 1960-61 profits of the other big brewery groups, the results of Ind Coope Tetley Ansell for the year to September 30th are disappointing and after they were published the 5s. shares lost 7½d. to 14s. 7½d., to yield 4.1 per cent, covered just over 1½ times, on the indicated dividend of 12 per cent. The new ICTA combine actually earned £16¼ million but when the profits are adjusted to a uniform basis of 52 weeks it becomes apparent that the increase in trading profits before depreciation was about 5 per cent. Moreover, while the profits of both Tetley Walker and Ansells rose by ten per cent those of Ind Coope rose by only one per cent. The Ind Coope directors give two reasons for this poor showing in a year when beer consumption was higher and beer prices were raised. First, Ind Coope incurred unanticipated difficulties in obtaining certain planning consents, which largely deprived it of benefits of rationalisation planned for 1961 following on the merger with Taylor Walker and which also resulted in "substantial non-recurring expense." Secondly, after the little budget there was a "noticeable swing" from bottled to draught beer which particularly affected Ind Coope.

Ind Coope has devoted much of its attention to the national promotion of such bottled beers as "Double Diamond" and "Skol" and it appears to have been more ready to assume than many other brewers that the swing towards bottled beer and lager apparent in the 1950s would be maintained. It has not, for example, put as much emphasis as others on container draught, preferring to stock other brewers' brands in return for outlets for its bottled beers. It has also tended to centralise production and distribution of its bottled beers and the effect of this policy on its costs may be becoming more apparent now that other big breweries have built up their own trading empires on the basis of regional plants and bottling stores. The half-yearly results of one of these competitors, Scottish and Newcastle, contrast strongly with Ind Coope's recent experience: Scottish and Newcastle earned a trading profit of £4,013,000 in the six months to October 31st, about 23 per cent more than in the same period in 1960, and it has effectively raised its interim dividend from 3 to 4 per cent. Ind Coope is the biggest of the three partners in the ICTA combine; but this "commonwealth concept" in brewing, as Mr Edward Thompson has decribed it, may not merely provide the outlets for Ind Coope's bottled beers but establish a more regional pattern of production and distribution upon its activities.

Bowmaker

THE list of hire purchase finance houses that have followed one dose of bad news with a second is now growing depressingly long. Bowmaker, in which Lloyds Bank has a 25 per cent interest, is the latest addition to the list. Last June it passed its interim and explained that the provision for bad and doubtful debts made by its wholly-owned subsidiary Midland Counties Finance, was "substantially inadequate." Although the directors of Bowmaker expected the setback to absorb the amounts available for the ordinary dividend, the impression was given that a thorough investigation and a strengthening of the Midland Counties' board had put matters right. Indeed the board forecast "a small net surplus, or at worst, a break even position" for the year to October 31st. The group has in fact made a loss of £1,358,000 before taxation (against a gross profit of £1,677,000 in 1960) and has, "with regret," passed its final dividend. Its ordinary shares have thus lost trustee status.

The main cause once again appears to be Midland Counties, and the reason is the same—bad and doubtful debt provisions that "have proved insufficient." This company must have cost Bowmaker something

approaching £2 million by now. The loss has been met by a tax write-back of £510,000, a transfer from general reserve of £644,000 and a reduction in the balance carried forward of £245,000. Higher interest rates and tighter credit after July also pushed up operating costs in the final three months of the financial year. The hire purchase debt outstanding is now some £6 million below the 1960 level of £69¼ million, and unearned finance charges are down from £6.4 million to £5.5 million. After the news of the loss the shares fell 1s. 6d. to 12s. 3d. but have since recovered to 12s. 4½d. At the moment the group is integrating its main operating subsidiaries in the hope that this will reduce costs.

Lancashire Cotton

AN important factor in the results of Lancashire Cotton for the current financial year could be the success or otherwise of discussions with Commonwealth producers on the question of curbing exports of yarn to this country. Commonwealth quotas do not restrict trade in yarns, though provision was made when the Commonwealth pact was renewed last year for restrictions on yarn if they are made necessary by the state of the Lancashire industry. Spinners were the first to suffer when trade faltered last year. By October, yarn production was about 13 per cent lower than a year earlier, though the output of cloth had fallen only 7 per cent. While

imports of cloth had declined, imports of yarn showed only a slight decrease after the first quarter of 1961. In the first ten months of the year they were a sixth higher than in 1960. Mr R. M. Lee does not mention the delegation that has now left for India to discuss yarn exports in his review of Lancashire Cotton's trading in the year to October 31st. The visit might not have been finally arranged when he wrote about prospects for the current year, but he left no doubt that, in general, he considers control of imports essential.

The group was a fairly heavy spender of capital account in the year to October. More than £1½ million was spent on re-equipment, and commitments of £1¼ million were outstanding at the end of the financial year. The 25 per cent grant towards the cost of re-equipment under the government scheme will be payable on "the major part" of this expenditure. The group is evidently not spending heavily outside the cotton industry, though it held £9½ million in liquid assets at the end of October. Its trading profits fell from £3,762,000 to £3,354,000, over the full year, though profits were substantially higher in the first half of the financial year than in the corresponding period of 1959-60. Results for the current half-year expected in June will undoubtedly be gloomy. But by then international agreement on cotton exports or direct negotiations with Asian producers might offer some relief. Sales of finished clothing have so far been well maintained so that before the end of April the destocking phase could be passing and the decline in production arrested. Lancashire Cotton's £1 shares at 45s. 4½d. yield 11 per cent on the maintained dividend of 25 per cent.

Amalgamated Cotton

AMALGAMATED COTTON MILLS TRUST has declared a second interim dividend of 12½ per cent and a final payment will not be made, so that for the year to September 30, 1961, a total dividend of 22½ per cent is being paid on the capital as increased by the one-for-five scrip issue last January. This compares with the equivalent of 20⅝ per cent paid in 1959-60. The group has spread its interests in recent years to include animal feeding stuffs and merchant banking; but in 1959-60 its extensive cotton interests, which include "Van Heusen" and "Aertex," were working to capacity and may have continued to do so in 1960-61 when gross profits rose by 7 per cent, from £1,356,000 to £1,448,000. Net profits rose by 5 per cent from £696,000 to £730,000, covering the dividend over 1½ times.

The dividend arrangements have been made to facilitate Amalgamated's bid for the cotton and rayon group of J. F. and H. Roberts. Shareholders in this company are offered seven 5s. Amalgamated ordinary shares for every two £1 ordinary they hold. The Amalgamated ordinary shares now stand at 12s. 6d.; the bigger dividend has raised the yield to 9 per cent.

Saxone-British Shoe

WITH the full details of the bid by British Shoe Corporation for Saxone Lilley and Skinner comes a clear indication that the 5s. shares of Saxone could scarcely have stayed at the present level of 30s. but for the proposed bid. At the time of the revaluation last October the directors had forecast that profits for 1961 would be lower than for the previous year due to pressure on margins and the need to make price reductions to reduce stocks. In fact profits before tax are estimated to have fallen by about 25 per cent to £1.17 million. Profits of British Shoe Corporation did not forge ahead in 1961 as in earlier years and at a level of about £5.7 million before tax they are about 5 per cent down on 1960. On these results the disparity between the rates

of return on capital employed by the two companies is still as wide as ever with British Shoe earning 24 per cent and Saxone 6½ per cent, taking assets on an up-to-date revaluation.

When news of the merger negotiations was first announced the market value of the bid was put at "about 30s.," thus the terms of one 5s. share and 7s. 3d. of a 7 per cent debenture in British Shoe for each 10s. ordinary share in Saxone puts a price of about 22s. 9d. on the British Shoe ordinary shares, which now for the first time are to have a Stock Exchange quotation. On the forecasts of net attributable profits equivalent to 27½ per cent and a dividend of 15 per cent on the increased capital this puts the shares on an earnings yield of 6 per cent and a dividend yield of 3.3 per cent —a high rating which is, however, justified both by the company's past record and its prospects. These are enhanced by the considerable economies which it should be able to effect by the rationalisation of the businesses.

The offer by British Shoe covers 14 million of the 18½ million Saxone shares, the remainder being already held by British Shoe, and if it is accepted in full Saxone shareholders will own about 20 per cent of the increased capital and Sears Holdings will be left with about 80 per cent. Assuming that the 7 per cent debenture is retained (it can be sold at par to Philip Hill Higginson) shareholders will come near to doubling their income which on the basis of 100 shares will rise from £3 7s. 6d. to £6 5s. 9d. gross.

Lancashire Steel

THOUGH the results of Lancashire Steel were less disappointing than those of most other steel companies the statement of the new chairman, Mr P. E. Holloway, is as depressing as any which have come from the spokesmen of the steel industry in recent weeks. He tells shareholders that profits so far in the current year are "appreciably below" those for the corresponding period in 1960-61 and that he does not expect total profits to reach the 1960-61 level when profits before tax fell from £5,926,000 to £5,237,000, unless there is a marked upsurge of demand in the next few months and "an alleviation of some of the burdens under which we are labouring." But Mr Holloway does not hold out much hope on either score, for he says that the destocking by consumers is not completed yet and that it is unlikely that they will carry stocks to the same extent in the future. Costs of both transport and certain coals are expected to rise further in the current year while he anticipates either industrial disputes or wage increases as opposition develops to the wage pause. Meanwhile increases in costs estimated at over 30s. a ton of finished steel have been offset only by price increases of about 8s. 6d. a ton.

The picture is not entirely one of gloom for Mr Holloway reports that the improvement in the demand for rods which became apparent in August has been maintained and that the rod mills are working normally. The company will soon be able to supply bars for all types of reinforcing work and this should "materially improve the load on the steel works." A good deal of new plant, including the new Irlam rod and bar mill, will come into operation in the current year and thus make possible a fall in unit costs. The completion of the capital programme will involve no further call for funds. Capital commitments at the end of September amounted to £3.1 million. As Lancashire Steel spent £4.7 million on capital account in 1960-61 net liquid assets fell from £4.5 million to £1.8 million, but the chairman says the remaining expenditure can be financed by overdraft facilities. The market's reaction to the full report was to mark the shares down by 2s. 10½d. to 31s. 1½d. so that on the maintained dividend of 11 per cent the shares yield just over 7 per cent.

Richard Thomas & Baldwins

IN his statement with the full accounts the chairman of Richard Thomas and Baldwins, Mr G. C. R. Eley, says that "a considerable improvement in demand" is needed if profits in the current year are to match those for the year to September 30, 1961, when net profits were more than halved from £8.9 million to £4 million; but he expects competition to remain keen with export markets becoming even more difficult. Interest and depreciation charges will rise in the current year although the development schemes will not bring any significant addition to profits until 1963.

In 1960-61, the fixed assets of RTB doubled to £155 million. This expansion was financed by an additional loan of £36½ million from the Minister of Power, another of £36 million from ISHRA, and a rise in creditors from £20¼ million to £28 million. Mr Eley says that the directors have had talks during the year with ISHRA but the changed circumstances of the past year have not increased the likelihood of any early denationalisation.

Jute Industries

GOOD luck and good judgment both played a part in the unexpectedly high profit achieved by Jute Industries last year. At its peak, the cost of jute accounted for about two-thirds of the price of most jute textiles. The exceptionally severe fluctuations in the price of raw jute in the past two years therefore exposed the group to the possibility of heavy losses on stocks. But stocks had been built up at the beginning of the financial year to an unusually high level and much of the jute appears to

have been acquired before the rise in prices had gone far. Consequently the group has been able to realise stock profits when a loss on its stocks seemed likely. But the group could not pass on to its customers the full cost of replacing the jute it was selling. The industry was depressed, and high prices further restricted business.

Even so, the group earned profits after depreciation of £824,000 in the year to September 30th, against £998,000 in 1959-60, which was an exceptionally favourable year. Had raw jute prices not recovered in the last month of the financial year, it would however have been necessary to write stocks down by about £125,000. The stock losses that were then avoided seem almost inevitable in the current year. But the group had reduced its stocks from £4.4 million to £3.2 million by September 30th. A bank overdraft of £890,000 had been turned into a substantial holding of liquid assets and a sharp fall in bills payable for jute had cut amounts owing to creditors by about £400,000 to £981,000. Though the maintained dividend of 13 per cent was covered 2.3 times by earnings, Jute Industries 10s. ordinary units at 9s. 7½d. yield 13½ per cent. Apart from the threat of stock losses labour troubles have afflicted the industry this year. On the horizon are potential difficulties for this protected industry if Britain joins the common market, and the industry's pricing policy is currently being reviewed by the Restrictive Trade Practices Court.

News of the World

UNLIKE most other companies the News of the World publishes its results before it declares a final dividend and shareholders now have to wait until early April to know what that final payment will be. The results suggest that they may well receive something more than last year's final of 15 per cent; two interims totalling 12 per cent, against 10 per cent, have already been paid. Trading profits before depreciation rose from £1,770,000 to about £2,500,000 in 1961, and as no material change is expected in the proportion of profits that will be set aside for tax, equity earnings should be well above the 39 per cent level of 1960. Thus a final dividend of 18 per cent, raising the total payment from 25 to 30 per cent, would easily be possible. On this basis the 5s. non voting shares, which have gained 9d. to 25s. 3d. since the results were published, yield 5.9 per cent and the 5s. shares at 26s. 1½d., 5¼ per cent.

The confidence expressed by Sir William Carr, the chairman, both at the last annual meeting and in the interim report, has certainly been borne out by the sharp improvement in profits. This must stem largely from a recovery in profits of the *News of the World* itself as a result of further increase of 176,000 in its average weekly circulation and the increase in its selling price. But the numerous outside interests now play an increasingly important part in the group's business and it will be surprising if their share of total trading profits has fallen much below the 62 per cent which they contributed in 1960. The 1961 accounts will have included a full year's profits from the road haulage and newsprint warehousing business and World Distributor (Holdings) which publishes children's books, magazines and paper backs and also an initial contribution from Vactric (Control Equipment) and Vactric (Precision Tools). The group's investment income will have been boosted by the increase in the dividend of TWW, the commercial television contractors.

Ilford

THE directors of Ilford, the makers of photographic materials, say that sales rose again in the year to October 31, 1961. But gross profits failed to keep pace, falling by 15 per cent from £1,540,000 to £1,304,000. Over half of this fall resulted from bigger depreciation provisions. A bigger provision for research had also to be made and higher manufacturing and overhead expenses added to the pressure on margins. The tax charge is still low and presumably reflects investment allowances on the new Basildon plant; even so, net profits have fallen by 17 per cent, from £896,000 to £743,000.

The ordinary dividend has been maintained at 17½ per cent and is covered 1½ times by earnings of 24 per cent on the capital as increased by the final call on the shares held by ICI which now has a 32 per cent stake in the Ilford equity. Over the past ten years the growth of Ilford's earnings has lagged behind the growth of assets. The 5s. ordinary shares lost 2s. to 19s. on the news of the setback but the yield is still no higher than 4.6 per cent. On past performance and the failure of turnover to rise enough to offset higher costs this yield appears to discount fairly fully any immediate improvement in earnings and any benefits that may flow from the link with ICI in colour photography.

Industrial Profits and Assets

The tables below continue the analysis of company balance sheets and profit and loss accounts which was introduced in *The Economist* of January 22, 1949; the figures are discussed on an earlier page in this issue.

Comparative analysis of 454 profit and loss accounts published October - December, 1961 (£'000)

THE MONEY MARKET

After five weeks of tactical withdrawal, involving the progressive lowering of its Treasury bill bid (raising the rate) in order to improve its margins, the syndicate of discount houses once again took the offensive last Friday and raised its bid by 8d. to £98 13s. 6d., and the average rate of discount fell by nearly ¼ per cent to £5 6s. 2.35d. per cent. The previous week's allotment was only 32 per cent and the possibility of a Bank rate cut was an argument for increasing bill portfolios. The market's allotment on the higher bid was 68 per cent.

After the tender on Friday one or two houses were forced to borrow from the Bank of England at Bank rate, but the amount was very small. Credit has been fairly short throughout this week, although the market now seems fairly well adjusted to the difficulties of the postal delay. The authorities provided a large amount of help on Saturday and Tuesday, when four or five houses were still forced to borrow a moderate amount from the Bank.

In New York this week the rate for 91-day bills fell from 2.770 to 2.688 per cent; in London the rate for Euro-dollar deposits is 3½ per cent.

APPOINTMENTS

FORMICA LIMITED
A Member of the De La Rue Group
require a

MARKET RESEARCH ASSISTANT

We require a recent graduate, aged 22 to 24, for our Market Research department at our head office in Regent Street. The successful applicant must have a genuine aptitude for fact-finding and may have had some market research or industrial experience.

The department is concerned with marketing research, business forecasting and economic intelligence, and is closely integrated with the marketing function.

The work is intensive but not desk-bound. There are good opportunities for learning the techniques of industrial market research and the processes involved in policy making at company level.

Apply (quoting ref. K.8678), giving details of age, education, experience and present salary to

The Chief Personnel Officer,
FORMICA LIMITED,
De La Rue House, 84/86, Regent Street,
London, W.1.

ECONOMIC AND SOCIAL STATISTICS

The Department of Technical Co-operation would like to be in touch with WELL QUALIFIED MEN AND WOMEN with experience in fields such as Economic Statistics, including National Income Estimates and Family Expenditure Surveys, who would welcome an assignment in under-developed countries. The Department receives a number of requests for Technical Assistance in this form from the U.K. Details of specific appointments will be discussed with suitably qualified applicants, and, should a definite offer be in prospect, the Department would be prepared to approach the present employer of the applicant on the question of leave of absence.

A letter, giving brief details of experience and main interests should be sent in the first place to the Director-General, Department of Technical Co-operation, Sanctuary Buildings, Great Smith Street, London, S.W.1, quoting reference RC 343/01.

POSTGRADUATE STUDENTSHIPS IN USSR 1962–63

Applications are invited for TWENTY SCHOLARSHIPS FOR STUDY AT SOVIET UNIVERSITIES FOR THE ACADEMIC YEAR 1962–63. These awards are open to post-graduate students, with at least 2nd Class Honours Degree, currently engaged in study or research at universities or equivalent institutions. Undergraduates in their final year may apply. Applicants must be of British nationality and have a working knowledge of the Russian language.—Particulars and application forms, for which a stamped (3d.), self-addressed foolscap envelope should be sent, are obtainable from Universities Department, British Council, State House, High Holborn, London, W.C.1. Completed application forms should reach the British Council as soon as possible, and, in any case, not later than February 10th.

RESEARCH APPOINTMENTS in the Civil Service. About eight posts of ASSISTANT RESEARCH OFFICER in Commonwealth Relations Office, Ministry of Defence, Home Office and Board of Trade, for men and women at least 21 and normally under 28 on 1.4.62. Duties involve collection and analysis of information bearing on sociological and criminological problems, on defence or economic policy, or on Commonwealth matters, and the preparation of reports. Qualifications: normally 1st or 2nd class honours degree, preferably in Economics, Geography, Statistics or a kindred subject, or with law, sociology, psychology or statistics as a main subject. Final year students may apply. For the Commonwealth Relations Office post, previous experience in the field of Commonwealth affairs will be an advantage. National salary scale £728–£1,222.

There are also two higher posts in the Home Office: SENIOR RESEARCH OFFICER (national salary scale £1,716–£2,340) and RESEARCH OFFICER (national salary scale £1,342–£1,654) for which practical experience of social or psychological research, or of research involving similar methods, is essential. Age normally at least 30 on 1.4.62, but exceptionally well qualified candidates aged 28–30 may be considered.

All posts are pensionable. Starting salary may be above minimum for all three grades. Promotion prospects.—Write Civil Service Commission, Burlington Gardens, London, W.1, for application form quoting 317/62. Closing date, February 27, 1962.

UNIVERSITY OF GLASGOW
ASSISTANTSHIPS IN MATHEMATICS

Applications are invited for TWO ASSISTANTSHIPS IN MATHEMATICS. Salary scale £600–£950 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than February 28, 1962, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

CAMBRIDGE UNIVERSITY
RESEARCH STUDENTSHIPS IN LAND STUDIES

A Harold Samuel Studentship, tenable from October 1, 1962, is offered for research in economic, legal or social matters relating to the use, tenure or development of land. Applications must reach the Registrary, The Old Schools, Cambridge, not later than March 15, 1962.—Value of the studentship and other particulars may be obtained from the Secretary, Board of Estate Management, 18A Silver Street, Cambridge.

EMGAS
worth working for

AN ASSISTANT STATISTICIAN

is required in the Commercial Manager's department of the East Midlands Gas Board at their Headquarters in Leicester.

The post is open to persons with qualifications in economics and or in statistics. Preference will be given to those who have knowledge and experience in market research.

Salary will be within a range rising to £930

Applications, stating age, experience, qualifications, present appointment and salary, should be sent by February 5, 1962, to the

Secretary IR 1,
EAST MIDLANDS GAS BOARD,
Beverley House, University Road, Leicester.

SENIOR EXECUTIVE

with top management potential, capable of assuming major responsibilities in the fields of

ADMINISTRATION AND FINANCE

is required by a large and old-established international company for its European Headquarters in Brussels.

Fluent command of English and at least one principal European language (French, Spanish or German) required.

In addition to superior educational qualifications, candidates should have considerable experience and a successful record on the appropriate levels of banking, accountancy or law or as a company secretary. Preferred age 35 to 42.

An extensive training and indoctrination in the Company's operations and policies will be provided. Starting salary will be in the range of £3,000 to £4,000, with retirement plan and other benefits.

Replies with detailed curriculum vitae should be addressed to BOX 1582 and will be treated in strict confidence.

CAMBRIDGE UNIVERSITY

Applications are invited for the position of ASSISTANT IN RESEARCH in the Department of Land Management. Applicants should be qualified to undertake research in economic, legal or social problems related to the use, tenure, or development of land. Salary scale: £750–£1,000. Further information may be obtained from the Secretary of the Board of Estate Management, 18a Silver Street, Cambridge. Closing date for applications, March 1, 1962.

Applications are invited from

MATHEMATICIANS AND COMPUTER PROGRAMMERS

for vacancies in the

COMPUTER BRANCH
ATOMIC ENERGY ESTABLISHMENT
WINFRITH,
DORCHESTER, DORSET.

The Branch is equipped with

FERRANTI MERCURY
I.B.M. 1401
and
E.A.I. PACE
COMPUTERS

There is also access via direct lines to I.B.M. 704 and 7090 computers.

Applicants should have a degree in Mathematics, Statistics or Physics. Experience in programming or reactor physics work is desirable.

Salary in ranges between £640 at age 21 to £1,055 per annum and £790 to £1,270 per annum according to qualifications and experience.

Superannuation, Housing and House Purchase assistance schemes.

Send POSTCARD for application form to Personnel Manager (W.450 2/1), U.K.A.E.A., A.E.E. Winfrith, Dorchester, Dorset.

Closing date:—

MARCH 21, 1962.

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited for the post of LECTURER OR ASSISTANT LECTURER IN ECONOMICS. Salary in scale £1,050 x £50—£1,400 x £75—£1,850 p.a. (Lecturers); £800 x £50—£950 p.a. (Assistant Lecturers), with F.S.S.U. and Children's Allowances. Applications should reach the Registrar, The College, Keele, Staffs., from whom further particulars and application forms may be obtained, not later than March 3, 1962.

THE UNIVERSITY OF ALBERTA CALGARY

invites applications for a position in the Department of Political Economy as follows:

An Assistant or Associate Professorship of Economics, at a salary between $7,500 and $10,000, depending upon experience and qualifications. The applicant should be prepared to instruct in money and banking and public finance, or international trade.

Appointments will be effective September 1, 1962. Applications for the position above should include a recent photograph, or snapshot, a curriculum vitae, transcripts of record from universities where degrees were obtained, and the names of three references, and should reach the Department before March 15, 1962.

For further appointments and other classified advertisements see page 374

UNIVERSITY OF MALAYA IN KUALA LUMPUR

LECTURER/ASSISTANT LECTURER IN DEPARTMENT OF ECONOMICS

Applications are invited for the above-mentioned post. Candidates should have a good first degree. A higher degree in the field of Rural Economics with emphasis in Anthropology or Sociology is desirable as the successful candidate would be required to teach and carry out research work in Rural Economics, Rural Development and Community Development. Experience of field work in the Asian rural environment would be an added advantage.

Salary:

Lecturers: $820 x $35—$1,030/$1,100 x $40—$1,300 p.m. (£1,148 x £49—£1,442/£1,540 x £56—£1,820 p.a.).

Assistant Lecturers: $715 x $35—$785 p.m. (£1,001 x £49—£1,099 p.a.).

In addition, a variable allowance is at present paid at 35 per cent. of basic salary, subject to certain maxima, together with expatriation allowance at specified rates. An allowance is made towards travelling expenses and housing assistance is available.

Application forms and further particulars are available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Kuala Lumpur and London on *February 28, 1962.*

MARKET RESEARCH ASSISTANT

required for Package Foods Division to work on both existing and new product development with responsibility later for commissioning research with outside agencies.

Applications from men or women age 24–30 who should have a degree and must have at least two years' Market Research experience are invited. Although salary and substantial Profit Sharing Scheme give good remuneration here, an indication of present or expected gross earnings would be helpful. Other benefits include Pensions and Life Assurance Schemes. Based in London now, a move to Esher is contemplated within two years.

Replies to:

Group Personnel Manager,
BROWN & POLSON LTD.,
125/130, Strand, London, W.C.2.

DECCA RADAR

Important Overseas Project

RESIDENT MANAGER

This position requires a man of sound business experience and executive ability to assume responsibility for the overall management of a large electronic engineering construction project in the Far East. His duties will cover a wide field and will include:—

Management of the Company's extensive field organisation.

Personal liaison at the highest Government level with the customer.

Business negotiations with the customer arising out of the present contract and extensions to it.

Local financial management of the project.

Qualifications in engineering are not essential but it is necessary to have good commercial experience at senior executive level in associated fields.

The present appointment, which will extend for a period of about three years, is of considerable responsibility and a substantial salary will be paid with generous overseas allowances. If successful in this engagement he should establish himself with excellent future prospects in this leading electronics company.

Applications in strict confidence should be addressed to Mr. J. H. P. Summers, Decca Radar Limited, 9, Albert Embankment, London, S.E.1.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF ORGANISATION OF INDUSTRY AND COMMERCE: LECTURESHIP

Applications are invited for the post of LECTURER in the above Department. In addition to undergraduate and post-graduate work in Industrial Organisation, the department conducts advanced courses and research in Management Studies.

Candidates should hold good qualifications in Psychology, Economics, Commerce, Industrial Sociology or an allied field; a basic training in psychology is desirable and industrial experience would be an advantage.

Salary Scale £1,050 x £50 to £1,250; Bar; £1,300 x £50 to £1,400 x £75 to £1,850 per annum, with placement according to qualifications and experience, and with superannuation benefit and family allowance where applicable. The successful candidate will be expected to take up duty as soon as possible after April 1, 1962, and not later than October 1st.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving the names of three referees, should be lodged not later than February 10, 1962.

CHARLES H. STEWART,
Secretary to the University.

January, 1962.

MARKET RESEARCH

A GRADUATE EXECUTIVE used to interpreting and presenting consumer research results is offered opportunity to extend his scope in this field.

He will find himself in a progressive organisation dealing with a variety of surveys in which capacity for administration and ability to handle increasing responsibility will largely determine his progress.

This senior appointment will offer a commensurate salary and excellent working conditions.

Enquiries to Box 1584

CITY OF OXFORD EDUCATION COMMITTEE

COLLEGE OF TECHNOLOGY

LECTURER IN MANAGEMENT STUDIES

Applications are invited for the post of LECTURER IN MANAGEMENT STUDIES. Candidates should have good academic qualifications, preferably in Economics, with Statistics, with suitable industrial experience. The College is recognised for the new Diploma in Management Studies and holds a variety of short courses.

Salary will be in accordance with the Burnham Technical Scale for Lecturers, i.e., £1,000 x £50 to £1,300.

Further particulars and a form of application may be obtained from the Principal, College of Technology, Oxford (s.a.e. please), and should be returned not later than February 5, 1962.

For other appointments see page 373

THE UNIVERSITY OF LIVERPOOL

Applications are invited for TWO LECTURE-HUME POST-GRADUATE FELLOWSHIPS, one in the School of Architecture or the Department of Civic Design, and one in any Department of the Faculty of Arts. The Fellowships will be tenable for one year at a value of £600, but may be renewed for a second year.

Applications, three copies, quoting Reference CV 59 E, and stating age, qualifications and experience, proposed field of research, the names of two referees and, in the case of the Fellowship in Architecture or Civic Design, enclosing copies or photographs of work, should be received not later than March 1, 1962, by the Registrar, from whom further particulars may be obtained.

UNIVERSITY OF GLASGOW

LECTURESHIP IN STATISTICS

Applications are invited for a LECTURESHIP IN STATISTICS from persons qualified in Mathematical Statistics. Salary scale: £1,050-£1,850 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (eight copies) should be lodged, not later than February 26, 1962, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

APPOINTMENTS REQUIRED

INDUSTRIAL RELATIONS EXPERT

—early fifties, at present occupying responsible position in this sphere, but willing to consider change which would provide equal responsibility with greater freedom of action and decision. Minimum salary required £2,000.—Box 1583.

HIGHLY QUALIFIED COMMERCIAL EXECUTIVE, 16 years' varied experience chemical sales, import export and home trade. Hons. Grad., languages, travelled, seeks managerial or similar appointment requiring efficiency, energy and ability.—Box 1581.

ANNUAL NATIONAL BOOK SALE starts Wednesday, January 31st. Ten days only. Outstanding Bargains in most bookshops.

THE BRITISH ASSOCIATION OF ACCOUNTANTS AND AUDITORS LIMITED (Incorporated 1923). The next examinations will be held from the 22nd to 25th May, 1962. Membership can only be obtained by those who have passed the prescribed examinations. Copies of the Syllabus are obtainable from the Secretary, Stamford House, 2/4, Chiswick High Road, London, W.4.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ., B.Sc.Econ. (three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ. B.Sc. Economics Exams, 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

SURVEY OF OPERATIONAL RESEARCH FOR MANAGEMENT

The London School of Economics and Political Science will hold a ONE-WEEK SURVEY COURSE IN OPERATIONAL RESEARCH from April 9 to 13, 1962. Its purpose is to provide Senior Managers with an appreciation of the function of Operational Research in the context of business or industrial undertakings. The fee, which does not include residence, is £50. Particulars and application forms can be obtained from the Registrar, The London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2),

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

UNIVERSITY OF EDINBURGH

Residential Course for Business Managers

The eighth RESIDENTIAL COURSE FOR BUSINESS MANAGERS will be held in the university from July 2 to 29, 1962. The aim is to encourage the development of a broader understanding of business problems and of the environment in which business operates and thus to assist in the transition from specialised to general management.

In addition to syndicate work and case-studies, seminars will be led by practising business and professional men as well as university teachers drawn from several departments, including commerce, political economy, accounting and psychology.

To encourage the exchange of knowledge and experience among members of the course, the number admitted will be strictly limited. There are no formal educational requirements. The fee for the course, including residence, is 90 guineas. Early application should be made: the closing date is March 9, 1962.

Post-Graduate Course in Management Studies

The full-time course of study leading to the award of the university's post-graduate Diploma in Management Studies commences on October 9, 1962. It is intended for young business managers who are likely to be promoted to more senior posts, and it is particularly suitable for those with a scientific or technological training who are taking on managerial responsibilities. The course extends over the three terms from October to June, but members may return to their companies during the two vacations.

The Department of Scientific and Industrial Research has accepted this course as suitable for the tenure of its advanced course studentships. Interested candidates are recommended to read the booklet "D.S.I.R. Studentships and Fellowships," January, 1960, obtainable from H.M.S.O., price 1s. 6d.

Candidates for admission should normally be university graduates, but suitably qualified non-graduates may also apply. Entrance standards are high, and only a limited number of places is available. Application for admission should be made as early as possible.

Further particulars and nomination forms for both these courses may be obtained from Professor Norman Hunt, 29 George Square, Edinburgh, 8.

Bachelor of Commerce Degree

The attention of those intending to enter upon a career in business is drawn to the Bachelor of Commerce (B.Com.) Degree course in this University. This is a three-year curriculum designed for those who intend to take up administrative posts in industry, commerce and government, and for those preparing to teach business subjects. It includes the following subjects: Political Economy, Economic History, Accounting, Organisation of Industry and Commerce, Mercantile Law; optional subjects include Languages, Banking, Industrial Law, Psychology, Statistics, etc. Further particulars may be obtained from the Director of Studies in Commerce, University of Edinburgh, 29 George Square, Edinburgh 8, and forms of application for admission from the Matriculation Office, University of Edinburgh, Old College, South Bridge, Edinburgh 8. These should be returned not later than May 1, 1962.

CHARLES H. STEWART,
Secretary to the University.

January, 1962.

WEST RIDING WORSTED AND WOOLLEN MILLS LIMITED

The Annual General Meeting of the Company will be held on 14th February, 1962, to receive the report and accounts for the year ended 31st August, 1961, and to declare a dividend.

The Directors have recommended the payment on 15th February of a final dividend of 13 per cent. (less tax) on the Ordinary Shares, making 21 per cent. (less tax) for the year.

The following summaries are extracted from the accounts:

PROFIT OF GROUP BEFORE TAXATION		£1,474,098

ECONOMICS OF INDUSTRIAL ORGANIZATION

by A. Beacham, M.A., Ph.D.

Largely rewritten and brought up to date, including a new section on post-war changes, this authoritative work is designed to supplement the general economics textbook. It deals with the organization of British Industry; discusses the location, control and development of industry; outlines the various forms of industrial and financial enterprise, and includes a chapter on monopoly.

Posing the Question?

To advance the technique of modern surgery to heart operations, British Surgeons needed an apparatus and a pump to match closely the delicate functions of the human heart. After long and careful experimentation with five basic pumping mechanisms against damage to blood corpuscles and for blood flow relationships, the Mono Pump was established by the Hospital Research Team as a superior means of pumping human blood.

Can this be regarded as confirmation of the Mono Pump as a superior principle of trouble-free pumping for industrial service? Or can the huge numbers used on a wide range of industrial duties be regarded as confirmation enough?

This is the small Ormond Mono Pump specially produced in one size only for use on Heart Lung Apparatus. Where meticulous hygiene is necessary and an output of up to 5,000 m.l. per minute is required, the pump has useful application to Laboratory or Pilot Plant. There are other various types of Mono Pumps ranging in capacity up to 16,000 gallons per hour to cover any pumping duty.

The Dry Fly palate

Styles of sherry vary considerably, but Dry Fly, a finely blended medium sherry, is designed to cover the widest possible range of tastes. It is delicious as an aperitif before a meal, served mid-morning with biscuits, or as an evening refresher. 18/6 a bottle.

Those who prefer a dry sherry should try CECILIA, a delicate Amontillado; and for sweet tastes—GOLDEN CHANCE, a rich Oloroso Cream. Both at 20/6 a bottle.

GROWTH OF A NATION: IN A SERIES . . . No. 11

Bread and butter for the Japanese "Boya"

The Japanese "boya" (little boy), with his appetite for more "pan" (bread), more butter, more milk and more meat, is a barometer indicating not only the increasing westernization of Japan, but also the growing prosperity of the nation. Every Japanese product sold abroad benefits this little boy; and the Nippon Kangyo Bank, through its worldwide banking services, has played its part in furthering his welfare. Kangyo means "industrial and commercial promotion"—but its implications are even more profound: We know that the fostering of the nation's future leaders, within a democratic framework, are of the utmost importance. Service for overseas buyers helps the "boya", puts the butter on his "pan", and furthers Japan's economic growth. Our assistance is available at all times—use the facilities of the Nippon Kangyo Bank freely!

JAPAN'S ECONOMIC OUTLOOK

a cautiously optimistic analysis

Like any national economy operating on the free-enterprise system, Japan's has shown the need for occasional periods of readjustment. It is currently undergoing just such a readjustment.

Japan is a country poorly endowed with natural resources but rich in technological capability. The logical outcome of this is that Japan's continued prosperity depends on an expanding export trade. With the announcement last year of the Ikeda Cabinet's 10-year plan for doubling the national income, private industry entered into the spirit of expansion so enthusiastically that new investment in plant and equipment far exceeded the rate of growth envisioned by the government. This capital investment entailed excessive imports, throwing Japan's international payments out of balance. That briefly is the background for the present dull tone of Japan's securities market, accompanied by a tight money situation and a necessary retrenchment mood throughout large sectors of the economy.

The bright side of the picture is that huge plant and equipment investments result in increased production capacity and large-scale technological renovation, making Japan's position in the competitive world market better than ever before. So with some curtailment in domestic consumption and active promotion of exports, Japan's international payments position will improve, and another era of prosperity will be ushered in. That is why the present period of readjustment does not discourage us; on the contrary this seems to us an ideal time to seriously consider the investment opportunities in the Japanese market.

■ Kellogg Engineering Teamwork at Work

CHEMICAL PLANTS FROM SCRATCH

For many of the world's leading chemical and petro-chemical firms, the Kellogg method of executing a capital investment in new plants and plant expansions has proved the soundest way to minimise expenditure.

This economic route to new chemical plants consists of co-ordinating and controlling all phases of engineering, procurement, and construction under an internationally integrated management. It is founded on close teamwork among all Kellogg operations at home and abroad . . . and with client engineering staffs.

Kellogg's method has improved process and plant engineering . . . saved money in procuring materials and equipment . . . increased labour productivity . . . expedited erection . . . achieved the earliest possible on-stream dates . . . and stayed within pre-determined costs. The result is the plant which achieves the optimum balance of investment and operating costs.

Working with clients on this basis, Kellogg has been responsible for a variety of chemical plants throughout the world.

If you are planning to build new processing facilities at home or abroad, Kellogg would be glad to show you how its engineering teamwork could work to your company's advantage. Please address inquiries to

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y.
Published weekly every Saturday, fifty-two times a year in London, England.

In The Economist this Week — February 3, 1962

HOME

HAPPY FAMILIES

There is no clear economic or technical case for anybody to object to the ICI-Courtaulds merger in advance: but it is not only on those grounds, but on moral and social ones too, that monopolistic tendencies have to be judged, if there is such a thing as the public interest. A pragmatic Tory Government is short on these criteria (p. 393).

Mr Gaitskell's torpedoing of Mr Wyatt's frail Lib-Lab bark may not have scuttled the vessel: voters in hopeless Labour but hopeful Liberal constituences may take the helm themselves (p. 401).

The anomalous *ménage à trois* of Probate, Admiralty and Divorce in the High Court does not look like being soon dissolved (p. 401).

SCRABBLE

Events have overtaken the speed at which official economic thought functions in Britain. The response of the economy to measures that served their turn in the past is unpredictable and may be the reverse of what is needed now; the first of two articles (p. 394).

Private engineering employers are paying more service to the pay pause than are most nationalised ones (p. 399).

London has a valuable lesson in transport and traffic planning to learn from its bogged-down tubeless Mondays (p. 412)—and from Glasgow's steady plod towards dry ground from a similar morass (p. 413).

SNAKES AND LADDERS

Further expansion of the banks depends on their coaxing depositors more sweetly (p. 435).

The House of Lords has ruled hire-purchase contract penalties unenforceable: finance companies are re-reading their small print (p. 440).

Mr Thorneycroft's apparent appeasement of noise-haters means more, not less, night jet flights from London (p. 441).

Parliamentary questions are today an important (if not exclusive) means of bringing ministers to account—as they were a century ago (p. 407).

BEGGAR MY NEIGHBOUR

An agricultural monopoly which might come into being despite the cries of wounded British farmers is a world wheat cartel proposed by French common marketeers (p. 405).

Agricultural marketing boards often tend to monopoly: so far, with humiliation, one of them has failed to achieve it (p. 405).

Lack of competition has been brought to its logical conclusion in Ulster's high-priced coal trade (p. 414).

INTERNATIONAL

ODD MEN OUT

The passing of a watery resolution condemning Dr Castro ought not to mislead the members of the Organisation of American States into thinking that they have dealt with the Cuban problem adequately (p. 396).

President Sukarno has always insisted on setting a higher priority on the solution of the New Guinea problem than on the mitigation of Indonesia's economic difficulties. The local communists are happily waiting for collapse to result (p. 429).

As a result of the Naples conference of the Christian Democrat party, **Signor Nenni** and his followers are no longer to be regarded as political untouchables (p. 425).

King Hussein, rejoicing in the birth of a son, has put in new and inexperienced men to face the problems of reform at home and of isolation abroad (p. 405).

There is no uniform correlation between the "responsibility" of members of the **United Nations** and their willingness, or ability, to pay for the organisation (p. 406).

HOW TO MARRY A MILLIONAIRE

Britain may gather some useful hints from **west German economic expansion** since the war, especially now that it seems to be slowing down. Further expansion may depend on the speed with which the labour force is reinforced from the farms (p. 397).

Meanwhile, President Kennedy is arguing that his **Trade Expansion Act** is essential if the United States is to retain its leadership in a changing world economy (p. 418).

The United States has decided to have the best of both military worlds, with the result that the cost of **America's defence** is rocketing (p. 417). It is good sense to publicise its efforts in space even if they fail (p. 420).

Mr Kennedy may be drinking milk for economic reasons, but he is no milksop politically (p. 419).

ORPHEE

The **Russian Jove** has sent his Mercury to meet his western counterparts in Paris (p. 399); a further shake-up of the Olympian hierarchy may occur in March (p. 401), but the suggestion that he is going to dethrone Herr Ulbricht, king of the east German Hades, is not yet supported by the evidence (p. 400).

Orpheus has been playing an unofficial lute in Bonn more harmoniously than usual (p. 400).

THE BLACKBIRD JUNGLE

Paramount: Nobody really believes that Dr Verwoerd intends more than a publicity move by his proposals to set up an "independent" Negro "homeland" in **the Transkei;** and there is a drift towards extending the apparatus of authoritarianism still further in order to muzzle the unconformist press (p. 426).

Twentieth Century Fox: Sir Edgar Whitehead is to be commended for his latest anti-colour bar declarations; the local African nationalists should agree to some sort of co-operation with him lest they provoke the white Rhodesians into abandoning him in favour of less wily and realistic leaders (p. 402).

Rank Organisation: Portuguese offences smelled high enough to ensure overwhelming repugnance (though not with Soviet noses) by the United Nations in the debate on Angola. Everyone was unhappy about Ruanda-Urundi (p. 432).

Bwana Brothers: The Lagos conference of African states displayed some of the faults, as well as the virtues, of the British tradition of compromise and pragmatism (p. 431).

REORIENTATE

visit **INDIA** ten thousand images

REORIENTATE—join today's top travellers going east to India—to the most profound holiday experience of all.

NAVIGATE—go north, south, east or west, you'll find more than a million square miles of unrivalled scenic beauty, home of the world's highest mountains, longest rivers, deepest valleys.

CONTEMPLATE—India is a thousand epics in stone, symbolic of man's driving quest for spiritual truth. A galaxy of dramas and festivals brings India's 5,000 years of civilisation to life.

ASSIMILATE—sample the world's most exotic foods (oriental or occidental). You have a splendid choice of that internationally popular dish—curry. Try it with fine, long-grained rice.

PENETRATE—tiger, panther, bear, elephant, buffalo, bison and wild boar in the jungle; trout and mahseer in the rivers, the wily snipe and the strong-winged duck on the jheels; above all, India's showpiece—the Gir Forest—with its one hundred regal lions.

Ask your travel agent about 'Visit India Year' concessions now available till March, 1962 or:–

POST THIS COUPON TODAY

to: Government of India Tourist Office, 21, New Bond Street, London, W.1. Tel: HYDe Park 0769.

Please send me free full-colour booklets and details of 'Visit India Year' concessions

SAVING FOR EVERYBODY

GOOD RATE OF INTEREST.
EASY TO BUY, EASY TO HOLD.
INCOME-TAX-FREE CONCESSIONS.

National Savings Certificates (10th Issue)

Each unit costs 15/-, becoming £1 in only seven years—equal to nearly 4½% interest free of U.K. income tax and surtax, or nearly 6¾% taxable at the standard rate of 7/9. You may hold 1,200 units.

Post Office and Trustee Savings Banks

You may deposit up to £5,000, with no restriction up to this maximum on the amount invested in any one year. Both husband and wife can each enjoy £15 interest free of U.K. income tax (but not surtax) each year on their Savings Bank deposit accounts.

Defence Bonds

5% Defence Bonds are on sale in £5 units, and after seven years yield a 3% bonus free of U.K. income tax. You may now hold £5,000 worth, exclusive of holdings of earlier issues. Ideal trustee investment.

Premium Savings Bonds

Thousands of prizes, from £25 to £5,000, free of U.K. income tax and surtax, can be won each month. Bonds cost £1 each, and the permitted holding is now 800.

Gentleman of the Road

It's his road, all his, from sunset to sunrise.
But in the morning, the ring of picks and hammers
and the rattle of drills rend the air.
Wards are putting new life into an old road.
Thos. W. Ward Ltd. are particularly well equipped for road surfacing and repair contracts. Apart from having a fully skilled subsidiary company entirely devoted to road works, other divisions of the group supply all kinds of materials and equipment used in roadmaking. Wards surface all kinds of roads. Broad highways and country lanes. Aerodrome runways and factory ramps. With their integrated organization, they can bring men and materials quickly to the job, anytime, anywhere.

Serving Industry Around the World **THOS. W. WARD LTD**

Head Office: ALBION WORKS, SHEFFIELD. *London Office:* BRETTENHAM HOUSE, STRAND, W.C.2.

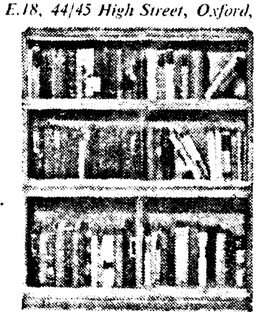
HARD-TO-DO
LITERARY
COMPETITION
FOR A FREE MINTY BOOKCASE

Minty bookcases are for people who know about reading and writing. A Minty bookcase can be yours free—yes, free!!—in return for a few hours of distressingly difficult literary work.

This is the first Minty literary competition. We are promoting it simply because we think you will find it more entertaining than the average advertisement. If the idea catches on there will be more competitions to follow, and more Minty bookcases to be won. Now let's get on with the first one.



Please write a description of a Minty bookcase as it might have occurred in one of the following:—

The Doors of Perception
The Alexandrian Quartet
Dr. No

Kindly remember that Minty bookcases are something of a status symbol; that they are glass-fronted, and singularly easy on the eye; that they are sectional, so that they can start unambitiously and grow as your library grows; yet they cost little enough to be bought by schoolmasters, poets, classical scholars, and the generally underprivileged.

Embody as many of these points as you can in a pastiche of 200 words or less. Use them, if possible, to throw new light on the action or characters of the book you choose. *Post your entry to Minty Competion E.18, 44/45 High Street, Oxford, before March 10th.*

THE PRIZE

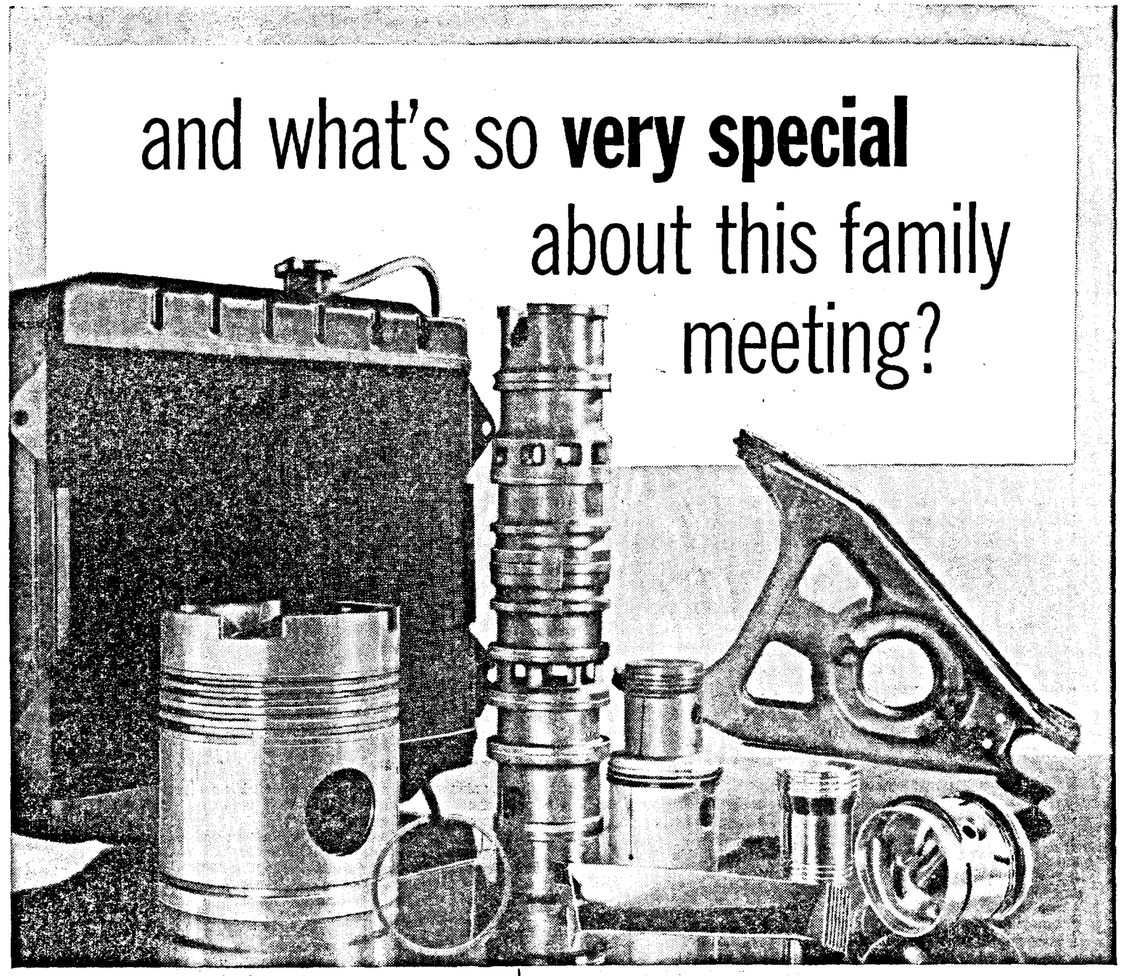
This handsome Minty bookcase (which sells for £27.9.0) goes to the winner. He/She will have the pleasure of seeing his/her work in print in a future issue of this publication.

The Judgement will be made by the Chairman of Minty and two other persons of literary sensibility, who hope to take the winner to a celebratory lunch. Their judgement will be final. No correspondence will be entered into.

MINTY LTD. HIGH ST. OXFORD

have
you
seen it yet?

ASAHI PENTAX S-3



The superb new Asahi PENTAX S-3 single-lens reflex camera—classic in design and meticulously constructed—has a host of exciting new features that give complete control over every picture situation: Ultra fast Auto-Takumar 55mm f.1.8 lens; fully automatic diaphragm automatically stops down to your preselected aperture, then opens fully after exposure; brilliant pentaprism viewfinder with exclusive micro-focus; depth of field preview lever; focal plane shutter with speeds from 1 to 1/1000 sec., plus Time and Bulb, on a single dial; rapid film advance lever; rapid rewind crank; "cocked" indicator; film type reminder dial; FP & X flash terminals; threaded lens mount for interchangeable lenses.

This is a camera to use and enjoy and treasure for a lifetime of photographic satisfaction. This is the new Asahi PENTAX S-3—the greatest camera value in the world today.

Please write for a complete Asahi Pentax folder.

ASAHI OPTICAL CO., LTD.
C.P.O. 895, Tokyo, Japan

and what's so **very special** about this family meeting?

Obviously a family with a passion for engines! Petrol, diesel and gas turbine. The paterfamilias is Associated Engineering, and the family is a group of 25 companies making components for prime movers to power anything from locomotives to lawn mowers. Their many factories and depots provide fast, efficient service to vehicle and engine manufacturers and the replacement trade in 118 countries.

A wide variety of engineering Besides being one of the world's leading suppliers of engine components, Æ undertakes pressings, castings and machining in great variety. It gives much time and investment to research and development. Its individual companies keep stocks to meet almost any demand—30 million piston rings and a million pistons, for example.

Some special facts about the Æ Group

- It supplies components to every major British engine manufacturer.
- It has an impressive record of growth.
- Its products include pistons, piston rings, cylinder liners, gudgeon pins, tappets, valve guides, valve seats, hydraulic mechanisms, gas turbine blades, circlips, gas seals, gland packings, superchargers, nitrided bushes, castings, machine tools, metallic packings, heat exchangers, radiators, space heaters, grilles, presswork.

"This dad is a pot..!!"

"Son, you amaze me. Where are the flowers ?"
"No flowers, Dad. You heat this pot"
"And make a hot-pot, presumably? So that's your mother's recipe—I've often wondered!"
"You wouldn't catch me eating it if it were. No, Dad, this is a plumbago pot"
"Plumbago's a plant, Son, with a blue flower. I thought you said 'No flowers'"
"You make it sound like a funeral, Dad. Plumbago's also just another name for natural graphite"
"Uh-uh. And what's it used for, Son?"
"The pot or the plumbago, Dad?"
"Both, you ass. Sometimes I pity Old Squirt"
"Well, the pot's for melting metal in—noble and base (non-ferrous naturally)—and comes in a wide range of shapes and sizes—from diminutive to giant"
"And the plumbago, Son?"
"Well, Dad, that's quite a story: they mix it with clay and from this mixture they make, as well as pots, the oddest sounding things: stoppers, launders, riser plates, skimmers, muffle rings, plunger-stirrers, saggars, brazing-pans, tundishes, retorts"
"Retorts courteous, Son?"
"They're always courteous, Dad; they're the oldest pot-makers in the country"
"You keep saying 'They', Son. Who are 'They'?"
"Morganite Crucible Limited, of course, Dad"
"Oh! Now I get it; for *'pots'* read *'crucibles'* throughout"
"Correct, Dad. Oh, and Dad?"
"Yes, Son"
"If they're all that old..."
"Son you will learn one day that age and quality go together. Take my Napoleon brandy; or rather don't take it—you're not old enough..."
"We're not back on good wine needing no bush are we, Dad?"
"Good Heavens no, Son. We used that for the Morganite Carbon advertisement. You wouldn't be wanting to confuse carbon with crucibles, would you?"
"Not plumbago likely, Dad"

With apologies to Harold Wincott

The Morgan Crucible Group is always pleased to hear from inquisitive young (and not so young) people. You'll find it well worth while to write to our Group Staff and Training Manager.

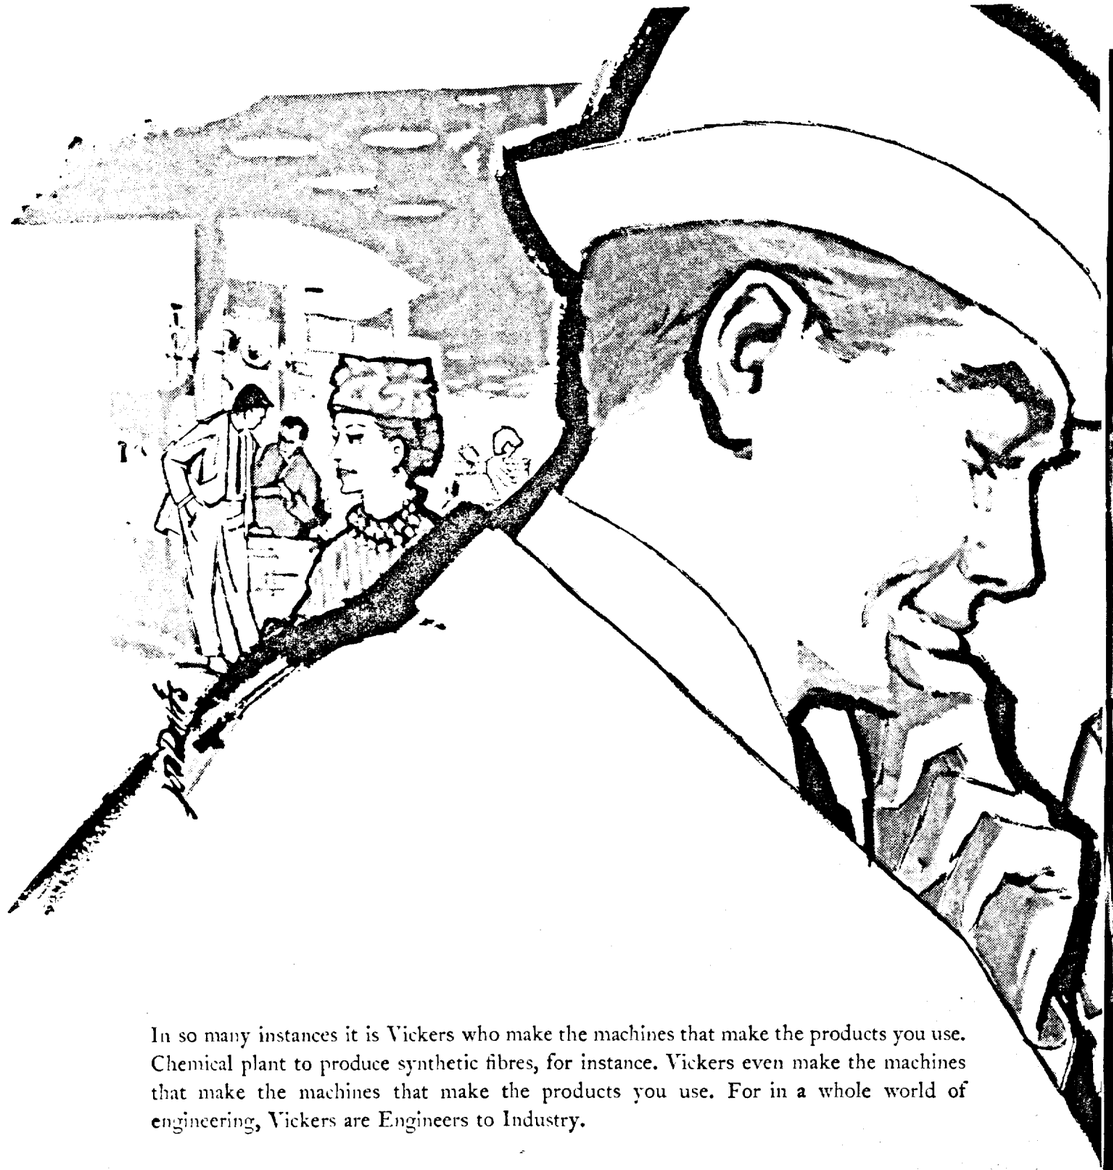
... the *new* and *better* galvanized steel sheets



Do you have a job that requires top quality galvanized steel sheets? If so, our LEONITE sheets are just what you need. Our fully integrated and modernized strip mills and Sendzimir continuous galvanizing line are working at full capacity to produce superior corrosion-resistant LEONITE galvanized steel sheets. There is ever-increasing overseas demand for LEONITE because it has a special-processed non-flakable zinc coating which makes it ideal for deep drawing. It is widely used for building material, ducts, furnaces, automobiles, refrigerators and numerous other household appliances.

This is just one integral part of NKK's mammoth enterprises. As the Orient's largest steel producer engaged in both steelmaking and shipbuilding, NKK's 30,000 engineers, specialists and workers are producing high-quality steel products.

What more embarrassing—

to a man of the world like myself, unaccountably wishing to surprise his wife with a present than to find, on reaching the stocking counter, that I am blushing for shame since not only have I forgotten the size, colour, denier and gauge of the nylons I came here to buy, but I suddenly realise that I do not know who makes plant for extruding nylon and other synthetic yarns whose toughness in industrial and marine applications seems strangely incompatible with so much sheer glamour.

In so many instances it is Vickers who make the machines that make the products you use. Chemical plant to produce synthetic fibres, for instance. Vickers even make the machines that make the machines that make the products you use. For in a whole world of engineering, Vickers are Engineers to Industry.

VOLUME CCII - NUMBER 6180

No Policy for Mergers

NO economist could pretend that there are any conclusive economic arguments, in the current state of this art-cum-science, against a merger between Imperial Chemical Industries and Courtaulds. The "technological considerations" into which Mr Erroll sought to delve last week afford no oracular guiding light. Nobody—ICI and Courtaulds not excluded—knows enough about the effects of bigness and vertical integration in a modern science-based industry to say with any real certainty that they would conduce to promote greater business efficiency in the production of man-made fibres in Britain than would freedom to buy the intermediate materials for any or all of these fibres in a market that is for the present in surplus.

The Government's commitment to empiricism in examining monopoly and restrictive practices would in any case have given it excuses for deciding (as Mr Erroll announced on Tuesday) not to decide whether this merger would or would not be in the national interest. Such empiricism—monopoly's not good or bad, but thinking (by the Monopolies Commission afterwards) makes it so—is built into British political attitudes towards the restraint of competition. Not into Conservative attitudes alone, either: Labour made it the core of the Monopolies and Restrictive Trade Practices Act of 1948, defends big trade unions against any scrutiny at all, and has had kind words for cartels arraigned before the Restrictive Practices Court. The Government's entranced indecision before the prospect of ICI's gobbling up Courtaulds is only the latest demonstration of the basic inadequacy of this whole political attitude, which sounds so sensible and constantly turns out to be so ineffectual.

It arises perhaps from the mistaken assumption—which economists are guilty of encouraging—that political objections to monopoly can be altogether based on evidential grounds, economic or technical. The United States—which is often accused in Europe of having an exaggerated animus against monopoly, because it has a policy that quite often works—seldom falls into this trap. Its legal prejudice, *per se*, against anything calculated to restrain competition, is avowedly based, in the last resort, on social and even moral grounds; the economic efficiency that it believes competition generally promotes is the secondary justification, not the first. Primarily, American attitudes towards monopoly (public as well as private) are based upon a distrust of concentrations of economic power, irresponsible in that they are not finally accountable to the public. This does not make American anti-trust legislation emotional and ineffective; it makes it at times even embarrassingly effective. It is no accident that the only British procedure in this field to have achieved even formal success, that of the Restrictive Practices Court, does lean towards the *per se* outlawry of restrictive agreements, holding them wrong unless, under specified heads, they can be proved to be right. But a similar proposition towards single firm monopoly is not one that can ordinarily be demonstrated in logic: either you feel it or you do not.

The present British Government, elected to represent a country where political democracy is still suffused with respect for established hierarchies of one kind or another, does not feel it. Starting from the assumption that bigness will only become bad when it can be proved to have been bad, it can form no opinions about the future results of the engrossing behaviour of business men. No doubt it was embarrassed by the project for an ICI-Courtaulds

merger, the more so when it found that the eminent business men in whose wisdom it at first counselled Parliament to trust were calling each other fools or liars (a spectacle that may yet have more effect on the end of the affair than most of us have yet reckoned on—as perhaps the Tory backbench disquiet may indicate). But it did not feel competent to decide, on the evidence, whether this merger was in fact in the public interest or not, and did not feel that any clear principle was involved.

This, rather than the mechanics of any possible intervention, lies behind the Government's refusal to intervene. Both companies could, as it is, be said to fall within the purview of the Monopolies Commission, which is indeed ordinarily asked to say whether conditions existing in an industry "operate or may be expected to operate" against the public interest. And any hint of Government uneasiness or disapproval, on grounds of the national interest, would certainly have had some considerable effect upon the attitudes of the directors and shareholders concerned. The idea of a quick inquiry—to find out the "facts of the case," or to take Parliament off the boil?—was never a good one. But had the Government been prepared to form an opinion, it would have had no difficulty in making that opinion prevail. It was not ready to do this; and one suspects that it will go on finding reason for not making up its mind about mergers. Tory ministers still do not stand for *laisser faire* in the sense of securing the largest practicable limits of effective competitive enterprise and choice; they tend to believe instead, as perhaps they always have done, in *laisser faire* for the biggest and best business men to pursue their expert objectives as they think most appropriate. What is good for the private barons may be good for the country; Mr Erroll washes his hands. Sometimes indeed this may be right; but the Tories have no public test, political or moral as well as economic, to judge by. It is almost symbolic that, in this property-owning democracy, the last people formally to be consulted about this transaction will be the shareholders of ICI.

THE PULL OF DEMAND

ECONOMIC POLICY RE-EXAMINED — 1

At both the beginning and the end of his "General Theory" Maynard Keynes reverted to his favourite theme that the world was ruled by little else than the "gradual encroachment" of economic ideas. The danger arose when "practical men, who believe themselves to be quite exempt from any intellectual influence" were in fact the slaves of the ideas of a few years back, which changing circumstances had rendered defunct. The object of these articles is to suggest that just such a thought-block may have arisen today about what the Treasury habitually calls (it uses the words again in its official *Bulletin* this week) the "excessive pressure of domestic demand upon resources"; that, for the second time since Keynes wrote, practical men and civil servants and politicians in power today may be being ruled by ideas that were rightly conceived for circumstances fifteen years back.

The coincidence of a fifteen-year gestation period is revealing. It took almost exactly fifteen years after 1931 before Keynes's own ideas on how to beat a slump percolated through to become the official policy of a British government; unfortunately, when they were applied in 1946-47 it was in conditions when the slump they were designed to fight had been replaced by a roaring boom. Many of the ideas that influence top civil servants and Tory politicians today were born during the period of reaction against the disasters and absurdities that then followed; and, as it happens, the fifteenth anniversary of the most spectacular of those absurdities now lies immediately before us. Fifteen years ago next week, at the end of a long and polemical parliamentary debate, Mr Shinwell suddenly announced that, because the country's stocks of coal had run out, large parts of British industry would have to close down until the weather improved.

Everybody knew what was wrong with Britain's economic policy at that time: the Labour government had allowed demand to rise in excess of the maximum possible level of production. Writers of the time—including *The Economist*—also had a clear definition of what excess demand then meant; it meant that demand was so voracious that the economy was constantly bumping along with an insufficient margin of stocks. This produced three main evil effects. First, its short-term effect on production: all over the country, cold weather or not, factories were liable to find themselves underemployed because the day's supply of steel or components or raw materials had not yet arrived. Secondly, the longer-term effect on production: because raw materials were scarce they had to be rationed, and it was impossible for efficient firms to increase their output by more than inefficient ones, since they could not get any extra raw materials. Thirdly, the effect on the country's precautionary defences against intermittent break-down: with stocks so desperately low, any minor additional interruption to supply, such as a wildcat strike or a spell of cold weather, was elevated from being a small-scale inconvenience into being a major national disaster.

At this stage, therefore, the last few hundred million pounds worth of domestic demand were actually serving to reduce real national income and production, not to increase it. Excess demand in this strictest sense began to fade out soon after the start of the 1950s. Something of a watershed was reached in 1954 when a month-long strike at London docks, which everybody (including the Government and the strikers) had expected might bring the country to its knees, in fact left industrial production broadly unaffected. Unfortunately in the next year, two of the other problems which economists had previously associated with "excess demand" reappeared: in 1955 a deficit re-emerged in the balance of payments and there was a quickening of the upward thrust of prices. The Government therefore assumed, and in the particular circumstances of 1955 possibly rightly, that the right thing to do was to restrict demand. It has gone on restricting demand whenever a balance of payments difficulty or an inflation in costs and prices has reappeared.

But under the new conditions—where any reduction in demand is now likely to push production down, not up—a whole new series of calculations has to be made before deciding whether the right course is, in fact, to restrict demand. These calculations are not easy to make. But it is a pity that in recent years there has sometimes appeared to be a complete official thought-barrier against any attempts to make them. This article will suggest the calculations that ought to be made about the relation of internal demand to the balance of payments. The even more complicated question about the relation of internal demand to price inflation will be discussed in a subsequent issue.

One should begin by stating basic principles, for it is these that are most easily disregarded—and, indeed, often cause the biggest shock as soon as anybody points them out. The first thing for a country to get clear in any year is what size of balance of payments surplus or deficit it wishes to aim at. This is not a simple matter of saying "big surplus good, any deficit bad." Logically, the question whether a country would be wise to run a balance of payments surplus (and thus lend abroad) or a balance of payments deficit (and thus borrow abroad) should depend on whether the profitability secured by investing the last pound of investible funds —or what economists call the marginal productivity of capital —looks like being higher abroad or at home.

If a calculation on these lines suggests that a country should allow its balance of payments deficit to be increased or its balance of payments surplus to be reduced in any year, it must take steps to increase its net borrowing or reduce its net lending abroad. The obvious way to do this is by increasing its internal interest rates relative to those in foreign countries. Quite often, this is the right thing to do, at least in the short term. But—here the present official view of economic objectives is right—there are two possible short-term limitations, and one very obvious long-term caveat, to this policy. The short-term barriers are, first, if interest rates then have to rise so high that they have undesirable effects upon the internal economy (effects so undesirable that they cannot be countered by appropriate tax changes); or, secondly, if foreigners have become so worried about one's balance of payments deficit that they will not lend to one even at higher interest rates. Both these barriers can sometimes exist, even though they tend to be exaggerated.

The long-term caveat, however, is much more important. If a country goes on borrowing more and more abroad at higher and higher interest rates, then it is going to have to finance a higher and higher current deficit in future as those interest payments fall due. A country which is borrowing in this way will have to export a higher proportion of its national product (or import a smaller proportion of it) in future if its current balance of payments problem is even to stand still. Nobody denies that Britain is in at least this position today; probably, indeed, it is in a position where the long-term balance of payments needs to be strengthened by a bit more even than this. And, because Britain is bound to import more raw materials as production goes up, it is also common ground that the strengthening of the balance of payments must be effected by securing a permanent increase in exports. The argument is how that permanent increase within an expanding economy can be obtained.

It is here that the thought-block appears. Logically, the only circumstance (save, again, 1947-like circumstances) when cutting internal demand can be an effective recipe for *permanently* increasing exports within an expanding economy is a rather special one; when there are a mass of British-produced goods which are at present sold at home but which could more profitably be sold abroad once manufacturers had gone out and looked for export markets and set up sales organisations in them. This circumstance may sometimes obtain; but all too often it is confused with the situation where a cut in demand, by making it less easy to sell some goods at home, can cause manufacturers temporarily to sell their goods on rather unprofitable terms in export markets.

The medium-term mess in which such a policy lands a country has become increasingly apparent. First, it means that Britain is deliberately running its economy on a basis where export sales become the marginal sales for each manufacturer—where exports are the sales that he wants to cut out when home demand improves again (as it is bound to improve again sometime, unless the standard of living is to stand still). Secondly, when the Government is successful in deliberately directing the cut in demand to industries which "could export a bit more of their produce," it is deliberately imposing a disincentive to invest (and to hire labour) discriminatorily upon them; then it wonders why, when foreign or home demand revives, these are precisely the industries which have insufficient capacity to meet the new demand. These two errors have bedevilled the whole of British balance of payments policy for the past six or seven years.

In the long term, the only way to secure a permanent increase in British exports, far from squeezing potential export industries and making it unprofitable to invest in them, must be to make it actively profitable to sell abroad a new slice of our national production. This could presumably be done in one of two ways; either by devaluing the currency (thus increasing the sterling profits to be earned by exporting), or by reducing British costs per unit of output relatively to the costs per unit of output of our main competitors in export markets (and relatively, too, to foreign demand). If relative British costs per unit of output could be cut only by actually reducing wage rates, as might be true if foreign demand and foreign costs were going down during a slump, then there might be a case for saying that the second course would cause even greater social strains than the first. But, in fact, the signs suggest that foreign demand and foreign costs are going up. Probably, therefore, all that Britain needs to do to secure a new relative advantage is to see that its wage and salary costs do not go up by more than its output does (thus keeping its costs per unit stable); of course, if wage and salary costs went up by even less than booming output (thus actually reducing costs per unit of output) that would, from the point of view of the export drive, be better still.

This provides the present case for the wages pause. But it does not provide a case for a tough budget; indeed, except under certain quite specifiable conditions, it can provide the reverse. The devices of a tough budget—whether they be increases in indirect taxation, or in direct taxation, or cuts in social services—serve in the first place to hold down output; unless they somehow manage to hold costs down by even more, they thus make exporting rather less profitable (in actual

cash terms, even if not relatively to home sales) than before. Most of those who believe in still restricting demand implicitly assume that a tough budget, by moderating the pull of demand, would in fact reduce costs by more than output. But this will, in fact, be true only in certain very special and definable circumstances: a subsequent article will examine them, and discuss whether they seem likely to be the circumstances to be expected in 1962-63.

Pan-American Eggs

The search for a formula to isolate Cuba has distracted Latin Americans from their own problems

REFLECTED in the distorting mirrors of the Punta del Este conference, the Latin American republics presented strangely flattened images of themselves. For ten hard-working days, from January 22nd, the foreign ministers of the Organisation of American States met at this pleasant Uruguayan seaside resort to talk about Cuba. The turbulence of separate and effervescent societies has been obscured by the one-dimensional purpose of the meeting; the only aspect of themselves that nineteen Latin American countries, of immense variety and jealous individuality, were called upon to reveal was the extent of their willingness to make a tough gesture of disapproval towards Dr Fidel Castro.

For the purpose of the conference, the Latin republics were roughly graded into hard and soft eggs—in other words, those who urged a complete break with Cuba and those who saw little sense or utility in such a step. On Tuesday night, after a prolonged and intense argument over its precise wording and implication, the conference passed, by exactly the two-thirds majority required, a compromise formula that, being hard and soft in parts, pleased nobody very much. It secured the ministers' release from the hall of mirrors, but left the impression that they might have done better never to venture in.

The formula (one among several, less controversial, resolutions) states that since marxism-leninism is incompatible with the inter-American system, Cuba is thereby excluded from participation. To plumb what this means in practice is to enter new depths of obscurity. Already Cuba is excluded from the defence discussions, and has no share in the economic aid programmes or the infant common trade policies. Eleven Latin American countries have already broken off diplomatic relations with Cuba; the rest are still under no compulsion to do so. Cuba has very little trade with any of its Latin neighbours; presumably its residual trade with the United States will still, for the time being, continue. The Latin members of the OAS are chained together by their hunger for American dollars, their suspicion of American dominance, and not much else. They are countries that tend to dislike their immediate neighbours, and to view more distant nations with indifference.

The practical loss to Cuba from being excluded from inter-American discussions seems minimal—quite apart from the doubt whether such exclusion is, in fact, legal under the organisation's present rules. On the other hand, the psychological impact of the snub will be effectively cancelled out by the fact that the "big three"—Brazil, Argentina and Mexico, who together account for two-thirds of Latin America's area and three-fifths of its population—refused with Chile, Bolivia and Ecuador to support even the milk-and-water resolution that finally collected the mandatory fourteen votes.

Ineffectual as it looks, this pot-shot at a joint inter-American attitude to Cuba carries on the policy that was started at San José in August, 1960—and which was interrupted in April, 1961, by the United States' tragi-comic attempt to deal with the Castro problem in a different way on its own. From Washington's point of view there has been some progress. At San José, in spite of United States' pressure, the OAS condemned Cuba only by implication. This time, the most vocal and implacable advocate of tough diplomatic action (including total economic and political sanctions) was not the United States itself but a group of Central American republics, backed lustily by Colombia and Peru. The leaders of the smaller Central American republics are liable to feel more alarmed about Dr Castro because their own countries are not only geographically closer to the Caribbean upheaval, but also have much more in common with pre-Castro Cuba than have most of the southern republics. Moreover, several of them may have felt the more vulnerable because they have so little to offer as an alternative to fidelismo.

BRAZIL and Mexico led the group most resolute against the irreparable step of blackballing Cuba. Argentina and Chile urgently sought a compromise. Uruguay wavered this way and that. Haiti added a touch of farce by switching, temporarily, from the hard group to the soft because it felt it was not getting enough money out of the Alliance for Progress. None of the delegates expressed any approval of the course of events in Cuba, but several of them agreed with the Brazilian foreign minister that it was unwise to shut the door on all chance of mediation.

Their reluctance to break off relations with Cuba has been generally interpreted as their fear of hostile domestic reaction. This, like so much else at Punta del Este, is an over-simplification. Certainly, those republics not under so tight a feudal grip as, say, Nicaragua or Paraguay had to take into account the effect of anything they did on aggressive left-wing groups at home. As a background to the conference there have been pro-Castro demonstrations in Bolivia, Brazil, Peru, Chile and Mexico; while in Argentina there have been angry mutterings from right-wing elements in the armed services. But by far the most serious reaction was in Venezuela, which broke with Cuba in November; last week, in several days of street fighting in Caracas, more than 30 people were killed and many hundreds injured.

But it is not only politically embarrassing for many of the Latin American leaders to stand up and be counted as anti-Cuban; when this is linked to a promise of economic aid it is also distasteful, and brings back sour memories. Latin Americans, who have had a longer period of unbroken independence than any African country, or most Asian countries, can accept political arm-twisting with considerable cynicism. It is not that they have less pride than others, but that they are more mature and more sure of themselves. They have, in the past, shruggingly respected Washington's susceptibilities in the cold war, only regretting that they themselves made so little profit out of the clash of interests. But in the last year or two there has been encouraging evidence of a change in American tactics towards the less committed world, and particularly towards Latin America. The suggestion of a reversion to older and cruder pressures may have sent cold trickles down the spine.

Probably the most regrettable feature of the Punta del Este meeting has been the loaded hinting, by the congressional members of the United States delegation, that the Alliance for Progress might be in jeopardy. In his budget message, President Kennedy estimated that the United States would hand out more than $1 billion in loans and grants to Latin America in the year beginning next July. But during the OAS conference, the point was made that the American Congress might think twice about appropriating this money if the Latin Americans failed to take a strong line over Cuba. This may have been mere tactics, and congressional rather than Administration tactics. But one feature of the alliance was to be that aid would be continuous and assured over a period. Another was to be that the conditions of aid would be related to the purpose of social and economic betterment.

Mr Kennedy did insist from the start that the countries to benefit from the economic alliance should only be those whose ruling classes had shown themselves ready to give up some of their wealth and privileges. The legislation authorising the programme specified a series of self-help criteria, including basic social and economic reforms. Since this is the sort of arm-twisting that fulfils a purpose germane to the programme itself, it is a pity that it should be relaxed by the suggestion that political conformity over the Cuban quarrel offers an alternative qualification for aid, or that lack of conformity is a bar to it.

Several of Latin America's leaders have shown little sign of having understood or accepted the social implications of the aid programme. When the chairman of the Uruguayan National Council welcomed Mr Rusk, the Secretary of State, to the conference he joked bitterly about the delays in getting any American money; in fact, the fault lay with the procrastination of Uruguay's parliament in approving their own master plan, a precondition for this American aid. And last week Mr Teodoro Moscoso, the American official in charge of the programme at the Washington end, spoke out against the failure of the Latin American governing class to play its part in the bargain:

> The people of Latin America are determined to . . . obtain social and economic justice and if they can't get it under their present governments they will turn to Castroism. . . . Unfortunately the leader class has not yet recognised this.

Mr Moscoso was making the one point that is fundamentally relevant to the present complex of inter-American relations. The labyrinthine course of the Punte del Este discussion was a diversion, and not a rewarding one.

Boom, Ruhr Style

France sets the fashion in economic policies. But the west German economy, now entering a new phase, is also worth study

FOR some eight years there has been talk of the German "miracle" coming to an end. As the *Bundesbürger* have restored their shattered homes and attained affluence, there have been many signs of the feverish drive to work giving way to a greater wish for leisure and a measure of *Gemütlichkeit*. German industrialists have been complaining loudly that their costs are rising and profits falling as the troubles of full employment close in. Again and again the gloomy prophecies have been confounded by new and remarkable statistics of expansion. But in 1961 the Cassandras have been supported by two new hard facts. The wall across Berlin cut off, in one swoop, the westward flow of managers, workers and students who have been feeding the west German boom and draining the meagre strength of east Germany; and last spring the Bundesbank plucked up sufficient courage to respond to persistent pressure from abroad and revalue, though slightly, the mark. Imports were modestly encouraged, exports discouraged and the boom gently checked. For some nine months now industrial production has all but stood still. It seems a good moment to glance back at the forces behind the long German expansion. What set them going? How strong are they still?

Though Paris has lately set the fashion for the British in their search for dashing models of economic growth, the German economy remains a useful yardstick for comparison with ours. War and migration have left the west German economy strikingly similar to ours. Its population of some 53 million is almost exactly the same size and as thick upon the ground as in crowded Britain. Last year the west German national product about reached the British level. In 1959 exports plus imports in each country were equivalent to some 30 per cent of gross national product. With a far stronger industrial base than France, and a bigger export trade, west Germany is at the same time Britain's first competitor, and most inviting market, among European countries. The one striking difference in the past decade has been that the west German economy, which started much poorer than our own, has been expanding more than three times as fast.

At first sight the cut of German policy looks massively different from the current Paris-London line. Planning is a distinctly improper word in Bonn. Wages have been rising by an average of 8 per cent a year for the last three years; hours worked have been on average shorter than in Britain for some years. These rising wages and improved working conditions have been the reward of rising productivity. Shorter hours worked (meaning not so much costly overtime) reflect the fact that the labour force has grown faster and been more mobile. There has never been any question of a dividend freeze (indeed, the tax on distributed profits is lower than that on undistributed ones). Market interest rates have

been consistently higher than in Britain, because the gap between bank rate and bank lending rates is much larger in Germany than here. All this can be made to look like a remarkable tribute to the sorts of policy *The Economist* has continually urged upon British chancellors.

If the parallel is perhaps a little specious, it is because, while there has been no formal dividend freeze in west Germany, there were also hardly any dividends in the first few years of recovery. Owners, like workers, were content to take little out of their undertakings; nearly everything they earned was put into re-equipment. This habit of modest withdrawals and dogged ploughing-back is much older than Germany's postwar problem and has persisted after it. When tax incentives for investment (such as depreciation allowances) were cut down in 1957, it was because they had become superfluous aids. Planning has not been needed in west Germany because the central aim of planning—rapid growth—has been achieved without it.

WHAT is true, however, is that the German miracle was originally based on a very large-scale squeeze indeed, the currency reform of 1948. As a result, Germany, much earlier than some other European countries, saw its liquidity brought into reasonable relationship with the national output. In the currency reform the occupying powers amputated Germany's bulging limb of wartime money in one blow. Wages were slashed. The result was that German industrial profit margins widened rapidly as reconstruction got under way. Liquid supplies of cash were small, but the incentives to invest and save were very great. Exports were intensely competitive because export industries were the profitable things to build up; in the years after 1948 German consumers had not enough money to buy many German-made luxuries, while export markets had. For a while large-scale dollar aid was given to German reserves of foreign exchange to get the economy under way. As productivity and exports rose the payments position righted itself, and wages began a steady rise which still continues.

Two classic policies were then applied to harness the individual energies of Germans. Dr Erhard's programme of unilateral tariff-cutting swung Germany, highly protected since 1879, into the ranks of the low-tariff nations, and exposed German industry to a new fierce breath of competition. At the same time direct taxes were cut in budget after budget. Almost every year in the early nineteen-fifties depreciation allowances for industry were increased and direct taxation in some way cut. Even when the time came to spread the cream more widely, welfare payments tended to take incentive forms. New pensions and sick pay are partly tied to earnings. Wives are encouraged to work by being taxed separately from their husbands.

The German boom derived its initial thrust from forces that had no counterpart in Britain—the 12 million refugees and the abnormally high yields obtainable on investment in a phase of reconstruction. But it retained its impetus long after the first effort of reconstruction was over. Why?

One reason seems to have been the sheer habit of growth. Expansion and high investment took firm root as habits. The psychology of expansion which the French instilled into their business men by a deliberate planning effort caught on in west Germany in the boom years of the early nineteen-fifties and has not seriously faltered since. Much of Britain's problem today is, like Germany's in 1948, the problem of shifting into a new high gear of expansion. Once the initial acceleration can be achieved, the momentum of expansion may be easier to maintain.

The structure of German industry also helps to explain Germany's continuous expansion. Because the German industrial revolution took place—late in the last century—in the age of electricity and chemicals, German industry has been better placed to take the opportunities of this century than British industry, with its roots in the earlier age of steam and cotton. The division of Germany enhanced the predominance of the capital goods industries in the German economy. The strength of machine tools, parts of heavy engineering, and steel, has stood west Germany in good stead in the developing postwar world. It lies behind the fact that almost every wave of west German expansion has been led, not by consumption, as in Britain, but by exports and orders for capital equipment. Above all, the facts that industrial rebuilding took place at a time when the export market was stronger than the domestic one, and that virtually all German industry was forced by its war losses to make a fresh start, for which it had to find new money in a rigorously competitive capital market, have made its growth industries export-orientated ones.

The strengthening of the key investment industries, which also look like the best export bets, and the creation of a habit of growth among industrialists are two tasks for Mr Lloyd's planners in this country. But it will be ironic if the British manage at last to jack their economy out of its lethargy just when the German boom is slowing down. For Germany the spectacular achievements of the nineteen-fifties—with industrial production growing by some 8 to 12 per cent several years in succession—are things of the past. All the indications are that the present pause will be followed by a more gradual expansion.

How fast this is may well turn on the skill with which German industrialists manage to find new sources of labour to replace the flow from the east. With trade union support they are already recruiting heavily in Italy, Greece and Spain, and are even going as far afield as the Dutch Antilles, the common market's Caribbean associate. But it is German agriculture, with its antiquated methods, that offers much the biggest reserve of men. In the past ten years more than a million men have left west German farms to work in industry. But more than three million remain, far more than an efficient agriculture should need. In Britain industry grew up within the structure of the crafts, leaving a legacy of restrictive practices and rivalries; the main untapped reserve of labour appears to be underemployed labour in industry itself. In Germany the invisible reserve is tied up in a protected agriculture, operating often in tiny units and with medieval methods.

Bold action to bring Germany's farm protection down could thus be the key to the next phase, not only of European integration, but of Germany's own industrial growth. West German industry has already benefited from the stimulus of tariff-cutting both in and outside the common market. In the next phase, while Britain is responding to the industrial challenge of the common market, Germany has the chance to raise its national wealth rapidly by an overdue revolution on the farm.

NOTES OF THE WEEK

WAGES

Nationalised Inflation?

THE events of the week have revived memories of a familiar adage: this country contains a large number of privately owned industries which are subject to strong government control, and a small number of publicly owned industries which are subject to no government control whatsoever. The four vital wage claims at present under way involve the engineering industry, British Railways, the Coal Board and London Transport. The engineering employers are to face a one-day token strike on Monday in protest against the rejection of a wage claim for £1 a week and a 2-hour reduction in hours. The 3 million engineering workers—or those of them who obey the call to strike—will probably be joined by their colleagues in government industrial establishments: in London, anyway, this might mitigate the effects of an unofficial Tube strike that day. But the employers are standing firm by their refusal of the claim: they concede that some prosperous firms in prosperous areas could afford to pay more, but refuse to countenance an across-the-board increase for all workers.

The nationalised employers, however, seem to be teetering on the brink of giving all-round increases, in their unprofitable services as well as their profitable ones, in their labour-surplus areas as well as their labour shortage areas—and above-the-pause increases at that. On Wednesday Dr Beeching sent the rail union leaders away to think about some new ideas: the impression has been given that the basis of these is that negotiations should be about how much more than 2½ per cent the men will get. As *The Economist* went to press it looked as if the Coal Board was preparing to give the Government an even more specific jolt. Lord Robens had already offered the miners almost half of what they had asked for; and the presumption immediately after his further meeting with them on Thursday morning (if only because by lunch time the unions were not yet squalling with protests) was that he might now step his offer up further.

The public has not yet been told what London Transport intended to offer to its busmen on Wednesday, because Mr Cousins was away from work with 'flu. But this trend towards creeping sabotage of the wages pause must now raise the question whether right wing Conservatives, whose gloomy cries about the "country having been ruined by nationalisation" have in the past seemed so exaggerated and so boring, may not have had a point after all. All round the country the nationalised industries are still operating many uneconomic services which, on grounds of sheer unprofitability, private enterprise would have closed down (or at least put on to an entirely different system of pricing and operations) long ago. The nationalised boards are thereby tying up many scarce labour and other resources in many of the wrong places and jobs. If, on top of this burden on the national economy, they are now to break all prospect of stopping national cost inflation—out of a good-hearted impulse to buy the friendship of the unions with money which they themselves have not earned—this raises very big new issues indeed. The Government has a plain duty to step in and see that bodies which consider themselves free from control by the market are subject to some other form of direct control instead. And, in wages policy, the time to do that is now.

Fingers Off Triggers

ONE of the most interesting features of this year's wages struggle has been that both union and Labour party leaders have plainly realised how unpopular strikes can make them. Mr Gaitskell went out of his way last weekend to deplore the first of London's series of Monday transport strikes. Mr Smith of the postal workers, in at last calling off the pointless post office go-slow on Wednesday, quite plainly had his members' public image mainly in mind. Mr Cousins, who three months ago was breathing fire and brimstone about the need for solidarity at the Labour party's annual conference, wisely persuaded his London busmen not to join the unofficial Monday transport strikes. And in Monday's debate on arbitration, held while the one-day strikes were on, the burden of Labour speeches was not a clarion call for support of striking workers, but a plaintive and never-ending accusation that the trouble was all the Government's fault.

The debate took the usual disordered form for parliamentary wrangles nowadays (52 Labour interruptions in the course of seven Conservative speeches), but only one Labour argument seems to have really annoyed Tory MPs when they read about it later in Hansard. This was when one Labour member accused the Government of deliberately stirring up strikes in the knowledge that they would be to its electoral advantage; Tories have got used to Mr Lloyd being called every name under the sun, except that of electoral asset. Moreover they still do not really expect him to be one; and although they will stand by the Cabinet if it decides to act firmly, there is still gloomily little sign that they will really revolt if it slides away from strikes into some Beeching-like settlement.

EAST-WEST

Mercuries

MORE than mere coincidence can be assumed to lie behind the three meetings this week at which Russians and Americans have discussed the "flow of communications" between their countries. On Monday President Kennedy's press secretary, Mr Salinger, talked to his Russian opposite number, Mr Kharlamov, in Paris; on Tuesday Mr Kennedy himself gave lunch to Mr Alexei Adzhubei, the editor of *Izvestia* (not to say the son-in-law of Mr Khrushchev), who interviewed Mr Kennedy at length as recently as November; on Wednesday Russian and American officials met to discuss an extension of the four-year-old treaty that governs the exchange of exhibitions, official magazines, visiting firemen and so on.

So far the only result of these meetings is an arrangement that Mr Salinger will visit Moscow in the spring, and a suggestion, apparently still to be approved by the great men, that Mr Kennedy and Mr Khrushchev might make a series of television appearances on each other's screens. Perhaps to show that Barkis is willing, one small American radio network will broadcast Radio Moscow's news in English, without comment, next week. It looks as if Mr Kennedy and Mr Khrushchev are moving towards a tentative agreement to do two things. One is to exchange views at regular intervals, more intimately than is possible through ambassadors, but not so intimately as to cause political difficulties at home; Mr Robert Kennedy, for instance, is apparently too exalted to play Mercury just yet. The second is to continue, and perhaps extend, the arrangements that have recently given public opinion in each country a glimpse of the other side's point of view.

If Mr Khrushchev wants to promote a civilised dialogue between Russia and the United States, the question remains what his motives are. One theory being studied with respect in Washington is that 1962 may bring a prolonged period of armed truce in the Berlin crisis, in which there will be no international agreement about the city's future, but neither side will do anything to make matters worse. (This means, in particular, that Russia would not sign a peace treaty with east Germany while the truce continued.) During such a pause, the improved traffic in ideas and information that Mr Kennedy and Mr Khrushchev are now seeking to cultivate would be distinctly useful. It would help to calm the nerves, and mollify the temper, of people in both America and Russia who might otherwise push their leaders into precipitate action. By letting Mr Kennedy and Mr Khrushchev

that, regularly though indirectly, it would also enable them to avoid misunderstandings about what the other was up to—and thus help to preserve the present delicate equilibrium.

Pluto

A MORE dramatic interpretation of what lies behind the recent lull in the cold war was offered by Mr Isaac Deutscher in last Sunday's *Observer*. Mr Deutscher suggests that Mr Khrushchev may be about to abandon Herr Ulbricht, the ruler of east Germany and the chief surviving deity of the Stalinist underworld in eastern Europe. By disinteresting himself and withdrawing the Russian divisions from east Germany, the argument runs, Mr Khrushchev might hope to achieve a lasting relaxation of tension in Europe, and thus divert substantial resources from his army to industry and agriculture.

How gratifying, indeed, if the Russians left Herr Ulbricht to his fate ; though the almost certainly unpleasant nature of that fate. and the upheaval that would follow in the rest of eastern Europe, make it difficult to see how this would encourage the relaxation of tension Mr Khrushchev is said to want. But the real difficulty is to find evidence that Mr Khrushchev plans so improbable a move. There is some ground for thinking that the Russian leadership, or a faction in it, toyed with the idea of pulling out of Germany immediately after Stalin's death in 1953. Mr Deutscher argues that nothing less than an intention to return to the ideas of 1953 could explain the attack Mr Khrushchev launched last October on the "anti-party" group in Russia and their allies abroad. But it is equally possible that Mr Khrushchev thought this attack necessary, not because of something he intends to do, but because of the "anti-party" group's opposition to what he has done already—at home in agriculture, and abroad in hinting at compromise over Berlin.

Billet Doux to Bonn

Diplomatic notes between Russia and the West rarely arouse such contradictory reports or provoke so much discussion as the document handed to the west German ambassador in Moscow on December 27th, and since published in Bonn. This is more moderate, more urbane and more shrewd than the usual run of Russian notes. The following summary may show why it has been possible to describe it both as a repetition of familiar themes and as the beginning of a new Russian policy on Germany ; as an attempt to divide Germany from its allies, and as a sensible gesture to the West.

THE Soviet memorandum (it was unsigned and has been described in Moscow as unofficial) begins by declaring that Russia and west Germany are the greatest states of Europe, so their relations must be important to anyone who wants a peaceful future. The two countries have different views on many important international questions, but they share a common interest in preserving peace. Both have suffered from the two terrible wars which Germany started, but the past must not be allowed to stand in the way of better relations in future.

The peace settlement (the memorandum continues) has not been completed. Europe is divided. "A few neutral states in Europe form oases" between the two military blocks. This situation is not our fault, argue the Russians. The Warsaw pact was formed long after Nato, in response to it. And it is the western powers that block disarmament, a German peace treaty and a solution for west Berlin, "on which, in the matter of its constitution as a free city, a decision must soon be made."

Then follow the arguments that have led the memorandum to be branded as an attempt to divide the West. "Some politicians, in countries allied with the Federal Republic, argue that to make concessions means to loosen the bonds that tie Germany to Nato." And certainly, "without the German pillar, the whole Nato structure would totter. A neutral west Germany—let alone a neutral reunited Germany with a small military expenditure and a powerful economy—is not what is wanted in the capitals of the western powers. Thus tension is kept up, not in the interests of Germany, but to maintain their (the allies') interests and keep the Federal Republic on their side."

What, continues the document, are the real interests of west Germany ? It joined Nato in the hope of "driving back socialism." But in fact, because of the Nato alliance, "the division of the country is deeper and the reunification of Germany incomparably more difficult and pushed into the far distance." Anyone who still hopes "to swallow the Democratic Republic, and thus strengthen the capitalist west German state" is living in a dream. The Nato policy has "strengthened Germany's position in relation to the western powers, but decisively weakened its political position in relation to the eastern powers." Which weighs heaviest, the gain or the loss ? German politicians must decide whether they care most about "solving the German national problem or fulfilling the 'collective tasks' of Nato, i.e. the policy of anti-communism."

Then follow two home runs. "Anyone who thinks the stubbornness with which France tries to tie west Germany to Nato is only due to a specially warm affection for west Germany is making a mistake." Leading French politicians, and especially General de Gaulle, want to control Germany and keep it tied to them. Nor, the argument goes on, is Britain enthusiastic to arm Germany for war against Russia, or to revive a strong Reich. It wants to arm west Germany "to weaken its west German competitor." Even President Eisenhower explained to Mr Khrushchev that if the Americans had not rearmed west Germany it would have "improved its position in world markets at the expense of the Nato allies." Nato was formed in the hope of rolling back socialism. But the policy of strength has obviously failed. There is a balance of forces in the world. And this makes war (and military alliances) obsolete.

This is the long introduction to some familiar themes of Russian policy. If war is in no one's interest, the time has come to get rid of the "leftovers from the last war." The "delayed signature of a German peace treaty and the tensions created by the unsolved west Berlin question" trouble the life of the west German people.

"Russian-west German relations are still very much imprisoned in the past," the memorandum continues. Both sides would do better to put them on a peaceful footing. Russia, of course, is not going to become friendly with west Germany at the expense of others (meaning the Democratic Republic). Indeed, if the west German government is interested in German unity it must "negotiate with the DDR."

But if Russia is not going to jettison its allies, neither need west Germany. "We do not want west Germany to exchange Nato for the Warsaw pact." Membership of Nato or neutrality "is up to the west German government." But friendship with other states should not compel Russia and west Germany to be enemies. They could still develop friendly relations on matters which do not hurt others—like trade, where Russia, needing machinery and offering raw materials, is complementary to the west German economy, not competitive like the common market countries.

The theme of burying the leftovers of the last war is then taken up in detail. Nobody wants to hurt the interest of the people of west Berlin. They can keep communications with anyone they please, and have close political, economic and cultural ties with the Federal Republic. But the occupation regime must end ; Berlin must cease to be a source of trouble ; the sovereign rights of the DDR must be respected. As things are the people are leaving, and "nobody—no single clever capitalist—will take steps towards an increase of production, so long as Berlin remains a frontline town. The wall has reduced the tension in Berlin," but it has not wholly solved the problem. "Because of the attitude of the western powers and the Federal Republic, we do not exclude the possibility of being forced in the end to sign a peace treaty with east Germany alone. But at the same time as, or even before, the signature of such a treaty, an agreement on west Berlin acceptable to both sides could be worked out."

Peaceful coexistence must be the aim. "If it is not possible to improve relations between our countries suddenly, let us do it step by step."

There remains a third, and far more depressing, possibility: that the coming months will bring neither the abandonment of Herr Ulbricht by the Russians, nor a prolonged truce over Berlin, but a sudden revival, after a pause, of Mr Khrushchev's threat to sign a separate peace treaty with east Germany. The interesting Soviet memorandum described on the opposite page, and an article by Mr Polyanov in *Izvestia* on January 25th, both specifically reserved this possibility. Just a year ago, it should be remembered, there were similar hopes of a period of calm discussion between Moscow and the new Administration in Washington ; but it all ended with the wall built and tanks facing each other across it. Given the right opportunity (perhaps a right-wing revolt against General de Gaulle's government, which would throw the West into temporary disarray) Mr Khrushchev might well be on the move again.

SOVIET UNION

Beware the Ides

BY mid-March the veils surrounding recent Soviet moves may be partly lifted. The session of the central committee, which is to open on March 5th, may provide answers to some of the questions that are being asked about what is happening in the Kremlin. Officially, the meeting will be concerned with agriculture. But in recent years party gatherings ostensibly devoted to agriculture—a serious and sensitive subject, after all—have not uncommonly turned out to be concerned with other things as well. A central committee meeting is, in fact, two conferences. At one, the members of the committee are joined by various regional notabilities and all sorts of agricultural experts ; its proceedings get wide publicity. The other, for committee members only, discusses all the important issues of the moment ; the fact that it has taken place is revealed only after the event, through the publication of resolutions—sometimes, startling ones.

At present there is no lack of subjects for discussion. All the issues left unresolved, or half resolved, by the party congress last October have to be tackled. It has to be decided how the campaign against the "vestiges of the cult of personality," which was heralded at the congress, is to be carried on in practice. The treatment meted out to the "anti-party group" and its figurehead, Mr Molotov (now reported to be ill) will depend on this decision. The party congress apparently ended in a compromise. It would not be surprising if the Soviet leadership, elected only last October, were to be reshuffled again in March.

Foreign policy comes next. The Russian leaders have their minds to make up about the not unconnected issues of its relations with the capitalised West and the communist East. The Moscow meeting coincides with a party congress in Peking. Both sides will have to decide whether to let the present breach between them become recognised in an open schism, or whether yet another attempt should be made to heal it at an international meeting. March may prove a momentous month for the world communist movement.

LIB-LAB

Orpington Rebuffs?

MR WOODROW WYATT'S proposal for a Lib-Lab pact, first put forward last November, has now made more headlines than ever before after his article in last week's *New Statesman*. But it seems unlikely at the moment to get any further. Mr Gaitskell's prompt repudiation of the plan rested on two principal and convincing arguments. First it would cause massive dissension inside the Labour party. Second, there is no guarantee that Liberal voters, in seats where they were deprived of a candidate, would vote Labour just because Mr Grimond told them to. The only sure beneficiaries of a pact would be certain Liberal candidates, who no doubt would pick up Labour votes in seats where a Labour candidate withdrew. Mr Wyatt's argument that there is nothing so very shocking about his suggestion, since it was through a Lib-Lab pact that the Labour party first got its chance in 1906 and won 29 seats, only underlines one of the dangers for Labour in his scheme. What the Liberals need more than anything else is a breakthrough on the parliamentary front, and the pact could present them with just this. Labour might well be hastening on its own funeral.

ORPINGTON — VOTE AND POLL

(Percentage of poll)

	(1) Actual vote, 1959	(2) Daily Mail Poll	(3) Column 2 without "Don't Knows"*
Conservative ...	56·6	35·9	44·0
Labour	22·2	10·7	13·1
Liberal	21·2	34·8	42·6
Independent....	...	0·2	0·3
"Don't Know"	...	18·4	...

*i.e., after redistributing "don't knows" in the same proportion as those who say they have made up their minds.

Nevertheless, if Labour loses the next election, one suspects that some sort of a pact may emerge—although probably only in an informal way. Labour might then gradually stand aside in some seats where it is now very much the "third party" candidate, and where its candidature merely serves to keep the Tory in. The Kent constituency of Orpington, where a by-election is impending, is a case in point. As our table shows, the Conservatives had a majority there equal to 34.4 per cent of the poll over Labour at the last general election. Now a *Daily Mail* public opinion poll (see column 3 of our table) suggests that the Tories might at present have only a very marginal majority of 1.3 per cent over the Liberals. Compared with 1959 the *Daily Mail* poll therefore suggests that there has been a swing from Conservative to Liberal of 12-13 per cent and from Labour to Liberal of 9 per cent.

When the Liberals temporarily won Torrington in a mid-term by-election during the last Parliament, they picked up a swing of about 13½ per cent from the Tories (compared with their last appearance there in 1950) but no swing at all from Labour (whose share of the poll actually went up). If Orpington therefore threatens the Tories with "another Torrington" it will not be because disgruntled Tories are flocking to the Liberals in even greater hordes than in 1958 ; the desertion from their banner this time seems in fact to be slightly less. It will be because more Labour supporters are now deciding that, in constituencies like Orpington, a vote for Labour is a wasted vote. This is likely to be a growing political factor, which both the major parties will have to face.

LAW COURTS

Odd Trinity

THERE has long been a good case for saying that the Probate, Divorce and Admiralty Division of the High Court—A. P. Herbert's unholy trinity of "the wrecks of wills, marriages and ships"—should be broken up. But expectations that the recent death of Lord Merriman—president of the combined court since 1933—would be chosen as the occasion for this are now fading. It seems that, apart from an interchange of judges between the Queen's Bench and Divorce Divisions, the system will continue as before.

Why ? The only common factor between these three disparate jurisdictions is a foundation of Canon or Roman law, and the shifts required seem fairly obvious. The principal purpose of the Probate Division is to give valid title to the property of the dead. On average 200,000 grants are made every year, but only one hundred or so are disputed. The proper place to deal with such cases is the Chancery Division, which already functions as the interpreter of wills and administrator of the assets. In the Admiralty Division—which is confined to cases where maritime law applies, but covers aircraft as well as ships—only about 300 writs are issued each year ; and of these less than half get to trial. There is no backlog of work, cases have to be disposed of promptly as ships are held up pending a decision, and costs in proportion to the sums involved are low. The Admiralty Division is therefore rarely criticised, yet its present marriage with Probate and Divorce is anomalous. It belongs naturally in the Queen's Bench Division, which deals

with other commercial causes. Specialisation — which certainly is needed in Admiralty cases, partly because they may have a strong international flavour (foreign ships are often involved) and because nautical assessors from Trinity House may need to be used to help with technicalities —could still continue there.

Divorce jurisdiction was taken away from the ecclesiastical courts in 1854 and joined to Probate and Admiralty in 1873. The court deals with nullity, separation decrees, restitution of conjugal rights, and declarations of legitimacy, as well as divorce. It used to be claimed that this work was of such social importance that it should be confined to high court judges, but less of this argument has been heard recently. Indeed the majority of divorce work is now done by special commissioners who are normally, but not always, county court judges. In 1958 8,176 divorce cases were taken in London, and 16,268 outside, most of the cases being heard by the commissioners. The Divorce Division of the High Court should be abolished altogether, and the work given to special commissioners. Despite the strong arguments for reform, the Lord Chancellor seems unlikely to give heed to them. The Evershed Committee in 1953 also favoured doing nothing on the ground that the degree of disturbance to the judges and system would not be justified by the benefits gained. Reformers have heard this argument before.

SOUTHERN RHODESIA

Whitehead's Burden

UNLIKE all the African states guided to independence so far, Southern Rhodesia is completely controlled by its own white community. In the rest of British) east and central Africa, African nationalists seeking the political kingdom have rightly seen that their strongest weapon has been the British Government's willingness to leave. But no mother country far away has had anything effective to do with Southern Rhodesia for nearly forty years. Now, for the first time in Africa, black men, relying entirely upon their own resources, are campaigning to wrest power from a governing white minority.

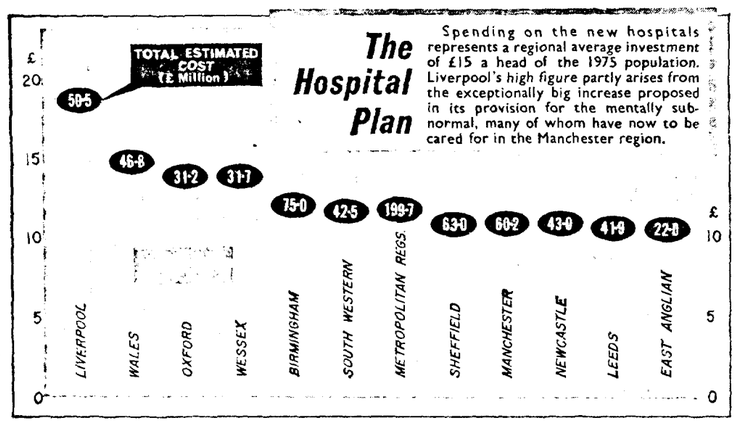
Wrongly, the Zimbabwe African People's Union (Zapu) is acting as if, by using the same methods of strike and boycott that have been so effective elsewhere, it can force the British Government to step in and suspend the Southern Rhodesian constitution. It is impossible to imagine circumstances in which this might happen. For this reason, Zapu should abandon its policy of total non-co-operation and at least agree to fight for the fifteen seats (in a house of 65) granted to Africans under the new constitution piloted through by Sir Edgar Whitehead; alternatively, Zapu should allow a centre party to do this job—and not dissuade voters from registering. Such a policy would not debar Zapu from continuing the extra-parliamentary opposition which, in the absence of universal suffrage, it has every right to put up; but it might prevent bloody exchanges before the transfer of power by channelling the forces of revolution into a fiery (but non-violent) political battle.

When that battle is over, the new government (Zapu-controlled or not) will need Southern Rhodesia's 220,000 whites; the more so because Southern Rhodesian Africans will demand a maintenance of the modern economy which the presence of those whites has engendered. So as not unduly to embitter them in advance, Zapu has a responsibility to at least play the constitutional game opened up by Sir Edgar—who, as prime minister, has most courageously and commendably declared an intention of sweeping away every colour bar in Southern Rhodesia (except the electoral one); true, African intransigence has pushed him part of the way.

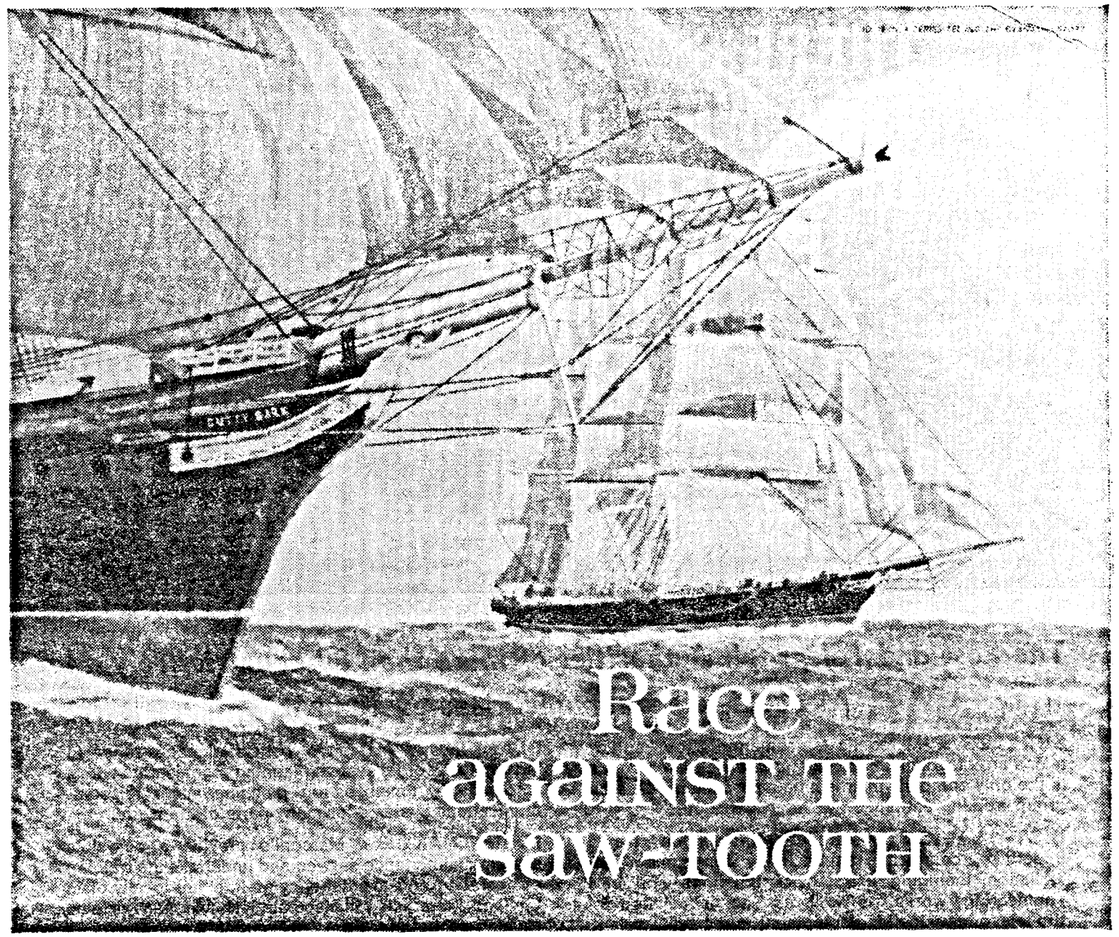
More sophisticated tactics on Zapu's part might appeal to the African intellectuals who have joined it (Southern Rhodesia's first two African doctors are among its leaders). Such tactics would also help Sir Edgar against his own right wing—and, if Sir Edgar is the man who banned the National Democratic Party, Zapu's predecessor, he is also the man who promised on Tuesday, to end the racial division of land. A government to the right of Sir Edgar would make violence in Southern Rhodesia almost unavoidable; a genuine extension of land to Africans, an improvement in urban African living standards, and an opposition to the right of Zapu might help to avoid it.

EUROPE

Parry and Thrust



THE Government made two moves this week, one offensive, the other defensive, in response to the worrying delay in the negotiations with the common market. The defensive move has been in the lobbies at Westminster. Don't count on Britain joining by the end of the year, the lobby correspondents have been told; the common market issue may still be with us by the time the next election comes round. Anxious to avoid a damaging disappointment later on, and to keep the Tory troops in good trim, the Government is taking precautions against over-optimism in case the pace in Brussels continues to be slow.



The offensive move has been made in Brussels; on Wednesday Mr Heath paid a flying visit to hustle the negotiations along. On Tuesday the British delegation had produced more definite proposals for the association of certain Commonwealth countries, and a more definite admission that certain others may have to be treated differently, than have hitherto been made. Next day, at Mr Heath's suggestion, the senior officials went into restricted session —expelling the customary clutter of interpreters and junior diplomats—in the hope that discussion would become more intimate and get closer to the point. Some kind of effort to make better use of the time spent talking in Brussels was certainly necessary. Each side seems to have been waiting for the other to broach the critical topics, and on each side there has been a mounting, if politely concealed, impatience with the other. The British, with the Commonwealth watching every visible move, are naturally reluctant to stick their necks out. But, with domestic critics yapping at its heels, it is the British Government that has the biggest political interest in all speed.

NUCLEAR TESTS

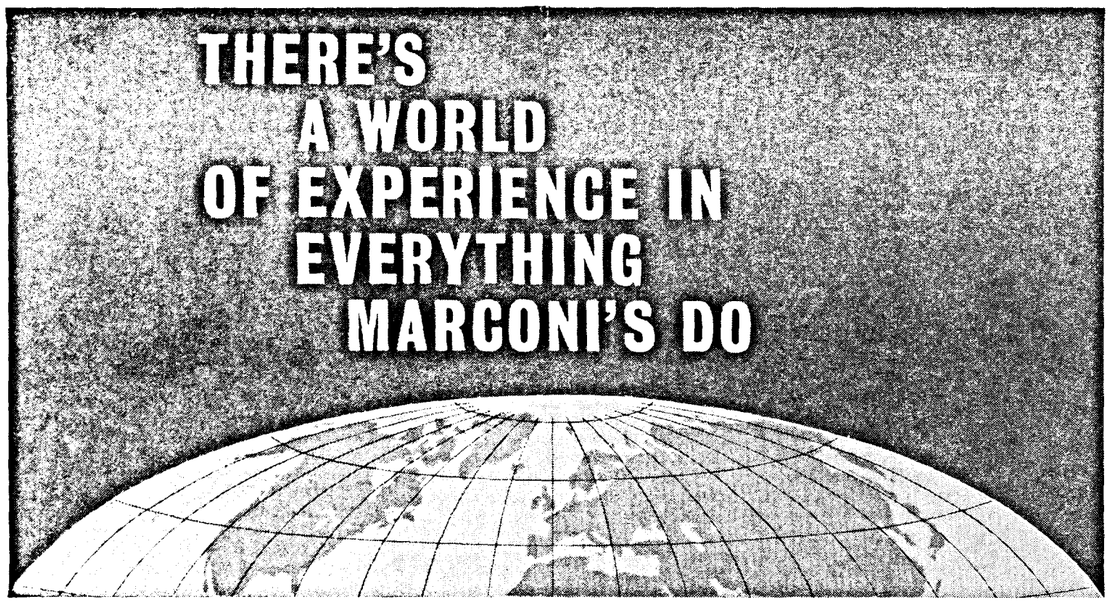
End of Line

AFTER three years and three months, the three-power Geneva talks on banning nuclear tests have reached what really seems to be the end of the line. The Russian record since these talks began on October 31, 1958 (against a background of heavy Soviet testing) has provided melancholy support for those who are sceptical about the value of negotiating with Russia at all.

THE "CUTTY SARK" BY COURTESY OF WHITBREAD AND COMPANY

Full sails. A spanking pace, homeward bound. Fliers like these would make the markets early. Beetles and weevils would have less chance to gnaw their way through the grain cargo. Steam has replaced sail, but the race against the saw tooth goes on. The saw-toothed grain beetle (Oryzaephilus surinamensis) and other insects still infest stored grain: for every ten bags of cereals harvested, one is lost through insect damage.

Transport today is faster, but the beetles and weevils are still there. That is, they were there until a few weeks ago, when the 'Jedmoor' docked in London. Her cargo of Australian wheat had been treated with Malathion, a safe insecticide made by Cyanamid. The Grain Elevators Board of New South Wales had earlier tested Malathion-treated wheat; after three months of storage — no pests. (Untreated wheat showed heavy infestation.) After six months, still no damage. In Britain, Malathion is recommended by the Ministry of Agriculture, Fisheries and Food for the control of saw-toothed grain beetle and other pests. Applied in such low concentrations as one pound to fifty tons of grain, Malathion effectively prevents infestation.



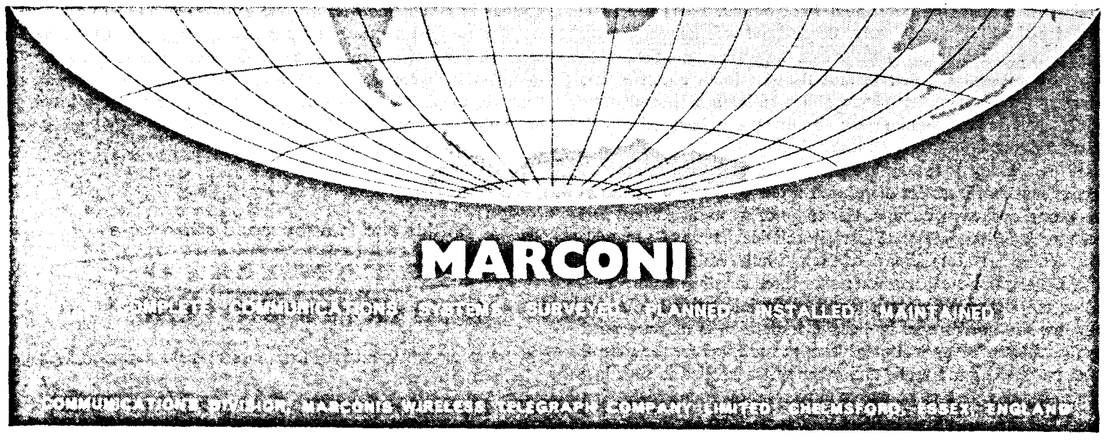
Cyanamid's Malathion is just one example of modern research helping to feed the world's growing population. Cyanamid's research expenditure runs at £10,000,000 a year. It is the kind of research that perfects new chemicals for industry, finds new drugs in the battle against disease, helps the farmer to market grain that is clean and wholesome, helps to save that precious extra 10 per cent of grain to feed the world.

In this and in a thousand other ways

CYANAMID

SERVES BRITAIN

CYANAMID OF GREAT BRITAIN LTD., BUSH HOUSE, LONDON, W.C.2.



The Post and Telegraph Authorities of more than 80 countries rely on
Marconi telecommunications equipment

SURVEYS ★ Marconi's telecommunications survey teams are at work in many parts of the world. Marconi's is the only company maintaining a permanent research group working entirely on wave propagation.

INSTALLATION ★ Marconi's installation teams undertake complete responsibility for system installation, including erection of buildings and civil engineering works as well as the installation of the telecommunications equipment and auxiliary plant.

PLANNING ★ Marconi's vast experience is reflected in the quality of its system planning organisation which is constantly employed on planning major telecommunications systems for many parts of the world.

MAINTENANCE ★ Marconi's provide a complete system maintenance service and undertake the training of operating and maintenance staff, either locally or in England. Marconi's will also establish and manage local training schools for Post & Telegraph Authorities.

COMMUNICATIONS DIVISION, MARCONI'S WIRELESS TELEGRAPH COMPANY LIMITED, CHELMSFORD, ESSEX, ENGLAND

Although the Russians began by demanding a test ban without international inspection, they soon accepted inspection in principle. Throughout 1959 and 1960 the Americans and British pressed them to turn principle into practice. Slowly Mr Tsarapkin was brought to accept successive elements in a system of inspection that came close to meeting the western requirements. In December, 1960, Russia was still going along with a unanimous vote in the United Nations Assembly that demanded effective international inspection of a test ban. But last year the Russians turned about and demanded "troika" control of the inspectorate. Next, while launching their new series of giant explosions, they turned against any international inspection, and against any test agreement in advance of a general disarmament agreement. When the 1961 UN Assembly called for an internationally inspected ban, the Soviet block and Cuba stood out.

On Monday Mr Tsarapkin insisted that the only basis for further discussion at Geneva was the Soviet proposal of November 28th, which rejected international inspection altogether. He denounced the western suggestion that a test ban should get high priority in the general disarmament talks due to open on March 14th. Equally he denounced the idea of continuing to discuss tests through informal contacts at Geneva or through normal diplomatic channels, and accused the Americans and British of "wrecking" the conference, which he declared to be "finished." It is still the western intention to press the test ban question in the coming disarmament talks; but there can be few illusions about the chances. The clock, or rather calendar, has been put back three years.

JORDAN

Young Entry

With a son from his British born wife, promptly dubbed crown prince of Jordan, and a brand new government of young, inexperienced men, King Hussein has flown in the face of all conventions this week. The infant boy, Prince Abdullah (born January 30th), is the first in Hashemite history to be placed in the line of succession without Hashemite blood from both parents. But pride in the firstborn son, much more intense among Arabs than in our own sex-equalised society, would dictate that no honour be denied to him. Today he is the well-omened offspring of a manifestly happy marriage. The future is too uncertain, and present problems too great, for theories about succession to have real urgency.

Of more immediate concern is King Hussein's change of government on January 27th. This was a clean sweep. Out went all the old politicians; and in came a junior eleven of rather young under-secretaries. Only the new prime minister, 48-year-old Mr Wasfi Tell, had held any high post previously. This bringing of youth to the fore is the King's reply to his countrymen's growing contempt for the waffling of office-dulled ministers. Although the retiring prime minister, Mr Bahjat Talhuni, was a man of some courage and stature, his colleagues had grown timorous of taking responsibility. This led to abuses and laxity in the whole field of government. There had also been general dismay at Syria's utter disdain for the king's too overt piping of the Fertile Crescent theme. Doubts may well have arisen whether Mr Talhuni, an old school Jordanian reared in a pro-British climate, was the best man to go, as projected, on a goodwill visit to Syria.

Mr Tell is of different vintage. It is true that, as Cairo has been at pains to point out, he served in the British army during the second world war. Subsequently, however, he identified himself more closely with the cause of the Palestinians than did many of his fellow Transjordanians, and held no important post until brought into office in 1959 as the protégé of the late ill-fated prime minister, Mr Hazza Majali. Since then he has been solidly a king's man and, as such, a staunch "Fertile Crescenter" when lately ambassador to Iraq. There may be a touch of excessive self-confidence in him. With his team of eleven novices he will have his work cut out to promote both reform at home and better relations abroad.

AGRICULTURE

World Food Cartels?

Some French officials have recently been proffering for "discussion" a suggestion that the common market's agricultural policy might eventually be merged into a common world agricultural policy, beginning with a common policy for wheat. The horrified British, who would lose by this scheme, are at the moment unwilling to believe that anybody else would ever accept this plan. But mightn't they? The idea is that the present mess of national support schemes for wheat might eventually be shunted into a conglomeration whereby all governments and a central international cartel should agree to buy wheat at, say, the present American support price. This is at present broadly equal to the French support price, but below most other countries' off-farm prices for soft wheat (except Australia's). Farmers in these other countries would thus get lower prices than now for wheat sold on their home markets (to their finance ministers' relief); but they would get more for wheat sold for export, because the central international cartel would sell wheat only at this support price —especially, of course, to the one big free market importer of wheat left in the world, namely Britain. Such a scheme could theoretically put up Britain's import bill for wheat by something like £50 million a year. If the scheme eventually spread to all other agricultural commodities, on the basis of present French or American support prices, it could put up Britain's total import bill by up to £400 million a year.

Moreover one other pressure might work in favour of introducing such schemes. Almost certainly any new "world support prices" would be pitched high enough to produce a surplus of food above what could be sold at the cartel's prices. But it would then be much easier to introduce give-away schemes to poor countries. At present if America gives away wheat to India, Canada and Australia may object that this deprives other exporters like them of a commercial market. But if Canada and Australia sold their wheat to an international cartel first, this difficulty disappears: of course, the cartel would have to finance the losses it made on its Asian give-aways—but it would no doubt do this partly by screwing up its commercial selling price (i.e. mainly its selling price to Britain) and partly by funds voted to it out of the budgets of countries participating in the cartel (the countries concerned would call these "aid" payments, and feel very generous in voting them). So underdeveloped countries, as well as exporting ones, might come to like the idea very much.

One last awful vision appears. Suppose Britain does not go into the common market because it feels that it has a duty to sustain Commonwealth farmers by buying their cheaper wheat and other foodstuffs. Suppose, then, that Commonwealth producers join some such worldwide cartel schemes, so that it does not matter to them to whom they sell; indeed so that Britain's complaints that it ought to be allowed to buy Commonwealth foodstuffs cheaply as before would come to seem a disruptive nuisance. One can imagine Mr Diefenbaker in a few years' time rampaging across the prairies saying that Britain should learn the habit of international co-operation. He had always believed, he might say, that Britain should have followed the enlightened policy of going into the common market....

MARKETING BOARDS

Tomato Sauce

A month ago, 60 of the 5,500 registered producers of tomatoes and cucumbers turned up at their annual general meeting and voted to deprive the members of their marketing board of all but 1d. each of their annual salaries. The result of this *coup d'état* may not be precisely what we liberals had hoped. Until now, the Tomato and Cucumber Board has been, from the consumer's point of view, one of the least obnoxious of all marketing boards: it is concerned only with advice, publicity, market intelligence and research and does not, therefore, interfere with ordinary market forces (except as a chorus to the thin wailings of the National Farmers' Union against the "insufficiency" of tariffs on imports of Dutch and Canary fruit). To this state of grace, however, the board has never been altogether amenable. It has always wanted to exercise the monopolistic powers enjoyed

by other marketing boards, but was defeated in a poll in 1960 on this issue by the producers themselves. Last month's revolt against it sprang partly from producers who resented that defeat (and who blame it for the welcome reduction in the number of British tomato producers from 8,000 to 5,500 in six years, in which many small and inefficient growers have been squeezed out); and partly from the opponents of all marketing boards, among whom a new (and much publicised) source of irritation was the recent handing over of £6,000 in compensation to a resigning chairman.

Last week, the board met to decide whether to carry on at a salary of 1d. each a year. It decided not to, but also decided that a new board should try to replace King Log by King Stork. Lacking any machinery for resigning *en bloc*, each member has now tendered his resignation to his sponsoring body (a branch of the NFU in most cases); an interim executive committee has been set up; and new elections to the board are to be held soon, at which the NFU will advise its members to vote only for those candidates pledged to seek powers that will "protect the producers"—which means monopolistic marketing powers.

The Government should not allow such powers to be confirmed. Indeed, the best thing for the country now might be for the whole board to be dismantled. If Britain goes into the European common market, a new situation will face the tomato industry; further sections of it will have to be closed down if they cannot stand up to Dutch competition. Probably the Government might then, rightly, agree to set up a compensation fund to help redundant growers to move into other and more economic fields; some body would be needed to manage any such compensation scheme, but it should not have the same sort of constitution as a marketing board.

The UN's Financial Laggards

LORD HOME said at Berwick on December 28th that 82 governments were "in serious arrears" with their payments to the United Nations. Oddly, his rather stringent definition of "serious arrears" seems to put Britain among the 82. And the published accounts do not uphold his general contention that the "irresponsible" newly independent countries are the worst defaulters.

Arrears on the regular UN budget are hardly alarming. By the New Year 86 per cent of the 1961 dues had already been paid in, a better showing than the corresponding figure a year ago. But the UN has been receiving less than three-quarters of the special dues assessed for UNEF (its international force on the Egypt-Israel border), and less than two-thirds of the much larger dues for its Congo operation. The Soviet block and most Arab states regard both these categories of special dues as illegal; in the case of the Congo, Belgium, France, Italy, Portugal, Spain and South Africa have also been among those withholding contributions. It is the accumulated deficit of more than $80 million on the Congo and UNEF accounts that has produced the crisis from which the UN now hopes to escape by selling its new bond issue.

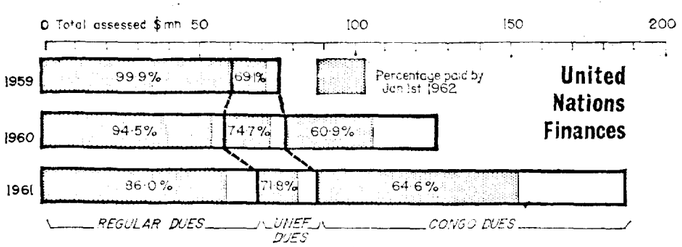
At the New Year sixteen nations were fully paid up on all their obligations: Australia, Burma, Canada, Ceylon, Denmark, Ireland, Ivory Coast, Japan, Luxemburg, Netherlands, New Zealand, Norway, Sweden, Thailand, Turkey and the United States (which had also made large voluntary contributions).

In descending order, there followed:

(a) Members accepting Congo and UNEF dues, but late with various payments for 1961: Britain owing a quarter of its Congo dues for January-October, 1961, and India a tenth of its 1961 regular dues (India's account showed UNEF arrears too, but these and Britain's Congo arrears have yet to be offset against these countries' claims for repayment by the UN of their expenditures incurred in assisting its two military operations); Central African Republic, Finland, Gabon, Iran, Malaya, Mali, Somalia, Tunisia, owing Congo dues; Liberia, owing UNEF dues; Dahomey, owing its regular dues; Cameroun, Iceland, Israel, Malagasy, Nigeria, Pakistan and Senegal, each behind with two or all three of the accounts for 1961.

(b) Members that had paid no Congo dues: Austria, Belgium, Brazil, Ecuador, France, Indonesia, Italy, Jugoslavia, Philippines, Portugal, Salvador, South Africa.

(c) Members paying neither Congo nor UNEF dues, but up to date with regular dues: Czechoslovakia, Dominican Republic, Iraq, Mexico, Peru, Saudi Arabia, Spain, Sudan, Togo, Venezuela, Volta.



(d) Members paying for neither Congo nor UNEF, and late with all or part of their 1961 regular dues: the Soviet block (except Czechoslovakia and Hungary), Afghanistan, Argentina, Cambodia, Chad, Chile, Colombia, both Congos, Costa Rica, Cyprus, Egypt, Ethiopia, Ghana, Greece, Guinea, Jordan, Lebanon, Libya, Nepal, Nicaragua, Niger, Panama, Syria.

(e) Members that had paid neither Congo nor UNEF dues, nor regular dues for 1961 or 1960: Bolivia, China, Cuba, Guatemala, Haiti, Honduras, Hungary, Morocco, Paraguay, Uruguay and Yemen.

In this last group Haiti had the distinction of having paid nothing toward its 1959 regular dues.

Political attitudes thus join with lax or cumbrous procedures in national public finance to make some strange bedfellows, especially among the worst defaulters; and, although the English-speaking and Scandinavian countries show up particularly well and the smaller Latin American states particularly badly, no clear general pattern emerges. Western and Afro-Asian members can be found either high or low in the scale of punctiliousness, according to taste.

As President Kennedy reminded Congress in a message last Tuesday, the new $200 million UN bond issue, being repayable from the regular budget, provides a means of getting members to pay a fairer share of UN costs on pain of eventually losing their right to vote in the Assembly. It seemed curious that Mr Heath did not make the same point during the lively exchanges that followed his announcement in the Commons on Monday that the Government intends to buy some of the bonds. The British purchase, Mr Heath said, would not exceed $12 million; he did not mention a minimum figure. As Britain is assessed to contribute 7.6 per cent of the regular UN budget, a firm undertaking to buy not less than $15 million of bonds would have been in proportion; the guardedness of the British response has made a poor impression in Washington, where Mr Kennedy has asked Congress to approve the purchase of $100 million worth of the bonds. Denmark, Norway and Sweden, whose combined national incomes are less than a third of Britain's, have promised to buy more than $10 million.

BOOKS

John Citizen and the Minister

Questions in Parliament.
By D. N. Chester and Nona Bowring.
Oxford University Press. 335 pages. 35s.

QUESTION time is one of Parliament's best-known institutions. It is the opportunity for any backbencher to interrogate the highest minister in the land, and to the man in the street, therefore, question time is closely associated with the rights of the humblest of Her Majesty's subjects to seek redress through Parliament.

One would expect this theme to be amply documented, and parliamentary literature certainly abounds in relevant material. But now for the first time knowledge in this field has been systematised, and our debt to Mr Chester and Mrs Bowring is great. The absence hitherto of any formal treatise is perhaps the less surprising in that question time in its present form is largely a product of the twentieth century. It is of note that the first edition of Erskine May treated questions to ministers not as procedure in its own right, but as an exception to the rules of debate.

To what do we owe the modern significance of question time? As the opportunities of private members in the late nineteenth century became more and more restricted by the increasing claims of the executive on parliamentary time, so greater reliance came to be placed on procedural devices, of which the parliamentary question was foremost. Indeed, at the start of the twentieth century, questions had come to take such a share of parliamentary time that the Leader of the House, A. J. Balfour, brought in a drastic scheme to curtail them. This was eventually modified; but it had been touch and go. The authors describe Mr Balfour as "a not unqualified admirer of Question time," and it is an interesting example of his ministerial prescience that he wanted to move question time to 7.15 p.m.—too late for many first editions of newspapers to carry. Nevertheless, it is to Mr Balfour that question time today owes its form. The procedures now current were established in 1902 and have persisted with modification to this day, supplemented, of course, by what is best described as a formidable corpus of parliamentary "case-law."

Unqualified praise is due to the authors for the skill with which they have drawn the constitutional and historical threads of their subject together; yet the true excellence of their work lies in a somewhat different direction. For they have succeeded in giving us a quantitative and qualitative survey of question time over the years from which the inquiring reader will learn a great deal that is surprising, novel or of political significance. For instance, with the ever-growing scope of governmental legislation one would expect the volume of parliamentary questions asked to rise considerably. This has not happened. Why? If one ignores the claims on time of the supplementary question, three facts seem to stand out. As fast as governmental responsibilities have grown, there has been an extension of statutory machinery to deal with individual grievances. Again, while nationalisation might have extended the scope of parliamentary questions, many administrative details are in fact not admissible functions of ministerial responsibility. Furthermore, overriding all is the enormous increase in the flow of letters between constituents and their members, and between members and ministers. Indeed, the parliamentary question, like the iceberg, rests on an unseen mass—in this case, correspondence.

Parliament, as we know, is not an assembly of exceptional people, though it has always contained many exceptional persons. Similarly, Parliament is not an assembly of pertinacious questioners. True, some are or have been very pertinacious: for example, the celebrated Colonel Harry Day of Southwark, who sought to emulate the Irish members of old, and who evoked from his colleagues whenever he rose the parliamentary cry of "Another Day!" But most members ask very few questions, and some none at all. Indeed, assiduity at question time is far from being necessary for parliamentary success. A popular preconception demolished here is the belief that the Left is more inquisitive than the Right. MPs are MPs: they ask more questions in opposition than in government. Such differences as there are between parties are statistically negligible.

While questions are treated seriously and expeditiously by departments, the student of politics knows that they are not generally regarded as a major challenge to policy or administration. It is a poor minister who cannot ride out question time. Not every supplementary is deadly. If a minister knows his facts, shows some sense of humour and remembers that it sometimes pays to answer the questioner rather than the question, he will usually satisfy the House. And yet it is the fact that questions are asked, and can be asked, that matters. Now and again there comes the exception: some questions change policies, even shake governments. There are, it is true, infelicitous questions and tedious supplementaries; but if question time disappeared, an important instrument for ensuring the accountability of policy and administration would go.

The Man Who Filled Vacuums

Dag Hammarskjöld
By Joseph P. Lash.
Cassell. 304 pages. 21s.

THE mystery of Dag Hammarskjöld's death in Rhodesia last September is now being investigated. Was he a mystery in life too? Some of his admirers wrapped

The Economist

FEBRUARY 1, 1862

THE VOICE OF PARLIAMENT

A combination of circumstances, principally historical, have greatly changed the ideas of the present generation from those entertained by our forefathers as to the functions and purposes of Parliament,—as to the work to be imposed upon it and the benefits to be expected from it. And the change is scarcely, we apprehend, in a sound or a serviceable direction. . . . Passing new laws, unless new laws are imperatively wanted, is a mischievous and not a meritorious employment of the time of Senators. Parliament has duties to perform,—more ancient, more necessary, and usually more beneficial, than legislative ones. Nay, we may go further, and venture on what some may deem a paradox:—it is doubtful whether the *talk* of Parliament be not often far more useful than its *action*. The House of Commons is the arena where the voice of the nation can be authoritatively heard; where the wishes and opinions of the people are, through their representatives, made known to their rulers; where—through the process of debate, often through the process of tedious and clumsy conversation—the public sentiment is expressed, ventilated, enlightened, and to a certain extent formed. . . . It tells the nation whom it ought to trust. It tells the Ministers whom they ought to listen to. It tells the Government what the people think of *them*, and what they desire for themselves. Talk, which has results such as these, may well be more valuable than any action. But Parliament has other work to do. It has to *question* Ministers; to ask an explanation of *this* dubious-looking transaction; to denounce that scandalous appointment; to drag to light one Galway job, or another Dover intrigue; to require justice, or at least a hearing, for such or such a case of *prima facie* administrative oppression;—it has to let the Government feel that it is vigilantly *watched*, and will be called to a severe account. . . . If Parliament does this work conscientiously—with sternness and with equity as well—it may be effecting more good and preventing more evil than if it passed twenty laws.

im in a fog of unsought reverence. Some his opponents accused him of megalo-ania and Machiavellianism. Yet one of his book's merits is that it brings out the an's essential consistency and—the word ay seem surprising—straightforwardness.

His reputation for intellectual subtlety, or being personally withdrawn, for a earching concern with fundamental beliefs, as well enough earned. But his bent was nalytical, not mystical. First in economics nd later in diplomacy, he would dissect ach problem minutely, spurning intuitive hort cuts. He always drove his remark-ble brain hard, drawing on an equally emarkable physical endurance, and could ake account of an unusual number of in-lividual trees without losing sight of the whole wood. In the Swedish finance ministry, in the OEEC, and in the United Nations, his talent for computing helped rather than hindered him in judging what would be politically possible. If he was a genius, it was in Carlyle's sense.

Mr. Lash, a New York journalist who has watched the United Nations for over ten years, naturally concentrates on Hammarsk-jöld's role as Secretary-General; but no reader should pass over his long and reveal-ing chapter on the earlier career of a man strongly marked by national and family in-fluences. He shows how, in a family with three hundred years' record of public ser-vice, no real contradiction arose when Dag and his brother Bo, sons of a father with a formidable reputation as an arch-conserva-tive, plunged into the work of building a welfare state in the 1930s. Later, he notes the personal rapport between Hammarsk-jöld and Chou En-lai—two patricians, both serving dramatically new causes—when they met in 1955.

Ironically, it was the Chinese communists who opened the door to the habit-forming process of "leaving it to Dag." The Assembly had given him the first of the vague mandates that were later showered upon him, asking him to try to free the American airmen then imprisoned in China by "the means most appropriate in his judgment." His decision to go to Peking in person was much criticised, and if it had proved fruitless his later role would have been sharply circumscribed. Instead, from then on it was progressively enlarged.

If he had been less willing to fill vacuums, would fewer of them have been left to him to fill? The evidence is to the contrary. Long before his appointment in 1953, his predecessor, Mr Trygve Lie (to whom Mr Lash is less than generous) had rejected the idea that the Secretary-General ought to remain politically inactive even when the Assembly and Council were visibly failing to ward off a threatening danger. Each of Mr Lie's interventions displeased one or other of the great powers; and ultimately, like Hammarskjöld, he suffered total ostra-cism and foul abuse by the Russians, although in 1946 Mr Gromyko, of all people, had been the first to champion his right to a political role. But the vacuums continued to appear, and Mr Lie could not interpret his duty in a way that would have allowed him to remain comfortably passive.

Hammarskjöld took office with—indeed, was acceptable because of—a reputation for prudent skill in avoiding controversy. But the persistent vacuums sucked him, too, into battle (as they are now sucking in his even more deceptively mild-mannered successor, U Thant). His analytical approach helped him to concentrate his efforts on the sectors where progress was practicable; unlike Mr Lie, he wasted none of the limited authority of his office on direct assaults on broad issues over which the powers could not be budged. His legalistic ingenuity helped him to cover his flanks each time he advanced; at times, his baffled critics felt that there was nothing unprecedented for which he could not conjure up a precedent. From 1957 on, he not only steadily elaborated the United Nations' executive functions but also codified their enlarge-ment in a series of closely reasoned state-ments of principle. He did not seek personal power; indeed, he often urged Assembly and Council to lessen his responsibilities by giving the Secretariat clearer instructions. But, as the number of smaller member nations grew, so grew the idea that the Secretary-General, and the United Nations as an organisation, are in a particular sense their instrument and shield in a world in which the great powers can appeal to sheer strength. Hammarskjöld evoked this idea when Mr Khrushchev was raging against him, and won what amounted to impressive votes of confidence.

Mr Lash's highly readable, sometimes moving, but not unduly coloured, account of these processes carries the main story up to last summer, and includes a short epilogue written after Hammarskjöld's death. Wisely, he has made little attempt to prophesy. Today, it is not only from Moscow that attacks are being launched against the whole concept of UN initiatives that displease one of the powers. But Mr Lash has already been justified in his under-lying belief that what Hammarskjöld built was too solid to be shattered merely by the death of the master builder.

The Jungle Wasn't Neutral

The War Against Japan. *Vol. III.*

By S. Woodburn Kirby.

Her Majesty's Stationery Office. 578 pages. 63s.

JAPAN'S "Ha-Go" offensive in Arakan, which opened its so-called attempted invasion of India in 1944, started when Sakurai's main striking force of 5,000 Japs marched in close formation, sixteen abreast, through the middle of the British front line in a valley stretching about 400 yards across—and without anybody particularly noticing them. One famous British county regiment, among others that night, did report with interest "a large number of men, talking in a strange language, with mules, moving north"; but it presumed that they must "be an Indian artillery ammu-nition party which had lost its way." Quite a lot of the beastly wet, muddled war in Burma was like that; it is a pity that this official history of the 1943-44 campaign is not sufficiently hard-faced to recognise it. As is usual with British accounts, it gets very cross with Stilwell for trying to cuss the British troops under his command be-yond the point of endurance; but Stilwell knew well (none better after his experience with the American Marauders and with his sometimes impossible Chinese) that disaster overtook any army in the east whenever it passed a strange and possibly movable psychological breaking point, a point where hard-pressed allied troops suddenly sat down and fell sick, and hard-pressed Japs sat down and actually died.

The genius of Slim was that he mobi-lised this psychological breaking point against the enemy. He at last hammered home the fact that when a body of Japs, carrying three weeks' supply of ammunition and rice, appeared behind the British lines, this did not mean that the British were cut off; it meant that in three weeks' time the Japs would be, and that they would be likely to break just as quickly as the British would have done without proper supplies. And so it proved, first in the Battle of the Admin Box at Sinzweya in the Arakan (which this official history mysteriously and unpronounceably renames the Battle of the Ngakyedauk Pass); and later in the much bigger battle of the Imphal plain.

Unhappily, but almost inevitably, Win-gate is finally devalued in this history—if only by the device of publishing in full the insulting, self-ambitious, and often wildly false-forecasting memoranda he wrote to Slim. Wingate had the great gift of making men feel proud to serve in his company, but by 1944 his main driving purpose was too often to get as many resources as possible wastefully diverted to be under his own control. Moreover the "penetra-tion group" tactics he wished to impose upon the British army were those that had won the Japanese victories until Sinzweya, but which were to lose the Japanese the Burma war as soon as the "stand-fast" les-son of Sinzweya had been learned.

Paradoxically, however, although nobody seems to have realised this, the one really new implication of this official history is that perhaps, by accident, it was Wingate who won the Burma war after all. Previously, everybody had supposed that his first Chin-dit operation was a complete military failure. Now it appears that it was the ease with which his tiny group slipped through the Chindwin defences that persuaded a reluc-tant Imperial Headquarters at Tokyo that it must shorten its defence line by going for-ward to Imphal; thus it was that it took the crass decision to throw its armies (carry-ing the usual three weeks' supply of rice and ammunition) over the mountains to die. As the Japanese 33rd Division came leap-frogging along the Tiddin Road, its General Yanagida suddenly realised that the cut off British and Indian detachments had learned

the lesson to stand fast, and he sent back to his Army Headquarters, even in that first week, the brilliant and obviously correct advice that the Imphal offensive had better be called off. His Army HQ responded by sacking him.

To the north of the Imphal plain, things were following a more usual Burmese pat-tern. Both sides managed to deliver their battle plans to the other side by mistake (the British through a misplaced aeroplane drop and the Japs by an errant messenger on a pedal cycle); moreover the British, through a series of transport and communi-cations muddles, had not got their defences organised properly in the most important place. The great tactical mystery here—which this official history does little to ex-plain—has always been why the Japanese 31st Division kept on butting its head against Kohima, after General Sato had discovered that the British and Indians were standing so bravely there; he could and should have skirted round it and driven straight to the much more important base of Dimapur—and to probable victory. In the intervals of maligning the memories of Stilwell and Wingate, it is right to remem-ber that there are many thousand British and Indian soldiers, alive today, who can thank their stars that there were much greater mistakes made in high places on the other side of the hill. In some ways the photographs of the Japanese leaders con-cerned—some of them incredibly Victorian-looking, some others coltish and bullet-headed—are the most revealing part of this book.

Act Three

Greek Civilisation: *From Euripides to Alexandria.*

By André Bonnard.

Allen & Unwin. 288 pages. 35s.

THIS is the last volume of three (though, misleadingly, it does not say so on the cover or the title-page: all three volumes are published with the same title on the back). It is a series of studies of particular men, mostly writers; but the choice and the treatment of the subjects reflect the late Professor Bonnard's personal tastes and en-thusiasms. His left-wing sympathies hardly emerge, except in a passionate hatred of slavery and some exaggeration (but not much) of its deleterious effects. He was no friend to religion in any form. Above all, he loved poetry, and could forgive anyone for his ideas, however unsympathetic, if he wrote well: he has little good to say about Plato's philosophy, but no one has praised his style more enthusiastically. He was interested in science and technology, where the Greeks showed up only moderately, but avowed a complete ignorance of mathe-matics, where they were brilliant.

The purpose of the book is to show the decay of classical Greece and the emergence of completely different attitudes and in-terests in the Alexandrian period. Hence some curious choices of subject, if one con-siders their absolute importance; but they all serve the author's theme. Aristotle appears only as a biologist; Xenophon and (most oddly) the new comedy are not mentioned at all; pages are spent on the revolting but tedious crimes of the early Ptolemies. Professor Bonnard is always at his best when he is inspired by good writing, with the curious exception of his chapters on Euripides, which are high-flown rather than illuminating. But on Plato as a writer, on Theocritus and on the mixture of good and bad in some of the minor writers, Bonnard is excellent: it must be some time since anyone has taken the trouble, in a book for general readers, to illustrate the move-ment of taste and ideas by expounding at leng:h the merits and defects of Apollonius Rhodius and Longus. The book ends with a noble passage in praise of Epicurus.

These three books are very well worth reading. Bonnard was a man by himself, and his enthusiasm for Greek writing is de-lightful; but, apart from that, it is useful for English readers, who tend to regard the ancient Greeks as senior members of the Commonwealth, to see them through differ-ently-focused French-Swiss eyes. The translation by R. C. Knight is first class; the book is well produced and has a number of pleasant illustrations, though some of them seem curiously irrelevant. Why, for example, the picture of a depressed-looking Marabou stork?

Neglected Dramatist

The John Fletcher Plays.

By Clifford Leech.

Chatto & Windus. 189 pages. 18s.

THE fifty-two plays in the 1679 Beaumont and Fletcher Folio are possibly the most neglected of once popular plays in the history of English drama. Not that there has been an absence of criticism, or of essential biblio-graphical and linguistic work distinguishing the respective parts played in the collabora-tion by Fletcher, Beaumont, Messinger and others. It is merely that in the Restoration period, according to Dryden, "their plays are now the most pleasant and frequent entertainments of the stage; two of theirs being acted throughout the year for one of Shakespeare's or Jonson's," and now we may look in vain for productions even of *Philaster, A King and No King, Thierry and Theodoret* or *The Maid's Tragedy*, apart from the enterprise of amateur societies.

In this admirable study Professor Leech has firmly decided to treat Fletcher as the controlling presence in the Folio, and has limited his approach to a consideration of only a handful of the plays in an effort to define the characteristics of his dramatic style. Shaw called Fletcher 'Tussaud Laureate.' The impression is shared by many critics. T. S. Eliot (not even giving Beaumont and Fletcher an essay to them-selves) writes that the blossoms of their imagination draw "no sustenance from the soil, but are cut and slightly withered flowers stuck into sand." L. C. Knights has stressed the false and superficial elements in the plays: they are decadent, he claims, because they exploit rather than explore emotion. Professor Leech's book should be taken as a serious rejoinder to such atti-tudes, though he does not waste time in describing the critical situation in order to press his disagreement. This is a calm and thorough work, exercising sympathy and arousing interest without displaying that un-warranted enthusiasm that one so often finds when a critic attempts some sort of rehabili-tation. Thus, although there have been some weighty American studies recently on these plays, and there is also a lively little book by William Appleton, it is Professor Leech's work that will send the reader (and one hopes the producer) to the plays themselves.

Fletcher, we come to feel, had an acute theatrical imagination. His sensationalism appears rather as an inability to construct a whole in depth in the Shakespearean manner. He therefore employs his inven-tion in each situation as it occurs to him, and moves from moment to moment in the play extracting shrewd insight from what on the surface looks merely bizarre. Professor Leech illustrates his intellectual curiosity, his grotesqueness, the frequent excellence of language, and places him in the drama of the period with firm tact and skill. We are made to feel that there is more here than

private entertainment for the Jacobean gentry, more than mere fodder for the dull romances of the Restoration stage: it is the work of a poet lightly exploring the fantastic possibilities in human relationships. "He angled in a dark lake," writes Professor Leech, "but the fish he brought up were live."

Essays in White and Red

Civil War in Russia.

By David Footman.

Faber (1961). 328 pages. 35s.

For three years after October, 1917, the fate of the revolution was in the balance. Time and again it seemed that the bolsheviks would not be able to resist the advance of successive White armies. How and why did they triumph in the end, thus changing the course of world history? Much has been written on this. Communists, at first, provided a great deal of original material that was later moulded into stereotyped stalinist shape. Russian emigres gave their own version, or rather versions, of the reasons for their defeat. Mr Footman's purpose was to provide an objective picture on the basis of the conflicting evidence.

Having carefully sifted the wealth of available material, he has selected the crucial episodes of the conflict. After a brief introduction, tracing the course of the war and giving the grounds for his selection, he takes the reader along the shifting fronts of the civil war from the Don, through the Urals to Siberia and then back to the south. His method was partly imposed by his subject. In a single volume it was impossible to write a detailed, comprehensive history of such a complicated, and not exclusively military, conflict. But Mr Footman's method has its drawbacks. By sketching successive parts of a vast canvas, he does not always enable the ordinary reader to follow the whole picture. And lastly, he does not quite answer the key question about the reasons for the bolsheviks' victory.

To attribute it to bolshevik "ruthlessness," or to the skill and determination of Lenin and Trotsky, is certainly not adequate. In a brief conclusion, Mr Footman quotes Trotsky's saying—that "in the unstable poise of a scale only a small weight is enough to decide"—and suggests that the party may well have been that weight. In that case, it may have been worth while to place more emphasis on the part played by the bolshevik party in defence of its revolution. The interesting chapter on the Red Army has too little weight in the general balance of the book. Probably reacting against stalinist propaganda, Mr Footman has viewed most of the war from the loser's angle, not the winner's.

Some of the reasons for the defeat of the Whites appear in the carefully documented descriptive passages. The vagaries of some Socialist Revolutionaries and Mensheviks show that there was no middle road in this conflict. The opponents of bolshevism were, willy nilly, thrown into the arms of the defenders of the Tsarist order. The author is at his best when describing individual episodes, such as the abortive British expedition to Archangel or the strange vagaries of the Czech Legion. Best of all is the final saga of Makhno, the anarchist peasant guerilla leader, who fought with the bolsheviks and then against them. Mr Footman may not have written the history promised in the title, but he has written vivid and interesting essays in white and red.

Outside Advice

The Organisation from Within

By Cyril Sofer.

Tavistock Publications. 191 pages. 25s.

One of the troubles facing social scientists is where to find their opportunities for research in a world not yet convinced of the value of social science, at least outside the United States. In this country the Tavistock Institute of Human Relations has tried to find a way of solving this by seeking to combine therapy with research. Dr Cyril Sofer's book is an example of this double process. He provides three case histories of his work as a social consultant. He was asked by an industrial firm to assist in the selection of a senior manager, by a medical research unit to advise on the problems of working within the normal framework of a hospital, and by a technical college to lead a research project into the function of a department of management and production engineering.

What emerges from his story is that as an objective outsider Dr Sofer was in each case able to give valuable assistance to the people concerned—by getting down to a precise definition of the problem they were up against, and suggesting how it could best be tackled within the context of each particular organisation. For example, he was able to show the industrial firm how the selection of a senior manager was dominated by the conflict between the needs of the firm for high grade personnel, and the desire of the board to keep all top posts among the original founding family. So far so good. What Dr Sofer does not show is that his particular therapeutic approach (rather than common sense) enables him to be of such help. Indeed the case histories revealed that his method of working brought its own complications. In each case, after some initial hostility, his temporary employers became very dependent on him, as in individual psychotherapy, and were reluctant to let him go.

While Dr Sofer's work undoubtedly provided him with excellent opportunities for studying organisations from the inside, it raises the following question. Do we, in fact, want a state of affairs to develop in which people are made to feel: here is a human problem, let us call in the expert on human relations? In the United States, large organisations, particularly in industry, have gone a long way towards basing their administration on the latest developments in social psychology. The disadvantages of such an approach have been clearly illustrated by William H. Whyte. Dr Sofer is in danger of creating for us his version of the Organisation Man.

No Day-Dream

Castle in Italy

By Lina Waterfield.

Murray. 277 pages. 28s.

The title is romantic, calling up the echo "Castle in Spain," the very essence of day-dream. The *fortezza* at Aylla certainly was romantic, and so was Poggio Gherardo, the other Italian home of Lina Waterfield; so, too, was Fyvie Castle, in Aberdeenshire, where some of her childhood was spent. Many of the ingredients of her autobiography are undeniably romantic, for she was an exceptionally beautiful girl, high-spirited, unusually intelligent, connected with a number of interesting people. She made a romantic and idyllically happy marriage. She also became a power to reckon with in Mussolini's Italy, for she was very well informed, a woman of complete integrity, and quite intrepid as a journalist. But, remarkable as her chronicle is, the tone is not in the least romantic nor, although she looks back over nearly ninety years, is it at all nostalgic.

Reminiscences of childhood, amusing stories about famous people, accounts of undertakings that demanded great courage and resource, they are all set down with the minimum of fuss. The autobiography does, indeed, suffer a little from the lack of high-lighting. Another woman might have made the same material sound far more dramatic. Mrs Waterfield does permit herself occasionally to regret her stoic disinclination to react demonstratively in emotional moments. This reserve governs the whole ordering of her story; and though her reticence makes for a certain monotony, no attentive reader could fail to recognise, through the very simplicity of the style and the complete lack of affectation, the author's fineness as a person.

OTHER BOOKS

The American Degree. By Bernard Mellor. 2nd edition. *Hong Kong University Press*. London: *Oxford University Press*. 65 pages. 7s. 6d.

This is a most useful evaluation, helpful not only to the intending student but also to anyone who wants factual information about America's multitudinous universities, about the courses they offer, the quality of their degrees and the cost of attending at least some of these establishments.

Social Security in Britain: *A History*. By Harold E. Raynes. 2nd edition. *Pitman*. 272 pages. 30s.

The Correspondence between Richard Strauss and Hugo von Hoffmannsthal. *Collins*.

This correspondence, which was reviewed in our issue of December 23, 1961, was translated by Ewald Osers and Hanns Hammelmann.

LETTERS

Mental Hospitals

Sir—The hospital plan for England and Wales emphasises that short-stay patients suffering from mental illness should be treated in psychiatric units attached to general hospitals, and a footnote to your table showing the proposed number of hospital beds in 1975 states that there will be 12,000 of these psychiatric beds. Yet in that year there will still be no fewer than 108 mental hospitals, of which 25 will have 1,000 to 2,200 staffed beds, and will treat medium-stay and long-stay patients.

The division of patients into short-stay, medium-stay and long-stay categories is misleading and is not one that can be accurately forecast in respect of patients seen for the first time. Presumably, therefore, all patients mentally ill for the first time will be treated in the general hospital psychiatric unit. What then will be the future function of the mental hospital? There is a grave danger that once again it will be mainly custodial.

The Mental Treatment Act of 1930 enabled patients to submit voluntarily to treatment, without being certified: the presence of these short-stay, less severely ill patients led to an improvement in standards both of accommodation and of staffing, and to the starting of open door admission units.

All these improvements have become even more marked with the procedure for informal admission under the recent legislation. The presence of patients suffering from minor mental illness and of patients whose illness has a good prognosis, together with new methods of treatment and the bigger turnover of patients—all this provided a stimulus to the whole hospital and benefited particularly the long-stay wards.

Now it seems to be proposed that this group of patients, usually so rewarding to treat, will no longer come direct into the mental hospital. One fears that in consequence the chronically ill and the demented old people will form the bulk of the admissions. The removal of the early case will withdraw the interest and stimulus from those who care for the long-stay cases, and the danger arises that the work will be insufficiently interesting to attract staff in the numbers and quality that these cases nevertheless require.—Yours faithfully,

Bexley Hospital M. Radzan

Broiler Fowls

Sir—Your statement in the issue of December 30th that the broiler industry in this country has developed without protection does not withstand close scrutiny.

First, there is a tariff of 3d. per lb. on all imported poultry of non-Commonwealth origin. Although this is a low rate compared with duties on many other foods, it nevertheless does provide some protection.

Secondly—and far more important—the importation of frozen chickens from countries with large outputs—chiefly the United States, Poland and Hungary—is prohibited, under the Poultry (Carcases) Landing Order. These regulations have no relation to the balance of payments and their ostensible purpose is to exclude poultry from countries afflicted by fowl pest. Despite this restriction, outbreaks of this disease still occur quite frequently and, on a pro rata basis, the experience and incidence in this country do not compare favourably with the United States. In recent years, it has become increasingly obvious that the official landing restrictions have become, basically and mainly, a protective mantle against the possibility of large-scale importations from the United States and other cheap sources of supply.

If American frozen broilers could be sold in this country, a price reduction of between 10-15 per cent could be achieved at the retail level, notwithstanding the 3d. per lb import duty. Production costs in the United States are still well below the levels achieved here. This is hardly surprising, in view of the fact that the British industry is based, almost entirely, on imported and therefore more expensive feeding stuffs.

The advent of the British broiler industry, with its considerable capital investment in processing and distribution facilities, has created a number of vested interests, including the suppliers of feeding stuffs. In the absence of protection, the British industry would not have reached its present size but, on the other hand, the consumer would have benefited by way of lower prices—Yours faithfully,

Caterham, Surrey Peter Kaufman

Moving the Cash

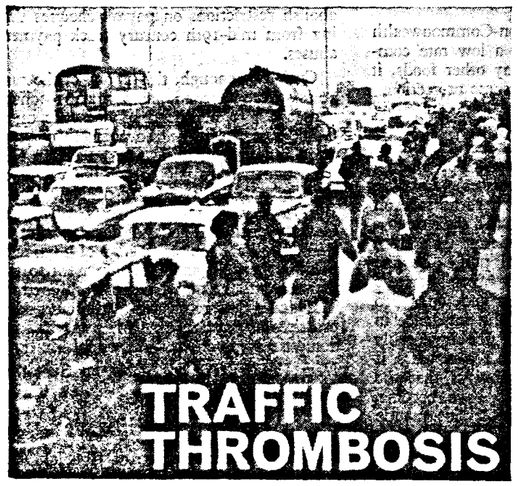
Sir—In connection with the important problem of the safe transfer of money between banks and business organisations, recently underlined by the publicity given to bank robberies, Mr Millard (January 13th) makes an interesting comment on the position of the insurance companies as the people who really "carry the bag" in this matter of carrying the cash. His suggestion that the insurance companies should organise their own safe conduct service is one possible approach. But even simpler and safer would be a change by which the need for these large transfers of cash could be largely eliminated. A system of meeting payrolls by bank cheque, as in America, or by more extensive use of post office cheques, as on the Continent, could achieve this. Admittedly, a change in British law would be required. But surely, at a time when even a decimal currency is being considered, it would not be asking too much to abolish restrictions on payroll cheques dating from mid-19th century truck payment abuses.

Curiously enough, this is one of the rare areas where international payment mechanisms seem to be ahead of domestic ones. Gold, if it has to be moved from country to country, normally does so by a short trip from one part to another of the vaults of the Federal Reserve Bank of New York. Eyebrows were raised recently when the Government of Thailand decided that it wanted to have the satisfaction of physically holding the gold and therefore went to the expense and risk of having it shipped to Thailand—thus returning to the outmoded practices of payment so widely adopted for domestic transactions.—Yours faithfully,

New Vernon, NJ Edward Symonds

London Airports

Sir—The current failure of Gatwick Airport is due to poor approaches to a much greater extent than so far reported. Intending air travellers mostly use public services because it is expensive to garage private cars for a long period. London Airport provides bus services to the centre exclusive to air travellers; Gatwick, further in mileage, is represented as equal in time, but this calculation depends on use of the Brighton railway, overcrowded throughout the holiday period, and on the uncertain chance that extra carriages, often insufficient in number, may be attached at Gatwick. Coaches from London Airport cover a wide area of the west country; those passing Gatwick a comparatively narrow belt as far as the south coast. Most seriously, London Airport has good bus connections in the two remaining directions, north and south; Gatwick has no direct connections at all east and west, and the greatest need is for adequate bus/coach services in one direction to Tunbridge Wells, Tonbridge, and Maidstone, in the other to Dorking, Guildford, and Reading.



The limiting factor is that Gatwick lies just within the London Transport area, which, owing to a historical accident, bulges in the south to an artificial line far outside "London" as defined for any other purpose. Lack of adequate road communications across this line is a nuisance to several places, of which Gatwick is only one.

The rigidity of one nationalised organisation now hinders another. If the London Transport area were cut back at least as far as the A25 road, commercial companies would be free to compete for licences for the potentially valuable Gatwick airport business, and the airport would then have a much better chance of prosperity.—Yours faithfully,

Sevenoaks Douglas W. Franklin

HOME REPORT

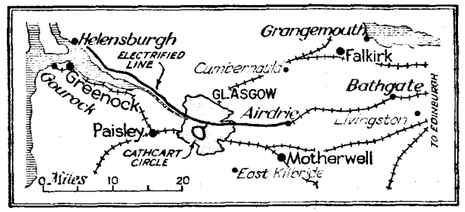
Members of the editorial staff and local correspondents report on life and happenings in and around Britain

FROM OUR SPECIAL CORRESPONDENT

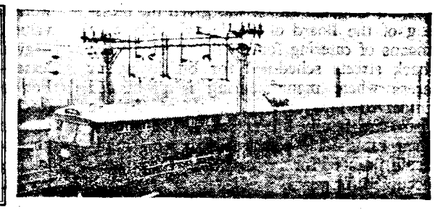
LONDON was allowed to make an unmitigated fool of itself last Monday, and for the sake of town and traffic planning in the next decade this was a splendid idea. The Ministry of Transport and Scotland Yard will not have the same chance to conduct so massive and uninhibited an experiment again. Henceforward they will be obliged to do something on strike Mondays, and the effect of even the timidest measures will help to conceal, once more, some of the realities that Londoners this week were digesting for themselves.

In the short run (which probably means the next batch of Mondays) there are four major lessons to be learned. First, in a transport strike and particularly a tube strike (for which also read local congestion as traffic increases) the most important single factor is public information: about the transport facilities that actually are available, the routes that have become totally congested, and any special measures that the police may be organising at particular points. These change constantly from hour to hour and the radio is the only way to make them known. On Monday morning the BBC broadcast two announcements, both very early, which did little to ensure that the tubes and electric trains in service were properly used (e.g., 20 trains continued to run on the Central tube line and 19 on the Northern). This is precisely the job that local radio could do very well. Possibly the police themselves had little useful information about routes to give over the air; if so, the sooner they put helicopters to work in sorting out traffic the better.

Secondly, parking. The one bit of news that was known in advance was that there would be free parking in the central area throughout the day. This was an open invitation to every one of the 300,000-400,000 car owners who normally use public transport to try their luck, irrespective of whether their own trains were running or not. This swelled the incoming tide (at about 1.5 persons per vehicle) and parked, and double-parked, cars restricted movement throughout central London. Some zoning ought to be reimposed: it should not be thought a great hardship for a motorist to walk his last quarter of a mile, particularly if this reduces traffic over the Thames bridges.



The third point appears to have been grasped by the authorities in their plans for next week. The flow system (using two or three lanes of the road for the preponderant traffic stream) is sensible, provided parking and delivery rounds are banned along these clearways. More one-way traffic may eventually be feasible, but it demands a far greater knowledge of London's street system than the suburban motorist plainly possesses. This ignorance had at least one good effect on Monday: it left the side streets free for ambulances and taxis.



Fourthly, the value of the bus in congested, slow-moving traffic is highly questionable. Many central buses were running half-empty (except from rail terminals) simply because they were caught in jams; and their size and inability to diverge from the set route helped to add to congestion at the big intersections. It is conceivable that London would actually have done better with fewer buses (i.e., if some garages had gone on strike) on certain routes: those that did run would then have been fuller and the road space left free by the others would have helped the private cars to manœuvre more freely. Buses normally cope with no more than 17 per cent of London's commuter traffic: one doubts if they really did appreciably better last Monday.

The longer-term answers should be even clearer now. They are none of them new; the only problem has been to get public opinion to look at them at all. The police are calling for more staggered hours and for up to 20 per cent of office staffs to work at home next Monday. Staggered hours are not as impossible as many employers like to make out: between 1957 and 1960 50,000 workers had their hours changed from the maximum peak periods. It is a beginning. The chief permanent improvement here would be to get the bulk of routine goods deliveries in the office areas over by 9 a.m.—some trades already do this. Why not more? The point about working at home is that a proportion of London office staffs (20 per cent is a nice round figure to aim at) ought to be working at home all the year round: that is to say, in office buildings in their own suburbs and in new and developing towns throughout the south-eastern area. A payroll tax in central London, or a special rate on offices levied by the Greater London Council, is the most discriminating way to weed out the inessential operations.

WITH parking the emphasis has to be on providing more off-street parking in the central area (with tough requirements for new office blocks) and on making the motorist pay stiffly for occupying kerbside space (meters) and adding to London's traffic at all. Mr Marples was saying the right things on these points last month. But the motorist must also have an incentive to behave rationally. If he stops on the periphery of the inner ring and takes public transport into the centre, he must be sure of good parking facilities first. Cannot something be done in places like Hammersmith and Battersea? The local councils do not seem to think so, but possibly the borough mergers and a touch of the whip from the GLC will shake them up. And on the outer ring it is still far from certain that public transport is quick enough or capacious enough to encourage the motorist to entrust himself to it. When it comes to apportioning space (e.g., should disused railway lines be reactivated with modern equipment or turned into motorways?) one's preference would be to encourage the railway at distances of over five miles. Or do we wait a decade for the hovercraft? These are all London's peculiar headaches, but, as the following article shows, there are other cities that are beginning to realise they have serious troubles of their own.

After the Blue Trains

FROM A CORRESPONDENT IN GLASGOW

IN the narrow, tightly-packed Clyde valley through which Glasgow impels its incessant, turgid and frustrated traffic, the idea of an integrated public transport system has seemed both sane and inevitable, except when the local transport authorities have bent their imperial minds to working out the details. Much of the Inglis report of October, 1951, has remained, with one major and signal exception, a neglected blueprint. Its traffic calculations were made before the family car decisively emerged in central Scotland in the mid-1950s (although car-ownership in Glasgow itself is still below the national average), but its recommendations for the commuter have a continuing ring of sense about them. Now the regional concept, dusted off and smartened up, may get its second chance.

The breakthrough that has started the first faint stirrings inside Glasgow's city administration has been the delayed but now hopefully remunerative arrival of the Blue Trains, the electrified suburban service between Helensburgh and Airdrie which the Inglis report primarily called for. British Railways has spent £16 million on this line; and at last, after a series of explosions and an embarrassed reversion to steam working, the trains are using their speed, passenger capacity and reduced fares to cream off commuters from Glasgow's own buses and Scottish Omnibuses.

Passengers on the line have risen to 250,000 a week, compared with 90,000 in 1960, and receipts to over £17,000 a week from £7,000; at one station, it is claimed, the rise is over 6,000 per cent. A second electrification south of the river on the short Cathcart circle line is imminent, and if the customers keep coming BR is likely to pluck up courage and electrify a further line from Gourock to Motherwell.

This development, if it is persisted in, must eventually be a powerful argument to the bus operators to think seriously of running services to railhead stations around Glasgow's periphery and cutting down certain services into the centre of the city. This would help, in turn, to relieve some traffic congestion in one of the slowest-moving town centres in the country; and on some of the reduced bus routes a more rational operation should be worked out between Glasgow Transport and Scottish Omnibuses. At present Scottish Omnibuses can only pick up passengers on outward routes and set them down on inward routes within Glasgow's arbitrary city limits: this makes sense for genuine long-distant traffic, but not on short-distance suburban services.

In the hey-day of its tramcars (the last of which are soon to disappear for good) Glasgow ruled the transport world far beyond its borders. Now it is hemmed in upon itself, and the reverberations of thwarted ambition and warring imperialisms have taken a long time to die down. Last month, with the Blue Trains upon her, Glasgow's independently-minded Lord Provost, Mrs Jean Roberts, persuaded her corporation to set up a special committee to improve public transport inside the city. Only the dimmest councillors have failed to conclude that little real purpose will be served unless the committee aims at creating some sort of central Scotland passenger transport board.

THE truth is that regional planning now involves the large unit of central Scotland, in place of the purely Clyde valley concept of recent tradition. Glasgow has been acutely aware of its own central problems since a beginning was made to the twenty-year plan to redevelop 29 districts of the city at a cost so enormous that no one has ever dared to add it up. This plan is designed both to oust the slums and relieve much traffic congestion by providing a modern street system, based on inner and outer ring roads and on the improved Clyde crossings at the Whiteinch tunnel and the still-distant Carnoustie Street bridge.

But now the city itself is being dispersed into new and satellite towns throughout the Forth-Clyde region. There are prospects of new light industry once the Motherwell strip-mill starts producing later this year. East Kilbride has been built since the war; a further 200,000 Glaswegians are to go to Cumbernauld and Livingston new towns and to other, older burghs. The British Motor Corporation's plant is going up at Bathgate. Falkirk and Grangemouth could finally merge into a big city complex.

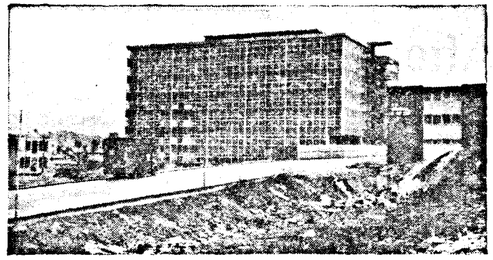
It happens that the Scottish Office (which took over the Ministry of Transport's responsibilities in 1956) has begun to lay down the road network for this new development. In the past five years almost £50 million has been spent on major road-works (including £17.5 million on trunk roads) and this expenditure should double over the next five years under a new system of priorities worked out at St. Andrew's House. The trunk roads system linking Edinburgh and Glasgow with the Borders, with Stirling, and with each other is showing signs of modernisation: the Clyde tunnel and the Forth and Tay road bridges are becoming established fact. Transport outside the cities is at last being given the opportunity to move smartly now that the roads are being tackled on a regional basis.

Mrs Roberts's special committee is to review Glasgow's own transport under three heads: (1) the best use of all forms, (2) to provide better linking facilities between the railways and the short (14-station), narrow-tunnel Glasgow underground, and (3) to consider what extra transport is required. The municipal departments will produce their briefs, but the real sting is in the intention to hold talks with the British Transport Commission and Scottish Omnibuses.

The sort of report that is needed should look at the short-haul suburban services as an integrated rail and road system. This means insisting on such things as joint timetables, properly designed suburban and peripheral terminals (with parking capacity), and above all transfer tickets for through-booking by bus and train. It should look at long-distance rail and bus traffic in the light of cheap air travel to London, Europe (and other parts of Scotland) from Turnhouse and Abbotsinch (replacing Renfrew) airports. Glasgow will not need the four main-line termini it now has, and perhaps not even the three that Inglis suggested: the extra capacity could be used to improve suburban services and diesel services through central Scotland where necessary.

As for the middle-distance buses (running from three separate centres) Glasgow's highways committee has just revived an old plan to deck over the Clyde from bank to bank above the navigable limit at the Broomielaw for one large bus terminal and car park. This will cost £5½ million, but it is probably the cheapest and certainly the easiest way of getting space in the heart of the town. Sooner or later someone in Glasgow will have to start moving heaven and earth, let alone the Clyde, to set its normal traffic to rights.

Factories in Flats



FROM A CORRESPONDENT IN BRIGHTON

BRIGHTON'S first communal factory looks like something out of a town planner's dream. But for many of the small manufacturers whom it is intended to rehouse it presents a nightmare challenge: a hazardous jump from the past into the present. Some of them feel it is a challenge they cannot take up.

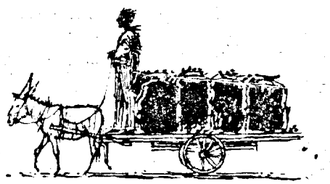
New England House was given the blessing of the Board of Trade primarily as a means of catering for small concerns from back streets scheduled for bulldozing or areas where manufacturing is prohibited under the new town plan. Most of these firms are family businesses, either owning their ramshackle premises or paying miniscule rents for workshops they have occupied for years.

The communal factory, housing two dozen enterprises under a single roof, has distinct planning advantages. It is a "tidy" answer to the problem of small, scattered firms. In a town like Brighton, with growing traffic congestion, it is a step towards removing delivery vehicles from narrow side-streets. Instead, it makes it possible to provide a single, easily controlled route to the main communications. (Both the railway goods yard and the main road to London are only a few yards from New England House.) Moreover, for the local authority with the responsibility of compensating disturbed businesses, it vastly reduces the initial expense and promises handsome profits in the future. When New England House is fully occupied it will bring in £30,000 a year.

It has cost £377,000 to provide its 143,000 sq ft of factory floor space. The keynote of the whole project is flexibility, with space allocated in units measuring 30 ft by 45 ft. Main services are available at the top of the eight-storey building, and tenants will have to pay to run them to their workshops. By today's values, the standard rents —available on 21-year leases—are not excessive. For the first three storeys (each of which, because of the factory's hillside position, offers road-level loading bays) the rate will be 7s. per sq ft. The fourth to eighth floors, served by lifts, will be let at 6s. per sq ft. There will also be a small service charge for communal facilities, such as window cleaning and the upkeep of staircases and lifts.

Small man's nightmare?

THERE is no shortage of would-be tenants from outside the Brighton redevelopment area, but before outsiders can be let in the displaced local firms must be given first refusal. As an added concession, these are being offered special low rents of 5s. 3d. and 4s. 3d. per sq ft—but only on seven-year leases.



Independence means a great deal to many old-established little firms. Some are opposed to the very idea of becoming corporation tenants; others feel they cannot afford even the reduced rents. Many of those prepared to take a chance fear that at the end of a short lease they may have to renew at rents even higher than the outsiders are paying.

Only about three-quarters of the factory space has so far been let to local firms. Of those that are going in, only a small number have claimed priority rents on a short lease: the others have chosen to sign for 21 years. Among those that do think it worth while are a clothes manufacturer, who will occupy an entire floor with 200 workers, a window-blind maker and a shoe manufacturer.

Brighton corporation says encouragingly that savings can be made both in space and staff. But one small printer, who has owned and occupied his premises for three decades, reckoned it would cost him £30 a week in rent and rates if he moved to New England House. And what sort of economies was he expected to make with a staff of a dozen? Like a number of others, he has plumped for full compensation and is seeking new premises for himself. For the corporation it is one subsidised tenant the fewer.

Coals to Ulster

FROM A CORRESPONDENT IN BELFAST

NORTHERN IRELAND is perpetually irritated over coal. But some Ulster people have more reason to nag about prices than others. Industry, for example, gets a fuel subsidy of nearly £1 million a year to help manufacturers meet the higher costs of coal and other fuel. Housewives are less fortunate: yet they do at least have a champion in Mr Edmund Warnock, a former attorney-general and now the most rebellious member of the parliamentary Unionist party.

Now Mr Warnock has ridden forth again. He told the Minister of Commerce that he should "immediately and forcefully" protest to the Minister of Power in London and to the National Coal Board about the proposed increase in the price of domestic coal in Ulster to "ensure that the already overburdened householders in Northern Ireland should not be required to bear this additional burden." If satisfaction could not be got, Mr Warnock declared, domestic coal should be subsidised out of the money that Mr Selwyn Lloyd promised to pay back to Northern Ireland from last July's increase in purchase tax.

Ulster householders do indeed feel they are unfairly treated over coal prices. The cheapest grade of coal costs £10 a ton, which is nearly £2 more than in, say, Liverpool. Moreover, Ulster does not get the benefit of the coal board's summer prices designed to encourage stockpiling for the winter. The chief reason for Ulster's difficulty was explained by the Robson committee on coal distribution costs in 1958. "There is little or no competition in the Northern Ireland coal trade," the Robson report said, ". . . . it would be to the consumers' advantage if the more efficient firms were to enter into vigorous competition with others . . . thereby helping to keep down the costs." There is, of course, more than one form of fair competition.

Thus Nationalist MPs at Stormont have been demanding that Ulster should break through the United Kingdom restrictions on importing cheap foreign coal: recently they suggested that coal should be bought from South Africa at £6 10s. a ton. In particular, they cite Dublin's recourse to the United States and Poland two years ago, which forced the National Coal Board to lower its prices in the Irish Republic. As a result southern Irish consumers got British coal at £2 a ton less than Ulster consumers.

Manfully, the coal merchants in the Republic agreed that this blessing should be widely dispersed, irrespective of politics: they found, in fact, that there was no law to prevent them sending NCB coal into Northern Ireland. Housewives across the border in Derry, Fermanagh, Tyrone and South Down were happy to take advantage of the NCB's cheap export prices; their only complaint was of unneighbourly profiteering by the cross-border carriers. Some supplies went as far inland as Ballymena in Antrim.

This trade seems to have kept up ever since last summer, when the NCB, after complaints by Unionist MPs at Westminster, increased the price of coal in the Irish Republic by 35s. a ton. All the same it was judged a hard blow by those who believe enterprise to be a fine thing.

Chemicals from Oldbury

...and Susan Yeoman's nightie

CHEMICAL COMPANIES • INTERNATIONAL ENTERPRISE •

Wise father — Henry Yeoman. Insists on his children having flame-resistant nightclothes. So when Susan has her bedtime romp with daddy, everyone's relaxed. No danger of her nightdress going up in flames. That's where chemicals from Oldbury come in.

Proban Ltd. — a company owned jointly by Albright & Wilson and The Bradford Dyers' Association — makes Tetrakis Hydroxymethyl Phosphonium Chloride at Oldbury. And Tetra ... what we said ... is an essential part of the Proban finish applied to fabrics to ensure that they won't catch fire. Less risk for wearers and less worry for parents like the Yeomans who believe in prevention — and Proban!

This is only one of the ways in which A & W chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British chemical industry, the Albright & Wilson Group contributes — but we could go on like this ...

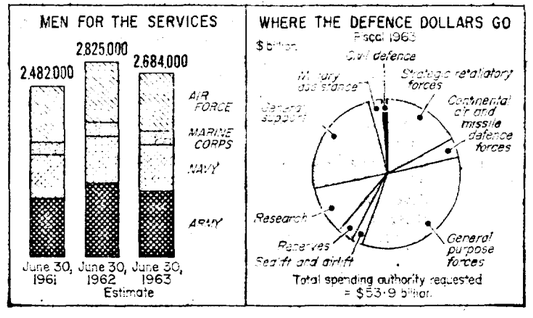
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.



Defence in Glass Houses

WASHINGTON, DC

In the President's Budget for the coming year a new peak of armaments is being added to a range already Himalayan. America's nuclear strength is much greater than Russia's and America also has more bombers and warships. But the Secretary of the Army, Mr Stahr, has said that both nuclear and conventional strength must be increased further because such military power coupled with iron will is the only language that communists understand. Last week, however, the Under Secretary of Defence, Mr Gilpatric, expressed the fear that the Russians might feel so overwhelmed as to be provoked into some dangerous sortie. The enemy, he seemed to think, ought to be made to feel inferior, but not too inferior. This apparent ambivalence makes American policy towards the communist world hard to expound and helps to explain why speeches by generals and admirals that are ghost-written by professional speech-writers in the Department of Defence are censored by professional speech-readers mainly in the Department of State.

The chief reason for the rising cost of defence is that the government has settled the debate about whether to rely on massive retaliation or to prepare to win limited wars by coming out in favour of both. This is what Americans had been told previously that they could not afford. But when nuclear weapons will be used and when they will not cannot be known in advance. There is, it appears, in the experts' minds a spectrum of possible communist onslaughts that ranges from subversion to large-scale military attack. The United States cannot counter subversion with atomic weapons, but beyond that it will use whichever weapons suit its purpose best.

Military forecasting is the most difficult of all forms of prediction. The Secretary of Defence, Mr McNamara, has issued a warning that the sum proposed for defence for the fiscal year 1963, which begins next July, may not be enough if the situation in Berlin has got worse instead of better by the end of June. Much also depends on what the United States thinks that Russia will do next. For instance, Mr McNamara said in a long statement on his budget that the existing system of air defence, which costs $2 billion a year to maintain, was designed primarily for defence against mass attack by a large force of manned bombers which unaccountably the Russians did not build in the end. In spite of this Russian failure to live up to the expectations of the western planners, he is now assuming "as in fact we must," that the Soviet Union will eventually build a large force of intercontinental ballistic missiles and that the air defence system must be altered accordingly. Peering further into the uneasy future, Mr McNamara said that the time will also inevitably come when the United States will have to try to be on guard against unfriendly satellites as well as against hostile missiles.

The grand design now is that the strategic retaliatory forces will be reserved for Armageddon and the general purpose forces will be used for any war short of it. The Secretary of Defence said that hitherto the American Air Force had concentrated too much on the problems of a short nuclear war and that the Army had thought in terms of a longer, large-scale conventional war but was not equipped to fight it, having over-supplies of some kinds of equipment and grave shortages of others. The hope, it may be assumed, is that more balanced as well as more massive military strength will make the United States more confident, and therefore more flexible, in its diplomatic dealings with Russia, since it will henceforth possess military alternatives. Apparently it is just such flexibility that the American right wing indignantly rejects, calling it a "no-win" policy.

Armageddon, should it ever come, will be fought with nuclear missiles and bombs, each capable of destroying a modern city or a missile base, according to which target is chosen. The missiles would be fired from underground vaults and from submarines at sea and the bombs would be carried to their targets in some twelve hundred aircraft, half of which will continue, as they are now, to be on a fifteen-minute alert around the clock. Congress pressed $515 million on Mr McNamara last year, urging him to buy B-52 bombers. But he felt that the sum would not buy enough of them to be significant, and for it he could have more missiles or Polaris-equipped submarines, with a better chance than bombers have of surviving long enough to strike back after a Russian attack. But in the next few years he will spend a billion dollars or so on experiments with the high and fast B-70, an aircraft which he thinks might be useful for assessing damage done to the enemy and for supplying the American missilemen with information about fresh enemy targets. He is evidently not prepared to gamble on Armageddon lasting only a few hours.

The general purpose forces will be armed with more of the conventional weapons, as well as with tactical nuclear weapons, and supported by 824 ships, including an eighteenth aircraft-carrier, as well as aircraft. There is a modification of the earlier notion of "pentomic divisions," away from unlimited war. The pentomic units were visualised as highly mobile and self-sufficient and so able to sustain themselves and to continue fighting in an environment that had become a nuclear desert. This nightmarish concept has evidently ceased to be fashionable and Mr Khrushchev's brandishing of megaton bombs is regarded almost indulgently, as evidence of a Russian cultural lag in military matters. But the Berlin crisis last year did uncover the fact that eleven American divisions were ready for combat instead of the sixteen regarded as the minimum essential for the conditions of the cold

war (and then only if the other partners in the North Atlantic Treaty Organisation pulled their full weights). Sixteen regular divisions are to be provided by slightly increasing the size of the standing Army and cutting fat from logistic support.

The Army and tactical Air Force come under a new strike command. All the military spies are put under one management, called the Defence Intelligence Agency, and the so-called "special forces," the guerillas and the counter-guerillas, the psychological warfare experts and the regional and language experts, under another. The task of the special forces is to cope, in Latin America, south-east Asia, central Africa and the Middle East, with what Mr McNamara calls "political assassinations, robbery, arson, subversion and bribery," and what Mr Khrushchev calls "popular revolts and wars of national liberation."

Hitherto the Army, Navy and Air Force have managed to preserve their sovereignties and have fought one another fiercely for supremacy while civilian Secretaries of Defence looked on almost helplessly. But the services are apparently resigning themselves, though grudgingly, to Mr McNamara's new order because he seems to be letting them have, if not all they could possibly want in the way of new weapons and money, at any rate considerably more than they got when the President of the United States was a general. In return, Mr McNamara looks like exercising his powers more fully than his predecessors did and over a much more centralised as well as a larger military machine. The Joint Chiefs of Staff were intimately involved as never before in the preparation of the defence budget and had scores of meetings with Mr McNamara, together and individually. But his urgent call for unified planning by the services suggests that the United States may be moving in the direction of a single Chief of Staff, in spite of deep-rooted and traditional opposition to such centralisation.

Mr McNamara says that the United States intends to continue the struggle of the cold war in all its forms until the communist leaders "both Russian and Chinese" become convinced that they are endangering themselves as well as their opponents by their aggressive policies. He evidently does not believe that the communist leaders will be convinced soon, for he spoke about replacing "soft" missiles with "hard" missiles, protected under concrete, as the next phase and looked beyond those "next few years" to the coming need for "new strategic retaliatory systems."

Shelters against radioactive fall-out and the new fifteen-minute warning system based on radar stations in Britain, Alaska and Greenland only emphasise that it is impossible in this day and age to provide an absolute defence for the continental United States and that missiles will always get through. After the era of the missile comes that of the attacking satellite. This is indeed terror on a Himalayan scale. No wonder that Mr Gilpatric said that there was a great need to get away from "the conception of a race, a competition, a struggle always to be ahead." Unfortunately, trying to catch up with and then surpass the United States is a constant preoccupation of the Russians, who in the matter of arms control have shown little genuine inclination to follow the advice of Bernard Shaw and to discuss the subject "quietly and cautiously, as becomes people who all dwell in the same glass house."

Bargaining for Expansion

IN his request to Congress for a new **Trade Expansion Act** to enable America "to meet the challenge and opportunities of a rapidly changing world economy" President Kennedy lists four fundamentally **new developments** which have made obsolete the 28-year-old Reciprocal Trade Agreements Act since it was last renewed in 1958.

1. **The growth of the European Economic Community** has produced a common market nearly as large as America's own but one with which, for internal reasons, it is impossible to negotiate reciprocal tariff reductions on the old, slow, item-by-item basis. Today America's best customers are in western Europe but the United States may lose its share of that market if it cannot bargain for reductions in EEC's external tariff. The main reason why Mr Kennedy wants the new trade legislation this year is because he hopes through it to bring pressure on EEC before its policies have crystallised. Many Congressmen, however, would prefer to wait and see if the community develops in a way which makes the new legislation necessary.

2. **The recent deficits in the international balance of payments** of the United States make it essential that Americans export more in order to offset the dollar drain of their military spending abroad and of other foreign aid.

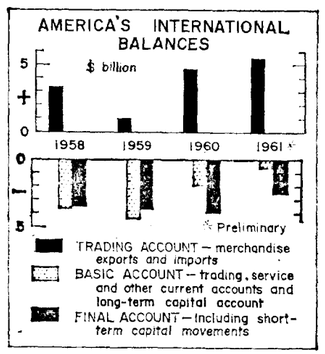
3. **The need to accelerate America's own economic growth,** and in particular to provide more jobs for Americans, can be met in part by selling more in Europe's rapidly growing market where the demand is largely for the type of goods produced by America's most efficient and expanding industries. If these industries are prevented by tariff barriers from increasing their share of the European market they will be tempted to export capital and employment by setting up more plants in Europe. More foreign trade will also help to prevent inflation at home.

4. **The Communists' economic offensive** in the less-developed areas of the world must be contained by giving these countries new outlets for their raw materials and manufactured goods.

THUS Mr Kennedy argues that America's efforts to maintain the leadership of the free world depend on the Trade Expansion Act which he begs Congress to treat as a national not a partisan measure. Certainly the divisions on it will be on regional and industrial rather than on political lines; but equally certainly the divisions will be sharp.

The President wants power for the next five years:—

1. to reduce existing tariffs by 50 per cent in bargaining with any country.



2. to reduce or eliminate entirely tariffs in bargains with the common market countries on those groups of products in which 80 per cent of world trade is in the hands of the EEC and the United States together. These are mainly industrial goods and accounted for nearly $2 billion worth of American exports to present and prospective EEC countries in 1960 and for about $1.4 billion of imports from those countries.

In both cases the reductions would take place gradually over a period of five years and would be negotiated on broad categories of goods, not on individual items—on organic chemicals as a group, for example; reductions would only be granted in return for equivalent concessions on the same or different groups of products by the other party to the bargain.

3. to reduce or eliminate all restrictions on imports of tropical agricultural products, provided the EEC does the same. These are the staple exports of many less developed countries; increased sales of these products would enable them to finance more of their needs themselves. Trade with Latin America, Japan and other countries outside the common market would also be expanded by the American negotiations with EEC because concessions obtained in this way would be extended to others under the most-favoured-nation principle. The President is determined that America's trading partnership with the EEC shall be non-discriminatory.

4. to assist companies, farmers and workers who suffer from increased imports as a result of the tariff reductions; in fact imports compete directly with only 1½ per cent of America's industrial output. In the past such assistance has been provided by a complicated system of peril points and escape clauses; these would be continued but on a broader basis and with more discretion for the President. Mr Kennedy also wants to provide unemployment and relocation allowances and retraining for workers who are jobless as a result of imports, and technical advice, tax benefits and loans for businessmen or farmers who are adversely affected by imports.

He emphasises that this help would be temporary, to enable the people concerned to readjust their activities to new conditions. The proposal will help to reconcile trade unionists to the tariff legislation but the businessmen who object to foreign competition are usually those who are inefficient and inadaptable and who cannot face economic life without protection.

President as Politician

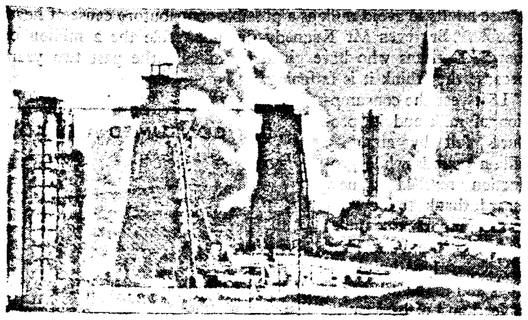
IN spite of Democratic promises during the election campaign, no new civil rights legislation was submitted to Congress last year and it has been very widely assumed that the President would continue to avoid giving offence to the Southerners, whose votes he needs for his trade programme and for other legislation with high priority. The Republicans have been making the most of this embarrassing chink in Mr Kennedy's armour. But last week Mr Mansfield, the Democratic leader in the Senate who a few days earlier had declared that he could see no civil rights legislation on the horizon, found himself introducing a Bill, drafted in the Department of Justice, to prevent southern Negroes from being disfranchised by arbitrary tests of literacy. It provides that six years of education at a tax-supported or private accredited school shall be adequate proof of literacy for a vote in federal elections—those in which the President and members of Congress are chosen.

There is also a sting in the Bill's tail for Governor Rockefeller. One section provides that Americans who can read Spanish, but not English, may not be disfranchised. The biggest number of Spanish-speaking Puerto Ricans is found in New York City, where it is believed that about 200,000 of them were unable to vote last year because of a state law which requires voters to be literate in English. Should the Bill pass, these Puerto Ricans may show their gratitude by voting for a Democratic Governor this autumn and against Mr Rockefeller's re-election. The Administration has also let it be known that it will support the outlawing of the poll tax on voters which lingers on in five southern states.

Unless the Administration puts its full strength behind these measures, southern intransigence may hold them up. But Mr Kennedy has carefully chosen to stress voting rights, which are far less controversial in the South than schools or housing or jobs. Conservative Republicans who normally co-operate with conservative Southerners will have to part company with them on this issue. They would have been wise to do so last week in the vote in the House Rules Committee on the creation of a new cabinet-level Department of Urban Affairs and Housing. Instead they played into the hands of the President, who was able to express surprise at their lack of interest in the plight of the cities. By confirming that he means to appoint a Negro as the first Secretary of the new department he put additional pressure on Republicans from the big cities with large Negro populations to support the scheme, which he is resubmitting as a reorganisation plan; it goes into effect within sixty days unless it is voted down in either House. However the vote goes, Mr Kennedy stands to gain in the big cities where he won—and the Republicans lost—the last election. He will either have his department and his first Negro member of the Cabinet or an election issue this autumn.

Sacred Cow

IN the farm message which he sent to Congress this week the President asked for tight controls over the agricultural surpluses which are proof of a misuse of resources and which are such a burden on the Budget. The primary causes are the terrifying productivity of American farmers and the political sacredness of the farm vote, but the changing diet of Americans plays its part. Even milk is not immune. Last week Mr Kennedy, sipping a glass, tried to reverse the drift away from milk on the part of the greatest milk-drinkers in the world. He praised it as delicious and nutritious, promised that it would be served with all meals at the White House, guaranteed that it did not contain dangerous amounts of radioactive fall-out and even ventured to cross swords with the doctors who advise adults to avoid milk as a possible contributory cause of heart trouble. But even Mr Kennedy did not tackle the 2 million or more Americans who have given up milk in the past two years because they think it is fattening.



Last year the consumption of milk and its products fell by about 3 billion pounds while production reached a new record, thanks to increases in the support price under both the Eisenhower and the Kennedy Administrations and to the low prices of feed and of beef cattle. Much of the surplus was turned into cheese, butter and dried milk, whose prices are all supported; this cost the government $300 million in 1961, compared with half that in 1960, and will cost around $500 million this year. Dried milk is a mainstay of the food-for-peace programme and in a perfect world the surplus of milk would be used to feed its 650 million hungry children instead of being pressed on reluctant American adults. But the United States is already giving away food worth $2 billion a year and Mr Kennedy cannot ignore the effect of any increase in this upon his future Budgets and upon the taxpayers.

In his message the President proposed to Congress that dairy-farmers should be given a choice between continued high price supports, accompanied by restrictions on their sales, and continued freedom to sell, but with a sharp reduction in support prices. These would be fixed at levels that would hold the costs of the dairy-products programme to no more than $300 million a year. But the dairy-farmers will continue to be cushioned until the end of what is, after all, an election year. Mr Kennedy is asking Congress to extend the present support price from April 1st (when, under the present law, it is scheduled to fall) until December 31st. On this he can count on the co-operation of Congress.

No Go

PERHAPS the assemblies of stars cast their shadows ahead. The conjunction this weekend, to the dismay of Hindus and Buddhists, of eight astrologers' planets is as good an explanation as any other of the Americans' extraordinary bad luck with the conjunction of the artificial craft which they had planned to send into space last week. On January 24th, a collection of five satellites carried on a single rocket, known as Composite I, went wrong about 50 miles up, the rocket's second stage proving too feeble, and fell into the Caribbean. On January 26th, a space vehicle designed to take television pictures of the moon and land instruments on its surface, called Ranger III, went astray by 20,000-odd miles because its rocket pushed it too fast. It subsequently failed to take even long-range pictures of the moon because an antenna was pointing in the wrong direction.

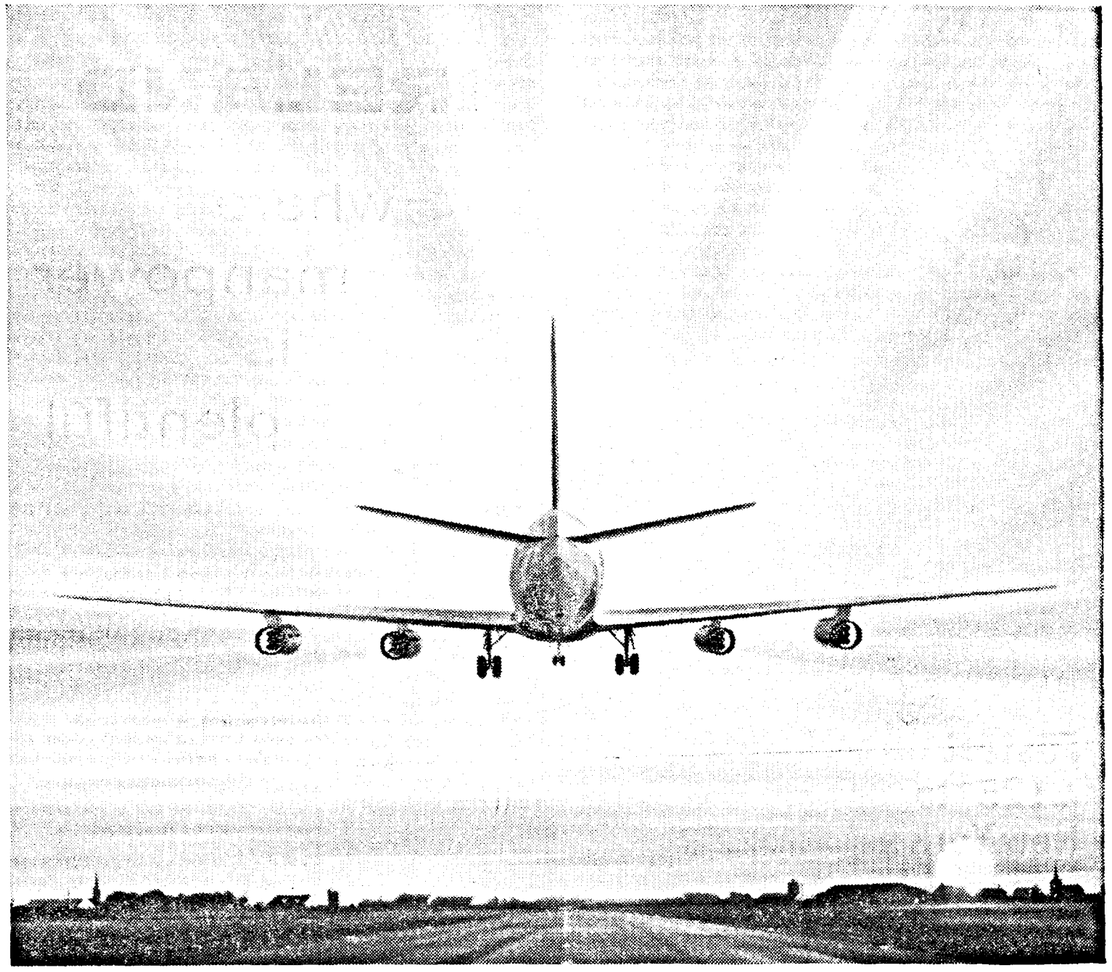
On Saturday, January 27th, this star-crossed series of disappointments culminated in the last-minute cancellation of the attempt to send Colonel Glenn along the earth-circling path already pioneered by two Russians. The sky suddenly clouded over. The photograph of Colonel Glenn's face after he had been encapsulated for five hours, strapped back to earth and face to the skies, showed what the private agonies of the mind can do even to a man as toughened as he is. The attempt to put an American into orbit, already postponed six times, will be renewed on February 13th.

One reaction outside the United States has been to criticise the Americans for giving so much publicity to experiments in which there was inevitably a risk of failure. The answer is that they have undoubtedly earned more respect by handling matters in this way than if they had kept the whole thing secret until they had a success to boast of. The crowds who followed the events of January 24th-27th caught a glimpse, in the maze of gantries and launching pads, of the effort and money the United States is putting into its space programme. The willingness to let the public know about failures as well as successes is what marks off the open society from the cloak-encircled activities of authoritarian governments. And it will do earth-bound people no harm to see what happens to an astronaut before the camera captures him, wrapped in smiles, on his triumphant return.

Wall Street's Far-flung Journal

FROM A SPECIAL CORRESPONDENT

THIS weekend the Dow Jones Company's new Sunday newspaper, the *National Observer*, makes its first appearance. The decision of the publishers of the *Wall Street Journal* to establish their new publication in Washington rather than in New York may have been influenced by the widely-felt need for a strong conservative voice in the nation's capital. But the location—like the project itself—can also be seen simply as a further example of the realistic attitude toward the business of journalism that has made the *Journal* itself an extraordinary success—both professionally and financially—in an era of fading newspapers. One reason for the *Journal's* success was, in fact, its early recognition of the importance of Washington as a news centre and of the need for competent reporting of the proliferating activities of the federal government. Today it often devotes more news space to material from Washington than to that from the country's financial capital, New York, and a far greater proportion than any other periodical, including the *New York Times*.



Its thorough coverage of Washington is only one facet, however, of the *Journal's* excellent reporting of business and finance, to which its attention is mainly directed. Its original, detailed and independent coverage contrasts sharply with most metropolitan newspapers, whose financial pages tend to be superficial, uniform and subservient to the interests of corporate advertisers. Together with the *New York Times* and a very few other newspapers, the *Journal* offers some positive evidence against the attitude, which is alarmingly prevalent in the American press, that "good journalism is not good business." And only the *Journal* has been able to turn to its advantage that central fact of economic life which has decimated the press: the arrival of mass marketing and the revolution it has caused in advertising.

Collectively, newspapers constitute the largest mass medium even though their share of all expenditures on advertising has declined somewhat since the advent of television. But individually the newspapers found that, when the large-scale advertising expenditures on which they depended began to be apportioned almost solely on the basis of the size of audience commanded, the mass marketing bonanza had its disadvantages. Newspapers competing within the same geographical areas found that substantial increases in circulation were very expensive to achieve ; costs rose and even the mergers of competing newspapers did not avoid the tendency to cheapen the product in order to gain an even larger audience at less expense.

Certain newspapers, most notably the *New York Times*, have been able to attain "mass" status while maintaining their quality appeal to a specialised "class" audience. And some "mass" papers have either never wholly abandoned their "class" appeal or are returning to it after having tested (unprofitably) the limits of their mass appeal. The significance of the *Wall Street Journal* is that it has been enormously successful while other newspapers have been having hard times. Its total circulation has risen to 820,000 from 707,000 at the beginning of last year. It therefore rivals the *Chicago Tribune* and the *New York Mirror*, both of which have daily circulations of between 800,000 and 900,000. Both, however, have lost circulation rather than gained it in recent years. Since the *Journal's* distribution does not rely on news-stand sales but is 98 per cent by subscription (on which the renewal rate is 68 per cent with 86 per cent on established annual subscriptions), there is little doubt that in the near future it will become the country's second-largest daily newspaper, surpassed only by the 2 million-copies-a-day *New York News*.

The key to its rapid rise, in a period when other newspapers have been lucky to keep pace with the increase of population in their own areas, is that the *Journal* is published and distributed from seven printing plants scattered throughout the country. Material from fourteen domestic bureaux and from correspondents in the United States and abroad is edited centrally in New York and the entire content of the paper is transmitted to the printing plants each day. Since advertising can be purchased separately in each edition, there is some variation in number of pages and fullness of detail, but the front page, the editorial page and most news stories are identical in all editions—even sometimes to typographical

Only TCA flies through to Winnipeg, Edmonton, Vancouver

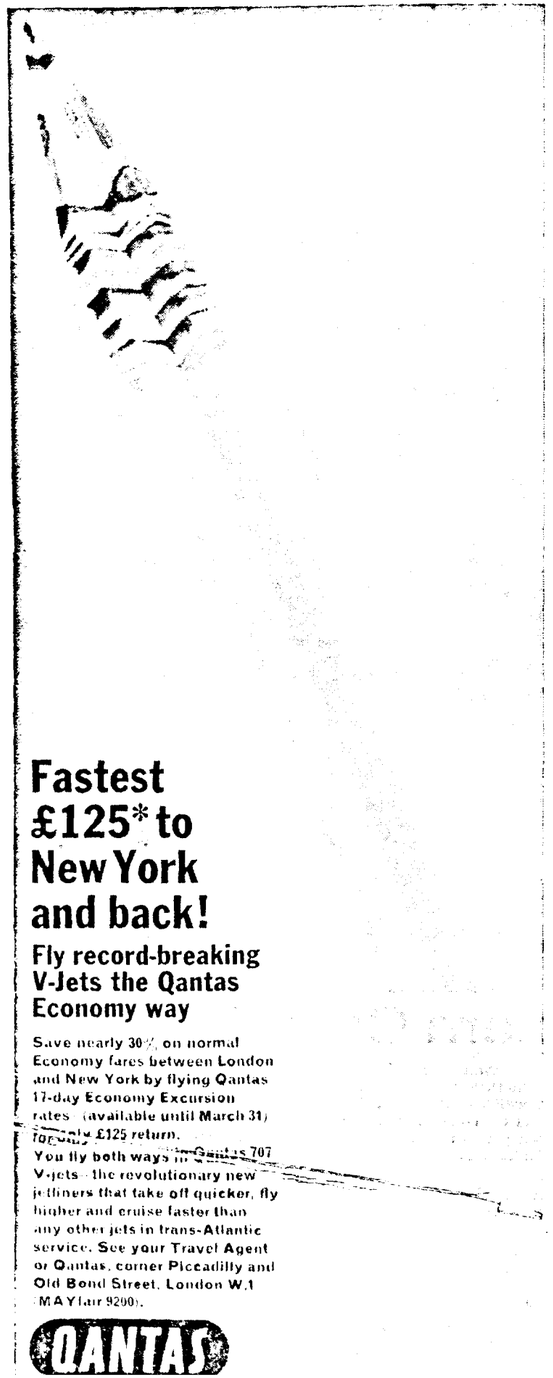
First stop Western Canada!

You get on a giant TCA jet at London or Glasgow. The very same night you are in the heart of Canada's prairie land, or on the coast of the Pacific. What's more—you get a choice of choices! You choose your day because even now in the off-season TCA jets fly five through services a week to Western Canada. And you choose your route–TCA has two to the Pacific:

TCA Hudson Bay Route—non-stop to Western Canada Every Friday a TCA DC-8 jet heads west, straight for Hudson Bay—the short-cut, non-stop way to Western Canada (and a route exclusive to TCA). First touchdown out of Britain—Winnipeg, 4,000 miles away. Then on to Edmonton and Vancouver —or by connecting services to other major points in Western Canada.

Or via Montreal or Toronto. Four TCA jets a week fly through to Western Canada via Montreal or Toronto. Same service all the way—and you land the same night in Winnipeg or Vancouver. But that's still not all. For TCA and BOAC jets or BOAC Britannias, fly every day to Montreal or Toronto. And once in Canada, you can get to any major Canadian city, from Atlantic to Pacific coast, on a TCA connection.

Fly TCA to Western Canada—and save on fares How? In lots of different ways. Far too many to mention them all. Any travel agent has details handy. But here's one example: the economy class return, London-Vancouver. Normal fare is £241. 18s.—but TCA can save you as much as £70. 2s!



This is how it's done. The 17-day excursion rate (available until 31st March) is only £196. 2s. by jet—saving £45. 16s. Then if you go on a Monday, Tuesday or Wednesday you can take advantage of the special TCA 24-day rates across Canada, and the fare comes down to £182. 10s. And if you fly to Montreal on a BOAC Britannia you get the advantage of a further £10. 14s. saving on lower-price propeller travel. Total saved—£70. 2s.

On TCA's Pay Later Plan you'd put down £17. 16s. against the £171. 16s. fare, and the balance in 24 instalments of £7. 2s. 9d. Easy terms—for 5,000 miles!

Ask any Travel Agent about TCA service and fares to Western Canada

TRANS-CANADA AIR LINES AIR CANADA

142-4 REGENT ST., LONDON, W1. WHITEHALL 0851 · AND OFFICES AT GLASGOW, SHANNON, BIRMINGHAM AND MANCHESTER

Fastest £125* to New York and back!

Fly record-breaking V-Jets the Qantas Economy way

Save nearly 30% on normal Economy fares between London and New York by flying Qantas 17-day Economy Excursion rates (available until March 31) for only £125 return.
You fly both ways in Qantas 707 V-jets—the revolutionary new jetliners that take off quicker, fly higher and cruise faster than any other jets in trans-Atlantic service. See your Travel Agent or Qantas, corner Piccadilly and Old Bond Street, London W.1 (MAYfair 9200).

QANTAS

IRELAND

—where manpower is plentiful

For new industries exporting from Ireland there are all the workers you need at reasonable wage rates, and Irish workers are quick to acquire new skills.
These are among the overwhelming advantages that are attracting more and more new industries to Ireland. Others include:

No Income Tax, no profits tax, for 10 years on profits from new industrial exports from Ireland, plus 5 more years of reduced taxation.

Grants: Substantial non-repayable grants available towards the cost of site, premises, equipment and the training of workers.

Capital and profits can be freely repatriated to Great Britain. Ireland is in the Sterling Area.

At Shannon Free Airport firms interested in the possibilities of air freight can obtain factories for renting, grants for machinery and for worker training, full tax exemption until 1983—and plenty of labour.

Mr. Gerard MacCarthy, representative of the Industrial Development Authority, will be pleased to provide further information on what Ireland can offer your industry. He can be contacted at the Irish Embassy, 17 Grosvenor Place, London, S.W.1 Belgravia 2171).

Or write for two informative booklets:

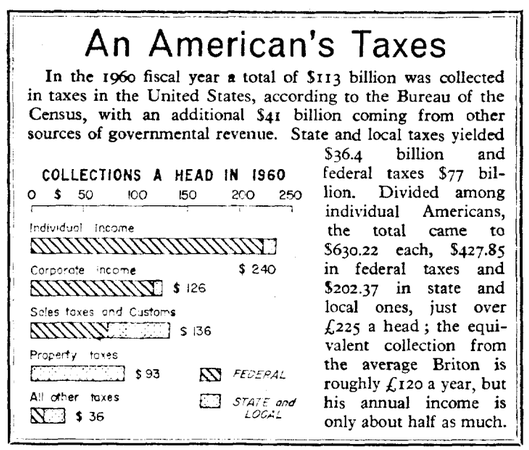
errors. The paper will soon open its eighth printing plant, in Riverside, California, and there will use a new technique: facsimile transmission, by means of a television-type cable, of whole pages of the paper from its present West Coast plant in San Francisco.



The *Journal's* system of telegraphic transmission, which made possible its national distribution, unique in America except for the *Christian Science Monitor*, evolved gradually over a period of years. The newspaper itself originated many years ago as an offshoot of the Dow Jones News Service which is still widely in use and shares the staff and facilities of the *Journal*. Both were founded in the eighteen-nineties and for many years confined themselves entirely to the stock market. The circulation of the *Journal* grew to 50,000 in the bull market of the nineteen-twenties and an almost entirely autonomous "Pacific Coast Edition" was created in San Francisco. But after the stock market crash of 1929 the combined circulation of the two editions dropped below 30,000 and stayed there until 1941. No doubt the resurgence of the stock market during the nineteen-fifties, which has tripled the number of shareholders in the United States, helped the *Wall Street Journal* to its present success. But the newspaper has so broadened its coverage to include business in general, government, politics, labour, and even occasionally the arts and literature, that its name, with its narrow connotations, has been more of a hindrance than a help.

The *Journal's* horizons began to broaden in the nineteen-thirties when a succession of competent reporters made its Washington coverage so excellent that Franklin Roosevelt once stunned a news conference by admitting that he not only read, but respected the *Wall Street Journal* for its lucid reporting of the New Deal. One of its reporters, Mr Bernard Kilgore, became managing editor of the paper in 1941 (at the age of 32) and president of Dow Jones in 1945. Under his leadership, circulation of the paper multiplied tenfold in less than a decade and has doubled again to its present level. The concept of a truly national newspaper emerged: the Pacific Coast edition was made nearly identical with the New York one, editions in Chicago and Dallas were added in the nineteen-fifties, and printing plants were built in Massachusetts, Washington, DC, and Cleveland, Ohio. Through this system of national distribution the *Journal* has now acquired a mass circulation while preserving its "class" appeal by means of a content that is truly national in scope and impressively high in quality. In the advertising industry it is a highly prized and highly priced medium both for corporate advertising and increasingly for consumer-oriented appeals.

It is conservative and "pro-business" in its editorial policies and coverage, but it has kept its news columns relatively—and surprisingly—independent, compared with most financial reporting. One of its editors won a Pulitzer prize last year for his articles concerning the personal transactions of the president of the Prudential Life Insurance Company. These dealings were questionable enough to cause his subsequent resignation. Editorially, the *Journal* espouses a simon-pure (sometimes simple simon pure) doctrine of *laisser faire* that leads it to depart from the orthodox conservative line by advocating, for instance, absolutely free trade between nations and the abandonment of all "fair trade" laws (for the maintenance of minimum prices). It tends to be suspicious of all politicians, regardless of whether they are Republican or Democratic, and was noticeably cool to both Mr Eisenhower and Mr Nixon during their campaigns for the Presidency. One little known fact which may help to explain how a paper called the *Wall Street Journal* can be so independent is that its controlling editorial group is largely composed of Midwesterners—most of them, in fact, graduates of a very small college, De Pauw University, in Greencastle, Indiana.

An American's Taxes

In the 1960 fiscal year a total of $113 billion was collected in taxes in the United States, according to the Bureau of the Census, with an additional $41 billion coming from other sources of governmental revenue. State and local taxes yielded $36.4 billion and federal taxes $77 billion. Divided among individual Americans, the total came to $630.22 each, $427.85 in federal taxes and $202.37 in state and local ones, just over £225 a head; the equivalent collection from the average Briton is roughly £120 a year, but his annual income is only about half as much.

GE's Trials

THE big manufacturers of electrical equipment hardly have time nowadays to bother with turbines and switch-gear; they are too busy defending themselves. Most of the trouble stems from the conviction of 29 of the companies last February on criminal charges of conspiring to fix prices. Then they were fined, in all, just under $2 million and a number of their officials were sent to prison. But this was not the end of the story; the Department of Justice can bring civil suits to ensure that the wrong-doing is not repeated. Most of the firms involved are considering signing so-called consent decrees, in which they would make promises of good behaviour in future. But GE has refused. The response of the Department of Justice has been to ask the courts to order the firm to refrain from fixing prices not only on its heavy electrical equipment but also on the whole range of its products.

The department argues that this probably unique step is necessary because of GE's "proclivity" for breaking the anti-trust laws; it notes that the company has been involved in more anti-trust cases than any other—36 of them since 1941 (19 are those in which the firm was found guilty last February). In all GE has been convicted 29 times and entered into 7 consent settlements in the past twenty years. The significance of a broad court order is that, if one is issued, the punishment for any violation could be very much heavier than the $50,000 fine which is the maximum under the anti-trust laws. A single infraction might cost the firm $1 million. GE maintains that the department wants to order it not to do things which it has no intention of doing and insists that it will fight the order.

But on another front GE and the Westinghouse Electric Corporation, another big firm, have had to knuckle under. Early last month they reluctantly gave Senator Kefauver's antitrust subcommittee detailed figures on their profits and losses, by manufacturing divisions, between 1955 and 1960. The alternative might have been citations for contempt for the presidents of both companies. The committee's aim is to discover if there is truth in the allegation that "conglomerate mergers"—large diversified firms—keep profits and prices high on products whose sales are closely controlled (such as electric light bulbs) in order to be able to cut prices on other goods (such as appliances) that are manufactured by a number of small competitors. In addition to these worries, the convicted manufacturers of heavy electrical equipment are bracing themselves for the claims for triple damages being brought by past purchasers of such goods. These claims now number about 200 and total hundreds of millions of dollars.

A prospect of progress

The developing countries of Latin America offer rewarding prospects especially to the exporter of capital goods. However, expert assistance is vital in dealing with the many formalities which abound. Consult our International Department Representatives. Their advice, based on detailed knowledge of local conditions, will prove invaluable.

Our branches and those of our associates – the Bank of London & Montreal and Balfour, Williamson & Co. – cover the whole of South and Central America. Through them, accurate market information reaches our International Department. The help and information which we are thus able to supply to business and industry includes the following:

- Individual market reports
- Tariffs and payments
- Import and export regulations, including licensing and prior deposits
- Names of agents
- Transfer of funds
- Financing

THE WORLD OVERSEAS

Miracle at Naples

FROM OUR SPECIAL CORRESPONDENT

A YEAR ago it would have seemed impossible that Italy's great Catholic party, with its dual personality facing simultaneously right and left, could make a decisive move in either direction without causing a violent convulsion. In July, 1960, it moved to the right and a convulsion followed, but each time its leaders have tried to push it to the left an intangible inhibiting force has paralysed them before they could achieve their end. This week in Naples the miracle occurred.

Quietly and almost painlessly, under the admirably skilful management of the party secretary, Signor Aldo Moro, the Christian Democrats have given themselves a new, unequivocal left-of-centre platform. In so doing they have found a new leader and a new style. Four-fifths of the party, with varying degrees of conviction, have consented to the elaboration of a new party line—a social and economic programme resting upon a fully-fledged development plan, specifically designed to attract the support of the Socialists, whom, until very recently, the Christian Democrats claimed to consider beyond the democratic pale. Some twenty per cent of the Christian Democrat party openly objects to the new line on the ground that it could favour the advent of communism by democratic means. Should the Socialists, they argue, become strong enough to form a majority either with the Communists or with the Christian Democrats themselves, who can doubt that they would revert to their old alliance? But these critics, who found a brilliant spokesman in the outgoing defence minister, Signor Giulio Andreotti, had no concrete alternative to the new line to offer.

The centre position, which has been the party's traditional stand since 1947, was abandoned by this congress, not because of the refusal of the Social Democrats and Republicans to work any longer with the Liberals (which in any case makes the present centre coalition unworkable), but because Signor Moro convinced the congress that the outlook and policy of the (right-wing) Liberal party were incompatible with the aims of Christian Democracy. The party secretary paid a tribute to the Liberals as allies whose past help had been precious in the defence of freedom, but declared that the Christian Democrats could no longer go side by side with them. It is Signor Moro's merit, and a measure of his capacity for leadership, that he has persuaded his party to accept the new line, not as a tactical measure rendered necessary by the situation in parliament, but as a fundamental choice arising out of the nature and inspiration of Christian Democracy. Since Signor Dossetti, who before his retirement from national politics in 1951 was closely associated with Signor Fanfani on the left wing of the Christian Democrats, no Christian Democrat politician has dared to theorise on the affinity between Christian Democracy and socialism. Signor Moro asks his party to seek the help of the Socialists not, as yet, in the form of an organic alliance, but as a necessary element in the parliamentary basis of a government capable of coping with the tremendous social problems arising from the pace of economic change in Italy.

Signor Moro gave three reasons why the party should make this change. First, because the Liberals are reverting to conservative principles which will not wash in a modern industrial society. Secondly, because the Socialists are coming round to democratic forms of government and should be helped in this direction. Thirdly, because industrial expansion aggravates the unbalanced distribution of wealth in Italy, creating problems which call for the immediate intervention of the state. A fourth reason, not mentioned in Naples, was none the less felt there. The church hierarchy has ceased to interfere in the detail of Christian Democrat affairs. The policy initiated more than thirty years ago by Pius XI appears to have been silently dropped. The Christian Democrats are on the way to recovering their original autonomy with one fundamental difference. The old Popular party, their predecessor, had a predominantly rural backing; the present generation of Christian Democrats is making a tremendous effort to adapt the party to a changed condition in which industry has replaced agriculture as the chief source of the nation's wealth.

Persuader: Aldo Moro

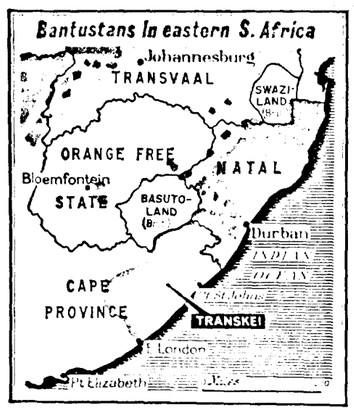
The delegates at Naples had expected to hear details of the party's economic plan and to compare these with the outline of a scheme recently published by the Socialists. But Signor Moro gave only a few general hints. Evidently he did not wish the congress to shelter behind the party's plan, offering it to the Socialists with an ultimatum to take it or leave it. His aim was to make the congress approve the policy behind the plan—a policy of approach to the Socialists—and to elect a party council and executive with a composition designed to convince the Socialists that the Catholics are in good faith in proposing a new left-centre line.

The proceedings at Naples were overshadowed by the fear that the outcome might resemble the famous Socialist congress at Venice in 1956, when the delegates voted for Signor Nenni's policy of getting closer to the Catholics but elected a council hostile to this line. There was something alarming at Naples about the very number of supporters of the new line. Apart from a few unexpected and confessedly reluctant converts, like Signor Pella, it is alleged that a number of people have joined the majority with the intention of disrupting it from inside. Of the four-fifths who support Signor Moro, one in three, it is thought, should be classed as doubtful.

If there are wreckers among the majority, this will very soon be apparent, for within a week the party has the ordeal of a government crisis to face. The resignation of Signor Fanfani's government has, in fact, been held back only to allow the congress to express its view. [*The congress ended on Thursday with the expectation, though not the certainty, that Signor Fanfani would form the next government.*]

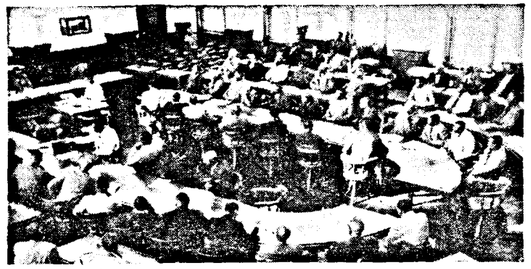
SOUTH AFRICA IN EXILE

FROM OUR CORRESPONDENT IN SOUTH AFRICA



Devise and Rule

World opinion, it seems, has Dr Verwoerd's government (though not Lord Montgomery) on the hop; "self-government" for the Transkei is one result



IF white South Africans really believed that four million Africans in the "Bantu homelands" were to be given independence in the foreseeable future, Dr Verwoerd's announcement on January 23rd, that the Transkei was to be granted "self-government," would have caused some alarm. But few people think that much more than a system of rudimentary self-rule is envisaged. The Transkei, 16,500 underdeveloped square miles in the eastern Cape, supports about a million and a half people; another million or so have left to work in the towns and cities of the Republic. It is one of eight separate African tribal areas (together, 13 per cent of the area of the country), that the government says will be self-governing one day. But two-thirds of South Africa's eleven million Africans live in the "white" 87 per cent of the country; they are officially expected to look to the "Bantustans" as their political homes where they can "develop along their own lines."

In spite of an unusually heavy propaganda barrage—Dr Verwoerd spoke of a "new South Africa"—few see any "Bantu homeland" getting authority over foreign affairs, defence, and justice, which are reserved for the South African government in the Transkei plan. But, with all the sham, the plan is an active response to the pressure of world opinion. Last week the prime minister appealed to the West to give his proposals a fair look. Favourable overseas opinion has been avidly sought. One government newspaper hoped that critics in the United Nations might now be silenced; another speculated that if as much were to be given to non-whites in South West Africa, that issue might assume a "totally different" character.

It is important to appreciate how far Afrikaner Nationalism has felt compelled to move since 1948, when talk of political rights for Africans was laughed to scorn as sentimental humanitarianism.

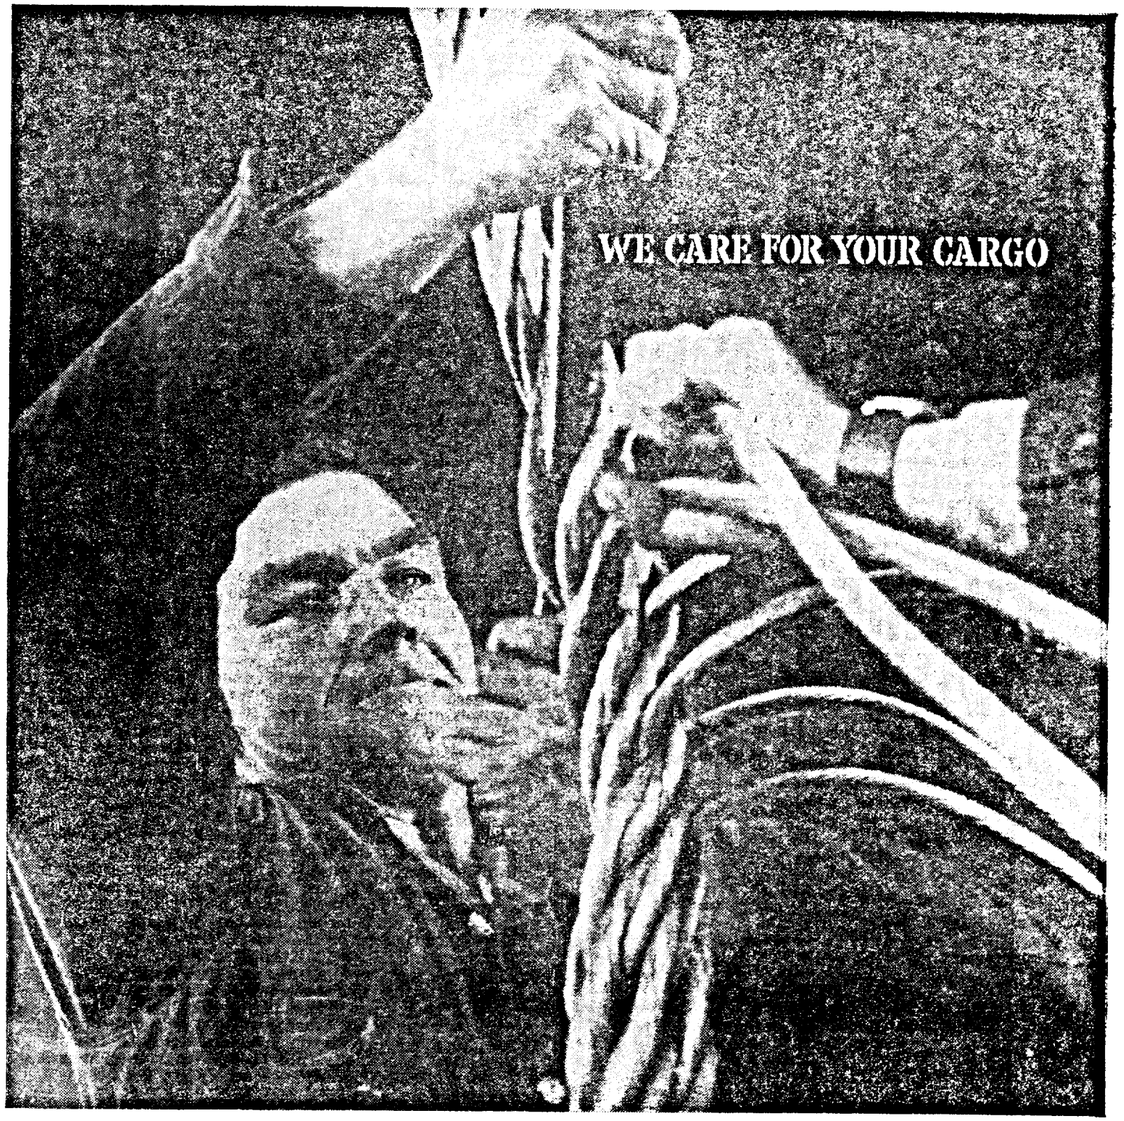
Today Dr Verwoerd and his colleagues concede that it is impossible to withhold political rights from non-whites indefinitely; they speak of self-determination for black men in much the way they have always done for whites. The prime minister says his policy is differentiation, not discrimination. Window-dressing or not, it is significant that pressure of world and local opinion has

Transkei authority sitting at Umtata

pushed the Nationalists so far as even to pretend that they will treat black and white alike as long as they live in separate areas.

The political rights and status of the millions of Africans who do not now, and probably never will, live in their "own areas," but are part of the South African community, remain, of course, unchanged: according to apartheid, these people are not entitled to any rights because they live in "white areas." So the Progressive party has, along with other critics, dismissed the whole undertaking as bluff—an attempt to provide the government with some moral background to white domination. The United party, by contrast, says it will support the government, short of an actual grant of independence, which would fragment the country and perhaps lead to war between the new black states and white South Africa.

Nationalist newspapers and the national radio are full of self-congratulation upon a "bold and daring" advance; and of self-satisfaction at proof of the government's good intentions. But, privately, Nationalist backwoodsmen say that the government is nearly as bad as the liberals in promising "the kaffirs" all these things. This is the traditional Nationalist school of thought: the Verwoerd government is likely to come under increasing criticism from some of its own supporters for undue "liberalism."



The African reaction to the Transkei plan has been mixed. There has been warm commendation from most of the chiefs, but rejection of a "phoney" scheme by individuals. The Paramount Chief of Tembuland says he favours separate development and self-government, but not in the way Dr Verwoerd proposes. Urbanised Africans reject the whole principle of "Bantustan." Dr Nkomo of Pretoria says that power will remain in the hands of stooges and government appointed chiefs. Other African politicians, however, feel that the government may have started a process over which it could lose control.

Nearly all South Africans agree that money must be spent on the economic development of the territory. The government says it has a five-year plan to spend more than £57 million. But white capital and entrepreneurs are to be kept out, or channelled through a Bantu development corporation. What is really needed is an imaginative programme of industrialisation to dovetail with the South African economy. Industries on the borders will, it is felt, leave the Transkei economically unviable and therefore politically dependent. The assumption is that some day the Bantu homelands are going to be so attractive that most black men will want to work and live there.

A Rude Device

The South African press may be forced to adopt "self-control" to avoid state control

THREE principal reasons are being given for the South African government's supposed intention of restricting the English-language press. First, the Nationalists have convinced themselves that the world's condemnation of their racial policy is based on reports and assessments in the English-language newspapers; for

SPLICING THE MAINBRACE? No, but this craftsman deserves such a reward, for on his skill in splicing wire slings for cargo, depends the safety of merchandise and lives.

THAMES BOARD HAVE THE MEN TO HELP YOU

Thames Board don't just make boxes. They make "FIBERITE" cases, tailor-made to your special needs. That's why they have a large team of technicians and designers, whose job is making sure that every customer's product—be it detergents, day-old chicks, or petrol pumps—always reaches its destination safe and sound. And when they have designed the right "Fiberite" case they don't just sit back and relax—they test it over and over again. (At Thames Board there are testing devices that can do things to a "Fiberite" case that even its worst enemy wouldn't.) Here is just one example of the many different problems dealt with by Thames Board.

A Quatermassian cloud

Mr. P. sells liquid detergents in bulk. And containers for transport were his problem. Traditional containers were safe—but not exactly cheap. Other, more economical forms? At the very thought, less courageous spirits might have had nightmares of gallons of liquid detergent breaking loose on a rainy day amid a Quatermassian cloud of foam.
But not Mr. P. He went to the Thames Board experts. Together they developed a way of packing the detergents in polythene cubes inside "Fiberite" cases. The cases (perforated for easy pouring) are made of "Aquapruf" board developed during the war for dumping supplies on invasion beaches. These "Fiberite" cases are so liquid-proof that they have even survived being tethered in the River Thames for several weeks.

FIBERITE PACKING CASES

TBF 43-6263-65

fourteen years these newspapers have been accused of fouling their own nest and stabbing their country in the back. Second, the English-language press is still a bulwark against total Nationalist domination of South Africa, and it has thus far been moderately successful in pointing out to a section of the English-speaking people and a minority of Afrikaners the worst excesses, perils and frauds of apartheid. The third, and in some ways the most important, reason is the influence that English-language newspapers exercise directly, albeit involuntarily, on the thinking and sometimes the actions of the non-whites—most of whom are wholly dependent on English papers for their news and political comment.

Unwilling for tactical reasons (both international and domestic) to institute blatant press control, successive Nationalist administrations have tried to intimidate English-language newspapers without taking any direct steps to restrict their freedom of comment. In fact, of course, newspapers are already liable to restrictions by the ordinary laws of the land, like the Criminal Law Amendment Act with its severe penalties for incitement, and the Public Safety Act with its sweeping powers of censorship in times of emergency. All the same, the feeling persists in Nationalist quarters that more should be done.

It was this feeling which, more than 11 years ago, led to the appointment of a press commission to inquire into the functioning of newspapers. The initial instalment of its long-awaited report is at last in the government's hands, and it is thought that the commission might advocate the setting up of a body to exercise some long-range, albeit "benevolent," control over newspapers. This would be in line with the thinking of some journalists. Six or seven years ago the idea of a voluntary press council was canvassed; the council would be set up by newspapers on their own terms and largely to forestall government action. But the idea was dropped primarily because of opposition from Afrikaans newspapers and lack of enthusiasm among a section of the English-language press.

Recently, however, after a deputation from the newspaper industry had discussed with the prime minister his statement in parliament that newspapers should exercise self-control if they wished to avoid state control, the idea of a voluntary press council was raised again. Alarmed by the threats to press freedom implicit in the government's statements, the industry has drawn up a code of conduct for newspapers and suggested that a board of reference should be established to watch over the press and deal with complaints. (The text of the draft code and of the board's constitution and functions was published on January 21st.)

The board would, among other things, be empowered to reprimand proprietors, editors and journalists for infringing the code, and to compel editors to publish corrections. One clause in the draft code reads:

> Comment should take due cognisance of the complex racial problems of South Africa and should take into account the general good and safety of the country and its peoples.

This wording, it is pointed out, is open to widely differing and dangerous interpretations. But it has been suggested that acceptance of the code and of the jurisdiction of the board should be voluntary, although it is uncertain whether this would satisfy the government.

In fact, no certainty exists that any part of the proposals will satisfy the government in its present mood. Although the new minister of information, Mr Waring, is on record as favouring a "code of conduct" and "some form of discipline in the profession," the report of the press commission is to be handled not by him, as was generally anticipated, but by Senator Jan de Klerk, the minister of the interior. Senator de Klerk belongs to the extreme right wing of the party and shares the view of many extremists that the unfavourable image of South Africa in the outside world and among English-speaking South Africans has been largely produced by the "irresponsible" English press.

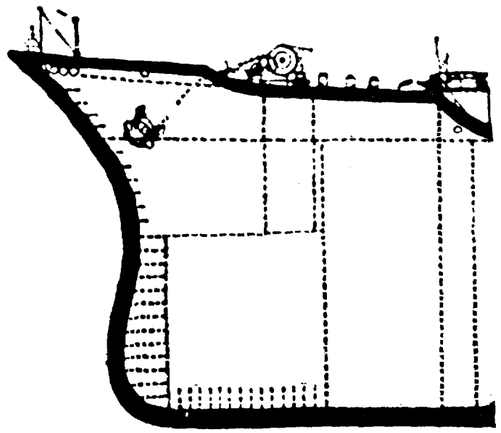
Opinion among practising newspapermen against the whole idea of a voluntary press council and a code of conduct has hardened since the prime minister's own mouthpiece, *Die Transvaler*, recently conducted a vicious campaign against the English-language press. Unless there was a change in the spirit of English newspapers, said *Die Transvaler*, the public demand for government action would become "irresistible."

"The opportunity which the prime minister gave the press to discipline itself is becoming dangerously restricted because of the pressure of public opinion and nothing else," it added. The reason for this "upsurge of opinion" is given as

> the fact that a white nation with two languages feels its security threatened and neither can nor will tolerate that such safety be exposed to any danger which can be avoided. In the actions of the English press such a danger is seen.

The more moderate wing of the Nationalist party, as represented by *Die Burger* in Cape Town, has never associated itself with this demand for press control. But *Die Transvaler's* demand that the English press should "change its spirit and become truly South African," combined with its charge that the English press is imperilling the safety of the state, constitute the most sinister evidence yet that the government is in fact contemplating possibly drastic action.

The lunatic fringe of the Nationalist party has from time to time demanded rigorous press censorship and even the closing down of the English newspapers. Like the government itself, it has come to equate South Africa's welfare with the wellbeing of the party. From there it is only a short step to equate criticism with treason, and this, many newspapermen feel, is the stage the Verwoerd government has just about reached.



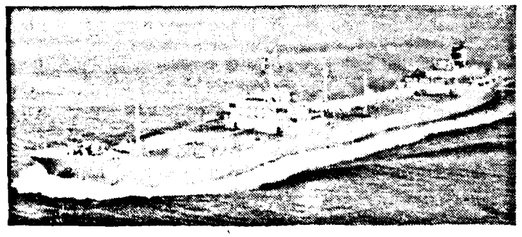
Dr Sukarno's Economic Worries

FROM OUR SPECIAL CORRESPONDENT IN JAKARTA

The mood of President Sukarno of Indonesia, which of course sets the mood for the country, is prickly, headstrong, taut, anxious and contradictory. He has driven the Dutch into concessions and compromise over West New Guinea—an issue that always exhilarates him. But he is also being nagged by the harsh facts of economics—a matter that always bores him.

His justifiably high hopes over West New Guinea have in fact been secured at a price that imperils his creaking national economy. The clumsy attempt to assassinate him when he was on tour on January 8th, in retrospect, helped to inflate the great Sukarno legend, but it has also left him shaken and alarmed. So when the informers brought him lists of political "suspects," he played safe and threw them into prison. However, Dr Sukarno has never been a cruel man and he later transferred them to comfortable quarters in the cool forests of Tjipajung, where their wives visit them and where, like a former occupant, the American mercenary airman, Mr Pope, they can admire the mountain scenery and play tennis. For good measure, and in all objectivity, President Sukarno also arrested two of the Titus Oates informers.

These curious shifting reactions have naturally unsettled the moderate advisers surrounding him, who brood over the possibility that their own names may appear on the next list of suspects. Each list, in turn, tends to weaken Dr Sukarno's confidence in his security organisation. To inflame this corrosive mood of anxiety and mis-



Technical breakthrough with new hull design

On October 31, 1961 the 48,000 DWT tanker S.T. ASIA MARU, the first ship to incorporate IHI's new hull design, was delivered to the Nitto Line. By shortening the length of the hull and deepening the draft, IHI was able to reduce considerably construction costs of this vessel. At the same time to avoid sacrificing speed, a slenderer hull was adopted, along with a bow of special design. This engineering triumph is IHI's latest achievement in over a century of shipbuilding leadership. Other ships incorporating the new hull design are already on the planning boards.

IHI is Japan's leading heavy-industry company. In addition to ships of all kinds and sizes, including cargo boats, tugboats, floating cranes, and dredgers, IHI's many-sided operations cover the design and manufacture of heavy equipment for use in the chemical, construction, iron and steel, power generating, and mining industries.

Brochures outlining IHI's capabilities and informative "IHI Letter" will be sent on request.

— simply for saving your Company £5,000 a year or more

It wants only someone with an idea. The *someone* could be you. The *idea* could be any one of the many computer-based scientific management techniques used by C-E-I-R—techniques which have already saved literally millions of pounds for commercial, industrial, and government organizations.

In the world of business *now* are a number of young and middle-aged men who have gone to the top, and stayed there, because they saw entirely new (and some of them quite revolutionary) ways to step up company profits to heights once thought impossible. They weren't idle visionaries. They were people like yourself, with practical foresight. The foresight to discuss possibilities with C-E-I-R—pioneers in the use of computers for the solution of practical commercial problems, and the largest organization of its kind in the world. Whether or not you are already conversant with the techniques listed below, ring up C-E-I-R about them—there isn't a business in the whole wide world which could not benefit from one or more of them. Just ring CHAncery 1551.

The well deserved wings might yet be yours.

trust at the top is clearly a major communist aim at the moment. The prime planner, it is said, is modest Comrade Sudisman, not party chairman D. N. Aidit.

In the more prosaic field of economic survival, the price of rice continues to soar. The fixed official price is four rupiahs a litre for government servants and others who draw a portion of their salary in rice, contrasted with fifty rupiahs or more on the open market, where the majority must buy if they can. (A normal ration of rice is about 15 litres per stomach per month.) This means that large families must subsist chiefly on tapioca, coconut and bananas—exotic but, as regular fare, unsatisfying. Diplomatists and other foreign residents must import their own flour. Bread was as scarce last week as rubies, and the huzza-ed arrival of magical bags of flour and tins of kerosene, during capricious black-out rehearsals in the city, was evocative of the lifting of the siege of Ladysmith.

Inflation is cantering, if not galloping; the estimated currency supply last month was 70,000 million rupiahs, against 60,000 million in mid-1961 and 45,000 million in December, 1960. All consumer goods are in short demand. Falling exports are drained off to meet orders for Soviet arms. British war material supplies are so small that the decision to suspend them did not embarrass Indonesian army plans and served only to weaken such goodwill and influence as Britain enjoys in Jakarta.

The Soviet MIG-17s are a formidable striking force; and only the type of western mind which believed in 1940 that the Japanese could not fly would doubt the ability of Indonesian pilots. But the quality of much of the communist war material is indifferent. Small arms are of late second world war vintage, and mostly too bulky and heavy for the tough, blooded, but physically small Indonesian infantry to use efficiently in jungle conditions. Of the two ancient submarines already supplied by Moscow from Polish mothballs, one suffered a mysterious explosion while engaged in surface manoeuvres and was hauled off ignominiously to the naval repair shops at Sourabaya.

THE redoubtable General Nasution remains firmly in control of the defence forces. He had one putative rival, Air Marshal Suryadarma, who has many communist party friends and contacts and whose wife has strong communist party sympathies. General Nasution, with the advice and support of army officers, prudently intervened to displace Air Marshal Suryadarma personally as head of the army purchasing mission that visited Moscow last year. Now that the air marshal has been relieved of his post as chief of the air force, following the naval brush off West New Guinea, his latent threat to General Nasution has presumably been removed. This command change in no way reflected presidential dissatisfaction with the air marshal's susceptibility to communist views, but undoubtedly the consequences of his abrupt removal will be borne with more fortitude by General Nasution than by the communist party.

In summary, there is cautious but general agreement in Jakarta that an all-out, large-scale invasion of West New Guinea is improbable—if only because it is becoming palpably unnecessary. There are formidable difficulties of logistics as well, but it should not be forgotten that these could be emotionally disregarded in a moment of impulse. Every year Dr Sukarno has insisted solemnly that West Irian must be liberated. Every year foreign experts have given solemn warning that Indonesia's national economy can scarcely escape collapse and explosion. West Irian "liberation" is now in sight. But the prospects of an improvement in the state's grave economic plight continue to recede. The two problems were always separate and distinct. The picture of Dr Sukarno as a dictator seeking to distract attention from impending bankruptcy at home by plotting adventures abroad has never been accurate. The truth is simply that he has always insisted on giving the territorial problem priority over the economic problem. Success in one direction, as the local party comrades are happily aware, will not help in the other. At best, it will be a damned close-run thing.

Monrovians Muddle Through

FROM A SPECIAL CORRESPONDENT

LAGOS

MOST conferences owe something of their flavour to the host country. The meeting of twenty heads of independent African states which ended in Lagos on Tuesday was marked by the spirit of compromise, pragmatism, and a Fabian pace of advance usually associated with Nigeria. From these solid virtues the conference derived its successes. But there is another side to a coin minted in the British tradition: Nigeria is a fine exponent of the noble art of muddling through. A vague complacency and a lack of purposeful preparation explain the failure of the conference to entrench the initiative established at the Monrovia conference in May, 1961. Two countries absent from the Monrovia conference —Congo (Leopoldville) and Sudan—agreed to come to Lagos. But the five Casablanca states—Ghana, Guinea, Mali, United Arab Republic, Morocco—who, together with the Algerian provisional government, have their own charter for African unity, established in Casablanca in January, 1961, did not send representatives.

It had been hoped that tactful diplomacy might encourage the dissolution of the Casablanca group into a wider pan-African framework. These high hopes were dashed on the rock of Algeria, although Morocco, Mali and Ghana each had private reasons as well for avoiding Lagos. The handling of this issue was a tactical blunder on the part of the Nigerian government. Even assuming that the Casablanca group used the Algerian issue as an excuse not to attend a conference they could not dominate—a doubtful assumption almost universally accepted in Lagos—intelligent diplomacy would have ensured that no such excuse would be afforded them. Tunisia, Sudan and Libya withdrew after they had failed to get the Algerians invited. The decision not to invite the Algerians was taken under pressure from the twelve conservative French-speaking states who make up the "Brazzaville group." A more skilful Nigerian government might have settled the matter through diplomatic channels in advance.

Ethiopia and Somalia were deeply and vocally disappointed; there were some irritated anti-Arab outbursts from Nigerians, and, said a French-speaking head of state, "we will not be dictated to by white Africans." None of these varied reactions goes very deep; and it is now almost universally (and optimistically) assumed that everyone will join when the positive results of this conference begin to bear fruit.

Indeed, if implemented, these are impressive. An organisation of African states (another OAS?) is envisaged as a permanent framework for functional co-operation. It would have a consultative assembly of heads of state meeting every three years and a permanent council of ministers to supervise the work of a secretariat. Disputes between African states would be settled by a permanent tribunal. Special attention was paid to the possibility of an African common market, on which agreement has been reached in principle. This was regarded as an essential part of Africa's response to the European common market. The finance ministers are to study the effects of the EEC on the economies of African states. The institutions envisaged are based on a Liberian scheme. If they are taken seriously—much will depend upon the eight absentees—there are some interesting possibilities.

The Commission for Technical Co-operation south of the

Sahara (CCTA) could be a nucleus for pan-African economic co-operation. South Africa has already privately indicated its intention to withdraw from CCTA at the annual meeting which opens in Abidjan on February 5th ; Britain and France are expected to follow suit. They may be invited, possibly along with the United States, to attend future meetings as observers. Thus reformed, CCTA could be the ideal instrument for co-operation between the independent African states who will direct it. The United Nations Economic Commission for Africa, under the direction of newly-appointed Robert Gardiner (a Ghanaian) is likely to command African confidence.

On the anti-colonial front the general mood of the Lagos conference was that the struggle against imperialism is best conducted by solid advances towards African unity rather than by Casablanca-type resolutions of militant intention. The main Lagos resolution calls upon Britain, France and the United States to exert pressure on South Africa and Portugal. Significantly, the resolution on Algeria was mild. Undramatic pragmatism was the chief feature of the debates. Emphasising respect for one another's sovereignty, the participants drew many analogies from the UN and the Commonwealth. By implication the conference condemned the activities of the Casablanca group, which has been accused of inciting subversion in other African states. But on the whole acrimony was avoided.

Mr Adoula, the prime minister of the Congo—confident and clear thinking—achieved a personal success at the conference and the policies of his government were whole-heartedly endorsed. Nigerian-Congolese *rapport* was marked at all levels, differences of language apparently presenting but a small obstacle to animated conversation. The success of the conference may be ascribed to its scrupulous avoidance of those political issues which might prove contentious. It is impossible to say whether these could have been avoided if all 28 states had attended. Would the Casablanca states have been prepared to sit in conference with the French advisers brought along by the Brazzaville states ? Would they, like the Brazzaville states, have acted as an exclusive caucus within the conference ? The next conference of independent African states meets at Tunis in April. Lagos and Casablanca will presumably try again—at Addis Ababa if not at Tunis.

Two African Debates

FROM A CORRESPONDENT IN NEW YORK

DISCUSSION of Angola, deferred without protest from the first to the second part of the 16th United Nations Assembly, has been going on since January 15th at a snail's pace in an almost empty house. Portugal's delegate, unmoved and apparently immovable, restated its lofty indignation at the whole "illegal" discussion on the first day of debate, and left the hall. The black-out on news from Angola being apparently complete, speeches have largely been reduced to reminders of last year's violent events, and to quotations from the UN investigating committee's report or from the eye-witness accounts, lately released, of missionaries who left the territory last July.

On the very first day of the debate, Poland and Bulgaria introduced a resolution which went about as far as it could go in championing Angolan independence, condemning Portugal, and urging the imposition of sanctions designed to penalise the culprit and to embarrass its Nato allies. This attempt to seduce the Asians and Africans overshot the mark. In their view African problems are the business of Africans, and others should wait for them to take the lead. After considerable caucusing, a second and more restrained resolution was put forward by 42 Afro-Asian delegations.

While the communist states' draft "resolutely condemns the mass extermination of the native population of Angola," the Afro-Asian text "deeply deprecates the repressive measures and armed action." The Polish-Bulgarian resolution "recommends to all states to deny to the government of Portugal any support and assistance, including assistance in the form of arms and war material, as well as to put an end to any export to Portugal of arms or any kind of war material." The Afro-Asian resolution simply "requests member states to use their influence to secure compliance of Portugal with the present resolution" and to "deny to Portugal any support and assistance which may be used by it for the suppression of the people of Angola." Finally, where Poland and Bulgaria "suggest to the Security Council to consider in urgent manner and under Articles 41 and 42 of the Charter the application of sanctions against Portugal," the Afro-Asians only ask the council "to keep the matter under constant review."

Among the sponsors of the more moderate proposal was Mongolia. This newly admitted Soviet protégé is now, it seems, a recognised member of the Afro-Asian group in the Assembly. Nobody, however, has suggested that Mongolia is "uncommitted." The appearance of its name on one resolution while Poland and Bulgaria championed the other led to interesting speculation about the disposition of these two proposals when the time comes for a vote. The Soviet Union would presumably have to vote for both resolutions, unless it manœuvred the withdrawal of the Polish-Bulgarian draft. Of the two, the Afro-Asian proposal—which has been endorsed by Canada, and spoken of quite kindly by the British delegate—would roll up a much more impressive total. In any case, the Russians will just have to put the best face possible on a situation created by again having over-played their hand with the newly independent states. Those hot heads have turned out to be cooler than was supposed.

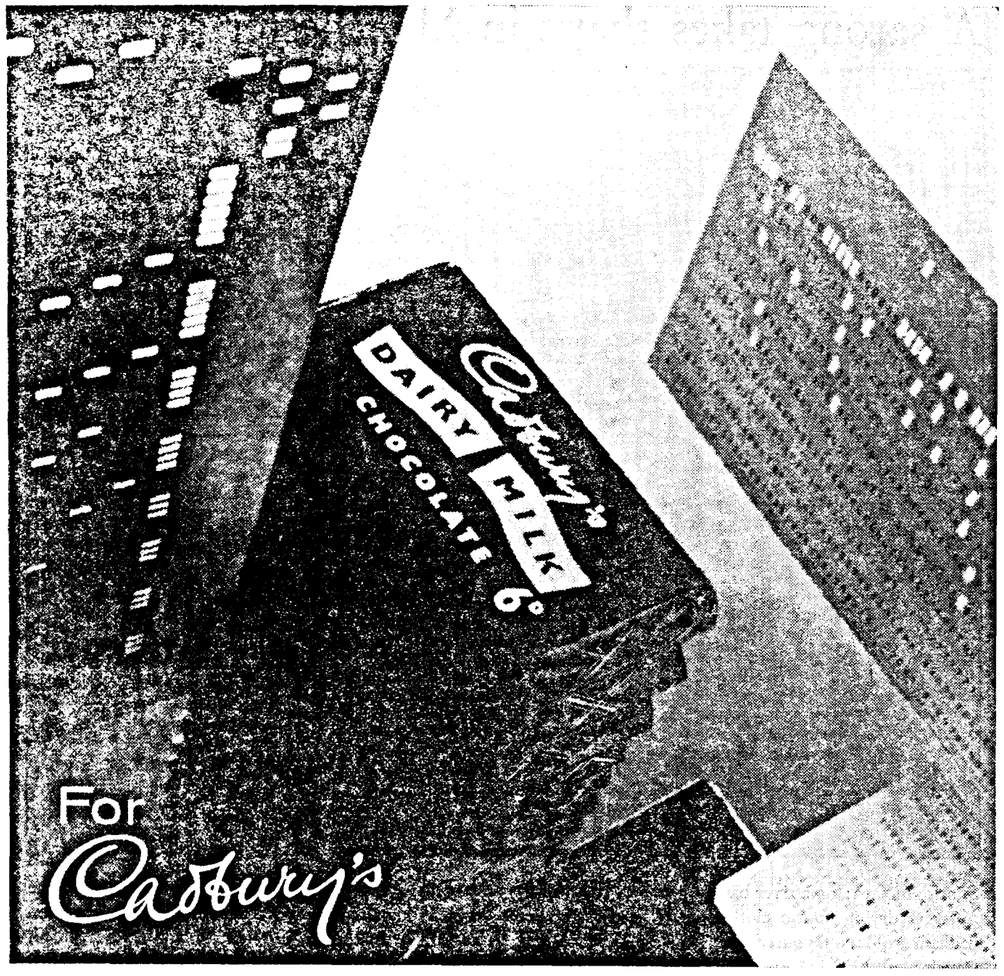
[*The Afro-Asian resolution was carried by 99 votes to 2 (Spain and South Africa), France abstaining and Portugal and Iceland absent, on January 30th. The communist draft was defeated, only 26 voting for, 43 against.*]

IN the simultaneous debate on the future of Ruanda-Urundi, the Afro-Asians have found themselves painfully divided. The UN has expressed itself rather strongly in the past on the need for this Belgian trust territory, formerly attached to the Congo, to emerge as a "single, but composite, independent state." Neither Ruanda, nor Urundi, as separate entities, can possibly be viable in the opinion of the Assembly's fourth (trusteeship) committee.

Elections held in Ruanda and in Urundi, and a plebiscite in Ruanda, all under UN supervision, have had anything but the desired result of promoting unity. By large majorities Ruanda has chosen to be a republic and Urundi to remain a monarchy. The elected representatives of each have told the current Assembly that their respective peoples cannot and will not accept political union. The UN commission for Ruanda-Urundi (made up of a Haitian, an Iranian and a Togolese) and the Belgian government both agree that unification is impossible in present circumstances.

With the end of the trusteeship due within six months, the Assembly is faced with nothing but uncomfortable alternatives. It can bless the separate independence of two feeble states and chance the possibility of an early need for a UN rescue operation. It can postpone independence until such indefinite time as political unity is acceptable to both parties. It can seek to impose political unity against the expressed will of the Ruanda-Urundi peoples. The first possibility is a very poor risk, and the other two fly straight in the face of basic United Nations principles.

The spectre of the Congo haunts the whole uneasy discussion, and some delegations see a family likeness between Katanga and Ruanda.



A sarong takes shape in Manchester

Sunrise in Java: on a river bank a group of chattering girls are drying cotton cloth, freshly printed in the brilliant colours favoured for sarongs. As the sun travels west, bringing a new day, printers and dyers of textiles in countless countries go to work: the bazaar craftsmen of Bombay, Bokhara and Cairo, the men who mind the intricate machinery of textile factories in Pekin, Vienna and Lyons. And in an I.C.I. laboratory in Manchester, the day begins for the group of scientists who have provided the colour for sarongs and French couture fabrics alike — the inventors of 'Procion' dyestuffs. Brilliant yet fast, economical and easy to use, the 'Procion' dyes were the first in the world to combine chemically with the fibres of cotton and linen. In the six years since they were invented, technical service specialists from I.C.I. have travelled millions of miles to explain their use and to give technical demonstrations lasting anything from three hours to three months. In every country in Europe, and in more than 30 others, they have established the 'Procion' dyes as leaders in their field. With the 'Procinyl' fibre-reactive dyes for nylon, they represent yet another triumph for I.C.I. research and a landmark in the history of colour chemistry.

The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1

it's FERRANTI COMPUTER time!

When a giant commercial concern like Cadbury's buy a computer, they mean business. When the computer they choose is made by Ferranti—they mean business efficiency! For their Bournville factory, Cadbury's have ordered an Orion—most commercially sought-after computer of its size in Britain. This large scale data processing system will be used for processing orders initiated on mark-sensed cards. It will print 100.000 invoice-items a day, and provide statistical guidance about stocks to factory and warehouse. Far ahead in time-sharing and memory-store capacity, capable of 20.000 operations a second, Orion is an impressive example of Ferranti's inventiveness and know-how.
Cadbury's are the latest of many large companies who have chosen Ferranti computers. Consider some of the names. They provide valid proof of the contributions Ferranti make to business efficiency—and our own standard of living.

Here are a few of the many industrial and commercial leaders who have chosen Ferranti computers: *Babcock & Wilcox Ltd. The Beecham Group. British Petroleum Co., Ltd. The General Electric Co., Ltd. Imperial Chemical Industries Ltd. National Provincial Bank Ltd. The Prudential Assurance Co., Ltd. Shell International Petroleum Co., Ltd. Scottish Widows' Fund & Life Assurance Society. THE BUSINESS WORLD

Banking Revolution: Stage Two

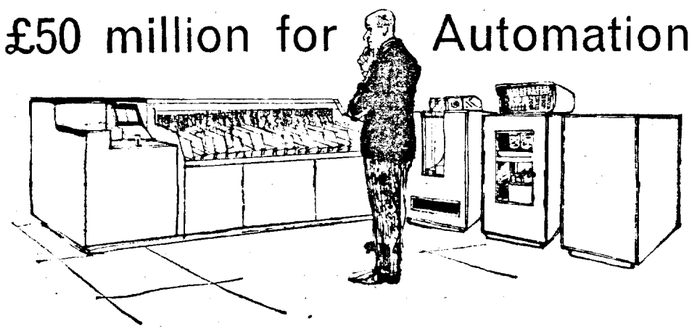
COINCIDENTALLY, several big English deposit banks are now coming under new management—four of the seven will soon have a new chairman, and three a new chief general manager. They and the older hands face a task that is less obvious but fundamentally more demanding than the exciting challenge to which the banks rose three and a half years ago. They then used their new freedom with unexpected zest. They re-established themselves in the lending business; they regained self-confidence; and they made their mark on a new public. These were vital achievements. But they did not, of themselves, provide a basis for a follow through: freer lending provided a big initial thrust rather than continuing motive power, which in the long run can come only from an increase in the banks' deposits.

In the three years from mid-1958 the banks did manage to defy this law: they raised their advances by more than 75 per cent on the basis of an increase in deposits of less than 10 per cent. They could do this by unloading more than half of the huge investments in gilt-edged securities which had been forced upon them during all the years when their primary lending function was kept under official constraint. By mid-1961 this massive switch in the banks' main assets had reduced the ratio of investments to below 14 per cent and brought the ratio of advances near to 50 per cent—the point at which bank managements would begin to apply the brakes even with no jogging from the authorities. In the last six months this double pressure has had a marked effect, achieving a reduction in advances of nearly £300 million, and bringing the ratio down five points to just under 44 per cent. The banks have made a good contribution to the Chancellor's deflationary package; and if national production is indeed to resume its upward course this year, the tight hold on bank lending should presumably be relaxed. But how are the banks themselves to finance this?

The Bank of England, admittedly, holds 3 per cent of their resources in special deposits; but much as the bankers may wish for an early release, not many of them really expect it—for this control seems to be as stuck to the up escalator as the misnamed regulator imposing a surcharge on indirect taxes. Nor can the banks expect any other large increases in liquid assets: *pace* Lord Cromer, the impact of the Government's activities on the capital market is now deflationary rather than inflationary: although the budget estimates of an overall surplus are most unlikely to be reached, the actual deficit will almost certainly be more than covered by the substantial inflow from both National Savings and from sales of gilt-edged. So the banks at last come square up against their enduring problem, which the special cushion of investments enabled them to duck in 1958: how to get sufficient new resources for expansion. It is in fact becoming clear that to hold their own in the competitive lending business they must hold their own too in the equally competitive business of borrowing.

This need to compete for deposits is still disputed by many bankers, who have been taught by the theorists that however it may seem to one particular bank, the amount of deposits available to the banks as a whole is determined in the last resort by the base of cash and liquid assets made available by the central bank and the Government; and that competition for deposits will simply mean that the banks pay more for the same amount. But this "fixed pool" theory is inadequate. It ignores the leaks direct into the Exchequer, through investment in Treasury bills, tax reserve certificates, gilt-edged securities or deposits in Trustee savings banks—all of which reduce the Government's need to finance itself from the banking system and thereby chip away the credit base of the clearing banks. It ignores the growing activities of the merchant banks. It ignores, finally, the existence of foreign money, which can increase or decrease the pool of clearing bank deposits. Thus in the past few years the clearing banks would have gained both in liquidity and deposits if the inflows of foreign funds had gone directly to them rather than into other, more attractive outlets.

BY what means then can the banks broaden their resources? There is little disagreement about the desirability of broadening the banking habit, and there have been some signs recently that the bankers are getting less complacent about the pace at which this is to be brought about. A major effort is being made to publicise the scheme for direct credit transfers, and it is now up to traders to do their part by including details of their bank accounts on their invoices, without which the public cannot make any sensible use of the facility. Together with Britain's highly used cheque system this does provide a fuller service than is in practice available in most other countries. But in their efforts to draw in new customers the banks have so far made disappointing progress with the wage earner—the recent amendment of the Truck Acts to permit payment of wages by transfer direct into a bank account has yielded little fruit.



Two obstacles here are location of premises and banking hours. Banks are sometimes few and far between in growing areas. The omission is being made good—the Midland alone opened sixty new offices in 1961. But a still more radical effort is needed, and this could easily be financed by an

equally radical effort to make the most economic use of their highly valuable—and grossly undervalued—existing sites. So far the bankers have only nibbled at this great opportunity. They tell themselves that they are not property developers ; but this is just why they should call in those who are.

But, wherever the banks are situated, they will not do business while they are closed. The banks cannot hope to reach their new class of customers in their old Victorian hours. It is perhaps at this point that they suffer most from the competition of the Post Office and of the Trustee Savings Banks. These banks pay their depositors 2½ per cent on their ordinary accounts and soon hope to offer them a limited cheque service, though important details have still to be agreed by the clearing banks—which would have to clear the cheques. The only recent move on clearing bank hours has been to shift forward the Saturday opening by half-an-hour to 9-11.30—which has been predictably unpopular with the public. There now seem to be moves afoot to implement the long discussed proposal of opening on one evening a week—but bankers fear that pressure from the staff might force them to trade this for a five-day week, with no Saturday opening at all. In that case they would surely have to consider special arrangements for cashing cheques at agencies in large stores, and other expedients of this kind. The Post Office, of course, is open all day on Saturday. The banks must decide how much they are willing to spend to meet competition for the small man's money.

They have one unique attraction—the possibility of overdrawing. It is this, together with their general financial service, that has long persuaded the middle class to tolerate

£50 million for Automation?

AUTOMATION came to British banking last July when Barclays started to process the accounts of twelve London branches on an electronic computer. By the time similar methods have been adopted right through the banking system, perhaps 200 computers will be at work, together with 100 electronic cheque sorting machines, and innumerable television and teleprinter links together costing perhaps £50 million and running to £12 million for each of the biggest banks. And this, the biggest refit in the banks' history, will have to be accomplished in relatively few years if the banking system is not to be choked by the rising flood of paper which at the present rate, according to Lord Monckton, will double within fifteen years.

There is a marked difference in the speed with which the banks have grasped the possibilities of automation. Barclays' lead in electronic book-keeping was quickly followed by Martins and the Bank of Scotland. Lloyds, on the other hand, has probably led with the electronic sorting of cheques. The other big banks, National Provincial, Midland and Westminster give the impression of heartily wishing the naughty word "automation" had never been heard. They each have computers on order, along with Coutts and National Commercial Bank of Scotland who, being smaller, can be forgiven for hesitating before taking the plunge, but some of these orders were not placed until the Barclays computer was already operating.

It takes a bold management to face not only the cost, but also the wholesale reorganisation of working methods involved in bank automation. Computers are not built in sample sizes where they can be quietly tested in the corner of a large branch bank. The average price is around £100,000, and such a machine is capable of carrying out the entire account posting operation for far more customers than the average branch possesses. To employ it economically involves linking together several branches by telegraph and teleprinter links at a cost of another £150,000 to a centralised book-keeping centre where the computer is installed. This in itself involves a break with tradition that several banks have taken only with reluctance. At the recent symposium organised by the Institution of Electrical Engineers, some of the banks' misgivings came to light and they were not all based on sentimental attachment to tradition. They were worried about the reliability of the relay systems which would automatically transfer data from branch to book-keeping computer centre and back to branch again. They were concerned about the accuracy with which the machines' "language" could be printed in magnetic ink on cheques and documents. The entire system revolves around the accuracy of this printing, which appears to fall some way short of ideal.

These misgivings over small but crucial details arise because no experimental work has been done in this country on the kind of automation the banks require, for this is different from any other form of automation in volume, content, accuracy and speed. Whose fault is this ? The banks have had least trouble with their computers because they are buying established types already proved by other users. But nobody outside a bank wants an electronic document sorter and the banks complain, not quite reasonably, that no British company has shown any interest in building one. All the cheque sorters and several of the computers on order by the banks are American designed and their price has been inflated to double what it is in the United States by the need to re-engineer them to work in sterling and for banks with a greater number of branches than the average American bank.

Such troubles might have been avoided if the banks had followed the procedure normal in the electronics industry and placed development contracts for experimental machines. The banks argue they have never done this before, but neither have they been customers for pieces of capital equipment which industry does not normally manufacture for sale off the shelf. Experimental running of such a prototype—possibly on behalf of all the banks—would have shown up difficulties about quality of cheque paper, about magnetic ink, automatic printers and the like, which are now causing several expensive American-imported cheque sorters to deteriorate doing dummy runs in separate banks, while their owners try to correct snags that ought properly to have been foreseen five years ago when the decision to standardise on magnetic ink "language" was first taken. The banks, who are so free with their advice to the rest of the economy, do not come out too well—with one or two exceptions—from their own first brush with this new technology.

the other disadvantages of a clearing bank account such as inconvenient hours and a charge for running a current account rather than interest on the balance. How much the banks have to do about these disadvantages to attract new customers therefore depends in part on what kind of lending service they can offer them. It was on this side that the banks made the biggest innovations in 1958, with formalised personal loan schemes and, indirectly, through participations in hire purchase. It is important that the real lesson of these experiments is not misread. The hire purchase companies in which the banks invested have proved notably less expert in their business than some bankers who chose the arm's-length approach in 1958 expected ; this shows the need for bringing more banking principles, not fewer, into hire purchase.

Experience with personal loans has been incomparably better. There have been some difficulties over repayments, mostly concentrated in branches with an incautious manager, but for the most part these difficulties have meant delay and trouble in collection rather than outright loss. Those bankers who were basically lukewarm about undertaking this kind of operation anyway now conclude that their initial misgivings have been proved right. But if the banks mean to make their mark in retail lending, which they may have to do if they are to get the retail deposits, they must adapt themselves to it ; and since they already have major interests in hire purchase they should obviously bring the two sides of the business closer together—as some banks are tentatively beginning to do.

Important scope exists therefore for the banks to improve their general service. But to be sure of attracting sufficient deposits they cannot avoid the central question of the deposit rate. On current accounts, they can probably still rely on the advantages of their general banking service to the customer to avoid paying him any interest—though the banks have already shown themselves prepared in many cases to shade their charges here. For deposit accounts, however, the banks, paying 2 per cent below Bank rate, are nowadays quite uncompetitive except when Bank rate is as high as 7 per cent. At present, deposits at seven days' notice can earn over 6 per cent in the local mortgage market, a full two points above the banks. The small man can get 3¾ per cent tax paid from leading building societies. At 4 per cent gross, the banks' deposit rate is exactly the same as that now paid by banks in the United States on deposits secured for twelve months or more—as much below the local Treasury bill rate as the American rate is above it. Indirectly, the English banks may admittedly keep an interest in money that is withdrawn into one of their own hire purchase subsidiaries which pay Bank rate or more for three months' money ; but this is no adequate recompense to the banks. They should follow banks in other countries by taking deposits for varying terms at varying, competitive rates. There need be no question of raising the basic rate for seven-day money.

There seems little doubt that the banks could increase their resources in this way. But would they be allowed to use them ? Obviously there is nothing to be said for paying more for deposits that are immediately sequestered into special accounts at the Bank of England. This consideration is very prominent in bankers' minds, and it is an example of how special deposits, although quite small in proportion, have a stultifying effect on bold and independent action among the banks. Some drastic rethinking, therefore, must also still be done by the financial authorities. The old arguments against the "squeeze by request" apply in much the same way to the "squeeze by special deposits." To discriminate against one particular set of lenders, namely the clearing banks and the Scottish banks, is both unfair and inefficient—one cannot expect commercially run institutions to maintain their drive if a ceiling on their business is placed on them from outside, and such discrimination must itself narrow the part that the controlled sector plays.

	DEPOSIT GROWTH COMPARED			INVESTMENTS ADVANCES	
	Gross deposits	Percentage change on		Ratios to gross deposits	
	Mid-Jan., 1962	Jan., 1958	Jan., 1961	Mid-Jan., 1962	
	£ million			Per cent	
Barclays	1,782	20·8	7·1	15·5	42·9
Midland	1,630	12·5	0·9	13·9	45·2
Lloyds	1,358	11·8	5·4	16·8	44·2
Westminster	1,015	17·4	4·0	13·7	42·1
Nat. Provincial	923	14·3	1·7	11·9	45·4
Martins	367	15·5	3·8	13·0	43·1
District	269	9·0	3·0	13·1	45·5
Eleven Clearing Banks	7,716	15·0	3·9	14·4	43·8

IF the authorities really believe that the banks can never be left to the play of market forces, even as influenced by the official hand, then there will in the end be little point in leaving the commercial banks as private institutions. In France, where the big banks and also the big insurance companies are publicly owned, their activities are closely linked with the *Commissariat du Plan*, and the existence of a channel of finance amenable to detailed central control is plainly a great help (some Frenchmen say an indispensable need) in making planning successful. This detailed control has its own logic in one scheme of things, though it might not commend itself to either the Tory Government or the Bank of England.

Nor is the special deposits scheme anything other than a bad compromise between control and free enterprise. Its one positive achievement, to cut into bank liquidity, has not had the immediate results that were expected of it: not until fifteen months after the first imposition of special deposits in April, 1960, did bank advances fall, and in the meantime the authorities actually helped the banks out of their liquidity difficulties to save them from precipitate action. Now that the big cushion of the banks' bond holdings is gone, it can be held that the banks are as responsive to normal methods of official control as they are to special deposits ; and certainly these normal methods, operating on the gilt-edged market and the long-term interest rate, must themselves be more efficacious in the new investment climate, in which fixed interest securities again have a definite attraction.

The constant contingent threat that is implicit in the special deposits scheme fortifies every instinct for conservatism and cartel-mindedness among the commercial bankers. With their new possible opportunities in Europe, the big English banks could stand on the verge of a major new expansion. It will not come to them automatically. On the contrary, one wonders whether without major changes the pace of present expansion can even be maintained. Deposit banks the world over have felt the pinch of competition from newer lenders. Are the English banks alone to refuse to meet that competition through handicaps of their own, and their official masters', making ?

Paquebot

France

BY OUR SPECIAL CORRESPONDENT

"WHAT a joy" someone said as we cruised round the Canaries ten days ago "to rediscover a ship." It could have been a reaction from one who resented too long being an airborne package and had lost himself once again in the dreamlike existence of a large luxury liner. *France* may well be the last of its kind—even the sunshine of the tropic of Cancer was not so strong as to put all thoughts of economics out of one's mind. How would four five-day ships make out on the Europe-New York run, when three were already finding difficulty enough? How would one aged and another ageing "Queen" withstand new competition from such a soignée and seemingly economic ship? Was not the maiden voyage of *France* with a full complement of passengers to New York this very Saturday itself a vindication of Cunard's decision not to proceed with the Q3? The *United States* and *France*, working on agreed alternate schedules, could carry two thousand passengers in each direction in a week; two Boeings could do the same work in the same time, but they would cost £6 million, whereas *France* alone is costing the Compagnie Générale Transatlantique 320 million new francs (about £23 million), quite apart from government aid to the builders, which cost another 20 per cent.

It seems that the motto of *France* is to be *cordon bleu*, not *ruban bleu*. The French Line is not going to waste money on empty prestigious efforts to set up new transatlantic records. It is concentrating rather on selling French style and much of this will knock the customer's eye out. Furnishings, materials, lighting, tapestries and murals provide continued diversion with rarely an opportunity for serious æsthetic dispute. Among all this richness, one has to search for the Picasso plates that would make a dramatic mark of their own in less exciting surroundings. The best of French interior decoration has been lavished on *France*. Every chair is a joy to look at and not one threatens danger to a slipped disc. Each nylon carpet has its own beauty of style (non-static, too, for every metre has been sprayed with an anti-static material). Some of these light pastels are going to need refurbishing long before the dun furnishings of older style liners have lost the remnants of their faithful clientèle. But customers looking for a concentration of modern, workable beauty will find it gloriously displayed in this ship. It is here, not in worthless extra speed, that prestige lies.

One could argue long about the ranking of the public rooms. The first-class dining room is finely conceived, but perhaps just a shade obvious since it has to cater also for showing off the women's dresses. The Atlantic bar, ingeniously constructed on split levels, is more refinedly French in decoration and will afford a splendid spectacle as *France* sails down the Hudson River. In your correspondent's view, the most remarkable architecture and decoration is to be found in the theatre, the work of M. Georges Peynet. The French Line describes this as the most splendid theatre afloat; but there are few theatres ashore that could excel its elegant yet economic design. It holds 650, with the stalls reserved for tourist class and the circle for first class. The underprivileged, therefore, are not forced into the cinema at times when the lordly ones are engaged at shuffleboard. They share with them—indeed, they have the better of the seats.

THIS principle of sharing, in fact, runs through the ship, in a way that is impossible in a three-class ship. Tourist passengers have a whole promenade deck to themselves, little different from the veranda deck that the first class passengers enjoy. They share the shop, which ingeniously joins the two decks by staircase, and a cabaret. Their public rooms may be short of *grande luxe*, but they are certainly *luxe*. They have a better swimming pool. Their cabins are admirably arranged, with air conditioning, thermostatic control of temperature, indirect lighting, and excellent plumbing, including a simple but most effective shower the mixing valve of which works with absolute precision so that scalding or freezing is one's own stupidity, not some inescapable mechanical malevolence. For the very grand in their suites, the discovery of such joys on board ship may not have meant much; for the modest traveller on the Atlantic, they are going to mean a great deal.

Does this sound too lyrical? New decoration in a hundred materials is not the whole way of French life. There is, one is assured, French cuisine. Here it must be truthfully, if sadly, reported that this shaking-down cruise revealed a number of things that needed to be shaken down—not indeed in the five-star regions of the first-class salon, but in the humbler *prix fixe* character of the tourist eating arrangements. French Line officials were as quick to spot these deficiencies as the clientèle, but it was odd to notice that the French tourists took what they were given, often cold and late, whereas the English expected something much better. British cruising addicts could not recall being served factory-made ice cream four nights running or being refused scrambled eggs for breakfast. Bravo for P and O, one thought, and down with snobbism about French food.

HOW the economics of *France* will work out is still to be discovered. To the lay eye, this seems an economical ship—certainly by comparison with *Normandie*. But any new ship would have benefited from the march of naval architecture and marine engineering since 1936. Certainly *France* suffers from none of the vibration that plagued *Normandie* before she went into service. It can carry more passengers, but also carries nearly a quarter less dead weight; its service speed is the same, at 30 knots or better, but it consumes nearly 50 per cent less fuel to produce the same 160,000 horsepower. Some of this economy is common to any modern ship—for example, water distillation to avoid the carrying of dead weight fresh water. But it still looks impressive in action on this scale. And the new style smoke stacks are a complete success, in cleanliness and appearance.

To the inevitable question: "Would you build *France* now?", M. Anduze-Faris, president of CGT, returned the expected answer. Any new ship, liner or carrier, is an act of faith. The risks were there to be run, and he would run them, unfrightened by the changes in economics and transport that have occurred in the five years since the decision was taken to build *France*. There was no doubt in France then about the wisdom of a single large ship. In this country the doubts have recently become decisive. History may well record that it was left to the French and the Americans to serve out the working life of that peculiar combination of transport and refuge from life which constitutes a luxury liner, and that this was one business in which the British feeling for tradition did not get the better of economics. Cold thoughts, engendered by the return to English winter; the bananas and poinsettias of Tenerife already seem a million leagues away.

BUSINESS NOTES

IN THE MARKETS

Courtaulds Closes the Gap

HAVING weakened on the prospect of last Monday's railway strikes around London, the equity market was in better heart after they occurred; it began looking forward, along with the government statisticians, towards a recovery in trade and seemed prepared to shrug off the threat of labour disputes to come. As a result, the *Financial Times* index, which had fallen just below 300 before the weekend, recovered to 304.1. But as measured by *The Economist* indicator, which fell 3.6 points to 357.0, leading equities did not fully recover their earlier losses; the indicator, however, does not now include Courtaulds. Doubts were still being expressed in the market whether this recovery will have any more impetus than its predecessors and whether, indeed, any firm view can be taken about equities before the Chancellor's budget proposals. The stock market fears that any weakening by the government on wages will mean a toughening in fiscal policy.

The spotlight in the market has remained focused on ICI and Courtaulds. The cheer that the Courtaulds' directors promised for Courtaulds' profits and the gloom they predicted for ICI's profits did not make their full impact on prices until after the weekend. ICI fell and on Thursday stood at 54s. 6d., imputing a bid value of 43s. 7½d. to Courtaulds, which stood at 42s. 6d. A number of cross-currents underlaid these movements. Some investors were selling ICI on the view that its growth in the sixties cannot possibly match its performance in the fifties and some were buying Courtaulds in the hope that, if ICI's bid failed, its shares could sustain their present value. The first action, though probably right in essence, may have been a little premature as ICI has still to reveal what sort of future it thinks it has and the second gives perhaps overdue weight to profit estimates that, however reasonably framed, are more than a little conjectural.

The closing of the gap made its own impact in giving fresh currency to the idea that to succeed ICI might have to raise its bid again—to, say, one for one. On this assumption, however improbable it looks in the light of Mr Paul Chambers's earlier words, a gamble in Courtaulds was not unattractive. Some certainly took it. Everything has run Courtaulds' way in the last few days; but no one can be confident of the outcome; even if the government's back remains turned on the battle, which is beginning to look less certain, the outcome still depends on Courtaulds' shareholders. ICI's shares have already taken their knock; can they move up again after the directors have produced their own forecasts? Courtaulds' directors may have some reserve ammunition in the shape of dividend forecasts to fire off; but have they boosted the shares as high as their own merits justify?

The City in the City

ALTHOUGH the discount market was forced on a large scale into the Bank this week, talk was still widespread about an early reduction in Bank rate. This helped sentiment in the gilt-edged market where in fairly active trading conditions prices advanced slowly at first and then went ahead quite sharply on some institutional buying on Wednesday. This formed a favourable background for the first issue by the City and Corporation of London since 1956 and its £12 million offer of a 6¼ per cent stock, 1971-72, at 97 was oversubscribed on Thursday. The Corporation of London is naturally a prime name in the market for local authority stocks and hence it was a sensible issue to bring forward to test the market's reaction to a reduction in the coupon on new local authority issues from 6½ to 6¼ per cent. The reduction was inevitable, for the three recent local issues of 6½ per cent stocks were at 99½ and they now command a small premium. With the 6½ per cent stocks so close to par, the only room for manœuvre was in a lower-couponed stock. At a gross redemption yield of £6 13s. 1d. per cent, the new London stock actually offers about 2s. more than the trio of stocks did, but its running yield of £6 8s. 10d. per cent is about 2s. less. As only £10 is payable on application and as the next call is not until March 6th, the issue offers a speculation on a reduction in Bank rate. A coupon of 6¼ per cent gives the authorities some room for refinement in the terms of the local authority issues that may follow.

THE EXCHANGES

From Bank Rate to OAS

STERLING has again been in continuous demand in the exchange markets, and was firm even on Thursday morning immediately before the Bank rate announcement. Expectations of a Bank rate reduction are still widely held, but exchange operators no longer see sufficient advantage in holding off the market in anticipation. Sterling is now being bought strongly from both New York and the Continent. In the United States some operators may have been influenced by Mr Dillon's revelation that the net payments deficit in the last quarter of 1961 was "well over $1 billion"—though for the year as a whole the basic deficit, excluding movements of short term capital, shrank further to $600 million. Speaking to the joint economic committee of Congress, Mr William Martin is reported to have said that the Federal Reserve is planning a "big move" in the international money market to counter speculation against the dollar.

Funds continue to stream out of Germany, and some of these are being seen in London, though despite a fall in the forward swap rate against the dollar to the annual equivalent of 2⅛ per cent, a transfer on a covered basis is still barely worth while. The Bundesbank lost the equivalent of a further DM 475 million in foreign exchange in the week to January 23rd, bringing the outflow in the first three weeks of the year to nearly DM 3 billion or $750 million—well above any loss that has ever been experienced by Britain. At DM 25½ billion (just under $6½ billion) total reserves are now some DM 5 billion below mid-1961, the whole of the fall being in the foreign exchange element: gold stocks are actually up a little on balance. To a substantial extent these massive movements in Germany's official reserves represent simply a switch of ownership of assets in foreign money markets from the Bundesbank to the commercial banks.

The Bundesbank has now felt able to remove one of the special controls through which it attempted to drive the banks into becoming net exporters of money. It has abolished the discriminatory reserve requirements on deposits taken from non-residents. Apparently the central bank feels that the outflow of funds has now gone so far as to strain the German capital market and interfere with its aim of lowering domestic interest rates. But the authorities still maintain their other curbs on an inflow, forbidding the banks to sell Treasury paper to non-residents or to pay interest on their deposits.

The gold market has been rather quieter this week, following the sudden revival of interest which may have owed much to the activities of the French secret army—at one stage General Salan is reported to have appealed to his supporters in France to go out and buy gold. On Tuesday this week the franc suddenly came under pressure, but this was entirely the result of technical end-month influences, and the rate recovered sharply in mid-week. Thus the franc retains its remarkable immunity from the political troubles—right wing bombs, it seems, are different.

THE ECONOMY

Opportunity Knocking

AFTER looking at the changes in the national economy since July, the Treasury is able to report in its *Bulletin for Industry* that domestic demand has slackened a little and "more resources are therefore now available for an expansion of exports." This is no more than a message of hope. The gross domestic product, if it changed at all, fell slightly in the third quarter of last year and the only elements of demand that continued upwards were public consumption and fixed investment. There was quite a sharp decline in the rate of stockbuilding and personal consumption was cut back a little. But exports of goods and services also edged downwards and it was moderation in the import bill that brought about a small improvement in the current balance. The Treasury, moreover, has to report that "the trade figures suggest the improvement has not continued into the fourth quarter."

On the income side in the third quarter, company profits fell for the second time running after allowing for seasonal factors, to a level 7½ per cent below a year before. On the other hand, wages and salaries were still rising, although only gently, having gone up 0.5 per cent above the second quarter. Personal disposable income, however, was much the same or even a little less in money terms and since consumer expenditure rose in value, although not in volume, there was apparently some fall in personal saving. This is particularly striking because hire purchase debt and bank overdrafts were reduced in these months: but the rate of saving had been exceptionally high in the preceding three months and it was still over 10 per cent of disposable income in the third quarter.

Since last summer, industrial output has fallen back, there has been some rise in wage rates, retail spending revived at the end of the year and retail prices were 4½ per cent higher than a year earlier. Costs, however, have been "about held" in recent months, according to the Treasury, and it is on the continued stability of costs that officials pin their hopes. No new medicine is prescribed and two questions are still wide open. Can British manufacturers take advantage of their stronger export competitiveness? Can output be stepped up without incomes rising more rapidly?

EXCHEQUER ACCOUNTS

Surplus into Mirage?

THE tax influx in the first weeks of the revenue season has been smaller, not larger, than a year ago; and the earlier shortfall in the Exchequer accounts compared with budget estimates has been carried further. It now seems certain that the Chancellor will not get the exceptional overall budget surplus which his July surcharge was calculated to bring; this is partly the result of the heavy supplementary estimates for agriculture and other departments, but the shortfall on the revenue side stems directly from the deflationary impact of the April and July budgets themselves. It is in inflationary years, one should remember, that impressive "improvements" in the Exchequer accounts are chalked up.

The inflow of income tax in the four weeks to January 27th was £506 million, compared with an inflow of £537 million in the first four weeks of 1961. Receipts of all inland revenue have totalled £611 million, £15 million less than in 1961. This shortfall could be simply the result of postal delays. But at a time when, on past experience, around two thirds of the year's inland revenue is in, receipts are now only £199 million up on the year against an expected increase for the fiscal year of £386 million.

While revenue is lagging, Exchequer spending is now well ahead of the budgeted increase for the full year; it has so far increased by £340 million compared with the expected full-year increase of only £215 million. In these circumstances there seems virtually no chance of the above-line balance improving by the expected £359 million (without allowing for the revenue surcharge) beyond the 1960-61 surplus of £147 million. The improvement on the year at present is £57 million. Nor is there any indication of the below-line deficit contracting by more than the expected £34 million. By January 27th it had in fact risen by £84 million.

STOCK EXCHANGE

Should Brokers Advertise?

THIS question has been well aired again this week following the news that the London office of Merrill, Lynch, Pierce, Fenner & Smith, the New York stockbrokers, has obtained a Board of Trade licence to deal in securities. Formerly it had been a member of the Association of the New York Stock Exchange Member Firms having representation in the United Kingdom; now it has resigned and is no longer bound by the rules and customs of the London Stock Exchange which have always been rigidly observed by the association. This means that Merrill, Lynch will be free to advertise in this country and it intends to launch an initial campaign soon, offering investors in this country "services and information similar to those already available to all Merrill, Lynch customers in the United States." For the time being at least this will be directed towards offering facilities in dealing in American securities for British investors. But Continental stocks are also likely to be included; Merrill, Lynch already has ten offices on the Continent. At the moment there is no intention of dealing in British stocks for British investors, although a dealer's licence would leave Merrill, Lynch free to do so.

The reaction of the London Stock Exchange has been cautiously non-committal but schemes for corporate advertising by the London Stock Exchange for attracting business and for prestige are still under active consideration. It remains to be seen whether such schemes could possibly have the same impact as advertising appeals by individual firms of brokers. Such advertisements, the Council has consistently argued, might be detrimental to small firms though they would undoubtedly benefit big ones. Behind such arguments the feeling lingers that stockbroking is a profession and cannot therefore be linked with anything so commercial as advertising. But no professional qualifications are required for becoming a stockbroker and this view of stockbroking is falling steadily behind the times. So, perhaps, is the view that advertising is totally inadmissible for the professions as a whole.

HIRE PURCHASE LAW

Unenforceable Penalties

MANY unkind things are said about the legal aid scheme and it is worth noting that the appellant in *Bridge* v *Campbell Discount Co. Ltd.* was legally aided in the Court of Appeal and in the House of Lords. The Lords' judgment in this case has given the quietus to one of the most criticised features of hire purchase agreements—the clause intended to secure for the hire purchase company, on the premature ending of the agreement, a fixed proportion of the hire purchase price (in Bridge's case, two thirds) in addition to the return of the article hired, and regardless of its second-hand value.

The issue was confused here by doubt whether the hirer, in saying he could pay no more and voluntarily surrendering the Dormobile (instead of, less straightforwardly, waiting for the company to take action), had exercised his right of termination. The House of Lords differed from the Court of Appeal and decided that he had not exercised any right; he had merely broken the contract. The legal purist might question this premise, but since it enabled their Lordships to hold unanimously that the two-thirds clause was a penalty, and therefore unenforceable, rather than an (enforceable) genuine pre-estimate of damage, the layman will respectfully approve if, in fact, this has involved any stretching of the point.

There has already been a movement by the hire purchase companies away from what is now unquestionably a penalty clause, towards a more rational measure of damages—the hire purchase price less both the instalments paid and the realised second-hand price. After the Bridge decision it is difficult to imagine any circumstances in which the old-type clause could be enforced to the benefit of a company relying on it.

AIRCRAFT NOISE

Sound and Fury

THE airlines have managed to present Mr Thorneycroft as the defender of peaceful nights for those who live near London Airport; in fact he is nothing of the sort. Far from cutting jet flying at night, he is about to permit a substantial increase, perhaps as much as 40 per cent. During the four years that jet aircraft have been operating, none has been allowed to land or leave from Heathrow between 11 pm and 7 am unless it made a great deal less noise than the average jet. This amounts to a ban on big jets at night; small ones like BEA's Comets and more recently the Caravelles have managed to conform to the noise regulations by climbing lightly laden and exceptionally steeply out of the airport. Other big airports like New York have much the same rules; neither there nor at London is there any restriction on night flights of propeller aircraft.

By allowing more jet flights this summer up to a limit of 1,500 landings and departures—subject to observance of the prescribed noise limits—the Ministry of Aviation is pushing the wedge farther but not as far as the airlines would like. Their summer schedules provide for a 77 per cent increase in jet night flights, more than the Ministry considers that local residents will stand and it has suggested that the rest be switched to Gatwick. The airlines have reacted to this as to a red rag; they suspect that they are being manœuvred to Gatwick to reduce its vast deficit—as a diversionary airport it has to maintain top international standards on virtually no traffic. Only British United Airways is regularly based at Gatwick; other international airlines like BEA or Air France would have to duplicate staff at Gatwick and at Heathrow. The rearrangement of the Ministry's departure buildings at Heathrow so that, inexplicably, they are said to be capable of handling far fewer people than in the past is simply regarded, like the suggestions about night flights, as another move in the Heathrow-Gatwick tug of war. But it may also mean that the Ministry is prepared to look more favourably on suggestions from airlines, notably BEA, to build their own terminal buildings for their own passengers.

BIDS AND DEALS

Fairey Rejects New Offer

FAIREY shareholders have just cause to be thankful to Bristol Aeroplane and Westland Aircraft as their bids have effectively trebled the price of Fairey shares from the 1961 low of 10s. 7½d. This week, after a month's deliberation, Bristol and Westland, as expected, raised their bid; but there was again a swift rejection from the Fairey directors, advised by S. G. Warburg. The revised offer of one Bristol 10s. share and one Westland 5s. share for one Fairey 10s. share compares with the original offer of two Bristol and two Westland for three Fairey and with Bristol at 14s. 6d. and Westland at 15s. 6d. raises the imputed value on Fairey from 20s. to 30s. The offer will be underwritten for cash, which is expected to provide about 28s. a share. An important element in the revised offer is the promise that Fairey shareholders will also receive any compensation moneys arising from the expropriation of the Great West Aerodrome; if the claim is fully successful Fairey has estimated that the compensation would amount to 7s. 10d. a share. The new offer is also attractive in terms of income, effectively offering 20 per cent against the forecast of 15 per cent by Fairey for 1961-62; though it has to be noted that on the basis of estimated earnings a dividend of 20 per cent could well be matched by Fairey in 1962-63.

Once again the main argument of the Fairey directors for rejecting the bid is concerned with asset values; these, excluding the compensation claim, amount to 47s. 4d. per share, which is well above the value of the latest offer. The Fairey directors repeat their earlier undertaking that if the forecast of gross profits of not less than £800,000 is not realised in 1962-63 they will "invite the views of shareholders on a distribution of assets." The directors add that in the event of such a distribution they could by a process of realisation of and quotation for the separate units in the group establish a value for Fairey well in excess of the imputed bid price. Moreover, they emphasise again that the acceptance of the offer will bring shareholders right back into the aircraft industry, though this argument does not carry so much weight now as shareholders are offered a cash alternative. Clearly shareholders will be best advised to sit tight and await both the formal offer and the detailed comments of the Fairey directors, which will include an estimate of the current year's profits which, it is claimed, shareholders will find "satisfactory."

WHEAT

Thrashing Out a New Agreement

A CONFERENCE began this week and will continue to sit throughout February to find a successor to the fourth international wheat agreement which expires at the end of July. As hors d'œuvre, governments have now had several weeks to digest the unpalatable facts contained in the international wheat council's latest review before its publication. The price of Canadian wheat has virtually touched the "ceiling" under the agreement of $1.90 a bushel and Canada reported to the conference that by July its stocks of wheat would be reduced to the lowest desirable level. Canada is therefore thought likely to press for higher maximum prices. But the authors of the IWC report did not believe that the setback in production last year was more than a temporary halt in a long-term trend. Unless "important changes in prospect" are realised, the council forecast that the advanced countries of the world would not be able to absorb as food or feeding-stuffs their increased wheat production. Less developed countries, who cannot always pay cash for their imports offer the only outlet for this surplus. The council expected world trade to rise beyond 42 million tons in the current season, but half of it will be under bilateral trading arrangements. However, President Kennedy's new farm programme in the form announced last week would certainly rank as an important change in national wheat policies.

Evidently, a solution to the problem of grain surpluses will eventually be found outside the wheat agreement. But by plugging away in its annual report at well-known distortions of trade, the council is bringing that day forward. The new international wheat agreement has to regulate the commercial half of the wheat trade. The first defect of the existing agreement is that it is based on a grade of Canadian wheat which, until the drought of last year, Canada had not produced in commercial quantities for several years. The heart of the current agreement is that importing members shall buy from exporters a stated percentage of their commercial purchases of wheat when prices are between $1.50 and $1.90 a bushel. It has been suggested that these percentages be raised. But if sufficient producers now outside the agreement chose to join, the provision would become meaningless, and an international agreement, after all, should aim to be as international as possible.

CAR EXPORTS

Italy Toes the Line

THE long-heralded ending of Italian import quotas for British cars is one sign that Italy is becoming reluctantly reconciled to life in a freer-trading world. Its own car manufacturers, headed by Fiat, have not exactly welcomed the flow of imported cars into what was virtually their own preserve, and they are not without political influence. Even now that the quotas have gone, the home industry is pretty well protected: import duties on cars from common market countries range from 27 per cent on those with engines of less than 1½ litres to 21 per cent for those of over four litres, while for cars from other countries the rates range from 38.4 per cent to 31.4 per cent. On top of this duty, importers have to pay a "compensation tax" to offset the turnover tax that Italian firms pay. Last year the compensation tax rose from four per cent to eight per cent; in the face of protests from all importers, who point out that this is more than Italian makers are likely to pay

in turnover tax, the government promised to reduce it to 6½ per cent last September —but it is still eight per cent. Italian makers receive a repayment of turnover tax on their exports at the rate that importers pay.

British cars have been selling well in Italy for the last year ; in 1961 registrations may reach 22,000, five times as many as in 1960. About two-thirds of these, however, are the Austin A40s assembled by Innocenti ; as these are imported in the form of parts, they were not affected by the quota restrictions. Ford with the Anglia is the other British maker to sell in substantial numbers ; its price having been cut substantially, as in France, it has become the most popular of the cars that are imported whole. Stocks of British cars seem to have risen substantially last year ; shipments of 12,400 complete cars—nearly three times the 1960 total —compare with sales of 7,000-8,000. But this is natural enough when a market is being opened up, and some of these cars appear to have got no farther than the bonded stores of Italian ports. Now that they have won their freedom, British makers can show whether the appeal of their cars has been more than that of a novelty. Given the monopoly of the low-priced car market that Fiat has possessed, they should find a niche for their cars. But until they get in under the common market tariff, their business can scarcely be very extensive or profitable.

RIO TINTO-CON. ZINC

Marriage of Equals

In principle, the soundness of the proposed merger between Rio Tinto and Consolidated Zinc cannot be questioned and should certainly appeal to the majority of their shareholders. Rio Tinto has a problem of continuity caused by the prospective decline in the uranium industry—at least temporarily —after 1966 or such time as other contracts now being negotiated run out. Because of the collapse in lead and zinc prices, Consolidated Zinc is over-extended by its commitments in aluminium. Negotiation of the merger was expeditious, despite the complexities normally encountered in the affairs of mining groups. It appears that after careful investigation by the boards of directors the two groups emerged "just about equal." Near equality is evidently conducive to swift agreement.

A new holding company will be formed with the title (surely to be slimmed later ?) of Rio Tinto-Zinc Corporation. Stockholders in Rio Tinto will receive 41 10s. shares in the new company for every 20 10s. shares held ; Consolidated Zinc's shareholders will receive 58 of the new units for every 20 £1 shares held. Rio Tinto's shareholders will therefore receive a fraction over 50 per cent of the holding company's equity. On current market values the terms favoured Consolidated Zinc, whose shares stood only 10 per cent higher than Rio Tinto's units, though the 41 : 58 valuation puts them 40 per cent higher. The market response was therefore predictable ; Rio Tinto fell 3s. 1½d. to 40s. 7½d., while Consolidated Zinc rose 6s. to 54s., leaving the latter still slightly undervalued in relation to Rio Tinto. However, in deference to the improved investment status the combined group will undoubtedly enjoy, the net effect of the price adjustments was a slight rise in their joint market valuation.

ASSETS AND EARNINGS

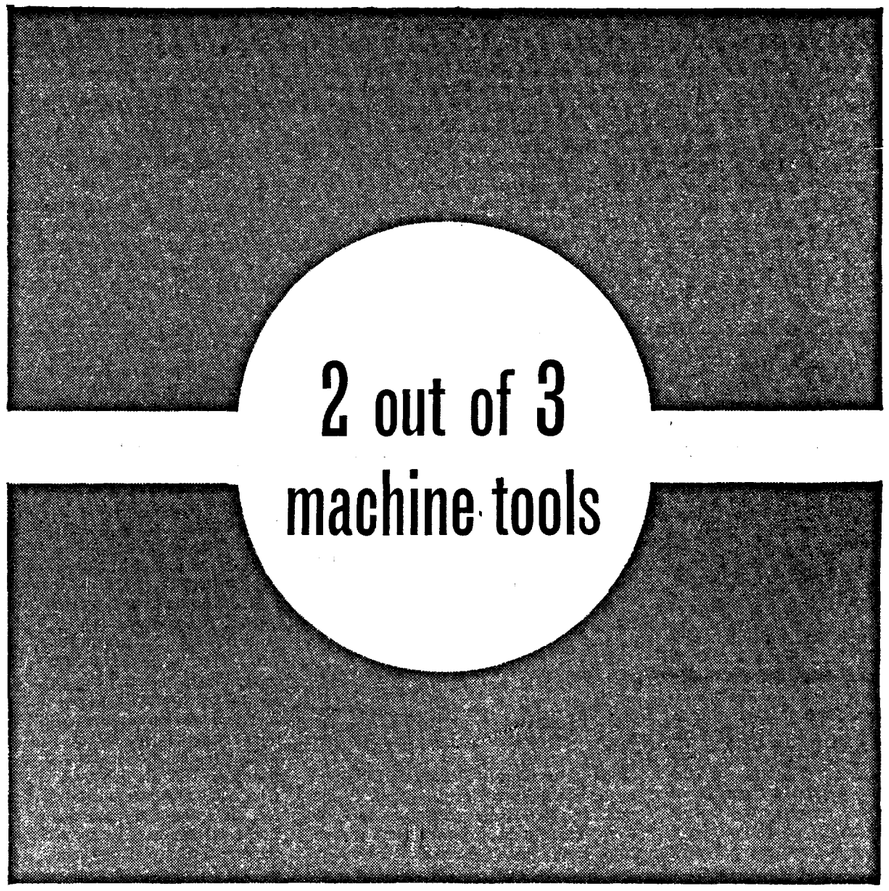
* At cost, less amounts written off.

The widespread interests of the two groups dovetail together to an extraordinary degree. There is little overlapping, though there are points of contact. Both groups are active in the exploration of further mineral deposits in Australia and Canada. The motivation is not rationalisation so much as the clear-cut advantage of greater size, spread and stability. The four main supports of the new group will be Rio Tinto's uranium and African copper and Consolidated Zinc's aluminium and lead-zinc-silver production.

It will be a unique group by any standard and shareholders will not overlook the added security of investment mainly in the older dominions. The group will also be fairly well integrated. Consolidated Zinc is already a substantial industrial company in its own right, producing zinc pigments, sulphuric acid, chemicals and fertilisers. It holds 30 per cent of the equity of British Titan Products. Aluminium is notably an integrated industry, and Rio Tinto has made significant progress towards participating in commercial development of uranium. Between them, the two groups will also bring into the new company a whole range of subsidiary mining interests and projects which are now being evaluated. Though in 1960 54 per cent of its group profit came from copper and 37 per cent from uranium, Rio Tinto has a useful stake in gold, emeralds, pyrites, thorium and building materials. Consolidated Zinc has a side-stake in rutile, zirconium and beryllium. Both have an interest in oil. Rio Tinto exchanged Kern Oil for 3 million ordinary shares in British Petroleum last March.

This merger seems to have averted the



prospect of skimpy dividends or capital issues on a weakened market for shareholders in Consolidated Zinc. Although the group raised £10 million in 1960 by an issue of loan stock with a conversion option mainly to the British South Africa Company, its cash flow last year could not possibly have been as high as the £3.8 million available in 1960, of which £1.2 million was distributed in ordinary dividends. It has to finance with Kaiser a half share of the £A130 million aluminium development scheme in Australia and New Zealand scheduled for completion in 1966. On the other hand, Rio Tinto is just beginning to receive a trickle of dividends from its uranium investment in Canada. But by 1966 it is said that Rio Algom, in which Rio Tinto holds 53 per cent of the equity, will have amassed about $150 million.

Unless British tax rules are made more lenient with regard to special tax concessions granted overseas, suitable investments would have to be found for most of the earnings from this source. Because of the unexpectedly early end of the uranium contracts and the uncertainties of exploration, doubts must have existed that Rio Tinto could bring enough projects to the profit-earning stage by 1966 to maintain earnings in the event of a sharp fall in uranium dividends when the major contracts expire. The merger can therefore remove the cause of the recent undervaluation of Consolidated Zinc's shares in relation to its potential and a potential cause of undervaluation of Rio Tinto that might have induced bids from other quarters.

SUPERSONIC ENGINES

Look to Your Laurels

The competition in aero-engines from a relative newcomer, Bristol Siddeley, means that Rolls-Royce will have to look to its laurels. Having had its system of vertical take-off adopted by the RAF in preference to that of Rolls-Royce (though the

in use in the U.K. are over-age

The quickening pace of technical progress, the growing menace of international competition, are making nonsense of yesterday's industrial economics. Today's standards of efficiency are so demanding that even if a 10-year-old machine is still running as well as its maker intended, it may yet be running at a loss.
In this new order of things, investment in re-tooling has become an essential part of industrial planning.
This is why Engineering Finance Limited introduced its machine life finance scheme whereby major items of plant and equipment can be bought on credit and paid for over periods up to ten years—possibly even more—depending on their useful working life.
Since we introduced the method a year ago, we have financed a wide variety of plant for a wide variety of industries. Could machine life finance help you to expand?
We will be pleased to send you a booklet with fuller details.

latter may yet make a come-back) Bristol Siddeley is now much fancied to provide engines for the French-designed supersonic Caravelle and for several other high-speed aircraft under discussion in Europe. The engine that the company would provide is, however, that designed for the RAF's controversial TSR2 bomber and foreign customers are aware that the TSR2 stands in some danger of being cancelled. It is difficult for Bristol Siddeley to persuade them that even if the aircraft goes, the engine will survive. This is an instance where the Government needs to know clearly how it will act if it is in fact decided to scrap the TSR2. Assurances given to Bristol Siddeley and indirectly to its potential foreign buyers are based on promises that the aircraft will be built but it would obviously be of much more use to the company to be given an assurance that the engine would be built whatever happened to the aircraft. The British aero-engine industry, as represented by Rolls-Royce and Bristol Siddeley, is in much better shape than the aircraft manufacturers and its products find a readier market abroad. Government policy may, therefore, have to allow for the building of engines for which there is no British aircraft available. And this, in turn, demands much closer integration between the British and European aircraft industries and their respective governments.

LLOYDS PERMANENT

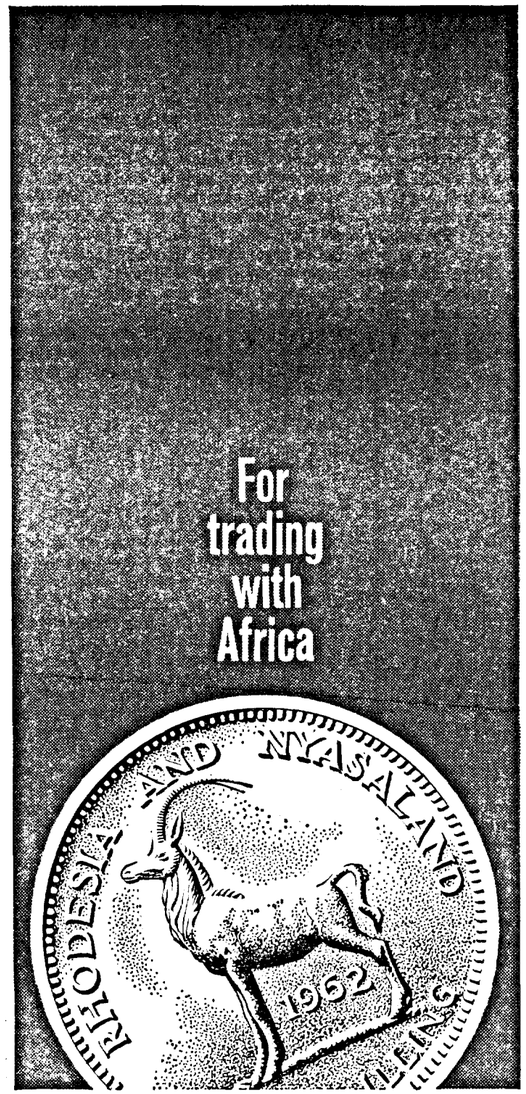
Future Indefinite

THE final report of Mr Dennis Leigh, appointed by the Chief Registrar of Friendly Societies a year ago to examine the affairs of Lloyds Permanent Building Society, shows that the reconstituted board

FURNITURE

Keener Buyers with Better Taste

STOCKBROKER - traditional, shoddy - contemporary and Tottenham Court Road Scandinavian once more vie for attention at the Earls Court Furniture Show, with much more prominence given, this time, to the latter style. The fact that all three are sometimes seen on the same stand presents the main difficulty of the industry : unless people buy enough of one type or style of furniture to keep the manufacturer in steady production, he is obliged to offer a wider variety, thereby forfeiting the advantages of concentration on a standard product. Not indeed that most manufacturers think that way round ; even those that pioneered mass production have got into the way of increasing rather than cutting down their number of lines, so that even the biggest factory in the country, that of Harris Lebus at Tottenham, may produce only a few hundreds of any particular piece of furniture.



Standardisation is, nevertheless, the byword of the more enterprising manufacturers, particularly the greater standardisation of components, planned so as to give the greatest possible variety of end-product with a limited number of parts. Fortunately well-designed furniture in the best modern idiom lends itself to this treatment, as firms like Stag have shown. It is cheering when good design makes good economics ; even without direct proof it seems true to say that the most profitable kind of firm is one of medium or medium-large size—50 to 100 workers makes this category in what is still partly a backyard industry—making a limited range of furniture. The severe shrinkage which the industry has undergone in the past ten years—from 3,000 firms to 1,800—has resulted in a greater emphasis on firms of this size, at the expense of smaller ones, rather than a concentration into really large units.

Further steps towards improved efficiency and greater exploitation of new cheap materials, such as plastics, are hampered by the industry's continued uncertainty as to whether or not it is on the verge of a big breakthrough into the consumer market of the kind experienced by electrical durables during the fifties. Though furniture manufacturers' total turnover increased from about £100 million in 1950 to £129 million in 1960, their volume of production grew during that period by only 7 per cent. The difference is largely made up by the increase in prices which, though steadier in the past eighteen months, are currently about 14 per cent higher than they were in 1954.

In 1959, before the reintroduction of credit restriction, it looked to some as though the hoped for breakthrough had arrived. Furniture benefited temporarily from three-year hire purchase agreements ; now, retailers and manufacturers alike are looking forward not only to the freeing of credit again as soon as possible but also to the time, in the near future, when people will have finished paying for the furniture they bought in 1959.

Clogged by the uncertainties of credit buying, certain manufacturers decided they must introduce a stronger stimulus into the market than the retailers' powers of persuasion. In the past few years they have tended more and more to do their own selling in the form of advertising and publicity of branded products—the use of brand names being itself an innovation for most of them, adopted after the initial success of firms like Gomme (G-Plan) and Parker-Knoll. Indirect publicity, through the medium, for instance, of women's magazines, has also had tangible effects—retailers report that their customers are much more conscious now than they were even two years ago of exactly what they are buying and more demanding about materials and finish—more so, indeed, than some manufacturers had bargained for. In spite of an appreciable reduction in the proportion of business done on HP there is evidence that people, when they do buy furniture, are more likely now to choose better quality and more expensive pieces. Instead of getting down to the mass market, the better manufacturers are, to a limited extent, drawing it up to their level. No one in the trade is getting very worked up about this but it does help to explain why the Board of Trade's figures of orders on hand at the end of November last year, a time when no one was particularly conscious of better business, stood at £11.7 million, compared with £9.1 million a year before—not far off the level of the record year, 1959.

Manufacturers have perhaps been over-concerned with the problem of fluctuating demand to the extent that few of them seem able or ready to adjust their delivery dates to the state of the market. This is bound to be a problem in what is still, in a modified way, a "made to order" business ; but some exhibitors at Earls Court should be asking themselves why is it they are quoting delivery times of up to twelve weeks for some furniture. Quick delivery would certainly play its part in encouraging customers.

Caernarvon Castle dating from 1284 is one of the fortresses built by Edward I in Wales for maintaining his influence in that country. A room in the Eagle Tower (centre) is traditionally the birthplace of Edward II, the first Prince of Wales.

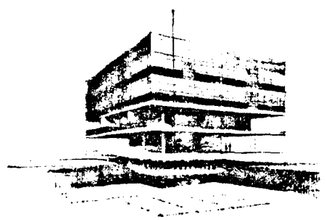
Symbol of Security

Over the centuries the castle has represented strength and security to those dependent upon its protection. In modern times the Alliance castle symbolises the same qualities which are just as important now as in the past.

With almost a century and a half of experience in insurance the Alliance offers you a comprehensive service, expert advice on your individual needs, and prompt and generous settlement of your insurance claims.

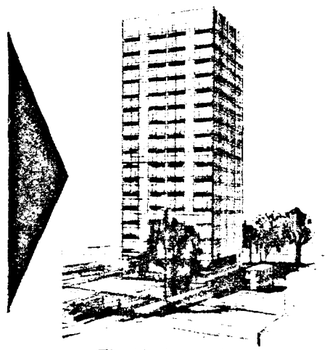
1824

ALLIANCE ASSURANCE
COMPANY LIMITED



BARTHOLOMEW LANE, LONDON EC2

of directors under the chairmanship of Mr Eric Partridge, MP, has gone some way towards putting the finances of the society back on a sound footing. The report is accompanied by accounts for the year 1960 with approximate figures for June 30, 1961; by this time total mortgages had fallen to £3,088,000, compared with £3,994,000 at the end of 1959. A recent sample showed that almost one-fifth of mortgages were in arrears but there have been comparatively few serious defaults among owner-occupier borrowers and their number is now being reduced. The society has issued writs for £90,445 against Mr Robert Jones, the former chairman of the society, in respect of sums lent to Freehold Land Finance Company which were later credited to his own mortgage account, and for £39,700 against Freehold Land Finance Company for moneys expended in discharging Freehold Land's liabilities and in the use of the society's property.



Mr Leigh sees no reason why the society should not be administered as economically as other societies: the bulk of the society's mortgages are earning 8 per cent, which is 1½ per cent above the current normal rate while the directors have cut the rate of share interest so that there is a margin for building up reserves. The snag is that any sizeable reinforcement of reserves will take time; the total available for general reserve is only £31,000—a long way short of the minimum of £100,000 required before the society's shares could qualify as trustee investments. Mr Leigh does not believe that Mr Partridge's hopes, voiced in November, that the Registrar would lift his ban on advertising for, or accepting, new deposits, are likely to be met "for some time to come." The repayment of money lent by shareholders and depositors might well, moreover, require ten years to complete. Not surprisingly, Mr Leigh therefore appears to lean towards another solution—the transfer of Lloyds Permanent's engagements to another society. The security on most of Lloyds Permanent's mortgages is not as strong as leading societies would insist on in their own lending, but it is not so weak as to rule out the possibility that one of them might consider taking over Lloyds Permanent's engagements.

BUILDING

Roof First

Four up, and the top floor is finished

The block completed

INNOVATIONS in building come but once a year. The "Jackblock" method of building tall blocks that Richard Costain (Construction) announced last week shows that the British industry is not entirely moribund. Essentially this is an elaboration of the by now established "lift slab" technique, where the concrete floors of a building are cast on the ground and then raised into place by hydraulic jacks. But with the Jackblock system the complete building will gradually rise from the ground: the first step is to cast the concrete roof on the ground, then to start lifting the roof and building the walls that support underneath. The main structure of the building consists of a core formed from concrete blocks, and it is this part that is raised by the hydraulic jacks as it is completed. Starting with the roof, supported on the jacks, the first stage in building the core is to raise all but one of the jacks and then insert a concrete block above this one jack. Then every other jack is lowered in turn, and a block inserted above it, until the building is one block high; the jacks are then raised—except one—and the process repeated, until the roof has been lifted one storey high. Then the top floor will be cast on the ground—all floors are cantilevered out from the core—and the side walls of this storey erected. Now the process can be repeated, and another floor built, while the internal work on the top floor goes on as it rises. When it is four floors up, after about four weeks, the top floor will be finished.

The first building to use this technique will be a 17-storey block of flats in Coventry that Costain is building for Coventry corporation. Work will start this month on the foundations, and jacking should begin in three months. The attraction of this system is that all building work can be done under the cover of the block's own roof; and though the jacks represent an investment of £17,000, they save the use of a crane and hoists. Until a building has been erected, no positive idea about the cost of the method can be had. But the chances of economies from being able to have men working on each stage of a floor all the time, instead of having to bring the different trades into a building in relays, should reduce cost. So should the ability to work under cover, free from the usual weather delays. But innovations need development, and with building methods this means putting up a building. So one cannot expect the first attempt to show all the advantages of the method: its value may be as much in sorting out any drawbacks.

BUTTER

In the Melting Pot

THE battle for the butter market has begun again with the Government assuming the role of a referee afraid to make an unpopular decision. Any decision will be unpopular in one quarter or another. New Zealand refuses to agree to any ceiling on its exports of butter to this country. The polite fiction of limitation of imports from traditional suppliers to this country and curbs on the more flagrant dumpers has strengthened the price of New Zealand butter by £35 to £285 a ton. But the interim agreement that came into effect retrospectively from the beginning of September will expire in March. However, last minute compromises are the rule, not the exception, in discussions of trade in agricultural produce, so it came as no surprise that exporters failed to agree to its extension at their recent meeting in Geneva.

The allegiance of exporters to the short-term agreement was tenuous in the extreme. One country apparently failed to sign it, but diplomatically reduced its exports to the required figure. Eire, however, stuck its neck out and promptly had it chopped off through the imposition of an anti-dumping duty that priced Irish butter out of this market. At the end of last year, the British Government was able to adopt a scheme conveniently suggested by GATT officials to enforce the short-term solution of the problem. It possibly hoped that the latest meeting would produce a similar opportunity to shirk full responsibility for regulating imports but on this occasion the secretary of GATT has not obliged.

The point that exporters can agree upon is that without limitation of exports, prices will melt after March. Stocks have remained high throughout the winter in this country and there is every prospect of a further large surplus available for export in many producing countries this year.

DISCOUNT HOUSES

Lombard Street Reports

THE chairmen of the discount houses are no more forthcoming about their own business operations than are the clearing bankers, and the three end-year statements to shareholders of the Union Discount, the National and Alexanders add little of general interest to what outside observers had been able to deduce. They refer to the losses suffered after the 2 per cent rise in Bank rate in July, to the subsequent partial recovery, and to the general rise in commercial bill holdings. This is in fact believed to include a substantial element of trade bills, which command a premium of ¼-⅛ per cent over bank acceptances, and can, with the right drawer, be highly attractive to a discount house.

The statement that will inevitably receive the closest scrutiny is that by Commander Lovel W. Coke of the National. He confirms that the National's particular difficulties were due to a continuation of the switch into higher yielding stocks, which had been pursued at "considerable cost" in 1960.

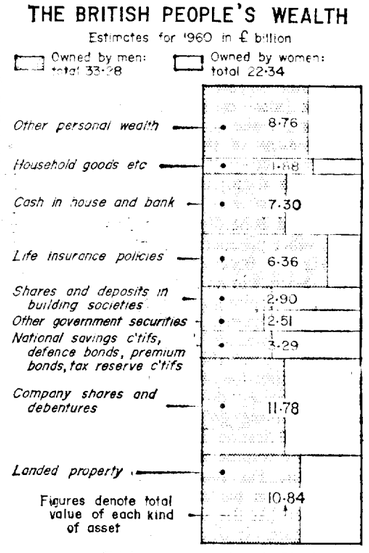
In the first half of 1961 we continued this procedure. The effect of this, although beneficial, was largely offset by the further all-round rise in interest rates.

But Commander Coke looks to ultimate benefit on redemption of the securities, and says that the average life of the company's bonds is "well under three years." No provision for depreciation is therefore considered necessary; the National indeed has its own practice of writing up the book value of securities bought at a discount to take credit for their approach to redemption at par.

Property Owning Democrats

INDIVIDUALS in Britain in 1960 had accumulated wealth to the value of £55½ billion gross, or £51½ billion after deducting debts, according to new figuring by the Inland Revenue department. The chart shows that about one-fifth of this estimated wealth represented land and buildings, another one-fifth stocks and shares in public and private companies; and, of the total, women owned two-fifths and men three-fifths.

These estimates of capital holdings have been made from estate duty returns for a single year, extended to include small estates below the exemption limit of £3,000. On the rather large assumption that these estates formed a representative sample, they were grouped according to age and sex of the deceased and rated up by mortality rates to measure total personal wealth. This method has been used before by academic and official research workers—by Mrs Kathleen Langley, for instance, who estimated that private capital in 1950 amounted to some £32 billion, leaving aside estates of under £100. But this is the first time that such calculations have borne the stamp of a government department. Unfortunately, this still gives no more than a cloak of accuracy; nevertheless, the board, with its access to fuller information, is far better equipped than any outsider to have a shot at such estimation, and earns commendation for its efforts.



The errors in using death as a means of sampling the population may be quite considerable. Certain assets, such as cash and household goods, are sure to be underestimated; others escape the net entirely. On the other hand, a life insurance policy is entered as the sum assured, above the surrender value which it is worth in the hands of the living. Yet the value put on life insurance by this method falls far short of the total sum assured by life and industrial companies, mainly because certain life policies under £3,000, like other items of such amount, may not appear at all in these statistics because of exemptions through the Married Women's Property Act. The figures for life insurance are particularly suspect; the board itself points out that an estimate based on the value of the life funds would have been more realistic.

It would be wrong, therefore, to accept these figures with any full precision. But if they are not too blurred, it would seem that women have more money than men in small savings, in building societies, in the Post Office and Trustee Savings banks and perhaps a little more in quoted stocks and shares. But they own only about 40 per cent of landed property, little more than a third of money invested in private companies and less than a third of household goods. One of the most interesting estimates that comes out of this exercise, and probably among the more reliable, is that there are around 600,000 men and 600,000 women who invest in ordinary shares quoted on the stock exchange.

The table gives some idea of the average size of different kinds of property. In the first two columns the estimated value has been divided by the number of individuals believed to hold such assets; in the last two columns the value is spread over the adult population, including non-holders, to show the relative importance of different kinds of savings. Thus the average holding of ordinary shareholders appears to be around £6,000; but since only one in thirty people invests, this form of saving is equivalent to only about £200 per adult, about three times as important as a form of savings as national savings and premium bonds taken together.

THE BRITISH PEOPLE'S WEALTH

Estimates for 1960 in £ billion

TOYS

No Child's Play

For parents, uncles and godmothers the most serious annual aspect of the toy trade is over for another ten months, but for the manufacturers and trade buyers now is the time of grim-faced activity. Geared to the fact that in such a faddy business manufacturers like to have a good idea of the year's demands before they launch into production, the British Toy Manufacturers Association's annual fair has opened at Brighton. The Harrogate toy fair, mainly for wholesalers, was held a fortnight ago. Already a number of American firms have shown their interest in the British market by participating in the toy exhibition at the US Trade Center. Another, the Lionel Corporation, has announced with Lines Brothers—the biggest British manufacturers, who also own Hamleys — their arrangement for the manufacture under a royalty agreement in this country and at Lines's Calais factory of a "science series" of constructional toys under the name Triang-Lionel.

Toys, indeed, is hardly the word for these and many other products of what shows increasing signs of becoming a science-based industry. Science in its more fictional form provides the inspiration for space travel equipment and ingeniously animated robots, while the technologists of the future, with their feet firmly on the ground, are propelled in the direction of applied science by means of elaborate "do-it-yourself" kits.

Perhaps working on the principle that extreme sophistication is the best answer to the growing volume of cheaply produced toys from the Far East, some American manufacturers, in particular, are going to new lengths. (At the same time, business becomes a patriotic duty by stimulating a science-bias in the young.) The best of these products, though not cheap, have far more to them than the old-fashioned science sets containing a few shillings-worth of chemicals. The components for what used to be called a crystal radio are being offered in package form; one exhibitor at the Trade Center sells an "electronics lab," retailing in the States for nearly $30 in its most elaborate form, supplied with the separate items for making, among other things, a television silencer and "six different transistor radios." Sensing devices are the basis of the considerably less elaborate "electronics engineering" equipment now introduced by Triang-Lionel. This combine also offers a series of "plastics engineering" sets selling at prices from 39s. 6d. to 6 guineas, with which a child can actually carry out the different moulding processes. If the ideas—and the prices—catch on quite a lot of children will be several pegs up, technologically speaking, on their parents.

EUROPEAN CHEMICALS

A New Look

Entry into Europe poses new problems not only for British industry but for the magazines that serve it. Temple Press, now part of Mr Cecil King's magazine empire, has reacted to these new demands with *European Chemical News*, a lively technical and economic weekly focused on developments throughout the chemical and allied industries in Europe. Its first issue, published a fortnight ago, displayed an impressive coverage, presented in short news and background items rather than the long and detailed technical analyses that are more frequent in trade magazines.

One of its more impressive features is a table of comparative "local delivered prices" for chemical products across Western Europe. These are not as complete as it would like—for example, it is proving hard to collect representative prices for chemicals in the German market, which is at once secretive and chaotic—but the array is already more comprehensive than anything published anywhere else. And unfortunately, the only implication that can be drawn from these first, incomplete comparisons is that Britain still has to pay relatively high prices for its chemicals. The first ECN price table lists a range of 92 chemical products, with prices for most of them in Britain, France and Italy, for some in Belgium, and for a few in Germany. Of the 92 the British price was highest in 39 cases, often by quite a wide margin. Last week's issue gave prices for 102 products of which the British price was highest in 32 cases.

This new chemical trade paper has come into being at a time of turbulence in the chemicals industry (its own reaction to the ICI-Courtaulds struggle is to emphasise the value of Courtaulds' marketing strength in textiles, and the present difficulties of producers of chemical intermediates that cannot command outlets for their materials). Its own price comparisons suggest that with the entry of the British chemical industry into the common market it will have a good deal more turbulent changes to record.

CAR PARKING

Simplicity Pays

American realism and know-how are the ingredients that Meyers Bros. Parking System will bring to the new company it has formed with City Centre Properties and Hambros Bank to build multi-storey garages in Britain. Meyers is the controlling shareholder in the new company, Meyers Bros. Parking System, which starts operations with the existing garage in Aldersgate built by Mr Alexander Kaye—who becomes a joint managing director of the company. It is already negotiating for 22 sites in Britain and Ireland and has plans to build more in France and Belgium. Meyers claims that it can offer parking at rates much below those now commonly charged in Britain; certainly at Aldersgate, which was designed without its help but where it has advised on detail layout and operating methods, the charge of £60 a year for long-term contract parking is substantially below that of other garages in central London.

The secret of Meyers' low charges does not lie in any unique method of building garages, but in designing each garage to suit the needs of the site and the type of users it will attract, and in operating them with a small staff. The structure of the garages is kept simple and flexible—the minimum of pillars to restrict the parking layouts that can be employed, for example. Ramps for getting the cars upstairs are used wherever land is available; cars go up in lifts on only the most restricted or expensive sites. Gadgets like intercom systems and even closed-circuit television allow the manager to keep a close control over the activities of the staff and the state of the stock, as well as saving men's time. So do the firemen's poles Meyers uses sometimes: men can descend one floor three seconds faster by pole than by lift, it finds.

AID

More for Pakistan

The meetings in Washington of the "Aid India" and "Aid Pakistan" clubs—both have the same members—appear to have gone smoothly. India has come away with a pat on the back for progress so far achieved, and a promise of a further meeting in May to discuss its needs for aid for the second year of its third five-year plan. Members have, however, agreed that these are likely to be a good deal more than the $930 million offered last June; and they asked the World Bank to try and enrol new members for the club—there are some conspicuous omissions from Europe.

TWO YEARS' AID FOR PAKISTAN
($ million)

	Commitments June, 1961	Additional commitment January, 1962	Total
Canada	18·0	20·0	38·0
France	10·0	15·0	25·0
Germany	25·0	55·0	80·0
Japan	20·0	25·0	45·0
United Kingdom	19·6	28·0	47·6
United States	150·0	350·0	500·0
World Bank and IDA	77·4	132·0	209·4
	320·0	625·0	945·0

The Pakistan consortium, somewhat unexpectedly, produced more tangible results—the World Bank has been impressed with Pakistan's management of its affairs. Last June Pakistan asked for aid totalling $945 million to fill the hole its planners had left in the foreign exchange needs for the second and third years of its (second) five-year plan; year 2 ends this July. Pakistan was then offered $320 million; now the consortium has agreed to enter into additional commitments to provide the extra $625 million to bring the total for the two years to the requested $945 million. Of this total, Britain had offered $42 million last June for the first two years of the plan and promised an additional $28 million last week. It asked that drawings on this aid should be spread over the remaining years of the current plan. To avoid embarrassment at future meetings of the consortium Britain has warned Pakistan that, because of its own balance of payments difficulties, it will not be able to increase its aid for the whole of the five-year plan beyond the $70 million already offered. Britain's aid offers to India for the first two years of its current plan so far amount to $250 million, out of a total offered by the consortium of $2,225 million.

MARKETING RESEARCH

Business Compendium

One way of inducing order is to lump everything into broader and broader categories. This is rather what the British Institute of Management has done in its "Survey of Marketing Research in Great Britain." Marketing research—of which the familiar "market research" is only a part—appears to cover by definition the whole commercial bag of tricks, from "purchase of companies" to packaging. Faced with such profusion, 179 of the 265 companies asked funked replying to the questionnaire. Nevertheless, the analysis of the 86 answers received does give a broad indication of how research minded, outside the production field, British business is. It also suggests in what directions interest is concentrated.

The consumer goods manufacturers surveyed spent on average over three times as much on marketing research as the makers of industrial products—£66,000 a year each compared with £20,600. Nearly all the consumer goods firms ran some sort of research department of their own, while only 29 out of the 38 industrial manufacturers did so. This follows logically from the types of research that seem most popular—such as product testing, and the almost universal interest in "acceptability of new products" shown by the makers of consumer goods. For all firms, the heaviest concentration is on the various aspects of market research, though when it comes to export markets the consumer goods manufacturers again seem the keenest. Yet only 26 per cent of the industrial and 42 per cent of the consumer goods firms said they were researching into the suitability of their products for the export market, while at home such important subjects of study as distribution costs and future personnel requirements appear comparatively neglected. It seems that firms shirk particulars when looking into the future, for in contrast the vaguer kind of crystal-gazing, under the heading "long-range forecasting" is fairly popular, being indulged in by 74 per cent of the industrial and 65 per cent of the consumer firms. But at least this is probably a harmless indulgence: something like half the manufacturers do not act upon the recommendations contained in marketing research reports.

SHORTER NOTES

A Cotton Board delegation that has been visiting India and Pakistan to persuade manufacturers to limit their exports of yarn to Britain has not been successful. No restrictions were placed on yarns under the pact limiting exports of other cotton manufacturers from Commonwealth countries. But when the pact was recently renewed provision was made for restriction of yarn imports if they increased substantially. When the original agreement was made in 1958, imports of yarn were less than 15 million lb a year. In 1961, imports rose to 44 million lb.

★

Philip Hill Investment Trust is raising £5 million by a one-for-eight rights issue at 20s. a share. With the existing 5s. shares standing at 27s. the rights are worth about 9d. a share and the prospective ex rights yield is 2.4 per cent on the ordinary dividend, which for the year to March 31st is being maintained at 12½ per cent to comply with the Chancellor's wishes. In view of the "opportunities for profitable investment which continue to arise" the directors feel that new capital should be raised since existing resources are fully invested.

★

Under pressure of its estimated trade deficit of US $450 million for 1961, Argentina has imposed stiff deterrents to imports. The customs surcharge on luxury and non-essential goods has been increased from 150 per cent to 250 per cent, and a surcharge of 40 per cent has been placed on all types of machinery, previously free of import duty.

COMPANY MEETINGS

NATIONAL PROVINCIAL BANK LIMITED

HIGHLY SATISFACTORY RESULTS

1961—A YEAR OF IMPORTANT ECONOMIC DEVELOPMENTS

MR D. J. ROBARTS ON GOVERNMENT'S ANTI-INFLATIONARY MEASURES

The 129th Annual General Meeting of National Provincial Bank Limited will be held on February 22nd at the Head Office, 15 Bishopsgate, London, E.C.2.

The following is the statement by the Chairman (**David John Robarts, Esq.**) which has been circulated with the Report and Accounts for the year ended December 31st, 1961:

Statement of Accounts. The Balance Sheet and Accounts of the Bank together with the Directors' Report are before you.

It will be seen that the liabilities of the Bank to its Current, Deposit and other Account holders at £946,557,603 exceed last year's figures by £15,686,910.

The total of our liquid assets—Cash, Money lent at Call and Short Notice, Bills and Re-financeable Credits—represents 36.6 per cent of our deposit liabilities. This compares with 33.6 per cent twelve months ago.

As a result of the further call made during the year, our Special Deposit with the Bank of England, £26,300,000, represents 2.8 per cent of our deposit liabilities as at December 31, 1961.

Investments in securities of, or guaranteed by, the British Government continue to be shown at a figure which is below their market value. The Balance Sheet value of £104,387,360 gives a ratio of 11.0 per cent to Deposits as against 14.5 per cent last year. We hold no undated Government securities and the majority of our holdings mature within ten years.

Our Advances stand at £441,902,278, which represents 46.7 per cent of our Deposits. The corresponding figures at December 31, 1960, were £415,568,727 and 44.6 per cent.

Profit and Loss Account. The account shows a net profit for the year of £4,256,388 compared with £3,565,996 for 1960.

Together with the amount brought in of £1,214,667 there is a balance for disposal of £5,471,055. An interim dividend of 7 per cent has been paid on the capital as increased by the issue of 3,003,760 £1 shares distributed and credited as fully paid to Shareholders in the ratio of one additional £1 share for every seven held at January 30, 1961. This took £1,030,290, leaving available £4,440,765.

It is now proposed to deal with this balance as follows:

To pay a final dividend of 7 per cent	£1,030,290
To appropriate to Reserve Fund	£2,000,000
This will leave to be carried forward	£1,410,475

The proposed final dividend of 7 per cent makes, with the interim dividend of 7 per cent paid in July last, a total dividend of 14 per cent in respect of the year 1961.

Subsidiary Companies. The Balance Sheet of Coutts and Company as at December 31st last and the Profit and Loss Account for the year ended December 31, 1961, accompany our own Report and Accounts together with a Consolidated Statement of Assets and Liabilities of North Central Finance Limited and its subsidiary companies as at September 30, 1961. Following the Bank's successful offer for the issued capital of the Isle of Man Bank Limited, the Balance Sheet as at December 31, 1961, and the Profit and Loss Account for the year ended December 31, 1961, of that bank are also included.

Head Office Premises. After most careful consideration, your Directors have decided that the time has come to rebuild the Head Office of the Bank. The main portion of this building is nearly 100 years old and, although it has been substantially modified over the years, it cannot now be regarded as making full and economic use of the large and most valuable site which it occupies. Shareholders will remember that we purchased the freehold of Gresham House in 1959, and the tenancies are arranged in such a way that we shall be able to obtain vacant possession of most of the building in the Autumn of 1964.

Building operations will start on the Gresham House site before the rebuilding of 15 Bishopsgate and 20/22 Old Broad Street commences, and the work will be phased in such a way as to enable the majority of the Head Office Departments to continue to function from the present address. The rebuilding project, when completed, will provide one large building covering the whole area of the Gresham House and Bishopsgate and Old Broad Street sites. This will house the Head and City Offices of the Bank, provide for future expansion and permit certain departments, which are at present expensively housed in other parts of the City, to be accommodated in the main building. In addition, there will be a substantial amount of space available for letting.

Taking into account both the rents which we anticipate receiving and saving, and the greater efficiency of operating in a modern building, your Directors are satisfied that the scheme is sound and well justified.

Some inconvenience will inevitably be caused to our present tenants in Gresham House, and this we much regret. We hope, however, to be able to offer to them much superior accommodation in modern offices when our new building is completed.

Management and Staff. At the end of 1961 Mr F. Keighley retired from the position of Chief General Manager of the Bank, after a most distinguished career. Mr Keighley entered banking at Leeds in 1915 as an apprentice with the Union of London and Smiths Bank, which was subsequently amalgamated with the National Provincial Bank of England.

In 1926 he came to the Advance Department in London, where he quickly established a high reputation with his work on many important and difficult problems which beset banking in the late 'twenties and early 'thirties. He was appointed successively an Assistant Controller, Inspector of Branches, Controller, Joint Chief Controller and General Managers' Assistant. Early in 1951 Mr Keighley became an Assistant General Manager and later that year a Joint General Manager.

He became Chief General Manager of the Bank in 1956 and was elected Chairman of the Chief Executive Officers' Committee of the London Clearing Banks in January, 1960.

We owe Mr Keighley a great debt of gratitude for his splendid work for the Bank which has extended over nearly 47 years.

I am glad to say that we are not to lose Mr Keighley's wise counsel as he has been elected a Director of the Bank and I will be asking you to confirm this appointment at the Annual General Meeting. Mr Keighley will also continue to represent the Bank on the boards of North Central Finance Limited and the Isle of Man Bank Limited.

Mr W. Lynn has been appointed to succeed Mr Keighley as Chief General Manager. During the course of his career Mr Lynn has held many important appointments and he has been a Joint General Manager since 1953. We are confident that in Mr Lynn we have a Chief Executive Officer who is admirably equipped to carry the heavy responsibilities involved.

At the end of June Mr H. C. Pearson, a Joint General Manager, retired after more than 44 years of distinguished service with the Bank. He was elected a Director of the Isle of Man Bank Limited and has subsequently been appointed Chairman on the retirement of Mr J. R. Quayle.

Mr R. F. Smith and Mr W. B. Davidson have been appointed Joint General Managers.

The very satisfactory results which have again been achieved would not have been possible without the great efforts of our loyal and efficient staff. Once again, on behalf of the Shareholders and Directors of the Bank, I would like to express our gratitude to them for their excellent work during the past year.

On the 7th June there occurred a tragic event which I record with profound sorrow. Mr H. Hartley, Manager of our Newcastle upon Tyne Branch, was shot dead in his room by an assailant who had sought an interview with him. Mr Hartley was a most loyal and efficient officer of the Bank and we were deeply shocked that he should be brutally murdered while carrying out his duties for the Bank. Our sincere sympathy goes out to his widow and sons.

The question of the security of our staff is one that is constantly before us and we are always seeking to improve our arrangements. I am satisfied that we have taken all possible precautions for the safety of the members of our staff and we shall continue to give very high priority to this important matter.

North Central Finance Limited. Our thanks and congratulations are due to the Chairman and Directors of our subsidiary, North Central Finance Limited. In a most difficult year they have achieved an increase in net profit of approximately £200,000 to £661,374. In view of the troubled times through which the whole of the hire purchase business of the country has been passing, this is a most praiseworthy performance and reflects highly efficient management.

A YEAR OF NOTABLE DEVELOPMENTS

The past year has been filled with events of great importance to the economy and so to the banking system of the United Kingdom. For the first time for ten years the Chancellor of the Exchequer produced a Budget which was, for practical purposes, in overall balance and the indications point to a reasonable realisation of his estimates. This is a most important matter because it goes to the root of inflation—the disease which has beset the country ever since the end of the Second World War.

Over the previous decade deficits in the national accounts had accumulated to the amount of £2,524 million and the National Debt rose by £2,330 million. To the extent that such huge deficits are not matched by genuine savings and higher productivity, the effect can only be inflationary. It would seem that a large part—more than £1,000 million—of these deficits has, in fact, been financed by increases in the note issue. One cause of the deficits has been the need to finance the nationalised industries. The British Transport Commission alone has made losses totalling some £475 million and in addition it now appears that £650 or £700 million of the debt of that body will have to be written off.

So the decade was clearly a period of serious inflation, the symptoms of which were recurring crises in our balance of payments position. The country's reserves are so small in relation to its liabilities and to the value of trade transacted in sterling that any adverse movement in trade or any weakening of world confidence in the stability of sterling has an overwhelming effect.

Such crises are also most damaging to business in the United Kingdom, necessitating, as they do, the imposition of restrictions on bank credit and, indeed, making all forms of credit harder and more expensive to obtain. In these circumstances planning ahead by businesses, particularly by those of small or medium size, becomes extremely difficult.

The 1961 Budget came too late to prevent the balance of payments crisis which came upon us last summer and which necessitated the "little budget" of July.

The measures then taken were more severe than appears to have been generally recognised. Bank rate was increased from 5 per cent to 7 per cent and the clearing banks had to deposit a further 1 per cent (making 3 per cent) of their deposits from the public with the Bank of England, thus depriving them of the power to lend that proportion of their funds to their customers. At the same time the banks were asked to restrict advances connected with personal consumption in the private sector of the economy. Such measures were by no means new. They had been used on several previous occasions in the past decade when a balance of payments crisis occurred. But this time there is a fundamental difference in that they have been accompanied by vigorous fiscal action in raising purchase tax and certain customs and excise duties. At the same time Government expenditure at home and overseas has been drastically reviewed. Such action is far more valuable than the exhortations to industry which have accompanied Government measures in the past unsupported by fiscal action.

The past year has been an eventful year also in regard to the foreign exchanges and foreign financial relations generally. The inflow of short-term funds attracted to London by the high money rates prevailing here, which was still continuing at the beginning of the year, was sharply reversed in March after the revaluation of the German and Dutch currencies. There followed a heavy drain on sterling due to the removal of hot money for speculation in other currencies on top of the current losses caused by the serious deficit in our balance of payments. The immediate impact was masked by the so-called Basle Agreement under which the principal European central banks agreed, in the interest of currency stability, to hold the sterling funds transferred to them without calling for repayment. This arrangement helped to meet the strain of the massive withdrawal of funds from London but it was, by its very nature, a temporary accommodation by the other central banks. Accordingly, in August the Government arranged to draw £536 million from the International Monetary Fund, which enabled the funds taken in by the European central banks under the Basle Agreement to be repaid. Meanwhile, the measures announced by the Chancellor of the Exchequer to strengthen sterling proved effective in stopping the outflow from London and £150 million of the drawing from the IMF has since been repaid. This was highly desirable as the drawing of £536 million had left the IMF with an insufficient margin of resources—particularly in European currencies—to meet all eventualities. A number of plans had been proposed to strengthen the powers and resources of the Fund and the one that emerged from the annual meeting of the members at Vienna in September proposed that the Fund should be empowered to borrow from countries with surplus reserves in order to give temporary assistance to other countries. This proposal was approved in principle and the detailed arrangements necessary are now being formulated.

GOVERNMENT'S ECONOMIC POLICIES

The decision of Her Majesty's Government to apply for entry, under suitable conditions, to the European Economic Community gives hope of closer integration with Europe in economic matters and, if President Kennedy can carry through his far-reaching proposal for more liberal tariff policies and perhaps some closer association between the United States of America and the countries of Europe, the vista is opened of a vast increase of international trade which should immensely increase the strength of the whole free world.

The year has therefore been marked by a number of developments aimed at securing closer financial and economic co-operation between the United Kingdom and Western Europe and eventually also the United States. These developments are all much to be welcomed as there is no future for any country in isolationism.

It is therefore all the more important that the Government should pay particular attention to the presentation of its economic policies. Those whose business regularly takes them abroad are continually finding that foreign financial authorities take a more pessimistic view of the future of sterling than we do ourselves. Needless to say we have ourselves been largely to blame for this, for we have, in the past, shown little sign of solving our balance of payments problem—possibly, and even probably, because governments have been too slow to take anti-inflationary measures and too quick to abandon them. But the present Government has decided to apply remedies which seem to be more appropriate to the disease and, moreover, has on the whole shown a clear determination to persevere with them. This being so, it should take more care about the presentation of its case and particularly in foreign countries. It can never, of course, prevent its political opponents from criticising its measures nor can it silence those correspondents who like to exaggerate this country's internal difficulties. But it should not be beyond the competence of the Government to counter this adverse comment. One of the most effective ways of doing this would be to avoid at all costs giving the impression of vacillation and of willingness to abandon a treatment just when it is showing signs of being effective.

Our balance of payments position and so our reserve position are both slightly improved, but, bearing in mind the outstanding credit from the International Monetary Fund, this process has a long way to go before we can afford to relax. Nevertheless, if the present sound money policy is continued, inflation and recurring crises in our balance of payments will become no longer the serious menace to all our activities which they have been in the years since the last war and, most important of all, the deficits on our trade balance can be held. Moreover, the halting of inflation will not prevent industrial expansion—indeed, to judge from the records of countries which have dealt with this problem, it is a necessary prerequisite of such expansion.

ALLIED RETAIL TRADES (LONDON)

THE CHAIRMAN'S STATEMENT

INCREASED TURNOVER AND PROFITS

The Fourteenth Ordinary Annual General Meeting of Allied Retail Trades (London) Limited was held in London on January 26th, **Mr W. Harold Martin,** chairman, presiding.

The following is an extract from his circulated statement for the year to October 1, 1961:

The group retail turnover was £3,810,528, an increase of £544,939 and more than a quarter of a million in excess of last year. We continue to expand and I have little doubt that the turnover next year will be in advance of £4 million.

I am pleased to report an increased profit at £181,032 as against £162,602 last year, an increase of £18,430, or some 11.4 per cent over last year.

During the year under review we purchased eight established branches and secured tenancies and opened nine new branches.

We have decided to recommend a final dividend of 15 per cent on the increased capital making a total of 21 per cent.

Our turnover during last year gradually increased throughout the year and shows every sign of continuing to do so. Therefore, provided nothing in the political world adversely affects our general position, we can look forward to a prosperous year with considerable confidence.

The report and accounts were adopted.

JOHN SUMMERS & SONS LIMITED

NEVER IN BETTER SHAPE

HIGHER PRODUCTION AND SALES BUT UPWARD TREND IN PROFITS CHECKED

INCREASE OF CAPITAL APPROVED

MR RICHARD F. SUMMERS ON THE OUTLOOK

The annual general meeting of John Summers & Sons Ltd., was held on February 1st at the Iron and Steel Institute, 4, Grosvenor Gardens, London, SW, **Mr Richard F. Summers,** chairman, presiding.

The following is the chairman's statement circulated with the report and accounts:

The year ended September last produced some marked changes in the economic outlook of the country and of the steel industry. In my last statement I indicated that there were signs of these changes on the horizon, and it was not long before we began to feel their effects.

It is unfortunate that the upward trend in profits which has been a feature for a considerable number of years has been checked, and that this year's figure shows a reduction of just over £1,000,000, but in view of all the circumstances I feel that the results should not be looked upon as unsatisfactory, for it must be remembered that in common with other steel makers we were adversely affected by an increase in the price of coal which became operative in September, 1960, an increase in wages which took effect from November, 1960, and finally the imposition of a duty of £2 a ton on fuel oil in the Budget in April.

The combined effect of these and one or two other items was to add something like £2,000,000 to our production costs. It is true that the Steel Board did agree to an increase of 1 per cent in the selling price in June last, but this only resulted in augmenting our receipts for the last financial year by some £130,000. Fortunately, however, despite a number of complications in the changeover from old to new methods of production, and one or two other difficulties which we encountered during the year, we did in fact increase our deliveries of finished steel by 27,000 tons.

A SATISFACTORY ACHIEVEMENT

In the circumstances I think we may consider this as a satisfactory achievement, for it must be remembered that we were passing through a year of intense competition both at home and abroad. There had been a very large increase in stocks of finished steel, and 123,000 tons of sheets were imported. These imports implemented commitments which had been entered into by some of our larger customers at a time when trade was booming and the motor and other sheet consuming industries were operating at a very high level. Unfortunately these imports and the withdrawal from stocks reduced the demand on home suppliers just at a time when their capacity was on the increase.

In trying to assess how in spite of these adverse factors we were able to produce and sell more of our sheets than in the previous year I can only assume that the majority of our customers, who have been dealing with us for very many years, were reasonably satisfied with the quality of our product and with our service. Undoubtedly we also benefited from the fact that we were able to offer a wide range of sheet and coil, covering not only the traditional qualities, but also our special sheets with various coatings—galvatite, zintec and stelvetite.

Modern trends in building construction are tending to require the use of more and more sheet steel, not only for external cladding and internal partitioning, but also for ducting for air conditioning, central heating and other services. This is encouraging; our coated sheets are particularly suitable to fulfil these needs, and I feel sure that we may look forward to a growing demand for them in the future.

FINANCE—INCREASE OF CAPITAL

I do not think I need comment on any of the items in the Balance Sheet or Profit and Loss Account as I feel that all the important points are clearly explained in the Report and notes on the Accounts. I would however wish to say something with regard to cash requirements and the capital structure of the Company. The developments at Shotton are now virtually completed, and there are at the moment no further large scale plans envisaged for those Works, but, as I mentioned last year, we are replacing a large part of the Shelton Works at a cost of approximately £18,500,000, a step which we considered essential if they were to remain competitive.

In the past we have financed a very large proportion of our capital expenditure out of our own resources, and it would be our intention as far as possible to continue this same policy in the future, but of course the extent to which we can do so must depend on the level of earnings over the next two or three years, for we are not unmindful of the interests of our shareholders, who quite naturally would expect us to pursue a reasonable dividend policy. Whilst we have arrangements for overdraft facilities with our Bankers and there is no immediate urgency, the Directors consider that in view of the overall commitments of the Company it may well be advisable at some appropriate time to raise some further capital. It is therefore proposed to hold an Extraordinary General Meeting after the close of the Annual General Meeting to seek authority to increase the Nominal Capital of the Company from £24,250,000 to £30,000,000.

On a major issue such as this we are naturally keeping in close touch with our Financial Advisers who have recommended the proposed increase in the Authorised Capital to which I have just referred, and they will advise us in the light of prevailing economic conditions when they think it appropriate for us actually to raise the new money, and the form the issue should take. I can assure you however that the Directors will not without further reference to Shareholders use any of this Authorised, but Unissued, Capital in a manner likely to affect the general nature of the business or the control of the Company.

I should like to point out, that even with this proposed increase in the Authorised Capital, the total will be comparatively small compared with the real value of the assets now employed in the business as a result of the way in which the Company has expanded since the end of the war. Capacity has been increased from 650,000 tons to approximately 2 million tons of ingots a year, and some £70 million has been expended on capital projects. If we had to start today from scratch to build a Works to make this amount of steel and convert it into the various products which we now manufacture it would undoubtedly cost two or three times as much.

FUTURE PROSPECTS. COMPETITION

Whilst the large capital expenditure at Shotton is virtually completed, we shall naturally be continually on the look out for any modern developments or additions which will increase our efficiency or help us to produce more economically. The introduction of oxygen in iron and steel making is just one of the matters which is being kept closely under review. We are undoubtedly in a highly competitive era, and the new strip mills coming into production in this country and

elsewhere make it essential for us to do everything we can to maintain and improve our competitive power.

We have always striven to operate our Company economically, and we believe that for its size the overhead charges are low, but this does not mean that we are necessarily satisfied; we shall go on looking to see where further economies can be made without impairing the efficiency of our organisation. Owing to the magnitude and complexity of some of the work that has been carried out, particularly during the last two or three years, it has been impossible entirely to prevent some temporary dislocations, with resultant increases in production costs. Now however that this work is finished and most of the initial difficulties have been overcome, even if the future order position may not for the time being allow us to take full advantage of the increased capacity, we are hopeful that provided we are not subjected to any financial impositions beyond our control our production costs will continue to show further improvement.

PRODUCTION RECORDS BROKEN

I am encouraged in making this statement by the fact that in November, 1961, production records were broken at Shotton in our blast furnaces, melting shop and rolling mills, which enabled us to achieve record deliveries. These record outputs and deliveries had a favourable effect on production costs, and have given a good start to the current financial year. It is disappointing that for the time being at any rate it looks as though market conditions may not allow us to continue operating at this level.

It seems clear now that the forecasts that the country would require an ingot output of 28 million tons by 1962 have turned out to be far too optimistic, and I think it may be some little time before this level of steel production will be required, with the result that we should not be justified in expecting our Company or the industry as a whole to be able to work to full capacity in the immediate future. If I am correct in this assumption then it is going to be the most economically operated Company that is likely to show the best results, and I am confident that now that the Works at Shotton have been completely modernised the Company's prospects should compare most favourably with any similar undertaking. The rate of our operations must of course depend on the requirements of our customers and their ability to increase the export of their products, and also on Government action with regard to hire purchase restrictions and Purchase Tax, which have such a big influence on the level of sales of consumer goods in the home market.

SELLING CONDITIONS

We realise that as far as selling is concerned the conditions that have prevailed virtually since the war have gone and are unlikely to return; therefore a much more intensified campaign is required in all markets. In view of this we have strengthened our selling organisation so that we may be in a position not only to look after our regular customers, but to go out and find new ones both at home and abroad. So far as export business is concerned it must be remembered that until quite recently there have been restrictions on the export of sheet steel, with the result that we have not been able to give our foreign buyers all that they would have liked.

Now we are faced with strong competition from foreign steelworks in practically all our traditional overseas markets. To meet this competition and to regain our proper share of the business the most intensive effort will be required. We feel sure that regular visits to our overseas customers by our selling and technical representatives will prove the most effective approach, and we intend to see that this policy is actively carried out.

COMMON MARKET

It now seems more or less taken for granted that Great Britain will at some time in the not too distant future join the Common Market, and there has been much discussion and speculation as to how this will affect the steel industry and its customers. I think it is true to say that the general view held by the industry is that it would be in the interests of the nation that we should join, and that if we did the steel industry would be able to compete successfully with the continental producers.

Discussions have been going on for some time as to what changes would be necessary if and when we join. It is clear that fairly drastic alterations would be required in a number of respects, especially with regard to pricing arrangements. Also consideration will have to be given as to how the Iron and Steel Board, the Restrictive Trade Practices Act and the central buying of certain raw materials by the British Iron and Steel Federation would be affected. These matters are at the moment being carefully considered by the Federation, and we are of course giving attention to our own position and trying to assess what alterations we shall require to make in our arrangements and organisation.

SUBSIDIARY COMPANIES

Shelton Iron & Steel Limited.—I explained last year why we felt it necessary to rebuild a large part of the Shelton Works, and events since have confirmed the wisdom of this decision, for it is even clearer now that in a few years' time the demand for many of the traditional products which Shelton are rolling today will have virtually disappeared. Good progress has been made on the preparation of the site, and a large part of the machinery is in the course of manufacture. Advantage has been taken of all the latest developments both of construction and design, and we are very hopeful that when the Works is completed it will represent the last word in what a modern small steelworks ought to be, with low production costs and capable of expansion if circumstances in the future should warrant it. The decision to modernise these Works has been very well received in the locality, and it is most gratifying to see the enthusiasm with which the officials there are tackling this development, which is of course vastly greater in its scope than anything with which they have had to deal in the past.

The financial results at Shelton, as at Shotton, were adversely affected by the increased costs of fuel and wages, and in common with other section rollers their order load fell away in the latter part of the year. In view of the difficulties the management need not be dissatisfied with the ultimate results.

Castle Fire Brick Company Limited.—I am glad to be able to report that all our Brick Works, both those making refractory materials and those supplying building and facing bricks, have been operating at full capacity throughout the year, and were successful in achieving a record profit. Last year we decided that wherever possible we would concentrate our production in fewer Works and install new machinery and labour saving devices; during the year satisfactory progress has been made along these lines. We are pressing on with this policy and look forward to further improvements in the future. We must congratulate the management of the Brick Works on their record year.

BOARD OF DIRECTORS

As stated in the Directors' Report Mr J. H. Pearce indicated his wish to retire in December last. He became a member of the Group when we took over the Wolverhampton Corrugated Iron Company in 1917, and was appointed a Director of the parent Company in 1931. All through these years his great knowledge of the industry was of inestimable value to the Company, and his charm of manner and scrupulous integrity made him a very popular figure with all those with whom he came in contact. We are very grateful to him for his friendship and his contribution to the Company's progress. We wish him well in his years of retirement.

CONCLUSION. TRIBUTE TO STAFF

In retrospect, last year was not an easy one for the reasons I have already mentioned, but a great deal of hard work was put in, and I wish to congratulate the Engineers and technicians who were responsible for the final stages of the developments at Shotton, and who succeeded in keeping interference with output down to a minimum. Praise must also go to the production people who did a fine job, at times under very difficult conditions.

The year however was not without its brighter side because we did in fact ship more finished steel than in the previous one, and the reduction in our trading profit of some 8 per cent, whilst to be regretted, is considerably less than some forecasters seem to have feared would be the case. As far as the future is concerned it is not easy to make any accurate prediction as to what the position over the next few months is likely to be.

It is difficult to see any spectacular improvement in demand in the immediate future, and we know that during the year the capacity for the production of flat rolled products will be increased, but earlier I referred to the fact that contrary to the general trend we had increased our deliveries last year and I suggested two or three reasons which I felt might have contributed towards this achievement. I see no reason why these factors should not continue to have an influence on the position during the current year, in which case I would expect that we should get at least our fair share of whatever business is available.

NEVER IN BETTER SHAPE

It is very easy when everything is going smoothly and well to believe that such circumstances will continue indefinitely. Conversely it is not easy during times of slack demand to realise that better times must surely lie ahead. Anyway, the Company has never been in better shape to cope with whatever problems it may have to face. Last year clearly demonstrated that we possess certain valuable advantages. We have first class equipment and loyal and efficient employees who have given the Company excellent service in the past, and on whom I know we can rely to do the same in the future.

The report and accounts were adopted and at a subsequent extraordinary general meeting the proposed increase of capital was approved.

COLVILLES LIMITED

STEEL PRODUCTION REACHES LOWER LEVELS

EFFECTS OF GOVERNMENT MEASURES

UNCHANGED PRICES IN FACE OF INCREASED COSTS CUT PROFITS

SIR ANDREW McCANCE'S REVIEW

The Thirty-first Annual General Meeting of Colvilles Limited was held on February 2nd at Glasgow.

The following is the circulated statement by **Sir Andrew McCance, DSc, LLD, FRS, DL,** chairman and managing director, for the year to September 30, 1961:

The strong demand for steel at the commencement of 1961 showed signs of weakening as the year progressed. Production by the end of the financial year in September had fallen to markedly lower levels. What might have continued as a relatively slow rate of decline was accelerated into a more rapid change by the measures the Government found it necessary to introduce to curb the increasing inflation which had become more and more serious as the year proceeded. These measures have had a marked effect on demand and at the present time production is only about 70 per cent of that at the beginning of the year. It is to be hoped that during the early part of 1962 indications of a recovery in the state of trade will be observable.

THE DIRECTORATE

I have received an intimation from Sir Frederick Rebbeck that he does not wish to offer himself for re-election at the end of his present term as a director. Sir Frederick has been a member of the Board for nearly 25 years and we are very sorry to lose his services as we have received from him always the most helpful advice and guidance.

Mr James Gibson has found it necessary for health reasons to relinquish his position as a special director. He has been associated with the company for 55 years and we greatly regret losing the benefit of his wide experience in steel manufacture.

I have pleasure in stating that the Board have appointed as special directors of the company Mr W. Banks, General Manager of Ravenscraig Works, and Mr. A. Young, General Manager of Clydebridge and Clyde Iron Works. They will both bring a wide experience of works management to bear on the operational control of our new developments.

With the large-scale developments now nearing completion much additional work has been thrown on the staff and employees in the Colville organisation. The Board are very appreciative of the excellent response which they have made to these new commitments and of the attention which they have given to the business of the company during a difficult time.

ACCOUNTS

The expenditure on capital account this year of £33,095,000 brings the total assets above £100,000,000 for the first time in the history of the company. This expenditure has been met by drawing on the Government loan to the extent of £15,000,000 and by raising approximately £15,000,000 from the market by means of a rights issue. This explains the large increase in the cash in hand which stands in the consolidated balance sheet at £8,762,000. The group however has still £61,000,000 to spend, of which £27,000,000 is committed in respect of contracts, so further drawings from the Government loan will be required.

I hope that the publication of the rate of interest (6⅛ per cent) and the amount of interest paid (£516,010) will make it clear that the Government's contribution to the financing of the strip mill project was in no sense a subsidy and not on the charitable basis alleged in certain quarters.

On the profit side, the striking feature is that in spite of an ingot production of 2,041,947 tons, only slightly different from the production of 2,056,467 tons last year, the trading profit has fallen to £10,892,508—a drop of £2,654,332 from the record figure of last year. This drop is in spite of the benefit of economies arising this year from improved plant and methods. The charge for taxation has been significantly reduced through the operation of investment allowances.

GROWTH OF COSTS

Without question, the reduction in profit was caused by continued increases in the costs of production during the year and by the reluctance of the Iron and Steel Board to pay adequate regard to those increases and to the responsibility which they carry when determining the selling prices of steel products. Against increases justifying a 3 per cent addition to prices, an increase of only 1 per cent was granted in July and this has caused a marked reduction in our trading surplus. Smaller margins reduce our ability to finance developments and in the long term will reduce our capacity to provide more employment.

The considerable expenditure on development has made it necessary to transfer £3,000,000 to the general capital reserve and it was thought advisable to add £2,000,000 to the general reserve.

The Board recommend that a final dividend of 10 per cent should be paid, making a total of 16 per cent for the year.

STRIP MILL DEVELOPMENT

The various sections of our 68" strip mill scheme have kept reasonably in step with the scheduled construction programme. Delivery of the main mill components has been in accordance with planned arrangements, but delays have taken place with some secondary electrical equipment, and a rearrangement of construction programmes has been necessary.

Some of these delays have been also due to labour disputes and so-called unofficial strikes. Most of the demands put forward in justification of these strikes are unrealistic—like the demand that Saturday should be a free day and Sunday work at double time rates should take its place. The impression remains that such demands are put forward knowing they will be refused: they serve the purpose of making difficulties and of impeding progress and Britain has suffered heavily in recent years from such tactics.

The Ravenscraig slabbing mill, which should have gone into operation in December 1961, is now expected to start in February 1962.

The strip mill should be in a position to start during the second half of 1962. The training of personnel is in active progress at the present time and this will ensure that the mill starts up with adequate and well-trained crews. It is a pleasure to acknowledge the assistance in personnel training which we have received from the Republic Steel Corporation in America and from our strip mill colleagues in the United Kingdom and abroad. All have been most generous with their help.

COLD REDUCTION MILL

Excellent progress has been made with the cold reduction mill at Gartcosh, which commenced production in December. We were offered and accepted an order to cold-roll hot strip from Russia for re-export to that country and this will help to improve the production load on our mill for the time being.

A team of technical managers has returned from a study tour of the plant and methods used for continuous galvanizing and their recommendations regarding the plant to be installed at Gartcosh will come up for consideration at an early date.

During the construction of the L-D plant at Ravenscraig, a patch of unexpected unsoundness was discovered in the site necessitating much additional piling. This difficulty has now been satisfactorily surmounted and progress is proceeding normally.

Negotiations for the installation of a second liquid oxygen plant of 200 tons per day capacity are under way with the British Oxygen Co. Ltd., who will operate the plant, and construction will be so timed that the additional output will be available when required. It will bring the total oxygen capacity at Ravenscraig to 400 tons per day.

DEVELOPMENT—OTHER SCHEMES

The 4-high plate mill at Clydebridge Works has proceeded according to the construction plan in spite of interruptions due to sporadic strikes which our sub-contractors have experienced. When completed, the capacity of this mill will enable a concentration of our plate rolling facilities to be carried out and bring about definite economies in production costs.

The new sinter plant at Clyde Iron Works is operating and the increase in the proportion of conditioned sinter added to the blast furnace burden has brought about a welcome reduction in the coke consumption.

After preliminary trials, orders were placed for the plant to apply oil injection to a blast furnace at Clyde Iron Works and it is now operating. If successful its use will be extended. This should achieve a reduction in our requirements of coking coal which has become increasingly expensive in Scotland in comparison with the price in other districts and in other countries.

In 1947 when the pits were taken over Scottish coal was competitive in cost and price with coal from other districts. In spite of the huge sums of money spent on mechanisation during the intervening years, the output per man employed was no better in 1960 than it was in 1947. This failure to improve productivity lies at the root of the economic troubles in the Scottish coalfields.

The universal beam mill at the works of the Lanarkshire Steel Co. Ltd. commenced operations in July this year. This mill has proved completely successful and the universal beams we are now able to roll have met with a ready welcome from all our customers. In this mill the rolling operation is fully automatic and investigation is under way to convert the cutting and assembly of the universal beams for customers' orders to a similar degree of automation. Meantime the state of trade for heavy sections has followed the pattern of other heavy steel products and the absence of major construction schemes in the Scottish area is also having its effect on the demand.

The hot blast cupolas at the works of the Fullwood Foundry Co. Ltd. are now in production although the completion of this scheme took longer than anticipated owing to delays in the delivery of components. It is too early yet to indicate the extent of the economies which will result from this plant, but the Board of the company have no doubt that when in full operation it will prove a real acquisition. I am glad to report further progress in the export business of this company.

DEMAND FOR SPECIAL STEELS

The demand for special steels which are mainly consumed by the motor industry, came under the same influences as heavy steel products and the output of The Clyde Alloy Steel Co. Ltd. during the past year has suffered some diminution. The company however had the advantage this year of operating the Hallside Works where new methods to facilitate production have been introduced.

New methods however take time to achieve their full advantage as operators have to acquire skill in their use and initial troubles with machines affected the first half of this year. These have now been overcome and there is every indication that the Hallside Works will amply succeed in the purpose for which it was reconstructed.

The remaining development in progress is the construction of the 80-ton electric furnace which should be in production towards the end of 1962. A substantial extension to the light casting department at Craigneuk Works was undertaken some years ago and a steady increase in production has followed its completion. In spite of the uncertain level of general trade, the production of light steel castings during the past year has achieved new records and this department has operated at almost its capacity during most of the past year. In the heavy foundry section, while the pressure of demand has not been so great and margins have suffered, a satisfactory level of production has been maintained.

BLANCHLAND FLUOR MINES

At our smaller subsidiary, Blanchland Fluor Mines Ltd., steady underground exploration has been proceeding for some years, and it is gratifying to record that large additional reserves have been located. There is every indication that the fluor is of excellent quality and a flotation plant for the production of high purity fluor is under consideration as there is an increasing demand for this grade at home and abroad.

As reported in 1959, the development of a limestone quarry at Shapfell was undertaken and the scheme is now well advanced in construction. The plant will be of the most modern type and in the layout attention has been paid to everything that would facilitate the efficient mechanised production and transport of limestone. This quarry will start operations during the early summer months. The Board have agreed to form a subsidiary company called Shapfell Limestone Ltd. to supervise and operate this extension. As finance for the scheme will come from the parent company as a development loan, it has been decided that Shapfell Limestone Ltd. will have a nominal capital of £100, all shares being allocated to Colvilles Ltd.

THE FUTURE

The efforts of the Board for some time have been directed towards modernising plant and methods for the purpose of bringing down production costs. As the older plant is reduced and a larger share of production comes from plant of recent design, opportunities for reducing costs become fewer and the possible savings are not so great.

When that stage is reached further increases in production costs whether due to fuel, wages, taxation charges, or other causes, cannot be balanced by production economies and must be reflected in increased selling prices or reduced margins. Policies which do not recognise this state of affairs stand condemned.

COMMON MARKET PROBLEMS

Unfortunately a reorientation away from the simpler association of costs and prices to less practical if more erudite economic theories seems to be fashionable at the moment and dangers to our trading results are already threatening. This is all the more to be regretted at a time when application by Britain to join the Common Market has been made.

On this matter some observations are necessary. There seems to be an idea, for instance, that the lower average rate of expansion during the past ten years in Britain's industrial production of 2.9 per cent per annum—the lowest of all European countries—will receive an immediate fillip when we come within the Common Market whose average increase during the same period was 6.4 per cent per annum, with Germany heading the list at 12.5 per cent. Such a conclusion is unwarranted. We can never move any faster no matter with whom we are associated until the basis of our own economy has been improved and until the mistake of placing heavy burdens on industrial costs has been recognised and put right.

The recent tax on fuel oil of 45s. per ton hits the steel industry particularly hard, coupled as it was with a refusal to give an opportunity to reduce costs by the use of imported coal. The chances of export orders for steel are further impaired when British coal has been sold to continental countries at prices substantially less than those charged to steel works at home.

BURDEN OF LOCAL RATES

Following the revaluation of our works, local rates paid by the Colville group have been increased by approximately £600,000 this year and when derating ceases, the aggregate increase will be £1,600,000 per annum, or more than 20s. per ton of steel despatched. Bearing in mind that in a works like Ravenscraig covering a large area we produce at our own cost all the electricity to light our roads which we maintain in repair at our own expense, that we are responsible for the supply of all the industrial water we use, and that we maintain a security force to guard the plant, it seems very unfair that the full extent of local rates should be charged to us.

Over the years the export record of the steel industry has been good. Such accumulating burdens however must gravely impede the progress of the export drive and weaken the efforts now being made throughout the country to correct the lack of balance in our external trade.

PROSPECTS

Regarding future prospects, when the large development schemes are completed and come into production they will bring about in time a considerable increase in the annual turnover. Given normal conditions of trade, with reasonable selling prices, the company can expect to derive substantial benefit from these extensions to its business activities.

A YEAR OF SIGNIFICANT NEW DEVELOPMENTS

Mr R. G. Soothill, Chairman of Turner & Newall Limited

The forty-second annual general meeting of Turner & Newall Ltd. will be held on February 22, 1962, at the Chartered Accountants' Hall, Manchester, when it is expected that **Mr R. G. Soothill,** the Chairman of the Company, will preside. The consolidated trading profit for the year ended September 30, 1961, was £14,778,690 (including £1,074,343 in respect of British Industrial Plastics Ltd. and Stillite Products Ltd. acquired during the year), compared with £13,636,555 for the year ended September 30, 1960. Mr Soothill's Statement to the Shareholders has been circulated to them with the Report and Accounts. The following is a condensed version of the Statement:

I wish to refer, with deep regret, to the death of Mr C. H. Glassey which occurred on July 3, 1961. He had been appointed to be a Director of Turner & Newall Ltd. on the acceptance of the offer made to the shareholders of British Industrial Plastics Ltd., when the latter company became a subsidiary. His death was a very sad blow to us all and represents a severe loss to British Industrial Plastics Ltd. and to the plastics industry as a whole.

REVIEW OF OPERATIONS

The financial year under review opened with activity in general trading fully equal to that experienced in the preceding year. This satisfactory trading level continued until the summer of 1961, when the effects of recent Government policy began to make themselves felt. As a result, the last quarter of the financial year was characterised by greater difficulty in maintaining the previous figures of turnover in the home companies and by continued pressure on profit margins. Overseas, the experience of our manufacturing companies as a whole was not unsatisfactory, while our mining operations yielded improved results. The net result of a varied experience shows a slight increase in the profit level achieved by Turner & Newall Ltd. without its recent acquisition of British Industrial Plastics Ltd. and Stillite Products Ltd., while the latter two companies have made an added contribution very much in line with what was anticipated.

The year has been unusually interesting in that it has seen the successful development of a number of significant schemes to the stage at which concrete results have been achieved. The following summary will illustrate the wide extent to which the financial resources of Turner & Newall Ltd. are being further deployed.

In the early part of 1961 we made an offer for the ordinary shares of British Industrial Plastics Ltd., which was supported by the Board of that company. The offer was accepted by the required majority of those to whom it was made, and British Industrial Plastics Ltd. subsequently became a wholly owned subsidiary of Turner & Newall Ltd. In addition, during the past financial year, we purchased Stillite Products Ltd., which manufactures mineral wool in various forms.

Looking overseas, a company has been formed in Australia to be known as Hardie-Ferodo Pty. Ltd., in which our good friends, James Hardie Asbestos Ltd., will be majority shareholders, but in which we shall have a substantial minority interest. The new company will manufacture and market in Australia friction materials for the automotive industry and for general engineering purposes.

After friendly and cordial discussions with the Premier of Eastern Nigeria and members of his Government, we reached agreement with them leading to the formation of Turners Asbestos Cement (Nigeria) Ltd., which is now erecting near Enugu a new factory for the manufacture of asbestos-cement products.

We believe that the problems now facing the Republic of South Africa will be overcome and have not allowed the present situation there to turn us from our policy of deliberate and steady expansion. We have recently announced our decision to expand our asbestos-cement manufacturing activities by transferring our operations to a new and larger factory in Durban. This development will be carried out by Turners Asbestos Products (Pty.) Ltd., a subsidiary of your company in which there is now a minority South African shareholding

In conjunction with Cement Ltd. of Dublin a plant to make asbestos-cement pipes is to be established in Eire. Turner & Newall Ltd. will hold one-third of the capital of this newly-formed company—Asbestos Cement Pipes Ltd.

I am sure that when you take into consideration all our new projects both at home and overseas you will agree that during the past year your Company has achieved much forward movement.

The establishment of new interests outside the United Kingdom in no significant way diminishes the capacity or the firm intention of Turner & Newall Ltd. to play its proper part in increasing the export of British-made goods. All our home manufacturing companies are continuing to pay the greatest attention to this task and in spite of unabated competition their combined export turnover this year has again shewn an increase. The task is not an easy one, but we are confident that our technical position and marketing experience will enable us to continue this progress and, in particular, we look on the possible entry of this country into the European Economic Community as an extension of the trading opportunities available to us.

MINING COMPANIES

Southern Africa

The combined results of our mining companies in Southern Rhodesia, the Republic of South Africa and Swaziland, were very satisfactory during the year ended March 31, 1961, both turnover and profit showing increases. It is impossible to forecast the nature and extent of problems which may lie in the future, but at the present time there is no reason to expect any substantial change in our mining situation. Price competition has increased, but we are in a position to face this with reasonable equanimity.

Canada

The impact of price competition is also very apparent in the Canadian asbestos mining scene and Bell Asbestos Mines Ltd. cannot escape its consequences, but operations continue on the enlarged scale referred to in my last Statement and, unless the competitive picture grows worse, there is no reason to suppose that the long-continued prosperity of this company will suffer any serious setback.

MANUFACTURING COMPANIES LOCATED IN THE UNITED KINGDOM

Turner Brothers Asbestos Co. Ltd. and associated companies

Total production and sales of Turner Brothers Asbestos Co. Ltd. again achieved new records. A slight decline in demand for some asbestos products for the motor trade was more than offset by an increase in the company's export trade to a new record level, despite keenly competitive trading conditions in European markets, where the largest increase in export turnover was nevertheless achieved.

In the fields in which its specialised insulation materials are employed, J. W. Roberts Ltd. achieved improved results, to which increased sales of its asbestos and glass reinforced technical plastics made a substantial contribution. Nearly half of this company's turnover was earned in export markets.

At Glass Fabrics Ltd., progress continued to be made in the technical problems relating to glass textile manufacture. In spite of a temporary check in the national demand for glass reinforced plastics, sales of glass textile products expanded during the year and demand was buoyant at the close.

Ferodo Ltd.

A small increase in turnover has been achieved in the past year in spite of the reduced level of activity in the motor industry. This results from successful trading in the home automotive replacement market, the cushioning effect of the company's diverse activities outside the automotive field, and another record year for overseas business.

Attention has been concentrated on the technical development of the brake pads used in disc brakes and on the expansion of the necessary production facilities. The winning car, whether British or Continental, in every major international event but one throughout the season, was fitted with our brake linings, an achievement which helps to sustain "Ferodo" as the best known brake lining in the world. Construction of the new factory for Ferodo Ltd. at Caernarvon (at a cost of approximately £2,500,000) is approaching completion.

Turners Asbestos Cement Co. Ltd.

During the year, demand for industrial, domestic and agricultural building materials has been well maintained and Turners Asbestos Cement Co. Ltd. has secured its full share of the market. This company supplies, under its trade marks "Everite" and "Turnall," not only the well known asbestos-cement roofing sheets but also many other asbestos-cement materials for building work, and pipes for carrying water, for sewage and for drainage. It offers a wide range of materials which provide the fire protection and thermal insulation which the architect requires.

Capital development continues; extensions are currently in hand at three of the company's factories and work is well advanced on the construction of the company's seventh factory, which is a new £1 million plant at Ditton in Lancashire.

The Washington Chemical Co. Ltd.

Newalls Insulation Co. Ltd. and Stillite Products Ltd.

Turnover in the chemical products of The Washington Chemical Co. Ltd. did not quite reach the level of last year's record figures. Extensions to the factory at Washington, Co. Durham, were well advanced by the end of the year, while additions to the research block will be completed in the current year.

In spite of the keenest competition, the contract turnover of Newalls Insulation Co. Ltd., differed little from last year's peak level. Profit margins in the insulation industry have been heavily cut, but Newalls Insulation Co. Ltd. receives the continued support of its customers, both at home and abroad. The company's range of manufactures of insulation products now includes "Newtherm" calcium silicate and glass fibre which supplement the magnesia and amosite asbestos range.

The acquisition of Stillite Products Ltd. will be of considerable assistance in the utilisation and marketing of fibrous types of insulation.

British Industrial Plastics Ltd.

This group of companies, which covers the broad field of the plastics industry, experienced a satisfactory year in which, despite more difficult trading conditions at home and overseas, turnover was maintained although profits were somewhat lower than the record level of the previous year. The moulding powders and specialised resins made by B.I.P. Chemicals Ltd. and sold under the trade marks "Beetle" and "Melmex" continue to be leaders in their markets; the plants which produce them are now being rebuilt and modernised to enable us to meet the steady growth in demand which we anticipate.

The engineering companies, B.I.P. Engineering Ltd. and B.I.P. Tools Ltd., both continue to be extremely active and both increased their turnover The capacity of both companies is being increased.

The production and sale of polyester resin glass fibre reinforced sheets have expanded rapidly. These sheets, which are marketed under the "Filon" trade mark, are available in a fully comprehensive range of profiles and have established an excellent reputation throughout the building industry. An increase in production capacity is at the planning stage.

The plastics moulding side of the B.I.P. Group, which includes "Gaydon" tableware, has been reorganised during the past year so as to concentrate trade moulding at Streetly and consumer goods moulding at Maryport.

MANUFACTURING COMPANIES LOCATED ABROAD

United States of America

Keasbey & Mattison Co., which now operates plants in six locations in the United States of America, had a rather more difficult year because of the less buoyant trading conditions and considerable pressure on selling prices throughout the American economy. Turnover was maintained but there was some reduction in profit figures because of lower margins and of the starting-up costs connected with the new pipe plant in Texas, which commenced operations in July. Trading conditions for the future promise to be rather better than those recently experienced.

Canada

The turnover of Atlas Asbestos Co. Ltd. increased significantly during the year under review. This increase was almost entirely due to the rapid expansion in the sales of asbestos-cement pipes, which are being produced in steadily increasing volume.

In recent months arrangements have been made, by the formation of a new trading company, Ferodo (Canada) Ltd., to relieve Atlas Asbestos Co. Ltd. of the specialised problems involved in the marketing of brake linings.

India

The prosperity of Asbestos Cement Ltd., which manufactures asbestos-cement building materials, is largely dependent on availability of asbestos fibre, its principal raw material, and this, in turn, depends upon the amount of foreign currency which the Government of India releases for the purpose.

In spite of mounting difficulty in this respect, and of the problems of distribution arising out of an over-burdened railway system, both turnover and net profit have increased.

There has also been a gratifying increase in both turnover and profits of Asbestos, Magnesia & Friction Materials, Ltd., whose operations at Ghatkopar continue to grow. Plans for a substantial enlargement of capacity, particularly for brake linings, are now coming to fruition.

The Republic of South Africa

I have referred earlier in this Statement to our plans for the expansion of Turners Asbestos Products (Pty) Ltd. Inevitably the current political uncertainty has held back the general economic development of the Republic of South Africa and consequently demand has been lower, competition greater, and the company's turnover and profit adversely affected—though only to a quite modest extent.

Federation of Rhodesia and Nyasaland

Political uncertainty has also reduced the turnover and profits of Turners Asbestos Products (Pvt.) Ltd., but the company is in an excellent position to improve its results just as soon as the political problems are overcome.

GENERAL

Dividend on Ordinary Stock

Your Board has pleasure in recommending a final dividend of 8 per cent on the Issued Ordinary Stock of the Company, making, with the interim dividend already paid, a total distribution of 12 per cent for the year. This is the same rate of dividend as for the previous year, but it is, of course, now payable on capital as increased by the issue of shares in part payment for the ordinary capital of British Industrial Plastics Ltd.

General Outlook

Stockholders will readily understand that, at the time of writing this Statement, uncertainty as to the short term economic outlook, in the United Kingdom and elsewhere, makes it impossible safely to estimate what our own experience will be in the financial year ending September 30, 1962. With its widespread interests, Turner & Newall Ltd. cannot detach itself from the fortunes of markets overseas or from the experiences of a wide variety of industries at home. Nevertheless, in both mining and manufacturing, our operating companies are, I believe, in a condition to meet all competition with confidence and, if the economic climate develops favourably during the course of the present financial year, we can hope for further satisfactory results even though the immediate picture may be somewhat less favourable. We shall, of course, continue our firm endeavour to increase our share in the total trade available, both at home and overseas.

THE TURNER & NEWALL GROUP

THE BRITISH OXYGEN COMPANY LIMITED

REVENUE WELL MAINTAINED

CHAIRMAN'S REVIEW OF PROGRESS

Extract from statement by **Mr J. S. Hutchison,** Chairman, to the seventy-sixth Annual General Meeting of members to be held on February 20, 1962.

BOARD

I am glad to be able to announce that Lt.-General Sir John G. Cowley, KBE CB AM, who retires as Master-General of the Ordnance on February 6th will join our Board thereafter and his appointment will come before you for approval at the annual meeting. His wide experience should enable him to take an important part in our councils.

PROFITS

The general picture of home trading was one of moderate sales expansion, and of further growth in costs particularly in the second half-year. Home profits were £7,033,598 against £7,385,743, before charging depreciation of £3,093,005 (£2,842,768).

Sales by our overseas companies were adversely affected by political and economic influences in some countries, and there was a general increase in costs. Profits were £6,802,339 against £6,877,221, before charging depreciation of £2,133,277 (£1,904,255).

FINANCE

Our programme of future capital expenditure may exceed the £40m. quoted a year ago. It covers, in roughly equal amounts, the expansion requirements of our general home business, the replacement of some of our older assets, the provision of special plants for the supply of industrial gases in tonnage quantities to the steel and chemical industries, and our needs for overseas development. Some additional finance will be required for this during the current year and we have arranged with our bankers for the amount we expect to need.

Additional permanent finance is likely to become necessary at a later stage, and this depends not only on completion of plans but on their timing. I expect to be able to state the position more definitely a year hence.

UNITED KINGDOM TRADING

Gases.—Sales advanced all round, with nitrogen and hydrogen making a better showing than expected, and argon and propane well ahead, helped by new arrangements for bulk supply in liquid form.

Tonnage oxygen.—We are now supplying the steel industry with tonnage oxygen from plants having a total capacity of 1,830 tons per day. These plants were built in our own workshops, with the exception of one made by a competitor which we agreed to take over from a customer and use along with our own plant to provide supplies on a more comprehensive basis. During 1961/2 we expect to bring into service further tonnage plants raising our capacity to 3,500 tons per day, and by the end of 1963 it will reach 4,300 tons per day.

User equipment.—Sales were fully maintained despite lessened activity in some branches of engineering, and included the first two of our very large Eagle computer-controlled flame cutting machines now installed in British shipyards and operating in every way up to expectation. At the other end of the scale, our newly introduced small Pug cutting machine has been an immediate success, with sales in the first few weeks running substantially above estimates.

Electric welding.—The market for electric welding products is fiercely competitive, with production capacity substantially in excess of demand. Techniques are changing rapidly and much technical skill has to be employed to keep in the van of progress.

Manual electrode and equipment sales were, however, practically maintained. Lower sales of automatic equipment were offset by improved semi-automatic sales where we gained a lead by using our versatile Lynx equipment in the new dip transfer process for welding 16/22 gauge sheet with thin wire, using CO_2. But there is little sign of expansion in the market, and our growth will depend on maintenance of technical leadership.

CHEMICALS DIVISION

Sales increased and profits were better than expected, although lower than last year. Melamine sales declined a little owing to competition from new capacity in all producing countries. We expect this situation to continue for a time but we look for improved demand in due course. Sales of Vandike vinyl acetate emulsions, on the other hand, improved substantially. In this most competitive business we have to be quick to develop new brands and to find new outlets.

The carbide and acetylene factory at Londonderry has completed a first full year's operation but the off-take of acetylene by our principal customer was less than had been expected, and, although there was steady improvement during the year, we finished up with a loss instead of the profit expected from fuller working. Sales have continued to rise, but we have now to face the unlooked-for burden of the 2d. per gallon tax on oil imposed in the last budget.

OVERSEAS

It gave us the greatest pleasure to welcome here for a conference in June, on the occasion of our 75th anniversary, the chairmen and chief executives of all our overseas companies. This was a unique occasion and proved to be of great interest and value to everyone who took part, strengthening greatly the ties and family spirit throughout the group.

Last year, Commonwealth Industrial Gases Limited was adversely affected in sales and profits by the economic measures enforced by the Australian Government. Prompt action was taken to meet the new situation, and the year ended with better results than at one time had been expected. The improvement continues and results may be fully restored this year.

In India, sales were helped again by the increasing rate of industrialisation, but profitability was modified by higher costs. We plan to extend our industrial gas capacity and to enlarge electric welding and equipment manufacture and, although there is growing competition, we expect to find full employment for our many units.

African Oxygen Limited had another good year. Extensions of industrial gas and electric welding capacity are in progress and we shall start manufacture of some lines of user equipment.

In East Africa and the Rhodesias sales and profits were good and would almost certainly have been better but for the political unsettlement.

Our other overseas companies, working in fluctuating markets and political conditions, progressed steadily.

RESEARCH

Research continues, guiding and improving our present activity, and pointing the way for the future. Our programmes cover many subjects and are under constant and critical review to ensure that we keep in the forefront of scientific development. Recent work on super-insulants is now being applied in the handling and storage at extremely low temperatures of hydrogen, helium and other gases in liquid form, with marked reductions in the evaporation losses hitherto experienced with these expensive products. Our recent purchase of Dupree Swift and Company Limited, manufacturers of special vessels for handling and storing cryogenic liquids, adds to our development in a field of growing importance.

TECHNICAL DEVELOPMENT

Our technical development staffs are now grouped together in new premises and are responsible for the applied work that links basic discovery and marketable products. An example is the introduction of the Eagle computer-controlled flame cutting machine which is far ahead of corresponding American, Russian and Continental work of this kind, and is arousing widespread interest. Again, in electric welding, the new Subare machine for automatic vertical welding of thick plates has been introduced with marked technical and economic success. Our position in automatic welding is increasingly recognised on the Continent, and leading manufacturers in Germany and France are now licensed to produce our patented electrodes. Our technical development work is wide in scope and plays a most important part in our service to customers. It will, I hope, be a means of extending our influence under Common Market conditions.

PROSPECTS

There have been great changes in the British industrial scene in a short time. Reductions in tariffs, the abolition of price agreements, technological progress and the transfer of production overseas, have sharpened competition, narrowed profit margins, and made it necessary to rationalise in many directions. One trade after another has sought to face the new situation by amalgamations and diversification, and many of our fundamental industries, already operating on bare profit margins, see little prospect of improvement under present conditions.

Is this then to be the state of preparedness for the Common Market with all the upset, as well as opportunity, it will hold? Are we as a nation confidently placed for entry to it if the negotiations succeed? The plain answer is that we are not, and that urgent steps are necessary to correct our recurring economic crises and to give constructive encouragement where it is most needed. We cannot afford to continue any longer with supposedly corrective measures that restrict essential and non-essential industry alike, or impose measures and taxes that increase the cost of living and generate further wage and salary demands. These in their turn push up costs and reinforce the inflationary spiral.

There is need to establish priorities. As I see it, apart from the obvious need for Government to contain its expenditure within budget income, this means stabilising the cost of living, encouraging essential industry, discouraging non-essential activities.

In our own affairs it is particularly difficult this year to assess the factors that will determine our results. Industrial gases will benefit from the price increase announced last May, and mainly introduced in October, and sales should advance again this year. Improved production and distribution arrangements should help to control increasing costs. The large increase in our tonnage oxygen capacity will bring its costs and, with steelmaking less active, revenue may be slower to grow than was expected. Chemicals, equipment of all kinds, new processes and applications, should do better.

There is an improving trend overseas but new economic or political features can be upsetting.

I believe that our profits are likely to be maintained in the current year, but that the figures would respond to any betterment in home trading conditions, or any easing of political or economic tensions overseas.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

22, Ryder Street, S.W.1.

PEACHEY PROPERTY CORPORATION LIMITED

The Annual General Meeting of the Peachey Property Corporation Ltd. was held on January 30th in London. The following are extracts from the statement by **Mr G. F. Farrow,** Chairman and Managing Director.

PROFIT GROWTH

★ Only three years have elapsed since the merger of the two main companies into the Group as now constituted and the increases in profits from slightly over £200,000 for 1959 to nearly £690,000 in 1960 and now to over £1,000,000 for 1961 fully indicate the investment and trading growth within the Group. Gross rents and services for the same period have increased from £1,081,000 in 1959 to £1,541,000 in 1960 and now to £1,888,000 in 1961. I believe that it is particularly important for shareholders to appreciate that the bulk of the increase in profit over last year arises from investment income. The Group profit for 1961 increased by no less than £325,000 over that for 1960.

PROPERTY PURCHASES

★ Due to competition and extremely high prices, your Board decided to bide its time on purchases, with the result that only a small amount of property was acquired during the financial year under review. However, despite sales, the Group has been able to maintain the total property figure in the Balance Sheet. I am pleased now to be able to report that since the close of the financial year the Group has purchased or contracted to purchase property for both trading and investment purposes for nearly £2,000,000.

CAPITALISATION OF RESERVES

★ The capital reserves of the Company now stand at a substantial figure in relation to the issued share capital. The true position of the shareholder should be better reflected by the nominal value of his holding than it is at present and the nominal value of each share held increased from 2s. to 5s. each, involving the utilisation of £3,150,000 of capital reserves to increase the issued capital from £2,100,000 to £5,250,000, and to consolidate and divide such capital into 21,000,000 Ordinary shares of 5s. each instead of the existing 21,000,000 Ordinary shares of 2s. each. Each shareholder's holding will remain numerically the same but will consist of shares of a nominal value of 5s. instead of 2s. each.

DIVIDEND FORECAST

★ With the further 15 per cent payment now proposed, dividends aggregating 38½ per cent will have been paid for this year. It would appear that the profits for 1961/62 should exceed those for the present year under review. I am therefore confident in forecasting, subject to unforeseen circumstances, a minimum dividend of 40 per cent (16 per cent on the proposed new capital) out of those profits. It is therefore proposed to pay an interim dividend of 15 per cent, less tax (6 per cent on the proposed new capital) on March 31st next.

FUTURE PROSPECTS

★ Your Board intends within the foreseeable future to hold and maintain a more balanced and diversified portfolio of property and with this end in view will take advantage of any suitable opportunities to develop and increase the Group's holdings of commercial property in association with The London Assurance. Preliminary negotiations for commercial sites have already commenced and it is hoped that some of these will mature in the near future.

The report and accounts were adopted and the Board's new capital structure proposals approved.

TANGANYIKA CONCESSIONS LIMITED

CAPTAIN CHARLES WATERHOUSE'S REVIEW

The Annual General Meeting of Tanganyika Concessions Limited was held on January 25, 1962, at the Head Office of the Company, Tanganyika House, Salisbury, Southern Rhodesia, **Captain The Right Honourable Charles Waterhouse, MC, DL,** The Chairman, presiding.

The Chairman addressed the Meeting as follows:

Your Company's financial year which ended on July 31, 1961, yielded a consolidated profit after taxation of £3,296,325. This figure may be compared with that of £4,451,766 for the year to July 31, 1960, the decrease being due to the smaller dividend paid by the Union Minière for the year to December 31, 1960.

Last year the Board recommended a final dividend of 2s. 3d. and I shall ask you to confirm their recommendation that the final dividend should be reduced to 1s. 9d. for the year under review. With the interim dividend of 1s. 6d. paid last June we arrive at a total dividend of 3s. 3d. for the year as against 3s. 9d. for the preceding year. In making this recommendation the Board, having regard to current events, are maintaining the conservative dividend policy which they have pursued in recent years.

When I addressed you at the Annual Meeting twelve months ago I stressed the overriding importance to our Company of the maintenance of law and order in the Katanga and expressed the belief that given a fair chance by the absence of hostile intervention from outside the Congo, the Katanga would continue its economic course.

The belief I then expressed has, I think, been borne out by the event. In spite of troubles early in 1961 in other parts of the Congo, the southern areas of the Province of Katanga, in which your interests lie, remained virtually undisturbed and production in the Union Minière mines and works continued according to schedule. Even the military operations by United Nations troops of August 28th and September 13th did not materially disturb mining routine, a clear proof, if proof were needed, that the local inhabitants are law-abiding citizens and that President Tshombe's government was working efficiently. It was at this juncture, September, 1961, that Mr Hammarskjold, unhappy at the course of events, decided to see for himself. He sacrificed his life while carrying out his duties. Had he survived and had an opportunity of personal contact with President Tshombe there is every reason to think that subsequent events would have been very different.

INTERVENTION OF UNO

This is not an occasion on which to attempt an assessment of the value of the intervention of the United Nations Organisation in the Congo as a whole. It may be fairly argued that large areas of the northern and western districts have reaped material benefits and that the presence of United Nations representatives prevented the establishment in them of a communist regime under Russian influence in 1960. It is, however, a fact that Katanga was at peace when the United Nations contingent were moved to that area. That those forces conducted themselves very much as units of an occupying army and thereby earned the resentment and even hatred of the civilian population, both African and European, is unhappily beyond dispute. This lack of understanding and accord was the root origin of the difficulties which led to the major offensive launched by the United Nations in December.

The contest then joined was of a completely new order. Not only was the fighting severe and casualties comparatively heavy, but sections of the foreign troops at times threw aside discipline and many innocent non-combatants lost their lives, including several senior members of the staff of the Union Minière. I should like, on your behalf, to offer sincere sympathy to the relatives of those who died in our service.

The fighting was specially fierce round the Lubumbashi smelter and some damage was done to that installation, which has been occupied by Ethiopian troops and consequently operations have been stopped since then. The mine at Kipushi was out of action for some days and the central block of Union Minière offices was also damaged.

All this took place in and around Elisabethville and once battle had been joined such events can be understood but it is difficult to find any reason or justification for the aerial bombardment of the railway sidings at Jadotville, 80 miles away. Much less can one understand the air attack on the Luilu works and the destruction of the oil tanks at Kolwezi, some 200 miles to the west and completely outside the trouble area. Compensation should be paid for this wanton damage inflicted by those whose duty it was to preserve order and to confine rather than to spread destruction.

POLITICS AND INDUSTRY

Our role is industrial and not political but politics nowadays are so vital a factor in industry that they may become the controlling influence. Such appears to be the case in the Congo today. Insofar as our advice has been sought our representatives have consistently advocated discussion and conciliation as a preliminary to the formation of a State embracing all Provinces of the Congo, including the Katanga. We welcome the friendly personal atmosphere in which the recent negotiations between Mr Adoula and President Tshombe at Kitona are reported to have been conducted and hope a mutually satisfactory conclusion may be reached. Unfortunately outside influences appear to have been at work and it is difficult to escape the conclusion that there are elements in the world today which are bent on the destruction of the Katanga under its present leadership and which would like to see it and its mines put out of action as a step towards the ejection of Europeans and especially of western influences from Africa as a whole.

Neither your Company nor the Union Minière have any reason to be ashamed of their record in Central Africa. Since the first decade of the century we have invested vast sums and have a right to expect a fair return on the investment. Africa as a whole is crying out for fresh capital and all those truly interested in the continent must agree that such capital is less likely to be forthcoming if existing enterprises are to be put in jeopardy and pioneers of the past pilloried today as exploiters of a "vested interest."

What of the future? The possibilities should be clearly envisaged, for the issue concerns not only the Katanga and the Congo but the world at large. It is reasonable to expect that the bitterness and dissension of recent months may be allowed to cool and the political structure to adjust itself, that the Union Minière will continue its work, producing raw materials for world markets, providing new capital for development, furnishing the exchequer with a considerable proportion of the money necessary to run the country, and offering citizens of the Congo State opportunities to earn in healthy surroundings. This surely is a prospect for which all men of good will should work and some events since Christmas give grounds for increasing confidence.

UNION MINIÈRE

Last October the Board of the Union Minière du Haut-Katanga decided that the results of operations during 1961 justified the payment of an interim dividend of 600 francs per *part sociale* during January, 1962, but indicated that it was not possible then to name a date for payment. The foreign exchange required has not yet been made available. Moreover, the dislocation and damage arising from the December fighting have added fresh problems. The Board of the Union Minière have therefore annulled the earlier resolution to pay the interim dividend, so that the position may be further examined. The dividend to be paid by Tanganyika Concessions Limited to which I shall ask you to agree today is based on the Company's results for the year ended July 31, 1961, and is therefore unaffected by this change.

As I have already said, copper production for the year has been satisfactory. The preliminary figure of output to December 31, 1961, was 293,500 metric tons, as compared with an actual production of 300,675 metric tons for the year to December 31, 1960. Copper prices on the London Metal Market varied between £248 17s. 6d. per long ton on May 24th and £216 12s. 6d. on January 12, 1961, which again compare with a high of £279 10s. and a low of £218 during the year 1960.

THE BENGUELA RAILWAY COMPANY

Let me now turn to the affairs of the Benguela Railway. During 1961 Angola had its major trials. Civil disturbances fostered by outside influences broke out in March but the timely action of the Angolan Government confined the troubles to a comparatively small area in the north of the country. Throughout 1961 the operation of the Railway was uninterrupted and the satisfactory results for the first nine months of the year tabulated in my review are a fair reflection of the workings for the whole year.

Gross receipts are likely to be fully up to the 1960 level but working expenses will be somewhat heavier. The actual profit earned during 1961 will, therefore, be less than that of 1960, but there is every reason to expect that the dividend of 12½ per cent paid last year will be maintained.

The Chairman of the Benguela Railway Company, Dr. Alexandre Pinto Basto, visited the line last autumn and the Managing Director, Dr. Manuel Fernandes, returned from a tour of inspection just before Christmas. Both were impressed by the work and spirit of the staff, were satisfied with general conditions and noted that rolling stock, permanent way and workshops are being maintained in the high state of efficiency which is normal on the line.

COMMONWEALTH TIMBER INDUSTRIES LIMITED

The Box factory and saw mills in the Port Elizabeth area of the Republic of South Africa owned by your subsidiary company, Commonwealth Timber Industries Limited, continue to be well employed, though profit margins remain small. An increase in the price of citrus boxes over the current season will be of assistance, as will the larger output of structural timber obtained as a result of the supply of a greater volume of larger diameter logs under the Company's timber contract with the Forestry Department of the Republic Government.

Work in connection with the erection of the new particle board plant by Novobord (UK) Limited at Thetford, in Norfolk, is progressing satisfactorily

I should like, on your behalf and on that of the Board, to express thanks for the loyal and admirable work carried out by the staffs of Tanganyika Concessions Limited and of its associated Companies. I think you would wish me to send a special message of appreciation to the staffs, European and African, of the Benguela Railway Company and of the Union Minière du Haut-Katanga, many of whom during the year have passed through periods of severe strain and of great anxiety in connection with their duties to their respective companies.

The Report and Accounts were adopted and the payment of the final dividend was approved. Dr. Alexandre Pinto Basto, Mr. Thomas Patrick Murray Cochran, Sir Mark Turner and Mr. Harry Frederick Oppenheimer were re-elected to the Board. It was decided that the place of Mr. Robert Clarke Hutchinson, who also retired by rotation, should remain vacant for the time being.

THE UNION DISCOUNT COMPANY OF LONDON

SATISFACTORY RESULTS IN DIFFICULT YEAR

MR ERIC O. FAULKNER ON SUCCESS OF BOARD'S POLICY

The annual general meeting of The Union Discount Company of London Limited will be held on February 28th in London. The following is the circulated statement of the Chairman, **Mr Eric O. Faulkner, MBE:** It has been a difficult year for your Company because for the second time in 4 years we have had to contend with an unusually high Bank Rate.

When the rates at which Discount Houses borrow money from the banks veer sharply upwards as a consequence of an increase in Bank Rate, such as was experienced in July when it rose by 2 per cent to 7 per cent, they inevitably suffer substantial losses on the bills they are holding. In addition the market value of their bonds falls heavily and suddenly.

It is at such moments that the state of their reserves must tell, and it is satisfactory to be able to report that, thanks to steps taken in past years, your Company was able comfortably to meet the "crisis" conditions of the summer. It has also of course received some relief from the reduction of Bank Rate to 6 per cent. before the end of the year.

The turnover in Treasury bills was a little less than last year, due mainly to smaller amounts of such bills being on offer and our year-end holding was therefore a little lower. This reduction was however partly offset by a rise in the total of Commercial bills discounted. There was only a slight reduction in our portfolio of bonds which is as usual shown at less than market value.

POSITION OF STRENGTH

The maintenance of our business in so difficult a year at the level which these figures reflect indicates the confidence which your Board and Management feel in our strength. There is, however, no room for complacency; it is much in our mind that in the present unstable state of the economy and with the Pound still vulnerable, we must continue to be prepared for sharp fluctuations in money rates from time to time.

While, therefore, we hope for an easier year in 1962, it will continue to be the essential basis of our policy that the volume of our business in general and the size of our bond portfolio in particular must be regulated by the adequacy of our reserves to meet the most arduous conditions which might be imposed upon us.

Your Board hopes that Shareholders will feel that the profits shown, though a little lower than last year, and well below those of our record year of 1959, are satisfactory considering the circumstances of the second half of the period in which they were earned.

I am sad indeed to have to report the death of Mr M. C. D. King, one of our Assistant Managers. He is greatly missed by all of us here and by his many friends in the Money Market.

Our Manager, Mr F. W. Arnold, had the honour of being elected Chairman of the London Discount Market Association during the year.

Once again I am delighted to have the opportunity of expressing our deep gratitude to our Management and Staff for their successful work in a trying year, and to our many friends for their continuing confidence in us.

WATNEY MANN
Limited

The Annual General Meeting of Watney Mann Limited was held on January 26th in London, Mr. S. H. Combe, M.C., Chairman, presiding.

The following are extracts from his statement circulated with the Accounts for the year to September 30, 1961:—

FINANCE

A scheme of arrangement to substitute for twenty-eight issues of Preference Stock, Loan Stock and Debentures of Subsidiary Companies, an issue of Debenture and of Loan Stock of the Parent Company has received the sanction of the Court. All the Stockholders of the subsidiaries will receive an increase in their income and hold more marketable securities of higher quality.

Group profit before taxation at £7,871,802 shows an increase of £887,492. The profit attributable to the members amounts to £3,910,996—an increase of £329,038. In view of the present financial climate, however, your Directors feel bound to recommend a final dividend the same as that for last year, namely, 12 per cent.

Under the Profit Sharing Bonus Scheme the Staff and Employees of the Group will each have received 32 days' pay. Governed as it is by the rate of dividend declared on the Company's Ordinary Stock, this remains unaltered.

With outstanding commitments for capital expenditure of £3m., it is no longer possible to finance our expansion from our own resources. Your Board are therefore making arrangements to raise sufficient cash to meet present requirements by an issue of Debentures.

TRADE

The year has been one of consolidation. The structure of our Free Trade Sales organisation has been recast into five zones, each under a Sales Manager, and centred on London, Manchester, Northampton, Norwich, and Trowbridge. This has been made necessary, not only by the heavy demand for Draught Red Barrel and for our four national bottled beers, but also because of the importance we attach to promoting the sales of local beers.

The provision of adequate production capacity, particularly for Draught Red Barrel, has involved considerable capital expenditure on the breweries of Phipps at Northampton, Ushers at Trowbridge, and Wilsons at Manchester. Some of the benefits of this reorganisation are reflected in the Accounts for the year; further expenditure in the near future is expected to bring a further increase in profits.

WATNEY MANN (NORWICH) LTD.

Since the end of the year we have completed negotiations to purchase a brewery in Norwich from Morgans Brewery Company Limited. Brewing in Norwich will enable us to offer even better service than before to our bottlers and to our other outlets in this area. Arrangements have also been made for Draught Red Barrel, Watneys Brown Ale, and Red Barrel Ale in bottle to be sold where demanded in Steward & Patteson's and Bullard's houses. The creation of Watney Mann (Norwich), the company formed to carry on this trade, and the acquisition of Coca-Cola Eastern Bottlers at the same time is a logical continuation of our policy of relieving the pressure on our production capacity by decentralisation, and these companies should prove a valuable addition to the Group.

PUBLIC HOUSES

The efforts we have made in the last few years to improve the amenities of our houses seem to be earning their reward. In our opinion "the local" has never before been so widely accepted as a pleasant place in which to meet friends and to drink, eat, and relax in leisure time.

During the year we opened 17 new houses of which nine were on entirely new sites and eight were houses rebuilt on old sites. In addition extensive alterations were completed at 27 houses.

MOTELS, GARAGES AND FILLING STATIONS

The Group's policy of widening its service to the public has been implemented by the formation of two new companies—Watney-Lyon Motels Limited to consolidate our interests in motels and Swift Garages Limited to centralise the management of all the existing and potential garages and filling stations within the Group.

WINES AND SPIRITS

Once again I can report an increase in the turnover and profits of our Wine and Spirit subsidiaries. The rise in turnover was at the same rate as in previous years—a most noticeable feature was the considerable increase in the sales of Continental table wines.

We have made further successful efforts during the year to promote the sales of our own brands; amongst other things we inaugurated a series of wine tastings for the public in our houses.

Our sales of Squires Gin, both of the original and of the new straw-coloured brand recently introduced and appropriately called "Cornhill," have been very satisfactory.

COCA-COLA SOUTHERN BOTTLERS LTD.

Coca-Cola Southern Bottlers Limited, our subsidiary company formed to acquire the franchise for bottling and distributing Coca-Cola in the southern counties of England, is now making a satisfactory contribution to Group profits. Sales are rising rapidly and have so far overtaken the productive capacity that the need for a fifth factory is now urgent. New premises are being sought so that this can be brought into operation in the spring of 1963.

The report was adopted and the conversion of the £1 Ordinary Stock units of the Company into four shares of 5s. each was approved.

RANKS LIMITED

EMPHASIS ON QUALITY AND SERVICE

MERGER WITH HOVIS-McDOUGALL

Extracts from the Review of the Chairman, The Lord Rank, J.P., presented at the 29th Annual General Meeting held on 31st January in London

"As always we have continued to place great stress on the standard of quality and service," comments Lord Rank in reviewing the Group's activities in the year to September 2, 1961.

I am happy to have an opportunity to welcome new shareholders to an enterprise whose products now include virtually every foodstuff made wholly or partially from wheat. Companies in our group manufacture flour both for the baker and for the housewife: many varieties of bread, confectionery, biscuits, health foods, rusks and animal feeding stuffs. Through our mills, bakeries and factories, we are now represented in every town of any size all over the British Isles.

CAPITAL EXPENDITURE

There has been further progress in the concentration of flour milling into a smaller number of fully modernised units working nearer to full capacity than was practicable with the larger number of smaller mills in operation. This has involved capital expenditure on reconstruction and re-modelling of well-situated older mills and it has involved some sacrifice of capital value on the closing of mills before they were worn out. Other aspects of capital expenditure have been the expansion by the acquisition of further companies engaged in the food trade; during the year 63 businesses engaged in activities similar, or ancillary to those of the group have been acquired at a cost of £1,181,997.

At the date of the balance sheet there were commitments for capital expenditure amounting to approximately £3,900,000.

SATISFACTORY MILLING RESULTS

With so many flour millers holding such strong opinions, I should like to repeat what I said last year, that it is indeed a tribute to the goodwill and common sense which have prevailed under the changed conditions of the industry that the trade as a whole has operated in a satisfactory manner. In the nature of things, with varying prices of wheat, there are fluctuating results throughout the year, but in general terms I can say that the milling results have been satisfactory. Your Group has continued to reap the benefit of concentration and reorganisation referred to.

PROGRESS IN BAKERY MODERNISATION

We have continued our policy of modernising existing bakeries in very much the same way as with the flour mills; this policy has enabled us to close out-dated bakeries.

Acquisitions during the year have been made after the most careful thought and planning, having regard to the location of our own mills and sources of supply and to distribution of population now and prospectively.

BLUE CROSS ANIMAL FEEDING STUFFS

This year, as well as other recent years, has been a period of expansion and development in the application of science to the feeding of livestock. We have made further progress in feeding stuffs sales, and it is creditable that this has been achieved in the face of keen competition. Our close scientific control and expert advice to the farmer has been a strong factor in this.

RANKS (IRELAND) LIMITED

The conduct of milling in the Republic of Ireland presents a difficult problem. The native wheat crop creates a field of variation almost unknown throughout the world and with the uncertain factor as to how much will be suitable for manufacturing into saleable flour the directors of Ranks (Ireland) Limited, in conjunction with the other millers in the Republic, have always endeavoured to co-operate with the Government in finding a way of meeting these difficulties.

The results of the trading have, however, shown a considerable recovery after the poor results of the previous year.

MANAGEMENT AND STAFF

Mr D. W. Nutting, appointed Secretary of Ranks Limited last year, has this year become a Director of Joseph Rank, Limited, and his place as Secretary of that company has been taken by Mr B. B. Mill, DFC. Mr Charles Norman, CBE, has retired from the active management of the Animal Feeding Stuffs Division, but I am happy to say he is continuing as a full time director of Joseph Rank, Limited. Mr W. H. Denning has succeeded to the management of the Animal Feeding Stuffs Division.

To all employees I and my colleagues desire to record our thanks for the spirit of progress and co-operation which has existed throughout this year, as heretofore, and which we are sure will continue in the future.

The schemes for the recruiting and training of future managers have already shown good results.

CONCLUSION

Throughout the Group we have a continuing development programme, and as always we have continued to place great stress on the standards of quality and service. Wherever we have control over costs we are continually making efforts to reduce these by the introduction of new methods.

We have therefore made, and are making, considerable investment in modernisation and we face the years ahead confident that this will keep the Group in the forefront in the various fields in which we operate. The current year has started well and we look forward to another satisfactory year.

THE FINANCIAL YEAR
(Ended September 2, 1961)

Trading profit (subject to Depreciation, Interest and Taxation)	**£12,044,951**
Depreciation	**£3,404,537**
Interest	**£625,259**
Taxation	**£4,020,354**
Group Taxed profits (£69,173 more than a year ago)	**£3,994,801**

The final dividend is 9 per cent making 14 per cent for the year.

Merger with Hovis-McDougall Limited and change of name to RANKS HOVIS McDOUGALL LIMITED

Lord Rank referred to the announcement that the offers to acquire all the issued capital of Hovis-McDougall Limited had been accepted by the holders of over 90% of both the Ordinary and the Preference capital of that Company.

Lord Rank explained that the offers had, therefore, become unconditional subject only to The Stock Exchange granting permission to deal in and quotation for the shares of Ranks Hovis McDougall Limited to be issued pursuant to the offers and to the requisite resolutions to give effect to the merger arrangements, including the change of name of the Company to RANKS HOVIS McDOUGALL LIMITED, being passed at meetings following the Annual General Meeting.

At subsequent class and extraordinary Meetings of Ranks Limited the above-mentioned resolutions were duly passed.

Members of Hovis-McDougall Limited who have not already accepted the offers may do so until further notice.

BIRD & CO. (AFRICA) LIMITED

The forty-fourth Annual General Meeting of Bird & Company (Africa) Limited will be held on February 24th at Tanga, Tanganyika.

The following are extracts from the circulated statement of the chairman, **Sir Charles Ponsonby, Bart, TD, DL**:

The Net Profit before taxation is £210,486 compared with a Profit of £393,879 for the previous year.

Dividends totalling 10 per cent have been declared for 1960/61, compared with 17½ per cent plus a bonus of 2½ per cent for the previous year. There may be disappointment at the result for 1960/61, but it will be recalled that I sounded a note of warning with my last Statement. Drought conditions in late 1960 and early 1961 were serious, and crops fell short of estimates. In addition, since January, 1961, prices have declined seriously and on average the Company is receiving, at the time of writing, about £16 per ton less for sisal than at that time. Tea prices have also tended to fall.

Furthermore, in reducing the dividend, the Directors considered it advisable to conserve cash resources as far as possible to cover normal rotational costs, replacement of machinery, and contingencies. This is especially necessary when there has so far been no sign of recovery in the price of sisal.

SISAL

At the beginning of 1961 the price of 3L sisal, now regarded as the standard grade, was quoted at £99 per ton, c.i.f. UK. Unfortunately it has declined steadily until the price at the time of writing is £78.

This has come at a time when growers' costs of production have been steadily rising, and the sisal grower is not in the fortunate position of being able to pass on increased costs to buyers.

A consistent rainfall makes all the difference to production. As a result of the serious drought during the year 18,105 tons were produced against an original estimate of 20,000 tons. A drought such as that recently experienced affects production for a year or two, and it would be optimistic to say that recovery will fully take place in 1962.

Whilst this statement was in preparation, the news arrived of torrential rainfall throughout Tanga Province with a serious hold-up in production. It is hoped that the ultimate benefit of the rain will be to enable production to be stepped up to a more reasonable level in 1962.

TEA

The crop of made tea for the year was 482,956 lbs. against an estimate of 500,000 lbs. It is reasonable to estimate a production of about 450,000 lbs. for 1961/62, rising to over 600,000 lbs. in 1962/63, and about 1 million lbs. in 1963/64.

There is no reason to doubt the completion of our first objective of 2,000 acres of planted tea by 1964/65. This will require additional factory accommodation, but given stable prices and stable labour conditions, we can look forward to Kwamkoro Estate being the valuable proposition that was originally envisaged.

Some reorganisation of manufacturing methods has resulted in improved quality and consequently satisfactory sales prices in recent months; indeed they compare favourably with those of similar good types of Legg Cut Teas in South India

RADIO RENTALS LIMITED

EXPANSION OF BUSINESS CONTINUES

MR P. PERRING-THOMS ON GROUP'S STRONG COMPETITIVE POSITION

The twenty-fifth Annual General Meeting of Radio Rentals Limited was held on January 31st in London, **Mr P. Perring-Thoms** (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

The year 1961 is one to be remembered by the Television industry in that it marked the Twenty-fifth anniversary of the inauguration of Television in this country by The British Broadcasting Corporation. It is also twenty-five years since your Company, Radio Rentals Limited, was formed.

TRIBUTE TO STAFF

Surveying the developments and progress that have been made since 1930, I know that these would not have been possible without the able assistance of all staff employed within the Group. Twenty-five years ago they numbered under 300; we now employ over 5,300 and it will, I am sure, interest you to know that in spite of loss of staff during the war, to date presentations of gold watches have been made to 63 men and women, who have served the Company for twenty-five or twenty years respectively. It is our constant endeavour to encourage good employee relationship throughout the Organisation and in this connection we have recently improved the Company's Pension Scheme and have contracted out most of our employees from the State Graduated Scheme introduced in April, 1961.

I, and my colleagues on the Board, desire to pay tribute to all our employees and I feel sure that it will be the unanimous wish of the Shareholders that I, on your behalf, extend to them our very best thanks for their faithful service throughout the years and particularly during the year under review which has been a difficult one not only for our Group but for the industry as a whole.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The Group Trading Profit for the year ended August 31, 1961, amounted to £6,612,458, an increase of £776,490 over the previous year.

After charging all expenses and the sum of £805,652 for Taxation compared with £728,124 for the previous year, the net profit of the Group is £1,570,401, which is very similar to that of last year. After deducting pre-acquisition profits and outside shareholders' interests the amount available for appropriation is £1,647,128 (£1,673,880).

The Directors have transferred the sum of £300,000 to General Reserve so bringing it up to a total of £3,500,000 in the Consolidated Balance Sheet. This Reserve has been built up out of profits to be available for any emergency in an industry which, as we all know so well, is subject to rapid and sometimes spectacular change.

Whilst your Directors do not foresee undue difficulties in providing for any change in the existing 405-line standard in Television that may be recommended by the Pilkington Committee and accepted by the Government, they consider it right and proper to make provision for any unforeseen development which may take place. Therefore, in addition to the transfer to General Reserve, the Directors have transferred the sum of £700,000 to Contingencies Reserve to meet the possibility that in the future certain television sets may have to be scrapped before their full cost has been depreciated, or the possibility that the rate of depreciation may have to be accelerated.

The Dividends on the Preference Shares have been paid. As regards the Ordinary Shares, your Directors recommend the payment of a final dividend of 10½d. per share, making with the interim dividend of 3d. a share paid in June, 1961, a total distribution for the year of 1s. 1½d. per share. This compares with a total distribution of 1s. per Ordinary Share for the previous year.

AUSTRALIA

In the Accounts under review the results of fourteen months' trading of the Australian subsidiary, Radio Rentals Pty. Limited, have been included. As a result of development costs having been written off during that period, this company has not materially contributed to the profits of the Group, but I am pleased to be able to report that it continues to develop satisfactorily and I reiterate my Statement of last year that it is an important part of the expansion of our Group.

REFRIGERATORS

In my Statement last year I mentioned the pilot scheme for the rental of Refrigerators. We have made reasonable progress in this connection and look forward with confidence to further expansion of this side of our business. It is the policy of the Board continually to investigate other fields where renting and servicing could be carried out profitably.

FUTURE PROSPECTS

Since the close of our financial year on August 31st last, the number of new subscribers obtained to date is comparable with the number for the same period last year. I regard this as satisfactory, especially in view of the increased competition, and the fact that many of our competitors have been able to purchase surplus stock at bargain prices for renting. Because the Group manufactures all its Television and Radio Sets through Baird Television Limited we have temporarily lost the advantage that normally accrues to us by making our own products for rental. However, I am pleased to say that the heavy stocks held by manufacturers and retailers have now been considerably reduced. We are continuing to expand by opening new branches, so providing more outlets for the products of the Group.

In conclusion I would say that we are well placed to take full advantage of any improvement in general trading conditions in that we have the organisation, experience and resources available. Therefore, although costs are continuing to rise and competition is keen, which inevitably brings about a drop in the profit per subscriber, with the continued growth of subscriberage, I look forward to the future with confidence.

The Report and Accounts were adopted.

MONTAGUE BURTON LIMITED

RECORD TRADING PROFIT IN 60th YEAR
COMMON MARKET OPPORTUNITIES WELCOMED
MR LIONEL JACOBSON'S STATEMENT

The Thirty-second Ordinary General Meeting of Montague Burton Limited was held on January 30th at the Registered Office of the Company.

Mr R. M. Burton (the Deputy Chairman) presided.

The Secretary (Mr H. V. Evans, FCA, FCCS) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman circulated with the report and accounts:

This year is a landmark in the history of the Company in that it is my privilege to report on the results for the 60th year of trading.

I have pleasure in stating that the Group has again improved on the figures for the previous year and returned a record trading profit of £4,438,950 which compares favourably with £3,914,492 for last year. Providing that you approve the dividend now recommended there will be left an amount of £1,146,869 to add to Group reserves.

In previous years I have emphasised how rapidly this Group reacts to the pattern of the National economy. This year was no exception; turnover in the first six months showed a marked increase but tended to level out towards the close of the year. A moderate increase in distribution costs was accompanied by the adoption of the 42-hour week throughout the fourteen Works of the Group. The combined efforts of management team and labour force failed to avoid a minor decline in works output and there was an attendant rise in costs. Despite these adverse factors increased turnover enabled your Group to absorb them and maintain the upward trend of profitability.

We have the support of a very loyal public which we believe to be the outcome of offering the best possible value in a garment which is a combination of the customer's individual requirements and the style conception of a team of designers who travel the world to keep ahead of current style trends. This emphasis on style, coupled to the customer's individual need, places a heavy burden on the manufacturing side of the organisation. Every suit made to measure has, over the entire 60 years of this organisation, been individually hand-cut by a cutter apprenticed and experienced in the trade.

Trade to date has been maintained and your directors adopt a cautious but confident view with regard to the immediate future.

CURRENT EFFORTS

Currently, our efforts are concentrated on maintaining the outstanding position that the Burton Company commands, whilst simultaneously we are endeavouring to expand the capacity of the Associated Companies. The problem of the Common Market has not escaped our attention, and in fact has occupied much of our time. Should the national decision be taken to join, personal enquiry into trading conditions and terms in Europe leave us confident of our ability to compete in that area. It will undoubtedly be some time yet before the position is clear cut but in the meantime I feel that you might like to know that my colleagues have paid several visits to the Continent and we look forward to the opportunity that such a challenge would present.

On June 12, 1961, I announced that instructions had been given for a complete revaluation of freehold and leasehold properties now appearing in the Group accounts at £14,320,267, after depreciation. Messrs Healey & Baker valued these properties on September 1, 1961, at £47,073,450 excluding the value of leasehold properties where the lease expires within 75 years. There is, therefore, a surplus of assets over book values of £32,753,183, to be added to capital reserve already standing in the accounts now presented at £4,928,025.

It is, therefore, now proposed to issue as fully paid from these reserves three Ordinary non-voting class "A" shares for each Ordinary and "A" Ordinary share now held. The result will be to increase the issued Ordinary Capital of the Group to £17,833,304. This should not, of itself, be taken as an indication of larger future dividends.

NEW CAPITAL

The expansion of this Group since 1946 has been financed from its own internal resources. New capital introduced even then was negligible. Expansion of the last few years has been rapid as evidenced by the increase in trading profits and dividends.

Acquisition of properties; trading interests and manufacturing units; rebuilding and credit operations have since 1953 cost approximately £16,000,000. The entire chain has been modernised and works maintained in a high state of efficiency. The market value of Group shares improved approximately 15 times over the same period.

We have over this period of expansion enjoyed the full and understanding co-operation of the Group Bankers, but, having regard to the opportunities which we believe the future will present and to our current financial position it is clear that we must bear in mind the introduction of new capital. We have not as yet decided which form this is to take, and your directors feel they would prefer the economic situation to clarify before reaching a final decision.

THANKS TO DIRECTORS AND STAFF

My warm thanks are again due to my colleagues and the personnel of the entire Group for their willing support in what has again been a successful year. It is perhaps opportune for me, at the conclusion of this sixtieth year of our history, to express a particular word of appreciation for the spirit of co-operation which exists throughout the factories and shops of the Group. This co-operation has made it possible during recent years to improve the benefits and welfare activities for which we have long had an excellent reputation. It is felt that the annual cost of Bonus Schemes, Pension Benefits, Christmas and Long Service Awards amounting this year to £761,000 is both deserved and appreciated.

The Report and Accounts were unanimously adopted. The Directors retiring in accordance with the Articles of Association were re-elected to the Board. The Auditors, Messrs Price Waterhouse & Co. and Messrs Volans, Leach & Schofield continue in office.

The Meeting concluded with a vote of thanks to the Chairman.

APPOINTMENTS

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited for the post of LECTURER OR ASSISTANT LECTURER IN ECONOMICS. Salary in scale £1,050 x £50—£1,400 x £75—£1,850 p.a. (Lecturer); £800 x £50–£950 p.a. (Assistant Lecturer), with F.S.S.U. and Children's Allowances. Applications should reach the Registrar, The College, Keele, Staffs., from whom further particulars and application forms may be obtained, not later than March 3, 1962.

THE UNIVERSITY OF SUSSEX

Applications are invited for the CHAIRS OF ECONOMICS, GEOGRAPHY AND FRENCH from 1962.

The salary will be not less than £2,600 p.a. plus family allowance and F.S.S.U. benefits.

Further particulars may be obtained from the Registrar, University of Sussex, Stanmer House, Stanmer, Brighton, to whom applications should be sent by February 28, 1962.

UNIVERSITY OF ABERDEEN

DEPARTMENT OF AGRICULTURE

Applications are invited for appointment as JUNIOR OR SENIOR RESEARCH FELLOW for two years at an annual salary of £950 to £1,700, depending on qualifications and experience. The Fellow appointed will be expected to review, from an economic standpoint, scientific literature on Pig Production Problems.—Further particulars are available from the Secretary, Marischal College, Aberdeen, with whom applications (two copies) should be lodged before February 5, 1962.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF ORGANISATION OF INDUSTRY AND COMMERCE: LECTURESHIP

Applications are invited for the post of LECTURER in the above Department. In addition to undergraduate and post-graduate work in Industrial Organisation, the department conducts advanced courses and research in Management Studies.

Candidates should hold good qualifications in Psychology, Economics, Commerce, Industrial Sociology or an allied field; a basic training in psychology is desirable and industrial experience would be an advantage.

Salary Scale £1,050 x £50 to £1,250; Bar: £1,300 x £50 to £1,400 x £75 to £1,850 per annum, with placement according to qualifications and experience, and with superannuation benefit and family allowance where applicable. The successful candidate will be expected to take up duty as soon as possible after April 1, 1962, and not later than October 1st.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving the names of three referees, should be lodged not later than February 10, 1962.

CHARLES H. STEWART,
Secretary to the University.

January, 1962.

CAMBRIDGE UNIVERSITY

Applications are invited for the position of ASSISTANT IN RESEARCH in the Department of Estate Management. Applicants should be qualified to undertake research in economic, legal or social problems related to the use, tenure, or development of land. Salary scale £750–£1,000.—Further information may be obtained from the Secretary of the Board of Estate Management, 18a Silver Street, Cambridge. Closing date for applications, March 1, 1962.

CITY OF LIVERPOOL EDUCATION COMMITTEE

COLLEGE OF TECHNOLOGY

BYROM STREET, LIVERPOOL, 3

Principal: S. A. J. Parsons, B.Sc.(Econ.), M.I.Mech.E., M.I.Prod.E., M.B.I.M.

Applications are invited for the following appointments:

(A) HEAD OF THE DEPARTMENT OF NAVIGATION, GRADE IV.

Duties to commence on September 1, 1962. Salary: £2,230 x £60 to £2,410 per annum.

(B) HEAD OF THE DEPARTMENT OF INDUSTRIAL ADMINISTRATION AND LIBERAL STUDIES, GRADE III.

The successful applicant will be required to lecture on "Management Principles and Practice."

Duties to commence on April 1, 1962, or as soon as possible thereafter.

Salary: £2,050 x £60 to £2,230 per annum.

Application forms (returnable by February 12, 1962) and further particulars from the Director of Education, 14 Sir Thomas Street, Liverpool, 1.

THOMAS ALKER,
Town Clerk.

UNIVERSITY OF GLASGOW

RESEARCH FELLOWSHIP IN MATHEMATICS

Applications are invited for a RESEARCH FELLOWSHIP IN MATHEMATICS. Salary scale: £800–£950 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than February 28, 1962, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

WOOLWICH POLYTECHNIC

LONDON, S.E.18

Principal:
Harold Heywood, D.Sc., Ph.D., A.C.G.I., Wh.Sch., M.I.Mech.E., M.I.Chem.E.

Applications invited for a Senior Lecturer in Economics. Applicants should have high academic qualifications in Economics; and/or teaching will be an added advantage. The duties of the post will involve teaching Economics (Principles and Applied) to Final B.Sc.(Econ.) and post-graduate management students. The successful applicant will be encouraged to undertake research into various aspects Business Economics.

Salary £1,800 — £2,000, plus London Allowance £45 — £60.

Particulars and application form from Clerk to Governors, to be returned by February 16, 1962.

For further appointments and other classified advertisements see pages 473 and 474

UNIVERSITY COLLEGE OF SWANSEA

DEPARTMENT OF ECONOMICS

Applications are invited for the post of RESEARCH ASSISTANT in connection with studies in the History and Organisation of British Overseas Trade. Applicants must be graduates in Economics or Economic History. Salary in the range £500 — £700 per annum together with F.S.S.U. Benefits. Duties to commence April 1, 1962, or as soon as possible thereafter.

Further particulars can be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received by *Saturday February 24, 1962.*

COMPANY AFFAIRS

After last week's shake out in the London stock market equities have been in much better form this week but gains have not been sufficient to offset earlier losses and over the week The Economist *indicator lost 3.6 points to 357.0. Gilt-edged stocks too have been brighter on hopes of an early cut in Bank rate and the "shorts" have attracted bank buying. In equities brewery shares were particularly weak at the end of last week on reports of a fall in beer consumption but they steadied later and tobacco shares have recovered some of their earlier sharp falls. Steel shares have moved erratically but fell back on Wednesday following the annual meetings of South Durham and Dorman Long.*

Dour Prospects for Steel

THE impact of under-capacity working on the current profits of the steel industry and the possibility of some revival in demand has elicited further comments from the spokesmen of the industry in the supplementary remarks they made to shareholders at this week's annual general meetings. There was little of cheer in Sir Walter Benton Jones' last statement as chairman of United Steel for he warned shareholders that there was likely to be a surplus of capacity for "some time to come." But he expected some recovery in the level of production before the end of the financial year. Uncertain prospects form the background to the directors' decision to defer part of the company's development programme. Expenditure which under the original scheme would have reached a peak in the current year is now expected to total about £20 million, as it did in 1960-61, and it will fall below this level in 1962-63. Thus for "the time being" Sir Walter expects that the reduced rate of expenditure can be financed by the company's own resources and bank facilities. Yielding 6 per cent at the current price of 40s. 6d. the £1 shares may hold out the prospect of some recovery in the months ahead.

The demand for steel is not likely to improve until the current financial year, ending on September 30th, is well advanced and the chairman of South Durham, Mr B. Chetwynd Talbot, is content to say that "the view is widely held that it may well be the second half of the year before substantial increase in demand manifests itself" without indicating whether he agrees with this view or not. But he added that he thought decisions about steel prices, as a result of the current negotiations with the Iron and Steel Board, will be made before very long. If it is thought that this review will lead to higher steel prices then anticipation of the increase could be the first influence in checking the current de-stocking. But, as Mr Chetwynd Talbot said, the existing price structures will rule for much of the current financial year when production will be at a reduced level. South Durham's results will depend not only on an early increase in steel prices but on a return to fuller capacity working. These uncertain prospects are reflected in the yield of 10.8 per cent offered by the £1 shares at 18s. 6d.

The chairman of Dorman Long, Mr E. T. Judge, was equally cautious, for his supplementary remarks at the annual general meeting refrained from specific comments about the prospects for recovery later in the year. Instead, he confined himself to the immediate and depressing facts. In the last few weeks, Dorman Long has been forced to close some plants and to lay off some labour, and while the structural fabricating shops have remained fairly busy the "present low order books" in structural engineering generally, Mr Judge says, look "ominous." Like other steel producers, Dorman Long has had to rephase its development programme, spreading expenditure over a longer period than was originally intended. Temporary borrowing facilities will take care of finance "for the time being," but Mr Judge recognises that eventually recourse will have to be made to long term finance. At 24s. the £1 shares yield 8¼ per cent.

Richard Thomas and Baldwins' decision to dismiss 1,500 men at its Ebbw Vale strip plant and to close one of the three blast furnaces there has been followed by news that its small Stourvale sheet-coating plant will be shut down. These moves show that the industry is trying to cut costs to match the fall in demand. RTB insists that the changes at Ebbw Vale are not intended to reduce output further, despite the approaching completion of the Spencer strip works nearby; by using sintered ore in the two blast furnaces remaining, as much iron can be made as the three blast furnaces produce today.

Turner and Newall

EXACTLY a year ago Turner and Newall announced its intention of drawing on its huge cash resources by its combined share and cash bid for British Industrial Plastics. Nevertheless at September 30th last the group still held about £25 million in liquid form and capital commitments of £4 million are handsomely covered by the current cash flow of £8 million a year. The bulk of this sum is committed to the completion of the new Ferodo factory at Caernarvon and the construction of a £1 million factory for asbestos cement. Overseas there are reports of new ventures in Australia, Nigeria and Dublin and the expansion of asbestos cement manufacturing activities in South Africa but there is nothing in Mr

Price (£1 shares): 54s. 4½d. Earnings yield: 9·40%,
Dividend yield: 4·4%. equal to 10·6 years' earnings.

R. G. Soothill's statement to suggest to shareholders that the liquid resources (equivalent to about 10s. 3d. a share) are to be invested to boost the group's earning capacity.

The inclusion of profits of £1,074,000 from British Industrial Plastics and Stillite (makers of mineral wool) raised consolidated trading profits from £13,637,000 to £14,779,000 in the year to September 30th. The group's traditional manufacturing and mining operations added only £68,000 extra to profits. It is a familiar story: fiercer competition and continued pressure on profit margins. But with the recession in the motor industry covering much of the financial year even the small increase in profits is not to be despised. In fact a fall in demand for some asbestos products at home was more than offset by an increase in exports. Ferodo, manufacturing brake and clutch linings, also achieved record sales abroad while a healthy replacement demand cushioned the effects of the turndown in the motor industry at home. As expected, the demand for asbestos cement from the building industry was well maintained and its uses and applications continue to grow. Sales of chemical products were hit by keen competition in the export markets and profit margins were cut. BIP's first trading year in the new group was not an easy one but the chairman is confident that collaboration between this and the older sections of the group's business will "undoubtedly strengthen our activities in fresh as well as existing fields of manufacture."

For the current year Mr Soothill is reticent about the group's prospects in view of the "uncertainty as to the short term economic outlook" but he says that "the immediate picture may be somewhat less favourable." Not surprisingly the £1 shares are close to their 1961-62 low and at 54s. 4½d. yield 4.4 per cent. This is below the average yield on leading industrials of just over 5 per cent and reflects expectations of normal growth to match Turner and Newall's past record.

British Oxygen

THE full report from British Oxygen suggests that the pressure on margins, which was growing in 1961, will become even more severe this year. Shareholders might have been looking for some improvement in the year to September 30th next, if only because of higher prices for industrial gases introduced in October and of the marked rise in fixed and working assets employed by the group, which more than absorbed the £12¼ million rights issue in October, 1960. But all that the chairman, Mr J. S. Hutchison, says is that profits are likely to be maintained in the current year, though he adds that they would respond to "any betterment in home trading conditions or any easing of political or economic tensions overseas."

The group's capital expenditure may, however, eventually amount to more than the £40 million envisaged a year ago. The growth in capital expenditure comes at an awkward time, for under-capacity working in the steel industry will put a brake on the increase in revenue from BOC's heavy investment in tonnage plant. The cash flow may therefore be inadequate to meet BOC's financial needs. Immediately, the banks will help, but Mr Hutchison says that additional permanent finance may become necessary at a later stage. Presumably any new issue by BOC will have to wait for clear signs of recovery in the

demand for steel. By then, however, the demand for tonnage oxygen may have abated; Mr Hutchison says:

> Much of the immediate potential for oxygen in steel-making in the UK is now provided for, and there may be levelling off in new business of this kind over the next two or three years. Other tonnage uses are slow to develop, although they may become important later, and there is intense competition for available plant business which is at present predominantly for export.

The ordinary dividend of 10⅜ per cent is equivalent to the 16 per cent paid in 1959-60 before the rights and scrip issues and is covered 1¾ times. The shares now stand at 14s. 6d., barely above their lowest point for 1961-62, and yield 3.7 per cent. This is in accord with the past facts of expansion by the British steel industry and BOC. But does it not assume too readily that the future will be equally as bright? It seems possible that BOC will be earning a lower rate on the capital it employs not merely in the current year but in some of the years to follow. BOC must, moreover, raise new money—if not this year, then next. The stock market, certainly, has changed its view about BOC's growth prospects. The question is: has it changed this view radically enough?

Cable and Wireless (Holding)

THE preliminary results of Cable and Wireless (Holding) contained no surprises. The ordinary dividend has been maintained at 10 per cent on the increased capital. The growth in C & W's income, one of the biggest investment trusts in this country, was not so rapid in 1961 as in 1960; net earnings after tax rose by 14 per cent from £1,022,000 to £1,161,000 compared with an increase of 21 per cent in 1960. As in the past C & W has retained a bigger proportion of its earnings than is usual for an investment trust and the dividend is covered 1¼ times; this in fact understates the cover as earnings on C & W's 50 per cent stake in the unquoted Cables Investment Trust, whose book value was written up in 1960 by £4,665,000 to £6 million, are not consolidated.

Investments at book value rose last year from £22.9 million to £25.4 million, reflecting the investment of the proceeds of the rights issue, while at market values they rose from £42.3 million to £49.1 million. At the end of 1960 only 2¼ per cent of C & W's portfolio was in fixed interest securities, but when the 1961 accounts are published next week they may well show a slightly higher proportion. Investment trust managers are showing signs of some disenchantment with low yielding equities—none more so than the Scottish American Investment which in the last two years has cut the percentage of its funds in equities from 88½ to 73 per cent. Its chairman, Mr Arthur Blair, says that industry is finding it difficult to earn profits in Britain and in the United States and this provides an unfavourable background for equity investment. If this is so, the 5s. shares of Cable and Wireless at 16s. 6d. yielding only 3 per cent may not be wildly attractive, particularly if there is to be no scrip issue this year. The yield on C & W is in line with the returns offered by other leading investment trusts, but this trust is more deeply committed to equities than most others and its gearing is lower.

Aveling-Barford

AFTER seven lean years of falling profits Aveling-Barford, manufacturers of road and building equipment, enjoyed a rise of 52 per cent in gross profits in 1959-60; the year to September 30, 1961, was much less spectacular as the burden of bank overdrafts, reflecting higher stocks, raised the interest charge from £36,000 to £102,000 and left gross profits almost unchanged at £700,000, against £696,000, even though trading profits before all charges had risen by 13 per cent. However, the chairman, Mr Edward Barford, seems confident about the future and his statement should do much to allay any concern about a balance sheet which reveals an increase in bank overdrafts from £948,000 to £1,910,000 in spite of the rights issue that raised over £1.1 million in May. Much of the money has been absorbed by stocks, which rose from £4,247,000 to £6,029,000, but net fixed assets are also higher at £2,174,000, against £1,565,000.

Mr Barford says that the immediate prospects for the two principal manufacturing subsidiaries are hopeful and though sales of light constructional equipment were hit by the little budget the outlook is now brighter. Overseas subsidiaries are penetrating new markets and apparently making good progress, and the shortage of components which hindered domestic production in 1959-60 now appears to be less critical. Mr Barford says that the accumulation of stocks reflected this earlier shortage as well as the higher level of activity and the near-completion of contracts at the end of the financial year. He expects stocks and bank overdrafts to be considerably reduced and capital commitments at end-September amounted to only £125,000. For the first three months of the current year sales were slightly higher and profits for the full year are expected to be at least up to the level of those in 1960-61.

Last May ordinary shareholders received a one-for-fifteen scrip issue as compensation for the enfranchisement of the "A" shareholders and there was a one-for-one rights issue of 5s. shares at par. The interim payment of 7½ per cent on the smaller capital and the final of 10½ per cent make the total equivalent to 14 per cent on the bigger capital, compared with 9.8 per cent in 1959-60. The cover has fallen from 2.2 to 1.6 times; the 5s. shares at 12s. 6d. yield 5⅓ per cent, compared with 6½ per cent a year ago.

THE MONEY MARKET

THE discount houses raised their agreed bid by a further 4d. to £98 13s. 10d. at last Friday's Treasury bill tender, following an increase of 8d. in the previous week. The average rate of discount fell by 1s. 4.29d. to £5 4s. 10.06d. per cent, bringing the fall over the two weeks to 3s. 7.97d. per cent. The market received 61 per cent of its application last Friday compared with an average allotment of 68 per cent a week earlier.

This sharp fall in the bill rate encouraged the feeling in the City that a fall in Bank rate was close. This week, however, the Bank of England's open market policy has become markedly more vigorous. On Monday one or two houses were forced to borrow a small amount at Bank rate, and on Tuesday a large amount had to be taken by seven or eight houses out of the twelve.

In New York this week the US Treasury increased the number of Treasury bills on offer by $100 million in an attempt to push up rates and narrow the covered margin, then around ¼ per cent, between British and United States Treasury bills. The rate for three months bills in fact rose from 2.688 to 2.705 per cent.

APPOINTMENTS

ECONOMICS

WITH STATIST.CS SOC OLOGY PSYCHOLOGY

A degree in one of these disciplines and, if possible, some related experience in analytical work, together with an ability to work hard, will qualify you for an interesting post in

THE RANK ORGANISATION

Write, with a full note of your qualifications and experience so far, to The Personnel Adviser (E102), The Rank Organisation, 11 Belgrave Road, London, S.W.1.

THE IRISH MANAGEMENT INSTITUTE

invites applications

for a new position

Deputy Head of its Management Development Unit

The person appointed will engage in the organisational and instructional activities of the Management Development Unit (MDU) which is the educational arm of the Institute.

Salary of the order of £2,000 per annum will be paid.

Candidates should preferably be in the age-group 28-35, have had business experience and, with training, be capable of instructing in and developing the principles of marketing at *management level, to line with the needs of* Irish business. The post will carry opportunities for further study in marketing at home and abroad.

A university degree is desirable.

The Institute also offers an appointment for *a period of from* one to two years as

Research Assistant

The person appointed will be responsible, under the *Head of the MDU, for carrying out* a research survey in depth of Irish managerial resources, which is being undertaken by the Institute.

The salary will be not less than £750 per annum.

Candidates should have a university degree and preferably be in the age-group 24-30. Experience in research is desirable.

Applications, giving full details, should be submitted not later than February 9th to The Director, Irish *Management Institute*, 32 Leeson Park, Dublin 6.

THE UNIVERSITY OF ALBERTA, CALGARY

invites applications for a position in the Department of Political Economy as follows:

An Assistant or Associate Professor of Economics, at a salary between $7,800 and $10,000, depending upon experience and qualifications. The applicant should be prepared to instruct in money and banking and public *finance, or international trade.*

Appointments will be effective September 1, 1962. Applications for the position above should include a recent photograph or snapshot, a curriculum vitae, transcripts of record from universities where degrees were obtained, and the names of three references, and should reach the Department before March 15, 1962.

EXPORT MARKETING TO EUROPE

Company interested in expanding its export sales with special emphasis on the new Europe, require a young man who could work out a sensible marketing approach to this problem.

This position is not for a man to work with many in a large company, but for someone who is interested in an individual approach, working in a smaller company.

Graduate in either economics or commerce, or with equivalent qualifications. Preferably with some experience in industry or commerce. Age group 25-30 years.

Starting salary around £1,200 p.a.

Applications giving details of qualifications and experience to Box No. 1587.

SECRETARY required, Knightsbridge district, for Managing Director of British agency of major German industrial concern. Must be of British origin but fluent German speaker. Good salary for suitable applicant for this permanent position.—BOX NO. 1586.

SKELMERSDALE DEVELOPMENT CORPORATION

Skelmersdale, Lancashire, has been designated as a new town to take overspill population from Liverpool and Merseyside. The development corporation will require these officers:

CHIEF FINANCE OFFICER, who should be a Chartered Municipal Treasurer, Chartered or Incorporated Accountant or Certified Accountant, or have equivalent qualifications. Wide and varied experience in commerce or *in public service is required.*

Salary £2,700-£3,400. Contributory pension scheme.

CHIEF ENGINEER, who should be a corporate member of the Institution of Civil Engineers and/or the Institution of Municipal Engineers. Applicants should have wide experience of *large-scale engineering works especially* in the fields of sewerage and road construction.

Salary £2,700-£3,400. Contributory pension scheme.

Applications, giving date of birth, education, qualifications and experience, and the names of two referees, should be made by March 9, 1962, to the Chairman, Skelmersdale Development Corporation, c/o The Secretary, Ministry of Housing and Local Government, Whitehall, London, S.W.1.

AREA POLITICAL EDUCATION OFFICER required for political organisation. Applicants should preferably be University graduates between 25 and 45. Commencing salary according to experience and qualifications, not less than £750.—Write to Conservative Political Centre, 32 Smith Square, London, S.W.1.

NORTHAMPTON COLLEGE OF ADVANCED TECHNOLOGY

ST. JOHN STREET, E.C.1

Application to Ministry of Aviation, EST. (TD2), Room S 34, Shell Mex House, Strand, W.C.2.

CONSTRUCTORS JOHN BROWN LIMITED

require a

MATHEMATICIAN, AGE 25-35

with a good degree in Mathematics and suitable industrial experience.

He will work in association with process plant design teams, and duties will include formulating engineering problems mathematically, the application of statistical and numerical techniques, and channelling work to the appropriate computing centre.

This is a permanent senior post carrying a good salary, and there is a Pension Scheme with Life Assurance benefits.

Please apply, giving brief details, to:
The Personnel Manager,
Constructors John Brown Limited,
CJB House, Eastbourne Terrace,
Paddington, LONDON, W.2

quote reference No. N9522

BBC requires Thai Programme Organiser (British subject). Duties include planning and production of broadcast programmes and supervision and co-ordination of duties of programme staff concerned with translation and broadcasting of news bulletins, talks, commentaries and feature programmes in Thai. Essential qualifications include definite interest in and knowledge of international affairs with special reference to South-East Asia, organising ability, sense of news values and wide cultural background. Experience of journalism, production and planning of broadcast programmes, ability to write for broadcasting, *recent knowledge of Thailand are considerable* advantages. Knowledge of Thai desirable but successful candidate must, in any case, be willing to study the language in order to become reasonably fluent. Salary £1,555 (possible), higher if qualifications exceptional rising by five annual increments to £2,000 p.a. max. Requests for application forms (enclosing addressed envelope and quoting reference 62/G.43 E.C.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

QUALIFIED ACCOUNTANT

A vacancy exists for a Chartered or Certified Accountant to be responsible to the Chief Accountant of a Company operating a large haulage fleet and shipping and forwarding services.

The post offers considerable opportunities for initiative and there will be scope for assuming greater responsibilities in the future.

The Company has progressive policies and good conditions of employment.

Applicants should be between 26 and 32 years of age. Some years of commercial experience is essential and some knowledge of mechanised accounting methods is desirable.

Applications in writing, marked 2K2, should be addressed to:—

The Personnel Officer,
London Carriers Ltd.,
Surrey House, Scarbrook Road,
Croydon, Surrey.

IRELAND AND THE COMMON MARKET

A large and progressive Irish Company manufacturing industrial products used extensively by consumer goods industries, is planning to build up a substantial export trade to Continental Europe.

The company requires a YOUNG, EXCEPTIONALLY ABLE AND ENERGETIC MAN to open up the European market for its products. Fluency in the French language is essential and at least some German. Experience is desirable, but not absolutely essential. The applicant must have the ability to obtain during his training period a complete grasp of production techniques and costings so that he can exercise full initiative in marketing the company's products. The right man will have no difficulty in commanding a generous salary. Applications for this important position, with full details of age, qualifications and experience (if any) should be sent in confidence to:

THE ECONOMIST INTELLIGENCE UNIT OF IRELAND LTD.,
37 Fitzwilliam Square, Dublin, 2,
who are acting in this matter for the company in question.

BIRMINGHAM REGIONAL HOSPITAL BOARD

REGIONAL TRAINING OFFICER

This appointment is required for the organisation of the training of administrative and clerical staffs of the hospital service in the region and in particular for oversight of trainees selected under the centrally organised training scheme. Later the duties of the post may be extended to cover training of other staff. Candidates (both from within and outside the hospital service) should show that they have suitable educational and other qualifications to enable the duties of the post to be adequately discharged. Salary at the assistant Secretary grade (£1,560 x £52·10 to £1,820—£1,872). Applications, naming three referees, to Secretary, RHB, 10 Augustus Road, Birmingham, 15, by February 28th.

For other appointments see pages 466 & 473

UNIVERSITY OF GHANA

DEPARTMENT OF ECONOMICS

Applications are invited for the posts of (a) SENIOR LECTURER (considerable teaching or research experience essential) and (b) LECTURER or ASSISTANT LECTURER (special interest in Economic Theory required).

Salaries: Senior Lecturer, £G1,750 x £G75—£G2,200; Lecturer, £G1,050 x £G60—£G1,400 x £G75—£G1,850; £G1,900; Assistant Lecturer, £G600 £G850. 20 per cent addition for non-Ghanaians. Entry at appropriate point. Appointment normally five years in first instance.

Outfit allowance £G60. Car allowance £G150 p.a. Family allowance for non-Ghanaians for each child in West Africa £G50 p.a. or, if under age of 21 and being educated outside West Africa, £G100 p.a. (maximum five children). Part furnished accommodation at charge not exceeding 7·5 per cent of salary. F.S.S.U. policies maintained if already held, or superannuation on similar basis.

Passages for appointee and family on appointment and normal termination. Annual leave with three overseas return passages in every four years for non-Ghanaians and one every three years for Ghanaians.

Applications (four copies) with full details of qualifications, experience, etc., and naming three referees, to be sent before March 1, 1962 to the Registrar, University of Ghana, P.O. Box 25, Legon, Ghana, or to the Assistant Registrar (London), University of Ghana, 15 Gordon Square, London, W.C.1, from either of whom further information may be obtained.

ECONOMIST, 45, Oxford graduate, wide experience of industrial and financial research, seeks position with progressive firm.—Box 1585.

BUSINESS AND PERSONAL

EASTERN EUROPE

We invite enquiries from Companies seeking expansion of their interests into the countries of Eastern Europe. Our study group will provide detailed statistical information and allied services. Please write to EAST-EURO RESEARCH, 47 Worcester Road, Sutton Surrey.

SALVAGE OF THE ABU SIMBEL TEMPLES

GOVERNMENT OF THE UNITED ARAB REPUBLIC
MINISTRY OF CULTURE AND NATIONAL GUIDANCE

In compliance with UNESCO'S campaign, the Government of the United Arab Republic hereby announces that Tenders will be invited for the Project of Saving the two Temples of Abu Simbel from being inundated at the filling of the Reservoir of the High Dam now under construction near Aswan.

The Temples have elaborately decorated facades and contain several large halls and rooms, all excavated out of sandstone rock *in situ*. The Project will comprise the separation from the rock of two large sandstone blocks, each containing one of the Temples, and their subsequent elevation by means of hydraulic jacks to a level above the future Reservoir water level.

The works to be carried out under the Contract will comprise:

1. Construction of and dewatering inside a cofferdam of about 400 m. length and about 34 m. height.
2. Excavation, without the use of explosives, of about 350,000 cu. m. of rock situated above, around and underneath the Temple blocks.
3. Strengthening of the rock by anchor bars and prestressed steel cables in drill holes of about 30,000 m. length.
4. Emplacement of the Temple blocks by about 50,000 cu. m. of reinforced concrete structures, partly prestressed.
5. Vertical lifting, about 65 m., of the Temple blocks by the use of hydraulic jacks with a total capacity of about 450,000 tons.
6. Construction, simultaneously with the lifting, of about 250,000 cu. m. of supporting concrete structures.
7. Re-establishment around the Temples in their elevated position of a sandstone hill, similar to the existing hill and containing about 6 million cu. m. of rock fill, covered with about 30,000 cu. m. of concrete or masonry.

Construction work is scheduled to start in March, 1963. Preparations for the lifting shall be completed in March, 1965, and the lifting to the final level shall be completed by the end of 1967.

Contractors who are interested in tendering are requested to present their names and credentials with information regarding competence and experience to the Consulting Engineers of the Ministry.

Messrs. Vattenbyggnadsbyran (VBB),
29, Humlegardsgatan, *Stockholm*,
Sweden,

not later than February 10, 1962.

In March, 1962, these Contractors, or groups of Contractors, will receive additional information enabling them to study the Project and visit the Site. Of those who in April, 1962 are still interested a selected number will be invited to submit their Tenders before August 1, 1962. Final Tender Documents will be available from May 1, 1962.

THE CHARTERED INSTITUTE OF SECRETARIES

Employers requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dept. E), 14 New Bridge Street, London, E.C.4.

(three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ.B.Sc. Economics Exams., 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

UNIVERSITY OF EDINBURGH

Residential Course for Business Managers

The eighth RESIDENTIAL COURSE FOR BUSINESS MANAGERS will be held in the university from July 2 to 20, 1962. The aim is to encourage the development of a broader understanding of business problems and of the environment in which business operates and thus to assist in the transition from specialised to general management.

In addition to syndicate work and case-studies, seminars will be led by practising business and professional men as well as university teachers drawn from several departments, including commerce, political economy, accounting and psychology.

To encourage the exchange of knowledge and experience among members of the course, the number admitted will be strictly limited. There are no formal educational requirements. The fee for the course, including residence, is 90 guineas. Early application should be made: the closing date is March 9, 1962.

Post-Graduate Course in Management Studies

The full-time course of study leading to the award of the university's post-graduate Diploma in Management Studies commences on October 9, 1962. It is intended for young business managers who are likely to be promoted to more senior posts, and it is particularly suitable for those with a scientific or technological training who are taking on managerial responsibilities. The course extends over the three terms from October to June, but members may return to their companies during the two vacations.

The Department of Scientific and Industrial Research has accepted this course as suitable for the tenure of its advanced course studentships. Interested candidates are recommended to read the booklet "D.S.I.R. Studentships and Fellowships," January, 1960, obtainable from H.M.S.O., price 1s. 6d.

Candidates for admission should normally be university graduates, but suitably qualified non-graduates may also apply. Entrance standards are high, and only a limited number of places is available. Application for admission should be made as early as possible.

Further particulars and nomination forms for both these courses may be obtained from Professor Norman Hunt, 29 George Square, Edinburgh, 8.

Bachelor of Commerce Degree

The attention of those intending to enter upon a career in business is drawn to the Bachelor of Commerce (B.Com.) Degree course in this University. This is a three-year curriculum designed for those who intend to take up administrative posts in industry, commerce and government, and for those preparing to teach business subjects. It includes the following subjects: Political Economy, Economic History, Accounting, Organisation of Industry and Commerce, Mercantile Law; optional subjects include Languages, Banking, Industrial Law, Psychology, Statistics, etc. Further particulars may be obtained from the Director of Studies in Commerce, University of Edinburgh, 29 George Square, Edinburgh 8, and forms of application for admission from the Matriculation Office, University of Edinburgh, Old College, South Bridge, Edinburgh 8. These should be returned not later than May 1, 1962.

CHARLES H. STEWART,
Secretary to the University

January, 1962.

The Koala

This fascinating little creature is nature's very own teddy bear. In its search for eucalyptus leaves, the koala bear climbs with steady deliberation, which seems to suggest that tomorrow will always do.

This philosophy is ideal for a simple little animal, but in our more complex existence it is vital we know exactly when and where we are going, and when our export consignments will arrive.

The right people to give you this information are the Coast Lines organisation, who operate scheduled passenger and cargo lines, coastwise tramps, holiday voyages, wharves and stevedoring, road haulage (bulk liquids and dry goods) and ship repairing.

Lloyds & Scottish Finance helps manufacturers and merchants to sell...helps firms and individuals to buy

A comprehensive hire purchase service backed by two great banks

Through its integration of two long-established finance houses—Scottish Midland Guarantee Trust and Olds Discount—Lloyds & Scottish Finance Ltd. represents an unusual concentration of specialized skill and experience in financing the purchase of: ● *Cars, commercial vehicles, and motor-cycles* ● *Industrial and agricultural plant and equipment* ● *Domestic electrical appliances and household goods.*

To traders in motor vehicles, radio, television, and domestic appliances and furniture, Lloyds & Scottish Finance offers both direct collection and block discounting facilities. The manufacturing and building industries, and other users of capital equipment and machinery, including agriculture, are employing its financial resources on an increasing scale. And convenient time payments are arranged for individuals for central heating installations, marine craft, garages and garage extensions, school fees and other such personal requirements.

Lloyds & Scottish Finance Ltd. is a subsidiary of Lloyds & Scottish Ltd., a holding company with a capital of £15,000,000 jointly owned by Lloyds Bank and National Commercial Bank of Scotland. With assets now exceeding £100,000,000, Lloyds & Scottish Finance is well placed for further expansion. Through its country-wide network of branch offices it has established a reputation for efficient, courteous and understanding service to all its customers.

Enquiries are welcomed at any branch, or may be sent to the address below.

The Japanese economy has been growing tremendously fast in the past ten years and it has taken considerable effort on Fuji's part to continue setting the pace. It has meant keeping the Company's four modern mills working all the time to continue producing 20% of Japan's steel. It has meant multiplying our capital eighty-fold and our pig iron and steel production four-fold in the past decade. It has meant expansion and modernization—Fuji's Hirohata works being the most modern in Asia. It has meant importing tremendous quantities of coal and iron ore from Africa, Asia, Australia, Canada, the United States, and South America. And, of course, it has meant setting higher and higher standards for quality. Those are a few things that setting the pace has meant to Fuji. Why not share the benefits of our growth!

PRODUCTS: Shapes, wire rods, rails, hoops, plates, hot rolled sheets, cold rolled sheets, galvanized sheets, tin plates, sectional poles, light gauge shapes and chemical by-products.

INTERNATIONAL

MUSCOVY DOVES

Though the Russian-American exchanges on Berlin are moving at a ponderous gait and yielding few results, Russia's diplomatic campaign to get on better terms with Western governments is arousing interest—and Western preparations to resume nuclear testing strike a sourly urgent note (p. 494).

Bonn is in several minds about how to respond to the Russian overtures (p.533).

Congo Moneybags

The Union Minière holds the key to the **Congo's** future. Can a scheme be devised to channel a fair share of its profits to the Leopoldville government? (p. 498).

Mark Antony in Africa

Mr Sandys has either to bury the **Central African Federation** or induce Sir Roy Welensky to loosen it up (p. 500).

A pamphlet from a conservative MP paints a gloomy outlook for **Kenya** (p. 500).

Communism's Southern Neighbours

India's critics feel it gets the best of too many worlds. The citizens of the world's largest democracy have their own worries about their country's place in world affairs (p. 495).

Tibetans are again resisting the Chinese communists (p. 505).

In **Persia** Dr Amini's government has survived the eruption and repression of student discontent, but has less popular support than ever (p. 538).

TO UNITE?

A **Malaysian** federation may have to be constructed in two stages (p. 534).

A **Pan-African** conference in Addis Ababa has thrown up the idea of regional confederation for east Africa—which may not fit in with Ghana's grand ideas for a United States of Africa (p. 537).

The collapse of the **West Indies Federation** leaves a dangerous vacuum (p. 500).

The **European** Six have still to agree how to unite politically (p. 508).

The British Government shares **Mr Khrushchev's** restrictive view of the **United Nations** (p. 506).

TO GOVERN?

Signor Fanfani now has the tricky task of choosing a cabinet and drafting a programme that will satisfy both right-wing Christian Democrats and Signor Nenni (p. 503).

Finland has managed a swing to the right in a way that pleases Russia (p. 506).

President **de Gaulle's** television broadcast was designed to reassure both the **French** people and the **Moslem** rebels of his determination to reach a settlement (p. 503). But as the government confronts the *plastiqueurs*, French loyalties are under grave strain (p. 528).

DEFENDING THE DOLLAR

To counter the short-term capital movements that are the main current source of strain on the dollar, the American Administration is planning new operations in the foreign exchange market. The new approach is venturesome, though it may bring risks (p. 541).

President **Kennedy's** remedies for **agricultural** over-production are drastic, but **Congress** may accept some of them (p. 515).

By imposing sanctions on **Cuba** the **Administration** hopes to induce Congress to be generous to other Latin-American countries (p. 516).

President Kennedy thinks the public has a right to know what is in the **strategic stockpile** (p. 517).

HOME

GUIDING LIGHTS

The Government's badly-written white paper on wages, salaries and profits is a much better beacon than most commentators have made out (p. 493).

Target figures for cuts in Government expenditure may be very well in their way: but that may not be the way to put the budget on to a better long-term footing (p. 503).

Dr Beeching and Lord Robens have obeyed the Government's latest tug at the reins; and the prospect of lengthy strikes is still uncertain (p. 500).

REIGN OF CHAOS

Cargo-handling at British docks is grossly inefficient—a legacy from the industrial revolution which the multiplicity of employers has not helped: the main trouble is the generally casual nature of dock employment (p. 496).

Before Dr Charles Hill can tackle the slum problems of Britain (as he wants to, and should) he will have to have up-to-date, and probably depressing, information (p. 504).

The Ministry of Aviation is adept at botching its costing (p. 551).

CASH NEXUS

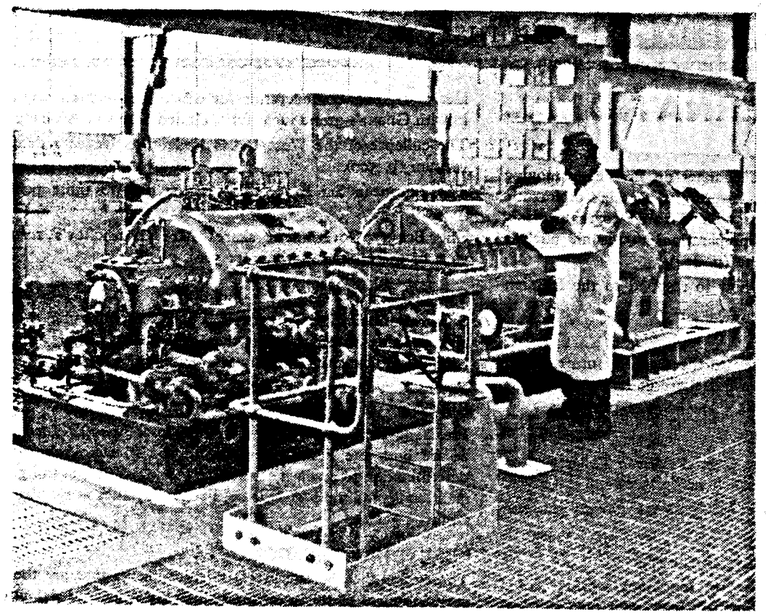
ICI, with profits down, bid still at four for five, but offer an attractive alternative (p. 546).

Continuous brewing offers economies to brewers, without narrowing the choice to drinkers (p. 542).

TRIBAL FRICTIONS

It is all very well—or very ill, if you happen to be a Tory—to shoot down the Prime Minister; he is not the man he was, and he has unpopular policies to father on his party: but who is to take his place? (p. 499).

Britain's joining Euratom may be a boon to the Atomic Energy Authority: but a boomerang for atomic engineers (p. 544).

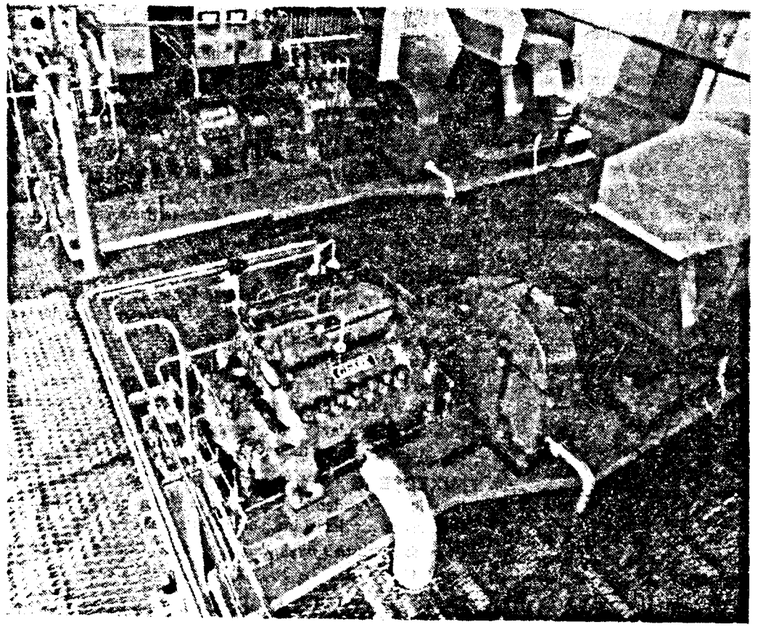


The heavy Sundays of the newspaper industry—on both sides of the Atlantic—are on the move (p. 504).

MIXED BAG

The Royal Academy's current exhibition highlights the shortcomings of provincial art galleries (p. 523).

Even St Augustine might have approved of prostitute's advertisements (p. 506).



Detailed contents on page 493

FOR ICI AT WILTON—

Twin strings of Clark compressors, each consisting of two multi-stage centrifugal units, handle 5597 cfm each of low pressure hydrocarbon gas at the No. 3 olefine plant of Imperial Chemical Industries, Ltd., Wilton, England. Drivers are H.S.B.T. expansion turbines, each developing 1900 bhp at 9000 rpm. Discharge pressure is 222 psia with suction conditions near atmospheric. Confidence in the complete interchangeability of Clark compressor parts is expressed in the fact that one of these strings was produced in Olean, New York, U.S.A. and the other was manufactured under license in Great Britain.

Ask any user! For reliability, no centrifugal compressor outperforms CLARK

CLARK BROS. CO.

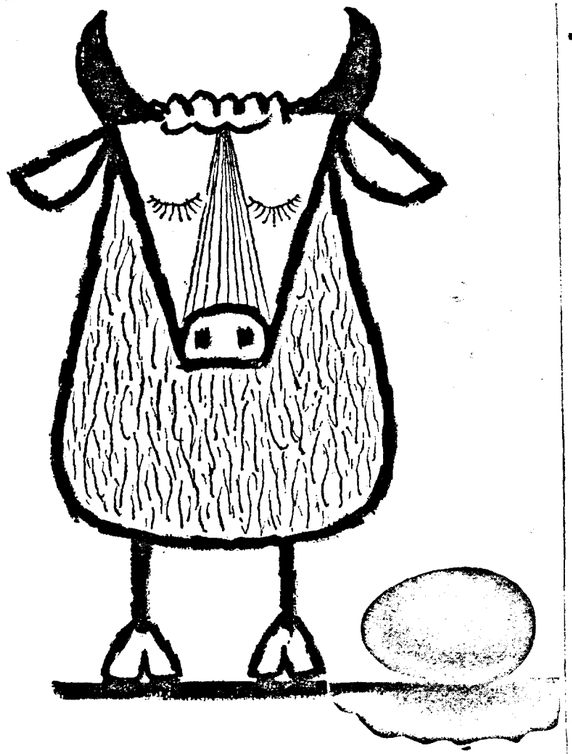
FOR ESSO AT FAWLEY—

Three Clark centrifugal compressors at Esso refinery at Fawley are driven in tandem through speed increaser gear by 3500 bhp electric motor: 1st stage. No. 3 case 4-impeller 11400 scfm at 8450 RPM: 2nd stage, No. 2 case 5-impeller 8960 scfm: 3rd stage. No. 1 case 7850 scfm.
and
Clark No. 3 case, 7-impeller centrifugal compressor equipped with pneumatically controlled variable inlet guide for propylene refrigeration duty on ethylene recovery. 1315 lbs./min. at suction temperature of minus 40° F. with one outlet and two inlet sidestreams. Driven at 6700 RPM through speed increaser gear by 3500 bhp electric motor.

Is this why some of your competitors are stealing an export march on you?



To many of Britain's leading manufacturers, BEA air freight is not an "emergency only" affair—it's a normal, routine move in the business of getting firmly entrenched in European markets.

To the bread-and-butter advantages of incomparable speed, savings in packing cost, lower insurance rates and great reduction in pilferage and damage troubles, BEA air freight adds the jam of extra prestige and good salesmanship.

Seeing that you can get all this at a cost which—in terms of overall despatch costs—is sometimes little if any higher than you are paying now, would it not be wise to study the facts and figures of BEA air freight with a new and imaginative eye? Ring your local BEA Office, or your usual shipping agent.

BEA's new 300 m.p.h. Armstrong Whitworth Argosy freighters, with Rolls-Royce Dart engines, are starting regular scheduled cargo services to Paris, Milan, Dusseldorf, Frankfurt, Copenhagen & between London, Manchester, Glasgow and Jersey. The Argosy's large nose and tail doors allow quick loading and unloading of heavy and bulky freight.

BEA Air freight

VERSATILITY!

Not surprise—just modest pride! We must confess to a similar feeling every time yet another example of the amazing versatility of TUFNOL is confirmed.
Bearings for ships' propeller shafts, and rudders, runners for Arctic sledges, seat rollers for the Oxford University Boat, insulators for high voltage switchgear, slideways for machine tools, control pulleys for aircraft, bearing bushes for motor cars, gears for textile looms—these are but a few of the many varied ways in which TUFNOL is being used to overcome problems of design, production or maintenance.
TUFNOL is a laminated plastics material of such versatility that no engineer can afford to ignore it.

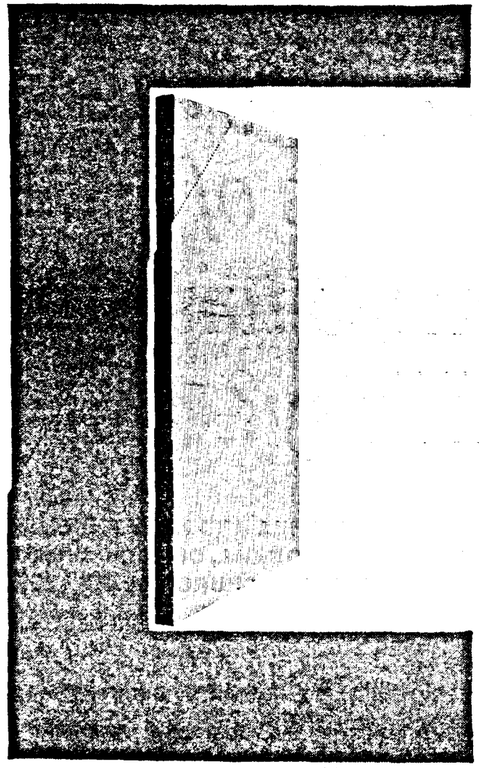
Who's playing these sorts of games with the Navy?

2ND INSTALMENT OF 'CHURCHILL AND HIS ADMIRALS' BY CAPTAIN S. W. ROSKILL, OFFICIAL NAVAL HISTORIAN, AND FELLOW OF CHURCHILL COLLEGE.

Much has been written of the disagreements between Churchill and his generals during World War II. But his relationship with the Admirals of our sea-going fleets was hardly happier. 'Who's playing these sorts of games with the Navy?' one Admiral rumbled angrily. In his second instalment, Captain Roskill describes the flood of Churchillian signals to the exasperated Admirals, the tragedy of the Russia-bound convoy PQ.17, and the order that the King George V should pursue the Bismarck, even if it meant running out of fuel and being towed. Based on many documents that have hitherto been kept secret, 'Churchill and his Admirals' was written specially for the Sunday Telegraph by Captain Roskill.



2ND INSTALMENT OF SEVENTY YEARS OF SOCIAL GRACE

HELENA RUBINSTEIN, the grand old lady of beauty culture, now well over 80, has written her life story under the title 'JUST FOR LUCK'

Budd builds automotive Progress

Almost all automobile manufacturers—throughout the world—are concerned with two problems: excess weight and manufacturing costs. In 1912 Budd introduced the first all-steel auto body. Ever since we have dedicated our resources to building long-life strength into automobiles, at the same time trimming off excess weight and fabrication costs. Our business is the design and manufacture of automotive bodies and the tools to make them, chassis frames, wheels, hubs, and brakedrums. But our proudest product is technology—basic know-how skills specifically adapted to worldwide automotive needs both in established high-production markets and in growth countries determined to realize their national potential. The Budd Company has unique skills in engineering . . . metallurgy . . . tooling . . . welding . . . testing . . . research . . . and production which have helped place Budd high among the world's 250 largest industrial concerns. Our customers and clients cover the free world. Write for information about Budd's automotive activities. THE BUDD COMPANY, INTERNATIONAL DIVISION, Philadelphia 32, Pa., U.S.A.

INTERNATIONAL Budd DIVISION

The only company with computing power for every size of business

I·C·T SPANS THE WHOLE FIELD OF DATA PROCESSING

Modern management looks to data processing to signpost the way to greater profitability. I·C·T installations, operating in their thousands in over 51 countries, serve organisations ranging from the twelve-man firm to the giants of modern industry. Each I·C·T data processing system is made not from a mould but to the particular needs of the customer.

COMPUTERS. The I·C·T range of computer systems starts with the 1202, and then steps up to the 1301 and the new 1500. Both the latter can be had as punched card computers, and both can be expanded in different ways to undertake almost any data processing task in government or business. But if a very large and even faster computer is required—then I·C·T can supply that too.

THE NEW 1500 COMPUTER SYSTEM. The 1500 computer is complementary to the I·C·T 1301, and is available on comparatively short delivery. Hub of the 1500 system is a central processor with a core store of 10,000, 20,000, or 40,000 characters.

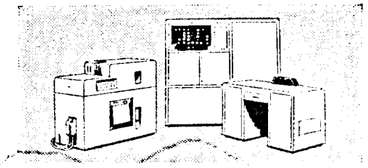
Input—one or two 80-column card readers, with machine speeds of 600 a minute, and a paper-tape reader at 100 or 1,000 characters a second.

Output—one or two 1,000 lines a minute printers, backed by a card punch with machine speeds of 100 or 200 a minute, and a paper-tape punch at 100 characters a second.

Bulk storage—up to twelve magnetic tape units with character rates of 10,000, 33,333 and 66,666 a second. For non-sequential working, up to 27,000,000 characters on interchangeable magnetic data records: up to 176,000,000 characters on fast access discs, with direct interrogation.

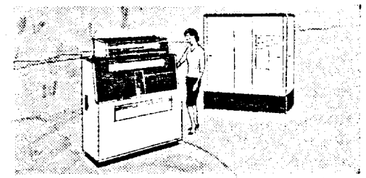
A small installation can be expanded as required to become a comprehensive data processing system. Brochures on the 1500, 1301 and other equipment are available from all I·C·T offices.

* * *



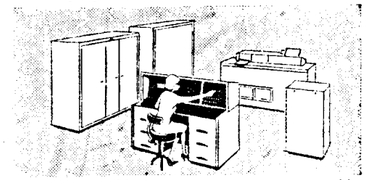
PUNCHED CARD EQUIPMENT. There are three main groups of I·C·T punched card equipment: 21-column units for small jobs: the 40-column range which, with auxiliary machines and a computer, is the world's most powerful small-card data processing system; and the major 80-column series of punched card machines, with computing power available through electronic calculators and a plugged program computer.

I·C·T SERVICE. From your initial enquiry, through all stages of its implementation, and the life of your installation, the technical and systems know-how of the company is at your service, locally and at head office. Specialists in almost every branch of commerce and industry ensure your equipment is a profitable investment. I·C·T evaluates the role of punched cards and computing systems in your organisation; assists in a feasibility study and a systems analysis; equates requirements with equipment; gives application demonstrations; and helps with staff selection and training.

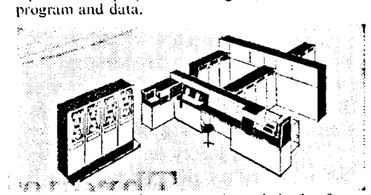


Technical experts work with your team developing the system in terms of programs and procedures and with the use of autocodes, Cobol and its simplification—I·C·T Rapidwrite. Services are backed by a library of utility and sub-routines, and facilities for program testing and systems proving.

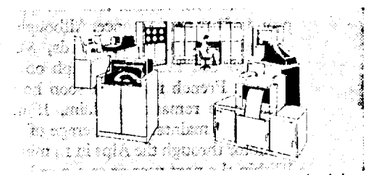
Installation and maintenance of the equipment is undertaken by local I·C·T Field Engineering Services.



To arrange for a demonstration of equipment telephone your local I·C·T office. In London, there is a full complement of punched card machines at Hamilton House, Piccadilly, telephone HYDe Park 8080. The 1301, 1500 and other computers can be seen at Putney Bridge House, SW6, telephone RENown 3322.



555 brings computer versatility to I·C·T 80-column punched card equipment. Punched card input and output; magnetic drum storage. Plugged program permits complex concurrent calculations on each program step.



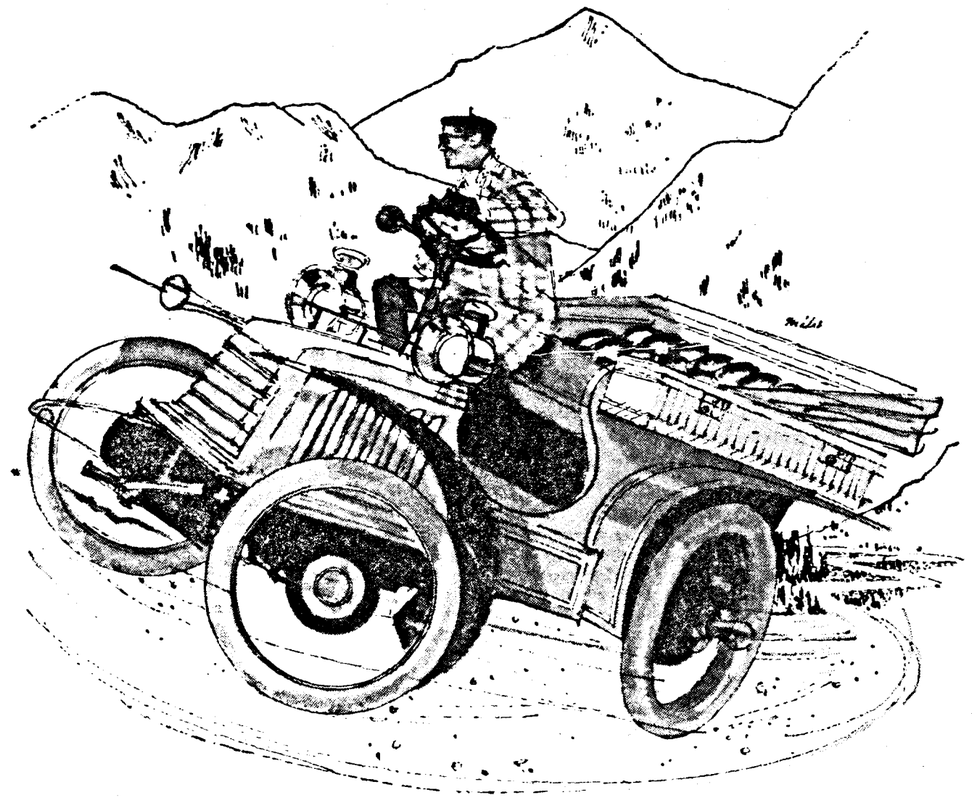
558 computing power for I·C·T 40-column equipment—the world's most powerful small-card data processing system. Input 540 cards a minute, punched output 135 e.p.m. Core storage for 256 program steps.

1202 provides computer power for a wide range of commercial and industrial problems, using 80-column punched cards. On-line input and output, drum storage 4,096 words for program and data.

1301 productive power places it in forefront of computers. On-line 80-column card reader, line printer and card punch, plus magnetic tape at 22½ or 90 kc/s. Drums, tapes and core store are all expansible on site.

1500 provides computer power embodying multiple inputs and outputs, plus vast backing store. Up to 27,000,000 characters on data records and 176,000,000 character on data discs. Unique 10 kc/s magnetic tapes in combination with 33⅓ and 66⅔ kc/s systems.

* * *



∞ INFINITY where larger, more complex and even faster computer systems are called for, using a variety of peripheral devices, I·C·T are prepared to submit a detailed report together with a specification to meet your individual requirements.

Through the Alps in 14 minutes?

M. Lecoq is the owner of a Panhard-Levassor (1903). Like all motorists with veteran and vintage cars, he is tremendously proud of her performance. Although she is not much of a hill-climber by modern standards, M. Lecoq claims that his Panhard can average 30 mph on a level stretch of good, straight French road. Yet soon he may be able to make an even more remarkable claim. If he could disregard speed limits and maintain his average of 30 mph he would be able to motor through the Alps in 14 minutes!
Within the next year or so a 7-mile tunnel will be completed through Mont Blanc, from Chamonix in France to the Val d'Aosta in Italy. This will shorten the motorist's journey from Paris to Milan by 194 miles, and cut the distance from Paris to Turin by 137. For the first time it will be possible to drive from France to Italy via the Western Alps at any time of the year.
Atlas Copco compressed air equipment and Sandvik Coromant drill steels are being used to drill the Alpine granite from the Italian side. And this is only one of the many major engineering projects in which Atlas Copco and Sandvik Coromant equipment has played a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

VOLUME CCII - NUMBER 6181

A Much Whiter Paper

THE Government's white paper on "Incomes Policy: The Next Step" (Cmnd 1626, published on Friday of last week) is much the best statement of basic economic common sense that it has yet produced. It is a pity that Dr Beeching and Lord Robens, both to be founding members of Mr Lloyd's National Economic Development Council, do not seem to have read it ; that several publicists and reporters—especially the BBC television news bulletins last week—so badly misrepresented it ; and that its impact upon opinion has so far been determined more by its literary style (which is obfuscating and turgid) than by its underlying economic merits (which are considerable).

For here, at long last, the Government intimates that it intends to set a target for increases in national production each year ; and that it proposes to collect together and publish at regular intervals factual information for arbitrators and wage bargainers about how far it is being attained. If the new publication of "factual information" is organised at all efficiently, it should make quite clear to the public, as each wage dispute approaches, what size of wage increase will be plain sabotage to the nation's future standard of life. Nobody should underestimate the possible long-term importance of this ; a regular publication of this sort could at last provide the continuing tool, so long needed, to mobilise public opinion against cost inflation. The Government's best course—although Mr Lloyd does not appear to have thought of this—might be to employ some professional journalist or even advertising copywriter, rather than a civil servant, to summarise bluntly the main lessons explicit in each dollop of "factual information" as it appears. Let the new official guiding light be made to blaze forth fiercely, instead of being politely edited away each time under a bushel of bare (and misunderstood) statistical tables and of circumlocutory bureaucratese.

Behind, unhappily, just such a screen of bureaucratese the rationale for the proposed guiding light, set out in Cmnd 1626, seems at last to be on almost wholly the right lines. The white paper proclaims that the main factor which arbitrators should take into account is that the "amount actually paid" in wages and salaries must not rise by more than output per head ; this means that basic wage and salary rates must rise by even less, because (here comes some of the bureaucratese) it is "necessary to have regard to the likelihood, judged from past experience, that basic rates will in practice be supplemented in certain employments by local or special payments." Some workers will have a case for above-average increases, particularly "where the building up of manpower in one industry relatively to others, or the prevention of a threatened decline, is plainly necessary" (although such increases should sometimes be "related to particular areas or grades" rather than spread across the board). But other "arguments which have in the past been widely used to justify higher wages and salaries" now need to go out of the window.

The trade unions are told bluntly that it is no good basing each year's bout of wage bargaining on the rise in the cost of living since the last bargaining bout ; this rise in the cost of living, in itself, will have been mainly due to the above-output rises in wages secured during the previous bout, and there is no case at all for making this rise self-perpetuating. The same argument applies to claims based on "comparisons with levels or trends of income in other employments." If electricity workers have succeeded in getting an inflationary increase, this does not make it "only fair" that gas or other workers should get inflationary increases

too; it makes it much more dangerous that they should. Perhaps most courageously of all, the white paper proclaims that arguments arising "from the trends of profits of productivity in a particular industry cannot in present circumstances be regarded as providing of themselves a sound basis for an increase."

It is a pity that the words "in present circumstances" have been inserted here. The principles on which arbitrators should judge claims in expanding industries are continuing and consistent. Some rises in productivity in a particular industry may be due to workers "accepting more exacting work, or more onerous conditions, or a renunciation of restrictive practices"; the white paper rightly agrees that there can be a case for above-average wage increases when new agreements genuinely ensure that one of these "direct contributions" will be made. But sometimes a rise in productivity will be due to the employment of more machines; if all the money earned by these machines (and needed for the amortisation of them) is promptly sucked away into higher wages for the workers concerned, a special barrier will be put in the way of increased mechanisation in British industry.

Other above-average increases in profits in particular industries may occur when the business concerned happens to have discovered a newly booming market. In these cases, the need is that new resources of capital and labour should be sucked into producing for this market. Normal bidding up for resources will then ensure that wages in this boom industry will rise by the natural force of the market (and this, together with the downward thrust on prices exerted by increasing supply and competition, will soon bring large profit margins down); the white paper does not oppose (and rightly cannot oppose) orthodox free market rises in wages and falls in prices of this sort. But if, as soon as an industry of high profitability appears, wages are immediately raised by national agreement above the free market level, so that profit margins in new boom industries are not allowed, even temporarily, to be any higher than in average or declining industries, all incentive for firms to expand their production in the new boom industries disappears. That would thwart the movement from low productivity industries to high productivity industries, which is one of the main movements through which Britain can and must hope to increase its standard of life.

In his heart everybody—every MP or publicist or chairman of a nationalised board or reasonably intelligent trade union leader—must know that these principles in Cmnd 1626 are right. There really is no excuse now for those who, for catchpenny political reasons, try to shuffle away from them. The general defensive reaction on the left has been to complain that the principles of Cmnd 1626 could serve to increase profits at the expense of wages. In one circumstance, that could be true: if the Government underestimates the amount by which total national production will manage to rise, and if total national wage increases have therefore been tied to a guiding light which fortunately proves to have been too pessimistic, then aggregate profits will rise excessively. But in that case, reiterates the Chancellor, in one of the most specific sentences of Cmnd 1626, "appropriate corrective action" will be taken. What this means is that profits will be prevented from taking a rising proportion of national income by the device of changes in profits tax. Everybody knows that this is no empty threat; profits tax has been increased five times in the last eleven Conservative budgets, and almost always in circumstances providing far less economic justification for a rise than these hypothetical circumstances would do.

There is no similar tax which can be applied discriminately to money wages: so the Chancellor delivers a longer and more involved homily to wage and salary earners. Imagine a judge, faced by two defendants. To Defendant A he says: "If you transgress, I can and will hang you." To Defendant B, he says: "I have no appropriate mechanism for hanging you if you transgress, but I intend to try to mobilise public opinion against you if you do so. Let me therefore explain in detail what forms such transgressions could take." Defendant B's counsel, Mr Woodcock and Mr Gaitskell, then emerge from the courtroom saying that the judge has been quite unfair to spend so long in ticking off Defendant B, when he devoted only one sentence to telling Defendant A where he got off. This is an exact analogy with a lot of the twaddle which has been talked, in far too many places, about Cmnd 1626 this week. If any substantial proportion of any nation really believes that the sort of incomes doctrine expressed in Cmnd 1626 is unfair to trade unionists, then that nation has lost its head. The next few weeks will show whether the British people have done so: the test will be whether the country will at last stand firm, offering no further concessions, in the face of any threat of major industrial strikes.

Tick, Tock

East-West exchanges seem to be taking on an intriguing new rhythm

Like a pendulum, Russian policy on Berlin just now seems to be fixed at one end, and swinging free at the other; like a pendulum, it is also a reminder that time is passing, and no agreement is yet in sight. The fixed end can be seen in the formal (one might nearly say ritual) discussions between Mr Gromyko and Mr Llewellyn Thompson, the American ambassador in Moscow, who held their third meeting on February 1st. Mr Gromyko is sticking like a limpet to the Russian claim that west Berlin must become a demilitarised city-state or, alternatively, that Russian troops must join the western garrisons. Mr Thompson, for his part, continues to insist that the proper subject for conversation is the means by which the western position in the city can be guaranteed. This is, for the moment at any rate, a dialogue between hi-fi records. To judge by Thursday's announcements in London and Washington about possible nuclear tests at Christmas Island, harsher voices may soon break in.

The other end of the pendulum, by contrast, is swinging free and far, and is penetrating some interestingly cobwebbed corners. Directly or indirectly, Mr Khrushchev has made separate approaches in the last few weeks to Dr Adenauer, through the now dog-eared memorandum of December 27th; to Mr Macmillan, in a letter he is reported to have sent to the Prime Minister; and, through his son-in-law, Mr Adzhubei, to President Kennedy. The ferment set working in west German political life by the December 27th memorandum is described by our Bonn correspondent on page 533. It may well have been increased by a broadcast on February 2nd by Mr Galkin, a Russian historian, who, praising the "spirit of Rapallo," recalled that in 1922 Germany had to choose between a far-reaching settlement with the Soviet Union and "final enslavement" by the western powers; any similarity with 1962 (or 1939), Mr Galkin did not say, was strictly coincidental. The day after this broadcast, an article in *Izvestia* said that Moscow should talk directly to Bonn about Berlin, since the Germans were the most directly concerned.

Mr Khrushchev may have two motives in pursuing this campaign. One would be to persuade the principal western leaders that, even though the present negotiations on Berlin seem to have got stuck in a cul-de-sac, this is no reason why east-west relations should not remain civilised—and even, in other matters (say trade), productive. The other may be a hope that, through this series of bilateral approaches, he may gradually succeed in widening the scope of the Berlin discussions to include the other matters that urgently interest him in central Europe: the recognition of existing frontiers, the limitation of armaments (most of all in Germany), and so on. In either case, the objective would be an agreement, whether tacit or explicit, that accepted the *status quo* in the middle of the Continent. If Mr Khrushchev cannot get this by talking to the Americans, he may think (not entirely wildly, maybe) that he can get it by talking to others. He may not; but it may still do more good than harm that he should try.

Off-White Elephant

India, about to elect a new parliament, is the largest nation ever to practise political democracy

On the epic battlefield of Kurukshetra, around five thousand years ago, the god Krishna turned up in the guise of a charioteer. He found one of the warring princes, Arjuna, in hesitant mood. Although the epic of the Mahabharata is often called India's Iliad (its great war involves a captive princess and a good deal of divine intervention), Arjuna was not just sulking like an Achilles; he was beset by philosophical doubts liker to Hamlet's. Krishna therefore employed much spiritual eloquence in urging him to go out and fight. Non-violence is not the only strand in Indian tradition.

Many westerners, and some Indians, were shocked by the military occupation of Goa in December because they saw it as a fateful turning away from the Gandhian path of *ahimsa*. In fact India has never been fully committed to that path. When Gandhi originally introduced his concept of non-violence into the struggle for Indian independence in 1922, the other leaders of the Congress, including Mr Nehru, made it clear that they accepted it as a political strategy suited to their then needs, not as an absolute dogma. Their personal respect for Gandhi was increased by his total personal commitment to *ahimsa*; but they reserved the right to differ.

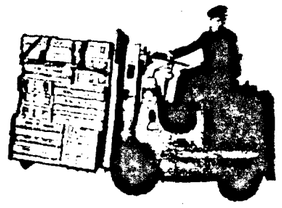
In the exaltation of independence, however, Mr Nehru and some of his colleagues tended for some years to address the world in terms that suggested a superior Indian morality—and earned the "holier than thou" jibe. The postwar West was particularly pained by their strictures on the new alliances which it was anxiously building up in fear of the communist powers. Mr. Dulles's dictum that "neutralism is immoral" was one reaction; another was the counter-charge that India, while championing self-determination for European colonies, was unmoved by the plight of Hungarians or Tibetans, and was itself engaged in military repression in Kashmir and Nagaland.

Historical perspective suggests that India, in this phase, fell heir to a role in the world that derives at least as much from the West as from the East. A succession may be traced from Mr Gladstone through Woodrow Wilson to Pandit Nehru, each in turn feeling an urge to address homilies to a sinful world, each open to the riposte that he did not always practise what he preached. One may speculate about whom this mantle will next fall upon. Long before the occupation of Goa, Mr Nehru for his part had seemed to be tiring of the role.

If, after Goa, the Indian elephant looks less immaculately white, are its relations with the other creatures, great or small, in the international zoo likely to be more comfortable, or less? Some will doubtless feel relief that the beast's reputed sanctity has gone for good. Others seem to fear that it will throw off all inhibitions and turn rogue—if not now, then later, when Mr Nehru has been succeeded by some less prudent and less masterful mahout.

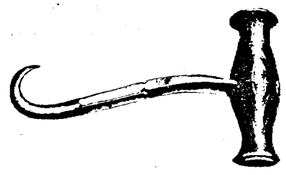
In some resentful eyes, India is regarded as having it all too good. Its people enjoy the liberties of a democratic system without contributing to the democracies' common defence against totalitarianism. Playing both sides of the street, it secures massive economic aid from both western and communist sources without paying any political price to either. In the case of Goa, in this respect unique among the vestigial colonial cases, India was overwhelmingly stronger than the colonial power; yet it could appeal to the general fund of sympathy for the oppressed underdog, and was sure of the support of Afro-Asian votes in the United Nations Assembly and of the veto-wielding Russians in the Security Council.

Similarly, India can count on a Soviet veto to shield it from any adverse Council ruling on Kashmir. While thus immune from any UN inhibition on its own actions, India is prominently involved in UN interventions elsewhere. In its quarrel with China, it can count on benevolent neutrality from Russia, and doubtless, if the Chinese threat became really dramatic, on a full-scale western rescue operation. Meanwhile the gospel of non-alignment, of which India is far the most important practitioner, has conquered most of the Afro-Asian world, won footholds in other continents, and had a marked impact on the policies of the great powers.



Few Indians would agree, however, that their position at present is so enviable. While appreciative of foreign aid (and less disposed than before to hail the Soviet fraction of

it more gladly than the preponderant western contribution), they point out that all the aid and all their own impressive efforts to break out of poverty and achieve self-sustaining economic growth are still barely enough to enable them to beat the rising flood of population. They are forgivably proud of their operation of the largest democratic system in human history, of the fact that an electorate of over 200 million is about to go freely to the polls for the third time ; but they see little reason for complacency about it.



Most of the other new nations of Asia and Africa have failed to establish democracy. India's vast size and extreme diversity add to the strains that bear on such a political experiment in any under-developed country. Even though the Congress party, in the coming elections, may again win half the votes, three-quarters of the seats in the national parliament, and control of all the state legislatures, the juggernaut is cracking as well as creaking, riven by countless local and factional differences as well as by those between its left and right wings.

Beyond their own frontiers, Indians are certainly glad to find their non-alignment now widely accepted or at least deferred to ; but they are troubled to see alignments multiplying among the non-aligned. India was at first reluctant even to attend last September's Belgrade conference. It has opposed Chinese and Indonesian calls for a second Afro-Asian "summit" conference on the lines of the one held at Bandung in 1955 (in which China played a starring role). It put its weight firmly behind Mr Hammarskjöld in the Congo, despite the criticisms of the Casablanca group of African states and other partisans of Mr Gizenga. The Indian quarrel with Pakistan affects its relations with other Moslem countries ; the quarrel with China has reached a stage at which Mr Nehru is now a target for personal abuse in the Peking press. Even its relations with Nepal are now openly strained.

India's extensive involvement in the world arena has, in fact, as the experience of other nations would suggest, earned it as many reproaches and cares as bouquets and easy victories. From time to time isolationist voices are raised in India itself, demanding less far-flung activity. (India still contributes troops to the UN force on the Egypt-Israel border, as well as to that in the Congo ; and it provides chairmen for the international commissions in Laos and Vietnam, as well as an increasing number of key personnel for UN operations.) A leader other than Mr Nehru, who has often frankly confessed his personal liking for the international arena, might have somewhat scaled down India's external involvement. But the involvement would still have been—and will long continue to be—extensive, as long as India's sheer mass gives it an outstanding position among the nations. The elephant may no longer look quite so white to some of its former devotees. All the signs indicate that it is a deeply worried creature, in no mood to play the carefree rogue. But it is still an elephant.

Dock Dilemmas

The Rochdale inquiry into the inefficiency of Britain's port facilities faces a mammoth task

Britain is totally dependent on sea transport, but the process of transferring objects into and out of ships here is carried out with almost ludicrous inefficiency. In March of last year a committee under the chairmanship of Lord Rochdale started examining the state of affairs in sixteen of the nation's most vital ports. What are the main problems that confront it, and what should some of its recommendations be ?

The docks industry is far from being homogeneous. The techniques of handling bulk raw materials—sugar, flour or rubber—are totally different from those of handling cargoes consisting of small pieces of machinery, boxes of tomatoes, or bus chassis ; while there are criticisms enough of the inadequacies of (for example) grain silos in certain ports, the problem here is comparatively a minor one. Oil or iron ore, delivered straight to a seaside refinery or steelworks, seems to be handled as efficiently in Britain as anywhere. Where it is possible to foresee a steady flow of goods of one type, efficient handling is merely a question of paying for and installing a specialised terminal—the British Railways depot at Hither Green, handling whole wagon-loads of vegetables and perishable goods straight from the Continent, is an example of a progressive and efficient new installation for a year-long flow of one kind of goods. Whole ports are specially equipped to handle fish ; whole wharves in London are designed to unload cargoes of meat or of bananas. There is no reason to believe that these are inefficient.

The real trouble is that certain British ports must handle vast quantities of miscellaneous cargo, travelling to the least predictable destinations: their sprawling inefficiency, built into the nature of the cargo they handle, is increased by the historical development of the towns in which they stand. Road access to the many ports built before the internal combustion engine is totally inadequate. Constructed in the early days of industrial expansion, manned from communities whose whole fate is tied up with the docks, and now squeezed into riverside strips whose expansion is prevented—and whose site-values are raised—by the pressure of the surrounding city, these areas are the ingrowing toenails of the economy.

The tempting solution is for the docks to uproot themselves from their traditional settings, and start up again elsewhere. There has, indeed, recently been a trend in this direction (although the promised new docks of the Port of London Authority at Tilbury are perhaps not as far away from the built-up areas as they should be). Shoreham in Sussex and Lowestoft on the east coast are small harbours whose traffic has increased, and which might well give good service with a little expansion. But the existing ports do represent vast

investments; far better use could be made of the facilities that already exist—including the questionable facility of the highly conservative dock labour force. The men's obstinate devotion to tradition leads at its most dramatic to protracted strikes, and at its most destructive to a refusal to use modern handling machinery without imposing ludicrous manning scales. But they in turn can point with a sure finger to other bottlenecks that only increase their frustration and conservatism.

Far more, for example, could be done to ease congestion on the inadequate roads into the dock areas. The port authorities themselves cannot build access roads, and one of their complaints is that it is difficult to persuade exporters to make better use of the railways. (One of British Railways' brightest new ventures has been the export expresses that run straight from manufacturing areas into the docks.) Much more cargo could be moved into the docks before the final day for loading: in London recently 47 per cent of cargo was reaching the docks in the last two days of the receiving period, and 13 per cent was arriving on the day after the closing date.

The Port of London Authority has attempted to persuade shippers to send their goods—in advance if need be—to central collecting depots ; but one depot was closed because it was not used, and the one remaining is under-used and runs at a loss. Central collection could, however, take place outside the immediate dock areas, where road access is easier and site values are lower ; and at the centres goods could be loaded on to pallets or containers, thus making it possible to standardise loading equipment. The potential advantages (including a quicker turn-round for lorries) seem enormous ; they need far wider publicity.

Before such a central arrangement could be made effective, however, it would be necessary to rationalise the structure of the competing firms that handle cargo. In London, where the physical control of the port is in the hands of the port authority, and where the control of the labour force is vested in the dock labour board, more than 200 firms are registered as employers of labour ; the spark that set off the last major unofficial strike of dockers in London was an absurd dispute over a tiny firm whose tiny wharf received no more than one lighter full of strawboards a month. Such people—it is no fault of their own—are casual employers, just as those who work for them are casual employees: small wonder that the docks are constantly beset with squabbles about pay, working conditions, manning scales and a host of technical issues involving labour-management relations. A recent and most welcome statement from the national joint council for the port transport industry, signed by both the chairman of the port employers and by Mr Cousins for the Transport and General Workers' Union, spoke of the need to "decasualise" labour relations in the docks: casual employers can be as inefficient as casual workers, and that can be very inefficient indeed.

But it is on the workers' resistance to improvements in work techniques that the main spotlight, and odium, necessarily fall. At present fewer than a quarter of the country's 70,000 dock workers are employed on a weekly basis: in London there are 10,000 weekly workers out of a total of 27,800-odd employees. It is among the casual workers that the basic discontents arise—and the outsider cannot wonder at it. The dock labour scheme, which ensures a minimum income of £7 8s. 6d a week, can permit men to earn up to £30 in good times. It is certainly better than the old days, when a man might get nothing at all some weeks. But the very principle of casual employment might be designed to encourage work-spreading and resistance to labour-saving techniques ; and the men's basic conservatism is immensely strengthened by the system of recruitment, which in practice often means that new recruits to the dock labour board's register are relatives of men already in this job.

The men's first fear is that, if many more of them were employed regularly by one employer on a weekly basis, the burden of uncertain employment and earnings would fall more heavily on the few remaining casuals. But the advantages to the employers of having a larger permanent labour force, which could then be properly trained in the use of mechanical handling equipment, should certainly make it worth their while to pay large sums for the right to introduce this fundamental improvement: on the west coast of the United States the longshoremen have wrung $5 million a year out of the employers in exchange for the virtual abandonment of all the restrictive rules whereby the union has hampered the modernisation of the ports, which gives some idea of how much the American employers reckon they may be able to gain by improving work methods.

But it will never be possible to have an even flow of cargo, and an even demand for labour, in the ports throughout the year. If the workpeople are to accept that the occasional burden of unemployment falls only on a few, those few must be guaranteed a far higher level of fall-back pay than they at present receive. What is more, steps will have to be taken to see that the risk of not working is evenly spread among them. The employers, shippers and shipping companies could help to make this possible by forecasting the traffic for a given week, and thus predicting the weekly labour requirement (there seems no special reason why men should turn up at all during a week when they are not going to be needed).

Such an advance would, of course, entail far closer cooperation between employers than has hitherto existed (or, ideally, a sharp reduction in, and increase in the size of, the firms registered as employers). A plan for decasualisation along these lines would go far to remove the workpeople's fear and distrust of efficient machinery for handling cargo: they should also be better inclined to cooperate in modernisation—and even, eventually, to agree to shift working—if they were no longer subjected to the indignity and inefficiency of the twice-daily "call" at the dock gates. The principle of decasualisation has at last received the backing of the chiefs of both sides in the industry, and the formal blessing of the Minister of Labour. The dockers' current pay claim is being somewhat gingerly handled by both sides in view of hoped-for changes in the pattern of employment. The virtue of the comprehensive Rochdale approach is that it can make recommendations not only in this field, but also right along the line of port working

RE-EXAMINATION DEFERRED

The second article on "Economic Policy Re-examined", following last week's piece on "The Pull of Demand", has been held over—probably until next week.

methods. Customs procedures and the insane complexities of the bill-of-lading are examples of inefficiencies in need of reform; the shipping people could do worse than to take some modest tips in some of these fields from their rivals in the airlines.

The airports, of course, have the inestimable advantage of having started recently, from scratch—and from having been helped to do so by the Government. Even the Federation of British Industries, in its report to the Rochdale committee, toyed with and only mildly rejected the idea that Government money should be spent on a once-for-all improvement of the country's ports, while the Dock and Harbour Authorities' Association has now as good as asked for a modernisation subsidy. New training schemes and new compensation payments for dockers would be necessary if re-equipment is to be carried out relatively painlessly. Lord Rochdale was the begetter, and has been a spectator, of the reorganisation of the Lancashire textile industry; perhaps a dose of the same medicine (improved in the light of experience) would serve for this other legacy from the world's first industrial revolution.

Congo Bingo

The key to the Congo problem is Katanga's wealth. An agreed and guaranteed division of revenues through a trustee outside the Congo might be the answer

WHAT to do about the Congo? is not a question that invites useful answers, but here is one for a try: Let the British, American and Belgian governments, through their business contacts, persuade the Union Minière company to sign an agreement with Mr Adoula and Mr Tshombe whereby the mineral revenue due to each party is shared out in agreed proportions. To make sure such an agreement, once made, was observed, Union Minière could make payments to an international trustee—the World Bank, say—which would then pay to each his due. Talks between Mr Adoula's central government and the company have already begun in Leopoldville, but, on Tuesday, a director of Union Minière said in Elisabethville that taxes had been paid to the Katanga government since independence, "and we shall continue to do so as long as it is the constituted authority."

But a lot of the "constituted authority" of the Katanga government derives from the use it has been able to make of Union Minière's wealth and administrative ability. The apparatus by which the Katangans support their claim to be an independent state; their weapons and foreign soldiers: not least the international lobbying that goes on on their behalf—all would have been impossible without money. There is evidence that the lobbying activity around the world is mounting. Through industrial connections in Europe and America, efforts have been made to influence the Swedish and Irish governments towards withdrawing their countries' contingents from the United Nations force in the Congo. Pressure against United States support for the UN operation in the Congo is building up through America's own well-financed Katanga lobby.

The picture within Katanga can be drawn more clearly. There is a famous phrase about the earth around Elisabethville—that it is "scandalously wealthy." It produces 8 per cent of the world's copper, 60 per cent of its cobalt and 4 per cent of its zinc—leaving uranium and other minerals aside. In 1959 Union Minière paid £21 million in taxes, duties and dividends to the Congo government (then Belgian). This kind of money has since been paid to the Katanga government, and it amounts to 80 per cent of Mr Tshombe's entire budget. This is not the whole measure of the company's value to the Katanga economy; Union Minière is a generator of local spending, a builder of houses, schools and hospitals, administrator of a virtual company state. Yet the Katangan infrastructure that supports it was built up, in the decades before independence, by contributions from the whole Congo economy. Now Southern Katanga, with less than a million people, has captured the copper goose that used to lay for the whole country (population 14 million).

This, of course, is what the argument has been about all along. Even before independence Mr Tshombe argued for provincial autonomy on the ground that provinces should control their own mines. And since independence the copper coin has had two sides: heads, Mr Tshombe takes over the mines and Leopoldville loses; tails, the mines take over Mr Tshombe—and Leopoldville loses. When local directors of Union Minière argued, as they did in the time of Mr Lumumba, that they could not allow the chaos to spread to Elisabethville, their arguments could be understood. And when, as they still do, they argued that they had to do Mr Tshombe's bidding to save the company, they could be at least half believed. (This is especially true of export duties, which, they say, Mr Tshombe insists must be paid before anything is allowed out.)

FOR these reasons, legality has had little to do with where the money has gone. According to a prior agreement with Belgium, the government of the Congo was to inherit a sixth of the shares in Union Minière after independence; in fact, because of the post-independence disorder, the agreement was never ratified and the shares are still being held in Brussels pending new general Congo-Belgium financial negotiations. Such negotiations might begin quite soon. But dividends have been paid to Elisabethville, and to outside shareholders (including Tanganyika Concessions, which holds about a seventh of the shares). Previously, about a half of Katanga's produce was transported along the "Royal Route" across the Congo to the port of Matadi. Now, more economically, it takes the Benguela railway, which is 90 per cent owned by Tanganyika Concessions, to Lobito; or through Rhodesia to Beira in Mozambique. (Discussions about diverting some traffic—and therefore some export duties—back to the "Royal Route" have begun.) Previously taxes and excise duties went to Leopoldville and, according to the *Loi Fondamentale* they still should. But now Mr Tshombe collects.

There is no need, however, to insist on former legalities, or the settlement of old scores, in new arrangements. The Leopoldville government put in a bill just before Christmas for all the money paid to Elisabethville so far. If Union Minière could be made more malleable by not being forced to pay twice, then it may be wise for Mr Adoula to settle for, say, only half the amount legally due to him. Equally, Mr Tshombe still has physical control over the mines; and in new arrangements Leopoldville may not be able to insist on getting all—though Mr Adoula, doubtless, would prefer to leave Mr Tshombe just enough to run a province without running a private army as well.

This is the kind of negotiation that the Belgian prime minister, Mr Spaak, together with the Americans, is believed to be urging on Union Minière—but the company itself shows signs of being divided between those in Brussels who see the sense of coming to terms with Mr Adoula and a few apparent *ultras* in Elisabethville, whose interests are emotional as well as economic. Here is where Britain, with its Tanganyika Concessions interest, could soberly throw in its weight and, perhaps, make a positive contribution to a peaceful settlement in the Congo.

FOR the British Government's touch in the Congo has not been sure. American policy, on the other hands, seems to be coming off. Some time ago, the State Department saw the need for resisting Mr Tshombe's separatist ambitions if the country was ever to be made stable, and if the communist-supported Mr Gizenga was to be kept under control. Now Mr Gizenga and his erstwhile Stanleyville regime seem to be in eclipse. On January 30th, the Russian move for a Security Council debate on the Congo, which might have revived passions calculated to destroy the delicately constructed political balance in the country, was rebuffed. In the voting, even Ghana and the United Arab Republic (once vocal supporters of Mr Gizenga as Mr Lumumba's heir) abstained. Since then Mr Adoula has visited the General Assembly; established good relations with U Thant and, sensibly, with Mr Spaak; and, on Tuesday, received assurances of support during a lunch with Mr Kennedy at the White House.

There have also been encouraging reports of co-operation between United Nations officials and the Katangese, and of a supposed willingness on the part of Mr Tshombe to reintegrate the province under the agreement signed (with American encouragement) at Kitona just before Christmas. But Mr Tshombe has gone on stalling about the things he then agreed to do to dismantle his separatist apparatus. Is Katanga playing 'possum? As in a game of Bingo, a properly negotiated agreement about the future disposal of its mineral revenues, including the use of an outside trustee to guarantee it, could fill in the last square on the card and, for the West and the Congolese (not to mention the UN), be the chance to complete the game.

NOTES OF THE WEEK

CONSERVATIVES

The Grumbles Grow

SIR HARRY LEGGE-BOURKE'S attack on the Prime Minister, despite its excitable puffing up by many newspapers, has petered out, as it was always clear it would. Not a single other member of the Conservative parliamentary party has come out in public support of Sir Harry, and the condemnation of his tactics (if not of the substance of some of his remarks) is as unanimous in private. Instead there are signs of the forming of one of those public squares that have served the Tories so well in postwar crises. What might have been the beginning of a sustained and damaging campaign of denigration of the Prime Minister has been reduced to the level of a petulant protest.

Symptomatic Sir Harry

Yet Sir Harry's outburst should not be dismissed as merely the isolated growlings of an eccentric blimp. It is symptomatic of the usual mid-term frustrations of a governing party at this stage of a Parliament; and those frustrations are taking the usual forms. Witness the familiar cry that what the Conservative party really needs is a super public-relations officer (a cry that was also heard in 1956-58); the impending drift of some brighter sparks out of political life (the Solicitor-General's elevation to the judicial bench will rob the Government of one of the best behind-the-scenes liberalising influences on legislative matters it had); as well as these mutterings that the Prime Minister is losing his touch (mutterings which in early 1956 played at least some part in driving Sir Anthony Eden over a famous brink). Mr Macmillan is a very long way from Sir Anthony's state of approaching breakdown in 1956, but his once effortless sense of political control and vivacity is not quite what it was. This became rather soberly evident in Parliament this week.

No Crown Prince

MONDAY'S parliamentary debate on Lord Home presented the Prime Minister with an admirable opportunity for rallying the party and raising its drooping spirits. The old Mr Macmillan would certainly have taken it: the new one tried to do so but manifestly failed. The content of what he said was better than its delivery, and he fortunately refrained from giving any hostages to fortune by rounding on the United Nations to get the plaudits of some of his backbenchers; but this was not the rumbustious speech of a man set on restoring his ascendancy over the party. Much has been written about Mr Macmillan's remarkable powers of recovery; on this occasion they were not seen.

At the moment the Prime Minister's great strength—the result largely of his own engineering—is the absence of any obvious successor. With no crown prince, there can be no palace revolution; it therefore looks more than likely that he will still lead the party at the next election. This is not to say that his troubles are over. The two most searching tests of his leadership are rapidly approaching. He will have to sell the Cabinet's liberal proposals on Rhodesia to a reluctant party, and carry his supporters with him into Europe. Both policies will involve a recognition of Britain's diminished position in the world, which Conservatives find highly unpalatable. In pursuing them Mr Macmillan will have to appeal to the head rather than the heart of the party, always a dangerous operation where the Tories are concerned. But it is on his success here, not on the ups and downs of day to day parliamentary life, that history—as opposed to contemporary political columnists—will judge him.

RHODESIA

The Undertaker?

DR BANDA, of Nyasaland, is fond of saying, "The federation is dead. All it needs is the undertaker and the burial certificate." The man who may turn out to be the undertaker is Mr Duncan Sandys, the Commonwealth Relations Secretary, who flew to Salisbury on Tuesday for what may be a long session of heart-to-heart talks with Sir Roy Welensky, the federal prime minister. Mr Sandys's job is no less than to decide whether or not the federation has a future: to report back quickly if he decides it has not; or to stay and win Sir Roy's agreement to any formula that may be invented for keeping it going.

Without much doubt he is taking with him a new constitutional plan that would give Africans a majority in the legislature of Northern Rhodesia. One of his problems is how to convince Sir Roy that such a plan is in the federation's interests. The British Government, despairing a little, seems to be taking hope from Sir Edgar Whitehead's new turn of speed in leading white Rhodesians towards the elimination of race discrimination (except electorally) in Southern Rhodesia. Thus it will be possible for Mr Sandys to argue that Sir Edgar's work, plus electoral arrangements for Northern Rhodesia acceptable to the Africans, plus a dramatically de-whitened federal government (shorn of many of its powers), just might win over Dr Banda and Mr Kaunda to an attempt to keep the federation going. This is remarkably like the Monckton formula. If Sir Roy will not have anything so liberal, Mr Sandys will have to report failure; and the crisis about the future of the federation will be on.

Perhaps there is only a faint hope indeed that this formula would save the federation; but the only other way, to maintain it by force, would be in the end hopeless. In the past, when Sir Roy and his party have talked of a last-ditch struggle (it happened between last February and last June), it has been London, not Salisbury, that has wilted. If history were to repeat itself this year and Mr Sandys were to be talked round to the wrong conclusions by Sir Roy, then "undertaker" would indeed be the word.

KENYA

Vultures

PROPHETS of African disaster have it easy when it comes to Kenya. The conference to decide on a new constitution and a date for independence opens in London on Wednesday. And after independence? Mr Philip Goodhart, a Conservative MP back from a tour of Kenya, has produced a pamphlet* in which he says that, at best, the British and Asian communities will be subject to increasing harassment, the tribes will pursue traditional ways in increasing isolation, and there will be some downturn in economic activity. At worst, Mr Goodhart fears, the British and the Indians will be attacked, killed, or driven out; there will be major tribal warfare; the economy will crash to subsistence levels; and government in the Western sense will largely disappear.

On top of this kind of foreboding, the Colonial Secretary, Mr Maudling, will have to cope next week with the clutchers after bits of an independent Kenya—the Somalis, the Masai, the Arabs in the coastal strip, and the vultures among Kenya's own politicians. With Tanganyika independent and Uganda due for independence in October, Mr Maudling can hardly hold Kenya back for long—perhaps not beyond this year. With the British Treasury in its present mood he can only with difficulty make the promises he certainly ought to make of massive compensation for white Kenyans if they get into trouble.

Is it going to be quite as bad as this? Mr Goodhart says he may be proved wrong by the unpredictability and "a certain unexpected niceness" to be found among the inhabitants of Kenya. Equally necessary will be a strong central government (however unpalatable this may sound to some people) in the new Kenya. The pessimists may yet be confounded.

WEST INDIES

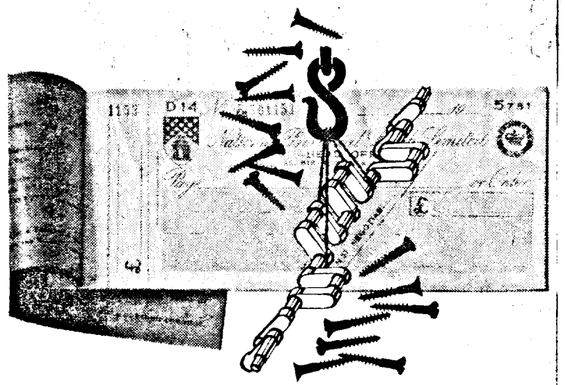
Caribbean Breakage

THREE months before it was due to become independent, the Federation of the West Indies has fallen apart. Announcing this to the Commons on Tuesday, the Colonial Secretary explained that since Jamaica and Trinidad are now determined to get out, the British Government, with the approval of the other island colonies, had no sensible alternative but to dissolve the rump of the federation, and start again. This was his conclusion from his visit there last month. Jamaica and Trinidad are both seeking independence on their own, and expect to get it this year. Mr Manley, the Jamaican prime minister, is now in London and has got his date, August 6th. Dr Eric Williams, Trinidad's prime minister, is unlikely to be far behind. What happens to the eight remaining clumps of islands is very hard to say. Various permutations are being suggested. To sweep the crumbs together would make the Caribbean tidier. But none of these suggestions answers the overwhelming problem of how such tiny, backward units can manage on their own, together or singly.

Busta: fiery voice

The ten island colonies decided to join up in 1958. But in Jamaica there were always misgivings, which later found a fiery voice in Sir Alexander Bustamante. Jamaicans, poor themselves, were horrified at the thought of having to pay the bills of the other islanders, and Mr Manley, despite his fight for a looser form of federation, was unable to convince them differently. They decided by a referendum in September to secede. Trinidad took the same decision in December, suggesting that any island of the eastern Caribbean could, if it so wanted, latch itself on to the future unitary state of Trinidad and Tobago. The invitation was not phrased tactfully; all the same, some of the islands may accept it. Dr Williams also looked forward, in general terms, to some kind of general Caribbean economic link.

Preoccupied with African affairs, the Colonial Office pursued a policy of hoping for the best. But even if London had been more alert and more generous, it was only Mr Manley's powers of persuasion that could have saved the floundering federation. If the Jamaicans had suspected that Britain was trying to push them into an association, their rebelliousness would only have increased. There are now the seeds of an anarchical, or Castro-like, situation in several of the islands. But it is still probably in Jamaica, with its overcrowding, its unemployment, and its economy dominated by outside interests, that the ground is the most fertile.



STRIKE THREATS

End of the Rein

THE Government has plainly decided that it had better not start an open fight with Dr Beeching and Lord Robens, but that it should hold them at the end of the present length of rein which these two gentlemen have already unhappily managed to gather in to themselves. When the railway unions returned to the Transport Commission this week, Dr Beeching duly raised his offer above 2½ per cent, as he had already virtually promised to do. But, plainly acting under a warning from the Government, he went up only as far as 3 per cent; and he intimated that any further increases after April—about which he had previously been issuing other winks and nods—might take the form only of "productivity agreement" increases and increases to special grades of railwaymen in areas where more recruitment is needed.

It is, of course, on these latter that his offer should have been solely concentrated in the first place. Rumbling with anger, the railway unions rejected his new proposal and have asked for a meeting with the Prime Minister; the interesting thing is that they have not immediately called a strike. But the leaders of all three railway unions know that a strike would be hideously expensive to their funds and wildly unpopular with the public; they suspect therefore that it would very probably fail. Two of the three unions, if left to themselves, would almost certainly accept the present offer, without a strike, in

can make the most of man-made fibres

WHOSE HAND *shall guide the affairs of Courtaulds is vitally important. Not only for* 180,000 *Courtaulds stockholders and* 60,000 *Courtaulds employees. It deeply concerns hundreds of British companies —specially in the fashion and textile industries–whose businesses have grown with the help of Courtaulds. And it concerns you, the customer.*

The issue is a simple one. To explain what is at stake, this advertisement (one of a series) has been prepared.

Courtaulds are the supreme specialists in the manufacture of man-made fibres ... and that includes the world, not just Great Britain. Last year Courtaulds alone produced over three-quarters of all man-made fibres in this country. *Three-quarters!*

Courtaulds make man-made fibres pay. Tricel pays. Courtelle pays. Rayon and acetate pay. And the demand grows heavier every year.

Courtaulds is the most advanced name in research and development. They have shown that they know how to anticipate the ever-changing demands of the fashion and textile industries and at the same time keep prices low.

Courtaulds have a highly profitable future—*alone.* Their resources should not be used to bolster the more problematical interests of the chemical industry.

RHC-48

COURTAULDS LIMITED, 16 ST. MARTIN'S-LE-GRAND, LONDON, E.C.1

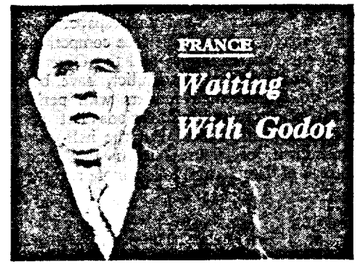
the end ; but the big National Union of Railwaymen is under extreme pressure from militants on its executive to show what the militants call " its full industrial strength." If the Prime Minister stands firm—as surely he must—there is likely to be a bitter internal struggle about whether the NUR should strike, and if so whether it will be with its two partners or alone.

Meanwhile both the Minister of Fuel and the Chancellor of the Exchequer have pretended to the Commons that Lord Robens's offer of 4 per cent to his day-wage miners is " not inconsistent " with the pause, although it quite plainly is. On Tuesday Lord Robens told the miners flatly that they could not have any more, and they departed with their next step uncertain.

The third leg of what some had expected to be a triple alliance of strikers this winter lies in the engineering industry, where the unions' one-day strike call on Monday had a resounding response: except in the naval dockyards, where there is a strong tradition of staying at work, about nine out of every ten engineering workers appear to have taken the day off. But there is all the difference in the world between taking a day off to go fishing and coming out on a lasting strike: on Thursday the Confederation of Engineering and Shipbuilding Unions decided that they would hold a ballot before calling a lengthier stoppage, although meanwhile they will take another Monday off in three weeks' time.

GOVERNMENT EXPENDITURE

A Target to Forget?



THE vote on account for government spending in the new financial year ought normally to be laid before Parliament in the next two weeks, and surely cannot decently be delayed by more than about three. If Mr Lloyd is to fulfil his promise of last July—that he would "do his utmost" to keep the rise in supply expenditure in 1962-63 down to 2½ per cent in real terms—he will have to make sizeable immediate cuts in the social services. *The Times* has now joined the chorus which thunders that he should. Otherwise, it said this week:

> his new economic policy, on which the future of the Government rests, will be riddled. ... The Government have insisted that large sections of the nation must take the medicine ; they cannot make an exception for themselves.

It would be nice to get back to the language of reasoning, instead of incantation, about this. The question is not whether Mr Lloyd should swallow his own medicine; it is, more probably, whether he should again this year make the British people pay more for theirs.

There were three reasons why Mr Lloyd's "pledge" about government expenditure last July was peculiarly gawky. First, as the British people's annual income goes up by 2½ per cent or whatever there are some things for which its demand should expand more than proportionately, others less than proportionately. Nobody can pretend that Mr Lloyd's pledge last July stemmed from a careful calculation about which category the particular goods and services that are provided through government expenditure should belong in 1962-63. He just uttered the mystical average figure for national income growth that he first thought of. Secondly, the worst way to control government expenditure is to concentrate on hitting a certain target figure by transient short-term cuts instead of ploughing forward relentlessly to secure lasting long-term economies.

Thirdly, when Mr Lloyd made his statement last July he could not possibly know whether by April of 1962 his general budget policy would need to counter any excess degree of demand inflation within the economy. Our own judgment at present—admittedly a controversial one—is that it need not. In these circumstances it is legitimate to question whether emotive immediate cuts in the social services would really make Mr Lloyd's main task this year, which is containing cost inflation through the pay pause, any easier. In budgetary policy, three decades after Keynes, one really cannot support this strange new itch to replace the economics of intelligent current planning by the economics of following some sort of ju-ju man's slogan thought up nine months before the event.

GENERAL DE GAULLE did not announce the conclusion of peace with the Algerian nationalists in his television address on Monday. To that extent he may have disappointed those Frenchmen who, like Mr Samuel Beckett's tramps, expected Godot to arrive with a message of salvation. But others may have realised that it was not in their president's character to spring surprises in this fashion, and that he is, in fact, waiting as anxiously as any of them for the outcome of the secret negotiations with the Algerian leaders.

His speech took the usual form of an appeal to Frenchmen and Frenchwomen to look past ephemeral difficulties to the glorious morrow. In turn France's history, France's present achievements, France's international importance, France's atomic armament, France's eternal greatness, were evoked, and the march past of these familiar banners took up half his time. But, as usual, the last parts of the oration were the most important: this was when General de Gaulle threw down his challenge to the OAS (the right-wing underground) and expressed his hope of achieving " the best " solution of the Algerian problem.

What this solution is thought to be, should soon be known. The French government is preparing to publish its proposals, so that the French themselves, the Algerians, and the rest of the world can see how " generous, realistic and constructive " they are, and what assurance they offer of a " fruitful and friendly relationship " with an " Algerian Algeria." What General de Gaulle has made clear is that he takes Algerian self-determination, and independence, for granted. He added that " the greater part " of the French armed forces was to be withdrawn to Europe before the end of the year, and he dismissed the OAS as a gang of criminals whom the police could cope with. The Algerians were warned, in the gentlest fashion, that without solid guarantees for the European population and French interests in the Sahara, peace could not come. But essentially the speech was an attempt to assure both the Algerians and the French that a settlement will not be jeopardised by any weakness towards the Right or insistence on untenable conditions. Whether the rebel leadership will be satisfied remains to be seen.

ITALY

Signor Fanfani's Task

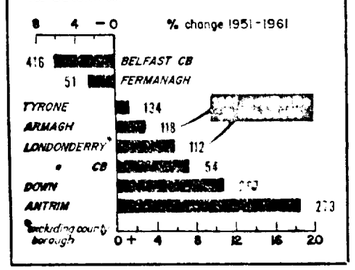
AT LAST Signor Fanfani has got his mandate for an " opening to the left." The Christian Democrats' new national council, elected on the last day of their party congress in Naples last week, contains a large majority of those in favour of forming a centre-left coalition with the support of the Socialists. Exhilerated, no doubt, by his success, Signor Fanfani handed in his resignation on February 2nd, without waiting to submit to a debate in the Chamber which was due to reassemble four days later. President Gronchi's ritual round of consultations was interrupted last weekend by an attack of influenza. When *The Economist* went to press, Signor Fanfani was still being confidently tipped as successor to himself, but President Gronchi had not yet officially relieved him of his suspense.

Assuming, however, that he is nominated as Italy's next prime minister, Signor Fanfani will not then by any means be out of the wood. He will still have to form a cabinet composed of the kind of men whom the Socialists feel able to support if not positively, at least negatively (by abstention). Above all, he will have to draw up a government programme that is broadly acceptable to the Socialists. Signor Nenni, himself, and his fellow " autonomists " within the Socialist party, have already welcomed the decisions of the Naples congress ; if and when Signor Fanfani presents his new cabinet to the Chamber, most of

them would favour supporting him with a positive vote, instead of a mere abstention. But Signor Nenni, mindful of his left wing, has felt obliged to announce that if his party is to support Signor Fanfani, it must be upon the "basis of a concrete programme." Signor Fanfani, for his part, is also anxious to produce a definite programme. But it would have to be a programme designed to overcome the doubts and misgivings not only of his own right wing, but also of all those Christian Democrats who, although not actively hostile to the opening to the left, are still very much in two minds about it. Clearly Signor Fanfani will have his work cut out.

GERMANY

Swabian Pause?



Do British industrialists feel a touch of *Schadenfreude* at the threats of strike and lockout in engineering industries in south-west Germany? What a relief, they may be tempted to think, if competitors in Württemberg and Baden are plagued by the German equivalent of Mr Carron. It would be a mistake to let the feeling go too far. West Germany's astonishing labour peace is an ingredient in German (and, therefore, western) political health. British exporters are getting their share of the high purchasing power of the German market. But while it would be churlish to wish industrial strife on Germany, the British can legitimately take comfort when German wages rise, giving a further impetus to consumer demand, and easing Mr Lloyd's battle to make British costs competitive.

In recent years the rise has been fast and persistent. But this year German employers, whose profit margins have been shrinking as wage increases have outpaced productivity, are in a mood to call a halt. When the engineering union in Baden-Württemberg put in for the usual 10 per cent rise plus six days of additional paid holiday, the employers countered with an offer of a mere three per cent increase plus only three days' extra holiday; anyway, the employers point out, existing agreements to cut working hours from January 1st already mean an effective wage increase of a further 3.5 per cent.

Threats of strike action from the union, backed by 86 per cent of its members, and of lockouts from the employers' side, have followed. But it is by no means certain that either will resort to such extremes. On Monday Herr Kiesinger, the chief minister of Baden-Württemberg, persuaded the two sides to meet again; both apparently have second offers up their sleeves. The Bonn government, for its part, is not obliged, like Mr Selwyn Lloyd, to hold the wages line even at the price of industrial strife. Dr Adenauer, now back in the saddle after a bout of illness, would probably prefer to keep the west German industrial image bright and clean

ULSTERMEN

In Northern Ireland, unlike the Irish Republic, the natural increase of the population this century has outweighed the loss from migration, and according to the 1961 census the population is now 1,425,000, as numerous as it was in 1861. The redistribution since the 1951 census has been towards the north-east and away from rural areas such as Fermanagh; the apparent exception is Belfast, where in fact people have moved to new housing estates on its outskirts.

SUNDAY PAPERS

Which Avant-Garde?

The "quality" Sunday newspapers have entered a period of fierce competition. Both the *Sunday Times* and the *Observer*, their horns locked in conflict, have been able to inform their readers with perfect truth of increased circulations last year compared with 1960. But the half-yearly breakdown of figures from the Audit Bureau of Circulations tells a more revealing story.

	('000s) July–Dec., 1960	Jan.–June, 1961	July–Dec., 1961
Observer ...	738·1	728·0	715·2
Sunday Times	1,001·1	1,022·9	967·1

As the table shows, the *Sunday Times* sale fell by 55,000 copies in the second half of last year (compared with the *Observer's* fall of 12,000) and both papers have appreciably lost ground since the comparable months of 1960. The reverse in the *Observer's* sale coincided with the emergence of the *Sunday Telegraph* last February; but the *Sunday Times*, despite the fact that its right-of-centre, predominantly Tory, middle-class readership now had two papers to choose from, rather surprisingly did not feel the draught until later in the year. It may be that it is only since about midsummer that family selectivity has really begun, and among a type of readership with which the *Observer* is not so closely identified. The *Sunday Telegraph's* "certified" circulation for the first twelve months of its existence was (rather vaguely) "in excess of 700,000." For the first five months (February to June) the paper claimed 716,000; its downward turn looks rather less marked than its chief rival's.

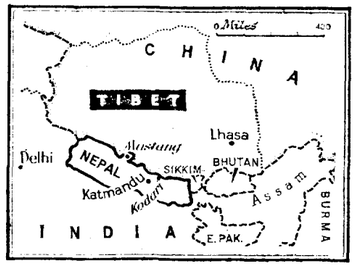
Thomson House's counterstroke, the free colour section to make the *Sunday Times* "the complete Sunday newspaper," was launched last weekend. Mr Thomson, in a bland television interview that evening, confessed himself disappointed with its content, but its potentialities (assuming the advertising revenue comes in) are already apparent. Curiously enough, just as Mr Thomson was taking up American Sunday newspaper technique, the *Wall Street Journal* began to march American Sunday newspapers in the opposite direction. In both size (32 pages) and appearance, its new Sunday venture, the *National Observer*, turns out to be a take-off of the old-fashioned British "quality." It relies, however, exclusively on comment: in this sense, it is cast more in the mould of the *Christian Science Monitor* than any other American paper. The progress of avant-gardism on both sides of the Atlantic promises to be intriguing.

As expected, all the British Sunday sales fell off in the second half of last year (the *News of the World*, despite its time-dishonoured formula, by as much as 90,000), with two exceptions. These were the *People* (up by 8,000) and the *Sunday Express* (up by 800,000). The *Express* has plainly succeeded in retaining the bulk of the unduplicated readership of the late *Sunday Dispatch*. But mergers of this kind, as the *Daily Mail* is discovering and as the *News Chronicle* discovered earlier, sometimes look less successful after a year or two.

SLUM CLEARANCE

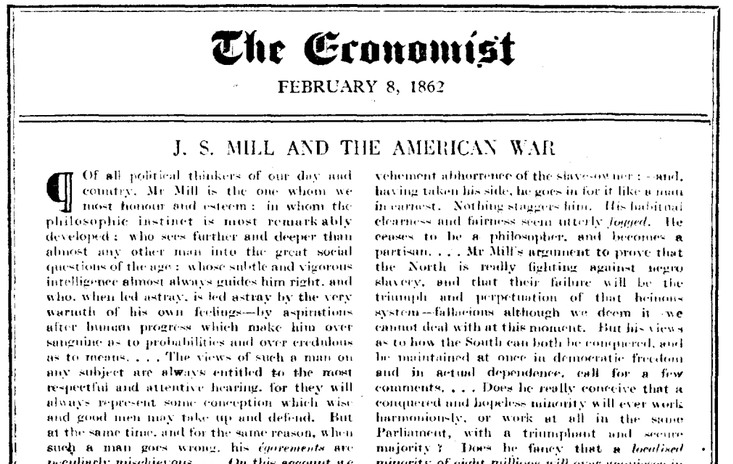
Bulldozer Hill?

Dr Hill wears all sorts of hats. There is the Ministry of Housing and Local Government; there is Welsh affairs; and this week it emerged that he is still responsible for the co-ordination of Government information services, a task in which he has just been allocated the spare-time assistance of Mr Barber, the Economic Secretary to the Treasury. Now he is after another: it can best be described as Minister for the Reconstruction of the North, and it is not at all a bad idea. On Tuesday he proclaimed himself the champion (before the Multiple Shoe Retailers' Association) of tearing down and rebuilding "on a pretty big scale" all decaying town centres. And in last Friday's housing debate he promised a special drive to clear the worst slums, in and around Manchester, Liverpool and Birmingham, rather quicker than the existing programme would do. These are the right noises to make. The reconstruction of Britain's seedier city centres and the replacement of the Dewsburys (all towns with too many outside lavatories) should be one of the real social priorities of our time, a priority from which



only the absurd muddle of rent control and housing finance policy has held Britain back.

The first task for Dr Hill is to define the precise range of the slum clearance problem itself. The figures cited in the debate were based on the 1955 estimate of 850,000 unfit houses in England and Wales (then 6½ per cent of the total stock), plus 150,000 in Scotland (10 per cent). Slum clearance in England and Wales has been running at 60,000 a year, but half a million of the houses condemned in 1955 are still inhabited. As fast as official slums are removed, the total of unfit houses is replenished from among the most decayed and ill-used of the four million homes which were built before 1875 but which are still occupied today. The hard core of the problem is essentially a localised one in big and medium-sized towns. The case for drastic action can only be strengthened by a more exact reassessment of what needs to be done. Those local authorities that blanch at the idea of any extra contribution from their own housing accounts should take another look at their rent levels. Last year, 51 out of 83 county boroughs were charging less than 25s. a week for a three-bedroom postwar house. In Scotland, the latest increases in Glasgow (which will bring in an extra £1 million a year) still leave the average council rent at 12s. 3d. a week.



TIBET

The Resisters

Whatever the precise truth about Tibetan refugees in Nepal, it is clear that the rebellion in Tibet against the Chinese communists (both as Chinese and as communists) is far from over. The Nepalese end is admittedly obscure. Officials in Katmandu first said on February 1st, then denied on February 4th, that unidentified aircraft had been dropping supplies to the refugees, who belong to the martial Khamba people. There are more than 10,000 Khambas in the Mustang area, where, at an average altitude of 15,000 feet, they evade the tiny Nepalese army. The air drop report suggested that the Nepalese were afraid the Chinese might assume a right of pursuit into the Mustang area. In view of the delicate state of Nepal's relations with India, such anxiety would be understandable.

There is no evidence that the Khambas now in Nepal are slipping into Tibet to resume the fight. If they did, however, they would find themselves in company. According to Tibetan refugees lately arrived in India, guerrilla warfare is still going on in the north-east, the west and the south-east of the country. In the north-east, Tibetan resistance interrupted the construction of the Lhasa-Lanchow railway late last year until the Chinese attacked from the air. As for the Khambas, some 2,000 of them are still said to be fighting in western Tibet. There is no reason to doubt such reports. Stories of the Khamba uprising similarly came from refugee sources in 1956, and were confirmed when the Dalai Lama fled Tibet in 1959.

The Economist

FEBRUARY 8, 1862

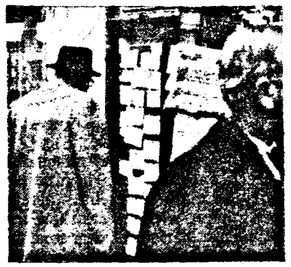
J. S. MILL AND THE AMERICAN WAR

Of all political thinkers of our day and country, Mr Mill is the one whom we most honour and esteem: in whom the philosophic instinct is most remarkably developed; who sees further and deeper than almost any other man into the great social questions of the age; whose subtle and vigorous intelligence almost always guides him right, and who, when led astray, is led astray by the very warmth of his own feelings—by aspirations after human progress which make him over sanguine as to probabilities and over credulous as to means. . . . The views of such a man on any subject are always entitled to the most respectful and attentive hearing, for they will always represent some conception which wise and good men may take up and defend. But at the same time, and for the same reason, when such a man goes wrong, his *opinements* are peculiarly mischievous. . . . On this account we have perused with care an article which Mr Mill has just published in "Fraser's Magazine"; and we confess it has filled us with the deepest amazement and regret. The side he takes has been determined by his strong anti-slavery feelings—his sincere pity for the slave, his more vehement abhorrence of the slave-owner;—and, having taken his side, he goes in for it like a man in earnest. Nothing staggers him. His habitual clearness and fairness seem utterly *fogged*. He ceases to be a philosopher, and becomes a partisan. . . . Mr Mill's argument to prove that the North is really fighting against negro slavery, and that their failure will be the triumph and perpetuation of that heinous system—fallacious although we deem it—we cannot deal with at this moment. But his views as to how the South can both be conquered, and be maintained at once in democratic freedom and in actual dependence, call for a few comments. . . . Does he really conceive that a conquered and hopeless minority will ever work harmoniously, or work at all in the same Parliament, with a triumphant and secure majority? Does he fancy that a *localised* minority of eight millions will ever acquiesce in such a despairing inferiority in all the aims and purposes of a common citizenship? . . . And . . . can he, a philanthropist, a philosopher, a lover of progress and of civilisation, look with the least complacency on the spectacle of a nation, constituted on so false and so unfair a basis?

COMMUNIST BLOCK

Peaceful Co-existence Again

While Mr Khrushchev remains silent, and Moscow finds it necessary to reassure the world about his whereabouts and his health, his colleagues show no sign of wearying in their ideological conflict with Peking's Albanian proxies. So far the Russians have still not directly implicated the Chinese; but when an article in *Izvestia* last week said that the Albanians "only parrot the ideas of others" about peaceful co-existence, it was getting near the knuckle. Throwing inhibition aside, this same article robustly attacked the Albanians as "lack-lustre theoreticians" and "dyed-in-the-wool dogmatists" who have slid into "the bog of opportunism" and adopted a most tendentious attitude towards Moscow's attempts to ease international tension.



Alarmed, perhaps, by Peking's increasingly venomous attacks on President Kennedy and every aspect of American policy, the Russians have been harping with unusual vehemence on the futility and impossibility of war. They have also been at pains to deny Albanian charges that their German policy is inconsistent and pusillanimous. But in a speech at a conference on Marxist theory and the social sciences (summarised in *Pravda* on February 4th) Mr Suslov, that enigmatic intellectual and party theorist, emphasised that although "reasonable compromises" are possible in political relationships between states, any peaceful co-existence or compromise in the ideological sphere is impossible. Conceivably, this harking back to the compromise formula on peaceful co-existence that the Chinese accepted at the Moscow conference in 1960 is an attempt to throw a line across the widening gulf between Moscow and Peking.

Mr Suslov also emphasised that revisionism, as propagated by the Jugoslavs, remained the main danger to the socialist camp. He argued, rather obscurely, that dogmatism of the Albanian variety created a favourable breeding-ground for revisionism. Mr Suslov's remarks might not have been entirely unconnected with the increasing friendliness lately shown by Mr Khrushchev towards Belgrade. In the present state of the quarrel inside the com-

munist block, Mr Khrushchev, a practical man, may well have his reasons for a few friendly gestures to the Jugoslavs; while Mr Suslov, as a keeper of orthodoxy, may be concerned to see that these are not misunderstood.

PROSTITUTION

Not Importunate

THE recent decision of the Court of Criminal Appeal (*Weisz v. Monahan*, January 31, 1962) that it is not illegal for a prostitute to advertise her services by a notice in a shop window is, while hardly an occasion for wild rejoicing, logical enough. The defendants had set up a notice board in their shop window, where one of the notices bore the legend: "Model Susan: 40-28-40. Full personal service. Corrective Treatment" and followed by a Ladbroke telephone number. The Street Offences Act (1959) forbids a common prostitute to loiter or solicit in a street (s. 1) and it was alleged that the shopkeeper was aiding and abetting her. She clearly could not be said to be "loitering," and the court held that "soliciting" involved the physical presence of the prostitute and conduct by her amounting to importuning or pressure on prospective customers. On the same day a similar appeal concerning the advertising of the services of a male prostitute was also allowed. (*Burge v. D.P.P.*) These cases are clearly distinguishable from *Smith v Hughes* [1960] 1 W.L.R. 830, where a prostitute was convicted of soliciting, although she was doing so from a balcony in Curzon Street.

Even the Attorney-General concurred in the decision in the Weisz case, but hinted ominously that such advertising might constitute an offence under some other legal provision. What might this be? A prosecution might be brought for knowingly living on the earnings of prostitution under s. 30 of the Sexual Offences Act (1960). This offence is committed if a man (the Act specifies "a man") is paid by a prostitute for services supplied to her for the purposes of prostitution, which he would not supply but for the fact that she was a prostitute. Alternatively a charge might be brought under the Obscene Publications Act for publishing an obscene article, but on the face of it there is nothing obscene about a notice in a shop window. (*The Ladies Directory*, which was condemned in the Shaw case, was illustrated.) It could, however, be argued that informatory postcards have a tendency to "deprave and corrupt." Finally, a prosecution might be brought for a conspiracy to corrupt public morals, the new offence which was created by the House of Lords in the Shaw case, and is capable of almost indefinite extension.

Such prosecutions are not desirable. The purpose of the Street Offences Act was to make the streets pleasanter places for the vast majority of Britons who are not prostitutes' customers, by sweeping prostitutes underground. It has achieved that purpose. Once the element of nuisance to ordinary people has been removed, it would be logical to go further only if one wants to make prostitution itself illegal, only if one wants to make the police the public's spiritual directors instead of merely guardians of the peace. Rightly or wrongly, but probably rightly, the overwhelming weight of western tradition is against such a course. It was St Augustine, who was not exactly a Benthamite liberal, who in the *City of God* counselled against the Roman state's suppression of harlots "lest the whole world be convulsed with lust."

FINLAND

Houdini

MANACLED, bound, and dropped into the river in a sack, Finland regularly manages to climb out again, red at the wrists but otherwise unharmed. The parliamentary election held last Sunday and Monday —earlier than usual, as a result of the Russo-Finnish crisis in November—has brought a distinct shift to the right. Yet, such are the oddities of the Finnish scene, the outcome may well be acceptable to the Soviet Union: which is the essential condition of Finland's freedom. The communists have lost their position as the biggest party in the 200-seat parliament, and the left-wing faction of the divided Social Democrats has been virtually wiped out. The chief gainers are the parties just right of centre—the Agrarians (from whose ranks President Kekkonen comes) and the liberal Finnish People's party. In all, the four non-socialist parties will now command a comfortable majority.

This suggests the possible shape of Helsinki's next cabinet. In theory, the most stable government for Finland would be a coalition of the Agrarians and the surviving, more moderate group of Social Democrats. Between them, they represent an alliance of town and country and straddle the middle of the political spectrum. But the leaders of these moderate Social Democrats are the most outspokenly anti-communist politicians in Finland, and are therefore anathema to Mr Khrushchev. Since the last such coalition broke up in 1958, having run into the reef of Russian opposition, the country has been ruled by minority cabinets of Agrarians. To broaden this foundation, President Kekkonen may now call in members of the other non-socialist parties, together, perhaps, with one or two Social Democrats not on Mr Khrushchev's proscribed list. The President himself has gained enormously in popularity since he succeeded in persuading the Russians to drop their demand for military consultations in November, and is now assured of another six-year term of office. This week's election may enable him, in addition, to construct the first government based on a solid parliamentary majority in over three years. If so, the picture of Finland as a nation tied hand and foot to Russian whims—a picture common among some myopic westerners—will once more have proved an illusion.

UNITED NATIONS

Accentuate the Negative

WHAT emerged with painful clarity from Monday's debate in the Commons was that the Government has no positive United Nations policy. Everybody in the wide world has an undoubted right to criticise the UN; but the Foreign Secretary, whose Berwick speech was the target for the Opposition motion of censure, has a clear duty to see that his criticism of an organisation which he is pledged to support is constructive. Mr Gaitskell accurately commented on Monday that Lord Home's speech had contained "no practical suggestions whatever" for strengthening the UN. Mr Harold Wilson, echoing Mr Hammarskjöld, pointed to the two basic attitudes toward the organisation—the static and restrictive, and the dynamic concepts—and bracketed Lord Home with the Russians as favouring the restrictive approach. If confirmation of this diagnosis were needed, the Prime Minister's speech provided it.

Mr Macmillan dubbed the Security Council "impotent," but deplored the development of the Assembly and declared that "the UN can never be made to work" until the Council was able to operate "as a team." He spelt out, in fact, more plainly than Lord Home had done what was the underlying logic of the Berwick speech: that the whole UN effort should be shelved until such time as a concert of great powers could be brought into being as a "cabinet of the world."

It is this dream of a return to a world run by a snug little club of top people—a club which apparently has an armchair all ready for Mr Khrushchev as soon as he can be taught to lower his voice to the appropriate murmur—that seems to be leading the Government even further away from reality, and away from the mass of nations that nowadays demand a voice in world affairs. As Mr Prentice remarked in a thoughtful speech from the Labour benches, to attack former colonies for their views on colonialism and to attack the UN, on which the new nations base their hopes, constitute together an infallible recipe for losing the cold war.

FIRE DESTROYS PETERBOROUGH OFFICE BUILDINGS!

January 4th 1962

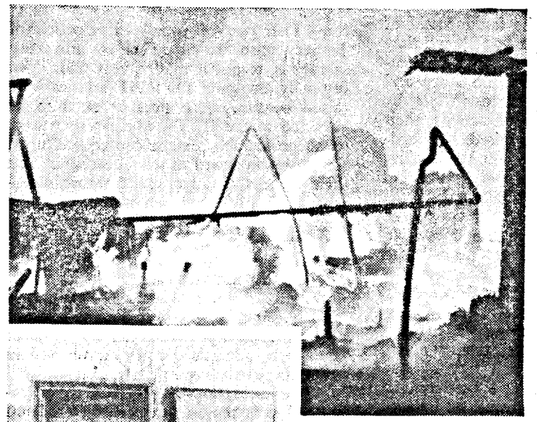


Photo: Peterborough Evening Telegraph

CHUBB CABINET Saves Vital Papers

On the night of January 4th these Peterborough offices were a blazing inferno.

Vital, irreplaceable records of this Firm's activities were housed in a CHUBB Record Protection Cabinet which stood at the very heart of the blaze for many hours. When the flames finally died away, firemen were able to remove the cabinet, and when it was opened *the important papers were not only readable; they had remained in undamaged, perfect condition and were immediately usable.*

Do your important papers have this kind of protection?

Write for details:

CHUBB & SON'S LOCK AND SAFE CO. LIMITED

EUROPE

Parisian Strip

IN his television broadcast, General de Gaulle appeared as keen as ever for some kind of political co-operation between European states. But it is still uncertain whether the Six can agree on the form a union should take. Doubts were raised by a new outburst of disagreement at a meeting of the Six on January 18th. For some eighteen months the "Europeans" on the Continent have been struggling to adapt President de Gaulle's highly personal concept of *l'Europe des patries* to make it serve, rather than sabotage, European unity. The Bonn declaration last July, which proposed a Union of European Peoples, and the work since then of a committee of experts under the French diplomat, M. Fouchet, have provided evidence of progress. But at the meeting in January, as a Dutch leak informed the world, a revised French draft was rejected indignantly by the other five countries. The plan, according to the Dutch, virtually went back on all the patient compromises of the past six months.

The dispute has not led to a total breach. At subsequent meetings, which apparently went well, counter drafts have been produced by France's partners. The two versions will be discussed at a meeting on February 20th. But though much common ground has been found, the French plan has revived old suspicions and old differences. For a long time the Dutch, and at times other members of the common market, have feared that the French want to make the new political machinery a further obstacle to the British. Fears that new defence arrangements in Europe might weaken Nato have still to be appeased.

The "Europeans" are worried, too, lest the proposed new forms of political co-operation weaken the existing communities in Brussels. Should a strong secretary-general give a "community" flavour to their proposed coalition of sovereign states? It may be that French concessions and persuasions will once again succeed in damping down the doubts. But so far the wine the Europeans have zealously poured into the Gaullist water has hardly coloured the mixture at all.

DURABLE CONSUMER GOODS SERVICE

Six-monthly reports combining economic forecasting and market research are available under this service for the main domestic appliances, radios and television sets and passenger cars.
Each report provides a unique guide to the character and extent of the U.K. market for these products. Results of 3,000 interviews are analysed to show:

OWNERSHIP — BRAND SHARES
CHARACTERISTICS — BRAND LOYALTIES
REPLACEMENT MARKET — INTENDING PURCHASERS

with a forecast of demand for the year ahead.

REPORT No. 8 available now

Prepared by The Economist Intelligence Unit Limited in association with The British Market Research Bureau Limited.

LETTERS

Export Profits

SIR—I think you omit a notable factor from those aiding "the German miracle" (February 3rd), as also from those that might contribute to a significant rise in British exports. From the outset of the re-establishement of sound currency in Germany in 1948, and in France more recently, exporters were officially permitted to do what they liked with a substantial proportion (or all) of their proceeds in foreign exchange. Since 1939 British exporters have never been given the faintest sniff of such an incentive to export; at home they have been subjected, as individuals or companies, to increasingly discriminatory and penal taxation on such proceeds; while, by both official and trade union actions, their costs have steadily been raised. Accordingly the expectancy of export profitability in UK industry today is poor beside that of French, German and others among the Six. I think it crazy that our authorities continue to advertise to the outside world their distrust of their own citizens' and companies' judgment about the worthwhileness of holding sterling rather than dollars, marks, francs, gulden, etc.

I admit to much misgiving about the present and future conduct of our economic affairs. But I have as much, if not more, misgiving about that of other systems and currencies. And I am sure that on balance we would gain much from a decision to permit UK exporters to do what they liked with most, or a big part, of their proceeds in foreign exchange. I cannot imagine why we have for so long ignored this obvious incentive to export. I think the Americans are being driven to employ it. Why not we, forthwith?—Yours faithfully,

London, W2 GRAHAM HUTTON

No Policy for Mergers?

SIR—He who laughs last, laughs proverbially longest! While you were right to point out in your article (February 3rd) that ICI shareholders would be the "last people formally to be consulted," you omitted that such last consultation will determine the issue—and in both senses of the word "issue." Unless they agree to the issue of fresh capital, Mr Paul Chambers and the ICI board will have failed in the main issue.

Surely you were wrong, incidentally, to have omitted the word "yet" (or "as yet") from many sentences where its rightful inclusion would have spoiled the strength of the argument. You pillory the Government in reality only [in] that it has made up its mind, e.g. ". . . not yet to decide whether this merger would or would not be in the national interest." Again, "It did not feel competent on the evidence *as yet* to decide whether this merger was in fact in the public interest."—etc.

You omitted also to point out that while Mr Erroll refused to give judgment on a hypothetical case, with not yet established facts, he made it very clear that he was watching the situation and would not hesitate to require ICI later to divest themselves of Courtaulds' shares were the event to happen and were the facts to justify such a judgment.—Yours faithfully,

House of Commons, SW1 JAMES PITMAN

University Teachers

SIR—That part of your leading article of January 27th which refers to university salaries is, to put it mildly, very odd. You begin by assuming that CAT salaries were raised because more teachers need to be attracted to the CATs, whereas they were to a considerable extent consequent upon the Burnham award to schoolteachers. You then proceed to advocate cutthroat differentials by subject, when nearly everyone in the universities objects to differential scales, even those teachers who benefit by them. You further assume that more teachers do not need to be attracted to university teaching, when every university is finding it difficult to get the right sort of person: it is not uncommon for posts to have to be advertised and re-advertised in order to get the sort of man needed, and in some cases the job has had to be re-tailored to fit the only candidate considered to be of the proper calibre. You also assume that recruitment is easy in some subjects, when, in fact, most subjects face recruitment problems: in both arts and science there is the occasional subject which finds little or no difficulty, but this does not occur on the scale you seem to imagine.

The only part of your remarks with which I heartily agree is that which states that university lecturers should not get a 17½ per cent increase: you are right—it should be about 30 per cent.—Yours faithfully,

KENNETH UNWIN
Association of
London, W2 University Teachers

Licensing Laws

SIR—Your suggestion (on January 27th) that the "absurd criterion of need should be done away with" in granting new off-licences and that supermarkets should be able to get them on demand is not, I hope, meant to be taken seriously. If supermarkets could have off-licences for the asking, then any other tradesman, whether grocer, tobacconist, barber, bootmaker or baker, must also be able to get them. In fact, why have a licensing system at all?

The answer is that we have a licensing system—we need certain practical and common-sense safeguards in selling and serving alcoholic liquor—as a protection against insobriety and alcoholism. France, with greater and often-lauded freedom, has an alarming record of alcoholism. The United Kingdom has a moderate degree of freedom and an exceptionally low rate of alcoholism. On the whole, we have struck about the best balance in the world in this matter of maximum freedom compatible with a fair and, in the long term, improving sobriety record.

"Proof of need" is essential to our system of licensing. Without it, every "reasonably respectable" tradesman would have to stock a few bottles on the chance that he might be asked for them, with the result that the sale and service of liquor would be without any effective control. The harm caused by such a breakdown would be as serious for this country again as it was in like circumstances in the past.

The suggestion that county court judges should take over from licensing benches is particularly preposterous. Licensing benches have a far better knowledge of the relevant conditions in the district. Unless the county court judges were to be laden down with detailed instructions and their numbers increased several times over, to investigate applications as thoroughly as they are gone into now, the licences might just as well be doled out over the counter at the post office or police station.—Yours faithfully, L. R. N. PERCEY

The Licensed Victuallers' Defence League, London, EC4

A Gulf Between

SIR—I was rather surprised to notice in your issue of December 30, 1961, on page 1304, under the heading "Kuwait's Holdings Abroad," the wrong words "Arabian Gulf" instead of the correct name Persian Gulf. I was totally at a loss to understand how this misnomer had appeared in your highly-valued and deeply informed paper, which I am sure has also aroused the astonishment of every literate compatriot of mine.

Of course, I must mention this point here that we are religious brethren of the Arabs with whom we are eager to have the most cordial relations, but we can never by any stretch of imagination accept the name of Persian Gulf to be wrongly called Arabian Gulf. Place-names which have been in existence from prehistoric times and have been shown on maps and recorded in geographical books the world over, for centuries past, have gained a sanctity and eternal entity which the whims and caprices nor the ambitions of certain emergent elements beyond our borders can slightly alter.

It is, therefore, neither fair nor right that a world-renowned paper with an exalted standing of knowledge and cultural accomplishments as *The Economist* should allow proper names to be wrongfully altered, apparently for showing regard towards the susceptibilities of inventors of this historically baseless nomenclature.—Yours faithfully, ALI HEMAMI

Teheran

BOOKS

Eupeptic Chancellor

High Tide and After: *Memoirs* 1945-60. By Hugh Dalton. *Muller.* 467 pages. 40s.

AUTOBIOGRAPHY, Lord Dalton rightly emphasises, in his preface to this third volume of his memoirs, is an exercise in egoism and he is not to be blamed for indulging it. His own doings and feelings in politics since 1945 and in government until 1951 are too tangled with his ripe personality to make acceptable history, but they provide plenty of highlights on the course of Labour governments and policies—accompanied by the inevitable artificial glosses that one has learned to expect from this perplexing baritone of a character. *The Economist* had its fights with Hugh Dalton in the two years when he was Chancellor. It would go back on none of these criticisms now, least of all in the case it argued from the first against ultra-cheap money, and repeated on the appearance of his revised "Principles of Public Finance" late in 1954.

To go over the ground again in detail, however, would surely be unnecessary. Lord Dalton puts all the familiar arguments. He claims that he had full official support for his attack on "the great phalanx of the 3 per cents" (including Keynes's support). He recalls the cheers for his "proud day for patriots", when "Daltons" were issued. His denunciations of the baleful financial Bourbons, conspiring with persons of "unrepresentative quality" to defeat his cheap money policies, have, even at this distance, some echo of their first vibrant ring.

Many people will find this book almost nauseatingly self-regarding. In Lord Dalton, the narcissus streak has always been prominent; he can stand off at considerable distance and admire the effect that he has produced. The things that go right are always splendid; the things that go wrong too often perversities of fate or of colleagues; never, even in 1947, of the policies that he himself had pursued. The warnings are faithfully on the record; the sleepless nights worrying about getting the dollar loan and then worrying about its disappearance are described; his arguments with Attlee and his cabinet about defence, manpower and exports show a direct concern over crucial questions, free from rodomontade, that does him credit. In the same way, contrasting vividly with bombastic budgeting in November 1947, the essential rightness of his decision to resign on his foolish indiscretion elevates his reputation far above the cheap level which too often seemed to satisfy him.

There is plenty of ripe gossip to savour here. No excess of sympathy for colleagues burdens his pages. Of Morrison, he repeats a remark: "Ernie can't pronounce the names either. But he does know where the places are." Of Chuter Ede: "I had not thought that this old boy had so much bile in him." Of Bevan: "He never seemed to have much judgment when his own egoism was involved." Of Shinwell: "He is an awkward colleague always thinking about himself, tensely self-centred but unco-operative with colleagues, and terribly long-winded in Cabinet and in Committee, with a big chip on his shoulder always visible." Of Cripps: "At least he had courage and clarity. But I still had doubts about his judgment and his ability to measure consequences." Of Gaitskell: "Towards this most exceptional young man I decided that I would do my best to deflect the leadership." Of Attlee and other colleagues in 1947: "Several times I came near to resigning over the import programme. Cripps was my only firm ally. None of the others, Attlee, Morrison or even Bevin, would always face the plain facts of arithmetic. And, over food, Strachey wasn't always a reliable colleague."

It was, as Dalton said, "a pig of a year." That, one recalls, was what it felt like in the country, too; and the doubts that people had about the government's performance, from the winter fuel crisis through the suspension of convertibility in August up to the budget imbroglio in November, seem well justified by the accounts of this chief participant. They leave a good deal of mystery too. Why was the impact of this clever and in some ways cultivated man so limited? His inherent streak of vulgar vanity made him plenty of enemies; but his own work of construction, in retrospect, was not important enough to earn him lasting respect. Technically competent in his budgeting, he had found no time for real innovation. His own big venture, cheap money, he depreciated to the level of a circus. His reform for the Bank of England was botched because he mesmerised himself with the legal forms and concerned himself hardly at all with the part that a central bank should play in a modern society.

He remains a singular first person, loving trees and the youngsters in the Labour Party—and stepping down in good time to give them room—disclaiming pomposity yet capable of writing: "That afternoon I had announced in the House the calling of the Three per cents, and the day before a number of German war criminals had been executed at Nuremberg. So history was on the move." His gifts and energies have made their mark on the

The War Against Japan

Volume III. The Decisive Battles

by

Major-General S. Woodburn-Kirby,

C.B., C.M.G., C.I.E., O.B.E., M.C.

The story of Ngakyedauk Pass, Kohima, and Imphal, the decisive battles of the war in S.E. Asia, fought under appalling conditions by the 'forgotten' 14th Army. The volume also tells of the part played by Admiral Mountbatten in co-ordinating the actions of the Allies and shows how the exploits of the gallant Chindits Brigade and the support given by the Allied air power helped to turn the tide of war in this area. Fully illustrated with 26 maps and 33 pp. of photographs. Index.
63s. (post 2s. 6d.)

ALLEN & UNWIN

"of all my views"). Sir Harry brings them all into topical factual focus; he is just as apt in describing flora and fauna or the anatomy of pidgin English as in weaving the dramatic narrative of European discovery and Christian proselytising into a general survey of modern social conditions and island legislatures.

The islanders' most striking characteristic seems to be their adaptability. "In once darkest Melanesia," so Sir Harry observes, "the descendants of people who were still eating one another up to the middle of the nineteenth century are now interested in vitamin capsules." One must hope that they are not suffering from a genuine deficiency in diet. The naturally refined Polynesians of the eastern region—Samoa, Tonga, Cook and Line islands, etc.—embraced with comparative ease the best of what the white man taught them without departing too much from custom. Tonga, under Queen Salote, seems a place of real sweetness and light. But the Fijians (Melanesians) have also been remarkably clever in giving their ancient system—a blend of the feudal and the communal—a sensible modern twist. Indeed, island life, except where corrupted by tourism, provides many happy examples of how to advance politically without scrapping too many traditions.

The book contains fascinating maps, but the photographs are too small to show the marked physical contrasts between the three great seafaring races that are native to the islands: Polynesian (a pale skinned Caucasian type of person), Melanesian (black African) and Micronesian (brown Asian).

To Inherit the Earth?

Man and Dolphin

By Dr J. C. Lilly.

Gollancz. 240 pages. 30s.

THIS book should not be dismissed out of hand; Dr Lilly's theory that dolphins with their man-sized brains might have man-sized intellects has caught the imagination of scientists in the United States in such a way that the dolphin has come to symbolise the good and compassionate and it has been seriously suggested that when man has exterminated his species with nuclear war, the gentle, playful dolphins will inherit the earth. Dr Lilly, a neurophysicist of repute, is interested in discovering whether this is scientifically possible. Studies with small mammals, including monkeys, have convinced him that these can learn so much and no more, and their learning capacity is linked to the size of their brain. The 1,500 gramme brain of man appears to be the minimum size required for rational reasoning, which Dr Lilly defines for convenient shorthand as the ability to talk. A few creatures besides man have brains of this size or even bigger—the whale family and the elephants—and the object of Dr Lilly's research is to discover whether the possession of big brains means that these animals have the same intellectual capacity as man, or an even greater. If, he argues, it is possible to establish communication with these animals, to teach them to speak as a human baby learns to talk, the case is as good as proved.

Whales and elephants being a bit large to have about the house, Dr Lilly has concentrated his researches on the dolphins, which come in fairly handy sizes and have the advantages of brains only slightly larger than a man's—the experiment would become unnecessarily difficult if man found that he was trying to establish communication with a mammalian genius. His laboratory in the Virgin Islands, built with his own money, is now supported by the US Office of Naval Research and the National Science Foundation. In this book Dr Lilly merely outlines his thesis and some of the rudimentary experiments that convinced him that the dolphin merited intensive study. He is prepared for the possibility that his researches may prove to be in fact unique in creation and the dolphin nothing more than a remarkably clever animal with a gift for mimicking human sounds—which the bird-brained budgie can do better. But the immensely sophisticated structure of the dolphin's brain suggests, on present evidence, that it should be capable of doing better than this.

The Great Inquest

The Making of Domesday Book

By V. H. Galbraith.

Oxford University Press. 242 pages. 35s.

DOMESDAY BOOK studies are a yardstick by which the development and progress of English scholarship in medieval history can be measured. Professor Galbraith's work reverses the views and conclusions made famous nearly seventy years ago by the polemical acid of J. H. Round and the *allegro con brio* of F. W. Maitland. He has related the surviving sources to one another and, with extraordinary skill and ingenuity, traced the processes by which the results of the great inquest were collected and drawn up into their final form: Domesday Book and Little Domesday which covers Norfolk, Suffolk and Essex. The past generation of scholars believed that the survey was intended above all to establish liabilities for geld, the great tax on land characteristic of later Saxon England, and that the returns which reached Winchester from the shires were made on a geographical basis, hundred by hundred, vill by vill and only later converted into the descriptions of fiefs which we find in Domesday Book. Professor Galbraith's case is that the survey was from the start, and was meant to be, an inquest of feudal tenures scarcely concerned with geld at all. "The Normans were never so 'feudal' as when they arrived in England."

Few will quarrel with the author's account of the surviving records, but doubts begin to gnaw as soon as he draws historical conclusions from them. If the Normans, to quote Professor Galbraith again, "thought less of the ancient counties and hundreds than of honours or baronies or fiefs held directly of the crown," why did the survey group all its materials under the shires? To find out the total holding of any single magnate the king's clerks would have had to search Domesday Book county by county and start adding up. For the sake of his argument Professor Galbraith has ignored what every student in Anglo-Norman history knows: that all the more important tenants-in-chief had lands in more than one shire. Domesday Book enabled the king's agents to see at one glance who the greater and lesser men in each county were and how the old obligations, particularly the geld, fell upon the new masters of England who had to shoulder them. Professor Galbraith's book thus does not settle old controversies but on the contrary breathes new fire and life into them, and that is perhaps its chief merit.

U-Boats in the South

War in the Southern Oceans, 1939-45

By L. C. F. Turner, H. R. Gordon-Cumming and J. E. Betzler.

Oxford University Press. 304 pages. 60s.

THE first fact to be remembered about South Africa's share in the last war is incontrovertible: it is that, when the Mediterranean was closed to Britain in 1940, it could not have carried on the Middle East campaigns without the Union's co-operation. The scale of the help afforded cannot be better demonstrated than by quoting the statement in this book that in 1942 no fewer than 3,858 merchant ships (excluding coastal traffic) entered Union ports. Nor were the Germans slow to realise the importance to world strategy of the great concentration of shipping that passed through the focal area off the Cape of Good Hope. For about the first two years their attacks were made by warships and disguised raiders; and the authors have here brought together a fuller account of the depredations in the south Atlantic and Indian Ocean than can be found anywhere else. After the surface raiders had been defeated, largely by the strategy of striking at their supply ships, the naval commands had to cope with a heavy onslaught by German and Japanese submarines, which were not overcome until Britain (with South African help) was able to introduce an almost universal convoy system. This book, excellently mapped and illustrated, gives the full details of a campaign which, because it was so remote from our shores, has attracted far less attention than the Atlantic battle. In fact, during the first six months of 1943 a greater tonnage was lost in the Indian Ocean than in the north Atlantic. Incidentally the authors give a very fair and balanced account of the notorious *Laconia* incident in September 1942; and it interesting to note that they place the responsibility for the bombing of the U-boats during their rescue work squarely on the American air base on Ascension Island.

In the main the story here told is of two British naval commands: that of the south Atlantic, which moved from Freetown to Capetown in March 1942, and that of the East Indies at Colombo, which worked in close association with the Eastern Fleet after it had been formed. Although the ocean-going warships controlled by those commands were predominantly British, the South African Defence Forces provided many of the local defence vessels (such as minesweepers), and also some sea and air escorts when the convoy strategy came to be applied in the theatre. They also generously lent anti-submarine vessels to the Mediterranean command at a time when they were desperately needed.

The authors end with a pertinent reminder that "the rapid regrouping of world power in the years since 1945 has changed the whole superficial appearance of high-level strategy, but the importance of the Cape of Good Hope in world politics is no less than ever it was." Today the future of the naval base at Simonstown appears to be uncertain, and with South Africa outside the Commonwealth the security of Britain's sea communications may have been struck a heavy blow.

Moroccan Dossier

Political Change in Morocco

By Douglas E. Ashford.

Princeton University Press. London: *Oxford University Press.* 443 pages. 68s.

THIS survey of Morocco in its first years of independence (1955-1959) is offered as a "case study" for the student of comparative politics. This is perhaps fair warning that its formidably clinical language is only for the hardiest reader. With the honourable exception of its opening historical chapters, which are agreeably concise and straightforward, the work is more of a dossier than a clearly articulated book. Accepted as such, it provides in unstinting detail abundant facts and figures about Morocco's political parties, civil service, trades unions, tribes and various social movements. Such minutiae on Morocco are not available elsewhere. Even so, it is not quite exhaustive. In a chapter on Moroccan citizenship and its attendant rights and privileges the Jewish minority gets no mention. And foreign policy is only casually discussed.

Dr Ashford is mainly concerned with the development of political organs and general political consciousness in the newly independent country. Some of his most interesting comments apply to such social experiments as literacy drives, the training of administrators, attempts to form rural communes overriding mere tribal parishes and to channel student enthusiasm into a patriotic road building project. (The country students responded, but the haughty town boys did not.) In the central problem of governing and making their country tick over, the Moroccans, he finds, suffered singular disabilities but enjoyed one considerable asset. The disabilities were those of profound inexperience—a result of the Istiqlal's (nationalists') refusal to hold executive office under the protectorate. The asset, of course, was their king. In those first fumbling years when novice Moroccan governments merely carried on in the French way (because they knew no other; it was also rather convenient) only appeals from the king could quell popular discontent. There was no real national unity. The country and town were at loggerheads. The town zones—ex-French and ex-Spanish—were out of step. An inevitable right-left cleavage eventually split the Istiqlal and, with it, the labour movement. Although the late King Mohammed V took more and more power on himself in order to cover these breaches and in doing so aroused new controversy, this controversy was muted. For the country at large was not ready for attacks on the monarchy.

The student of comparative politics may consider that the presence of a king who regularly rushes in as a kind of political life-saver tends to stunt political development and prevent political leaders from attaining their full stature. This is arguable. On the other hand, when a country is in transition and has not yet achieved real cohesion, there is much to be said for having a big national figure who remains above party politics—as King Mohammed scrupulously did.

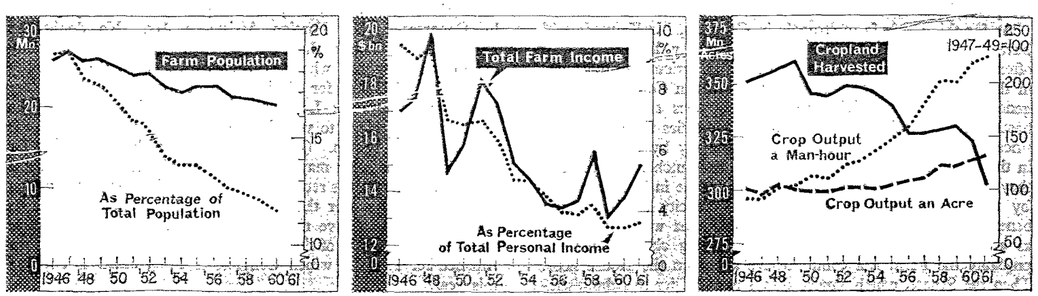
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Strong Medicine for Farmers

WASHINGTON, DC



PRESIDENT KENNEDY has delivered a bitter pill to Congress, sweetened by just a little sugar coating, to try to cure American farmers of the ailments which stem from embarrassing over-abundance. His latest agricultural message calls on Congress to enact production controls of unprecedented rigidity in an effort to whittle down the ever-mounting surplus of farm commodities. The sugar coating consists of a recommendation that government subsidies should go up a bit so that farm income will not fall as production does. This might seem to be a course far more sensible than the pattern which has prevailed throughout the postwar era: rising agricultural output helped along by constant technological advances that increase the amount grown on each acre of farm land, steadily climbing government expenditures to support the prices of these crops, declining farm income as production keeps well ahead of demand. In fact, Mr Kennedy's prescription for tighter controls seems obvious in view of Congress's refusal to take the alternative route of gradually ending all subsidies and all controls and of establishing a "free market" in which only the most efficient farmers would survive. This latter course was implicit in the agricultural proposals put forward by President Eisenhower and rejected by Congress with monotonous regularity. Yet Congress is by no means certain to force farmers to swallow Mr Kennedy's medicine in whole or in part.

The very idea of governmental regimentation for the farmer runs counter to the still persistent Jeffersonian myth of the independent yeoman farmer as the self-reliant backbone of the Republic, even though in fact he has long been more dependent upon government aid than has any other segment of the economy. More important, the President's programme appeals to neither the left wing nor the right wing of the farm movement. The left-wing National Farmers' Union applauds high subsidies to support prices but, along with most farmers, it abhors the production controls that Mr Kennedy insists must accompany them. The right-wing American Farm Bureau Federation, biggest and most vocal of all the country's agricultural organisations, will use its mighty lobbying muscles to fight any plan that does not envision an end to all government controls and subsidies and a return to a "free market" economy. Although the Farm Bureau departs from its usual conservatism to support freer world trade, its officials have warned the President that they will have little time to back his bid for greater powers to cut tariffs if they use up all their efforts fighting his farm programme. And in an election year Republican help in Congress for the Administration's farm Bill will be a very scarce commodity.

Yet, even though the President's new proposals face formidable obstacles on Capitol Hill, the situation is not nearly so sombre for the Administration as it was last year when Mr Kennedy's farm programme never so much as advanced to the stage of being debated on the floor. Actually, there is no great philosophical difference between the 1961 and 1962 Bills. Both were based on the argument that the government must adjust the imbalance between the supply of and demand for farm commodities by imposing fool-proof controls on production. The great difference between the two plans is in the technique to be followed.

Last year's programme would have transferred the real responsibility for devising plans for supporting the prices and controlling the production of each commodity from Congress to Mr Orville Freeman, the Secretary of Agriculture, with Congress merely exercising veto power over his plans. When, as almost anyone might have predicted, Congress refused to go along with this quixotic attempt to overhaul farm policy over night, the Administration hastily gave ground and had to be satisfied with temporary new programmes for wheat and maize that only slightly altered the *status quo* by tightening production controls moderately. Blessed with the experience of a none too happy year in Washington, Mr Freeman and his advisers have now adopted a more realistic and less revolutionary approach. No longer challenging Congress's basic responsibility for writing farm legislation, the Administration is asking it to approve long-range plans for controlling—effectively, it is hoped—the production of maize and other feed grains, dairy products and wheat.

The essence of the new programme can be found in these words of Mr Kennedy's farm message: "our two goals—improving (farm) income and reducing (government) costs—can both be achieved only if farm output can be reduced below needs for several years and then allowed to increase at a rate equal to the growth in demand." In other words, production would be controlled enough not only to stop the government-held surplus from increasing, but also to reduce it substantially from its current $5.5

British economy; under better control and personal judgment they might have made a decisive mark. Friends and critics alike join in wishing this remarkable character well in his struggle for life at this moment.

Ariadne and the Arabs

The Changing Patterns of the Middle East, 1919-1958

By Pierre Rondot.

Chatto & Windus. 221 pages. 25s.

In the winter of 1956-57, while Britain and France were licking the wounds of their Suez misadventure, the United States set out to fill what it believed was a "power vacuum" created by the elimination of British and French influence in the Middle East. This was a strangely misguided assessment of the situation. The Arabs, intent on their long search, first for independence and then for unity, were in no way looking for a new political overlord. The Middle Eastern stage was already crowded by the converging and conflicting passions of its players, while the Soviet Union stood by as prompter. Since the collapse, forty years before, of the Ottoman Empire, the swirling streams of Arab nationalism had added new depth and new complexities to a pattern already disordered. A gulf of misunderstanding had driven its way between the Arab and the western world.

Colonel Pierre Rondot, in his bold outline of the forces that have shaped the Middle East today, brings order to disorder. He picks up the story from the end of the Turkish empire and carries it along until 1958, when the Iraqi revolution lost Britain its staunchest supporter and stung the United States, at last, into action of a sort. His intimate knowledge and his remarkable understanding of the sources of pressure enable him to guide the reader through all the complexities with rare simplicity. His clarity of thought and language is well served by his translator, Mrs Mary Dilke. Avoiding the wiggling lines of his chronicle, he sweeps along with broad, impressionist strokes, stopping from time to time to draw conclusions or to gather his design together.

Since he sticks rigidly to the essentials of his narrative, Colonel Rondot does not take time off to explore British or French motives in the Middle East. But he does show how, in the beginning, the British were more alert than the French to the pace and direction of the nationalist fervour. The French interpreted their mandate in Syria and Lebanon as a long-term exercise in education; they applauded the ideas of the intellectual precursors of Arab nationalism, but soon found themselves overtaken by events. The British went farther, seeking out the traditional and tribal leaders and trying to identify their own interests with more aggressive nationalist aspirations. But they, too, eventually found themselves overtaken and hopelessly on the wrong side in the clash between tradition and progress. The end of the line was the fatal inspiration of the Baghdad Pact.

From the mid-1930s, the Arabs were judging all external events by three criteria: the dislodging of foreign forces, the rejection of foreign influence and the fight against Zionism. Anglo-Saxon concern, first with the war against Germany and, later, with the struggle against communism, seemed, and still seems, to most Arabs irrelevant side-issues. They remain convinced that the fight for independence and the search for unity are the major movement of this era. The west, unhappily torn in conscience over Israel, and unwilling for a long time to accept the full consequences of the Egyptian revolution, could not compete with the Soviet Union, which could smugly profit from repeated western errors. Now, two years later than the end of Colonel Rondot's chronicle, things are no longer so easy for the Russians—but they still have made no serious false move in the Middle East.

Everything is clear in Colonel Rondot's account, except, possibly, the way he has arranged his material. His starting point is also his finishing point: the bloody inauguration, in July 1958, of a republic in Baghdad. He sketches what was going on all over the Arab world at this time; then, at greater length, shows what led up to it all. Flashbacks are nearly always irritating, and, by the time the book was published in England, the plunge straight into 1958 had become a bit arbitrary. For the same reason, the epilogue, which carries the story along to the end of 1958, has the perverse effect of making the finished work seem more out-of-date than it otherwise would. In a changing world, no substantial political guide can be quite up-to-the-minute.

Colonel Rondot provides an outline. It is possible to feel that he should have filled in certain episodes more fully than he has, or that some of his lines of thought are open to argument. In particular, he seems to have been inclined to make light of the bitter antagonism and fear that Israel feels for Egypt. But, carping apart, this is still the best introduction yet to current Middle East politics. In his own words, Colonel Rondot has provided an Ariadne's thread to a disconcerting and perilous maze.

What Can Ail Thee?

Claude Barrès: *A Hero in Revolt.*

By Pierre Lyautey, translated by Humphrey Hare.

Macmillan. 222 pages. 25s.

When he was fifteen, Claude Barrès went to visit his father at the front in the phoney war of 1939: "he drove the family Chrysler about the lines, driving well, but dangerously fast." Later, as the German troops advanced, he drove the same car towards the south, accompanied by his mother and the Duchess de Lévis-Mirepoix. Victor Hugo, Fenimore Cooper and Defoe were the books of his youth; all his life culture, aristocracy and bloody war remained his romantic three elements. In the enforced aimlessness of training in Britain for the invasion of Europe, he fell automatically into fighting, drunkenness and casual lovemaking. After the war he tried journalism, but could find no satisfaction there; returning to the paratroops, and on a troopship bound for Indochina, he wrote: "This is where my freedom lies." On his first visit to Algeria he despised the local bourgeois Europeans, and had an aristocratic disdain for their "ruthless determination to preserve their social status." Visiting British troops in Malaya during his service in Indochina, he was fascinated by the methodical attention they gave to the construction of field lavatories.

Barrès died in Algeria, under a burst of rebel bullets near the Tunisian frontier in 1959. His life, well translated, is written by the nephew and executor of the great Marshal Lyautey, who occupies a position in French colonial history similar to that of Lord Lugard in the story of Britain in Africa. The author, himself once an officer of *goums*, is a Commander of the Legion of Honour and was six times mentioned in dispatches; six of his works have received awards from the Académie Française. Barrès was the grandson of Maurice Barrès, philosopher of French nationalism, and was literate in a way inconceivable in a British officer; he too was mentioned in dispatches (twelve times), and received the Legion of Honour and the Médaille Militaire. There is more than a casual affinity between the author and his hero; the tone sometimes hovers too near to worship for the non-French reader's comfort of mind.

This short book consists very largely of letters from and to its hero, brief and graphic accounts of his battles, and frequent citations for his gallantry. The quality it reveals is that of a picaresque honesty, a brilliant hopefulness that life will continue tomorrow, that somehow a place will appear between battles that is as graceful as the beach at Cavalière and as rich in sun-tanned Parisiennes. But this doom-laden hedonism does not last out Barrès's life: towards the inevitable end he found himself impelled to work out a cause to be doomed for, and the sour touch of reality curdles his dreams. In Algeria, he convinced himself: "The enemy was not an enemy at all, it was a population which had become hostile under threat of extortion and assassination"—the carefully preserved "social status" of the Europeans of Algeria now forgotten or put aside. The rising of May 13, 1958, and the return to power of that fellow aristocrat of literature and of arms, General de Gaulle, stirred the loyalties of Barrès. The Algerian peasants are regrouped under the "protection" of the army, their misery prompting the romantic thought that: "In the Middle Ages, peasants all over Europe had taken similar refuge in the shadow of the castle." Barrès had seen the defeat of 1940, the defeat of Indochina, the aimless slaughter of Korea. Perhaps it was merciful that this knight of lost causes did not see the coming end of his last and equally hopeless crusade.

The Phenomenal Rabbit

Mussolini

By Laura Fermi.

Chicago University Press. 488 pages. 42s.

Benito Mussolini

By Christopher Hibbert.

Longmans. 382 pages. 25s.

Reviewers seldom bless the all-too-frequent coincidences that bring two books on the same subject to their desks at the same time. But in the present case they, and their readers, may well be grateful. For, although he misleadingly subtitles his work "a biography," Mr Hibbert has in fact written an excellent account of the last days of Mussolini; and Mrs Fermi has painted a no less excellent picture of the Duce's rise and days of glory, devoting little more than a quarter of her space to the course and origins of the second world war, which caused his fall. The two books are complementary.

Mr Hibbert writes very gracefully; he is a master of anecdote and broad narrative; the characters are so well described that they fill his pages with life and movement. But by professing to write a biography the author has laid himself open to the charge of not being master of his subject. It is ridiculous, for example, to allude to the Concordat only once, in a half-sentence, or, for that matter, to compress twenty years' rule into nineteen pages. It is no more than a slip of the pen to write Pietro Gobbi for Pietro Gobbetti, but it is a pity that Mr Hibbert believed Mussolini's tale of having attended Pareto's lectures at Lausanne—Mrs Fermi shows that he almost certainly did not. Indeed, Mr Hibbert leans too heavily on fascist sources throughout. For most of the time he is content to portray his subject without much comment and with no analysis, in the hope, presumably, that the facts will speak for themselves. It is a misguided hope. Mr Hibbert's Mussolini remains a vividly painted, jerkily animated, wholly two-dimensional cardboard character. And at times the author clearly exceeds his warrant. Mussolini is called brave, compassionate and a good conversationalist. There is no reliable evidence that he was any of these things.

Mrs Fermi's book has most of the merits and some of the demerits that Mr Hibbert's lacks. She writes in English, so that her language has that curious deadness which afflicts all but the most gifted of those who employ, however correctly, a tongue not native to them. She does not tell a story with Mr Hibbert's verve, and her photographs are not nearly so revealing.

But Mrs Fermi knows her country, and has obviously taken great pains. She takes the reader patiently through Mussolini's life, stopping from time to time either for a set piece, like the description of the signing of the Lateran pacts, or to bring out the significance of what she is narrating. As a result we come very close to answering, at least provisionally, the question that Mussolini himself propounded: "When I am gone I am confident that the historians and the psychologists will ask how a man had the power to lead such a people for so long." He was, it seems, before anything else a poseur; not a dynamic actor like D'Annunzio, from whom he learned so much (Mrs Fermi calls the poet the "choreographer of Fascism"), but a performer with an extraordinary ability to sense the next part in which the public would be happy to see him when his current engagement ended. Thus, between 1911 and 1936, he was in turn socialist, patriot, anti-bolshevik crusader, catholic, promoter of agriculture, empire-builder. He had the true journalist's instinct for profitable, vulgar, eloquent words; his excellent memory, wide reading, striking appearance and remarkable vitality did the rest; he was able to pose successfully for years as an all-wise, hard-working superman. But Hitler showed him up: the stronger will, the real political genius dominated Mussolini, and drew him down into disaster. In the war it was no longer possible to solve problems by satisfying the Italians' taste for flamboyance. In 1919 one of his socialist enemies had said of him "he is a rabbit; a phenomenal rabbit: he roars. People who see him and do not know him mistake him for a lion." By 1945 the people knew him.

Neither Mr Hibbert nor Mrs Fermi seems to be sure about the Duce's violin-playing. So it may be worth mentioning that Fritz Kreisler is on record as finding it merely funny.

South Pacific

Islands of the South Pacific

By Harry Luke.

Harrap. 274 pages. 25s.

Scattered as they are across millions of square miles of ocean, the islands of the South Pacific do not lend themselves easily to a single purview. There are so many thousands of them, each group with its separate history, racial make-up and international tie-up (only two groups are independent, Samoa but recently and Tonga British protected; the rest are the wards or property of a number of different powers). It would need a life time to know them. But this, more or less, is what Sir Harry Luke has had. Since 1903 he has voyaged, on and off, between the most and the least of these territories and in the thirties was Governor of Fiji and High Commissioner for the Western Pacific. To an eye for vivid detail and an ear for a good story is added a down to earth knowledge. The outcome is a usefully informative and delightfully anecdotal book.

Nearly everyone has his fancy for this or that South Seas island, whether Gauguin's Tahiti or R.L.S.'s Samoa, or Robinson Crusoe's Juan Fernandez or Darwin's Galapagos Islands ("the origin," he recorded,

billion level by making it necessary to draw on the surplus to meet current demand. Full enactment of the new programme, the Administration estimates, would cut more than $430 million next year from the $2.5 billion that would otherwise be spent for price supports and storage of agricultural commodities.

Specifically, the existing voluntary controls over production of maize and other feed grains, which involve compensating farmers who agree to retire land from production, would be replaced by a mandatory system under which growers of feed grains would be allocated maximum acreages for planting for the first time since 1958. The total acreage permitted to be planted to wheat would be reduced and a limit would be placed for the first time on the amount of wheat which could be sold for export and for human consumption at home. The production and sale of dairy products, now completely free of restrictions, would be reduced forcibly; if milk farmers sold more than a specific quota assigned them they would be subject to a heavy penalty. In addition, Mr Freeman would institute pilot projects that would lead ultimately to the conversion of 68 million acres of land now used for crops into grazing areas, forests and recreational lands. At the same time, the rates at which prices of wheat, dairy products and feed grains were supported would climb for the second time in as many years.

THE severity of the controls proposed by the President shows that the Administration's farm planners have given up whatever hope they ever had of disposing of any substantial portion of the American surplus through exports to Europe. Certainly, the apparent reluctance of the common market to lower its tariff walls to allow the entrance of American farm produce has had its impact on domestic policy in Washington. Officials now believe, moreover, that in the near future increased farm production in Europe, stimulated by heavy government subsidies coupled with the prospect of continued tariff protection, may actually reduce the volume of $1.1 billion worth of agricultural products sold by the United States to countries in the common market last year.

Furthermore, little is heard today of the argument, so popular among liberal Democrats before their party regained control of the White House a year ago, that the farm surplus could be reduced significantly by expanding the flow of food and fibre to under-developed countries in return for non-convertible currency as part of the "food for peace" programme. There has been in recent weeks one of those public disputes within the Administration that Washingtonians so adore, involving Mr George McGovern, the administrator of this programme, who called for expansion of overseas shipments, and Mr Freeman, who contradicted this view. But this was no more than a sham battle; the White House and the Budget Bureau had decreed that total spending for farm programmes must decline rather than increase, and that ended any prospect of a dramatic stepping-up of "food for peace."

As for this year's farm struggle in Congress, Mr Kennedy will have to rely heavily on the votes of big city Democrats who often prove to hold the balance of power on agricultural questions in the House of Representatives. These urban Congressmen are generally allergic to high farm price supports and particularly hostile to the President's call for higher subsidies for feed grains, since these would almost surely be felt finally by the consumer in the form of higher prices for meat in the butcher's shop. But they may be won over by the promised decline in farm spending by the government, since theoretically the city dweller would benefit from this as a taxpayer even though he would pay more as a consumer. If the members for the big cities support it, probably the Farm Bill could survive a test on the House floor. Then the Senate, which almost always is friendlier to Administration programmes than the House, would be likely to concur.

The big problem for Mr Kennedy is therefore how to get the programme out of the Agriculture Committees and on to the floors of the House and Senate. Last week the initial reaction to the new plan from the coalition of Republicans and conservative southern Democrats who control both committees was less choleric than might have been expected. But the Farm Bureau Federation and the other agricultural pressure groups have not really launched their campaign against the Administration as yet. The task of forcing the farm medicine down Congress's throat will fall to the amiable Mr Freeman, who is gaining a reputation as one of the most skilful legislative lobbyists in the Cabinet. As of now, nobody is prepared to bet either way as to whether the fund of good will which Mr Freeman has built up on Capitol Hill will be enough to get even a sizeable portion of the new Kennedy farm plan through Congress.

Screen of Cigar Smoke

THE United States, which failed to persuade the Latin American countries last week that they should impose economic sanctions on Cuba, has gone ahead on its own. On Wednesday an embargo was placed upon the import of all goods of Cuban origin, although an outward trickle of medicines and certain foodstuffs will be permitted to continue. The amount of trade is pathetically small compared with imports from Cuba of $528 million in 1958, the year before Dr Castro seized power, and exports to Cuba of slightly more. Last year the United States bought about $35 million worth of goods from Cuba, almost entirely tobacco for high-grade cigars, with a little industrial molasses and a few vegetables. Recently Cuba has been spending about $100,000 a month in the United States on medical supplies and food. Small as Cuba's exports to the United States have become, last year they provided almost a third of its dollar exchange; the rest came from other non-communist countries, from the Soviet Union and from wages and fees, about $10 million in all, paid by the United States at the Guantanamo naval base.

Dr Castro demanded indignantly how Cuba could pay for American medicines when it cannot sell its tobacco to the United States, but the Administration insists that such dollar earnings have been used to finance subversive activities in other Latin American countries. It hopes that Cuba's other non-communist customers can be induced to follow America's example, but it has already had a cold shoulder from the Canadians. They do not care for such strong hints and they point out that in any case they sell much more to Cuba than they buy from it—about three times as much last year.

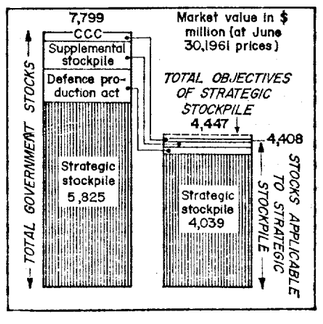
The Administration took action, not under the Trading with the Enemy Act, which would have involved cutting off telephone and air communications with Cuba and the freezing of individual Cubans' bank accounts, but, ironically, under authority granted by Congress in the Foreign Assistance Act. No doubt the Administration hopes that this punitive gesture will mollify members of Congress who have been frustrated by their inability to punish Dr Castro for his impertinent Marxism and who are indignant because six Latin American countries, including the three largest, refused to vote for the expulsion of Cuba from the inter-American system. (Under pressure from his right wing Dr Frondizi of Argentina may have to change his stand.) Ever since the Secretary of State's return the Administration has been working overtime to gloss over this rebuff which it would perhaps have done better not to have risked, both for the sake of hemispheric unity and for the sake of the appropriations for the Latin American Alliance for Progress which Congress is being asked to approve this year.

Republicans Hang Together

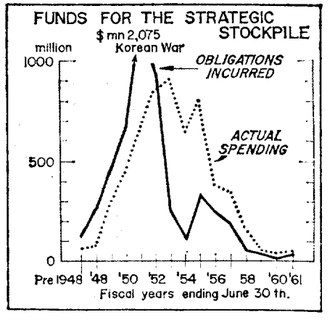
BY bombarding Congress with requests for legislation President Kennedy is not only appeasing those Democrats who accuse him of lacking enterprise and drive but is also hitting the Republicans where it hurts them most. If he forces them to vote, especially on his welfare proposals—on the new Department of Urban Affairs, aid for education, improvements in public assistance, medical benefits for old people—he will also force the Republicans to demonstrate publicly their inability to agree on such matters. Already this inability has frustrated a suggestion that the party should produce its own legislative programme as a constructive alternative to President Kennedy's. In spite of warnings from the more progressive Republicans that the party must approach today's problems positively, that it is "again' everything" was the main impression given last week by its leading spokesmen, even by the supposedly liberal Governor Rockefeller of New York. They were addressing a series of dinners all across the country, linked by closed circuit television, to raise funds and open the campaign which will end on November 6th with the election of 435 members of the House of Representatives, 37 Senators and 35 State Governors.

Success in these elections, as a starting point for victory in the 1964 presidential contest, depends, according to Republican officials, on improved organisation, on more Republican salesmen, regardless of what they sell, particularly in the big cities. These were where Mr Kennedy found his majority in 1960 and a recent report showed that in these cities Republican workers, especially paid full-time ones, are almost unbelievably thin on the ground. The Republicans have little prospect of actually winning in these urban centres but they hope to reduce the huge Democratic majorities which offset Republican votes in suburban and rural areas and thus enable the Democrats to carry statewide contests.

Since congressional and state elections are fought largely on local and personal issues, organisation may indeed be more important than policy for the Republicans next November, even though it is in the cities that the party suffers most from the refusal of its reactionaries to support social welfare programmes. And if, as may well be the case, it is the liberal Republicans who achieve the victories, if Mr Nixon becomes Governor of California and Mr George Romney Governor of Michigan, then by 1964 they may be able to check the trend to the right which has so much to do with the present ineffectiveness of their party.



Stocks Out of Hand



IT is surprising that President Kennedy was surprised at the size of America's stockpile of strategic materials, for reports on this emergency reserve are published every six months; these give the total value of the commodities in hand and an account of the progress being made towards the final objectives, although details of the actual amounts of the various commodities appear only in a secret supplement. Much of this secrecy has become unnecessary and most, if not all, of the information will come out as part of the complete exploration of the subject which Mr Kennedy has asked Senator Symington to undertake, beginning next month, so that the public may know the truth about this huge investment. Other congressional committees are trying to cash in on any political advantage which the investigation may have. But so far there is little expectation that any serious scandals will be revealed even though the President did talk of the stockpile as "a potential source of excessive and unconscionable profit."

Begun in 1939, resumed in 1946 and greatly expanded in 1950, the stockpile was designed to provide a five-year reserve of essential materials, particularly those from overseas, which were likely to be in short supply in wartime. In 1958, when it became accepted that the next war would be nuclear, the position was reviewed; the period to be provided for was cut to three years and more consideration was given to supplying the necessities for recovery after an attack—machine tools, processed materials, etc. Many experts feel that more emphasis should now be placed on this aspect of the stockpile and that to plan for a three-year war is totally unrealistic—a three-week one is thought more likely. President Kennedy has now ordered yet another reassessment.

This reduction in the period covered and changes in technological requirements are the main reasons why the amounts of many of the 76 items in the stockpile today are far more than is consistent with current objectives. The surplus will go on growing, for the government is still committed to making purchases through contracts under the Defence Production Act of 1950, intended to encourage increased output of critical materials—aluminium, for example, of which there is already much too much in the stockpile; strategic materials are also still coming into the supplemental stockpile and the Commodity Credit Corporation's store under the arrangements for getting rid of surplus farm products by bartering them abroad. But buying for the strategic stockpile itself, very small in any case in recent years, has now been stopped except for three items which are still in short supply; these are understood to be diamond dies, jewel bearings and chrysoltile asbestos.

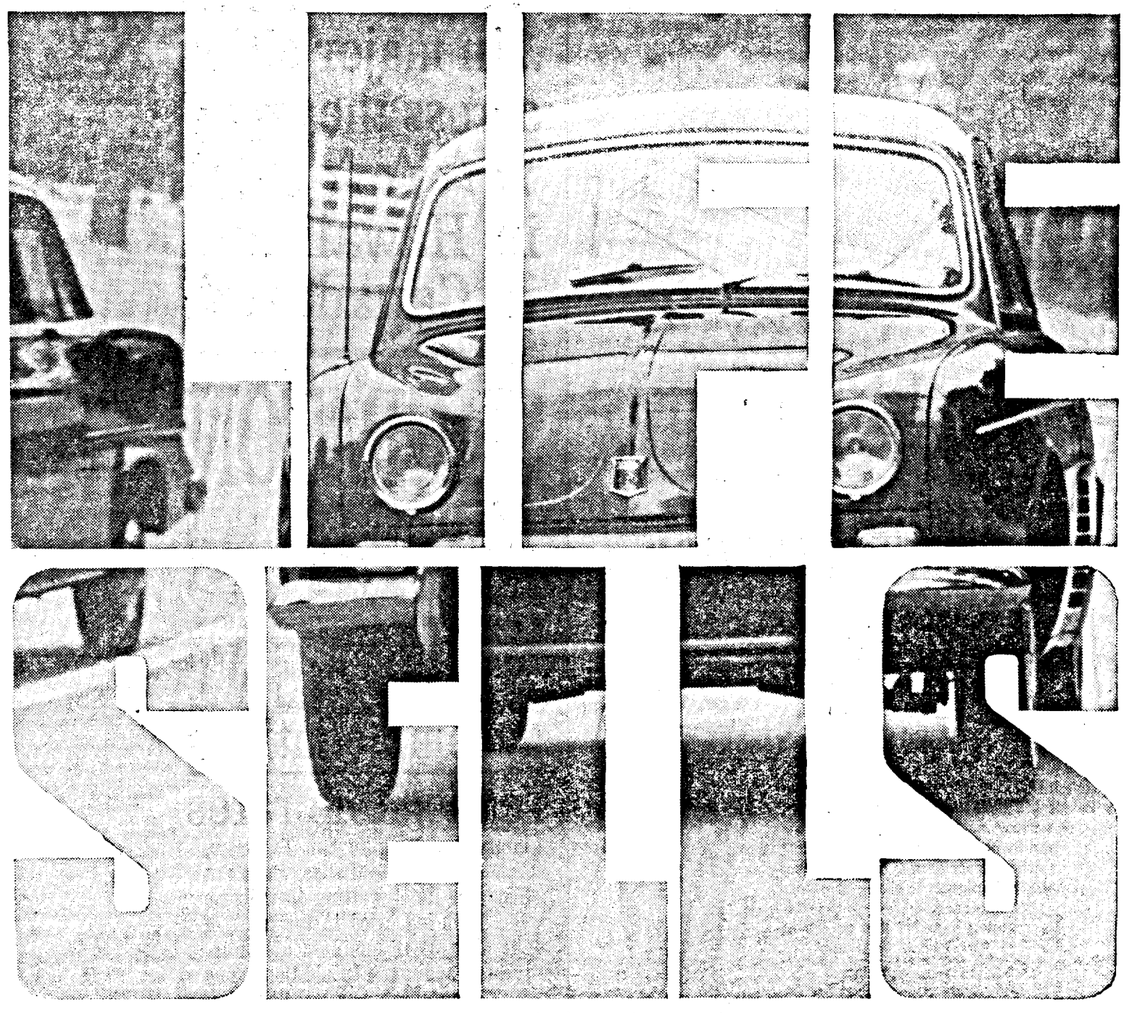
Much as the President would like to liquidate some of this excessive investment, he must recognise that there is little he can do in this respect without disrupting world prices or adding to the difficulties of domestic producers and of those countries which rely economically on one or more of these strategic materials. He has promised to take account of both these factors, to the relief of the commodity markets which as a result have received his move comparatively calmly. Moreover, Congress has to approve all sales from the strategic stockpile and has practically never given the necessary permission; possibly, however, the coming hearings may make it more amenable in this respect.

Hats in the Ring

FROM A CORRESPONDENT IN TEXAS

THREE recent congressional by-elections in Texas have all sent Democrats to Washington, and ones who seem likely to support the Administration on most issues, though the two who were elected last month—Mr Purcell from Wichita Falls and Mr Roberts from Mr Rayburn's old Fourth District—are neither of them as dedicated to the New Frontier as Mr Gonzalez, the liberal who stood successfully in San Antonio in November. But the growing Republican party in this traditionally Democratic state has no cause to hang its head; its candidate against Mr Gonzalez polled 45 per cent of the total vote, a remarkable achievement in liberal San Antonio, with its substantial Negro and Mexican minorities, and another Republican won 38 per cent of the vote in Wichita Falls, which is strong Democratic territory. The Republicans, who hold only one of the state's seats in the House of Representatives, plan to enter candidates in at least 15 of the 23 congressional races next November. But there will be a clue to how fast their numbers are growing in May when, under the law, the party has to hold a primary election to determine its candidates for all the offices at stake next autumn. This is because the Republicans polled so many votes—over 200,000—in 1960.

There is only one Republican candidate for Governor, Mr Cox, but five major candidates will dispute the Democratic nomination. Until last week it seemed fairly certain that this preliminary round would be won by Mr John Connally, who was rewarded with the post of Secretary of the Navy when his old Texan associate, Senator Johnson, became Vice President of the United States last year. But two last-minute hats have been thrown into the ring—that of Mr Daniel, the present Governor, a formidable vote-getter who has decided that he would like an unprecedented fourth term even at the cost of offending the Vice President, and that of former General Walker, whose inarticulate crusade against communism will appeal to the discontented on the extreme right. It is rumoured that the General is being supported financially by Mr H. L. Hunt, one of the state's richest and most reactionary oilmen. The two other Democrats are Mr Wilson, the conservative state attorney general, who is fighting against the Vice President's remote control of Texan politics and for his own political life, and Mr Yarborough, a young liberal whose hopes depend on whether he can win the support of other liberals and that of organised labour. If no candidate secures an absolute majority there will be a run-off between the top two in June; the three most likely to reach this stage seem to be Mr Daniel and Mr Connally, both of whom will be appealing to voters right across the political spectrum, and Mr Yarborough.



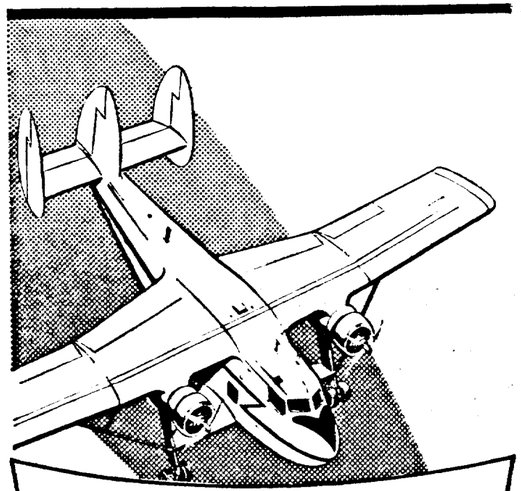
As in the other one-party states of the South, political battles in Texas have been fought within the Democratic party; nomination has been tantamount to election. These political battles have been waged less on issues than on personalities; in the main, political rewards have been based on longevity rather than ability; and the one-party State Legislature has been an incoherent mass of diverse and disorganised Democrats. Many of the party's leaders voted for Mr Eisenhower for President in 1952 and 1956 rather than for the comparatively liberal Democrat, Mr Stevenson. Now, however, the growing attraction of the Republican party in the state for extreme conservatives is having repercussions in Democratic circles. One reason—apart from gratitude—that the Vice President is supporting Mr Connally's bid for office is the desire to prevent a wholesale exodus of conservatives from the Democratic party, which would leave the state organisation in the hands of the liberals. Mr Connally, a smooth political manipulator like his patron, has close connections with the big financial and industrial interests in the state and his highly geared organisation is said to be the most comprehensive ever put together for a state election. (The other reason for Mr Johnson's support of Mr Connally is that the Vice President still cherishes presidential ambitions for 1968 and wants to have the Governorship in friendly hands.)

The nominal head of the Democratic liberals is Senator Yarborough, who is not related to the young aspirant for the Governorship. For a time the Senator encouraged rumours that he might enter this race himself, partly because he fears that Mr Connally's election might disorganise the liberals, partly because he has long been at odds with the Vice President, particularly over the plums of patronage which are the cement that holds a political organisation together. Senator Yarborough did not take himself out of the race until he received assurances from the Administration that he would receive more consideration in Washington in this respect. If Senator Yarborough had entered the primary and won the nomination there would have been a rush of Democratic conservatives into the Republicans' arms.

AGAINST this confused Democratic background the Republican party in Texas has been growing in confidence and vitality. In many ways it resembles a kind of Foreign Legion. It is full of rebellious souls who were easy to recruit because of their discontent; even its candidate for Governor this time is a convert from the Democrats. Moreover, the party literally gains much of its strength from "foreigners"—recently arrived white-collar immigrants from the upper Middle West and the Northeast. Until recently the party seemed to exist mainly to dispense patronage when the Republicans captured the White House. But now it is attracting large numbers of the young executives and technicians who man the middle and upper echelons of the state's growing industry and who have no loyalty to the Democratic party; to them that party has meant only increased taxes and expanding welfare programmes.

The big break-through for the Republicans came early last year when Mr John Tower, a young professor, captured the Senate seat which had been Vice President Lyndon Johnson's. Strangely this victory was due to the co-operation of Republican conservatives and Democratic liberals. Many of the latter voted for Mr Tower (or abstained) because they thought him less objectionable than the equally reactionary, inarticulate multi-millionaire who was the Democratic candidate. Mr Tower is a follower of Senator Goldwater and shares his fervid opposition to practically every aspect of the welfare state as well as his advocacy of a "stronger" American position on international affairs.

Senator Tower expresses the raging conservative mood among the well-to-do in Texas and he has given the Republican party the prestige and the confidence to conduct a spirited movement at state and local levels. Young Republicans have been travelling all over the state appealing to conservative Democrats to join the party where their conservatism can be truly effective; the Republicans argue that Texan conservatives cannot hope to influence the Democratic party as a whole, since it is essentially "left-wing." The greatest publicity has been given to a series of "resignation rallies" at which repentant Democrats renounce the party of their ancestors. Two Republicans have also been sent to the lower House of the State Legislature—the greatest number since the



Says Régie Renault: "*Throughout the world the International Editions of LIFE provide us with a wonderful 'showroom in print' for our automobiles where they are displayed to their best advantage in full colour.*"

LIFE readers, as a customer group, represent a world-wide economic and social elite of opinion-leaders, our best prospects."

LIFE International and LIFE En Español are designed to appeal to industrial and community leaders everywhere. They contain much exclusive material of international interest as well as features and articles adapted from FORTUNE, the U.S. LIFE and other TIME Inc. publications. The variety of their editorial and advertising pages has made LIFE's International Editions the world's leading international advertising media.

LIFE can sell for you, too. For more information about LIFE International and its advertising edition for Europe, as well as LIFE's Spanish language editions for Latin America – write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond St., London W.1.

SHERATON HOTELS

IMMEDIATE CONFIRMATION

EXCELLENT accommodations

reasonable rates

From New York to San Francisco, from Montreal to Dallas, there's a Sheraton Hotel waiting to welcome you. Each is located in the heart of the city, near business districts, theatres and shops. In addition to fine food and superb service, Sheraton Hotels offer many extra values such as the Family Plan (children under 14 FREE when they share your room), air-conditioning, free TV and radio. If your ship or plane is delayed, Sheraton will hold your reservations. To get reservations at any Sheraton Hotel, see your travel agent or a Sheraton General Agent:

days of Reconstruction after the Civil War. The party is strong and growing in the larger cities and towns ; it is wealthy and energetic ; above all, it is convincing many conservatives that it is now respectable to be a Republican in Texas. But the professional organisers will admit privately, if not publicly, that a genuine two-party state will take years of hard work to achieve. Mr Cox is not given much of a chance in November, whoever the Democratic candidate is.

Slimming by the Book

FROM A SPECIAL CORRESPONDENT

RECENTLY the Food and Drug Administration, as the watchdog of the public's health and nutritional well-being, seized 1,600 copies of a book called "Calories Don't Count" from a Brooklyn warehouse of the United Whelan Drug Store chain—along with 58,000 capsules of safflower oil. "Calories Don't Count," which has been something of a best seller in America, propounds the theory that "You need to eat fat if you are to be slim." The author, Dr Taller, a gynaecologist, argues that the more fat is consumed, the more is burned up. However, not any old fat will do, and animal fat is taboo, as with most diets. Unsaturated vegetable fats do the trick, the book claims, and particularly the oil of safflower, a large thistle-like plant grown in the western part of the United States.

Weary of meticulous calorie-counting and the rigours of semi-starvation, American women have fallen eagerly upon a menu that stresses the weight-reducing efficacy of fried chicken and shrimp, egg mayonnaise, stuffed peppers and cheesecake ; that warns dieters not to leave the table hungry ; and that bans entirely the kind of foods that the average slimmer gets weary of: apples, vegetables, jellies and skim milk. Unfortunately, at least one careful follower of the diet, which includes the downing of the daily quota of safflower oil, put on four pounds in a week ; others may have had the same experience and may have complained to the Food and Drug Administration.

At all events, the FDA alleges, first that "Calories Don't Count" has been offered to the public as a promotional tie-in to encourage the purchase of safflower oil ; and, second, that the latter is not an effective means of controlling weight. The book is involved only because it has been used as the basis of allegedly false and misleading claims for the capsules. This is not the first time that the FDA has seized a book ; some time ago it proceeded against another best-seller, "Folk Medicine," which prescribed honey and vinegar as a cure for most ills and which was being sold in combination with these specifics. The degree of Dr Taller's complicity, if any, in a deception, if any, that has been perpetrated on the public is a matter which the courts will have to decide. But there are at least grounds for suspecting that he may have been engaging in a gigantic leg-pull. He lists fourteen points of a programme for systematic weight reduction. One is: "Walk at least one hour a day." Bearing in mind the normal habits of Americans, which do not include walking if this can be avoided, Dr Taller might have started and ended right there.

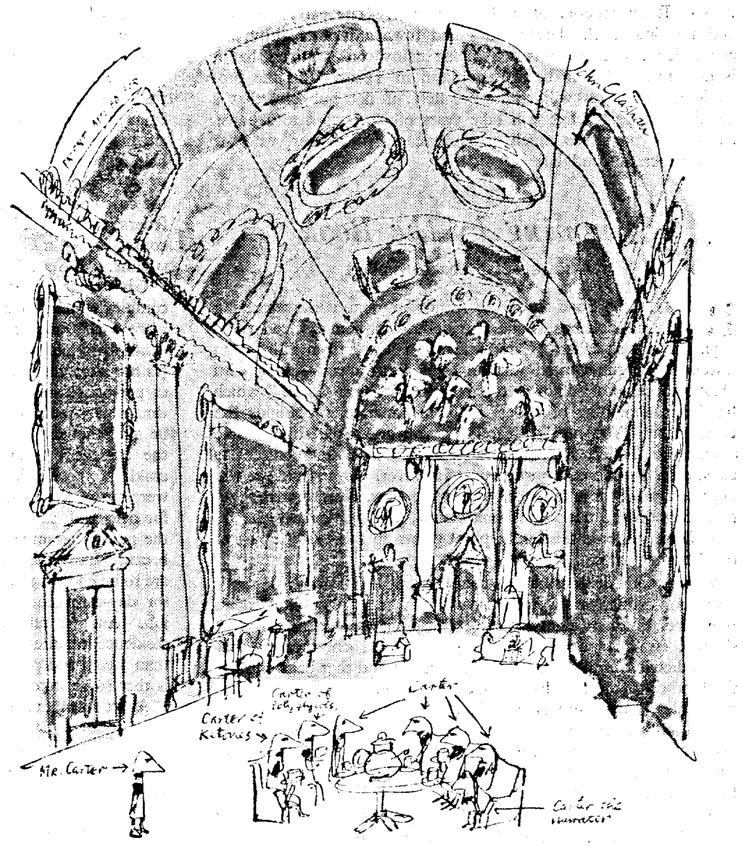
Poverty Amid Plenty

IN the most affluent society in the world about 7.4 million people are receiving public assistance. The federal government pays over half the bill, which will amount to about $4.7 billion in the coming fiscal year, through grants which must be matched, in varying degrees, by the state welfare programmes. This system goes back to the Social Security Act passed in the middle of the nineteen-thirties and has been little changed although the shape of the problem has altered profoundly: much less poverty is caused by unemployment and much more by personal inadequacy or social misfortune. The whole system is now under fire, partly from people on the right who, like the citizens of Newburgh, New York, think that the assistance rolls should be cut ruthlessly and partly from those on the left who feel that much more should be done to aid the unfortunate. By encouraging the states to spend more on helping people to become independent, the Administration hopes to satisfy both groups though, as the President warned Congress, the cost is bound to rise in the short run ; another $193 million in federal money will be needed in the coming fiscal year. Even the conservatives in Congress seem sympathetic. The real question is whether the State Legislatures are prepared to do their share.

Given that the problems of the destitute are often personal and complex, rather than simply economic, the key need is for many more social workers and diagnostic and remedial services. The Administration would like to pay three-quarters of such costs (rather than half) and to contribute more money to the training of personnel, in order to speed up the work of rehabilitation ; in time this should lighten the assistance rolls. Liberals will also be glad that the President is asking Congress to make permanent the present programme of temporary federal aid to dependent children whose fathers are unemployed. Until last year men who were out of work had to desert their families to make them eligible for help and, where local authorities have not taken advantage of the new programme, families are still being stricken off the rolls because the father has been found in the home. Such families are to be encouraged to strive for independence by providing money for day-care centres for children so that the mother can take a job. Another reform long pressed by social workers is that the residence requirements of the states should be fixed at no more than a year and preferably abolished altogether. The trouble here is that some states are more generous than others to the needy.

Apart from the hope that fraud will be reduced by employing more social workers, right-wing critics will be pleased by the blessing for state schemes of work-relief. Many taxpayers feel that able-bodied men who receive assistance should make a return to the community. Mr Kennedy insisted, however, that if the federal government is to help to foot the bill work relief must be regarded not as a penalty, but as an opportunity for men to keep their working skills in trim or to learn new ones.

SHORTER NOTES



Mergers—even in the hard-pressed airline industry—are easier to announce than to carry out. A fortnight ago American Airlines and Eastern Airlines, the second and third largest of the domestic operators, revealed that a merger had been arranged ; if it goes through the result will be the biggest airline in the world, with routes from Mexico City to Montreal and from San Francisco to Puerto Rico. But a week later there was a cautionary tale from two other would-be partners, Continental and National Airlines, who have decided that they cannot make a go of it. The belief is that the heads of the two companies could not agree on which of them would run the new concern.

* * *

The activities connected with water and its supply in the United States are immense—$230 billion are likely to be spent on them in the next 22 years—yet until now no university has offered a degree in hydrology, the science of water. Water specialists have had to learn their trade by experience or after graduation in allied disciplines such as engineering, geology and meteorology. But now the University of Arizona has announced the country's first curriculum in hydrology, leading to the bachelors', masters' and doctors' degrees, and Columbia University in New York City started a graduate programme in hydro-geology last autumn.

PROJECT 304

The story of the great
Shell Chemicals
Sculpture Competition
by A. N. Other-Carter

Chapter One:
Mr. Carter's Inspiration

I well remember the day the whole thing began. A few of us were sitting over our coffee in the Emulsions Lounge at Shell Chemicals when the talk turned to the public image of us.

'I wonder what the public image of us is,' said Carter, one of our scientists.

'Oh, what does it matter as long as we do our jobs?' grunted another scientist, a chemist called Carter (in fact all the Shell Chemicals people in this story will be called Carter, to avoid heartburnings). 'Well, I must get back to my Hilger Standard Polarimeter and continue my investigations into the structure of the products obtained by condensing sugars with ethanolamines.'

'You're right, you know,' said Carter, a Polyglycols man, to Carter, when Carter had left us.

'I don't believe the public has a clear picture of us. I expect they think we're in some little shed behind a refinery.'

'Oh, I don't know,' chimed in Carter from Ketones, 'I met a chap in a pub last night, it slipped out that I was in Shell Chemicals, he said 'Oh yes, you're the people that make TEEPOL 514, an anionic wetting agent, and NONIDET, a nonionic wetting agent, both very useful in textile scouring. I've always wondered what's the difference between anionic and nonionic.'

'By jove!' said Carter, from Advertising, 'that's interesting. What was this chap?'

'He was a textile scourer,' said Carter.

One of our directors, called Mr. Carter, had been listening silently to all this. 'I think what we need is a great competition for a sculpture depicting *The Spirit of Shell Chemicals*,' he said.

I was electrified. Immediately I thought of *Isobel* . . .

Do not miss Chapter Two:
'The Great Conference'

Provincial Primitives?

FROM OUR SPECIAL CORRESPONDENT

ACCORDING to how they set their sights, visitors may come away from the winter exhibition at the Royal Academy disappointed that some of the greatest masters are seen only at second best, or impressed and delighted with the selection of primitive paintings as well as many of the examples of British minor painters such as a choice Stubbs and two excellent Wilson Steers. Whichever view is taken, however, sympathy must go out to the foreign visitor who, lured into this exhibition of over four hundred works from sixty-five provincial galleries by its catchy title "Primitives to Picasso," darted from an Alan Davie to a Patrick Heron, ejaculating to his companion: "Picasso?" In fact, there is only one smallish, very early and quite uncharacteristic painting by Picasso, belonging to Glasgow. To the best of one's knowledge, only two other examples, and these of a similar kind, could have been produced from the provinces.

Poor representation of twentieth-century foreign art is only one of the deficiencies of these museums' collections. Certain important artists of other schools are virtually unrepresented in public collections outside London, and it would be hard to find many signs that the museums are keeping pace with the most recent developments in British art. Yet on several scores, these galleries are better able to enter the art market than ever before. In many towns ratepayers have put up the annual purchase grant, small though it may still seem in art-starved eyes; the taxpayers' grant to the Victoria and Albert Museum for special purchases by provincial museums has been sharply increased, from £2,000 in 1958 to £25,000; and valuable help is given by the Gulbenkian Foundation.

Indeed, the exhibition at the Royal Academy has a prosperous air in that two-thirds of the paintings and sculpture on view have been acquired in the last twenty years. But of the 128 works obtained since 1950 only about fifty have been bought by the galleries unaided. Getting on for twenty have been presented or bequeathed by individual people or firms, another eight by corporate benefactors such as the Contemporary Arts Society or Friends of the Gallery, nearly forty have been acquired through the National Art-Collections Fund and the remainder with the assistance of the Gulbenkian Foundation, Treasury, Victoria and Albert Museum, Ministry of Education or Arts Council.

	Annual attendance	Purchase grant from rates (£s)	Capital fund
Birmingham ...	700,000	12,000	Yes. Annual contribution (max. ¼d. in £) from rates
Bristol	250,000	3,000–4,000	Private bequest yields £1,000 p.a.
Glasgow	350,000	5,000	Some private bequests
Leeds	160,000	3,000	None
Liverpool	150,000	4,000	Private fund yielding minimum of £7,000 p.a. up to 1967–68
Manchester	100,000*	5,000	None
Newcastle	145,000	1,250	Private bequest yields £1,367 p.a.
Plymouth	100,000	1,850	None
Southampton...	40,000	500†	Private bequests yield £4,850 p.a.
York	40,000	1,000	None

* Permanent collection only † For ceramics only

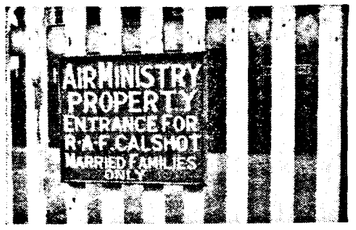
This untidy profusion of purchasing props is no bad thing in itself, but it does raise once again the question of whether the provinces are looking after themselves as well as they should. Support given to art varies considerably from one town to another, as even the few and variously qualified figures in the table show. The apparent stinginess shown by ratepayers in certain cities may seem surprising; why does Birmingham stand out as a shining example compared with Manchester?

Equally puzzling as local differences is the seemingly general apathy towards contemporary art in the provinces. Why has the buying of modern pictures and sculpture, for private as well as public collections, not become a status symbol among well-to-do industrialists in the north and midlands? They have not always been behind the times in art: a hundred years ago the provinces welcomed the Pre-Raphaelites and were delighted to buy their works. (And the evidence of some even more judicious buying—the Impressionists—is there, too.) The hard-headed Bradford woollen manufacturer of today may well feel that he is keeping his feet on the ground in resisting abstract art; but why should it have caught on in the United States and not here?

IF the answer is that the interest of the local collection is not sufficient to spark off enthusiasm, what is to be done? In a world in which art prices have gone slightly mad and in which even the purchase grant of the more art-conscious citizens of Birmingham cannot buy much by established artists, it is obviously impossible to provide collections all over the country of an equally good standard. Some kind of regional network, repeatedly advised by Lord Bridges, is the obvious solution. The art student, or art lover, may not be able to make frequent visits to the national collections; but he must be prepared to travel a little. Either galleries within a particular region should specialise in particular schools of art or, better still, the best of the collections should be concentrated together in one centre. A get-together on art is surely not impossible, even if it means swallowing a little civic pride. Galleries should be encouraged, and given any necessary legal powers, to sell when they have too many examples of one artist or school. Above all, ratepayers need to be more generous in their budget and in unshackling their local art director from the artistic approval of a committee of civic worthies whose knowledge may be very questionable.

A special report on the provincial collections can be expected this year from the Standing Commission on Museums and Art Galleries. The current exhibition at Burlington House should stimulate plenty of interest in the commission's recommendations.

Outcasts of the Island



FROM OUR SPECIAL CORRESPONDENT

THE 60-odd families dispossessed of their volcanic island, Tristan da Cunha, have moved from their overcrowded and unsuitable temporary refuge at Pendell, in Kent, to permanent tenancy of part of Calshot RAF camp on Southampton Water. This has been greatly to the indignation of those who would rather have seen them set down on one of the Hebrides, Shetlands or Orkneys. The opinion has been pretty freely aired that the Colonial Office, in whose care the Tristanians have been since the disaster, has done worse than any volcano in depriving these hardy people of their communal isolation. It is an opinion in keeping with a newspaper attitude which the Tristanians have come to resent: that they are freaks to be housed in an artificial environment simulating as closely as possible their old conditions.

In fact the Colonial Office has behaved with reasonable humanity (some would say too much: on its own admission, its care that everything possible should be done for the islanders has resulted in a loss of personal initiative). Its aim has been to bring about the integration of these particular British subjects into the larger body of their compatriots. Most of the exotic suggestions have not been concrete (for instance, no land has been offered officially in the Outer Isles, and nobody in the Colonial Office has seen more than newspaper reports of the rumoured gift of an island in the Bahamas).

The younger Tristanians are an adaptable bunch, and many of them have a larger experience of the world outside Tristan than has the average young British habitué of caff and coffee-bar. Their difficulties in fitting into an industrial society will be few; indeed, most of them are already working and earning. But the old people are naturally less willing to cast off their way of life: they have few skills beyond boat-building and the ability to launch a skiff in a hard sea, and they do not easily learn new ones.

It is mainly for their sakes that the Colonial Office has gone along with sentimentality as far as it has in keeping the Tristanians together as a single community, and it is this which has been the greatest problem in their resettlement. Many places could offer sixty houses; but none of them had sufficient opportunities for relatively unskilled employment. Many more could offer jobs, but found it impossible, even by jumping housing queues, to put all the families together.

WHAT was hoped for was generous action from some local authority, in need of such benefits as the islanders could bring it, in building houses specially for them. Calshot camp was therefore seen initially as another temporary refuge until something better could be arranged. In the event, however, the Tristanians who went to look over the camp decided that they liked it enough to stay there, and the others did not disagree.

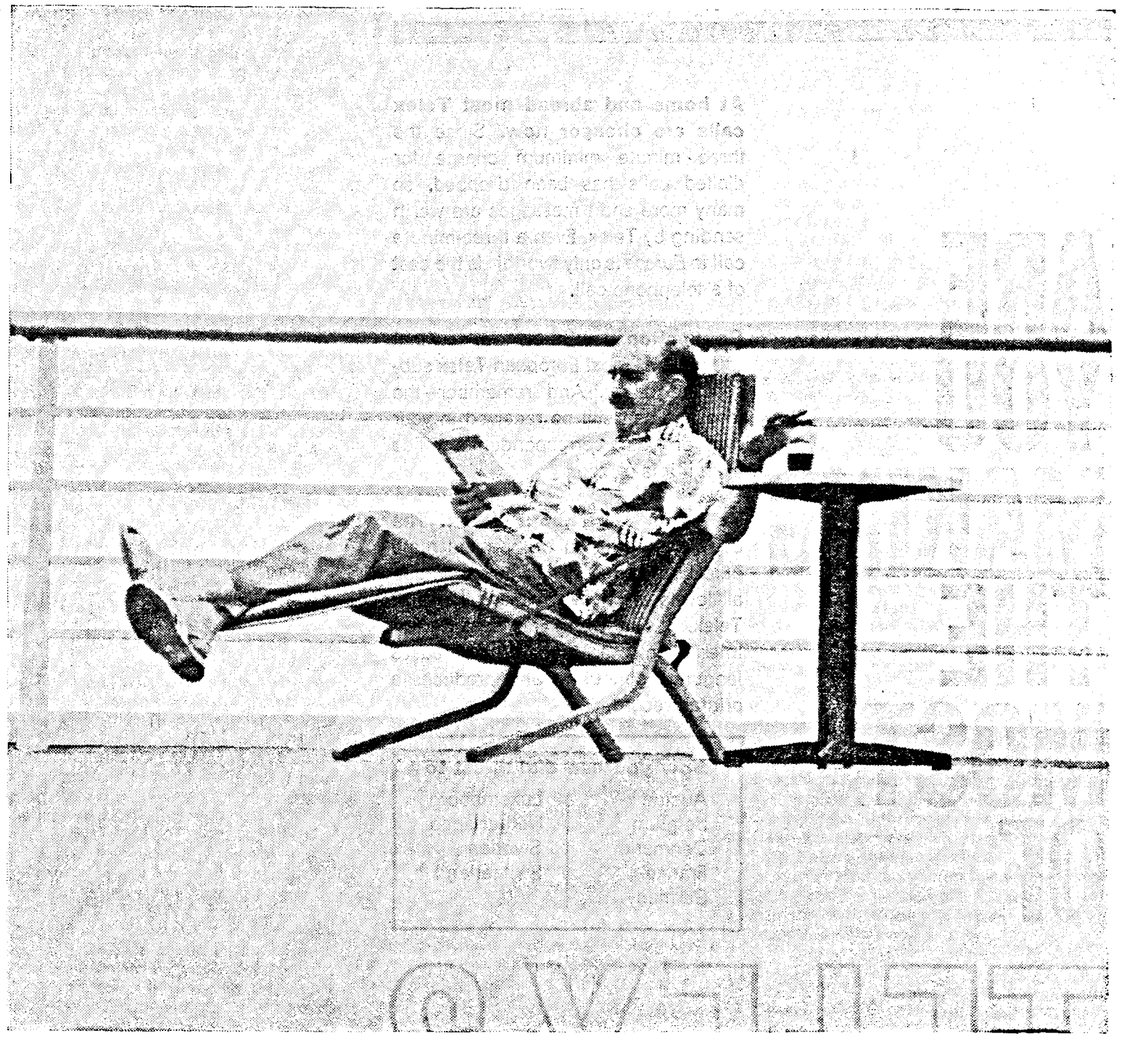
Calshot is not the sort of place that would appeal to everybody. It is bleak, both bare and cluttered as only a military camp knows how to be, and its atmosphere, like that of all such places, is one of indefinable impermanency. But from the islanders' point of view it has many advantages. The sea, or at least wide water with fish and ships, is a step away; the surrounding country is pleasant and underpopulated; and there is sufficient work nearby (though not at Fawley refinery two miles away, where the requisite skills are far from simple). About half the men are now in employment.

The bungalows are like all military bungalows; but much has been done to make them comfortably habitable. Between £200 and £300 has been spent on the furnishing of each, and they are well-carpeted and curtained, warmed on free coal, and an enormous improvement on the conditions at Pendell where, according to one of the islanders, they were housed ten to a bungalow in some cases. For this, the Tristanians' gratitude is touching.

The Colonial Office has not added up all its sums yet, but the cost of the whole rescue and rehabilitation operation will, at the end, be somewhere in the region of £60,000, apart from the furnishing of the houses. More money has come from relief funds, and many of the services which would otherwise have had to be paid for have been done by volunteers. The salaries of the administrator and the other colonial officers connected with the operation have been met from the original Tristan administration fund.

Smethwick Shivers

FROM A CORRESPONDENT IN BIRMINGHAM



SMETHWICK, a name on the map to most people outside the Black Country, clings to the western boundary of Birmingham like a Midland Salford of 73,000 people; even its postal numbers are Birmingham 40 and 41. But for all that it has its local pride, securely based in Domesday Book and the industrial revolution. Boulton and Watt's Soho Foundry in Smethwick made engines for the *Great Eastern* and now produces weighing machines; Smethwick provided ironwork and glass for the Crystal Palace.

Last summer it reached the national headlines with its threatened rent strike by council flat tenants who objected to a Pakistani neighbour; the colour controversy, assiduously fanned by local spokesmen, now notorious, has flickered feebly again with the smallpox scare in the letter columns of the intriguingly-named *Smethwick Telephone*. But Smethwick now faces a more urgent problem. By next July about 2,600 workers may have been dismissed from two of the town's traditional factories. Cycles and railway rolling stock tempt few investors these days.

From its 1955 peak output of over 3,500,000, the cycle industry has declined rapidly, and production last year was probably little more than half that figure. Exports have fallen roughly proportionately, for all the striking success in the United States market last year.

Smethwick has two cycle factories, both part of the British Cycle Corporation, which is part of Raleigh Industries, which is part of Tube Investments. Last April TI announced a major reorganisation within Raleigh, concentrating cycle production at Nottingham, and leaving scooter and moped production at the Downing Street works in Smethwick. At the end of November, to the shocked surprise of the unions, the closing of Downing Street by March 31st this year was announced, making 1,500 workers redundant, with a streamlining of the labour force at the British Cycle Corporation's Phillips works in Bridge Street, which makes components. Keeping Downing Street open would be "economic suicide," Raleigh said, especially since demand for "motorised products" had not materialised in Britain; at the same time, 9,000 cycles and 600 mopeds a week would be turned out until the factory closed.

Similiar decline has brought increasing redundancy at the Birmingham Railway Carriage and Wagon Works, which last year found itself in the unenviable position of having to hand back to London Transport an order worth £2,500,000 because it could

COMPANY REPORT: THE BUTLER DID IT

At Colombo it looked like the dowager dunnit. Then at Sydney he was laying bets on the sinister uncle. But by Suva his mind was made up: the butler did it. And (as always) the Chairman was right.

If you think he took a mighty long time to spot the murderer you don't know the Chairman—or the ship he's on. It's hard to take time out for sleuthing when your shipboard diary's so full of other inviting engagements. A swim in the pool (twice a day now he's feeling so athletic!) . . . a cool drink in the shade of the bar . . . Sole Meunière tonight and Suva tomorrow. Leadenhall Street was never like this!

It's nine weeks now since he made that famous decision to start that American trip by sea—and P & O–Orient Lines in particular. Nine weeks of sunshine and idleness, nine weeks to unwind and tone himself up for the gruelling time ahead. And when he gets to America he'll be nine times more competent, nine times more alert than anybody else round the conference table. Best decision even he ever made!

P & O–Orient Lines, 13-5 Leadenhall Street, EC3 • 14 Cockspur Street, SW1 or Travel Agents

At home and abroad most Telex calls are cheaper now. Since the three-minute minimum charge for dialled calls has been dropped, so many more short messages are worth sending by Telex. Even a three-minute call to *Europe* is only two-thirds the cost of a telephone call.

Connection is quicker, too, now that you can dial most European Telex subscribers direct. And remember—the message can still be received in your own or your correspondent's office even if it is closed.

Tell your staff about Telex. The day's business can be handled more quickly and efficiently if you encourage all levels of staff to make full use of Telex. It's as easy as sending an internal memo. Moreover, it eases language difficulties and produces a printed record.

ARE YOU MAKING THE MOST OF TELEX?

Now you can dial direct to

Austria, Belgium, Denmark, France, Germany, Luxembourg, Netherlands, Sweden, Switzerland

Send it by TELEX—everywhere

GPO Headquarters Building, St. Martin's-le-Grand, London, E.C.1.

CVS-404

not carry it out economically. Shop stewards at the factory have been saying for several weeks that it will close completely by the end of July or early August, when the current order for the British Transport Commission is completed.

Although the management has said it is "doing its utmost" to obtain more orders, none has yet been announced. In small numbers of 50 or 100, employees have been made progressively redundant over the last few months. The present labour force is about 1,100, many of whom have known no other employer; it is the "man-and-boy-these-last-50-years" kind of factory.

THERE has been plenty of activity on Smethwick's behalf. The local trades council has painted lurid pictures of a "ghost town"; it has harried the local MP, Mr Patrick Gordon Walker, who for his part has seen both the Minister of Labour and the President of the Board of Trade, London Transport and the BTC. The district committee of the Confederation of Shipbuilding and Engineering Unions has campaigned up to national executive level.

There has been little more than sympathy for the Smethwick men at national level. Mr Hare told Mr Gordon Walker that the displaced cycle workers should have no difficulty in finding other work locally, though admitting it might take longer than it would have done some time ago. The executive of the confederation told the Birmingham district committee, who requested a national conference of affected unions, that it could not be expected to resist every closure, that (in the words of Mr Harold Poole, the president) they could not be expected to rob Peter to pay Paul, and the Midlands was not an area where there was no alternative work available.

Meanwhile local Ministry of Labour figures show 509 unemployed in Smethwick (396 men, 113 women), and local officials are quoted as saying that probably no more than 100 of the redundant men will be able to find jobs in Smethwick. In fact, for a neatly-parcelled, small-scale example of the cutting-back of declining industries and the problems of redeployment of labour which must follow, the student economist or sociologist could scarcely improve on Smethwick in the next few months.

Expanding Oxford

FROM A CORRESPONDENT IN OXFORD

TO translate current discussion about university expansion into bricks and mortar is hard work full of snags and risks. This is most obviously so with the new universities at York, Norwich and Brighton. It is less obviously but equally true of the two older universities, both of which are founding new men's undergraduate colleges for the first time since the nineteenth century: Churchill College at Cambridge and St. Catherine's College at Oxford.

The starting point for both colleges was the general recognition during the 1950s of an urgent need for increased output of science graduates. The composition of this output, and its final allocation between teaching, research, industry and administration, are not, as Professor Jewkes has pointed out, questions capable of automatic solution. But the need itself was already clear in 1952 when Mr Alan Bullock, then a Fellow of New College, Oxford, was appointed to the vacant Censorship of St Catherine's Society, a non-collegiate body of about 300 students which traces its modest origins back to 1868.

WITHIN four years the Censor produced his plan for a new men's undergraduate college, using the existing society as its nucleus, which would devote about half its places to science and mathematics. An influential group of dons gave the plan academic backing; Merton College promised a site in Holywell Meadow; and an initial appeal for financial support made in 1958 led to the subscription of over £600,000, largely from British industrial firms. This was obtained despite other current appeals, including one by Churchill College for £3 million. The University Grants Committee promised a further £250,000, and the university's Hebdomadal Council appointed a subcommittee, on which the outside sponsors of the college were represented, to watch over its development. This marked the end of phase one.

In phase two, through which the college is still passing, there seem to have been three main problems: raising more money, choosing an architect and putting his building up, and expanding the body of fellows. More than £2 million has now been obtained, including the donation of over £170,000 by the American millionaire Dr Rudolph Light, a former St Catherine's student, and of $250,000 for research fellowships by the Ford Foundation. However, the college could clearly do with still more funds as plans develop and costs creep up. Its members talk of another half million, but it is probable they will need a million. Their Danish architect, Arne Jacobsen, whose choice raised patriotic murmurs in Britain, regards the college as a "prestige job" and such jobs are not the cheapest.

The policy is right, but parts of the structure may be uncompleted at first from lack of funds, unless the college's financial barometer unexpectedly rises. Difficulty in meeting Jacobsen's exacting standards and delay caused by bad weather also make it uncertain how much will be ready for occupation by opening day in October.

St Catherine's other main current task has been to expand its body of fellows from the nucleus provided by the existing tutors of St Catherine's Society. Three things are clear about this process. The college is retaining Oxford's traditional stress on teaching, and hence on tutorial fellowships. Second, it is keeping the balance of fellows and undergraduates fairly even between arts and science. Third, though laying stress on the need for research fellows, and for the association of distinguished outsiders with the college through supernumerary and visiting fellowships, it has made no provision for a class of research studentships such as exists, for instance, at Nuffield and St Antony's colleges (which have no undergraduates). The traditional Oxford gap between the senior and junior common room thus remains.

These decisions are deliberate; on each Churchill has taken a contrary view. It will be interesting to see how St Catherine's policy works out as it moves after October into phase three of its development, as a working institution.

THE WORLD OVERSEAS

FACES OF FRANCE

FROM OUR PARIS CORRESPONDENT

MUCH of the image is in the eye of the beholder, who has two completely contradictory pictures of France to choose from. One picture shows a prosperous nation of holidaymakers with no greater cares than the twist-versus-jive struggle or the height of the waistline in the spring collections. Sun-tanned thousands stream back from winter sports. Production is booming, business is good. At the ministry of finance, M. Baumgartner has bequeathed well-filled coffers to his youthful successor. All this seems to justify General de Gaulle's message that everything is for the best

If the spotlight is switched to other scenes—to policemen directing traffic in Paris with sub-machine-guns in their hands, to the armoured units of gendarmes that wait on the alert in the suburbs—it picks out a quite different picture. Both are true, within their limits; each is incomplete. The following notes try to illustrate some of the symptoms and causes of the disquiet that certainly exists despite the absence of any major social discontent.

Hoax or Hydra? Last week the police forces in Paris were strengthened to 25,000 men and the government was able to claim the capture of some important henchmen of the OAS (*Organisation de l'Armée Secrète*). It is too early to say what will be the effect of this new police offensive. On previous occasions, notably after the abortive attempt on General de Gaulle's life, the claims that the OAS in France had been beheaded proved premature. Indeed, one of the psychologically most disturbing factors was the contrast between official assertions and reality. Last month, each government declaration of confidence and resolution was echoed by the daily explosion of *plastique* in provincial towns and in various parts of Paris, including the Quai d'Orsay. Communists were no longer the main targets; the flats of liberal and even conservative editors were attacked as well.

This is psychological warfare. Casualties are few, the damage mainly material, but an impression is created that the underground is omnipresent and the authorities impotent. Officials found two excuses for the government's initial lack of results: these handy bombs are easily hidden; and specialists, coming from Algeria, are able to enlist recruits among the disgruntled poujadists or fascist youth. The ease of this recruiting raises the question of the deterrent.

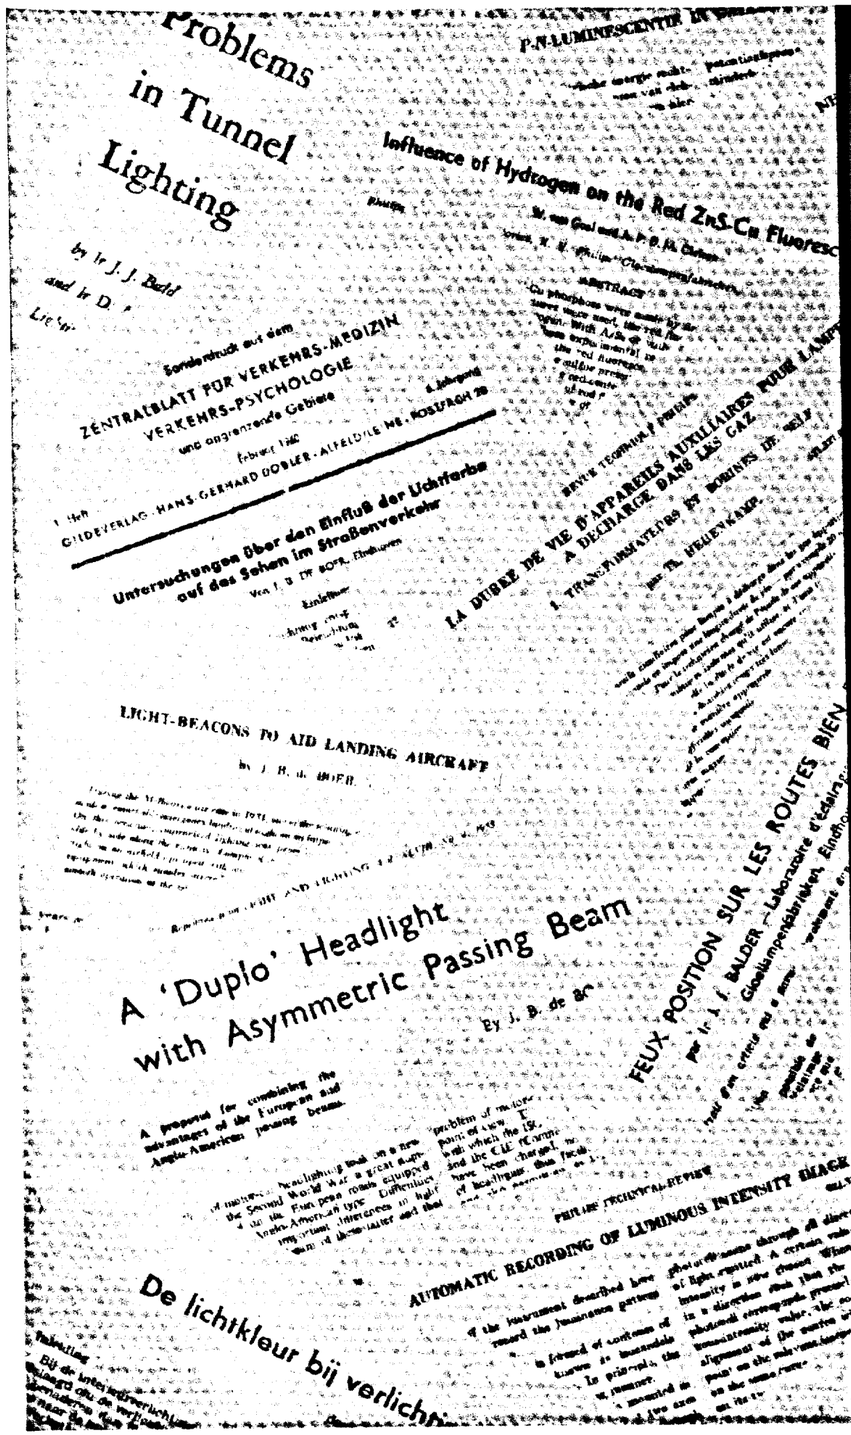
All, all, honourable. The French courts have shown remarkable indulgence towards offenders who justify their crimes through their attachment to *Algérie Française*. Many men who vanished while under suspended sentence are now on the general staff of the Secret Army. This caution on the part of the judiciary, combined with the government's appearance of indecision, had its inevitable consequence. On January 26th, three men who had been threatened by the Secret Army refused jury service at Nîmes, and the trial had to be put off. The government reacted swiftly. Several cases were transferred to a special military tribunal and, last week, a *plastiqueur* was actually sentenced to six years in jail.

It should not be concluded that military justice is always swift and severe. On January 16th, another Parisian military tribunal gave its verdict in the case of three officers accused of torturing a Moslem woman to death. The gruesome indictment was public; the trial was heard *in camera*; the three men were acquitted. It is enough to add that these three officers could not even plead superior orders or invoke the complicity of higher ranking officers. Such complicity has prevented all other cases of torture from being brought to trial.

Policeman's Lot. It used to be fashionable to say that the army was suffering from a bad conscience. Now the fashionable malaise concerns the conscience of the police. For years the police have been fighting against the Arabs; now they have to turn against the Secret Army as well. For an even longer time they have been told that the chief enemy was on the left; since 1947, anti-communism has been a main qualification for recruits. Now the police are told that the opponent is on the right. To complicate matters still further, they are ordered not to forget that the struggle is on two fronts. Communism is the permanent danger; the Secret Army is a transient one. To the ordinary policeman it must all seem rather confusing.

There are, however, deeper reasons for the uneasiness and hesitation among magistrates, officers and policemen. Occupation, resistance and liberation undermined the simple rules of discipline. For years afterwards efforts were made to explain that wartime conditions were the exception. Then came the change of regime in 1958 and many may have concluded that it is most comfortable to sit on the fence. With many of its former fellow plotters now on the other side. the regime provides a precedent against itself.

Suspicions about the government's ability, or willingness, to cope with the situation, increasing terrorism and rumours of a *Putsch* to come have led political and union leaders to meet and talk about filling the void, about self-defence, even about the succession.



Old Dilemma: "Without the communists, the Left is nothing; with the communists . . . the army will never tolerate it." This sentence, attributed to General de Gaulle, sums up a great deal in the French situation. It explains the ambiguous relationship between General de Gaulle and his armed forces. It reveals one of the reasons for the impotence of the French Left. M. Mollet, the socialist, who shares the view that the threat of a popular front could provoke the army into action, has recently been busy

regrouping. He has met M. Pinay, the conservative, as well as Radical, Catholic and trade union leaders, to see whether, if a vacuum arose, a coalition could be formed to fill it. At the same time, he has been trying to form a more active alliance of the non-communist Left against the Secret Army; without, so far, much success.

M. Pinay, whom many tip for the succession, has no special reason to broadcast his views on Algeria from his retirement. General de Gaulle's illustrious precedent demonstrated the political efficacy of ambiguous silence.

Recent demonstrations against the Secret Army have confirmed two things: that the communists can no longer bring as many people into the streets as they used to be able to do; and that no mass demonstration can be staged without them. The combination of these two lessons with the activity of the OAS has somewhat decreased the reluctance to work with communists. The Left still stands divided, but whether the communists will continue to be kept in isolation may now depend on events.

Waiting for What? Stories of an impending peace or an impending revolt are plentiful. The Secret Army, which dominates the life of the European population in Algeria, has no real roots in France. The fight against the Secret Army, for what it is worth, is waged by the police forces, mainly the cloak and dagger men. Meanwhile the French army carries on the Algerian war, and each fortnight brings reports of, say, 600 Algerian casualties. The wiser among the Secret Army strategists want to delay major action until the exiled Algerian leaders return to Algiers to take over; they would then try to get the armed forces to join them in the struggle against the "common enemy."

In prosperous France there is no scope for a massive fascist movement. All the question marks, however, lead one back to the problem of the army. The questions are not new. The government's present display of precautions suggests that the next few weeks may provide the answers. It is then that the true face of modern France may be seen.

Germans Think About Moscow

FROM OUR BONN CORRESPONDENT

LOCKED and unattended, a train composed of eight azure coaches, each inscribed "Germany's Way" in letters of gold, stands on a weed-grown siding near the Rhine, a couple of miles from Bonn central station. A fading sticker on the last carriage tells what lies behind the boarded window. It is an itinerant show:

> An exciting report on the rise of our nation. A mirror of the world in which we live. The first comprehensive exhibition giving a unique survey of the past, the present and the now forming future. Visitors do not require a platform ticket. Admission free.

Newer stickers on the carriage doors announce that the exhibition is *geschlossen*. For good? Or just having a breather? From time to time some riverside walker turns aside to ponder the vivid derelict. Is this, he may well be asking himself, a symptom of national apathy? Of impotence? Or just of despair of correctly divining the auguries? Perhaps the sponsors (the federal press and information office) feel that those intriguing exhibits concerning the shape of the future should be kept shunted out of sight while the two global giants continue to make friendlier faces at each other, and while Dr Adenauer and his uneasy coalition government are making up their minds how to react collectively to the latest Soviet overtures.

After a fortnight's hibernation ordered by the doctor, the old Chancellor reimposed his authority on the restive Bonn scene at the beginning of the week. First, there was his deputy, Herr Erhard, to congratulate upon his birthday (at 65, Herr Erhard is the Chancellor's junior by 21 years). It must have been a faintly awkward encounter for both, considering past vexations and current reports of moves to obstruct Herr Erhard from the succession to Dr Adenauer (might it be next year?) in favour of Herr Krone, the former parliamentary leader of the Christian Democrats and now minister without portfolio. But, having deposited his ambiguous present, a clock, on Herr Erhard's desk, Dr Adenauer was soon on his way from the ministry of economics to the Palais Schaumburg and his overriding love, the conduct of foreign policy. The first cabinet minister he called in was Herr Schröder, who succeeded Herr von Brentano at the foreign ministry in October in deference to the Free Democrats, advocates of a less crustacean approach to the Soviet-ordered world.

HERR SCHRÖDER had not been paralysed into inactivity by the Chancellor's absence. He had already summoned the German ambassadors to the Soviet Union, the United States, Britain, France, Italy, the United Nations and the North Atlantic Treaty Organisation to attend a conference in Bonn this weekend, at which foreign policy is being reviewed in the light of the new Soviet approaches. Herr Schröder had also had a long talk with the four leading Free Democrats who have been exhorting the government to seize the opportunity provided by the Soviet memorandum handed to Dr Kroll in Moscow on December 27th for an attempt to ease the tension between Bonn and Moscow. They are Herr Mende (the party chairman, who refused to take cabinet office under Dr Adenauer), Herr Scheel (minister for co-ordinating development aid), Herr Dehler (a former chairman of the party, noted for independent thinking and a plain tongue) and Herr Achenbach (a strongly nationalist member of the Bundestag foreign affairs committee, who was too closely associated with the Nazi occupation of France for many people's liking). It was rumoured at the beginning of the week that these four, along with other Free Democrat deputies, had accepted an invitation for an evening's talk with Mr Smirnov at the Soviet embassy. This, it now seems, is not true; and if it ever was, it was because the Free Democrats had assumed that some Christian Democrat and Social Democrat deputies would be doing the same thing. The two latter parties, however, have flatly declared that the time is not opportune to discuss the new Soviet proposals at that level.

In the course of a long talk with Dr Adenauer on Tuesday, Herr Mende restated the arguments that he and his colleagues had presented earlier to Herr Schröder for responding civilly and constructively to the Soviet memorandum. They are not as unqualified as Herr Mende's much-quoted remark—"I don't subscribe to the theory that ambassadors should be deaf and dumb"—had first led the public to suppose. Herr Mende advocates direct talks between west Bonn and Moscow—but only with the full connivance of the western allies, and only if the United States government's present soundings get nowhere. Should the highly dangerous deadlock continue, it would be irresponsible, Herr Mende contends, not at least to try to ease it by taking advantage of the good relationship which the west German ambassador in Moscow, Herr Kroll, has established with Mr Khrushchev.

Dr Adenauer, himself as mistrustful as ever of Soviet intentions, is planning to hear the views of a number of officials and politicians during the next few weeks. There are indications that he will find the bulk of opinion in approximate agreement with Herr Mende. The foreign ministry is divided several ways; at any rate, Herr Kroll has admirers there as well as detractors. As for the Christian Democrats, both Dr Krone, who was quick to point out suspicious discrepancies in Soviet propaganda about west Germany, and Herr von Brentano, who uttered the warning that it would be "dangerous and wrong" for Bonn to engage in bilateral talks with Moscow, are beginning to sound a little less

outraged at the idea. The Berlin Christian Democrat, Herr Gradl, has expressed the belief that there is more behind the memorandum than tactics and propaganda, and that the Russians genuinely want to improve relations with west Germany.

Professor Meyer, who was west German ambassador in Delhi from 1952 to 1957, has spoken for the majority of Social Democrats in counselling direct talks so long as Germany's partners agree and are kept fully informed. And it need scarcely be added that that militant pacifist convert, Dr Niemöller, president of the Evangelical Church in Hesse, has been exhorting a world seemingly bent on suicide to give up "the superstition that the differences between East and West are irreconcilable." But up to now his is the only voice that has been heard in public proposing that the aim of talks with Russia should be to establish a neutral, reunited Germany, romantically "bridging East and West." Dr Niemöller apart, none of the advocates of direct exploratory talks has so much as even hinted that the time may have come for Bonn to loosen any of its military, economic and political ties with the West. There is, indeed, nothing in the memorandum, or in the various Soviet elaborations that have followed it, to suggest that the Russians are ready to change their east German and Berlin policies for the sake of amicable relations with west Germany. Nor, as Herr Erhard has pointed out, are west German industrialists much impressed—at any rate for the time being—by the memorandum's reference to the "ocean of new possibilities" in trade with the eastern block. Only 4.7 per cent of west Germany's total foreign trade is conducted with the eastern block, and most firms could give up their eastern orders without inconvenience.

But it is the condition of the 17 million Germans living beyond the Elbe-Werra line, and the quality of their rulers, that is the chief hindrance to any increase of west German confidence or of readiness to make sacrifices for the sake of the general peace. Nothing could persuade the Germans more thoroughly that the division of their country is shamefully wrong than the character and conduct of the Ulbricht regime. Happily there are some signs, tenuous as they are, that this is being recognised in Moscow. Mr Khrushchev has been showing so little concern lately for Herr Ulbricht's feelings that the east German information services have been having to censor Soviet pronouncements. Thus the pace-setting east German daily *Neues Deutschland* omitted from its summary of the Soviet memorandum to Bonn the significant passage (so different from the paper's strident line):

> All conditions exist for the development of good neighbourly relations between the Soviet Union and west Germany. The necessity for establishing such relations accords with the fundamental interests of our peoples.

Once again those political pundits in Bonn who have long maintained that when Dr Adenauer goes Herr Ulbricht will go too are nodding their heads sagely. But perhaps that is looking too far into the future. At the moment of writing it seems that Dr Adenauer is being talked into agreeing that the Soviet memorandum shall be answered; and the reply would set forth once again the German thesis that self-determination for all Germans is the pre-requisite of satisfactory German-Soviet relations. The Soviet proposal for direct talks is likely to be ignored, but not explicitly rejected.

Malaysia in Two Bites?

FROM OUR SPECIAL CORRESPONDENT IN SINGAPORE

DEMOCRACY was getting in the way of progress in Borneo last week. The Greater Malaysia Show, which was put on the road with a brassy flourish of trumpets a couple of months ago, looked like stalling in a Borneo bazaar or a head-hunters' long-house.

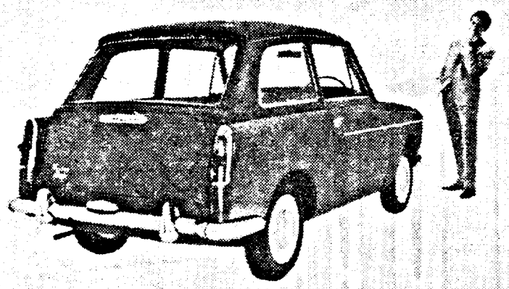
There was a brave and articulate assembly of delegates from Sarawak, Brunei and North Borneo, with Malayan and Singapore allies, in the bunting-hung Victory Theatre here for the fourth and final meeting of the Malaysia Solidarity Consultation Committee. But hearty adjectives masked cautious sentiments and, for all the exultant shouts, the anxious theme was: "Don't rush it!" The prospects, at curtain-call, were that Greater Malaysia would require two bites instead of one.

The Sarawak leader, Mr Yeo Cheng Hoe, appealed for "more time," because "our people are now divided and confused," and gave a blunt warning that, if Malaysia were "rushed through, there could be a repetition of that unhappy episode in Sarawak's history when the Rajah ceded the country to the British government." Mr Donald Stephens of North Borneo admitted that racial feeling against Malaysia was rising, and counter-propaganda was needed to allay "Chinese fears of becoming second-class citizens." Dato Ali of Brunei, stressing his territory's independence from Britain, was piously hopeful, and tactfully abstained from any reference to the unfortunate impression which some arrogant and inefficient "advisers" from Malaya have already left in the Borneo sultanate.

The plain fact is that Malaya and Singapore can hardly afford to wait for the innocent natives of the Borneo territories to shed their doubts and fears, accept the strange doctrine that their lot, whatever their present naive delusions, is not a happy one, and that fatter pigs, whiter rice and better fortune generally await their democratic decision to join the new state of Greater Malaysia. The noble Dyaks, crocodile-hunters and former head-shrinkers themselves, may brain-wash easily enough, but the local Chinese, inherently and innately suspicious of a change to greater Malayan control, are united in a solid block of sophisticated opposition to the project. They are, indeed, adopting the last desperate stratagem of democracy: spending money to resist the change. (For example, in North Borneo they have started a newspaper, the *Borneo Times*, solely to put a case against Malaysia.)

This embarrassing opposition confronts Tunku Abdul Rahman of Malaya and the prime minister of Singapore, Mr Lee Kuan Yew, with a hard decision. Should they abandon all pretence of democratic processes and go ahead with virtual annexation of the Borneo territories? Or should they build Greater Malaysia in two stages—Singapore and Malaya today, the Borneo territories tomorrow?

Mr Lee can probably command a safe referendum victory on merger in Singapore, despite the opposition—and doubtless bloody violence—of the Barisan Socialis breakaway extremists. (The Barisan Socialis boycotted last week's meeting of the Solidarity Committee.) Even if Mr Lee should lose a hard-fought vote, the Tunku, moving in to "protect" the lives and interests of the Malayan minority in Singapore, could suspend the present Singapore constitution by withdrawing his representative on the Singapore Security Council and, with the tacit agreement of Mr Lee, in effect absorb the restless, explosive, unpredictable island.



The Tunku has already accepted the lesser of two evils by consenting to embrace Singapore along with the Malayan makeweights in Borneo. After that hard but graceful swallow of old prejudices, he can probably bring himself, in expedience and realism, to yet another choice of the lesser of two evils. Merger deferred

Teenager or business tycoon, motor mechanic or mother – all or any of these may be the target your product is intended for. How can you reach them most economically? The answer is – when they travel! Nearly all of them have to travel many times a week. THIS FAMOUS CAR

IS NOW EVEN BETTER VALUE

MORE IN FRONT The Austin A40 Mark II has advanced in all directions. The wide-span grille presents a new bold facade, shows the new car in a grander, expansive mood. Start up the engine. Purr into the seventies. You have more power, greater acceleration.

SIT INSIDE Try the back seats. Your long legs are allowed to find their full length. The A40 has more room than ever before. Experience a new kind of comfort with the luxuriously restyled trim and new facia panel.

SAME IN SIZE There's only one way the A40 hasn't advanced—in overall length. And you wouldn't want it otherwise. It's still the ideal shape for threading through tangled traffic. And the price remains as small-car as ever.

NEW Longer wheelbase (3") gives greater passenger comfort
NEW Anti-roll bar on the front and telescopic rear dampers
NEW Easy-action, wind-down windows
NEW Fully hydraulic brakes on all four wheels
NEW Completely restyled facia with glove box lid/picnic tray
NEW Trafficators that cancel themselves after cornering
NEW Restyled, full-width radiator grille
NEW S.U. Carburettor gives increased b.h.p.
NEW Fully-folding rear seat gives more luggage room

PRICES. BASIC: £450 plus £207.9.9 P.T. and Surcharge. SUPER DE LUXE: £475 plus £218.18.11 P.T. and Surcharge.
EXTRAS ON SUPER DE LUXE INCLUDE: *Fitted carpet throughout. Stainless-steel windows. Bumper over-riders. Passenger sun visor. Wind-screen washer. Water temperature gauge.*

Personal Exports Division: 41-46 Piccadilly, London, W.1. THE AUSTIN MOTOR COMPANY LIMITED · LONGBRIDGE · BIRMINGHAM

will not just make Mr Lee's heart sick ; it will also kick him out of office. Then the fears that induced the Tunku's first change of heart will become ugly facts indeed.

Suggestions—perhaps unworthy—are heard that Britain would not be desolated by a delay in the transfer of Sarawak and North Borneo from their existing Crown colonial status to partnership in the brave new South-East Asian state. This breathing-space, so the tongues wag, might be useful at a time when the future of the Singapore and Hongkong bases and the possible substitution of carrier-borne marine commandos are question-marks on the Far Eastern horizon.

Inche Yusof bin Ishak, Malayan delegate at the Solidarity Committee rally in Singapore, probably made the most prudent, realistic and truly Oriental reference to the difficulties and delays ahead. "Realisation of the State of Malaysia is only a matter of time," he observed equivocally. In the East, time is, of course, always a relative matter. Malaysia's hour, it now seems, will strike more surely and enduringly if it strikes twice—first, for Singapore and Malaya ; secondly, for the uneasy and reluctant Borneo territories.

Africa: Southward March

FROM OUR SPECIAL CORRESPONDENT IN ADDIS ABABA

ONE of the more curious of African paradoxes is a Pan-African conference in Addis Ababa. "The "freedom fighters" graciously thank His Imperial Majesty for welcoming them to the imperial capital ; then they switch over to their best nationalistic oratory to condemn the "bloodsucking parasitic imperialists." A land whose men have adopted the topee and jodhpurs as a national costume, and which provides as conference receptionist an ambassador's daughter educated at Cheltenham Ladies' College, may not seem the likeliest place for a conference planning "the total emancipation of Africa."

But all the delegates to the Pan-African Freedom Movement for East Central and South Africa conference this week took these slight incongruities without blinking. Indeed, the series of conferences held here since the United Nations economic commission for Africa made Addis Ababa its headquarters, and since the magnificent new African Hall was built here, has had an important effect on Ethiopia—one of which the emperor seems to approve. The Unesco conference on education, for instance, inspired some self-criticism of the limited Ethiopian school programme.

The point of this week's conference was not, however, to educate Ethiopia. It was to make as practical plans as possible for the liberation from white supremacy of all southern Africa by a date much earlier than 1970—the one suggested recently by the "Monrovia" heads of state. With independence for all east Africa within eighteen months almost assured, the emphasis has shifted south. The old Pafmeca founded by Mr Julius Nyerere four years ago has been enlarged into Pafmecsa, covering all southern Africa. At the same time, but for different reasons, it has spread north to embrace Somalia, Ethiopia and the Sudan.

The atmosphere has been one of confident militancy. The days of universal professions of "non-violent action" seem to be past. The Pan-Africanist congress delegate from South Africa, Mr Peter Molotsi, said that for leaders "lunging into the last phase of the liberatory struggle" it was unrealistic to champion non-violence as laid down in the Pafmeca constitution. The Uganda chief minister, Mr Benedicto Kiwanuka, remembering his years as a sergeant-major, gave Portugal a year's notice to start preparing Angola and Mozambique for freedom. "It does not matter what means we use, but they must be liberated," he said. As for white Rhodesians, they must yield or quit—"there is plenty of land in Australia." Mr Nelson Mandela, a bearded lawyer and an heroic figure from the South African political underworld, said that his African National Congress would continue non-violent strikes but would fully understand if the people turned towards the sort of sabotage that began in the main towns in December.

It is not clear what detailed plans the eighteen Pafmecsa countries are making to destroy the "Verwoerd-Salazar-Welensky axis," and the attempts of the champions of white supremacy to maintain an industrial empire "from Katanga to Capetown." Their main points of strategy will not be revealed. But it is known that the South Africans want equipment rather than conspicuous volunteers ; Mr Kenneth Kaunda wants money either to organise an election campaign or a general strike (depending on whether the new Northern Rhodesian constitution proves acceptable or not) and the Southern Rhodesians want scholarships for exile students. In response to these requests a freedom fund and a refugee fund are being set up, and the permanent secretariat in Dar es Salaam is being strengthened.

More important in the long term, of course, is what these nationalist leaders intend to construct when they have destroyed the old colonialist fabric. There has been a good deal of talk about political union. The emperor began it by speaking of "a regional federation of east and central Africa." The Ethiopian chief delegate strengthened the point by saying that political union was necessary if the countries of east Africa hoped to diversify their economies, integrate their development programmes and exploit their mineral resources and the potential of their rivers.

The difficulty of achieving union has not blunted the general optimism. The accommodation of a sultan, a kabaka and an emperor inside one state is not regarded as a great problem. When the Zanzibaris point out that a customs union with mainland east Africa would deprive the islands of a third of their revenue, they are assured of compensation. But none of this will happen overnight. The early steps seem to be agreement to avoid setting up competitive industries, to establish a customs union and to pool defence forces. Ethiopia, which spends about 40 per cent of its budget on defence and internal security, could benefit greatly.

THESE conferences have established a convention that it is bad taste to air brotherly quarrels which detract from the image of African unity. Any protests the Somalis may have had about Ethiopian or Kenyan attitudes towards Somalis were politely hushed in the Ethiopian capital—especially with a Kenyan, Mr Peter Koinange, as secretary-general. Even when an angry word flew—as when the Afro-Shirazi delegation called the Arab administrators in Zanzibar "foreign insignificant minority elements" and Mr Oginga Odinga attacked the Kenya African Democratic Union as "a misguided tribalist organisation, a complete negation of African nationalism"—the other side did not answer back. This may not be the best way of resolving internal differences, but it stops controversy from confounding the attempts at broader planning.

The most worried men at the conference were observers from Ghana and Guinea. They see the growth of a regional federation in eastern Africa as a threat to Pan-African unity (and perhaps to their pre-eminence in promoting it ?). Mr John Tettegah, Ghanaian ambassador-at-large, declared, "So long as we remain balkanised regionally or territorially we shall be at the mercy of colonialism and imperialism." He proposed an American-type constitution for the united states of Africa that would provide for common economic planning, a joint military command and a common foreign policy ; he added that this union need not impinge on any country's sovereignty.

The idea of many Pafmecsa delegates is to build from the ground upwards, rather than from the roof down. Several would privately suggest that the Ghanaian plan is up in the air, whereas

regional federation is well founded. Publicly they assure Accra that Pafmecsa is conceived "within the framework of the All-African People's Conference." But this divergence of view over whether regionalism or Pan-Africanism comes first may prove a more important division than any that sets the Monrovia group apart from the Casablanca powers.

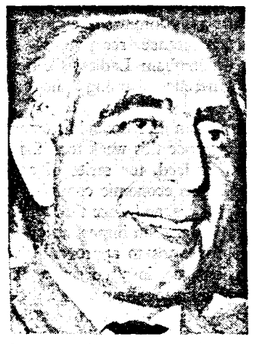
Persia's Gamble Against the Clock

FROM OUR MIDDLE EAST CORRESPONDENT

TEHERAN

Although Dr Ali Amini, the Persian prime minister, weathered last month's storm of student violence—and its ruthless suppression by a paratroop battalion—the disturbances have left the government with less public support than ever. It is generally accepted that Dr Amini was right in insisting that influences outside the university helped to stir up the students, and that paid gangs of hooligans, who notoriously play a squalid but important part in Teheran politics, took part in the street fighting. But it is equally clear that the paratroops got out of hand in putting down the riot; the government has tacitly admitted this by replacing the battalion commander. The prime minister has denied that he knew beforehand of the orders given to the troops, and there is good reason to believe him. Who, then, pressed the button? If that responsibility could be established, an important piece of the Persian jig-saw would fall into place.

At the height of the excitement, some 300 people were arrested; of these, more than two-thirds have by now been released. Dr Amini, supported by Dr Arzanjani, the minister of agriculture, lashed out in all directions—at the feudalists, the National Front, the Communists and the "Al Capones." This last reference was presumably to General Teymour Bakhtiar, who, when he was chief of security, reinforced his police by gangs of thugs and managed to amass a fortune for himself. After the riots General Bakhtiar was sent out of the country by the Shah; he is at present in Europe.



After an exchange of correspondence with the rector of Teheran university, Dr Amini seems to have made his peace with the scholars. The rector and his deans have withdrawn the resignations that they tendered in protest against the behaviour of the paratroops, and it is hoped to reopen the university before the end of the month. A lot of repair work has still to be done, and much equipment has still to be replaced. The government is also insisting that the university authorities set up a student guard to keep order in future. But who will the guards be? The method of selecting them seems likely to provoke heated debate among the students.

Teheran has regained its calm, but an end to Persia's troubles is remote. Dr Amini's government is pledged to a programme of radical reform by evolutionary methods. This includes the break-up of the big estates in favour of peasant ownership, and an extensive programme of industrial development. These changes imply a political and social transformation of the country. In time they would break the power of the traditional landowning class and produce thousands of articulate administrators and technicians in town and country. The experience of other countries suggests that at least a generation will have to pass before the programme is completed.

Except for the Shah himself (and his courtiers inspire little confidence) and the followers of Dr Amini, few Persians are prepared to wait this long. The breach between the prime minister and the National Front (the main opposition force) now seems irreparable. A policy of economic austerity and the dragging of government feet in bringing the corrupt to justice (most of the senior officials arrested on charges of corruption still await their trial) sharpen the quarrel; but the real issue is over elections. The National Front wants them now, Dr Amini refuses to hold them until the electoral law has been changed. This issue has not only widened the gulf between the government and the front. It has also given the front, formerly a loose and shapeless alliance of nationalist groups, a cohesion which it has never had since Dr Mossadegh went into pyjamaed retirement.

The National Front wants elections as a means to power. But what it would do if it got power is still anybody's guess. It holds together on the election issue; but, if elections were no longer an issue, it would probably fall apart. Uncommitted Persians differ about the desirability of parliamentary government at the present stage. Some argue that free and honest elections would result in the return of the more responsible representatives of the landowners and of the National Front, with perhaps a sprinkling of communists giving a strong majority for radical but gradual reform along lines laid down by Dr Amini. Others fear that the extremists of all parties would get in, with a small but determined communist group holding the balance and making the practice of government impossible. The past performance of the Teheran *majlis* suggests that the pessimists have good grounds for their apprehension; even if "responsible elements" were returned, how many would remain responsible and for how long?

There are those who are urging accelerated reform—or revolution—; there are others who do not want any reform at all. These are mainly the big landowners, whose strongholds are the court and the army. They do not represent the whole landowning class, perhaps not even a majority; but they are there, in high positions.

Survivor: Dr Amini

Dr Amini claims that the land reform will save the landowning class (for which he is promptly attacked from the left). But there are many landowners who have no use for this form of salvation.

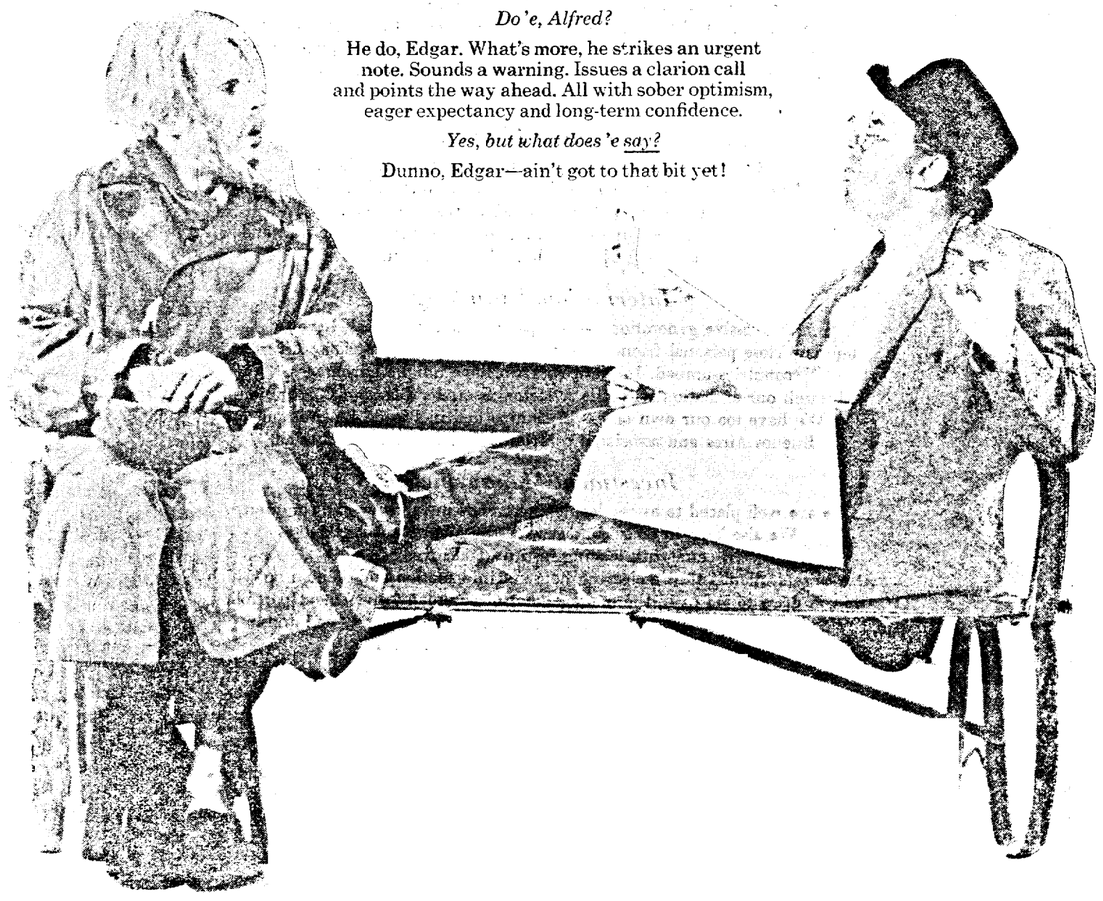
Land reform is starting in the district of Maragheh, in Azerbaijan. In repeated statements designed to placate the landowners, and, perhaps, to impress outsiders by the prudence with which reform is being put into effect, the minister of agriculture has declared that the Maragheh "pilot project" is experimental. Any mistakes made will be rectified by changes in the law, and taken into account when the reform is applied elsewhere. For this very reason, some of the Maragheh landowners are already up in arms. "If you want to experiment," they ask, "why start on our lands? Why not make your mistakes on crown or government land instead?"

Although their motives are not unselfish, the Maragheh malcontents have a point. In the Qazvin area, for instance, where the Shah has already distributed large tracts of crown property, the lot of the peasantry has improved little, if at all. Farming is wretchedly inefficient. Since bread is a staple, wheat has to be grown however small the holding. The situation is getting worse as time passes and the sons of the family grow up and there is no land for them. On most such farms a time is reached when the younger sons drift off to the nearest town, which has little but casual labour to offer them. The government's answer to such problems is to form co-operatives. If enough officials, competent, honest, imaginative and patient, can be found to run the co-operatives the reform may succeed, given time. But Persia may have neither the men nor, more urgently, the time.

Financially speakin', Alfred, what's new?

A highly interestin' report, Edgar, by the chairman of John Summers.

Whass 'e say?



Usual stuff, Edgar. He reviews the position. Sets the scene. Issues a disclaimer. Makes a forecast or two and drops more than one scarcely veiled hint. In short, he establishes a platform.

Do 'e, Alfred?

He do, Edgar. What's more, he strikes an urgent note. Sounds a warning. Issues a clarion call and points the way ahead. All with sober optimism, eager expectancy and long-term confidence.

Yes, but what does 'e say?

Dunno, Edgar—ain't got to that bit yet!

In his report for 1961, Mr. Richard Summers spoke of the prospects for the steel industry. With a £60 million development programme completed and with a very favourable capital structure indeed, John Summers, he said, are particularly well balanced to operate economically and to meet any competitive conditions which may arise. ☐ If you would like a copy of the Annual Report and Accounts, please write to the Secretary.

JOHN SUMMERS & SONS LTD STEELMAKERS

Hawarden Bridge Steelworks, Shotton, Chester.

Merchant and Investment Bankers

We have a century-and-a-half of experience behind us in the City of London, and amongst our clients are some of the largest and most progressive companies in the country. Besides providing acceptance credit and other specialised banking facilities, we can also offer our services in the following fields:

Company Finance

Loan and Share Capital Issues, mergers, acquisitions, capital reorganisations, the conversion of private into public companies—these are some of the operations we undertake.
In all such matters an important factor for success can be the skill and standing of the "House" behind you.

International Banking

Successive generations of our partners and principals have built up close personal friendships with bankers and industrialists in many countries abroad. In New York we have unique advantages through our affiliation with the J. Henry Schroder Banking Corporation. We have too our own offices in Europe and in Rio de Janeiro and Buenos Aires and associated companies in Australia and Canada.

Investment Management

We are well placed to assess developing trends in industry and commerce. We also keep in daily contact with the main Stock Exchanges and with leading institutional investors.
Our organisation is thus a clearing house of information and opinion on which we can draw to aid us in the management of our many investment portfolios, which include Investment Trusts, Pension and Endowment Funds.
These can be managed either under a specific arrangement or at our discretion.

J. HENRY SCHRODER & CO. LTD.
145 Leadenhall Street, London E.C.3
Telephone: AVenue 4600
and
HELBERT, WAGG & CO. LTD.
41 Threadneedle Street, London E.C.2
Telephone: LONdon Wall 1722

A complete financial, banking and investment service both at home and abroad.

THE BUSINESS WORLD

New Defences for the Dollar

SPURRED by a big increase in its payments deficit as officially—and exaggeratedly—recorded, the United States is planning two further defensive moves to rotect the dollar in 1962. One of them is highly intriguing. fr Dillon last week declared that the Administration would ot oppose "an increase in the discount rate to achieve a igher level of short-term rates"; secondly, the impact of ese higher rates internationally is to be reinforced by new oves in official intervention in the foreign exchange markets, otably in the forward exchange markets. The tentative steps this direction that have been taken in the past few months y the United States Treasury itself are now to be supple- ented by the Federal Reserve Board acting on its own ccount.

The possibility of manipulating forward exchange rates in rder to guide the flow of international funds has exercised ie minds of monetary theorists from Keynes onwards. litherto monetary authorities have been distinctly cautious putting these ideas into practice. In Britain the Exchange qualisation Account does operate in forward markets, but s intervention is limited, spasmodic and discreet: it is aditionally wary of operating too far "against" the market end and would consider it positively dangerous to let its ims—and thus its position in the market—become known.)n the Continent, official intervention in the open market r forward exchange has also been rare, but in both Germany nd Italy the central bank has recently provided special rward swap facilities for one important sector of the domestic arket, the commercial banks. The new moves now being eveloped by the United States are novel in the sense that ey aim at a systematic—and openly proclaimed—interven- on in the forward exchange markets. And since it is the ssence of American policy to act in these markets in close o-operation with the local monetary authorities (i.e., they ould not sell sterling forward at a time when this would mbarrass the Bank of England) their initiative could con- ivably lead to wider and more concerted official intervention enerally, with the monetary authorities acting in concert to ounter unwanted flows of short-term funds.

These steps make sense for the United States just now, cause the main element in its deficit is the outflow of short- rm capital. In 1961, the basic deficit on all other transac- ons was reduced to $600 million, from $2 billion in 1960 nd double that in 1959. But the "net" deficit, which the nited States records as the outflow of gold plus the increase foreign-owned dollar balances, was still $2.5 billion; and the fourth quarter, although the combined trade, govern- ment and long-term capital accounts were better than in the third quarter—when this basic deficit had temporarily widened —a steep increase in the recorded outflow of short-term capital widened the so-called net deficit to "an annual rate of $5 billion." Nor did this outflow reflect a concomitant flight from the dollar. It appears, for example, that some $150 million was attracted by Canadian banks and agencies in New York and promptly reinvested in that market: yet this $150 million which never left New York swells the net deficit —multiplied by four, of course, to get the annual rate. The great increase in international financing through the Euro-dollar market and in other ways has indeed made nonsense of conventional ways of measuring the movement of funds—it has, for example, added greatly to short-term US claims on foreigners. It is good to see that Mr Dillon is now making an "intensive study" of this important question of presentation.

At the same time, the American authorities are seeking to check the true outflow of funds. In recent months both the Federal Reserve Board and the Treasury have been working on "operation nudge" for the short-term rate, with some success. Officials now acknowledge that "crash action" in the form of a new rise may be necessary to fortify the external account. But they insist that this will not mean a commensurate rise in longer-term rates, which could stifle economic growth. And it is in order to minimise the domestic impact that the American authorities are putting their new emphasis on foreign exchange tactics. Most transfers of funds internationally are secured against the exchange risk by a forward exchange swap; and by working on the cost of that swap, as well as on American short-term interest rates themselves, the American authorities are bringing influence to bear on covered interest arbitrage from both sides.

LAST spring the United States authorities began operating in foreign exchange markets for the first time in a generation. Their initial move was in German marks; the Treasury put part of the proceeds of a German debt repayment into its reactivated stabilisation fund. This was used partly in the spot market, to help get the dollar off the floor. But the main emphasis of the operations has throughout been on the forward swap rate, in an attempt to bring down exceptionally high forward discounts on the dollar (premiums on the mark), which made it too expensive for Germans to secure cover for a transfer of marks to New York unless they enjoyed the Bundesbank's official facilities), and which actually made it worth while for Americans to leave their marks in Germany

at no interest and buy their dollars forward at a discount. Mr Alfred Hayes of the New York Federal Reserve (which acts as the Treasury's agent) last week revealed that by the end of June last it had "provided" forward marks (i.e. contracted to supply marks against dollars) to a total of more than one billion marks. As it happened, these forward commitments were unwound without difficulty in the wake of the Berlin crisis—which pushed funds out of Germany into Switzerland.

At this stage the US Treasury duly turned its attention to the high premium on the Swiss franc, and it broke new ground by borrowing from an overseas government to build up an operating fund. In October it borrowed 200 million Swiss francs ($46 million) in a three months' credit granted through the Swiss National Bank. About half this credit was repaid in January, and the remainder was renewed for a further three months. In its latest venture, the Treasury has this week announced a three months' credit of $25 million in lire granted through the Bank of Italy: the Treasury has already been operating in lire in co-operation with the Italian authorities, helping to lift the dollar off the floor in Milan.

But the resources of the United States Treasury are limited not only in foreign exchange but also in dollars. Less than half of the $350 million in the exchange stabilisation fund has been available for transactions in Europe, the remainder being committed in stabilisation agreements with Latin American countries and the Philippines. The Treasury's Swiss and Italian borrowings, in turn, come under the debt ceiling. The decision to bring in the Federal Reserve appears to have been taken to provide greater resources, rather than greater freedom of action. Officials claim they have no set figure of how much will be available through the Federal Reserve. They point out that it could range well above $1 billion if conditions dictate, though they plan a modest start, believing that a little can go a long way (as the Treasury has to some extent shown) and also contemplating foreign borrowing in appropriate circumstances. It is still unresolved whether the Federal Reserve Board's activities will completely replace the Treasury fund; probably both will continue to be used, as the stabilisation fund offers the opportunity of masking transactions for periods longer than can be managed by the board—which expects to disclose transactions monthly, though it will probably still hide the details of currency transactions.

The success of this open experiment in one of the more neglected applications of Keynesian theory may be important for future currency management in the world. The forward exchange market, like any market in expectations, is particularly sensitive and not always rational. If dealers know that an official fund has major open commitments, this fact itself will influence them—and it may obsess them. To operate "with" the market is easy, as the Americans found in the German market after the Berlin turn-round. In Switzerland their success has been only partial—after an initial fall in the cost of the dollar swap this has now returned to its interest parity. In this case determined tactics by a larger official fund should make their impact. But at a time of real distrust, official operations designed to lift the dollar to a smaller forward discount might have to be very large indeed—and their very size might then frighten the market. Such possibilities have hitherto kept forward operations by the less venturesome European stabilisation funds within fairly small limits. The Americans, who are after bigger game, will have to exercise boldness and prudence in a fine blend.

On the Brew

A YEAR ago a number of head brewers still saw little commercial prospect for continuous brewing. Today, partially continuous brewing is already in practice and the industry recognises that fully continuous brewing on a commercial scale is technically possible. The system best known and most fully tested in this country is based on experimental work carried out by the British Brewing Industry Research Foundation and further developed by a consortium made up of the federation, the APV company of Crawley, Guinness and Courage Barclay and Simonds. The first development plant installed at Guinness's Park Royal brewery, for stout, and the second at Courage's Park Street brewery, for lager, have been used for research into production-scale problems. More recently similar plants have been installed by Watney Mann and by Peter Walker (a member of the Ind Coope Tetley Ansells group); these are working as production plants and the wort that they produce for fermentation is being used in beer sold to the public. The system used by these four breweries is continuous only up to the point where boiled and hopped wort is produced. But there would be no great technical difficulty in linking this stage with a continuous fermentation plant, and at least one of the four has successfully developed continuous fermentation equipment.

Brewers are aiming at the fully continuous process, from mashing through boiling to fermentation, for only at this last stage do the economies become most obvious. In the conventional batch process of brewing beer, the mash tuns, coppers and hopbacks used in mashing and boiling can normally be used several times in 24 hours; but the fermenting vessels are occupied by one batch of beer for four or five days, and beer may have to be left in maturing tanks for up to several weeks. One factor impeding the development of a fully continuous process is the brewer's traditional caution, though the industry is not grudging on research and development, on which it spends around £1 million a year. Another is that the Excise has not yet accepted any method of automatically gauging the gravity and metering the flow of the unfermented wort; some method will be needed before fully continuous brewing can start, but some promising equipment is now being tested. The other important impediment is legal rather than technical. At least eleven patents, some dating back to before the turn of the century, are registered for continuous fermentation. Last July the Dominion Breweries of New Zealand, which has been making use of the Morton Coutts process for continuous fermenation for some time, registered a series of patents in this country, which apparently sought to tie up continuous fermentation so comprehensively as to cover anything that any other brewer can do. Whether the patents are precise enough to stand up to legal argument remains to be seen. Before long, some British brewer is likely to take the plunge, at the risk of litigation, with his own patented system.

Once the patents problem is overcome it will not be long before a fully continuous plant is in operation. This does not mean that brewers will scrap existing batch plants, on which they have spent a great deal of money since the end of the war. But continuous brewing offers tangible advantages in the construction of new breweries, in flexibility in production and in decentralisation. The capital cost of a conventional ale brewery, capable of producing 200,000 barrels a year, is put at £5 a barrel, £4 for plant and £1 for building; it is hoped, perhaps optimistically, that the capital cost of a fully continuous brewery of the same size would be £2 a barrel. The saving in such plant, built in stainless steel and instrumented throughout, would be impressive. The economies arise mainly because such a brewery would take up little space. A fully continuous brewhouse, capable of producing 50,000 barrels of ale a year, could be constructed in a building of two storeys on an area no bigger than a tennis court. Moreover, while a conventional brewhouse has to carry great weights (a single big fermenting vessel when full may weigh, for example, over 600 tons) and absorbs a great deal of space in storage between successive processes, a continuous brewhouse requires a comparatively lightly framed building with storage simply for raw materials and finished products. Indeed, beer might not have to be stored at the brewery at all, being taken off immediately to stores and bottling depots.

For lager, savings in capital costs would be even more dramatic, if it could be firmly established, as one patent claims, that a continuous fermentation process can eliminate the "lagering" time, which by Continental standards is not less than six weeks. Such a saving would be particularly important for British brewers; excise duty, which forms a substantial part of the price of beer, is charged on the unfermented wort and brewers are out of pocket for the cost of the duty all the time the beer is maturing. A fully continuous brewhouse capable of producing an acceptable lager without the need for prolonged maturing time, might cost as little as £2 a barrel, if it could be developed; the cost of a conventional 200,000-barrel plant, allowing for storage, is something like £12-£13 a barrel (£10 a barrel of it on plant).

Capital charges do not, however, loom large in the total costs of an ale brewery, amounting roughly to 5 per cent excluding duty and to 10 per cent including duty; a lager brewery involves a higher cost of servicing. To be acceptable to the brewers, the fully continuous process will have to offer something more than a saving in capital costs. It may save a little labour, calling for a smaller but more highly qualified staff. It does offer extraordinary savings in time; a continuous brewhouse can convert raw materials into finished beer in a quarter of the time taken in a conventional brewery. All the materials can be mechanically handled and fed continuously into the process, thus saving costs—particularly for hops. The process also offers the brewer very close control over the quality of his product, an important point for national brewers who have to produce a broadly identical beer at a number of local breweries. In parallel with the development of continuous brewing, much effort has been devoted recently to the specialised instrumentation needed, and brewing engineering companies will soon be able to offer fully-instrumented "package" breweries, either for batch or continuous brewing. The latter carry automatic safety devices at each stage; vital feeds are duplicated; and two or more identical plants are likely to be installed in parallel, not only for greater security but also for greater flexibility in production.

WITH such advantages, continuous brewing opens up new possibilities for the export brewer. Instead of engaging in the costly exercise of shifting masses of water halfway across the world, he could, in the market areas of his own choice, erect new breweries requiring little space or labour but capable of producing a beer of export strength and staple quality. At home, too, continuous brewing offers possibilities of greater decentralisation and savings in transport costs. Concentration of the brewing industry into big and less vulnerable groups has led to the closing of some breweries, but it has

No Heel Taps

THE first stage in brewing is to infuse roughly ground malt in hot water ("mashing") so as to break down the starch and to extract all the sugar; in the "mash-tun" the porridge of malt and hot water is soaked and sprayed with further water ("sparging"). The resulting solution ("wort") is boiled in a copper (or "kettle") with hops, from which preservative resins and bittering substances are extracted. After the spent hops have been trapped in a "hopback," the wort is then cooled, usually in a "paraflow." Yeast is then added and the wort is left to ferment in a vat. In this country, excise duty is charged at the point where the wort is transferred into the fermenting vessel. Lager brewing is a more complicated process, requiring several boilings and a longer period of maturity for the fermented beer than is usual for British-type ales.

Continuous brewing gives the same basic treatment to the raw materials automatically and non-stop, the aim being to deliver a continuous flow of fully fermented beer ready for consumption. The apparatus used may bear a superficial resemblance to conventional "batch" vessels, but it does in fact involve a break with the traditional equipment and techniques which are essentially the same as they were four hundred years ago.

Continuous brewing requires a precise automatic control of weights, flow and temperature; the automatic measurement and control of specific gravity; and, in this country, automatic gauging and sampling for excise purposes. In the continuous process, malt is fed at a controlled rate into a miniature mill and the resulting grist is passed by a weigh feeder to a small vessel in which it is automatically mixed with water entering at a controlled flow and temperature. There is no need for a mash-tun. The conversion and extraction of the malt can take place in passage through a system of heated pipes in which the optimum temperature can be established and maintained exactly. From there the water and grist can be passed to an automatic filtering and sparging vessel in which the residual extract is washed from the spent grain. The wort can then be run off continuously through a gravity controller to a heat exchange boiler and then on to a hop extraction vessel. The hop extraction may either involve passing the liquid successively through batches of hops or spraying the liquid through hops which are continuously fed on to a moving belt. The hopped wort is then passed out to a paraflow cooler and through a metering and sampling device into a continuous fermentation vessel, from which the beer can be run off either into casks or tankers or piped to the bottling store.

not brought about a general concentration of production into a few large-scale plants. It is likely, indeed, that production will remain dispersed. The cost of moving beer over any appreciable distance operates against excessive centralisation ; another factor is the supply of water. Brewers may use up to ten gallons of water for every gallon of beer that they produce, and in certain areas they would not be allowed to increase their consumption much above its present level. Transport and water may thus force the brewers to think in terms of dispersed production ; it follows that possibilities of brewing in twenty or thirty automatic, fully continuous breweries instead of three or four conventional ones cannot be ignored. Bottling is already widely dispersed ; looking a long way ahead, some brewers cannot see why continuous plants should not be erected next door to the bottling depots. Through mergers and take-overs, this industry is buying a measure of decentralisation and at the same time tightening its grip on the tied trade. But the greatest technical economies may come through decentralising production in fully continuous plants.

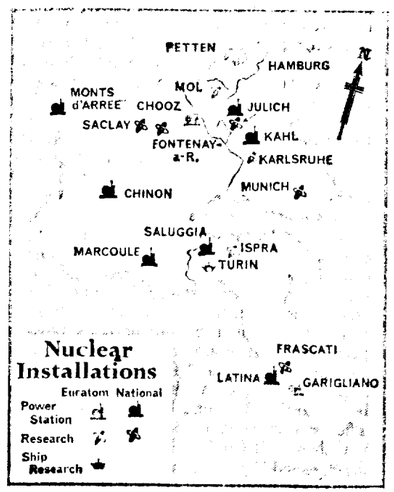
Behind centralisation and decentralisation lies another question, important alike to the consumer and the brewer: will continuous brewing affect the strength, quality and flavour of British beers and produce a greater uniformity between brands ? Brewing is an art. To perfect and maintain the individuality of a particular beer, the industry will argue passionately, calls for experience and judgment far more subtle than any number of scientific facts and formulae. Science offers the brewer methods by which he can either improve and better protect the quality of his beer, or economise at some expense of quality if he should want to. The scientist provides the means ; how they are used depends on the brewer. Clearly, continuous brewing might tempt brewers to adopt a policy of greater uniformity. On the other hand, it could be used as a method of improving quality and extending the production of national brands, and at the same time producing the regional and local beers that are at the heart of the British brewing tradition. At the moment, most big brewers are sensitive to the consumer's idiosyncratic attitude towards the beer he drinks. It may seem odd that a brewery should spend time and money producing ten or fifteen types of beer instead of trimming production down to one or two brands ; but brewers know they have to hold the goodwill of a large group of consumers which might be lost if they ignored or tried to strait-jacket the ordinary drinker's preferences. Hence, though continuous brewing offers the temptation of greater standardisation, the brewers may resist it. Continuous brewing, in fact, offers them a means of production as flexible as their traditional processes and holds out prospects of important economies. It will not revolutionise the industry overnight ; but revolution was never a mark of the British brewer.

Britain into Euratom?

Some difficulties for nuclear engineering companies will arise if we do

SOME time in the summer, if negotiations for Britain's entry into the common market continue to go according to plan, the question will be raised of this country's joining Euratom. This time, the Atomic Energy Authority will not be able to tip the scales against membership as it was five years ago—there is no intention of joining some institutions of the Six and not others. Euratom, however, is an atomic energy organisation that actually owns plants and lets contracts, and can profoundly influence the course of nuclear research by giving or withholding funds. The effects on Britain of joining Euratom will not be quite the same as those of joining other parts of the common market. Very briefly, membership might prove a boon for the Atomic Energy Authority and a boomerang for companies involved in atomic engineering.

Euratom in real life is a different beast from the Euratom that appeared on paper in the original Treaty of Rome ; its features are softer and its tone less autocratic. The Euratom of the treaty was to be a supra-national body with considerable powers to prevent the production of nuclear weapons in western Europe by rationing and controlling their source material—uranium—and also to control the development of nuclear power through its grip on uranium supplies and its ownership of key production plants. That conception was never realised ; the Euratom that is emerging with shape and stature in Brussels is an international, largely non-political, research organisation filling the gaps in Europe's nuclear research between the programmes of individual countries and generally working for sensible commercial development of nuclear power. The roles of politicians and scientists in the organisation have been reversed ; the scientists run Euratom today and the last figure of political stature in the organisation, its president, M. Etienne Hirsch, has recently been removed to make room for a man said to be more interested in atomic fission than European fusion.



There are two reasons for the change. One is the attitude of France ; the other is plentiful uranium. France has persisted throughout in going its own way, conforming with Euratom regulations when they suited French policy and amiably shouldering them aside when they did not. When France made plain its government's determination to make nuclear weapons, a quick scissors-and-paste job had to be done on the Euratom treaty to accommodate this. Today, France refuses to allow Euratom inspectors into plants like the Marcoule nuclear power station and its ancillary plutonium extraction plant (the French equivalent of Windscale and Calder Hall) because the French argue—though Euratom disagrees—that these are military installations. The fear of a widespread shortage of all fuels, including uranium, was one of the driving motives that brought Euratom into being. It was assumed that western Europe would need a large nuclear power programme and might have difficulty in buying enough uranium to fuel it. The idea was that Euratom would negotiate uranium supplies for its six members and ration these out. But these shortages soon gave way to surpluses of coal, oil and uranium with falling prices all round ; so the need for a large-scale nuclear power programme disappeared too, and

with it the joint services that Euratom might have provided.

For all their practical effect, large parts of the Euratom treaty could be regarded as having lapsed quietly—although it might be argued otherwise in Brussels. What remains is the rump of the original scheme—co-operative research—and on this the Euratom administration in Brussels is feeling its way towards the best method of getting things done. Superficially, it may seem to have achieved notably little ; in fact since Euratom came into existence in 1958, it has been laying the foundations for a research structure upon which a European nuclear energy industry can be built. None of this has been missed by the Atomic Energy Authority, cannily playing possum in London, but it is unlikely that the British atomic contractors fully realise what may happen to them when this country joins Euratom.

The consequences stem from the kind of research that Euratom supports and the way this support is given. Each member country (with the exception of Luxemburg) has its own independent national programme of atomic research ; in addition, it contributes to the upkeep of Euratom, whose five-year research budget expiring at the end of this year amounts to $215 million. (It is asking for $480 million for the next quinquennium.) Euratom is spending this money by sponsoring projects that member countries are not prepared to undertake and by supporting particular pieces of research that are of interest to all six members. Its object is to see that, somewhere in the Community, work is being done on all important aspects of nuclear physics, which can then be drawn on by industry as or if required. Wherever possible, Euratom prefers to place research contracts with existing laboratories in the member countries (occasionally outside them) rather than to set up laboratories of its own, so that each member can expect to get back some of its contribution to the upkeep of Euratom in contracts to do work for Euratom.

This aspect of Euratom's work must have considerable appeal for the UK Atomic Energy Authority at this time. The AEA's work in the future will be at lower tempo than in the past—indeed, magnificent research facilities are in danger of being under-employed if not literally idle. Its reactor research station at Winfrith Heath is one such case. And it so happens that the AEA's first taste of working to a Euratom research contract is on the same site, where Euratom has a sizeable stake in the research project known as Dragon (a high-temperature gas-cooled reactor for the 1970s, a sort of Mark III Calder Hall). The Dragon contract was part of Euratom's plan to fill obvious gaps in Europe's research programme. For much the same reason, it has taken over the Italian centre at Ispra and converted it into an institution doing research on power reactors cooled with organic liquids instead of gas or heavy water, on which plenty of work is already being done elsewhere ; a limited amount of work is sponsored on even more esoteric types of reactors in Holland. There are several new reactor types on foot in Britain that might interest Euratom ; if they do, Euratom would not find the AEA too proud to share work with it.

IF this were to happen, where would British atomic construction stand ? It has been conditioned to take basic scientific data passed down from the Atomic Energy Authority and to translate this, with appropriate flourishes, into engineering drawings of nuclear power stations to be sold to the Central Electricity Generating Board. It is an industry that has not been encouraged to think for itself, and on occasion when it has tried, has been slapped down on the ground that the AEA knows best—as indeed it should since it controls all the major facilities for finding out. Atomic construction on the Continent is more precocious. It may not have Britain's experience of building large nuclear power stations, and some odd goings-on in at least one French nuclear power station suggest that the British consortiums could teach their Continental colleagues a great deal about work on site. But it has been accustomed to working closely with scientists on development ; even the French Atomic Energy Commission, which has some resemblance to the AEA, leans more heavily on industry than the British authority has ever done.

Consequently, many Euratom research contracts are placed direct with industry, which is extending all the time its knowledge of advanced atomic technology. Contracts for research into thermonuclear fusion are, indeed, generally placed with national laboratories, and industry is not concerned with the kind of salvage operation that Euratom performs periodically when the smaller member countries find that in their enthusiasm to build a national nuclear research centre they have forgotten how much these expensive status symbols subsequently cost to run. One aspect of the immense stimulus that Euratom can give to the nuclear engineering industry is its ship research programme. Euratom is financing two design studies by industry, one in Germany, one in Italy, into small, protoype nuclear powered ships and if the designs look promising, it might order both ships to be built for experiment. British companies will remember that they bore the full cost of what proved to be abortive tenders for an atomic ship without a " thank-you " for their pains.

When Britain joins Euratom, the consortiums may find themselves at a competitive disadvantage. When Euratom places research contracts in Britain it will wish to place them with whoever is best situated to carry them through ; and that is likely to be the Atomic Energy Authority. Under present arrangements, British atomic companies would stand no chance of getting contracts from Euratom, and this must qualify their ability to compete with those industries on the Continent that do. This is not an argument against going into Euratom ; but it does suggest that some re-organisation of Britain's domestic atomic industry will be necessary if we do.

BUSINESS NOTES

ICI—COURTAULDS

A Telling Counterblow

EFFECTIVELY, ICI has raised its bid for Courtaulds without actually doing so. The paradox is explained by the fact that while the ICI directors have stood pat on their offer of four for five in ordinary shares they have now offered Courtaulds' shareholders the alternative of a convertible loan stock. For every £10 of Courtaulds' ordinary shares the offer is either £8 of ICI's ordinary shares or £25 of a 6½ per cent convertible unsecured loan stock 1972-77. The stock is convertible into 32 units of ICI ordinary stock in 1963, 31 units in 1964 and 30 units in 1965, representing prices equivalent to 62s. 6d., 64s. 6d. and 66s. 8d. respectively; conversion on the first date would thus produce the same amount of ICI stock as would be obtained from accepting the straightforward share exchange. ICI is to call an extraordinary general meeting to authorise the additional capital necessary to implement the offer. It is able to contemplate the issue of about £200 million in the new convertible stock because its capital gearing is low; the new stock would be covered about four times by the combined net assets and over six times by the combined current earnings of ICI and Courtaulds. The butt of the pistol peeps out of ICI's pocket in the announcement that while the formal documents will be posted on February 14th the closing date is March 8th and ICI reserves the right not to extend the loan stock offer beyond that date.

From ICI's point of view, the offer of a convertible saves Mr Chambers the embarrassment of having to announce a late extra final final bid. For Courtaulds' stockholders, it imputes a value of 50s. to their shares, on the fair assumption that the loan stock will command par in the market. The rise in the market price of Courtaulds on Thursday to 44s. 1½d., when ICI fell to 55s. 3d., was well timed. A full year's income on the convertible loan stock would be equivalent to £16 5s. per £100 of Courtaulds' ordinary stock; this compares with £10 of ordinary dividends for the year to March 31st. More than this, it provides an effective counter to any forecast of higher dividends by Courtaulds for 1962-63 or perhaps even 1963-64. The alternative, moreover, lessens the fear that the ICI stock issued in exchange for Courtaulds would hang over the stock market in a depressing mass. Although convertible loan stocks have lost some of their enchantment, this will please the institutions that were fully alive to the possibility of having too much ICI stock. Nor will they be displeased to have an income of 6½ per cent up to 1972 at least and possibly up to 1977 if the conversion offers failed to prove attractive. The stock provides a bridge over which Courtaulds' stockholders can walk without much danger. Unless Courtaulds now promises the distribution of some of its cash assets, it will have difficulty in keeping its shareholders to the path of independence. After hours on Thursday the jobbers seemed to be assuming that Courtaulds' stockholders would take the loan stock, for they marked Courtaulds up to 48s. and left ICI unchanged.

In a Glass Darkly

THE loan stock offer is backed by a long statement which refurbishes many of the old arguments but admits that ICI's profits fell sharply in 1961; this it tries to explain away and it promises, not too specifically, better profits to come. Having seen ICI's estimates for 1961, Mr Frank Kearton of Courtaulds was on safe ground in staking his reputation that ICI's profits must have fallen by "not less than 25 per cent" last year; in fact, gross profits fell by 30 per cent from £88 million to £62 million, and this despite the achievement of a record volume of business (physical, presumably, and not in cash terms ?). The cover on the maintained dividend of 13¾ per cent, paid on the capital as increased by last year's rights issue, appears to have fallen from 1.9 to approximately 1.4 times. The directors attribute the sharp drop in profits to big falls in chemical prices, to the deliberate adjustment of prices to competitive levels in anticipation of Britain's entry into the common market and to difficult and competitive conditions in domestic and overseas markets.

Answering the ostensible precision of the Courtaulds profit forecasts, the ICI directors fairly say they would consider it "quite irresponsible to influence stockholders by detailed forecasts of profits two or three years ahead"; profits, they point out, can be affected by factors outside a company's control such as political events, labour conditions and by the success or failure of plans to raise living standards. But after taking this point, they do not abstain from painting a brighter picture of ICI's prospects than last year's results would lead anyone to expect—and far brighter, naturally, than the picture that Courtaulds has been busily sketching in black crayon. They expect 1962 to be a better trading year than 1961 (could it be worse ?); given the expected improvement in the second half of the year, profits, they say, will be "appreciably higher than those of 1961." They expect, too, that the record profit of £88 million will be exceeded "within the next two or three years," giving point to the conversion rights in the loan stock. Looking further ahead, "any surplus capacity for individual products will be of brief duration" and ICI's sales should rise by at least 80 per cent within the next decade. They see no reason, indeed, why ICI should "not maintain the same rate of growth, with a substantial increase in profits, during the present decade as it did during the last." The directors do not attempt to spell this out in terms of returns on capital employed.

So far as estimates can be made, the ICI directors believe that the profits of Courtaulds in a merged group would be sufficient to cover the dividends payable on any ordinary shares to be issued, even without taking any account of additional profits they expect from the merger, which they put at not less than £2½ million per annum "soon" and £10 million "within a decade." The loan stock would cost more than a comparable issue of ordinary shares, at the current dividend, but interest on the loan stock is allowable for profits tax so the net additional payment for the company would be "comparatively small."

Industrially Speaking

IN giving their views about the man-made fibres industry fresh currency, Mr Paul Chambers and ICI cover a great deal of old ground which has been examined and commented on—almost to the point of exasperated exhaustion—by the two combatants and outside observers. Some new points of emphasis, as opposed to a brand new set of facts, have emerged. The basic ICI view is that the British man-made fibres industry can only be competitive if the maximum of integration, both vertical and horizontal, is secured so as to avoid duplication in research and development; to meet the demands of the market by combining changes both in the nature of the polymer and in the fibre-making process; to plan correctly the large capital investments needed; and to put the maximum push behind the commercial development of a new fibre. ICI admits that Courtaulds is right to buy its raw materials in the cheapest market; but it still argues that without a link with a polymer producer Courtaulds could not get all the supplies it wants at the right time and at the right price. ICI claims, for example, that it sells nylon polymer to BNS at a cheaper price than its competitors can land the polymer for sale in this country. In answer to the suggestion that the purpose of the merger is to protect its own investment in nylon and Terylene polymer plants it points out that these plants are at present working profitably and at full capacity. Nor is Mr Chambers impressed by arguments based on the fact that some of the patents are running out, replying, in effect, that what will be important in the competitive struggle ahead is not so much the possession of a particular patent as the accumulation of technical know-how from past developments.

What ICI tries hard to do is to refute the implication underlying many of Courtaulds' statements—that it has been a dummy in the development and exploitation of man-made fibres. Hence it makes great play of its success with Terylene, claiming that its sales and profits are still rising, and saying that its failure with "Ardil" should be compared with Courtaulds' lack of success with "Fibrolane" rather than its achievement with "Courtelle." To the arguments about being "better" are added some about being "bigger." By weight, Courtaulds produces about 80 per cent of the British man-made fibres (including rayon) and ICI about 16 per cent; by sales value the proportions are 65 : 35; excluding rayon, ICI claims, the proportion is reversed in its favour to 80 : 40. As the bidding company, ICI dare not knock Courtaulds' achievements and forecasts too hard; but it could score a point by asking how, in view of world overcapacity for rayon and the possibility of tariff reductions, the forecast increase in Courtaulds' rayon profits will be achieved.

THE ECONOMY

On the Upswing?

FROM the end of last year to the end of this the National Institute of Economic and Social Research expects home output to rise by about 3¼ per cent—that is to make good the slight dip in late 1961 and to rise by 1½-2 per cent beyond the higher level reached last spring. This is a shade more optimistic than most forecasters were at the turn of the year, perhaps mainly because the institute's optimism about exports in 1962, which had lagged a little though not disappeared three months ago, is now quite as strong as it was last summer. It does not, on the other hand, expect imports to rise much faster than home output: so its forecast of a 6 per cent rise in exports during 1962 offers the expectation of a current balance of payments surplus of £50-75 million. The institute, too, notes the consistent credit in the balancing item, and believes that the genuine deficit in the basic balance this year (i.e. debiting long-term capital) may be relatively small.

Some salient figures from the institute's forecasting are set out in the table (these simply translate its ideas about percentage changes into money figures for consolidation, and should not be taken as any firmer than the percentages). It does not expect the turn in stockbuilding to come until the second half of the year (so that some reduction may now be occurring in stocks of imported materials); and it reckons that the fixed investment boom is now clearly over (though a high level of capital expenditure is likely to be maintained). Its forecasts are based on the postulates that credit restrictions will not be relaxed even if Britain's short-term economic climate improves: that 10-12 million workers may get increases of 4-5 per cent in wage rates in 1962, moving the wage index up about 3½ per cent by the end of the year, and disposable incomes up by 4-4½ per cent;

THE INSTITUTE'S FORECASTS FOR 1962

£ million at 1954 prices, seasonally adjusted, quarterly average

	1961 II	1961 IV Provisional	1962 IV Forecast	% changes forecast: 1961 II to 1962 IV	% changes forecast: 1961 IV to 1962 IV
Expenditure at market prices:					
Consumption	3,694	3,630	3,695	0	+ 1¾
Durables	*336*	*250*	*275*	*−18*	*+10*
Non-durables	*3,358*	*3,380*	*3,420*	*+ 1¾*	*+ 1¼*
Public authorities	793	815	835	+ 5¼	+ 2½
Fixed investment	931	965	975	+ 4¾	+ 1
Private	*435*	*465*	*455*	*+ 4½*	*− 2¼*
Public	*318*	*325*	*340*	*+ 7*	*+ 4½*

Imports	1,385	1,380	1,435	+ 3½	+ 4
Home output	4,614	4,545	4,695	+ 1¾	+ 3¼

and that with manufacturers unable to raise prices much, consumer expenditure may rise about 1½-2 per cent (no more than recovering to the level before the Chancellor's measures in July).

It expects spending on durables to rise more than this, by about 10 per cent during 1962; but discounts the expectations of a 9 per cent increase in home sales that the car manufacturers gave it in November. In fact, by the turn of the year the motor forecasters were themselves more cautious, with guesses ranging from a nil to an 8 per cent increase: but the institute's own guess that sales may actually be lower in 1962 than 1961 implies much less eagerness now to spend on cars than on other durables, which runs rather counter to the latest samplings of consumers' spending intentions.

NED, So Far

APART from the Chancellor, the Minister of Labour and the President of the Board of Trade, the National Economic Development Council is to have 17 members, counting Sir Robert Shone *ex-officio* as director of the planning office. This week the names of all but the TUC members were announced. Lord Robens and Dr Beeching represent the nationalised industries; Mr F. A. Cockfield, Mr. A. R. M. Geddes, Mr C. E. Harrison, Mr E. J. Hunter, Mr J. M. Laing and Mr J. N. Toothill, private industry. The six private employers, who have been asked individually to serve by the Chancellor and not formally nominated by trade associations, will be balanced by six trade unionists nominated by the TUC. Sir Oliver Franks and Professor H. Phelps Brown (who is one of the dying Council on Prices, Productivity and Incomes) have been appointed as independents. At the second level, in the "office," Sir Donald MacDougall has been appointed as economic director and Mr Frank Pickford to head its administration.

IN THE MARKETS

Scramble for Gilt-edged

THE dominant feature of the London stock markets this week has been a surge of demand for gilt-edged. Equities have remained quiet and still show no decided trend—despite a marked upturn on Wall Street, where the Dow Jones industrial average rose from 700 to over 715 in the week to Wednesday. Over the same period *The Economist* indicator of London equities rose by only two points to 359.0.

Just why gilt-edged should seem so much more desirable this week than they did last is not clear. The underlying mood of the market has been favourable to gilt-edged for some months, and the ending of the official tap in 5¼ per cent Treasury 2008-12 in mid-January gave clear scope for a rise. For no apparent reason the market suddenly became quiet—decisions by institutional investors may still take weeks to reach—and a block of this stock that had been laid in by a large firm of jobbers was available to meet the demand. But this was soon exhausted, and when a large order reached the market on Monday the jobbers raised their prices sharply. This set off further buying, and brought little selling until Wednesday, when prices at first eased

All prices are shown net of accrued interest.

—but then went ahead again on the strength of new buying at the close, some of it on foreign account. On Thursday the market rose further, taking the unchanged Bank rate in its stride. The driving force behind the current upward movement is based essentially on long-term considerations, about equities and the uncertain industrial outlook. Bank rate considerations are secondary, which is shown by the emphasis on the long rather than the short end of the market.

This unusual phenomenon of a dearth of gilt-edged sellers has produced some sharp price movements. By Thursday's close net prices of long-dated and undated stocks were up by around two points on the week, and

the newly free Treasury 2008-12s by nearly three full points, bringing the gross redemption down to £6 6s. This is now very near the yield on the new and shorter tap stock, the 5½ per cent Funding 1982-84, whereas when Treasury 2008-12s came off tap three weeks ago they offered a margin of 6s. The result is that the 1982-84s, which the government broker has kept broadly steady through the rise, are already looking cheap and attracting the first "reverse switches" from the 2008-12s.

Much earlier than seemed likely, it is already exerting a check on the long-term market. The authorities now have to decide whether to keep it distinctly cheap, and hold the market down, or raise the tap price in the market's wake and thus give scope for a bigger rise. The present mood at the Bank may favour the second course: it is not necessarily the right one for a year when the pound needs every support it can get.

THE EXCHANGES

Investment Funds for London

While the gold market has quietened down considerably, demand for sterling has persisted and even strengthened further in the past week. The spot rate on New York has risen further to $2.81⅞, and if the Exchange Account had not taken dollars off the market the rate might have gone through the ceiling of $2.82. Sterling has also registered gains against the leading Continental currencies. In January, the net intake of gold and convertible currencies was shown at £33 million—and the authorities have been known to put something by at such times, in particular against forward commitments. The disclosed increase more than covers the net outflow of £18 million shown in December, when funds were being withdrawn for window dressing.

The inflow of investment funds appears to have quickened in the past week, and has helped to stoke up the gilt-edged market. Interestingly, foreign operators are showing no strong liquidity preference in their sterling investment. Thus in the local authority mortgage market they have shown little interest in seven-day deposits—so that the rate here has actually risen a little to 6¾ per cent—but have concentrated on maturities of at least three months. This is logical enough on the view that Bank rate may come down and that sterling is safe for the time being.

The huge outflow of $750 million from the Bundesbank in the first three weeks of January was checked in the last week of the month. In December and January together, the Bundesbank's reserves still fell by DM 1½ billion ($375 million). Only a small portion of this is believed to have come to London, and it is not clear where the rest has gone (into Euro-dollars, yes—but who are the borrowers?). Part of the answer is that this is essentially a paper switch: dollar assets lost by the Bundesbank have been taken up by German commercial banks, under cover of a forward swap provided by the Bundesbank at the cost of ¼ per cent premium. Thus even though the Bundesbank has nominally reduced the portion of dollars in its external reserves, its "dollar risk" has not been reduced in the same degree, because of the exchange guarantee it is providing on money no longer in its own name.

AUSTRALIA

The Opposition's Clothes

The Australian government this week swung its economic policy into reverse. The December elections reduced its working majority in the lower house to two votes, and new elections are expected later this year. So Mr Menzies has scooped the opposition. The new measures are designed to stimulate the economy, now flagging under the impact of last year's credit restrictions. In all, *says our correspondent in Sydney*, they will pump about £A75 million into the economy in the remaining four months of the financial year. But included among the stimulants is the announced intention to re-impose import controls "where necessary"; a "competent economic adviser" attached to the Tariff Board will advise the government when quantitative restrictions are necessary. Possible examples mentioned by Mr Menzies are "certain motor vehicle components, certain chemicals, textiles, and paper products, and categories of timber." Import duties are already high, and quotas have not been removed from wool textiles and man-made fibres.

Internationally, these restrictions must appear particularly objectionable, and openly protectionist, because Australia's trading account has rarely been healthier.

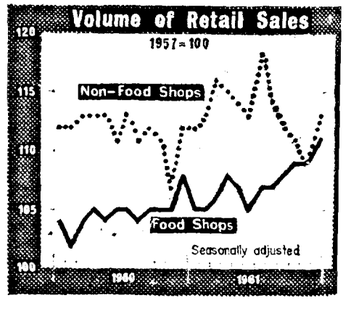
* Excluding made-up goods. † January-September only.

It moved into surplus last May, and in the first seven months of the financial year from mid-1961 the surplus has reached £A131 million, compared with a deficit of £A169 million in the same period of the previous financial year. Admittedly, the net inflow on capital account has fallen sharply, partly because of repayments of foreign credits by importers and the granting of credit for wheat sales to China. Even so, the reserves stand at just over £A600 million—equal to six months' supply of imports—compared with £A376 million at the end of December, 1960. So, with his big trade surplus, Mr Menzies had plenty of room for manoeuvre before he need have worried that a revived import boom might endanger his balance of payments. Indeed, the one certain way to stimulate imports into Australia is to talk about controls. Mr Menzies is well aware of this; he has promised "special temporary measures" if importers try to jump the gun. January's high import bill of £A82 million suggests that they might have already started.

The fiscal stimulants are:

1. A rebate of 5 per cent on this year's income tax, which will cost the Treasury some £A30 million.
2. Further grants of £A25 million to the state governments for public works and housing.
3. An investment allowance of 20 per cent on new plant and equipment.
4. An increase in the basic unemployment benefit.
5. A reduction in the sales tax on cars from 30 to 22½ per cent.



The regular budget is due in August—and the election could be before or after.

CONSUMER SPENDING

Picking Up?

The Board of Trade has confirmed that shopkeepers had yet once more, a "best ever" Christmas; its figure for seasonally adjusted sales (1957 = 100) is finally put at 118, unchanged from the original estimate. Still a little uneasy, however, about seasonal adjustment for that month, the Board points out that it would be unwise "to assume that the high December level will necessarily be maintained in the coming months."

According to these calculations, the value of sales by both food and non-food shops increased by about the same amount (3 per cent) in December, but the volume of business went up more in non-food shops. For the first time since July, there was some improvement in sales by durable goods shops, but the rise of 3 per cent, after taking seasonal factors into account, still left them 20 per cent below their peak. Credit sales of household goods shops went up rather more than might be expected, in line with

he total business of these shops. But outside ordinary retail trade, new credit business fell by nearly one-quarter between November and December, more sharply than is usual ; as a result, total instalment debt was reduced again, although by only £4 million over the month.

Figures collected by Hire Purchase Information show that hire purchase sales of new cars rose in January by just over 3,000 to 10,257. This was a larger number of contracts than were made last year ; but credit sales of used cars were some 16,000 short of the January, 1961, figure. New and used car contracts together were 9 per cent below a year before and 18 per cent below January 1960.

UILDING

The Trials of a Boom

THE tiresome problems of an industry that is working to capacity and is a subject of the government's attempts to regulate the economy form the theme of this ear's report from the National Federation f Building Trade Employers. For the econd year running, it complains of the difficulty of quoting a firm price for a ender when the price of materials or wages may rise before it is finished. Its efforts have by now been rewarded by getting some makers of building materials to agree to sell at fixed prices, too ; but it has been unable to persuade the Ministry of Works to agree to a shortening, from the present two years, of the period over which the price in a tender has to be guaranteed as firm. The Ministry has rightly argued that to do so would undermine the whole system which it laboured so hard to establish.

Despite the builders' complaints, their costs seem to have risen rather less than their prices over the past two years. The Ministry of Works index of building costs rose from 113 at the end of 1959 to 120 at the end of 1961, after the October wage increase ; but the index of building prices that Professor C. F. Carter publishes in *The Builder* rose from 112 to 125 over the same period. The Federation does complain that the Ministry's cost index—which, until the wage increase, had risen only three points since 1959 or one point since 1958 —was "not in accordance with the experience of practical builders." No doubt a practical builder who looked only at the prices of materials and labour would feel this way ; but much of the explanation of the stability of costs is the great improvement in productivity that the industry has achieved over this period. The Ministry of Works calculates that net output per man-month has risen nearly 13 per cent since 1959, and that materials input per man-month has gone up by ten per cent. So rapid an increase shows that the industry has something to be proud of—and illustrates the advantages of a high level of activity.

AIRCRAFT CONTRACTS

Blue Steel Blues

THE years have hardened Sir Edmund Compton, Comptroller and Auditor General, against the shock of learning that aircraft projects have exceeded original estimates five-fold in five years. The latest case is Hawker Siddeley's Blue Steel, a baby rocket carrying an H-bomb, a junior Skybolt to be taken by V-bomber to within a couple of hundred miles of its target and then released to complete the journey under its own power. When first ordered in 1955, its cost was tentatively put at £12½ million ; towards the end of 1960, this had risen to £60 million ; Sir Edmund gives no inkling of what has happened since. But the figures he gives suggest that the cost of developing this tiny weapon is not much less than the amount spent on the huge Blue Streak to date, with all its test facilities and rocket ranges.

This is not an isolated case ; all the missiles that have undergone inquisition by Sir Edmund have exceeded estimates, some by more and some by less than Blue Steel. Indeed the Ministry of Aviation (and the Ministry of Supply before it) have argued publicly and privately that guesses about the likely cost of a radically new project are not worth making. It is not humanly possible, so it is said, to estimate in advance the cost of an original missile that may take ten years to develop. If this is so, why attempt to do it ? If senior civil servants lend authority to calculations which they admit to be without meaning, the whole process of Government accounting is brought into disrepute—which is precisely what has happened in those cases over which the Ministry of Aviation has control.

All missile projects have involved considerable basic research which, as every scientist knows, is difficult to cost for more than a short period ahead ; exploring the unknown is not easily brought within normal accountancy.

A Note of Realism

THE Ministry of Aviation seems to make a bigger mess of its cost estimates than most Government departments faced with similar long-term projections. The Department of Scientific and Industrial Research discovered several years ago that accurate budgets could not be drawn up for research beyond twelve months and the DSIR now works on a moving 5-year plan in which it accurately costs the first year and drafts estimates of progressive uncertainty for the remaining four. Could not the Ministry of Aviation adopt a similar procedure ? Is it strictly true that the Treasury would never sanction new projects without some preliminary estimate of the probable size of the total bill ? Experience must have taught the Treasury that any figures given at the start of such work have little meaning. Moreover the present system is invidious because it implies that excess cost may be due to contractors' inefficiency, whereas often it is caused by quite other factors. Hawker Siddeley has been indicted for mismanaging Blue Steel at certain stages, but the company would deny that this is the only, or even the main, reason for the rise in cost. The development cost of Blue Steel in fact compares favourably with similar projects in the United States that had to be cancelled long before completion—it is likely to compare well with its successor, Skybolt, which is turning out to be a pale shadow of the weapon originally promised in everything but its astronomical cost.

This system of picking costs with a pin makes mockery of the work of Government watch-dogs like Sir Edmund Compton ; when the Ministry of Aviation blandly describes its estimates of cost as "necessarily conjectural," how is he to sense whether the excess over estimates is due to muddle, inefficiency and wrong design or whether it genuinely arises from circumstances that cannot be controlled ? A committee recommended to the Government before Christmas that future development contracts should be placed piecemeal as work progresses, so that a project could be stopped at any stage when costs looked like exceeding the military value of a finished weapon. This advice is being followed with varying enthusiasm, although it is said to be unpopular with the aircraft industry. The value of the system depends, however, on making a fresh assessment of the project at each stage of its development. This, in retrospect, seems to be the great strength of the French government in relation to its aircraft industry. The British aircraft industry is currently holding up the French example as the epitome of sensible and consistent government support for aircraft development. It might remember that successive French governments have cancelled many more aircraft than they have ordered.

FORD

Detroit Style

THE reorganisation of Ford's British company into five "profit centres" seems one of the first-fruits of the purchase of the minority shareholdings by Ford America last year. The new form of organisation is that which has been used for some years past in the American parent ; its introduction to Britain is, Ford says, a recognition of the growth of the company to a size where it cannot be run as one unit, and the need to improve quality and reduce costs to compete effectively in the common market. The essence of the scheme is that each "profit centre" is responsible for one part of the manufacturing process—the hot metal division covers the blast furnace and foundry ; then there are the chassis, transmission and engine division, the metal stamping and body division and the assembly division. Finally comes the sales

division. Each of these divisions will be a self-contained accounting unit, buying and selling from the other divisions. This elaboration of cost-accounting methods is liked by Ford for the extra incentive it gives each division to improve its "profitability." To the outsider, its economic effect may appear to depend pretty much on how the transfer prices from "centre" to "centre" are set, and on how real any assumed freedom for each to buy from outside rather than from one another or established suppliers turns out to be.

Though any firm like Ford must have a good idea of how its costs compare with those of bought-out parts, this sort of decentralisation helps to make the contrast clearer to the staff—and perhaps get consideration of it carried further down the line. It does not, however, mean that central direction disappears; the independence of the divisions is limited to the functions that each can perform separately, and policy on all such basic matters as models and prices will be set at the top. But the divisional organisation should shorten the chain of command, and reduce the number of people who have to be consulted about a decision.

One expected effect of Ford America's full ownership that has not yet become outwardly apparent is co-ordination with Ford Germany (though there are rumours, denied by Ford, that the whole European sales policy is now set in Cologne). For the moment the two subsidiaries produce competing ranges of cars, even though they are sold—as they have been for some time past—through the same dealer network in Europe. If there are two factories of the same company, supplying the same market, one might assume that they would make cars that complemented one another. When model planning is so long-term a process, it would take a long time to work this out; but unless it had such thoughts in its mind, one wonders why Ford America wanted the minority shareholdings.

BIDS AND DEALS

Fairey Bountiful

THE latest circular from Fairey suggests that there is now little chance that the revised Bristol-Westland offer, now worth 30s. on the basis of share prices or alternatively 28s. in cash, will be acceptable to shareholders. Having been advised by their directors, who in turn have sought advice from S. G. Warburg, to reject this offer they now have the prospect of a distribution of part of the company's assets, amounting to at least 12s. 6d. a share, dangled in front of them. Of this at least 6s. 6d. will be in cash; in addition the shares in Siebe Gorman (which was acquired in 1960 for £1,350,000) will be distributed one-for-one and will have a stock market quotation again. The directors once more emphasise the inadequacy of the bid in relation to asset values. If 12s. 6d. is subtracted both from the cash bid of 28s. and the current net asset value of 47s. 4d. per Fairey share the value of the Bristol-Westland offer is 15s. 6d. for assets worth about 34s. 10d. a share. Fairey moreover will match the offer of Bristol-Westland to pass on to shareholders any compensation received in respect of the expropriation of the Great West Aerodrome; this has been estimated at 7s. 10d. if the claim is fully met.

Fairey directors stand pat on their forecast of a 15 per cent dividend for the current year and again for 1962-63, so shareholders would also do better in income, assuming a 5 per cent return on the cash and share distribution. The proposed distributions involve a scaling down from £800,000 to £650,000 in the forecast of gross profits for 1962-63 but the directors will consider a further distribution of assets if this estimate is not reached. The main question for shareholders is what the shares will be worth after the distribution: a price of around 22s. does not seem unreasonable, at which they would yield 7 per cent. Adding back the 12s. 6d. this puts a value of around 34s. 6d. on the shares, without taking any account of the aerodrome claim. The shares in fact remained practically unchanged at 32s. after the circular was published, for many recent buyers were taking useful profits. The manner in which Fairey has fought back will not be lost on Courtaulds' shareholders.

WHAT MIGHT HAVE BEEN

Among many revelations by Lord Dalton in his last volume of memoirs, reviewed on page 509, are some official intentions about appointment of the Governor of the Bank of England in 1949—the first new appointment after nationalisation. When Lord Dalton resigned in 1947 he left a note to Sir Stafford Cripps:

> It was made quite clear to Mr Cobbold—by Lord Catto on my instructions—when he was reappointed Deputy Governor at the time of the nationalisation of the Bank, that he must not regard this as giving him any expectation to succeed to the Governorship.
>
> Of the present Court of the Bank, only Lord Piercy, in my opinion, is worthy of serious consideration. . . . Among the bankers the best man would be Sir Clarence Sadd [vice-chairman of the Midland Bank], who combines practical experience with a broadminded political approach.

Lord Dalton goes on to point out that when Lord Catto resigned in 1949 Mr Cobbold succeeded him—"but only after Cripps had unsuccessfully invited a leading industrialist, Sir John Hanbury Williams, who had by then become a member of the Court."

FOOTBALL POOLS

Pools and the Post

A MONTH'S working to rule in the Post Office had little effect, it seems, on the steady delivery of football coupons to and from Liverpool. The pools play an important part in the Post Office's finances for in the 1960-61 financial year they accounted for about 8½ per cent of all inland mail. On the assumption that half the 848 million pools letters posted were completed pools coupons enclosing postal orders with an average poundage of 3d. each, over £5 million came into the Post Office from the postal order poundage alone. Clearly this is a business which the Post Office can ill afford to lose.

Not all pools coupons go through the post, but it was not until the Post Office employees worked to rule that many punters became aware of the existence of pools collectors. They are not employed directly by the pools firm but by a concessionaire appointed by the firm for a certain area. The size of the concession depends upon population densities; in some instances the concession will cover two or three counties and in others only part of a big city. The concessionaires, who usually work full time, receive 6d. in the pound on all money staked and employ area managers, generally on a salary basis; these in turn enroll collectors, very often pensioners, who receive in the case of Littlewoods 3s. in the £1 on the money they collect. All the leading firms have used collectors for years but so far only on a relatively small scale, partly perhaps because the pools have no wish to antagonise the Post Office and partly because punters often are reluctant to let it be known how much they stake each week or that they even "do the pools."

Even after paying a total commission of 3s. 6d. in the pound Littlewoods still believes that the collecting system cuts down its costs, for not only are its coupons delivered by hand but since punters can pay cash to the collector this avoids one of the major problems, the sorting of postal orders. For the punter there is the saving of poundage and postage and in many cases a weekly queue at the post office. The weekly collections keep the concessionaires, managers and collectors closely in touch and this reduces the chances of default, for which in the case of collected coupons the liability rests with the concessionaire.

The possibilities of an extension of this scheme would appear to be attractive at least in thickly populated areas, especially as the new Betting Act allows collectors to call and collect at factories and offices. It seems clear that the pools firms would look favourably upon any increase in business done in this way. But they would be reluctant to bypass the Post Office altogether, for fear that if the Government's postal revenue from the pools went down the direct pools tax, currently 33 per cent of gross stakes, might go up.

PROBLEM NO. 4.

E.C.G.D. MAKES IT SAFE TO CARRY ON

An E.C.G.D. policy turns the trickiest market into a sound business proposition. No need to worry about current commitments, no need to upset your production schedule: you're insured against war, rioting, sterling shortages, import restrictions plus a whole lot of other risks besides. When you're backed by E.C.G.D. you can keep your hold on the market with absolute confidence. In fact, you're probably safer than your local competitors.

INDUSTRIAL PROFITS

Steel Profits Down: Other Profits Up

A TOTAL of 103 company reports for January is well below the average monthly figure—partly the result of certain changes in the industrial groupings in our analysis. Rubber and tea plantation companies and finance companies engaged solely in hire purchase are now excluded. "Property" and "entertainment" companies now form two new groups; the printing and newspaper companies are being separated from the paper making companies; and the "miscellaneous" group has been split broadly between manufacturing and distributive companies.

Steel companies have always dominated the analysis for the first quarter of the year, and their influence on the January figures is even more striking. Total trading profits of

Net earnings/net assets	11·2	8·7	9·2	8·7

* After deducting non-recurring credits.

the 103 companies fell by 5½ per cent; but the profits of the iron and steel group fell by 17 per cent, and if these are excluded the profits of the other groups rose by 10½ per cent. A single month's figures cannot be representative for industrial profits which reflect largely a trading year to September both last. Increases came mainly from companies closely in touch with the consumer, such as Watney Mann and Montague Burton; profits of the Granada Group rose by as much as 150 per cent. Other companies to report satisfactory increases were ICT and ACV. Apart from the steel companies, smaller profits were earned by Lancashire Cotton, Jute Industries and British Oxygen. Even with the steel companies excluded, the rise in trading profits produced a comparatively small increase in net equity earnings and an even more modest increase in dividend payments. The table also shows that returns on capital employed continued to fall. The indications are that with profit margins still under pressure this decline will persist for some time. Prospects of further increases in ordinary dividends would be remote even without the Chancellor's call for restraint. It is not therefore surprising that investors are turning their attention increasingly to the gilt edged market, and those who are still buying equities are looking for a strong management record, of which one sign is a rising, or at least a stable, rate of return on capital employed.

PRICE-CUTTING

Best of Both Worlds

IN the complex love-hate relationship between manufacturers and price-cutters two elements stand out. The first is that in order to make the most of the public's bargain hunting instincts the discounter needs the authenticity of well-publicised brand names at obviously (though sometimes only slightly) reduced prices. The second is that well-known manufacturers are often only too glad to use the cut-price stores as anonymous bulk outlets instead of lowering official prices for their acknowledged products. These goods are then sold under special brand names side by side with the often identical well-known brand, only with a rather larger mark-down.

This type of merchandising is a familiar technique in food supermarkets and has begun to be used by Tesco in their Leicester "discount-supermarket" on quick-selling clothing items such as stockings. But it is doubtful how far it can be extended to bigger purchases, such as household appliances, where the guarantee of a familiar name is far more important. Nor can the discounters hope to go very far with sales of the larger appliances as long as their margin-cutting policy is too drastic to allow credit sales, though they do excellent business with irons, electric fires, toasters and even vacuum cleaners, now for many people below the hire purchase line.

It will therefore be especially interesting to watch the progress of Rolls Razor's prospective chain of cut-price electric shops, the first of which opens at East Ham at the end of this week. It looks as if this company may be in the fortunate position of having it both ways. The already familiar Rolls Colston dishwashers and Rolls Razor radiators and washing machines will be sold at their usual prices—the first time that they will be available through a retail outlet. At the same time other small appliances—irons, toasters and heaters—will be introduced under the Rolls trade-mark, but these will in fact be manufactured by other firms. And side by side with these, though as a less important aspect of the business, Rolls is retailing other manufacturers' appliances at cut prices—and managing to offer HP terms on the big items even with their reduced margins. What Rolls is in fact doing is to drive home the point that its regular prices are still competitive with cut prices for a number of other brands. How far other firms are really going to be willing to abet Rolls in this, even when it provides an outlet for excess capacity, is an intriguing speculation.

PETROL

Competition Wholesale

PRICE-CUTTING at the retail level in post-war years, has come as a comparative novelty to the petrol trade, but it has never stopped so far as the users of commercial vehicles, who buy in bulk, are concerned. The virtual breakdown of the rules that used to limit this trade has, however, by now aroused the ire of the garage trade, which feels that it is losing business. The definition that a commercial user had to meet to get his petrol direct from the oil company at a discount from the normal retail price used to be owning five or more vehicles, of five cwt or over and licensed for commercial use. But competition for sales has now reached the point where almost anyone who installs his own petrol tank and carries on some sort of business can expect to get his petrol cheap. And the amount of the discount he can expect has risen. Although it varies with the size of the delivery he can accept—and the strength of the competition in that part of the country—many commercial buyers are paying less for their petrol than the retailer does. This does nothing to improve the latter's opinion of the oil companies—and feeds his suspicions that he will be the last person in the trade to benefit from any lowering of selling prices, though he stands in the front line of competition.

This sort of resentment has been fed by the realisation that some of the major oil companies are supplying petrol to the distributors retailing cut-price petrol. Esso has mentioned publicly that it supplies one or two such firms, and Shell does not maintain the prices that independents charge on resale. Octane, one of the main price cutters, states that it obtains petrol from one of the majors—which insists on strict anonymity. The commercial argument for supplying the distributor of cut-price petrol more cheaply than a garage is the same as those for competing over fleet user discounts: the sales are largely additional ones and so are profitable at a smaller margin. The cut-price distributor may have an extra appeal: he often takes the petrol away in his own tankers, and buys in bigger quantities than any retailer can do. But unless he is able to distribute petrol more cheaply than the oil company, he still needs more than a quantity discount in price compared with a retailer if his dealers are to sell for 3d. a gallon below the normal price without cutting their margins—as is true of Octane retailers at least.

COPPER

Bolder Tactics

RHODESIAN copper shares are mainly a political counter; copper markets are currently something of a tactical battleground. In October, when cash copper fell to £220 a ton, it was stoutly defended by Rhodesian Selection Trust which bought several thousand tons of metal. This hazardous exercise was crowned with success. The price was bounced back again to about £230 a ton, its average level for a large part of last year, and needed only the occasional nudge from RST to keep it

there. Not everyone expected that this price could be sustained if strikes threatened in Chile and the United States could be averted. Recent agreements have brought this possibility much closer to achievement, and some speculators had sold copper forward in the expectation of lower prices. But RST has now had the confidence to counter attack by buying copper at well over £230 a ton.

Helped by reports of labour disputes in Rhodesia, cash copper rose to £237 a ton last week, and the less stout-hearted "bears" were forced to run for cover. The temporary squeeze on spot supplies of copper produced an unusually large discount of 50s. a ton on forward copper. A large part of the metal traded outside the United States is priced by London Metal Exchange quotations. Therefore, according to the American brokers, Merrill Lynch, by investing in "as little as 10,000 tons" of copper (worth £2¼ million) prices for about 200,000 tons of output have been set at "rather favourable levels."

It is not known how much bought-in copper RST has already resold. Presumably, it did find buyers for a significant portion. One side of the operation has been the reduction of stocks held in LME warehouses, which had been depressing the market. These, mainly consisting of fine refined copper, have been reduced from 22,600 tons in October to 13,900 tons. Some of the metal has apparently been taken to be electrolytically refined. The premium on electrolytic copper would only defray part of the cost of the operation. Despite the expansion in the United States, where consumption of copper last year practically regained its 1956 peak, consumption outside America has apparently failed to increase further in 1961 and stocks of copper therefore remain high despite the producers' output restrictions.

Producers got slightly less for their copper in the last quarter of 1961 than in the preceding three months. But the quarterly figures of the RST group of mines show an improvement in earnings because of a reduction in operating costs and provisions. A setback in Chibuluma's production in the six months to December 31st is expected to be made good by the end of the financial year. Roan Antelope's output in this period dropped by 2,300 to 39,400 tons and its profits before tax declined from £2,668,000 to £1,960,000. Average costs per ton increased by £7½ to £169½ a ton though Mufulira's costs declined by £2½ a ton. A fall of 30 per cent in Roan's net profit for the year was forecast in the statement on the share exchange offer from RST.

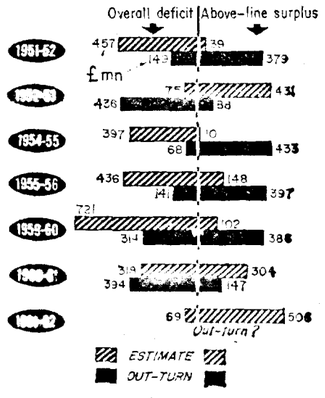
JUTE

Hangover in Hessian

JUTE has many uses—and just as many competitors. If it disappeared, it would probably be fairly soon forgotten by consumers. Jute goods would simply be replaced by paper sacks, foam underlays, felt-based linoleum and rayon backed carpets. The jute trade has recently been strangled by successive crop failures which closed mills and drove up prices. Time will obviously be needed for recuperation, but some people who earn their living from jute do not appear too anxious to ensure its recovery. Pakistan, the only large exporter of raw jute, has plenty of fibre to sell this year. But perhaps because it is beguiled by the high prices received in earlier seasons, it now wishes to sell at prices that manufacturers think unreasonable. A tug-of-war is therefore in progress with little trade passing.

Some shippers appear to have been exporting at prices below the controlled minimum under pain of having further supplies cut off. But prices are still about £15 to £30 a ton higher than three years ago. Good quality jute is still scarce. London Jute Association firsts at £120 a ton would be reckoned expensive in a normal season. Spinners are not buying because they believe that the controlled minimum price for current transactions will be lowered and that the basic minimum export price set by Pakistan for the season (£100 a ton for firsts) might have to be abandoned. For Pakistan to make such a concession in mid-season would be unique.

Machinery used in the manufacture of jute goods is fairly flexible and can handle jute of differing qualities. But despite the steeper fall in the price of lower grades of jute, manufacturers are only slightly less perturbed about the price of these grades that are in plentiful supply, though after last year's protracted decline in the manufacture of jute goods, orders have recovered. It is claimed, however, that in some goods demand is not what could have been expected had there not been the fireworks that have occurred in jute in the past two years.



Workers in the Dundee jute industry have chosen this critical time to deny jute its convalescence. Strikes and go-slows were used at the end of last year in support of a pay claim. The unrest solidified into a ban on overtime which persisted until the beginning of this week. It might be succeeded next week by the popular one-day strike. Overtime working is not necessarily a sign of high prosperity in the jute industry. Machines are serviced by their operators after working hours. The cleaning has recently been done during normal working hours, inflating the backlog of orders for jute manufactures and, it is said, losing some business to foreign competitors.

Deflationary Shortfall

BRITAIN will not, after all, this year mark up the first overall budget surplus since the days of Sir Stafford Cripps. This is now virtually certain, and is bringing adverse comment from Westminster, the City and financial observers overseas. How significant is it? The higher bills for agricultural subsidies and other supplementary estimates—this week's batch brings the total to £221 million, and the Treasury hints that underspending on other services is likely to be less than in previous years—do reflect unplanned additional burdens on the economy. But more than half the apparent shortfall so far in the budget accounts proper (i.e. above the line) reflects a shortfall in revenue—which results essentially from a less buoyant economy.

It should by now be a truism that if a budget is truly disinflationary in damping down the economy, it will thereby erode the foundation of its own accounting success. There is in this sense an almost inverse correlation between performance in the Exchequer accounts and in the whole economy. Thus the years in which a spectacular improvement has been registered in these accounts have usually been years of at least incipient inflation, when the resulting paper surplus did nothing to obviate the need for stern corrective measures. The budget of 1961-62 has had, without a doubt, a fundamentally deflationary impact. It is naively old fashioned to focus attention on the accounting deterioration alone.

Budget Improvements—

CHEMICALS

An Example to the Industry

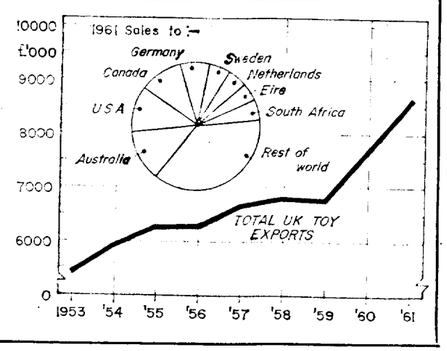
AT a time when the chemical industry is afflicted by overcapacity and falling profits the news that Lankro Chemicals, one of its liveliest and most efficient units, was slipping under the wing of Shell Chemicals could be expected only to elicit a tired sigh. Instead, the arrangement could serve as a model of how to get the best of several worlds. Shell is to buy 20 per cent of the issued capital of Lankro. No strings attached; no Shellman on the board. Few large firms could have resisted the temptation to meddle with the running of even so well-managed a firm as Lankro; it is a pleasant surprise to find Shell capable of such lightness of touch.

Lankro was started by Dr F. H. Kroch, a German refugee, in 1937 to make pigment finishes and auxiliary chemicals for leather dressing. Now Lankro's assets are worth perhaps £5 million and it makes a wide variety of specialised chemicals; its turnover has increased tenfold in the last decade to £6 million in 1961, of which leather chemicals now account for only 5 per cent. The expansion has been generated entirely from Lankro's own resources (of which perhaps the most resourceful is Dr Kroch himself).

Lankro's success attracted the attentions of several big chemical producers. But Shell and Lankro have long been among each others' biggest customers, and Shell's was the approach that Dr Kroch favoured. The resulting arrangement was his idea and it argues well of Shell that it agreed immediately. Shell gains an investment in an efficient and flexible unit while Lankro is protected against the attentions of other giants, and acquires capital for further expansion and a backing that will be useful in the hurly-burly of the common market. The alliance provides one answer to the problems of being too big for efficiency or too small to survive. When Lankro seeks a stock exchange quotation later, as it plans to do, it will be possible to see how much investors like the solution.

COLOUR FILM

Ilford Tries Again



IT has taken four years for the marriage between Ilford and ICI to bear fruit—which is surprising, as anyone would have sworn that they were both heavy with child when it was first announced. ICI had all but produced a colour negative system from its Dyestuffs Division; samples had gone out for testing, but the problems of manufacturing the film and selling it still remained. Ilford led the market for black and white photography and had a colour reversal film out since 1948; but this had never done well. (Reversal film is used to make transparencies; negative film to make prints.) It seemed that each could supply the other's deficiencies, and in 1958 ICI bought a one-third share in Ilford for £4.8 million. In return for royalties on sales of colour products ICI handed over its work on the colour negative system and agreed to help with further research. There is good precedent for this. The two biggest firms in the colour film market, Kodak and Agfa, benefit from association with chemical groups that make dyestuffs.

In 1958 Ilford's net profit before tax was £1.7 million, earned on £9.8 million of capital employed. In 1961 the figures were £1.3 million on £15.1 million. This drop in profitability reflects the amount that Ilford have had to spend on research and new plant. The market for colour films is very competitive, and at present dominated by Kodak; Ilford has learned from bitter experience that it is not possible to enter this without considerable preparation.

In 1958 the company modified its colour reversal film and reissued it as Ilfachrome. Sales of this film never approached those of the market leaders. A colour negative film was issued as Ilfacolor in 1960, but it was hardly in the shops before it was withdrawn at the end of the year. Now three new colour films are to be issued in April: the colour reversal and negative films, modified to make them faster, and a ciné film. These stops and starts have made dealers chary, although Ilford commands considerable goodwill as the only wholly English firm in this market. Perhaps its latest businesslike idea of putting the film on the market at prices that are as much as 25 per cent below those of other manufacturers will provide the spark of success that has so far been lacking.

The Toy Trade

OVERSEAS interest in British toys is increasing: exports have risen sharply in the last two years, even to countries with prosperous toy industries of their own such as the United States and Germany. The British Toy Fair in Brighton which ended this week included for the second time, some foreign exhibitors and a record number of overseas buyers attended, including groups from Africa and Russia.

SHORTER NOTES

New orders for machine tools in November followed much the same trend as in the preceding months: there was some increase in orders at home compared with the earlier months of the year though the level remained 10 per cent below November 1960. Export orders, which have fluctuated more widely, were 12 per cent higher than a year before, in line with the average increase for the rest of the year.

★

Bailey (Malta) has awarded the contract for the development of its ship repair yard jointly to G. Wimpey and Co. and Royal Netherlands Harbour Works Co. The contract is worth nearly £2 million and covers the enlargement of docks four and five and the boiler wharf, construction of a plate shop and erection of a tank cleaning farm. It will take about two years to complete.

★

Despite a slight fall in the volume of crude steel and rolled steel produced in the year to September 30, 1961, the net earnings of August Thyssen-Huette, the West German steel group, rose from DM 46.5 million to DM 54 million. The dividend has been maintained at 12 per cent on the ordinary capital as increased from DM 444 million to DM 450 million.

★

Last July Lindustries, the textile and industrial holding company, forecast a final dividend of 8 per cent but in the event only 6 is being paid, to make a total of 10 per cent for the year to September 30, 1961, compared with 12 per cent in 1959-60. The directors say that all sections of the business suffered more severe falls in profits in the second half of the year than had been anticipated and as a result trading profits fell by 29 per cent from £1,381,000 to £983,000 over the year as a whole.

★

Despite a fall in royalty income the consolidated profits of "Chartered," the British South Africa Company rose from £13,549,000 to £13,570,000 in the year to September 30, 1961. A bigger tax charge made slight inroads on net profits but the ordinary dividend was maintained at 7s. 6d. per share.

COMPANY MEETINGS

THE ROYAL BANK OF SCOTLAND

CONTINUED EXPANSION OF BUSINESS

GOVERNMENT'S EFFORTS TO WITHSTAND INFLATIONARY PRESSURES

PROPOSED NATIONAL ECONOMIC COUNCIL WELCOMED

NEED FOR SPEEDIER GROWTH OF SCOTTISH ECONOMY

THE DUKE OF BUCCLEUCH ON THE COMMON MARKET

The Annual General Court of Proprietors of The Royal Bank of Scotland will be held on February 27th in Edinburgh.

The following is the circulated statement of the Governor of the Bank, **His Grace The Duke of Buccleuch and Queensberry, KT, PC, GCVO, LLD.**

I regret that I have once again to commence my review of our affairs and the events of the past year on a note of sadness for I have to record, with deep sorrow, the death in July last of Sir William Crawford Currie, who had been one of our Extraordinary Directors since 1950. He was Deputy Chairman of Williams Deacon's Bank Ltd., a post which he had held for ten of the twenty-two years he had served on the Board of that Bank. He was a man of great charm, with wide business experience and an unrivalled knowledge of the shipping industry, to which he rendered outstanding service during his life. He will be deeply missed by all his colleagues in the Group.

The net profit for the year was £1,094,816, a rise of some £61,000 (5.8 per cent) on the previous year's figure. This, I feel, can be regarded as a satisfactory result, especially as it was achieved in face of rising costs and after providing for additional profits tax imposed in 1961. We brought forward a balance of £161,347 which gives a total of £1,256,163 available for distribution.

DIVIDENDS

In July, before the Chancellor introduced his "Little Budget," we declared an interim dividend of 9 per cent. This was ½ per cent more than the rate of interim dividend for 1960. In considering the final dividend we had to have regard to the Chancellor's statement at the end of July in which he said that a further general increase in dividends in the coming year would not be justified. We are, therefore, recommending a final dividend of 10 per cent, the same rate as the final dividend for 1960. We are also recommending the transfer of £200,000 to our Published Reserve Fund which will leave a balance of £171,713 to be carried forward.

The main figures in our Balance Sheet do not differ much from those of the previous year.

Our Advances at £62,781,000 were approximately £260,000 less than at the end of December 1960. Among the influences making their impact in this particular field of our operations were the measures of restraint introduced by the authorities at the end of July—an additional call for Special Deposits, the raising of Bank Rate once more to the crisis level of 7 per cent and a Bank of England "directive," a form of control which, in July, 1958, we thought was being discarded. I welcome the steps that are now being taken to devise a long-term economic plan with the objective of removing the strains which have caused us to be plagued with crises as frequently as we have in recent times. It is imperative that something be done to make it possible for a sound and steady growth in our economy to be maintained. I must also say that, while admitting the necessity, in the difficult situations which have arisen, for the imposition of restraints on credit, I regard it as unfair that the Joint Stock Banks should have been singled out and asked to bear the whole burden of these restraints without imposing similar restraints on other lending institutions. It may also be pertinent to ask whether it is necessary, now that a return has been made to controlling the level of Bank advances by the technique of the "directive," to retain the Special Deposits Scheme.

LEVEL OF DEPOSITS

Our Deposits of £135,151,000 are marginally down on the previous year's figure. I am happy to state that, in respect both of turnover and the number of accounts, the Bank has continued to progress, but we are just a little concerned that there should be such a static look about our deposits. The level of a Bank's deposits is affected by seasonal and other influences, which can cause them to move at times against the general trend in the Banking system as a whole. We have, however, to probe deeper to find an explanation for the poorer performance, in recent years, of Bank Deposits in Scotland as compared with England. A comparison of the trends in the two countries brings out the disturbing fact that, over the past decade, Bank Deposits in England have expanded at a faster rate than in Scotland. A contributory cause is felt to be the relatively greater strength of the Trustee Savings Banks in Scotland and another—more marginally perhaps—the loss of banking deposits through the absorption of Scottish businesses by English concerns, but I am sure, as I have said before, that it is fundamentally a reflection of the slower growth of the economy in Scotland as compared with England. We know that the basic cause of this lies in the structure of the Scottish economy, which has been engaging the attention of the Scottish Council (Development and Industry) and other bodies for some time. Last year I commented upon the Symposium held in 1960 by the Committee of the Scottish Council (Development and Industry) set up under the Chairmanship of Mr L. A. Elgood, to enquire into the natural resources of Scotland and their potentialities for development. The papers submitted at the Symposium, which have now been published, brought out evidence that Scotland is not lacking in resources available for development. The Committee, I understand, is to issue its full report, with recommendations in April.

POTENTIAL GROWTH

In November last, another Committee, set up by the same Council with Mr J. N. Toothill, CBE, as its Chairman, reported optimistically on the potentialities for growth which exist in the Scottish economy, provided the right climate can be created and sufficient encouragement given for the adoption of economic policies that will promote and generate growth. At the root of the problem, as the Report of the Committee bears out, is the fact that Scotland has more than its proportionate share of the older and declining industries and not enough of the newer and growing industries. If Scotland is to be capable of maintaining a viable economy in the future, this is certainly something which must be remedied, but it is easier to state the problem than to suggest a cure. The Scottish Council (Development and Industry) has achieved a considerable measure of success in attracting new industries to Scotland but, such are the dimensions of the problem, that the impression this has made upon it has been relatively small. "The need," as Mr Toothill's Committee says, "is for a plan which will tackle the problem quickly and resolutely." The Committee has suggested a plan which is now under consideration by the Scottish Office, the Scottish Council and other bodies, and it is to be hoped that when action is taken—and some action should be taken without undue delay—it will receive the fullest co-operation of everyone who is in a

position to make a contribution to the solution of the problem.

BALANCE SHEET FEATURES

Returning to our Balance Sheet, it will be noted that there was during the year an expansion of just over £500,000 in our note circulation, bringing the total of notes outstanding at December 31st up to nearly £18,636,000.

Our holdings of British Government Securities at the end of the year amounted to £22,717,000 valued, in conformity with our customary practice, at or under market value. This is an increase of just over £2,000,000 as compared with the 1960 figure.

Our liquidity remains satisfactory. The ratio of the liquid items to Deposits and Notes in Circulation was 38.87 per cent.

Our Published Reserve Fund has been increased by £350,000 by the accretion in the value of our holdings in our Associated Banks representing the amounts which they have added to their Published Reserves as follows:

Williams Deacon's Bank Ltd.....	£250,000
Glyn, Mills & Co.	100,000
	£350.000

If, therefore, the proposal to allocate a further £200,000 from our own profits for the year is approved, this will raise the Fund to £9,150,000.

Williams Deacon's Bank Ltd. and Glyn, Mills & Co. have both reported higher profits, records in each case. The consolidated profit of the Group at £1,633,641 is up by approximately £96,500 as compared with the 1960 profit.

The Deposits of the Group at the end of the year were £340,500.000, a decrease of slighrly over £8,000,000 from the total of the previous year.

The aggregate Advances of the Group at approximately £147,500.000 showed a drop of over £7,000,000 on the December 1960 figure.

NEW BRANCHES

Williams Deacon's Bank have continued their policy of extending their Branch system to areas where they were not previously represented and during the year new Branches were opened at Alvaston (Derby) and Wolverhampton. Additional Branches are to be opened this year at Brighton, Winchester, Swindon, Gloucester, St. Helier (Jersey), Handforth (Cheshire), Allestree (Derby), Mapperley (Nottingham) and Sheffield University.

We ourselves have intensified our drive to modernise our Offices in order to provide more comfortable working conditions for our Staff and improve the facilities for our customers. A great deal has been accomplished in recent years. The accommodation at Head Office in Edinburgh, at our Chief Office in London and at our Drummonds Branch has been enlarged and many other Offices completely renovated.

The large-scale redevelopments being undertaken in our towns and the developments projected for the future are under constant vigilance in case they should make it necessary or desirable for us to alter the location of Branches. Furthermore, the establishment of new towns is not being allowed to pass unnoticed and we have opened, and will continue to open, new Branches where we feel this policy is justified. At the beginning of September we opened a new Branch in London close to Victoria Station, in a district where considerable rebuilding is taking place. We also opened a second Branch in Perth and a Sub-Branch to Alloa at the Police College, Tulliallan.

I would also like to refer to the Drive-in facilities at our Drummonds Branch in London, which are now in operation. I do not consider that the provision of drive-in facilities is to be recommended as a general policy but, in built-up areas, where there are no, or inadequate, parking facilities as is the case in parts of the West End of London, drive-in facilities can, as has been proved at Drummonds, be a great convenience to customers.

Another matter under constant examination is "electronics." The expanding use of banking services, including the credit transfer scheme inaugurated last year, emphasises the need to adopt the most efficient techniques for handling the growing volume of transactions. In conjunction with our Associated Banks we are at present conducting a comprehensive study with a view to selecting the most suitable installation to serve our special requirements.

ECONOMIC SCENE

In looking back over 1961, the most important developments were the measures introduced by the Government in July. The urgency for action to restrain inflationary pressures and strengthen the balance of payments was clearly revealed in the early months of the year when currency developments abroad contributed to a reversal of the flow of short-term capital which, in the latter part of 1960, had been protecting Britain's reserves from the full impact of the deficit on current and long-term capital account.

The steps taken to meet the crisis which had developed by July were designed to provide a breathing space for the formulation of longer term policies to promote balanced economic growth.

These temporary measures included arrangements to borrow a substantial sum from the International Monetary Fund, a sharp increase in Bank Rate, new fiscal powers to increase duties and purchase tax, the restraints upon Bank credit and the controversial policy for a pause in increases in wages, salaries and dividends.

At the same time, steps were taken to review critically every aspect of public expenditure in order to ensure that future rises do not exceed the growth of national resources and to concentrate expenditure on strengthening national efficiency. These proposals must command wide support, as must the powers granted to the Government last year to vary some taxes between Budgets and thus reduce its dependence upon monetary measures for making shorter term adjustments in the economy.

The Government's demand for a pause in increases in wages, salaries and dividends has undoubtedly helped to slow down the upward pressure on costs in recent months. This, however, is no more than a "stop-gap" measure. There still remains the objective of devising a long-term policy which will limit future increases in money incomes to increases in production. The crux of the problem may well prove to be the division amongst industries and occupations of such increases in income as may be justified. I therefore welcome the setting up of the National Economic Development Council and of the recently announced intention of the Trades Union Congress to join it.

FINANCING EXPORTS

The urgent need for the generation of a higher volume of exports has stimulated close examination of the financial services available to our exporters, with a view to ensuring that in this respect they are not at a disadvantage compared with their competitors abroad. This examination has led to some important developments. Early in the year the insurance cover available through the Export Credits Guarantee Department was extended and the Bank of England introduced a scheme to provide the Banks with re-finance facilities if required in order to ensure the availability of Bank finance for medium-term export credits. Exporters of capital goods complained, however, that they also suffered because of the higher rates of interest charged in this country under existing conditions and the difficulty they had of quoting fixed rates of interest as a result of the practice in this country of aligning rates for credit to Bank Rate. In an endeavour to overcome these disadvantages, the Banks and Insurance Companies agreed last month upon a scheme under which the Banks will provide finance for export contracts at a fixed rate of interest of 5½ per cent for terms between three and five years and the Insurance Companies for longer periods at a fixed rate of 6½ per cent, and while the reception accorded to this scheme has been a trifle disappointing, it should be of considerable help.

In a year in which our export performance has given such cause for concern it is gratifying to note that there has been no falling off in the demand for Scotch Whisky and in 1961 exports were again higher by approximately £9 million in value, of which over £4.8 million was attributable to an increase in exports to the United States of America.

On the other hand, the Scottish Woollen industry had a difficult year in the export field, largely by reason of the high tariff rate imposed upon imports of woollen goods into the United States of America from the beginning of the year when the previous quota arrangements were abolished.

Last year I referred to the gloomy outlook for the shipbuilding industry and it is reckoned that more than one-third of the capacity of Scottish yards was not used in the past twelve months. Orders for merchant ships, increased towards the end of the year but returns for 1961, as a whole, show that while some yards have about two years' work on hand, others have much less. Those which have done best in the way of modernising and re-equipping their yards are said to have received the greater part of the new orders. With the increase in new orders in the last quarter, the total for the year for British shipyards was rather higher than in 1960 but returns show that gross tonnage under construction was at its lowest level since the war. In the keenly competitive position which seems likely to continue, advantages will lie with those yards which have done most in improving their production techniques.

The steel industry has also had rather a poor year and is still operating well below full capacity.

COMMON MARKET

No account of the past year would be complete without reference to the Government's negotiations for joining the European Economic Community and the fundamental implications that membership would have for this country in the years ahead.

Major adjustments in our overseas trade and in our economic life in general will be inevitable as a consequence of the Common Market, whether we join or not, and many of our producers, particularly those in agriculture, will face difficult problems. Already the growing

unity of Western Europe is imposing a new pattern of international relationships which will progressively affect our own.

It may be that the adjustments we would need to make, as members of the Community, could provide the stimulus and impose the disciplines which would help to overcome our basic economic problems—our restrained rate of increase in production and our recurrent balance of payments difficulties. But it is also important to us that measures for encouraging and developing strength and unity in Europe should at the same time be directed towards the wider horizon of liberal trade policies. Our particular interest in this is, of course, our trade with the Commonwealth—to say nothing of the wider political and social Commonwealth aspects—for although the Commonwealth's share of our total trade has lessened in recent years it still accounts for more than two-fifths of our exports and the Commonwealth's ability to import remains in large measure dependent upon its European markets.

We cannot foresee at this stage what the outcome of the negotiations will be. The present members of the Community have been facing great difficulties in harmonising their own economic systems in conformity with the terms of the Treaty of Rome, and provision for our essential interests—in agriculture for instance—will not be easy for them.

SCOTLAND'S POSITION

It is, nevertheless, only prudent that we should be doing what we can to prepare ourselves to meet the challenges and take advantage of the opportunities that membership of the Common Market would bring. If we do this there seem to be good reasons to hope that Scotland would be able to face the consequences at least as well as other parts of the United Kingdom. The economic circumstances of recent years, which have conditioned Scottish industry and agriculture to cater for the needs of changing circumstances, our emphasis upon high quality products and skilled workmanship and, perhaps, even our location in relation to the wider European market, are factors which encourage confidence in this.

EXECUTIVE APPOINTMENTS

The load of work on the Senior Executives of any large organisation is bound these days to be an increasingly heavy one. Banks, with their wider responsibilities as one of the principal instruments of Government economic policy, in addition to their constant search for greater efficiency in a highly competitive world, are no exception.

I am sure you will be pleased, therefore, to learn of the creation of additional Assistant General Manager posts; one at Head Office has been filled by the appointment of Mr James Thomson, lately the Secretary of the Bank, and one in Glasgow, by the appointment of Mr A. P. Robertson.

This will help to develop further the capacity of the top Executive to tackle the problems that lie ahead. In particular, the creation of an Assistant General Manager post in Glasgow shows the great importance which the Bank attaches to the West of Scotland.

I should like in conclusion to express our warm appreciation of the contribution by the General Manager, Mr W. R. Ballantyne, the Assistant General Managers and all our Staff to the satisfactory results in another difficult year.

F. W. WOOLWORTH AND CO., LIMITED

The following are extracts from the statement by Mr. F. L. Chaplin (Chairman) circulated to Stockholders:

CONSOLIDATED PROFIT AND LOSS

The consolidated net profit before taxation amounted to £32,586,783, as compared with £31,303,554 for 1960, an increase of £1,283,229 or 4.1%. The increase in taxation of £1,296,745 is greater than the increase in profits before tax, mainly as a result of the further rise of 2½% in the rate of Profits Tax over the full year.

The profit after taxation at £14,984,734 shows a slight reduction of £13,516, but the net surplus for the year at £15,184,181 is £519,412 more than in 1960.

The Directors have transferred £2,500,000 (as against £2,000,000 in 1960) to General Reserve and the balance carried forward has been increased by £2,130,041 to £7,609,548. The proposed final dividend at 1s. 3d. per unit is the same as for 1960.

CONSOLIDATED BALANCE SHEET

The value of fixed assets before Provision for Depreciation has increased over 1960 by £8,566,938 and the net increase after Depreciation amounted to £6,907,093.

Net current assets at £14,765,904 show a reduction of £1,167,934.

SALES

During the early part of 1961 sales were disappointing as compared with 1960 but they gradually improved, and with a satisfactory Christmas trade, having regard to the weather conditions in certain parts of the country, turnover for the year proved to be a new record in the history of the Company, despite the fact that there were two less shopping days in 1961 as compared with 1960.

ADVERTISING

During the year we continued advertising in the Press and on Television. We believe that this service has been of benefit to our customers and we are promoting a similar campaign during the current year.

FOOD BUYING FACILITIES

It is our belief that as far as possible the housewife likes to do all her shopping under one roof and with this in mind we have in recent years extended facilities for buying food in our stores. We now have twenty-four stores equipped with the latest refrigeration machinery for handling and retailing fresh meat under the most hygienic conditions. From its inception this service has been well received and ever-increasing sales testify to the appreciation shown by our customers. Delicatessen also is an important factor of our food service and in the grocery sections of our stores we have increased and are increasing the range to cater adequately for the public's requirements.

DEVELOPMENT PROGRAMME

During the year your Directors approved development projects the total cost of which, together with projects previously approved and not yet completed, will amount to approximately £28,000,000 which will be spread over the next few years.

STAFF

I should like to take this opportunity of expressing to all employees of the Company our sincere appreciation of their loyal and devoted service throughout the year.

THE FUTURE

We know that we are going to be faced with a material increase in overhead expenses and that the constant squeeze on profit margins is likely to persist. We also know that we shall have to meet more and more intensive competition. Our future profits depend on the extent to which we can continue to increase our turnover.

Our ambitious programme for future store development when completed will enable us to give better service to more customers and I have every confidence in the ability of our team of buyers to continue to put on our counters first-class merchandise at competitive prices. We are keeping abreast of the constant changes in consumer demand brought about by social changes and higher average incomes and we are continually striving to upgrade as well as improve the quality and presentation of the items in our vast range.

BOWMAKER LIMITED

FACTORS AFFECTING THE YEAR'S RESULTS

PROBLEMS CREATED BY GOVERNMENT'S POLICY

The thirty-fourth annual general meeting of Bowmaker Limited will be held on February 26th in London.

In the course of his circulated statement, the Chairman, **Sir Arthur Morse, KBE,** said he regretted that the trading of the group for the year ended October 31, 1961, had resulted in a loss of £1,358,189 after making full provision for bad and doubtful debts; in consequence no dividend could be paid on the ordinary share capital.

He added: I warned shareholders in my letter of June 30, 1961, that normal provisions, together with the exceptional provisions required in the accounts of one of the subsidiary companies, might absorb the amounts available for ordinary dividends. In the light of the circumstances ruling at that time, we felt justified in thinking that the group results for the whole year might disclose a small net surplus, or at worst a break even position.

There are various reasons why our calculations have, in the event, proved incorrect, at least two of which could not have been anticipated at the time The measures adopted by the Chancellor of the Exchequer in his "Little Budget" added—because of the increase in bank rate—some £300,000 to the cost of our borrowing. Bank rate has since been reduced to 6 per cent, a level which although unduly high, does permit of a reasonable margin of profit with the increased hiring charges now in force.

Further, severe measures of credit restraint were introduced, as well as additional taxation. All were necessary to meet the alarming deterioration in the economic position of the country. How far the "credit squeeze" was responsible for the fall in retail sales of motor vehicles is open to argument; the fact remains that from August, 1961, onwards there was a sharp fall in the demand for cars, and in consequence less demand for hire purchase facilities.

At the same time, the fall in the value of second-hand vehicles and domestic equipment which had been going on for some time was aggravated, thus increasing the loss on repossessions. Similar considerations, of course, apply to various items of domestic equipment. As a result our provisions for bad and doubtful debts, conservative as we believed them to be at the time, have since proved insufficient.

UNDERLYING CAUSES FOR PRESENT SITUATION

In view of the regrettable outturn of the past year, I think it appropriate to give my views on what the future may hold for the company. At the same time, I will explain what, in my opinion, are the underlying causes responsible for the present situation.

It is necessary to go back to the end of October, 1958, when all Governmental restrictions on hire purchase were abolished; this led to a tremendous enlargement in hire purchase debt from £450 million to a peak figure of £800 million by 1960, a rapid and unhealthy growth with which was I fear encouraged by the offer in many cases of terms which carried a greater than normal element of risk.

Competition became intense and much substandard business was accepted by most companies; even so, losses might have been less but for the sudden reimposition of Government controls in 1960. This reduced retail sales and resulted in a heavy fall in value of second-hand vehicles, further aggravated by the greater availability of new motor cars as a result of a reduction in exports. Even greater falls occurred in the second-hand value of other consumer durables which are normally the subject of hire purchase contracts. Strikes, short time working and some unemployment also contributed to the inability of some hirers to honour their obligations.

Many agreements were broken; the vehicles and other merchandise thrown back on our hands could only be realised at a loss. The work involved in dealing with this heavy volume of bad debts and defaults greatly increased operating costs.

THE FUTURE OUTLOOK

Now, as to the future, the hiring rates now in operation are profitable and the terms as to deposits and rental period should minimise losses because additionally we are being as selective as possible in the acceptance of new business.

Sir Arthur then referred to the steps being taken to integrate the three principal hire purchase companies of the group in this country, with a view to improving efficiency and achieving substantial economies by the merging of branches and departments.

Sir Arthur added:

But the future of hire purchase in this country must depend, like every other activity, upon the extent to which we can increase productivity and exports, avoid recurrent balance of payments crises and the alternate policies of "stop" and "go" which have so bedevilled our business of recent years.

We appear as yet to have found no solution for the difficulties which arise when unhealthy expansion of the economy is permitted, leading to inflation and overfull employment and overfull pay packets encouraging the public to undertake commitments which they can only meet if those conditions continue; then, when we run into balance of payment difficulties, restraints are imposed, causing some unemployment, short time working and loss of overtime; thus commitments which appeared reasonable when entered into, cannot be honoured in the changed conditions.

One cannot be very optimistic in the short run, but hire purchase has still a vital role to play in the economy and given reasonable conditions, your company will again give a good account of itself after the disasters of the past year.

It would be rash of me to make any prophecy about the results for the current year, but we have dealt drastically with bad debts and defaults; some, but not all of the benefits of integration will be realised in the period; we look for an upturn in business in the spring and I hope that when we meet again in a year's time, we shall have a much better report to make to you.

The Chairman then reviewed the balance sheet and accounts, the results and prospects of the operating subsidiary and associated companies and various domestic matters.

BLACK-CLAWSON INTERNATIONAL LIMITED

SUBSTANTIAL ORDER BOOK

MR K. F. LANDEGGER REVIEWS A MAJOR PROBLEM

The thirteenth annual general meeting of Black-Clawson International Limited will be held on March 2nd in London.

The following is the circulated statement of the chairman, **Mr K. F. Landegger:**

The Accounts for the year ended September 30, 1961, show an improvement over those for the year to September, 1960. The profit, before taxation, for the year ended September 30 last is £314,158 (1960—£258,527) after charging depreciation of £97,090 (£88,537) and Debenture stock interest of £36,000 (£36,000). We have provided out of these profits £173,728 (£147,989) for taxation.

An interim dividend of 4 per cent (less income tax) which absorbed £26,950 was declared and paid in May 1961, and your Board recommend a final dividend of 6 per cent (less income tax) making a total of 10 per cent for the year.

HIGHER TURNOVER

As you are aware, our business consists to a large extent of the manufacture to specification of substantial pieces of machinery. The engineering and manufacturing of a complete paper machine may extend over a period of 12 to 15 months, and delivery can only take place after the machine is substantially completed. Accordingly, the company has to finance Work in Progress to a considerable extent. The turnover of the year under review was approximately 25 per cent higher than in the preceding year. These factors are reflected in the value in the balance sheet at September 30, 1961, of "Finished products, work in progress and supplies" at £2,323,615 compared with £1,177,561 at September 30, 1960.

I also report that there has been an increase of approximately £127,000 in the excess of Current Assets over Current Liabilities and at September 30, 1961, the excess was £1,197,507.

EXPORT TRADE

We have continued our wide export business with 75 per cent of our deliveries going to overseas markets. Since my last statement we have obtained orders for new paper machines from West Germany and Austria as well as from the United Kingdom and we have obtained orders for other installations from many countries in Western Europe and the Commonwealth. The volume of orders on hand continues at a high level despite increasing competition and at present stands at approximately £11,750,000. On the sale of complete machines and other larger installations the credit facilities which the exporter is able to offer has become of increasing importance. In this respect the major problem which we have encountered has been the unwillingness of customers to bear the onerous and incalculable interest charges, related to British Bank rate, in respect of the credit facilities which we were able to offer. With the value of an order being of such magnitude it is obviously to a large extent necessary for the exporter, with the help of the Export Credits Guarantee Department, to obtain finance from its bankers.

The cost of this finance has to be included in the price payable by the foreign customer and, with the Bank rate at a relatively high figure, we have in effect been discriminated against to the extent of about 10 per cent of the sales price compared with our foreign competitors. We hope that the proposals recently announced by the Chancellor of the Exchequer will go some way to alleviate this position.

EXPANSION OF MANUFACTURING FACILITIES

In order to improve our deliveries and to expand our manufacturing facilities we acquired, for cash, in January, 1962, the share capital of Reed Brothers (Woolwich) Limited together with a leasehold site, works and certain other trading assets. The site which is held on a 75 year lease is on the Woolwich Trading Estate and includes a large machine shop and a first class assembly shop. There is also a modern drawing office and administrative block.

Our Converting and Extruder machinery manufacture, including the relevant sales and engineering services, are being transferred to Woolwich. We will concentrate this department in that area and relieve some of the pressure on our main plant in Newport, Monmouthshire. Additionally, there will be some capacity for machining and assembly for certain other Black-Clawson products.

We are continuing the manufacture of the rubber mill machinery previously sold for home and export by Reeds.

Our subsidiary company, W. A. Baker & Company Limited, which sells steel castings, has had a good year, both sales and profit being much higher than formerly. A considerable number of steel castings have been shipped by Bakers to the North American continent.

The employees of your Companies have maintained their high standards of workmanship during the past year.

The British Division of The Black-Clawson Group is therefore continuing to expand and I am confident that after the initial development period necessary in our Woolwich plant we shall be able substantially to increase our production in the United Kingdom.

The Black-Clawson Company of Hamilton, Ohio, has recently acquired The William Kennedy & Sons Limited plant in Owen Sound, Ontario. As a result of this purchase and the acquisition of Reeds the Group now owns nine plants in various parts of the world. Great benefit is available to our customers from these worldwide facilities and we can and do exchange technical and commercial knowledge. We also have the ability to manufacture similar equipment in these various plants thus assisting in an enhanced service to the industries which we serve.

BAY HALL TRUST LIMITED

Summary of Directors' Report for the year ended 31st December, 1961, and of the accompanying Statement by the Chairman, Sir Charles J. Hambro, K.B.E., M.C.

In 1961, gross revenue rose from £388,148 to £455,532. The income from the second, and final, instalment of £455,000 on the 5½ per cent Debenture Stock received in November, 1960, contributed to the increase, but even after making allowance for this there was still a healthy growth of income from the Company's other investments. The net profit for the year, after paying a full year's interest on the Debenture Stock, rose by over 10 per cent to £242,202. In deference to the Chancellor of the Exchequer's request for dividend restraint, the Directors have recommended an unchanged final dividend of 6 per cent, less tax—thus maintaining the total payment for the year at 9 per cent, less tax, absorbing £184,669. But for this request they would have recommended a higher final dividend out of the increased net profit for the year. The sum transferred to General Reserve has been increased from £30,000 to £50,000, leaving a balance to be carried forward of £64,792.

DISTRIBUTION OF INVESTMENTS (based on valuations at 31st December)

EQUITIES:	1961	1960
	%	%
COMMERCIAL & INDUSTRIAL—		
United Kingdom:		
Banks, Insurance, etc.	1·3	1·1
Breweries and Tobacco	1·8	2·0
Building	1·3	1·2
Chemical	1·3	1·9
Electrical	1·3	1·5
Engineering	8·4	8·6
Foods, Stores	2·3	1·9
Iron and Steel	4·2	6·4
Motors and Accessories	1·3	2·1
Paper and Printing	1·2	1·3
Property	27·2	17·8
Miscellaneous	2·2	2·3
	53·8	48·1
Australia	0·6	0·1
Republic of South Africa	5·6	6·2
United States of America	4·5	2·3
MINING FINANCE—		
Republic of South Africa	26·7	32·4
Elsewhere Overseas	2·1	2·2

Gold	0·9	1·6
Oil, Tea and Rubber	1·7	2·1
Total Equities	98·6	98·3
FIXED INTEREST	1·4	1·7
TOTAL	100·0	100·0

At market prices ruling on 31st December, 1961 (or where no market prices existed, at valuations by the Directors at that date amounting to £524,179) the Company's investments had an aggregate value of £8,132,029, compared with the balance sheet value of £5,125,512. After allowing for the final dividend on the ordinary shares, the net assets of the Company totalled £7,166,000, which is equivalent to 21s. 4½d. per share and compares with 19s. 6d. per share a year earlier.

The principal change in the Distribution of Investments is the increase in the proportion invested in property shares. This is due partly to the general rise in Stock Exchange values which has taken place in this section of the market and partly to increased investments, including a rights issue by St Martin's le Grand Property Co. in which the Company has a substantial interest.

The Chairman states that in view of the conditions which British industry is at present experiencing, income during 1962 cannot be expected to continue the growth that has taken place in recent years. He is, however, hopeful that this year income will be maintained at about last year's level.

Copies of the full Report and Accounts are obtainable on application to the Company at Princes House, 95 Gresham Street, London, E.C.2.

IND COOPE TETLEY ANSELL LIMITED

"A COMMONWEALTH OF BREWERS"

In his annual statement circulated to shareholders, **Mr Edward Thompson, M.B.E., T.D.**, the Chairman, says that Ind Coope Tetley Ansell came into effective being in May, 1961. When the merger of Ind Coope, Tetley Walker and Ansells was recommended by the Chairmen of those three companies, the conception was that of a Commonwealth of Brewers. That conception is well on the way to realisation.

Sales of the Group's three National beers, Double Diamond, SKOL and Long Life now available in both bottle and can, were all substantially in advance of those in the previous year.

Tetley had another record year with some 89 per cent of their production in draught beer: Walker also achieved an increase in barrelage usefully in advance of the national average. As co-ordination progresses, Tetley Walker's popular beers will become more widely available in the Group's Northern properties. Ansells' sales were again up and their draught Mild will be made available more widely in Ind Coope houses in the Greater Birmingham area.

Group production of beers excluding lager now approximates 68 per cent draught and 32 per cent bottled.

All wines and spirit companies within the Group had another record year of trading. Ships' stores and export trade expanded again during the current year.

Mr Thompson points out that the Group owns a total of 95 hotels. The profits from that part of the business are attractive notwithstanding the costly modernising and restyling necessary in the more old-fashioned hotels.

In the course of his views on the future, Mr Thompson reminds shareholders that the Company has been in effective operation only for a period of months, but he says it has enabled him, even more, to appreciate the great potential of the new Group and the capacity and enthusiasm of its management to make the best use of its combined resources. He adds: The Group is soundly based financially and well placed to take advantage of trading opportunities as they arise.

ILFORD LIMITED

(Manufacturers of Photographic Materials)

INTRODUCTION OF NEW COLOUR PRODUCTS

The sixty-fifth annual general meeting of Ilford Limited will be held on March 2nd in London. The following is an extract from the circulated statement of the Chairman, **The Hon James P. Philipps:**

Turnover once again reached a new all-time record in value, although the rise was not as great as anticipated owing to unforeseen delays in getting into production with our new range of colour products. Nor was it sufficient to offset both the increase in manufacturing and overhead expenses, including substantially increased expenditure on research, and higher depreciation on our plant. In fact, more than half of the reduction of £235,000 in Group Profits before taxation was due to the increase of £131,000 in depreciation.

Very large sums are necessarily being spent on research and development. It is only in this way that we can possibly increase, or even maintain our share of the steadily expanding world market for photographic goods.

Meanwhile, considerable improvements have been made in our colour products and we shall also be able to offer the amateur an increased range of fully competitive products this spring. One of the new products we shall be marketing for the first time will be a high quality fast 8 mm. colour cine film to compete in this rapidly expanding amateur market. We are confident that we shall be able to secure a fair share of the rapidly expanding market in colour and also in the long run to earn therefrom a satisfactory rate of profit on a greatly increased turnover. However, for the next year or two the cost of promoting these sales is bound to be heavy.

We are now able to offer a very comprehensive range of Ilford cameras at prices ranging from approximately £2 10s. 0d. to £45 including tax. Of these, the roll-film types—Sporti 4, Sporti and Super Sporti—are good looking but robust pieces of equipment, having optical eye-level viewfinders and flash synchronisation.

Cameras using 35 mm. film range from the simple Sportsman Vario with direct manual controls to the Sportsmaster Manumatic with which the lens aperture may be automatically or manually set.

We have also in production a slide projector of modern design with magazine loading and a particularly efficient illumination system.

With Sportsman cameras, Ilfochrome film and the Sportsview projector we are now able to supply all the requirements of those who find colour transparencies especially satisfying.

In the past year our subsidiary companies in the USA and Australia have both increased their turnover appreciably. Our various subsidiaries in Europe should be of great assistance to us if Britain enters the Common Market, and should help our Export drive in the "Six" which reciprocal reduction of duties would facilitate, although naturally it would also make competition fiercer in our Home Market.

Your Board are confident that with the introduction of our new colour products, the second half of our current financial year will see an increase in sales. Unless our costs are going to continue to be forced up by circumstances outside our control, such increase in sales should lead to a corresponding increase in profits.

THE STEEL COMPANY OF WALES LIMITED

DEVELOPMENT PLANS NEAR COMPLETION

SHAREHOLDERS' PATIENCE SHOULD BE REWARDED

MR HARALD PEAKE REVIEWS TRADING PROSPECTS

The fifteenth Annual General Meeting of The Steel Company of Wales Limited was held on February 5th in London.

Mr Harald Peake, *Chairman,* who presided, said:

Before proposing the adoption of the accounts, shareholders may wish me to bring them up to date regarding the progress of the Company.

The aftermath of the bricklayers' strike, which ended on October 29, 1961, continued to have an adverse effect on trading well into December. It is inevitable, therefore, that the profits for the half year to the end of March, 1962, will compare very unfavourably with those for the similar period a year ago.

At present we are continuing to work below the rate of three million ingot tons per annum which was provided for by the Third Development Plan. This is due partly to lack of orders and partly to the change-over from 230-ton to 400-ton furnaces at the Abbey Works melting shop.

IMPROVED VOLUME OF ORDERS

There is now some improvement in the volume of orders and two out of the four 400-ton steel furnaces have been commissioned. Furthermore, the Iron and Steel Board has announced that it is reviewing the maximum prices which may be charged for iron and steel in the light of the additional costs which the industry has had to meet in recent months. It seems reasonable, therefore, to expect that trading results will improve from now onwards.

Whilst prospects, in the short term, are uncertain, I think that shareholders should not take a gloomy view of the future. Last year our Company achieved a larger surplus on trading than any other British maker of iron and steel. Towards a capital expenditure of 18½ million pounds during last year, no less than 14 million pounds was provided out of the trading surplus of the year.

The Fourth Development Plan is approaching completion and, if no further major developments are undertaken for a few years, a very strong financial position should be built up.

I believe that if we shareholders have a little patience it will be well rewarded.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Julian Pode, JP, FCA, FCIS (Deputy Chairman and Managing Director), seconded the Resolution which was carried unanimously.

The dividend recommendation was approved; the retiring directors, The Rt Hon Lord Cobbold, Sir Robert Barlow, Mr R. W. Evans, MMet, FIM and the Hon Hugo Kindersley, were re-elected and the remuneration of the auditors, Messrs Peat, Marwick, Mitchell & Company, was agreed.

CHAIRMAN'S RETIREMENT

Concluding the formal proceedings, Mr Harald Peake said it was with very great regret that he was laying down the Chairmanship of the great Company which he had served for the last 6½ years, but he was very pleased indeed to be handing over the chairmanship to Sir Julian Pode, the deputy chairman, who, as managing director, had done such very great work for the Shareholders of the Company ever since its formation. Mr Peake added: My regret at leaving is mitigated by the fact that I can see that the Company will go forward from strength to strength.

The Chairman then expressed his thanks to his co-directors, to the executives, staff and workpeople, and to the shareholders and customers, for the support he had received from them during his term of office.

SIR WILLIAM MCFADZEAN'S TRIBUTE

Proposing a hearty vote of thanks to the Chairman, his colleagues on the Board, the management, staff and workpeople, Sir William McFadzean said he deliberately included everyone because while the effort or contribution made by individuals must obviously vary, what really mattered was the collective effort as a whole. That had never been more important than today when as a country every effort must be made to increase productivity and the share of world trade.

Sir William said he was sure all shareholders greatly regretted the Chairman's decision to relinquish his office in order to leave the hectic life of industry for the quieter pastures of the City. He added: We wish you every success in your Chairmanship of Lloyds Bank and, being thoroughly selfish, we are delighted you are remaining one of our Directors.

He continued: To our new Chairman, Sir Julian Pode, we extend a very warm welcome. We have every confidence in him and wish him well. We are also delighted to see Mr W. F. Cartwright appointed as Managing Director and Mr David Young as his assistant—two men who have won their spurs in the service of the Company.

Sir William concluded: Mr Chairman, you ended your Statement as follows: "In the Steel Company of Wales we have a skilled staff, good workpeople and first class equipment. I have confidence in its future." May I add that we have also got a first class Board. In moving this warm vote of thanks on behalf of all Stockholders, I assure you we share your confidence in the future of the Steel Company of Wales.

MR T. MERVYN JONES' REMARKS

In seconding the resolution, Mr T. Mervyn Jones said that the accounts gave a clear picture in the attractive modern style. He added: The picture in parts—we look at dividends and sales—is cogent and sober. Dividend pause follows sales pause—in the long term how wise a

decision. There is, however, much comfort: export tonnage held, total sales second highest in the Company's history, progress with the Fourth Development Plan, a past ten years that has seen both assets and ingot production increase three-fold.

Mr Mervyn Jones joined in the tribute to Mr Harald Peake and in the welcome extended to Sir Julian Pode as the new chairman. He concluded: The Company's crest is the Red Dragon. Our hope, as our confidence is that it will continue to achieve the motto customarily attached to it—"The Red Dragon leads the way." or translated into Europe's oldest language, "Y ddraig goch ddyry cychwyn."

The motion was carried by acclamation.

After a brief response by the Chairman and by Sir Julian Pode the proceedings terminated.

HENLYS LIMITED

The thirty-third annual general meeting of Henlys Limited was held on February 1st in London, **Mr H. G. Henly** (the chairman) presiding.

The following are extracts from the Directors' Report:

Your Board has much pleasure in reporting another successful year's trading by the whole of the Group.

The Hire Purchase Subsidiary has grown during the year and has financed almost exclusively transactions of the Group's own customers and has thus escaped the setbacks reported by other finance houses.

The Net Profit of the Group before taxation amounted to £925,062, which represents 2.5 per cent on the value of the Group's turnover for the year. The decrease of 0.1 per cent compared with the previous year can be attributed to more competitive trading conditions. The turnover of the Group was a record.

The Interim Dividend paid and the Final Dividend recommended on the Ordinary Shares represent a distribution of 34 per cent gross.

Since the Chancellor's restrictions in July, trading has been difficult and, if these conditions continue, the Board is of the opinion that the results for the year ending August 31, 1962, cannot be expected to equal those for the past year. Needless to say, if the economic conditions of the country take a turn for the better, your Organisation is in a position to take full advantage of any such improvement.

The report was adopted.

cannot succeed without a considerable level of profits and just as certainly without a great deal of co-ordination or planning, whether of investment, production or incomes, which only a Government can undertake. If any simple slogan is permitted let it be "Planning for Profit."

NORTHERN IRELAND

In Northern Ireland, notwithstanding a deterioration in the unemployment figures, a brighter note was possible in that orders for four ships were on hand and new industrial projects in the pipeline.

THE REPUBLIC AND THE COMMON MARKET

The Republic of Ireland had applied for full membership of the Common Market and Lord Longford was wholeheartedly in support of this. There would be a difficult transitional period but an expansion in production and exports sufficient to end emigration was a glittering prize for the present generation of Irishmen which he urged the whole community to co-operate in seeking.

A FEW COMPARISONS

In Ireland the Resources had increased somewhat faster than the average of the other Banks. In England in the last ten years the Resources of the London Clearing Banks as a whole had increased by 19 per cent, whilst those of the National Bank had increased by approximately 47 per cent or more than twice as fast. The Bank's rate of growth had been about the same in England and Ireland. Too much should not be read into these figures, but they did show clearly that there was a strong demand for the services of the Bank.

FINSIDER

SOCIETÀ FINANZIARIA SIDERURGICA PER AZIONI

REGISTERED OFFICE, ROME

CAPITAL LIRE 94,248,000,000

The annual general meeting of Finsider was held in Rome on July 14, 1961, under the Chairmanship of **Cavaliere del Lavoro Prof. Dr. Ernesto Manuelli,** with the participation of 60 shareholders, representing 140,456,008 shares; 188,496,000 shares being the entire registered capital.

The report by the Board of Directors shows favourable results for 1960, a year in which Italian steel production amounting to 8,229,000 tons reached a new record, showing an increase on the previous year higher than that of all member countries of CECA (+21.7 per cent).

Particularly noteworthy was the level reached by consumption, which being over 9 million tons (corresponding to 183 Kg. pro-capite) showed an increase of 24.6 per cent in respect of 1959.

Within the framework of this excellent position, the Finsider Group also showed maximum production results: 2.3 million tons of pig iron (+ 28.8 per cent in respect of 1959); 4.4 million tons of steel (+24 per cent); 3.6 million tons of hot rolled products (+32 per cent).

Turnover therefore increased to 434.3 billion lire, of which 390 is in the steel sector.

In 1960 also the development plan for the Group was given a start, with a view to increasing the full cycle production of steel, which by 1965 should be double the present output.

As for the organisational field, the report states that a radical modification has been made within the structure of the Group, by merging the Ilva and Cornigliano companies and forming Italsider, which is among the first European companies both for size and efficiency. It is in fact within the new grouping that the vast works were initiated for the construction of the new integrated steel plant at Taranto (whose Pipe mill is already in operation), also the erection of the Novi Ligure cold-rolling mill, as well as improvements to the three existing centres at Cornigliano, Piombino and Bagnoli.

The profit and loss account of the entire Finsider Group shows that the net profits have nearly reached 14.5 billion lire, with a remarkable increase in respect of 1959, in spite of the fact that the allocation for depreciation was 10 billion lire in excess of the previous year.

As for the balance sheet it is to be emphasised that the gross value of installations is in the region of 700 billion lire of which 36.4 per cent (250 billion lire) is covered by mortgages. Net investments amounted to 51.5 billion lire.

The total financial liabilities as at December 31, 1960, were 327 billion lire against 304 at the end of 1959: of these 207.8 billion lire were formed by consolidated debts (equal to 63.6 per cent), 93.5 billion lire by debts to Banks and Financial Agencies (equal to 28.5 per cent) and 25.9 billion lire by debts to I.R.I. (equal to 7.9 per cent).

The Finsider S.p.A. balance sheet shows an increase of 37 billion lire (of which 26 billion lire are due to an increase in the share-holding in other companies. Profits for the year amounted to 9,913,120,480 lire, an increase of 2.6 billion lire in respect of the previous year.

In connection with the Directors' report, a thorough discussion took place in which various shareholders participated: the Chairman answered everybody exhaustively; thereafter the balance sheet was approved as well as the distribution of profits. After allocating 5 per cent of profits to the ordinary reserves (495,656,024 lire), a dividend of 10 per cent was declared on the capital, equal to 50 lire per share fully paid up (45 lire in the previous year); and 26.65 lire on the shares issued following last year's capital increase of which 15 lire for the 30 per cent of the capital paid on May 7, 1960 and 11.65 lire for the balance of 70 per cent paid on January 1, 1961. The dividend was made payable as from July 24, 1961.

THE NATIONAL BANK LIMITED

ANOTHER RECORD YEAR

LORD LONGFORD'S ADDRESS TO SHAREHOLDERS

The Chairman, in his address at the 127th Annual General Meeting at 13 Old Broad Street, London, E.C.2, was able to report another year of expansion, with Resources at December 31st last standing at the record figure of £112,600,000, an increase during the year of over £7m., whilst Advances had increased by approximately £1m. to £50,393,000.

Lord Longford explained that in accordance with modern practice the Profit and Loss Account this year showed the dividend figure less Income Tax, on which basis the profit for the year at £261,948 had increased by £15,614. The figure would have been much higher but for the substantially larger sum of approximately £359,000 allocated to the Staff Pensions and other Funds. The Dividend was left unchanged at 18 per cent.

ECONOMIC BACKGROUND—IRELAND AND ENGLAND COMPARED

Lord Longford said that both employment and productivity in Ireland has continued to increase. The real National Income is again expected to increase by 4 per cent., or twice as much as envisaged in the Whitaker Plan.

In Britain, there have been many disappointments but 1961 may still prove to have been a turning point in British economic history. He strongly supported the decision to apply for membership of the Common Market.

Last year, said Lord Longford, I called for a five-year British Plan and pointed out the success of the so-called Whitaker Plan in Ireland. For some months the British Government has been trying to secure the co-operation of the Trades Union Congress in a National Economic Development Council. I very much hope that agreement has now been reached. The brutal truth is that a large proportion of the British public is allergic to a National Plan and another large portion as allergic to high profits, and yet in their calmer moments, the vast majority of people in this country believe that business

APPOINTMENTS

MARKET RESEARCH

Economics Graduate (with statistics) required to initiate and maintain a market research unit working on Telecommunications Transmission Systems. This is a most interesting and challenging opportunity in a new field presenting ample scope. Some general knowledge of radio or electronics would be an advantage. Excellent salary and benefits.

Apply to—The Personnel Manager, Standard Telephones and Cables Limited, North Woolwich, LONDON, E.16.

For other appointments see page 573

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS AND GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships and grants for Research in Economics, Economic Statistics, Government and Social Administration, Social Anthropology, Sociology or the Economics and Organisation of Business, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The Studentships are usually of the value of £450 or £480. They are offered to candidates who have obtained a degree of Bachelor or Master in this or another approved University.—Applications should be sent not later than February 24, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

EDUCATION: BUSINESS AND PERSONAL

THE Purchasing Officers Association maintains an Appointments Register, and invites requiring the services of purchasing staff are invited to communicate with the Association at Wardrobe Court, 13/15 Queen Victoria Street, London, E.C.4. (CITy 3881.)

COLLEGE OF ADVANCED TECHNOLOGY, BIRMINGHAM

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

The following courses will be offered in the Autumn Session:

DIPLOMA COURSE IN MANAGEMENT STUDIES. A 24-week full-time residential course for graduates with industrial experience. A five-year course will also be provided on a day-release basis.

DIPLOMA COURSE IN INDUSTRIAL ADMINISTRATION. A full-time "sandwich" course for graduates newly entering industry. Students will attend College for three periods, followed by nine months in industry, and a further three months in College. A three year course will also be provided on a day-release basis.

FULL-TIME COURSES IN WORK STUDY. A course lasting 10 weeks.

FULL-TIME COURSES IN ORGANISATION AND CONTROL OF PRODUCTION. A course lasting six weeks.

FULL-TIME COURSES FOR WORKERS' REPRESENTATIVES. (Each course lasting two weeks.)

PART-TIME COURSE IN EMPLOYMENT STUDIES. (One week.)

Further details and application forms may be obtained from the Head of Department of Industrial Administration, College of Advanced Technology, Gosta Green, Birmingham 4.

UNIVERSITY OF EXETER

RESEARCH FELLOWSHIP (AGRICULTURAL ECONOMICS)

Applications are now invited for the post of Research Fellow in the Department of Economics (Exeter Province — Provincial Agricultural Economics Service, Newton Abbot).

The Fellow will be required to undertake a study on the place of pig production in the general farm economy with special reference to the long-term effects of specialisation and size of unit. The appointment is for a period of two years and the salary range is £800-£1,200 per annum according to qualifications and experience. Further particulars from the Secretary of the University, Exeter.

Closing date for applications, the 28th February, 1962.

THE UNIVERSITY OF MANCHESTER

Applications are invited for one or more temporary posts at the grade of LECTURER in ECONOMIC DEVELOPMENT in the Faculty of Economic and Social Studies. The tenure of the appointment will be for a period of not more than four years. Applicants should have field experience, preferably in South America, South East Asia or Africa, or knowledge of China. Salary scale £1,050 to £1,850 per annum; membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than March 31, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

CENTRAL OFFICE OF INFORMATION requires a SENIOR INFORMATION OFFICER (unestablished) for production work on Radio-tapes for overseas. Duties include liaison with other Government Departments and briefing of free-lance contributors. Qualifications required are a thorough knowledge of radio production and of tape-editing. Some familiarity with the work of the official Information Services overseas will be an advantage. Salary £1,573-£1,937.—Write, giving age, full details of experience and qualifications, to Manager (P), 50 PUO, Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

THE UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

The University will offer a number of Research Scholarships, value £270-£330, to graduates and to those expected to graduate this summer who wish to read for higher degrees in the Faculty of Commerce and Social Science. There will be opportunities for advanced study and training in research in all the main departments of the Faculty and also in subjects common to more than one department.

Further particulars may be obtained from the Assistant Registrar (Commerce and Social Science), The University, Birmingham, 15, to whom applications should be sent before 16th June, 1962.

DIRECTORS needing able office staff on. and £—Consult Stella Fisher Bureau, 436 Strand, W.C.2. TEMple Bar 0942.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9 2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

SECRETARIAL TRAINING, especially for university graduates and older students. Shorthand and audio-typing courses.—Write, Organising Secretary, Division 5, 158 Holland Park Avenue, W.11. PARk 2654.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the London examinations for London Univ. B.Sc.(Econ.) (Part I) and B.Sc.(Econ.) (Part II). Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention examination) from T. W. Shaw Thatcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

UNITED NATIONS

ENGLISH TRANSLATORS

The United Nations will hold an examination to select English translators and trainee translators in April 1962 in New York, London and Geneva.

Candidates must be nationals of States Members of the United Nations, of English mother tongue, have an excellent knowledge of French and of Russian or Spanish, and have a university degree or equivalent qualifications.

Successful candidates may be offered probationary appointments in New York as trainee translators at a salary of $7,500 ($6,130 net after deductions in lieu of taxation), leading to a permanent appointment after two years of satisfactory service at a higher level carrying a salary ranging from $9,300 ($7,460 net) to $12,800 ($9,870 net). A cost-of-living adjustment and allowances for dependants are also payable. Other benefits include pension scheme, children's education allowances and home leave.

Successful candidates with considerable experience as translators in this field may be offered initial appointments at the higher level.

Opportunities exist for further promotion to the level of Senior Translator, which carries a salary ranging from $11,400 ($8,930 net) to $15,200 ($11,420 net).

Further information and application forms may be obtained by writing to one of the following addresses, sending an unstamped self-addressed business size envelope:

Personnel Division
English Translators
(Room 266)
United Nations
Palais des Nations
Geneva, Switzerland

or

United Nations Information Centre
14/15 Stratford Place
London W.1, England

The closing date for the receipt of completed application forms is 12 March 1962.

GKN

G.K.N. GROUP OPERATIONAL RESEARCH SERVICE (Midlands Unit)

GROUP LEADER

Applications are invited for the position of Group Leader in the Midlands Unit.

This is a senior vacancy and the successful candidate will be required to supervise small teams working on management problems in the Engineering Companies of the G.K.N. Group.

Applicants should be graduates, preferably between 30 and 35 years of age. They should have had experience in Operational Research or in similar work, and experience in management itself would be an advantage.

The Unit is based on the Group Research Laboratory at Wolverhampton, and there is pleasant country within easy reach. The work is in the Group Companies, most of them being within daily travelling distance of here, though occasional periods away from home must be expected.

Please write or telephone:

The Personnel Officer, G.K.N. Group Research Laboratory, Birmingham New Road, Tanefield, Wolverhampton, Wolverhampton 37361.

THE UNIVERSITY OF MANCHESTER

Applications are invited for two posts at the grade of ASSISTANT LECTURER in ECONOMICS in the Faculty of Economic and Social Studies. Salary scale £905 x £50 to £905 per annum; membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent, not later than February 17, 1962, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF HULL

Applications are invited for an Assistant Lectureship or Lectureship in Social Administration, tenable from 1st October, 1962. Preference to candidates with a particular interest in the industrial aspects of social policy or in housing and planning. Salary scale £905 x £50 to £905 per annum; Lecturer £1,050-£1,350 p.a., with F.S.S.U. and children's allowances. Further particulars may be obtained from the undersigned to whom applications (six copies) should be sent not later than 10th March, 1962.

W. D. CRAIG, Registrar.

COMPANY AFFAIRS

Gilt-edged stocks have captured most of the limelight in the London stock market this week and insurance companies and pension funds have been big buyers particularly of long-dated stocks. In a buoyant market the new City of London 6¼ per cent stock has had a good reception and it has touched a premium of one point. By contrast equities have been quiet but have remained reasonably firm and The Economist *indicator gained 2 points to 359.0. Interest centred on the take-over front—ICI and Courtaulds inevitably and Fairey, Charrington and Waterlow as well. A higher dividend estimate gave a strong boost to John Brown and tobacco shares attracted buying again after Imperial Tobacco's results were published.*

Imps Fights Back

In a written reply Mr Niall Macpherson, Parliamentary Secretary to the Board of Trade, set out again on Tuesday the reasons why the President of the Board of Trade is not enforcing the Monopolies Commission's recommendation that Imperial Tobacco should sell its holding in Gallaher. Mr Macpherson recalled that the Monopolies Commission had acknowledged that the competition experienced by Imperial Tobacco was intense and he said that it had become even more intense since the report was published. He added: "There is no evidence that Imperial is not combating it as strongly as they can; indeed all the evidence goes the other way."

So it proved the same afternoon when Imperial Tobacco's preliminary results for the year to October 31st last revealed that the recent decline in trading profits had been halted. Profits have no doubt been helped by the June increase in cigarette and tobacco prices. This was followed in July by the 10 per cent surcharge on tobacco duties; this produced an exceptional stock profit of £1½ million which, as on other occasions when the duty was increased, has been transferred directly to reserves. The increases in prices have not damped down tobacco consumption very much, though they have accelerated the switch into tipped cigarettes. Investment income, which in the past has more than offset the decline in trading profits, also received another boost as BAT's dividend was raised though Gallaher's payment was simply maintained on the capital as increased by a rights issue. But the earnings of the printing, paper and other subsidiaries appear to have fallen by about £530,000 and this has limited the increase in consolidated trading profits with the result that, after a higher tax charge, equity earnings are fractionally lower at 39.2 per cent (against 39.5 per cent), leaving the cover on the maintained 22½ per cent dividend unchanged at 1.7 times.

Years to October 31	1960 £'000s	1961 £'000s
Parent Company :—		
Trading profit	17,400	18,554
Other income	8,093	8,679
Gross income	25,494	27,233
Net profit	13,694	14,133
The Group :—		
Trading profit	20,924	21,543
Other income	7,109	7,537
Gross income	28,033	29,080
Net profit	15,049	14,945

The results pleased the market especially as the chairman, Mr R. S. W. Clarke, told shareholders last March that sales for the first four months were slightly down and costs were rising and the £1 shares gained 5s. 10½d. to 61s. 3d. to yield 7.4 per cent. This is two points more than the return on Gallaher—a disparity which can be justified on the record of growth over the past ten years. But the latest results suggest that Imperial Tobacco, whose share of the trade is around 60 per cent is now staving off the competitive challenge of Gallaher and other cigarette manufacturers more successfully. One small indication of Imperial Tobacco's endeavours to fight back is the decision to replace the traditional and old-fashioned design on the flat packets of "Players" with the modern design already used on the flip-top packets. The shares have for long held attractions as an income stock but those investors who are impressed by the latest results should await the publication of the forthcoming cancer report before going into the market to buy.

Ind Coope, Tetley Ansells

The brewing commonwealth created by the merger of Ind Coope, Tetley and Ansells has imposed a more regional pattern of trade and production on the policies of Ind Coope and from the shareholders' point of view this is probably all to the good. The benefits of rationalisation in production and distribution are still to come from this merger and as there has been some delay in securing the necessary planning consents so, too, are some of those arising from Ind Coope's earlier merger with Taylor Walker. The sale of some of the group's properties will release money for capital developments; the cash flow from such realisations amounted to £2½ million in 1960-61 and it will not be less than £1½ million this year so that by the end of next September about £10 million in all will have been released from property sales. But the capital developments, including the building of two lager breweries and the improvement of licensed premises, have been big and stocks, reflecting the extra duty, have risen; as a result the group's liquid assets have been halved to £3 million and the chairman, Mr Edward Thompson, says that eventually the cost of permanent new investments (including Tetley Walker's earlier acquisition of a brewery in Leeds for over £3 million in cash) will have to be funded. This, presumably, will involve the issue of a prior charge stock.

The concentration of ownership in the brewing industry is not, however, all sugar and no pill. Mr Thompson, for instance, says that trade can be disturbed and profits affected by "the change of beers consequent upon the closing of a brewery." The ordinary drinker, in other words, may prefer his local brew to a national one. There has been a swing back from bottled beer to draught, which is cheaper and earns a smaller margin for the brewer. Mr Thompson appears to blame the extra duty largely for this change; but some other brewers believe that more permanent factors are at work and point to the growth of container draught as a portent for the future.

Whatever the reason, the swing away from bottled beers has important consequences for Ind Coope. Its sales of "Double Diamond," "Skol" and "Long Life" were higher in 1960-61 but its profits rose by only one per cent, compared with a rise of ten per cent achieved by the two other partners in the group, Tetley and Ansells. Obviously, it cost Ind Coope more to promote the growth in sales of its bottled beers last year and though the summer's increase in prices should take care of the rise in costs a further fall in sales could have a serious effect on Ind Coope's own earnings, especially as it did not pass the increase in duty on to its bottled beer drinkers. It is perhaps as well for the Ind Coope shareholders that they now have a stake in a larger group, in which about two thirds of the sales are draught. But if the profits on Ind Coope's bottled beers fail to rise, this will act as a drag on the group's earnings as a whole. The 5s. shares are not now so popular as they were and at 13s. 3d. they yield 4.4 per cent on the indicated dividend of 12 per cent, covered 1½ times.

F. W. Woolworth

In his first statement as chairman of F. W. Woolworth, Mr F. L. Chaplin says that sales were disappointing in the early part of 1961 but picked up as the year went on, and with a satisfactory Christmas trade they reached a new record level. The turnover figure is not given, but as Mr Chaplin refers to a "constant squeeze on profit margins" and the rise in trading profits of 4 per cent was a little more than that of retail sales over the nation as a whole, the inference is that Woolworth has at least held on to its share of the retail market. Gross profits rose by 4 per cent, from £31,303,000 to £32,587,000 but higher profits tax skimmed off the gain and left net profits £13,000 lower at £14,985,000.

The ordinary dividend was fractionally higher as a result of an adjustment for the scrip issue in November, 1960, and the cover remains unchanged at 1.4 times. Mr Chaplin says that the future growth of profits depends on the growth of turnover, but margins are being squeezed by the rise in costs. In the next few years Woolworth intends to build 27 new stores, modernise another 45, and relocate 17 in bigger premises; in all this will cost about £28 million, but with liquid assets of about that amount, and with the cash flow running at over £6 million, the financing of this programme should present no problem. The real problem for the future may be to meet the competition of discount stores, which might force Woolworth to extend the range of its merchandise, but for the moment geographical expansion is probably the best way of adding to sales. Sales appear to have been stimulated by press and television advertising—a recent innovation for Woolworth—and like Marks and Spencer it is extending the food sections in many of its stores. But for the moment at least it is not proceeding with its plan to apply for a licence to sell beer, wines and spirits at some of its large stores, having had its application turned down at Nottingham. At 48s. 3d., the low point for 1961-62, the 5s. shares yield 3.7 per cent and with signs that the Woolworth management is now more in tune with changes in consumer demand this may not look too far ahead.

† Adjusted for Scrip Issues

John Brown

Recent sellers of John Brown £1 stock units, who had brought the price down in the previous two weeks from 38s. 6d. to 33s. 9d. by last weekend, received a rude shock when the directors announced a one-for-four scrip issue and held out hopes that the present dividend would be maintained on the bigger capital. Thus on Monday morning the shares jumped by 6s. 3d. to 40s. to offer a prospective yield of 6¼ per cent. For 1960-61 the ordinary dividend was held at 11 per cent when the John Brown directors were among the first to comply with the Chancellor's appeal for dividend restraint. Now in announcing a maintained interim of 4 per cent they say that "subject to the national interest" they hope to keep the final dividend at 7 per cent on the capital after the scrip issue. Shareholders will assume that next year's interim will also be left unchanged, so that the total payment will effectively be increased to the equivalent of 13¼ per cent on the present capital. While no indication of the trend of profits in the current year is given with the statement it seems clear from the forecast of a bigger dividend that once again higher profits from the two machine tool subsidiaries will more than offset a probable decline in earnings from John Brown's shipbuilding and boiler-making interests.

General Electric

As expected the interim dividend from General Electric has been maintained at 3 per cent and shareholders will now have to wait until July to see whether the final dividend, which has been kept at 7 per cent for the past four years, will be cut. If they read between the lines of the interim statement they may feel that the odds are slightly in favour of an unchanged final for 1961-62. They are told that the dividend will be determined not only in the light of the results for the year to March 31st but also of the estimated results for 1962-63. For the current year the chairman's forecast of a recovery in profits has been revised; profits before tax and reorganisation expenses are now expected to be about the same as the combined profits of GEC and Radio and Allied (acquired in April) for 1960-61.

This points to pre-tax profits of about £4 million but reorganisation expenses will take about £1 million so that earnings, assuming a normal tax charge, are not likely to exceed 7 per cent. The 10 per cent dividend was not covered by earnings in 1960-61 and GEC can hardly afford in its present financial plight to continue paying dividends which are short earned. But the reorganisation of the group is now almost completed while the greater part of its cost will have been borne in the current year; if the outlook for 1962-63 looks favourable the directors may be willing to pay a short-earned dividend once again. GEC still has a major financial problem on its hands. Bank overdrafts and acceptance credits are still close to the September total of £16½ million; but the directors say that the benefits arising from realisations have still to appear. These include the reduction of GEC's holding in Pirelli-General Cable from 50 to 5 per cent (which is expected to bring in about £2 million) and in due course the sale of Magnet House. The negotiations about the Hunterston nuclear power station, which was responsible for £8½ million in overdrafts in September, may also have an important influence on GEC's financial resources.

On trading the directors' statement suggests that GEC may now be over the worst for there are signs of a recovery in domestic appliance sales and the telecommunications and electronics business is expanding. In heavy engineering, however, margins remain "meagre." Moreover in 1962-63 the sweeping changes made in management, trading and distribution should really begin to make their mark. The £1 shares standing at 28s. 3d. yield over 7 per cent on the assumption of an unchanged dividend and they are not likely to move much higher ahead of the full year's results. But even if the signs of a recovery are then more apparent than they are now any rise in the price of the shares would almost certainly be limited by the prospect of an early call on shareholders for new capital.

Heineken's Umbrella

The four biggest exporters of beer in the world are Guinness, Carlsberg, Tuborg and Heineken. Of the four Heineken is probably the most international, for, in addition to direct exports from Holland, it has a number of minority interests in overseas breweries. Among the countries in which it has a stake in local brewing are Malaya, Egypt, Nigeria, the Congo, Belgium, Italy and Venezuela. Most of the investments, including those in the Congo, continued to do well in the year to September 30th, with the result that the revenue Heineken received from them went up from Fl. 2.3 million to Fl. 2.7 million. Heineken's international participations are much like Whitbread's "umbrella" in this country and it is not surprising that the two companies have come together in a trading agreement. This provides Heineken with outlets for its lager in the British market; but, more important, it provides a base from which Heineken and Whitbread can extend internationally, both in exports and overseas investments. The first fruit of this partnership will be a lager brewery in Nigeria.

As the biggest brewer in Holland Heineken operates from a strong home base: in 1960-61 its domestic sales of beer went up from about 900,000 hectolitres to just over 1 million hectolitres (about 600,000 barrels) while exports rose from 525,000 hectolitres to nearly 550,000 hectolitres (about 340,000 barrels) with the result that its trading surplus advanced from Fl. 20.3 million to Fl. 23.5 million. Because of the high level of sales, it can plan its big capital extension schemes, as for example at the brewery at 's-Hertogenbosch, to secure economies of scale in production. The extensions and a revaluation of assets have pushed up the depreciation charge, limiting the rise in net profits (from Fl. 6.8 million to Fl. 8.3 million) and in the rate of return on capital employed. Having raised its dividend from 11 to 12 per cent it is to make a one-for-five rights issue at Fl. 250 a share, which compares with the current market price of Fl. 655.

In the export markets, Heineken usually works through independent agencies, to

(*concluded from page 567*)

whom it gives help in promotion, and it does not worry unduly that its beer sells at higher prices than locally-brewed brands because of high transport costs. Satisfied that it is producing a high quality beer, it can trade on the "snob appeal" of a high-priced product and has done so with success in the United States. But its trade is at the mercy of swingeing increases in import duties, as occurred in Ghana last year, and it is by no means clear that a high price policy can be pursued successfully in Europe. The directors speak of keen competition in the common market and say that it will become even keener if Britain, Denmark and Ireland enter it. Another danger to Heineken's exports, particularly to third countries, is that the common market's agricultural policies may push up the price of barley. It may therefore be that Heineken's future international growth will be more through participations in local breweries than through a sharp rise in direct exports.

Hire Purchase Contrasts

THE reasons for **Bowmaker's** £1.3 million loss in the year to October 31st were fairly fully covered in the preliminary statement. The full report confirms that higher borrowing costs and insufficient bad and doubtful debt provisions were mainly to blame. The interest of investors is now concentrated on the future. After last year's debacle Sir Arthur Morse, chairman of Bowmaker, is suitably cautious. He is not optimistic in the short run, and says that it "would be rash of me to make any prophecy about results for the current year." He does however add two riders: he hopes to make a much better report to shareholders next year, and is sure that the company will again in the future be able to "give a good account of itself." Bowmaker is now "being as selective as possible in the acceptance of new business." The managerial reorganisation of Midland Counties Motor Finance, the main culprit in producing the latest losses, is now complete and the three operating subsidiaries are being integrated. The 5s. shares now stand at 13s. 9d.

The results of **Wagon Finance** have this week relieved the gloom in the hire purchase market that followed the publication of the Bowmaker accounts. Wagon Finance has managed to increase its net profits slightly in the year to December 31st, by £8,000 to £223,000, despite a higher tax charge. On these results the shares closed 3s. 9d. higher at 97s. 6d. Wagon Finance has made caution pay-off. Last year's precautionary increase in the bad debt provision, raised to £256,000 or 2.9 per cent of balances outstanding, seems to have been adequate, and the increase in profits is on balances outstanding down from £9.51 million to £8.48 million. The dividend is kept at 21¼ per cent and the shares now yield nearly 4½ per cent.

Steel Prospects

THERE has been little to cheer shareholders at the annual meetings of the steel companies and the remarks of Mr R. F. Summers, the chairman of **John Summers,** must have been as welcome to many as the first swallow in spring. He was able to tell shareholders that since he wrote his annual statement there had been "a considerable improvement in the outlook" and that orders for flat rolled products were stronger than expected. The company is still operating at about the November level and Mr Summers expects that the present rate of output will be maintained at least until the end of March. Clearly this is a reflection of the improved outlook for the motor industry and taking into account both the seasonal upturn in the motor industry and the possibility of some relaxation of credit restrictions Mr Summers expects the group to "continue operating at a satisfactory level." For shareholders one shadow on the horizon which the prospect of improved profits brings nearer is the possibility of a rights issue but Mr Summers added nothing to his original statement that "the matter has been actively under review." Mr Summers's only note of gloom was on the heavy steel side where he said that demand had not improved, but this forms only a small part of Summers' total production.

Heavy steels are much more important for **Colvilles** whose output, Sir Andrew McCance, the chairman, reports, is only about 70 per cent of the level of October, 1960. The demand for special steels, widely used in the motor industry, has also fallen away but the new Hallside works should mean more efficient production when demand improves. Sir Andrew hopes that signs of a recovery in steel demand will appear in the early months of 1962. During the second half of 1962 production should start at the Ravenscraig strip mill but it is unlikely that this will have much influence on the current year's results.

Not surprisingly in his last speech to shareholders as chairman of **the Steel Company of Wales,** Mr Harald Peake took a long term look at the company's prospects and from this viewpoint said that shareholders should not take too gloomy a view. They can do little else immediately, for they were told that profits in the six months to March 31st would compare "very unfavourably" with past results. Although the bricklayers' strike ended on October 29th it had an effect on trading well into December. The group is currently working below the capacity of 3 million tons envisaged in the third development programme though Mr Peake says that orders are now improving.

From Glasgow Mr A. G. Stewart, the chairman of **Stewarts and Lloyds,** also painted a gloomy picture of the immediate prospects with earnings so far in the current year "considerably lower" than those of the corresponding period in 1960–61. Moreover Mr Stewart did not hold out much hope of an early recovery for the demand for pipes from the oil and natural gas industries remains low. At home the demand for steel tubes has been well maintained, thanks largely to the high level of building activity, but now there are signs that it may decline.

Polycell Holdings

THE "do-it-yourself" cult has transformed Polycell in the last four years into a flourishing producer of a growing range of paints, paint removers and brushes. Trading profits for the year to September 30, 1961, amounted to £597,000, compared with the forecast of £600,000 at the time of the one for five rights issue in September. But the ceramics division made a loss of £140,000 as a result of problems encountered in extending the range of tiles. The directors say the loss is non-recurring, but it cut gross profits before tax to £457,000, against £529,000 in 1959–60. Investment allowances have kept the tax charge low so that net profits were virtually unchanged at £274,000, against £275,000. The cover on the maintained dividend of 25 per cent paid on the increased capital has fallen from 2.7 to 2.2 times.

The statement by the chairman, Mr F. S. Smith, confirms the stock market's impression that the prospects for the current year more than outweigh the recent setback in profits. The directors said that in October they expected to have eleven products on the market compared with six a year earlier, adding that the rise in sales depended in the main on a wider range of products. Mr Smith now says that there will be further additions this spring. The cost of developing the new products must have been largely borne in 1960–61 and they should begin to yield profits this year. Sales in the first three months of the financial year were substantially higher than in the same period of last year, and the acquisition of a factory in Welwyn Garden City should produce economies in production and administration. But a further growth in Polycell's sales and profits is fully discounted in the dividend yield of 2.6 per cent offered by the 1s. shares at 9s. 7½d.

EXCHEQUER RETURNS

For the week ended February 3, 1962, there was an "above-line" surplus (after allowing for sinking funds) of £152,005,000 compared with a surplus of £118,641,000 in the previous week and a surplus of £132,049,000 in the corresponding period of last year. There was a net expenditure "below-line" of £51,090,000 leaving a total cumulative deficit to date of £585,436,000 compared with £573,457,000 in 1960–61.

THE MONEY MARKET

AT last Friday's Treasury bill tender the syndicate of discount houses again raised its bid—by 1d. to £98 13s. 11d. The average rate of discount fell by 5.13d. to £5 4s. 4.93d. per cent. Over the past three weeks the bill rate has fallen by 4s. 1.10d. per cent. The number of bills on offer was cut by £40 million to the unusually low level of £200 million, while total applications fell by only £20 million; the market's allotment therefore fell to 33 per cent from 61 per cent in the previous week.

Credit has been tight in Lombard Street throughout the week. The authorities assisted the market by the special purchase of bills on each of the six working days to Wednesday and on two days the market was forced to supplement this help by borrowing at Bank rate from the Bank of England. On Tuesday four or five houses had to borrow a fairly large amount, and on Wednesday two or three houses took a small amount. Rates for day-to-day loans have rarely fallen below 5¾ per cent.

In New York this week the rate for three months bills fell slightly from 2.705 per cent to 2.695 per cent.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) In general, males under 21 and females under 18 years of age. (5) Weekly earnings are surveyed in April and October. October figures are : Men, 1959 : 271s. 1d.; 1960 : 290s. 8d.; 1961 : 307s. 1d. Women (full time), 1959 : 140s. 11d.; 1960 : 148s. 4d.; 1961 : 154s. 6d. Youths (under 21), 1959 : 117s. 6d.; 1960 : 130s. 0d.; 1961 : 137s. 10d. Girls (under 18), 1959 : 90s. 10d.; 1960 : 96s. 10d.; 1961 : 102s. 0d. (6) 18,000 workers had a net decrease in wages over the year. (7) 633,000 workers had wage cuts (but over the whole of 1960 no worker had a net decrease). (8) Over the corresponding week in the previous year. (9) Average for fourth quarter. (10) Average for third quarter.

APPOINTMENTS

AEI

ACCOUNTANTS

AEI have the following openings in the Treasurer's department of their head office near Victoria Station:—

(1) A senior man whose duties will include investment records, investment analysis, financial forecasts, and analysis of cash flow. Candidates need experience in the problems of consolidation and an aptitude for financial management rather than historical accounting.

(2) A younger man (about 20–25) studying or about to study for an accountancy qualification. His duties will include reconciliation of current accounts with branches and companies, preparation of statistical analyses, and records of investments and assets.

The Company operates a generous contributory pension scheme.

Applications, giving full details of experience, qualifications, salary, etc., should be sent to the

Personnel Officer, Reference EC,
Associated Electrical Industries Limited,
33 Grosvenor Place, S.W.1.

NORTHUMBERLAND

ORGANISATION AND METHODS OFFICER

Applications are invited for the appointment of Organisation and Methods Officer to be in charge of the O. & M. Section in the Clerk of the County Department, which provides a service for all departments of the Council. Appropriate professional or other qualifications, and current experience of O. & M. work, are necessary. Salary scale £1,560–£1,825.

Further particulars and application forms from the undersigned, to whom applications should be returned not later than the 26th February, 1962.

E. P. HARVEY,
Clerk of the County Council.

County Hall, Newcastle upon Tyne, 1.

UNIVERSITY COLLEGE OF SWANSEA

DEPARTMENT OF ECONOMICS

Applications are invited for the post of RESEARCH ASSISTANT in connection with studies in the History and Organisation of British Overseas Trade. Applicants must be graduates in Economics or Economic History, salary in the range £500—£700 per annum according to qualifications and experience. Duties to commence April 1, 1962, or as soon as possible thereafter.

Further particulars can be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received by *Saturday, February 24, 1962.*

UNIVERSITY OF BIRMINGHAM

DEPARTMENT OF ECONOMETRICS AND SOCIAL STATISTICS

Applications are invited for two LECTURERSHIPS in the fields of Econometrics or Statistics in the DEPARTMENT OF ECONOMETRICS AND SOCIAL STATISTICS.

Salary according to qualifications and experience within the scale : £1,050 x £50—£1,400 x £75—£1,550 : £1,550 x £75—£1,850. Together with F.S.S.U. and family allowance benefits.

Further particulars can be obtained from the Assistant Registrar (Commerce and Social Science), the University, Edgbaston, Birmingham 15, to whom applications should be sent by 2 March, 1962.

MEDICAL RESEARCH COUNCIL requires Technician for new Unit at the London School of Economics to work with Hollerith machines and take part in the general research work of the Unit. Previous training in Hollerith machines not essential. Salary according to age and experience within range £600–£950, plus London Allowance, National Health Service superannuation.—Apply to Dr. J. W. B. Douglas, c/o Medical Research Council, 20 Park Crescent, London, W.1.

WILMOT BREEDEN FELLOWSHIP

Applications are invited for a Fellowship, to be held in association with the College of Advanced Technology, Birmingham. The value of the Fellowship, which is for a two-year term, is £1,000 per annum.

A candidate for the Fellowship should normally have had two or three years' research or industrial experience. He should have an Honours Degree or equivalent qualification and be acceptable to the College as a research fellow.

The Wilmot Breeden Fellow would engage in an enterprise of such a character as to require the facilities both of the College and the Company, his time being spent at both. His enterprise may have the character of Scientific Research, Design, Development, a combination of some or all of these, or in some other way to be appropriate to the activities of Wilmot Breeden. The Company is especially concerned with Mechanisms, Electro-Chemistry, Metal Finishing, Metallurgy, Metal Formation, Hydraulics, Electronics.

Full details may be obtained on application to the Education and Training Officer, Wilmot Breeden, Ltd., Amington Road, Birmingham 35.

Final applications must be received before 1st May, 1962.

ECONOMICS RESEARCH OFFICER. Young man or woman, age 27–35, required for a new team in a major industry. Good economics degree essential. The successful applicant must have an alert and imaginative mind, and be able to work as one of a team of first-class people. Excellent salary. Pension scheme.—Apply, with full curriculum vitae, Box 1589.

THE COLLEGE OF MARKETING

The Education and Training Division of the Institute of Marketing and Sales Management

You could build an exciting future as a member of the College of Marketing staff. You would have total responsibility for organising and operating a range of residential and non-residential programmes.

You would have an opportunity of examining closely and critically the operation of the best marketing organisations and interpreting this for other marketing managers.

This is rewarding work in a new field of marketing practice.

We require :

1. Experience of sales or marketing management.
2. A willingness to spend a reasonable period in residence in the College.
3. Ability and enthusiasm to teach modern marketing methods to middle and senior managers.

The following qualifications are desirable but not essential :

1. Age 28–35.
2. A degree of a British University.
3. The Institute's Diploma in Sales Management Studies.
4. A car owner.

The commencing salary whilst training is £1,750 p.a.

Full expenses and car allowance will be paid together with a luncheon allowance. A contributory pension, life insurance and accident scheme is in operation.

Please send brief details in full confidence to D. W. Smallbone, Director of Studies, College of Marketing, 127 Victoria Street, London, S.W.1.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF HISTORY

Applications are invited for the post of Assistant Lecturer or Lecturer in the above Department. While preference may be given to a candidate with special qualifications in West African History, it is hoped candidates whose primary interest is in other fields of African history would also apply. The person appointed would be expected to take part in the normal work of the Department. It is also hoped that he would assist in the development of a Centre of African Studies. Salary scales—Assistant Lecturer: £800 x £50 to £950 per annum. Lecturer : £1,050 x £50 to £1,250 per annum. Placement on the scales will be according to qualifications and experience. The posts are subject to superannuation, and family allowance is payable where applicable. The successful candidate will not be expected to take up duty before the 1st October, 1962.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving the names of two referees, should be lodged not later than 10th March, 1962.

CHARLES H. STEWART,
Secretary to the University.

2nd February, 1962.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for the post of Assistant Lecturer or Lecturer in Economic Development in the above Department. Preference will be given to applicants with experience in applied economics in Africa. The person appointed will be required to lecture and to assist in the development of a Centre of African Studies. Salary scales—Assistant Lecturer : £800 x £50 to £950 per annum ; Lecturer : £1,050 x £50 to £1,250 ; Bar: £1,300 x £50 to £1,400 x £75 to £1,850 per annum. Placement on the scales will be according to qualifications and experience. The posts are subject to superannuation, and family allowance is payable where applicable. The successful candidate will not be expected to take up duty before the 1st October, 1962.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving the names of two referees, should be lodged not later than 10th March, 1962.

CHARLES H. STEWART,
Secretary to the University.

2nd February, 1962.

EDITOR required for Trade Union Journal (published monthly). Applicants should be experienced in this type of journalism and have a broad general knowledge of the British Trade Union and Labour Movements.

A high standard of English is essential. Selected applicants will be interviewed in London in due course.

Write, in first instance, giving details of experience, age and salary expected, to Box 1590.

W. D. CRAIG,
Registrar

AUSTRALIAN NATIONAL UNIVERSITY

RESEARCH SCHOOL OF SOCIAL SCIENCES

CHAIR OF SOCIOLOGY

Applications are invited for appointment to the recently established Chair of Sociology in the Research School of Social Sciences of the Institute of Advanced Studies.

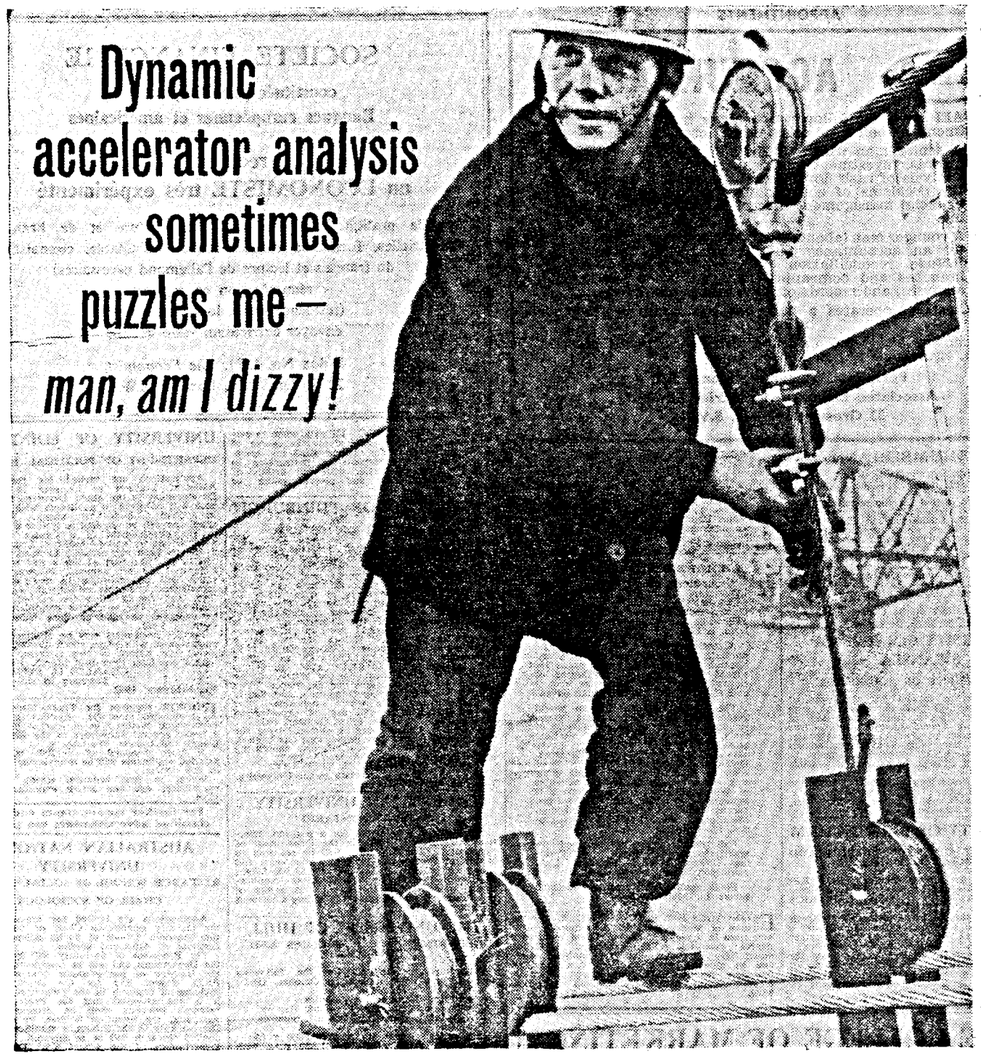
The Professor of Sociology will be Head of the Department and will be responsible both for the training of post-graduate students for the Ph.D. degree and for the development of sociological research in the Department. While it is not essential that the Professor's own research interests shall be directed towards Australia, the intention is that, as with other Departments in the School, a significant part of applied research will be so directed. The other Departments of the School are : Demography, Economics, History, Law, Social Philosophy, Political Science and Statistics.

The salary will be £A4,700 a year.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on 1 *March*, 1962.

ECONOMIC CONSULTANTS LIMITED

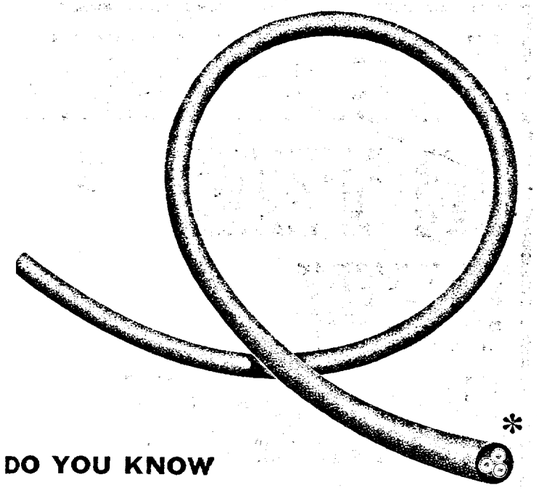


We invite applications for posts in either of the following categories :

ECONOMIST, with several years' experience of research work (first-hand knowledge of industry and/or commerce an advantage).

RESEARCH ASSISTANT, with probably a couple of years' experience in an economic department or institute, or in industry, since graduating.

In both cases the chief requirements (in addition to a good degree in economics or related subject) are intelligence, accuracy and flexibility. We work for some of the largest companies in the country, several of whom have their own economists, statisticians, market research subsidiaries and the like, and who tend to give us their most awkward jobs. The work has therefore plenty of headaches. Conditions of work are pleasant and reasonably informal. Full non-contributory pension scheme.



Please write, enclosing short personal history, to W. F. Luttrell, Managing Director, Economic Consultants Ltd., 3 and 4 Clement's Inn, Strand, London, W.C.2.

Even a man in my job can be excused if his head begins to spin a bit when he looks into economics. But not everything in economics is complicated and difficult. Take Life Assurance. There's something which is basically quite simple. It has two aspects. It gets the policyholder—all the millions of policyholders—the best deal possible. This is done through free investment with a lot of know-how behind it. For this is a job which the Life Assurance industry has been doing for two hundred years. The other aspect is the national one. Money put into Life Assurance goes towards making a better life for everyone in Britain. It helps to provide valuable and flexible finance for industrial expansion and public projects.

You get a good deal from **LIFE ASSURANCE**

Issued by The Life Offices' Association, London, and Associated Scottish Life Offices, Edinburgh

DO YOU KNOW

that this bit of flex could be shockingly expensive?

VULCAN KNOW The condition of an electrical installation can only be determined by making thorough tests. The expert who knows how to verify the soundness of the insulation, to check the effectiveness of earthing systems, switch polarity, and switchgear, is the Vulcan Engineer Surveyor.

The regular annual inspection of your electrical installation is the greatest safeguard against the hazards of shock and fire. This inspection and protection is what Vulcan provide. It is a specialist's job.

Equipped with the finest modern instruments, the knowledge, and the experience, Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!
We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

Vulcan ARE SPECIALISTS

THE VULCAN BOILER & GENERAL INSURANCE CO. LTD.
DEPT. 17, 67 KING STREET, MANCHESTER 2

* *The safety of any electrical installation depends on the soundness of the earth conductors, the insulation, the wiring itself. Nothing is more ill-used than electric flex. A break at any point, and you're in for serious trouble. Many times before now, the most innocent-looking flex has hidden away such a fault. Fire, costly damage, sometimes loss of life, have been the direct result.*

ECONOMICS OF INDUSTRIAL ORGANIZATION

by A. Beacham, M.A., Ph.D.

Largely rewritten and brought up to date, including a new section on post-war changes, this authoritative work is designed to supplement the general economics textbook. It deals with the organization of British Industry; discusses the location, control and development of industry; outlines the various forms of industrial and financial enterprise, and includes a chapter on monopoly.

4th Edition, 18s. net

GUIDE TO CONTENTS SEE OVER

in a changing world

It may be very amusing to recall that people once viewed television on sets like this. Yet, by 1962 standards, even the set of five years ago is obsolete.

Today's television receiver, with its bigger screen, its brighter and incomparably clearer picture, and its beautiful slim cabinet, has brought new proportions to viewing.

Mullard have contributed a great deal to this progress with their "Radiant Screen" picture tubes, Frame Grid valves, semiconductors and magnetic components.

Advanced products like these are playing their part in all fields of electronics today. If you have an electronics problem, we will gladly help you solve it.

Mullard products in television receivers include:
VALVES · SEMICONDUCTORS
PICTURE TUBES
MAGNETIC COMPONENTS

Mullard
ELECTRONICS

HOME

High-Engendered Battles

The Liberals' triumph at Orpington (like their advances elsewhere) does not mean that the next Government will be headed by Mr Grimond; nor does it mean that the Tories are yet being put to flight; what it does mean, handled rightly, is a golden (Lib-Lab) chance for Mr Gaitskell (p. 975).

While the echo of the **ICI-Courtaulds** clash is still in the ear, some assessment of the damage is possible: ICI's image as a benevolent giant has been tarnished; and Courtaulds carries round its neck the campaign promises it will have to honour (p. 1037).

Having once won Letchworth in a takeover, the Garden City's controllers may soon be defeated at Parliament's hands (p. 992).

Knockdown Arguments

The clatter of falling tenpins is music in the ears of Britain's entertainment moguls: **bowling** has bingo beaten (p. 980).

The Royal Academy's need to sell their **Leonardo** to keep themselves in the black might not have arisen if more people had known they had it (p. 982).

Two blows at **advertising's** breadbasket: tobacco and detergents (p. 1050).

An economist's case for control (p. 1034).

Forms of Party Strife

In north-west London, a bus-building firm has **sacked ten workers** who, at the firm's invitation, defied their trade union and worked during a one-day strike (p. 991).

Supporters of the **Immigrants Bill** should not expect to draw comfort from a forthcoming report in which immigrants are associated with a rise in violence: most of the hurt taken is domestic and unserious (p. 988).

Some Distressful Strokes

The Government's refusal of the University Grants Committee's recommendation and its blanket 3 per cent salary increase to university teachers have jeopardised **the universities' expansion plans** and may hurt their present performance (p. 983).

New jobs for Cambridge dons (p. 987).

British Railways, pursuing the chimera of solvency, has slashed a service which should by rights never have been started (p. 991).

The Minister of Agriculture has been gentler than he might have been with his pruning knife on **farm price guarantees**—but the farmers will not think so (p. 982).

The case for a large all-round increase in **nurses' pay** is not good; but more should be done for those climbing to the top of their calling (p. 984).

Ireland **Europe's other island** pages 993-1011.

INTERNATIONAL

Banning the Bomb

Britain's ageing nuclear deterrent may well be more valuable as a diplomatic weapon than as a military one. It might be dropped with pacific results into any scheme for regional nuclear disarmament in Europe (p. 977).

Ways of checking the spread of nuclear weapons have figured in the confused manoeuvres of the Geneva **disarmament conference;** but there are no signs yet that the conference will avert American nuclear tests this spring (p. 1013).

Russian interference in the **Berlin** airlanes is a reminder that the West cannot preserve its position in Germany merely by sitting tight; but **Dr Kroll's** recall from Moscow is a success for those who want it to (p. 981).

Bombs and Butter

The controversy over the B-70 does not mean that **American industry** is dependent on **armaments** (p. 1021).

Soviet agriculture needs more capital, but armaments and industry soak this up (p. 1019).

The Pull of Europe

Neutrals, like Sweden, have a case for association with the common market, but not all would-be associates need get the same terms (p. 978).

A **Swedish** manufacturer of **rock drills** has achieved world stature, but success in Mont Blanc has evaded it (p. 1039).

American firms are setting up branches **in Europe,** not to get behind the tariff wall but to be near a growing market (p. 1023).

The drive for a new **Trade Expansion Bill** has begun in Washington (p. 1023).

War and Peace

The last days before the expected ceasefire in **Algeria** are overshadowed by continuing violence (p. 983).

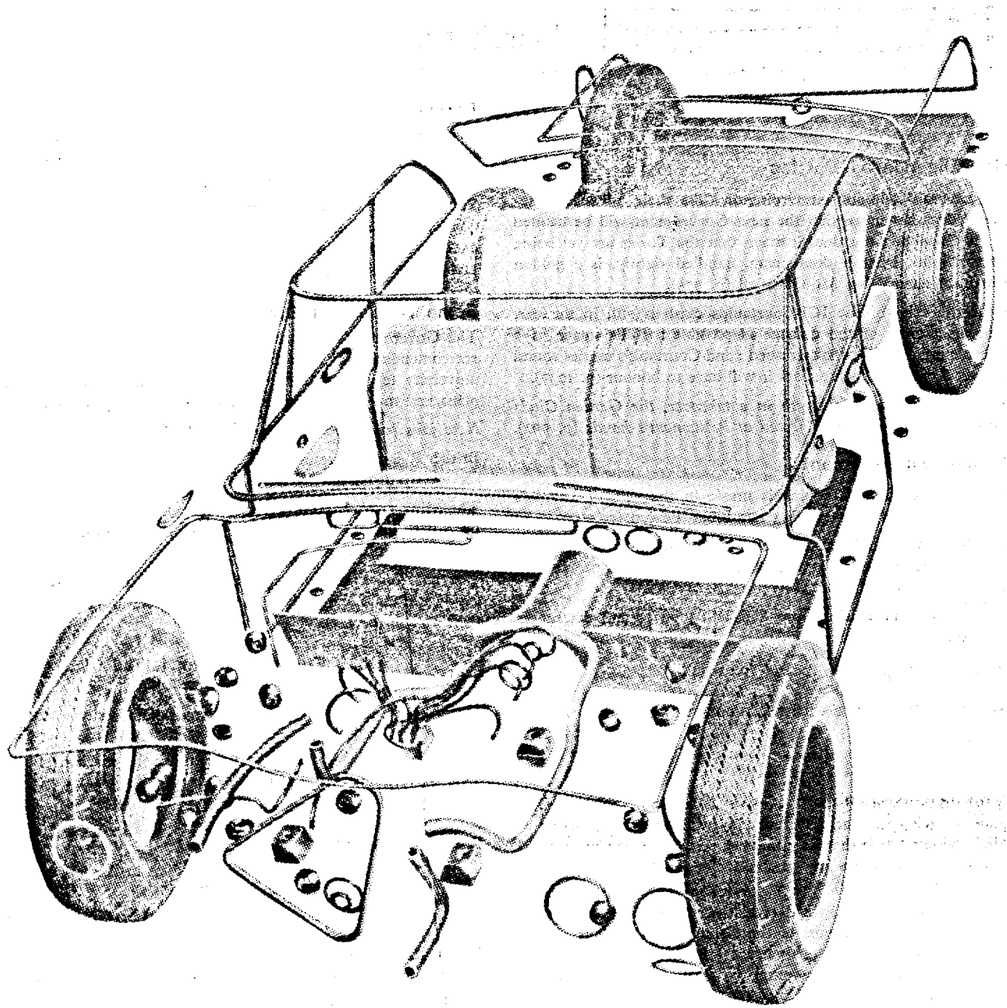
American mediation may avert a clash in **New Guinea** (p. 984).

Latin Laments

The **Alliance for Progress** is not making as much progress as was hoped (p. 1022).

Its main beneficiary, **Brazil,** presents a sorry economic picture as Senhor Quadros returns from exile (p. 987); so does **Cuba,** where Dr Castro's policy of fair shares has made rationing necessary (p. 983).

Ins and Outs



The **Indian elections** have once again produced no serious opposition to Mr Nehru's Congress party (p. 1017).

Business recovery in **Canada** has restored Mr Fleming's tarnished political reputation (p. 1014).

Sir Roy Welensky's decision to hold an election in the **Central African Federation** is unpopular even with his own supporters (p. 1014).

The anti-communist crusaders are making things difficult for **Mr Nixon** in California (p. 1027).

A rubber automobile?

Without rubber, today's automobile just couldn't be built. All the automobile parts you see illustrated are made from one of the many types of Polysar* rubber—from tires to upholstery, from weather stripping to the interlining of the spring leaves. Because of Polysar rubbers, your car gives you better performance, greater comfort—and lasts longer.

If you are planning a new process, a new product, or improvements to an old one, success can depend on your finding a new raw material. A most promising source may lie among the 40 different types of Polysar synthetic rubbers, produced by the Polymer Corporation Limited.

Within the world-wide Polymer organization there is a representative nearby, ready to advise you. A letter to the Marketing Division, Polymer Corporation Limited, Sarnia, Canada, will put him in touch with you.

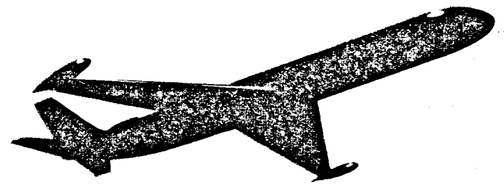
Mallory 'sound power'

is changing your world



The amazing 'Sound Power' generated by Mallory batteries has triggered off a host of modern miracles. Instance the many types of 'invisible' hearing aids, some so tiny they can be contained in spectacle frames; transistor radios small enough to slip into a pocket or purse; paging receivers which will fit into a buttonhole.

All benefit from Mallory size which permits truly miniature design and Mallory 'Sound Power' which ensures a steady flow of energy—a constant volume of sound. Fade-proof in store and in use, Mallory batteries are giving designers the power to reshape the world around us in so many different ways. The greatest battery design development for more than eighty years, they can be of great help to all manufacturers who wish to make their own products smaller and retain full power.

FOR ICI AT WILTON—

Twin strings of Clark compressors, each consisting of two multi-stage centrifugal units, handle 5597 c/m each of low pressure hydrocarbon gas at the No. 3 olefine plant of Imperial Chemical Industries, Ltd., Wilton, England. Drivers are H.S.B.T. expansion turbines, each developing 1900 bhp at 9000 rpm. Discharge pressure is 222 psia with suction conditions near atmospheric. Confidence in the complete interchangeability of Clark compressor parts is expressed in the fact that one of these strings was produced in Olean, New York, U.S.A. and the other was manufactured under license in Great Britain.

Ask any user! For reliability, no centrifugal compressor outperforms CLARK

VOLUME CCII · NUMBER 6136

After Orpington

LET us get the Conservative débâcles in this week's by-elections into perspective. In three out of the four of them the Conservatives have done between 2 and 7 per cent worse than they were doing in the nearest equivalent by-elections last November; in the fourth (the much-advertised Labour triumph at Lincoln) they actually did considerably less badly than they were doing then. (The figures are shown in a table overleaf.) Contrary to what some newspapers are saying, therefore, it has not suddenly become very much less probable this week that the Tories will win the next general election. At a pure but reasonable guess, the Conservatives probably still have, say, about a two out of three chance of winning it; and the odds in their favour have not, in fact, been significantly higher than this for most of the past year.

It is true that if there were a general election tomorrow, and if everybody voted at general elections as he does at by-elections, Mr Grimond's present mass capture of so many of Mr Macmillan's former supporters would probably enable Mr Gaitskell to become Prime Minister. The net swing from Tory to Labour in this week's by-elections—in the purely statistical sense of half the difference between the drop in the Tory share of the vote and the drop in Labour's share—was respectively 5 and 6 per cent in the two supposedly marginal constituencies which had heavy turn-outs, and 11 and 12 per cent in the two supposedly safe seats which had heavy abstentions; and a net swing to Labour of as little as 3½ per cent in a general election would serve to scrape Mr Gaitskell into office, provided it occurred in the right marginal places. But, in the first place, these large Liberal raids on the Tory vote would not necessarily repeat themselves in the right marginal places from Labour's point of view (i.e., in Tory seats that might conceivably go Labour); and, in the second place, there is not going to be a general election tomorrow. Nor, *pace* Sir Roy Welensky, is there likely to be a general election at any time this year. Mr Macmillan can be expected to go to the country at whatever date in 1963 or 1964 suits his party's interests best.

Nevertheless, the past week has probably been a very important one for British politics, and its main effect might prove to be very beneficial indeed. One need not give great credence to the conventional argument that massive defeats like Orpington will somehow "serve to keep the Tories on their toes," and thus have a marvellously revivalist effect on them. One is not normally marvellously revived by a kick in the groin. But we do believe and hope that these results might have an important reforming and revivalist effect on the whole future nature of the Labour opposition. There seems real ground to hope that the result at Orpington may speed up the happy march of events which is making it increasingly likely that Britain's alternative government—the one that will be fighting on the hustings in 1963 or 1964 with at least a strong minority chance—will be of what might be called the Lab-Lib variety: Lab-Lib, that is, in complexion, although almost certainly still Labour in name. For, at a time when exaggerated news of Tory disasters are filling every newspaper headline, it has been borne in upon Labour that, in order to win office, its main future task must be to see that it does not lose as many votes to the Liberals as the Tories lose. It would be wrong to say that, from now on, both major parties' main concern will be to fight desperately to steal the Liberal's clothes (the common market is, in fact, their most identifiable dress). But they will certainly have to fight all the time to prevent Mr Grimond from running off with their own

marginal trousers, and in terms of the general image that each will know that it must try to project, that may amount to nearly the same thing.

Consider the strange electoral situation that now subsists. In anything up to a hundred of the Conservatives' 365 parliamentary seats—in the plush suburbs of London and the home counties, in many rural constituencies and seaside towns, as well as in the older battlegrounds of the west country and the Scottish highlands—it is now plainly the Liberal party that presents the main challenge to Tory incumbents. One may reasonably doubt whether the challenge at general election time could really hope to be successful in more than a score of these (if, indeed in as many); but, especially if the idea gains ground that in these areas a Labour vote is a wasted one, there will increasingly be this challenge. It is a challenge, moreover, that is aimed at the root of what the Tories have hitherto regarded as some of their safest seats.

Another 65 Conservative MPs hold seats that would be won by Labour as a result of gaining a net 4 per cent swing. Theoretically, on the basis of this week's by-election results, Labour could expect to gain all these seats—and more—if there were an early general election. But, in practice, one very much doubts whether Labour would win all of them, and Mr George Brown and his cohorts at Transport House would be very wise to doubt it too. At present there are many Tory voters who are ready to swing to the Liberals even at the expense of letting a Liberal in, but the number of Tories who are willing to swing to the Liberals at the expense of letting Labour in is almost certainly much smaller. Paradoxically, therefore, the safest seats for sitting Tory MPs at the moment may be those which until recently were regarded as being in their upper marginal range: seats where a net swing of between 4 and 10 per cent from Tory to Labour (or of between 8 and 20 per cent from Tory to Liberal) would saddle a former Tory area with the un-status symbol of electing a Labour MP. After this, almost by definition, one enters the range of seats where a similar Tory desertion to the Liberals would put a Liberal MP in instead; and where Tory dissidents may therefore feel freer to abstain or vote Liberal to their hearts' discontent.

THIS WEEK'S SWINGS

Two of the past week's by-elections were four-cornered fights in constituencies where there had been no Liberal candidate in 1959. At Middlesbrough East the fourth candidate was a Mosleyite, and the result can fairly be compared with last November's by-election at Manchester Moss Side, which had a similar pattern of candidacies. Lincoln (where the fourth candidate was a pro-conscriptionist who got derisory support) can perhaps best be compared with last November's by-election at East Fife. Neither comparison is exact, because both this week's seats were Labour-held and both last November's were Tory-held; but as a broad indication of trend each will serve:

CHANGES IN % OF POLL COMPARED WITH 1959.

	Cons.	Labour	Liberal	Other
Lincoln	**−14·7**	**− 4·6**	**+18·2**	**+ 1·1**
(East Fife)	(−22·4)	(− 3·7)	(+26·1)	—
Middlesbrough East	**−23 7**	**− 0·9**	**+22·9**	**+ 1·7**
(Moss Side)	(−21·2)	(−11·9)	(+27·9)	(+ 5·2)

In the other two by-elections, including the seat gained by the Liberals from the Tories at Orpington, there had already been Liberal candidates in 1959. The nearest comparison lies with last November's by-election at Oswestry:

CHANGES IN % OF POLL COMPARED WITH 1959.

	Cons.	Labour	Liberal	Independ.
Blackpool North	**−19·5**	**+ 4·8**	**+ 14·7**	**—**
Orpington	**−21·9**	**− 9·8**	**+31·7**	**—**
(Oswestry)	(−15·1)	(Nil)	(+12·3)	(+ 2·8)

WHAT, in these circumstances, could Mr Gaitskell and Mr Brown best do in order to "get this tired Tory government out"? Theoretically, one way in which they could achieve this would be by disbanding their party tomorrow. In that event, if one believes the apparent message of these by-election figures, Mr Grimond would be likely to be swept into the Prime Ministership at the next general election with people like Mr Lubbock of Orpington as his main cabinet ministers. To others beside the Labour leaders this will appear a sobering, rather than a thrilling, thought. But now that Labour has started to lose deposits in areas where the Liberals plainly provide the main challenge to the Tories, it would not be surprising to see official Labour candidates gradually withdrawn from fighting some of these seats—at least by the time of the general election after next.

This does not mean that Labour would gain from a full-scale Lab-Lib pact *à la* Wyatt. While the withdrawal of Labour candidates from Liberal "possible" seats like Blackpool North this week would have served to put the Conservative out, the withdrawal of Liberal candidates from some Labour "possible" (or even "actual") seats elsewhere in the country would help to keep, or even put, the Conservative in. Mr Taverne would not have so markedly increased his Labour majority at Lincoln last week had not a Liberal intervened to draw so many votes away from the Tories. There remains then the third possibility. When you can't join them or beat them, look like them. That is what Mr Gaitskell has sensibly wanted to do to the Liberals ever since he took over the Labour leadership in 1955, and especially since the traumatic experience of Labour's 1959 defeat. Now the powerful force of his party's reviving hopes and ambitions should surely help him on his way. For the truth is that the floating vote in this country is now of the sort that prefers to regard itself as Liberal-more-or-less; and it is for the floating vote that every sensibly ambitious political party has to fight.

That is why the most interesting long-term speculation about the results of this week's by-elections concerns their possible effect on the party whose performance in them has in a sense been least dramatic: the one that has not gained or lost a seat, although it has managed to lose a deposit. It is easy to overestimate the baleful consequences of this week for the Conservative party, who may now merely have temporarily mislaid their floating adherents in response to the usual mid-term anti-Government swing. It is tempting to overplay the week's hopeful auguries for the Liberal party, although it may justly light its torchlights this weekend because its parliamentary strength has been increased from six to seven. But it is impossible to exaggerate the lesson now laid before the party that will still serve as alternative to the Tories in at least five constituencies out of every six. Mr Gaitskell's clear recent aim has been to get into a position where he can persuade his party to shake off its old remaining trappings of atavism and class prejudice and unlovely shibboleth, where he can persuade it to try to start to look instead almost more Kennedyite than Mr Kennedy himself. Dare one hope that he may now have been powerfully helped to get into this position by a mixture of his own competence and a rival party's success?

Dropping the Bomb

When and how Britain might usefully give up its nuclear arm

IF the Government is superstitious, it will keep its fingers crossed about paragraph 13 of this year's defence White Paper. Paragraph 13 is the one which says that Britain's contribution to the western deterrent—the V-bombers, that is—will be kept effective "throughout the 1960s." Last Monday's debate on the air estimates in the House of Commons featured the Secretary of State for Air, Mr Julian Amery, in the part of Horatio, keeping this bridge as stoutly as the Minister of Defence, Mr Harold Watkinson, had defended it in the general defence debate a week earlier. But there are signs that support for the Government's stand is weakening, even among those nearest and dearest to it; a substantial number of people are wondering whether (and in what circumstances) the military usefulness of keeping the V-bombers might soon be outweighed by the diplomatic benefits of giving them up.

President Kennedy's attitude towards the British deterrent is doubtless more complex than Mr Harold Wilson suggested on March 6th, when he said that nobody in Washington thought it added "one iota to the strength and credibility of the western deterrent." The Americans look on the 180 or so aircraft that Bomber Command could put in the air as a useful supplement to their own striking force of 1,600-odd bombers and assorted missiles, on the ground that a larger margin of safety is always better than a smaller one. But they plainly feel confident that they possess a sufficient margin of safety to do the deterrent job alone, if need be, once the targets now given to Bomber Command had been reallocated. If Britain were to retire from the field, the Americans would no doubt accept its decision cheerfully enough—provided the resources thus set free were diverted to other needs they consider more urgent. And one's guess is that they would positively welcome it, if a British renunciation had the effect of stopping the further spread of nuclear weapons in Europe.

These feelings are shared by a growing body of opinion nearer home. Quite apart from the Labour and Liberal parties, which are now committed to the proposition that Britain ought to bow out of the attempt to keep up a strategic nuclear arm, an interesting number of the Government's supporters seem to have doubts about its policy. Four of the eleven Tory back-benchers who spoke in the defence debate on March 5th and 6th said either that there was a case for giving up British nuclear weapons entirely—provided that Britain was not the only country giving something up—or that, at least, some of the money now being spent on nuclear arms should be transferred to conventional forces. There is no reason to think that this is an unfair cross-section of the party's state of mind.

The case for dropping the bomb (in the constructive sense of the phrase) is not chiefly a military one; that is to say, it does not depend on believing that the British deterrent is no longer able to do the job for which it is getting upwards of £170 million a year. The available evidence about Russian anti-aircraft defences does make it clear that Bomber Command—even with Blue Steel or Skybolt—would be liable to suffer heavy losses if ever it had to be launched against the Soviet Union. But even in the worst (and very unlikely) case of Bomber Command having to act alone, he would be a remarkably confident Russian who based his choice of peace or war on the assumption that his protection would be 97 per cent effective—a level at which five bombers would still get through to their targets.

Even this degree of deterrent power is something worth having. The doubts arise when three other facts are taken into account. The first is the Americans' apparent ability to do the same job without British help. The second is the alternative use the money spent on the deterrent could be put to. (It could, to take an over-simple illustration, provide every man-jack in Britain's regular army with an extra £1,000 a year; think of the effect that would have on recruiting figures.) The third, and most important of all, is the possibility—it cannot be put higher at the moment—that abandoning the deterrent might do more to preserve the peace of Europe than clinging on to it would.

WHETHER a renunciation of nuclear weapons by Britain would in fact make for greater stability in Europe depends entirely on how the renunciation was made. A great many people sincerely believe that a simple declaration by the Prime Minister in the House of Commons next week, followed by a televised jettisoning of warheads into the North Sea the week after, would somehow decisively wrench the world into a general about-turn on nuclear policies. The idea is flattering to British visions of moral leadership, but it is surely inaccurate. Such a unilateral gesture would be applauded by public opinion—wildly in the uncommitted world, much more dubiously in western Europe and the United States, probably for the wrong reasons in the communist countries. The real test, though, is what effect it would have on the three governments whose preoccupations with nuclear weapons are of urgent interest: the governments of France, west Germany and China. There is no reason to think that it would deflect any one of them from its immediate ambitions.

For a British renunciation to have any serious effect, it would have to be linked to similar sacrifices—not necessarily of the same kind, but involving the same degree of military self-denial—by some other major powers; and this exchange of sacrifices would have to be embodied in a formal, and probably written, agreement. However, this is not the same as saying that Britain must wait for a world-wide disarmament agreement before it can discard its own nuclear weapons, which is what the Government says at the moment. The dim prospects of the current 17-power conference at Geneva, and the extreme unlikelihood that China would join in anything the

Geneva conference happened to agree on, suggest that the wait for a universal treaty will involve a long vigil indeed. There is thus a strong case for arguing that Britain's trump card in disarmament policy—the offer to give up its strategic nuclear armoury—ought to be played with the aim of achieving a more limited agreement to reduce the military tension in Europe. The stability of Europe, after all, is Britain's chief concern ; and even a localised agreement of this sort would be a very fair price to get in return for a non-essential weapon of slowly declining value.

Is there any chance of such a regional agreement? As it happens, there may just be. One of the modest hopes Lord Home has taken to Geneva with him is the hope of getting the powers to act upon the Irish proposal, adopted among other proposals by the last General Assembly, that the present possessors of nuclear weapons should agree not to transfer them to the control of others. Mr Gromyko matched this on Monday with a proposal for a zone free of nuclear weapons in (among other places) Europe. It is a fair guess that, out of the interplay of suggestions like these, the powers are sooner or later going to find themselves turning over the old idea of a regional experiment with arms conirol in central Europe. The experiment might range from restrictions on the deployment of tactical atomic weapons, to an inspected limit on the size of conventional forces.

The difficulty is that any such proposal runs headlong into the opposition of the west German government, because it is liable both to restrict the further growth of the west German forces, and to prevent them being equipped with the atomic weapons which Dr Adenauer and his minister of defence, Herr Strauss, say they must have. So long as any British observations on the subject continue to be delivered from on top of a pile of nuclear arms adorned with the Union Jack, Dr Adenauer is going to have grounds for complaining of discrimination. But suppose that British advocacy of a regional arms control scheme in central Europe were coupled with a British offer to get off the atomic high horse. One of Dr Adenauer's standard objections would be removed; and the United States, which under Mr Kennedy's Administration has steadily sought to oppose the spread of nuclear arms in Europe, would be able to exercise its powers of persuasion with a far easier mind.

In present circumstances, it need hardly be said, a scheme for limiting arms in Europe cannot extend to the removal, or even the serious weakening, of the American presence. But there is plenty of scope, short of that, for arrangements that might reduce tension along the Elbe without reducing the western powers' ability to guard their part of Europe. Such arrangements will involve various governments in various degrees of self-denial in respect of their military establishments. Self-denial may in any case force itself on them as they come to realise that they, like Britain, almost certainly cannot afford the costly weapons systems of the nineteen-seventies. Still, many people suspect—and they are probably right—that the process will never be set in motion at all unless one government makes a first gesture. Is this a target at which Britain's nuclear arms, never used in war, might now peaceably be aimed?

Welcome, Wild North-Easters

Common marketeers, wondering what to do about the Nordic neutrals, could imitate Charles Kingsley

SOONER or later the common market is going to make some kind of arrangement with the small countries on the periphery of western Europe to save them from the hardships of economic isolation. The common market's planners are perfectly willing to offer the nations concerned this vaguely comforting generalisation. But, preoccupied with more urgent matters like the entry of Britain, they may not realise that it is too vague. Countries as different as, say, Sweden and Spain present quite different problems that may call for different solutions. Not to make any bones about it, some of these fringe nations may require—and deserve—closer links with the common market, short of full membership, than others do. The common market's task is to pick out the right countries to favour with a special attachment ; and, in particular, not to discriminate against those that are neutral just because of their neutrality.

One test of the common market's attitude will be its treatment of the neutrals in northern Europe. Of the four Nordic countries, Denmark has already applied for full membership of the European Economic Community, and on March 2nd the Norwegian government asked its parliament for permission to do the same (which the parliament will almost certainly grant). Since both countries belong to Nato, their decision was predictable. The Swedes, on the other hand, have applied for the less intimate status of associate membership. Their application was made after a long public debate in which it became clear that there was virtually no support for any closer relationship that might endanger Sweden's neutrality. The Finns are waiting to see what happens to Sweden's application ; if it succeeds, they will try to negotiate a similar arrangement for themselves.

In effect, Sweden is asking the common market to disentangle the economic strand of the Treaty of Rome from the political strand, and to let Sweden attach itself to one but not the other. This is a large demand ; and the Swedes are anxious to show that they are not simply trying to get inside the community's tariff wall without accepting the economic obligations that go with this privilege.

If their application reaches the point of detailed negotiation, they seem likely to swallow without much argument a number of pills that still cause some British throats to tighten convulsively: the common market's farm policy, for instance, the free movement of labour—and even some co-ordination of national economic policies. They would presumably draw the line at submitting their budgets and their monetary policies to control by a supranational agency. But the prime minister, Mr Erlander, has pointed out that the chief purpose of the common market is to encourage economic expansion. The implication is that Sweden would be prepared to take a seat on some planning body run on a basis of persuasion.

The Swedes may even be ready to dip a toe in the water of political co-operation—the operative word once again being "co-operation." This depends on the kind of political machinery eventually set up by the common market. If General de Gaulle were to get his way, and the machinery were to consist simply of arrangements for (say) regular consultation between heads of government, Sweden might quite possibly agree to take part.

But this is the furthest limit of the Swedes' willingness to stretch their neutrality. They will join no body in which the vote of a majority of the members could dictate foreign or defence policy. And even in economic matters they demand certain guarantees of independence: the right to end their association with the common market if they want to (full membership is theoretically indissoluble); and freedom to make trade treaties with other countries—Russia is clearly the one they have in mind—without having to seek permission in Brussels. A substantial body of Swedish opinion also wants to limit the freedom of foreign capital to move into the country, for fear that key industries will fall under alien (particularly German) control.

ALL this is a test of how the common market sees its future. The Swedish application for associate membership looks like a genuine offer to go most of the way towards economic unity, stopping short only at those things that affect the political independence of a neutral. If it is accepted, a special arrangement will almost certainly have to be offered to Finland, *deo et Khrushchev volentibus*. Finnish exports, three-quarters of which are forest products that compete with similar products from Sweden, would suffer disastrously if Sweden were within the common market's tariff wall and Finland were outside.

This would not necessarily mean opening the door to every other neutral in Europe on the same terms. Switzerland, for instance, has special problems—its uncompetitive farmers, and its semi-autonomous cantons—which would make it difficult for the Swiss to move as far towards economic unity as the Swedes. But to accept Sweden would mean that the common market embraced within its economic boundaries a country whose domestic politics, and ideas about east-west relationships, were interestingly different from those of the dominant group within the existing community. It would be a splendid gesture of broadmindedness.

Just now, the chances of such a gesture look dim. Some leading figures in the common market have recently questioned whether it is possible to grant the kind of association Sweden wants, except as a half-way stage to full membership. The argument is that, were Sweden to be granted associate membership, half a dozen other small countries ranging from Portugal and Spain to Turkey and Israel would promptly demand the same right. So many holes in the tariff wall of the inner group, it is said, would destroy the sense of economic togetherness which is the essential prerequisite of the group's search for political unity. Instead, the little countries on the fringe must hope for relief in the general reduction in tariffs that President Kennedy proposed last December ; in addition, the common market might make specific trade agreements to let in particular products—paper from Sweden, raisins from Turkey, and so on.

BUT is this argument good enough ? If it were a matter of admitting all the possible applicants for associate membership, the case would be unanswerable. But there is a case for picking and choosing between those to be given the rank of associates (the non-commissioned officers, as it were) and the rank and file who would have to be content—at least for the time being—with commercial agreements covering the commodities they were specially interested in. It is best to be blunt about this process of selection. The favoured applicants to be admitted within the tariff wall should be those who, in addition to bringing some significant economic strength to the community, would also help to give it added social stability and a properly distributed political balance. It would do no harm for the predominantly conservative flavour of the existing community to be diversified by the addition of a few countries with a nonconformist taste—not least in their approach to east-west relations. If Iberia one day comes in as well, the presence of good Scandinavian democrats would provide an essential counter-balance.

The Nordic world offers just the right ingredients for mixing. The best case for bringing countries like Sweden within the community's walls is not that, if left outside, they will inevitably be thrust into the communists' arms by economic necessity. Most Swedish economists think that Sweden will survive even if its present application is rejected. One of them, Mr Bengt Reuterskiöld, writing in the current issue of the Skandinaviska Bank review, reckons that the consequences of isolation would amount to no more than about 18 months' delay in reaching the level of national income that would otherwise be reached in 1972. The real case for accepting Sweden is less dramatic, but just as persuasive.

Inside the community's tariff walls, Sweden can make a useful contribution to the economic strengthening of western Europe. Outside, it will most probably suffer a slowing of its economic development. The trade agreements for specific exports offered by the common market might keep its existing industries alive, but the development of new industries could well be inhibited. The result might be a gradual drifting out of the main stream of European development.

If the European Economic Community means the first word in its name to be taken seriously, then this would be wrong. The danger of the common market has always been that its original members, in seeking to draw closer to one another, would unconsciously widen the gap between themselves and other parts of Europe. It will require an act of imagination for the existing members of the community to let in a brisk wind from the north-east ; they should remember that the north-east, too, is part of the same continent.

The Demon Bowlers

Skittles, at least when taken with beer, are once more in England an idea of heaven

NEITHER work nor worry can mar the pleasure of the long-drawn rumble as the ball goes down the alley and of the cathartic, percussive music of the falling pins. The game is immemorial: Sir Flanders Petrie found that the Egyptians played it, and it has been recorded from time to time since the beginning of the Christian era. Edward III thought it spoiled his archers, and frowned on it; some bishops in the middle ages, by calling the pins heathens, were able to provide an outlet for the righteous zeal of their flocks; and it has been a frivolous diversion (so necessary from serious drinking) in English pubs, particularly in the west country, for centuries. No doubt it was one of the less rigid of the west country pilgrims who, finding constant rectitude a bore, set about whiling away his new American leisure by whittling out nine skittles and a ball. He thus took to the New World one of the milder vices of the old, to which, in the past two years, it has been returned, much altered, polished and purified —but still recognisably skittles.

The original nine pins became ten in the last century, when right-minded Americans outlawed "ninepins" as a breeding-place for gambling and some grosser sins. They were promptly outwitted by the gamblers, who set up ten pins instead. The game has not looked back since then; but until the end of the second world war it was confined still to sweaty men replete with such off-putting ancillaries as beer, spittoons and loud swearing. Then an unknown benefactor introduced his wife: more women followed and, by the nineteen-fifties, bowling (which is as distinct from skittles as baseball is from rounders) was booming. In 1952 it was revolutionised by the invention of an electronically controlled machine to replace the boy who gathered the fallen pins and set them up again, and big business moved in. Today 26.5 million Americans play; and they are worth a billion dollars a year to the game's promoters.

By 1960, the bowling boom in America was levelling off, and the two main manufacturers of the automatic pin-setting machinery, American Machine and Foundry Company and Brunswick Bowling, were looking about for new fields in which to set their great galleries. Their eyes fell, among other places, on Britain. AMF approached ABC Television, who cautiously leased the first centre, at Stamford Hill in London, and watched the results with interest. Soon ABC was in business itself and, predictably, the Rank Organisation followed almost immediately, with a great many other smaller operators at their heels. In these last two years, no fewer than seventy centres have been opened, or are shortly to be opened, in England and Scotland.

Most of the centres are large, with 20 or more lanes ("alleys" went out when the women moved in). In each lane some 30 people a day pay three shillings a head to play. In general the rinks are housed in the shells of cinemas which died of the dreaded TV plague of the fifties; but that source of convenient buildings is running out in the really profitable areas (the north-west, Birmingham and London). New centres will mostly be what has come to be known as "purpose-built" —at a cost which might blanch the cheek of an investor less intrepid than Rank or the commercial television industry. Each lane costs £2,000—without its equipment, which costs £3,000 if bought outright from Brunswick but allegedly somewhat less if taken on lease from AMF; some of the cost is accounted for by the extreme fussiness of the governing body of the game in Britain, the Tenpin Bowling Association, who have adopted American standards of accuracy, in which a tolerance of forty-thousandths of an inch is allowed on important dimensions.

AT Southampton, to take one example, Rank's will pay £5,000 apiece for 24 lanes and £100,000 for the building which houses them, in addition to the £35,000 already spent on the vast site needed. Rank has now invested over £2 million in bowling; ABC are near enough £1 million committed; other operators have not been able to raise that sort of money, but at least four other television companies are involved and they, together with single-centre owners and one or two specialist firms, could probably show another £4 million or £5 million of investment between them.

The return expected from this vast stake in bowling is not, by the operators' accounts, very impressive: ABC thought that 10 per cent was about right; ATV and Rank were less sure, but admitted they would be disappointed if it were not more; and one investor went as far as to admit that he would not be happy with less than 12 per cent. It is difficult not to feel that someone is leaving something out; about 150,000 people play regularly in Britain, and none of the centres has yet experienced the sort of black depression which comes to cinema managers when seats are empty. Present plans are for expansion as fast as centres can be built, in the expectation that every city in the country with a population of 50,000 or more will be able to support at least one centre of 12 lanes. The Americans find that planning at one lane to every 2,000 of population is safely profitable, but Britain is more cautious: even so, the amount of capital, enthusiasm and organisation going into bowling indicates a return a good deal better than 12 per cent.

Overheads and recurrent expenditure are high. Apart from the £3,000 to £5,000 required to set up each lane, the pins themselves attract an import duty alone of £2 10s. each (and each lane needs ninety of them a year); balls cost between £8 and £10, and refinements such as hand-dryers must constantly be put in as they are developed; wages are not low, and the requirement for staff is large.

On the other hand, every centre has highly profitable catering facilities (indeed most of them are licensed clubs, the club being separate from the lanes), as well as selling a nice line in special shoes, clothes, balls and bags to carry them, and enjoying one or two other side-lines which help to keep the wolf from the foul-line. One six-lane operator's actual takings are £650 a week. If his takings can be taken as a guide, at £105 a lane every week, a company such as ABC with 118 lanes might be earning about £12,000 a week.

The centres themselves are of clinical perfection and extreme uniformity. It is only by slight differences in furniture and decoration that one can tell whether AMF or Brunswick has been responsible for fitting out any particular centre; but it is sure to be one of them. Together with the bowling lanes, there are often such attractions to the house-bound as crêches, laundrettes, restaurants. Nevertheless, more men than women play in Britain, and it will be a long time before women become as important to promoters here as they are in America, where they supply no less than 40 per cent of the custom. Young people are more in evidence than adults, and a year ago accounted for nearly half of all the games played in Britain. But the operators insist that the main attraction of the game is that it appeals to whole families.

The real pull of the game seems to be the deceptive ease with which good bowlers practise it and the opportunity it offers for knocking something down in competition with other people. Already hundreds of small leagues (industrial, office, household clubs) are playing long series, encouraged by operators who would rather see block bookings for league play than wait for casual bowlers to drop in now and again. It is also offered as a good means of slimming and as one way in which a predominantly spectator-minded nation can actually do something. Abroad, too, the game is catching on; so fast, indeed, that ten-pin bowling is only just short of the minimum requirement for Olympic recognition, which is that a game should be played competitively in 26 countries.

So far nothing has stood in the way of the bowlers except the planning authorities. But there are rumours that several local authorities who see as their main duty the suppression of unrestricted money-making may decide to dictate what hours the centres should keep. That would be ruinous, so the bowlers claim, in cutting down the number of people they cater for during the 14 or 15 hours a day they now keep open and would reduce their businesses to unprofitability. It is freely forecast that general restrictions on bowling hours would kill the game altogether. While so many people are enjoying themselves, and so many others making money (that most innocent of employments) this would be a pity; but no doubt the skittle alleys of the west would continue unmoved.

NOTES OF THE WEEK

GERMANY

In Retreat from Moscow

So Dr Kroll, the west German ambassador in Moscow, has not succeeded in thwarting his enemies again. The compromise devised last weekend by Herr Schroeder, the foreign minister, after Dr Kroll had been recalled to Bonn for inquiries about his alleged loose talk and defeatism, was by no means a total victory for those in the foreign ministry and elsewhere who sought to displace him from his Moscow perch. After a long spell of leave, Dr Kroll is to return to his Moscow post in early May and will remain there until the autumn, when there is to be a major ambassadorial reshuffle. He is then to return to Bonn to take up a post as an eastern specialist in the foreign ministry.

Herr Hartlieb, number three in the Moscow embassy, who uninhibitedly told German journalists that his "deluded" chief would certainly precipitate "another crisis in April" if he returned to his post, has been recalled to Bonn as a visible scapegoat. But, for all the sugar on the pill, the fact remains that Dr Kroll is to go. Dr Adenauer, who in January protected his ambassador from his detractors in the foreign ministry, this time did not even see him. This most colourful and unorthodox of German diplomats is almost certain to be replaced in Moscow by a greyer figure from the Bonn establishment.

Dr Kroll's fall had personal as well as political causes. He has a way of alienating both subordinates and superiors. But there is no doubt that his fall was engineered by the powerful school in the Bonn foreign ministry which took exception to his ideas for a more flexible policy towards the East. Dr Kroll gets on well with Mr Khrushchev. He is just the man to start the friendlier relationship with Bonn which Mr Khrushchev seems to want. And he has forthrightly told the Chancellor what he believes.

West Germany's re-examination of its eastern policy will no doubt go on. The irrepressible Herr Dehler, the Free Democrats' former leader, has endorsed on television a remark by Mr Smirnov, the Soviet ambassador to Bonn, to the effect that Germany has been at war with Russia since 1932—a war cold, hot and now cold again. Outraged, the Christian Democrats are now seeking to remove Herr Dehler from the vice-presidency of the Bundestag. But in an unexpected switch of roles *Die Welt*, ashamed perhaps of its shabby part in the Kroll affair, has stuck up for Herr Dehler in the name of free speech. The whole great debate on Germany's future needs to be fought out in open public debate, not with the weapons of the smear and the backstairs intrigue.

BERLIN

The Hound of Spring

FOR five months, to the day, the Berlin crisis has been in hibernation. It was on October 17th that Mr Khrushchev withdrew his deadline for a separate peace treaty with east Germany, in the apparent belief that serious negotiations would follow. The only thing remotely resembling negotiations since then has been the series of five totally abortive meetings between Mr Gromyko and the American ambassador in Moscow, Mr Thompson, the last of them on March 7th. Dissatisfied, the Russians have now decided to bring the crisis out of hibernation.

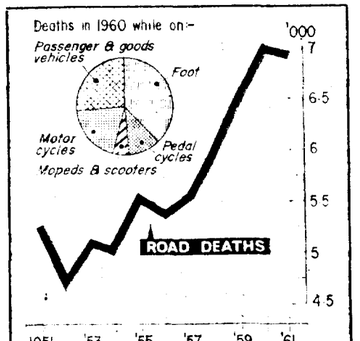
Mr Gromyko, in Geneva for the foreign ministers' disarmament talks, has once again raised the possibility of a separate peace treaty, a threat already made in *Pravda* on March 9th and *Izvestia* on March 11th. The Russians have also increased their efforts to frighten people out of using the air corridors to Berlin. On Tuesday, for the second time in a week, they sprinkled "chaff" in the corridors, small metal strips designed to confuse the radars that guide allied planes. On Wednesday night they threatened to send four of their own aircraft into the corridors at times and heights used by western commercial airliners, thus extending into the hours of darkness a dangerous habit they have developed in daylight over

the past month ; but they shied off at the last moment.

The animal emerging from its winter's sleep could be of three kinds. It could be the beginning of a really major crisis, involving a serious attempt to block the air corridors, and a Russian decision to hand over the responsibility for Berlin to the east Germans in a separate peace treaty soon. This is possible, but not very likely. The references to a peace treaty in the Soviet press have been conspicuously without a time-limit ; and the Russians can hardly relish the idea of a series of mid-air crashes, which is (at the very least) what a really determined attempt to close the air corridors would involve. The second possibility is that this is all a diplomatic gambit aimed at the Geneva conference. The Russians may be doing and saying unpleasant things with the idea that they can subsequently withdraw them at Geneva in return for, they hope, western concessions.

More likely than either of these possibilities, however, is the third explanation. This is that the Russians have now embarked on a campaign to remind the West of the consequences of not granting some kind of recognition to east Germany—the basic communist aim in the Berlin crisis. One consequence, they are in effect saying, is that your rights in the air corridors are not absolute, so that your airlines may have to change their flight plans from time to time, or risk having their passengers scared away. Another consequence is that the threat of a separate peace treaty can be revived at any time. The point is valid ; Dr Adenauer and General de Gaulle, please note.

FARM PRICES



Small Trimmings

The Minister of Agriculture is likely to have metaphorical turnips thrown at him by farmers for this year's price review, but he has not in fact hardened his heart towards them by quite as much as he could have done. After allowing £19½ million for increased costs, the maximum permitted reduction of guarantees under the Agriculture Act was some £14 million this time ; the effect of the price review is to reduce the figure by just under £11 million (compared with £5 million last year). Since farm income has been fairly buoyant, rising by over £25 million in 1961-62, the farmers cannot be said to have done badly. The estimated cost of agricultural support has risen to £339 million for 1962-63, but there is no guarantee that the estimate will not again be hugely exceeded.

Instead of setting himself a target for this year's guarantees, Mr Soames has settled for the actual reductions produced by the necessary changes in individual commodities. Beef is still regarded as a likely long-term winner (possibly with Europe in mind) although it is clear that competition in the shops from poultry is not going to diminish, and there are broiler turkeys coming along, too. It can be argued that housewives continued to buy beef last year, despite the failure of market prices to fall. What caused most trouble was the flood of poor quality beef ; the Minister has therefore decided to raise the standard at which cattle are accepted for the existing guaranteed price.

The reduction of 0.4d. per gallon in the guaranteed price for milk (a cut of 1d. per gallon in the pool price to farmers) is bound to cause a loud outcry among high-cost producers. But last year's idea that it would be possible to check excess production by some sort of restrictive arrangement, while actually putting prices to the farmer up, has visibly failed ; and the Government has sensibly decided to move nearer to management by market prices instead. It is intended to let the retail price of liquid milk cover the full cost of the guarantee in future. (Recently the shortfall in it has cost the Exchequer £8-£9 million annually.) The retail price of milk is now expected to rise by ½d. a pint for six months of the year. This is a step back in the right direction.

The Government is still pushing the National Farmers' Union towards better marketing arrangements. It has promised £1½ million over the next three years to assist in marketing research and development. The English and Scottish unions will now set up an executive committee, under an independent chairman, to vet and pass on to the Ministry the better schemes that come forward. This price review has been unhappily governed by promises made last year, to the pig industry in particular ; one consequence is that it fails again to take into account the over-riding need for readjustment in commodity guarantees on the eve of joining Europe.

MORE DRIVE WITH MORE CARE

In spite of an estimated eight per cent increase last year in motor traffic in Britain there was a reduction in the number of road deaths for the first time since the fuel rationing of 1956. A complete analysis of the accidents in 1961 is not yet available. However, one notable exception in the general decline in deaths was among child pedestrians : there were 534 deaths compared with 522 in 1960.

ART SALE

Let's See It

The uproar over the Royal Academy's proposal to sell the Leonardo da Vinci cartoon contrasts wryly with the apathy shown about it hitherto. Very few people ever asked permision to go into the council room at Burlington House to see it. The Royal Academy can be blamed for this: too few people knew of its existence. The current feverish excitement suggests that the Academy lost its chance in not advertising it and charging for a peep at it. But would people have then flocked in or is it simply that possesions are never so valuable as when they are in danger of being lost ?

The Royal Academy has every ethical right to make the sale if it wishes. It is a professional body whose main function is to run its schools of painting, sculpture and architecture which give free tuition between them to about a hundred students: this costs about £9,000 a year in overhead expenses, salaries and wages. In addition, it administers forty-five charitable trusts—annuities to distressed artists, prizes, student grants and the like—and runs its annual exhibition of works by members and non-members, without charging sales commission. The entrance fees to this and the loan exhibitions are its main source of income. But the Royal Academy no longer enjoys the big attendances of up to 450,000 that it had in the late 19th century, and its income is insufficient to meet mounting costs, which include a rate liability of £8,500. Fairly understandably, its council decided, by 28 votes in favour to one against, to realise its most valuable asset.

What is to be done about it ? There are only very few works on the scale of this cartoon by Leonardo da Vinci in the world and the mysterious quality of his draughtsmanship is unrivalled. It is one of the most important works of Italian art left in British possession. But it is not a question of saving something that has been of great benefit to the nation up to now, but of whether the nation can afford to add it to the national collections. The idea that the money for this great cartoon can be raised by half-crown subscriptions is pretty half-baked: there is no reason why the Royal Academy should budge much from the valuation price, which is probably around £750,000. If the work goes to a foreign buyer at Sotheby's, an export licence is likely to be withheld for a limited time to see if a buyer in this country can be found at the knock-down price. A better course would be to see beforehand if there are any rich benefactors who would come forward, and between them raise enough to meet a large part of the cost ; it might then become

reasonable to tempt the Treasury to make some contribution on the understanding that there should be a return for its investment in terms of it being readily viewable by students and art-lovers. The logical place for this cartoon, if it did pass into the national collections, would be in the print room of the British Museum alongside the drawings there by Michelangelo and Raphael. But it might be more popular to house it in the National Gallery. This particular issue apart, however, is it not time that the best of the art treasures in this country were given a little more publicity—and a charge made to see them ?

CUBA

Sharing

Social and economic upheaval in Cuba has meant that fewer goods are being shared out between more people. Rationing of a sort has been in force for some months, in that many consumer goods are hard or impossible to get hold of ; now Dr Castro has announced that from next Monday rationing is to be organised and official. Rice, beans and lard will be rationed everywhere ; certain other foods in the Havana area only, and soap and toothpaste in all towns.

Dr Castro blames these measures on the American economic blockade ; more decisive reasons would seem to be the dislocation of trade, the flight of people who know how to run an economy, and the new regime's own crashing errors of judgment. But it would be a fallacy to interpret the rationing as an augury of the revolution's failure. If Dr Castro's government has been successful in redistributing income between Cuba's rich and its poor, the number of people in the market for consumer goods is bound to have increased. In several Latin American countries, the larger part of the population is described as being "outside the economy." Such people do not contribute to the statistics of production, and they do not buy enough to be called consumers. There is little to be proud of in having shops that are well stocked, if most people are too poor to buy anything in them.

ALGERIA

10 . . . 9 . . . 8 . . . 7 . .

By the time this issue of *The Economist* is in readers' hands, they may know whether the peace talks at Evian between the French and the Algerians have come to an end ; or if they may not. The negotiators were, at noon on Thursday, still struggling with difficulties that, though small, are magnified by the suspicions and distrust bred by seven years of war. But there is no reason to suppose that hope will be cheated by a last-minute collapse of the talks ; no major obstacle is visible to the expected announcement that the composition of the interim government has at last been agreed on, that the Moslem *force locale* which is to help the French army keep order is about to be set up, that Mr ben Bella has been freed and that General de Gaulle is to address the nation. In short, the cease-fire.

What remains in question is the effect of these announcements in Algeria. The Secret Army Organisation continues to be very much in evidence—blowing up a wireless transmitter in Oran, killing 17 people on Thursday morning in Algiers, shooting the defendant (a Moslem nationalist) during his trial before a military tribunal at Bône. The SAO is planning to launch a general strike the moment peace is declared, and will certainly do everything it can to sabotage the settlement. The longer the Evian negotiations last, the greater the likelihood of Moslem demonstrations against the European terrorists—and such demonstrations are exactly what the SAO wants, in order to force the French army to choose between firing on the Secret Army or throwing in its lot with it. Already, it is said, many officers have assured the SAO of their support.

Meanwhile France was in a state of emergency this week. Troops have been confined to barracks. Anti-aircraft guns have been put on the roofs of public buildings. With the exception of the regular lines, no private planes have been authorised to fly over French territory. M. Soustelle's latest anti-Gaullist group has been dissolved by the government. And everyone, including, one suspects, the president, has remained totally uncertain what "D-Day" will bring, when the war without victor or vanquished (as it is supposed to be, for the sake of military pride on both sides) is ended.

The Economist

MARCH 15, 1862

RULES OF WAR

The rule that a neutral ship which carries enemies' goods must not be touched is effectual, because a belligerent who breaks it incurs a penalty. He thereby offends the neutral; he angers a *new enemy*. But a belligerent who covenanted twenty years ago and during peace not to touch the other belligerent's ships will incur no further penalty if he break that covenant. If we promise France not to capture her ships in a future war, and we do capture them in a future war, what is France to do? The remedy for international bad faith—the sole and ultimate remedy—is war; but France is already at war with us. What more, then, can she effect or attempt? . . . Precisely the same difficulty applies to the abolition of privateering. We promised France in 1856 that if we again went to war with her, we would not use privateers. But suppose in the next war we use that "Punic faith" which French orators so often impute to "perfidious Albion," and *do* issue letters of marque, what is the remedy of France? She has none. England would have incurred shameful dishonour in the face of all the civilised world, but France would have no effectual resource. Our bad faith might embitter hostilities, but during a French war it could not cause a French war. If the same nations who agreed to the first clause of the Declaration of Paris were to agree to an additional article declaratory of the security of floating property, the remedy and the effect would be as complete for the new covenant as for the first. War suspends or annihilates all treaties; but when the special object of a treaty is the regulation of warfare, no great nation could infringe it without perpetual dishonour. Even if, which is unlikely, any civilised Power could venture on so gross a breach of international morality, the other parties to the authoritative declaration of the rules of war might well choose to enforce those regulations by arms. France would have no remedy if we captured her ships or licensed privateers : but Russia or Italy might, and perhaps would, intervene to give her aid and punish our falsehood.

UNIVERSITY FINANCE

Off Target

In turning down the recommendations of the University Grants Committee on recurrent expenditure in the next five years the Government has made it virtually impossible for university expansion to meet its immediate targets. These were for 150,000 places by 1966-67 and 170,000 places by "the early 1970s" (now categorised for the first time as 1973-74). No doubt the Robbins committee will have *something to say about this in due course*. The Government hopes that the universities will still try "as far as possible" to reach 150,000 places on time, but it appears that there is a wide discrepancy between its estimate of the necessary resources and that of the UGC—which, in turn, is below the universities' own ideas of what they need. The restrictionists in the senates will now be digging their heels in even more stubbornly, and saying happily that they cannot afford to take so many more students now.

It is true that the Government is expanding the colleges of advanced technology and the teacher-training colleges (which now have standard three-year courses), and to a very limited extent the diversion to these institutions of the better kind of candidate for higher education is an advantage to them. But while the Government claims it has made provision for the 18-plus "bulge" (judged on the recent rate of university entrance) it surely has not sufficiently allowed for the consequences of the present expansion of the sixth forms, let alone for the further expansion in them that is sure

to come as more working-class children stay on longer at school. Unless the universities are unexpectedly ingenious (i.e. in applying some form of shift system) Britain's provision for higher education is going to remain even more ridiculously below the standard set by the north American, Australasian and many western European countries.

The 3 per cent across-the-board salary increase proposed for university teachers this year will not satisfy the dons who see themselves falling behind lecturers in the colleges of technology and the scientific civil service. In itself, this may not massively matter. But what does matter is that nothing discriminate is being done to staunch the outward flow of university teachers from those posts and universities where they are now most needed. The case for making discriminating awards in favour of the less popular universities and most understaffed faculties was argued in *The Economist* of January 27th. Although the idea of discrimination is hugely unpopular with most professional spokesmen, the fact remains that (particularly with new universities like Brighton making attractive bids for the more enterprising university teachers) the academic performance of some of the drearier civic universities is liable to become increasingly shaky.

NURSES' PAY

Underpaid or Overworked?

In accordance with the pay pause, hospital nurses are being offered an increase this year of only 2½ per cent all round. Is there, as they claim, a case for giving them much more? At the bottom of the nursing scale the student nurses in general hospitals are given a training allowance of £299 a year to begin with, rising to £336 in their third year, from which they have to pay £128 a year for board and lodging if they live in. This is certainly not princely; a shorthand-typist of 18-21, who has paid for her own training, can expect £10 a week. But a student nurse is being paid as she learns; whether she is satisfied with what she gets will tend to depend on whether she thinks she works harder than her student status justifies and whether the salary paid at the end of her training is worth waiting for.

Between 1949 and 1960 the total number of nurses had increased from 126,000 whole-time in England and Wales to 162,000; and the number of student nurses from 46,000 to 54,000. This is the justification for Mr Powell's statement on Monday that the "nursing situation is not disastrous" and that the nursing force is at its highest ever. In 1960, however, the number of student nurses declined for the first time for some years. For general hospitals the fall was insignificant (though the effect of the minimum educational standards to be introduced this summer has still to be seen); but in mental hospitals and hospitals for the subnormal the number of women student nurses, who are paid £53 a year more than those in general hospitals, dropped by over 6 per cent.

Like the teachers the nursing profession suffers from wastage among its young recruits, often (though not always) through marriage. Like the teachers, again, there is therefore less of an economic case for giving a big pay boost in these early years of service—although there certainly is a case for further improving their working conditions, since nursing still involves far too many unnecessary tasks and unnecessary discipline. But, among those who do stay on, a trained staff nurse receives only £525 a year, rising to £656; and a ward sister, for her extremely responsible post, £656 to begin with and £840 at the maximum. In other words, she receives the same as a three-year trained non-graduate teacher to begin with but £300-£400 a year less when she is in her thirties. (In mental hospitals, the scale is from £709 to £893.) What is really needed now is a series of discriminatory increases for trained nurses who stay on in the hospital service and in places where the shortage of staff is most felt. It should also be recognised that the London teaching hospitals, which have no staffing problem, have tended to be the dominating influence in nurses' pay and training for far too long.

BILLS IN COMMITTEE

MacFabian Tactics

The Scottish Grand Committee is supposed to spare English members (except those sentenced to make up the Government majority there) some of the homespun wit and wisdom of Scottish Labour members like Messrs Ross, Emrys Hughes, Manuel, Rankin, Willis and Dr Mabon. Last week, when the Government imposed the guillotine on the committee's pondering of the Housing (Scotland) Bill, the Commons learned how devolution really works. After 13 sittings the committee had still not disposed of the second of the bill's 37 clauses; Labour members opposed to any rise in the rents of Scottish council houses had, in fact, threatened to stop the bill's passage throughout this session. In putting his case to the whole House the Secretary of State for Scotland met five early attempts at a point of order (one from Mr Nabarro seeking equal time for England) and 16 recorded interruptions in an otherwise short statement. He must have felt at home.

In its present demoralised state, the Scottish Grand does not even pretend to air a balance of Scottish opinions. Of the first 33 hours of discussion on the housing bill, 29 were taken up by Labour speeches and almost all the brief remaining time by ministers. Tory backbenchers realised long ago that if they open their mouths it merely delays any bill's passage still further. At one stage recently four hours were spent in discussion (one Tory seems to have spoken) on whether to sit on Tuesday evenings or Wednesday mornings. A committee room on the Thursday night train north could be one solution.

Mr Marples's Transport Bill has also been seriously delayed in committee, and it, too, has now had the guillotine imposed. At the rate of progress in the first 23 meetings (60 hours' discussion, 18 of them from the Tory side) the bill would have been maturely considered by 1964, but the Government has decided it wants it back by April 6th.

NEW GUINEA

At Talking Point

Both the Dutch and the Indonesians have now accepted an American proposal for preliminary talks on New Guinea. Progress towards talks has clearly been painful on both sides. The Dutch cabinet sat round the clock on Monday, debating whether to send reinforcements to the island or to accept the American proposal, which Mr Robert Kennedy, the United States attorney-general, took with him to Jakarta and The Hague last month. After the meeting the Dutch prime minister, Professor de Quay, announced that no reinforcements would be sent and that the American offer would be accepted. As a further gesture of conciliation, the Dutch government on Sunday started repatriating the 52 Indonesian prisoners captured in a naval clash off West New Guinea on January 15th.

On the Indonesian side, the foreign minister, Dr Subandrio, announced on Wednesday after a flying visit to Bali, where

ELECTRICITY AUTHORITY ORDERS TWO I·C·T 1301 COMPUTERS

MAJOR ORDER PLACED BY THE NORTH-EASTERN ELECTRICITY BOARD

Long-term confidence in I·C·T products is the keynote of this order from the North-Eastern Electricity Board for two of the latest I·C·T *1301* electronic data processing systems. These computers are planned to handle the billing for the whole of the Board's area in two separate centres, one Northern and one Southern, to cover the five sub-areas of the Board.

As an integral part of the Board's ten-year programme for the introduction of centralised electronic data processing, it is envisaged that all other accountancy duties of the Board, including payroll, stores control, expenditure analysis and costing, will be likewise centralised in the two centres referred to above. It is also envisaged that to carry out these functions two additional computers will be necessary, and when the stage is reached for centralising these procedures, discussions will take place with I·C·T as to the type of computers to be installed.

The whole programme has been carefully evolved in collaboration with I·C·T computer specialists to ensure a smooth and efficient changeover to a co-ordinated electronic accounting system for all the Board's requirements. The basic advantages of speed, adaptability and expansibility-on-site make the I·C·T *1301* the ideal choice for such a programme.

President Sukarno is relaxing, that the American proposal was acceptable. There remains, however, some reluctance in Indonesia to unsay some of the bellicose things that have been said in the past three months. True, the latest Indonesian speeches are less intransigent than earlier ones, but Dr Subandrio said on Monday that military preparations would continue.

The Americans are in an optimistic mood. In part, this feeling reflects official approval in Washington of the sweeping Indonesian cabinet reorganisation announced on March 6th. Rightly or wrongly the change of structure and the changes of names are considered a blow to the Indonesian communists ; it is felt in Washington that had the Indonesians really been planning to take West New Guinea by force, they would have tried to please the Russians —who are supplying them with heavy arms —by including members of the Indonesian Communist party, as distinct from just fellow-travellers, in the cabinet. Officials in The Hague now seem confident that preliminary talks, aimed at determining the agenda for the main negotiations, will start soon, in the presence of some prominent American yet to be named.

BRAZIL

Return of the Exile

Woe unto those, said Senhor Jânio Quadros when he returned to Brazil last week, who would like to know why he had resigned so abruptly six months ago. Attack is a useful method of defence, but even without his strangely unenlightening curse, the situation in Brazil is sufficiently woeful. By suddenly walking out of the presidency in August after seven active months in office, Senhor Quadros succeeded in creating the political and economic shambles that was, presumably, his intention. Indisputably, Brazil is worse off without Quadros than it was with him ; on the other hand, many Brazilians are deeply reluctant to put their trust in so unpredictable and whimsical a national leader again.

The substitution of a parliamentary for a presidential form of government saved Brazil from the civil war that threatened when Senhor Quadros resigned. But with the president, the prime minister and congress all pulling in different directions, the impetus of Brazil's development programme spilled over into anarchy. Party systems began to collapse ; so did the tenuous relationship between the states and the federal government. With remarkable disregard for the country's interest, congressmen voted for laws that would line their own pockets. The cost of living last year went up by 42 per cent. The yawning budget deficit makes nonsense of the fact that about a third of all the money so far allotted under the American "alliance for progress" programme has gone to strengthen Brazil's finances. The reluctance of the United States Congress to hand over yet more money is discussed on page 1022.

Recently, there have been some signs of improvement. The government is trying to enforce an anti-inflationary policy, and congress has at long last agreed to do something about the parched and impoverished regions of Brazil's north-east. But in October there are to be congressional elections at which, it is easy to guess, Senhor Quadros will play a significant part. Although some of his former supporters are more wary of him, several of his former opponents, such as the formidable right-wing governor of Guanabara, Senhor Lacerda, have now apparently come round to the view that he is the best leader they have. The reception he got at Santos on his arrival suggests that his popular support is as large as ever. He has two constitutional alternatives: to work his way up to the premiership through a seat in congress, or to the presidency through the governorship of a state. But Brazil is a land of surprises, and Senhor Quadros has already shown himself an impatient man.

CAMBRIDGE DONS

The Quota Men

Cambridge has 430 university teachers —nearly half its total of all lecturers— who are not fellows of any college. Some of them rather resent this and would like to take on college duties and extra comforts if only they could find somebody to elect them. Others don't and wouldn't, although they are grateful for the chance to increase their earnings by doing tutoring and supervisory jobs for the colleges on top of their sometimes undemanding (minimum: 30 hours a year) lecturing responsibilities. For their part some of the colleges, particularly the poorer ones, could do with more fellows, if only they could afford to take on the chaps they like. This is the essential problem to which the Bridges syndicate has been addressing itself since 1960 and, voicing the customary approval of the college system with some cautiously liberal asides on the reform of teaching methods, the syndicate has now come up with the kind of solution that treads on as few toes as possible.

It suggests that the languishing lecturers can put themselves down on a sort of free transfer list, and the colleges will then have to pick the ones they want in order to bring their high tables up to the quota of one fellow to 16½ undergraduates (e.g., King's would elect none and Pembroke 15). This would absorb just under 200 extra-collegiate candidates in the next six years. The remainder, together with the university's 1,100 research students, would help to populate a new university centre-cum-club which the syndicate expects, rather against probability, to become the hub of the higher university life.

The bait for the majority of the colleges is the remission of the £144,000 a year that they contribute to the university coffers (or 7d. in the £1 of university income). This cash would pay the additional salaries of the new fellows. It would also sustain 60 new faculty lecturerships for fellows of colleges who do not now share in university teaching. It is doubtful whether these lecturerships will add significantly in calibre to university teaching resources, but they would certainly help the women's colleges, among others, to offer more attractive remuneration to some of their fellows. Since over half of the colleges' £144,000 is put up by three affluent ones—Trinity, King's and St. John's—the net effect of the remission would be that they will subsidise the poorer Selwyns and Magdalenes, which is probably quite right. One of the committee's most overdue proposals—for an extension of the seminar system, and greater inter-collegiate co-operation in supervisions —could certainly help to strike a better average standard of teaching.

CONSERVATIVE PARTY

Placid Pulse?

A rallying call by Mr Macmillan was, not surprisingly, the first business before the Central Council of the Conservative party, which began its two-day annual conference at Church House on the morrow of the Orpington débâcle. This council is a relatively little known political body, but not a wholly unimportant one. It is the governing body of the National Union of Conservative Associations and is made up partly of elected party faithfuls from the constituencies and partly of *ex officio* members. The *ex officio* members include the leader and chairman of the party : the general director and other officials of Central Office: all Tory MPs and those peers receiving the party whip who express a desire for membership. The council appoints the officers of the National Union, amends its rules when necessary and provides a forum for discussion and debate. In the past the council has had its recal-

citrant moments—as Mr Baldwin once almost knew to his cost in 1934—and in any major party crisis it could become the Tories' grand council and exercise a real influence on events.

The council meeting is generally regarded as a useful opportunity to allow the leaders to feel the pulse of dedicated party workers at the half-way point between the party's big yearly conferences; but this year the pulse does not yet seem to be beating as fiercely about such matters as Rhodesia or the common market as might once have been feared. Motions have been tabled criticising Government policy on the cost of living, transport, the distribution of industry (especially its continued concentration in the south-east and London areas), and its failure to communicate its policies to the electorate. This last is an especially widespread complaint at all levels of the party at the moment, as it usually is when by-election results are going wrong. For the rest, the motions suggest mainly that the local party office-holders are sticking closely to their grindstones, like the devoted workers for Conservatism they are. There is a demand from several associations that the limitations on election expenses imposed by the Representation of the People Act should be revised upwards. A controversial motion, unlikely to be passed, is that representation at the annual conference should be reduced. A somewhat quixotic motion calls for an increase in individual subscriptions by party members, but rules out any specification of a minimum sum. For the first time for some years there is no motion calling for flogging or birching: the Brighton conference has evidently done its work.

KENYA

Unnatural Disasters

LAST year Kenya was ravaged by flood, drought, pestilence and politicians; the result is likely to be a deficit on this year's budget of £2½ million, plus a bill for £1 million for flood and famine relief. At best, the deficits for the coming two financial years will be £5 million for 1962-63 and £7 million for 1963-64. There is also a £5½ million deficit on the 1960-63 development budget. What happens to the economy now depends upon the politicians who have been talking about a constitution, without much visible effect, at Lancaster House in London since February 14th. What happens to the politicians themselves next year may also depend upon their own efforts now. Life in Government House in a bankrupt country would be hard, independence or no.

At Lancaster House the Kenya African Democratic Union (Kadu) has presented a plan for a federal constitution involving six regions, each with its own armed forces and control over finance; an upper house in the central government would represent the regions, and it would have equal powers with the lower house. This plan is the result of fear of what the majority party, the Kenya African National Union (Kanu) might do after independence. Kanu started the negotiations with a search for a mildly decentralised Kenya government, with strong powers at the centre. In the bargaining so far, it is Kanu that has made the concessions, though its strength in the country is greater.

Kadu may now find that its turn for concessions has come. Kanu, against expectations, has conceded a second chamber (though as part of a unitary, not a federal, government); it has also agreed to entrenched constitutional clauses, and a clear division of powers between the central government and strong regional or provincial authorities. But, reasonably enough, these authorities would not be quasi-states, as Kadu seems to insist they should be. Mr Ngala is to be congratulated on extracting as much as he has from Mr Kenyatta and Mr Mboya of Kanu; now some means must be found of generating the kind of mutual trust without which no constitution of any kind can be made to work. The Kenya politicians should be able to agree, if all are reasonable, on a constitution that neither completely stultifies government (as Kadu's original plan would), nor lacks effective safeguards for local authorities and minorities (as Kanu's original plan did).

VIOLENCE

Blame the Immigrants?

FROM the two-day conference organised by the National Association for Mental Health last week on "Violence and the Mental Health Services," one fact is likely to be very widely bandied about, especially by supporters of the Immigrants Bill (which has now passed through the Commons into the Lords). This is the remark of Dr West of the Institute of Criminology in Cambridge that the rise in crimes of violence in London is largely associated with immigrants.

Dr West was in fact giving a preview of a forthcoming Institute report which will certainly show that immigrants accounted for a larger share of violent offenders in 1960 than ten years previously. Offenders from the Irish Republic accounted for 12 per cent, compared with just under 10 per cent in 1950; and those from the Commonwealth and colonies for 13 per cent, compared with 6 per cent. The share of offenders born in the United Kingdom fell from 82 per cent to 71.5 per cent. The total number of violent offenders doubled over the ten years, but the Irish ones rose by 153 per cent and the Commonwealth ones by as much as 321 per cent.

But before all these percentages enter into general folklore, note should be taken of what the immigrants' main crimes of violence seem to be. It appears that they accounted for nearly half of the convictions of violence arising from domestic brawls. These domestic brawls—many of them obviously relatively trivial—are still the commonest form of an offence of violence, and they serve rather misleadingly to inflate the total figure for violent offences. Even so, and including them, Dr West confirmed in his address that 95 per cent of all indictable offences in this country are offences against property and only 2 per cent concerned with physical violence against the person. Of this 2 per cent, only 3 per cent are associated with serious harm to the victims.

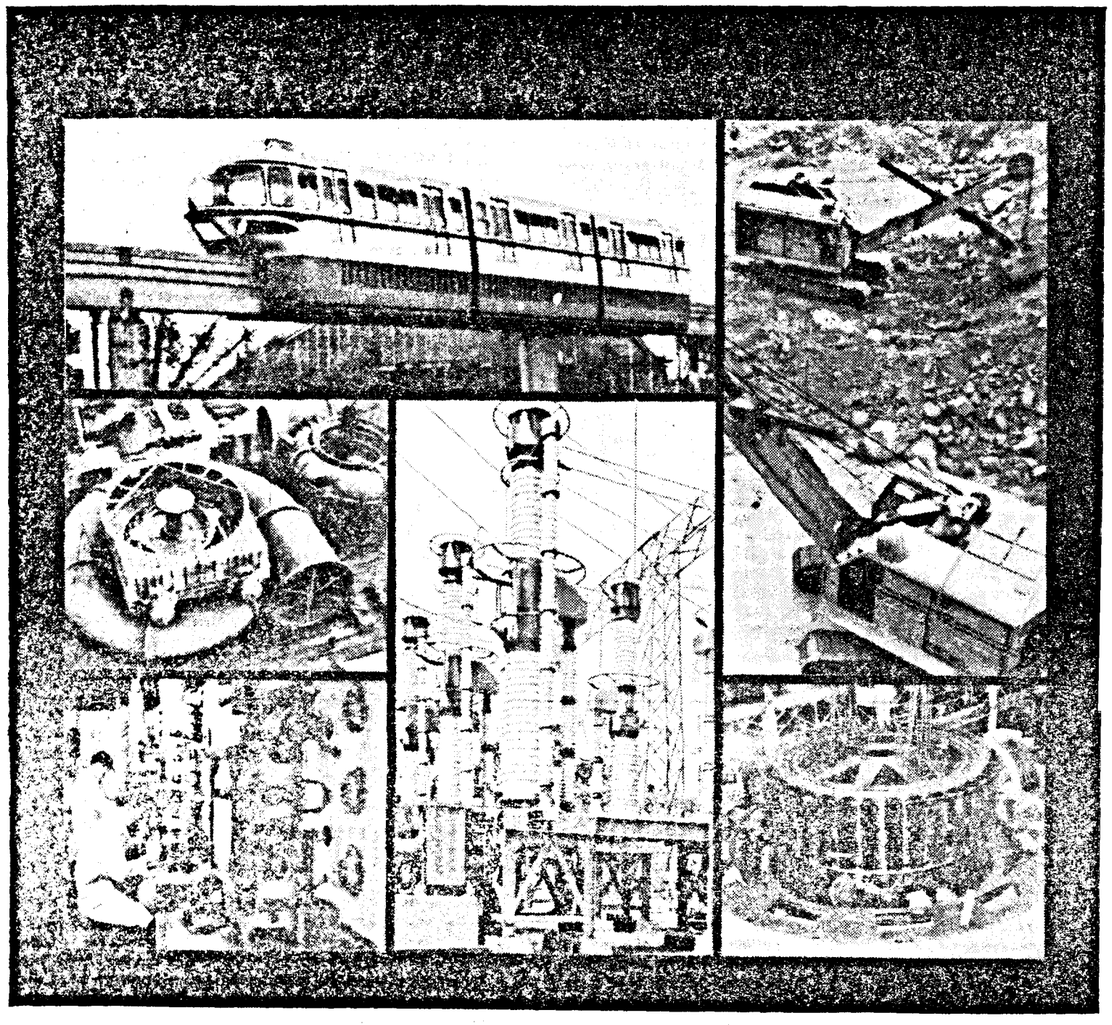
Adventure is all very well, but...

Intrepidity never ranked very high among the qualities required of a trustee. Then came the 1961 Act; and trustees were finally freed—and generally expected—to venture forth from the asylum of the old trustee securities into the jungles of equity investment. For how many this new freedom looked like the last straw we do not know. Yet there was (and is) no cause for despair. An investment in The M&G Trustee Fund is a complete, trouble-free (and economical) solution to the problem.

Although open to all investors, this new Fund has been specially planned to meet the requirements of trustees. Its income is distributed in accordance with trust law. It provides an investment in selected equity shares, widely spread and professionally managed—and in some cases not open to purchase by the trustees themselves. Life-tenants will welcome the respectable yield of the Fund, and some of them its high net U.K. rate. And ingenious provision is made for accumulation in those trusts whose income is to be reinvested for a minor.

Could you do better by bearing the burden yourself? If you doubt it, why not write (or send the coupon below) for full details of the M&G Trustee Fund.



Price **10/11d.** (March 7th) Yield **£4.17.3d.%** (gross) Net U.K. rate **7/- in the £** (estimated)

ELECTRICITY IS A MANY SPLENDOURED THING AT HITACHI

It's incorporated into 10,000 Hitachi products: turbines and generators, transformers and trains, electronic computers, home appliances, the miniaturized devices of the space age and just about any item you can mention if it's powered by electricity (and even some that are not).

It takes experience and plenty of know-how to make this infinitely complex equipment. What's more important is that all of it is 100% Hitachi — designed, engineered and manufactured under one responsible management which accounts for the unmistakable quality of any Hitachi product.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Reprisals at Southall

FROM OUR SPECIAL CORRESPONDENT

LONDON sprawls off to the north-west in a straggle of factories, cemeteries, railway lines and transport terminals that flow away from the high site-values of the city centre. The local economy is solidly based on the most expansionary industries in Britain: there is no unemployment, wages are high, the newspapers are packed with advertisements for skilled craftsmen. With other forms of light engineering, the motor industry thrives here. As always, it has brought along the troubles of prosperity. Labour relations in north London are proverbially appalling.

Unofficial strikes at a Rootes Group subsidiary at Acton last autumn and at Smiths Motor Accessories at Cricklewood showed just how tough and enduring the workers' resistance could be, as much to the advice of their own union officials as to the blandishments of employers. Communist activists are busy in senior union jobs in the area, and their presence is often suspected among shop stewards; they may have played some part in this resistance, but it would be absurdly complimentary to credit them with all the disruption. North London workpeople are used to good times, and are often buttressed against bad fortune both by savings and by the employment opportunities for women as well as for men. They are not people an employer can afford to get across, however good his record of labour relations.

AEC, besides making London's buses, are probably Britain's second producer of chassis, engines and parts for heavy commercial vehicles. The company (whose initials no longer stand for anything) employ some 3,500 hourly paid workers and 1,000 staff at Southall in the heart of the north London industrial area. They have not had a strike since 1936; they do not pay wages above the (admittedly high) odds for the area; they employ a high proportion of skilled men, since everything they make is custom-built and production runs are short by the standards of the vehicle industry. Labour-management bargaining, both sides claim with some pride, is hard but not unrealistic. Yet the company has now come in for a round of savage public denunciation. In the bluntest terms AEC, under pressure from the unions, sacked the only ten of its employees who refused to obey the one-day strike call sent out by the engineering unions on March 5th.

The first of these one-day strikes was on February 5th. All AEC's employees came out, save one. This unfortunate man stayed on at work for ten days before his life was made intolerable, and he left of his own accord. In some other firms, notably at the Jaguar works, open disputes broke out between managements and unions over the continued employment of men who refused to strike; in each case some agreement was reached whereby the employers climbed down and dismissed or suspended the non-strikers. Before the first strike the engineering employers' federation recommended its members to post a notice saying that the works would remain open as usual for those who chose to turn up. It withdrew this recommendation for the second strike, but AEC decided to post such a notice just the same.

On March 5th nobody turned up for the day-shift at AEC, but the ten semi-skilled and unskilled workers arrived to work the night-shift. Some of them, it is darkly murmured, were "put up to it" by an unidentified agency; the others may genuinely not have realised they would be so few, since there was some resentment among the night-shift men that the day-shift workers had been able to make up the earnings they had lost on the previous Monday strike by working overtime on the following Saturday morning. It is even possible that some of them were motivated by loyalty to the firm. It is far more likely that, despite the unpleasant fate of the solitary blackleg after the previous strike, none of them wanted to lose a night's pay in a nebulous cause.

THE reaction of the day-shift men on the Tuesday was immediate. Restrained by their shop stewards, they did not walk out of the factory; but they did agree unanimously (as far as can be ascertained) to ban overtime and to refuse to operate the plant's bonus system—which meant in effect that they were to go slow. It was plain that production would be disrupted: in view of what had happened on the previous occasion, it was also unlikely that the rest of the night-shift men would agree, in any circumstances, to work alongside those whom they thought to be blacklegs. For the management the solution seemed to be to cut their losses: local rumour reports that some kind of compensation was offered to the ten non-strikers, and that the possibility of returning to work at AEC at a later date was held out to some of them. In any case, out they went.

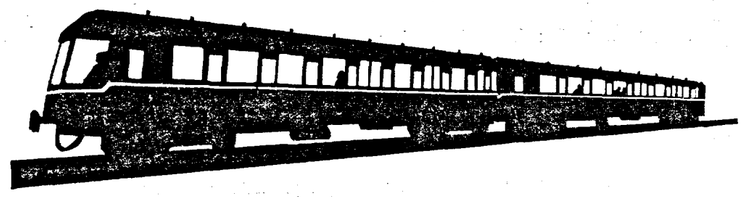
To start preaching to a firm in AEC's position is not immediately helpful, however much it might be justified. Certainly the result of their action was to penalise those who had followed the firm's invitation rather than that of the union. The hard truth is that AEC recognised the facts of industrial power in an area of full employment; and that power, in the well-run plant with its excellent record of labour relations, was exercised by the employees in pursuit of their wage-claim with no reference to official union opinion at all.

Retreat of the Diesels

FROM A CORRESPONDENT IN BRISTOL

THE intensive diesel train service in the Bristol area, for which so much was hoped by British Railways, has ended in failure less than three years after its introduction to the sound of public relations men's silver trumpets. In one of the most drastic reorganisations the region has known, seven hundred trains a week have disappeared from the new timetable—issued on March 5th. It is hoped to save £250,000 a year on these cuts.

Diesel trains arrived in the Western Region with a considerable success story behind them, mainly in heavy industrial regions in the north, where they had filled the need for fast, cheap and clean transport to and from the larger population centres. In the Bristol area they replaced most of



the old steam trains, and formed the basis of an intensive railway network which increased train mileage by 42 per cent, and radiated from Bristol to Taunton, Weymouth, Westbury and Swindon. New services outside the peak morning and evening hours, and on Sundays, were heavily advertised in the hope of forming new travelling habits among Bristolians.

But the experiment failed. Only 44 out of 2,292 trains a week carried the economic load of 60 passengers; three-quarters of them had less than 20 people on board, and on some there were more railway workers than paying passengers. Most of these empty trains will fall under the reorganisers' axe; in addition, more than 30 small stations will close after 7.30 on weekday evenings, and only the principal stations will be served on Sundays.

Two reasons are given for the failure of the experiment and both of them are well-worn. Too much use is being made of private transport and, where it is not being over-used, people are merely staying at home with the telly. There is no reason, however, to believe that the proportional increase in car and television owners has been any greater in Bristol than in the West Riding of Yorkshire, for example, where the diesel train services have met with success. But there is, on the other hand, good reason to look more closely at the social, monetary and employment habits of northerners as compared with Bristolians—and to ponder on the differences between the dense triangle Leeds-Bradford-Wakefield and the green-belted, languorous city of Bristol. Rightly, British Railways have decided that "they [the public] have demonstrated they do not require frequent rail service during the middle of the day and in the evenings. . . .". They might easily have discovered that before they offered the unwanted and presumably expensive service.

RAIL services outside the peak travel hours ignore the small demand for travel at those times. Ten trains are of no more use to a Somerset villager than one if there is nothing to attract him at the other end of the line—as there generally is not in Bristol. Even if there were, the main-line station is a bus ride from the business, shopping and social centres of Bristol; but most buses that serve the country areas go through them on their way to other points in the city.

Even now the future of diesel train services in the Western Region is still in doubt. "It is by no means certain that the modified service will pay its way," British Railways declared. "We can only run a service which the public patronise in sufficient numbers." A great deal plainly depends on Bristol's future as a social and shopping centre; the chances of attracting people there during their leisure hours were hardly improved earlier this month when the city's planning committee rejected a £2 million scheme for an entertainments centre which, with its ice rink, bowling alley, cinema, ballroom and banqueting suite, would have provided recreation for nearly 5,000 people at a time.

The Letchworth Story

FROM A CORRESPONDENT

ON Tuesday what may well be the last act in the drama of Letchworth Garden City will be played out in the House of Commons. The private bill promoted by Letchworth Urban District Council will then get its second reading and, if it is accepted, will provide for the transfer of the freehold ownership of this town of 25,000 people from its founding but not unaltered company, First Garden City Ltd., to an independent public corporation. This transfer is intended to put a stop, once and for all, to the erosion of the principles on which Ebenezer Howard and his associates founded the town and the company in 1903.

The company pursued an undisturbed administration of the Howardian ideas for over 50 years, owning all freehold in the 4,700 acres of Letchworth, paying out 5 per cent per annum on the stockholders' investment of £400,000, and charging ground rent at site value only (that is, unmodified by whatever improvements the lessee chose to make). It promised to wind itself up and transfer itself to a public body when the time came (in about 1970, when the population would be 32,000 and the development would be finished) and to return to its stockholders not only their original £400,000 but 10 per cent on top of it.

But things did not work out quite in that way after 1954, when Conservative town planning acts replaced the Labour nationalisation of development value, and the original memoranda of association of the company were not reinstated. The early restrictions went by the board and the company produced a double dividend to ease the hardships of investors bewildered by the falling pound. Thus some of the profit which ought to have gone back into civic improvement went to stockholders; and other less mildly acquisitive eyes began to be turned on First Garden City, which was ripe for a takeover.

The first bid failed; but the second, by York Hotels Ltd. and Mrs Amy Rose, managed to capture more than half of the voting rights in First Garden City (largely, according to Howardian ex-stockholders, because they promised to play the game with the founder's ideas), and set about altering the town's concept. Freeholds were offered for sale, rents on renewed leases were quoted rather higher than site value alone would justify, and some troublesome members of the board more interested in ideas than money (one of them was the Minister of Housing's nominee) had to resign.

The urban district council and the lessees saw the beginning of the disintegration of the ideas which had started the town, and acted almost immediately. The UDC posted a notice of its intention to promote the present bill (and foiled any further profit-making from freehold sale by blandly assuring those concerned that everything at the date of posting—June, 1961—would be counted as belonging to the company).

THE price of buying First Garden City might be, if the UDC and the lessees could depend on the inviolability of company articles of association, as little as £440,000—the original investment and a bonus of 10 per cent. On the other hand, it could be as high as £3.7 million, which is Mrs Rose's valuer's estimate of the value of the estate to Mrs Rose. An independent valuation, which envisages the continuing unity of the town rather than its exploitation as development land, puts it at £2.4 million, and this is likely to be the final price.

The corporation would have to borrow this money, and the servicing of such a loan would be beyond the resources of its income from business (about £100,000 a year); at least a 1s. 3d. rate would have to be levied by the UDC to make it up. However unfair this may have seemed to leaseholders, they have accepted the burden by a vote of seven to two in a recent town poll; and parliament's reaction may well be much the same, in the hope of preserving intact this monument to town planning on which much of Britain's new-town building, with all its prestige, has been based.

GO TO IRELAND IN STYLE BY AER LINGUS

direct from eleven points in Britain

Only Aer Lingus offers this comprehensive service—flying from *eleven* points in Britain to Ireland's *three* holiday centres: Dublin, Cork and Shannon. By taking you all the way from your nearest big airport right to your holiday destination, Aer Lingus cuts travelling costs—and the fares are surprisingly low. Aer Lingus will take you to Ireland in 90 minutes or less—flying high above the Irish Sea in real style. (With no luggage worries, no tipping, and free refreshments on the longer flights). See your travel agent.

"The average Northern Ireland Housewife controls a greater weekly expenditure on . . .

Household and Personal purchases than the average British Housewife"

This is one of the findings of "The Distribution of Consumer Goods in Northern Ireland" commissioned by Ulster Television and just published.

You can reach these housewives—housewives with greater buying power—more effectively through—

Ulster Television

FACTS

★ Four out of five people in Northern Ireland are in Ulster Television's transmission area.

★ Ulster Television has a higher number of potential viewers per household than any other area.

★ The average viewing hours per home are consistently highest in the network.

★ Ulster Television holds the record for the highest rating for any Independent Television programme.

★ Local viewership loyalty is second to none (one local peak-hour programme, "With a Fiddle and a Flute" has been in TAM's 'Top Ten' fifteen times).

These are the facts . . . and facts are what you need if you are to sell.

Going Into Orbit?

The junction with Europe may help to alleviate Irish decisions, but it will require even greater efforts to move with the times

IRELAND, in the last few years, has risen above the horizon of its past. Irish diplomats in New York, Irish soldiers in the Congo have thrust themselves upon the world's attention. Economically, too, both the Irelands, north and south, are headed for new orbits in a European and, quite possibly, an Atlantic context. Neither of them is likely to prove a wholly complaisant satellite, and neither of them is likely to rush trustingly into the other's arms at the behest of a wider political community. But Ireland as a whole is changing, and these changes are of immediate importance to the peculiar relationship that exists between the two off-shore islands of north-west Europe.

Since the southern counties of Ireland broke out of Britain in 1922, the realities of that relationship have often been hard to perceive. It has been tempting for Englishmen to dismiss the Free State and the Republic as a mere provider of builders' labourers and rumbustious playwrights. In southern Ireland the very breach had the effect of discouraging any articulate contact with the outside world; previously the outside world had very largely been Britain, and that was something to forget. By contrast, the Ulsterman's reaction was to reaffirm that he, at any rate, was British—and he still does so, sustained by an historical conviction as positive and as prejudiced as anything in the south.

Today, almost through the interstices of prejudice, an Irish personality is asserting itself once more. It is a curious and an attractive mixture. Some of its attitudes badly need sorting out. Irishmen were Europe's first anti-colonialists, and now some of them are the last passionate loyalists. On the fringe of Europe, Ireland looks in many ways to America. Speaking the language of the Anglo-Saxon powers, the Irish by temperament seem to have much more in common with the Latins. The Celtic world, dour in Belfast, volatile in Dublin, retains the defensive instinct of centuries. But if the periphery of Europe is to remain viable it knows that it must brace itself to meet the outside world once more.

Now the important thing in Ireland is the rise of a generation that does not remember the past of violence and passion. It has not won the day yet, by any means, but it will do so, given half a chance. In the Republic there are still people who insist on ordering their Guinness (to the bewilderment of the barman) in the Irish language. In Belfast the Orange lodges still parade with fife and drum to celebrate the victory of King Billy over the Papishes. Most damaging of all, the threat of burnings and shootings along the border is not over even now that the diehards of the Irish Republican Army have formally called off their latest six-year offensive. But in the glens of Antrim young girls are setting off to the factory each morning, not caring about the religion of the girl on the next bench. In County Mayo country lads spend their evenings at the vocational school, learning with sturdy application the art of tractor maintenance.

The poet Yeats had a prophetic vision of the dull days that would follow the terrible beauty of the fight for independence: "What need you, being come to sense, but fumble in a greasy till . . .? " This, precisely, is what the Irish are now learning to do: they have realised that, if they do not, their sons will simply leave home altogether. North and south have different problems: for Ulster the need is to rebuild an industrial economy whose two main props—linen and shipbuilding—have weakened under the strain of technological progress and foreign competition. The Republic must start from scratch, having never had an industrial tradition at all. Their methods are basically the same, involving much direct government initiative and support. It might even be called a kind of socialism, were not the northern government staunchly Conservative, and the southern one devoutly Catholic.

Both economies, if all goes according to plan, will shortly have to face the biggest test of their forty years' experience: open competition from and with the whole of Europe. They will also be opened to each other—and this is, perhaps, the best hope that reunification of the country will one day come about. In the south this is something that politicians shout about; in the north, which has lived with the constant menace of bombs along the border, there is a greater reticence. It is obvious that sensible accommodations on trade will alleviate the real inconveniences of partition. But at present the northern Protestants feel themselves threatened by their large and poor Catholic minority in a way that southern Catholics do not by their tiny (but rich and powerful) Protestant minority. Eire admired its Protestant first president and boasts of its Jewish lord mayor of Dublin: until Ulster can feel a similar pride in a comprehensive Irishness, southern harping on the prospect of reunification within Europe is likely to damage a cause better served by silence.

There is probably far more Irish agreement on joining Europe than appears on the surface. Ulster Unionist members of parliament (at Stormont or at Westminster) are often identifiable, outside Belfast, as rather right-wing Tories, and are unlikely to be more favourable to any apparent abandonment of the Commonwealth than their English fellow-Conservatives on the same wing of the party. Their doubts are probably not shared by most northern businessmen, who have a rough confidence in their ability to sweep the board in fair competition with the protected industries of the Republic. Some businessmen in the Republic feel that this is indeed a threat, but do

not want to admit their incompetence by saying so.

The free passage of goods may be achieved earlier than the free passage of labour. It is a little difficult to believe that southern labour will flock to the north when and if Ulster's Safeguarding of Employment Act is repealed. Rightly or wrongly, people in the south and west do not regard present-day Belfast as the best place to go to for work. But if potential workers and voters from Donegal were to flow into their natural centre at Londonderry, the effects on the politics of that bastion of partition could be decisive. Presumably also, the Treaty of Rome will at least equalise farm prices between the two Irelands, thus ending the enviable position the Ulster farmer occupies at present in southern eyes. The gradual equalisation of social services will remove another instance of disparity. These prospects, a nationalist might claim, surely add up to the eventual ending of partition.

Perhaps they will. But the continuance of racial and religious feelings forms a barrier which no one, especially in the south, should forget. It affects both sides. Partly by good luck, partly by deliberate policy, the Republic has been spared from any problem of religious division. There are those in the south who have no great wish now to see the battlefields of Aughrim and the Boyne brought into the Dail. In the last resort, however, the biggest weight in the scales is likely to be the economic future of Belfast. It is there that the divisions of northern life are most bitter and most equally balanced. It is there also that Catholics and Protestants alike have most difficulty in getting work.

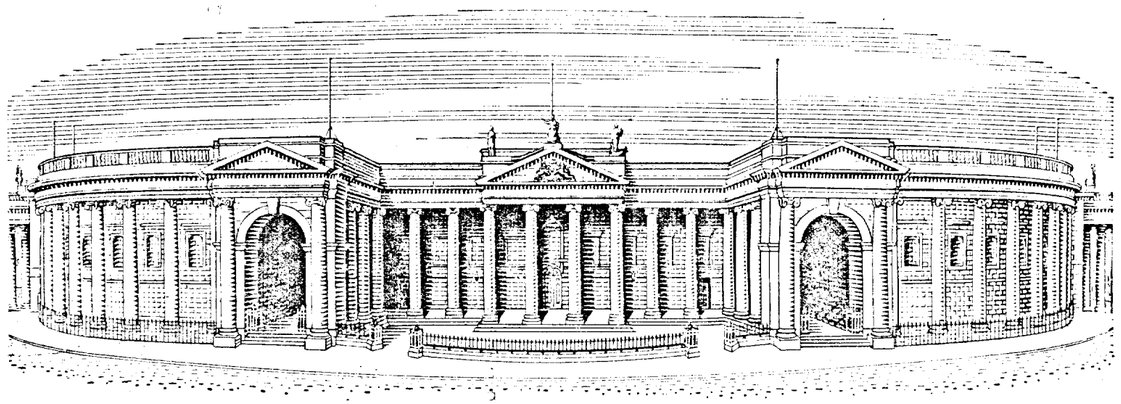
Within Europe, however, the Irish farmer sees one hopeful prospect: the market for the beef that he produces so successfully should get progressively larger and more prosperous. Given the will to develop a rational farming structure, Ireland —south or north—has more positive incentives to join the common market than the necessity of following willy-nilly behind its chief trading partner. But both Belfast and Dublin have to think now about the problems that will face not only Ireland but all the fringe areas of Europe: about the kind of industry (beyond that serving any small local market) that can exist successfully outside the dynamic triangle between Birmingham, Paris and the Ruhr. Ireland can offer labour, but it needs to train it. It has had some bright ideas (like the Shannon industrial estate and the man-made fibres complex around Carrickfergus), but it needs a more general sense of enterprise. It can hope to make itself a tourist centre (as well as a funk-hole for German capital), but it needs to develop an external communications network that will really link it to the European heartland. Forgotten for so long by Britain, Ireland cannot now afford to let itself be forgotten by anyone.

Dublin's Quandary

After the crowded year of Ireland's visible demonstration of influence at the United Nations, at once an exhilarating and (in Katanga, at least) an occasionally painful experience, the foreign relations of the Republic are at something of a crossroads. The Republic does not have to choose today between active neutralism and equally active political participation in Europe, and it hopes, in its heart of hearts, that it will never actually have to. Outsiders (*in* New York or Brussels) would be unwise to ignore the Irish past altogether and insist, merely for the sake of logic and tidiness, that the Republic should fit itself irrevocably into either framework. A state that can effectively help to bridge the gap between the West and the underdeveloped world is worth a little cosseting by both. But last summer's application to join the European Economic Community has meant that a choice of emphasis for tomorrow has had to be thought about in Dublin ; and in some quarters it may already have been made.

The Irish difficulties over joining Europe are not always, even in Dublin, fully defined. It is not solely a matter of economic readjustment, though no one believes that the removal of tariffs will be a simple matter. Nor is it solely a problem of entering an alliance although that, also, sets up strong resistances. It is rather that going into the EEC, even as an associate member, represents a reversal of policies that have been taken as traditional. Although Irish delegates have been enthusiastic participants in the Council of Europe, it is a much more settled orbit that the common market demands.

In practice, Irish self-government has meant isolation. It need not necessarily have been so: the nationalists of the nineteenth century never stopped talking about Ireland taking its place among the free nations of the world. The reality was different. The Free State did join the League of Nations without delay but the organisation with which it had most to do in practice was still the British Commonwealth, fashioned by the Statute of Westminster. The Imperial Conference of 1926, at which Kevin O'Higgins played so active a part in the formulation of the principle of equality between



The neutralist's burden : Irish prisoners in Katanga

the nations of the Commonwealth, was the high-water mark of that association. The tide turned sharply when Mr de Valera came to power in 1932. During the 1930s Ireland was at loggerheads with Britain and found little to attract it in Europe. Neutrality during the war was almost an instinctive continuation of that policy ; and the successful maintenance of neutrality meant that the principles on which it was based were never questioned. The process was taken a stage further still when Ireland left the Commonwealth in 1949.

For a generation, therefore, the Republic has had no formal association with any group. Admission to the United Nations in 1955 filled a void ; and the eagerness with which the activities of the Irish delegates was followed suggests that the existence of the void had been felt. But there has been no unanimity over the implications of taking part in the Congo operation. For the most part, there has been a strong instinct that Irish troops should be maintained in the Congo, once they had been sent: there have, after all, for long been Irish priests there. There is also a highly vocal opposition to Irish participation in votes against the colonial powers. A variant of this attitude is the claim that the United

ELECTRONIC CONTROL PUTS THE FINGER ON PROFIT

The profitability of many industrial processes depends on accurate methods of weight control. And as competition hardens, both at home and abroad, profit margins are becoming tighter. Increased profits come from decreased wastage of materials and better use of manpower—direct results of faster handling and more accurate, sustained control of materials. In view of this, more and more industries are turning to automation, using Avery weighing equipment with electrical and electronic control systems.

Avery have perfected weighing mechanisms coupled with punched card and tape machines which provide fully automatic and foolproof operation for all kinds of control processes. The use of electronics has enabled ultra-sensitive weighing mechanisms to operate control systems, computers, typewriters and other business machines. Where a lower order of accuracy is acceptable Avery also supply load cell weighing installations with the associated instrumentation and control systems.

By linking such modern sciences as electronics and solid state physics with two centuries of experience in weighing, Avery have achieved a combination that is profiting trade and industry.

AVERY

Nations is an instrument of communism against Roman Catholic France and Belgium. This approach is, fortunately, not widely shared. But it does cut across what ought to be the lines of division over entering (if asked and allowed) the EEC and Nato. It may be suspected that many of those who support sending troops to the Congo (and after all, it is nothing new for Irish troops to go abroad, except that in the old days they were Royal Dublin Fusiliers and Connaught Rangers) are not anxious to involve Ireland in any commitments nearer home. On the other hand, in spite of the Irish equivalent of Auld Alliances, there is a notable lack of enthusiasm for France and Germany. How much better it has been, the rueful reflection runs, to deal with the British who disregarded logic.

Eating's one's cake and having it seems an unlikely achievement. The prime minister, Mr Lemass, plainly wants to go in (again, if and when asked) to the EEC as a full member. If that involves joining Nato as well, the further step will have to be taken. But it will not be all that easy. Mr Lemass does not have a clear majority in the Dail. He will be propounding a line of conduct which is bound to be uncomfortable, and it is not a convincing argument to reply that the alternatives might be even more uncomfortable. After all, prophecies that the country would be ruined by the political and economic dispute with Britain in the 1930s, and by neutrality and leaving the Commonwealth in the 1940s, were proved false by events. Ireland has a great deal less to renounce, for Europe's sake, than Britain: though a surrender of sovereignty for a relatively new nation state is always a bitter decision. But, unlike the British, the Irish have to persuade themselves (and against all the evidence of experience) that no country can be an island to itself.

Towards the Take-Off

Face-lift for the old exports—and some new ideas too

WHEN the southern counties of Ireland set to work to assert their political independence of Britain, geography sternly ruled out the formation of any new economic alliance to replace Britain as the market for agricultural produce and the chief supplier of manufactured goods. But new-found national self-respect made it necessary for the Irish to minimise the outward signs of their continued dependence. Throughout the 1930s and well into the last decade, the policy of successive governments was to encourage home production for the home market. Companies established in Ireland had to have at least a nominal majority of Irish shareholders: tariffs and quota restrictions were smacked on to protect these domestic (and usually very high-cost) industries. The Republic has never even become a member of the General Agreement on Tariffs and Trade. The policy-makers' plight was that of all tributary economies which have the political will, but not the bargaining power, to find a viable alternative to continued payment of tribute.

Nowadays, such countries turn to socialism. But Ireland is not simply buttressed against the left by Roman Catholicism: it is a country of small landholders, and the potential time-bomb of agrarian discontent had been disarmed even before independence by large-scale land-distribution schemes. Apart from a few firms —the Guinness brewery, Jacobs biscuit factory, the specialist manufacturers of chocolate crumb—the capitalists were not big enough to have new ideas nor competitive enough to sell abroad. The export of live cattle kept the foreign exchange accounts vaguely balanced. Emigration and stagnation were the true economic indices.

In the past few years successive acts of parliament have completely transformed the ingrown pattern of 40 years of independence. Fortunately, the continued prosperity of most traditional sectors of the economy has muffled the cries of those who might otherwise have protested. Foreign investment is no longer regarded as a threat of foreign domination: it is canvassed for by eager salesmen, coaxed and subsidised. Tourists are no longer considered eccentrics of retired Irish-Americans: hotels are built for them, roads improved and amusements provided. The good years of the past were largely based on accidents, on a good harvest, a period of high prices for cattle or wool. Now the Irish feel that they are making their own successes.

In each of the last two years, the national product has increased by 5 per cent. National income rose from £484 million in 1958 to £542 million in 1960. Inflation and strain on the balance of payments have so far been avoided. Exports have risen from £131 million in 1959 to £152 million in 1960 and £181 million in 1961. Imports, certainly, have risen even more. On the other hand, invisible earnings, especially from tourism, continue to increase. It seems plain that there is a substantial inflow of external capital. Although there was a payments deficit in 1961, the net external assets held by the Central Bank and official agencies rose to £112 million while those of the commercial banks (which are the true first line of defence) rose to £111 million. In the three years 1958-60 the average annual payments deficit was £3 million: it is not expected to be more than double for 1961.

The brightest part in this stabilisation was played by industrial production for export. Exports of manufactures have trebled in recent years and are now, at about £47 million a year, pushing up towards the traditional export of livestock. It is notable that this increase (which, it should be said, includes an element of raw materials) was over a wide front, extending from electrical accessories to clothing. This suggests that a fair part of the boom in 1960-61 was caused by conditions of demand in the United Kingdom.

State policy is the moving force behind the increase in industrial production for export. Substantial grants are offered to new concerns; hire-purchase facilities are available through the state-owned Industrial Credit Company; and the government is willing to take up equity interests in companies needing capital

for expansion or development. In one form or another these inducements have been available for some years past; they are now being sold hard and successfully abroad by the Industrial Development Authority.

Since 1955, 90 factories have been built with foreign participation in the Republic, and 15 others are building now: as a sample of the extent of state aid, during the year to March 1961 grants were given to 37 projects to a total value of £3.2 million. The average proportion of the cost of the fixed assets represented by grants was 40 per cent for the country as a whole. Of these 90 projects, 37 originated in Britain, west Germany being in second place with 22. Of course some of the factories are tiny, and none of them has had a decent run to prove its worth. But developments such as the Verolme shipyard near Cork, employing nearly a thousand people on the site of a former Royal Navy dry-dock where work in recent years has been spasmodic and uncertain, can do nothing but good to an economy in which industrial skills are all too rare.

But the cost of providing new jobs is very high, and there are occasional signs of undue rashness. The Verolme yard is very probably a sound investment, although the amount spent on it by the Irish state cannot be ascertained; at least it can offer some advantages over shipyards elsewhere, such as the elimination (after a long strike) of craft demarcation problems. The latest development on this scale is the project to establish an aircraft factory in County Dublin. The Irish government will provide half the capital of £3 million for the new company: it will clear the land and build the factory, and pay half the cost of the equipment and materials. The French firm of Potez, which already has a factory making heaters in Galway, will provide the other half of the capital, and the plans and know-how. It will pay no taxes for ten years. The Irish authorities presumably realise the extent of the risk they are taking.

The Republic may be going ahead as fast as it can with such ventures in the fear that membership of the common market will limit its freedom to act in this way. It is often argued that the economic community will be kind to its underdeveloped areas,

REPUBLIC: PRODUCTION FOR EXPORT

Live animals	32	39	45	55
Food, drink, tobacco	51	44	51	63
Manufactures and raw materials	13	35	44	47
Other	4	8	8	10

and that the community's social fund should spend its money on bringing work to the people rather than people to the work. Certain industries will, however, be hard hit. Vehicle manufacturers assemble their cars in Ireland in order to get under present restrictions (and to qualify the cars for the lower rate of taxation on Irish-assembled cars); there seems no reason why this should continue after the common market has caused tariffs and quotas to fade away. Irish workmanship has been notoriously bad in the car-assembling plants: a British-built Ford, despite the higher rate of road tax, usually has a considerably higher resale value than its Irish-assembled twin. This, indeed, is a principal justification for projects such as the Potez aircraft plant. Without the really top-skilled industries, say its supporters, how can standards be raised elsewhere?

The latest big worry is wage inflation. Highly skilled men have always been expensive, since firms in the Republic have to compete directly in wages with British employers. Now the current round of general wage increases, set off by last autumn's 17 per cent increase in the nationalised electricity supply industry, may well end up with all-round wages rises of well over 10 per cent. Certainly the low present level of production gives more leeway for wage rises than in more heavily industrialised countries. But the employers' organisation and the Congress of Trade Unions are busily discussing whether they can keep wage and production rises in line. Mr Lemass wants to set up some kind of national planning board. The government, industry and the unions are also co-operating on the new Committee on Industrial Organisation, which aims to put industry on its feet to meet foreign competition. While the unions and the native firms are taking it very seriously, it is unlikely that foreign firms with subsidiaries in Ireland (and there are a great many of these) would agree to being "rationalised" purely for their Irish operations.

The Republic is still primarily an agricultural country; and amid the excitement of industrialisation, it is sometimes forgotten that agriculture needs pushing as well. Cattle are prosperous enough: live beasts accounted for £55 million worth of exports in 1961. Starting from the west, more and more counties are being declared free of bovine tuberculosis; and, increasingly, cattle are exported as fat beasts, instead of as stores that need fattening in Britain. But much of Ireland's cattle production is still exported for fattening in the United Kingdom; since three months on British (often Northern Irish) soil qualifies the cattle for a British subsidy, Irish producers benefit indirectly from British agricultural policy.

But the traditional exports of butter, bacon and poultry have suffered. In particular, the banning by Britain of imports of Irish butter, to make room for imports from traditional suppliers like New Zealand, Holland and Denmark, caused resentment in Ireland; but export prices are kept unnaturally below prices at home, and it seems that Irish producers have for too long failed to pay attention either to quality or price. Foreigners with reason to know can tell some scarifying stories about (for instance) the state in which milk leaves the farm. But there are signs, particularly in the large, state-aided co-operative creameries of the southern counties, that propaganda on hygiene and quality control is having its effects.

The best news is that organisations like the bacon producers are at last trying to improve both the quality and the image of their products in Britain. The initiative of the state-owned Irish Sugar Company, which is setting up a plant for the accelerated freeze-drying of vegetables in Mallow, County Limerick, shows that a serious effort is being made to exploit Ireland's one geographical asset: its mild winters and lavish, even rainfall. Agricultural incomes have not risen in Ireland since 1953, while costs have been pushing steadily up, and the farmers have already staged some impressive, almost French-style, demonstrations against this trend. Politically it would be harmful for both the Republic and Britain if, for whatever reason, Irish farm produce ceased to sell in the British market. And no doubt there are ways in which the British could encourage the Irish to make the improvements that, slowly, they are beginning to realise are needed.

The Republic of Ireland is now in process of surmounting the first, and most formidable, of economic humps—the transition from a peasant economy to a modern, mixed economy, in which farming becomes an industry like any other. It is not yet admitted that some of the most desolate areas should be left to tourism (and perhaps forestry), but the old aim, to preserve them as a kind of zoo whose inmates were remarkable only for their poverty and their faithful adherence to an almost dead language, is passing away with the philosophy of isolationism. There are high hopes of Europe, especially among those impressed by the figures that show how beef-eating spreads among the new rich.

But, once over this hump, Ireland will have another to face. Is Ireland to be to Europe what Wales and Scotland (and *a fortiori* Northern Ireland) are now to England—fringe areas, dragged to prosperity well behind the metropolitan complex? Republican Irishmen will glory in the reply that an independent nation has resources of will that subject peoples (like the Scots) have not. Within Europe, Ireland—including that other Ireland to the north—will have to assert a spirit that can buy and sell, not fight and die.

IRELAND

—where new export industries get maximum help

New industries exporting from Ireland are eligible for substantial non-repayable grants. These can, in some cases, amount to full cost of site, premises and training of workers, and half the cost of equipment. This is just one of the overwhelming advantages that are attracting more and more new industries to Ireland. Others include:

No Income Tax, no profits tax for 10 years on profits from new industrial exports from Ireland, plus 5 more years of reduced taxation.

Capital and profits can be freely repatriated to Great Britain. Ireland is in the Sterling Area.

Labour: all the workers you need at reasonable wage rates.

At Shannon Free Airport firms interested in the possibilities of air freight can obtain factories for renting, grants for machinery and for worker training, full tax-exemption until 1983 - and plenty of labour.

Mr. Gerard MacCarthy, representative of the Industrial Development Authority, will be glad to provide further information on what Ireland can offer your industry. Contact him at the Irish Embassy, 17 Grosvenor Place, London, S.W.1 (BELgravia 2171).

Or write for two informative booklets to:

THE INDUSTRIAL DEVELOPMENT AUTHORITY OF IRELAND

14 ST. STEPHEN'S GREEN DUBLIN 2. TEL: DUBLIN 61965

tories were offered at rents as low as £7 a week, but the response has been disappointing.

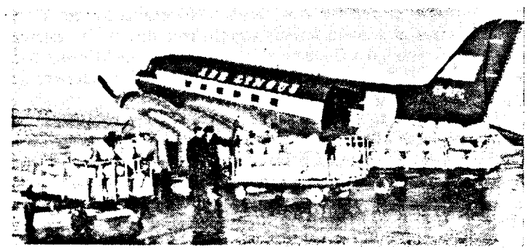
Native enterprise may be rare in Northern Ireland; or perhaps the enterprise is there but the capital is lacking. Money tends to flow out to more profitable investment elsewhere, and the secretary of the Belfast Stock Exchange believes the government should sponsor a local investment trust that would attract small savings. Even more serious may be the emigration of the native élite. One-third of the native-born graduates of Queen's University emigrate, mainly because they are offered higher salaries and better opportunities outside the province. On the other hand, since Ulster enjoys social services on the British standard, the relatively higher level of unemployment benefit and national assistance in a land where living is cheap may positively discourage the emigration of the unskilled. A further reason for the lack of enterprise (which other peripheral areas of Britain share) is the high preponderance of family control in the older industries. But these industries' expansion is hampered, in any event, by the small size of the home market and by what is assumed to be the crippling cost of transport overseas. Nearly three-quarters of Northern Ireland's products are exported; more than half the imports consist of raw materials.

UNEMPLOYMENT ('000s)

	1953	1958	1959	1960	1961
Northern Ireland	38·0	43·5	36·9	32·4	36·1
Per cent of labour force	8·1	9·3	7·8	6·8	7·5
Republic of Ireland	70·0	64·8	60·5	52·7	46·8
Per cent of labour force	9·1	8·6	8·0	6·7	5·7

Emigration from the Republic runs at some 30,000 a year; in 1961, for the first time, unemployment and emigration declined together.

Even Ulster's great surplus of labour is not the attraction it should be to modern industry. Nearly three-quarters of the unemployed are either unskilled or have very little skill. The government does its best to overcome this handicap by grants to employers who train workers on their own premises and by its own training centres. At these training centres, courses concentrate on new industrial processes—electronics, fine engineering techniques, advanced methods of welding and so on: they are available both to the unskilled and to craftsmen who need retraining for new industries. But key men like toolmakers and highly skilled machinists are still scarce.

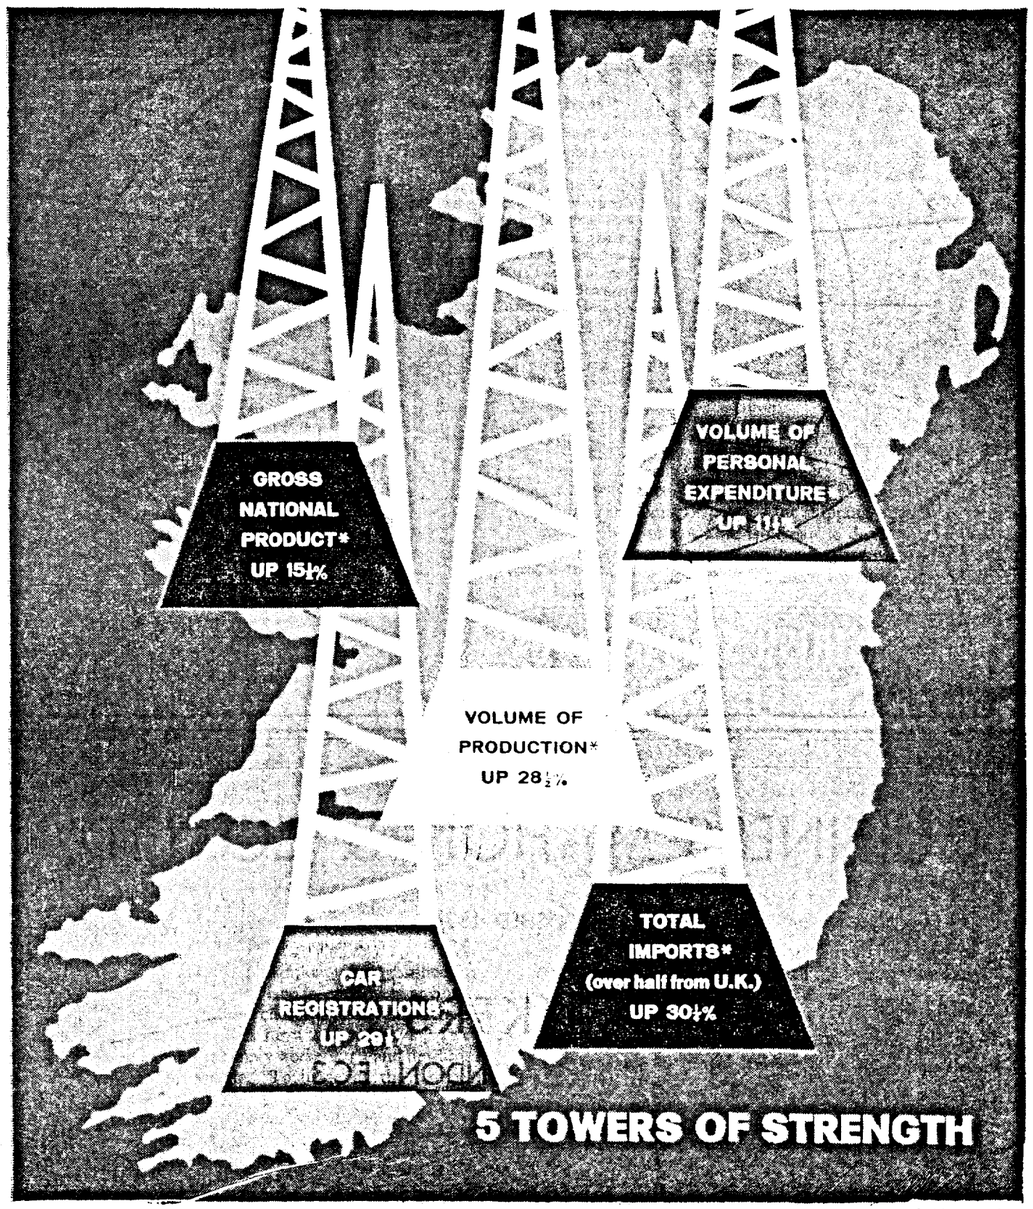


Northern Ireland has not exactly greeted the prospect of joining the common market with general acclamation. There are fears that membership could end the government's power to subsidise industrial development, and force the repeal of the Safeguarding of Employment Act by which the entry of alien labour is controlled. A similar uncertainty hangs over the farmers. Highly mechanised and, on most counts, reasonably efficient, the farmers do not fear competition from high-cost agriculture in western Europe but they would hate to lose the £25 million a year that they enjoy under British agricultural guarantee schemes.

Ulster's average farm holding is a little below 40 acres; as in the Republic, more than three-quarters of the farms are less than 50 acres. Thus, while the average farm in Ireland (both north and south) is smaller than in Britain it is 60 per cent larger than the average holding in western Europe. The Northern Ireland government is trying to encourage the amalgamation of small farms and the formation of farming partnerships. With a sharp eye to any potential threats from Europe, the Ulster Farmers' Union has formed a joint committee with the National Farmers' Association in the Republic of Ireland to study the effects of the European Economic Community on Irish agriculture as a whole; it is also, with the British National Farmers' Union, pressing the British Government to negotiate lasting guarantees for agriculture in the United Kingdom.

But there is another side to joining Europe. Already the prospect of economic integration has tipped the scale in Northern Ireland's favour in the eyes of several American firms looking for a stake in Europe. Northern Ireland, after all, is near the Continent, has natives who are friendly and English-speaking—and boasts golf courses that are unrivalled anywhere. For a firm with long-term plans the certainty of a supply of labour is far more important than its immediate degree of skill.

Finally, of course, the consequences for North Ireland, both industrially and politically, of common membership with the Republic in a free trade area could be immense. It would naturally remove the complaint commonly heard among the smaller Ulster industrialists that Ulster products often have to pay heavy tariffs, or face stern quota restrictions, on entering the Republic, while southern Irish products have the right of duty-free entry into the United Kingdom. A home market of 4.2 million people would be something worth competing for.



Western Approaches

For fifteen years, Shannon airport enjoyed a monopoly. The big airliners, setting off on the long transatlantic journey, needed fuel for their engines and meals for their passengers, and they needed these services as far to the west as possible. But just across the Shannon estuary stands a dreadful portent—the Foynes flying-boat terminal, rendered abruptly obsolete at the end of the war by the land-based descendants of the giant bombers. The Irish have made a hospital and a hotel out of the débris, but Foynes is a ghost town.

Now the boom of jet engines, crossing from London, Paris and Frankfurt to New York on the northern circle, could presage a similar fate for Shannon—and the coming of the supersonic airliner could put the seal on fate. Already some of the North Atlantic carriers want to use Dublin as their Irish stop-off, and have been angrily rebuffed by the government. The problem for Shannon now is to engender traffic to attract the planes: this need became apparent just when Ireland was turning decisively away from the ingrown economic policies that had been followed for twenty-five years. Shannon, it was decided, could not only survive as an airport: it could also provide jobs for the forlorn west of the country, attract foreign investors and bring in the tourists to the delights of Killarney southwards and Connemara to the north. In doing all this, the airport could act as a pacemaker to the whole economy of the Republic, away from the comparatively well-advanced centres of Dublin and Cork.

Airports customarily contain a duty-free shop attached to the transit passengers' accommodation: the logical extension of this at Shannon was to declare the whole airport a vast bonded area, with freedom from tariffs and quotas for all goods coming in and out by air, and freedom for factories within the area to do all the manufacturing they want. In 1958 the Irish government set up a company to undertake the industrial development of the airport area, which has been endowed with £3 million for capital invest-

ment and £1¾ million for grants to incoming companies. Factories, mostly built to an all-purpose specification in units of 16,500 square feet, are available, with the figure of £2,500 quoted as an average rent. Buildings can be custom-built on request: power, heating, and ample water are laid on. Subject to negotiations with individual firms, the development company may make cash grants covering half the cost of new machinery and the full cost of training workpeople. Incoming companies are exempt from all tax on export operations up to 1983, and pay only nominal rates: they are totally free to repatriate profits. As Irish products, most goods made at Shannon enjoy duty-free entry to Britain and the Commonwealth. Some established Irish businessmen have wondered what will come of this "bribing" of foreign investors but, since all production is for export, there is no need for complaints about the home market.

Twelve firms, four of them from Britain and two from Germany, are now established in Shannon: a Dutch company makes pianos, some neat Japanese make transistor radios: there has been only one failure. Expensive machine tools in some factories show that the new investors are taking the future seriously. One thousand people are employed on the industrial estate, and another 1,700 depend directly on the airport for a livelihood. Many of them would otherwise have emigrated to Britain or the United States, or gone to swell the rapid growth of Dublin.

By British standards this is a minor development, but for the Republic it is a revolution. Agricultural prices and subsidies have traditionally been adjusted to ensure a marginal livelihood for the peasants of rocky Donegal, Connemara or Kerry. In the green lowlands of the counties Limerick and Clare, where without human intervention the rain feeds the grass, the grass feeds the cow, and the cow transmutes itself into milk or beef, there has been no incentive to energy. The spur of real poverty, present elsewhere along the western seaboard, was never known here even in the darkest depression of the 1930s.

Unfortunately for nostalgic admirers of this apparent rustic contentment, its main social consequence was massive emigration. The young men—above all, the ambitious young men—went off to join the ranks of wage-earners in Detroit, Coventry or Sydney: those left behind slowly stagnated. The chief justification of the Shannon experiment, and the reason why the Irish government is prepared to back it so massively with capital and charm, is that it makes it possible both to be a wage-earner and to stay in the west of Ireland.

In the absence of an industrial tradition, of established trade unions, or of rival bargainers for labour, employers at Shannon find that labour is both plentiful and cheap. The development company quotes some basic wage rates for a 44-hour week: £11 7s. for tradesmen, £9 to £11 for assembly workers, £3 and upwards for male trainees and less for female. To judge by the number of trainees in evidence in the industrial estate, Shannon employers' wage-bills must be low enough for a British industrialist's rose-coloured dreams.

But the supply of skilled workers is a problem. Already many locals have been overseas to train with the parent companies and the Irish vocational schools will organise courses specifically tailored to employers' needs. Although they are apt to treat the topic extremely gingerly, employers also congratulate themselves that trade unionism has not yet affected the wages issue here; the unions, for their part, are doing their best to enrol these workers with no industrial tradition at all, and have organised a few strikes.

Even so, many supervisory jobs are still done by expatriate staff. These people are well paid for their trouble; their main problem is housing. Already, 187 apartments and ten small houses have been built on the airport estate, but the rent of a two-bedroom flat is nearly £4 a week. The nearest towns, large shops and cinemas are at Limerick (population 51,000) and Ennis (population 8,000), both of which are fifteen miles off: here, too, a decent flat is hard to find and costs around £3 a week, and there is nothing comparable to the English council house at a subsidised rent. The Shannon authorities often speak of the reserve of Irish labour, longing to return home, that is available in England. A large-scale housing programme will certainly be needed if these people are to reappear, and local resources can certainly not supply enough skilled labour for the target of 4,000 industrial employees by 1965.

Last year, as compared with 1960, slightly fewer passengers passed through Shannon in transit—although the drop was cushioned by the large number of charter flights, using piston aircraft at reduced rates, that stopped there; but there was a 23 per cent increase in passengers ending their journeys there and setting off on tours of Ireland from this convenient centre. Freight using the airport increased from 19,100 to 24,100 tons. Since so much transatlantic air freight is carried in the holds of passenger liners, both these increases make it more tempting for scheduled flights to stop off at Shannon.

With recent reductions in air freight rates, the latest idea that is being pushed by the development company is that of using Shannon as a bonded entrepôt where cargoes can be stored, broken down into small parcels for distribution to European markets, or made up into economic planeloads for shipping elsewhere. Any further development of this kind is certain to demand increased spending by the Irish government on housing, transport facilities and the provision of amenities for Shannon workers. But the will to surmount the troubles of the future certainly exists, both at Shannon and in the political parties in Dublin. Nobody dares to contemplate failure.

Foreigners' Ireland

Face of the west: but whiskey for tourists

FOREIGN investments and tourism are the white hopes of north and south alike—which is fortunate, for the first thing that Irishmen have to learn about foreigners is that, to them, Ireland is one island. Culturally, it has made a distinctive mark on the world: talking and drinking are widely recognised as activities in which the Irish excel, and which may fascinate the tourist while scaring the industrial investor out of his wits. But this image is very largely based on exiles' blissful, but unhelpful, dreams. The truth is that the Irish are very little different from other Europeans, except that they are poorer than most.

There are no known mineral resources, save for a chance coal-mine, a little copper, and the elusive (and now nationalised) Eldorado of silver on the farm of a Mr O'Reilly in County Galway.

There are two triumphant crops, grass and potatoes; there is a reserve of unemployed; and there is the precious asset of splendid scenery and a deserted coastline near to the industrial centres of Europe. In the north there is a great industrial tradition, which adds to the first impression of English or Scottish provincialism; in both north and south there is a precious smattering of new industry. But Ireland must now make the best of itself with what it has, and both its governments are determined to do so in a spirit (and this is important) of not unfriendly rivalry.

For Irishmen, unemployment is the country's bane: for foreigners it is a bait. Sites are available for building—and in many cases they are practically given away free, complete with ready-made factories. The language of both Irelands (in the face of successive Republican governments) remains the language of the sterling area and world trade.

To balance the industrial infrastructure of the north, the south offers a special bonus for employers in the absence (outside the Dublin and Cork docks) of a tradition of trade unionism. In the new Dutch shipyard at Cork, and in the Irish television service that opened in January this year, British-based unions were pushed into the background not so much by the employers as by the Irish unions themselves. For other, longer-term objectives the Irish unions—partly through canniness, partly through their lack of bargaining power—are prepared to bide their time.

For the foreign executive who accompanies a new firm to Ireland the balance is delicate. In Dublin a citified person might feel constricted, but could not feel unstimulated. Staunch residents of other Irish cities can make no boast save that they are easy to get out of. Ireland's attractions for the incomers are the country pleasures: the salmon falls, the mackerel-crowded seas, wildfowl, woodcock, golf, and the world's most petrifying fox-hunting. Field sports are ludicrously cheap and uniquely friendly.

The sporting prospects have always been a prime attraction to the retired Englishmen who choose Ireland for their home (although these have rather faded away since the days when the old Indian army and civil service disgorged their grizzled veterans by the dozen, and a flow of external funds, into the Irish countryside). But houses, vast and ramshackle or small and cramped, are still cheap by English standards. The past year has been described as a boom year for property, but it is possible to buy a new semi-detached three-bedroom house a few miles from the centre of Dublin for £2,500. Building sites in remote beauty-spots can be bought for a couple of hundred pounds: with local labour, another £1,000 should be enough for a comfortable home. Rough shooting or salmon fishing rights can be bought or rented at prices way below those asked in Scotland for comparable estates.

A GOOD farm in Ireland will fetch perhaps one-third of the price of something similar in England, and barely one-tenth of what people are paying in (for example) west Germany; and this fact has at last been discovered on the continent. All over Ireland, to the wild amusement of the locals, families from Hamburg or Munich are buying land and houses, investing in tractors and hiring managers and labour. These newcomers will usually explain that the Germans have a thirst for land that is easily slaked at Irish prices, but their motives are probably less high-flown. Many of the properties they are buying are being sold by English people who arrived in Ireland in 1947 to escape the dangers of a socialist government, and have now given up the unequal struggle with the natives. No doubt a good many German land purchases are motivated by the desire to put a few hundred miles between a young family and the Berlin wall.

Both governments, north and south, run tourist boards that try to attract the more conventional kind of summer visitor, and both have to contend with the high rainfall. They may have to contend with the industrial development people, too, one of these days. When the southern Industrial Development Authority advertises the beauty-spot of Clifden, Connemara, as a site for factory building it is hardly acting in tourism's best interests. To some extent, also, the promotion of mass tourism may discourage the free-spending, hunting, shooting and fishing kind of visitor who has contributed so much in the past. But the opening up of Cork airport this summer will put the warmest part of Ireland within easy reach even of weekend visitors from England, and ultimately from Europe. New car ferries and BEA's three-guinea off-peak flights to Belfast should also do much to increase the flow of visitors. The building of new hotels and motels is going on rapidly in both north and south; roads are clear and good; and, for those without their own cars, motor-coaches are replacing the uneconomic branch railway lines.

The edge of Europe: how much of an asset?

Even a casual visit to Ireland will do something to dispel the tradition that the people are feckless good-for-nothings. But if the Irish are really to convince the outside world that their country is a worthwhile industrial prospect a first need will be to improve their own outmoded standards of selling and design. Linen is the one Irish product of whose quality outsiders are easily convinced. Even Irish whiskey—different from but certainly not inferior to Scotch, and left for longer to mature—is often regarded as second best. The producers have now started to sell hard, and to advertise expensively, in the United States.

The Irish are at last conscious that, if they want to sell, and to give an impression of efficiency abroad, they must tighten up the quality of workmanship with which they have got by in the past. It is not easy for a country that has little modern tradition of good design, and whose home market has largely (in the north) accepted wholesale the taste of English manufacturers, or (in the south) suffered from a lack of overseas competition in consumer goods. The tradition of poor craftsmanship goes back farther than many Gaelic enthusiasts would admit: for example, this great dairy country has never invented or consumed cheese, and much of that now produced is only fit for processing into spreads. The Republican government lately showed its determination to overcome this disadvantage in the eyes of overseas consumers by inviting a team of Scandinavian design experts to have a look at Irish produce—and the publication of the scathing if sometimes ill-directed report that resulted must have needed a good deal of courage.

This, and more, is what the Irish really need to compete in consumer goods. For too long excessive loyalty has stifled criticism. In the north to this day criticism of the government is all too often regarded as a blow at the Imperial connection. In the Republic any questioning of (for instance) the government's policy of teaching Irish compulsorily in schools, or of handing the control of state schools over to Catholic teaching orders, may be smeared as a stirring-up of old rivalries. Inside or outside Europe, Ireland's leaders—politicians as well as businessmen—must prepare to face criticism as much as competition. By beginning to open the frontiers, the Irish have let in a scouring, and ultimately brightening, gale.

THE BANK THAT'S BUILT A BRIDGE ACROSS THE IRISH SEA

If your interests—whether business or travel—cross the Irish Sea, you'll find the unique services of The National Bank *doubly* useful.
First, The National Bank believes in an *individual approach* to banking. This means that when you walk into any branch you know you'll be looked after personally—you know you'll receive helpful, friendly advice.
Second, The National Bank provides an especially useful banking service for people who have interests on both sides of the Irish Sea. This means that you can conduct your business speedily through your nearest branch.

The NATIONAL Bank Ltd

Chairman: The Rt. Hon. The Earl of Longford, P.C.

London (Head Office), 13-17 Old Broad Street, E.C.2
Dublin (Chief Office), 34-35 College Green
Belfast (Chief Office), 62-68 High Street

the only Bank with a network of branches both sides of the Irish Sea

Established 1835 Member of Committee of London Clearing Bankers

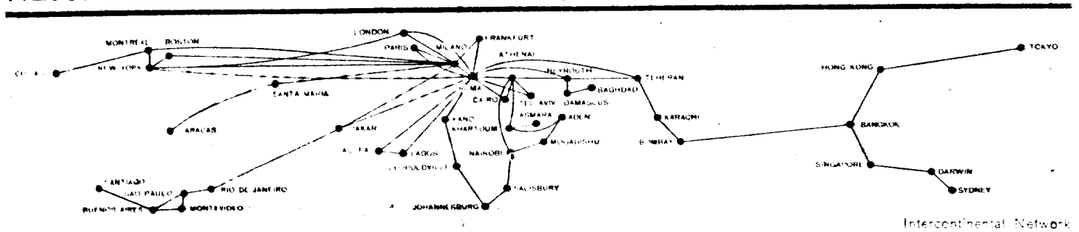
LAGOS - ACCRA: CHILDREN MEET JETS

It took an Italian airline to arrange a first meeting between the youngest generation and the latest intercontinental planes. It was love at first sight, in airports all over the world. In Lagos and Accra, four children were invited to the airports for the first time in their lives. They spent the day there, drawing and painting the ALITALIA Jets, which were leaving for all parts of the world. Patrick Gardiner, aged twelve; Beth Haile, ten; Paul Williams, eleven; Margaret Greaves, twelve.

Men and Jets SUPER DC-8 S AND CARAVELLES - two of the finest and fastest Jets in the world - flown by million mile pilots, trained to perfection in keeping with this modern Jet Age.

The Winged Arrow Service All the warmth and atmosphere of Italy greets you the moment you step aboard - prompt, courteous hospitable ALITALIA service awaits you. ALITALIA'S stewards and stewardesses are anxious to show you the true meaning of the Winged Arrow Service.

Be Budget - Wise Business meetings or congresses in distant places - sporting events - trade shows - group travel or family travel - businessman or tourist - ALITALIA offers you the most advantageous rates and most economical solution.



Air Freight City to City - Continent to Continent - fly your freight the ALITALIA way. Careful handling, speedy and punctual delivery at conveniently low rates. As far as cargo goes, ALITALIA goes all the way.

Think Ahead The modern traveller always plans and thinks ahead. Carefully planned itineraries afford you the opportunity to see more places at no extra cost. Think ahead - plan ahead - consult your Travel Agent, take his advice - realise what is to be gained in planning your trip.

ALITALIA AIRLINES

The Winged Arrow to West Africa
The ever increasing target of the Winged Arrow Service now takes in West Africa. London-Rome-Lagos-Accra, every Monday and Thursday - in Super DC-8 comfort.

ALITALIA is in all of ITALY and goes EVERYWHERE in the world

Intercontinental Network

48 countries, 77 cities, 18.000 approved agents all over the world

THE WORLD OVERSEAS

FROM OUR SPECIAL CORRESPONDENT IN GENEVA

MAN proposes; but at least in Calvin's Geneva this week it has been clear that he does not dispose of his fate. The 18-nation disarmament conference is not going according to anybody's plan. It counts only 17 nations—unless one includes the hovering Germans—and its real subject matter is both less and more than disarmament. Mr Khrushchev failed to kick it off to a start at summit level; President Kennedy and Mr Macmillan did not get a separate three-power conference on halting nuclear tests, and the placatory substitution of a few days of three-power foreign ministers' contacts before the full cast came on stage on Wednesday cannot as yet have yielded them much satisfaction.

Although the three ministers ate together on Sunday and subsequently talked *à deux* over and after a series of meals, their only collective non-gastronomic session was on Wednesday morning when it seems that very little was said about tests anyway. Little indeed could be said. Mr Gromyko was scarcely likely at this stage to prove forthcoming to the degree necessary to avert the prospect of American testing above ground after mid-April.

Mr Rusk and Lord Home for their part were inhibited by the emergence of the divergence, as it has been called. Some versions of this have been exaggerated. Mr Kennedy's call for inspection not only of tests but also of preparations for tests has plunged the experts into the depths of technicality, and the real dimensions of the problem will not be known till they climb out again. Distinctive nuances also seem to divide the State Department from the more unmovable logicians in Mr William Foster's new United States disarmament agency on this particular issue. Finally, German questions loomed above those of nuclear testing in the lurid light of this week's Soviet aluminium offensive against Berlin's air lifelines.

It is pretty widely assumed here that the scattering of chaff in the air corridors and other harassments served as side dishes at Mr Rusk's and Lord Home's meals with Mr Gromyko were nicely calculated to put on the heat without actually setting anything afire. Mr Gromyko's bland assurances that he knew nothing of such naughty pranks seemed an unclever echo of the cruder diplomatic tricks of Stalin's time; but Mr Gromyko had no other counter to Mr Rusk's cogent reminder that the joint Soviet-American declaration of principles for disarmament last September had stressed the need to refrain from aggravating actions. The Soviet minister doubtless regarded his scarcely visible blushes as amply compensated for by the achievement of a set of conversations that began to look interestingly like the opening rounds of a foreign ministers' conference on Germany—minus the French.

Nothing was said even about the limited issue of Berlin during the three ministers' only formal talk on Wednesday. But in their twosomes they touched upon German questions more generally if gingerly. Seemingly no word passed that need arouse qualms in Bonn, but that of course was no guarantee against qualms. Herr Schroeder, having tiptoed as near as Lausanne to get a word with Mr Rusk, ventured to Geneva's very edge to dine with Lord Home and—although he retired to bed in Lausanne—the causal chain drew him right into town next morning for a tightlipped but far from button lipped "courtesy call" on Mr Gromyko, whose untwinkling eye betrayed no recollection of the fate of Dr Kroll. The air inevitably thickened with speculation about what form an east German counter-distraction might take; but not with any lively theorising about what might have passed unrevealed between the Soviet and west German ministers.

Three men in a boat

Theorists in Geneva are naturally devoting much word power to the familiar logic of the inseparability of the problems of Germany and of disarmament. Chicken and egg are both doing well—as conversational gambits among delegates and others. The Russians and their friends are of course second to none in stressing this logic. But Moscow has not been too obsessed with its central European marchlands to lift its eyes to wider horizons. The publication on Monday of the Soviet reply to the United Nations secretary-general's letters arising from the recent Assembly resolutions was not only beautifully timed to catch western diplomats, their briefcases just filled with new papers, in a rush to hunt up the relevant ones stashed away after the disarmament debates at the United Nations last November. It was also well phrased to catch the ears of Asians and Africans converging on Geneva as new members of the expanding but still selective "disarmament club."

Basically U Thant's circular was about the so-called Swedish resolution (which although Swedish-inspired had actually been sponsored by eight governments in the UN Assembly). It was an inquiry about the terms on which non-nuclear states would undertake to bar from their territory all nuclear arms, including those controlled by other states. It was this last provision that, obviously bearing on the disposition of allied arms in west Germany, had evoked opposition (unsuccessful) from most Nato governments in the Assembly in November; whereas Ireland's resolution, without such a clause and with reference to inspection, had been carried unanimously, thus expressing all parties' wish to limit the spread of nuclear arms *en principe*. Russia's best friends would hardly claim it to be a non-nuclear power; it was not therefore really being called upon for a substantive reply to the United Nations, but it would have been unnatural for it to miss the opportunity to say a few well chosen words. They were well enough chosen for the purpose of both castigating the West and tempting all other comers with visions of a global chain of Rapacki plans and other schemes for nuclear-free zones.

It is too early, with Mr Krishna Menon barely arrived and Mr Unden of Sweden among the ministers due to reach Geneva after the conference's opening, to measure accurately the collective pulse that is now flickering in response to these stimulants. On paper Russia ought to be sure of solid Afro-Asian support for the schemes envisaged in Mr Gromyko's reply to the United Nations which, together with the Rapacki plan, must now be headed straight for the

conference table. But nothing is that sure. Mr Menon has arrived apparently thinking primarily about quite a different system of zones—Sohn zones, the areas into which the American professor, Louis Sohn, and others have suggested each power should divide up its territory, after which a disarmament inspectorate could pick one in each country (and then two in each, and so on), to toothcomb through. (This was one of the encouragingly, fresh ideas envisaged in Mr Rusk's initial speech on Thursday—a speech in marked contrast to the lengthy restatement of familiar Soviet themes which it followed.) Several of the club's newest members have been doing some serious homework on the intricacies of disarmament in practice in the past few months. The fact that some new members have come to Geneva in a mood of healthy impatience with the oldsters' hieratical postures does not necessarily mean that they can be easily rushed into siding with Russia—or anybody else.

Rhodesian Pyrrhus

FROM A CORRESPONDENT IN SALISBURY

SIR ROY WELENSKY has always been regarded as an astute political tactician on his home ground. But in deciding to hold a snap election next month he appears to have seriously miscalculated not only the mood of the electorate as a whole but that of his own party supporters as well. There is widespread misgiving among a broad section of white opinion about the wisdom of going to the country at this stage, especially when the precise issues at stake have still to be made comprehensible to the man in the street. No doubt Sir Roy's own prestige was involved after the patent failure of his London visit ; so he turned to parliament for "support and sustenance." The response was half-hearted.

The prime minister told members that he would seek a mandate to preserve the federation and to negotiate on a range of federal problems. But any new scheme must be acceptable to the government. If it was not, then the federation would continue unchanged and it was up to them to see that it did. That, too, was part of the mandate. Thus the flexibility of one statement is cancelled out by the implied threat of the other.

It seemed to most people that Sir Roy already had his mandate and that a new appeal to the country was therefore unnecessary. But the main criticism is based on two arguments: that an election now is bound to heighten racial tension in a crucial year and that it is being held under an old franchise so heavily loaded in favour of the white voter that it will fail to convince those who most need convincing. The figures speak for themselves. The federation has a population of 8,630,000, of whom 8,290,000 are black Africans. Out of a total white population of 304,000, some 104,000 will be entitled to vote next month, compared with some 11,000 Africans. In the territorial election in Nyasaland last August all 21 candidates put up by the ruling United Federal party on the lower roll lost their deposits in the face of Dr Banda's massive victory. They will be in no such danger this time. Nyasaland has three million Africans, but the federal franchise permits only 36 of them to vote and these may well decide to follow the advice of the African leaders and stay at home.

There are already signs of alarm in UFP circles at the withdrawal of the opposition and the prospect of silent hustings in every constituency. A nationalist boycott had been foreseen and it was no great surprise when the Liberal groupings in Northern and Southern Rhodesia decided likewise ; but the boycott now announced by the right-wing European parties, which have closed ranks behind Mr Winston Field, is a more serious matter. No thoughtful white Rhodesian wants to see a grave national issue become a purely party affair which would leave a triumphant Sir Roy Welensky in much the same position as King Pyrrhus at Asculum. Meanwhile, Sir Roy is playing cards with a circumspection matched only by that of Sir Edgar Whitehead—at the cost of keeping the electorate in suspense.

Both prime ministers are travelling the same path. Both are agreed on the need for speed in reaching a federal settlement to galvanise a public whose confidence has been badly shaken. But there is no sign yet of a concerted plan to keep the federation together. Sir Edgar has been content to think aloud in the most general terms, fortified by the reflection that in Southern Rhodesia he has a firmer base than Sir Roy from which to parley. His recent skilful intervention in federal affairs, however much it may have surprised constitutional purists, has done Sir Edgar no harm at home and probably not in London either. It is unlikely that in his talks with British ministers he had any solution for the federal dilemma which no one had thought of before.

With African acquiesence most things would be possible, but their hostility remains and has even grown with territorial advancement. Any scheme for maintaining a truncated federation which links Southern Rhodesia with selected parts of Northern Rhodesia —and the line of rail with Sir Roy Welensky and the Paramount Chief of Barotseland presumably sharing the same footplate always creeps in here somewhere—is likely to end in tears. There are still very good economic reasons for keeping the federation together—reasons which Dr Banda and Mr Kaunda even now do not fully appreciate. But to proud Africans who have lived marginally for so long they hardly seem to matter.

Canadian Pyramus

FROM OUR OTTAWA CORRESPONDENT

IMPOLITE critics of Mr Donald Fleming, the Canadian finance minister, have been heard to say that he looks like a balloon. They have been less pleased to find that he certainly bounces like one. Last summer, when Mr Fleming took responsibility for the bungled, and basically dishonest, attempt to get rid of Mr Coyne as governor of the Bank of Canada, many observers believed that Mr Diefenbaker had manoeuvred him into accepting a stigma from which he could never recover. Inspired press reports in October confirmed the idea that he had become a liability and would be translated to a post of less prominence.

Three months ago Mr Diefenbaker unquestionably came very near demoting him, but drew back at the last minute for reasons which are still unexplained. Two months ago the political gossips were doubtful whether Mr Fleming, having kept his post, would be allowed to present another budget before the next election. Today, just as in a midwinter night's dream, all is transformed. Mr Fleming is no Bottom, but Pyramus again and the pride of the Conservative party. His budget will be presented in the normal course, probably in the early part of April, and government supporters confidently believe that it will give them a merry start to the election campaign. Indeed, the current betting is that parliament will be dissolved a few days after the budget in time for a general election on June 11th, Whit Monday (not a holiday here).

The finance minister's bounce is due primarily to the strength of the business recovery in the last six months. Month by month the key indices show a larger improvement over the same month of last year. Manufacturing industries especially show steady production gains. Unemployment, which by this time last year amounted to more than 11 per cent of the labour force, was only 8.5 per cent in January and is probably increasing less rapidly than it did last winter. The most important reason for lower unemployment is that the Canadian labour force has almost stopped growing. The recent difficulty in finding jobs has had the welcome result of keeping youngsters in school. Net migration has fallen

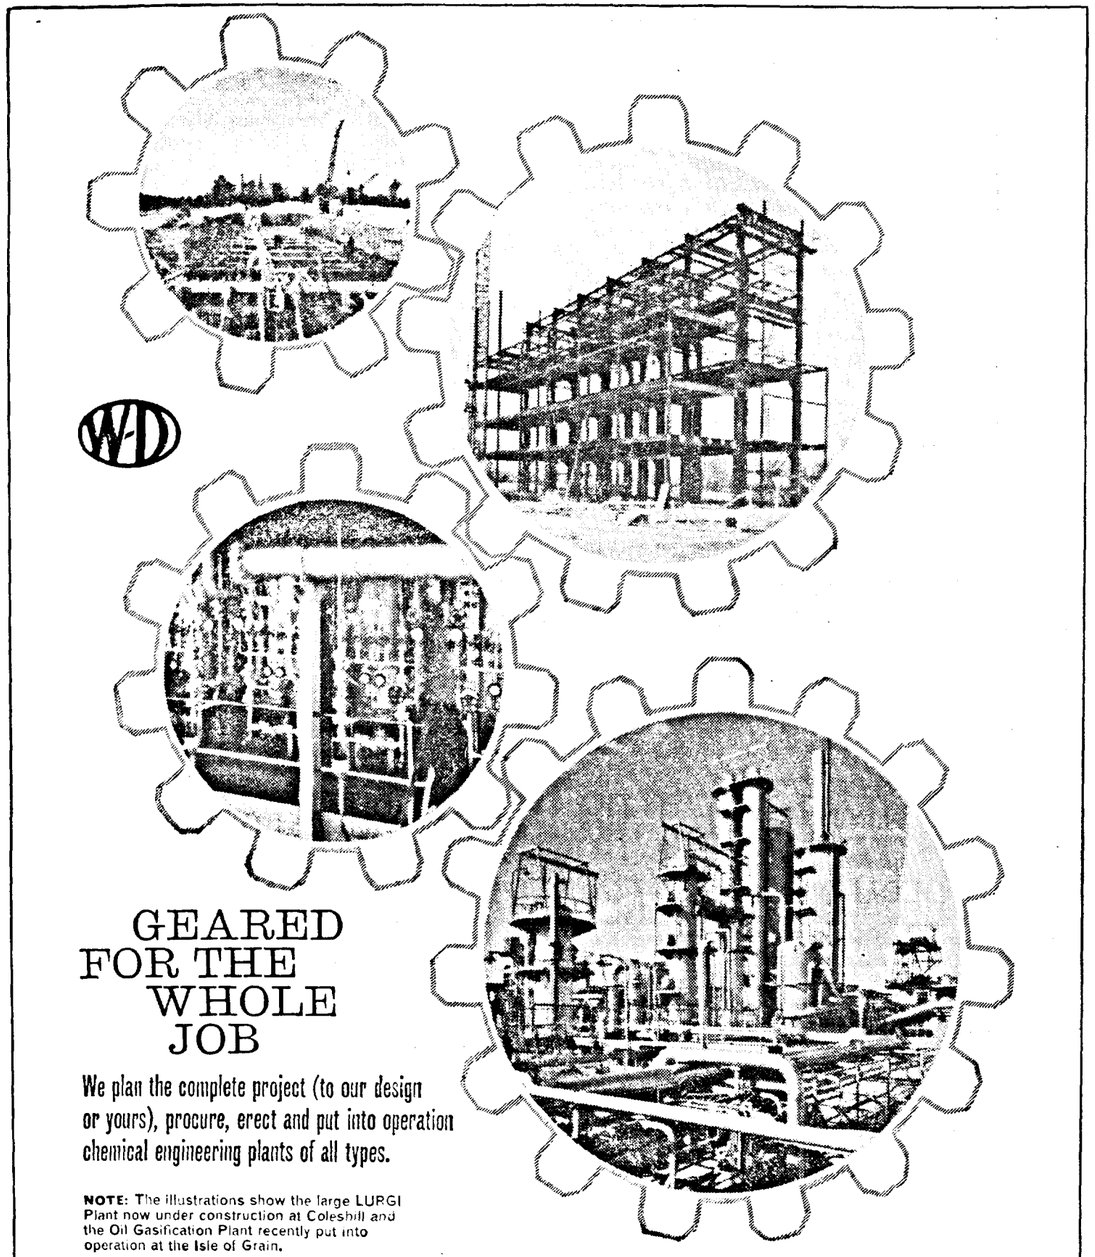
μ

ANOTHER SCIENTIFIC BREAK-THROUGH
BY DUNLOP

DEVELOPMENT OF HI-MU RUBBERS
HERALDS GREAT NEW ERA IN TYRE SAFETY

A major break-through in synthetic rubbers has been made at the Dunlop Research Centre.
Until recently the tyre designer had only a limited choice of rubbers. Then Dunlop research into man-made rubbers, allied with advances in the study of tyre behaviour, led to the creation of *a whole new family* of rubbers, exceptionally suitable for use in tyres, whose properties could be varied to suit each particular job. These rubbers all have high co-efficients of friction. They have therefore been called HI-MU, after the Greek letter μ—pronounced "mu"—the scientists' shorthand for "co-efficient of friction".

NEW STANDARDS OF ROAD HOLDING



One by one, as manufacturing and economic problems were overcome, Dunlop introduced various HI-MU rubbers into production tyres: racing motor cycle tyres (1959), the Road Speed tyre for fast sports cars (1960), the outstandingly successful Elite tyre (1960), scooter tyres (1960) and wet-weather racing car tyres (1961).

NOW, THE MOST ADVANCED HI-MU RUBBERS OF ALL HAVE BEEN BROUGHT BY DUNLOP TO THE POINT WHERE THEY ARE AVAILABLE FOR PRACTICAL AND ECONOMIC USE IN TYRES FOR EVERYDAY MOTORING.

NEW SAFETY

Although almost infinitely variable in properties, HI-MU rubbers all offer greatly improved adhesion between tyre and road—greater *gripping* power—particularly on wet surfaces. They also make for quiet, smooth running and greater comfort. With advanced tread patterns, and the highest technological and production skills, Dunlop HI-MU rubbers put within the grasp of tyre designers standards of road holding and *safety* which only a few years ago were thought unattainable.

SYMBOL OF PROGRESS

GEARED FOR THE WHOLE JOB

We plan the complete project (to our design or yours), procure, erect and put into operation chemical engineering plants of all types.

NOTE: The illustrations show the large LURGI Plant now under construction at Coleshill and the Oil Gasification Plant recently put into operation at the Isle of Grain.

WOODALL-DUCKHAM CONSTRUCTION COMPANY LTD

A MEMBER OF THE WOODALL-DUCKHAM GROUP OF COMPANIES

to a negligible figure. With the labour force very little larger than it was a year ago, every extra job resulting from the business pick-up has helped to reduce the pool of unemployed.

Politically it probably does not matter to Mr Fleming and his colleagues that this relief is essentially temporary and that its underlying implication is consolidation rather than growth. In relation to the budget it means lower payments from the almost bankrupt unemployment insurance fund, improved yields from personal income tax and consumer taxes, and an upsurge in corporation profits which will make more impact in the first part of the new fiscal year than before March 31st. New spending commitments for the coming year are already formidable, the biggest being the increase in old age pensions by $10 a month. But Mr Fleming has been canny both about the many estimates, and about future commitments which would have to be shown in his budget calculations. He will not have to show in an April budget the extra expenditures which may confront a new session of parliament next autumn. He need not allow for assistance payments to prairie farmers, which have cost him more than $40 million in both the last two years, or for the reconstruction of unemployment insurance ; this must be made before next winter, and should have been undertaken last year. He may even postpone, in the guise of a loan, the extra $50 million or $60 million for old age pensions not covered by increasing receipts of the old age security fund.

On the revenue side, he can rely on rising yields from present taxes to match an increase in gross national product which some sober economists already put as high as eight per cent over 1961. On such terms the new budget can paint a rosy picture of revenues catching up with expenditures, though still very far from balancing them. The present year's deficit is expected to turn out at about $750 million in budgetary terms and about $1,100 million in total cash requirements. Next year's deficits can almost certainly be kept below these limits, while still leaving Mr Fleming some room for tax concessions. Already assured is some form of production incentive for business, and some improvement may be made in personal allowances short of a change in income tax rates. All thought of bringing the budget anywhere near balance has long been abandoned. The property of bouncing balloons is not balance but buoyancy.

Bogeymen's Blackmail

FROM A CORRESPONDENT LATELY IN HAITI

THE departure of the British ambassador from Haiti last week-end, and the corresponding withdrawal of the Haitian ambassador from London, are stages in a long quarrel. By common consent Dr François Duvalier's regime in Port au Prince is one of the most unpleasant that even Haiti has ever known. When Dr Duvalier, a former country doctor, was elected president by a sweeping majority in 1957, Haitians and foreigners alike hoped for a period of recuperation and reasonably honest government. But habits of violence and duplicity once begun are difficult to abandon, and before long Dr Duvalier showed that he was more interested in staying undisputed cock of an unruly roost than in trying to accomplish anything for his impoverished country.

Beset with rivals, and several times the intended victim of abortive coups or assassination attempts, Dr Duvalier came to rely increasingly upon organised gangs of thugs for his support. Administration languished and the economy decayed. Today there is only one passable road in Haiti outside Port au Prince, electricity in the capital is rationed because of power failures and the government's inability to pay its fuel bills, and the telephone system is so far run down that embassies and commercial firms are having to use walkie-talkie sets for communication within the city. While the United States and the United Nations both maintain technical aid missions in the country, many of Haiti's own skilled technicians, desperately needed at home, have fled to the relative sanity and security of international operations in the Congo and elsewhere.

In the past year Dr Duvalier has set his thugs—known in Haiti's Creole dialect as Tontons Macoutes or bogeymen—to collecting money for his regime. Announcing that he was going to build a new city called Duvalierville, the president sent out the gangs last autumn to collect arbitrary levies from Haitians and foreign residents alike. The bogeymen's brutality brought sharp collective protest from the diplomatic representatives of Britain, France, the United States, Italy and Canada on behalf of their citizens. As the senior member of this group, the British ambassador, Mr Corley Smith, was the spokesman. It has taken five months and several incidents to bring Dr Duvalier to the point of demanding Mr Corley Smith's withdrawal for his temerity.

How much longer this extraordinary rule of blackmail and harshness will last depends largely on the Americans. So far, with more at stake than the British, they have been vastly more susceptible to blackmail. They have supplied the president with money and military aid, all in the hope, presumably, of deterring him from turning, like Dr Castro, to the Russians—as he has threatened to do more than once. Most Haitians regard this threat as empty and are increasingly impatient of American faint-heartedness in helping to keep in power one of Latin America's nastiest regimes.

Delhi's Grip Loosened

FROM A CORRESPONDENT IN INDIA

INDIA has still not found an opposition. That is the main, unsurprising, lesson of last month's general elections. Though the opposition parties have slightly increased their parliamentary strength, Congress still holds seven out of ten of the seats in the Lok Sabha (lower house), and more than ten times as many seats as the Communists, the largest opposition group. The ruling party lost more heavily in the state assemblies, but nowhere so much as to lose power.

In North Bombay, where the opposition put on its star turn, the great "Marx or Gandhi" fight soon turned into "Nehru or big business." Mr Nehru won hands down. And all the signs are that the right-wing and communal gains in several states will only push him into switching the party and the country a little faster to the left. That need not mean any change in Congress ideology: merely that Congress will put its ideology into practice. Even that need mean nothing too drastic (nothing, one suspects, to alarm the foreign investor).

But it could have important political effects. As ideology acquires some practical meaning, the right side of the notoriously wide Congress umbrella may well shrink. On the left, the Communists, whose own gains in the elections were slight, are eager to slip in under the edge, openly aiming for a "national democratic front in co-operation with progressive elements." This would further alarm the right. The new Swatantra party, which at state level at least proved itself a going concern, now offers the rightists somewhere to go. That leaves the Praja Socialists, who were cut down, though not quite as bloodily as some had expected. They are already being advised to pack it in and join Congress. They are indeed in much the position of pre-Grimond Liberals, and will be more so if Congress moves left. Are they to leave the interpretation of "left" to the Congress leftists and the Communists, and still oppose from outside? So far they show no sign of surrendering.

Dead Secret Scrolls

FROM OUR SPECIAL CORRESPONDENT JERUSALEM (JORDAN SIDE)

MOST secret, the big Dead Sea scroll that was opened at the end of last year in the Palestine Archaeological Museum in Jerusalem is now under lock and key in a room of its own. The American Schools of Oriental Research, which have acquired the rights to study and publish its contents, are taking no chances on pirate scholars perusing it and issuing snap translations. Loitering with such intent is not an unknown practice among peeping Toms visiting Jordan. And the cash stakes are high: in the spiral of scroll finance, publishing rights alone are now worth thousands of pounds.

This particular scroll—from the 1st century AD—is unusually exciting and valuable. For handsome appearance combined with considerable length there is no scroll to touch it in Jordan. It is surpassed only by some of those first discoveries, including the great Isaiah scroll, that were smuggled to the United States in 1949 and subsequently bought by Israel (for £125,000). Four metres long and written in Hebrew on parchment it contains Old Testament psalms in a version and order more ancient than any previously known. It includes psalm 151, which has hitherto been known only in the Septuagint (Greek translation) and in Syriac and Latin renderings, two more known only in Syriac, and five quite unknown compositions. This opens up fascinating prospects for textual criticism.

Coming as it does from the area of the Essenes' settlement at Qumran, the scroll must be part of the version of the book of psalms that was used by that pre-Christian Jewish community. This would seem to confirm that our canonical order was being put together not earlier than AD 50. The Hebrew texts of psalms known previously only in Syriac may also have a tale to tell. Scholars working in other countries have already discerned in certain Syriac writings an affinity with Qumran modes of thought. These texts may reveal the link. But these are mere shadowy ideas of the textual datings and ratings that should emerge from more prolonged study. All lies in the lap of the authorised American scholar, Dr J. A. Sanders, who, although he has now completed some tentative translations and spoken to journalists about them, will need much more time to reach his final conclusions. Meanwhile the scroll's not for viewing, for the simple if remarkable reason that the rights to examine it and publish a translation have cost over £20,000. This sum was privately subscribed by two Americans, Mr and Mrs Bechtel, who are letting the American schools enjoy the privileges so acquired. Such a payment purely for privilege opened a new chapter in the story of scroll finance.

THAT story is best told backwards since it came to its climax last month, when the museum in Jerusalem reached an agreement with the Jordan government by which all scrolls found in Jordan became government property. This was the culmination of a seven year controversy as to whether the scrolls should be nationally or internationally owned.

The museum, which is under international trusteeship, has provided both the experts and amenities as well as most of the money for acquiring, restoring, studying and displaying the scrolls. It had formerly been assumed to have some title to them and had been prepared, in return for financial help, to allow foreign institutions to possess appropriate fragments. These assumptions are now reversed. The Jordan government, however, in claiming sole proprietorship, is going no further than most other Middle East governments. Nearly every one of them owns all archaeological finds in its territory and forbids their export. This, now, is what Jordan has also claimed and done. Its action, not startling in itself, disappoints those foreign institutions—including Manchester, Heidelberg and McGill universities and the Vatican library—which together had raised £21,000 to help the museum to buy scrolls from the nimble beduin who find them. The scroll fragments promised in return they will not now have. Instead, it seems, they will be reimbursed for their payments and will have to be content with loan exhibitions. At the same time the museum has agreed with the Jordan government that while the government is owner, the museum shall be the keeper—and possession is, after all, nine points of the law.

Over the past twelve years £102,000 has been paid out to beduin scroll-finders. For the first finds retained in Jordan the museum paid £1,000. Later the Jordan government handsomely contributed £15,000. Finally in 1956 the museum gave £65,000 from its own endowment fund. (To these sums must be added the money raised by institutions abroad.) It was really to replenish its endowment fund that the museum first thought of scroll trading. But now that this is prohibited it has found other assets to sell. These are the kind of publishing rights that were assigned in the Bechtel transaction. The idea, happily, seems to be catching on. Similar rights in an Aramaic targum (free translation) of Job have been acquired by the Amsterdam Academy. And there are other good bits for the bidding: part of the book of Leviticus in ancient Hebrew script, and an unknown book in Aramaic whose subject is the heavenly Jerusalem. The rights in these and other lesser pieces will of course come much cheaper than those in the great psalter. But gradually, through their sale, the museum should refund itself.

The question remains whether the beduin treasure seekers have any more scrolls up their sleeves. Though they go no more a-hunting in the desolate caves of Qumran, they may well be witholding some prizes from earlier sorties. No scrolls have been purchased from them since the 1956 haul. This interregnum has been caused not only by lack of money but also by the meddling of so many people who are strangers to the beduin—government officials, impetuous cave-crashing excavators, and even freelance Jordanians—and who have exploited the protracted controversy about government ownership to by-pass the museum and get in on their own. Accustomed to dealing solely with the tactful museum authorities, the beduin have grown more wary and more calculating. It is not that government ownership stops the buying of scrolls. Jordanian law lays down that just payment shall be given for declared archaeological finds. But beduin do not like governments and prefer to have no truck with them, whereas they will trust the museum people. In time this confusion may pass and the way be cleared again for the museum, the keeper of scrolls, to resume negotiations. This is to be desired. For only so are the beduin likely to divulge their secrets.

Continued from page 1017

In the state assemblies, Congress is much less secure. It gained ground only in Assam and, sensationally, in Maharashtra where the popular and able chief minister, Mr Y. B. Chavan, undoubtedly strengthened the claim sometimes made for him as a likely successor of Mr Nehru. In two of the ten states that elected new assemblies Congress now holds barely half the seats. In Kerala, which did not, the voting for the national parliament suggests that, if there had been state elections too, the Congress-Praja Socialist coalition would have been defeated outright by the Communists aided by the Moslem League. The Congress could only win six out of Kerala's eighteen Lok Sabha seats, the Praja Socialists none. The Communists increased their strength in both their other strongholds: substantially in Andhra, slightly in West Bengal (partly because they fought more seats) though the local party there is notoriously pro-Chinese. Congress's only consolation is that the Communist gains in West Bengal were far less than it had feared.

The most remarkable results were the success of the more or less communal parties and of the conservative Swatantra party. The Akali Sikhs gained heavily in Punjab, the Jan Sangh in Madhya and Uttar Pradesh; the separatist Dravida Munnetra Kazhagam won a quarter of the seats in Madras State, though some of its gains were due more to working-class appeal than to separatism. The Swatantra party did astonishingly well in its first elections, thanks, in part, to princely support. It emerged as the chief opposition group in four states, including Orissa, where it has merged with a local feudal party.

The weakening of Congress governments in the states is likely, paradoxically, to strengthen their hands against New Delhi. They will be under increased pressure to secure concessions, and the Congress high command will be correspondingly less ready to refuse them. The intra-party struggle for power is already under way in several states, most interestingly in Gujarat, home of the finance minister, Mr Morarji Desai, who threw Congress into a turmoil there last year by his determination to replace the present local leadership. His favourites were roundly defeated at the polls.

Looking ahead, then, the elections promise, at government level, little change: none in foreign policy, at home some swing left in reaction against a slight popular swing right. This could produce, at party level, open ideological splits within or (if the spoils of power are not still too alluring) breakaways from Congress. On the constitutional plane one would predict a shift away from strong central control toward a federalist balance of power.

Not by Maize Alone

DOWN to earth, Mr Khrushchev feels in his element. Last week he had two opportunities to give a lecture on agriculture in front of his party's central committee and he eagerly seized both. His discourses ranged from general principles to maize yields on individual farms, and from among the mass of detail two important trends emerged. Mr Khrushchev announced a reform in the management of agriculture, and confirmed the Soviet intention to switch to more intensive methods of farming. Logically, such a switch should be coupled with a shift in investment resources. But as if to deny such expectations, Mr Khrushchev in his second speech, on March 9th, asserted that investment in agriculture would not be carried out "at the expense of industrial development or of the strengthening of the country's defences."

On the same occasion, in reply to western critics, he proclaimed that there is no agricultural crisis in the Soviet Union. By drawing comparisons with the very low level of 1953, he could indeed claim that Soviet farm output has grown considerably; had he chosen 1958 as his base year the index for 1961 would not have shown any progress. Nor did his other argument, about American food surpluses in a hungry world, alter the fact that the Soviet Union, with an incomparably larger agricultural labour force, does not have surpluses but shortages. In more candid passages, Mr Khrushchev did not hide the fact that Soviet farm output is lagging far behind industrial growth, behind its own planned targets, and behind a demand swollen by wage and population increases.

One of Mr Khrushchev's remedies could be easily forecast. For some time now he has been putting the blame for the poor state of Soviet farming on the so-called Vilyams school of grass crop rotation (see *The Economist* of January 20th, page 237). Last week he reiterated his thesis that nearly a third of the 220 million hectares of arable land is being used in a wasteful manner. By switching land under grass, oats or fallow to maize, sugar beet, peas and fodder beans Soviet farmers will greatly increase their fodder base and thus pave the way for a rapid growth in meat and dairy production. This is Mr Khrushchev's new version of "land reclamation," and in the current year he hopes to turn 20 million hectares over to more productive use.

Stalin backed the Vilyams school because he was, in Mr Khrushchev's words, "captivated by Vilyams's arguments that less capital investment was needed for agriculture under the ley system. . . ." The problem of capital investment for agriculture certainly cannot be bypassed. In the first few years after Stalin's death the supply of agricultural machinery rose rapidly, though a high proportion of the new equipment was sent to the virgin lands. The drop in output since then is strikingly revealed by some of the figures now quoted by Mr Khrushchev. For instance, 208,800 tractor cultivators were supplied in 1957; in 1960 the figure dropped to 79,000. Results are scarcely better for mineral fertilisers; in the last three years the commissioning of new capacity has not even reached half of its planned target. But Mr Khrushchev is now promising a rapid increase in the supply of both machinery and fertilisers. On March 5th, the opening day of the meeting, he even seemed to suggest that this agricultural progress should be achieved through "a redistribution of capital investment and material funds." But a few days later he added that it should not be done at the expense of industry or defence. The Soviet leaders have not apparently made up their minds whether they are willing, or able, to pay the necessary price for a policy of more intensive farming.

Some progress, however, can be made by improving methods of management. Here Mr Khrushchev seems to be retreating. In 1958 he presided over the dismantling of the machine and tractor stations and the sale of their equipment to collective farms. But the MTS, in addition to their ordinary work, were party outposts in the countryside. The Soviet planners must have concluded that they need some other body to keep the farms under control and they have now decided to introduce a more complex system. Local agricultural boards are to be set up. Their membership will include heads of state farms and collectives in the area, as well as local officials and specialists under the chairmanship of the party secretary. Similar bodies will be set up in larger administrative areas, in oblasts, krays and republics. At the top of the pyramid, in Moscow, there is to be a committee for the management of agriculture, including the key farming experts in the party, government and planning institutions. The new system will be responsible for planning and supervising production on every farm. The agricultural boards will control both the 8,000 state farms and the more than 40,000 collective farms. The similarity in treatment for collective and state farms suggests that Mr Khrushchev still intends to eliminate the differences between them. But the urgent problem is to raise production.

Last week's session of the central committee finished by setting specific targets for each of the coming years for the output of grain, meat, milk and eggs as well as for various yields per hectare. But these targets will certainly meet the sad fate of their predecessors unless higher priority is given to agricultural investment.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Arming and

Disarming

WASHINGTON, DC

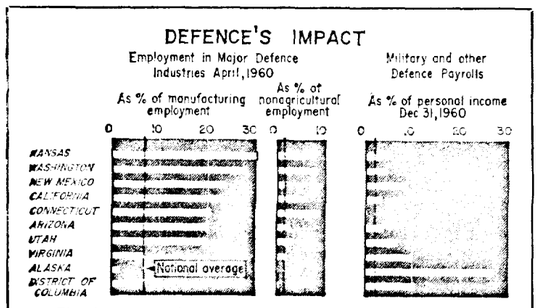
FRANCE has BB but the United States has not yet got the B-70, a supersonic bombing aircraft that is almost as photogenic as Miss Bardot and that arouses almost as much emotion. It will not go into production even after the first flight of a prototype in December. The Secretary of Defence, Mr McNamara, has called for the Pelion of resuscitated conventional weapons to be piled on top of the Ossa of nuclear power—but he draws the line at the mass manufacture of an aircraft which, he suspects, is already obsolete unless it can be fitted with weapons so advanced that they have not yet been invented and may never be.

The B-70 was first conceived in 1953 and for years it has beckoned seductively to bedazzled Air Force generals. It has been a mouth-watering proposal for military contractors and subcontractors, who would not have been human if they had not regarded it as a particularly luscious plum in the enormous and lucrative pie of defence orders. If Mr McNamara's heart were to melt there would be varying degrees of jubilation in California and Ohio, Kansas and Maryland, Illinois and Arizona, all places which have factories that would benefit from the production of this most complex and costliest of aircraft.

The Secretary, however, shows no sign of giving in to the pressures now being brought to bear upon him. In vain are hundreds of millions of dollars he did not ask for spread in front of him. Angered by this obduracy, the Armed Services Committee of the House of Representatives stated grandiloquently that defence officials were "directed, ordered, mandated and required to utilise the full amount" of those unwanted dollars for the B-70. It added that, if this language constituted a test as to whether Congress has the power to so mandate, the test ought to be made and the B-70 ought to be the field of trial. But Mr McNamara seemed as unmoved by this as by the Air Force's rather pathetic tactic of renaming the unwanted B (for bomber) -70 the RS (for "reconnaissance strike") -70.

The Air Force claims that in nuclear wartime the B-70 (or RS-70) might operate effectively in conjunction with a force of missiles. It is envisaged as roaming over the battlefields of Armageddon like a day-of-doom U-2, looking out for enemy installations that have somehow escaped total destruction and putting right the omission. While remaining polite towards this picture, Mr McNamara has felt constrained to point out that the B-70 suffers from certain disadvantages. It will lumber along at 2,200 miles an hour, compared with the 15,000 miles an hour re-entry speed of an intercontinental ballistic missile, but it is too fast to make low-altitude attacks. There seems little doubt that in espousing the cause of the B-70 the airmen are desperately striving to avert their own likely fate of becoming mere push-button missileers.

This can hardly be admitted; therefore, in addition to the other claims for the B-70, it is argued that it is highly necessary to the security of the United States to have a manned bomber force that is the most up to date in the world, as well as more missiles than anyone else. General LeMay, the Chief of Staff of the Air Force, has said that, with missiles only, there is no flexibility—"Your finger is either on the button and you are at war, or it is off the button and you are at peace"—whereas manned systems can be used as a threat to prevent a war from starting (why missiles could not similarly be used seems obscure) and can be recalled even after they have been launched.



Another Air Force argument is that the Russians may only seem to have given up mass-producing bombers in favour of missiles. What, American Air Force men ask, about the very advanced looking types of aircraft that appear from time to time at Russian air shows, to the consternation of foreign air attachés? Mr McNamara responds that, by continuing the work on prototypes of the B-70, he is preserving the option that a manned bomber of this most advanced kind can be developed fully if it should be determined later that such a system is required. The fact is, however, that the Department of Defence does not seriously think that this option is going to be taken up and it does not believe that the Russians are going beyond prototypes of advanced bombers.

SINCE 1953 about $800 million has been allocated to the B-70. The sum would be much larger had Congress had its way. If the airmen think of the B-70 as their possible salvation from a future of pushing buttons in an underground silo, the politicians probably think of it at least partly in terms of popularity and votes. President Truman firmly turned away unwanted money for unwanted additional military aircraft. So did President Eisenhower—but, towards the end of the 1960 election campaign, he announced that over $250 million would be spent on the B-70, and not the mere $75 million in the Budget. This may have helped Mr Nixon to garner some of the 30,000 votes by which he carried the State of California for the Republicans. President Kennedy was cheered in Florida last weekend when he said that the National Aeronautics and Space Administration intends to increase its spending in Florida fivefold, and that employment at Cape Canaveral will be quadrupled. He has also said that government spending on space and defence activities is now higher in California than it was under the Eisenhower Administration, to the indignation of Mr Nixon who is now running for Governor there. This week the President denied blandly that he was playing politics by making such statements and expressed hope that the good sense of the appropriations committees of Congress would enable the B-70 controversy to be adjusted amicably. But he conceded that the distribution of military contracts is a matter of continued concern.

The Armed Services Committee of the House of Representatives, which laid down the Constitution to the too thrifty Mr McNamara, is concerned with building contracts for defence facilities worth around $800 million a year. The chairman of the com-

mittee, Mr Carl Vinson, comes from Georgia, which has so many military installations that a general once joked that one more would sink the state. The problem of the military pork-barrel is anything but new and the fringe benefits of armaments worry a number of Americans. They worried General Eisenhower ; just before he handed over the burden of office to Mr Kennedy, he uttered his dire warning against the influence of what he called the military-industrial complex.

Almost everyone pays lip service to the notion that armaments are a burden and a brake on economic development. Senator Hubert Humphrey, the chairman of the disarmament subcommittee of the Senate Committee on Foreign Relations, says that disarmament has a "broad constituency" in the United States. As evidence, he points to Congress having set up an autonomous agency whose sole function is to prepare workable schemes of disarmament. Its panel of economists, headed by Professor Emile Benoit of Columbia University, has concluded that, given sensible adjustment policies and vigorous leadership from the government, there is no economic reason why disarmament in itself should bring an immediate depression or be a drag on prosperity over the longer term ; indeed, by releasing human and material resources it should make it easier to achieve the national goals of full employment and an ever-rising standard of living. Idealists talk enthusiastically about the federal government financing schools and hospitals at home and abroad on a scale great enough to take the place of armaments in the economy, although the public might prefer a cut in taxes and in the public debt.

The chart shows the states where the economic impact of defence on employment and or income is heaviest. Industrially the impact is most direct on companies making aircraft, ordnance, ships, radio communications, electrical equipment and machinery.

Source : Economic Impacts of Disarmament, US Arms Control and Disarmament Agency, January, 1962.

Arms do provide a lot of Americans with jobs. Some states lean fairly heavily both on defence industries and on military pay-rolls for their incomes. The projected earnings of defence industries are now a big factor on the Stock Exchange. Defence spending finances about half of all industrial research, as well as a quarter of the research that it may already be a misnomer to call "pure." But there is another side to the picture. As well as taking a firm stand so far in the matter of the B-70, Mr McNamara has also gone ahead with the closing down of 52 military installations, in spite of the unhappiness caused to Congressmen who represent the affected districts, and there has been far less grumbling in those districts than might have been expected. Most, though not all, manufacturers made the switch from aircraft to the very different and difficult field of missiles with a suppleness suggesting that, when the time comes, they will adapt themselves just as swiftly to civilian production. As even Mr Khrushchev has admitted, American enterprise is not so dependent on armaments that it could not survive disarmament.

Unprogressive Alliance?

SINCE President Kennedy's fresh approach to foreign aid did not get moving until last November, it would have been surprising if he had asked Congress for any important changes this year. Even though his request for appropriations—for $4.9 billion in all, including $2.8 billion for development loans and $1.5 billion for military assistance—was for nearly $1 billion more than Congress gave him last year, this increase is largely a matter of book-keeping and the congressional prospect is not unduly unfavourable at the moment. Trouble is blowing up, however, for Latin America's co-operative Alliance for Progress, for which President Kennedy has requested a special authorisation of $3 billion to cover the next four years, with $600 million to be appropriated, mainly for development loans, for the coming year. This is the only innovation in this year's foreign aid programme and it is to fulfil a pledge already given to the Latin American countries. Last year's pledge, that $1 billion would be committed to the Alliance by March 1st, has been fulfilled. But there are grave doubts whether this money is doing what it is supposed to do, encourage the Latin American recipients to help themselves, especially by reforming their economic systems.

This supicion has crystallised around Brazil, regarded as the key to Latin America, to which 35 per cent of the first $1 billion has gone, most of it for balancing Brazil's international accounts instead of for development projects. The Brazilian government is asking for another substantial contribution to get it out of difficulties which are due largely to its own incompetence. At the same time the left-wing and politically ambitious governor of the state of Rio Grande do Sul has expropriated an American-owned telephone company ; this is hardly designed to stimulate the generosity of the American Congress. There the latest suggestion is that the United States should "let a few of these countries go to the communists" rather than hand out money to prevent this without first insisting on economic reforms.

Evidently the President's advisers believe that the need to stop the spread of communist influence in Latin America by showing quick results is so urgent that there is no time to insist in every case on the constructive long-term aspects of the Alliance, especially when such insistence generates resentment among Latin Americans. Chile, for example, has just been granted $120 million and promised *more*, even though it has not yet changed its methods of land tenure and taxation. But the President himself, while expressing sympathy for the pressures which are generated by reforming efforts in many of these countries, has made it clear that the United States is not prepared to wait for ever.

Three's a Crowd

BOTH Mr Edward Kennedy, the President's youngest brother, who has just announced that he is a candidate for the Senate from Massachusetts, and the President himself must sometimes wish that they were not members of so large, so ubiquitous and so zestful a family. The air and the headlines always seem to be full of Kennedys. The First Lady is at last on a semi-official trip to India and Pakistan, which has been delayed several times by illness—some of it said to be diplomatic in origin. Mr Robert Kennedy, the Attorney General, who is thought to have justifiable political ambitions of his own, has returned from a flight round the world which infused new blood into the languid vision of America held by many Asians ; it may also infuse new blood into America's representatives abroad. Mr Shriver, the head of the Peace Corps and the President's brother-in-law, is the most travelled of all.

It is no wonder if some of the President's advisers feel that Mr Edward Kennedy's decision to stand (for the very Senate seat which his eldest brother resigned to become President) is too much of a good thing. The hint of a royal family—the Massachusetts Dynasty—wealthy, personable, well-connected, is inescapable. At his press conference this week the President insisted that he would remain rigidly neutral. But the Attorney General indiscreetly suggested that this neutrality might evaporate if Mr Edward Kennedy wins the primary election in September, when Democrats choose their candidates. It would be unfair for young Mr Kennedy (he is only 30) to have to forgo a political career simply because of his family. But if he wins the unfriendly will ascribe it to family influence ; if he loses, the President's enemies will crow.

Additional embarrassment is provided by the fact that the other aspiring Democrat is Mr Edward McCormack, the Attorney General of Massachusetts, the favourite nephew of the new Speaker of the House. The elder McCormack is a power in the state and the Kennedys and McCormacks have long been at odds in Massachusetts. If Mr McCormack is defeated by a sprig of the Kennedys relations between the Speaker and the White House, which are none too good, may deteriorate further. One final ingredient in this rich New England boiled dinner is the fact that the Republican candidate may well be Mr George Cabot Lodge, scion of a family whose roots go deep into Massachusetts history. But no Republican is given much of a chance to win the seat this year ; that is why the Democratic nomination is so prized.

Zero Hour for Trade

THE Administration laid down a tremendous barrage for its Trade Expansion Bill this week when the House Ways and Means Committee opened its hearings on the measure which the President feels is by far the most important to come before Congress this year. Every member of the Cabinet who could conceivably help has been mobilised to testify—from the Secretary of Commerce down to the Secretary of the Interior—and the elaborate report from the White House on the just-concluded tariff negotiations at Geneva underlined the dazzling possibilities for American exports to the booming European market and the need for wider and more flexible powers for the President if full advantage is to be taken of these opportunities. Mr Kennedy pointed out with pride that the United States got more than it gave away. But he noted that this round of bargaining exhausts his tariff-cutting powers under the Reciprocal Trade Agreements Act, which expires in June ; indeed the negotiations might have collapsed if the President had not boldly disregarded a number of the "peril points" below which, according to the Tariff Commission, duties cannot fall without harming American industries.

In the new Bill the President seeks not only the power to reduce all tariffs by up to 50 per cent in broad "across-the-board" bargains, but also the power to eliminate tariffs completely on goods for which the United States and members of the expanded European Economic Community will be the dominant suppliers—that is, provide 80 per cent of the exports of these commodities, chiefly industrial hard goods like aircraft and machinery. A tentative "zero list" includes 26 groups of products ; trade in these goods between the United States and the EEC in 1960 amounted to over $3 billion, two-thirds of which were American exports to Europe. World-wide, they cover trade worth $19 billion.

The Administration is understandably as shy about this potentially explosive list as Congress is curious. The Administration's witnesses were much more anxious to emphasise the 4 million jobs which are already dependent on exports and imports (with chapter and verse about the states and congressional districts involved) and the 150,000 new jobs which, it is estimated, every additional billion dollars worth of exports will create. The Secretary of Labour put the number of jobs likely to be lost by increasing imports at no more than 90,000 over the coming five years. Some 260 witnesses will be heard before the committee retires into executive session. The best judgment at present is that the Administration will carry the day, but that the real battle will take place over safeguards, such as the present escape clause and peril point procedure, over exemptions, over the five years of bargaining authority which Mr Kennedy seeks, over the zero list and over assistance to firms and workers injured by imports.

Why Businessmen Leave Home

FROM AN AMERICAN CORRESPONDENT IN EUROPE

A SERIES of surprisingly tenacious myths continues to dominate much of the discussion, both inside and outside the United States, of American direct investment in Europe. Like most legends, the four main myths have a tiny element of truth in them, which sustains the myth-makers. But there is some evidence that the facts are gradually beginning to be recognised in the United States, though the Administration—perhaps to avoid that worst of government embarrassments, admission that it has been wrong—continues to repeat the old slogans.

For example, President Kennedy, in an understandable effort to promote his new trade Bill, has given fresh currency to the myth that firms establish branches or subsidiaries in Europe to "get inside" the tariff wall around the European Economic Community. In fact, they do nothing of the kind. They establish

Is It Cheaper Overseas?

IT is widely believed that American manufacturers build plants overseas to take advantage of costs of production which are lower than they are in the United States. The National Industrial Conference Board, which sponsored a study of comparative costs in manufacturing in 1956, has followed this with a second study* covering 147 firms with plants overseas in 1960. Inevitably most of these firms are very large ones and their operations are concentrated in the industrially mature countries. The questionnaire did not ask for actual figures of costs, which the firms might have been reluctant to give, but for relative figures.

The table below shows the percentage by which various components of unit costs in each geographical area exceeded or fell below those in the United States. Average figures for total costs have been obtained by weighting.

	Plant			Sub-Total	Sales	Other	Total Unit Cost
	Materials	Labour	Overhead				
Canada	11	−1	0	10	0	0	10
United Kingdom ..	3	−5	−4	−6	−7	−3	−16
Common Market..	11	−6	−4	1	−3	−1	−3
Latin America	19	−1	5	23	−3	5	25
Australia	14	3	−2	15	−1	2	16
All other	13	−6	3	10	−5	4	9
Total, all products.	12	−2	0	10	−3	1	8

From this table it appears that only in the United Kingdom do lower costs of labour offset to a significant degree the generally higher costs of materials. That these are lower in the United States is due to a "hidden productivity factor": a vast network of specialised suppliers to satisfy the precise needs of manufacturers. Since 1956 there seems to have been a slight narrowing in the differences between the cost of manufacturing abroad and in the United States.

* Costs and Competition. By Theodore R. Gates and Fabian Linden. 226 pages. $20. The National Industrial Conference Board, New York.

subsidiaries in Europe because the market is large and growing. Finding an American company whose main incentive for setting up an operation in Europe was the new tariff is like trying to find a needle in a haystack.

The EEC has, of course, been an inducement to foreign investors for another reason: it holds out prospects of a much larger European market for any given concern in any one of the six countries. But even this can be exaggerated. In spite of the prospect of complete free trade, German firms are investing sizeable amounts in other countries belonging to the common market. Many American firms are setting up shop in more than one European country. In numerous cases—in Italy, for example—a large and growing domestic market provides foreigners with sufficient inducement to invest.

Myth number two involves the balance of international payments. Here Europeans, including even such august figures as central bankers, have been as much victims of the myth as have Americans. Without allowing for any of the many offsets on the receipts side, the total cost to the American balance of payments of the "invasion" of the common market in the peak year of 1960 was only $280,000,000. This compares with total payments by the United States of $31,000,000,000, a payments deficit of $3,900,000,000 and an outflow on direct investment account of $1,700,000,000. Moreover, the figures usually cited give the total value of the new investment, not the impact on the American balance of payments. A great deal of the money comes from reinvestment of earnings by firms already established overseas or is raised locally. A firm moving into Belgium, for example, would be mad to use dollars when it can cover as much as two-thirds of the investment with loans raised locally at subsidised rates of interest.

Needless to say, American investment in Europe also generates income—not only in dividends and royalties, but also in the form of exports of both equipment and components. One recent study of 19 large American firms showed that they alone sold more than $150,000,000 of exports to their overseas affiliates in each of the past four years, or enough from these companies alone to close the "gap" in the balance of payments between dollar outflow for new direct investment in economically advanced areas and the present return from dividends.

The third myth relates to taxation. The idea prevails that the present law, which permits payment of American taxes on corporate income earned abroad to be deferred until it is repatriated, was adopted in the postwar period as an "incentive" for private investment. In fact the provision has been in the law for several decades. What is more, it "induced" very little investment in Europe until it became plain to all that Europe was booming. Now that investment in Europe has proved profitable and become fashionable,

ABC of Investment

FROM A SPECIAL CORRESPONDENT

ANY American father who is alert to teenage trends shows little surprise these days when his 14-year-old son scans the financial page instead of the comics in the morning paper, and he is ready with all the answers when his daughter, who is only 12, quizzes him on the Dow Jones industrial averages at the supper table. The children have picked up their interest in the financial world at school; lessons in the ABC of investing are being given increasingly all over the country.

The instruction takes different forms. In some cases students buy one share in a well-known company and follow its fortunes on the blackboard throughout the school year. Schools in a number of states, including New York, New Jersey, Ohio, Indiana and Texas, have formed small investment clubs with each pupil contributing perhaps twenty-five cents to the pool. In Western Springs, Illinois, youngsters are reported to be studying mathematics by watching the fluctuations of the market. They are probably picking up a few tips about stocks and shares at the same time. The New York Stock Exchange, which is by far the largest in the country, is playing a leading part in this educational and promotional work. Films, charts and instruction kits on the subject of investment have been issued and one of the exchange's vice-presidents estimates that more than a million children used these teaching aids in 1959.

The NYSE also took the lead several years ago in simplifying the maze of regulations which then surrounded the purchase of shares in the name of minors. Until recently this red tape made the pleasant task of giving a child a few shares such a nerve wracking procedure that most parents dropped the whole idea; they opened a savings account or bought a government bond instead.

Today legislation has been passed in all fifty states and in the District of Columbia making it comparatively simple for parents, close relatives or guardians to buy shares in the name of any person under 21. As a result of these changes there are now nearly 200,000 American investors under 21 and their number is growing. Even if these young people own only one share, as many of them do, they experience the excitement that comes with owning stock for the first time. They receive through the post annual reports of the company in which they have an interest; they also receive, just like an adult, their dividend cheque even if it is for only a few cents.

Investment classes are supposed to teach children the fundamentals of how a company's finances work, and something of the American business system besides. They learn what a dividend is and what makes the value of shares go down as well as up; they learn how to read the lists of share prices in the local newspaper. The teachers, if they are wise, also lay a groundwork of caution in the minds of the younger generation, stressing that making a quick killing is not the major function of investment.

There are now 15 million individual shareholders in America, more than double the number in 1952. Interestingly enough, nearly one-half of the new shareholders in the country since 1956 have been between 21 and 34 years of age, a time of life when the family budget is generally under the greatest strain. The New York Stock Exchange takes great pains to stress to would-be investors that they should provide in advance for family emergencies before purchasing shares. But classroom instruction in stocks and shares will probably encourage the present trend towards investment early in life.

SHERATON HOTELS

EXCELLENT accommodations at reasonable rates

From New York to San Francisco, from Montreal to Dallas, there's a Sheraton Hotel waiting to welcome you. Each is located in the heart of the city, near business districts, theatres and shops. In addition to fine food and superb service, Sheraton Hotels offer many extra values such as the Family Plan (children under 14 FREE when they share your room), air-conditioning, free TV and radio, private baths. If your ship or plane is delayed, Sheraton will hold your reservations. To get reservations at any Sheraton Hotel, see your travel agent or Sheraton's General Agent:

Over 90,000,000 customers

and a trader who knows them all

Shortly after New Year's, throngs like this gathered in Japan at the myriad shrines of Ebisu, the symbol of good fortune. Long the patron diety of business, Ebisu is a happy symbol in a land where today's bubbling prosperity can be seen on every face in the crowd. Over 90 million customers make Japan one of the world's most promising potential markets.

Turning a potential market into a practical one is the business of C.Itoh, one of the world's major trading and investment companies. In fact, there is a C.Itoh office in every major commercial center in the world. Whatever your business—importing, exporting or co-operative ventures—why not ask your C. Itoh representative to call today. You'll find him a trader who knows his business— and very probably yours as well.

The ICI-COURTAULDS battle

The inside story by Roy Jenkins M.P.

Many people saw the affair of the ICI-Courtaulds take-over bid as a battle, and moreover a battle between David and Goliath, which Goliath lost. But does this in the least reflect the truth of the matter?

Roy Jenkins M.P. has been getting at the truth, and a lot of it is very surprising. This Sunday in The Observer appears the first of a series of articles in which he unravels the tangled negotiations—evidently conducted in a fog of mutual incomprehension—which led up to the open breach of last December.

He gives some deft character studies of the personalities involved; sketches the nature and history of the two firms (Courtaulds are no slouches themselves when it comes to take-overs); describes how Courtaulds came to cut their dividend. It is above all an *inside* story that he tells. And intensely readable. It begins in The Observer this Sunday.

Begins this Sunday in the

OBSERVER

there is little reason to believe that a change in the tax law would curb it significantly. Businessmen in the United States continue to fight against a change, for the good reason that the present law gives them much more flexibility in their operations abroad. But tax considerations are by no means paramount in the basic calculations that go into the typical decision to plunge into a new market. An American who had just set up a subsidiary in Belgium remarked recently, "We took all their tax subsidies with pleasure. What they didn't know was that we would have come anyway without them."

The final myth is the most difficult to combat factually, though this does not mean that it contains more truth. The myth is that investment in Europe means less investment (and fewer jobs) in the United States. The unanimous response of businessmen to this allegation is that establishing plants in Europe has been imperative to preserve or create markets that would otherwise have been lost to European competitors; for reasons which differ according to industries, there was no prospect of supplying these markets with goods made in the United States. Labour costs, transport costs, the need for close knowledge of local conditions (and once in a great while tariffs) are the sorts of reason given.

This argument cannot be shrugged off. One significant evidence of its truth is that, in spite of a few widely publicised examples, exports back to the United States from manufacturing subsidiaries established abroad have been trifling. To supply the home market businessmen invest at home; domestic investment is still ten times as large as that overseas, even allowing for the portion of foreign investment financed by means other than dollars from the United States. To supply the foreign market, businessmen sometimes have to invest abroad. For better or worse, the flow of American firms to Europe will continue until saturation point has been reached, almost regardless of tariff changes and tax changes. And, of course, this will strengthen the position of American business in the world—as many Europeans are well aware.

Beheading the Far Right

RECENTLY President Kennedy refused, even in an election year, to succumb to the temptation of linking the Republicans with the fanatics of the far right; he declared that the totalitarian anti-communism of the John Birch Society was alien to both the great political parties. But Democrats closely engaged on the political battlefield, like Governor Brown, the Democratic candidate for re-election this year in California, are less restrained. Mr Brown has been making much of the fact that many Republicans, particularly in the southern part of the state, are John Birchers; their real political hero is not Mr Nixon, but his only remaining rival for the Republican nomination for Governor, Mr Shell. What worries Mr Nixon is that to win any Republican must attract the votes of some of the Democratic majority and this is not going to be easy for anyone who accepts support from the Birchers.

When the California Republican Assembly, which represents about 12,000 voluntary Republican workers and leaders, met early this month to endorse its candidates, Mr Nixon asked that membership in the John Birch Society should be declared incompatible with the principles of the Republican party. The Assembly, which endorsed Mr Nixon as its candidate by 263 votes to 176 for Mr Shell, went so far as to describe the society as "dictatorial and totalitarian" and declared that Mr Welch, its founder and head, has done "immeasurable harm to the cause of liberty." But it refused to urge its members to retire from the John Birchers on the ground that the Republicans could not afford to alienate the extreme right.

In California Mr Nixon is in the very thick of the organised anti-communist crusaders. But in the country as a whole he has plenty of allies. Since the President spoke out against the far right virtually all the great religious groups—Jews, Roman Catholics, Presbyterians and Episcopalians—have denounced the danger from the extremists, some of whom have been harassing and victimising liberal churchmen, even to the extent of bombing their houses. Mr J. Edgar Hoover and other officials of the Federal Bureau of Investigation, who for a time had the field to themselves, have condemned the self-appointed scourges of communism. In California itself San Francisco has proved far less hospitable to Dr Schwarz's travelling anti-communist school than Los Angeles. And the Department of Justice has done its part by asking Mr Welch (so far without result) to produce his evidence after he made a speech about thousands of communists in government departments. Mr Welch, who made the fatal error of calling General Eisenhower an agent of communism, seems to be on the way out. Conservatives feel that he is making them ridiculous and he was not even on the guest list of the Young Americans for Freedom, a right-wing group which held an 18,000-strong rally in New York last week. If he had been they might have had even more trouble than they did in assembling enough distinguished guests to support Senator Goldwater, their idol.

"Sorry, Old Boy, But Your Wife And I Feel You're Becoming An Embarrassment"

Maryland's Black Eye

FROM A CORRESPONDENT IN ANNAPOLIS

FOR the second year in succession, the political scene in Maryland is being dominated by the savings-and-loan associations which in Britain would be called building societies. This time last year Governor Tawes was running into heavy political weather because of his backing of Bills to regulate a business which, after decades of respectable prosperity, had begun to attract fly-by-night firms as a result of the lack of controls in the state. Many of the Governor's fellow-Democrats were involved in various aspects of the business, some of them dubious, and passage of a Bill was a test of his political strength. Now Mr Tawes is being attacked by his Democratic rivals for the Governorship because he did not deal with the scandal earlier and the savings-and-loan issue promises to figure largely in the primary elections on May 15th, when members of each party will choose their candidates. The deadline for entering these contests was March 4th.

To set the scene, it is necessary to go back to the improbable events of last spring and summer. The Governor signed the control Bills on March 28th but they were not to go into effect until June 1st. Petitions began to circulate calling for a state-wide

referendum on the control laws. These were traced to Baltimore's last specimen of the classic city boss, Mr "Jack" Pollack, who rather ostentatiously conveyed the first 10,000 signatures to Annapolis in an armoured lorry. On June 1st the constitutionality of the original laws was still in question and Mr Tawes called a one-day emergency session of the Legislature and had them re-enacted by a triumphant majority. Mr Pollack filed suit to have them declared unconstitutional, but some wind was taken out of his sails when one of the collectors of signatures was sent to prison for six months for perjury, declaring as he went that Mr Pollack had offered him 7 cents for every name. The legality of the laws is still in some doubt.

In the meantime state and federal law officers were delving into the savings-and-loan business. They found, as was expected, that the majority of the active firms were perfectly sound but five of the new-comers are in receiverships, two are under state-appointed conservators, two are in federal bankruptcy and two have been ordered to dissolve. About ten more firms have to be dealt with. The charters of more than 250 inactive associations have been revoked. Further revelations are expected, but will be less political. The Legislature voted last week to establish deposit insurance for state-chartered associations which do not have federal insurance and so provide an alternative to the only private insurance firm, which is controlled by financial interests that prefer to remain anonymous. The Legislature has rejected a move to conduct a grand inquest into the whole savings-and-loan imbroglio.

Now the issue has passed (the line is fine but perceptible) out of the realm of legislation and wholly into that of politics. This happened just before Christmas, when an anti-Tawes Democrat who is running for the United States Senate said that for the Governor to assume credit for the clean-up was "political fraud." In 1960 Mr Tawes vetoed a stop-gap savings-and-loan Bill as giving only an illusion of reform and as being too weak to be effective. He then appointed a commission which drafted the present legislation. His rivals contend that his veto gave shady promoters another year of grace in which to swindle Marylanders of their hard-won savings. This cry has been taken up by several other leading Democrats, one of whom is demanding tax relief for the victims of the Governor's procrastination. How much political advantage Mr Tawes's Democratic opponents can get out of these charges remains to be seen. But the Republicans, who have kept their skirts clean, have thrown away their chance of profiting from the upheaval in the Democratic camp; their candidates for Governor and Senator are admittedly only stop-gaps. At the moment the best bet is that Governor Tawes can have the second term which he used to say he did not want.

SHORTER NOTE

Membership of the House of Representatives is to remain at 435. A carefully laid scheme to increase the number to 438, primarily to relieve a political impasse over redrawing constituency boundaries in Massachusetts—the home state of the Speaker of the House, Mr McCormack—blew up in his face last week just when it was on the point of being accepted. Pennsylvania would have received one of the extra seats but at the eleventh hour its Congressmen discovered that their state would have to scrap its own painfully-achieved redistricting law; they were not prepared to accept this. The Speaker's prestige has not been enhanced either by his attempt to favour his own state or by his failure to bring off the manoeuvre.

BOOKS

Diplomats Take Second Place

British Foreign Policy in the Second World War: *History of the Second World War*

By Llewellyn Woodward.

Her Majesty's Stationery Office. 647 pages. 37s. 6d.

WARS are bad times for Foreign Offices. The continuation of policy by other means necessarily involves the demotion of the diplomat. He has to take second place to the soldier and to accept as partners the practitioners of many improper trades: the organiser of underground movements, the economic warrior, the propagandist. And in a total war his role is reduced even where allies and neutrals are concerned. He has to share the conduct of foreign relations with emissaries from other departments, each claiming an absolute priority for his own mission, dealing direct with their own opposite numbers, reporting back to other and possibly superior sources of authority at home. In such a revolution it is something to be able to say "J'ai vécu," and if this latest volume in the official war history needs an epigraph that is surely it.

Certainly such downgrading of the senior department of state sets its own problems for the historian. How is he to isolate the story of a country's foreign relations in wartime when the nation's whole life is permeated by its awareness of the outside world? How is he to disentangle from the whole complex those parts of it for which the Foreign Office is responsible? The planners of the official history have ready to hand an easy solution—let him write it out of the departmental files. And this is what Sir Llewellyn Woodward has, no doubt very properly, done. The result, however, is not what it calls itself, a history of "British Foreign Policy in the Second World War." It is a narrative of those parts of the policy which principally concerned the Foreign Office, with a certain number of references to published accounts of what was happening elsewhere. Of these other accounts one is pre-eminent; the net effect of Sir Llewellyn's 600 pages is to provide a series of footnotes to Sir Winston Churchill's "Second World War."

No doubt this faithfully reflects the reality of a war that was dominated by great national plenipotentiaries, in Britain not least of all. We should be rightly suspicious of a diplomatic history that tried to emulate the effects of some of those who have written up soldierly diaries and conveyed the impression that the Prime Minister was hardly to be trusted out of sight of a khaki nursemaid. The instances given here of disagreements across Downing Street are fairly presented and realistically assessed: the debt to Churchill handsomely acknowledged.

But was it necessary to make Sir Winston quite such a present of style as well as of content? If anything was needed to convince one of his mastery of the historian's craft it is, alas, supplied by this product of a professional historian's pen. Pemmican for *filet mignon* is what we are offered here. In place of the ample quotations from contemporary documents that give Sir Winston's book its vividness and immediacy, we have an almost continuous precis of despatches and minutes interspersed with a minimum of quotation. The façade of departmental unity is preserved, but at the price of grave injustice to its members. No one will get from this volume any idea of the liveliness and independence of mind of the public servants at work in these years in the Foreign Office or overseas.

How much of this is the result of rules imposed by his official masters and how much to decisions of Sir Llewellyn's own making we are not told. But the author himself must surely be responsible for another, very regrettable, feature of his treatment. He nowhere gives his reader any adequate account of the organisation of the Office at home or of its relations with the other agencies of government involved in foreign affairs, or of the way in which the structure of British representation abroad was, or was not, adapted to take account of the vastly different working problems of wartime. The creation in Washington, for example, of a miniature Whitehall around the ambassadorial core was a crucial feature of the Anglo-American partnership on which much else depended. In neglecting to expound such themes Sir Llewellyn has robbed his story of much of its significance.

This apart, what kind of a Foreign Office emerges from these pages? Very properly—in retrospect—it is a body that regards the winning of the war as only an incidental element in its permanent struggle to safeguard British interests. Again and again it points out to Sir Winston and his enthusiastic colleagues the distinction between the short run and the long run. Unfortunately, if perhaps inevitably, it tends to see the long run almost entirely in prewar terms, with Europe predominating in its thinking. For all the traditionalism, even imperialism, of Sir Winston's world view it was a *world* view and as such often wiser and ultimately more realistic than the near-sighted calculations of the FO. Yet on many issues the FO was right; it produced the better blueprint for the United Nations (a story told for the first time from the British point of view in these pages; it might usefully have been told in greater detail), was consistently sensible about France and Germany, and though rather governessy about liberated Italy was certainly more willing than Sir Winston to be tough with Franco. But it was slower than he to recognise the primacy of the Anglo-American alliance in Britain's diplomatic strategy and, in 1945, more disposed to attribute merely limited objectives to Russia. Taken all-in-all, however, not many departments came through the war with as few major mistakes to their credit.

One name of high repute in Britain comes poorly out of this record. The British files yield further evidence that the statecraft of Franklin Roosevelt was inadequate to the exacting demands of his time. It is not his doctrinaire anti-imperialism that is at issue; these pages reveal all too frequently a pettiness of mind, an overconfident vanity, and a readiness to make overdrafts on his friends in order to placate his foes. That the State Department under Mr Hull frequently emerges as the wiser counsellor is the measure of the slump which Mr Roosevelt's reputation sustains. But the Hyde Park archives have still to be heard from. This book should stimulate the demand for a Rooseveltian version of many of these events.

For its disclosures on this and other topics Sir Llewellyn's book is rightly to be rated indispensable. It is indeed the only comprehensive account of foreign affairs in wartime that we have. Yet the dominant sentiment must be one of disappointment. To have dug so deep and so long in these jealously guarded quarries and to have come up with so little. To have watched, through the medium that historians have, the written sources, the unfolding of events and the shaping of policy and to have caught so little of the sense of movement, of the drama of decisions. If this is official history, the sooner we have some unofficial history the better.

First Archbishop

Thomas Cranmer

By Jasper Ridley.

Oxford University Press. 450 pages. 35s.

THIS life is of the first Protestant Archbishop of Canterbury; a man controversial in his own time, and still difficult to bring into focus. He was consecrated by the Pope, repudiated the papal power, married the king five times, drew up the first two liturgies of the Church of England, married secretly and was forced to hide his wife, chose imprisonment under Mary, recanted during his imprisonment and was burnt at the stake, finally reaffirming his essential belief in the Protestant position.

All the sources of Cranmer's life are biased, and even Mr Ridley, who conscientiously tries to hold a middle position, shows himself hostile to both Cranmer and Henry VIII. One is left with the feeling that he has failed to make up his own mind about Cranmer, and his conclusions add little to what is known already. It is not enough to picture Cranmer as the servant of Tudor despotism; Tudor despotism is itself a controversial subject, and Cranmer in any case was more than this. The great interest of his character lies in its manifest contradictions; he was a gentle, even a timid, man, yet he had the notable courage to write to Henry on behalf of Anne Boleyn, Mary Tudor and Cromwell, when to do this might in each case have meant his own destruction. His career is marked by doubts and hesitations both in his theological thought and his political actions; it is typical of Cranmer that he went to the stake carrying two versions of his final speech, one Catholic and one Protestant. It is therefore fatally easy to accuse Cranmer of betraying his principles, as Mr Ridley does over his acceptance of the Six Articles, or to condemn him for insincerity in his expressions of sympathy for Katharine of Aragon or in his "double think" over the "Real Presence." His secretary, Morice, was more just when he wrote, "men ought to consider with whom he had to do, specially with such a Prince as would not be bridled nor gainsaid in his requests."

Mr Ridley is in fact inclined to simplify the whole period. Tudor politics, and the nature of Tudor government, can only be understood against a background of violence. In English history the period stands between two civil wars. In France and Germany, the sixteenth century was a time of terror and atrocities: the sack of Magdeburg and the massacre of St Bartholomew were not repeated in England because of the political decisions of men like Henry and Cromwell, and the adaptability of Cranmer.

As Archbishop, Cranmer made two great contributions to posterity: he avoided extremes, and as a result helped to create the Anglican "Via Media"; and he compiled the Book of Common Prayer, which is one of the great literary achievements of the period. Mr Ridley pays insufficient attention to both these aspects of Cranmer's life; thus, in spite of being informative and up-to-date, his book remains inadequate to the greatness of his subject.

Canada Looks Abroad

The Art of the Possible: *Government and Foreign Policy in Canada*

By James Eayrs. *Toronto University Press.* London: *Oxford University Press.* 240 pages. 56s.

THIS diligent and perceptive study is not concerned with the substance of Canadian foreign policy. It is part of a project of the School of International Service of American University, Washington, to investigate the influences and the mechanisms that govern the making of foreign policy in various countries. Mr Eayrs has lightly and entertainingly sketched the development of the Canadian attitude to the outside world from the frustrations of early twentieth century negotiations with Washington through the British Ambassador, to the creation of a worldwide diplomatic service within the last twenty years.

In this, as in earlier works, he displays much skill, backed by formidable but unobtrusive research, in selecting the significant incidents and anecdotes to carry his theme. He has been greatly assisted by the recently revealed extracts from the diaries of W. L. Mackenzie King, who was of course the dominant figure throughout the period when Canada was developing both a foreign policy and a department of External Affairs.

Professor Eayrs, who teaches at the University of Toronto, is one of a new generation of Canadian dons who are beginning to introduce a new element into the formulation of government policies. Until about ten years ago the intellectual contribution to Canadian policy-making was largely limited to the select and brilliant group of senior civil servants, whom he describes as the "under-Cabinet" and the "bureaucratic elite." The gulf between the academic world and the few scholarly practitioners of the art of the government was too wide for the good of either. The increasing amount of critical study which many of the younger university teachers are giving to current affairs, both international and domestic, is bound to improve Canadian public life in the long run, though its first results can be clumsy, as they were in last

year's intervention of economic professors in the Coyne controversy.

Mr Eayrs's lack of direct experience in government leads him astray at one or two points. He rightly reports that the Governors-General from 1926 to 1952 had no influence on policy but became ceremonial cyphers. Since 1952 when Mr Massey was appointed Governor, followed by General Vanier, he asserts that the office has been "rehabilitated." This may be true in terms of public prestige and popularity; but the "rehabilitation" has not, as Mr Eayrs implies, restored the prerogative of being consulted, and of encouraging and warning their ministers. The Governors' influence on policy remains a dead letter.

Again, in a valuable chapter on "The Military Establishment," reliance on public criticisms such as those of General Guy Simonds and on the mere forms of various committees leads him to miss the point of the Canadian problem. It is not, as he implies, that civilian influence stifles the military advice. It is that civilian ministers have been reluctant to take their proper responsibility, and the military brass have been permitted to make far-reaching private agreements with the Pentagon long before the Government has had any idea of what they were up to. Similarly, one questions whether the charge that Canadian diplomats are completely hamstrung in their negotiations abroad deserves all the prominence Mr Eayrs gives it.

But these are argumentative criticisms. The book is a very welcome contribution to public understanding of public affairs and an even more welcome sign of the Canadian universities' new involvement in them.

Crisis of Socialism

The Economics of Socialism Reconsidered

By Henry Smith.

Oxford University Press. 235 pages. 30s.

To most people, socialism means the public ownership of the means of production. The trouble is, from the point of view of many socialists, that much of what it was expected to secure has been achieved without it: full employment, for instance. Furthermore, even if all industry were publicly owned, this of itself would do little to improve matters further.

This is what Mr Smith calls "the contemporary crisis of socialism." His aim is to see what ends lie behind the demand for public ownership and to discover what economic conditions must be fulfilled for those ends to be realised. His answer is to redefine socialism as the demand for the minimisation of conflict arising from economic relationships. He then argues that this demand can only be met when no one works any more than they would choose to work if unpaid and when capital is so plentiful that the rate of interest is zero.

Such a state of affairs requires public ownership of capital, for private ownership of what yields no revenue would be absurd. It also requires simple tastes and the absence of want-creating activities. So socialism is unlikely to be achieved and unlikely to be wanted in most of the developed countries. It is, that is to say, utopian.

This over-simple summary explains what constitutes the main theme of the book. But no summary could describe its interest and erudition; Mr Smith ranges too widely for that. Thus he discusses Marxist economics in some detail, examines the future of planning in India and discusses the possibility that future adverse movements in the terms of trade may cause economic retrogression in the advanced countries. He has, in fact, written a scholarly study informed with humanity about one of the central questions of the modern era.

History in the Open

Reconstuction of American History

Edited by John Higham.

Hutchinson. 244 pages. 35s.

In the marketplace of ideas, no less than in the department stores that peddle more matter-of-fact merchandise, the Americans believe in explicitness. They do not go in for the cult of the hidden preciosity, to be revealed only to the most persistent or favoured customers; their wares are on the counter and the information booth stands just inside the front entrance. This admirable openness is well exemplified in Mr Higham's book. It is, in effect, an information booth for contemporary American historiography. He has expanded five broadcast talks originally given for the *Voice of America* into a collection of eleven essays on major themes in American history. Each essay comes from the hand of an expert in the period or topic, and preference has clearly and beneficially been given not to the maestri of settled name and renown so much as to the coming men whose ears are alert to history's future as well as her past. Mr Higham himself contributes an illuminating résumé of the broad trends in past American historical writing and suggests that its present condition is ambiguous; there is a neo-conservatism that dwells on the happy elements of consensus in the American past, but there is also a persisting disposition to explore and emphasise the elements of conflict.

The individual essays are frankly and most usefully written around the works of the leading scholars of each theme. They do not fight shy of citing, where necessary, the significant article as well as the full-length book, and they follow up their analysis of the principal writers by succinct bibliographies, which list monographs or peripheral studies. The result is a highly suggestive as well as a very practical set of signposts for scholar and layman alike. It would be an excellent idea if British historical scholarship were similarly ordered and signposted in terms not merely of the stock periods but also of the live issues that generate controversy and inquiry.

Two things emerge very clearly from these essays. The first is the impressive unity of the world of American historical scholarship. Vast in point of numbers, scattered in countless institutions across the continent, exposed to the tireless marauding depredations of the social sciences, the anti-social sciences and even the natural sciences, American historians maintain a community of discourse, a persistent exchange and friction of ideas, which guarantee that no hypothesis will go unexamined and no thesis escape its antithesis. They may be a little insular, rather too seldom relating American experience to that of other times and places, but in cultivating their own garden they have explored its potentialities to the full. Perhaps this is due, more conspicuously than their British opposite numbers may care to admit, to their other very evident characteristic—their industriousness. Without intending it, Mr Higham's book is, among other things, a tribute to the sheer assiduity with which American historians have gone at their country's past. No doubt sheer volume of output is not everything. But it is something that British historians could do with a little more of.

Missionaries and Others

Livingstone's Missionary Correspondence, 1841-1856

Edited by I. Schapera.

Chatto & Windus. 368 pages. 42s.

East Africa: *Through Contemporary Records.*

Selected by Zoe Marsh.

Cambridge University Press. 236 pages. 25s.

Writers about Livingstone, like Blaikie, have mostly drawn a standard Victorian portrait of a Christian gentleman full of conventional virtues and missionary zeal. In fact he was a difficult, irascible, intolerant and thoroughly unsociable man, who was by profession and instinct an explorer and by religion and temperament a sort of eclectic gipsy. He was only a missionary for a short time and he was not a great success. The qualities that made him perhaps the most brilliant explorer of his age did not always go down very well with the London Missionary Society.

In this book Professor Schapera has collected together a valuable and entertaining selection of letters, many of which have never been published before. They cover the period between Livingstone's first arrival in South Africa as a missionary in 1841 to the time when he finally broke his connection with the London Missionary Society in 1856. Professor Schapera has summarised them in a most illuminating and thoughful preface of his own.

The letters fall into three groups: those

"... far better written, far livelier, and expressing genuine opinions."

You wrote in an American magazine recently, Sir Charles, about Great Delusions; the ones that blind many Americans to their country's weaknesses. Do you think that the British are similarly deluded in believing, as many do, that their Press is the best in the world?

Now, that's difficult. I think the British Press is probably the most highly professional of any I know, and in many ways the most interesting and lively. But I must say I don't think it is as deeply serious as, for instance, the best of the American Press.

But surely newspapers, especially popular ones, should be entertaining as well as serious?

Oh, of course! It's just that I would like to see more news in our papers. I can't say I'm very happy about the tendency of British newspapers to become more and more like daily magazines. Perhaps this is inevitable. But I would like it not to be so.

What about the political weight distribution of our Press?

Well, of course, it's heavily tipped towards the Conservative side at present.

So you would probably agree that there ought, at any rate, to be a place in the set-up for a popular radical paper? Do you think that, in fact, such a paper can achieve the sort of circulation that it would need to compete with its popular rivals?

I very much hope so. The great danger seems to me to be that we're going to have too few newspapers, and, consequently, relatively few opinions and those more or less homogeneous. That would be a bad thing by any standards.

Then do you think the Daily Herald will be doing both what is right and what is expedient if it sticks to its guns as "an independent newspaper of the Left"?

I'm sure it will. Though I feel the words "Right" and "Left" are unsatisfactory here. One great change in this country is that you now have a belt of affluence which covers a large part of the prosperous working-class and has made them into, in sociological terms, a lower middle-class. It's extremely important that these people should be represented, and, above all, **helped to form opinions.**

And do you think the Daily Herald, in its new form, can do this?

Well, I'm not sure if it has found the right approach yet. Don't misunderstand me. I am full of admiration for what has been done to the Daily Herald of late. It's an immense improvement; everyone agrees on that. It's a far more interesting paper; far better written, far livelier, and expressing genuine opinions. Whether they are opinions tuned to the people who are going to form its readership, I have some slight doubt.

Have you an image of this readership? ... this new market? Who are they?

I have no doubt that they are the very large number of intelligent and educated Labour voters in the country.

Do you think it's mainly a young market?

I'm always a little suspicious about age distributions in connection with things like books, plays, newspapers ... I think it's a mistake to be hypnotized by that. Statistically, there must be great numbers of Labour voters of all ages who don't yet read the Herald, and it seems to me that if you get even half of them you've got your mass circulation!

Then what do you think is still needed? There they are, the natural readers of the Daily Herald; what must be done to win them all over?

The Herald has still got to stamp its personality, and that is the hardest thing of all for a newspaper to do. It's got to acquire a particular cachet; something that distinguishes it from all the rest.

Would you say there are signs that a personality is emerging in the Herald now?

Oh yes. It can't happen quickly, because, you see, it's a two-way traffic. You need the right audience to help create the paper's personality. The two things must interact. It's like the current that flows to and fro between actors and audience in the theatre. And journalism is just the same.

C.P.SNOW HAS SOMETHING TO SAY ABOUT THE NEW DAILY HERALD

Men of many parts are rarer than they were, but Sir Charles Snow is one. As C. P. Snow he is famous as one of Britain's most gifted novelists. His books are widely read in the United States and all over Europe, East as well as West. Scientist, Lecturer at Cambridge and leading American universities, Civil Service Commissioner, director of a great business firm, member of the American Academy-Institute—he is or has been all of these. Here he talks frankly and freely about the Daily Herald.

You've just said, Sir Charles, that the Herald is greatly improved. What do you find especially good?

I very much like this précis of what's in the paper: "The World This Morning." I find that excellent. And "The Daily Herald Explains"; I'd like to see that developed even further. The series on the Common Market was particularly good.

What about "As I See It"—this column on page 2 which is opened to a wide political range of contributors? Do you approve of this kind of personal journalism?

Now, that I'm not so sure of. Or rather, I feel you can dissipate your effects rather easily that way. Of course Michael Foot is a brilliant journalist; so is Walter Lippmann. **But readers are largely got by legend and habit,** and I think you form the legend and give people the habit through something they expect to read regularly and often. I would prefer the Herald to have one political columnist as good as these, in line with the policy of the paper and writing regularly.

Like Malcolm Muggeridge, who writes regularly on "Life and Books"?

As good as Malcolm Muggeridge, but seriously political.

What do you think of that side of the paper which deals with the arts?

Well, one thing occurs to me at once. I'm very strongly for "A Book a Day." All the reviews I've seen have been extremely well done, and I've been most impressed by the care that has been taken to get the right people to review the books. I like Paul Dehn, too, on films; and the theatre criticism is on the right lines.

Some people feel more space should be given to that part of the paper. Do you agree?

Yes, I think that is probably so. Music, for instance. There you really **do** have an audience that the paper ought to be able to use, and the same is true of the visual arts as it never was before; and this is something that is world-wide. But I'm a great disbeliever in culture as a decoration added afterwards. It must fit the paper. For instance, I'd hate the Herald to go in, like certain of its competitors, for dramatic criticism which has absolutely no bearing on anything the paper could possibly represent. That, ultimately, is death!

In that connection, do you think that, on political and other matters, too, it's important that things should fit the paper? For instance, what sort of things do you feel the Daily Herald, more than other papers, should be campaigning for, or against?

Well—there are two major local issues, for a start, which will concern this country more and more in the next ten years or so: one, how we're going to earn a living; and, two, education. They're connected, of course, because education means both educating ourselves for a decent society, and educating ourselves for the practical tasks we have to tackle in it. The Daily Herald should be very much concerned with both.

You said local issues. What about bigger ones?

Yes, indeed, and the biggest one of all, which we can't escape, is that **somehow the world has got to live together.** People have got to try to understand what's happening not only to our own relatively static society, but also to societies which are changing extremely fast. People haven't realised just how fast. Intellectually, perhaps, but not emotionally; and until they do, the task of trying to live together in peace is hopeless. Russia, for instance, is a vastly different country from the one it was eight years ago; and it's the same in many other countries. The actual rate of change is fantastic. Now, **that is the sort of thing that a paper like the Daily Herald can bring home to people....**

from Livingstone to the headquarters of the society in London, the replies sent to these letters, and a particularly revealing series of informal letters to a friend of his called William Thompson. They show how bit by bit Livingstone changed from being a conventional missionary, first into a restless gospeller with a zest for travel and hearty dislike of his fellow missionaries, and finally into the solitary explorer which he remained for the rest of his life. Although other missionaries complained about him in very uncomplimentary terms, and he himself bombarded London with obstinate, disobedient and sometimes scurrilous letters, the directors of the London Missionary Society were, it seems, remarkably understanding and generous, and gave him a lot of rope. In the end, however, there was a limit to their forbearance, and to their ability to justify spending missionary money for exploration pure and simple, and he had to go.

The conclusion that emerges is that David Livingstone, though impossible to live with, work with or control, was a character, and a most courageous and gifted explorer. One is grateful to Professor Schapera for transforming a legend into a man.

Miss Marsh's extracts from contemporary records range from Herodotus to the Carter Report. They outline the nature and the effect of the various outside influences that have shaped the development of the East African territories. Although its main value is, of course, as a source book, some of the extracts are lively and appetite-whetting enough in themselves. There is a splendid account of an argument between Stanley and Mr Gladstone whether a peak of Ruwenzori should be called Crophi or Gordon Bennett, and an extract from a debate on the Uganda Railway which ought to be read as a warning by all MPs who speak about overseas territories they have never been to. The drawings by Ruth Yudelowitz are enchanting.

Fresh Approach to Competition

Competition as a Dynamic Process

By J. M. Clark.

Faber for the Brookings Institution. 518 pages. 54s.

In the early thirties, Mrs Robinson in this country and E. H. Chamberlin in the United States revolutionised the theory of the firm and of price determination by providing a rigorous analysis of cases midway between free competition and monopoly. At the time, this seemed to be a great advance towards realism and relevance, and dozens of articles appeared in the learned journals, elaborating and extending the theory.

Unfortunately, the main legacy of all this has been the readiness of undergraduates to believe that they understand the workings of the economy once they have learned to draw marginal revenue and marginal cost curves, or to expound the kinky oligopoly demand curve. The sad fact is that all of this ingenuity has contributed very little towards useful knowledge. This became gradually apparent when economists, armed with the new tools of analysis, sought to use them in studying the behaviour of particular industries. Despite manful attempts to expound their conclusions in terms of the theory, one author after another found himself unable to do more than pay it lip service. The first high hopes were thus disappointed, though even today some of those economists who find facts an unpleasant subject for contemplation continue to manufacture intellectually satisfying theoretical constructs for the delight of their fellows.

The reaction against the new theories started before the war. Some economists got on with the job of studying the price and output policy of a particular firm or industry, while others attempted to formulate inductive generalisations (for instance, the full cost principle) on the basis of surveys by interview and questionnaire. As a result, a large but disorganised body of knowledge now exists, particularly in America (where each anti-trust action provided thousands of pages of source material). Economists are therefore in a position to contribute something as is shown, for instance, by their appearance as witnesses before the Restrictive Practices Court in this country.

One of the big differences between the pure theory and the down to earth approach is that from the former competition is regarded as a state of affairs, while from the latter it is regarded as a process. Professor Clark takes this second view and has here attempted to set out a fresh approach to the study of competition, which is dynamic and which fully reflects the complexity of industrial life, but which contains new theoretical generalisations rather than mere description.

The results of his labours defy summary. Four hundred and fifty pages exhaust the reader if not the subject. There are no clear and crisp hypotheses, no elegant chains of Euclidian argument: there is only page after page of reflective platitude and wisdom. Does competition improve or worsen quality? "It depends" is the answer. But then we are told what it depends upon in a thoroughly sensible discussion of the many relevant factors. They are too many to be embalmed in any concluding precise formulation, however, and the same is true of all the other fields through which the author steadily ploughs: such as, what do we want competition to do?, cost behaviour, competition over distance, and so on. It is a worthy and impressive performance which few other economists could have matched. No one should set out on the study of competition in a particular industry without having read it, and if the generalisations are not general enough to suit most theorists, perhaps it is the fault of the subject rather than of the author.

A Gallop Through History

Great Britain to 1688: *A Modern History*

By Maurice Ashley.

Michigan University Press. London: *Cresset Press.* 477 pages. 50s.

The University of Michigan has embarked on an immense task; no less than the history of the world in fifteen volumes. This series will include volumes on Africa, the Southern Pacific and India, and when completed may well be one of the most up-to-date surveys of its kind in print. Mr Ashley's volume is the first of two on Great Britain (the only other country so honoured is the United States). It is described as a "modern" history, presumably in the sense that it is contemporary in its approach.

It is difficult to feel completely convinced of the value of these gallops through the ages. There are doubtless a few avid searchers after general culture who genuinely want a bird's-eye view of Great Britain from the Beaker people to the Whig grandees in four hundred and fifty pages, and who can read through a brisk recital of facts without mental indigestion; and there is, of course, the ever-increasing stream of exam-conscious young, who want a comprehensive survey. To these, especially in America, Mr Ashley's book will be a godsend, for it is clear, competent and, above all, readable.

It is perhaps ungenerous to carp at Mr Ashley for making history read like the unrolling of a pre-inscribed scroll. The terms of the problem set him make simplification essential. This means that much has to be sacrificed—the complexity of human motives, for example, and doubtful or controversial interpretations. Without these, history is apt to seem a little thin. Mr Ashley does break his narrative periodically to discuss the general social-economic state of society, and to describe the development of the arts and of science and technology. These sections are well done and do much to fill in the background. His bibliography is good, and his summaries of Welsh, Scottish and Irish affairs in the earlier sections are most useful in disentangling the complexities of their politics. It seems a pity that this method was not continued for Scotland and Ireland whose later development always tends to be obscured by that of England. There are maps, but no genealogical tables. The latter omission is surprising, since the ramifications of the English royal line are unfamiliar to most people, and a clear understanding of the fourteenth and fifteenth centuries is impossible without some knowledge of the rights of the various claimants to the English throne.

Mr Ashley's book must be judged as part of a series: a series, moreover, that spans the whole history of the human race. As part of such a vast scheme it is what it sets out to be, a brief lively account of the surface of British history to 1688. It is not more than this. However efficiently the facts are presented (and Mr Ashley is extremely efficient), the result cannot be more than a summary.

Why does one want to read history in this form at all? One answer is that one wants to get a knowledge of the past, even in a general and simplified form, in order to understand the present. This is true of Britain as elsewhere. Political ideas such as manhood suffrage, which flourished in the struggles between king and parliament, bore fruit centuries later here and in America. Mr Ashley is keenly aware of this—one feels he writes of the past with an eye to the present. If what is wanted is an introductory account of British history, this is adequate and stimulating.

Reassessment

The Growth of Southern Civilisation, 1790-1860

By Clement Eaton.

The New American Nation Series.

Hamish Hamilton. 374 pages. 35s.

The assiduity of American historians, mostly Southerners themselves, has resulted in the last thirty years or so in a radical overhauling of the nineteenth century views of Southern society and the slave economy on which it rested. Hard digging in the archives and serious analysis of the statistics have uncovered a South that has less charm but more diversity, fewer magnolias and more soil erosion, less poetry and a lot more economics than the one which dominated the history books for two generations after it had lost the war. It is fair to say that no American region has been so realistically re-examined as the ante-bellum South.

Equally, however, the new findings still awaited an adequate synthesis. In this book, one of the best volumes in the New American Nation Series, they receive one. Comprehensive but not congested, incorporating the results of other scholars but also using much new material of Professor Eaton's own, sympathetic but critical, very learned but easily digested, this is the long-awaited treatment that only a devoted historian who is also a loyal Southerner could provide.

OTHER BOOKS

The Law of Restrictive Trade Agreements. By Jeremy Lever. *Sweet and Maxwell.* 88 pages. 10s. 6d.

This monograph provides a straightforward account of the Restrictive Trade Practices Act and the way in which it has been enforced by the Restrictive Practices Court. As a guide to the relatively lay reader through the case law that has now accumulated it has especial value, and it will no doubt be studied carefully by those trying to produce schemes that evade the provisions of the act.

The Economy Through Boom and Slump. By J. Delaire, G. de Vernisy, and R. P. Schwarz. Librairie de l'Université. Geneva. 114 pages. 8 Swiss francs.

This, despite the deceptive title, is simply a French-English dictionary of economic terms, of a highly selective and useful kind. It covers not technical expressions but the catchwords of economic jargon, which as the authors rightly say often cause more difficulty to readers—and translators—than the straight technicalities. This is an invaluable handbook to anyone who has to follow contemporary economic discussion in the French tongue. Stagnation, floating exchange rates, countries in strong surplus positions, inflationary pressures subsiding—here they all are in French.

History of the Society of Incorporated Accountants, 1885-1957. By A. A. Garrett. *Institute of Chartered Accountants.* 378 pages. 24s.

The seventy odd years of independent existence of the Society of Incorporated Accountants witnessed vast changes in government; in the finance of industry; and in taxation. Most of these changes altered the functions that accountancy was called upon to perform and greatly enlarged its scope. The story of the evolution of the society, until it merged with the three Institutes of Chartered Accountants, could have been entrusted in no better hands than those of Alexander Garrett, for it made certain that the story would be told from the inside. He was secretary of the society for 30 years up to 1949 and knew intimately his predecessor whose term covered an even longer period. His history is not a mere account of the growth of the society. It covers in turn the activities of other accounting bodies and builds a pattern of major events in a period exceptionally rich in change for the accountant. The various bodies were not always in agreement, but it is, perhaps, inevitable, in view of the recent integration of the society with the chartered accountants, that he has somewhat played down past differences. He gives, however, an interesting account of the discussions and conflict of views that attended the event and makes a good case for the more liberal policy of entry into the society, particularly as against the institute. There are accounts of efforts, largely abortive in early days and not very fruitful more recently, to secure co-operation with the universities for further education of accountants. It may seem strange to those outside the profession that there is so little on the subject of education, as distinct from office training, for the articled clerk or the by-law candidate. This question is only now becoming a matter of active interest within the profession.

Signals of Recession and Recovery: *An Experiment with Monthly Reporting.* By Julius Shiskin. *National Bureau of Economic Research,* New York. 203 pages. $3.00.

The rapid recent development in the United States of methods of assessing and forecasting the state of business is the fruit of the co-operation between the policy men in the Council of Economic Advisers, the official statisticians in the Department of Commerce and the researchers in the National Bureau of Economic Research. Mr Shishkin has taken an important part in this work. He provides in this book an essential guide to the new monthly statistical series—"Business Cycle Developments"—published by the Commerce Department, and arranged in accordance with the National Bureau's analytical system (noticed under "Economists' Weather Map" in *The Economist* of November 4, 1961, page 466). The book describes the uses—and the traps—of the "leading indicators" and the other barometers of business conditions, and reviews their performance during recent cycles. Mr Shishkin confines himself in this short monograph to the highlights. For a more exhaustive discussion of the National Bureau's system, the student will need the two volumes of "Business Cycle Indicators," edited by Geoffrey Moore (discussed in *The Economist* of September 9, 1961, page 991).

Parliamentary Reform, 1933-1960. Hansard Society. *Cassell.* 202 pages. 25s.

Building Societies Yearbook 1961. *Francis & Co.* 744 pages. 45s.

POWER REACTOR EXPERIMENTS

This important work, published in record time in the Proceedings Series of the INTERNATIONAL ATOMIC ENERGY AGENCY, includes 35 papers and a complete record of the discussions of the Symposium on POWER REACTOR EXPERIMENTS, organised by the IAEA and held in Vienna from 23 to 27 October 1961. It contains information on the latest projects, developments and results in the field of power reactors. It deals with high-temperature gas-cooled reactors such as DRAGON, EBOR, pebble-bed reactors, etc.; aqueous homogeneous suspension and molten-salt reactors; fast breeder reactors like the Dounreay reactor, the USSR BR-5, RAPSODIE, etc.; nuclear superheat in general and, in particular, its application in the BORAX-5 reactor, the reactor of the USSR First Atomic Power Station and the ESADA Vallecitos Experimental Reactor; and such other reactor types as SRE, ESSOR, PRTR, Saxton and VULCAIN.

This book is the first authoritative publication in the field and will be for years to come an indispensable tool for nuclear engineers, specialists in reactor physics and the nuclear industry in general.

Papers published in the original language of presentation (English, French or Russian) with abstracts in English, French, Russian and Spanish. 2 vols., paperbound, photo-offset, 690 pp., 150 illustrations, price 60s.

Published by the INTERNATIONAL ATOMIC ENERGY AGENCY, and available in the United Kingdom from:

Smoking and Health

SIR—I wonder whether you can be induced either to explain more clearly your reasons for not supporting the suggestion made by the Royal College of Physicians that restrictions should be imposed on advertisements for cigarettes, or to give it the support which it seems to me to deserve.

One can make various guesses about the effects of such advertising. I would not myself agree with your view that the advertisements constitute "harmless" attempts to attract to a particular brand a bigger proportion of a fixed total consumption: I suspect that most of the advertising experts involved would also consider that their skilful wooing of young people increases total sales. But be that as it may: even if you felt certain that you were right, I would still urge you to support the physicians, on two grounds:—

First—and less important—your hypothesis means that the advertising is simply a beggar-my-neighbour process of wasting resources: its compulsory abolition would be a measure of legislative relief to an industry whose profits will (we must hope) be suffering from the public's better realisation of the dangers involved in cigarette smoking.

Secondly, a government which prohibited the advertising of cigarettes would, by that very act, do a great deal to convince the public that the danger to health is serious. The counter-publicity which you recommend will gain greatly: "There must be something in it—otherwise the government would not have faced a row with the advertising interests as well as the cigarette-makers." If, on the other hand, cigarette advertising is allowed to continue unchecked, the expenditure on truthful counter-publicity of (perhaps) 10 per cent of manufacturers' expenditure on advertising will appear as little more than hypocrisy.

Perhaps one type of advertisement should be permitted, if it can be suitably defined—the type which says: "The physicians are convinced that smoking is dangerous, but if you want to run the risk, smoke Whiffers."—Yours faithfully,

W. B. REDDAWAY

Department of Applied Economics, Cambridge

[We are not over-confident on the correctness of our line about this. We accept that Mr Reddaway's second point is a fairly strong one. But we are much more chary than he of banning any form of free speech, even the lowest. There are a lot of things and activities and even organisations which we think are, like smoking, a bad thing for the British people; we maintain our right to attack them, but we are nervous of anybody who says glibly that they should be banned by law from answering back. And we are confirmed in this nervousness because we think that Mr Reddaway's first and general point—about advertising as between different brands of anything being "simply a beggar-my-neighbour process of wasting resources"—is extraordinary nonsense; basically that is a doctrine for the compulsory abolition of large areas of competition in the British economy, especially of competition by new varieties of a product entering the field to challenge established ones.]

Central Africa

SIR—Mr F. H. Keenlyside (March 10th) implies that nationalism in Central Africa (he seems to be restricting himself to the non-white types in his strictures) is fundamentally racialist.

How does he explain the presence of some two hundred Europeans in the United National Independence Party? Has he read any of the speeches made by Mr Kenneth Kaunda or Mr Joshua Nkomo or Mr Dunduzu Chisiza in recent months? Why is Mr Colin Cameron, a Scottish Presbyterian elder, holding a portfolio with Malawi support in Zomba? Does he know anything of the recent political associations of men like Sir Stewart Gore-Browne and the Rev. Merfyn Temple?

More seriously misleading is his claim, often repeated by the United Federal Party, that the Federation is "the only attempt in Africa to build up a non-racial society." What nonsense! I spent some years in Central Africa both before and after August, 1953, and I can testify that the governments of Northern Rhodesia and Nyasaland were seeking different ways to develop non-racial institutions. Indeed it was the imposition of the Federation against the known opposition of the majority of the inhabitants irrespective of race which arrested such processes. An examination of the division of subjects between the Federation and the territorial governments, whether done for liberal reasons or not, reveals how this big new constitutional change divided the races. For example, white education up to and including secondary became federal and black education of the same brand remained territorial. The same new chasms appeared in subjects like agriculture.

Mr Keenlyside also states that "last year, the then governing class, by a majority of some 2-1 in a referendum, voted away their existing privileged position. This was an act of political liberalism for which it would be hard to find a match in ancient or modern history." I suppose he is referring to the referendum in Southern Rhodesia on the new Constitution of July 26th last year. The development was in the contrary direction to the one Mr Keenlyside indicates. There will be only 15 African members in a House of 65. The African block will not be big enough to prevent the two-thirds majority which can by-pass the constitutional council's opposition to a discriminatory bill. The European-dominated Assembly can override any recommendation or report from the constitutional council by a simple majority after six months.

In return for such nibbling concessions as Sir Edgar Whitehead made, Mr Duncan Sandys bartered away the reserve powers held by the metropolitan government for over two generations. The governing class of Southern Rhodesia, to quote your correspondent's terminology, did not "vote away" their privileged position; they consolidated it.—Yours faithfully,

KENNETH MACKENZIE

Edinburgh

Tory Hopefuls

SIR—Your article of March 3rd gives the reader the impression that we do not worry about the 11 to 15-year-olds. Unfortunately incorrect information was given to your special correspondent over the telephone from Conservative Central Office. The Young Briton age limit is 9 to 15, not 6 to 11 as stated in the second paragraph of the article in question. There is therefore no gap between the leaving age of Young Britons and entry age into the Young Conservatives.—Yours faithfully,

JOAN DAVIDSON

Chairman, Young Britons Organisation

London, SW1

Treaty of Rome

SIR—One aspect of this country's proposed entry into the common market does not appear to have been touched upon by any of your correspondents. I refer to the spiritual implications whereby this country, for many years a bulwark of Protestantism, will be involved both politically and commercially with peoples 80 per cent of whom are Roman Catholic. The very name of Protestant is derived from the "protest" which we have maintained against papal rule and practices. Did RIDLEY and LATIMER die in vain that four hundred years later we should be considering proposals for a new link with that from which we severed ourselves at the Reformation?

With the question of the common market is inextricably linked the question of reunion with Rome. Let us face the fact here and now, before any reunion is seriously considered, that Rome's idea of reunion is not what we understand by that word. Her idea of reunion is unconditional surrender to the papacy with all that that would involve. Only one year ago we commemorated the tercentenary of the Authorised Version of the Bible by the publication of the New English Bible (New Testament) in the language of the people, the reading of which would certainly not be permitted were we ever to come under the yoke of papal rule.—Yours faithfully,

H. V. ELDRED

London, NW7

FAY BATEMAN SAYS:

Cans make felines feel like canines

Cans even make cats behave like dogs

If you want your cat to grow up to love you dearly, welcome you home, hate your enemies and love your friends (just as a dog will), then you must talk to her from earliest kittenhood, feed her by hand, flatter her, show her every sympathy and pay her unceasing compliments. And then you will have proof indeed that devotion does not belong to dogs alone.

Easier with cans

These days, of course, both cats and dogs are easy enough to feed. There are at least thirty different kinds of canned cat and dog food in the shops. All inexpensive, hygienic, and brimming over with vitamins, essential minerals and the rest . . . .

Quicker with cans

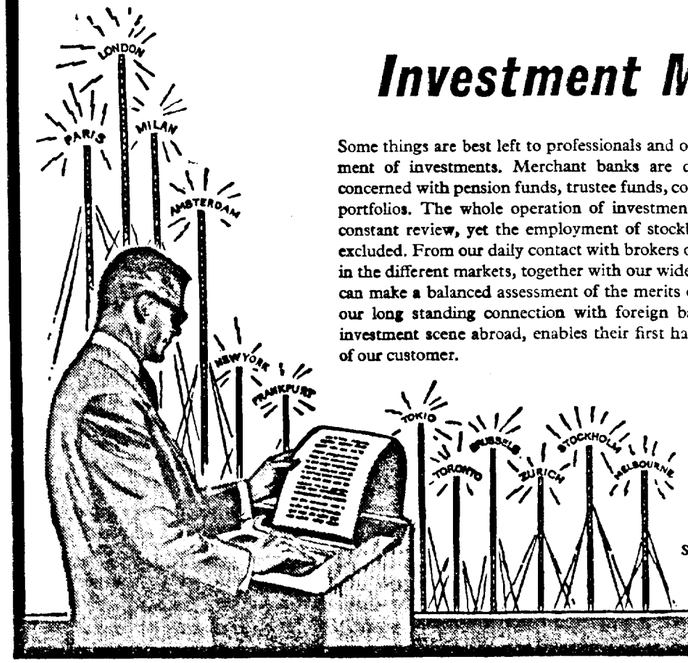
More difficult than feeding your pet, perhaps, is finding enough time to give them the attention they crave. But cans will help you here too, making housework lighter and cooking quicker. A little imagination (and a few cans) will earn you the leisure to sit peacefully by the fire with your dog or cat — a pretty and domestic scene much loved by husbands.

WHERE NEXT? On top of all these Swiss mountains. The skiing season's here again, and out comes the suntan lotion all along the snowline. And now that your lotion turns up in aerosols, a deep brown skin can be acquired for practically no trouble at all. A touch of the button, a touch of the sun—and there you are!

MAXIMUM PROTECTION...

for a man's family in the form of capital and income.

MINIMUM COST...



by combining two different contracts in one composite policy.

For as little as £2.8.0d. per month a man at age 30 can secure for his dependants a capital sum of £1,000 and, in addition, a maximum income benefit at the outset to the value of £9,000 payable in quarterly instalments amounting to £300 per annum. Full particulars of this Family Protection Scheme are available on request from

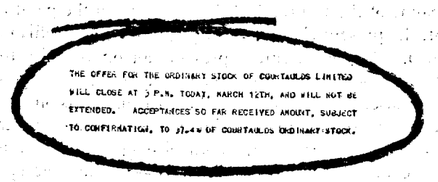
A MERCHANT BANK AT WORK



Investment Management

Some things are best left to professionals and one of them is, without doubt, the management of investments. Merchant banks are qualified to give expert assistance to all concerned with pension funds, trustee funds, company investments and private investment portfolios. The whole operation of investment is thus made simple and is kept under constant review, yet the employment of stockbrokers nominated by the investors is not excluded. From our daily contact with brokers on the London Stock Exchange specialising in the different markets, together with our wide knowledge of industry and commerce, we can make a balanced assessment of the merits of each particular investment. In addition, our long standing connection with foreign banks, who play an important role in the investment scene abroad, enables their first hand knowledge to be placed at the disposal of our customer.

THE BUSINESS WORLD

Living with 37.4 per cent

EIGHTY-EIGHT days after its final, final bid and two higher offers later, Imperial Chemical Industries conceded defeat at midday on Monday, March 12th. By then it had acquired 37.4 per cent of Courtaulds' ordinary stock, only 0.7 per cent more than it had secured by March 8th, the first closing date; and the decision not to extend its offer further spared ICI more humiliation. It also decided to let its offers for Courtaulds' preference shares lapse, having received insulting acceptances of 45.3 per cent of the 5 per cent stock and 60.4 per cent of the 6 per cent stock.

If ICI, halfway through the struggle, had not made its alternative offer of convertible loan stock, it would have commanded no more than a handful of supporters. The assents it received have come largely from the institutions who have taken the loan stock primarily for its good running yield, and only secondarily as an escape from the present uncertainties of the equity market with the option of getting back in if conditions next year or later are more favourable. Some private holders of Courtaulds sold out, but the vast majority decided to stand by their directors.

The complex of reason and emotion that swayed the individual stockholder led many observers astray; but, in the broadest terms, three factors appear to have been especially important. First, many investors resented the aggressive, dogmatic manner in which Mr Paul Chambers and ICI saw the only possible answer to the problems of the man-made fibre industry in submitting Courtaulds to a total merger. Secondly, in the course of the battle, Courtaulds' directors convinced many stockholders that the stuffy, conservative past was dead and that the new men with their new policies, embodied in a number of far-reaching forecasts and promises, would henceforth keep their interests in the forefront. Thirdly, a week before the closing date, when ICI declared its offer virtually unconditional, it admitted that it was prepared, if need be, to hold a minority interest in Courtaulds and could justify paying about 50s. a share. This tactical error has created a situation that is surely without parallel in British industrial history. What an unsuccessful bidder normally arranges is to slip out; but ICI made this impossible for itself and so remains as holder of a substantial minority interest.

What has been said and done in the last three months by the two sides must profoundly influence their future—how, no one can foretell, for the main personalities must first set themselves on constructive courses. It could be argued that although it now has over a third of the Courtaulds equity ICI really has no mandate except to hold the shares as a trade investment. But could ICI be expected to "neutralise" its holding in Courtaulds as Imperial Tobacco has done with its 37 per cent in Gallaher? A holding of this sort is more likely to form the base from which either mischief or some form of reconciliation could be attempted. Some of the moves in the closing stages of the struggle suggested hope of conciliation; but there is an equal possibility that unless both sides practise a little accommodation, war could continue with ICI as a militant minority interest.

This week ICI has refused to give any hint about its future course and certainly a breathing space in which emotions and tempers can cool is welcome. Nor has Courtaulds any ready-made solution to offer; it, too, wants time to reflect. One can, presumably, disregard the possibility that ICI might be tempted to buy more Courtaulds' shares to gain control (which would cost about £27½ million) or would try to dispose quickly of the investment it has already made. Courtaulds would certainly consider possible forms of co-operation, but while it is not in the nature of Mr Chambers to come to Canossa, it is he who has argued for a complete merger. If a hint came that ICI was now prepared to discuss answers to the problems of the man-made fibres industry other than its own decisively rejected solution of an outright merger, a way might be opened.

In the past the two companies have sought remedies in opposed directions: ICI in vertical integration and Courtaulds in greater independence from the suppliers of basic raw materials. After last year's abortive negotiations and the hard words about basic differences in industrial philosophies, is any workable scheme of technical co-operation possible? Negotiations to this end could easily fail, but they would have served some purpose if they created an improved atmosphere and diminished the prospect of perpetual war between two companies that are tied together as suppliers and customers, as partners in British Nylon Spinners, and as stockholders.

But before they can seriously talk to each other about their future, both ICI and Courtaulds have to take an objective look at their own organisations. ICI has come out of the struggle far weaker than it went in. The weaknesses were there already; they have now been exposed to public scrutiny

and criticism. ICI's chairman, Mr Paul Chambers, has suffered a personal rebuff, not merely for the policies he has advocated, but even more for the manner in which he has tried to impose them. It may be that some other ICI directors followed his lead with increasing misgivings; but they did follow him and they must feel bound by the doctrine of collective responsibility in the boardroom to offer no support to suggestions that Mr Chambers, having so signally failed, should now resign. Yet, for all his outstanding gifts, Mr Chambers will hardly be able to lead ICI with the same ebullient self confidence in his own ideas and in the "big brother" philosophy of ICI as he did in the past.

The difficulties currently confronting ICI and the chemical industry have been sharply exposed. ICI has also lost goodwill among the investing public and it will go into a conference—with Courtaulds or anyone lese—with less prestige and fewer friends than it possessed less than a hundred days ago. One way of regaining favour is to be reasonable and circumspect in its future dealings with Courtaulds. In its turn, Courtaulds would like to get back to "square one"—back to a situation and atmosphere where its representatives and ICI's could examine fresh solutions to their mutual problems. The Courtaulds' directors have not had time to formulate what solutions they would find acceptable. Nor has ICI; though on the day of defeat Mr Chambers continued to extol the virtues of vertical integration. The proposals put up by Courtaulds at the "truce" conference in January envisaged either the formation of a joint company to deal with all melt-spun (i.e. non-rayon) fibres, in which ICI would have a majority interest, or of a joint company to deal with all fibres, in which Courtaulds would have a majority interest. If these were the absolute limits of conciliation that Courtaulds was prepared to stomach at that time, it must be seriously questioned whether it would be prepared to go so far now. But the possibility of some joint venture with ICI in melt-spun fibres over and above that already established in British Nylon Spinners cannot be ruled out, though any idea that ICI might transfer its interests in polymers and fibres to Courtaulds seems to be a non-starter. The two companies may in the end decide that some rigid scheme for a further joint venture in man-made fibres is impossible; in that case, let them be opposed in competition, but partners against mutual destruction.

Courtaulds has its own real problems to settle. In one sense, it can never get back to "square one" as it existed last September; the new voices have been lavish with promises and they have shifted decisively the balance of power within St Martin's-le-Grand. The shift is not finished yet, nor has its effectiveness yet been proved. In the rayon division, for instance, senior executives whose experience stems from the palmier days for viscose might create a barrier of change to policies keyed to leaner, more competitive days. At the top level—in the boardroom itself—a real drama is being played. Some of the Courtaulds' directors are on the point of retirement, the present chairman, Sir John Hanbury-Williams, among them. Their retirement presents an opportunity for demonstrating conclusively that mediæval traditions, epitomised in the discussions that led to the arrogant decision (and gigantic error) to reduce the interim dividend in November, are truly dead and buried. It could also open the way to the most conciliatory gesture—that Courtaulds accepts representation of its biggest stockholder, ICI, on the board.

Sir Alan Wilson has already been designated as Sir John's successor. He figured prominently in last year's discussions with ICI but took no great part in the battle from December onwards; his somewhat aloof, intellectual personality appeared to be smothered by the fire and smoke. Whether he was more attracted to the idea of a merger with ICI than some of his colleagues would be impertinent for an outsider to guess. Should he decide to accept the chairmanship of Courtaulds, he will have the full support of his colleagues. If he does not, an obvious candidate may at first sight appear to be at hand in the person of Mr Frank Kearton, whose fire, courage and ability, supported by Mr H. R. Mathys and Mr A. W. Knight and other Courtaulds directors, have made a decisive mark. But although there can be no doubt of his ultimate role in the future conduct of Courtaulds' affairs, it may still be true that the task of building bridges may be better undertaken for a few years by someone from outside who can bring independence as well as experience to bear upon Courtaulds' problems. The crucial question of Sir John's successor will have to be settled before Courtaulds can explore any area of agreement between itself and ICI.

Courtaulds has emerged from the struggle both stronger and weaker—stronger because the majority of stockholders have been persuaded to overlook the past (though many of them cannot have forgiven it) and to pin their faith on new men with new policies and promises, and weaker because ICI's minority holding breaches the St Martin's-le-Grand citadel and could easily bring it down if the directors fail to justify the faith that investors are now putting in them. Their promises about future profits and dividends are halters that they have knotted round their own necks. If the knot tightens, it will be their own fault. Courtaulds shares, currently standing at 50s., will not have to fall much below that level before the growls are heard. The only mandate the Courtaulds board has been given is to do as well as they promise and this prospect could be jeopardised if they failed to reach some sort of concordat with ICI.

Homilies and admonishments are thick in the air. The role that the Government can play in regulating monopolies and the engrossment of a market needs to be re-examined. So, too, does the ill-defined nexus of relations between a company and its directors, and the stockholders and general public. This goes far beyond a public relations image. Courtaulds' decision about the interim dividend has, in the end, provided another demonstration that the interests of stockholders can be ignored only at the directors' peril. The remedy does not lie in creating impressions of remote boardroom benevolence, but in the readiness of directors to treat stockholders responsibly and to justify candidly and publicly the courses they pursue. Equally, what has happened to ICI demonstrates that lasting goodwill is not built on an image of what a company thinks it would like to be, but on what it actually is. A man greater in his faults and virtues than any at Millbank or St Martin's-le-Grand once asked to be painted, warts and all. ICI, Courtaulds and other companies should have learnt some such humility from this bitter and at times shoddy episode.

CROSS STOCKHOLDINGS

ICI owns 37·4 per cent, or £29·6 million, of Courtaulds Ordinary stock. On the assumption that all the acceptances have been for ICI's 6½ per cent convertible loan stock ICI will have to issue £74 million of loan stock. The cost of servicing this stock will initially be £4·8 million gross.

On its holding of Courtaulds' Ordinary shares ICI should receive for 1962–63 at least :—

	Gross £ mn.	Net £ mn.
An Ordinary dividend of 13 per cent	3·9	2·4
A tax-free capital distribution of 2½ per cent	1·2	0·7
Interest payments at 7 per cent on a holding of £13·4 million in Courtaulds' Loan stock	1·0	0·6
Total	6·1	3·7

Thus ICI will receive £3·7 million (net at 7s. 9d. in the £) in investment income from Courtaulds while it will have to find from its own income £4·8 million to service the loan stock.

* Based on balance sheet on March 31, 1961. † Reserves and debenture capital adjusted for issue of loan stock from capitalisation. ‡ Approximate division at book values based on the switching of gilt-edged securities and some trade investments into the new investment trust, whose assets are estimated to have a market value of £40 million. Courtaulds' 50 per cent share in BNS remains as a "trade investment".

Building a Business on Air

He putteth forth his hand upon the rock;
He overturneth the mountains by the roots.
Job 28, 9

TWO and a half years ago, the stage was set for a battle royal under Mont Blanc. On the northern slope a French contractor had assembled an armoury of heavy American machines, supplied by Ingersoll-Rand, veteran manufacturer of pneumatic mining equipment, and since 1871 largely uncontested champion in the specialised field of rock drilling. On the southern side an Italian contractor had mustered a drill team equipped with light "jackleg" drills, supplied by the Swedish firm Atlas Copco, which holds altogether different views on how to break rock economically and efficiently. During the past ten years Atlas Copco has been arguing with considerable success to miners and contractors the world over that there is no point in paying £4,000 for a machine when with the application of science the work can be done equally well with a £140 drill unit. Now the champion and challenger have come to grips with each other under the Alps.

Yet the excitement in this battle of the mid-century sputtered out soon after it got under way. There is not much fun watching an Italian contractor fighting water, rock falls, crush zones, rock bursts, and the rest of the ugly obstacles that meet tunnellers advancing from a southern portal. The Italian engineers have had to dust off last-century textbooks on tunnelling, and to apply methods that are slow and cumbersome but save lives. On the French side the heavy American machines, working in relatively good rock, have advanced reasonably to plan and by the end of February had reached 4,800 metres. In February the Italians ran into good rock for a change and set a record for both sides with an advance of 250 metres, which brought them to 4,100 metres. There remain 2,500 metres of tunnelling before the teams meet, and Mont Blanc may indeed be holed through some time this year.

Although Mont Blanc has cheated Atlas Copco of the opportunity of showing its mettle on a classical battleground, the new principles of underground rock excavation evolved in Sweden under the impact of war, past and future, and marketed by the company have proved sound under exceptionally difficult conditions. Were it not for the flexibility in methods offered by this type of equipment the Italian team would have lost its tunnel heading long ago. Atlas Copco, as an industrial name in compressed air, has only existed about six years, but the group behind the label is no newcomer to the European engineering industry. The first half of the name is an inheritance from 1873 when the parent company set out to make locomotives and railway rolling stock, with discouraging economic results. A merger in 1917 with a diesel manufacturer turned it into AB Atlas Diesel which with a share capital of Kr 20 million became the best-heeled engineering company in Scandinavia. As one of Rudolph Diesel's early licence holders, the new partner helped to make a prime mover out of a cumbersome invention. By making it reversible, lighter, faster and direct-injected, the company turned the diesel into a marine engine.

Both the parents and the offspring of that union were strong on engineering. Unfortunately they were weak on everything else, apart from producing clever and at times revolutionary designs. By 1940, Atlas Diesel, too, was in bad shape. Diesel manufacturers elsewhere had grown into giants as Atlas Diesel licence holders; but the company itself urgently needed new management to make something of its wasteful, obsolescent motor manufacture, plus some odds and ends of pneumatic tools that had been added haphazardly since 1888. In 1940 its opportunity came. In the deepest secrecy, the Swedish military authorities were preparing underground fortifications,

command posts, stores, even armament factories in caverns blasted out of solid granite. Swedish engineers soon lost their respect for hard rock. Huge areas were taken out by full face methods, with the aid of light, fast-hitting rock drilling machines with "airleg feed" developed by Atlas Diesel.

The Germans, pioneers in tungsten carbides, had tried with some success to apply this hard man-made metal in rock drilling. Used in the Scandinavian rock, the bits shattered, and seven years of development work were put in by Atlas Diesel before the two leading Swedish manufacturers of drill steel and carbide bits succeeded in modifying this erratic material into a durable rock-cutting bit. In this work practically the entire Swedish contracting industry as well as numerous mines took part, trying out innumerable generations of carbides and high-alloy rods with Atlas Diesel's high performance rock drill. By 1945, the metallurgical problems were licked.

UNDER a non-technical managing director, trained in retailing, who saw no particular difference between a tunnel and a hole in the ground but knew a good selling line when he saw one, Atlas Diesel went to market with a share capital of Kr. 10 million (£700,000). Still hampered by a diesel engine operation that consumed labour, space, and time, turnover rose slowly until 1948 when the management got rid of its cumbersome engines to devote all resources to the manufacture and sale of pneumatic equipment. More than half of the turnover was still domestic.

From there on, Atlas Diesel never looked back. Nearly everywhere it went new sales and service companies sprouted; most of them flourished beyond expectation. Two years later, in 1950, the turnover was Kr. 78 million (£5.4 million), of which 60 per cent was sold abroad. The rapidly expanding subsidiaries threatened to turn into an untidy mess, so in 1956 the corporate name was changed to Atlas Copco—the latter half derived from the name of the Belgian subsidiary Compagnie Pneumatique Commerciale. At last count there were 32 Atlas Copco companies, plus a number of other sales and manufacturing companies under other names.

Although always profitable, this rapid growth has at times strained the company's finances to the limit. In 1959, for example, with a group turnover of Kr. 380 million (£26.2 million) the home company ended the business year with Kr. 277,646 (£19,200) in cash. In 1960 the share capital was raised to Kr. 76.65 million (£5.3 million) and the turnover grew to Kr. 480 million (£33 million) providing a net profit for the home company of Kr. 11.7 million (£810,000). The assets of the group grew from Kr. 331 million (£23 million) to Kr. 451 million (£31 million) in 1960, while profits doubled from Kr. 13.7 million (£950,000) to Kr. 26.7 million (£1.85 million). The new Kr. 25 per share issue was snapped up at Kr. 80 per share. In 1961 the turnover rose by nine per cent.

Atlas Diesel set out on its global peregrinations at a time when backward construction industries were at long last beginning to mechanise. The hardware offered by the company was beyond doubt excellent in design and quality, but Atlas Diesel and its corporate ancestors are ample proof that the solid virtues of Swedish engineering do not in themselves hold the key to economic success.

Apart from providing spares for machines that pound themselves to pieces in a year, the service policy of Atlas Copco goes well beyond the provision of high-alloy hardware. A contractor who, say, in 1950 purchased a few rock drills became *ipso facto* the beneficiary of the new scientific codex of rock blasting. Atlas Copco would plan his work cycle, introduce new methods, put its own experts, from civil engineers to drill masters, on the job and by taking over a section of the tunnel train the contractor's people in the new methods. Thousands of contractors and engineers were brought over to have a look at underground powerhouses being built in Scandinavia. The new methods slashed costs all along the line, in labour, power and explosives; and the ability to drill a round in half the time or less that was previously required, stepped up the whole working cycle and enabled record advances and good profits to be made.

This experience shaped Atlas Copco's service policy. Ten years ago the engineers were cocky characters who knew it all. Since then they have discovered that there exist local tricks of overcoming difficulties that they never dreamed of in their geology. So the company's project department has become a world clearing house in rock blasting technology. Somewhere in the Andes, for example, a team of power engineers is tapping a lake by a supply tunnel leading to vertical penstocks conducting water to a powerhouse 3,000 feet below. The machines are already installed; all that remains is to blast the rock partition at the upstream end. The big question is how to blast it without the risk that the pressure wave and rocky debris, carried by the rush of water, might destroy the turbines below. It has to be done with 100 per cent precision, with no such thing as a near-miss. A handful of men, most of them Norwegians, are capable of preparing and firing this final round under such exacting conditions. They represent one aspect of the skills that Atlas Copco brings together. Any project anywhere that involves rock excavation on some scale is analysed and costed by the planning department. Each contractor bidding for the work is supplied with an outline plan estimating the equipment, manpower and transport he will need. The one ultimately awarded the contract will be supplied with detailed working plans and schedules. If he buys its equipment, Atlas Copco helps him to start the job.

Some of the ideas developed by Atlas Copco may seem rather far-fetched to old-time contractors accustomed to filling the sites with labour. In benching out large tunnels where under similar conditions a contractor, admittedly prodded by the unions, would use 36 men for drilling and charging a round, Atlas Copco obtains the same output with five men. In advancing the tunnel two men per machine are still common—at best, only one man—whereas Atlas Copco is now trying to convince sceptical engineers that with proper equipment and training one man is capable of running two or even three machines—in Scandinavia this is standard practice, using operators who four months earlier had never heard of rock drilling machines.

Atlas Copco's road to world-wide prominence in its field can be followed by some other mile posts. The wholesale price index in Sweden has risen by 340 per cent since 1935 and the wages of tunnel miners by something like 550 per cent; the cost of tunnelling has been reduced by about 40 per cent, in terms of 1935 prices and before the advent of the labour-saving "ladder drilling" referred to above. Atlas Copco cannot claim sole credit for this amazing development in underground construction, but without its equipment, it might never have happened.

BUSINESS NOTES

OVERSEAS TRADE

Forget about January

OFFICIAL policy and investors' prospects depend crucially on the trend of Britain's trade, but the monthly figures obstinately refuse to show one. Late in 1960 the two-year deterioration in the balance of trade was checked, and until the spring of 1961 there was a clear improvement. Over the past year however the balance has swayed to and fro, and exports have remained dead level.

In the fourth quarter of 1961, the Bank of England states in its latest bulletin, there was "probably" a small surplus of visible trade, on a true payments basis, though the whole improvement and more was attributable to seasonal influences. In January imports rose sharply, as they had done in October; but February's trade figures published this week suggest that this was a second false hare. Imports last month fell back to £363 million seasonally adjusted, close to the low point of the last summer. In December-February together imports on this basis were in fact slightly below their level in the previous three months. Exports notched up another small increase, by £7 million to £307 million—a move in the right direction but of disappointing size: it merely restores exports to their average for 1961 as a whole. But if they are a little tantalising the February trade figures at least offer the consolation that January's sharp deterioration was exceptional.

The detailed, and revised, official figures of the balance of payments in 1961 are expected in the last week of this month and a special article in the Bank of England bulletin on the all important errors and omissions hints that at least a few of them may then be laid.

Slowly, official mystique about this preposterous item is being lifted. "The balancing item is not entirely a collection of unknowns . . . the compiler [of the payments figures] may be able to infer with some confidence that certain kinds of movement have taken place without . . . being able to measure them and enter them separately." This statement from the Bank bulletin should be duly noted by Treasury officials who in the past have fended off questions about the balancing item with the crisp avowal that if they knew what was in it they wouldn't have put it there.

IN THE MARKETS

Delayed Boost for Gilts

AFTER responding only slightly to the ½ per cent fall in Bank rate at the end of last week, the gilt-edged market has this week moved significantly ahead. The buying has been concentrated mainly at the extreme ends of the market. A rise in War Loan on Tuesday later encouraged some switches into Treasury 2008-12, and at the very short end, the official tap in Exchequer 5½ per cent 1966 came to an end last Friday, and the stock subsequently rose by almost a full point. The medium dated tap stock, Conversion 6 per cent 1972, attracted a fair demand, but this was not reflected in the price. There has been little interest in the "long" tap, the 1982-84s; investors in their present mood prefer to get the same or slightly better yield on still longer or undated stocks. The authorities must be notching up a good total of net funding sales in the current quarter; in the three months to mid-December, the Bank bulletin shows, net official sales of stock totalled £183 million, of which two thirds were short bonds.

The market has not yet been checked by the spate of new fixed interest issues. Investors took in their stride the £20 million issue by Middlesex County Council, with a coupon of 6¼ per cent, dated 1975-77 at 97¼. The stock offers a flat yield of nearly £6 8s. and a gross redemption yield of £6 9s. 6d.—virtually the same as that currently available on the last gilt-edged issue, by the City of London. The Middlesex issue, which was being subscribed on Friday, brings total corporation loans since January 1st to £69 million, of which just under half has been paid up.

Industrial Issues

ALTHOUGH it admits that its prediction could be upset by large scale funding of bank overdrafts by companies, the Bank of England goes on record in its latest bulletin as saying that there is "the possibility that this year there may be a markedly smaller volume of industrial new issues than there was last year." What leads the Bank to this view is the possibility that retained earnings will be higher, capital expenditure lower and stocks little changed. By an odd chance of timing this prediction has come in a week when two big industrial issues have been announced and several introductions arranged. But if the Bank is right, the effect of the reduction in the demand for investible funds could be significant for stock market prices.

Although it took note of the Bank's hint of a possible recovery in profits this year, the market has been primarily concerned with the immediate facts about industrial profits and dividends—marking, for example, brewing shares up on Charrington's results and engineering shares down on those of Newton Chambers—and with more optimistic hopes about the shape of the budget. Last week's cut in Bank rate appears to have encouraged the market to believe that the Chancellor's hand will not fall too heavily upon the economy, whatever he does to the stock market through a short-term capital gains tax. On balance, therefore, equities—with the notable exception of tobacco issues—moved up, and *The Economist* indicator gained 4.5 points to 356.7.

This week's issues make a notable impact on the market in fixed interest securities. John Summers, which came out of the "steel year" to end-September with a better immediate performance and rather more encouraging prospects than other steelmakers, is raising just under £7½ million by issuing a 6½ per cent debenture 1976-78 at 99, convertible into ordinary shares at prices equivalent to 53s. 6d. in 1964, 56s. 6d. in 1965 and 60s. in 1966. The current price of John Summers' ordinary shares is 49s. 9d. and obviously the conversion rights, which extend beyond the last date of the next general election, by which time the issue of steel renationalisation will be settled, are potentially valuable. In the meantime, the debenture provides a fair running yield and a hedge against the possibility of a Labour victory at the polls; and it carries investors over a period of economic uncertainty in the steel industry. The new money,

together with retained profits and bank overdrafts, will cover the cost of development at Shelton, amounting to over £19 million, in the next two or three years. On Thursday dealings started in the debenture at a premium of 5¼.

On its second debenture, Dunlop Rubber has had to pitch the yield higher. The issue of £12 million 6½ per cent second debenture stock 1985-50 at 98½, is covered, with the existing debenture, about 3½ times by assets and nearly 6 times by earnings. Dunlop last raised money from the British market in 1955 and it has since spent about £60 million on capital account; bank overdrafts are fairly heavy and with commitments amounting to £7 million at the end of last year capital spending is expected to remain at a high level. The debenture raises the gearing on the ordinary shares whose holders will be pleased to note that Dunlop's net income in 1961 will not be less than the £6.7 million earned in 1960.

Rally on Wall Street

A correspondent cables:

After a month in the doldrums, equity prices on Wall Street have begun to move up again and the volume of trading has expanded. The Dow Jones industrial average has risen above 720 for the first time since early January. Brokers attribute the rise to hopes of a renewed upsurge in the economy later in the year and to the belief that the resumption of steel wage negotiations lessens the chances of a prolonged and harmful stoppage in the steel industry. Wall Street is not confident about the immediate economic outlook but it is pinning its hopes on a good improvement in the second half of the year. This immediate uncertainty is reflected in the bull market in fixed interest bonds. Many institutional and private investors have been content to sit on the sidelines, but the commercial banks which need additional income to cover higher payments on deposits have been big buyers of tax-exempt municipal and government bonds. This has forced prices up and yields down on all but the shortest term securities. But once economic activity starts picking up again, the demand for bonds may moderate and equities should benefit, particularly those in companies whose earnings are improving.

For the first time for several months steel issues, led by US Steel, have moved higher and there has been some buying of construction, chemical and other basic industrial issues. Investors have continued to be very selective and they are now able to obtain comparatively good yields on better quality equities. The fashion in investment appears to have swung to what analysts are calling "tired blue chips"—shares in major industrial companies whose earnings and market prices have been fairly static in the past few years. Whether these shares can attain a new lease of life is by no means certain but, because they offer more stable yields than the growth stocks which are vulnerable when earnings fail to come up to expectations, they do offer a measure of safety.

ASSOCIATED ELECTRICAL

Dividend Down

AEI

Following the reduction in English Electric's dividend from 10 to 8 per cent, Associated Electrical Industries has cut its total dividend from 15 to 10 per cent. The stock market was prepared for some reduction, following the director's warning in the interim statement, but it had hoped that the 1961 dividend would be 12½ per cent. Thus AEI's dividend, backed by unimpressive results, is disappointing. Turnover rose last year from £208 million to £212 million and at £185 million orders in hand at the end of the year were £4 million higher than at the end of 1960. But trading profits fell from £10.8 million to £9.8 million and as debenture and other interest went up from £1.8 million to £2.7 million net profits, after a proportionately higher tax charge, fell from £4.7 million to £3.5 million.

The directors say that although many of the divisions of trading companies earned higher profits, the results were adversely affected by difficult trading conditions for some products and particularly by "a serious slump in the market for radio and television components and by lower profits on domestic appliances." The rise in debenture and other interest suggests that while AEI has been earning lower margins on sales it has had to employ more capital to earn its profits. Like the other electrical engineering giants, it has again earned less on the capital it employs.

ROYAL DUTCH SHELL

Dividend Up

As expected, "Shell" Transport and Trading has maintained its total tax free dividend at 1s. 3d. per 5s. share, or 25 per cent on the capital as increased by the one-for-five scrip issue. Effectively, therefore, the dividend has been raised from 20⅝ to 25 per cent. Last year the volume of sales of crude oil and oil products by the Royal Dutch/Shell group rose by 6 per cent but, owing to the pressure of competition on prices, this was not fully reflected in the rise in income from sales, net of taxes and duties, by £49 million to £2,007 million. Operating expenses rose from £1,463 million to £1,521 million and the increase in the group's net income from £177½ million to £187 million is more than accounted for by the rise in investment income from £31 million to £39½ million, and the fall in income taxes, from £133⅜ million to £127 million. As the table shows, the rise in net income was especially sharp in the last quarter of the year, when an improvement in margins occurred.

STEEL

Not Much Better

The rise in steel production to 415,000 tons a week in February—perhaps five per cent more than in January when allowance is made for seasonal variations—is not enough to make the steel industry feel it is recovering from its slump. The improvement was concentrated onto the lighter end of its products, where rising car output means relative prosperity for the strip mills; but demand for steel from the motor industry and its suppliers has yet to rise as much as output, suggesting that stocks of components had been built up through the winter and are now being run down. The fall in stocks of sheet had slowed down by the last quarter of 1961, and by now the stock level should be reasonably stable.

For the industry as a whole, however, the fall in stocks seems to be continuing with unabated speed. The drop of 300,000 tons in the last quarter of 1961 may well be approached in the present quarter, though expectations om last month's price increase gave users an incentive at least to keep their stocks stable. At the end of December stocks still amounted to 15½ weeks consumption, and with the continued squeeze on short-term credit and signs of a possible fall in construction hopes that stocks would be stabilised by the middle of this year are beginning to wane: 1963 is more the millenium by now. Constructional engineers are big stockholders, and any fall in demand upon them would add another factor to those already encouraging industry to reduce its stocks. The prospects of the heavy side of the steel industry thus look depressing for the foreseeable future—but this is, after all, only a matter of months.

MONEY AND EXCHANGES

Bears in a Bull Market

Last week's reduction in Bank rate from 5½ to 5 per cent has not had its intended effect of warding off foreign funds from London, and by encouraging the view

To bow, or not to bow? Pitfalls big and little await the international businessman in this alien world.

Japan has its share of these pitfalls, but the exceptional profit in trade with Japan makes it worthwhile coping with them. The dynamic economy of the country is constantly creating new profit opportunities for both buyer and seller from overseas.

A good way to start taking advantage of these opportunities is to consult Mitsubishi Shoji. This big general trading company represents 30 Mitsubishi companies in foreign trade. Products of Mitsubishi companies carrying the Three Diamond mark cover the entire range of light and heavy industry.

You will find a Mitsubishi Shoji branch or affiliate in any of the world's trading centres.

General Importers & Exporters

Potterton heat bank or bungalow beautifully

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

Potterton have been making boilers since the year dot. Very experienced people. Very reliable boilers. Pick Potterton. It pays.

Is your Potterton file up to date? For all the latest information by return post, just jot "boiler information, please" on your letterhead and send it to us.

A Potterton FOA oil-fired boiler (output: 1,000,000 B.th.u./hr.) heats Barclays Bank, York. Supplied and installed by J. Shanksmith Limited.

And a Diplomat 100 (a domestic gas-fired Potterton boiler) supplied by South Eastern Gas Board and installed by C. Fletcher, Sons & Company Limited, Kingston, heats and provides hot water at an 8-roomed bungalow in New Malden, Surrey.

Potterton Boilers at the heart of efficient central heating — oil or gas

"Potterton" and "Diplomat" are registered trade marks.

that a further reduction is in the offing it may have had the opposite result. This certainly happened after the first cut in Bank rate last October, and the risk has been endemic in this whole Bank rate exercise. Since London money rates last summer were four clear points above those in overseas centres it should have been clear that the only certain way of stopping the inflow was to reduce Bank rate dramatically—to levels that would have left interest rates outside the short term money market a good deal lower in Britain than elsewhere. Official policy on interest rates still lacks any real rationale.

While the inflow of funds has continued, and spot sterling has actually risen to a new

peak for the year, approaching $2.81\frac{1}{4}$, the mood of the market has not been uniformly buoyant. It is notable that the discount on forward sterling fell by only about half as much on an annual basis as the $\frac{1}{2}$ per cent fall in the interest differential, so that on the Treasury bill comparison there is now actually a slight margin on covered arbitrage in favour of New York. In 1960, by contrast, London enjoyed a covered margin of well over one per cent. One element now keeping the forward margin relatively high is the existence and use of other, more profitable arbitrage circuits. But there is a more important element, which has had little attention. The forward discount is being kept up by some significant short selling of sterling from New York.

Professional operators there are making outright forward sales of sterling in the expectation not of a devaluation but of a straight weakening of the spot exchange rate within the existing margins—which is always a possibility when the spot rate is near its peak. Since the forward discount is now $1\frac{3}{4}$-$\frac{5}{8}$ cents for three months, operators are banking on the spot rate dipping below parity when seasonal and psychological pressures turn against sterling in June. This interesting phenomenon of the building up of a short position in an outwardly bull market is also evident in the high rates being paid for sterling deposits in Paris ("Eurosterling"); three months' deposits command $6\frac{1}{4}$ per cent. These dents in sterling's bull position suit the authorities quite well, since, by keeping up the cost of forward exchange cover, they act directly on the covered interest margin —more effectively than minor changes in Bank rate. And at a time when professionals are contemplating a significant fall in the spot rate it would be surprising to see any big increase in the volume of foreign funds coming to London uncovered.

Some clues to last autumn's inflow are contained in the excellent latest issue of the Bank of England bulletin. The commentary on the financial markets is further improved: it is more up to date and more informative. Indications are given of movements in sterling balances and gilt-edged transactions in individual months (it is to be hoped that the next step will be to publish the figures) and the concentration of buying of both sterling and gilt-edged into October is confirmed. The Bank also ventures the estimate that the inflow of foreign funds in the three months to mid-December was £150 million—but as this includes leads and lags it does not add greatly to existing knowledge: indeed, the total inflow of funds in this period appears to have been considerably larger. More interesting, perhaps, are the figures for overseas and foreign banks in the last quarter of 1961, which show a rise of £40 million in loans to local authorities and of £13 million in their holdings of gilt-edged.

Rates After the Cut

THE Treasury bill rate fell by the full $\frac{1}{2}$ per cent to a fraction over 5 per cent at the tender immediately following the Bank rate cut. In the four weeks before, the market had actually pushed the bill rate up, from under $5\frac{1}{4}$ per cent to over $5\frac{1}{2}$ per cent. The authorities have forced the market to borrow from the Bank of England at Bank rate on only one occasion since the rate changed; this restraint may not last, however, if the market starts to push the bill rate down too quickly. In its quarterly bulletin the Bank of England gives, for the first time, monthly totals of its loans to the discount market. The new information gives some quantitative guide to those carefully chosen adjectives that the Bank's discount office uses when describing market borrowing. Thus, borrowing on June 30th of last year, now shown to be £33 million, was described at the time as "very large"; the £6 million borrowed on March 8th was described as "small." In October-November, when the Bank was putting strong pressure on the market to check the fall in the bill rate, the gross amount advanced was £91 million.

Rates in the local authority loan market eased considerably after last week's Bank rate cut; the rate on seven-day money has fallen from $6\frac{1}{8}$ per cent to a fairly shaky 6 per cent. Money for periods of one to six months is finding few takers at $6\frac{1}{8}$ per cent and one dealer has placed three months' money at 6 per cent. The cause of this sudden ease, at a time of year when local treasurers are usually actively bidding up rates to meet their heavy payments of interest and principal to the Public Works Loan Board, is generally traced to the acceleration, since last Thursday, in the inflow of foreign funds, which come to the market mainly through the merchant banks and overseas banks. At the same time, demand from local treasurers is not so strong this year because many of them, having had to pay heavily in previous years for funds to take them over the end of the financial year, this year took the precaution of securing substantial amounts of three-months' money in February. It is also reported that the clearing banks are being more liberal in letting treasurers increase their overdrafts, which, at 6 per cent, are as cheap as seven-days' deposit money.

CANADIAN DOLLAR

Must Canada Stabilise?

CANADA'S exchange authorities are no longer smoothing out minor fluctuations in the value of their currency, still less are they holding its value down. Since the beginning of the year they have been engaged in major support operations of the opposite kind, to hold it up. These operations depleted the official reserves by $133 million in January; the February fall is now shown to be a further $175 million, a still sharper drop than market observers had expected. In the two months together Canada's reserves have fallen by some 15 per cent, and at $1,747 million are equivalent to little more than 20 per cent of a year's imports. Admittedly a freely floating exchange rate should partly dispense with the need for reserves. But at present, Canada's exchange is not being allowed to float in any real sense. The exchange authorities are defending the rate at its present level of just under five cents discount on New York with the same determination as if they had a formal obligation to defend a fixed parity. On Tuesday this week, Mr Fleming described this policy as "very beneficial."

The new tactics adopted by Mr Fleming last summer, of using the exchange fund to push down the value of the Canadian dollar to a "significant discount," have, after all, set off forces beyond the authorities' control. In the early stages, while the business community was still slow to realise what was happening, it seemed difficult to get the Canadian dollar down as far as the authorities wished. Despite substantial official purchases of United States dollars, the discount seemed stuck at 3 cents. Then it began to widen, to five cents; and the Canadian authorities evidently decided that this was about right.

By now however the confidence of the market had been sapped. The steady fall in the rate—two years ago Canadian funds were at a premium, not a discount, of 5 per cent on New York—has given the Canadian dollar the fatal connotation of a depreciating currency. A rise in customs receipts in

the past few months suggests that a new rise in imports may have contributed to recent exchange pressures. But the major factor has clearly been speculative selling —and by no means all by professionals. They sold last summer. Now that a "significant" fall in the rate has taken place it is the ordinary American investor, lamenting the depreciation in his Canadian assets, who is covering his exchange risk against further depreciation. If the Canadian authorities have really decided that a 5 per cent discount on New York is an appropriate level for their currency, they may find that the only practical way of holding it is to stabilise *de jure* as well as *de facto*. A floating rate that fluctuates sufficiently to bring in stabilising purchases by speculators themselves has clear technical virtues. A nominally floating rate that is held rigid by an exchange authority that has previously engineered a slow depreciation has none.

STOCK EXCHANGE

Changing the Rules

THIS week 300 members of the London Stock Exchange have been issued with small pocket radio receivers and instead of "watching the lights" to see if their offices wish to get in touch with them they can be

RESTRICTION AND MONOPOLY

Common Market Hoops

IF Britain goes into the common market (and even if it does not) our industrialists will have to learn something of the new regulations of the European Economic Community on restrictive practices and monopolies, which may touch on their own trade agreements with companies inside the Six. Presuming that Britain goes in, these regulations will supplement the disciplines imposed by the Restrictive Trade Practices Act and the Monopolies Act (even if these may have to be amended somewhat to accord with European practice). Basically, the regulations accepted in Brussels at the beginning of this year, and recently spelt out by the common market commission, govern inter-state commerce; that is, they supplement rather than supplant the restraints upon cartels and monopolies that each member state imposes within its borders. But they may, eventually or incidentally, reach down inside individual economies.

Businessmen who consider an attachment to "atomistic" free competition out of date and liberal economists who retain, in varying degrees, such an attachment have both been curious to discover whether these EEC regulations look hard or soft towards monopolistic business behaviour. The published regulations, and the views of the Brussels officials who will have to work them, leave the inquirer still curious: all depends on how they are worked. These regulations involve judgments whether the effects of trade agreements or market concentration are harmful in particular cases; in this they resemble the rules of most countries in the six and also of Britain, and they are in contrast to the *per se* condemnation of anything that restrains competition which forms the backbone of the American anti-trust code. However, as against the reservation of powers to Britain's Restrictive Practices Court—and the powerlessness of the Monopolies Commission unless it is supported by a President of the Board of Trade with positive views against monopoly—the EEC regulations put this judgment into the discretion of an administrative department of the Brussels Commission, subject to review by EEC's Court of Justice.

The regulations have been made to put into practice Articles 85 and 86 of the Treaty of Rome. Article 85 concerns

> agreements, decisions and concerted practices that are likely to affect trade between member states and to limit competition within the common market (unless they improve distribution or promote technical progress "for the ultimate benefit of consumers.")

Article 86 deals with

> any abuse of a dominant position within the common market affecting trade within the member states.

Both forms of restraint on competition, when shown to fit the definitions, are prohibited.

The regulations, as finally agreed, exempt agreements where only nationals of one state take part and neither imports nor exports between member states are affected (assuming the individual governments should take care of these); exclusive dealing contracts, or licensing agreements for patents or knowhow, between two parties only; and agreements covering simply standardisation or joint research. They put the responsibility of reporting agreements, or of seeking authorisation of exemption, upon the parties to the agreement, the businessmen concerned. But the commission itself gains considerable powers to demand information from companies and from trade associations. And it can also initiate inquiries where it suspects that competition is being restrained in whole sectors of common market trade, either by trade agreements or by the abuse of a single firm's dominant position. Investigation, on its behalf, will be carried out by the "anti-trust" departments of each member state; but the commission, as well as the state concerned, may decide that these departments need its own help.

This "anti-trust" department of the commission in Brussels, therefore, will combine most of the powers of Britain's Registrar of Restrictive Practices, Restrictive Practices Court, and Monopolies Commission, with considerably more initiative in inquiry than the last of these authorities possesses. It can fine enterprises or trade associations up to $5,000 for supplying false or incomplete information; up to $1,000,000, or 10 per cent of annual turnover, for infringement, wilfully or through negligence, of Articles 85 or 86 of the Treaty; and up to $1,000 a day for failing to bring prohibited agreements to an end.

These regulations thus leave the onus on business companies and associations to decide whether to submit their agreements to the commission, but can penalise them heavily if they do not and it later decides that undisclosed practices infringe the treaty. It could, potentially, become a powerful administrative "anti-trust" department with powers of administrative decision comparable to those of, say, the Federal Trade Commission in the United States, as well as the investigating responsibilities of the Department of Justice. There is however no guarantee that it will. Departments within the Brussels Commission have to develop beneath the vigilant and often jealous eye of the Council of Ministers. In the field of single-firm monopoly, moreover, its regulations remain vague. The commission has yet to decide what proportion of any market should constitute "a dominant position" for an existing enterprise; and it has no powers—as British authorities at present have none—to act against the establishment of such a position by mergers.

The inclination in Brussels at the moment seems to be to feel that the proportion of common market trade in a particular line that should call for scrutiny of a single firm's behaviour might be a fairly low one (perhaps even smaller than Britain's one-third?). In spite of the presumption that the common market will bring about more competition among big units than any single country now enjoys, a company commanding say a quarter of Europe's trade in any field might soon develop into a very big company indeed, with considerable market power not only locally but across national frontiers. But the definition of dominance that it finally chooses, and some other aspects of EEC's "anti-trust" procedure, may still require much more argument to dovetail with the varying codes of EEC's six, seven, or more members.

LONDON MANCHESTER GLASGOW LEEDS BIRMINGHAM

NEW YORK EVERY FRIDAY, SATURDAY AND SUNDAY

Bamburgh Castle standing on a precipitous crag dominates a wide area of Northumberland coast and countryside. In the middle ages the castle withstood many a siege. Today, eight centuries after its construction by Henry II, it is still a private residence.

Symbol of Security

Over the centuries the castle has represented strength and security to those dependent upon its protection. In modern times the Alliance castle symbolises the same qualities which are just as important now as in the past.

With almost a century and a half of experience in insurance the Alliance offers you a comprehensive service, expert advice on your individual needs, and prompt and generous settlement of your insurance claims.

ARE YOU MAKING THE MOST OF TELEX?

At home and abroad most Telex calls are cheaper now. Since the three-minute minimum charge for dialled calls has been dropped, so many more short messages are worth sending by Telex and a three-minute call to *Europe* is only two-thirds the cost of a telephone call.

Connection is quicker, too, now that you can dial most European Telex subscribers direct. And remember—the message can still be received in your own or your correspondent's office even if it is closed.

Tell your staff about Telex. The day's business can be handled more quickly and efficiently if you encourage all levels of staff to make full use of Telex. It's as easy as sending an internal memo. Moreover, it eases language difficulties and produces a printed record.

Now you can dial direct to

Austria, Belgium, Denmark, France, Germany, Luxembourg, Netherlands, Sweden, Switzerland

Send it by TELEX—everywhere

notified individually by a "bleep-bleep" in their pockets. This is a simple instance of the stock exchange keeping up with the times. The proposed changes to the rules relating both to members and firms are a much more important example, governing largely the qualifications and requirements of membership and the accounts to be kept by member firms.

It is proposed that a candidate for membership must have had at least two years' training with a member firm. Surities will not be required in future but instead a candidate will have to obtain a proposer and seconder (though they will be under no financial obligation in the case of a default). The surities, usually £500, have now been effectively superseded by the compensation fund and the council clearly feels experience gained in the two-year qualifying period and a testimony from the proposer and seconder (and if needs be from a partner in the firm in which a candidate underwent his training as well) will provide better evidence of his ability and his eligibility for membership. The framing of this rule suggests that the time may not be far distant when a candidate will have to pass an entrance examination before becoming a member.

In future the council will require advance information before a new firm is formed, or, a member is taken into partnership or a partnership is dissolved. The present rules require this information only when the formation, dissolution or alteration has taken place. Among the firms that will be affected by the new ruling will be 17 one-man firms (nine brokers and eight jobbers) who have until March, 1963, to conform with another new rule that every firm must have at least two partners.

Among the most important of the proposed changes are those relating to the accounts of broking and jobbing firms. In future the accountants' report on them will have to be submitted to the council within six months of the balance sheet date. If the council is not satisfied with the report it will have the power to call for further information, including a report from independent accountants, and if necessary to suspend the firm or any of the partners from trading.

One of the major requirements will be that the firms will have to maintain on capital account a balance sufficient to ensure a "minimum margin of solvency." This excess of assets over liabilities cannot be less than £10,000 for a broking firm and £15,000 for a jobbing firm and in any case it must not be less than the sum obtained from multiplying £5,000 by the number of partners in the firm. The new rules have been designed to improve the standard of membership and the capacity of firms to carry on their business. They clearly provide additional safeguards to the investor and they should go a long way to offset any anxieties that may have crept into their minds as a result of one or two much publicised "hammerings."

NATIONALISED INDUSTRIES

Public Accountability

THE report of the Select Committee on Nationalised Industries published this week is important for its omissions rather than its content. The directors of nationalised industries may feel they get more than their fair share of public criticism but the Select Committee, first set up six years ago, is in fact the only forum where they can be called personally to account. But since it seems likely to take the best part of eight years to work its way round the nationalised industries—it has not yet reached electricity and may soon have to add airports to an already long list—the present members thought that a good way to keep the boards on their toes might be to check what they had done about putting its recommendations into effect. On this week's evidence, it is a good idea that failed to come off.

The committee must bear a measure of blame for this failure. The industries chosen for the first follow-up were the National Coal Board, the two air corporations and the North of Scotland Hydro-Electric Board. The issues raised with the two power industries were of minor consequence. The Scottish hydro-electricity authorities said that efforts to get fixed price contracts, as the committee had recommended, were baulked by the refusal of manufacturers to quote fixed prices. The Coal Board said that it now co-operated more closely with the Ministry of Power on major investment projects but most of its evidence was devoted to explaining why, after seven years and the expenditure of £8 million, it is still no nearer the large-scale production of smokeless fuel. Rumours of successful methods devised on the continent made the committee politely sceptical and while it "emphatically" reaffirmed its "disappointment at the slowness of progress in this field," which was stressed in its original report on the NCB of five years ago, there was nothing here to set the Thames on fire.

Questions in the Air

THE Select Committee, which gave half its report to a study of the air corporations, re-affirmed that both had "the primary duty . . . to operate as successful commercial organisations." But having re-stated this admirable though sometimes disputed principle, the committee inexplicably passed up the opportunity to ask the British Overseas Airways Corporation why it was not doing so. The earlier report of the Select Committee into BOAC's affairs six years ago spotlighted alarming discrepancies between the corporation's costs and those of other airlines at a time when its fortunes were just beginning to turn down. Since then, the corporation has lost more than £11 million in four years and its loss for the present financial year is admitted by BOAC at about £10 million. BOAC can, indeed, show striking reductions in operating costs, in maintenance costs and improvements in output per head, yet its fortunes continue to deteriorate in a distressing manner. How, with the results of the past years before it, can the committee seriously say that "the latest available statistics seem to your committee to reveal an improvement in BOAC's performance"? Or did the committee perhaps omit to look at the financial results? Yet even if it did, how could it close its eyes to the evidence of tables produced by BOAC itself showing that its staff get through three-fifths the work of Pan American, and barely half the work of TWA? This sliding over of painful issues makes the Select Committee a Basenji among watchdogs.

So does the easy way that the committee appeared to accept the corporation arguments that the Government and the aircraft industry should stop trying to recoup the development costs of civil aircraft out of sales. Aircraft manufacturers the world over expect to spread development costs over sales and it is no use being beastly to Dr Bronowski about his briquettes on one page and then saying "your committee welcome . . . this trend of increased expenditure by the Government on development costs (of aircraft)" but is "unable to judge whether the Government's contribution to development costs is large enough to put the corporations on a basis comparable to that of their competitors; but they take note that the two corporations do not appear satisfied with it," as if the industry must be subsidised for the airlines' convenience.

EXPORT FINANCE

£14 Million for Peru

HELPED by the new long-term financial guarantees provided by the Export Credits Guarantee Department, the City has recently committed itself to put up some substantial amounts for medium-term export finance. Heads of agreement were signed this week for a loan of £14 million repayable over fifteen years to cover British participation in a hydro-electric project at Mantaro in Peru, which is to be constructed by English Electric, George Wimpey and Siemens-Schuckertwerke AG. The total cost of the project is around £30 million, and rest of the finance is being provided by Germany's Kreditanstalt für Wiederaufbau and by the Peruvian government.

The City's £14 million is being channelled through the consortium of commercial banks, insurance companies and pension funds that Lazard Brothers formed for this purpose last year. The original commit-

ments to this consortium were almost wholly taken up by one single project, a steel mill for Jugoslavia, costing £28 million and requiring credit of £21½ million; it is hoped to get final signatures on this contract in the next month or so. For the Peruvian project the insurance companies provided additional resources for the Lazard's consortium and they have not set these off against their promise of £100 million over the next five years for the new centralised insurance finance company. This is being formed to supply credit at fixed rates of 6½ per cent, in association with credit for the first five years provided by the clearing banks at 5½ per cent. Because the money in the Lazard's consortium was committed well before this new scheme was launched, it does not fall exactly under the new terms. But Peru will still get its money at a fixed rate, which is understood to be on broadly the same basis as under the new scheme.

In another financing arrangement made before completion of the new scheme, a consortium arranged by Hambros Bank will put up £2.6 million for ten years for a second 80,000 ton tanker being built at Belfast for Norwegian owners. In this case the interest rate will apparently be on the old variable basis. In the past twelve months Hambros has arranged the financing in London of merchant ship contracts of a total value of some £15 million. The total cost of the latest order will be £3½-4 million; it is a fixed price contract for a tanker that so far has no fixed charter.

BUILDING SOCIETIES

Halifax Marks Time

THE biggest building society in this country, the Halifax, had much the same experience as other leading societies last year. The net inflow of investment funds fell in the middle of the year but revived in the last quarter following the rise in building society interest rates. Over the whole year to January 31st its net inflow of savings was practically unchanged, but the Halifax did not repeat its 1960-61 policy of deliberately reducing its liquid funds, choosing instead to reduce the amount advanced on new mortgages. Indeed, the Halifax has reinforced its liquidity ratio from 15.2 to 16.5 per cent and its reserve ratio from 3.51 to 3.56 per cent. In a difficult year it has, in fact, been orthodox and conservative and it must be wondered whether it will pursue the same independent line, both on interest rates and in its relations with other societies and their association, as it did under Mr Algernon Denham's sway.

Years to January 31	1961 £'000s	1962 £'000s
Receipts from investors	112,292	121,825
Withdrawals by investors	79,424	89,453
Net receipts	32,868	32,372
Mortgage advances	102,536	87,899
Mortgage repayments	68,024	76,815
Liquid assets	74,557	89,589
Total assets	490,544	543,513
Reserves	17,237	19,335
	%	%
Liquidity ratio	15·2	16·5
Reserve ratio	3·5	3·56

ADVERTISING

Anti-campaigning

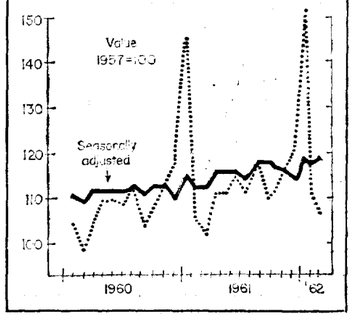
CHILL blasts have blown on the advertising industry this week, from two contrary directions. On the one side it has been urged, with increasing fervour, that the advertising of cigarettes should be forbidden or severely curbed so that sales are cut, particularly to the young. On the other, Unilever has introduced an experiment with one of their detergents whereby severe cutting down of advertising and publicity gimmicks will make it possible to sell more of the product at a time. Hitherto cigarettes and washing powders, by reason of the extravagant battles between often indistinguishable brands, has been top money spinners for most branches of the advertising trade, particularly television companies. The Unilever step is to sell its well-known brand, Surf, in the London area in packets containing 18 per cent more detergent, for the same price as before. The extra value comes almost entirely from reduced advertising.

Responding, none too promptly, to widespread criticisms of the absurdities of much soap-selling, Lever has chosen to emphasise fair play. The packet, labelled "Square Deal Surf" is in sober and seemly contrast to the standard garish style. The biggest innovation is a prominent guarantee that if it is found to contain less than the stated weight money will be refunded. The other Unilever detergent, Omo, already carries an accurate but minutely printed statement of net contents; Hedley products, in the same size packets, do not—a random packet of Daz, now the top-selling detergent, contained one ounce less than a 16 oz. Omo.

It must be admitted that Unilever had other good reasons for wanting to cut down its publicity for this particular product. Last year advertising on Surf was 75 per cent of that on Omo but Surf, nearly identical but always the weaker product, still sells in only half the quantity. Unilever admit they could not have risked the experiment with a bigger seller; this reason, and the uncertainty of public response to common sense rather than publicity, is some comfort to the advertising men.

On the cigarette side, another crumb of comfort may come from the launching of government counter-propaganda, to be set against the £10 million cake of manufacturers' advertising. But there is a snag here too. Unless cigarette advertising is forbidden entirely, virtually all the main agencies will still have a cigarette account. On the principle of not running rival campaigns under the same roof, who will take on anti-smoking? Sir David Eccles tried his hand at copywriting the other day—he may have to take it up seriously.

MONOPOLIES



A Bill for Divestment

SIR JAMES PITMAN'S little Bill to give the Board of Trade the power, which it now lacks, to require a company to divest itself of shares in any wholly or partly owned subsidiary or associated company, where the Monopolies Commission has ruled that the ownership of such shares is monopolistic in character and harmful to the public interest, must be welcomed as an attempt to put even a little stiffening into the Government's flabby attitudes. It would at least prevent the President of the Board of Trade from being able to plead in such a case as Imperial Tobacco and its holding in Gallaher that he had no power to compel divestment—though in this case it was clear that he would not have been minded to use it even if he had it. The same would be true of the ICI-Courtaulds holding if at some future time the Monopolies Commission found that this was monopolistic in character and harmful to the public interest.

Although this Bill has highly respected support, its legislative chances cannot be put very high. Seeking leave to introduce his Bill on Tuesday, Sir James made some pointed comment on the 37 per cent holding that ICI now has in Courtaulds; this, he claimed, gave ICI effective control in the sense that Courtaulds' directors must continually be looking over their shoulder at the possibility that this 37 per cent holding might be cast in one solid vote against them and thus represent in effect the single controlling force against an array of widely disseminated small holdings. He went on to make the additional point that the distribution of the shares of the taken-over company to the owners of the taking-over company will enable the latter to cast their votes directly rather than indirectly. "The essence of the 37 per cent control," Sir James said, "is that a block vote can be cast solid; if an undertaking is given to the Board of Trade that such votes will not be so exercised, one will have made absolute nonsense of the Companies Act and the control of shareholders over their boards' directors."

RETAIL SALES

Retail business continued at a high level in February. The Board of Trade provisionally estimates that the seasonally adjusted index of retail sales (1957 = 100) was 118, slightly above the January figure and back to the record level of December.

AIRCRAFT ORDERS

TWA's Troubles

WHEN the world's biggest international airline, Trans World Airlines, runs into financing difficulties, the shock is registered in the board rooms of all the aircraft factories of the West. An airline of this size cannot endure without aircraft, but TWA's modernisation has been held up while the board has tried to disentangle itself from Mr Howard Hughes—with the success that a ball of wool might expect to escape from a kitten. Re-equipment that other airlines have spread over several years—and with wiser purchases—has to be compressed by TWA into a short period: the airline finds itself attempting to raise sums that borrowers are reluctant to lend, particularly since its financial results last year showed a crushing $17 million loss.

TWA appears to need roughly another $400 million worth of new jets for its long, medium and short routes. For the short routes it ordered 20 French-built Caravelles last autumn, to cost about $100 million; the French have repeatedly postponed their deadline to give TWA time to raise the money and chances of finding it before last date in May grow daily slimmer. Equally, it seems to be in trouble with the 26 big Boeing jets on order to supplement the 31 in service. Certainly Boeing has taken steps to meet TWA in a manner that must strike a chill in the hearts of manufacturers. The order for 26 (the first due to be delivered

TANKERS

Whose Guesses About Demand?

BETWEEN 1938 and 1955 world consumption of petroleum products rose by about 180 per cent. Seaborne movement of oil, however, rose by 200 per cent. The world tanker fleet was 167 per cent larger in deadweight tonnage, with a further increase of perhaps 20 per cent in carrying capacity arising from the fact that its average speed had risen from 11 to 14 knots. Oil company forecasts—and the tanker building programmes based upon these by both the companies and the independent tanker operators who serve them—were in that era of the mid-fifties based upon the firm assumption that the ton-mileage of seaborne movement of oil would rise faster than world demand for petroleum products.

It was upon that basis—and upon the shorter-term signs of higher demand at the time of Suez—that the tanker building programmes now being completed, after pruning meanwhile, were planned. They have resulted in an addition of 15½ million tons dw of new tankers during the last four years, with perhaps 2½ million tons to be launched this year; though some vessels have been scrapped, the world fleet is now of the order of 67 million tons deadweight, with about 1½ million tons idle and perhaps one million tons of tankers having temporarily switched to the carriage of grain.

Nevertheless, some of the world's independent tanker owners, notably the Norwegians, are beginning to chance their arms and order new ships—not on the firm time charters that they had in the fifties (which have served them well even through the subsequent slump in voyage rates), but truly speculatively, without any employment fixed at all. Some of the new buildings recently financed by Hambros for British yards—where, as elsewhere, shipowners can get extremely attractive terms with builders' margins pared down to a level where the work does not fully cover overheads—have been of this kind. One result is that building contracts rose for the first time since 1957; orders for 3 million tons were announced in the second half of 1961.

IT is the business of these independents to assess the medium run of the market better than their clients, the oil companies: that is how they make their money. Nevertheless, the major companies are now warning their suppliers of marginal tonnage that the current slump is more than a temporary fluctuation following a bout of over-ordering—and that for a time, at least, the seaborne movement of oil seems likely to grow more slowly than world oil consumption.

In Oslo last month John Kirby, managing director of Shell Tankers, spelt this out in an address to Norwegian tanker owners. First, he said, oil consumption itself seemed likely to be increasing more slowly than in the fifties, though healthily enough (6 per cent annually against 10 per cent in the fifties). Secondly, various new factors were interrupting the continued switch to Middle Eastern sources upon which in the mid-fifties it had been assumed that the average distance that oil moves to market would become longer.

The biggest element here is an urge to self-sufficiency, in one way or another. The United States, which is self-sufficient but which on grounds of costs would steadily have become less so by shifting to lower cost foreign oil, is for the present committed to restrict imports. Quite a number of countries have developed their "own oil" inside their own frontiers (e.g. Argentina), within dependent territories (now, possibly, Portugal), or within territories associated in one way or another (Algeria, with France). Some of these newly developed territories may become significant world exporters, such as Algeria and Libya; and they are closer to major importing areas such as Europe than the Middle East producers are. Russia has returned to the world oil market as an exporter, as forecasters ought probably have expected it to; but the size of its future exports, still a matter for debate based on guesswork, could probably not have been reasonably guessed then.

Finally, there is one technological shift within transport: pipelines from the Mediterranean coast to Central and North-West Europe will for a time depress the ton-mileage required to supply a given tonnage of oil to European consumers, though by opening up these markets to oil they may eventually boost demand for tankers. Technical developments within tankers themselves have no necessary influence upon the ton-mileage required. If demand for tankers grows more slowly than the world fleet, however, the companies chartering tonnage will be able to become even more discriminating in their choice of size and speed. Moreover, though the movement of petroleum products is likely to continue becoming proportionately less important as against crude oil movement, its requirements are becoming more specialised (for example with vessels to carry liquid gas). Mr Kirby, in his Oslo lecture, guessed that the ordinary products tanker would be replaced by a "white products tanker" or "black products tanker."

in a week or so) has been cut back to 18, and Boeing has arranged to lease five aircraft to TWA. The engine manufacturers, Pratt and Whitney, have agreed to "lease purchase" the engines for all 23 aircraft. The manufacturers are thus carrying a fair amount of the financing and in return TWA has ordered ten of Boeing's new medium-range jets.

WHEAT

Ranging Higher

THOUGH overshadowed by—or possibly partly because of—the emergence of the common market and discussion of cereals under the General Agreement on Tariffs and Trade, the International Wheat Agreement continues to draw in more adherents. The expected admission of Russia to a virtually renewed agreement for the three years from the end of July will bring in exporters of virtually all commercial supplies of wheat. It will also mean recasting the schedule of percentages that each importing country agrees to purchase from members. France is an important seller of wheat and West Germany a large importer. Because of common market commitments provision has therefore had to be made for the possible sale of wheat to Germany by France at higher prices than those contained in the international agreement.

As always, a new price range was the trickiest problem. Allegedly for the sake of five cents a bushel, Britain dropped out of the IWA in 1953 and was only induced to return in 1959 when the maximum price was lowered to $1.90 a bushel. The new maximum was fixed 2½ cents below the 1953 level, but the lower limit has been raised 7½ cents above the 1953 minimum by lifting the whole range by 12½ cents a bushel. The new range of $1.62½ to $2.02½ a bushel has a spread of 40 cents compared with 50 cents in 1953. Because of smaller crops and a bigger appetite for imported wheat, principally in China, Canadian prices for wheat are already near the maximum under the expiring agreement. If the Wheat Council made a "maximum price declaration" in respect of an exporting country, it would be required to make available to importers at the maximum price its commitment of wheat under the agreement.

With minor exceptions, the wheat trade normally manages to operate comfortably within the limits set by the IWA and there is every prospect that it will continue to do so for the next three years. The decision on prices has no immediate market significance. Traders who bought early are still selling Canadian wheat several cents a bushel cheaper than the Canadian Wheat Board's published price and showing a profit. So it is a little too early to speak of a further rise in the price of bread, though there has been talk of it. Bakers always seem to be itching to find a solid reason for adding a halfpenny to the price of a loaf partly to help defray less specific rises in the cost of production. But since the last round of increases in January, the cost of Canadian wheat has fallen.

IWA PRICE RANGES*

	Minimum $ a bushel	Maximum $ a bushel

BUILDING

Less Work, More Pay

THE building industry is having to absorb the effects of last autumn's sharp wage increase (of about 10 per cent) and prepare for the possibility of having to meet further "substantial" claims at a time when it can no longer rely on the very high level of demand to which it had become accustomed. Allowing for the increase in prices as a result of the wage rise, output declined by 2 per cent in the last quarter of 1961 compared with the previous three months, and new orders fell by as much as 8 per cent; compared with the same period of 1960 they were 5 per cent, or £26 million smaller. Not so long ago there were shortages of bricks: but manufacturers had 307 million piled up in their yards at the end of January, 55 per cent more than a year earlier, and are offering immediate delivery. Bad weather at the turn of the year is certainly not the only reason for this swollen stockpile.

Though both work done and orders received were higher than ever for the year 1961 as a whole, they may well be lower in 1962. The drop in industrial building orders is sharper than had been expected—they fell to £60 million in the last quarter, the lowest since the summer of 1959. Dear land and money continue to hamper private housebuilding. Other types of private building, such as shops and offices, are still increasing; so, to a lesser extent, is public authority housing. But a number of local councils are complaining bitterly at steeply increased tenders. The index of building costs of three bedroomed council houses (excluding land and services) has gone up 50 per cent in 10 years, and 15 per cent of the increase occurred last year. If the fall in demand becomes sharp and lasting, prices are going to look out of proportion.

AIRCRAFT FUEL

Burning Issue

THE Ministry of Aviation's cautious, judicious report on the relative proneness of two types of aircraft fuel to burst into flames is going to be widely misinterpreted. Fifteen months ago, Lord Brabazon raised a bogey that many people thought had died. It was simply this: gas turbine engines will burn paraffin; cold (but not hot) paraffin is known to catch fire with reluctance compared with petrol; airlines that persist in burning a crude form of petrol in their jets are therefore careless of safety. QED. The fact that refineries have a good deal more of this crude petrol (a wide-cut fuel consisting of a mixture of low-grade petrol and paraffin very different from high octane spirit) than paraffin, and no visible market for it other than the airlines' jets, lent sinister undertones to the dispute and the Ministry set up a working party to resolve the issue.

Its findings deal solely with the relative fire risk of the two fuels and conclude, cautiously but unequivocally, that while there are many kinds of aircraft accidents in which one fuel will burn as readily as the other, there are also some where paraffin might be expected to catch fire less readily than the wide-cut petrol and to burn more slowly. But there is not enough statistical evidence to prove the issue either way. This finding may cause worry and distress, not only to aircraft passengers but also to those airlines (they include Pan American and Trans Canada) that use the wide-cut petrol in preference to paraffin because their engineers believe that paraffin too has its drawbacks. For the peace of mind of the passengers, it is regrettable that the Ministry concentrated narrowly on flammability which, according to arguments on the other side, may be only one aspect of the relative safety of the two fuels.

COTTON TEXTILES

Unkind Cut?

RELIEF — mainly psychological — was afforded western manufacturers by the negotiation of a five-year agreement regulating international trade in cotton textiles in Geneva a month ago. The strong posse of American lobbyists at the conference were cock-a-hoop at its conclusion. But with the ink scarcely dry on the scheme which will control exports after the end of September, the United States asked for cuts in Hongkong's exports to America under the existing temporary agreement. Eight categories of exports were affected by the request, including gingham, sheeting, knit shirts and articles classified by American authorities as sweaters, cardigans and coats.

"To retain American goodwill" the issue of licences to export these goods from Hongkong was immediately stopped, though the ban was later lifted to permit shipments up to and including March 10th. Except in desperate circumstances, the Geneva procedure specifies a 30-day period of consultation in which restrictions can be negotiated. Hongkong has exceeded its minimum quota for exports of the items affected by the ban. But as far as is known, the United States has not demonstrated that its trade has been disrupted within the meaning of the agreement. It was announced this week, after much heartburning, that exports of these goods would not be resumed by Hongkong for the time being. Manufacturers were warned against entering into new commitments while further negotiations were conducted with the United States. The Hongkong government promised relief in proved cases of hardship resulting from the ban.

The ban will depress the whole industry as well as causing severe distress in some parts of it. Spinners and weavers have decided to reduce output by a third. One worker in three will lose his job. An obvious flaw in the international scheme is that it appears to have little sense of proportion. Sectors of the American industry whose condition appears to have improved in recent months have been saved from "disruption" at the cost of far more serious dislocation in Hongkong. Under the new long-term agreement, Britain will not be expected to make bigger concessions to Asian producers. Imports of grey cloth are falling spontaneously as stocks are reduced following the boom of 1960 and early 1961. In January, imports of grey cloth were little more than half the level of a year earlier, though imports of yarns and made-up garments were still high. It seems only a matter of time before manufacturers in Lancashire begin to see a little more business.

The British cotton industry has been so riddled by imports from Asia that a sharp reduction in imports would possibly cause some disruption now. At each level of manufacture, producers rely on substantial imports of materials. Continental manufacturers see this as a bar to Britain joining the common market and claim that Britain will have to choose between its present arrangements with Commonwealth manufacturers and Europe. But though free competition between Lancashire and the French industry, which has so far been exposed to only negligible imports of Asian textiles, will cause difficulties, it appears that negotiations in Brussels on this point have made fair progress.

OVERSEAS BANKS

Profitable Year

PROVIDING banking facilities in the world's underdeveloped areas can still be profitable. Published profits of three of the biggest overseas banks with their head offices in London, the Bank of London and South America, the Chartered Bank, and National and Grindlays Bank, have increased fairly steadily over the past ten years with Bolsa leading the advance. In the latest year to December 31st the published profits of each of the three banks, after the usual undisclosed transfers to inner reserves, increased by around 30 per cent.

The disclosed profits of the Bank of London and South America rose from £756,000 to £973,000 and would have been considerably higher but for the heavy setback, from £238,000 to £85,000, in the net profits of the recently acquired subsidiary Balfour, Williamson, and the loss of £45,000 on the first eight months' operation of the new Buenos Aires subsidiary Compañia Financiera de Londres. Sir George Bolton, chairman of Bolsa, complains that the Treasury's stiffer scrutiny of investment in the non-sterling area that followed last July's little budget, prevented the bank from transmitting to Balfour, Williamson in South America that part of the proceeds of last year's rights issue earmarked for Balfour, Williamson's working capital needs. Deposits rose by £19 million to £253 million in the year and expansion was spread fairly evenly among the bank's branches; in the two previous years, growth had been concentrated in the London branch. Unlike the chairmen of the other two banks, Sir George Bolton does not survey the territories in which the bank operates; this job is now done with great competence in the bank's fortnightly and quarterly reviews. Sir George concentrates on the world's problems. Europe is charged with "self-centred indifference to the state of the two major international currencies." Washington and Whitehall are presented with the possibility of having to choose between "the relative importance of their foreign and military policies and monetary stability." Sir George extends his sympathy to "the common man" who, he says, "is increasingly showing a healthy distrust of economic expedients accompanied by showers of paper money of ever-declining value."

The Chartered's disclosed profits in 1961 increased by 30 per cent, from £762,000 to £990,000, after an increase of £150,000 to £400,000 in the transfer to published reserves. Published profits of National and Grindlays rose by 34 per cent from £479,000 to £644,000. In order to maintain the relationship between capital funds and deposits after the acquisition of the Lloyds Bank's eastern branches National and Grindlays also transferred £850,000 from inner reserves to published reserves, and a one-for-four rights issue will increase the issued capital by some £1,140,000. During 1961 the bank joined the Hongkong and Shanghai Banking Corporation and S. Japhet the merchant bankers in forming the Exporters' Refinance Corporation to provide export credit up to five years.

SHORTER NOTES

British United Airways hopes to operate the first hovercraft service next summer between Hoylake, on the Cheshire coast, and Rhyl on that of North Wales. It would use the Vickers VA 3 hovercraft (which has yet to fly). BUA has applied informally to the Ministry of Aviation for permission to operate the service; whether the Air Transport Licensing Board has authority to give licences for hovercraft as well as aeroplane services is something that remains to be settled, despite the number of applications it has already received.

★

Net profits of British Wagon, the hire purchase company in which the Bank of Scotland has a 40 per cent interest, fell by 28 per cent in 1961 from £227,000 to £161,000, and the dividend is reduced by 2½ per cent to 10 per cent with a final of 5 per cent. Bearing in mind the recent results of other companies in this field these figures should not produce too big a frown.

★

Despite forecasts of a smaller cocoa crop earlier in the season, it now appears that production will reach a new peak. Gill and Duffus estimate that world production will be 1,209,000 tons this season—56,000 tons higher than the previous record in 1960-61. An increase in consumption of 10 per cent to 1,094,000 tons is expected in 1962, roughly the same rate of increase as in 1961. Lower prices helped to stimulate the rise in consumption. In Britain, total expenditure on chocolate and sugar confectionery rose by £7 million to £272 million last year. Expenditure on chocolate confectionery rose by £10 million but sales of sugar confectionery decreased. Since 1953, the first year of derationing, expenditure on confectionery per head of population has increased by 11 per cent. to 103s. 1d. a year. Prices have risen by 4 per cent.

COMPANY MEETINGS

LORAINE GOLD MINES, LIMITED

(Incorporated in the Republic of South Africa)

CHAIRMAN'S SPEECH

At the Annual General Meeting of Loraine Gold Mines, Limited, held in Johannesburg on March 8th, **Mr B. L. Bernstein,** the Chairman, said:

My Review in the Annual Report gave shareholders a comprehensive survey of the Company's operations up to the end of December, 1961. Now, as in previous years, I propose to bring you up to date in regard to development results at your Mine up to the end of February, and to elaborate on certain aspects arising from statements made in my Review.

DEVELOPMENT PROGRESS

During January and February a total of 15,340 feet of development was accomplished of which 14,653 feet were on Elsburg Reefs. Of 2,915 feet sampled on the Elsburg Reefs, 1,715 feet, equivalent to 58.8 per cent, were payable at an average value of 26.78 dwt per ton over a channel width of 28.4 inches, equivalent to 760 inch-dwts.

This development includes the first reef footage so far obtained South of No. 3 Shaft, all of which has been in the EA zone. Of 320 feet sampled in this area 46.9 per cent has proved payable at an average value of 738 inch-dwts.

In addition to these results, recent development North of No. 3 Shaft in the EA zone has disclosed a wide band of reef immediately above the lowest EA reef band. This reef, which is considered to be a composite of several bands which occur separately elsewhere, has so far been exposed over a distance of 150 feet in raises and winzes advancing North and South from the 48th level at No. 80 crosscut. 205 feet have been sampled and 73.2 per cent has proved payable at an average value of 12.82 dwts per ton over a channel width of 81 inches. The extent of this wide reef is not yet known, but is almost certainly confined to a relatively small block of ground about 100 feet from East to West and 400 feet from North to South. Sampling results from this reef are excluded from the total development figures and will be given separately in Quarterly Reports so as not to obscure the picture obtained from sampling results of normal reef development.

I mentioned last year that the main concentration of development would be in the No. 3 Shaft area where stoping tonnage can most readily be made available and this policy is still being vigorously applied in advancing haulages northwards. Reef development from these haulages has necessarily been concentrated in the EA zone, because, in most cases, an upper reef has to be mined ahead of underlying reef for reasons of safety, but reef rises between levels are being advanced on other horizons where intersections have shown payability.

The 48th level haulage has been completed: the 50th level haulage is now 6,300 feet North of No. 3 Shaft; the 54th and 56th level haulages 3,300 feet and 1,600 feet, respectively.

South of No. 3 Shaft good progress is now being made with the 46th and 48th level haulages, which form the spearhead of the exploratory development to the South. At the end of February the 46th level haulage had advanced 2,130 feet and the 48th level haulage 3,240 feet. Faulting has been intersected and diamond drilling is being carried out to obtain further structural information. Where a reef is in reasonable proximity to these haulages, limited reef development is being undertaken for valuation purposes. Where a reef zone is remote from haulages, prospect diamond drilling for valuation as well as for structural information will be done and the results obtained from such specialised drilling will be published in Quarterly Reports. When the main development North of No. 3 Shaft has been completed haulages to the South will be commenced on the lower levels suitably sited in accordance with structural information obtained by drilling from the upper levels.

In my Review, development results were analysed on a roughly regional basis by giving separate values for the Elsburg Reefs in the No. 2 Shaft Area and in the No. 3 Shaft Area. Although limited areas have so far been entered by development, it may help to clarify the picture if I give you an analysis of the progressive footage on Elsburg Reefs divided into stratigraphic zones.

The results up to the end of February, 1962, are as follows:

Zone	Footage Sampled	Payable Footage	Percentage Payable	Channel Width Inches	Inch dwt.
EA.....	26,145	16,555	63·3	35·3	716
EB.....	1,400	1,095	78·2	35·9	958
EC.....	410	190	46·3	37·5	530
ED.....	2,585	1,490	57·6	28·1	569
Total.....	30,540	19,330	63·3	34·8	716

An interesting feature of recent development in the EB zone has been found in the 81 crosscut on the 50th level and in a cross-rise from the 52nd level where a succession of reef bands occur in close proximity. The widths of individual reef bands vary from 14 to 76 inches and the waste partings separating them from 12 to 132 inches, resulting in a composite value of 7.0 dwts per ton over an overall channel width of some 840 inches. Intersections of reef in adjoining crosscuts, situated 500 feet to North and South show normal widths of EB reef at about 600 inch dwts and therefore this feature can only be regarded as an isolated occurrence of limited extent. Included in the total of 1,400 feet sampled in the EB zone which was referred to in the tabulation I have just given you is 200 feet of raise sampling on one of the lower bands of this succession of reefs, all of which is payable at an average value of 2,393 inch dwts. If the values from this raise had been excluded, the values of the EB zone quoted above would have been reduced from 958 inch dwts to 637 inch dwts.

Considered in conjunction with the wide reef in the EA zone to which I have already referred, it serves to emphasise the difficulty of assessing from work so far accomplished, the pay tonnage that will ultimately become available for mining.

Tonnage mined on Elsburg Reefs in the No. 2 Shaft Area, where payability has been confined to reefs in the EA zone, reached a maximum during the past year. Ventilation facilities at No. 2 Shaft have imposed a limit to expansion of mining operations in this area which is now being gradually replaced by stoping operations North of No. 3 Shaft where no ventilation restrictions exist and where progressive development values compare favourably with those in the No. 2 Shaft Area. At present stopes adjacent to No. 3 Shaft provide about 14,000 tons per month to the mill and new stopes are being opened up as fast as reef development permits.

During the latter half of this year sufficient stoping face should be available to give scope for stoping North of No. 3 Shaft at a higher grade. At that time it is expected that tonnage drawn from "B" reef stoping will have been reduced from the present figure of 34 per cent of tonnage milled to about 25 per cent.

Meanwhile, experimental work is in progress to determine whether the rate of surface sorting which was 14.8 per cent last year can be increased either by improving on the manual waste sorting currently in use or by introducing mechanical sorting. A radiometric sorting unit is still under test at a pilot plant on the Harte-beestfontein Mine.

Development footage in excess of that considered necessary to replace the depletion in ore reserves created by current stoping operations continues to be a charge against capital and at the present rate of development and stoping this is equivalent to approximately R1.4 per ton milled. This footage will be reduced during the course of the next two or three years while adequate ore reserves are being built up without affecting the cost per ton milled of development charged as a working cost. It is considered that it will be necessary to maintain an average total development rate of the order of 7,000 feet per month for the next two years.

As a result of the view that tonnages from the Elsburg Reefs may not be sufficient to support a long life it has become necessary to obtain an early indication as to what supplementary tonnage can be expected from other reefs, so that long term planning of mining operations can be undertaken.

EXPLORATION OF BASAL REEF

In the general vicinity of No. 3 Shaft it has been found that the Basal Reef conforms generally to the same trough formation as the Elsburg Reefs, with a steeply dipping western limb which brings the upturned reef to an elevation above the 54th level in the vicinity of No. 3 Shaft before it is cut off against the boulder beds on a line parallel with the cut-off of the Elsburg Reefs. It has also been found that whereas the thickness of strata separating the bottom of the ED zone of the Elsburg Reefs from the Basal Reef is about 1,100 feet at No. 3 Shaft, which is on the eastern side of the trough, this thickness is reduced to some 400 feet near the top of the western side. It is thus possible to intersect Basal Reef by advancing a crosscut about 300 feet to the West from the 54th haulage North. It is probable that the Basal Reef subcrop falls entirely within the western boundary of the original Riebeeck Lease Area. You will remember that payable values occurred in the Basal Reef intersected from several surface boreholes in the general area of No. 3 Shaft, namely, Boreholes SB3, VDH1 and VDH4A.

It is now proposed to initiate exploration of Basal Reef in terms of the Riebeeck flotation agreement, by means of limited development by two crosscuts from the 54th level haulage and by underground boreholes drilled from the 54th and 56th levels with the object of determining whether payability extends up the western limb to elevations which could ultimately be exploited from the existing Loraine shaft system. It is also hoped to determine whether khaki shale is still present at the higher elevations, and, if so, to what extent stoping operations would be affected in steeply dipping areas. It has been agreed with General Mining and Finance Corporation Limited and General Exploration (OFS) Limited that the limited development rock estimated at some 2,000 tons arising from this reef development will be treated in your company's mill and the gold recovered will be for your company's account.

As far as current operations are concerned they continue to be satisfactory. The mill is operating efficiently and to capacity, and as the grade increases profits should gradually increase, as no steep rise in the cost structure is anticipated. When sufficient information is available about the southern area it will be necessary to locate a shaft to serve that area. The siting of this shaft must await development work to the South of No. 3 Shaft, but it would appear from present indications that preparatory work could commence towards the end of 1963, and full scale sinking in 1964. It is anticipated that the capital expenditure for the new shaft system will be financed from profits.

Certain criticisms have been made arising out of the publication of my statement in January. On the one hand, there has been the criticism that the warning note contained in the statement should have been issued earlier. On the other hand, I have had letters from shareholders criticising me for referring to the future before more information was available.

PAYABLE TONNAGE STILL UNKNOWN

From the start of the Mine the predominant question mark has been how much tonnage would be found in the Elsburg Reefs. Promising boreholes indicated, and development results have since proved, that payable ore is available, but the question as to the probable payable tonnage in the Elsburg Reefs still remains unanswered. Every shareholder and every share analyst who had studied this position must have been aware of this. The surface boreholes indicated a narrow zone of enrichment and that there were difficulties in correlating the various reefs intersected. The Riebeeck flotation agreement itself posed this question by providing that if the tonnage on the upper reefs alone were adequate to establish a satisfactory mine, only then would another company have the right to explore the reefs lying below the upper shale marker with a view to establishing a second mine to exploit those reefs.

Indeed, at every annual meeting this point has been raised by shareholders. At the 1959 meeting, in reply to a question I said, "It is too early to assess the significance of the limited development in relation to payable tonnage contained in the lease area as a whole." At the 1960 meeting I said, "At the moment we only have information on strike, and on strike we have established continuity, but there is no information available yet as to the extent of that continuity on dip, so there is no possibility of being able to estimate tonnages at this stage." At last year's meeting I said, "There has been much speculation regarding the total tonnage of payable Elsburg Reefs contained in the Mine. Work done to date has proved that the upper and lower Elsburg zones are continuous from the northern boundary of the old Riebeeck lease area to No. 3 Shaft, but until the number of reefs and the extent of their payability at depth is known it is impossible to make any assessment." This clearly indicated that this vital question mark has always overhung this mine, and indeed it still does today.

EMERGENCE OF GRADE AND COSTS PATTERN

We have come to the conclusion, however, as a result of a further twelve months work on the Elsburg Reefs that a pattern has emerged, which, if it continues, will be a limiting factor as regards tonnage from those reefs. There was no dramatic moment when this became apparent. There was no dramatic change which could immediately have been brought to the attention of shareholders. There has been a gradual accumulation of evidence. I felt it my duty to bring this matter to the attention of shareholders because the evidence over the past twelve months points to the probability that we are unlikely to have sufficient tonnage for a long life based solely on the Elsburg Reefs. By long life I mean the life of thirty years as envisaged in the Riebeeck flotation agreement. The life from these Elsburg Reefs, if the present pattern continues may be of the order of fifteen to twenty years at our present milling rate. But, even if this opinion does prove to be correct, that does not mean that the life of the mine is limited to that period. Exploration work on Basal Reef and on "A" and "B" Reefs will be carried out to ascertain to what extent these reefs can be economically exploited by your company. Furthermore in due course exploration will be carried out to determine whether the Elsburg Reefs persist and contain payable ore along the western boundary of the former Loraine Lease Area—that is, to the North of the present limit of the No. 2 Shaft Elsburg Reef workings.

The pattern of grade and costs obviously must have an important bearing on the profitability of the mine. You will bear in mind that this time last year the percentage of reef drawn from the Elsburg Reefs amounted to only 40 per cent whereas even today that figure has risen to only 66 per cent. Although we have been stoping in the No. 3 Shaft Area for eleven months, even now only 17 per cent of our tonnage comes from the Elsburg Reefs drawn from No. 3 Shaft areas. It is apparent that it is only over the last year that we have been developing and stoping sufficient Elsburg Reefs to form any opinion as to factors that might influence grade and costs. The pattern of faulting, unconformities and distribution of values, which has emerged over the past twelve months has naturally inhibited grade and had an adverse effect on costs. It required time before one could draw conclusions. However, on the basis of the information revealed by the last twelve months' work, it was my duty to point out the inhibiting factors which were influencing grade and costs. These are a challenge to our mining methods and technique, and naturally everything is being done so as to obtain the optimum grade at the lowest cost.

Our technical people at Head Office and on the Mine are naturally exerting every effort to evolve methods and techniques to offset these factors, and thus improve the grade and reduce costs. Obviously I can make no forecast as to whether this will or will not be possible. What is apparent on present information is that the grade should continue to rise over the next two years as adequate stope faces on Elsburg Reefs become available and less "B" Reef is mined. From then on grade will depend on development ahead of the mill and the success we have in offsetting the mining conditions to which I referred in my statement.

Because in all matters the future is most uncertain, and nowhere is it more uncertain than in the mining of a deposit having unique geological features, the Board decided that warnings should be given, and that my statement should be issued as soon as possible ahead of the Annual Report and Accounts. These warnings could not have been given until all concerned had had an opportunity to evaluate all the evidence which was of a highly technical nature, and they were given as soon as this evaluation had been completed, and were subject to all the qualifications we considered essential.

The simplified model showing the geological structure between No. 2 and No. 3 Shafts is again available, and those shareholders who are interested are invited to inspect the model after the Meeting. The Company's technical staff will be available to explain the model and also to assist those shareholders who wish to study the plan of the underground workings.

REPLIES TO QUESTIONS

Before putting the motion for the adoption of the Report and Accounts to you I shall deal with certain questions which shareholders unable to be present have asked me to answer at this Meeting:

Question: Will you keep shareholders advised in the Quarterly Reports of your interpretation of current development and trends, particularly in relation to the assessment of Elsburg Reef tonnages?

Answer: The Quarterly Reports deal with factual information. Any attempt to interpret such information or project it into the future would be dangerous and could be very misleading, because the period of three months is far too short in mining operations to make such interpretations. The only proper place for any predictions or comments, based on work accomplished, is in the Chairman's Annual Review and at the Annual Meeting. However if there were any very significant facts which emerged and which, in the opinion of your technical advisers, were so conclusive as to materially affect our assessment of the future, naturally such information will be published timeously. Shareholders will be given all relevant factual

information, and in future the results of development on each of the four Elsburg zones will be published separately in the Quarterly Reports, and the results of any development and borehole results on the Basal Reef and in the area South of No. 3 Shaft will likewise be published separately.

Q. Are operations at the Mine proceeding satisfactorily, and, if so, will profits increase, and when do you expect to pay your first dividend?

A. Operations at the Mine are proceeding satisfactorily. We are milling to capacity and making reasonable profits. We expect the grade to increase and we expect costs to more or less stabilise, so that profits should increase. It is too early to make any forecast as to when we will pay our first dividend. This will depend upon the accumulation of profits available after providing for capital expenditure, redemption of the note issue, and payments of interest. You will also bear in mind that, in terms of our agreement with the Anglo American Corporation, whenever dividends are paid an equivalent amount must be paid out by way of redemption of the Anglo American loan.

Q. How will the R2,000,000 for capital expenditure be spent?

A. The rough breakdown of this is as follows:

Excess Development	R1,000,000
Pumping Equipment	90,000
Ventilation Plant	210,000
Bantu Quarters	200,000
Electric Power Supply	250,000
Buildings and Miscellaneous Services	250,000
	R2,000,000

Q. Have any negotiations been carried out with Freddies Consolidated Mines in connection with the Elsburg Reefs they have discovered on that property?

A. There have been no negotiations with Freddies Consolidated Mines in respect of the continuation of the Elsburg Reefs southwards into the Freddies property. It is common knowledge that these reefs are likely to extend into that property, and the question as to whether such reefs should be exploited by Freddies, or kept for future exploitation by that company, or might ultimately become available for exploitation by your company, cannot be determined at this stage when information is incomplete. It must, however, be clear that this area will in all probability be exploited in due course by either Freddies Consolidated or your company because it does not appear that any other mine could exploit it economically.

Q. Is it the faulting or sporadic values which are mainly responsible for the possibility of "dilution" being an important factor?

A. Although faulting results in the mining of additional waste the adverse effect on recovery grade is reduced by surface sorting. Sporadic value, however, results in the unavoidable mining of unpayable ground. This, therefore, is the more important aspect of the dilution problem.

Q. In the Technical Advisers Report payable development for the year on Elsburg Reefs is given as 838 inch-dwts. This indicates 14.5 dwt per ton over the ore reserve stoping width of 57.8 inches. The value of the Elsburg ore reserve is given as 10.0 dwt per ton and recovery grade is now about 7.0 dwt per ton.

(a) Is the recovery grade likely to increase?

(b) What relationship can be expected between:

(i) Payable Development and Ore Reserve grade?

(ii) Ore Reserve grade and Recovery grade?

A. I have already indicated in my statement that the recovery grade can be expected to improve as the stoping tonnage drawn from the Elsburg Reefs in the No. 3 Shaft Area increases and becomes fully representative of average development grade in the area.

(b) (i) The Pay Development for the year cannot be compared directly with the Ore Reserve value because the ore reserve also contains blocks developed in the previous financial year and carrying lower values than obtained from the development during the past year. Ore reserve value has so far proved to be about 80 per cent of the value of payable development. The extent of the difference between the payable development value and the ore reserve value depends on the proportion of unpay development which has to be included when computing the ore reserve, because of the necessity of mining some unpay ore along with the pay ore.

(ii) The ratio of recovery grade to ore reserve grade is also expected to be about 80 per cent. This ratio depends mainly on the percentage of tonnage milled drawn from the ore reserve, the percentage of development rock sent to the mill, and on the percentage of waste sorting by means of which recovery grade can be enhanced.

Q. Under certain conditions, Geoffries is entitled to exploit the lower (Basal and Leader) Reefs. Will you please give details of this arrangement?

A. After the Company has completed 40,000 feet of development along the Upper Reefs which include the Elsburg, the "A" and the "B" Reefs, Geoffries may require an assessment to be made by the consulting engineers as to whether a satisfactory mine (as defined) exists in the Upper Reefs. If after four years no such assessment has been called for by Geoffries, then your company has the right to do so, and if at any time during this period the Government Mining Engineer calls upon your company to explore the Lower Reefs an assessment with regard to a satisfactory mine must be made. If a satisfactory mine does not exist, your company will be entitled to exploit the lower Reefs for its own benefit. If it is decided that a satisfactory mine on the Upper Reefs does exist, Geoffries may apply to the Government Mining Engineer to exploit the Lower Reefs as a second mine to be established by Geoffries. If such permission is refused, or if the Government require your company to work the Lower Reefs, or if Geoffries wishes to include the Lower Reefs in a company not formed by themselves, your company may exploit the Lower Reefs for its own account on payment of R200,000 to Middle Wits and R400,000 to Geoffries.

Q. What is considered a satisfactory mine under the arrangements with Geoffries?

A. A satisfactory mine shall be a mine which is estimated to yield from the Upper Reefs sufficient gold-bearing ore to support profitable mining operations for at least 30 years commencing on the date of initial production from those reefs for which purpose:

(a) The estimated average grade over the period of at least 30 years shall not be less than 7 dwts. per ton;

(b) The estimated quantity of gold-bearing ore to be milled shall not be less than 30 million tons; and

(c) The estimated profits will be at least equal to the amount of capital required by the company (both factors being present values at 10 per cent per annum).

Q. Has there been any difficulty in coping with the water intersected in the water-bearing fissures south of No. 3 shaft?

A. Although development south of No. 3 shaft has been retarded to some extent by the intersection of water-bearing fissures requiring cementation, no serious water problem exists at your mine. The pumping rate during the past five months has been of the order of 1.6 million gallons per day, which is well within the mine's pumping capacity of about 10 million gallons per day and substantially less than that of most of the mines of the Orange Free State goldfield. A programme of draining under control the known water fissures in the No. 3 shaft area has been put into effect.

Q. To what extent have the results of surface boreholes been confirmed or otherwise by development sampling in the underground workings in the vicinity of the boreholes?

A. By and large, the results given by the surface boreholes have been satisfactorily confirmed by underground development. This is especially so in view of the rapid variations in reef widths and values over short distances which development has shown to occur on many of the Elsburg Reefs. Variations in values over a stope face, even in successive sample sections, ranging from the order of a hundred or so inch dwts, to well over a thousand, are by no means rare.

It would, therefore, be somewhat surprising if a close correspondence in detail were found between development results in the more or less close vicinity of a borehole and the results obtained in the borehole itself.

Until a surface borehole is actually intersected in the workings it is often not possible to be certain of its exact position underground. In all cases, except that of borehole K1 on Kromdraai, which was exposed in the workings, comparison between borehole and development results can be made only in a general way. In the case of K1 also, no direct comparison can be made since stope sampling approached, at its nearest point, to 30 feet from the borehole reef intersection. The borehole sampling reflected 478 inch dwts. and the stope sampling about 30 feet away averaged 659 inch dwts.

The occurrence of a number of reef bands over a total potentially payable thickness of about 70 feet in the EB zone and of a massive payable reef body some 14 feet thick in the EA zone to which I have referred, illustrates the difficulty of attempting to make detailed comparisons between underground development and borehole results. In both these cases the information so far available indicates that they are probably of strictly limited lateral extent.

Q. Are you aware that rumours circulated long before your Statement, and what do you intend to do about it?

A. From time to time, and particularly where a speculative counter such as Loraine is involved, a large number of rumours do circulate in the market and elsewhere which, in nine cases out of ten, are entirely without foundation. It is not practical politics to deny or confirm every rumour which is sometimes inspired by persons for their own advantage. Both the Board and the Management are fully alive to the necessity of ensuring, so far as it is humanly possible, to do so, that confidential information does not leak out until shareholders as a body can be given the full picture, and any misuse of confidential information which came to the notice of the Board or the Management would be drastically dealt with.

Q. and A. The question has been ventilated in a letter to the Press as to whether production and development values were "run of mine." I don't know whether the writer intended this question to be offensive, but it certainly read that way. However, the answer is that these values are computed in accordance with normal mining practice and are naturally "run of mine" and correctly reflect the position at the mine.

In reply to further questions asked at the Meeting, the Chairman stated:

1. That any shareholder is welcome to visit the Mine at times convenient to the Company.

2. The period of four years during which Geoffries is entitled to call for an assessment as to whether a satisfactory mine (as defined in the Riebeeck flotation agreement) exists on the "Upper Reefs" commenced from August 9, 1961.

3. For reasons already given in his Review and his speech at the Meeting it was obviously not possible to say what recovery grade could be expected from the Mine in the future.

4. As regards the importance of the values to date on the various zones in the Elsburg series, insufficient had been done to determine their potential. The EA zone has proved to be the most promising.

5. In assessing the value of the Mine, inch dwt. values appear to have obscured the other important factors at the Mine, such as percentage payability and dilution.

Quarterly Reports have indicated that the percentage payability has been dropping and this should have been regarded as a warning.

6. The purpose of his Review was to sound a warning note to shareholders with regard to tonnages available on Elsburg Reefs but Members should bear in mind that, in addition to these Reefs, there was the "A" Reef, the "B" Reef and possibly the Basal Reef which could affect the life of the Mine.

7. As regards criticism that there had been leakage of information and "knowledgeable selling" of Loraine shares as a result thereof, every effort which is humanly possible is made to ensure that important information is not divulged until it is released to all shareholders simultaneously. Many rumours have been circulating but in most cases they were grossly exaggerated and this was a matter over which the Board had no control.

8. That with regard to a number of questions asked by shareholders directed to "knowledgeable selling" and dealings in the Company's shares by directors and others associated with the Company, the Register of Directors shareholdings was before the Meeting. He was satisfied that no abuse of information was made by those connected with the Company but an inquiry into share-dealings could only be made by The Stock Exchange or some other competent authority which he and his colleagues would welcome. A resolution of the Meeting was not required to institute such an enquiry.

The motion for adoption of the Directors' Report and Accounts was seconded by Sir George Albu, put to the Meeting and carried.

The retiring directors were re-elected, the remuneration of the Auditors was fixed, and payment of their expenses was confirmed.

The Resolution for the adoption of new Articles of Association was passed as a Special Resolution.

THE CHARTERED BANK

The One Hundred and Eighth Annual General Meeting of The Chartered Bank will be held on April 4th at 38, Bishopsgate, London, E.C.2.

The following is an extract from the statement by the Chairman, **Mr V. A. Grantham**, which has been circulated with the report and accounts for the year 1961:

THE BANK'S BALANCE SHEET

An extraordinary General Meeting was held on October 4, 1961, to sanction an increase in the capital of the Bank. At that meeting the authorised capital was raised to £10,000,000 and of that sum £6,600,000 has now been issued and paid up.

In 1960 our balance sheet total reached a record figure and I indicated in the opening remarks of my overseas survey that there was at least a possibility of some recession in world trade which might affect us but, in fact, there has been a further substantial increase in our own figures of £36,938,878, which has brought the balance sheet total to £353,142,076.

The Consolidated Balance Sheet total of £408,097,902 shows an increase of £45,338,266 over that of last year.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The profit we show in the current year of £990,238 exceeds that of last year by £228,322, a substantial increase for the second year running. We have been able to match increased costs with increased income.

In September last we paid an interim dividend of 7½ per cent, less income tax, absorbing £252,656 and it is now proposed that out of the balance available a final dividend of 7½ per cent, less income tax, on a capital which has been increased during the year to £6,600,000 be now paid at a net cost of £303,188.

The premium of £1,100,000 arising from the Rights Issue has been transferred to Reserve Funds to which we have transferred a further £400,000 from our profits, bringing the total of those funds up to £7,250,000. There remains to be carried forward a balance on Profit and Loss account of £540,648, an increase of £34,394 over that of last year.

THE IRANO BRITISH BANK

Our associate in Iran completed its second full year in March, at the end of the Iranian year 1339. After examination of the balance sheet and profit and loss account it was agreed that the recommendation from Tehran that a small dividend should be declared, was justified. The accounts at the end of the last Iranian half-year indicate that trading profits have been maintained at about the level of the previous year and plans are at an advanced stage for the opening of another branch in Tehran.

Business during the year 1961 was difficult owing to continued tightness of credit and a general lack of confidence among the merchants in the bazaar. A report on Iran is included in the overseas survey.

OVERSEAS SURVEY

In Asia today the main concern of governments is the raising of the living standards of their people and most of the countries in which the Chartered Bank Group has branches are carrying out economic development plans to this end. At first sight some of these plans appear over-ambitious in that too much is being attempted in too short a time, but the rise in population is so rapid that most Asian governments are having to accelerate the process of development merely to maintain existing living standards, let alone improve them. On the whole progress in recent years has been satisfactory but the main difficulty has been, and will continue to be, shortage of foreign exchange. The industrialised countries of the world have recognised their responsibility in the matter and have given considerable assistance by such means as commodity aid under United States Public Law 480 and grants and loans on a country-to-country or consortium basis. So great, however, are the total requirements, that external aid, save in exceptional cases, can only be marginal and the main source of foreign exchange for economic development in Asia must necessarily be export earnings. Hence there is understandable anxiety over the tendency of the industrialised countries to apply restrictions against imports of low-cost Asian manufactures. Asian countries must be able to export if they are to survive and to deny them this is to negative the benefits of aid.

Now, too, there is bound to be additional anxiety amongst the Commonwealth countries in Asia until the result of the United Kingdom's negotiations to join the European Economic Community is known. At the moment Commonwealth countries are far from convinced that equal trade in a wider market will be a satisfactory substitute for special privileges in a reduced market, particularly for a developing industrial country. It should, however, not be assumed that the interests of the Commonwealth and the interests of Europe necessarily conflict with one another and the British government has been at pains to make it clear that there is no question of entering the Common Market unless Commonwealth interests can be adequately secured and it is encouraging at this stage of the negotiations that the representatives of the Community appear to be increasingly amenable to this important stipulation. Another important point to remember is that although the Treaty of Rome is basically an economic agreement it has important underlying political objectives and there is no doubt that Britain's influence in the Community will be greater than if it were to stand aloof, which should be to the ultimate advantage of the Commonwealth.

CYPRUS

The immediate problem is to achieve a more satisfactory balance in the country's overseas trade, for imports are increasing rapidly and were last year, double the export earnings. The trade deficit was £21 millions and was, for the greater part, covered by expenditure in connection with the British bases on the island, but the annual contributions from this source may not continue on the same scale and obviously Cyprus has to encourage the development of those local industries which will lessen the need for imported goods.

The prudent budgetary policy of the government should induce confidence and, provided sufficient foreign aid is forthcoming, the development programme will assist the country towards building up a more self-supporting economy.

IRAQ

Iraq is dependent upon its oil production not only for the continued satisfactory state of its economy but also for the country's development, and it is to be hoped that happier relations between the government and the oil companies will soon be established to ensure that the new five-year economic development plan be successful. Given oil production and oil revenue not less than 1961's increased figures there is every hope that the plan, which includes industrial, agricultural and public works projects, should reach its targets and raise the general standard of living, for Iraq is basically a rich country.

THE GULF

Bahrain. Trade was satisfactory but the development of other ports in the region tends to slow down the rate of expansion of Bahrain's entrepôt trade.

The local production of oil at Bahrain remained steady during 1961 and there were no new drillings worth noting. The refinery throughput, which includes crude from the mainland, reached the record figure of 10.5 million tons.

Abu Dhabi. It is now generally recognised that Abu Dhabi will, within the next few years, begin to receive a very substantial revenue from resources of oil both offshore and on the mainland and it is commendable that energetic action is already being taken by the government to ensure that the town is developed in an orderly way.

The Eastern Bank opened its branch in Abu Dhabi on October 1, 1961.

ADEN

In the government of Aden Colony the development of representative institutions has continued satisfactorily. Although the entrepôt trade continues at a satisfactory level, it is tending to diminish as the efficiency of neighbouring ports improves. For some time to come this reduction will be offset by expenditure arising from the presence in Aden of the armed forces, but there is a danger that the economy will become over-dependent on this source of income, particularly as there is little sign of new industries being developed in the Colony either by foreign investors or by local enterprise.

IRAN

Immediately after his appointment early in May the new Prime Minister, Dr Amini, announced his intention of introducing a programme for strengthening the economic position of the country both internally and externally, and the efforts of the financial authorities throughout the second-half of the year have met with some measure of success. The mounting inflation of recent years has been arrested and the steady rise in the cost of living has been slowed down.

It has been stated by responsible authorities that this year Iran's earnings of foreign exchange from the oil industry, including sterling sold to the government by the consortium of operating companies for their local expenditure, will amount to around £130 millions, an increase of some £10 millions over last year.

INDIA

India has reason to be proud of the progress made in the development of the national economy. Indebted as it is to foreign aid and investment for the success of its first and second five-year plans (1951/61) it has still, by its own efforts, achieved remarkable results in what it terms its industrial revolution.

The visible results of this revolution are the new industrial enterprises appearing in all parts of the country, but less apparent are the tremendous strides in agriculture which have raised the output of food grains by 50 per cent to 79 million tons in the last ten years and have helped to turn chronic food shortage and malnutrition to something approaching self-sufficiency. This achievement is all the more commendable when viewed against the background of a population showing an increase of 21.5 per cent during the same period and now reaching a figure of 438 millions.

The cost of the plans, or the revolution, whichever it be called, is not clear: India no longer has a surplus of foreign exchange and the present level of reserves is barely sufficient for current needs. Now, too, the country goes into its third five-year plan faced with the additional burden of servicing the substantial debt already incurred and knowing too that only the further vast sums promised by the consortium of countries in the form of aid can make it successful. Fortunately private foreign investment continues at a high level and government's interest in attracting overseas investment, preferably in conjunction with Indian interests and for industries with export earning potential, was shown in tax concessions in the last budget. Taxation is, however, still very high by world standards.

PAKISTAN

Pakistan has continued to enjoy the benefits of firm but benevolent leadership and the President's already high prestige was further enhanced both at home and abroad as a result of his visit to the United States last July.

Last year I mentioned the improvement in the level of exchange reserves which had made it possible for the government to permit increased imports of raw materials and consumer goods. The liberalisation of imports succeeded in the twin objectives of sustaining a further increase in industrial production, which benefited by the increased availability of raw materials and spare parts, and of reducing price levels. On the other hand, the higher import bill is causing a deficit in the balance of payments. With the growth of population, which the 1961 census revealed was rising by 2.4 per cent per year, a rate higher than was estimated by the planners, there is increased domestic absorption of most commodities, and reduced exportable surpluses.

It is heartening to find that throughout Pakistan there is confidence in the ability of the country to overcome present problems and to make a success of the five-year plan.

FEDERATION OF MALAYA

The outstanding political event last year was the crystallisation of the previously vague concept of a confederation of Commonwealth territories in South East Asia and its acceptance by all the governments concerned as the next logical constitutional development.

Industrial development in the Federation is now well under way and the number of foreign trade missions visiting the country, particularly in the early part of the year, is an indication of the country's increasing importance as a market for capital equipment and manufactured goods and as a field for investment from abroad.

The increasing tempo of trade and industry in the Federation demands an expansion in banking facilities and we have therefore felt it necessary to enlarge our own organisation in the country. New branches of the bank have recently been opened at Kuala Trengganu, Kota Bahru and Port Dickson, and our branches in Petaling Jaya and Port Swettenham have been accommodated in new office buildings during the course of the year. We commence the building of a new main office in Kuala Lumpur this year.

With prospects for both rubber and tin reasonably good, the favourable development of the Federation's economy under the second five-year plan, which covers the period 1961/65, should continue. By adhering firmly to sound fiscal and economic policies the government has successfully created conditions favourable to trade and industry and it is to be hoped that the imaginative initiative which has been taken in connection with the proposed merger with Singapore and the Borneo territories will be attended with success.

SINGAPORE

The government of Singapore has consistently advocated closer association with the Federation of Malaya and therefore welcomed the Federation's proposals for a merger to include the Commonwealth territories in Borneo as well as Singapore and the Federation. Such a merger would obviously benefit Singapore by giving increased scope for the entrepôt and other specialised commercial and financial services available in the port, and by providing wider markets for the new industries which are to be established in terms of the four-year development plan (1961/64).

It is greatly to the credit of the business community that in what has been in many respects, a difficult year, overseas trade has been maintained at a satisfactory level. In value the aggregate was lower than in 1960, but only because of the reduction in the price of rubber a commodity which accounts for a third of Singapore's imports and nearly half the exports.

Provided that relations with Indonesia continue to improve and the negotiations for the merger of the Commonwealth territories in the area proceed favourably, the outlook for Singapore in the coming year could be reasonably bright.

In August we extended our own organisation in Singapore by opening a new branch at Queenstown.

THAILAND

Under the firm guidance of Field Marshal Sarit's administration Thailand has enjoyed a quietly prosperous year. Thailand, agriculturally a land of small-holdings, is in the fortunate position of producing enough food and other commodities to support the population simply but adequately and still have a surplus available for export sufficient in value to meet normal requirements of imported goods. This gives a fundamental stability to the national economy which has enabled Thailand to be one of the few countries in Asia able to sustain over a period of years a free economy with an absence of import restrictions.

The way in which foreign enterprises are able to conduct their business without interference or discrimination, providing they respect the laws of the country, is a clear indication of the liberal policy of the authorities towards investments from abroad.

HONG KONG

The economy of Hong Kong may be finely balanced but there is no indication of this in the buoyancy of government's budgetary revenue or in the characteristic manner in which the business community continues industrial expansion in the face of difficulties. It is those difficulties which must bring caution into my remarks after what must be considered another prosperous year although profits generally were lower. They are, in the main, the difficulties of finding and keeping overseas markets for the Colony's expanding industry.

There has been a large increase in the banking system in Kowloon and the New Territories and we ourselves opened new offices in Kowloon, Shamshuipo, Hung Hom and Wong Tai Sin. New banks, too seem to be opening up all the time on the island and on the mainland and we are relieved to hear that the government is bringing in legislation to ensure that normal banking standards are observed. For too long now it has been possible for any concern with a small capital to open up in Hong Kong and include "bank" or "banking" in its name, and it is to be hoped that the new legislation will set minimum standards for such privilege that will give adequate protection to depositors, local and overseas.

CHINA

A year ago I suggested that the grain imports which China had been obliged to make, following successive bad harvests, would impose a severe strain on the country's exchange reserves and thus cause a contraction in trade with countries outside the Soviet block. This has proved to be the case. Nevertheless, the Chinese have lately been showing increasing interest in developing trade with countries outside the Soviet block, this trend being evidenced by the recent contract for the supply of British aircraft.

Our Shanghai office continues to do useful business in connection with the financing of China's overseas trade.

JAPAN

In Japan in 1961 it was the economic rather than the political issues that dominated the scene. This is not surprising as the post-war industrial boom was obviously getting out of hand and the mounting bill for the tremendous industrial development in the preceding years had to be met. That bill, that is the external cost of the

vast investments in new plant and machinery, was primarily responsible for forcing Japan into a balance of payments crisis. The reserves finally fell only U.S.$338 millions during the year, but at one time the downward trend was so alarming, and as usual in such circumstances internal inflationary pressure was such, that the government had to take the usual remedial steps of a credit squeeze, high interest rates and more liberal financing for exports. Even with these measures it may be well into 1963 before the Japanese economy is on an even keel, for the country's balance of payments is even less satisfactory than might appear from published figures, which show neither the recent loans by American banks nor the large overseas borrowings of the Japanese banks.

CONCLUSION

The unsatisfactory state of the United Kingdom's balance of payments has caused the government to call for a renewed export drive and, as a large part of the business of the Chartered Bank Group is the financing of international trade and as our branch system extends from the eastern Mediterranean to the Pacific Ocean, we have obviously a part to play. We have a first hand and intimate knowledge of the markets of Asia and wonder at times if their promise and potential are too little known to the exporters in this country. It would be unwise for them to take for granted what may be termed the traditional markets for British goods, such as India and Hong Kong, or to view the East as one unit forgetting that each individual market has its own features. Foreign exchange is always scarce and must be spent to the best advantage, which makes exporting to the East a highly competitive business. It is obviously worth studying in view of the fact that the greater part of the world's population lives in the area and rising living standards will stimulate demand for a widening range of products. Certainly, during my tour in the East last year I had brought home to me over and over again the aggressive efforts in salesmanship made by other countries.

Information about particular markets can be readily obtained from the exchange banks and other organisations but this is only a start. Our manufacturers must not expect to be able to sell only what they are already making. They must find out what each market wants and put themselves in a position to meet those wants. After that the all-important factor is for the manufacturer to be able to meet price and delivery dates in a competitive market, and to arrange finance on terms acceptable to the buyers and equal to those of rival exporters abroad. At the moment much of the export trade is handled by a relatively few large organisations, and for them the government and banks have progressively made suitable export finance terms available, but more could be done to assist medium-sized and small manufacturing concerns to develop profitable export business. I feel sure that the Export Credits Guarantee Department, which is always helpful and forward-looking, will, with the banks in this country, evolve a scheme to meet the problems of these smaller manufacturers and encourage them to sell abroad.

Copies of the full text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London E.C.2.

ROBECO

EXTRACTS FROM THE MANAGING DIRECTORS' REPORT FOR 1961

When it became evident in the early part of the year under review that the recession in industrial activity in the United States was reaching its lowest point, we shifted the emphasis of our investments to that country. Thus during the year our interest in this section rose from slightly more than 29 per cent to nearly 41 per cent of our assets, in value even more noticeably from fls 199 million to fls 391 million. Our purchases were mainly in food, pharmaceuticals, public utilities, financial institutions, office machinery and oil. At the present time our investments in the United States are largely within those groups which generally speaking are least affected by adverse economic conditions.

The percentage of our Canadian holdings remained practically unchanged and our total interest in the American continent at the end of the year amounted to 44 per cent, as against slightly more than 33 per cent at the beginning of the year.

We also extended our European interests. Although in terms of market values they went up from fls 360 million to fls 478 million, the percentage dropped from nearly 53 per cent to approximately 50 per cent. Long term economic prospects in this part of the world are encouraging.

The value of our holdings in Dutch international concerns rose from fls 165 million to fls 187 million. We further extended our interest in Royal Dutch and we also added to Unilever, Philips and Hoogovens.

Our German interests were maintained at approximately 8 per cent. Our British holdings increased from fls 20 million to fls 41 million, insurance companies representing our main purchase. On balance our interest in France and Belgium also registered an increase. The balance of our African portfolio was disposed of during the year and our Australian holdings remained very small. At the end of the year our liquid resources totalled nearly 6 per cent of our assets.

DEVELOPMENT OF THE COMPANY

The dynamic development of your Company continued in 1961. As a result of the international interest shown in ROBECO shares, the issued capital rose from fls 150,200,000 to fls 200,100,000.

Turnover figures of the Amsterdam Stock Exchange confirm the marketability of your shares. In terms of par value, sales of ROBECO shares in 1961 ranked second to Royal Dutch, while in terms of actual value, at fls 222 million, they ranked fourth among all shares quoted in Amsterdam. It is estimated that approximately one quarter of the outstanding shares are held by investors outside the Netherlands. The shares are also officially quoted on the Stock Exchanges of Paris, Brussels and Antwerp.

As most of our shares are in the form of certificates to bearer, we do not know the names of the holders of these shares. It is apparent, however, that in addition to numerous private individuals, ROBECO shares are bought by many institutional investors, in order easily to secure both a wide spread of risk and an active management of their capital. The number of pension funds which are building up a portfolio of ROBECO shares by periodic payments of fixed amounts continued to increase.

RECORD INCOME: LOWEST COSTS

During 1961 the income of your Company, amounting to over fls 43 million, was again satisfactory.

The cost of administration decreased to an unprecedentedly low level. These expenses, which amounted to 0.20 per cent, 0.16 per cent and 0.14 per cent for the years 1958, 1959 and 1960 respectively, dropped to 0.12 per cent of net assets in 1961.

The available profit balance, inclusive of that brought forward from the previous year, amounts to fls 45,582,370.21. We recommend to you a final cash payment of fls 5.25 per share of fls 50 nominal value, making fls 9.25 for the year. The interim dividend of fls 4 per share, which was paid in October, 1961, involved an amount of fls 15,170,252, leaving an available balance of fls 30,412,118.21. The final payment of fls 5.25 per share will involve fls 21,010,500.

We propose that in addition to the final payment in cash, a payment of 2½ per cent be made in shares; this payment, being a bonus from the share premium reserve, is free of income tax.

Application is being made to the Council of The Stock Exchange, London, for quotation for ROBECO shares of fls 50 and sub-shares of fls 5. Full particulars will be published in the Press on 21st March, 1962, and it is expected that dealings (ex the final dividend and stock bonus, mentioned above) will begin on 27th March, 1962. Copies of the full Report and Accounts in English may be obtained from:

ROBECO, P.O. Box 973, Rotterdam.

BRITANNIC ASSURANCE COMPANY LIMITED

OVER £4,700,000 FOR POLICYHOLDERS' BONUSES

MR FREDERICK A. POWELL'S STATEMENT

The ninety-sixth annual general meeting of the Britannic Assurance Company Ltd. will be held on April 5, 1962. The following statement by the chairman, **Mr Fredk. A. Powell, FCA,** has been circulated with the accounts.

At our meeting last year I told you what a wonderful recovery Mr Kenneth J. Britt had made from a serious illness, but that he was then relinquishing his executive position as joint actuary. In retrospect I am sure that was a wise decision, for the easing of his burdens has undoubtedly enabled him to maintain his recovery throughout the year. Mr Britt now feels that it would be in his best interests to retire completely, and in paying tribute to the valuable services he has rendered to the company over a period of fifty-four years, during the last fourteen of which he has been a director, we all wish him every happiness in the future and maintenance of his recovery. To fill the vacancies on the board, you will be asked to elect Mr P. J. Duffy and Mr D. Hamilton Shaw who, since February 5th last, have held the positions, respectively, of secretary and deputy general manager.

GENERAL PROGRESS

I am pleased to report continued progress in all branches during 1961 with record new business figures in both life branches. The company's total income increased by £1,518,000 to £24,052,000 and the premium income in the life branches by £756,000 to £16,102,000. Gross interest income rose by £712,000 to £7,846,000. Total sums assured, including bonuses, under policies in force in the life branches amounted to £290,209,000, while the funds held as security for the policyholders increased during the year by £7,348,000 to £136,889,000. The amounts allocated to policyholders totalled £4,708,000—an increase of £553,000 over 1960. Increased bonus rates have been declared in the life branches.

ORDINARY BRANCH

Our new sums assured in the Ordinary Branch were £14,233,000 compared with £13,478,000 a year ago. Total premium income rose by £256,000 to £5,277,000 and the gross rate of interest earned was £6 8s. 7d. per cent—an increase of 3s. 7d. over the previous year. The corresponding net rate was 2s. 7d. up at £4 13s. 6d. per cent.

Death and maturity claims were higher than a year ago, the former at £539,000 being £77,000 higher and the latter at £2,219,000 being £286,000 higher. The expense rate was 13.86 per cent, being .47 higher than the year before. The policyholders' funds increased by £3,215,000 to £48,473,000.

During the year we improved our immediate annuity rates and hope that the satisfactory income which these annuities offer will enable us to sell more of this class of business.

INDUSTRIAL BRANCH

New sums assured in the Industrial Branch increased by £1,374,000 to £18,427,000 and the premium income by £500,000 to £10,825,000. The gross rate of interest earned was £6 11s. 3d. per cent or 3s. 6d. more than a year ago, while the net rate rose by 3s. 10d. to £6 6s. 2d. per cent.

The outstanding feature of the revenue account is the increase of £2,100,000 in the maturity claims, which amounted to £4,962,000. In this we are seeing the effect of the big increase in new business which took place in 1946, the year when so many men and women were returning to civilian life and taking out assurances which, but for the war, they would have taken out some years earlier. An insurance company exists to pay claims, and it is good to see policyholders benefiting from their thrift and foresight. Death claims at £1,994,000 were up by £175,000. After being held steady for three years, the expense rate rose by .84 to 28.86 per cent, the increase being due largely to improved terms for our field staff which operated from the beginning of the year. Policyholders' funds increased by £4,039,000 to £77,691,000.

POLICYHOLDERS' BONUSES

In the Ordinary Branch the surplus was £2,482,697. Out of this £1,683,652 has been allocated to with-profit policyholders, and has enabled record bonuses to be declared. With-profit life policies receive a reversionary bonus of 52s. per £100 sum assured, against 50s. a year ago, and with-profit approved retirement annuities a bonus of 44s. per cent on the amount of the annuity payable at retirement date, compared with 42s. a year ago.

In the Industrial Branch the surplus was £5,841,756. Out of this £3,000,000 has been allocated to Britannic policyholders. A reversionary bonus has been declared at the rate of 42s. per £100 sum assured on premium-paying policies on which premiums have been paid for at least one year. This compares with 40s. a year ago. In addition, the special declaration made last year has been repeated, further reversionary bonuses having been declared on policies issued earlier than 1957, ranging from 5s. to 60s. per £100 sum assured according to the duration at the policy anniversary in 1957. These two special declarations have added bonuses of £6 per £100 sum assured to all policies issued before 1946 in addition to the ordinary bonuses.

INVESTMENTS

During 1961 the national economy was disturbed by continuing difficulties arising chiefly from the unsatisfactory state of the external balance of trade. The corrective measures which had been taken by the Government in the previous year proved to be inadequate, and stronger action became necessary to avert a rapidly developing sterling crisis and to lay the foundations of a significant expansion in the volume of our export trade on which our living standards ultimately depend. The discipline of an intensified credit squeeze, operating through such devices as high interest rates, increased purchase tax, and restraint on wages, profits, and dividends, has been effective in improving the value of the pound sterling, but there is little evidence up to the present time that any pronounced stimulus has been administered to our export trade.

Against this background, the management of the company's investments during 1961 presented us with many problems. Our faith in the long-term merits of equity stocks as a suitable channel for the investment of a substantial proportion of our funds remains unshaken, however. Our ordinary share holdings increased from £31,619,000 to £36,588,000. The increase of £4,969,000 results mainly from taking up new shares issued on rights terms by companies in which we already had holdings and the effects of mergers, mainly in the brewery industry, which took place during the year. We also took advantage of the higher interest rates offering on fixed-interest securities to increase our holdings of debenture stocks by £1,882,000 to £12,674,000.

Our holdings of British Government and British Government guaranteed stocks were reduced from £33,487,000 to £31,212,000, the reduction of £2,275,000 arising from sales and portfolio rearrangements. Many of these transactions involved the transfer of funds out of relatively short-dated investments into long-dated redeemable stocks in order to secure what we considered to be an attractive increase in yield.

The valuation of our investments at December 31, 1961, showed a most satisfactory overall position, more favourable indeed than at the end of 1960, and we have not considered it necessary to augment our investment reserve funds of £9,125,000.

HOUSE PURCHASE SCHEME

The demand for House Purchase loans has continued at a very high rate throughout the year, although since July 1st the rate of interest charged on such loans has been 6½ per cent, the highest rate in the company's history. In common with other lenders we also found it necessary during the year to suspend our mortgage guarantee scheme, under which House Purchase advances up to 90 per cent of the purchase price were being made.

In spite of these restrictive measures House Purchase advances made during the year amounted to 2,526 with an aggregate sum advanced of £4,596,000, against 1,985 and £3,359,000 respectively in 1960. After taking repayments into account, the net sum outstanding under this scheme has risen by £2,824,000 to over £27 millions. The total amount advanced to policyholders since the introduction of the scheme in 1907 is now over £50 millions.

FIRE AND ACCIDENT BRANCH

The premium income in this branch rose by £39,000 to £1,249,000 while the profit increased by £39,585 to £60,599. Although this is a most satisfactory result, we should bear in mind that the profits in this branch are liable to quite wide fluctuations as the results of the past few years have clearly shown.

DECIMAL CURRENCY

The Government's approval in principle of a change to decimal currency poses particular problems for a "Home Service" assurance office where we have millions of long-term contracts in force for small weekly premiums. The Industrial Assurance Commissioner's report for 1960 showed there were 95,000,000 premium-paying Industrial Branch policies in force, and the administrative problems of converting these contracts would be a colossal and costly operation. Any system of decimalisation which abandons our present penny as the basic minor unit would require considerable statutory legislation to enable offices like ourselves to vary premiums and sums assured in our contracts. A system

which used one hundred of our present pennies as a unit of currency—call it a "Royal" or what you will—would be the most simple and least costly one for us. I feel that such a system would have great merits in many other spheres of our daily life.

INCREASE IN CAPITAL

The Trustee Investments Act, 1961, empowers trustees, in certain circumstances and subject to certain conditions, to invest in ordinary and other stocks or shares of United Kingdom companies. One of the conditions is that the companies concerned must have an issued and paid-up capital of £1 million or more. At the present time, therefore, our company's capital amounting in the aggregate to £500,000, does not qualify as an authorised investment for trustees. In the opinion of the directors this is a disability which, detracting as it does from the investment status of the company's capital, ought to be removed. Accordingly we are proposing a capitalisation of reserves under which new fully paid-up ordinary shares of 5s. each will be allotted to existing ordinary stockholders on the basis of six new shares for five old units of 5s. each, thereby bringing the company's total issued and paid-up capital to £1,023,800. This capitalisation of reserves is a book-keeping procedure which, of itself, does nothing to increase the profit-earning capacity of the company.

STAFF

Our thanks are due to the staff for all their good work and it is my privilege once again to express those thanks on your behalf. During the year we completed negotiations for improvements in our terms of staff remuneration. One effect of the improvements was to increase future pensions, and it is for this reason that we are recommending an increase in the amount transferred to the staff pension fund from £330,000 to £365,000, which I am sure will have your approval.

KLEINWORT, BENSON, LONSDALE LIMITED

GROUP'S ACTIVE FIRST YEAR

The Annual General Meeting of Kleinwort, Benson, Lonsdale Limited will be held on April 19th in London.

The following is the statement by the chairman, **Mr Ernest G. Kleinwort**, which has been circulated with the report and accounts for the year ended December 31, 1961:

The accounts now submitted are the first statutory accounts of the Kleinwort, Benson, Lonsdale group. I must remind shareholders that these accounts are not comparable with the *pro forma* accounts submitted last June, for reasons that I shall give in my remarks concerning the principal subsidiary companies.

GROUP RESULTS

Your group has had a satisfactory year and profits have improved. A final dividend of 12 per cent is recommended which, with the interim of 5 per cent paid last December, will make a total distribution for the year of 17 per cent. This is similar to the total distribution received by shareholders last year.

During the year all the investment trust interests of the group were consolidated into Lonsdale Investment Trust Limited, whose accounts are enclosed with the report and accounts. It will be seen that these accounts cover the whole twelve months' period, as against the ten months covered by the last accounts submitted.

Growth of income of Lonsdale Investment Trust Limited has continued, but at a slower rate: had it not been for the Chancellor's request in July for dividend restraint, the revenue from the Trust's investments in Great Britain would undoubtedly have been greater during the latter part of the year. Since then credit restriction and increased competition are having their effect on profit margins in several industries, so that there may be reduced dividends from some of our investments during the current year. On the other hand, industrial activity in the United States has increased since mid-1961 with the result that larger dividends may be expected from many of our North American investments. The Trust's interest in Europe is still relatively small, but it is being increased now that prices of Continental shares are less inflated.

The accounts of Kleinwort, Benson Limited, in which are concentrated all the banking activities of the group, are now presented in the manner authorised for banking companies, which basis did not apply to the ten months' accounts of the former Robert Benson, Lonsdale & Co. Limited presented last year. The present profit figures are accordingly not comparable with the published profits of the two former banking companies, but it can be stated that the general level of profit has been well maintained.

GREATER ACTIVITY IN BANKING BUSINESS

There has been greater activity in all sections of the banking business. In particular it is encouraging to see the increase in the figure of acceptances—the traditional business of a merchant bank. The continued growth of foreign deposits, both in sterling and in dollars, is also noteworthy.

In new issues our activity has been maintained at a high level. During the year we successfully contributed to the City's techniques and ability to meet special requirements by sponsoring an equity issue involving applications by tender instead of at a fixed price.

Our investment management and advisory services, seasoned for many years in the management of large investment trusts, have been employed by more pension funds and we have made particular arrangements to meet the growing demand both in this country and the United States for advice on Continental securities. The Transatlantic Fund Limited, a Canadian investment trust specialising in European securities, which we sponsored some years ago to meet the requirements of the American investor, has prospered and has a portfolio worth nearly £8 million; last March, in order to provide the British institutional investor with similar opportunities, we launched privately in London the European Market Investment Trust Limited, whose funds now extend to some £3½ million.

It is now almost exactly one year since we began the gradual process by which the varied activities of our banking and investment business will eventually become fully integrated. Shareholders will recall mention at the time of the merger of the benefits anticipated from the complementary nature of the two businesses now merged into Kleinwort, Benson Limited. I am pleased to say that there continues to be tangible proof of such benefits. The process of integration and the achievement of smoother and more efficient working continues, but cannot be complete until we are all housed under one roof. As a first step, to be accomplished within the next two months, we have arranged to bring our investment departments together in Aldermanbury House, and by the summer of 1963 the rest of the business now carried on at Fenchurch Street will move to temporary premises closer to Aldermanbury House. Our intention is for the whole business of the group eventually to be housed in a new building to be erected on our Fenchurch Street site. The temporary move will enable the Fenchurch Street office (which, incidentally, we have occupied for very nearly 100 years) to be demolished and rebuilt. Arrangements for this development project are well advanced, but we do not anticipate that the building will be ready for occupation until about 1965.

COMMON MARKET PROSPECTS

Looking to the future, I would like to make some remarks with regard to the Common Market.

In assessing the prospects for the merchant banks, commentators have pointed out the opportunities they will have as a result of the United Kingdom joining the E.E.C. This is true, for, like ourselves, many merchant banks have extensive and well-established connections on the Continent that will equip them to assist United Kingdom and Continental customers who are seeking new outlets and manufacturing facilities or working agreements and will require an intimate knowledge of the new territories before they can wisely undertake fresh enterprises. I do, however, suggest that whilst substantial new business and earnings may ultimately be looked for, it would be a mistake to expect quick or easy results from this activity.

Your Company has undertaken much exploratory work on the Continent with a view to assisting its customers in this field. The task is a large one calling for consistent effort, but I believe that, if the United Kingdom becomes a member of the Common Market, our rewards, if not immediate, will be well worth while.

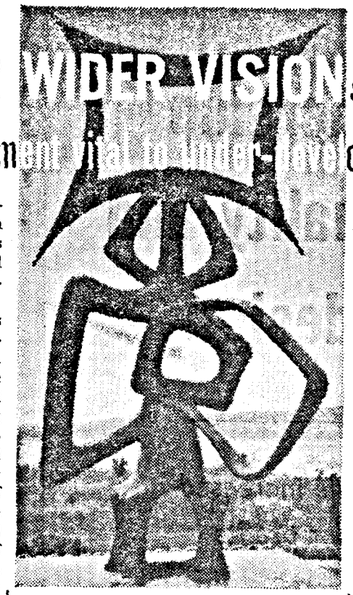
In general, there would seem to be good grounds for confidence in the prospects for the City in connection with the Common Market. There is no doubt but that London has a much larger capital and money market, backed by a more highly-developed and more efficient financial machine than exists in any of the other countries of the E.E.C. It is therefore natural to expect that, if the United Kingdom were to become an integral part of this Community, there would be a growing tendency to turn to London in financial matters. I would add a plea that every official encouragement should be given to the City to take advantage of this great opportunity; as, for example, by removing those irritating imposts that, whilst yielding relatively little revenue, are even now driving Stock Exchange and investment business to other centres.

The first operating year of Kleinwort, Benson Limited as a single unit has just been completed, and I would not let the occasion pass without expressing my appreciation of the spirit in which the task of co-ordination has been tackled by all concerned. I am sure that shareholders will wish me to express on their behalf our thanks to all executives and staff for their co-operation in this matter, and for their excellent work during the past year.

A NEED FOR WIDER VISION

Says Sir George Bolton

long-term investment vital in under-developed countries



The trading and financial world is experiencing many discomforts derived from anxieties over international politics, doubts regarding the world's major currencies and their related problems, and confused thinking about overseas trade.

Among the readily identifiable factors is the end of the apparently automatic expansion of world trade that began in 1945. Attention is belatedly being given to the effects on world trade of the continuous fall in commodity prices over the last decade; this has brought about exchange and payments disturbances and internal financial and monetary problems in virtually every country that is dependent on the export of primary products. These difficulties have affected the whole of South and Central America and Africa, with the exception of the Republic of South Africa, which enjoys a steady income from the export of gold and diamonds; and in one way or another their consequences have been felt throughout the Commonwealth.

INHERENT DISTRUST

Besides these trading problems, and partly as a consequence of them, there is now a deeply-rooted lack of confidence in the structure of foreign exchanges. Not only trading difficulties, but also the continuing heavy military and foreign aid expenditure by the U.S.A., and, to an equivalent but lesser extent by the United Kingdom, are affecting the stability of both the dollar and sterling. These currencies are under remorseless pressure, as is revealed from time to time by events in the exchange markets. It is an inherent distrust of these and other paper currencies that is the underlying factor in the gold price controversy.

United Kingdom economic policy cannot be independent of the world situation, nor can the sterling system remain unaffected by any decision on the dollar made by the U.S.A. Nevertheless the British Government's reactions to current economic problems seem to have small relevance to international needs, except in its decision to apply for membership of the European Economic Community.

Brasilia: Modern Sculpture in front of the President's Palace of the Dawn.

PROBLEM OF WORLD LIQUIDITY

The problem of world liquidity is rendered the more intractable by recurrent weakness in the two principal international currencies. The outstanding problem today is not whether the price of gold should be raised, nor whether sterling or the dollar should be devalued, nor whether the Deutsche Mark or the Italian lira should be revalued, nor whether exchange rates should float or have wider official quotations. It is to be found in the fact that the tremors, large and small, that pass across the exchanges are no longer a reflection only of the weaknesses or follies of any particular government: they are the consequences of many years' abuse of the paper money system.

North America and Europe have for many years regarded the countries of Latin America and Africa as being of great potential importance. Industry and commerce have looked forward to the economic progress of these vast areas and to a large increase in world trade that would follow as a result. To disregard these countries because earlier hopes have not been fulfilled, and in consequence to concentrate on Europe, is a retrograde step, since there is a limit to the extent to which greater prosperity can be achieved within the comparatively narrow confines of the Old World.

Despite vast potentials in physical wealth and human resources, the struggles of the Latin Americans to place themselves on a viable competitive footing with the world's more advanced economies have been constantly hindered by domestic monetary troubles and recurrent inflation. It must be admitted that many of these difficulties have been the products of political instability and lack of internal discipline; but it is not hard to see that there is a fundamental cause of all these disruptions, namely an almost complete lack of domestic long-term investment capital.

NEED FOR OUTSIDE HELP

It is therefore obvious that all the under-developed countries must look beyond their own frontiers for help. For significant progress to be made in assisting the real emergence of the under-developed countries, as distinct from their rescue in individual payments crises or the granting of aid for public works and social improvements, wide agreements would be needed on matters of key economic importance. It would be necessary to ensure stability in monetary reserves and exchange rates, and to co-ordinate monetary policies, with the object of maintaining confidence in domestic currencies.

If the western democracies are to maintain a thriving international trade through free markets and freely-moving prices, conducted by the initiative of countless individuals making their own free choice, a major problem is to ensure that the monetary system works efficiently.

Because of the tensions in our price and monetary system in both the developed and the emergent sectors of the western world, we face the prospect of a prolonged crisis in the international financial structure; this is a situation urgently demanding attention and all responsible governments should give it equal priority with international politics.

1862 1962

THE CHAIRMAN'S CENTENARY YEAR STATEMENT

BANK OF LONDON & SOUTH AMERICA LIMITED

The full text of the Chairman's Review and a copy of the Directors' Report and Statement of Accounts for the year ended 31st December 1961 may be obtained from The Secretary, Bank of London & South America Limited, 40 Queen Victoria Street, London, E.C.4.

Hoover leadership assured by quality and advanced design

Annual Review reveals increased turnover but smaller profits

The Hoover Keymatic—unique in the field of home-washing. Full automation, simplicity in handling and excellence of design result in the finest washing machine available.

In the Annual Review for 1961 Hoover Limited revealed increased turnover but smaller profits. Other points from the Review are as follows:

The Keymatic, generally considered the best machine available anywhere, a redesigned Hoovermatic, a new low priced Cleaner—the "Hooverette" and a redesigned Polisher at a substantially reduced price, were introduced during the year. These products have been well received both by our dealers and the public, and are the chief factors responsible for increased turnover. But economic conditions, and the fight to keep in the forefront technologically and in share of the market—which we believe essential to our long term progress—has required small profit margins and heavy advertising and sales expenses.

There are indications of a significant change in the Government's approach to the country's economic problems. We hope ways will be found to avoid using the consumer durable industry as the anvil on which the blows of counter-cyclical fiscal policy have, in recent years, invariably first been visited.

The Export Market

Hoover Limited is always engaged in an "Export Drive" and 1961 was no exception. We are now strengthening our Export Division in personnel and organisation.

Our share of the export shipments of vacuum cleaners and washing machines continues to make us the overwhelming leaders in this trade.

The underlying trends for export appear favourable, although, as in the home market, profit margins are likely to tighten even further.

Planning for the Future

Many observers believe that Britain will join the Common Market within the next year or two. This development would naturally be of great interest to Hoover Limited and we established in 1959, in collaboration with our parent company, The Hoover Company of the United States, a new company in Switzerland, Hoover S.A., having the objective of developing to the full the opportunities afforded by the European Common Market. Hoover S.A. has been most helpful in the areas of market research and management reorganisation and has been conducting forward planning studies in regard to the requirements of productive capacity to serve the Common Market.

With the objective of increasing efficiency and simplifying the lines of authority and responsibility, as well as building greater flexibility in the management structure, your Board has been taking several actions in regard to corporate ownership and is considering further moves.

We are making special efforts to reduce to the maximum possible extent our costs of production and overhead expenses so as to improve our badly reduced profit margins.

Appreciation must be expressed for the support and loyalty of our employees and of our dealers and distributors in difficult trading conditions

The Hoover Shampoo-Polisher, latest addition to the Hoover range, will efficiently shampoo carpets in position, polish floors and furniture and serve all types of surfaces.

The British Bank of the Middle East

ANOTHER SATISFACTORY YEAR

The Seventy-Third Annual General Meeting of The British Bank of the Middle East was held on March 13th at the Bank's Head Office, 7 King William Street, London, E.C.4, Sir Dallas Bernard, Bt., Chairman, presiding.

The following is an extract from his circulated statement for the year ended December 31st, 1961:—

Since my last Statement, a year ago, there has been one change in the Board of Directors. Mr. S. W. P. Perry-Aldworth notified us that he wished to resign at the end of the year. He played a prominent part in the discussions, two years ago, that led to the offer being made to our shareholders by The Hongkong and Shanghai Banking Corporation to acquire all our Bank's shares. Since the merger, Mr. Perry-Aldworth has been one of our Directors and the harmony that has been such a happy feature of our common endeavours can be ascribed to a great extent to his understanding of our problems. We shall miss him.

TRIBUTE TO MR. MUSKER

Mr. G. O. W. Stewart, who has taken Mr. Perry-Aldworth's place as Manager of The Hongkong and Shanghai Banking Corporation's London Office, has been elected to our Board.

Mr. H. Musker, General Manager since 1948, retires on 10th March and will be succeeded by Mr. C. F. Warr. I am glad to say, however, that Mr. Musker will remain a Director and so we shall have the benefit of his experience and advice on the Board. Mr. Musker was a most successful General Manager and we shall be very sorry to lose his services in that capacity. During his tenure of office the Bank has grown considerably. At the time he was appointed General Manager the Capital and Published Reserves were £2,165,000. Today, assuming the resolution to be put before the shareholders at the Annual General Meeting is adopted, the figure will have been increased to £5,330,000. The number of branches has increased from 22 to 30 and we have a subsidiary in Casablanca and an Associated Company in Iran of which we own 49 per cent. of the capital.

BALANCE SHEET FIGURES

The Accounts that we are presenting to shareholders at the Annual General Meeting show that the Bank has had another satisfactory year.

Generally speaking, our Balance Sheet shows very little change from a year ago. The total is lower than last year by £2.6 million and this is caused by a small reduction of about £3 million in the total of our Deposits. This is the result mainly of normal day to day transactions and it so happened that, at the end of the year, there were some balances smaller than usual.

On the assets side, an increase in Cash and Cash at Bankers of £700 000 compared with a year ago is matched by a decrease of about the same amount in Money at Call and Short Notice and is of no significance. Treasury Bills held at 31st December, 1961, were £4,769,000 as against £8,837,000 last year.

Discounts and Advances to the Public total £46 million and have increased by £1½ million compared with a year ago.

Other figures that have changed are the amount due by our Associate Bank in Iran, which has increased from £108,000 to £518,000, and our investment in Morocco which appears for the first time amounts to £164,000.

This year our Profit and Loss Account represents the result of a full year's work. Last year, you will recall, we changed our accounting year so that it ended on 31st December instead of 31st March, which had been our annual closing day previously.

SLIGHTLY HIGHER PROFIT

The nett profit at 31st December, 1961, was £402,709 which is proportionately slightly higher than the result for the previous period.

The Directors recommend a final dividend for the year of 8 per cent. which, with the interim dividend of 8 per cent. paid in July, makes a total of 16 per cent. for the year. Last year's single dividend of 12 per cent. for the nine months' period, was at the same annual rate. The cost of this year's dividends, less tax, is £196,000.

The Directors have allocated £100,000 to Reserve Account, increasing it thereby from £2,500,000 to £2,600,000, and written £50,000 off Bank Premises which now stand at £411,000 in the Balance Sheet, a slightly lower figure than last year.

PROPOSED SCRIP ISSUE

Here I would like to refer to the capitalisation of £500,000 (£100,000 from the Bank's Share Premium Account and £400,000 from the Bank's Reserve Account) to be applied in the payment up in full of 500,000 shares of £1 each to be allotted to shareholders. To maintain the Published Reserve Account at its present level, £400,000 will be transferred from the Bank's inner reserves to Reserve Account, if the capitalisation is approved by the shareholders.

The proposed capitalisation is recommended by your Directors with a view to bringing the issued capital of the Bank more into line with the capital actually employed in its business and to increasing it to a figure more appropriate to the standing of the Bank in the countries in which it operates.

OIL PRODUCTION

In recent years I have formed the habit of quoting in my statement the annual figures for oil production in the Middle East. During 1961 total production at 282 million tons was 6½ per cent. higher than the 265 million tons produced during 1960 and 22 per cent. higher than the 230 million tons for 1959. The most significant increases during 1961 were those of Saudi Arabia and Iran which both showed over 12 per cent. increase; in fact in other countries production showed little change over 1960.

I must mention that Libya appears in the list of oil-producing countries for the first time in 1961. The figure of half a million tons must give a feeling of intense satisfaction to His Majesty King Idris of Libya and to his Government and people.

I would like to say once again that the success achieved during 1961 is in no small measure due to the high standard of work and loyalty that we have again received from our Staff. Their efforts have built our reputation and they may well be satisfied, as we here in London are, with the progress the Bank has made. I and my colleagues thank them all.

LOCAL CONDITIONS

Market conditions in Iraq throughout the year were rather dull although the demand for money continued to be strong. Import licences appeared to be issued a little more freely but no figures were published. The commodities licensed for import were mainly those necessary for the overall development and basic needs of the country.

In Libya new houses for the Managers of our two branches have been completed and work will start on new office premises for both Tripoli and Benghazi Branches early in 1962. I am pleased to say that our branches are well placed to contribute towards the economic growth of Libya which undoubtedly lies ahead.

The State of Kuwait has encountered peculiar difficulties and problems during 1961 and has surmounted them satisfactorily. Our branches—we now have five—have had a satisfactory year and the new branch in Fahad As-Salem Street, which we opened in July, has made good progress. A new office for our Ahmadi Branch is under construction and we hope to occupy it in the spring of 1962. A contract for the construction of our new Main Office in Kuwait, in Commercial Area No. 3, was awarded at the end of the year and work has now started.

Conditions in Bahrain have remained stable, and the volume of trade has been maintained. The value of imports during the first six months of the year was £10.8 million, the same as in the corresponding period of 1960. Re-exports totalled £3.7 compared with £3.9 million.

I mentioned last year our entry into Morocco and I am pleased to report that our subsidiary, The British Bank of the Middle East (Morocco) now has two branches in Casablanca and is making encouraging progress.

On 20th March 1961, our associate, The Bank of Iran and the Middle East, completed its second year of operations. Despite the curtailment of credit during the latter half of the year, it continues to make good progress.

On the whole, 1961 was an economically difficult year for Morocco. The failure of the grain harvest has caused considerable hardship to the population and the cost of living over the year increased by 6 per cent.

The Report and Accounts were adopted.

SHARJAH

Associated Bank in Iran—

THE BANK OF IRAN AND THE MIDDLE EAST

The Bank is a member of the Hongkong Bank Group whose total assets exceed £445 million.

SOCIÉTÉ GÉNÉRALE DE BELGIQUE

The Annual General Meeting of Shareholders of the Société Générale de Belgique was held in Brussels on February 27, 1962. The Governor, **Mr Max Nokin,** presided.

The Company's chief asset is its holding shares in financial, industrial and mining companies in Belgium, the Congo, Canada and other countries. The portfolio is shown in the Balance sheet at the conservative valuation of £30.7 million sterling. Its market value is estimated at about £105.7 million sterling.

Profits for 1961 were £3.7 million compared with £3.3 million in 1960. Total profits in 1961, including balance brought forward from the preceding year, were £4.4 million compared with £3.7 million in 1960. The increase has been made possible, mainly, by the fact that the reduced dividend receipts from a number of African companies, was more than offset by a recovery in the income received from other shares in the portfolio, combined with income accruing from recent investments.

During the past year, activity continued on a satisfactory scale in most branches of Belgian industry. The rate of investment, already at a high level in 1960 showed considerable expansion. This is confirmed by the sections of the Report dealing with the various companies in which Société Générale de Belgique is a shareholder. These companies spared no effort in their response to the incentive provided by the progressive opening of the internal frontiers of the Common Market.

BANKING

Deposits of the *Banque de la Société Générale de Belgique* increased substantially during the year. The Bank was increasingly active in the international monetary market, particularly in the field of short-term notes. The Bank also undertook, alone or in concert with other establishments, the financing of sizeable exports of Belgian industrial equipment.

STEEL

At *Cockerill-Ougrée*, work was completed on a new high-capacity blast furnace, and a continuous cold rolling mill for the Ferblatil section. It was decided, also, to double the capacity of the production unit for orientated grain magnetic plates. *Forges de la Providence*, also, continued the execution of its big investment programme, affecting each of the company's three works. The Report also records the fact that, subject to the final authorisation of the High Authority of E.C.S.C., it has been decided to erect a new integrated steel unit north of Ghent. The chief end-product of this enterprise will be cold-rolled plates.

NON-FERROUS METALS

Société Générale Métallurgique de Hoboken has again expanded its capacity for germanium production. It has reinforced its research department to deal with its growing business in basic materials for the electronics industry, and in the metallurgy of special metals—notably tantalum and niobium. Société Générale de Belgique, and other companies in the Group, have joined forces with subsidiaries of the Reynolds Metals Company in forming *Société Aluminium-Europe (Alenrope)*, which is to enter the aluminium product manufacturing industry.

ELECTRICAL AND MECHANICAL INDUSTRIES

Steps had already been taken to expand the electrical and mechanical engineering section, and these are now beginning to bear fruit. *Ateliers de Constructions Electriques de Charleroi (A.C.E.C.)* and *La Brugeoise et Nivelles* were both successful in bringing new products into the market. Both companies have strengthened their position in the Common Market by forming associations with producers in other countries, thus ensuring their participation in new techniques claimed to have a substantial future and a considerable prospective influence on employment.

NUCLEAR ENERGY

The Group's nuclear undertakings were marked by the growing proportion of concrete projects undertaken in relation to the theoretical and design studies. The high flux BR-2 reactor of the Centre d'Etude de l'Energie Nucléaire de Mol started operation at reduced power. The start of a BR-3 reactor will be delayed, since the law dealing with protection against nuclear risks has not yet been passed. Preliminary work was begun on the construction of a plant to treat radioactive combustibles of the Eurochemic company.

MERGERS

Early in 1961, a new plate glass manufacturing company, called *Glaverbel*, was created through the merger of *Union des Verreries Mécaniques Belges (Univerbel)* and *Glaces et Verres (Glaver) S.A.* The merger was essentially one of expansion, designed to create a stronger enterprise which would be better able to respond to opportunities offered by the economic unification of Europe. By bringing together under a single management the industrial resources of the two merged companies, Glaverbel became one of the world's most important manufacturers of plate glass.

In the shipping industry, the assets of *L'Union Financière et Maritime (Ufimar)* were merged with those of *Compagnie Maritime Belge* in a move to reinforce their position in international shipping, to strengthen the merchant fleet, and to permit the simultaneous development of subsidiary companies whose shares previously had been held in separate portfolios.

CANADA

In Canada, sales by the *Inland Cement Company* set an all-time record. *Iroquois Glass Limited* increased production capacity by about 20 per cent. Principal construction work and installations of *Brockville Chemicals Limited* were completed and the plant began operations at reduced capacity in July 1961.

CONGO COMPANIES

The loyalty of the personnel of private companies in the Congo was largely responsible for effectively maintaining the country's economic potential. In fact, despite adverse conditions, certain companies expanded production capacity and introduced new technical processes.

In Kasai, diamond production by *Société Minière du Bécéka* set an all-time record. The fighting in Katanga in December 1961 interrupted operations at *Union Minière*, and total production of copper was 7,000 tons below the 1961 goal of 300,000 metric tons. In the Leopoldville and Equator provinces, agricultural enterprises maintained, and in some cases increased production levels of such major agricultural exports as palm oil and palm kernel. However, in other regions, particularly Orientale and Kivu provinces, the insecurity of persons and property resulting from administrative disorganisation and political tensions seriously reduced economic activity.

THE CARDINAL INVESTMENT TRUST LIMITED

VALUE OF PORTFOLIO WELL MAINTAINED

The fifty-fifth Annual General Meeting of The Cardinal Investment Trust Limited was held on March 8th in London, **Mr R. G. Mills** (the chairman) presiding.

The following is his Review which was circulated with the Report and Accounts for the year ended December 31, 1961:

The Directors' Report refers to the death of Mr Eric Davenport who had been the Managing Director of your Company for a long period. Although his death took place in May last this is the first opportunity that has fallen to me to pay a tribute to the great contribution which he made in building up the Company to its present status. His death in the prime of life is a great loss.

The Board have appointed as Manager and Director Mr K. G. Drummond, FCIS, to succeed Mr Davenport, with whom he had worked closely since 1946. We have also appointed Mr J. M. Davenport, ACA, another Senior Executive, as Assistant Manager and an additional Director.

Turning to the accounts, I would draw your attention to the increase in the issued capital to over £1,000,000 by means of a capitalisation issue of Deferred Shares in November, thereby qualifying all the capital of the Company as Trustee investments in accordance with the provisions of the new Trustee Act. The opportunity was taken at the same time to increase the authorised capital to £1,500,000.

Having regard to the trend for Company dividends to be reduced, which became more evident in the second half of the year, the increase in our net revenue of some 9 per cent is not unsatisfactory.

The proposed final dividend of 8½ per cent, making 14½ per cent on the Deferred Capital, is a slight increase on the 17 per cent distributed for last year, when account is taken of the rights issue in 1960 and the recent capitalisation issue. As mentioned in the November circular to shareholders it is proposed to pay an interim dividend in July of 4½ per cent which is the equivalent of 6 per cent paid last year on the smaller capital.

The value of our portfolio has been well maintained despite irregular conditions on the London Stock market during the year.

The investment outlook for the coming year is, to say the least, obscure, and it is possible that we may experience some reduction in our income. However, subject to some major disaster affecting investments generally, we should be able to maintain the present rate of dividend of 13 per cent.

The report and accounts were adopted.

SCOTTISH WIDOWS' FUND & LIFE ASSURANCE SOCIETY

OUTSTANDING NEW BUSINESS RECORDS
LARGE MARGIN OVER BALANCE SHEET VALUES
FUNDS NOW EXCEED £163,000,000

The one hundred and forty-eighth Stated Annual Meeting of the Society was held in the North British Station Hotel, Princes Street, Edinburgh, on Tuesday, March 13, 1962, **Mr Alastair C. Blair** (Chairman of the Ordinary Court of Directors), presiding.

The Secretary read the notice convening the meeting and the minutes of the Special General Meeting held on June 20th, 1961, which were approved; and the aduitor's report was also read.

In moving the adoption of the report and accounts, which were taken as read, the Chairman said:

It has become a common-place in recent years, both for the Society and for other insurance offices, to report record amounts of new business, but the Society's records which were attained in 1961 were outstanding. New annual premium income, at £2,800,000, showed an increase of 22 per cent over the 1960 figure, and new single premiums including considerations for annuities, at £3,700,000, an increase of 34 per cent. The benefits secured by these premiums, i.e. sums assured of £63M and annuities of more than £8M were respectively 29 per cent and 35 per cent ahead of the figures for the previous year. I must, however, mention one special consideration—the amounts of new insurances and annuities under existing group and other pension schemes, which are included in these figures, were exceptionally high due to factors which are unlikely to recur, and we do not expect to obtain as much business from these sources in 1962.

HIGH QUALITY OF SERVICE

The growth in our new business in 1961 compares favourably with the experience of the life offices as a whole and indicates that the Society's popularity shows no sign of diminishing. We believe that this is due not only to the good returns obtained under the Society's contracts, but also to the high quality of the service given by our staff to agents, members and prospective members—a feature which has become increasingly important in view of present-day complexities of life assurance. It is our aim to make our service still better in the years to come and we shall continue to welcome suggestions from our connexions as to any ways in which we can help them.

Our premium rates for whole life and endowment assurances without participation in profits were materially reduced last year and are now among the lowest rates quoted for these classes of business. While our faith in the Society's with-profit contracts is as strong as ever, there are certain purposes for which a policy on fixed terms is more suitable and we look forward to writing an increasing amount of full-premium non-profit business, as well as low premium business such as Family Income which provides life assurance at the least possible cost.

INVESTMENT POLICY

The outstanding feature of the investment world in 1961 was the high level of interest rates which continued to exceed the dividend yields generally obtainable on ordinary shares, notwithstanding the slowing down in the growth of industrial profits. In these conditions, our new money has been mainly invested in long-dated and irredeemable fixed interest securities; I do not need to emphasise the suitability of such stocks for a life office whose business it is to enter into long-term commitments.

I need hardly remind you that the Society was one of the first offices to enter the equity market in a big way. In particular, a considerable proportion of our new money was invested in this category during the years from the end of the war up to 1957. These investments, made at a time when dividend yields were appreciably higher than the yields then obtainable on British Government Securities and when dividends were very well covered by earnings, have amply justified the policy which was followed. They are largely responsible for the high yield on the funds and furthermore have enabled the Society to pay substantial special bonuses out of capital profits. Now that the period of post-war rehabilitation and expansion is over, the attractions of ordinary shares as a class are less obvious, and the advantages of high yielding fixed interest stocks more readily apparent. But in the long run we still believe there is merit in equity investments, and so we are watching developments carefully and hope in time to find good opportunities for adding to our portfolio of them.

SOCIETY'S STRENGTH

In the meantime, I would only add that the margin between the market values and the balance sheet values of our stock exchange securities increased still further during the year. In fact this margin at December 31st last was higher than it had been at any year-end with the exception of 1959—and this notwithstanding the transfer to the assurance and annuity funds out of realised profits of £5M in 1955 and £5½M in 1959 to meet the cost of special bonuses. Our members can therefore face the uncertainties of the future with every confidence in the Society's strength.

Our new Head Office building is approaching completion and it will be a happy day when our Head Office staff can be brought together in one building. This in itself will make a valuable contribution to efficiency.

TRIBUTE TO STAFF

In conclusion, I should like to pay a tribute on behalf of my colleagues on the Board to the Society's staff throughout the country. They have had many problems to face and a growing volume of work to contend with. One and all both at Head Office and the branches, both in the field and inside the office, they have responded well. There is a real desire throughout the staff to serve the members and I am confident that this spirit is a major factor in maintaining the Society's reputation as a progressive office.

The Directors' report and the accounts as audited were adopted.

APPOINTMENTS

LONDON COUNTY COUNCIL

ARCHITECT'S DEPARTMENT

Applications invited from university graduates or equal class of award, including town planning students who will be taking their final examinations this year, to work in Town Planning division. Applicants should intend to make a career in planning and to qualify as Associate Members of the Town Planning Institute by evening study in their own time.

Forms and particulars from Hubert Bennett, D.S.O., M.C., Architect to the Council (EK.1) 58(a), County Hall, S.E.1, closing date 2.30 p.m.

We are looking for a Secretary between 25-30 who is interested in commerce and/or Economics to be Personal Assistant to our Norwegian Branch Manager. The position will provide scope for initiative and carries a fringe benefit study and three weeks' annual holiday. Write, with full C.V. Box H.3485, c/o Hannay Press, 13 Fleet Place, E.C.4.

THE UNIVERSITY OF MANCHESTER

Applications are invited for one or more posts at the grade of LECTURER in ECONOMIC DEVELOPMENT in the Faculty of Economic and Social Studies. The choice of the appointment will be for a period of not more than four years. Applicants should have field experience, preferably in South Pacific, South East Asia or Africa, or Economics of China. Salary scale £1,050 to £1,850 per annum; membership of F.S.S.U.; and Children's Allowance Scheme. Applications should be sent not later than March 31, 1962 to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for the post of ASSISTANT LECTURER IN GOVERNMENT. Salary scale: £800-£950 per annum, F.S.S.U. benefits and family allowances. Duties to commence October 1, 1962.

Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received by Saturday, April 7, 1962.

WORCESTER COLLEGE, OXFORD

OFFICIAL FELLOWSHIP AND LECTURESHIP IN ECONOMICS

The College proposes to elect an Official Fellow and Lecturer in Economics from October 1, 1962, if possible. Further details may be obtained from the Senior Tutor, to whom applications should be sent by April 15, 1962.

UNIVERSITY OF MANCHESTER

CENTRE FOR BUSINESS RESEARCH

Applications are invited for a post of Senior Research Officer or Research Officer to work on projects in Applied Decision Theory. Applicants should have a good background in mathematics, mathematical statistics and economics, together with some industrial experience and an interest in the practical application of mathematical and statistical models to the solution of decision problems. Salary will be in the range £1,250 to £2,000, inclusive of any provision for pension. Applications should be sent by April 9, 1962, to Professor J. Johnston, Department of Economics, University of Manchester, from whom further particulars may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for an ASSISTANT LECTURER IN SOCIAL ADMINISTRATION. Salary on a scale £800 to £950 per annum with membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent, not later than March 26, 1962, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

For further appointments and other classified advertisements see pages 1074 and 1075

THE UNIVERSITY OF MANCHESTER

As the result of a grant from the Department of Scientific and Industrial Research, the Department of Social Anthropology and Sociology plans to carry out a study of selected industries in Salford, and applications are invited for the following posts:—

(a) SENIOR RESEARCH WORKER, initial salary within the range £1,000–£1,500 per annum;

(b) Two RESEARCH ASSISTANTS, initial salary within the range £700–£950 per annum.

The appointments will be for three years commencing October 1, 1962, and two of the successful candidates will be required to carry out participant observation studies in factories, the other to work on some aspect of community life in Salford. Applicants should have training in Sociology or Social Anthropology. The appointments carry membership of the F.S.S.U. and Children's Allowance Scheme. Application forms and further particulars may be obtained from the Registrar, the University, Manchester, 13, to whom applications should be returned by not later than March 24, 1962.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for the posts of ASSISTANT LECTURER IN ECONOMICS (Two posts). Salary scales: Assistant Lecturer £700-£950 per annum; Lecturer £1,050-£1,450 per annum. F.S.S.U. benefits and family allowances. Commencing salaries will be according to the age and qualifications and experience of the successful candidates. Duties to commence October 1, 1962.

Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received by Saturday, April 7, 1962.

CITY MERCHANTS require ASSISTANT, preferably with general knowledge grain and shipping trades; also some arbitration and legal experience dealing with other parties, State age, salary required, etc.—Write, Box Z0122, Deacon's Advertising, 36, Leadenhall Street, London, E.C.3.

THE UNIVERSITY OF HULL

LECTURESHIP FELLOWSHIPS IN COMMONWEALTH STUDIES

Applications are invited for two Lectureship Fellowships for teaching and research in Commonwealth Studies, with special reference to Economics, Geography, Political Studies, Sociology or Social Anthropology. Tenure may be one to three years. Salary within the range £1,650 to £1,850 per annum with F.S.S.U. and children's allowances. Some provision for travel. Applications (six copies of one from overseas candidates) together with the names of three persons to whom reference may be made, should be sent to the undersigned not later than 1st May, 1962.

W. D. CRAIG,
Registrar.

COMPANY AFFAIRS

Both gilt-edged and equities rallied in the London Stock Market following last Thursday's cut in Bank rate. With sterling remaining strong gilt-edged have taken the limelight and 3½ per cent War Loan has been prominent. With fewer sellers in evidence equities have made small gains and The Economist *indicator gained 4½ points to 356.7. Following the good results from Charrington brewery shares made useful gains while stores were firmer. By contrast tobacco shares fell sharply following a television programme on the report of the Royal College of Physicians, but with buyers appearing at the lower prices most tobacco shares closed above the worst.*

Hoover and the Common Market

It is now almost two years since the boom in the domestic appliance market was finally pricked by the re-introduction of hire purchase restrictions. In this period Hoover's profits before tax have fallen from £11.1 million through £6.4 million in 1960 to £3.9 million in 1961 and the ordinary dividend, set at 45 per cent for both 1959 and 1960, has been cut to 25 per cent. This has represented a sharp reversal of fortune for the company and its shareholders, but in his review with the full report the chairman, Mr H. W. Hoover, says nothing to suggest that better times are near at hand.

Once again it is a story of increasing pressure on profit margins as a result of severe competition in an industry now working well below capacity. Nevertheless Hoover says that the "fight to keep in the overseas markets last year even though its sales fell in the last quarter of the year. At home the higher sales appear to spring from the introduction of new models, notably the new Keymatic washing machine, but Mr Hoover says that the "fight to keep in the forefront technologically and in share of the market . . . has required small profit margins and heavy advertising."

In the export market too profit margins are falling and while Hoover held on to its proportion of about 75 per cent of all exports of washing machines and vacuum cleaners from this country it is finding the going increasingly hard. Mr Hoover says that as far as Europe is concerned "nearly every large company in the world is taking steps, as we have, to capture a share of the growth of this market." Hoover's sales in Europe should be helped this year by the introduction of the Keymatic. For the long term a great deal of importance can be attached to the decision to build a factory in France near Dijon. Shareholders may wonder what implication this may have for the factories in this country, particularly as the review suggests that Hoover Limited may be relinquishing its direct interests in the common market. In 1960 it was announced that a Swiss company, Hoover S.A., had been set up jointly with the American parent company to co-ordinate the group's activities in the common market and now the directors are studying the possibilities of selling British Hoover's sales companies in the common market countries to Hoover S.A. for a "suitable consideration." In this way the American parent would get a direct interest of 50 per cent in these common market outlets. These moves may explain why there have been recurrent rumours that, like Ford, Hoover of America would make a bid for the shares it does not already hold in Hoover Limited. Minority holders of these shares may have to face the prospect of losing 50 per cent of a direct interest in the possible growth of profits from the common market countries.

In view of the tone of the review and the possible implications of the plans for common market integration it was not surprising that the "A" shares fell back sharply by 3s. 3d. to 35s. at the opening of the new account. But helped by bear covering they have recovered to 38s. 9d. to yield 3¼ per cent.

Charrington

Recent buying of Charrington shares has largely been prompted by anticipation of the terms of the merger with United Breweries. Buyers will be well content meanwhile with the 1961 results of this London based brewery group. Unlike many of its competitors its financial year runs to December and its results therefore reflect a longer trading period after the July surcharge on duties than those of breweries which drew up their accounts at the end of September. Even so Charrington's profits before tax rose by 31 per cent, from £2,324,000 to £3,051,000, and its net profits went up from £1,149,000 to £1,463,000. The ordinary dividend set at 20 per cent for the past two years has been raised to 25 per cent and is covered 2.3 times by earnings. This is not the end of the good tidings: a revaluation of the group's freehold and leasehold properties, carried in the balance sheet at £21.2 million, has thrown up a surplus of £8½ million and this raises the net asset value per ordinary share to about 120s.

These results suggest that the rise in the price of Charrington shares, now standing at a new peak of 146s. 6d. to yield 3½ per cent, has not been overdone. With United Breweries 5s. shares standing at 15s. 3d. Charrington shares are valued at about 9½ times United Breweries' shares. But Charrington's earnings would appear to be about 11 times those of United Breweries and its assets value about 12 times as much. On these considerations, it would appear that the share prices are still out of line; but they are far from being the only factors in assessing the terms of any merger. In this case, however, since the initiative for the merger seems likely to have come from United Breweries, Charrington perhaps stands to gain the most.

Arusha Industries

Market hopes that the shares of Arusha Industries offered good prospects of recovery have received a sharp setback. Following the ending of board room wrangles and the injection of both funds and new blood by Mr Harold Drayton's Securities Agency the 4s. shares had risen since December from about 9s. to 14s. 6d. But they fell sharply to 11s. following the none too encouraging statement from the new chairman, Mr M. E. Rich, who is also a director of Securities Agency. He tells shareholders that the improvement in trading profits from £841,000 to £1,060,000 in the year to September 30th last is not likely to be maintained and that profits for the current year are likely to show a "fairly sharp fall." The bulk of the profits of this holding company, which is to change its name to the more appropriate one of General and Engineering Industries, come from Sheffield Steel Products, Barrow Haematite Steel and R. H. Windsor. Since these companies are closely connected with the steel and engineering industries, Mr Rich expects the cover for a maintained 20 per cent dividend to be considerably reduced from 3¼ times; the dividend will be payable on the capital as increased by £375,000 in ordinary shares issued to Securities Agency.

These shares were issued at 8s. a share to bring in £750,000 and a similar sum was raised by the issue of a 6½ per cent loan stock to Securities Agency; the loan stock is repayable by quarterly instalments of £58,000 beginning in June, 1963. But the new funds have not completely solved Arusha's financial problems, for while their injection initially reduced the group's overdrafts from £1,765,000 to £315,000, overdrafts are now back to £546,000. Taking into account the probable capital expenditure in the next year or so and an early start to the repayment of the £750,000 loan stock, Mr Rich makes it clear that additional permanent capital will be required once the present reorganisation of the group is completed. In this week's rally the shares have recovered to 12s. 1½d. and yield 6.6 per cent.

Calico Printers

Shareholders in Calico Printers' Association may be relieved to find that the interim dividend has been maintained at 7½ per cent, but apart from this there is very little to comfort them in the interim statement for the six months to December 31, 1961. The interim dividend is attributable to royalty income, which was £102,000 higher at £1,294,000 in the first half of 1961-62 than in the same period in 1960-61. Overseas sales of the group's patented polyester fibres manufactured under licence were higher and royalties from them accounted for over 70 per cent of CPA's revenue in the last half of 1961. By contrast CPA's trading activities fared badly; the recession in the textile trade resulted in an even smaller demand for commission, printing and finishing services than in 1960-61, when demand fell by 8 per cent, and output at the printing and finishing works fell by a fifth in the six months to December 31, 1961. CPA's subsidiaries, with the exception of the Australian one, have done well, and business usually picks up in the last three or four months of the financial year. Even so the directors say that the absence of any revival of demand "makes it improbable that the increase in royalty income and profits from subsidiaries will be sufficient to maintain total profits at last year's figure.

This prospect puts a question mark over the size of the final dividend, for the total of 21¼ per cent in 1960-61 was covered only 1½ times by earnings from trading. Obviously the best that shareholders can hope for is that the final will be unchanged. For the longer term they cannot be happy about the trend in profits earned in CPA's traditional business, as CPA's royalty income will tail off after 1966 and run out altogether in 1969. And not surprisingly after the interim results were published the 5s. ordinary shares lost 1s. 7½d. to 10s. 10½d., to yield 9¾ per cent on the assumption of an unchanged dividend.

Newton Chambers

Since its colliery interests were taken over by the National Coal Board fifteen years ago, Newton Chambers has diversified its activities and ploughed back a large proportion of its profits. Today the range of the group's products covers the manufacture of plant for the steel and gas industries, excavators, germicides and insecticides. But in 1961 the steady growth of its profits met a sharp reverse. The preliminary statement reveals that increased competition and higher costs cut into its margins and its principal subsidiary—the excavator manufacturers, Ransomes and Rapier—actually suffered a loss. Although record sales were achieved, the trading profits of the group fell by just over 10 per cent from £1,551,000 to £1,394,000. After a lower tax charge but a bigger provision for depreciation, net profits fell by over 21 per cent from £618,000 to £483,000, and, most disturbing, the final dividend has been cut from 12 to 10 per cent, reducing the total payment from 20 to 18 per cent.

This reduction suggests that the directors are worried about the immediate future, for a 20 per cent payment would have been covered 1.3 times by the latest earnings compared with 1.7 times in 1960. It may have been prompted at least in part by financial difficulties. At the end of 1960 Newton Chambers's net overdrafts amounted to £955,000 and its capital commitments to £636,000 but last year's cash flow was less than £600,000 and presumably Newton Chambers has had to borrow more from the banks. The stock market was surprised by the results and the 5s. ordinary shares immediately lost 4s. to 16s., the low point for the year. They have since recovered to 17s. 6d. to yield 5.1 per cent on an 18 per cent dividend, covered 1½ times.

Woolcombers

The lower level of activity in woolcombing, the severe pressure on the woolcombers' margins and the halving of Isaac Holden's dividend prepared the stock market for disappointing results from Woolcombers for 1961. In the event Woolcombers' profits fell sharply from £807,000 to £580,000; but a rise in investment income and a lower tax charge cushioned the fall in net profits. They fell from £443,000 to £322,000 reducing the cover on the maintained dividend of 10 per cent from 1¾ to 1¼ times. The £1 shares have held their price at 29s. and yield almost 7 per cent.

The chairman of Isaac Holden, Mr J. R. Stanley Raper, does nothing to raise shareholders' spirits about future prospects when in his statement he says that the first two months of the current year show no improvement although the amount of work is now more plentiful. The spectre which haunts the woolcombing industry is the growth of local competition in export markets, which threatens to leave the British industry with excess capacity on its hands.

Canadian Pacific

Earnings per share of Canadian Pacific Railways rose in 1961 from $1.81 to $2.04, the rise in profits being almost entirely attributable to higher net railway earnings. Despite the wage increases granted last May, railway operating expenses did not rise as quickly as receipts; new operating techniques have clearly begun to pay off and some uneconomic branch lines have been closed and the number of unremunerative passenger services reduced. The ordinary dividend has been maintained at $1.50 per $25 stock, or 6 per cent.

Among the other interests of the group, the loss on steamships has more than doubled, reflecting higher wages, port charges and depreciation, but the company has denied reports that it intends to sell any of its "Empress" liners. Though no specific figures are quoted, the airlines too must have incurred further heavy losses.

Income Account	1960 $000	1961 $000
Railway revenue	457,105	465,490
Railway expenses	423,431	427,839
Net railway earnings	33,674	37,651
Fixed charges	17,106	16,907
Net income	*28,971*	*32,461*
Ordinary dividends	21,499	21,499
Retained profits	4,376	7,759
Other Income		
Steamship earnings	Dr. 807	Dr. 1,683
Hotels, communications and properties, etc.	4,413	3,743
Dividends	9,583	11,133
Rents and royalties	3,835	3,599
Miscellaneous interest	1,449	440

The only really bright spot is the rise in dividend income from Consolidated Mining and Smelting, in which "Canpac" has a controlling interest. The $25 shares at $44 London yield 5¼ per cent.

Amalgamated Roadstone

Last November, the directors of Amalgamated Roadstone reported a "substantial improvement in both turnover and profits" and said that they were enough in themselves to merit a higher interim dividend. But in deference to the Chancellor's request the interim was left unchanged at 5 per cent. The preliminary figures for 1961 suggest that the second half of the year was as good as the first, for though the total dividend is unchanged at 12½ per cent, gross profits have risen by 19½ per cent, from £788,000 to £942,000. Net profits advanced by 22½ per cent from £465,000 to £568,000, to cover the ordinary dividend nearly 2¼ times.

Some reservations about the results have however to be made. They include earnings from two acquisitions made in April and August, but even so they are not quite as good as the directors had expected a year earlier, when they said that the rise in profits in 1961 should cap the rise of 23 per cent in gross profits in 1960. Even so the shares gained 1s. 1½d. after the preliminary results were published and now stand at 37s. xd to yield 3.4 per cent.

THE MONEY MARKET

At the Treasury bill tender that followed the ½ per cent cut in Bank rate, the average rate of discount fell the full ½ per cent—by 10s. 5.37d. to £5 0s. 5.89d. per cent. The syndicate of discount houses raised its main bid by 2s. 8d. (a cut of 10s. 8d. in the annual rate) to £98 14s. 11d. for bills dated Tuesday to Saturday and received 53 per cent of its application. Its application for 92-day bills, avoiding the Whitsun holiday, was met in full and raised the market's average allotment to 57 per cent compared with the previous week's 37 per cent. Total applications for an unchanged offer of £230 million bills rose by £14 million to £396 million.

Credit has been fairly tight throughout the week since the Bank rate change and the authorities stepped-in to relieve the pressure by the special purchase of bills on each day except last Friday. Moderate purchases on Tuesday, however, were still not sufficient to prevent two or three houses borrowing a very small amount from the Bank of England at Bank rate. The rate for overnight money has now settled at about 4⅛ per cent and the market is paying, on average, slightly under 4¼ per cent for its funds.

APPOINTMENTS

THE ELECTRICITY COUNCIL

Administrative Officer

Secretary's Department

Applications are invited for the superannuable post of ADMINISTRATIVE OFFICER in the Secretary's Department, Headquarters, London, S.W.1. The successful applicant, who will be responsible for organising the work of one Section of the Administration Branch, will supervise staff engaged in the drafting of correspondence, papers and minutes of meetings, and will be required to attend meetings. The work involves co-operation with other Departments of the Electricity Council on the presentation of policy issues with which the Council is concerned, for example, financial, commercial, technical and industrial relations matters. The post demands considerable administrative ability and experience.

Knowledge of the electricity supply industry and its problems within one or more of the fields mentioned, experience of work at a national headquarters involving co-operation with Government Departments and representative national bodies, possession of a degree or equivalent educational qualifications, and an appropriate professional qualification, would all be considered advantages.

● *Salary within range £2,025-£2,440 p.a. inclusive. Applications, stating age, present position, salary, qualifications and experience, to the Establishments Officer, The Electricity Council, Winsley Street, W.1, by 31st March, 1962. Quote ref. ECO 152.*

FORD OF BRITAIN

ACCOUNTANTS AND INTERNAL AUDITORS

Ford of Britain offers an attractive career to qualified accountants in a modern integrated accounting system which is directed towards the supply of management information as well as statutory requirements. The Company is of such a scale that all aspects of cost and financial accounting are covered and extensive machine and computer installations are used. In this system the internal audit function is responsible for the examination of management controls rather than the verification of detailed figures.

Present vacancies are at three different levels and are suitable for men up to the age of 35. Prospects are exceptional as salary and promotion depend entirely on ability and the Company's expansion plans will provide many opportunities in the next few years.

Applications, giving age and brief details of experience and qualifications, should be addressed (with envelope marked "Ref. A1A") to

MR. H. G. PEARMAN,
TRAINING AND RECRUITMENT OFFICE,
FORD MOTOR COMPANY, LIMITED,
DAGENHAM, ESSEX.

BOURNEMOUTH EDUCATION COMMITTEE

BOURNEMOUTH MUNICIPAL COLLEGE OF TECHNOLOGY AND COMMERCE
Department of Commerce and Languages.

Applications are invited for the following appointments, duties to commence on 1st September, 1962:—

SENIOR LECTURER for advanced work including Higher and Ordinary National Certificates and Diplomas in Business Studies. Experience in teaching Law and Economics is desirable.

LECTURER for advanced work, including Higher and Ordinary National Certificates and Diplomas in Business Studies. Experience in teaching Business Administration and Government is required.

Technical Scale: 1961, viz.:—Senior Lecturer: £1,850 to £2,000 per annum. Lecturer: £1,600 to £1,800 per annum.

Forms of application and further particulars may be obtained from the Principal, Bournemouth Municipal College of Technology and Commerce, Christchurch Road, Bournemouth, to whom completed applications should be returned by 31st March, 1962.

Scottish Woollen Technical College, Galashiels.

SENIOR LECTURER in MANAGEMENT STUDIES

Applications are invited for the post of Senior Lecturer in Management Studies. This is a new appointment and the person appointed will be responsible for the development of teaching in management studies in the College Associateship and Diploma courses.

The successful applicant will also be expected to organise and develop courses and conferences for managements in the Scottish Woollen Industry with which the College is closely associated.

Applicants should have suitable academic qualifications and experience in industrial fields. Previous textile experience not required. An academic background of economics or engineering would be most attractive.

Salary: £1,845 x £80—£2,175.

Applications to be addressed to the Principal.

For other appointments see page 1067

ROYAL COLLEGE OF ADVANCED TECHNOLOGY

SALFORD
DEPARTMENT OF MATHEMATICS

Applications are invited for the following posts:—

PRINCIPAL LECTURER IN MATHEMATICS
Salary range: £2,000 rising to £2,150 per annum.

SENIOR LECTURER IN MATHEMATICS
Salary range: £1,800 rising to £2,000 per annum.

LECTURER IN MATHEMATICS
Salary range: £1,600 rising to £1,800 per annum.

Applicants should possess a good honours degree, together with good research and/or industrial experience. Good research facilities are now available and the Department is to be equipped with an English Electric KDF.9 digital computer in mid-1963. Interest in mathematical aspects of electricity, aerodynamics, computing, statistics in operational research would be an added qualification.

For one of these posts a detailed knowledge of programming languages is required.

Further particulars and forms of application may be obtained from the Registrar, Royal College of Advanced Technology, Salford 5, Lancs, quoting reference MA/D, to whom completed applications should be returned by 2nd April, 1962.

ECONOMICS graduate (about 27 years of age) required by public company in the Midlands with extensive manufacturing, wholesale and retail interests for market research and inventory control duties. Commencing salary £1,000 p.a.—Box 1602.

LOUGHBOROUGH COLLEGE OF TECHNOLOGY
LOUGHBOROUGH, LEICESTERSHIRE

RESEARCH IN MARKETING AND ECONOMIC PLANNING

Research Fellow, Scholar or Assistant required to work with existing staff on an economic survey and methods of market research in Department of Industrial Engineering and Management. This will be followed by wider studies to examine methods of business forecasting.

Remuneration within range £350-£1,400 depending on qualifications, age and experience.

Application forms and particulars from Academic Registrar, quoting Ref. S.RD.

ASSISTANT - FINANCE (BUDGETS DIVISION)

BRITISH TRANSPORT COMMISSION invite applications for a post in the Economics Section, Finance Department, at their Headquarters. Candidates should have several years' experience in the provision of economic information to management. Familiarity with statistical methods and a good knowledge of sources of economic statistics required. Fluent knowledge of French or German an advantage, but the lack of this should not deter applicants.

Starting salary, according to qualifications and experience, not less than £1,300 a year.

Superannuation scheme; certain travel facilities; medical examination.

Applications, stating age and qualifications and experience, to the Director of Establishment, British Transport Commission, (Dept. D) 222, Marylebone Road, London N.W.1, within 14 days.

SOUTH AMERICA

A CONTINENT OF OPPORTUNITIES

If you are a qualified accountant, there is probably an opening for you in a firm of international public accountants who are increasing their permanent staff in Argentina, Brazil, Chile, Peru and Uruguay. Vacancies exist for men at all levels of experience from those newly qualified to those capable of undertaking managerial posts, including men with experience in the field of management consultancy. Contracts are for an initial period of three years, renewable by agreement. The terms include an allowance to cover the expenses of moving to South America, salaries (payable partly in hard currency) which allow a comfortable standard of living together with a margin for savings, return passages for staff members and their dependants, and three months' paid leave at the end of each contract in addition to local leave. Salaries are subject to merit increases and are automatically reviewed periodically in the light of changes in the cost of living. Annual bonuses are payable and other benefits, which differ somewhat from country to country, are provided by advanced social legislation. A partner of the firm will shortly be in London to interview applicants.

If this advertisement interests you, please send particulars of your experience and qualifications, together with a passport type photograph, to Box 1597.

DUNLOP

ACCOUNTANTS

There are vacancies at various establishments in the U.K. for qualified accountants, and for graduates who are interested in accounting as a career.

The posts provide an excellent introduction to industrial and management accounting, and the opportunity to acquire a wide knowledge of financial systems.

After two to three years, successful applicants will be eligible for financial executive appointments at home or abroad. Initial salaries will be dependent on age and experience.

Apply in strict confidence to:

Finance Personnel Manager,
DUNLOP RUBBER COMPANY LIMITED,
Dunlop House, 25 Ryder Street, London, S.W.1.

CITY OF BIRMINGHAM

ASSISTANT TO STATISTICIAN

Applications are invited for the Appointment of an Assistant (male or female) in the Central Statistical Office of the Town Clerk's Department.

Candidates should have a university degree in science, mathematics or economics, formal course or research involving the analysis and interpretation of mass data will be an advantage. Salary A.P.T. III £695-£1,040.

Applications, giving age, where educated, details of degrees, diplomas, etc., particulars of any previous occupations, including details of statistical training and experience, with names of three referees, to the Town Clerk, Room No. 7, Council House, Birmingham, 1, not later than 9th April, 1962.

T. H. PARKINSON,
Town Clerk.

Council House,
Birmingham, 1.
March, 1962.

ORGANISATION & METHODS

CO-OPERATIVE INSURANCE SOCIETY LIMITED

requires Assistants for its Organisation and Methods Section in the Head Office in Manchester. Applicants (ages 25-35) should have a degree or professional qualification. Experience in O.&M. would be an advantage but is not essential, since training will be given where necessary. At an early stage members of the section are expected to work on their own initiative, with a minimum of supervision.

Starting salaries range up to £1,350 per annum, including a payment of £150 per annum for certain professional qualifications. For those who show a particular aptitude for the work there are good prospects of promotion to the next higher scale, which rises to £1,500 per annum, including the qualification payment.

Applications, stating age, qualifications and present salary, and giving details of experience, should be sent to: The Assistant Secretary, Co-operative Insurance Society Limited, 109, Corporation Street, Manchester, 4.

Mark the envelope "O.&M."

MARKET RESEARCH ASSISTANT

required for Package Foods Division to work on both existing and new product development with responsibility later for commissioning research with outside agencies.

Applications from men or women age 24-30, who should have at least two years' Market Research experience, are invited. Salary and substantial Profit Sharing Scheme give good remuneration. Other benefits include Pension and Life Assurance Schemes.

Applications to
Group Personnel Manager,
Brown & Polson Ltd.,
125, Strand, London, W.C.2.

MEDICAL RESEARCH COUNCIL

SOCIAL MEDICINE RESEARCH UNIT.—Applications are invited for the following: (1) SENIOR STATISTICIAN, with experience in medical, biological or social statistics; medical qualification an asset. Salary starting in range £1,555-£2,355. (2) STATISTICIAN, with good degree. Salary starting in range £960-£1,665. Five Fifth Engagements in a wide variety of social medical investigations. Some teaching. FSSU. Family allowances.—Please send detailed application to The Director, SMRU, London Hospital Research Laboratories, Ashfield Street, London, E.1.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE hopes to appoint an Assistant Lecturer in Law from October, 1962. Salary scale £800 x £50—£950 a year, plus £100 a year London Allowance; with superannuation benefits and family allowances. In exceptional circumstances a short-term appointment will be given for one year. Applications, with the names of three referees, should be received not later than 30th April, 1962, by the Secretary, The London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2, from whom further particulars may be obtained.

The Institute of Taxation

THESIS COMPETITION

The Council of the Institute announces a thesis competition, the conditions of which are set out hereunder:

(i) The competition will be open to all, with the exception of members of the Council, the Board of Examiners of the Institute and Institute employees.

(ii) The subject for the thesis will be "New Alternative Methods of Taxation."

(iii) Theses will be judged by content rather than length, and in any event no thesis submitted should contain more than 25,000 words.

(iv) There will be one prize only, viz., one hundred guineas.

(v) The copyright of the winning thesis shall vest in the Institute, and the Institute shall have the right to publish extracts from other theses upon payment of fees to be agreed between the Council of the Institute and the competitors concerned.

(vi) The competition will be judged by the Council of the Institute, whose decision will be final.

(vii) The closing date for the submission of theses will be October 31, 1962.

(viii) Submission of a thesis will be construed as an acceptance by the competitor of the conditions set out above.

Typescripts or manuscripts should be sent to the Secretary of the Institute at Clifford's Inn, London, E.C.4. All competitors will be advised of the judges' decision, by post, on a date to be fixed by the Council.

dynamic pensions

protect your employees in retirement: dynamic pensions— a new approach

Pensions that keep pace with Britain's economic growth. A plan that provides retired employees with a prudent measure of protection against the rising cost of living. This is what all imaginative employers seek.

The Dynamic Pension Plan—a new, unique formula—is intended for firms or trade organizations in any field of industry. It is offered by Hobbs Savill and Bradford (Pensions) Limited and is underwritten by the Provident Mutual Life Assurance Association.

The Dynamic Pension Plan
ensures income growth for the pensioner
stabilizes pension costs for the employer
contributes to good management-labour relations

A brochure giving full details of the plan is available now. Write to any of the addresses below.

The Fuji Bank knows this diving girl. Her precious load makes up one of Japan's prime exports. Wherever she brings up the pearl oysters from the tranquil seas around Japan, a Fuji branch is near by.

Business transactions flow smoothly through the Fuji Bank's vast facilities, which, since 1880, have been promoting world-wide trade.

If you are importing cultured pearls, let the bank that knows the source handle your exchange finances.

The name is Fuji.

DO YOU KNOW

that this crane hook could land you in real trouble?

VULCAN KNOW The most simple things can cause a disaster to all kinds of industrial machinery. But simple or complex, every potential danger spot needs an expert eye to find and correct it. The expert who knows where to look, and what to look for, is the Vulcan Engineer Surveyor.

Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection and protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!

We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

The cheapest distance between two points

The moving and storage of materials with efficient and time-saving handling equipment can decimate overhead costs and increase productivity considerably. Lansing Bagnall, the largest and most experienced manufacturer of materials-handling machinery in Europe, design and develop methods and equipment that cut the cost of handling and the time involved. Each machine is specially designed and built for individual companies and their specific handling problems; as no two handling problems are alike, it takes the knowledge and craftsmanship of Lansing Bagnall technicians to achieve the right solution. One Lansing Bagnall fork lift truck, for example, operated by one man, can cut the time of any handling operation by 25%, and increase the storage capacity of existing buildings by 30%.

Lansing Bagnall offer the most efficient and comprehensive after-sales service in the industry –available for the whole life of any truck. Recognise your need for improved handling–and Lansing Bagnall will show you how it can be done, promoting greater efficiency and economy for you. Write, or if urgent telephone, for advice on any problem of handling and storage. Lansing Bagnall will recommend, without prejudice or commitment, the most suitable solution.

INTERNATIONAL

WEST CLIMBING DOWN

The last hours of empire:

Frenchmen have greeted with caution the end of the seven-year struggle in Algeria. One reason is that the activities of the Secret Army threaten to rob the word "ceasefire" of meaning.

But, beyond that, Frenchmen are still the people best able to help the Algerians (p. 1089).

Consequences of **the peace treaty**—p. 1119.

How it was negotiated—p. 1118.

The people best able to help **Kenya's** politicians settle their quarrels are still the British (p. 1096).

Zanzibar, too (p. 1123).

Members of the UN have their own ideas of helping Africans in **Southern Rhodesia** (p. 1124).

Mr Hammarskjold's fatal crash in Northern Rhodesia was definitely an accident (p. 1146).

West Climbing Up

Trade: The high tariffs on both sides of the Atlantic are a relic of the economic isolationism of the 1930s. As President Kennedy's Administration seems to recognise, they are becoming out of date (p. 1093).

US Business: President Kennedy is making some progress in his wooing of the American business community (p. 1105).

Only if **businessmen** play their part will the economy expand as it is supposed to do this year (p. 1108).

The new manpower retraining act is intended to enable American **workers** to adapt their skills to a changing economy (p. 1109).

Gold: The central bankers in the Basle club are hatching a new plan for gold. If it is bold and flexible it could be a great step forward; if narrow and constrictive it could do positive harm (p. 1138).

West in the East

Japan: With an economy nearly as fully developed and technically advanced as some in the West, Japan retains some kinds of industrial organisation that would look odd elsewhere (p. 1140).

Formosa: Circumstances are tempting for large-scale commando and paratroop raids into communist China (p. 1097).

Indo-China: Surprisingly little notice is being taken in the United States of the extent to which it is becoming involved in the hostilities in Vietnam (p. 1106).

Okinawa is moving towards self-government (p. 1109).

Israel: the West in the Middle East is playing with fire (p. 1101).

West in the Balance

In Geneva, confusion of words is one bar to progress towards a treaty on **disarmament** (p. 1120).

Things are more cheerful in space (p. 1106).

In Nato, it is time to put into practice the idea of sharing the burden of expenditure on **defence** (p. 1097).

HOME

Signs and Portents

Wishful forecasts of sweeping Liberal gains in the next general election—or even, more modestly, in some forthcoming by-elections—cannot be supported by the electoral arithmetic; but the probable, and powerful, displacement of some loyalties may have desirable side effects on Opposition policies (p. 1090)—and a salutary fillip to more forward-looking Government ones (p. 1096).

A considered and embracing **capital gains** tax is one thing: but the arbitrary animal Mr Lloyd seems to have in mind can have neither of these qualities (p. 1137).

Last week's **economic debate** uncovered a vein of liberalism in the shadow chancellor and a rich, but eroding, deposit of puritanism in the President of the Board of Trade: if the latter's nods and winks mean anything, **the budget** will be neutral (p. 1098).

Nuclear disarmers have all the best tunes—at least in Scotland, where they figure largely in a folksong revival (p. 1113).

Errors and Omissions

Sir David Eccles has postponed—perhaps abandoned—his bill to reform the **teachers'** salary negotiation committee: some teachers think this is a triumph for their side, but it could be the beginning of bigger troubles in the profession (p. 1094).

The **probation service** is understaffed, undertrained and underpaid: theirs is a good case for breach of the pay pause (p. 1102).

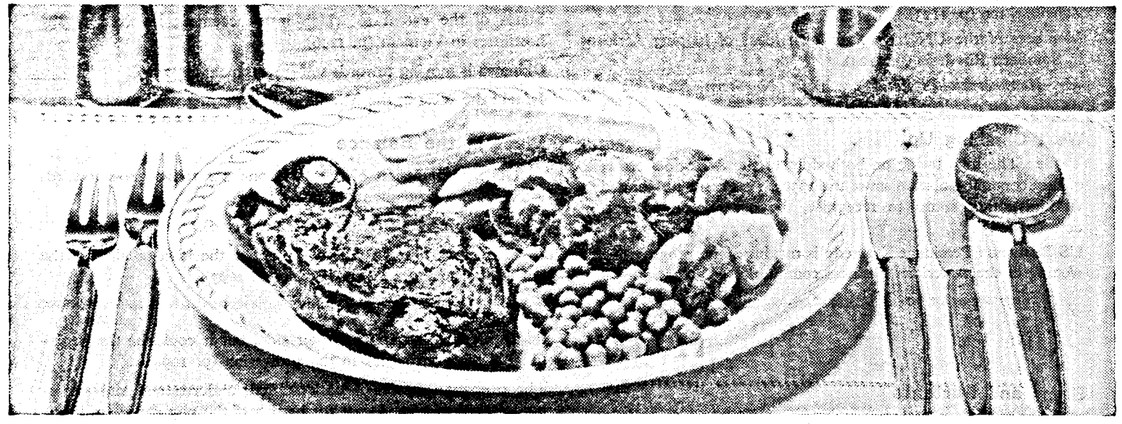
The imposition of quota restrictions on **butter imports** may please British farmers, but will irritate European dairymen as well as housewives at home (p. 1098).

At £600,000, the prime ministerial inconveniences of a refurbished No 10 Downing Street begin to look expensive (p. 1102).

Mend and Make-do

Mr Butler's appointment to the **Central Africa Office** is less hilarious than some Labour members think: his chances of bringing some order out of the federal chaos are better than either Mr Sandys's or Mr Maudling's; and he could do himself some political good, too (p. 1096).

Licking their wounds after the great takeover battle **ICI and Courtaulds** are using the right conciliatory words towards each other (p. 1142).



The **civil estimates** in their new form are half as long and twice as clear (p. 1150).

Two enterprising landlubbers with broadcasting ambitions hope to evade their frustrations by taking to the boats (p. 1117).

THE ANSWER IS CUT AND DRIED!

With Vickers resources behind you, A.F.D. food production is now an economic proposition.

To compete successfully in the race to market Accelerated Freeze Dried food your company needs time, money and specialised equipment. Vickers will lighten the load for you by holding trials to determine whether your products are suited to Accelerated Freeze Drying. These tests embrace everything from the initial economics of A.F.D. to the final packaging of the food, and involve no expenditure by your company.

If, like many other leading food processors, you find the results impressive, Vickers can provide low-cost pilot plant for you to continue your own product tests until you are familiar with the technique and ready to install a full production line.

LARGEST A.F.D. COMPANY Vickers is the only British company able to offer you a complete range of Accelerated Freeze Drying equipment—in fact the choice of pilot, batch or continuous A.F.D. system—as well as supporting food research and laboratory services.

IMMENSE POSSIBILITIES Each facet of Accelerated Freeze Drying has been carefully studied and considered by economists, engineers, physicists and bio-chemists on Vickers staff. Their work and knowledge provide a solid base on which to build your own A.F.D. experience.

Accelerated Freeze Dried foods will soon be no strangers to the larder shelf; in another few years they will be as much a part of everyday eating as the knife and fork. Knowing this, can your company really afford to ignore the potentialities of A.F.D? If not, then invite Vickers engineers to examine the application of A.F.D. to your own business.

How to live dangerously without taking risks

If you live in an inflammable house and have breakable limbs and own the good things in life that burglars appreciate, you're living dangerously. Especially if you have a wife and family to support and you're mortal. But that's no reason why you should lie awake at night worrying. There's a group of friendly, helpful people called The Northern who specialise in taking risks – other people's risks. You can get them to take yours.

VOLUME CCII · NUMBER 6187

End of a Chapter

ONCE, it could have been the end of a volume. Who would have thought, even a year ago, that the official ending of the Algerian war would be greeted so cautiously? The struggle lasted for seven years and five months. According to the official French figures, which are undoubtedly conservative, 150,000 Algerian and 17,000 French soldiers were killed. Tens of thousands of non-combatants died. A sixth of the Moslem population was displaced. Algeria, not a rich country, suffered enormous material damage. France, not an undemocratic country, saw one regime founder and another come perilously close to the brink of collapse under the strain of war.

This seven-year struggle has been the cause of much misunderstanding and bitterness between France and the rest of the world; it was the root of France's actions in the twin disasters of Suez and Bizerta. In the age of the cold war, it diverted French military efforts to what was, in spite of right-wing polemic, scarcely even a subordinate theatre of the east-west contest. In an age of rapid economic growth, and correspondingly voracious social demands, France devoted perhaps as much as £3½ billion to this war effort. In the age of decolonisation, Algeria was the most conspicuous example of a settler minority clinging to its position by a policy of suppression—an example that prevented the otherwise liberal policies of France and Britain in Africa from having their full effect. It was high time that such a multicellular nuisance was abated. Yet now that it has been, the cheers are muted. Why?

The short answer is that the activities of the Secret Army threaten to rob the word "ceasefire" of meaning. General Salan and his followers look like doing all they can to sabotage the settlement. The first day of "peace" in Algeria on Monday was marked by a sprinkling of the familiar atrocities, and by the long-planned general strike. The second and third days saw a marked increase in the atrocity level. The aim is to provoke the Moslems into reprisals. It is too soon to say how far these, or other, tactics will succeed; ominously, Tuesday also saw demonstrations by up-country Moslems that ended in bloodshed. On Wednesday, however, the gendarmerie justified their reputation for loyalty by opening fire on a Secret Army "commando."

Probably the French army is not as loyal, especially in the middle commissioned ranks, as General de Gaulle chose to say in his broadcast to the nation on Sunday. But unless the French troops allow the Secret Army to embark unimpeded on a major programme of provocation, it is hard to see how the procession of events now set in motion by the Evian agreement can be stopped. The provisional executive, with its *force locale*, will be set up. The Front de Libération Nationale will consolidate its grip on the Moslem population, making of it a unified weapon to resist the Secret Army. Even the European population, as it slowly realises that the end of *l'Algérie Française* has not meant the end of the world, may abandon its preoccupation with violence and make a reasonable choice between exile and reconciliation (and there can be small doubt which is the more sensible).

It will be touch and go; it is common sense for both the French and the Algerians to refrain from premature celebrations. But it is pertinent to remark that common sense is General de Gaulle's acknowledged angel. Aided by him, it has safely guided the French people from the intoxication of May 13th four years ago to the peace treaty of March 18th. He is right to hope that it will

now rescue even the settlers and "errant leaders" of the army from themselves and their delusions.

It is, however, fair to remark that common sense might have had a less uphill task to accomplish if General de Gaulle himself had been more swiftly responsive to its biddings last summer. No one but he could possibly have led France to a liberal settlement; but one suspects that he might have led it there sooner. The Secret Army, which is now in a position to threaten the consolidation of the Evian accord, has been given time to grow strong. After the crushing of the generals' putsch in April last year the French president was probably in a position to impose what settlement he liked. The Secret Army was barely hatched, and much weakened by the failure of the rebellion; the bulk of the army had just demonstrated its loyalty in the most conclusive fashion; metropolitan France was, as ever, at his command.

Perhaps General de Gaulle could have struck then the bargain with the Algerians that has now been reached. But his insistence on the retention of French sovereignty in the Sahara, or at best on the creation of a second Mauretania there, wrecked the first Evian talks. Maybe M. Louis Joxe deserves even more credit for persuading his aloof sovereign to abandon his Saharan fantasy (proceeding from his concern for the French nuclear deterrent and the oil wells of Hassi Messaoud) than he does for his skilful conduct of the peace talks.

ONCE he had seen where necessity was leading, General de Gaulle followed with the resolution that is uniquely his. More than that, he has helped both sides in the war to realise their need for one another. He was too modest, in his broadcast last Sunday, in attributing solely to "the sacrifice of the fallen on both sides" the possibility that the two peoples will understand that they "are made, not to fight each other, but to march in brotherhood together upon the highway of civilisation." His own actions have much nurtured this understanding. Inadequate though the provisions of the 1958 Constantine plan for social and economic development were in some respects, they did mark a new and generous departure from the old Algerian pattern of colonial exploitation. Now the general has promised to carry forward his work in this field, and so has secured the "guarantee of guarantees" for his peace treaty, since it will be in the Algerians' interests to abide by it. (For details, see pp. 1118-9.) General de Gaulle is not alone, to be sure, in deserving praise for this. M. Joxe and his colleagues, again, have served their country well; and the Algerian leaders have shown a wise moderation and spirit of conciliation. This is one happy augury at least for Algeria's future.

The next chapter of the Algerian story is still unpredictable. If a large part of the settler population stays unreconciled, and supports the Secret Army in a steady campaign of provocation, the self-discipline of the Moslems may well crack. The agreement signed on Sunday, not to mention the longer-term problem of fitting an independent Algeria into its new relationship with France, would then be in serious hazard. Above all, General de Gaulle—whose great personal achievement this is—will have to see that the French army and administration do their duty in enforcing France's part of the bargain. It will be harder to make sure that the settlers do theirs; the general may have to lean heavily on the control of the FLN over its followers—a control now openly exercised, with the blessing of the French authorities, in Algiers.

But the sober reaction in France to the ceasefire may spring from another cause besides anxiety about the Secret Army and weariness with the long negotiations. Perhaps Frenchmen realise that they have not done with Algeria yet, and that it would be ignoble as well as unwise to shrug off their remaining responsibilities to the wards of 132 years of French tutelage. There is a long, rough road ahead for the new state; no one is in as good a position to give it a helping hand as France. France will not be a loser by the bargain; its reward will be a half-share in the profits of Saharan oil. But the profit will not just be material. It has been one of the most encouraging aspects of General de Gaulle's pronouncements on his country's greatness that he has proclaimed the obligation of France to assist less fortunate countries. Free Algeria is still its opportunity.

How Many Orpingtons?

A new look at electoral arithmetic after the Liberal triumph

"IF the Liberal party were again to be a major one, coming first or second in 100 or more seats (instead of less than 40) the problems of electoral arithmetic would become much more complicated." Thus Messrs David Butler and Richard Rose in their Nuffield College case-study of "The British General Election of 1959," an election in which the Liberals in fact won only 6 seats and came second in 27. The result at Orpington raises the question whether that much greater complication for British electoral arithmetic has now arrived. How many Tory MPs now really have reason to fear that Liberals might conceivably capture their seats at the next general election? This article will attempt to be realistic rather than purely statistical—which means that it is based on some sweeping (but, we think, tenable) assumptions, and will therefore probably annoy all three parties in turn.

The Liberals' Mr Lubbock at Orpington last week turned a previous Tory majority of 14,760 into a Liberal majority of 7,855 for two main reasons. First, over 9,000 of the people who had voted Tory in 1959 voted Liberal this time; the Tories can reasonably claim that many of these "deserters" are likely to return to the Conservative fold at a general election. Between the Torrington by-election of 1958 and the Torrington vote at the 1959 general election, about four-sevenths of the previous Tory deserters returned, and a return on that scale at Orpington would serve to recapture the seat.

Secondly, however, Mr Lubbock piled up his majority because over 4,000 of the Orpingtonians who had voted Labour in 1959 (equalling 9.8 per cent of the polling electorate and nearly 45 per cent of previous Labour voters) also voted Liberal last week. It is unlikely that these Labour "deserters" swung to Liberalism mainly because of their great dissatisfaction with Mr Gaitskell; much more probably most of them

voted Liberal because they thought that this was the best opportunity of getting the Tory out. In a general election this Labour urge to "keep the Tories out" is unlikely to be weakened; it is more likely to be stronger, as was seen in 1959 in those (mostly west country) constituencies in which the Liberals had already emerged as the main opposition party. For example, the Tories recaptured Torrington in 1959 because about 4,000 of their 7,000 previous supporters who had abstained or voted Liberal in the 1958 general election returned to their fold, but Mr Bonham Carter's bacon was very nearly saved by a simultaneous switch to the Liberals by 3,000 (or a full 35 per cent) of the people who had voted Labour even in 1958; the Labour share of the poll at Torrington in 1959 went down to 14.8 per cent, compared with 24.6 per cent in the by-election fight.

IN relating "post Orpington psephology" to the current political scene, we are not going to assume that the percentage swings shown at Orpington (Tory −21.9 per cent, Labour −9.8 per cent, Liberal +31.7 per cent) can sensibly be even hypothetically applied to every constituency in the land. If one did that the Liberals would actually become favourites to win practically every one of the 150 odd Conservative seats that they contested last time, as well as an actual majority of any other Tory seats they chose to fight—and that is plainly absurd. But we are going to assume in our tables below (purely as a first cockshy; we will discuss each area in turn later) that it is possible that in what we will call "Orpington-like seats"—i.e. seats which the local voters will assume that Labour has no hope of winning—up to half the people who voted Labour in 1959 may switch to Liberal in 1963 or 1964 in an effort to keep the Tories out. The next problem is therefore to define "Orpington-like seats."

The definition we will use in the tables below is any Tory seat in which Labour got less than 30 per cent of the vote in 1959 in a three-cornered fight; in which the Liberals got over 17½ per cent (thus showing that they are serious contenders); and in which the Liberals could gain the seat if less than 13 per cent of the electorate switched from Tory to Liberal even after half Labour's former voters had switched to Liberal too. All three cut-off points are to some extent arbitrary—as is the decision to count as "Liberal possibles" next time only those seats that they fought last time—but there seems to have been some justification for the first two both at the time of the last general election and in some by-elections in this Parliament (witness the lower swinges from Labour to Liberal in by-elections like Oswestry and Colchester and High Peak). When Labour got more than 30 per cent of the vote in a three-cornered fight last time, traditional supporters of both major parties can reasonably tend to assume that Labour might just possibly win; and then Labour voters (at all times) and Conservative voters (certainly at general elections) generally become much less willing to switch to Liberal. No doubt it is also true that "industrial" Labour voters are less willing to switch to Liberal than "suburban" Labour voters. But in fact these two explanations often amount to much the same thing; when Labour's vote goes below 30 per cent, this is generally because the seat is in no real sense industrial.

And so to our tables. On our definition, there appeared to be 40 Orpington-like seats in the country at the time of the last general election, and they fell into four fairly distinct categories, split into Tables I to IV below: 12 west country seats; 6 Scottish seats; 8 seaside resorts; and 14 other constituencies. The first three columns in each table show the percentage shares of the poll won by each party at the 1959 general election; the last column shows what proportion of Tories would need to swing to the Liberals in order to win the Liberals each seat—on the assumption (a pretty optimistic one for the Liberals) that half of those who voted Labour in these hopeless seats for Labour in 1959 switched to the Liberals next time. The seats have been numbered in order of "Liberal hopefulness" purely on the basis of this pretty artificial arithmetical assumption.

Table I shows the 12 west country seats among our 40; it will be seen that, theoretically, six of the Liberals' first best eight hopes still lie there. But the table shows that at least the top three (Torrington, North Cornwall, Bodmin) have reached their present position largely and precisely because the Liberals have already squeezed quite a lot of the Labour

TABLE I.—WEST COUNTRY
PERCENTAGES OF POLL IN 1959

	Conservative	Labour	Liberal	Presumptive swing from Tory needed (see text)
1. Torrington	45·6	14·8	39·6	Nil
2. North Cornwall	46·6	9·5	43·9	Nil
3. Bodmin	46·0	15·7	38·3	Nil
5. Denbigh	41·7	20·1	31·0	0·3
7. St. Ives	47·9	26·9	25·2	4·6
8. Hereford	49·3	22·4	28·3	4·9
12. N. Dorset	52·8	17·0	30·2	7·2
6. Tavistock	53·7	21·8	24·5	9·2
19. Totnes	53·1	25·8	21·1	9·6
23. Honiton	56·7	15·1	28·2	10·5
25. Leominster	55·4	21·6	23·0	10·8
28. Tiverton	55·6	25·2	19·2	11·9

orange in these three places. And in the seats in the table where Labour in 1959 still had over 20 per cent of the vote, we suspect that it may be more reasonable to suppose that Labour's proportion next time may fall to somewhere like Torrington's and Bodmin's 14 or 15 per cent, or perhaps a little higher, rather than actually be halved. Tiverton, the last name on the list, had a by-election in November, 1960. The percentages there changed from the 1959 figures in Table I to Conservative 45.7, Liberal 36.7 and Labour 17.6; and the Tories therefore held on to the seat.

If there were a by-election in any of these twelve constituencies in Table I tomorrow, immediately after Orpington, we suspect that the Liberals would probably capture every one of them. But at the next general election, unless it takes place at a time of even bigger revulsion against the Tories than now, we would be surprised to see the Liberals capture more than two or three; and it has also to be frankly recognised that the Liberals' two existing seats in the area—North Devon (Liberal majority over Tory 362) and to some extent Mr Clement Davies's Montgomery (Liberal majority 2,794)—are the reverse of safe.

Table II (overleaf) shows the 6 Scottish seats among our 40 Liberal possibles. It will be noted that in all except South Angus Labour's percentage in 1959 was still over 20; it might be supposed that here, at least, the Liberals could hope that there was still a lot of juice in Labour's orange for them to squeeze. But in the past the Labour vote in rural Scotland has proved remarkably unsqueezable; at Inverness in 1959

Labour's share of the vote actually rose slightly, even although Mr Bannerman had plainly emerged as the Tories' main challenger. It is, therefore, by no means certain that

TABLE II.—SCOTLAND
PERCENTAGES OF POLL IN 1959

	Conservative	Labour	Liberal	Presumptive swing from Tory needed (see text)
4. Inverness	44·7	22·7	32·9	0·2
6. Ross and Cromarty	47·2	29·1	23·7	4·5
10. Roxburgh	50·2	21·1	28·7	5·5
15. Moray & Nairn	52·6	25·0	22·4	8·9
27. Galloway	56·3	20·4	23·3	11·4
29. Angus S.	57·1	19·0	23·9	11·9

the Liberals would gain many of these Scottish seats even if there were by-elections in them tomorrow.

The new electoral situation in the 8 Liberal possibles among English seaside resorts (Table III) is potentially more interesting. The pattern of votes in these eight constituencies in 1959 was astonishingly similar. It will be seen that Blackpool North, which is fifth of the eight in the list, is the seat which

TABLE III.—SEASIDE RESORT
PERCENTAGES OF POLL IN 1959

	Conservative	Labour	Liberal	Presumptive swing from Tory needed (see text)
21. Scarborough	54·3	22·5	23·2	9·9
26. Southport	56·0	20·4	23·6	11·1
31. Torquay	56·8	22·7	20·5	12·5
33. Folkestone	56·5	24·3	19·2	12·6
34. Southend W	58·2	19·5	22·3	13·0
36. Blackpool N.	57·8	21·6	20·6	13·2
37. Weston-super-Mare	57·5	22·7	19·8	13·2
39. Eastbourne	57·3	24·3	18·4	13·4

the Conservatives held by only 973 votes against the Liberal in a by-election last week; if Blackpool had polled after Orpington, it is probable that the Liberals would have won it, because some Labour voters might then have switched to the Liberal to put the Tory out. If any of these eight resorts should hold a by-election in the near future, the Liberals should probably be favourites to win them; even at a general election they might well run the Tories close.

The remaining fourteen "Orpington-like" seats on our definition—including Orpington itself—are shown in Table IV. It will be seen that even on this list Orpington comes tenth out of fourteen; theoretically on our definitions, there are nine Table IV constituencies—and 29 constituencies in Tables I to IV as a whole—which the Liberals might have found easier to win than Orpington itself. But in five out of the first nine constituencies in Table IV—including Mr Henry Brooke's

TABLE IV.—COMMUTERS AND OTHERS
PERCENTAGES OF POLL IN 1959

	Conservative	Labour	Liberal	Presumptive swing from Tory needed (see text)
9. Skipton	48·3	26·6	25·1	5·0
11. Nantwich	48·3	29·8	21·9	5·8
13. Harborough	51·0	29·2	19·8	8·3
14. Cheltenham	51·0	29·5	19·5	8·4
17. Finchley	53·2	24·1	22·7	9·2
18. Basingstoke	52·2	29·0	18·8	9·5
20. Cheadle	55·0	19·1	25·9	9·7
22. Hampstead	53·4	28·3	18·3	10·4
24. Westmorland	55·9	19·8	24·3	10·8
30. Orpington	56·6	22·2	21·2	12·2
32. Altrincham	56·0	26·4	17·6	12·6
35. Howden	57·7	21·8	20·5	13·2
38. Ruislip	57·0	25·3	17·7	13·3
40. Penrith	58·1	23·1	18·8	13·9

constituency of Hampstead—the Labour percentage in 1959 was over 28; when it has been as high as that, the assumption that half of the Labour supporters might vote Liberal next time becomes even more likely to be an overestimate. (Incidentally, the only other Cabinet Minister's seat in our tables, the President of the Board of Trade's at Altrincham, creeps into our qualifying limits only by 0.1 per cent in the Liberal vote.) If there were by-elections in any of these seats now, our guess is that only about three or four of them would really be as likely to fall as Orpington; and in a general election (as already explained) the experience of Torrington suggests that Orpington itself might well return to Tory hands. Moreover, a great hidden weakness in the Liberals' position is that two of their seven present parliamentary seats—Mr Holt's at Bolton and Mr Wade's at Huddersfield—were won in 1959 because they were allowed a straight fight against Labour; next time the Tories will intervene in those two seats, and Mr Holt and Mr Wade could well be squeezed out.

There may be some surprise that the general tone of this comment so far has not been more optimistic for the Liberals. But the comment so far has ignored an important fact: namely, the number of new Liberal "possibles" that are tending to be added to our lists in Tables I to IV with each new by-election that comes along. *The most important political development of this Parliament has been that all eight of the by-elections that have been held in constituencies of a largely non-industrial type have duly added new names to the Liberals' "possibles" list.* The eight constituencies concerned are shown in Table V. It would be wrong in this table to show a last column of "presumptive swing from Tory needed," because in each

TABLE V.—BY-ELECTION ADDITIONS
PERCENTAGES OF POLLS IN EIGHT BY-ELECTIONS, 1960–1962

	Conservative	Labour	Liberal
Harrow W.	55·8	18·1	21·4
Ludlow	46·4	26·3	27·3
Carshalton	51·7	20·7	27·6
Petersfield	54·4	16·6	28·9
Worcester	39·7	30·2	30·1
Oswestry	40·8	28·0	28·4
East Fife	47·5	26·4	26·1
Manchester, Moss Side	41·1	25·8	27·9

case—as the figures emerge from by-elections—the swing from Tory can be presumed to have already occurred. Probably in a general election, some of the Tories who voted Liberal in these by-elections will return to the Tory fold; but it will not be at all surprising if some of those who voted Labour in these by-elections decide to plump for the Liberal.

It is now time to chance our arm at some forecasts, or rather guesses. Unless the next general election takes place at a time of great dissatisfaction with the Tories, our analysis does not suggest that the Liberals are actually likely to capture a great number of Tory seats; indeed, because most of the Liberals' existing seven seats are themselves marginal, one cannot altogether dismiss the paradoxical possibility that the Liberals might emerge after it with fewer MPs than they have now. But what does seem likely to happen is that in nearly all the 48 seats mentioned in Tables I to V, and quite probably in about 50 other Tory seats as well, the Liberals will emerge as the undisputed main challengers to the Tories; after the next election, it may gradually come to be accepted that in about one hundred non-industrial constituencies a Labour vote is a wasted vote, even though Labour will still plainly be the main alternative government. What effect this would have on British politics is difficult to judge; but our guess is that it will lie in the logic of history for Labour then to try to look more like the Liberals, although probably not to act in a close-knit pact with them.

One final question remains. Even if the Liberals do not gain many seats from the Tories, might their interventions cause many seats to swing from Tory to Labour? This was freely prophesied last time, but in fact study of the 1959 general election results revealed only about nine cases in which it could conceivably be argued that Liberal "interventions" had enabled Labour to hold on to a seat it otherwise would have lost. All experience suggests that in general elections both major parties' supporters are especially loth in marginal constituencies to drift off to vote Liberal, for fear of letting their sworn enemies in the other major party in. But Conservative voters, at least, are generally more volatile in by-elections than general elections; witness Rochdale which was won by Labour in a famous by-election in the last Parliament as a result of a massively successful Liberal intervention—and has remained Labour since. As it happens there are two by-elections now approaching which could conceivably have Rochdale-like results. In Middlesbrough West and Derbyshire West two Tory seats could fall to Labour if the Liberals pick up, respectively, an extra 15½ per cent and an extra 22½ per cent net from the previous Tory vote. In each of them the Conservatives have reason to show some by-election nerves.

Atlantis without Walls

Tariffs on industrial trade between the richer countries are growing obsolete

PRESIDENT KENNEDY'S battle with Congress for new powers to cut American tariffs has now begun in earnest in Washington. It is a struggle of significance far beyond the United States. On March 7th, in the most successful bout of bargaining since the war, the United States, Britain and the common market agreed to cut many of their tariffs by a fifth. Yet a glance down the customs tariffs of these three major industrial powers shows that—even after this effort, and all the previous efforts of the postwar years—their economies are still sheltered by towering tariff walls.

Of the three (the United States, Britain, and the European Economic Community), Britain has the highest barriers of all against imports of manufactures from outside the Commonwealth. Even where cuts were negotiated last week, there are still some formidably high tariffs protecting British industry—25 per cent or more on many chemicals, between 12 and 20 per cent on much machinery, and between 20 and 33 per cent on some textiles. The artificially stimulated camera and instrument industries, built up between the wars for strategic reasons, still shelter snugly behind tariffs of 20 to 40 per cent, and vehicles behind one of 22 per cent. All this works out at an average of some 16 per cent on manufactures. In the latest bout of bargaining in the General Agreement on Tariffs and Trade (Gatt), Britain has so far given smaller concessions (on some £71 million of trade a year) than the other two powers. Slowest to adopt protection in the first half of this century, Britain has been slowest to reverse it.

The future common market tariff on manufactures—an average of just over 11 per cent—will on present form be lower than the British. Common market tariffs on most engineering products are in the teens, and are very similar to those of Britain, but the range of tariffs on textiles is rather lower, between 10 and 16 per cent. The Six have not felt able to apply the latest cut of a fifth to chemicals, because the United States would not reply in kind, but even so most of the common market's chemical tariffs fall between 15 and 20 per cent—well below the British level. Only on one or two raw materials and semi-manufactures—aluminium, down from 10 per cent to 8.5 in the latest negotiations, and pulp—is the common market tariff significantly higher than our own.

On average the United States tariff on industrial products is the lowest of the three—a mere 10 per cent or so after this month's deal. But the American tariff on manufactures is not a fairly uniform wall, like that of the common market; it is, rather, a serrated battlement. Since President Roosevelt's first Reciprocal Trade Act in 1934, successive Administrations have worked to get the barriers down, and they have succeeded in exposing large sectors of the American economy to the fresh breath of European or Japanese competition; there is a tariff of only 6.5 per cent on cars, and low ones on many other consumer durables. Yet certain sectors of the economy are still guarded by impressive fortifications, like the tariffs of over 30 per cent on many chemicals and textiles.

ON every recent occasion when there has been some serious dismantling of these walls, the resulting damage has been far less than anyone expected, and the benefits far greater. Seven years ago restrictions on imports from the dollar area were regarded as essential to Europe's economic survival; they have since been swept away, and the only effect on the British economy has been a mild but salutary widening of consumer choice and a useful downward pressure on prices. In the common market, the main effect of lowering the barriers of the two most highly protected members, France and Italy—for whom a grim fate was prophesied—has been an invigorating acceleration of economic growth. The truth is that the high tariffs that still survive on both sides of the Atlantic are a relic of the attempt made between the wars to shut out, by a policy of economic isolation, the infection of slump from each national economy. Such a policy has become quite out of place today, when all western governments seek to give priority to expansion. New vested interests have of course grown up behind the old barriers. In the chemical industry, monopolistic corporations or oligopolies on both sides of the Atlantic are deeply attached to the *status quo*. But this is a field, like engineering and vehicles, where a large and beneficent growth of trade could come if the barriers fell.

President Kennedy's new proposals were thus much needed. The bargaining powers of the United States have been almost totally exhausted in the latest round of talks in Gatt. Even this month's agreement was reached only because the rest of the world was willing to give greater concessions to the Americans (on $1.6 billion of trade) than it got in return ($1.2 billion). On its side the Kennedy Administration was able to reach agreement only by breaching the "peril points" protecting vulnerable industries, and thus risking political trouble later

on. With the European nations advancing towards still freer trade by means of a series of 10 per cent cuts in the members' entire tariffs, there is an obvious case for applying the same kind of technique more widely. Hence the President's request for powers to cut the American tariff by up to 50 per cent in across-the-board cuts—if Europe does its share too.

Despite (indeed, because of) the height of Britain's present tariff, no other country has so great an interest in reducing the barriers to transatlantic trade. For a start, a bold slashing of the common market tariff looks like being the only way in which manufactures from the developed Commonwealth countries, like Canada, can be given new opportunities in the European market. In the longer run, those Britons who fear that the common market will prove a prison, severing Britain's ties across the seas, must find new hope in President Kennedy's initiative, however Congress may curb it.

It is encouraging that key men in the European community have also welcomed the President's request for power to halve American tariffs. The group round M. Monnet has always seen the common tariff of the community as an instrument for massive tariff bargaining with the United States. Now Europe, flush with exchange reserves, is under additional pressure to help the American balance of payments ; as the strains of full employment close in on the European economy, imports from beyond the community's borders are becoming an invaluable weapon against inflation. In Brussels as in Washington, the future is seen, ideally, in terms of a "tandem" economic partnership between two continental common markets, each with low external tariffs about half as high as they are now.

A fluttering in the European dovecot could be heard, however, when a second proposal was put forward by the United States Administration in January. This was the request for powers to remove tariffs altogether on products where "80 per cent of free world exports" come from the United States and the enlarged common market (that is, including Britain and the other new applicants for membership). What did the formula mean ? Was the President proposing a new free trade area which could weaken the cohesion of the European community ? The Administration has now produced some tentative figures to show what the formula meant. Put into effect, it could mean the total removal of tariffs on about $1.2 billion of American imports from the enlarged European community out of a total of $3.5 billion, and $2.1 billion of American exports to the community out of a total of $5.1 billion. When the agricultural exports of the United States are excluded from the last figure, the new formula covers a sizeable portion of the manufactures the United States sells to Europe. The formula has been devised, frankly, to cover those capital-intensive industries—chemicals, vehicles, parts of engineering—where the removal of tariffs by America and Europe would not lead to a massive influx of goods from low-wage Asia.

Many continental Europeans may remain doubtful about this final stage—the complete removal of tariffs—until the United States is prepared for full economic union and until Europe has found a substitute for the unifying bond of its outer tariff in closer political ties. And the whole prospect of freer Atlantic trade still depends on one major premise: British membership of the common market. The "80 per cent" formula will cover virtually no trade at all if the community is not enlarged. The President's trade programme is founded on the argument that a common market including Britain and linked with parts of the Commonwealth will present a challenge America cannot ignore. Thus the new hope of a wider open door in the European community turns on Britain's will and ability to get into it.

Burnham Benumbed?

Sir David Eccles

NUT secretary Gould

NAS' secretary Rushworth

The next tussle over teachers' salaries may show the present negotiating machinery in an even more unfavourable light

Almost unnoticed outside the teachers' common rooms, the Minister of Education has quietly dropped his second Education Bill: the bill that was to have reformed the constitution of the Burnham committee which negotiates teachers' salaries in England and Wales. Sir David Eccles has called this a postponement, but it looks like being a lengthy one. New salary talks are due to begin in the Burnham committee in July, leading towards an eventual award by April next year. After that, as the teachers' unions have been reminding everyone, the Government may not have much time to spare for new legislation before the election season begins in earnest.

Naturally enough, the National Union of Teachers, which emblazoned defence of the Burnham system on its foremost banners in last summer's tussle with the Minister, is wearing a look of triumphant vindication now. Unfortunately, the new struggle may show this continuing old system in an even more unfavourable light than last year. And the Minister's continued inability to resolve any deadlock in the Burnham machinery may not be to the teachers' advantage this time.

For the effect of the chief change that has been brought about inside Burnham since last summer—the addition of the anti-feminist National Association of Schoolmasters to the teachers' panel—could mean one of two misfortunes for the bulk of the profession remaining under the NUT's maternal wing. Either the NAS may stick out under pressure for its own salary policy (which includes preference for those teachers, usually men, with dependent children) and thereby bring the teachers' side into deadlock from the outset. Or the NUT may feel obliged to start outbidding the NAS on the basic scale, thereby presenting the local authorities' panel with an impossible bill which it (and its ratepayers) simply will not wear. If the teachers then go on to argue that all, or at least a still more preponderant share, of the cost of education

should be borne directly by the Treasury, they will have unlocked the door for Sir David to take his seat on the committee as the teachers' visible and real employer. Since the NUT is girding its loins to put in for a 25 per cent rise (amounting to just under £100 million a year) and the NAS for one of 40 per cent (over £150 million) it is increasingly unlikely that, even after considerable watering down in negotiation, any joint claim can be anywhere near the extra 3 per cent a year that the Chancellor, judged by his answer to the university lecturers this month, is ready to put up. The point is that if Burnham broke down at that stage, the teachers would not even get 3 per cent—they would get nothing at all.

Why has the chance to improve the Burnham machinery been let slip ? The resolution of last summer's battle has a good deal to do with it. Last July, when the Minister offered the teachers £42 million instead of the £47½ million which was hastily agreed on in Burnham, he had no legal power under section 89 of the Education Act of 1944 to impose his own salary scales. All that he could do was to reject the £47½ million—just as outright acceptance or rejection of any recommendation is all that he is empowered to do now. He said then that he meant to go to Parliament for authority to hand out his £42 million and, for the future, to alter Burnham in three sensible ways. These were to bring his Ministry into the salary negotiations from the outset ; to declare (if necessary) the global sum acceptable for any award, with some indication of the kind of allocation he wanted ; and to get reserve powers both to break any deadlock between the two sides in the committee and to give effect to any award (irrespective of the committee's disagreement) that the Treasury considered to be in line with general wages policy.

The teachers reacted vociferously against this intervention in what they considered to be their free bargaining machinery (free, that is, except for the Minister's power of rejection under section 89). The local authorities, although patently less outraged by Sir David's proposals, joined ranks with the NUT ; but at the same time urged the union to climb down and settle for the £42 million inside Burnham. There was no formal understanding that the Minister would withdraw his Burnham reforms if the NUT did this, but the idea of a bargain was certainly bruited about and played some part in resolving the union's internal struggles. In the event, the bargain has been observed, Sir David's explanation being that the Burnham panels need more experience of how the Government's new policy of setting a general guiding light for incomes (through Ned or elsewhere) works out in the long term. Since Sir David was himself the one Minister to visualise a major overhaul of the negotiating machinery within his jurisdiction it could be that he wants to see how things work out (in Ned or elsewhere) too.

But Sir David has already had his way on two reforms that do not need legislation. The first is the admission to Burnham of the NAS and of the small but influential National Association of Head Teachers. By taking the NAS within the body of the kirk the Minister and the NUT moderates have plainly hoped to alleviate the internecine war within the profession and, in the long run, to stop the extremists in the NUT and the NAS leapfrogging each other's salary demands in a ruinous competition for added membership. So far, however, the NAS has remained as intractable as ever on the major aspects of professional solidarity, and its willingness, when it comes to the bit, to form a common front on salaries inside Burnham still looks remote. The NAS is particularly cocky over its access of 10,000 members in the past year. While the much larger NUT has also gained in strength, and retains a thumping majority even of men teachers (as well as virtually all the women teachers), the NAS is convinced that its rough tactics will still pay off.

The second change which the Minister has made is that he is now to provide the Burnham committee with regular information from his research department, on the precise teacher-supply situation and the differing needs for particular sorts of teachers. The Burnham members have always had their own welter of statistics, and the NUT is in fact undertaking a massive survey of its own at the moment ; but it is useful that a back door to the Ministry's problems should be available in this way. There is no intention in the Ministry to impose official opinions at the very beginning (e.g., on the global sum for any award) ; no doubt Sir David hopes that the Government's general guiding light for incomes policy will perform this function. But there are cases within the teaching profession (witness the special shortage of science graduates) where selective awards, on the scale of the last increase to the police, are obviously justified ; there are other cases (witness, the superfluity of young women teachers, many of whom leave so quickly to get married) for whom no special new inducements are needed at all. One of the chief difficulties within the existing machinery has been to give different sorts of cases the degree of priority they deserve.

For the moment the NUT is still licking its wounds. It is not prepared to surrender any part of its negotiating power to the Minister's good intentions, although the fact that he did steer the profession to a 14 per cent rise last year has not been lost on those members of the executive who have lifted their heads to see how other people have fared. The immediate problem is that these moderates are at present engaged in a bitter electoral fight to retain control of the executive against the extremists, some of whom have very left-wing political connections and all of whom are pressing for a real trial of strength with the Government (i.e. strikes). The elections for the new NUT executive take place next month, and the results could be of crucial importance. It is natural for the hard-pressed moderates to claim now that they saved Burnham last summer, however imperfect they privately admit its machinery may be.

But in this fight, as in the wider issue of the teachers' future as a profession, it depends on the ordinary union members, many of whom have never chosen to get involved in union politics before, to decide what kind of people they really want to be. Hitherto they have been ranked with, say, the executive class of the civil service ; if they choose to run their affairs as the extremists want, they are liable to find their employers regarding them and their remuneration in quite another light —and inevitably the public would then eventually come to regard the teaching profession in that same new light too. By withdrawing his Burnham proposals at this moment Sir David Eccles has left the teachers to come to terms first of all with themselves.

NOTES OF THE WEEK

POLITICS

Backs to Which Walls?

History repeats itself. Once again, as in early 1958, the upper classes—in 1958 they used to be called the Abstaining Majors and Colonels—are writing to the papers saying that Orpington voted Liberal because the Conservative Government is too liberal and unconservative itself. Fortunately, the Government does not quite believe this; nor, despite the chairman of the Stock Exchange, does it really suspect that the electorate rose in massive revolt against the proposed tax on capital gains. But probably, as in 1958, the new mood will have at least some marginal influence on policy. A little more willingness to take risks in pushing economic expansion perhaps, although one suspects that it was the Governor of the Bank of England (not the electors of Orpington) who again edged down Bank rate on Thursday. Possibly, and wrongly, some relief on householders' Schedule A tax in the budget. Meanwhile, one very evident effect has been that ministers now regularly launch an attack on the Liberal party as well as the Labour party in all their speeches. The main line being chosen is that the Liberals are not liberals at all, but opportunists who rush round offering smooth verbal commitments to every pressure group which happens to come along. The criticism is the right one to adopt: both because this is a tendency against which the Liberals too often have failed to guard, and because while ministers utter it there is rather less danger of the Government trying wrongly to buy off particular pressure groups itself.

The Westminster equivalent of the Abstaining Colonels are the backbench knights. The anti-common market group on the Conservative backbenches, led as usual by Sir Derek Walker Smith, have considered this to be the right moment to put down one of their expected motions designed to cramp Mr Heath's negotiations at Brussels. Significantly, however, the motion is of what might be called the "recent Northern Rhodesian type": eager to wound, and to hint, and to warn, but still politically too polite actually to strike. On the first evening that it was tabled it attracted the signatures of just under half of the (at a guess) 65 or so Tory MPs who are at this stage by no means instinctively inclined to tell Sir Derek to go jump in a lake. These mumblings are the reverse of helpful to the Commonwealth interest, which some of the dimmer Tory rumblers think they are trying to protect. At some stage at Brussels Mr Heath will presumably want to strike tough bargaining attitudes with the Six; the thought that some Tory knights will stand gesticulating behind these bargaining gestures (and wildly exaggerating them) may not frighten the Six, but it can very reasonably hinder Mr Heath in the bargaining tactics he will wish to employ. But these impediments to negotiation had to be expected anyway. In the longer term the large Liberal vote at Orpington cannot reasonably have made it more difficult for the Government to strive to enter Europe—and thus take over for itself the most distinctive and attractive piece of clothes that the Liberals have.

CENTRAL AFRICA

The Third Man

Reactions to Mr Butler's appointment as secretary of state for Central Africa (for that is what it amounts to) have ranged from mild astonishment from Conservatives, through a certain uneasiness from some uncommitted Liberals (who feared that it might mean that the whole question was to be reopened), to some unseemly and ribald mirth from Labour backbenchers. In fact, however, the Prime Minister's choice is reasonable enough. Nearly every intelligent politician and administrator in London, no doubt including Mr Butler and his very able new chief civil servant Mr Tennant, recognises the main imperatives for British policy in central Africa now; although Britain can no longer stand as Sir Roy Welensky's shield against the wind of change, it would be very desirable to negotiate at least some form of economic association or free trade area even if the old form of central African federation is now to fade away. If the secondary industries of Southern Rhodesia were ever cut off by a tariff barrier from the markets of Northern Rhodesia and Nyasaland, many of them would go bust.

The wobbling diarchy of the Commonwealth Relations Office and the Colonial Office over Central Africa would not be a good mechanism to which to entrust the new and ticklish stage of negotiations; indeed it proved a pretty unwieldy mechanism even for the old stage. And it would have been poor politics to entrust the whole job now to either the Commonwealth Relations Secretary or the Colonial Secretary. To have chosen Mr Sandys would have antagonised Mr Kaunda: to have promoted Mr Maudling would have alienated Sir Roy: neither of these two Rhodesians, to judge from his preliminary reactions, seems to be quite sure what to make of Mr Butler, but neither has rejected him. Mr Butler has many of the qualities most needed for the hot job. In the past his capacity for seeming to be all things to all men has sometimes been a handicap, but in Central Africa (and even more at Westminster) it could turn out to be a valuable asset. He is thought to be in agreement with the basic premises of the Monckton report, but he is also known to be an experienced and cagey politician. He is in addition a very senior minister, and a senior minister was needed for this task.

What effect will this extra appointment have upon the bewildering see-saw of Mr Butler's personal career? When he left the Leadership of the House and the chairmanship of the party in last October's Cabinet reshuffle, there was a natural tendency to write his future importance down. But with the defeat of critics of his penal policy at Brighton his prestige revived. This was followed by the somewhat nebulous appointment as chairman of the Cabinet committee on negotiations with the common market, and now by the very tangible responsibility for Central Africa. Of course if Mr Butler fails to prevent the emergence of an Algerian situation in Central Africa he really will be out, but then so will the Conservative party. There are also more subtle risks in success, but the Tory party normally manages to accept the inevitable. Whatever the outcome of the appointment Mr Butler is certainly right back in the centre (or torrid zone) of the political map. His old admirers should welcome this.

KENYA

Butler for Governor?

Bickering like Congolese, the African politicians of Kenya have not so far lived up to the responsibility that is theirs. For a long while now the future of Kenya has been in the hands, not of Britain, but of its own leaders. Britain has been able to withhold independence while Messrs Kenyatta, Mboya, Odinga, Ngala, Muliro, Blundell and all have gone through their Congolese phase; the pause cannot last much longer, and the risk will grow of Congolese bloodshed when power passes.

While Kenya does remain a colony, however, the skill of the Colonial Office is there for its politicians to draw on. Just how useful this can be was shown on Wednesday, when the Colonial Secretary presented constitutional proposals to the delegates at Lancaster House. Mr Maudling's suggestions are only the sketch of a possible regime, and leave some crucial problems (such as the police) still to be settled. But, as far as they go, they are excellent: they offer Mr Kenyatta's party the strong central government it demands, while granting the asked-for regions to Mr Ngala's party. The regions, and the local authorities, would have a real say in matters affecting land, education, and housing—and the powers of the regions would spring from the constitution, not the central legislature. An upper house representing the local authorities would be able to veto changes in the constitution.

Such a scheme offers genuine constitutional protection for tribes and local authorities; at the same time it would not hamper the work of the central government. If both parties were reasonable they might accept it as a basis for discussion. To help bring them together, Mr Maudling has tried to persuade them to form a national government, return to Kenya, and carry on the negotiations as a government-to-government affair. This is an admirable mechanism if it can be brought into use over the polemics of both the African parties. But it would be the better for continued access to the British kind of skill in constitution-making. For this reason Mr Maudling might now consider replacing the present governor of Kenya (who has not always shown complete understanding of the problems with which he has to deal) with a man more suited to this tangled situation. What a pity Mr Butler has so much on his plate.

CHINA

Chiang is Go

General Chiang Kai-shek and his government have so often spoken of "returning to the mainland" that the phrase is understandably greeted with bored scepticism. For once, however, scepticism may be out of place. Circumstances are not ripe for a full-scale invasion (and they may never be), but they are temptingly favourable for the large-scale testing attacks—by paratroop landings and commando raids—which the Generalissimo is reported to have advocated in his talks in Formosa with Mr Averell Harriman, the American assistant Secretary of State for the Far East.

The combination of the Sino-Soviet dispute and hunger in continental China is a new factor. It seems unlikely that the National People's Congress (communist China's parliament), which was due to open

HARRIMAN and CHIANG: hands across the water?

its postponed session this week, will be able to offer its members much beyond tale of woe. No overall economic plan for 1961 was ever published; neither has a plan for 1962 yet been exposed to public gaze. In a number of areas the daily ration, where it is honoured, is lower than it was in the days of the Kuomintang (though these cannot, in other respects, be remembered with great enthusiasm). In contrast, and on an admittedly far smaller scale, the economy of Formosa is booming. The production of agriculture, fisheries and forestry rose by 7.6 per cent last year, and that of industry 14 per cent.

One inhibition on a large-scale attack by the Nationalists is the treaty of December, 1954, with the United States, in the notes accompanying which the Nationalists agreed not to attack the Chinese mainland without "prior agreement" by the United States. Another, and more unpredictable, factor is the Sino-Soviet treaty of 1950. The Russians did not commit themselves to defending the Chinese communists against a Nationalist attack; but they would intervene if another power were involved. General Chiang is apparently arguing that his forces must be allowed to attack before the Chinese communists build their first atomic bomb, and that all the Americans need do is to sit back. Will "prior agreement" be forthcoming?

EUROPE

Charley's Aunt

However hot his new seat, M. Christian Fouchet, President de Gaulle's high commissioner for Algeria, might still find the job more rewarding than the last one. For over six months a committee of the Six of which he was chairman has been exchanging plans and counter-plans on European political union. When the six foreign ministers met at Luxembourg on Tuesday to consider the work of M. Fouchet's committee there was no sign whatever that agreement was in sight.

Only on one small point was the gap bridged between the French conception of *l'Europe des patries* and the more "European" views of the other five countries. The five had proposed that the new union should have an authoritative secretary general. In deference to the French they withdrew the idea; instead, a joint political commission is to give the new union a sense of community, and try to prepare the basis for common foreign policies. Nothing has been done to satisfy the fears of the five that the existing European communities will lose importance if the new union covers economic matters. Nor have the French provided guarantees that any new defence scheme will be set firmly in the context of Nato.

This failure is causing heartsearching in Bonn. Dr Adenauer sets great store on achieving some kind of European political union before he leaves the political scene. Yet his talk with President de Gaulle in February has produced no results.

This is the background to Dr Adenauer's gloomy comments on British membership of the common market in *Le Monde* of March 10th. Observers on the Continent believe that they were a deliberate attempt to placate President de Gaulle. Certainly the Chancellor's comments on Britain had a novel, almost gaullist, pessimism. Britain was part of Europe, but was it part of the Continent? "The maintenance of the Commonwealth in its present form will certainly not be possible," the Chancellor reportedly remarked. Vigorous protests from the British Government have now led Bonn to rewrite the comment on the Commonwealth. All the same, the Chancellor's anxious efforts to please Paris are one more reminder that both the geographical extent and the political shape of the new Europe depend, in the end, on France.

NATO

Orphan on the Rhine

Ever since Sir Anthony Eden promised in 1954 to keep four British divisions on the Continent for fifty years, this necessary commitment has been a source of friction in the western alliance. Over the years the British have cut down the manpower of the Army of the Rhine to under three divisions, while the clause in the Paris agreement which gives Britain the right to withdraw troops if it has payments difficulties has hung like a sword of Damocles over the Rhine army. More than once Britain has had to seek help in carrying the £70 million burden on its balance of payments.

This time, it seems, Mr Henry Brooke, the Government's financial watchdog, has done rather well, though the burden itself is of course unaltered. As he told the House of Commons on Monday, west Germany has offered to ease the strain on the balance of payments by spending an extra £54 million in Britain in each of the next two years. But, as in the past, the test will come when the vague promise has to be put into practice.
