Kharg Jetty, Persian Gulf TAKES 100,000 TON TANKERS

Birks Store, Adelaide
LARGEST IN SOUTH AUSTRALIA

The largest tankers afloat can now berth at Kharg Oil Terminal in the Persian Gulf, built by Costain as a joint venture with Raymond International (above). Shoppers in Adelaide can now be served in their £A3 million store (left) which is due for completion this summer. Costain's name is associated with these two developments, completely dissimilar, in different parts of the world. (*Consulting Engineers for Kharg: Frederick R. Harris, N.V. Architects for Birks Store: Hassell & McConnell*)

VOLUME CCIII · NUMBER 6194

Living with de Gaulle

FOR better or worse, General de Gaulle has now stamped the imprint of gaullism on France, and on France's relations with the rest of the world. For better or worse, the rest of the world—in particular, the rest of the western alliance and, most of all, Britain—has to decide whether it can coexist with gaullism. The general, celebrating this Sunday the fourth anniversary of the coup in Algiers that brought him to power, can savour the knowledge that with reasonable luck he is finally emerging, as he intended, from the Algerian labyrinth in which he has been caught since 1958; and that, having emerged, he will at last be in open country where he can deploy his own ideas about the future of France to their full effect. Our Paris correspondent discusses the French implications of this on page 556. But the international implications are even more arresting—history having arranged that the general's liberation from his Algerian preoccupation should coincide with the moment when Britain and continental western Europe have to decide whether to be one or two.

For the British, teetering on the edge of this decision, there are two questions to be answered about General de Gaulle's intentions. The first and basic question is whether his ideas about the coming shape of Europe, and about Europe's place in the world, are sufficiently compatible with British ideas on these subjects for the two countries to live side by side in the same community. If one had nothing to go on but General de Gaulle's stated objectives, the two points of view might seem irreconcilable. In his memoirs, having described how his early hopes of Anglo-French collaboration were rebuffed in 1944, he says that he wants to create a "third planetary force" on the mainland of western Europe which will not only be distinct from "the Anglo-Saxon camp" but might even on occasion find itself on the opposite side of the east-west fence from it. Coupled with his repeatedly expressed contempt for the United Nations, this adds up to a gaullist picture of the future in which there is no place for Britain except outside, looking plaintively in.

But it is sometimes a mistake to be mesmerised by the general's statements of intent—as the supporters of a French Algeria have discovered. In fact, he has already modified the picture he painted in his memoirs very considerably. Because his deepest passion, deeper even than his taste for third forces, is for the strength and dignity of France, and because he realises that France can be strong and dignified only if it is part of a club of nations big enough to match the superpowers, he has accepted the need for allies—and, with allies, the conditions that allies bring with them. His nationalist lips have swallowed the existing supranational elements in the common market; even more important, for the sake of staying friends with Dr Adenauer he has overcome his dislike of being dependent on the Anglo-Saxons enough to accept, however grumpily and conditionally, Dr Adenauer's fundamental (if now momentarily exasperated) trust in the alliance with the United States.

Thus General de Gaulle has been drawn, no doubt reluctantly, part of the way back towards the basic belief of British postwar policy: the belief in the need to preserve the link between the United States and western Europe, which, because it was absent in the beginning of two world wars, threatened the West (and all that General de Gaulle stands for) with the disaster that, each time, was just averted. And the facts of life in the nineteen-sixties are likely to make it difficult for him to veer back again now to separatism. If he hopes to see

western Europe rank alongside Russia and America in the reasonably near future as the world's third great power he must realise that the goal will be more swiftly and surely achieved if (indeed, it may not be achieved at all unless) it is pursued in co-operation with what he still, and sometimes contemptuously, calls the Anglo-Saxon powers; in the case of Britain, this co-operation probably means British membership of the European community. The blunt fact facing General de Gaulle is that practically any link he seeks to establish with a neighbour attaches him automatically to the link which that neighbour wants, and needs, to maintain with the United States.

There is another reason for thinking that the general's ideas about the future of Europe may not be quite as unacceptable to British minds as he sometimes makes them appear. The other main element in British foreign policy in recent years, alongside the insistence on transatlantic solidarity, has been the pertinacious attempt (for which Mr Macmillan, to be fair, must have the credit) to ease the tensions in central Europe, in the hope that the two halves of the continent may one day be knitted together again. During the Berlin crisis General de Gaulle has seemed to put himself in precisely the opposite camp: the camp, that is, which would rather see the hostile confrontation along the Elbe prolonged than venture on a policy of conciliation with eastern Europe. But from time to time another, more imaginative, train of thought has peeped out from behind this intransigent French front, when the general has dreamed aloud of a single Europe "reaching from the Urals to the Atlantic." This corner of the general's mind, at any rate, is forever England's. He, and only he so far, has even (does he remember?) said the Oder-Neisse line has come to stay.

IF these hopeful guesses are right—if the gaullist and the British views of the world are in fact just compatible enough to make cohabitation possible—there is still a second major question which needs an answer. General de Gaulle's whole approach to foreign policy is based on the belief that France must play the leading part in the group of nations it assembles round itself. It will be hard enough to maintain this pretence at pre-eminence even within the existing European community; there are men in Bonn who do not see themselves just as loyal retainers to the lord in Paris; there are many men elsewhere who do not think that, in the end, the eminence can be anything but German—and who fear this. The question is whether the French president can bring himself to associate with yet another rival to the French claim of leadership; a rival, moreover, with markedly different ideas about how this leadership should be exercised. To be specific, can he risk the experiment of coexisting with Britain?

The answer to this question falls into two parts. One part is that, although he would doubtless prefer not to dilute Europe's "personality" by letting Britain in, General de Gaulle knows very well that there are limits to his ability to impede Britain's entry. These limits are set by what the other members of the European club will tolerate; if he pushes his opposition to the British application beyond reasonable limits, there is a serious risk that the continental coalition might fall apart; Europe will be severed again. The negotiations with Britain enter the stage of really serious bargaining this Friday, May 11th, when the ministers in charge meet in Brussels to review the groundwork that has now been completed by lesser officials. Such evidence as there is suggests that the terms offered to Britain are likely to be tough, but not intolerably unacceptable. If this turns out to be the case, it will mark the general's understanding that he must stay within bounds.

The other part of the answer to the question whether General de Gaulle can afford to coexist with Britain is that it depends on Britain. The president's attitude towards British membership of the common market is plainly linked to his larger aim of putting France on equal terms with Britain in the diplomatic hierarchy of the free world, and in the possession of a nuclear armoury. So far the United States has flatly refused to help him in either ambition. If Britain now gives the impression that it wants to come into Europe as a kind of representative of the Anglo-Saxon directorate—wearing a badge marked "special relation" in its lapel, and clutching its nuclear independence as a token of its superiority over mere Europeans—General de Gaulle might well be excused an icy murmur of *fichez le camp*.

THIS is why Mr Macmillan's visit to Paris on June 2nd is so important; it could be the most important trip he has made since he took office. This is not to say that he ought to take to Paris a specific offer to buy Britain into the common market, either by handing over British nuclear information to the French or by agreeing to support the French demand for membership of a triumvirate running western affairs. The British entry into Europe ought preferably to be achieved—and probably can be—solely within the limits of the Treaty of Rome, and without extraneous inducements; this country has at least as much to give to the European community, politically, economically, and financially, as it has to gain from joining it. But, while Mr Macmillan should not go to Paris with the idea of buying Britain in, he should make it quite clear that—once in—Britain will regard itself, atomic bombs and all, as wholly committed to Europe, and not just a part-time representative from another, Anglo-Saxon, world.

In particular, Mr Macmillan should try to come to a preliminary understanding with General de Gaulle about how Britain might dispose of its nuclear armoury if and when it joins the common market. The ideal solution of the problem, for people whose deepest fears are about the gradual proliferation of these damned weapons, would be for Europe as a whole to withdraw from the nuclear competition and rely on the United States for its protection. If this proves impossible, however, the next best (though significantly worse) aim should be an *entente nucléaire*: a bilateral Anglo-French arrangement to replace the bad examples the two countries are currently setting with their separate, national, atomic forces.

General de Gaulle might still not be interested; he might insist that his atoms, like his homecoming infantry from Algeria, must be his and his alone. Yet there would be powerful advantages for him in such a pooling of effort. His defence planners, if not the general himself, must be aware that the new generation of weapons that will come to birth in the second half of the 1960s will be beyond the pocket of all but the richest powers—or combinations of powers. A joint Anglo-French nuclear arm might provide a credible deterrent for the whole of western Europe; its bases would lie away from the politically sensitive middle of the continent; it would need no third recruit.

But the really decisive recommendation of the idea lies in its political, not its military, value. The nuclear entente might at last convince General de Gaulle that the British have returned, for good, to Europe, and dispel his vague suspicion that the barbarians begin at Dover. It would also provide a foundation of common interest on which Britain and France might try to reconcile the still substantial differences between their views of the world. Mr Macmillan, rehearsing the ideas he intends to let drop at the Chateau de Champs, might profitably concentrate on this one.

Britain's Five-Year Plan

LOUD cheers for Ned! It launched itself down the slipway this week in precisely the form which *The Economist* has long advocated—but which we had frankly not expected to see achieved. Sir Robert Shone and his team of economic technocrats at Bridge Street are to draw up a report, before the end of this year, which will "examine the implications" of, and set down statistical projections for, achieving an entirely new and specific objective for British economic policy. The project to be discussed is that of expanding Britain's gross domestic product by an average of 4 per cent a year between 1961 and 1966, or by nearly 22 per cent over the whole period. Because the growth of gross domestic product between 1961 and 1962 is likely to be only about 1½ or 2 per cent, as a result of Mr Selwyn Lloyd's unambitious 1962 budget, the rate of growth assumed in these projections for 1963 and the three subsequent years will probably have to be 4½ per cent per annum or more.

In order, presumably, to save the faces of those who had not wished to see the National Economic Development Council wield so much policy-setting influence, the first Shone report is not to be officially called a five-year plan; and 4 per cent per annum is not even being specifically called a target rate of growth (it has been described instead, in a masterpiece of tactful diplomatic prose, as "a reasonably ambitious figure likely to bring out problems that have to be solved if faster economic growth is to be achieved and as a help in focusing thinking on the problems of faster growth"). But of course, unless older-style influences somehow launch a counter-attack, a five-year plan and a target rate of growth are what they are hearteningly likely to become. By the time of the next budget, in April, 1963, the Chancellor of the Exchequer will be faced by an estimate that total national output will need to rise by over £1,000 million a year if the projected figures in the first Ned report are to be achieved; if total demand seems unlikely to be high enough to bring that extra £1,000 million of output into being, then the Chancellor will surely feel under an incentive to step up demand by something like Ned's calculated and required amount through the medium of an expansionary budget.

This does not mean that, if an expansion of demand should lead Britain into price inflation or balance of payments troubles, the target growth rate can possibly be regarded as sacrosanct. But it should mean that there will be a subtle check to the form of instinctive thinking which has ruled British economic policy in the past six years: the sort of thinking which has assumed that the remedy for any economic troubles, even those which cannot be shown to have any obvious relationship to excess demand at all, must be to retreat into a squeeze and destimulate the phagocites. In recent years growth in the British economy has been everybody's favourite son in theory but most policy-makers' whipping boy in practice, largely because there has been no vested interest in Whitehall to father the poor child. It has been beguilingly easy to blame every trouble on the fact that "we have been trying to do too much," largely because it has been regarded as improper to set down in advance even any approximation of what we have been trying to do. From next year on, whenever the Chancellor tries to do something desirable, like checking inflation or improving the balance of payments, he should feel under new pressure to try to do these things in ways that seem likely to have the least damaging effect on another thing that will be recognised as desirable—namely the achievement of his target rate of economic growth. That is why this week's news is much more important than a mere announcement that the two knights of Bridge Street (Sir Robert Shone and Sir Donald MacDougall) are to set down some hypothetical figures on paper. They will be operating here in the field where basic attitudes to policy-making are formed. It could be a psychological breakthrough of the first importance.

THE staff of Ned is assuming that the annual growth in the labour force between 1961 and 1966 should serve to raise output by about 0.7 per cent a year, so that the target rate of 4 per cent for the growth of gross domestic product implies an average increase in production per worker of something like 3.3 per cent a year. If cost inflation is to be avoided, it follows that average earnings at the workbench should not rise by more than 3.3 per cent a year, which means that average annual rises in wage rates negotiated by trade unions would have to be notably less than this. Tactfully Ned has apparently not yet pointed this out even to its own trade union members. But if the idea of a national plan catches hold, the two most important annual target figures—the target rate for total expansion at which the Government should aim, and the ceiling rate for average annual wage increases if inflation is to be avoided—should stand a much better chance of being burned into the public consciousness. This could be the second important psychological breakthrough which the new Ned model planning might achieve.

In drawing up the first draft plan, the staff of Ned is to examine the contribution made by government services, initiate a special study into the distributive trades, and seek factual information from sixteen separate industries on the implications for them of a 4 per cent growth rate in total national production. In all, their first batch of inquiries will thereby cover one half of the gross domestic product. The sixteen industries chosen for this first round include a sufficient weighting of modern growth industries (chemicals, motor vehicles, electronics) in order to be dynamic, and a sufficient smattering of industries whose labour forces are likely to have

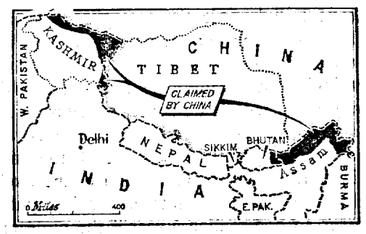
to decline (coal, agriculture) in order to be realistic. Some delicate planning touch has plainly already been at work in choosing this list.

At one time, *The Economist* had feared that opposition from Whitehall might divert Ned from the enunciation of target rates for the growth of home demand into the compilation of mere research essays into the obstacles standing in the way of efficiently responding to such an expansion ; as things have turned out, pressure has gone the other way. A number of studies into the obstacles to growth have already been started, including studies of the balance of payments, research and development, and of taxation ; the last named is a sign of how completely and courageously Ned seems prepared to stick its researching oar into matters which the Treasury might well once have preferred to regard as its own strictly private territory.

Unfortunately, it is perhaps fair criticism for zealots to say that Ned does not yet seem to have shown a similarly great audacity in preparing to face problems which might cause resentment among trade unions ; there is no mention yet of any inquiry into such subjects as restrictive labour practices or into the wasteful absurdity of large parts of the British apprenticeship system. But *festina lente ;* this is a minor blemish in a programme that represents a remarkable and imaginative start to a process of moving new men—and confident new statistical ideas—into the high places of British economic policy-making which have for the past six years been so desperately in need of them.

Three Hands in Kashmir

China has stuck a trouble-making finger into an area where it may get nipped



ONE would normally welcome, without qualification, any agreement between two nations for the amicable demarcation of a long-disputed frontier. Quarrels over border lines are one of the commonest sources of international tension. One less quarrel, so much the better. Unfortunately, there are serious qualifications to be made in the case of last week's simultaneous announcement by China and Pakistan that they are to negotiate a demarcation agreement. The boundary is that of north-western Kashmir. (Pakistan proper has no common border with China.) The joint announcement explained that the provisional agreement now to be negotiated will be replaced in due course, after the India-Pakistan dispute over Kashmir has been settled, by a formal boundary treaty between China and " the sovereign countries concerned."

Pakistan, which has effectively controlled this part of Kashmir for thirteen years, can scarcely be blamed merely for seeking to straighten out the boundary question with China, whose territorial claims in recent years have troubled all its southern neighbours. Nepal and Burma have already negotiated border agreements with the Peking government. But last week's announcement from Peking and Rawalpindi was made against a doubly disturbed background. It cannot be taken in isolation from either the long-standing Kashmir dispute between India and Pakistan, which was once again before the United Nations Security Council last week, or the newly-inflamed frontier conflict between India and China.

Inevitably, the Indian government has reacted sharply to the Sino-Pakistani announcement. Mr Nehru told parliament on Monday that it was " opportunist," and amounted to " interference with India's sovereignty over Kashmir." It is natural for Indians to think that both Pakistan and China are at least as much concerned to score points off India as to settle matters between themselves. Nor are these suspicions unfounded.

Pakistan's strongly anti-communist, western-allied government has gladly accepted communist Peking's implicit support, or at the least its benevolent neutrality, in a dispute which it has so often vainly brought before the UN, which has found its allies unwilling to commit themselves, and which has brought Russia flatly down on India's side. China has not, of course, actually backed Pakistan's full claims in Kashmir. But its technically " uncommitted " stand is not only one of its conspicuous rifts with Mr Khrushchev, who has personally and forcefully espoused India's case. It is also, in effect if not in theory, a boost for Pakistan and a blow at India ; a boost and a blow which reveal, very interestingly, that membership of " militarist-western blocks " is no bar to—and non-alignment on the purest *panch shila* principles no guarantee of—the favour of a communist power interested in making trouble among its neighbours.

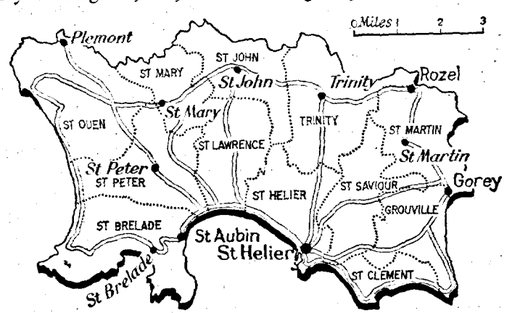
Only as long as the Chinese can exploit the " nuisance value " of the older Kashmir quarrel, however, will Pakistan be able to count on their benevolence. It suits Peking's military commanders that the Indian army in Kashmir should, while stepping up its pressure on the Chinese forces who have intruded in the east, have to look over its shoulder at the west, where the newly-elected president of Pakistan-held Kashmir and others have lately revived talk of a war of liberation. Such talk must now be music in Chinese ears. For there is little doubt that the Chinese, as Mr Nehru told parliament on May 3rd, have " grown apprehensive of our growing strength."

THE " tougher " thinking in India about the Chinese threat, which was described in *The Economist* of April 21st, is not just a matter of tough talk. In the last five years, the size of India's army has been doubled. Its strength is now close to half a million men ; it is among the six strongest in the world. Its inevitable walkover in Goa last December did its morale no harm. This spring, substantial elements have been purposefully deployed in Ladakh (eastern Kashmir), and probing contact has been made with the Chinese intruders there.

" When we establish checkposts, it is often behind their checkposts," said Mr Nehru on May 3rd, adding " the Chinese are rather nervous "; and he told a cheering parliament that India would " not submit to Chinese threats " of action against Indian patrols. The Chinese demand, in a note sent on April 30th, for the withdrawal of two newly-established Indian posts in Ladakh, had been refused. " We propose to remain where we are."

To " throw the Chinese out " altogether, as many Indians have phrased their demand, is another matter. The area in north-eastern Kashmir across which the Chinese have gone so far as to build a military road, which now serves as a supply line for their campaign of repression in Tibet, is extremely difficult for Indian forces to reach in any strength. The vigour of the Indian patrolling is indicated, however, by the complaint from Peking that Indian troops have recently entered Sinkiang eleven times. (This charge is denied ; but complaint and denial merely reflect the dispute about where Kashmir ends and Sinkiang begins.) What is abundantly clear is that there will be no more Indian lying down under Chinese encroachments. The Indians now mean to give at least as good as they get.

Why has Peking chosen to throw away, for the sake of a doubtful toehold on these bare and bitter mountains, the vast goodwill it once enjoyed in Delhi ? Its need to secure the frontiers of still restive Tibet does not fully explain the crass crudeness of its recent behaviour toward India. The Peking press campaign of defamation of Mr Nehru, while partly a direct reaction to his increasingly firm line on frontier questions, also stems from his unwelcome victory at last September's conference of non-aligned countries in Belgrade. At Belgrade, where the theses dear to Peking's heart were mainly advanced by President Sukarno of Indonesia, they were beaten down, one after another, by Mr Nehru and Mr Krishna Menon, and Dr Sukarno ended up humbly carrying to Mr Kennedy the Indian-drafted peace appeal which he had at first scorned. After Belgrade, the Chinese press valiantly tried to depict the whole thing as a " triumph for Sukarno " and a defeat for the Indians, who were branded as " agents of American imperialism." India's support for the UN in the Congo has provoked further Chinese anger.



One element in Chinese land-grabbing may, admittedly, be mere traditional instinct. Peking's imperialism has an imperial pedigree. China's current maps and publications imply continued claims to border areas in Russia and North Korea as well as in the south. But there is nothing so inviting about the nightmareish mountains of Ladakh, or of northern Assam, as to explain the difference between Peking's belligerent conduct towards India and its more diplomatic settling of border disputes with its other southern neighbours.

If China hoped at an earlier stage to manoeuvre India into isolation from the general Afro-Asian community, that hope must by now be distinctly faded. If it still hopes to humble India and destroy the prestige of a neighbour who is inevitably in some sort a deadly rival, it must be stubbornly blind to Delhi's now conspicuous stubbornness. The most likely explanation for continued Chinese intransigence is the simple and common explanation of why many other governments, once involved in a venture that turns out profitless and damaging, do not cut their losses at once. " Face " is no Chinese monopoly ; but there is no indication that the Peking government will now be able to get off the Kashmir hook any more elegantly than the other two contestants already impaled on it.

Prospero's Isle

Jersey, largest of the Channel Islands, basks happily in a financial sunshine to which Englishmen, while they envy it, contribute handsomely

ENGLISHMEN, arriving white and emaciated from their own island, may be forgiven for mistaking Jersey for the Hesperides, the island of the blest for which their resilience in this vale of tears has made them eligible. They may be forgiven, too, for wondering why their own island,

so near, so similar, should yet be so different from these 28,000 acres in the crook of the Normandy coast, with their 1s. 10d. for 20 (English) cigarettes, their £400 (English) small cars, the orgy-provoking prices of their wines and spirits—and their sunshine. And the answer is the same as the question: it is precisely because of this inexpensive exoticism that upwards of half a million played-out Britons annually sacrifice £16 million in this temple of delights ; and it is that sacrifice which supports an economy in which petty luxuries would otherwise attract the far from petty penalties they do at home.

For Jersey, despite visions of monstrous clamps of potatoes, limitless tracts of tomatoes browsed over by golden cows, and tax-dodgers gambolling at the bright blue water's edge, lives by tourism. Without that staple, it would be stunted to the point of death (as the German occupation in the war—an experience which has permanently marked the souls of Jerseymen—showed). That £16 million (holidaymakers spend more in Jersey than they do anywhere else in Europe—about £19 a week each) represents an income to the island of £250 for each of its 63,000 men, women and children ; and it goes more than full way towards wiping out even the thought of an unfavourable trade balance of about £7 million with the United Kingdom, from which all but £5 million of its £20 million worth of annual imports come.

Politically, the island is an independent entity owing allegiance to the Queen (and in practice bowing to the Privy Council, who advise her) ; in domestic matters its government, the States, is the sole arbiter of policy, but in

foreign policy, although it has in theory freedom to ignore developments in the United Kingdom, Jersey follows Westminster without fuss. The States is composed of 52 members: 12 senators, who are elected on an all-island franchise for nine years each (four of them retire every three years); the constables of the 12 parishes of the island, who sit for three years; and 28 deputies, who are elected parochially and sit for three years. Up to 1856, the States consisted of the constables and 12 *jurats*, who were appointed. In that year the deputies were added, but further reform did not come until 1948, when the senators were introduced and the *jurats* removed to a residual function in the judiciary, still called the Royal Court, which, in its original form, governed the island until 1771. The president of the States is the Bailiff, who is appointed; the Lieutenant-Governor, apart from certain residual powers in the matter of passports and the immigration of aliens, enjoys a purely representative function.

Government in practice lies somewhere between what is possible for a local council in the United Kingdom and what is thought important enough to occupy the time of Westminster. It is conducted with remarkable amity; there are no political parties, each member being elected on the platform he chooses. Opposition to any proposal is likely to be modified or met in private, so that the resulting measure passes easily (in English, which is the language of debate, although French is the official language) into law. There is no cabinet, but the committee system works without signs of undue stress.

Not much of the business of steering the affairs of Jersey is left to the parish councils, who fix rates—generally low by English standards—and supply law officers under the constable. The States and the Royal Court do all the rest. They assume, in their finances, something of the financial philosophy of Mr Micawber, and their budget reflects the happy state of the man who has spent only nineteen and six of his income. Last year there was, indeed, a deficit of £56,000 brought about by extraordinary expenditure, but it was more than made up for by the £1 million brought forward from the previous year, so that the £5.24 million revenue comfortably covered all that the committees had set out to do (and not one of them overspent its allocation). It also covered the public debt twice over.

All this is managed on an income tax of 4s. in the £1, mitigated by generous allowances (and the size of Jersey incomes may be gauged by the £2.4 million yielded in tax); by duties on spirits and tobacco which are like a dream of better days; and by airport dues. But there is no free medicine; school meals are an economic proposition; there are no agricultural subsidies (except for milk) and no marketing boards; and the thousand or more miles of road are something less than adequate for a motor population which approaches one car for every five people, in addition to the 3,000 hire cars which are the terror of Jerseymen (but bring in £300,000 a year). There is also an acute housing shortage, partly brought about by the diversion of building enterprise into constructing hotels, and partly by the States' encouragement of wealthy immigrants and the permission which it must give, if Jersey is to prosper, for the conversion of dwellings into guest-houses.

Jersey is a crowded island, with a population density of 1,500 to the square mile; and all of it is crammed into the third of the land that has not been given over to the intensive agriculture which produces fine tomatoes, new potatoes, vegetables such as broccoli, and spring flowers for the English early market—the source of much of Jersey's export earnings, now about £7 million a year. The need to keep farming in good fettle, and the conflicting need to maintain as much land as possible untouched by development to please the tourists, are aggravating factors in the shortage of houses. An effort to solve the problem has, however, been made. Last year, a comprehensive report on future development was drawn up by Mr W. H. Barrett and Sir William Holford and Partners and presented to the States, including a recommendation to build 2,000 houses in the next decade.

Some of these houses are frankly earmarked for the wealthy exiles whom it is still the States' policy to attract—and wealthy is the operative word: a prospective immigrant who does not intend to work must have £5,000, in addition to such qualities, less tangible, as the responsible committee decides are desirable. He may buy an existing house, but his application will be considered "on its merits." Unless no Jerseyman is prepared to buy a plot of land advertised, as it must be, in the local newspaper, the incomer may not buy one to build on, and will not qualify for that basic privilege until he has lived on the island for several years (some say ten) and accepted jury service. For less wealthy exiles who would like jobs in Jersey, the housing problem can be even harder.

For Jerseymen, it cannot be much easier: the guest-house rooms in which visitors are packed during the April to September season are shut up for the rest of the year. There is little new building to cope with the natural growth of the population (about 6,000 since 1951, during which time 2,500 houses have been built). Even if there were, the general level of Jersey salaries and wages is not high enough to tempt people to borrow the large sums of money needed (and much of the cheap money which circulated until the last British budget was merely reinvested, and did not get to potential housebuilders); nor is there any building society to which they could turn for it. Wages generally are equal to the British provincial rates, and are almost all negotiated by British trade unions; salaries are improving, but have less purchasing power on the island, where luxuries are cheap but necessities are dear. The rewards of shop or office work are smaller than most British employers would dare to offer. Yet labour troubles are rare, and unemployment is low.

It is on tourism that Jersey depends, but it is against tourism that many Jersey people, exasperated by the hordes of transistor-toting holiday-makers, are turning. The States has now acknowledged that enough is enough, and there will not be many more permits issued to new guest-houses, although hotels in the luxury class are still too few in the tourism committee's view. But nothing will stop the tourists, for whom Jersey remains, and will remain, an easy compromise between the strangeness of a foreign country and the familiar things of home. There are no formalities; the patois is hardly spoken and English is everywhere; car hire is cheap; the sea is warm; the licensing hours are long; and the countryside is glorious with sun. And if the island has the highest lung cancer rate in Europe, one can always give up smoking when one gets home.

NOTES OF THE WEEK

DOCK STRIKE

Mr Cousins Rides Again?

As *The Economist* went to press, the negotiations on dockers' pay appeared to be lurching towards their agony, complete with cabinet meetings, feverish discussions at the Ministry of Labour, and with Mr Cousins staring out from the television screens at a mass electorate which is unlikely to come to love him. The point at issue is a tiny one—6d. a day for dockers hired at time rates. The employers have satisfied the union on every other aspect of the claim. They have proposed to raise the guaranteed fall-back payments for men who do not find work; to increase time and piece rates by 3 per cent; and to discuss reducing hours of work from 44 to 42 a week next January. But the workers on time rates are the lowest paid in the docks (although the details of payments vary enormously from port to port): whether because of pressure from within his own union, or because he wishes to show his independence of the Government's policy of wage restraint, Mr Cousins is adamant that time rate workers must get more—reportedly, 4½ per cent.

The selection of one small and unexpected issue as his sticking-point is characteristic of Mr Cousins as a negotiator. Connoisseurs of Mr Cousins's undoubted professional ingenuity say that he has followed broadly the same favourite tactic throughout his industrial career: the tactic is to intervene in a negotiation just when tired men think that they are about to reach an agreement and ask for just that little bit more. Admittedly, too, he has picked the best (and most emotive) point at which to make his intervention. The parts of the port employers' offer which propose to raise fall-back pay and time rates by 3 per cent are broadly in line with the Government's income policy; the offer to raise piece rates by 3 per cent is not, because piece rate earnings rise with production anyway; and a move to reduce the working week (i.e. to pay for two more hours at overtime rates) would superimpose an additional element of cost inflation. But by raising the increase in time rates to 4½ per cent, the dockers would break through the Government's incomes policy in appearance as well as in fact; and the challenge is therefore being thrown down to fight a national dock strike over a matter of apparently only about £250,000 a year in terms of hard cash, but of much more than that in terms of industrial and national example.

It remains to be seen whether the employers will think that bearing the disruption caused by a strike will be worth this. Those who believe that Britain will never restore its economy to rights until an incomes policy is made effective will soberly

We Have Been Here Before

The similarities between 1958 and 1962 grow more and more extraordinary:

(1) **The Beginning:** Britain entered 1958 with Bank rate at 7 per cent, the level to which it had been raised the previous September during an exchange crisis which the Government thought had been due to demand pull inflation, but which other people thought had really been caused by speculation about the Deutsche-mark and by wage push inflation.

Britain entered 1962 with Bank rate at 6 per cent; the rate had been raised to 7 per cent the previous July during an exchange crisis (as above).

(2) **Government Expenditure:** Mr Thorneycroft resigned in January, 1958, because the Cabinet refused to cut Government expenditure for the new financial year to the target rate which he had promised during the previous year's exchange crisis.

Mr Selwyn Lloyd did not resign in February, 1962, although the Cabinet . . . . (as above).

(3) **Politics:** The Liberals won Torrington in March, 1958, a seat which the Conservatives had held at the previous general election with a majority of just under 10,000.

The Liberals won Orpington in March, 1962, a seat which . . . . (as above, but substitute "just under 15,000").

(4) **Budget:** In April, 1958, Mr Heathcoat Amory introduced a budget which gave away £50 million in tax reliefs, but which *The Economist* criticised as likely to be insufficiently reflationary unless the Chancellor took further steps to stimulate demand later in the year. However, immediately after the budget the Chancellor began in fact to talk about restimulation and to move Bank rate down by ½ per cent as a first step . . . .

In April 1962 Mr Selwyn Lloyd introduced a budget which gave away no net tax reliefs, and which *The Economist* criticised . . . . (as above).

(5) **Wage Claims:** Throughout early 1958 the Government resisted excessive wage claims without running into the expected strikes, although *The Economist* criticised it for buying off a railway strike by a wage offer of 3 per cent to railwaymen, together with a promise to start reviewing the whole railway wage structure later in the year. However in May, 1958, Mr Cousins unexpectedly led his Transport and General Workers' Union into a London bus strike, which was widely unpopular with other trade union leaders and which he proceeded to lose.

Throughout early 1962 . . . . (as above, but substitute "dock strike" for "London bus strike" and insert question marks at the end).

(6) **Swing of the Political Pendulum.** In April, 1958, before the outbreak of the London bus strike, Labour's sweeping successes in the county council elections had suggested that in the following month's borough elections it should secure more than 500 net gains. In fact, however, by the time the boroughs went to the polls a sudden anti-Labour swing, apparently explainable solely by the unpopularity of the bus strike, cut Labour's net gains to 200 fewer than this. This was the clear starting point of the Conservatives' political recovery which led up to their return to power in October of the following year.

In 1962, Labour's gains in last week's Scottish burgh elections suggested that in this week's provincial borough elections (i.e. not counting London boroughs) it might expect to secure more than 300 net gains. Those borough elections were being held on Thursday, and the results will have been announced by the time this issue is in readers' hands (see page 569 for a detailed bogey scorecard). Probably the threat of a dock strike has come too shortly before the poll to affect these results; but, if the strike occurs, the political swing from now on will certainly be watched with interest.

(7) **Economic Expansion.** Starting from the firm base provided by its outfacing of the London bus strike, the Government set out from the autumn of 1958 on the most successful brief period of economic expansion in British history. In the following eighteen months the real earnings of British workers rose at a faster pace than ever before, although (or rather because) there was a definite pause in the element of wage inflation provided by national (as distinct from local) trade union wage bargains. This period of economic expansion came to an end soon after wage inflation, and the consequent need for economic restrictions reappeared with the granting of the Guillebaud award to railway workers in early 1960.

judge that it is worth while—provided the Government acts resolutely about introducing emergency labour to keep the docks running during a strike. The political, as well as the economic, effects of this threatened strike could be climactic; the note on the previous page draws the weird parallels between the situation of the British economy now and in 1958—up to and beyond the moment in May 1958, when Mr Cousins plunged the country into the admittedly much lesser inconvenience of a London bus strike. But on Thursday afternoon, some 80 hours before Sunday's dock strike was due to begin, it was still quite uncertain whether the Ministry of Labour or the port employers or Mr Cousins or the British people at large would recognise how close these parallels with 1958 were.

NUCLEAR TESTS

Belt Busting

No good has been done to the reputation of the United States by its plans to carry out high altitude H-bomb tests. The re-examination of the plans announced by Mr Kennedy on Wednesday is a good thing. Scientists abroad look on the tests as a crude demonstration of American one-upmanship and have not hesitated to say so. The United States, lagging behind the rest of the world in the new science of radioastronomy, may be genuinely unaware of the effects of some of its experiments on other people's work. Last autumn, an attempt to girdle the world with a belt of copper needles failed, but has apparently not been abandoned. The belt of needles would have made it more difficult for astronomers to probe the outer galaxies and establish the origins of the universe, but they could have partly discounted its effects. The high altitude explosions may be worse. They could induce physical changes beyond the atmosphere that might take a generation to reverse. On the other hand, they may prove damp squibs.

What has infuriated the scientific community is the American idea of embarking on a series of experiments whose consequences are wholly unpredictable without having the good manners to inform the rest of the world through international organisations set up specially to deal with such cases. All countries share the same heavens and live beneath the same van Allen belts of particles, exciting, newly discovered and barely explored, that spiral hazily from pole to pole, swinging up to 4,000 miles into space as they go. What right, it might be asked, have the Americans to take risks with man's physical environment without preliminary consultation? The tests, if they take place, are expected to produce a short-lived interruption in radio communications by blowing holes in the ionosphere, which acts as a reflecting layer for radio signals; and a long-term (possibly ten-year) disturbance in the van Allen belts, upsetting the earth's magnetic field. But these effects have not disturbed scientists anything like so deeply as the principle they feel to be at stake—that a handful of scientists should feel free to disrupt and at worst destroy the work of their colleagues, and in this case on arguable military grounds.

NATO

Shortlived Harmony

Overshadowed by the row over Berlin between Washington and Bonn, the harmony of the Nato ministers' meeting that ended in Athens last Sunday now seems remote. It is a piece of history that is worth recording, all the same, for the ministers came to some sensible decisions. When they met on May 4th they firmly shelved the idea of a Nato deterrent, even if they did not bury it. The ministers agreed instead on a series of modest measures to

Nato under the world's eye

give the Europeans more knowledge about nuclear weapons and a greater say about how they would be used. But the essence of the measures is that President Kennedy's finger remains firmly on the trigger. For the moment at any rate Nato has set its face against any enlargement of the circle of nuclear powers.

European fears that a time may come when Americans are unwilling to commit nuclear suicide for Europe have been calmed by an American gesture. In fulfilment of an old pledge, the United States has placed five Polaris-carrying submarines under Nato command and offered others later. The force will not come under General Norstad, the Supreme Commander in Europe, but under the Supreme Commander, Atlantic, based in Virginia. This perhaps diminishes the force of the gesture. But only the French remain sceptical of the painstaking attempt the United States is making to give the Europeans a greater sense of security without actually giving them nuclear triggers of their own.

The one topic to which even the Greek air could not bring sweetness and light was the old tussle between the American advocates of stronger conventional forces in Europe and the British advocates of tactical nuclear arms. Inside and outside the council chamber Mr McNamara, the American Secretary of Defence, rammed home the argument that excessive reliance on nuclear weapons to resist even a local attack could lead direct to full-scale atomic war. Mr Watkinson has now agreed to build the British Army of the Rhine up to the committed level of 55,000 men. Stories of American requests to the west Germans for more conventional divisions, in addition to the twelve already planned, appear to have some substance. The thought may chill some British spines. But where else can the men and the firepower come from so long as British defence policy fails to provide adequate conventional forces on the continent?

NURSES' PAY

Arbitrate?

There is to be another full dress parliamentary debate on nurses' salaries next week. Public sympathy for their claim is just about spilling over its top, and the nurses' divided leaders would be well advised to choose this moment to take their case to arbitration at the industrial court; if they did the Government would almost certainly thankfully accept a recommendation to give most nurses a substantial increase. One can see why the original offer to the nurses was rigidly limited to the national "guiding light" figure of only 2½ per cent. The salaries and grading structure of the nursing profession were thoroughly reviewed three years ago, with increases in salaries ranging up to 25 per cent, and they had another pay increase of 5 per cent only just over a year ago. The staffing position is better than it was, with 10 per cent more whole-time and 70 per cent more part-time nurses in general hospitals than there were five years ago; the big increase in part-time staff is a particularly welcome sign that more married nurses are now returning for part-time service in the profession. At the bottom of the scale there is not necessarily a good economic case this year for giving young women nurses an increase that is again substantially bigger than the growth in national productivity as a whole.

But higher up the scale most people will agree that trained staff nurses (£525-£656 a year) and ward sisters (£656-£840) are still paid far too little. Any arbitration court now would be likely to recommend larger discriminatory salary increases for trained women who stay on for a reasonable time in the profession and for special categories of nurses (e.g., mental nurses) who are in really short supply; probably indeed, in the present climate of opinion, any court would (less wisely) recommend increases above 2½ per cent for all nurses of every description. But if the nurses' leaders continue to reject arbitration, their favourable opportunity for cashing in on public sympathy may pass; in any case there is almost bound to be a widening split between the professional organisations who must slowly come to recognise this, and the Confederation of Health Service Employees, which is at present mainly concerned to build up its trade union power.

LABOUR AND EUROPE

Avoiding the Rubicon

Mr Gaitskell's three main political headaches have this week all swum into the headlines at the same time. Two of them—the grave threat to Labour's recovery provided by the possibility of a dock strike, and the success that he has achieved by outfacing last week's rowdies from the Campaign for Nuclear Disarmament — are discussed on pages 541 and 570 respectively. The third main problem is Labour's attitude to the common market, and to this he devoted the whole of his allotted party political telecast on Tuesday. His statement fell some way short of being a success, but a very long way short of being a failure. The impression he imparted by his solo performance was that of a cautious, responsible but very conservative statesman who has unfortunately felt unable to make up his mind. He has burned no fatal boats behind him; he firmly rejected the argument that joining Europe would intolerably diminish Britain's political sovereignty; but he still seems too much concerned to placate an internal pro-Commonwealth vote which (sentimentally sad though this may be) probably does not really exist. Nevertheless the importance of his one positive judgment as a professional economist ("probably a slight advantage economically in going in in the long run, though there would be some nasty shocks in the short run") should still in the end outweigh his apparent failings as a political tactician. For it is in the long run that the influence on the Labour party of Mr Gaitskell's opinions as an economist most generally tend to come alive.

RHODESIA AND NYASALAND

Labours of Butler

Sent off to sweep out the Rhodesian stables, Mr Butler flew away from London this week armed with his own design for a vacuum cleaner. As soon as he arrives in Salisbury on Saturday he must set about persuading the federal government that the British Government can be trusted. He wants the Rhodesians to co-operate with the handful of men—an economist, a constitutional lawyer and a few others—he plans to send out later to suck in ideas and information about central African thinking. This homework will be guided by Mr Butler himself, whose arm will extend from London to move his beat-as-they-sweep-as-they-glean men around the three territories.

More immediately, Mr Butler will do his best in Nyasaland to talk Dr Banda into helping this future committee in its first task—which is to decide how much it would cost Nyasaland to leave the federation, and what sort of economic links could be retained if it did. Mr Butler has already acknowledged that Dr Banda has an electoral mandate for secession; the likelihood is that Mr Butler now thinks that Dr Banda can go ahead and secede. As an entirely separate problem, Mr Butler—and the men he will send after him—will work at rearranging the Northern and Southern Rhodesian furniture so that the two may retain closer links than, together, they might have with Nyasaland. All this disturbance is certain to raise the maximum of dust.

LAOS

Fancy Fray

It would be premature to regard the fall of a town and a village in north-west Laos as the start of a new communist offensive. But the British Government is right to take it seriously and, as joint co-chairman of the Geneva conference, to ask Russia, as the other co-chairman, to restrain its Asian allies. The Americans, too, have protested. This is the best way to prevent one incident leading to another and possibly growing into a real offensive. Doubtless Mr Malcolm MacDonald, the leader of the British delegation at the Laos conference in Geneva, explained this to the Laotian communists and neutralists during his visit to the Plain of Jars, where he arrived on Wednesday.

Just which allies of Moscow's are involved is hard to say. The spokesman of the right-wing Boun Oum government in Vientiane has attributed both defeats to combined action by the Chinese and north Vietnamese, brushing aside the communist-minded Pathet Lao as of little account. The Vientiane spokesman, however, has long been known for the vein of fantasy with which he treats current news. The village, Muong Sing, fell on May 3rd. (The spokesman said the Chinese had helped the Vietnamese to take it, and then gone back across the border.) The town, Nam Tha, was taken three days later.

It is not difficult to guess why the communists struck. For the past few months, well-trained Meo tribesmen in northern Laos, and Khas in the south, have been turning the tables on the communists by infiltrating behind their lines and controlling the countryside, leaving the towns to the Pathet Lao and their neutralist allies. A conventional success was needed, and it has been won at the expense of the right-wing regulars, who continue to be less successful than their irregular tribal allies.

It now seems desperately late to implement the provisional agreements reached by the Laos conference earlier in the year. Everything was to depend on the formation of a government of unity representing the right, the left and the neutral centre. But the right-wing Prince Boun Oum and his "strong man," General Phoumi, are still reluctant to commit suicide, as they claim to see it, and continue to defy the State Department, even though the monthly American cheque of $4 million has been withheld since February and inflation now reigns unrestrained.

BY-ELECTIONS

No Bogey for Montgomery

One of the more dampening memories of the Liberal party is that in 1957, when their last mid-Parliament recovery in popular support was just getting under way, they went and lost Carmarthen, one of their few parliamentary seats, to Labour. The main reason was that 4.6 per cent of the electorate, who had voted Liberal in 1955, switched in 1957 to vote for the daughter of Lloyd George, even though she was carrying Labour's colours. But another reason, little noticed at the time, was that the Welsh Nationalists (7.8 per cent of the poll in 1955, 11.5 per cent in 1957) picked up 3.7 per cent of the poll from the Liberals as well, in the usual orgy of diminished by-election responsibility. Next Tuesday the late Mr Clement Davies's old constituency of Montgomery goes to the polls. The percentages here at the 1959 general election were Liberal 42.1, Conservative 31.3, Labour 26.6. This time a Welsh Nationalist is appearing, and can presumably be expected to pick up at least some part of the poll. At whose expense?

It is difficult (well, fairly difficult) to believe that he can run down the Liberals' share by the net 10-15 per cent that is presumably required to put either the Conservative or Labour in. The last general election provided no clear evidence about who is usually hurt most by Welsh nationalist interventions. At Anglesey in 1959 the whole of a newly intervening nationalist's vote came from the Liberals; at Cardigan (Mr Bowen's Liberal seat) it came from Liberals and Labour about equally; at Denbigh it came marginally from all three parties (but from the Liberal least of all). But did Mr Clement Davies also have a large personal vote in this remote Welsh fastness, part of which might now go Labour or Tory? The campaign, as well as the electoral arithmetic, is proving politically peculiar. All three "English party" candidates are busily promising to bring poverty-stricken rural Welshmen even greater help from English taxpayers than they are getting already, while the Welsh Nationalist is saying majestically that they would be better off without English help at all. In the absence, so far, of any public opinion poll from the constituency, no forecasts will be made here.

AIRPORT DISPUTES

Heated Air?

It looks as though the long-suffering airlines are getting tough with their trade unions. At both London's airports rows have come to a head during the past week with threats to lay men off if restrictive practices in support of pay demands are not

withdrawn. At Gatwick, British United Airways—built from former small airline companies, and now backed by strong shipping interests—runs aircraft on charter and trooping work, and has recently received licences to operate some regular services on European routes. On April 18th the supervisory staffs' union started to work-to-rule in support of their claim for a bonus scheme that would give their members at Gatwick the same earnings as those doing similar work for British European Airways at Heath Row; and on May 3rd the manual workers put in a claim for £1 a week more, supporting their claim by a similar work-to-rule.

The managing director then gave notice to all the 500 engineering employees that they would be sacked as from the coming weekend. For the unions the issue is simple enough: they resent the fact that their members at Gatwick get a couple of pounds a week less than their colleagues at Heath Row. It is complicated by the rumbustious managing director's desire to set up a company union (he is said to have pleaded: "Come and work for Freddie"); but basically what the company has done is to look at the nationalised airlines' accounts and decide that it prefers to make a profit. This dispute was temporarily calmed down by a reasonable compromise on Wednesday night.

British European Airways, with more tact, are doing something similar at Heath Row. The electricians who service their instruments claim that they need higher qualifications than those doing similar jobs for BOAC, and therefore asked for 6d. an hour increase, backing their demand with a strike. BEA is therefore planning to reduce its services, and is laying off many of its engineering workers engaged in servicing the planes that cannot fly with their instruments in poor order. There are hopes that the affair, despite Heath Row's reputation, will be sorted out by arbitration. But in view of last year's dreadful results (BEA had a loss of about £2 million), it is hardly surprising that the airlines do not want to start the summer with their costs even higher than before.

PORTUGAL

Unhappy Returns

FOR the second time in a week Lisbon has been the scene of demonstrations ending in loss of life. On May 1st the police appeared in force to deal with demonstrators called out by the communist underground in support of the students who are on strike in pursuit of their quarrel with the minister of education. In the ensuing clash, one demonstrator was killed and many dozens injured. On May 8th further demonstrations were met in the same fashion; a woman was killed and at least nine people were wounded.

Salazar: no cause for smile

These incidents are chiefly interesting for the light they throw on the opposition in Portugal. Clearly, the regime is now exposed to open challenges, in which the communists have for the first time revealed something of their real strength. Dr Salazar was 73 on April 28th, and his time may perhaps at last be running out; on his birthday there was trouble in a mining town in the south of the country where the police opened fire on a crowd protesting against political arrests, killing two people and wounding twenty.

Dr Salazar still has to worry about the war in Angola, despite official talk about "mopping-up operations." The Portuguese government, complaining of the difficulties placed in the way of economic progress in Angola by the war, has arranged for a loan to the provincial government by the Angola Commercial Bank of £1,200,000, "placed in the service of the crusade." The problems of a government faced with the financial drain of a colonial war, which yet dare not alienate its chief supporters by raising taxes to meet it, are strikingly illustrated by the emphasis placed on the "voluntary" nature of the bank's contribution.

SPAIN

The Caudillo Strikes

DR SALAZAR is not the only Iberian twin in difficulties. General Franco, too, has had to suppress demonstrations in his capital, on May 7th, though in his case without loss of life. But there is a significant difference between his situation and Dr Salazar's. Whereas the Lisbon disturbances were political in origin, the Madrid demonstrations were connected with the miners' strike in northern Spain. The students of Madrid want to express their support for the miners, but the government is unlikely to feel seriously threatened by their doing so. General Franco has no Angola to make him vulnerable.

All the same, he has been obliged to declare a state of emergency in the three northern provinces of Asturias, Vizcaya and Guipuzcoa, and arrest twenty-five students, including one American, in Madrid. The miners' strike involves sixty thousand men in the three provinces, and there has been similar action in shipyards and metal works. The miners claim that the employers, after agreeing to pay a higher wage, were dilatory in keeping their word. The employers blame the government for its slowness in sanctioning a rise in certain coal prices. The government blames agitators and communists. It is only two years since a new law included strikes in a list of offences amounting to "military rebellion," to be tried by military courts. It remains to be seen whether the law will be applied. Probably it will not; Spain is anxious for association with the common market, and the government is most unlikely to do anything that would injure its prospects.

The Economist

MAY 10, 1862

NEEDY GOVERNMENTS

THERE was never a time at which a general survey of the financial condition of foreign States was so important as it is now. Many of them are endeavouring to borrow money of us, and those who think of lending should begin by studying. Our money market is in a state of exceptional, peculiar, and, so to speak, lamentable wealth. The cessation of the American trade has set free much capital which would otherwise have been beneficially and profitably employed: we have for the moment a singular surplus of disposable funds, of which it is reasonable to suppose that needy Governments will take advantage. But this is not the sole peculiarity of our present position: the principal one remains, and it is this—*all great Governments nowadays are needy*. There is scarcely a single first-class Power (England alone excepted) which can show a balance sheet with a healthy equilibrium between expenditure and income—which is not now, or has not been lately, encumbered with large deficits—which has not lately been a large borrower, or is not likely to become so soon. But the effect on the money markets of Lombard Street and Paris is in comparison a trivial matter. The true point of inestimable importance is the perpetual absorption of immense hoards of capital in expenditure which is not reproductive. It *may* be necessary: that is a large question which no parenthesis will decide. But the indisputable fact remains, that the expenditure of a Government is not *creative*; it makes nothing, and every sixpence which it spends is so much abstracted from the *making* power of the people. At no period of diffused peace, perhaps, has this abstraction of capital ever been so much in excess of the regular revenue—of the ordinary incomings of the different nations of the world as it is now.

Three Banks have merged.
Separately, they have large assets,
a fine tradition and a wealth of experience. United they offer a comprehensive service in all matters affecting business with the East and the Middle East. Their advice and help are your surest "passports" to profitable trade with those areas.

PLAYING FIELDS

Mr Lloyd's Bounty

THE Chancellor of the Exchequer deserves a modest cheer (he would expect no more) for releasing a further £6.3 million for capital expenditure on sport and physical recreation. This will bring total public spending to £26.4 million in the present year, of which £11 million is specifically for school playing fields. This gesture towards both the Wolfenden (sport) and Albemarle (youth service) reports will mean some useful progress in encouraging amateur athletics, and in giving more children a chance to play and receive qualified coaching off the streets. There is a case for earmarking a bigger proportion of future grants to recreation facilities for the real misfits, whose social plight is much greater than that of young people who naturally gravitate to some sport (however ill-endowed with public funds) or to an established youth club. The Government has not yet acceded to the Wolfenden committee's recommendation to set up a sports development council with a dowry of £5 million. This piqued some Labour MPs when the Chancellor made his announcement on Tuesday, but the limited means at his disposal may be better devoted at present to loans to local authorities, who already have a fair backlog of recreational projects awaiting Treasury approval. And cannot something much more positive be done to ensure that school playing fields are made more readily available to young working people outside school hours?

CZECHOSLOVAKIA

Meatless in Prague

CITIZENS of Prague and other Czechoslovak cities now enjoy seven meatless days a week; for some time supplies of meat, whether fresh, frozen or tinned, have been unobtainable in the big towns, and various other foodstuffs have been in short supply. The press and the radio have been full of complaints; the party leaders of apologetic admissions and explanations. On May Day, in Prague, students are reported to have demonstrated against the current shortages with cries of, "We have Gagarin and Titov, but we have no meat."

All this should not be exaggerated. The Czechs are used to a better standard of living than anyone else behind the iron curtain; they are also accustomed to periodic shortages. All the same the party leaders are clearly worried; the promised benefits of collectivisation, now virtually complete, are slow to materialise. Production is increasing but not nearly fast enough; last year it rose by only one per cent, instead of the planned 7 per cent. This year planned deliveries of meat, milk and eggs have fallen

Slow Clean-up after Suez

CREDITORS are sharpening their claws for the foreign exchange that Dr Kaissouny, the United Arab Republic's minister of economics, managed to whip up on his recent trip to the United States. Among them are the very large number of British nationals who are still trying to retrieve something from the unholy mess that was caused by the British attack on the Suez canal more than five years ago. Their cause, often and patiently argued by the Foreign Office, was once again raised when Dr Kaissouny stopped briefly in London on May 2nd. Now, with luck, it looks as if the next few weeks may bring some of them the comfort that is grossly overdue and still no more than meagre.

The financial bargain between Britain and Egypt struck in February 1959 reopened the door to a civilised relationship between the two countries. But a lot of clearing up had still to be done. Two main groups of British nationals had outstanding claims against the Egyptian government: the property of one group (small in numbers, but including most of the large companies) had been nationalised and was therefore lost to them forever; the property of the other group (about 5,000 people) had been sequestrated and was to be returned on application. Under the financial agreement, Egypt handed over £27½ million to provide compensation for nationalised property and to cover damage to sequestrated property. Egypt also undertook to allow people whose property had been desequestrated to transfer the equivalent of £E5,000 each into sterling. This last undertaking is the rub. Because of its acute shortage of foreign currency, Egypt has not been able to allow these British nationals to take their currency out of the country.

Desequestration has proved a laborious and soul-destroying business. Most of the owners have had to operate by remote control through agents, and the Egyptian government has not allowed anything to be released until the owner or his agent could produce certificates proving taxes had been paid in full. This was hard for everybody, but particularly for those who had been cleverest at dodging taxes. So far about two thirds of the claimants have won through and got their property back (although some, confusingly, have now had it taken again under the new batch of sequestrations enforced last autumn). But what good is it for a man living in Britain to have property in Egypt? About a thousand people are believed to have returned to try and pick up the strands of their life in Cairo or Alexandria once more, but Egypt, in its present stage of development, is not a welcoming place for a foreign investor, trader, or agent. Most of the claimants are struggling to achieve the transfer of funds that was allowed by the agreement; those who own more than £5,000 are probably resigned to whistling the rest good-bye.

After hard bargaining, the Egyptian government agreed a year ago to the preliminary transfer of up to £E1,000 a person; so far, 280 people have been able to get some money out of Egypt under this scheme. The battle goes on to apply the £E1,000 agreement to the others and to extract the remaining £E4,000 allowed by the agreement of 1959. The British Government has recognised, as indeed it had to, that two bad cotton harvests have made it impossible for Egypt to honour all its international obligations. But after the recent discussions with Dr Kaissouny, some new form of compromise device seems to be in the air.

DR KAISSOUNY does not have to worry about the other major clearing up problem—compensating those who have lost property through nationalisation or damage. Having handed over £27½ million of compensation, the UAR is in the clear. The British Government is now having to assess the claims (which is appallingly difficult when it comes to damage to sequestrated property), apportion the compensation as fairly as possible and, perhaps, add to it. The wheels grind slowly as a committee of lawyers hears the claims, and the subsequent appeals, in public. The smaller a man's claim, the better he does: if his loss is under £5,000, he is entitled to 90 per cent of the assessment; if it is over £500,000, he only gets 20 per cent. The total claim for nationalised property is about £60 million; the claims for damage to sequestrated property have by no means all come in and it may take at least another year until the total is known.

When the £27½ million extracted from the Egyptians was discussed in the House of Commons in March, 1959, the Prime Minister said that he did not "exclude a further contribution from public funds." The Government has never advanced from this rather negative form of assurance. A more generous approach seems urgently called for. Probably nothing will be settled until all the claims are in. It will then have to be decided whether any additional money provided should go to the large nationalised concerns, such as British American Tobacco or the Smouha estate, or to those frustrated and long-suffering people who have recovered their property, but have as yet almost no means of enjoying it.

MONROE

gravely short. The government, according to Mr Novotny in a May Day speech, is having to import "great quantities" of various foodstuffs, although the country's agricultural resources "are far from being fully utilised." The leaders openly admit that the problems of organisation and management created by collectivisation have not been overcome; they are naturally less willing to recognise that a damaging blow may have been struck at the farmers' morale and initiative.

It is, however, curious that with agriculture in such difficulties the regime should have chosen some weeks ago to introduce a social security law for collective farmers which deliberately discriminates against those who retain their private plots. Throughout eastern Europe these plots, although tiny in area, produce a quite disproportionate share of basic foodstuffs; most communist regimes put up with them for this reason. The Czech attitude is no doubt an illustration of the tougher and less liberal line that Mr Novotny would like to pursue. Perhaps another example is his treatment of the more progressive Mr Barak, formerly minister of the interior, who on April 20th was sent to prison for fifteen years for alleged embezzlement.

THE PRESS

Professional Privilege?

SHOULD journalists who get information in confidence be given absolute legal privilege to protect the secrecy of their sources when challenged in court? A survey* by the International Press Institute (which holds its annual assembly in Paris next week) suggests that a majority of journalists in 24 countries would like this privilege—but without being at all clear what it would involve. Virtually complete protection seems to exist in Austria and the Philippines and in a dozen states in the United States; circumstances favouring journalistic secrecy are also said to be present in the courts of Sweden, Norway, west Germany and Switzerland. In Britain, where legal protection does not even extend to the confessional, the courts have usually been reluctant to press journalists to the point of revealing confidential sources (although the issue reared its head in the Bank Rate Tribunal of 1958). It is, of course, open to the individual newspaper or reporter to protect sources by voluntarily incurring contempt of court. In the last resort this remains the effective (if painful) way both of appealing to public opinion on the ground that the court's demand was excessive, and, where actual legislation has been introduced to restrict journalistic freedoom, to make it a dead letter.

Thus, in the New South Wales case of 1953, the *Sydney Morning Herald* defied an act passed by the Labour government of the state which was intended to prevent the leakage of information about malpractices in the Sydney city council. Judgment was given for the paper on the ground that, as a corporate body, it could "no more disclose information than drive a motor car"—but, the judge went on, if the paper had, in fact, been ordered to produce documents "it would have been a different matter." That may be so, but it was the actual refusal to disclose sources that rallied public opinion and discredited the new act.

In countries where the courts respect professional secrecy, unless in exceptional circumstances, it would surely be undesirable to create legally privileged groups whose interests (in, for example, crime reporting) might run directly against the citizen's duty to aid the police and the ends of justice. If British newspapers were to make such a claim, as of right, public opinion would be strongly opposed, and it might have a low idea (sometimes rightly) of the kind of journalism that wanted such protection. In countries where official powers of interrogation are misused in extorting information from the citizen, journalistic privilege would undoubtedly be useful; but these are hardly the states where the courts would respect it.

SOUTH AFRICA

Race to a Conclusion

LOOK at the poor Rhodesians, say Dr Verwoerd's followers, and see where repeated concessions to non-racialism get the white man. The Afrikaner nationalists are right: nothing short of full black control will for long satisfy the Afro-Asians, the United Nations, and the central African blacks themselves. From this, Dr Verwoerd argues that there is no point in making concessions. But will apartheid—or even partition—better withstand the revolutionary pressures that South Africa is increasingly beginning to feel? The Afrikaners, so logical about the consequences of "appeasing the Afro-Asians," might consider the logic of an apartheid solution that would be both just and durable. It would have to be freely negotiated and agreed to by a majority of each race: separate, "tribal" Bantustans would have to be genuinely self-governing territories—and economically viable at that. And something would have to be done about the urban Africans working within white South Africa.

None of this is envisaged in the constitution steamrollered through a meeting of Transkei chiefs on May 3rd. The chiefs, all government employees, approved a constitution that will give the Transkei a glorified county council; 64 chiefs and 45 elected members will run the local affairs of the 1,300,000 Africans who inhabit this backward south-eastern corner of the republic. The decisions of the new Transkei legislative assembly will be subject to approval by the president of South Africa.

If all this is as unacceptable to the majority of Transkei tribesmen as reports suggest it is, then it is likely to be equally unacceptable to the United Nations, whose representatives Dr Verwoerd, with diplomatic grace, has admitted to South-West Africa. The South Africans might try to fob the UN off with a Bantustan within South-West Africa, but that would not resolve the argument whether or not the territory was a UN responsibility—or part of the South African state. Nor would it be likely to serve as protection from the increasing pressures being felt by a group of people whom even the Rhodesians, with some compassion, might refer to as the poor South Africans.

HOSPITAL STATISTICS

Clearing the Clutter

THERE will be a general welcome for Mr Powell's determination, expressed last week to the annual conference of the Institute of Hospital Administrators, to bring some sense into the compilation of hospital statistics. He took three examples of figures at present returned by hospital authorities, which may be completely meaningless but which are often quoted in support of a particular proposition or criticism.

The first example concerns hospital establishments. Up to quite recently, hospital authorities used to budget for an increase in staff far beyond what could be achieved in the year and their annual estimates were inflated accordingly. Similarly, staff complements that are clearly unattainable in the foreseeable future, and merely represent someone's aspirations, are often used to prove the need for expansion—one wonders to what extent the figures bandied about on the nursing shortage have any realistic basis. The Minister of Health's second example was taken from the return of hospital beds. Figures of "available staffed beds," "temporarily unavailable staffed beds," "beds unused for lack of staff"—all should have a precise and helpful meaning, but too often bear no relation to what the hospitals either want or could cope with. The 10,000 beds returned in 1960 as "unused for lack of staff," and duly recorded in the Ministry of Health's annual report, have now been categorised by the Minister himself as a lie.

But probably it is the figure for waiting lists that has been misused most often. Fluctuating between 430,000 and 530,000 over the health service's first ten years, it has been cited by the Left to justify its proposed abolition of private pay beds in hospitals, and by the Right as illustrating how inadequately, by comparison with what "free consumer choice" would have achieved, the health service has fulfilled the demands made on it. In fact, as Mr Powell emphasised, some waiting lists tend to melt away when they are critically and intelligently examined and patients removed from them who have died, recovered or been admitted to another hospital. When they have been properly deflated, it will be much easier to assess where additional building and additional staff are really needed. In forthrightly castigating these statistical returns, Mr Powell did not forget the need for a measure of efficiency by which performance in the hospital service can be judged. Such an instrument has not yet been satisfactorily forged. At least there is hope that it now may be.

LETTERS

Merit Awards for Doctors

SIR—The disparity between the various specialties in the distribution of distinction awards, to which you drew attention on April 28th, has an outcome which is not apparent at first sight. Though the proportion of consultants holding an award at any one time is limited to 34 per cent, the Royal Commission found that, since few consultants receive an award soon after their appointment, the probability that a consultant will receive an award at some time in his career is as high as 43 per cent. But this is the average for all specialties and it means that approaching 100 per cent of general physicians and surgeons must sooner or later be thought worthy of an award.

Since general physicians and surgeons, like all other consultants, vary in their ability from the very good through the good to the less good, it would seem that in the eyes of the selection committee the mere attainment of a post as consultant general physician or surgeon must of itself be tantamount to the possession of "outstanding distinction which merits additional reward."

Yet it was the intention of the Spens Committee, on whose report the whole awards system was based, that remuneration in the national health service should not reflect the disparities that existed before 1939; moreover, the committee stated that "we are certain that unless all specialists in whatever branch of medicine they practise have an opportunity of reaching the highest levels of remuneration the ancillary specialties, however important, will find it difficult to attract sufficient recruits of suitable calibre." It is open to question whether the allocation of awards in recent years could be held to accord with the spirit of this recommendation.

While it would be quite wrong to imply that the selection committee has been activated by other than the highest motives in their operation of the awards system, one can nevertheless sympathise with the general practitioners in their reluctance to become involved in a similar scheme which might appear to be just as fair in theory but no less unsatisfactory in practice.—Yours faithfully,

ROBERT J. EVANS
Woking and Chertsey Group Laboratory
Surrey

Co-operative Housing

SIR—The article "All Co-oped Up" (March 31st) has been called to our attention. Your New York correspondent, in the space of a few paragraphs, has attempted to give a knowledgeable account of co-operative housing in New York City. This subject is far too complex for such superficial treatment.

For example, the term "state-aided co-ops" is used without explanation of what such aid consists of. The term may mean assistance in acquiring costly land sites for slum clearance; it may mean tax abatement on improvements for a number of years; or it may mean government insurance on mortgages; and it can mean that the government will provide mortgage financing.

The majority of co-operatives in the New York area have been built by private builders without assistance from the government except for insurance on mortgage loans. Only recently has the government provided direct mortgage loans.

Notwithstanding the fact that some co-operatives receive aid, in one form or another, from the government, and others do not, the article fails to point out that this is not the basic difference between the three different kinds of co-operatives which exist in the city of New York. The fundamental difference is that of motivation. Speculative-luxury co-operatives are motivated to profit the individual owners of the apartments. Builder-sponsored co-operatives are motivated to profit the builder. Consumer co-operatives are motivated to provide housing for moderate-income people on a non-profit basis.

It is the consumer type that has engaged our attention for the past 35 years. It is this type in which over 24,000 families in New York City have invested $52,590,000 in order to obtain decent shelter. The average monthly carrying charges in these co-operatives are $20 a room. It is in co-operatives of this kind we find three generations of families living in the same community, and in which the turnover is less than one per cent a year.—Yours faithfully,

A. E. KAZAN
President,
United Housing Federation
New York

BOOKS

Care and Community

Mental Hospitals at Work
By Kathleen Jones and Roy Sidebotham.
Routledge. 236 pages. 30s.

Living with Mental Illness: *A study in East London.*
By Enid Mills.
Routledge. 196 pages. 28s.

THESE books are complementary. The first concentrates mainly on the work going on within three contrasted mental hospitals; the other, sponsored by the Institute of Community Studies, describes the home background of a sample of patients going into a mental hospital and their condition, and their relatives' experiences with them, after they came out. Although each in its own way paints a gloomy picture, there are reasons for suspecting that these pictures may not be typical of conditions generally today. Both studies were completed in 1958-59, and much has happened since then within mental hospitals, in the community, and particularly in the development of a relationship between them. In spite of the authors' half-hearted attempts to conceal the identity of the areas one can presume that the area covered by Dr Jones's very large hospital is Liverpool, and that Miss Mills's east London borough is Bethnal Green; and both are atypical. Liverpool has a high proportion of immigrants and, as a port, exceptional obstacles to successful follow-up and community care. Bethnal Green is more unusual still. Its admission rate to a mental hospital is very low, perhaps because family relationships are particularly protective and because it has a large teaching hospital and psychiatric unit nearby, whereas its mental hospital is more than twenty miles away. Possibly only in the last resort did people go there. In any case it must be difficult for a hospital so situated to supply follow-up and domiciliary services on the scale arranged elsewhere.

Dr Jones, whose two earlier historical works are deservedly well known, has been joined this time by Professor Sidebotham, who presumably contributes the sections on costing and measures of efficiency. They compare three hospitals, a private one with 300 beds, a regional board monster with 2,750, and one of the rare mixed hospitals, with health service, amenity, and private accommodation, totalling 400 beds. The anatomy and physiology of these very different hospitals are described critically, lucidly and graphically.

In looking for comparative measures of efficiency the authors have examined costs and followed up samples of patients. They decide that the measure that means most is the cost of treating a short-term case. Despite—indeed, probably because of—its high cost of medical care, the private hospital shows up best because it discharges its patients more quickly; but the authors admit that the test may be misleading and that like is not being compared with like.

The panoramic view presented in her historical books leads Dr Jones to see the recent fall in the number of occupied beds in mental hospitals as a phenomenon that may turn out to be temporary, a ripple in a line that has risen steadily for a hundred and twenty years. It is salutary to be reminded of this, lest the down-swing of the last few years, and various over-enthusiastic forecasts, should lead to a general impression that major mental illness has been defeated in the same sense as infectious illness has been defeated. In an early chapter the authors marshal a variety of reasons for suspecting that "community care" will not prove adequate and that home may not be the best place to treat mental illness. So much has been heard in the last few years about the virtues of psychiatric beds in general hospitals and of community care that it is refreshing to have the case for the mental hospital so persuasively—even polemically—argued.

Nevertheless, "despite the difficulties in rehabilitating long-stay patients, in the five years 1955-59 more than 10,000 patients who had been continuously in hospital for five years or more were returned to the community." This quotation is from the supplement on mental health to the Registrar General's Statistical Review for 1959, published last week (HMSO, 7s. 6d.). Miss Mills's book gives a vivid account of the kind of homes some of them returned to, the lives they led there and the problems many of them created for their families. "Community care" is a comfortable catchword, and the author's chief service is to have broken it down into its component, and all too often unrelated, parts.

The reader will be bewildered by the numbers of agencies involved, ranging from the official—health and welfare services, employment exchanges, the Assistance Board, housing departments, and so on—to the voluntary and unofficial—missions, citizens' advice bureaux, clubs, the Family Welfare Association, settlements. Patients and their relatives must be even more bewildered. "Some people with problems remained quite out of touch with the social services, while another group of people with very similar problems attracted widespread attention." Miss Mills quotes from Sir Edward Bligh, formerly London's Chief Welfare Officer, writing in 1939:

> The multiplication of the social services is resulting in a growing bewilderment to the ordinary needy person. He finds himself . . sorely in need of a trustworthy guide.

But the relieving officer is no more.

Less abnormal areas than these authors have chosen already have community services of a high standard. There are several preconditions: a reasonably compact administrative unit; a mental hospital fairly close at hand; and a good relationship between its psychiatric staff, medical and other, general practitioners, and local health authority services. The "trustworthy guide" should be either the psychiatrist with a social worker if the patient is still in need of treatment as an outpatient, or, if he is not, the mental welfare officer of the local authority. At present, there are not nearly enough of any of these people to provide satisfactory community care over the whole country.

An Expansionist

The Economics of Education
By John Vaizey.
Faber. 165 pages. 21s.

Education for Tomorrow
By John Vaizey.
Penguin Books. 118 pages. 2s. 6d.

MR VAIZEY'S heart is unquestionably in the right place: on the side of educational expansion, and this for social, not simply technological reasons. His head is a much tougher nut—which is infinitely more valuable in the educational debate, even if it is inclined to bring his radical expositions to a dying fall on the jagged rocks of practicality. This may be confusing, particularly to the popular audience reading his new Penguin book (in the "Britain in the Sixties" series). Thus, parents who sit up shocked when told on page 30 that "to staff our schools adequately at this moment we need at least 100,000 more teachers" will find if they persevere to page 112 that what Mr Vaizey really means is that this target must be hit some time "in the 1960s"—which happens to be nearer the actual need. And, to take another subject of immediate and practical controversy, teachers whom Mr Vaizey encourages to ask for higher salaries are thereupon reminded, very properly, that

> there is a very little evidence that the rate of recruitment to the profession as a whole has been reduced by the payment scales which have been in force for the last few years.

Mr Vaizey's advice is that the teachers will only get satisfaction in this respect, and others, if they aim at full professional status, which means a progressive break with the working-class preoccupations of the National Union of Teachers (not a popular recommendation at the moment). The point prompts him further to argue for the complete break-up of existing local authority control, to be replaced by the Ministry of Education at the top end and by teacher-parent governorship of schools, or groups of schools, at the local level.

Mr Vaizey's more academic study is a useful, and generally careful, analysis of the educational system in terms of expenditure, productivity and individual and community returns. The attempted analogy with industrial investment, although a stimulating one, does not always bear being pressed too far. Mr Vaizey recognises this—although his summary of the (mainly American) work in this field deserves wider attention. He has some interesting points on education and economic growth in underdeveloped countries (but the section on Greece, specifically promised on page 125, does not appear).

The conclusion, for both audiences, is the same: that education is a social investment, that it must primarily be weighed and financed in this sense (although practical arguments help things along), and that the final justification—and practical success—of expansion can only be properly found by regarding society itself as an educative process. The political debate (in both major parties) has still some way to catch up with all that this implies.

Sense on Irregulars

Guerrillas in the 1960s
By Peter Paret and John W. Shy.
Pall Mall Press. 90 pages. 15s.

THIS very brief book is as good as it is short. The authors run through the written theory of guerrilla, from Clausewitz to Mao; discuss some of the past occasions when theory has been applied in practice; and draw up some interesting guiding notes for the near future. Their volume is the first in a new series, to be called Princeton Studies in World Politics; it sets a refreshingly high standard. They discuss the offensive and defensive uses of guerrilla fighting, and pay special attention to communist uses of these methods in the past and to American adoption of them in the future. They omit several examples of local interest to the British—Ireland is ignored, and not much is said about Palestine or Jugoslavia. However, they make effective play with the contrast between Cyprus and Malaya; in the first of these two the colonial government's irresolution doomed it to failure; in the second, a determined counter-guerrilla offensive succeeded. Their comments on counterguerrilla are of special topicality at this time of tension and disturbance in south-east Asia; as they remark, "the tasks of counterguerrilla warfare are as much political as military—or even more so; the two continually interact."

The truth is that thermonuclear weapons have made all-out war absurd; no one dares to fight it any more, because to embark on it is simply suicidal. But the international anarchy is still riven by the same sorts of jealousies, cupidities, honourable and dishonourable ambitions as have produced the all-out wars of 1914 and 1939—to go no farther back. Politicians dislike being seen to be absurd; so they fight shy of fighting all out. Yet the stresses that used to lead to wars still press on them; the only way they can ease the stresses, short of surrender to whatever Other Side they face, is by ordering guerrilla or counterguerrilla operations of one kind or another. This is the arena of international conflict for the present and near future; the book under notice is an excellent guide to its nature.

Bolshevism Revisited

Survey, No. 41: *The Western Image of the Soviet Union, 1917-1962*
Edited by Walter Z. Laqueur. 200 pages. 5s.

The China Quarterly, No. 9: *North Vietnam*
Edited by Roderick MacFarquhar. 222 pages. 5s.

WE are increasingly in the debt of the Congress for Cultural Freedom, and of its wise use of revenue, including the generous contributions of the American foundations. Among the more specialised publications associated with the Congress, *Survey*, which is a journal of Soviet and east European studies, and *The China Quarterly*, maintain a consistently high standard. These two special numbers are cases in point. The *Survey* number is clearly of more general interest. It is a symposium in which various writers re-examine what has been written about post-revolutionary Russia in the light of more recent judgments, and, in particular, of Mr Khrushchev's revelations about the Stalinist period at the twentieth and twenty-second congresses of the Soviet Communist party.

The outcome is almost uniformly fascinating, and, as one would expect, in places highly controversial. Mr M. Philips Price, formerly of the *Manchester Guardian* and one of the very few western eyewitnesses of the Revolution, casts a candid eye over the books they later wrote about it, including his own, "My Reminiscences of the Russian Revolution," which he engagingly describes as "rather hotchpotch." M. Marcel Liebman rigorously avoids any facile sarcasm in finding reasons for the most monumental of all western gaffes about the Soviet Union, Sidney and Beatrice Webb's "Soviet Communism: a new civilisation." Mr Leopold Labedz is less kind to Mr Isaac Deutscher. His "Deutscher as Historian and Prophet," is an exercise in demolition. The exercise, however, is incomplete, for the article in this issue deals only with Mr Deutscher as a journalist, a field in which few practitioners are invulnerable.

The China Quarterly's special number on North Vietnam, though mainly of interest to specialists, is also valuable in a wider sense, for it brings into perspective the special dilemma of a small communist country which, for geographical and historical reasons, wants to escape satellisation by China but finds Russia too distant a friend. Mr P. J. Honey, who writes ably on the succession to Ho Chi Minh, has assembled an impressive list of contributors, including Vietnamese as well as French and American.

The Agricultural Concordat

The Economics of Subsidising Agriculture: *A Study of British Policy*
By G. McCrone.
Allen and Unwin. 189 pages. 25s.

The State and the Farmer
By P. Self and H. Storing.
Allen and Unwin. 251 pages. 30s.

THESE are two books about British agriculture by independent observers, and therefore probably will not be very popular with British farmers themselves. Mr McCrone, from Glasgow University, ploughs with eager and honest researching zeal through all the economic arguments conventionally used for subsidising British agriculture: the balance of payments argument, the "world food shortage" argument and so on. With great regret, he finds that none of these arguments has any real economic substance at all. But he also does not think much of the idea of "abandoning the industry to *laisser-faire* and allowing the market mechanism to weed out the uncompetitive enterprises"; because past experience has shown that such

> conditions of depression themselves discouraged enterprise and investment, the very things which were needed to bring the industry to a new competitive equilibrium.

He would therefore prefer some sort of subsidy policy which, instead of simply supporting farmers' prices and incomes, would be specifically aimed at reducing costs and making the industry more competitive. In this respect he cites and supports the present Government's small farmers' scheme. As that scheme partly seems to have served to keep a number of uncompetitive small farms just sufficiently ticking over to make a bare living at present sub-

sidised prices (and to add to the milk surplus), the example may not be altogether happy. But the main analytical part of this book, though a bit stodgy in literary style, is sober and studious and statistically devastating; anybody who believes that "agricultural support has saved £400 million per annum for the British balance of payments" should read Mr McCrone.

Mr Self and Mr Storing have written a more lively book, which comes to some of the same policy conclusions as Mr McCrone. But the main feature of "The State and the Farmer" is not so much its recommendations for policy as its fascinating account of how successfully the National Farmers' Union (and, a bit less successfully, the agricultural workers' union and the agricultural landowners' association) have worked to achieve their ends. The concordat which the NFU has struck with different governments since the war has been one of the greatest political success stories by any sectional group in British history, and it has been largely based on bluff. As this book shows—perhaps to politicians' surprise—the cult of the farmers' vote has been wildly exaggerated as a real election-swinging factor. Basically, the NFU has been throughout in a much weaker position than its partners in government have realised; the union must have known all along that if, in anger against any government, it really did take its case to the parliamentary and political arena then it would immediately weaken its consultative status—and on this consultative status its power to aid farmers with taxpayers' money has depended. Mr Self and Mr Storing do not make the mistake of treating the NFU as the villains of their story; they have a slightly amused admiration for the union's considerable achievements. But their well-documented book is a useful case study for students of politics, and of how successful pressure groups can get things swung.

Displaced Governments

The Conspirators: *A Study of the Coup d'État.*

By D. J. Goodspeed.

Macmillan. 264 pages. 25s.

OVERTHROWING governments is an exacting and nerve-racking occupation, and Major Goodspeed succeeded in imparting, in this book, a good deal of the excitement of the game. He has selected well-known shots at six separate establishments; three of them missed their target. He begins with the palace revolution in Belgrade in 1903, which facilitated Serbia's transformation from a satellite of Austria into a pugnacious little power, allied with Russia and a deadly enemy of the Habsburgs. From Belgrade, the author takes us to Dublin in 1916, and then to Petrograd in the following year. In 1920, the Kapp *putsch* against the Social Democrat government in Berlin is described; a chapter is devoted to Mussolini's march to power, and another one to the unsuccessful attempt on Hitler's life in 1944. The stories are well told, and they are clearly destined to become James Bond's favourite bedside reading.

Nevertheless, the author claims to be doing more than telling us stories of blood and horror. In the concluding chapter—it is intended to be the focal point of the book—he generalises about the nature of coups, and about the reasons for their failure and success. He runs into difficulties here. In the study of revolutions, as in any other historical enquiry, it is usually impossible to draw new conclusions on the basis of old facts; none of Major Goodspeed's facts is new. His selection of the six highly dramatic incidents also proved a disadvantage. Their drama interested the author much more than the duller problems of organisation; he did not consider a single case of the less spectacular, but more effective, subversion and infiltration into an established government. Indeed, as a textbook for would-be revolutionaries, this study is highly misleading.

Theory and Illustration

Economic Development

By A. Pepelasis, L. Mears and I. Adelman.

Harper, New York. London: *Hamish Hamilton* (1961). 628 pages. 60s.

YET another undergraduate textbook on economic development must show some fairly clear product differentiation to secure anything of a niche for itself. This volume's claim is that it combines an introduction to the principles of economic development with a dozen case studies of development in particular countries.

The first section is concerned with the principles and takes up only about a quarter of the book, but it is in some ways the more interesting. Professors Pepelasis and Mears, who wrote it, have had to be strictly compact, though space has been saved by the exclusion of much historical material and by the omission of growth theory—a theoretical section is to be published separately. The authors deserve credit for the fact that the result is not completely unreadable, and it provides a useful and clear discussion of the determinants of economic development. At the same time it must be admitted that the treatment is ambitious and extends considerably beyond the boundaries of the economic to the socio-political forces underlying economic behaviour.

It may, of course, be argued that it is particularly important to lay stress on non-economic matters where underdeveloped countries are concerned. And there is an undeniable gain from a wide approach in many circumstances. But it is doubtful whether the cost of compressing a lot of economic argument can be favourably balanced against the inclusion of a good deal of equally compressed material relating to aspects considerably beyond the scope of economics. Moreover, in their desire to be comprehensive the authors sometimes neglect the more specially economic aspects in particular fields. For instance, the discussion of underemployment starts from a largely non-economic definition that runs in terms of the difference between the actual amount of time worked and that which the labour force is capable of supplying, while the supply of effort is dealt with mainly in general terms in later chapters. The chapter on capital, on the other hand, shows the advantage of a wide approach, since it starts by taking a view of capital that includes all productivity-raising outlays, whether or not they result in an increase in the capital stock as usually measured.

The bulk of the book is given over to the case studies and it is of great value to have them bound together. The twelve authors were free to organise their material as they pleased, and though a tight common outline would not have been suitable, some more editorial control might have reduced the unevenness, for instance, between David Felix's fascinating analysis of development problems in Chile and the rather disappointing economic and social geography of the Congo. In general, however, the coverage is wide; it includes countries like Greece and Jugoslavia, which are not very well covered in the literature in English. The general standard, too, is high, and if there is a single criticism to be made of all the case studies it is that they are not used in the first part of the book, where illustrations are drawn almost exclusively from other sources—and not infrequently through footnote references to earlier textbooks. In that sense the book is insufficiently integrated. The idea of the volume was good. An integrated second edition would be that much better.

Seeking the Answers

The Origins of Scientific Thought: *Vol. I. 600 BC to 300 AD*

By G. de Santillana.

Weidenfeld & Nicolson. 320 pages. 36s.

THIS is the first part of a series planned under the auspices of that impressive institution the Massachusetts Institute of Technology. The general reader would probably be wrong in deciding to skip this volume and wait for the others, which will (presumably) deal with later periods, when the ways of thinking and acting that we call "the scientific method" had been established.

Professor de Santillana is surprisingly stimulating and readable and a reader ignorant of mathematics will not stub his toes on equations while no reader will be permanently lost in the mists of metaphysics. Not that it will be possible for all to agree with all the implications he makes, by way of emphasis or omission. He gives more credit to the Greeks and less to the Babylonians and Egyptians than is usual today and has only one reference to all that Professor Joseph Needham has to tell us about the Chinese. Nor, though he is dealing with the speculations of men

whose thinking was largely pre-scientific, does he clearly contrast their thinking with the alternative ways—mainly sympathetic magic—in which mankind tries to deal with the phenomenal world.

What fascinates Professor de Santillana is the spectacle of bold and persistent Greeks as they wrestled with the task of seeking answers to the large questions that each of us has asked or pondered in childhood. "What keeps the stars in the sky?" "What makes this other thing drop?" "Is Fire a thing?" Such are the questions asked by each generation. The Greeks sought adult answers.

The Romantic Poets

The Visionary Company: *A Reading of English Romantic Poetry.*

By Harold Bloom.

Faber. 475 pages. 36s.

THIS book stems from a wish to demonstrate how all the English Romantic poets were animated, and related to one another, by a faith in the power of the imagination to create a world fitter for their genius to live in than the actual society in which they found themselves. All were rebels, in varying degrees, against the accepted values; disappointed of revolutionary hopes, like Blake and Wordsworth; outraging the conventions, like Byron and Shelley; all quite unable to find satisfaction in the orthodoxies of their day. For this reason, they were obliged to make their own myths. Not their own philosophies; for it is not by systematic discursive thinking that poets can apprehend truth. It is by finding imaginative equivalents for their intimations of what is significant in experience.

By bringing together the six major Romantics, and adding a chapter on some minor ones, Mr Bloom shows them truly to be "a visionary company," bound together by common preoccupations and using similar methods to resolve their dilemmas. His method is to examine in considerable detail individual poems that seem to him to illustrate the solutions arrived at by each poet. Consequently, anyone wanting a brief commentary on, say, *Tintern Abbey* or *Alastor* could just turn to the appropriate pages; but without having read the whole book, he might be more mystified than enlightened by Mr Bloom's expositions. Indeed, some of them are outrageous. It is all very well to call Robert Graves "the most persuasive of modern misreaders of texts," but even if his version of *La Belle Dame sans Merci* is a misreading, it is infinitely more plausible than Mr Bloom's, who poses the question "Why is the knight-at-arms ailing?", and gives an answer of which this is the climax. It is because he "has devoured, under the instructions of La Belle Dame, a faery's child, a natural food that has made him both less and more than human. Either way, he has little use for human food again." After this, one is almost prepared for the ludicrous effect, a few pages later, of words misused: "Keats had come a long road before cycling into the desired . . . paradisal bower."

The whole book is vitiated by the intolerably abstract and pedantic quality of Mr Bloom's style—a literary critical jargon that is not peculiarly his, and more commonly to be found in transatlantic reviews and books than in English ones; but his critical method is itself imaginative, and sometimes one is convinced that he is reading the Romantics as they would have wished to be read.

OTHER BOOKS

ATLAS OF THE UNIVERSE. By Br. Ernst and Tj. E. de Vries. Translated from the Dutch by D. R. Welsh. Edited by H. E. Butler. *Nelson.* 226 pages. 42s.

CHANGING VIEWS OF THE UNIVERSE. By Colin Ronan. *Eyre and Spottiswoode.* 206 pages. 15s.

ASTRONOMICAL SPECTROSCOPY. By A. D. Thackeray. *Eyre and Spottiswoode.* 256 pages. 18s.

To anyone whose retinæ refuse to get the Great Bear into focus, the pictures in the first book will be a joy. Here are stars and nebulæ in their full majesty with no pretence of turning them into celestial tea leaves cluttering the universe with improbable symbols. But the word "atlas" is surely a misnomer likely to infuriate anyone who spends two guineas on this very beautiful book and expects to find detailed maps of the heavens and to put off the astronomical dilettante who would probably consider the money well spent. For this is a continental approach to popular science that rarely appeals to British publishers; it sets out to entertain before it instructs and lovingly reproduces pictures of galaxies because they are lovely things that deserve to reach a wider audience. The second half of the book consists of a simple encyclopedia that should be of great help to those who cannot tell an albedo from an albino, as well as to a great many who can.

It is interesting to compare this style of treatment with Mr Ronan's simple but thorough history of astronomy from prehistory up to the present time. This, and Dr Thackeray's book, are the first two of a six-volume Survey of Astronomy, written by experts for people who are prepared to read from start to finish. Who can tell which approach will gain the most proselytes?

THE LANGUAGE OF AVIATION. By W. S. Barry. *Chatto & Windus.* 197 pages. 15s.

English is the international language of aviation: Russian air traffic controllers spoke English to the Scandinavian pilots who flew the first western air services into Moscow. Dr Barry's book, originally a series in the BBC's *English by Radio* service, explains the procedures of civil aviation as well as the jargon often incomprehensible even to those whose English is their mother tongue. In the process of explaining load factors and load sheets, the aerodynamic laws that get a 200 tons aeroplane into the air, the precise importance of stalling speed and the intricacies of ILS, VOR, DME and Decca, he slips in such titbits of information as the rule that obliges every member of the crew to carry a whistle and a torch and prints the verbatim recording of a talk-down in bad visibility, half patter, half blank verse. All that is missing is a glossary of air-crews' private language.

THE FIRM: MICROECONOMIC PLANNING AND ACTION. By N. W. Chamberlain. *McGraw-Hill.* 437 pages. 62s.

Apart from a bit of hoo-ha at the beginning and end, Professor Chamberlain has written a descriptive work. Basing himself on interviews, questionnaires and writings by businessmen, he explains how large American firms use budgeting. Economists who are innocent of what businessmen really worry about will find instruction here. Some businessmen, too, may like to learn how other businesses arrange their planning. Both will enjoy the examples.

HOUSING AND ECONOMIC PROGRESS. By Lloyd Rodwin. *Harvard University Press.* London: *Oxford University Press.* 228 pages. 60s.

A highly detailed study of housing during the last century in Boston and lessons which can be drawn from this history. Professor Rodwin, of the Joint Centre for Urban Studies formed by Harvard University and the Massachusetts Institute of Technology, is here particularly interested in middle-class housing.

MONEY, SAVING AND INVESTMENT IN ENGLISH ECONOMICS 1800-1850. By B. A. Corry. *Macmillan.* 199 pages. 30s.

Dr Corry has succeeded in writing both interestingly and concisely about the macro-economic analysis of the classical economists. He shows that their monetary theory was less crude than is sometimes believed and that its contemporary critics were not really precursors of Keynes. His exposition succeeds in relating classical to modern thought while expounding it in a context related to its time; thus he displays the wisdom of hindsight but avoids condescension, that cardinal sin of historians of thought.

THE ATOM: FRIEND OR FOE? By Charles-Noël Martin. Translated by T. Schoeters. *Harrap* 236 pages. 25s.

A layman's guide to nuclear physics needs, these days, to have something new to say and M. Martin has not. But he re-states old ideas wonderfully well.

Statistics on Incomes, Prices, Employment, and Production

No. 1. APRIL 1962

The first issue of a new bulletin giving factual information on wage rates, earnings, hours of work and other conditions of employment, manpower, prices, production, profits and other relevant subjects. The next issue will appear in August and at regular intervals thereafter to keep the statistics up to date. Part of the information included has not previously been published and it is hoped to add to this in later issues.
12s. 6d. (post 8d.)

Commonwealth Trade 1960-61

A memorandum prepared in the Intelligence Branch of the Commonwealth Economic Committee, reviewing the main features of the external trade of the individual Commonwealth countries and of the Commonwealth as a whole.
6s. (post 5d.)

HMSO

From the Government Bookshops in London, Edinburgh, Manchester, Birmingham, Cardiff, Bristol and Belfast, or through any bookseller

Could Lloyds Bank help you with your export problems?

The specialist EXPORT DEVELOPMENT SECTION of Lloyds Bank can do this:

Obtain full *local* reports on market conditions and potentials . . . for a range of products or individual lines.

Obtain a list of names and addresses of potential buyers and agents . . . in some cases effecting the necessary introductions. Obtain confidential reports on the credit standing of overseas buyers.

Advise exporters of trade enquiries; which frequently reach the bank from overseas importers.

Advise exporters on *all* matters regarding import restrictions, duties, exchange, payment remittances, etc.

Should you feel that any or all of these services could assist you with *your* particular export problem your *local* Lloyds Bank manager will immediately arrange the necessary meetings, reports, etc. for you.

LLOYDS BANK LIMITED

THE WORLD OVERSEAS

Berlin Soundings and Semantics

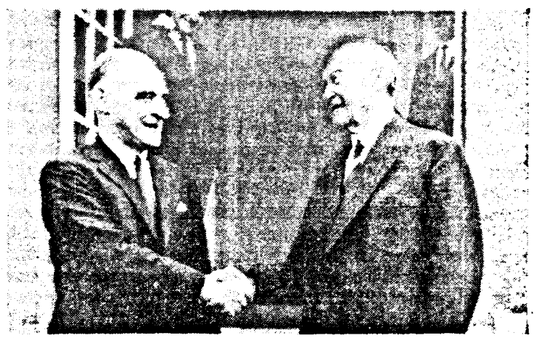
FROM OUR BONN CORRESPONDENT

To the west Berliners only one thing emerges quite clearly from the current palaver concerning their future. This is that still no term can be set to their unique struggle to preserve the modicum of freedom—chiefly of opinion and movement—that politically adult societies consider really worth troubling about. They know they would have to continue to keep exceptionally careful watch even should the Soviet-American soundings find firm ground on which to set up some long-term arrangement for letting west Berlin survive more or less tolerably in the opinion of everybody except Herr Ulbricht. But it seems that so far the soundings have been largely unrewarding. Mr Rusk, the Berliners have been told, said so at the Nato ministers' conference in Athens last week. And Dr Adenauer remarked in Berlin this week that he himself expected nothing to come of them; indeed, he would rather the unsatisfactory circumstances of Berlin remained as they were than be changed into something potentially more mischievous.

Had they not already experienced so much folly masquerading so confidently in variously coloured cloaks of office, the Berliners might be more surprised than they are at what is happening. They had been led to believe that the west German foreign minister, Herr Schroeder, had virtually agreed, if reluctantly, to Mr Rusk's proposals for a *modus vivendi* in Berlin—and most notably to the project for an international body, on which east Germany would be represented, for controlling the traffic to and from Berlin by land, water and air. But already in Athens Herr Schroeder spoke a shade less accommodatingly than he was supposed to have been thinking. He told journalists that there were four inviolate conditions for a Berlin settlement—the continuing presence of the western garrisons, the preservation of west Berlin's political and economic association with the Federal Republic, freedom of communications and recognition of the principle that the Berlin and German problems could be finally settled only by reuniting the country.

Both the State Department and Dr Adenauer, Herr Schroeder claimed, subscribed to these maxims. Yet in Berlin a few days later Dr Adenauer admitted that he was recalling the federal government's accredited representative in Washington, Professor Grewe; because the ambassador had estranged himself from President Kennedy by carrying out too faithfully Bonn's instructions to oppose any concession that could be interpreted as a shadow of recognition of the east German regime. General Clay, the President's robust and popular special emissary in Berlin for the past eight months, has not been able to dispel the federal government's misgivings. "Trust us. You won't be disappointed," General Clay promised at a ceremony at which he was proclaimed an honorary citizen of Berlin. The west Germans and west Berliners trust General Clay all right. For them the trouble is that the general, too, has been recalled. Some four hundred west Berlin youngsters staged a farewell torchlight procession outside his Wannsee home last Saturday night.

In warning Herr Schroeder that there is a danger in present trends that the German Democratic Republic might come to be recognised "in a roundabout way" as a fully sovereign state, the *Frankfurter Allgemeine Zeitung* has voiced the uneasiness of probably the majority of Germans. "Good relations with the United States," the newspaper has observed,



> may not be bought with this concession. It is the business of diplomacy to determine also in writing what is understood by the flexible foreign ministers' elastic formula. The Kennedy Administration would like to arrive at a compromise with the Soviet Union over Berlin, but is confronted with a vigorous determination to win recognition for the German Democratic Republic.

The analysis is obviously correct as far as it goes. In an interview published by *Pravda* this week Herr Ulbricht declared:

> Naturally there can be no question of any international organ being given the right to intringe the sovereignty of the German Democratic Republic by exercising administrative functions on its territory. . . . If we assume, by treaty, one hundred per cent control of the traffic and yet are ready to call in an international arbitration board in the event of any dispute, then that seems to me to be a generous, reasonable and realistic proposal.

That is Herr Ulbricht's idea of international control. And he threw some hints on the likely objects of east German interference with Berlin-bound traffic when he referred once again to the "war-inflammatory and trouble-making centres" in west Berlin. Only wide publicity at an awkward moment has prompted the east German authorities to reverse their decision to refuse a return transit visa to the Swiss subject, Otto Frei, the *Neue Zürcher Zeitung's* correspondent in west Berlin, who has specialised in reporting east German affairs for the last twelve years. Herr Frei could still have gone in and out of Berlin by air, but would doubtless have been prevented had the east German regime been in a position to have its own way.

Much thought is being given in Bonn to ways and means of keeping up the Berliners' spirits during this uneasy period of waiting, and of persuading them that whatever happens they will be all right in the long run. Both the federal president and the chancellor have visited Berlin this month. Dr Adenauer used the opportunity to announce that he had appointed Herr von Eckardt, the state secretary in charge of the government's information services, to succeed the old and ailing Herr Vockel as the west German plenipotentiary in Berlin. Herr von Eckardt can be relied upon to

Clay, Adenauer: one can shake, and shake . . .

cultivate the city's vital relations with west Germany energetically and imaginatively. He is hoping that the importance of his work will be recognised by a standing invitation to attend cabinet meetings in Bonn. On Wednesday Herr von Eckardt had talks with President Kennedy's press chief, Mr Salinger, who passed through Bonn on his way to Moscow.

A scheme for fostering cultural work of national importance in west Berlin is one of several plans now taking shape for keeping the city alive and kicking, and conspicuous on the travellers' map. Details are to be announced by the chief burgomaster, Herr Brandt, in the west Berlin parliament on June 22nd. The west German *Land* governments, which are autonomous in cultural affairs, agreed at a recent meeting in Bremen to let this project be controlled mainly by the central government in Bonn. An outstanding feature is the establishment of a centre of studies for students from the developing countries. While Dr Adenauer was in Berlin further substantial tax concessions were promised as a bait to west Germans who go to west Berlin to take work or set up their own business. With effect in all probability from July, the average worker, for example, will be allowed to keep 25 per cent of his income untaxed. As much as DM 30,000 will go untaxed to firms with a turnover of under DM 200,000.

A comment from our Washington correspondent on German-American relations is on page 562.

The Second Act Opens

FROM OUR PARIS CORRESPONDENT

THE gaullist republic is on the threshold of a new phase. Next Sunday is the fourth anniversary of the rising in Algiers which marked the beginning of the end of the Fourth Republic. Two days later, General Salan (now awaiting trial in Paris) appealed to General de Gaulle (then in retirement at Colombey) to form a government, and M. Pflimlin (then premier and now back in ministerial office) got ready to surrender. For the next four years the life of the new gaullist republic was dominated by the Algerian war. It took so long a time for the general to find a solution acceptable both to his army and to the insurgents. True, the Algerian question is still far from settled. The next few weeks will show whether a compromise worked out so late in the day can still be made to stick. The manner in which it is (or is not) made to stick will determine how much of the Algerian poison remains in the French body politic. But, bearing this in mind, it is at last possible to contemplate a France that is no longer dominated by its Algerian shadow.

By replacing the obedient M. Debré by the trusted M. Pompidou at the head of the government, General de Gaulle wanted to show that the Evian agreements marked the beginning of a new chapter in the history of the Fifth Republic. The deputies took the same view and, by providing only a small majority for M. Pompidou's investiture, tried to express their feeling that the return to "normalcy" ought to have been accompanied by a return to a more normal system of government. The Left had to accept General de Gaulle in 1958 because it had proved unable to end the Algerian war itself, or to put up any resistance to the generals' *putsch*. The Right welcomed him because it wanted a strong man to preside over the last stages of France's withdrawal from its colonies, which they feared might otherwise lead to a popular front. Many politicians, however, climbed on to the gaullist bandwaggon in the rather naive hope that once the Algerian question was out of the way the general would return, if not to the plough, at least to more parliamentary practices. They now see, beyond the Algerian horizon, such controversial issues as the future of Europe and of the Atlantic alliance. The way in which M. Paul Reynaud, hitherto a faithful supporter, castigated the regime last month for its departure from parliamentary ways was a sign of the changing mood.

It is possible to argue that, by cutting the constitution to his own measure, General de Gaulle does not bother enough about what happens after him. It is unfair to accuse him of inconsistency. He has always favoured a system in which an untroubled ruler guides the destiny of the nation. In this scheme, the ministers—including the prime one—carry out orders, parliament is a rubber-stamp and the people applaud presidential tours or vote *oui* in referendums. His failure to obtain such powers after the war, because of the revival of party politics, drove the general into retirement. The short-lived gaullist rally failed to bring him back to power, but the Algerian coup provided the springboard he needed. The general's ideas had not changed while he was in retirement. It rapidly became plain that all key questions—Algeria, defence, foreign affairs and even finance, when it mattered—belonged to the prerogative of the president of the Fifth Republic. And the scope of this prerogative is now to be extended rather than reduced. M. Pompidou can hardly be more obedient than his predecessor, but the appointment of this former *chef de cabinet* to the premiership was designed to dispel any ideas that parliament might be about to come back into its own.

It is a common fallacy to describe the Fifth Republic as the result of a switch from the parliamentary system *à l'anglaise* to a presidential one *à l'americaine*. But there is no question of strengthening parliamentary curbs on the power of the president. If anything, the president will seek means to by-pass parliament should the next chamber, as is likely, prove less pliable than the present one. Gaullist theoreticians make no bones about this. On the contrary, they speak with the pride of pioneers of the service they are rendering in seeking—by trial and error, but with the help of a man sent by providence—a pattern of government corresponding to the needs of western society in the age of the atom—and of television.

IN France a period of rule by a saviour in uniform is not without precedent. The gaullist experiment has been favoured by several factors, some of them transient, others more lasting. The governmental merry-go-round of the Fourth Republic, and its impotence to solve the colonial problem, have discredited parliamentary institutions. The defeat of 1958 deprived the political parties of their initiative and they have done little since to seize it again. The Right has become divided during the attempt to solve the Algerian problem. The Left is as divided as ever. The parties' understandable preoccupation with Algeria has prevented them from working out a coherent alternative to gaullism. France's relative prosperity, after the pay pause of 1958-59, has made political discontent less explosive. Only a poujadist fringe has been attracted by fascist ideas. Thus the only threat to the regime came from the army; but the threat was at the same time an asset. General de Gaulle had come back to power as the man who could come to terms with the army, as the living safeguard against civil war; and each successive threat of an army coup forced his political opponents to rally uneasily behind his banner.

The end of the Algerian war should weaken this threat, and this is why some commentators in Paris foresee a revival of political opposition. Elections have been put off, they argue, but nothing in the next year or so is likely to improve the chances of the gaullist coalition in parliament. The next chamber may therefore be hostile to, or at least more reluctant to follow, the general's line on, say, foreign policy. General de Gaulle has now twelve months or so in which to find in his arsenal a referendum or some other weapon with which to parry such a counter-offensive. In the meantime, it would be most surprising if the present chamber, hitherto no more influential than the Supreme Soviet, carried its opposition beyond sulking.

The real tests will not take place in parliament. On the economic front the government's position is fairly encouraging. By keeping wages and prices in check after the financial reform of December, 1958, the Fifth Republic managed to add a strong franc and a flourishing balance of payments to the rapid rate of growth of its predecessor. It now has some room for manoeuvre. The economic consequences of the peace cannot be measured until the size of the European exodus from Algeria is known. The defence burden will not be cut, although in purely economic terms expenditure on a nuclear striking force is more beneficial than on the upkeep of a colonial army. In any case, there are signs that the trade unions, no longer hindered by political scruples, are preparing for a struggle not only over wages, but also over hours and conditions of work. The extent of this action and of the government's reply will provide the first test.

The army is the other unknown factor. It is still too early to estimate how deep was the influence of the Secret Army (OAS); how severe the shock of having to compromise over Algeria on the officers' corps. General de Gaulle will now attempt to reshape the armed forces, to modernise them and transform them into that *armée de métier* that he described before the war. He may well succeed in the end in turning the army into an obedient tool. But one thing must be kept in mind. Whether it obeys the general or not, an army which brought one man to power and then, for years, was treated as the only important political force is likely to be interested in the succession.

Views differ on what this will be. The "optimists" say that it will end with a Pinay as president and a regime not very different from its predecessor; they probably underestimate the part played by the army in politics. The "pessimists" argue that a political awakening after years of apathy will lead to bloodshed; they may underestimate the French reluctance to fight. The political consequences of the postwar transformation of France have only begun to be drawn. The real face of the Fifth Republic is still to be revealed.

New Deal for Persians

FROM A CORRESPONDENT LATELY IN PERSIA

DR ARSANJANI, the ambitious and ebullient Persian minister of agriculture, says that he is going to complete land reform throughout the whole of Persia within the next two years. He appears to think little of the difficulties of surveying and redistributing from a quarter to a half of the agricultural land in the country (at a wild guess, for no one knows how much land really is involved). To the minister it seems as simple as selling off a small farm—indeed, perhaps rather easier. At present he is mainly concerned with the financing of the landowners' compensation, which he claims can be done through the Agricultural Bank, without foreign borrowing and without creating inflation. The government pays 27 per cent of the principal plus the operational costs, and will settle with the landowners in full over a term of ten years. The peasants will pay the government the remainder of the principal, over a term of fifteen years.

The general principle is not more than one village to one landowner, irrespective of the value of the land. This will certainly hit the many Persian landowners who prefer quantity to quality, holding several poor villages rather than one good one. It seems, however, a pretty blunt instrument with which to operate on a country whose farming runs the whole geophysical gamut, from irrigated sub-tropical to dry temperate zone: anyone who passes quickly from the Caspian "jungle" in Mazenderan (which looks like the Forest of Dean) to the stifling and arid Mesopotamian plain of Khuzestan finds it hard to believe he is in the same country. One also wonders how land reform is going to be effected so quickly in a country with no land registration, and no standard way of establishing title.

The 'pilot scheme" of the land reform has been launched in Azerbaijan, at Marageh. Azerbaijan is next to Russia, and was the scene of a short-lived communist break-away republic in 1945-46. It also lies next to Persian Kurdistan, a region of great tribal landlords who have sometimes shown separatist leanings (the Kurds are now referred to by Dr Arsanjani as "dearest and bravest of Iranian peoples"). Finally, it is a fruit-growing area, where it is

Peasants with titles

reasonably certain that the peasants will make a decent living if they are allowed to plant fruit trees without punitive rent increases.

The distribution of titles has now taken place in the Marageh area to 7,825 peasants in 145 villages, and in the neighbouring areas and in western Azerbaijan a further 5,000 peasants have received lands. What happens next is less clear. The peasant "co-operatives' set up under the reform are loose associations of villagers under a sort of reeve. They are financed by the peasants themselves, and future agricultural development seems to depend on the co-operative putting up their own projects to the government, which, if it approves, will supply two thirds of the capital needed. The scale on which the government will be able to give technical advice and guidance to the peasants is still unclear. Dr Arsanjani says that in a few weeks some 200 agronomists and other technicians will be available. The Israelis have sent several teams to help, and Persians have gone to Israel to train. But the crucial point is whether the Persian peasants can produce enough of a spirit of mutual aid to make the co-operatives work. There is no yeoman spirit in Persia; only in one or two areas are there many peasant proprietors at all. Unassisted, the peasants will not get quick results—if they get any. Apart from one or two show areas, the only places where agricultural development on the crown lands distributed by the Shah has been impressive is where the lands were sold to capitalist farmers.

The opposition of landowners to the reform has so far been less than was expected; it may be that they think these are better terms than any future government will give them. But in the end the land reform depends on the extent to which the Shah and his government are united in their determination to carry it through. Of the Shah's goodwill there is no doubt, though it is less certain that he approves of Dr Arsanjani as the man to do it. The minister has a reputation as a demagogue—he refers to the peasants as "fifteen million helpless and semi-starved people." The prime minister, Dr Amini, has only recently been convinced, but on his recent visit to Azerbaijan he hailed the reform as "an answer to negativists and defeatists."

Whether or not the present government stays in power, it has pushed Persia—though at the moment gently—towards a slippery slope. In one or two isolated instances peasants are said to have already seized lands in anticipation of the reform: among fifteen million helpless and semi-starved people some at least are likely to catch the implications of what the minister of agriculture is saying about them.

Italy's Presidential Battle

FROM OUR ROME CORRESPONDENT

AMONG the senior notables of Italian politics it would be difficult to find a more obvious incumbent for the Quirinal palace than Signor Antonio Segni, who took his oath as third president of the Italian republic yesterday (May 11th). His qualifications include a distinguished academic career—he is professor of law in the University of Rome; a record of political integrity preserved from the fall of the Popular party to his leadership of nascent Christian Democracy in Sardinia during the war; a reputation as a pioneer of land reform; prime ministership in two cabinets; and international prestige for his services to the European community when foreign minister in this and the last government.

Signor Antonio Segni

With these attributes and with a little more tact and flexibility on the part of both the Christian Democrat and Social Democrat leaders, Signor Segni might have been the candidate of the same widely based groups in the Italian parliament which brought about the recent "opening to the left" (*apertura a sinistra*) and now uphold Signor Fanfani's left-centre coalition government. Instead he was made the champion of a faction of the Christian Democrat party, the moderates or Dorotheans, whose determination to get him elected at all costs came within a hair's breadth of the use of fraud—there was an uproar when a voting paper with Signor Segni's name on it was pressed into the hands of a reluctant voter; these tactics demonstrated an almost pathological desire to humiliate Signor Fanfani and defy his allies in the coalition. The pressures brought to bear upon Signor Fanfani and his followers to give their support to Signor Segni were resisted up to and through the seventh ballot; they included a threat to withdraw four ministers from the government and make the party secretary resign. But as a result of this extraordinary behaviour Signor Segni was elected on the ninth ballot, on May 6th, in an atmosphere of exasperated tension and by a slender majority of 51.8 per cent, including the monarchists and neo-fascists.

Now that the election is over, the prime minister's allies do not intend to hold these distressing circumstances against the new president of the republic. Signor Nenni, Signor Saragat and the leaders of the Republican party have expressed their confidence that Signor Segni's conduct as president will very soon cancel out the memory of this dramatic week. In the present state of Italian politics Signor Segni will certainly not lack opportunities to show that the presidency of the republic is no sinecure. The *apertura*, which got off to a limp start partly because of the imminence of this election, is compromised but not totally wrecked. It may even recover vigour if the Socialists keep their promise of redoubled watchfulness. There may be a danger that the neo-fascists (and other reactionaries) will try to exploit what they consider a victory; this will have to be parried.

But the fundamental trouble, ruefully diagnosed by the Christian Democrat party's allies (less ruefully by the Communists), lies in the conduct of the Dorotheans (the group takes its name from the hall of Saint Dorothy in Florence, where this faction broke with Signor Fanfani in 1959). This group of moderate reformers controls about half the parliamentary party and a little more of the party's national council. It appears bent on obtaining absolute control of the party and on asserting the party's domination in the country, in contrast to the idea expressed last January in Naples, at the congress which approved the *apertura*, that the Christian Democrats cannot govern without allies. Signor Saragat has complained bitterly of "the ungenerous and impolitic intransigence of the Christian Democrats" who refused to discuss or negotiate with him, and Signor Nenni has deplored the methods used by the party in this election. The Socialists, who are inclined to think of the *apertura* as a straight dialogue between themselves and the Catholics, blame Signor Saragat for advancing his own candidature instead of plumping from the start for a left-wing Christian Democrat. Signor Togliatti's diagnosis is not substantially different from Signor Saragat's. All the parties, he says, must examine the conduct of the group that controls the Christian Democrats. "The party that governs Italy is not an anti-fascists' party," according to Signor Togliatti, "and the men who lead it will stop at nothing to preserve their power."

Naturally the confusion and malaise benefit the Communists even more than the fascists. Their conduct throughout this affair has been, democratically speaking, irreproachable. After the second ballot they supported Signor Saragat—"though we did not propose him"—as the candidate of the *apertura*. No one could contest Signor Togliatti's statement that "the strength and prestige of our party are confirmed and strengthened by this struggle," and few would question his assertion that "successive ballots brought about a convergence of democratic and anti-fascist forces which should and will be repeated on other occasions."

The unity of the Christian Democrat party has been maintained at a heavy price and begins to look incompatible with the *apertura*. Signor Moro, who so brilliantly led the Christian Democrats in Naples, staked his position as party secretary on the election of Signor Segni. But he stands out today less as the leader of a united party than the tool of its most powerful faction. Signor Fanfani's friends have taken a beating, but the prime minister is resilient and still has plenty of cards in his hand. He has decided to take over the foreign ministry himself for the time being, but it would be a trick to him if he could hand it over to Signor Saragat.

Death for the Conspirators?

FROM OUR MIDDLE EAST CORRESPONDENT

ON Wednesday Lebanon's military prosecutor asked for the death sentence on 313 people, including 38 military men, who were involved in the plot organised by the Parti Populaire Syrien against the government on New Year's eve. Another 47 men are accused of lesser offences, carrying penalties of imprisonment from six months to 15 years. The charges include the attack on the ministry of defence and other public buildings, the illegal concentration of armed conspirators, the murder of members of the security forces and the attempted kidnapping of the president. The trial of the accused will probably start in Beirut on June 1st.

But whatever the results of the trial, it seems inconceivable that anything like this number of death sentences will be carried out—quite apart from the fact that many of the accused are in hiding abroad. The Lebanese show hot tempers in their private quarrels, but have long had a reputation for political toleration. Even during the long civil disturbances in 1958 the number of people who actually died was remarkably low.

The indictment accuses Jordan of having financed the PPS to the tune of £20,000, paid in two instalments. Although the Jordanian government itself is not specifically mentioned as the source of these funds, the wording of the allegations suggestively points that way. King Hussein laid himself open to these charges by his support for the fertile crescent dream, which is also the main platform of the PPS. Certainly individual Jordanians were involved, which is hardly surprising since the PPS is a pan-Arab movement with followers in Jordan, Syria and Iraq as well as in Lebanon. It has also been suggested that the conspirators tried to get support from Iraq, but failed. In any case, if the court upholds the allegations about Jordan, there will be few Arabs who will not be able to detect, somewhere in the scheme of things, the hidden hand of perfidious Albion.

Canada's Plural Society

FROM OUR SOUTH AFRICAN CORRESPONDENT

WHEN French-speaking Canadians talk of separation or independence for Quebec their English-speaking compatriots politely ignore them, dismiss them as amiable eccentrics, or simply laugh. But as the bilingual product of another plural society, 8,000 miles away in Africa, visiting Canada, I became very conscious of the deadly seriousness of French feeling, and convinced, admittedly after a brief visit, that unless it is handled with more skill and sympathy an unpleasant state of affairs might develop which would do Canada much harm.

A foreigner's first discovery in Quebec is the existence of two nations, geographically and economically integrated but culturally and linquistically separate. "At heart every French Canadian is a separatist," a French-language editor told me. "We only differ in our assessment of the practicability or otherwise of separatism." By contrast, most English Canadians whom I met pooh-poohed independence talk as not serious, the product of French excitability or pique or jealousy. To an outsider who has seen the role language and sentiment can play in politics, this seems unrealistic.

Take the case of M. Marcell Chaput, a chemist employed in the Defence Research Board, whose book, "Pourquoi Je Suis Séparatiste," was a best-seller, and who became the leader of a body called *Le Rassemblemènt pour l'Indépendance Nationale*. M. Chaput declares that there are "glaring inequalities" between the French and English groups (I quote from a notice of his book written by Dominique Clift). It is all very well, he goes on, to tell French Canadians that Canada belongs to them as well as to the English; but in fact it is only in Quebec that French Canadians are allowed to be themselves. Confederation (so M. Chaput argues) is really an instrument whereby French Canadians are kept in tutelage.

"We are fed-up with being second-class citizens. . . . We separatists say, 'If, because of our fidelity, we cannot become totally English, then let us become totally French in a country that is really ours. . . . If French Canada were to become Anglicised for purely practical reasons . . . then it might be even better to seek annexation to the United States because—and this is no state secret—the standard of living there is higher than it is in English Canada. . . . Independence for Quebec does not mean the isolation of a timorous group behind protective barriers, but rather the expression of a national identity in full view of the world'."

To this the English Canadian is apt to reply that the French are again "fighting shadows." "If they are really economically depressed, as they aver," a university lecturer in Toronto said to me, "it is entirely their own fault. They haven't had the enterprise or the gumption to establish a commanding position for themselves, so they blame us. As for bilingualism, they exaggerate the lack of it; and in any case their own French is so parochial as to be uninteresting or even unintelligible."

But in Ottawa a senior French-speaking civil servant spoke to me with vehemence about "the English." "If the bloody English don't give us our due," he said, "there will be bloodshed." I asked what he meant by "due." "To begin with," he replied, "a square deal in such things as bilingualism." He complained that when he went to register the birth of a child, the whole transaction took place not in his mother tongue, but in English. Again, when he contravened a traffic law he was handed a summons in English. He resented this in a supposedly bilingual country.

"The English pay only lip-service to bilingualism," he said. "We French are the only bilingual Canadians." (My mind went back to the Afrikaner's old complaint of the failure of his English-speaking fellow-citizens to learn Afrikaans in bilingual South Africa.) However, the French do console themselves with the reflection that Canada's main bulwark against cultural absorption by the Americans is its French-speaking section. "Look at our art and culture," my informant said. "The bulk of Canada's indigenous output in these spheres comes from our side. Eighty per cent of French Canadian television, for instance, is indigenous, whereas 50 per cent of 'English' television material has to be imported from the United States or Britain." A distinctive Canadian flag and a separate national anthem are other items on the French list, as well as diplomatic representation at the Vatican. "Why," the civil servant said, "those new French-speaking states in Africa have their own representatives at the United Nations, yet 6,000,000 French Canadians, the largest French community outside France, have no international standing or recognition. It is intolerable." It became clear to me why General de Gaulle's action in receiving the premier of Quebec, M. Jean Lesage, as a head of state in Paris made such an impression on French Canadians; though the incident, as far as I could gather, was little noticed in English-speaking Canada.

THE danger, to my mind, lies in the unconcern or lack of knowledge of English-speaking Canada about the feelings and aspirations of French Canada. When I told a Toronto man that a Laval University man had made out a persuasive case to me for the creation of a special Supreme Court to deal with constitutional matters, he snorted and said: "It's quite unnecessary. What is wrong with the present court?" Outside Quebec, this is a prevalent attitude. From my very limited observation, which did not include the middle or far west, where the position is doubtless much worse, there are vast areas in Canada where people are totally unaware of the feelings and strivings of French-speaking Canada. Just here and there one finds signs of English-speaking unease and awareness. During my stay in Quebec City, for instance, the *Chronicle-Telegraph* warned its readers that the separatist movement should prompt "some deep reflections" on the part of English-speaking Canadians. While welcoming the plea of the influential St Jean Baptiste Society that French Canadians should seek self-realisation by constitutional means rather than by seeking to become a separate autonomous state, the paper saw a stumbling block in the society's insistence that French Canada was a nation in itself. "If we learn to accept our compatriots as persons with a distinct identity," the paper concluded, "English Canadians will go a long way toward taking the wind out of the sails of those who are most voluble in pressing the cause of separatism."

Before I felt Canada, Mr Lester Pearson had opened the Liberal party's general election campaign (with a series of meetings in Quebec Province), and there was evidence that his party had become aware of French feelings and was trimming its sails to the Quebec wind. Have the French Canadians at last succeeded in putting their case on the nation's agenda for 1962?

Rural Strongholds Besieged

FROM A CORRESPONDENT IN WASHINGTON

HISTORY is at last catching up with that tenacious phenomenon of American politics, the disproportionate power of the rural voter. In the last seventy-five years, according to the official statistics for population, the United States has changed from a country two-thirds rural to one two-thirds urban. But the cities, and in recent years especially the suburbs, have been frustrated in their efforts to translate growth into legislative strength. The farmers and small-town tradesmen—yokels, H. L. Mencken called them—have held on to power simply by refusing to re-draw the boundaries of the districts from which members of State Legislatures are elected. The result is a situation like that in Georgia's lower house, where Echols County, with a population of 1,876, has two representatives and Fulton County (including metropolitan Atlanta), with a population of 556,326, has six; a vote in Echols is worth ninety-nine times as much as a vote in Fulton.

The phenomenon is a national one. In all but six of the fifty states legislative districts are so unbalanced that some are at least twice as populous as others. In Vermont, 12 per cent of the voters elect a majority of the lower house; in Nevada, 8 per cent pick a majority of the upper house. Moreover, the rotten boroughs of the State Legislatures affect the make-up of the national House of Representatives, whose districts are drawn by the legislatures. An example is Michigan, where a congressional district, including suburbs of Detroit, has a population of 803,000, while another in the rural north has one of 177,000. A recent study by *Congressional Quarterly* concludes that fair districting would deprive twenty-seven rural Representatives of their seats in the 534-member House, seven of these seats going to cities and twenty to suburbs.

In the past the only recourse for the disfranchised has been an appeal to the conscience of the very legislators who are the beneficiaries of the system. These rural politicians have been, to say the least, unmoved. But in the last few weeks they have had to deal with a force much more powerful than their own consciences—the law. On March 26th, in a case from Tennessee, the Supreme Court cast aside precedent and held that the courts could examine the fairness of legislative districts. The decision was framed cautiously. The Court said that at some point districts could be so unfair as to violate the Constitution's guarantee of "the equal protection of the laws." But it did not indicate where that point would come. It left to future cases the spelling out of constitutional standards. For this reason the prevailing view in Washington was that the decision could not be expected to produce immediate political changes of significance.

That appraisal could not have been more mistaken. In the few weeks since the Tennessee decision nothing less than a political revolution has begun. Lower federal courts have plunged in where the Supreme Court held back. They have told several State Legislatures that they must redistrict at once, with the changes to take effect before next November's election, or the courts will do so for them. State courts have begun to follow the federal lead; Maryland's highest court virtually invited the Governor to call a special session of the Legislature. The politicians, looking nervously over their shoulders at the bench, have tried in some cases to forestall legal action. Kentucky's Governor has filed his own lawsuit, asking the courts to tell him what he ought to do. Other governors have called special legislative sessions and urged the legislators to redistrict before the courts move in. In twenty-six states legal or political action looking towards redistricting has begun.

The course of events in Georgia is particularly remarkable. In no state has the rustic grip on politics been more secure. Not only has the Legislature been grotesquely unrepresentative, but the same rural bias has been applied to primary elections to pick the Democratic candidates for Governor, Senator and Congressman. (In a one-party state such as Georgia these elections are decisive.) Instead of being chosen by popular vote, these officials have been selected under a "unit system" in which each county cast the same number of "units" as it had seats in the lower house of the Legislature—metropolitan Fulton County 6 units, tiny Echols County 2. Thus the voter in Atlanta again found himself at a disadvantage of 99 to 1.

Within a few hours of the Supreme Court's decision in the Tennessee case, Atlanta lawyers had filed a suit asking a federal district court to hold the unit system unconstitutional. The Governor, Mr Vandiver, called the Legislature into special session in the hope that some amelioration of the system would forestall judicial intervention. The Legislature raised Fulton County from 6 to 40 units, among other changes, thus reducing the discrimination against voters in Atlanta to a mere 15 to 1. It was the first concession made to Georgia's urban voters in this century but it did not satisfy the three federal judges who were considering the matter. The day after the legislation was enacted they held the revised unit system to be unconstitutional and prohibited its use in this year's Democratic primary. Another suit, not yet tried, asks the court to do the same for the state's legislative districts.

Georgia has the right to appeal to the Supreme Court to reverse the decision striking down the unit system and it will do so. But it cannot have high legal hopes. The impression is that the Justices of that august tribunal, having brought the pot to the boil, would now prefer to let it simmer in the lower courts for some time without further direction from above. It is the tradition of the Supreme Court to take a first tentative step toward some new legal doctrine, then delay the ultimate resolution of it until experience throws light on the problems raised.

How can one explain the astonishing zeal with which judges and politicians are acting on the Supreme Court's rather limited hint? The contrast with the response to the Court's decision on racial segregation in the schools is especially striking; where the schools are concerned southern politicians and federal judges have had to be pushed into carrying out a much more unequivocal decision with even the "deliberate speed" demanded by the Court. It seems clear that on the issue of legislative districting the Court touched a moral nerve. Even those who had fought all attempts to correct the rural imbalance knew, in their hearts, that their position was ethically defective—an admission which most Southerners have been slow to make about racial

segregation. The Supreme Court simply provided an outlet for political pressures that were already there and an inspiration to political resolution of essentially political problems.

General revision of state legislative districts throughout the United States could have profound effects. The states might begin to deal in earnest with such urban needs as housing and transport, which they have neglected for so long and which have therefore become federal concerns. In the South the racial issue would be affected significantly. Negroes find it much easier to vote in southern cities than in backwoods areas and in general urban whites are more moderate than rural ones on the race question. A decline in the power of the "woolhats," as the country folk are called in Georgia, might at long last take race-baiting out of southern political campaigns, at least in the relatively more urbanised states. Indeed, some observers can foresee the day when a Georgia Senator will favour a civil rights Bill.

The milennium has not arrived. Many difficult legal and political problems remain. There is no agreement on how much equality in legislative districts the Supreme Court will hold the Constitution to require or on whether the principle of equal representation must apply in both houses of a State Legislature. (At present, in many states one House has a member from each county or town, regardless of population.) But if problems remain, at least it is clear that the process of reform has begun at last.

Unloved Ones

WASHINGTON, DC

DOCTOR ADENAUER'S heavily facetious suggestion that his Ambassador is perhaps unpopular in Washington because of his ears, or because of the shape of his nose, strikes an impatient White House as distinctly infelicitous. Nor did official Washington anticipate that the German Chancellor would talk about Dr Grewe as if he were an innocent lamb being sacrificed on the smoking altar of unjust American wrath. When the Administration, after avoiding Dr Grewe for two weeks, conveyed to Dr Adenauer that it found the Ambassador "incompatible," it expected apparently that Bonn would simply couple its announcement of his recall "for consultations" with some hint that his usefulness in this post was about over and that his early replacement could therefore be taken for granted.

The State Department feels frustrated by a west German foreign policy which is conducted by press conference and this situation is exacerbated by political factionalism in west Germany and by the recent leaks of information. And if, for one reason or another, Dr Grewe failed to establish harmonious relations with President Kennedy and his Secretary of State, the Ambassador was only reflecting, with stiff correctness, his master's attitudes towards the American Administration's notions about Berlin. The Americans protest that, while at Athens the German Foreign Minister, Herr Schroeder, may have indicated that Bonn was not entirely happy about some aspects of their proposals, he did not say, as Dr Adenauer was reported to have done, that they were "unworkable" and still less that talks with the Russians on Berlin should be broken off.

The disappointment and irritation in Washington are all the more acute because American observers had begun to congratulate themselves that Herr Strauss, the German Minister of Defence, was perhaps less militaristic than some of them had supposed and Herr Schroeder somewhat more independent of the Chancellor than some of them had dared to hope. What this seemed to signify was that the inevitable and inevitably difficult post-Adenauer phase of west German politics might provide smoother sailing after all. What this week's confusions and contradictions suggest, on the contrary, is that the aging Chancellor may be ceasing to be master of either his house or his tongue, but that none of the three leading contenders for the political succession is able either to curb him or to calm him.

As far as Berlin is concerned, the United States has never seriously expected dramatic results. Probably the best that has been hoped for is that the Russians might be persuaded to agree to a modest clearing of some of the cluttered ground, without either side conceding points of principle. Accordingly, the Americans are all the more annoyed to find themselves apparently being accused by the Chancellor of rashly embarking on talks foredoomed not just to failure but perhaps even to a Munich-like betrayal of an ally. Having pledged itself to Berlin and west Germany up to the hilt of possible annihilation, the United States feels that it has the right not to be suspected of treachery just because it is seeking to find some way out of the present deadlock over Berlin. This point was underlined by President Kennedy at a press conference in which he did what he could to co-operate with the Germans in repairing the breach between Bonn and Washington without capitulating to Dr Adenauer.

Southern Victory

THE Administration suffered a painful and far-reaching defeat on Wednesday when the Senate, by the unexpectedly large vote of 53 to 43, voted not to curb the southern filibuster designed to talk to death the Administration's chief proposal on civil rights. This Bill would require states that impose a literacy requirement on voters to accept six years of education as automatic proof of the ability to read and write. The southern states would thus be deprived of the main device they use to disfranchise Negroes—discriminatory application of tests of literacy. No one had expected the Bill to pass this year because, under the Senate's rules, debate can be shut off only by the vote of two-thirds of the members present; it has never been shut off when a civil rights measure was being debated. It had been expected, however, that more than 50 Senators would vote for closure. This would have demonstrated that the will of the majority was being frustrated and would have improved the chances that next January the rules might have been changed, opening the door to a host of civil rights measures. This hope has now gone down the drain.

Whose fault was it? For one thing the Bill itself aroused little interest; the liberals were more concerned with other civil rights Bills. The southern argument that only the states have the power to set qualifications for voters had some effect. Moreover, a number of Senators vote automatically against closure because they fear that some day they themselves may want to talk a Bill to death. Apart from this, the two-week filibuster was too gentlemanly to attract attention; Mr Mansfield, the Democratic leader, allowed the Senate to convene as usual at noon and go home for dinner each night. The Democrats failed to get the Republican votes which they needed although Senator Dirksen, the Republican leader, was a co-sponsor of the Bill and although a ban on literacy tests was part of the party's programme in 1960. Only 13 Republicans voted for closure; 23 voted against it. Republican conservatives often help their opposite numbers in the Democratic South. The real trouble, however, was that the Democrats lost nine non-southern votes, all but one of them from the West, and two southern votes which they had counted on: those of Senators Kefauver and Gore.

By a parliamentary manoeuvre Mr Mansfield went on to obtain a favourable vote—63 to 33—supposedly on the merits of the Bill and he will make a second attempt at closure next week. But this is not expected to do more than bury the ban on literacy tests. Few observers attach much importance to the second of Wednesday's votes. It was the first one which counted and, when that had been lost, some Senators were not averse to getting a little cheap and meaningless credit for a "vote for civil rights." Some Republicans simply hoped to keep alive a little longer a debate which is holding up important Administration Bills.

They're Off!

THIS month the 1962 election campaign begins in earnest with a large batch of the primary elections in which party members in many of the states select their candidates for next November. On Tuesday voters in five states—Ohio, Florida, Indiana, New Mexico and West Virginia—picked their nominees for two Senate seats, two Governorships and 54 seats in the House of Representatives. But by far the most interesting contest so far was last Saturday's in Texas when Democrats had a choice between six gubernatorial hopefuls. The most widely-known of these, the former General Walker, the rabid anti-communist, ran last in what was the first test of the political strength of the right-wing John Birch Society. He was an ineffective campaigner but even so it is encouraging that he was defeated in a state where extreme conservatism is strong. However, Texas is also a state in which liberalism is growing. This was demonstrated on Saturday when Mr Don Yarborough unexpectedly came in second, with enough votes to keep the winner, Mr John Connally, from having a clear majority over all his opponents. These two will meet on June 2nd in a run-off election.

It was Mr Yarborough who fought as an enthusiastic supporter of President Kennedy and particularly of his social welfare programmes, although Mr Connally had resigned from being his Secretary of the Navy in order to run for the Governorship. Once he got back to Texas he kept quiet about his Washington background and even repudiated many of the President's proposals. He is an old political ally of the Vice President, Mr Lyndon Johnson, and his success in the primary was something of a surprise to those who believed that Texas Democrats were increasingly resentful of being kept in Mr Johnson's pocket. Mr Connally had the help of a great deal of expensive publicity in making himself known in the state and Mr Yarborough is attacking him as the favourite of the oil industry and as a man who is trying to buy the Governorship. But there is little doubt that Mr Connally will win in June, for then he should have the united support of the conservative Democrats whose vote was split last week. When it comes to November, however, some of that support may go to the Republican gubernatorial candidate, Mr Cox, who used himself

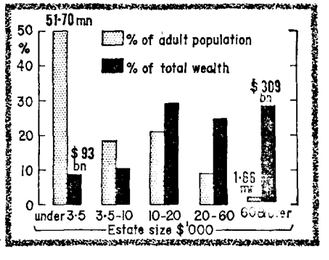
FROM A SPECIAL CORRESPONDENT



THE mythology which has been built up about the distribution of wealth in the United States receives some shocks in a study produced by the National Bureau of Economic Research and published in Britain this week.* Marxists teach that under capitalism the poor get poorer and the rich richer with time; American New Dealers recall with satisfaction the shift in the opposite direction that took place between the bad old (Republican) nineteen-twenties and the Rooseveltian era. Mr Lampman's findings shake both theories.

The figures which he uses to do so are based on the statements of dead people's estates made to the federal government's tax authorities in 1953. These 36,699 returns give a broad sample—chosen, it is true, by the grim reaper rather than by science—with details of age and sex as well as of the size of the estate. The figures are transposed by the use of mortality tables to represent living generations. Among the 103.4 million Americans over 20 years old in 1953, 1,659,000 were estimated to have estates worth $60,000 or over and thus qualified as "top wealth-holders." They controlled 28.5 per cent of personally-held assets and their share had declined hardly at all in the past thirty years, although since 1922 the percentage of all adults in the country who were in the top wealth-holding category had doubled. Of course these relatively small changes in proportionate asset-holding were accompanied by marked changes in the distribution of income, largely because of the growth in earned income. Mr Lampman grouped his individuals into spending units and found that in 1953 the top 11 per cent, ranked by net worth, controlled 60 per cent of net assets but received only 24 per cent of all income.

When the characteristics of the top wealth-holders emerged from Mr Lampman's calculating machines, the popular belief that women hold a majority of American assets was not confirmed. Among the well-endowed, men outnumbered women by two to one and the men's median gross estate, $116,800, was larger than the $105,200 median for women, although the women came out better when all these estates were averaged, with $220,500 to the men's $162,400. The wealthy men had a further advantage; they were younger, with a median age of 52 compared with the women's 57.

The pattern according to which the wealthy invest their assets varies considerably from that followed by less affluent people. Partly because their liabilities are not so great, the wealthy are not so interested in cash (or readily cashable assets), life insurance and real estate and more interested in corporate shares and state and local government bonds. Many corporations point with pride to the increasingly broad distribution of their equities among shareholders in the lower income groups, but corporate shares still account for only 15 per cent of the wealth of all persons, although they form 39 per cent of that of the top people. The comparable figures for holdings of property are 39 and 22 per cent. Even within the wealthy group the proportion of corporate shares and state and local bonds to total holdings rises rapidly with the size of the estate.

An economic Jaques could write another soliloquy on the seven ages of man from these figures. Youth is a time of debts and mortgages, middle age of life insurance, old age of bonds and cash and, among the wealthier, of holding shares. Then to all comes death and the tax collector. Actually, however, many wealthy individuals do not wait for these inevitabilities. Today's rich, unlike their fathers, do not try to take it with them. Trust funds for children, and especially for grandchildren, set up during the lifetime of the patriarch or matriarch, distribute income increasingly widely within families, while family funds for philanthropic—and tax-exempt—giving are also multiplying.

The chart shows what proportion of adults over 20 in 1953 had "estate tax wealth" in the ranges given and their share of the total. Actual numbers and amounts are given for the bottom and top ranges

* The Share of Top Wealth-Holders in National Wealth 1922-56. By R. J. Lampman. London: *Oxford University Press* for *Princeton University Press*. 313 pages. 52s.

to be a Democrat. The Democratic nomination is no longer quite tantamount to election in Texas.

In this primary the incumbent Governor, Mr Price Daniel, who had been regarded as an almost certain winner, ran third, apparently because he was trying for a fourth term, which the voters thought was too much, and because he followed the middle of the road politically. But he is the only incumbent to have been upset in the present series of primaries, although on Tuesday Mr DiSalle, the Democratic Governor of Ohio, came close to being turned out and well may be in November. He had not intended to run for re-election and, when he changed his mind at the last minute, he had to face the opposition—and the strong criticism—of his Attorney General. Mr McElroy contended that Mr DiSalle, a leading supporter of the President, had failed to give the state the leadership which it needs and had been guilty both of indecision and extravagance. Probably Mr DiSalle's main political fault is that he has raised taxes.

Duel in Baton Rouge?

FROM A CORRESPONDENT IN LOUISIANA

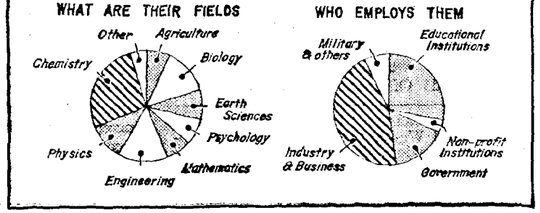
PRESIDENT KENNEDY came to New Orleans last week for what was billed as a major speech on his foreign trade programme; voting on this began this week in the House Ways and Means Committee. But to his immediate audience his brief comments on Louisiana's serious racial problems were of equal interest. As tactfully as he could, he told the city that it would have to learn to live with the Negroes' drive for equal rights:

> Cosmopolitan by nature, tolerant in outlook, the product of many nations, many cultures, many races and creeds, New Orleans has long represented the strength of diversity working in harmony, and I am confident the overwhelming majority of your citizens intends to see that your most valuable reputation and character are preserved.

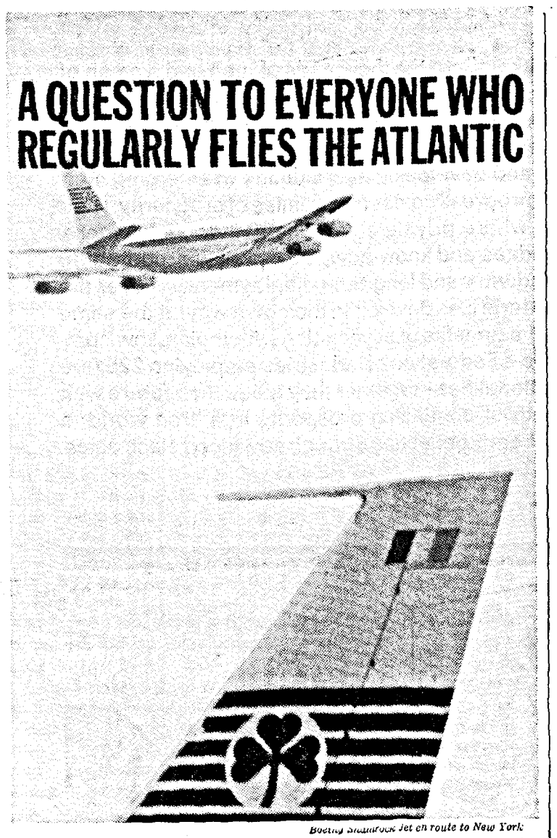
Up until two months ago Louisiana did indeed seem to be on its way to accepting, like Virginia, the admission of some Negro children to its white schools, so long as this was limited to cosmopolitan New Orleans and the number of Negro children was no more than token. Last autumn there was no repetition of the near-riots of 1960 and no organised resistance, apart from a partial boycott by the whites of the schools to which 12 Negro children, in all, had been admitted.

In March, however, the passions of the extreme racial segregationists were rekindled by two developments. The Roman Catholic Archbishop of New Orleans announced that race barriers would be eliminated next autumn in all the parochial schools of the diocese; in it live 1,142,000 of the state's 3 million people, including 527,000 Roman Catholics. These parochial schools have 65,000 white pupils and 10,000 Negro ones. The second development was an order by Judge Wright to the school board in New Orleans to drop all racial barriers in the first six classes of the tax-supported schools, the classes in which Negroes greatly outnumber white pupils because the Negro population is rising so fast. Of New Orleans's 630,000 inhabitants, two-thirds are white, but of the 92,000 children in the city's schools about 50,000 are Negro.

Many moderates in the city—moderate segregationists, that is—who supported Judge Wright in 1960, when he thwarted the angry attempts of the Legislature to enforce complete racial segregation, felt that his last ruling was an invitation to chaos and possibly to violence. He has now been promoted to an appeals court in Washington, DC, and many people believe that his successor, Judge Ellis, may narrow the scope of the ruling so that only dozens, instead of hundreds, of Negro children will enter white schools this autumn. The moderates fear that unless this is done the extremists in the state and the Legislature will try to abandon public education, even though Louisiana already has one of the highest rates of illiteracy in the country.



The Legislature meets on May 14th and no one can predict exactly what will happen except that the major actors are certain to be the Governor, Mr Davis, and one of his uneasy political allies, Mr Leander Perez, the leading spokesman of the White Citizens Council. Mr Davis was elected with the help of the extreme segregationists and two years ago he seemed to be incapable of opposing any of their schemes. During the tumultous days of 1960 the Governor permitted Mr Perez to take control of the segregationist programme in the Legislature. It was Mr Perez and a handful of legislators from northern Louisiana who openly encouraged men and women to demonstrate when the schools in New Orleans first admitted Negro children. The Governor signed Bills which would have closed the schools if the federal courts had not intervened, though more recently he has said that he would never shut the schools; it is not for nothing that he is called the Hamlet of the hill country. But if he needs Mr Perez politically, the Governor is also known to dislike, distrust and fear him.



There are indications today that Mr Davis has had enough of the segregationists' ranting and raving at the federal government—particularly as he hopes for help from President Kennedy to wipe out the $75 million deficit facing Louisiana. The federal government is holding in escrow almost $500 million in royalties from the oil-rich tidelands off the coast, where the line between the claims of the state and of the federal government has not been drawn finally. It is thought that the President might use his influence to release some of this money—but not if the state's segregationists get out of hand as they did in 1960.

Mr Perez, who has made millions of dollars out of petroleum and who is an absolute ruler in Plaquemines Parish (county) adjoining New Orleans, is openly working to defeat any compromise over the off-shore oil lands, claiming in defiance of the Supreme Court's judgment that Louisiana should not settle for anything less than what he regards as its full rights. He has interests in mineral-rich lands which would be affected by a compromise; his enemies claim, moreover, that if the Governor abandons the extremists, Mr Perez will accuse him of having been bought off with federal money. Mr Perez is one of the three Roman Catholics who were ex-communicated last month for advocating disobedience to the Archbishop's order. Already legislators friendly to Mr Perez

SCIENTISTS IN 1960

Of the 201,292 scientists who reported to the National Science Foundation in 1960, 7 per cent were women, mainly biologists, psychologists, mathematicians and chemists, and 86 per cent were in full-time civilian employment. Their median salary was $9,000 a year. Thirty-seven per cent had only a bachelor's degree, 25 per cent had gone as far as a master's and 31 per cent had taken a doctorate. Over a third of them were doing research and development, nearly a quarter were engaged in management or administration and 15 per cent were teaching. The register is not comprehensive as regards engineers.

Boeing Shamrock jet en route to New York

Can you make the mileage shorter and sweeter too?

Yes! By Aer Lingus—Irish International Airlines. Catching a transatlantic jet need not mean hours of cross country journeying in the wrong direction. Aer Lingus flies *direct* from the major airport nearest you, to connect at Dublin with the daily Boeing jet to New York and Boston.

AIRBORNE BUT NEVER BORED. Has air travel sometimes made you feel more like a parcel than a passenger? It won't on this route, for the time that other people spend getting to the aircraft, you can spend most pleasurably.

AT DUBLIN: a relaxing interlude before boarding a Shamrock jet. Most people go to the airport restaurant—certainly the best in Europe. A meal here is a memorable experience.

AT SHANNON: the Duty Free shopping centre, where the nicest things from all over the world are gathered under one roof and sold for a song.

IN THE AIR: smiling Irish eyes, belonging, of course, to the air hostesses. Perhaps it is because they have so much to smile about that Irish International Airlines hostesses seem as warm and friendly as they are efficient. On what other 1st Class Service can they offer such delicacies; Lobster Iolair, and broiled Liffey Salmon, both fresh caught each day; smokey-flavoured Limerick hams; with the noblest wines to accompany them? (Note: we still have some of our Pouilly Fuisse '57, Santenay '53 and Heidsieck '53 left.)

Your travel agent has full information about these flights.

Check your home town against this list of Aer Lingus take-off points in Britain.

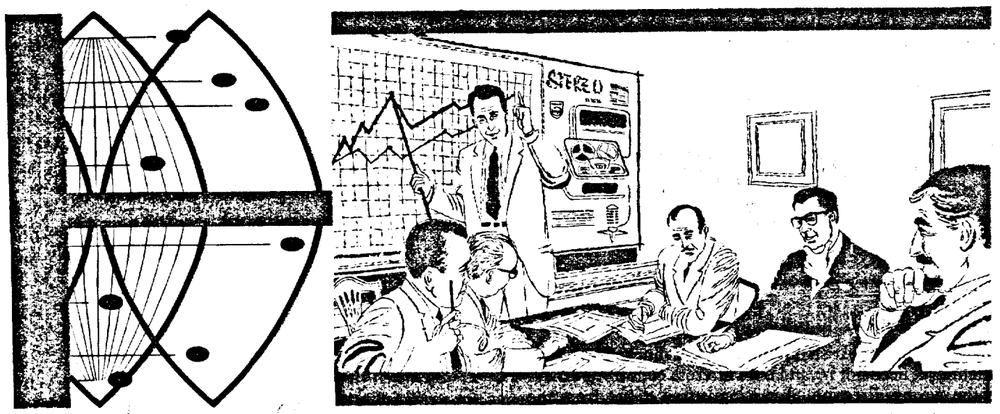
Why Remy Martin has no stars on its label



No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good*. In a word, Remy Martin cater for the one man in a hundred who prefers to compliment his palate—and his guests—with brandy as good as Fine Champagne V.S.O.P. Just ask for Remy Martin.

PRIDE OF COGNAC

REMY MARTIN

Philips "salesmakers" are the thousands of men and women of commerce. They are people who are informed and astute in the ways of modern business. They are sales managers, marketing men, auditors, economists, salesmen. Their duties can also include fostering and developing new industry in emerging markets where with progress comes the promise of prosperity. Their environment is where private enterprise can flourish; where, by exchanging ideas and know-how, "salesmakers" contribute to permanent industry and long-term employment. All over the world Philips enterprises develop in their own way, at the same time obtaining the benefits of association with their fellow companies. Philips is a Federation of Industries employing 225,000 people of all nationalities - together they guide their future with Philips on a path of continuing prosperity in a 'tron world; a modern world already benefiting through advanced electronics.

are pressing for measures to tax the multi-million dollar commercial properties of the Church and there are whispers that an effort will be made to cut off the children's lunches and the textbooks with which the state provides the parochial schools. It is Mr Perez's assistant who organised the drive to send unemployed Negroes north.

Most observers expect to hear a great deal of inflammatory oratory during the two months of the coming session of the State Legislature, but they doubt whether public and parochial education will suffer very much. The Governor has many powers which he can use to thwart Mr Perez. Moreover, both President Kennedy and his brother, the Attorney General, are known to be watching the situation in Louisiana carefully; in 1960 Mr Eisenhower was President and he did little to aid the moderates. At present, Washington's presence is felt very keenly in the state capital, Baton Rouge. Federal agents are investigating several members of the Davis administration for alleged irregularities involving postal frauds. If the President were to use these investigations as a stick and the oil money as a carrot, the combination might be very effective.

Racial disturbances have hurt Louisiana economically; indeed, many people believe, though they dare not say so publicly, that Mr Perez is wrecking the state. The tourist industry ranks close behind foreign trade and oil as a source of income and racial crises frighten away both pleasure-seekers and potential investors in industry. But Louisiana has few leaders either in business or politics who are willing to tell the people what racial segregation is costing them.

One hopeful sign is that in the economic field Louisiana's million Negroes are making some progress. Some shopkeepers are now willing to hire Negro cashiers. The bus and tram company in New Orleans has agreed to use a few Negro drivers. Just this year a manufacturer of telephone equipment began a training programme for Negroes and the federal government's new space centre will provide jobs for Negroes—if qualified ones can be found. Unfortunately, the level of Negro education and technical training is far below that offered in white schools and too many of the Negroes with good qualifications go north as soon as they get the opportunity—an export of potential wealth which Louisiana can ill afford. New Orleans does have a Negro middle class and a few rich Negroes. But good jobs are still scarce and even in the federal court house, where the Negro feels that he has friends, some floors are still being swept by Negro graduates.

Stockpiling in the Open

SENATOR SYMINGTON'S inquiry into the national stockpile of strategic materials, built up as a reserve for wartime emergencies, has been subject to a good deal of interruption and delay, but at least Mr Symington has had time to suggest one method which might enable some of the accumulation of surplus materials to be disposed of without upsetting the markets too severely. He plans to introduce legislation under which defence suppliers could be provided with stockpiled materials to use in carrying out their government contracts. Something of the sort has already been arranged for rubber from the stockpile which is now to be used in tyres supplied under the foreign aid programme.

This scheme is possible since Congress has already approved a programme for getting rid of surplus rubber, although sales are limited to about 5,000 tons a month because the State Department fears that it would upset producers abroad if more were offered. Such foreign considerations are only one of the difficulties making it hard to liquidate the stockpile. When it comes to domestically-produced commodities, such as lead and zinc, the Department of the Interior rushes in to protect the mining interests, as do the congressional representatives of the mining states. Indeed, the main reason why there are such huge surpluses of these two metals in the stockpile is that it has been used to support prices. One of Mr Symington's chief concerns has been to find out why in 1955, when there was a shortage of copper, producers were allowed to defer deliveries to the stockpile and to sell the supplies thus released on the open market at higher prices. He suggests that the government should have taken delivery at the contract price and then sold the copper itself, thus making a substantial profit and denying a "windfall" to the producers. To this the official who was responsible replied that this would have meant that the government was "playing the market" and that such speculation hardly seemed a suitable, or legal, activity for officials.

Certainly if they were allowed to engage in it they would have plenty of opportunity. The table deals with the twelve most important of the 64 commodities in the stockpile, which make up about 75 per cent of the total, and shows the quantities in excess of maximum requirements for wartime reserves at the end of 1961.

Material	Unit in thousands	Maximum objective	Total in stock	Percentage surplus	Value of surplus (thous. $)
Aluminium	Short tons	1,200	1,929	60·8	349,844
Chromite	Short tons	2,700	5,229	93·7	219,757
Cobalt	Pounds	19,000	97,048	410·8	117,073
Copper	Short tons	1,000	1,142	14·2	88,390
Lead	Short tons	286	1,302	355·2	208,304
Manganese	Short tons	6,800	9,116	34·1	174,535
Molybdenum	Pounds	59,000	84,305	42·9	35,427
Nickel	Pounds	323,000	438,702	35·8	90,293
Rubber	Long tons	750	1,092	45·6	213,710
Tin	Long tons	185	349	88·6	442,171
Tungsten	Pounds	50,000	161,464	222·9	159,070
Zinc	Short tons	178	1,580	787·6	336,388

Altogether the stockpile has cost the United States $8.6 billion to date and the value of the excess supplies is put at about $3.4 billion. Changes in estimated requirements, both of actual commodities and of the period to be covered, reduced from five to three years in 1958, are the basic explanation of the huge size of the surplus. In the case of tin it is enough to supply the needs of the whole world for a year. But even now the accumulation continues, of nickel, for example, because of contracts entered into ten years or more ago, to encourage increased output.

Tale of the Phantom Tanks

REPUBLICANS are licking their lips over the case of Mr Billie Sol Estes, a Texas Democrat with friends in the Department of Agriculture, who is accused of defrauding some of the country's foremost finance companies of about $22 million. The Republicans like to think that the Kennedy Administration, so far unspotted by scandal, may find Mr Estes to be the equivalent of Mr Goldfine during the Eisenhower Administration—though no one of anything approaching the eminence of Mr Sherman Adams has been involved. But the victims, the big finance companies and the farmers, both of whom were too greedy to be careful, provide food for strictly non-partisan reflection.

Mr Estes is a Horatio Alger with Texan trimmings; nine years ago the Junior Chamber of Commerce chose him as one of the ten most promising young businessmen in the country. He was born a poor boy who early showed such a talent for making money that he became a legend; he was said—mistakenly, it now seems—to have been worth $150 million by the time he was 30. He is also a strict fundamentalist, a lay preacher for the Church of Christ which forbids drinking, smoking, swearing and dancing; even in Mr Estes's sumptuous swimming pool the sexes could not mix. His business empire contained farms, fertilisers, grain storage facilities, an undertaking establishment and a newspaper. The

newspaper, which he started in a commendable effort to rid his home town of Pecos of a journal which is alleged to have been controlled by members of the John Birch Society, was his undoing. The rival editor set to work and discovered that Mr Estes and some other businessmen had been obtaining capital (to expand his facilities for storing the government's huge surplus of grain) by strictly unorthodox means. Mr Estes had become a big dealer in anhydrous ammonia, a fertiliser, by buying it on credit and selling it at such low prices to grateful farmers that his small competitors were wiped out. He then asked the farmers to help him by buying anhydrous ammonia tanks on hire purchase. The farmers never saw the tanks, which in theory were leased back to Mr Estes for sums which more than covered the instalment payments. On paper, Reeves County became the anhydrous ammonia tank capital of the world. In fact, the tanks did not exist but the farmers' contracts, worth about $33 million, were used to borrow about $22 million from various finance companies at very high rates of interest.

Since this story broke, Texas has been full of investigators and investigations—from the Department of Agriculture, from the Federal Bureau of Investigation and the office of the State Attorney General. Mr Freeman, the Secretary of Agriculture, concedes that three of his employees, including a former Assistant Secretary, may have received presents of clothing from Mr Estes. But he denies that any favouritism was shown toward him, although it was not until this week that Mr Estes was finally fined $554,000 on long-standing charges of illegal trafficking in cotton allotments. The bond which he was required to post for storing grain was also surprisingly low. Mr Estes was a big contributor to Democratic party funds. The Republicans are not likely to let the matter rest.

Miners not Undermined

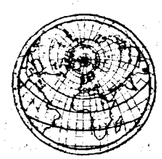
FROM A CORRESPONDENT IN COLORADO

A NEW misfortune has befallen the embattled International Union of Mine, Mill and Smelter Workers, which moves from one cliff-hanging episode to another like the heroine of an early western film. Last week the Subversive Activities Control Board ruled that the trade union is a communist-infiltrated organisation. Unless this decision is overruled by the courts the union will be unable, under the National Labour Relations Act, to represent its members and bargain for them with the employers. An appeal to the courts—to the Supreme Court, if necessary—seems certain.

This is only the latest round in a long fight. For twelve years, ever since this union of workers in the non-ferrous mining industry was expelled by the then Congress of Industrial Organisations as communist-controlled, the government has been on its trail. Four other attempts have been made to deprive the union of its bargaining rights; three have been defeated in the courts. In the fourth it was charged that officials of the union had conspired to defraud the government by signing false affidavits that they had never been members of the Communist party. Recently the Court of Appeals in Denver freed two of the defendants and, while finding that there was evidence that the remaining seven had filed false affidavits, held that the chief government proof of the charge of conspiracy rested on hearsay evidence which should not have been admitted. Presumably there will be a new trial, although anti-communist affidavits have not been required of union leaders for three years.

The union's president, Mr Clark, who has never been accused of being a communist, complains of "many years of unjust legal harassment," but this harassment does not seem to have undermined the faith of the members in their leaders. In recent elections to determine who shall represent the miners for bargaining purposes with their notoriously hard-boiled employers, Mine-Mill has had considerable success in repelling attacks from another direction—the raiding tactics of the wealthier steel and chemical workers' unions, which are members in good standing of the American Federation of Labour and Congress of Industrial Organisations. Last year Mine-Mill signed an offensive and defensive alliance with Mr Hoffa's teamsters, who are also exiles from the house of organised labour. But the biggest factor in the survival of the union is the loyalty of its members. The miners have learned to shrug off accusations of red domination in the union which has been fighting their battles, literally as well as figuratively, for over sixty years.

SHORTER NOTES



By declining, with great firmness, to run for the Governorship of New York State the Mayor of New York City, Mr Wagner, has presented Mr Kennedy with a bad headache and one which cannot be left to cure itself. The present Governor, who is seeking re-election, is Mr Rockefeller, the most liberal and the most attractive of the Republican contenders for the Presidency in 1964. Mr Kennedy would like to see Mr Rockefeller knocked out of that race by a defeat, or a close call, this year. Mr Wagner seemed the man for the job—or so the public opinion polls said; moreover he is the only Democrat acceptable to all the party's factions in the state. But the wily Mayor would rather seek a Senate seat—his lifelong ambition—in 1964 when his opponent would be Senator Keating, not a very formidable foe, and when the Democratic tide to carry Mr Kennedy back to the White House will presumably float lesser Democrats into harbour as well.

* * *

In order that a new President may be able to appoint as chairman of the Federal Reserve Board, the central bank, a man who has his full confidence, Mr Kennedy has asked Congress to change the starting date of the chairman's four-year term, so that it will coincide with the presidential term. Mr Kennedy also wants the 14-year terms of the seven members of the board to expire in rotation at the end of January in odd-numbered years, so that there would always be a vacancy when a new President takes office for him to fill with a man of his choice. This proposal has the support of the present chairman of the Board and was first made by the Commission on Money and Credit; neither feel that the change would jeopardise the Board's independence.

* * *

For the past month two of America's biggest cities—Minneapolis and Detroit—have been without newspapers because of strikes by the teamsters (lorry-drivers) which spread to other unions.

Scorecard for the Boroughs

FROM OUR SPECIAL CORRESPONDENT

IN the first three days of elections for urban district councils in England and Wales the Liberals marked up even more than their expected quota of gains, while Labour's gains, which were also pretty widespread, seemed so far to be only slightly lower than last week's Scottish burgh results could have led Labour's biggest optimists to expect. The Conservatives, who in the first three days appeared to lose about a fifth of their seats, were doing fully as badly as they had had every reason to fear. On Thursday, as we went to press, the English and Welsh boroughs were voting; the results will be blazoned across the newspaper headlines by the time this issue of *The Economist* appears. It is worth setting up a scorecard to suggest what they will mean.

In the 402 non-metropolitan boroughs (i.e. boroughs outside the county of London) one third of the councillors—which means, in practice, rather over 3,300 seats—fall due for re-election each year. Labour has always won less than half of these 3,300 odd seats except in its two peak years of 1945 and 1952; usually its share has fluctuated between 1,200 seats (in pretty bad years) and 1,600 (in pretty good ones). Last year, 1,339 Labour councillors were elected—almost exactly the same number as in the general election year of 1959, when the councillors who were defending their seats on Thursday were returned. For once, therefore, Labour's gains or losses this year will show the change in the party's fortunes fairly directly, both compared with last year and with the period just before the last general election.

In the light of recent polls and by-elections it had looked until last week as if Labour should be able to hope for perhaps between about 150 and 200 net gains of seats in these non-metropolitan boroughs; even gains of that order would make them favourites to win any immediate general election. But last week in the Scottish burgh elections, Labour put on its best performance ever; the peak hope of the party has thus seemed to be to do the same in England and Wales—i.e., gain well over 300 seats net in these non-metropolitan boroughs, and thus secure the largest number of Labour borough councillors ever returned in an annual election. Theoretically, there seem to be about 40 or 50 places (ranging alphabetically from Bolton to Wolverhampton) in which control could conceivably switch to Labour if it secured this clean sweep in every possible marginal seat; but the party will do remarkably well if it does secure as many switches of control as that, especially as the Conservatives extended their power in some places by aldermanic nominations last year.

Naturally, especially after the early urban district results, attention this year will be turned as keenly towards the Liberals as towards Labour. Over the last three years the Liberals have been progressing steadily but slowly in the non-metropolitan boroughs, claiming 17 net gains of seats in 1959, followed by 51 in 1960, and 86 last year. This year, as well as attacking their rivals' positions, they will for the first time be defending some seats that they won at the beginning of their advance. Circumstances could hardly be more favourable for this test.

This year's upsurge of enthusiasm for the Liberals could exert its maximum effect in local elections because of the low total turnout; in some recent local council by-elections they have done astonishingly well; they are also running more candidates than in 1961 (about 1,230 in the non-metropolitan boroughs). They can reasonably hope to hold on to the great majority of the seats that they will be defending, to make gains in perhaps 60 or 70 other wards which have elected Liberals some time in the last two years (but where this year's retiring councillors, elected in 1959, were not Liberals), and then go forward to make a heartening number of new net gains on top of that. In the residential areas of the south—including the outer suburbs of London—the Tories are plainly afraid that they may lose a considerable number of seats to them. Last year in the north of England, by contrast, most of the Liberal gains came from Labour; it will interesting to see whether they go on capturing more of these, or whether the main effect of their appearance outside the Tory suburbs of London will be to help swing marginal Tory seats to Labour. In the scattered district council results so far, they did in fact seem to be gaining from both Labour and Tory at once.

So far this comment has been confined to the provincial boroughs, where one third of the councillors retire each year. Nothing has been said about elections in the smaller urban or rural district councils (where measurement of genuine party gains or losses is always very difficult to make accurately, which is why the figures emanating from the different party headquarters have shown some variations in the first three days of this week) or about the elections that were taking place on Thursday in the 28 metropolitan boroughs within the county of London. In these metropolitan boroughs, where the whole council comes up for election every three years, all of the 1,356 seats were at stake—in elections which, if Dr Hill's reorganisation plan for London local government goes through, will presumably have been the last of their kind.

Eighteen of these 28 metropolitan boroughs have remained solidly Labour ever since the war (with one exception, Stoke Newington, in 1949); six have remained solidly Conservative (with one exception, Holborn, in 1945). Generally speaking, the main battle usually rages over the four remaining boroughs. They are Lewisham (where the Tories had an elected majority of one in 1959, but where Labour then resorted to some aldermanic legerdemain), St Pancras (won by the Tories in 1959 after a violent split within the local Labour party), Wandsworth and Paddington (each held by the Tories since 1949). To judge from trends in recent by-elections, Labour might expect to win all four of these marginal London boroughs this year, leaving the Tories with control over only their usual safe six; and even in those safe six the Tories have had some reason to feel nervous about the effect of Liberal interventions. In the past the Liberals have had no success in the metropolitan boroughs; but this year they put up 358 Liberal candidates, and were plainly attacking hard.

May Day Malignants

Mr Gaitskell (at microphone) and barrackers

FROM OUR SPECIAL CORRESPONDENT

MR GAITSKELL'S verbal punch-up with the Glasgow nuclear disarmers on Sunday has almost certainly done him no harm at all with the general electorate. The revival of Labour's fortunes, begun by the leadership's stand at the Scarborough conference and continued by the expulsion of the five Victory for Socialism unilateralists last year (closely followed by the party's first by-election boost at Birmingham, Small Heath), has coincided with the growing popular conviction that a government led by Mr Gaitskell would not allow itself to be dragged down the slippery slope towards tacit neutralism. The image of Mr Gaitskell as an alternative, pro-American prime minister hobnobbing with President Kennedy in Washington, both of them in close agreement over the fast-disappearing military value of the British deterrent to the alliance as a whole, has been confirmed by the calm official Labour line on the present American test series.

The realisation that it may actually be a pro-American and pro-Nato policy to let the British nuclear effort run down in the next few years has visibly disconcerted and angered those extreme left-wing spokesmen who had hoped to exploit unilateralism as a permanent running sore in the western alliance. By the same token, the Washington understanding has done Mr Gaitskell a great deal of political good.

At the same time the Campaign for Nuclear Disarmament has been having its troubles. The Gaitskellite triumph at Blackpool ended the honeymoon period in which CND's moderates and extremists could make common cause within the body of the Labour party. The moderates followed Canon Collins in continuing the campaign by moral persuasion (Aldermaston, etc.), and the Russian tests last autumn pushed the canon and those who understood the moral issue into adopting a much more publicly multilateral position. The militants followed Lord Russell's Committee of 100 into civil disobedience, which the canon was prepared to condone but not to participate in. Even this form of protest against the British bomb could be given full sympathy on the Labour left without necessarily having to be complemented by outright rejection of Nato as an institution: Mr Cousins's straddling on this point is worth studying.

But now the extremists have gone further. Some actively want to turn CND towards positive neutralism in the cold war; others want industrial action against the bomb (at which the unions have sat up and taken notice); and others still want to run CND electoral candidates against Gaitskellites. A few CND candidates have been standing in this week's local elections, and a ginger group has been formed to put parliamentary candidates forward irrespective of what the CND annual conference decides to do next month. While the cooler heads (of whom the canon is no doubt one) believe that CND will be on a licking to nothing at the polls, the possibility that Labour could lose some left-wing votes (partially offsetting the expected Tory defections to the Liberals) has been enough to bring Transport House into action.

BEATEN in the official Labour party, the unilateralists and their Trotskyite allies have succeeded (to no one's great surprise) in impressing their views on the revived Young Socialist movement, as its Easter conference made abundantly plain. Equally, a good deal of anti-nuclear and specifically anti-Polaris feeling can be found among local organisations like trades councils (which actually organise May Day celebrations) and, north of the border, the Scottish Trades Union Congress. These were among the people whom Mr Gaitskell in Glasgow and Mr Brown in Hyde Park came up against on Sunday. Mr Gaitskell, in fact, spoke from the same platform and from under the identical banner as Mr Cousins did last year. About one-third of his Clydeside audience was primed in advance to heckle and cat-call if he did not take the anti-Polaris line that the extremists wanted (and which is the last piece of unilateralism which they can still claim to be official Labour policy, agreed on at Blackpool).

The communists have protested that they had no guiding hand in this, but the repentant secretary of the Young CND group in Glasgow claims to have evidence that they had. The Young Socialists were organised to barrack, too; it seems certain that there is a wide spread-over in the membership of the two movements. Thus Labour has a familiar disciplinary problem on its hands, and the Young Socialist movement in Glasgow itself has been swiftly disbanded.

But the warning issued by the party secretary, Mr Williams, on Monday goes rather further. In keeping with Mr Gaitskell's angry words from the platform ("These people are not worth a tinker's cuss. They are peanuts. They don't count.") Mr Williams has told CND as a whole that it has "obviously become infiltrated by anti-democratic elements." This is certainly a danger that CND has not been noticeably concerned to prevent: it was the Home Secretary who actually saved the movement last year from lionising delegates of a Japanese communist-front body who intended to join the Aldermaston march. But local Labour parties have something to look into as well: the organised barracking of Herr Willy Brandt, the party's guest on his visit to Britain, was not exactly confined to well-known communists.

There is no doubt that a formal proscription of CND by the Labour leadership would damage the anti-nuclear movement enormously, and the consequent ructions inside the parliamentary party would probably lead to no more than 20 Labour MPs refusing, or being denied, the official whip. If this happened it would actually strengthen Labour's support in the country at large. But it is unlikely to happen immediately, partly because the leadership cannot ignore the sincerely pacifist following that CND has, and partly because of fears that a working majority for Labour after the next election might depend on the support of the 20 outright unilateralists (assuming that official Labour candidates were not run against them) and another 30-40 of their sympathisers. What does seem clear is that the leadership's belief that it could safely let the defence issue rest after the Blackpool success has not visibly helped in the conversion of the dissident local groups throughout the country.

The New Co-operators

FROM OUR SPECIAL CORRESPONDENT

THE London Co-operative Society has at last been taken over by its young (well, fairly young) Turks. For electoral purposes members of the organisation have formed themselves into three "parties"—the London Co-operative Members' Organisation, which has held power for thirty years; the 1960 Committee, which existed for some ten years before the date it bears; and the Co-operative Enterprise Movement, founded eighteen months ago, orthodoxly Labour in its views and adhering orthodoxly to the reforms advocated for the co-ops by Mr Gaitskell himself in 1958.

Last week elections were held for the London society's management committee, which is a sort of board of directors: five of the fifteen members are elected each three years. The 1960 Committee carried off all five seats, and now has a majority of 10 to 4 over the LCMO. There will be a by-election to fill the vacancy left by the election of a sitting member, Mr John Stonehouse, MP, to the presidency for the next three years. But Mr Stonehouse was elected on an LCMO ticket. Some people have predicted that he will have a rough ride as president, particularly as the 1960 Committee is known to have communist members.

The reality is far more hopeful for the London co-op. Under LCMO rule the society's trade was down by £1 million last year (while co-ops elsewhere have been charging ahead with supermarkets, drink licences and plenty of new ideas). Criticism of the old guard is widespread: there are would-be reformers within all three electoral groups. The leader of the reformists who have stayed within the establishment and the LCMO is Mr Stonehouse himself. His policies seem much closer to those of the 1960 Committee than of his own group, and he had a long struggle to win a presidential nomination from the LCMO.

The Co-operative Enterprise Movement was founded by some Labour party faithfuls when the LCMO failed to adopt Mr Gaitskell's recommendations; on many issues they agree with the 1960ites, except on the acceptance of communist members and on strict fidelity to some of the master's recommendations (which the 1960 Committee says are not suitable for a society as vast as the London co-op). The 1960ites claim that they have communist members mainly because the other groups will not accept them; but it is obvious that many CEM voters supported Mr Stonehouse for president because the 1960 Committee presidential candidate is a communist.

Co-op president Stonehouse (right): reform in store?

So the new president is likely to find his committee more tractable than some observers have anticipated. It is at last possible that the management committee will hive off some of its unnecessary spadework (for instance, the appointment of some fairly junior executives) where it belongs—with the society's paid officers: this should give the committee more time to think about the toughly competitive long-term problems of trading in London. It will also have to see that these executives are paid something nearer to what private enterprise store managers get: the reserve of good middle-rank executives for promotion is running thin.

The CEM, defeated at the elections, has now set out to improve the catastrophic voting record of co-operators (it claims that both the older groups benefit from keeping the voting within a closed circle). Out of the total membership of 1¼ million, perhaps only 200,000 are regular shoppers at co-op stores (many others buy only their milk from the co-op, which sells one-third of the milk in London). But of these, only 12,038 bothered to vote—6,078 for Mr Stonehouse and 5,960 for his opponent. Obviously a minute increase in the poll could have put someone different in: an energetic pressure group, whatever its origins, should have no trouble in getting a thousand or two more people to the meetings in the evenings or to the 200 stores where voting took place last Saturday—while the Cup Final was on, and the traffic jams were at their heaviest in the shopping districts.

The CEM wants a two-tiered electoral system, whereby a council of members elected at grass-roots level within each of the 70 parliamentary committees in the London co-op area would in turn elect the three committees—management, political and education—that run the three prongs of the society's activities. If some such idea could bring out a few more co-operators on polling day, it might even prove to be a soundly commercial piece of public relations. For the result of this week's tiny vote, however welcome for some, was hardly co-operation.

Thinning Out

BRITISH potato consumption may be expected to fall off markedly in the next 20 years, if North American and similarly affluent dietary habits establish themselves here. The basic recommendation of a critical survey just published from Wye College* is that the rationalisation of the potato industry and concentration on specialist producers should be pushed ahead vigorously by the Potato Marketing Board. The advent of the common market, where potato prices have been appreciably below British levels, should, the survey declares, be an even more immediate spur to remove two out of every seven present British growers from commercial production.

Although she has cut down on her unnaturally high starch intake since the war and early postwar years, the British housewife continues to show a surprising attachment to the humble spud. Consumption per head fell from 219 lb in 1954-55 to 198 lb in 1956-57, but in the past five years it has stayed stubbornly round the 200 lb mark, or twice as much as the average American eats. Local preference plays a part in this stability of demand, particularly in areas like the north of England; excessive helpings of potatoes in industrial canteens and the steady growth of the processing industry are other factors. After this year's sad experience of running into a scarcity the Potato Marketing Board is currently concerned to keep home production up, and has not imposed (despite its new power to do so) any penalty on growers planting in excess of their acreage quota this year. At normal yields, the acreage actually planted still will not guarantee enough potatoes to meet average home consumption.

The Wye College report underlines the board's chief difficulty in reducing wild fluctuations of yield under the acreage quota system. The board has little year-to-year control over growers who do not choose to plant their full acreage, while its penalties have fallen on the more efficient producers who increase their acreage despite the excess levy. There is no logical reason why the protection of a guaranteed price should be offered to those growers whose decision to plant may be merely to clean the soil and not to provide any regular supply to the consumer; these are not the people who will invest, for example, in the better growing techniques and modern means of storage that the industry needs to develop. In the long term the Wye College report therefore wants the board to switch from acreage quotas to quantity contracts with growers, and to develop by itself a system of market supply contracts. It also recommends that future price support should be financed, not by the taxpayer but by levies on producers in years (like the last one) of scarce supplies and very high financial returns.

A HOME-SERVICE INSURANCE OFFICE

Warwick Castle, a magnificent example of a 14th-15th century palace fortress, stands superbly above Shakespeare's Avon. The Castle was founded in 1068 and later passed to the mighty Beauchamp family, who, for two centuries, influenced the course of English history.

Symbol of Security

Over the centuries the castle has represented strength and security to those dependent upon its protection. In modern times the Alliance castle symbolises the same qualities which are just as important now as in the past.

With almost a century and a half of experience in insurance the Alliance offers you an extensive service, expert advice on your individual needs, and prompt and generous settlement of your insurance claims.

Inquest on a Floating Rate

An Ottawa story has it that when some of the directors of the International Monetary Fund complained last January that Canadian officials did not seem to hold a proper attachment to "the fixed rate system" of the exchanges, Mr Louis Rasminsky, one of the founding fathers of the IMF and now governor of the Bank of Canada, replied that Canadian officials found it difficult to be attached to any "system" because Canada had tried them all—without success. Canada now has a fixed parity again for the first time since September, 1950. But the move from a true floating rate, set by the free play of market forces, and towards positive devaluation to a fixed rate, occurred not last week but in December, 1960. From then on the authorities moved gradually away from a free rate.

They first acted surreptitiously by interventions not to smooth natural fluctuations in the rate, but to alter its level. By June they had put $156 million into the exchange market; and at this point Mr Fleming, the Finance Minister, broadcast his intention to intervene in order to establish the rate at a level (a "significant discount") considered appropriate by the authorities. Once the decision had been taken to abandon a floating rate, the likelihood of an eventual move to a formally fixed rate became very high, for the hybrid manipulated rate tends to have most of the disadvantages and few of the advantages of both fixed and floating rates. It can be argued that the episode did give the Canadian authorities the chance to clarify their views on what would prove to be the viable fixed rate—though might they not also have chosen 92½ cents in December, 1960?

Canada's floating rate had clear limitations in its latest years; and its experience does cast some light on the limitations of floating rates in general. But the full lesson of that experience is by no means one sided; and it certainly does not suggest that Canada would have done better to have had a fixed rate throughout the decade 1950-1960. The floating rate system must on balance be held to have worked well, for Canada, at least from its inception until the passing of the great investment boom of 1956-57.

In the autumn of 1950 Canada, at an exchange rate of 91 US cents to its dollar, faced a massive inflow of speculative funds; the feeling was abroad that the upsurge in demand for Canadian exports generated by the Korean war would force Canada to revalue its currency, probably to parity with the US dollar, from which point it had been devalued as part of the general currency realignment triggered off by Britain's devaluation of 1949. This speculation could no doubt have been stemmed by such a revaluation. However, it was clear by this time that, in addition to the speculative inflow, a considerable inflow of long-term investment capital was under way. And a continuing increase in the Canadian exchange reserves would embarrass the domestic moves to contain the money supply. The internal and external demands on monetary policy would thus have been in sharp conflict. This problem was avoided by adopting a floating rate, such as Canada had, in fact, used from 1929 to 1939.

The move was no doubt successful initially. The floating rate eased the Canadian authorities' task in developing monetary policies to contain the inflationary pressures. Over the next few years Canada was not seriously tempted to return to a fixed parity. The floating rate seemed to be working well. By 1952 it had reached parity with the US dollar, and from then on it showed a remarkable stability. Canadian interest rates were able to rise more rapidly than rates in the United States in response to internal pressures on demand, and then to fall more rapidly as the rise in unemployment warranted an easier monetary policy. Not only did the floating rate make easier a proper and independently timed anti-cyclical monetary policy in Canada, but its fluctuations tended also to be generally anti-inflationary in their impact. Thus the rate tended to strengthen on the upswing of the cycle, helping to restrain the economy, and to weaken on the downturn, giving Canadian trade a mild fillip.

It is difficult to argue therefore that Canada would have been better served in the period 1950-57 by a fixed rate. But in the period since 1957 the matter is more complex. Broadly, the complaint against the floating rate is that, with the passing of the great investment boom, the rate ceased to behave in an anti-cyclical manner, and, by its continuing buoyancy, did in fact exacerbate both the domestic problem of under-employment and the long-term external problem of a yawning trade deficit. This is plainly true. It came about, however, because domestic monetary policy itself began in these years to follow a perverse road. Had Canadian interest rates declined relatively to US rates as they had, for example, during the setback in 1954, the successful pattern of the earlier years might have been repeated. In practice, domestic monetary policy during the years 1958 and 1959 had the effect of forcing Canadian provincial governments and municipalities into the New York market on an unprecedented scale, and this supported the exchange rate at a level higher than was desirable from the standpoint of either employment or trade policy.

If one asks why the exchange rate ceased to move in a manner appropriate to changing economic circumstances, one

therefore finds oneself embroiled in the tangled subject of the general management of monetary affairs in Canada during the tenure of Mr James Coyne as Governor of the Bank of Canada. The collapse of the bond market following the great government refunding operation of 1958, partially under the weight of that operation and partially as a result of the collapse of the speculative boom in long-term bond prices in the United States, produced intense demoralisation in the Canadian capital market—which was, if anything, deepened by the subsequent manœuvres of the Bank of Canada. In this period, moreover, despite the growing evidence of the ebbing of inflationary pressures along with the ebbing capital investment boom, renewed anxiety was expressed by orthodox opinion about price stability ; and in this atmosphere anti-cyclical policies involving deficit budgeting tended to weaken confidence further. The Bank of Canada maintained conservative views on the role of monetary expansion even in the recession ; and bond prices actually came under pressure from official selling, by the Unemployment Insurance Fund to meet its growing liabilities. But in this particular period an extremely large increase in the money supply would probably have been needed to alter interest rates significantly, such had been the traumatic effects of the upsets to which the bond market had been subjected.

It was in these circumstances that the authorities, Mr Coyne and Mr Fleming for once speaking with one voice, began to hint at the possibility of losses to Canadian borrowers in New York from future fluctuations in the exchange rate. Since, with the wide margin of up to 1½ per cent between Canadian and New York long-term rates which then existed, the Canadian dollar would need to decline well below its range of fluctuation of previous years if this borrowing were to prove more costly than borrowing in Canada, official indications of this kind were naturally unsettling, and began to disturb the deep-rooted assumption of the normality of a US-Canadian exchange rate giving about equal value to the dollars of the two countries.

During the interlude between a properly functioning free rate and last week's establishment of a fixed rate, a consensus of opinion appeared which agreed that a "premium dollar" was inappropriate. Usually it was also agreed that the manipulated rate could be only temporary ; the choice lay, it was said, between the re-establishment of a floating rate, and the adoption of a proper fixed rate. Two clear expositions of the case for these alternatives were put at the turn of the year by the Presidents of the Royal Bank of Canada and of the Toronto-Dominion Bank. Mr W. E. McLaughlin, of the Royal Bank, argued forcibly that Canada's peculiar vulnerability to external economic influences made it difficult to establish and maintain fixed rates that could be expected to remain equilibrium rates for considerable periods, and that floating rates, moving smoothly rather than erratically in response to changing fundamental conditions were to be preferred. If the employment situation warranted a lower value for the Canadian dollar than had existed prior to official intervention in the market, it presumably also warranted the sort of domestic monetary policy likely to produce just such a rate, and this should be the method used for securing the exchange rate objective. Mr A. T. Lambert of the Toronto-Dominion Bank argued for a fixed rate (in the range of 94-96 US cents to the dollar), because of the need for manufacturers and traders to be able to plan ahead with some confidence. Now Canada has chosen a fixed rate ; and it must inevitably be asked whether the many and persuasive arguments, official and unofficial, that have long pointed to Canada's special need for exchange flexibility, will now be forgotten. Certainly, frequent revisions of the fixed rate would be more unsettling and disruptive than a floating rate backed by appropriate domestic economic policies.

In the week following the establishment of the new peg, the Canadian dollar has dropped quickly to parity, after opening near its upper limit at 93¼ ; the Canadian authorities may already have provided some official support. Their vital task now is to recapture the confidence of overseas investors. Canada still needs massive support on its capital account—the current deficit shrank by Can $228 million in 1961, but it was still near $1,000 million. The devaluation of 10 per cent and more since 1960 should lead to a further improvement, but this may not come quickly. Most of Canada's major exports sell at world market prices. So higher domestic prices have already been announced for wheat, setting an example which is likely to be followed by producers of pulp and paper, aluminium and other metals. By improving the profitability of the resource industries, devaluation should, indeed, help the trade balance in the long run—provided domestic costs are not allowed to catch up. But it seems certain that the current deficit will not be reduced to an extent sufficient to permit any quick reduction in dependence on foreign capital.

In a wider sphere, it is difficult to be dogmatic about the relevance of the Canadian experiment for other countries and other circumstances. On one facet, Canadian experience could indeed be cited by Professor Meade in support of his view that under floating rates short-term capital movements are likely to be stabilising. But the conclusion must be closely guarded. As Mr R. Wonnacott says in his book, "The Canadian Dollar, 1948-58":

> If a country follows relatively conservative fiscal policies, if a country has relatively restrained monetary policies, if a country has easy access to the major world capital market, if a country has a history of economic growth and clear potential for further expansion, and if a country's current account adjusts relatively readily to changes in long-term capital flows . . . , then flexible exchange rates are unlikely to lead to disaster and may, on the contrary, operate more smoothly and make the problem of domestic stabilisation more manageable than would fixed exchange rates.

The intriguing aspect of the Canadian experience is indeed that the floating rate was adjusted too easily by short-term capital flows, and as a result failed to reflect the long-term external needs of the economy in the way protagonists of floating rates claim they will. The exchange market will not in fact isolate the influence of the current account alone, and automatically adjust the rate to a notional equilibrium point. Capital flows follow the arbitrage calculation and the mood of confidence—not some vaguer long-term need that finds no expression in market terms. Canada's experience is a reminder, above all, that if domestic policies are pursued that are themselves not responsive to fundamental changes in the economic situation, a floating exchange rate cannot be relied on to provide the corrective itself.

Whose Pipelines?

Rather unexpectedly, the Pipelines Bill that reached the House of Commons this week (from the Lords) has developed into something of a political issue. In principle, this is not surprising: it is the first general legislation of any kind to deal with a means of transmitting fluids that, enthusiasts argue, may be widened to many other forms of product in the coming years, and will certainly develop quite rapidly in the hydrocarbon field alone. In fact, however, the Ministry of Power, which has sponsored the bill, seems to have regarded it as a non-controversial measure that should get a fairly clear passage. This it did not get in the House of Lords, where it encountered sharp criticism from more political slants than one, though no very significant amendment. And the second reading debate in the Commons on Wednesday promised similar harrying treatment.

Before this bill, there has been nothing to stop anyone laying a pipeline anywhere, provided he could get agreement to wayleaves from all the people whose property it crosses. Shell-Mex and BP is in fact doing so with one line from Shellhaven on the Thames to a products depot near St Albans. If any landowner does not agree, however, the pipeline developer has had to seek compulsory powers to acquire transit rights across his property—which has involved for BP and more recently for Esso the cumbersome procedure of a private Parliamentary bill. It was the last of these, the Esso Pipeline Bill passed last year, that led a select committee to propose general legislation for pipelines.

The resulting bill was summarised in *The Economist* of March 3rd. It would make all "cross-country" pipelines (those more than ten miles long) subject to "construction authorisation" by the Minister of Power. An applicant would have to advertise the project and notify all planning authorities concerned ; if these authorities objected the minister would, and in other cases he might, hold a public inquiry. An inquiry or hearing would have to be held, also, if the pipeline developer (however short his line) wanted powers of compulsory purchase and anyone objected. But the Minister's "pipeline construction authorisation" could, if he so directs, carry with it automatic planning permission. The bill would give the Minister power to lay down safety standards. It would also allow him, if he thinks other people may want transit over the same route, to require the applicant's line to be constructed to a larger capacity, and to impose "common carrier" obligations on the developer to allow other people to use the pipeline without "undue discrimination" in charges or otherwise. And, for the first time, this bill would make pipelines rateable.

These are unremarkable provisions: but opposition to the bill has crystallised around three points. There is some reluctance among backbenchers on both sides of both Houses to the powers that it gives to the minister to license compulsory purchase by private individuals: the Government sensibly proposes to make it easier for a petition of general objection to be referred to a Joint Parliamentary Committee. There has also been the expected pressure from Labour to have pipelines developed on a planned framework, as common carriers in public ownership—preferably by imposing on the railways the duty to provide them as they have to provide a railway service. This argument has been put forward as protection of public transport's right to develop pipelines on their own property and link them up across other people's land, which is provided in a clause of the Transport Bill now also on its way through Parliament. Thirdly, and unforeseen, the argument has emerged that as pipelines are a new means of transport that could become "as important as the railways," they ought to come under the Ministry of Transport, not the Ministry of Power.

Pipeline development here is dominated by the fact that Britain is a small island with no place more than 80 miles from the sea. This has meant so far that almost all oil pipelines in Britain carry petroleum products, not crude oil. Because of their diversity products in general cost more to store and move than does crude ; and one of those for which demand here and in Europe is rising fastest, fuel oil, has been difficult and is still costly to move along a pipeline. So in central European markets, far from the sea, the fashion is to move the fuel oil "in the crude" by lines from the coast to inland refineries, rather than refine on the coast and move the products. In Britain, so far, the balance of economics still tips the other way: it is cheaper to refine coastally and move products. The recent development here is of products lines serving large centres of concentrated consumption—such as London Airport—that are costly to serve by rail or, with traffic congestion, road tankers, or serving large-scale specialised customers who want continuous supplies of particular products—such as ICI at Severnside or the North Thames Gas Board at Southall.

This balance could eventually shift: some company may think it worthwhile to put an inland refinery near Birmingham. But no company—including the latest to examine the economics of refinery location in Britain, Texaco—has so decided. So, for the present, pipelines developed under this bill are likely to be products lines from refineries to big consumption centres. This may make it rather less likely for them to need common carrier rules: certainly to impose these rules generally, on lines carrying, for example, feedstock from a refinery to a chemicals or a gas reforming plant, would seem ridiculous. The permissive power to have lines enlarged and impose such rules in special cases seems perfectly adequate.

Nothing in this bill seems to preclude the limited right to develop pipelines expressly given in the Transport Bill. The bills may need examination to clear any possibility of conflict: equally, there seems no reason why the railway authorities should in principle be any more limited than any other potential pipeline developer. But to give them any pre-emptive right would put customers for the transport of fluids at a hopeless disadvantage. The vast route length of property and wayleaves owned by the railways is not quite as relevant here as might be thought: many of the likely pipeline routes run alongside rail routes essential for other cargoes, and often the room beside the tracks could not take a modern buried

pipeline. In the House of Lords Opposition spokesmen calling for protection of the rights of public transport in this new field seemed almost to be advocating control of pipeline development by the public boards set up to run older, infirm systems of transport. That would go a fair way to ensuring that the system would not be developed properly.

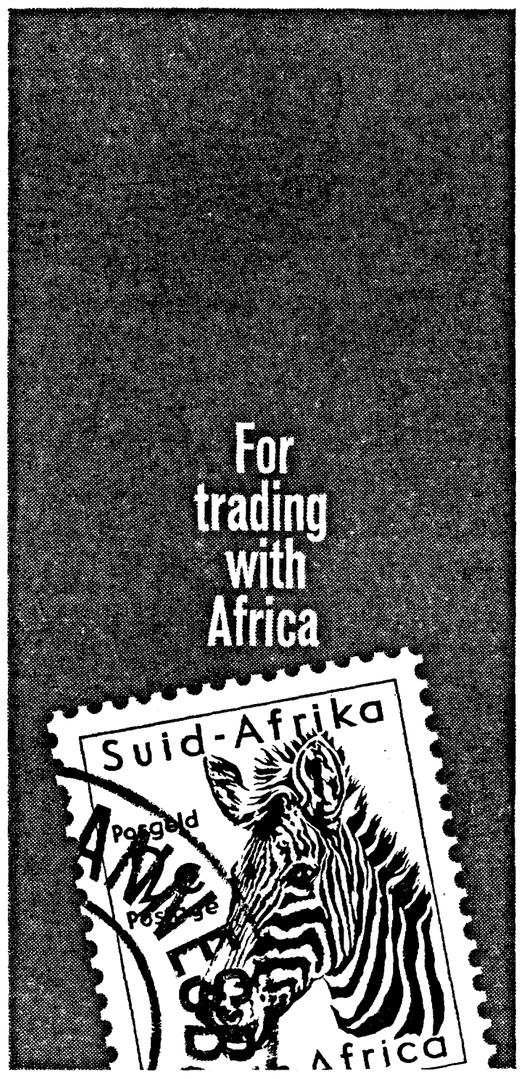
Concern over any measure that gives a Minister power that Parliament and local planning authorities shared before is reasonable enough, particularly the power of intrusion and compulsory purchase. Parliament is entitled to demand such safeguards as will not mean too much delay. The third argument—that these should be Mr Marples's lines, not Mr Wood's—has some logic in principle. Can anyone really argue that a pipeline is not a means of transport—merely some umbilical extension of a refinery's entrails? So far, certainly, they have been pieces of the petroleum business, and nothing else (this bill excludes gas mains and internal works lines). But the oil companies, looking with no eagerness whatever towards the Ministry of Transport, have in one sense only their enthusiasts to blame. Have not these zealots been arguing recently that almost anything, down to postal parcels, can go along a pipeline?

The Government so far has stuck to the Ministry of Power, but is prepared to admit the possibility of shifting the responsibility later if all these things should come to pass through the pipe. There seems no particular reason of principle why these specialised facilities for oil movement should go under the Ministry of Power, which does not supervise the operation of road or marine tankers; though gas and electricity transmission, it must be added, remain within the power of Power. But principle has no clear sway here (what is steel doing, for example, under the Ministry of Power?); and so long as little except petroleum moves through pipelines, it may be convenient and sensible to leave it with the ministry that is concerned (some might say too concerned) with petroleum. As and when we start delivering *The Economist* along this means of transmission, we shall immediately state the case for putting pipelines under the Press Council.

Where the Lines Run

In Britain, where refineries are still being constructed near ports, there are only two crude oil pipelines. Both belong to British Petroleum Co. and are about 60 miles long, of comparatively small capacity. The Scottish one links Finnart (Loch Long) terminal, which can take tankers up to 100,000 tons dw to the 3½-million-tons-a-year refinery at Grangemouth. The Welsh pipeline links the new Milford Haven terminal, where similar-sized tankers can tie up, with the 3½-million-tons-a-year refinery at Llandarcy near Swansea. The first pipeline has a capacity of 3½ million tons annually and the other one of 5 million tons.

Apart from numerous short pipelines linking some refineries with gasworks, the other type of pipeline, the long, cross-country product carrier, is represented in Britain by various stretches of the wartime network, which Regent Oil uses between Ellesmere Port and Stourport, west of Birmingham, and Shell-Mex & BP uses from Isle of Grain to Walton-on-Thames. This is linked to a short pipeline owned by the group itself that runs from Walton to the London Airport. The first company-owned, cross-country product line in Britain will be the one from Fawley refinery of Esso to Feltham, with an extension to London Airport; parallel to it for most of the 75 miles will run a propane-butane line supplying North Thames Gas Board Southall works. A similar line, but for carrying cracked gases, has been laid last year between Fawley and the Severnside plant that ICI is building.



Two immediate proposals for further lines are for products. One line, planned by Shell-Mex and BP, will supply the North London area with white products from the Shell refinery at Shell Haven; the other is for a "common carrier" pipeline to run along the canals (and some other public-owned property) from Canvey Island to Ellesmere Port. Interest in using such a pipeline has already been shown by various companies with refineries near the ends of its proposed route, and by some Continental oil refiners. All concerned will find a chance of pumping their products to the Midlands, either from the London area or from Merseyside.

The present pattern of distribution in Britain, where the London zone includes 30 per cent of the total population, leaves only the Coventry-Birmingham-Wolverhampton conurbation at the fringe of easy supply area. While coal provides most of the industrial fuel used there, "white" petroleum products, petrol, paraffin oil, white spirit and diesel fuels, etc., are supplied by road, rail or canals. These products make up 30-35 per cent of the total British consumption; the needs of this area, with a population of 2½ million forecast for the 1970s, may still be below a million tons. Trunk Pipelines Ltd.'s project for a 8-10-inch diameter pipeline capable of carrying 1½ million tons annually would be able to meet this demand for years to come, since oil may flow along it equally well from the South-East as from the North-West. It is intended that there should be various depots belonging to the various interested groups, with supplies directed to the appropriate one by an operational head office, initially at Canvey.

At present the Midlands are supplied by rail and road fed from coastal depots. Coastal tankers up to 17,000 tons dw feed those reasonably cheaply, but from then on the costs of distribution begin to mount. Even so, barges provide an economical means of delivery to inland depots for journeys twice the length of a land journey. Shell-Mex and BP think it better to supply Leeds from depots on the east coast than from the west coast refineries. Other economies are provided by the use of whole trains and of road vehicles as large as the traffic conditions will allow. The cost per gallon delivered by a 4,000 gallon vehicle is only 75 per cent of the cost using a 2,000-gallon vehicle. There are at present in operation two company-owned pipelines, one for various black oils and one for various white products, running side-by-side for 23 miles from Stanlow to Partington, near Manchester. Transport of fuel oils over longer distances would be too expensive, since the oil is so viscous that it must be heated—or possibly thinned with water.

For rights-of-way across property easements and future occasional access the present going rate varies between two and five shillings per running yard. The total cost of pipeline includes design, materials, construction, supervision, protection, testing and commissioning; some of these costs are constant, and some are variable, depending, for instance, on the weight of steel rising with pipeline diameter and length. Apart from the easement costs, a 10-inch pipeline may cost £10,000-£15,000 per mile; the 6-inch pipeline from Fawley to Severnside cost over £800,000 and the Fawley to London pipeline will cost over £2 million. The Shell Haven to St Albans pipeline will be 8 inches in diameter and 30 miles long; the Trunk Pipelines project will be 280 miles long at 10 in.

Only the smaller companies so far have expressed interest in the project for supplying the Midlands; the pipeline capacity should later be doubled with additional pumping equipment. For the more distant future Trunk Pipelines Ltd. would like to lay a crude oil line alongside the product line. Before that comes to pass, however, there are proposals for laying an underwater pipeline between a terminal for 100,000-ton dw tankers, to be located outside Margate, and the Canvey Island depot. This would serve any refinery in the London area with ease, since the diameter of the pipeline would be over 30 inches.

BUSINESS NOTES

WALL STREET

King Bear

A correspondent cables :

THE bear was king on Wall Street this week. Following an ephemeral attempt at a rally after last week's " selling climax " prices slumped to a new low for 1962 ; on Wednesday the Dow Jones industrial average fell by over 9 points to just under 655, well below the nadir touched in the previous break in the markets. The further collapse in prices had added to the pessimism, for while the popular market indicators have fallen by only about 10 per cent the vast majority of stocks that enjoyed a vogue last year, such as electronics, vending machine and bowling stocks, have fallen much more sharply. Transitron Electronic, which after Texas Instruments is the biggest manufacturer of semi-conductors, has, for instance, fallen by over 80 per cent from its peak in 1960.

The mood has been gloomy but there has been no panic selling. There have however been a few chain reactions in the market as stop-loss orders touched off little waves of selling ; the fluctuation of about 60 points in IBM is a case in point. There have been some margin calls on shares purchased on credit which have fallen below a level regarded as acceptable by the lenders. But the volume of sales has been light. Some institutional investors have complained about difficulties in liquidating big blocks of securities but most of the mutual funds, bank-managed trust funds and insurance companies are not selling but are sitting tight, having sold in anticipation of a downturn some time ago. They have built up their holdings of cash and short-term debt securities to a high level ; for example, the Wellington Fund with $1.4 billion in assets now has only 58 per cent of its portfolio invested in common stocks, the lowest proportion for five years. While the mutual funds have been adopting a cautious attitude towards the market, they have also been making record sales of new shares to the public. In the first quarter net sales of mutual fund shares amounted to about $600 million, an all time record. As a result a substantial amount of buying power has been built up and it is safe to predict that as the prices of sound issues with solid earnings records fall lower the funds will not be timid in putting their money to work.

LONDON MARKETS

Fillip from the Funders

THE belief that the monetary authorities are prepared to see, and even to encourage, a gradual fall in long-term interest rates was clearly confirmed on Friday last week—although this week the threatened dock strike and other influences have discouraged any market response. On the same day that the government broker's " tap " in 5½ per cent Funding 1982-84 ran dry, it was replaced by the issue of a further tranche of £300 million of 5 per cent Treasury stock 1986-89. But whereas the £200 million of the 1982-84s had sold remarkably fast since December, the authorities seem to have leaned over backwards to discourage any immediate interest in their new funding stock, for the price of the issue, 84½, was about half a point above the market price of the existing stock. This week the authorities made their usual announcement that the £300 million was fully subscribed and that applications from the public were allotted in full—it is perhaps just possible that some misguided old ladies have been foxed into taking from the Bank of England at 84½ what their stockbroker would have sold them at 84.

Plainly, the authorities are in no hurry to sell and the stock will not become attractive until the rest of the market rises. The Chancellor's budgeting has left the Exchequer with no net borrowing needs from the gilt-edged market, and a continuation of funding at the pace of recent weeks would indeed cause unwanted pressure on bank liquidity. The authorities still prefer to issue themselves with a stock in order to keep some influence over the long end of the market, and also to facilitate the switching process, of short bonds into mediums and medium dates into longs, which is the essence of funding at the moment. Some market observers have indeed noticed that the new issue of £300 million is also the amount of the 5½ per cent Treasury bonds which mature in November—and are wondering whether this may now be left to run off unconverted.

Nerves in Throgmorton Street

THE threat of a dock strike, the poor showing of the Conservative party in the local elections, the further decline on Wall Street and a number of disappointing statements from British companies all combined to unsettle the equity market this week. The volume of selling was light but there were few new buyers, with the result that *The Economist* indicator fell 5.7 points to 356.7 in the week to Wednesday's close and the *Financial Times* ordinary index fell below the 300 mark on Thursday. Following investors on Wall Street, British investors are wondering whether an expansion in business, when it comes, will lead to much improvement in profit margins in competitive markets and hence to a sharp jump forward in profits. These fears can be overdone in Britain, for though there are a sizeable number of low-yielding stocks in the British market, earnings yields in this country have not in the past been brought down to such a low level as on Wall Street. By British standards, admittedly, they are now low on many of the stocks that have attracted buyers in the last few months and it is not surprising that this week investors began to have second thoughts about the merits of some of the stock concerned. Property shares have come off the top ; so have insurance shares following a number of cautious statements by the spokesmen of the industry. Brewery shares have also taken a knock, not least because the directors of Hardy's Crown Brewery in recommending a bid by United Breweries which was below the market price said that the latter price was " unrealistic in the light of any reasonable estimate of the company's maintainable earnings " ; this has seemed inherently probable for a number of brewery take over prospects.

In addition to the rights offers by two banks, the flour milling combine, Ranks Hovis McDougall, is coming to the market for about £11¾ million comprising a rights of one new ordinary share at 28s. for every 20 shares held, to raise about £4¾ million and an offer to stockholders of all classes of £7½ million 6¾ per cent unsecured loan stock, 1981-86, at 99. In the present state of the markets the good running yield on the unsecured loan stock is the most attractive aspect of this twin issue, designed to fund bank overdrafts of £8½ million and to provide money for further capital schemes.

THE ECONOMY

No Certainty

UNIMPRESSED by the Treasury's current optimism, the National Institute, in its latest *Economic Review*, sticks to its view of three months ago that national output at the end of this year will be only some 3 per cent above the low point at the end of last year, so implying for this year as a whole a rise of little more than one per cent above the 1961 average. Moreover, this none-too-cheerful forecast assumes that the " underlying trend in exports continues upwards at about 2 per cent a quarter," a trend which so far is discernible in the official quarterly statistics only if exports of ships and aircraft, which have been falling very sharply, are excluded. It is the month-to-month edging up from the very low December figure that offers modest encouragement. But while the institute sees no reason to change the general expectation of an increase of some 8 to 9 per cent in exports over the year, it sees " some good reasons for not being sure about it." One of these is that a rise of that order requires that Britain should stabilise its share in world trade in manufactures. This share has been falling and it looks as if the experience in the first quarter of this year was no exception.

Among the few pointers to export prospects, statistics of orders for engineering products do not suggest that a further large rise in these exports is certain, while figures published this week for machine tools show a further fall in February in the amount of export work on hand in terms of the current rate of export delivery. If, as the institute suggests, British sales in the United States may be at a peak for the time being, and if weaker competition from Germany is offset by stronger competition from Italy and other countries, it might seem that British hopes are largely pinned to the strengthening Australian market. On the other hand, British exporters as a whole seem fairly confident of more widespread success, as also does the Board of Trade ; and a nose to business may be the best guide.

On the home side, there is a clash of views on the course of consumer spending. The institute foresees a rise in real consumption of 2½ per cent from end-1961 to end-1962 ; the Chancellor in April forecast a 4 per cent increase over the twelve months of the fiscal year. The institute argues that consumption will rise much in line with real incomes; the Chancellor evidently expects that a recovery in hire purchase will cause it to rise faster, mainly because repayments are now falling. Yet hire purchase debt fell a further £11 million in March, the credit sales of household goods shops that month were 5 per cent below last year, and the new business of finance houses, which is largely for motor vehicles, was less than usual. The April figures of car sales on hire purchase did not change the picture. While the Budget and the timing of Easter may have affected these figures, there is certainly no sign in them of any boom.

THE EXCHANGES

Dollars in Demand

THE dominant feature of the exchange markets this week has been a shortage of United States dollars. The pegging of the Canadian dollar at 92½ US cents on Thursday last week provoked some expressions of nervousness in Switzerland about exchange stability generally (though whether change to stability should be taken as a stabilising or a destabilising factor is a nice philosophical point). Buying of Swiss francs has, however, been limited, and by Wednesday this week the Swiss franc was weakening again, to 4.3365 against the dollar—still above the level of a week before. Swiss share markets had what was described as a panicky day on Wednesday, though falls such as that of 100 to 5,210 in Union Bank of Switzerland would seem less than drastic in other centres.

The general demand for spot dollars has lifted the rate on Euro-dollars at call from 3 to 3½ per cent, and also brought some easing in spot sterling in midweek, to $2.8130. The threat of a dock strike was also an influence here. Earlier, sterling had been strong, and the authorities are believed to have taken in more dollars. Throughout the week strong demand has continued for forward sterling partly in conjunction with swaps out of sterling into dollars spot and back into sterling forward. The margin on Treasury bills after allowing for forward cover is now ⅜ per cent in favour of London, whereas in recent weeks it was in favour of New York. A slightly larger margin exists on switches out of Euro-dollars into loans to local authorities, and this seems to be the main medium for short-term investment flows into London nowadays.

Certainly there is no other way of interpreting the figures of sterling balances for the first quarter of this year which, apparently by mistake, are published in the April issue of the *Monthly Digest of Statistics*. The figures show not only a fall of £61 million in this quarter to £2,570 million in sterling balances of overseas sterling countries, which reflects almost exactly Australia's repayment to the International Monetary Fund, but also a fall of £50 million, to £876 million, in the balances of non-sterling countries. Since foreign money has been streaming into London in this period—the reserves, adjusted for repayments to IMF, rose by £185 million in the first quarter—it certainly looks as if the coverage of these figures is still more unsatisfactory than had been apparent before. Surely not all the inflow has gone into portfolio investment. The one big known omission is direct overseas lending to local authorities ; but it is still difficult to explain a drop of £50 million in other forms of foreign sterling balances. One notable movement is for the Latin American countries, from a balance of £16 million in at end-1961 to *minus* £11 million at end-March, representing a rare excess of published sterling borrowings over balances. No official elucidation is available here either. The Treasury and Bank of England should be pressed to make some sense out of these figures.

KUWAIT OIL

Fifty-Fifty in Concession

ONE seems to detect some special overtone of achievement in the announcement that the Kuwait Oil Company (in which British Petroleum and Gulf Oil are equal shareholders) has agreed to relinquish 9,262 square kilometres of its concession of 18,512 square kilometres, with at least 1,000 square kilometres to be relinquished in five years from KOC's offshore concession. The announcement from the Kuwait Government in fact refers to talks " satisfactorily concluded " with the representatives of the two shareholding companies and conducted throughout in a " most friendly atmosphere." The relinquished areas have not been delineated in detail in London, but they are said largely to comprise areas in the western regions of the Sheikdom and at the two extremes of the off-shore concession.

This must be regarded as an acceptable agreement. It involves areas that are outside KOC's proved reserves and it observes, too, a rough and ready fifty-fifty principle in relinquishment for which General Quasim had no use when he sequestrated the whole of the unworked areas of the Iraq Petroleum Company's concession last year. It will now be possible for anyone who wishes to add to the world's existing glut of crude oil to prospect for further supplies in the west regions of Kuwait or in Iraq. There are good geological bets in both countries, not least in the Rumaila field in Iraq which contains huge proved reserves ; anyone prepared to take the risk of legal action could take a concession there and have proved oil without the risks and costs of exploration. Others would no doubt prefer the temperate Ruler to the temper of the General.

STEEL

The Lighter the Better

STEEL production rose slightly in April, allowing for the effect of seasonal influences—chief of which was the Easter holiday—though the actual rate of 409,800 tons a week was slightly lower than that of March. But there is no decided upward trend in output yet, nor can there be until stocks cease to fall. In the first quarter they are estimated to have shrunk by 300-350,000 tons, or at much the same rate as they did in the last quarter of 1961 ; and this drop suggests that consumption was running at the same rate in the two periods—though it could be expected to rise about 100,000 tons in the first quarter. This makes consumption nearly nine per cent lower than it was a year earlier, while production had dropped about 15¼ per cent.

The concentration of the recession on the producers of heavy sections, while the light end of the industry is mostly prosperous, is forcibly demonstrated by deliveries of finished steel products. Those of heavy rolled products were 30 per cent lower than they had been in the first quarter of 1961, but two per cent more sheet and seven per cent more tinplate was delivered. Demand from the construction industries was even lower than it had been in the autumn—35 per cent less than a year

before—and so was that from railway rolling stock makers. But the motor, cycle and aircraft industries together took 23 per cent more steel than a year before. So the strip mills run near capacity, while the beam mills are remaining appreciably below capacity.

BANK PROFITS

Second Thoughts

INVESTORS have recently been indulging their enthusiasm for bank shares to a degree that is difficult to justify by the banks' immediate prospects. In the past week Lloyds and the National Provincial have taken advantage of the buoyant market to announce sizeable rights issues, leaving only the Westminster among the big five to complete the second round of bank capital increases since 1959. The Lloyds issue, announced last week-end, will raise £12.2 million, by a one for ten issue at 50s., compared with the market price of 67s. 6d. The new shares will not rank for the interim dividend, which will be 4½ per cent as forecast earlier this year at the time of a one for six scrip issue, but the directors now forecast an increase to 5 per cent in the final dividend. The jobbers accordingly marked up the shares to 71s., but investors failed to respond, and the price slipped back to 66s. 6d.—still leaving the yield below 3 per cent.

The £10½ million one for seven issue by the National Provincial was more temptingly priced at 60s. compared with the market price of 102s. 6d.; the shares rose initially by 1s. but dropped back to 102s., giving the rights a value of 5s. 3d. The NP forecasts an unchanged dividend: the directors have again preferred to put the emphasis on a "cheap" rights issue.

These issues will be readily taken up, but will also reduce the head of steam in this section of the market. It was apparent at the beginning of this year that bank profits could scarcely hope to continue their outstanding performances of 1959, 1960 and 1961 for yet another year. Now Bank rate is down to 4½ per cent, which itself represets a sharp setback for bank profits. Investors are making much of an upturn in advances resulting from a release of special deposits; but this would need to be much larger than seems at all likely if it were to offset the impact of sharply lower earnings rates.

Undue Hopes

THE market has also been counting on windfalls from revaluations of bank property and forced disclosure of true bank earnings. Both are eminently desirable, but how likely are they? The National Provincial gives no hint of the first when it relates its capital issue, in traditional manner, to the large sums that will be needed to rebuild its head office (and what is the site value of this two-acre goldmine?). On earnings disclosure, the Jenkins report is now believed to be delivered to Whitehall; but even if it recommends full disclosure, which is far from certain, the operative decision would still be with the government, against predictable pressure from banking quarters.

Meanwhile unofficial attempts to calculate the banks' true earnings by a firm of stockbrokers and a banking journal have got little further. Comparisons by the former showing that United States banks earn two to three times as much on their assets as British banks on theirs give no real guide to true earnings in this very different banking structure. American banks earn significantly more on loans, as the borrower pays on the full amount of the loan rather than on the amount of credit he actually takes in his overdraft; and the American borrower has to keep an agreed percentage of the loan in his current account. The American banks also have more advantageous facilities for building up untaxed reserves for bad debts. This particular reserve is closely circumscribed in Britain by the fiscal authorities and is almost certainly below 2 per cent.

CABLES

Return to the Jungle

JUNGLE warfare, in competitive price cutting, is no part of normal business life Britain—more's the pity, consumers may say. But the cable industry gave one of the rare demonstrations of such activity in the summer of 1959, when the price-fixing agreements of the Cable Makers' Association ended, before it settled down to a more British sort of existence under the price leadership of the largest manufacturer, British Insulated Callenders Cables. Prices rose, and though margins seem to have been rather narrower than they had been in the good old days of the CMA, the industry appeared to have regained stability. But some of the smaller companies that had not belonged to the CMA continued to do as they had done before, and sold below the prices of the bigger manufacturers. Such behaviour had been tolerated then, but it seems less popular now: BICC has just cut its prices for household cable insulated with polyvinyl chloride by eight per cent, and added 1½ per cent to the wholesalers' discount.

RESTRICTIVE PRACTICES COURT

Tough Nuts and Soft Options

THIS week the Restrictive Practices Court began its hearing on the Standard Metal Window Group's price agreement, the first contested case since last November's indictment of the permanent magnet makers (on which judgment is still awaited). Only three other cases are due this year: on June 25th the Publishers' Association will be called to defend the net book agreement; in October the Forgemasters will defend the pricing of iron forgings and castings and a smaller case, that of the Birmingham Builders' Association, will also be heard.

This comparative lull in full-blown hearings is partially explained by the continued stream (twelve since October) of agreements ended under consent orders. Only three agreements have been found not contrary to the public interest, and each addition to the file of unsuccessful defences (now totalling 14) has encouraged capitulations over similar agreements. Last week the Lead Sheet and Pipe Manufacturers threw in the sponge; so did Cadbury's, Fry's, Rowntree's and Terry's over their agreements which limited distributors' margins and ensured that chocolate was supplied only with a stipulated retail price.

Nevertheless the twenty-odd cases on which notices of reference are currently served contain several tough ones not likely to yield under the example of others—agreements concerning switchgear and generators, for instance, are being defended in spite of the successful indictment last year of the transformer manufacturers' pact. A number contain features which will make history in the Court. The net book agreement will be the first contested case of straightforward collective price-maintenance. The Newspaper Proprietors' Association are defending their right to have agreed together in February, 1961 (as they also did in 1957) to simultaneous price increases—their plea that the Court could not consider the collusion in retrospect was disallowed. The trial some time next year of the Finance Houses Association's code of practice for motor dealers will be the first time the Court has considered the fixing of *maximum* charges to customers: its job will be to find out if in fact this is a concealed method of price-fixing. It will also look at the legality of the rest of the code, which fixes maximum commissions for dealers, now 15 per cent, and sets its own minimum down-payments and repayment periods at a higher level than the law requires. Then there is the case of the sulphur pool—the first issue involving collusion in bulk buying to be brought before the Court. Heavy steel prices (on which a number of similar agreements in the industry should depend), the supply of telephone equipment to the GPO and of milk to Londoners are also in the Registrar's queue. It could take another two years to clear.

E.C.G.D. COVER
HELPS YOUR BANK TO BACK YOU

In financing your export business you should find ECGD doubly valuable. An ECGD policy tells your bank manager that your export trade is soundly based. What's more, an ECGD policy assigned to the bank provides collateral that may relieve the burden on your other assets, and so extend the range of your borrowing. The policy covers you—and your bank—against all the main risks: sterling shortages, insolvency of the buyer, and many more.
Are you out to expand overseas sales? ECGD is at hand to help—to back you (more cheaply than ever before) so that you can press ahead with singleminded confidence. Insured business is sound business. ECGD makes helpful bank managers even more helpful. Get in touch with ECGD straight away.

CRG50

Shell speaks the language of flowers

Sitting quietly with the other women of her village, she marks out a design which has a special meaning for the sarong-wearing ladies of Central Java. Each village has its own design, which is handed down from mother to daughter, and each design has its own meaning.

That part of the cloth which is not to be dyed, she covers with Shell Batik wax; her colours come from tree bark and iron sulphate. Ultimately, her cloth will be worn by one of the lovely young women of her village, and the message that the floral decoration carries will have been spelt out by Shell.

Wax is, in fact, one of the more eloquent Shell products. In lipstick, it can speak volumes of feminine appeal; contained in an eye pencil, it writes poems silently; in greasepaint, it moves audiences to tears or laughter.

Around the world wax can be found protecting food, or providing light for festive and religious occasions. While behind the scenes, it is in factories and workshops everywhere. Whether its destiny is picturesque or practical, Shell make it and make sure that it is always where it is wanted.

YOU CAN BE SURE OF SHELL

The new price is probably under some if not most manufacturers' costs of production, but all have felt obliged to follow BICC's lead. With the possibility of wage increases to come, the smaller manufacturers feel more than unhappy about their position; household cable forms the bulk of production for most of them. It is hardly surprising that some at least amongst them regard BICC's actions as a deliberate attempt to make them more amenable to its leadership in future, by giving a sharp reminder to little men that getting in front is painful. As the price cut follows an increase of about five per cent made only last January to match rising costs—and these have not fallen since—it seems to mark a fairly sudden change in commercial policy by BICC. The prices of other types of cable have been tending to rise recently, too, making this an isolated act—and the belief that it is aimed at certain manufacturers the more convincing.

When the last bout of price warfare took place, the ability of the smaller manufacturer to stay in business was questioned; but only one small company has fallen out. Though profits were sadly reduced, warfare ended soon enough to preserve solvency—after eight months. If it had lasted much longer, it might have been fatal to some; now after this long lean spell, the weaker firms might easily get into difficulties. But it seems unlikely that BICC would want to keep its prices down long enough to bankrupt the smaller companies; it would gain little from their elimination. Persuading them to follow its prices should be enough. And unless some of the smaller companies are able to make household cable more cheaply than BICC, and so can sell profitably at the present price, the instinct of self-preservation will allow the price leader once again to lead.

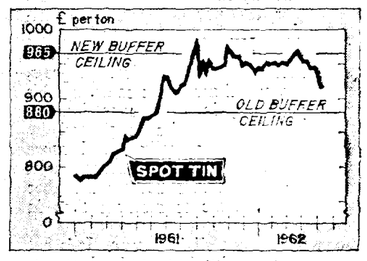
SHIPPING

Essence of Discrimination

BRITANNIA for many years has disavowed any claim to rule the waves; in fact she seems to spend more time waiving what used to be the rules. The British shipping industry, realising that its opportunities lie in international seaborne trade, regardless of flag, has tried to pursue a liberal policy since the repeal of the Navigation Acts over 100 years ago. In this policy, shipowners of the traditional maritime countries of Europe have followed the British lead, believing that policies of restriction, discrimination and excessive regulation can only prejudice the operation of a free market in an international transport service. This liberally-accented policy has suited the traditional maritime countries because they are low-cost suppliers of shipping services.

But the clash between opposing shipping policies—the efficient in favour of freedom, the inefficient in favour of protectionism—seems at last to be coming to a head, challenged in particular by American shipping policy. This is largely dictated by two elements—the absence of any general sense of interest in shipping, and the presence of a powerful lobby in Congress.

Thus, ever since the Merchant Marine Act of 1936 (which followed earlier enactments incorporating the same principles) American shipping legislation has been directed towards protecting the American shipping industry by such means as reserving the coastal trades to American-flag ships and insisting that half the cargoes resulting from aid programmes should go in American ships. Despite the fact that these restrictive shipping policies have already manifestly failed, they are still being copied by the aspirant maritime countries. And the United States Congress has now advanced a stage further in its apparent desire to control international seaborne trade. Inspired by suspicions of the international liner conferences as international cartels, Congress has recently decided that all commerce to and from the United States must be subjected to regulation by the Federal Maritime Commission. This Commission, which is the logical successor of a series of similar bodies whose efforts have succeeded in decimating the American merchant marine, is now instructed by Congress to "judge" whether freight rates charged by shipping companies of any nationality are "reasonable"; and in order to do so it is empowered to order the production of documents and other evidence concerning transactions which may take place entirely in foreign countries, which are not normally subject to jurisdiction of the United States.



The assumption of this international jurisdiction is, at last, something which sticks in the gullets of the "poor relations." Past British investigators, at least, decided that the conferences were harmless. The British and European Ministers of Transport have conferred on two occasions in order to try to find a rational means of counteracting this enormous presumption—that American law applies equally to the London docks and to the offices of forwarding agents in Birmingham, England. Most of the Ministers have instructed their shipowners to refuse the American demands, and Mr Marples has asked the General Council of British Shipping to explain in detail what it envisages as "retaliation" so that he can judge more precisely the effects of taking such action. So far the only American reaction has been to brandish the threat of a $1,000 per day fine in respect of each ship refusing to comply.

TIN

No Shining Example

THE future of important commodities is being publicly booted around in Washington. Their producers are understandably nettled by the sight. With so much at stake, countries like Malaya have questioned why releases of rubber and tin from the American strategic stockpile cannot be decided in decent secrecy in the hope that the more horrifying suggestions for their disposal might never be made public. The strength of rubber has been sapped by the prospect of accelerated releases from the stockpile though it could not be claimed that the drift in prices to 23½d. a lb for RSS has been drastic. However, the effect of the pronouncements on tin has been more electrifying. At the end of March, tin stood well clear of the International Tin Council's new "ceiling" of £965 a ton. But the recent approval by a sub-committee in Washington of the long-mooted proposal, for disposing of 50,000 tons of tin has pushed spot tin back to £915½ a ton, a level not seen since shortly after the old ITC ceiling was breached a year ago. Higher production in Malaya and promised increases in Bolivia and Indonesia later this year also have a bearing on fears that the shortfall in tin supplies has been exaggerated, though calculations of this sort are often unhelpful.

It is far from certain that tin would be stronger if no part of the stockpile hearings were made public before a scheme for releases had been tentatively arranged. But a better indication of the method likely to be adopted would not have been out of

place at this juncture. The atmosphere at the hearings seems to be slewing away from releasing an important industrial metal merely to meet a pressing need towards a more positive attempt to clear some stock out of the junk room while a convenient demand exists for it. It is apparently intended to dispose of the tin over a number of years without disrupting prices.

The intended method of disposal is by tenders for small lots as in earlier sales of minor quantities of tin. No hint of direct co-operation with the International Tin Council has been dropped, though the Council has asked for consultations and might have met to consider stockpile disposals this week, though no announcement to this effect has been made. If the major consideration will be to ensure disposal of the tin, sales at regular intervals seem likely. The sale of 10,000 tons a year over the next five years is planned. Two arguments used to support the contention that the United States could be persuaded not to sell below a fixed high price have fallen into abeyance. The "stale bull" point that sales will not be made below the average cost price of the metal, said to be in the region of £1,000 a

ton; no longer seems relevant, and the "Russian bear" argument that nothing will be done that might throw producers like Bolivia into the arms of the communists, no longer appears to guarantee that sales will not be made below the £965 level as these producers have requested. The graduated scale of releases according to price resulted from a form of co-operation between producers and stockpilers of rubber. It has not been a dazzling success, but short of full co-operation with the ITC, it might again provide the best compromise.

RESEARCH AND INDUSTRY

Are Comparisons Odious?

Comparisons between research spending in 1959 by British and American industry made in cold anger by the National Institute of Economic and Social Research suggest that three years ago American industry was spending in real terms over five times as much on research as Britain, and double the proportion of its national income. The survey does not produce many new facts about research in British industry; but it attempts to equate the conditions in costs, in wages, in standards of technical qualifications, that normally make comparisons between conditions here and in the United States so difficult. Industries that depend absolutely on technical progress, like aircraft, spend much the same, by this revised yardstick, in both countries. In textiles, British companies toughened by foreign competition actually spend more than American. The non-ferrous metal industry in Britain also devotes a higher proportion of income to research than in America.

But that is about all in favour. It is not surprising that lumber and furniture should spend thirteen times more on research, in real terms, in the United States than in Britain; but it is shocking to read that the British vehicle industry's research effort is a twelfth of the American. No other industry compares so badly but several important growth industries, including electronics, electrical equipment, machinery and instruments, make a worse than average showing while chemicals, the metal-producing industries, paper and food make a better than average showing. Even when government research is allowed for, American companies still spend, in real terms, 4.3 times as much on research as British companies, and in the vehicle industry more than nine times as much.

These comparisons underline the government's present pre-occupation with getting the results of research applied in industry. They suggest that too many British companies are coasting on past knowledge; but stepping up research expenditure is not necessarily the cure. Many companies that responded to exhortations to do more research by establishing expensive laboratories have been sadly disappointed by the results. The National Institute puts its finger on the real weakness in British industry today: "High research expenditure will be useless unless managements are capable of recognising and translating the results into commercial production. Indeed, in this country more technically qualified people may be needed in management as much or more than they are needed in laboratories." A change of heart is as important as a loosening of purse.

CONSTRUCTION

Where Capacity Lies

Complaints of over-capacity among civil engineering contractors made by the chairman of their Federation, Mr P. W. E. Holloway, this week come rather oddly near the peak of a building boom. But they seem to reflect some imbalance in the public investment programme—or the capacity of the industry. The sort of work that contractors would like to get more of is the smaller and less glamorous digging—of sewers, for example, or flood protection—which is highly mechanised and does not need the skilled labour that is in such short supply. And it is the work that local councils are most likely to cut down when the government makes it more difficult for them to borrow money; they prefer to maintain their more visible activities as those that most impress the ratepayers.

Planning is all in favour with an industry that needs to look far ahead. So it hopes that one effect of NEDC will be that all public investment will be based on a five-year programme, as road building is already. And a wages policy would be welcome as a change from the present cost of living escalator, which becomes especially embarrassing when fixed-price tenders are being urged on the industry. But attempts to persuade contractors to stop bidding up the wages of scarce craftsmen seem no better than pious hopes.

Export business is important to the bigger contractors; they did £135 million worth in the year to March, 1961. Though the political instability of Africa and the middle east have affected orders over the past two years, the longer-term credits that the government has helped to provide

Spain's Banking Reform

FROM A SPECIAL CORRESPONDENT

Approved unanimously by the Cortes, Spain's nominated parliament, the Spanish government's bank reform bill has at last passed into law. The new Act is based on recommendations made during the 1959 survey by American and OEEC experts with a view to strengthening the central bank's powers of monetary control, improving medium- and long-term credit facilities for private firms and stimulating the competitive efficiency of the economy.

The Act provides for the nationalisation of the Bank of Spain and the "official credit banks" (the Mortgage Bank, the Local Credit Bank and the Industrial Credit Bank, but not, at least for the time being, the Banco Exterior) and the creation of an institute for medium- and long-term credit which will guide and co-ordinate their activities. It makes possible a reorientation of Spain's numerous local savings banks (*cajas de ahorros*) so as to enable them to advance cheap credit to farmers and small businessmen; and it equips the Minister of Finance with powers to circumscribe the industrial empires of the leading private banks.

In the absence of an investment-minded middle class, Spain's "mixed" banking system has played an important role in fostering industrial development. When reminded of one of the main objections to "mixed" banking, the danger of becoming illiquid during periods of strain, the banks' spokesmen retort that during the world slump of the 1930s only one instance of this occurred in Spain. But they have no easy answer to the criticism—raised by Spanish reformers and foreign observers alike—that the system promotes oligopoly. The following figures for 1960 are eloquent. The first column gives the numbers of members on the board of administration of the bank named, the second column the number of enterprises the bank controls, and the third the total paid-up capital of each group. The 1,008 enterprises controlled by these six banks make up less than 7 per cent of all Spanish companies, but their paid-up capital accounts for just over 49 per cent of the total capital of Spanish joint stock companies.

Name of Bank	Board members	Enterprises controlled	Capital (million pesetas)
Banco Espanol de Crédito	19	197	46,575
Banco de Vizcaya	24	192	43,400
Banco Hispano-Americano	17	133	33,308
Banco Urquijo	18	135	33,178
Banco Central	29	176	26,636
Banco de Bilbao	24	175	20,104

The bankers have known for two years that reform was inevitable—on paper—and do not appear depressed. Their impression is that the Minister will use his new powers primarily to prevent (in the words of the bill) "further expansion of their influence over private enterprise and in particular over other banks." They believe that if they play ball their present holdings will continue to prosper, and their confidence suggests that they may have received assurances to this effect.

Japan's imports-exports in millions of U.S.$)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped 5,000 overseas firms do $1,100,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write:

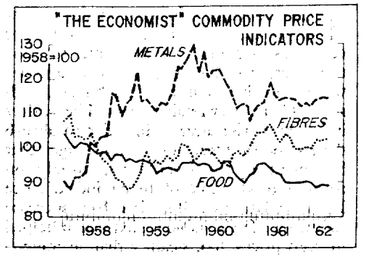
These famous companies (and thousands more) are going forward on *coal*. Fashion and fancy have no part in their shrewd thinking on the vital question of industrial fuel. They choose coal—and they go on choosing coal. Coal, because coal gives the maximum heat for the minimum cost. Coal, because coal, used with modern automatic equipment, is smokeless. Coal, because coal is the British fuel; there's plenty of it to meet all the demands of industry for generations to come, and—vital for the future—supplies are unaffected by political changes abroad. The National Coal Board technical service will gladly advise you on the vital part coal can play in *your* plans for the future.

PROGRESSIVE INDUSTRY PLANS ITS FUTURE ON

COAL

ISSUED BY THE NATIONAL COAL BOARD

should make for better business in the future. They have, for example, allowed British firms to get work in South America. But competition is stiff: in the far east Japan now has to be reckoned with.



COMMODITIES

Unpleasant Prospect

GAZING into their crystal balls in the shadow of crumbling prices, the UN Food and Agriculture Organisation and the National Institute of Economic and Social Research are both hinting darkly at a stormy passage for commodities through the sixties. NIESR's analysis is characteristically clinical and its suggestions prosaic. From its study of 14 commodities, accounting for about three-quarters of world trade in food, beverages and tobacco, the institute concludes that unless prevailing policies are modified in favour of primary producers, their exports of foodstuffs to industrial countries will rise much more slowly than in the years 1948-60. It believes tropical and semi-tropical products might hold out the most promising prospects for primary producers because industrial countries cannot normally produce them for themselves; and suggests that primary producers should process more of their products to obtain higher export earnings.

On NIESR's reckoning, the value of primary producers' exports of selected commodities in the decade it studied would have been worth $8.5 billion had they kept pace with the rise in money incomes in industrial countries. In fact, they fell $2.8 billion short of this target. NIESR calculates that the lag in consumption of these foodstuffs and beverages behind the growth in real incomes in industrial countries was responsible for 16 per cent of this "gap." Consumption of beverages, one of the main products of primary producers, grew more slowly than other foodstuffs. This changing pattern of consumption accounted for 9 per cent of the gap, and a fall in the primary producers' share of the food market caused by higher production in industrial countries was responsible for a further 4 per cent. But 71 per cent of the gap resulted from the big shift in the terms of trade in favour of industrial countries; over the decade the prices of these commodities dropped by 7 per cent, though the general price level in industrial countries rose by 25 per cent.

The FAO has delineated this sort of gap with considerable sophistication. Its latest projections* seem to rule out any improvement in the terms of trade of producers of temperate agricultural products in the sixties, and even on the most favourable assumptions, it foresees a growth in the value of exports of tropical and semi-tropical products no greater than the growth in population of the low-income countries. At best, it foresees no worsening of the chronic overproduction of agricultural products, but unless policies are modified there might be further additions to the already excessive stocks of agricultural products, which are depressing prices. *The Economist* commodity price indicator at 92.4 (base 1958=100) is near its lowest point and shows no improvement since the end of 1961. In the first four months of the year, prices have remained around the

extremely depressed level of the last quarter of 1961. The FAO suggests restriction of production and aid to underdeveloped countries to enable them to absorb larger quantities of foodstuffs which they could not otherwise pay for. Its arguments are familiar but unless used as a temporary stopgap, the leaning towards restrictions might be questionable.

* Agricultural Commodities—Projections for 1970.

EXPORT CREDITS

Long-term Proposition

IMPROVED facilities for insuring export risks are no quick acting tonic for exports. There is no precise relation between the level of export credit business insured and the total export performance, and last year's moves by the Export Credits Guarantee Department to match the terms offered by Britain's competitors for insuring export risks certainly failed to achieve any immediate impact on exports, unless one assumes that but for these changes, Britain's export performance would have been even more dismal than it was. But with their aid the volume of ordinary commercial business insured by ECGD rose by 12 per cent to £806 million. The relatively small amount of business done for special reasons increased from £22 million to £40 million. ECGD now insures about 20 per cent of Britain's exports.

ECGD FIGURES*

	Commercial risks		Special risks	
	1960–1 £ mn.	1961–2 £ mn.	1960–1 £ mn.	1961–2 £ mn.
New business insured	720·8	805·7	21·7	39·5
Premium income	7·4	8·6	1·1	1·7
Claims	4·0	4·1	2·9	0·1
Increase in reserves	7·4	7·1	0·9	1·9
Reserve at end-year	27·9	35·0	4·2	6·1

* Years to March 31.

Last year's cut in premium rates restricted the growth in premium income, but against a drop from 8s. 6d. to 7s. 9d. per cent in the average premium on short-term credits (up to six months) the rise of £580 million to £663 million in this class of business produced a slight increase in premium income. Though medium-term "commercial" business expanded only slightly, premiums last year were swollen by payments in respect of earlier years. Claims did not increase despite the difficult trading conditions faced by many of Britain's customers.

The new long-term guarantees produced no actual business though, as they say in the markets, they attracted active inquiry. Backed by these new facilities British exporters bid for 22 contracts worth more than £134 million; half of the contracts concerned shipbuilders and five related to heavy plant. About £26 million of this business seems certain. If the sums involved still seem high in relation to the total volume of insured credits, it has to be remembered that the response to the offer of guarantees for periods of five to ten years might reflect the first flush of business brought out by the new facilities.

CHEMICALS

OECD Report

THE chemical industry may be strong by British standards, but it looks pallid beside those of European countries. It is hard to avoid this conclusion after reading the latest OECD report of the chemical industry in Europe covering 1960. This was an outstandingly profitable year for the industry and has been described by Mr Chambers as irrelevant because exceptional. Between 1959 and 1960 the turnover of the chemical industry in Europe increased by 13 per cent to $19,750 million. Production increased by 14 per cent, compared with 10 per cent for manufacturing industries as a whole. But within the industry, some sectors were increasing very much faster: of these the most spectacular was petrochemicals which grew by 45 per cent, to 1,680,000 tons. Four countries supplied 80 per cent of European chemical production: Britain and Germany about one quarter each and France and Italy about 15 per cent each.

For those gifted with hindsight, the only hints of the tight year to follow were to be found in the way in which chemical

COLOMBIA
Out next week:
Colombia is something of a microcosm of the many problems, political and economic, facing Latin America at the present time. The Review examines the development of the political situation in the light of the recent National Front election victories, describes the great influx of foreign funds expected during 1962, and takes a critical look at the new 10-year development plan; it also examines Colombia's prospects within the Latin American Free Trade Association (ALALC), with particular reference to the possibilities of expanding exports to ALALC countries.

Further details from:
THE ECONOMIST INTELLIGENCE UNIT LTD.,

60 East 42nd St., New York 17 Tel: Murray Hill 7-6850

prices lagged behind those of other commodities and in the rise of imports in relation to exports; imports by European countries increased by 25 per cent to $3,140 million and exports by 14 per cent to $4,256 million. This increased activity mainly reflects intra-European trade, much of which was between Common Market countries, Britain's exports increased by 8 per cent and exports to Europe by 17 per cent, representing nearly one-third of the total. Imports from the United States and Canada to Europe increased by 36 per cent to $689 million, while exports from Europe to North America remained unchanged at £255 million. British exports were 19 per cent of turnover, but German exports were nearly a quarter.

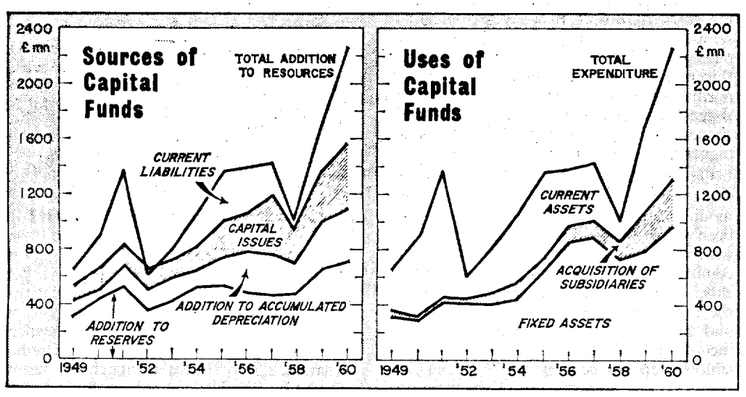
Investment in chemicals in Europe rose 16 per cent, and represented 10 per cent of the total investments in manufacturing industries and construction. Investment in Britain was $358 million, in Germany it was $525 million. One-fifth of the total was invested in petro-chemicals; if present plans are completed petro-chemical production should be more than doubled by 1963, requiring an annual investment of $415 million over the three years.

SHOES

Price Problem

THE Chancellor's increase in the rate of 5 per cent of purchase tax to 10 per cent was not totally unwelcome to shoe manufacturers, for it gave them another weapon in their war with big buyers, such as Mr Clore, over retail prices. These, they insist, must rise anyway in order to absorb the rise of £1 a week or more in wages that has piled up in instalments, largely on account of the cost of living index, since February last year. This is a sharp increase following a fairly stable period which helped to keep prices, too, steadier than average—at the time of the budget they had risen by 11 per cent since 1956, compared with an average 17 per cent.

It is the smaller manufacturers, least able to afford the labour and time-saving machinery that has done much to transform large-scale shoe production, who are most in the hands of the big buyers of the British Shoe Corporation, and are also the hardest hit by the wage increase. Bigger independent manufacturers reach the public either through their own shops or through independent retailers. The retail chains are in a strong position for they can, and do, get an important proportion of their stock from abroad, particularly women's shoes from Italy and Belgium, which are competitive even with the present 10 per cent tariff and sometimes serve to expand retail margins where they do not reduce retail prices.



There is certainly no argument for bolstering weak manufacturers against effects which must anyway be felt before long, but the industry does have a just complaint against the rigidity of the retail pricing system favoured by the chains. This at present virtually dictates that prices of women's shoes can only vary between fixed levels—39s. 11d., 49s. 11d., and so on—which straitjackets price increases. Manufacturers are quite happy to see prices go up by less than 10s. a time and the budget has already given a ragged look to some retail price structures which should help the industry. But the British Shoe Corporation seems determined to stick as far as possible to what it terms "natural" prices. Yet are these "penny under" figures nowadays anything but a source of irritation to shoppers?

COMPANY FINANCE

Sources and Uses

CHANGES in the value of company assets as published in their balance sheets may be due to any of three factors—the purchase of new assets, the purchase of existing assets through the acquisition of new subsidiaries, or the revaluation of existing assets. In an attempt to distinguish between the influence of these factors the Board of Trade in a new study, *Income and Finance of Quoted Companies*, 1949-60 (published in *Economic Trends*, April, 1962, *HMSO*, price 5s.), has tried to trace the actual money flows that have occurred. The statisticians have worked back from the 1960 balance sheets, obtaining figures for earlier years by deducting the funds which were generated each year either by new issues of capital or by the ploughing back of profits. This method eliminates changes in the value of assets and other changes which are not a direct reflection of the annual cash flows; and it provides not only the breakdown of expenditure on assets but also an analysis of the sources of the capital funds.

Since 1955 the 2,600 companies concerned, which were largely engaged in manufacture, distribution and construction in this country, have relied more on new issues in the capital market than they did earlier. They have raised most of their new money in the capital market through issues of ordinary shares and their dependence on rights issues became particularly noticeable after 1958. Between 1956 and 1958, expenditure on tangible fixed assets represented nearly two-thirds of all spending on assets but since 1958 the proportion has fallen to two-fifths. At the same time, the sums spent on acquiring new subsidiaries have been rising and of the £338 million spent in this way in 1960 as much as £200 million was spent by companies in the food, drink, metal manufacturing, engineering and paper industries.

FRANCE

Deposit Rates Lowered

A Paris correspondent writes:

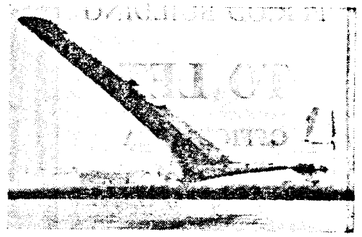
THE National Council of Credit last week reduced maximum interest rates to be paid on bank deposits and *bons de caisse* (certificates of indebtedness) by ⅛ per cent for periods up to one year and by ¼ per cent for longer periods, bringing short-term deposit rates to a range of 2¼-2¾ per cent. This move is in line with the recent reduction in rates on Treasury bills and follows current official policy of reducing interest rates in the short-term market. The French authorities have been aiming, as the Bank of France states in its annual report, to encourage the banks to lend a larger portion of their funds at medium term.

The tone of the central bank report is one of quiet optimism. For 1961 it can report a rise of 6 per cent in industrial production, of 5 per cent in personal consumption, of 13 per cent in industrial investment, and of 11 per cent in exports against a rise of 7 per cent in imports, giving an excess of exports of 3 per cent plus 10 per cent from invisible receipts. The franc has remained consistently strong. The current surplus rose from 643 million new francs in 1960 to 858 million in 1961, despite a fall in net invisible receipts. In addition, the inflow of capital was stepped up from 244 million francs to 273 million francs.

COTTON

Residual Supplier

COTTON textile industries are notorious for their periodic slumps. The same seems to be true of exports of American cotton only more so. On its experience over the past decade, the United States could not be sure whether it would sell 2½ million or 7½ million bales to foreign consumers in any given season. These excessive fluctuations are caused by the growing army of suppliers of American-type cotton who undercut American exporters when a surplus of cotton appears. In the 1958-59 recession, they cut the United States right out of the market for much of the season. Smaller producers cannot afford to carry over 14½ million bales at the season's end as the United States was forced to do in 1956. They are only thankful that America is willing to stage this massive buffer act on their behalf.



But this season's expected drop in American exports to abut 4½ million bales, compared with 6½ million in 1960-61 and 7¾ million in 1959-60, has brought renewed calls for bigger export subsidies (the current rate is 8½ cents a lb) and bigger sales under Public Law 480 (assisted purchases and "give-aways"). This agitation is not to be confused with the demand for an impost on the cotton content of imported textiles designed to nullify the competitive advantages foreigners enjoy in the American market because of their access to cheaper cotton. High prices for cotton are already helping man-made fibres to a very large share of the total fibre market in the United States; cotton's share dropped to its lowest point of 63 per cent last year.

A revival in the United States has given American mill consumption an unexpected lift this season; it might exceed 9 million bales. The end-season carry-over is therefore likely to expand only moderately to 8 million bales. Recovery in the United States has produced higher prices for American cotton though the demand for it is far from robust. Prices in America have risen more than the 2½ cent increase in this season's export subsidy and that has not helped exports. So far this season Britain's imports of non-American cotton have fallen by only 275,000 centals of 100 lb to 2.8 million centals; imports of American cotton are 533,000 centals lower at 1.4 million centals. In the first three months of this year, imports from other countries were actually higher though imports from the United States were nearly halved. Over the past two years, the general level of cotton prices has edged higher, though recently there has been some reaction. But helped by the low level of unsold warehouse stocks combined with the threat of a dock strike spot supplies 1-inch American cotton have been maintained at 24½d. a lb, which still gives its competitors a strong inducement to expand their output.

MAN-POWERED FLIGHT

Puffing Puffin

MR JOHN WIMPENNEY flew half a mile flight under his own power last Friday, and won a £50 prize offered for the first flight over the distance. His feat puts the de Havilland team favourite for a £5,000 prize offered by Mr Kremer for a flight over a full mile including—and here is the rub—two figure-of-eight turns. Their Puffin aircraft is so far free of control troubles—these grounded Southampton University's man-powered machine for alterations—but it has yet to be tested in a full turn. More flight testing, and some fine weather, will be needed before Puffin is ready to attempt the mile, piloted (or powered?) by a racing cyclist with perhaps 30 per cent more power output than Mr Wimpenney can manage to produce. The third serious contender is a two-man machine being built at Southend airport, but this has yet to be assembled. All three projects have been financed by

grants from the Royal Aeronautical Society, which does not think highly enough of other man-powered projects to extend aid to them. Considerable aerodynamic knowledge is needed to design an aircraft like Puffin with a limit of half a horsepower from its hominoid engine. Once the design has been proved, there may be fascinating possibilities for future generations of Puffins, crewed by the not-so-athletic but assisted by a motor producing the extra half-horsepower that is beyond their flabby muscles.

SHORTER NOTES

Identified overseas earnings by British hire purchase finance companies amounted to £1 million in 1960, the Board of Trade recently disclosed in answer to a parliamentary question.

★

Equity and Law Life Assurance has disposed of the whole of its shareholding in the Save and Prosper Group Limited, the management company of the Save and Prosper Group of unit trusts, to Robert Fleming and Company, which made the purchase on behalf of itself and other institutions.

Nowhere in the world are land values rising so rapidly as in Brazil. Already, Brazil is a world leader in a long list of essential products—livestock, coffee, industrial diamonds and timber are but a few examples. Now, European investors have a unique opportunity to buy rich Brazilian land at very low cost. Sumnorth Property Ltd. are offering fully surveyed land, sealed by the Brazilian Government and by the British Consulate in Brazil, at £5 an acre.
Your free copy of Brazil Today fully explains the opportunity of such an investment, together with responsible facts and figures from unimpeachable sources on the timber, mineral and farming potential of the country. For full information on this offer, together with satisfaction guarantee and payments plan, 'phone CHAncery 7220 or write to

ROYAL INSURANCE GROUP

REVIEW OF RESULTS FOR 1961

STATEMENT BY MR T. H. NAYLOR, CHAIRMAN, ROYAL INSURANCE COMPANY LIMITED

The Annual General Meeting of the Royal Insurance Company Limited will be held on Wednesday, May 30th in Liverpool.

A statement by the Chairman, **Mr T. H. Naylor,** from which the following are extracts, has been sent to stockholders with the 116th Annual Report and Accounts.

DEVELOPMENTS IN 1961

The year 1961 was an eventful one in the long history of your Company and before reviewing the results for the twelve months ended December 31st last, I should like to touch upon the important highlights. I refer, of course, to the acquisition by your Company of the share capital of The London and Lancashire Insurance Company and virtually the whole of the share capital of two jointly operated Canadian Companies, The Western Assurance Company and The British America Assurance Company. The acquisition of the "London and Lancashire" was effected by an exchange of shares, for which purpose our authorised share capital was increased in February 1961 from £6 millions to £7.5 millions. The two Canadian Companies were purchased for cash ; and in order to finance the transaction on a permanent footing, the authorised share capital was further increased to £30 millions in July 1961 by the creation of 90 million new shares of 5s. each.

Considerable progress has already been made in bringing the Companies of the "London and Lancashire" Group into closer association with the "Royal-Globe." A joint Finance Committee of Directors has been set up to secure uniformity of financial policy and practice. Unified control of the wider activities of the two Groups will be established by the Boards having common membership and meeting jointly.

RESULTS FOR THE YEAR

The premium income of our Fire, Accident and Marine Departments exceeded £199 millions. Prior to the mergers, we were already the largest Group of our kind in the Commonwealth and our leading position has now been further consolidated.

The underwriting result was a surplus of £2.4 millions and on such a large premium income this is a very modest margin of profit indeed. Apart from in the United States, to which I refer in the Overseas section of my Statement, our overall underwriting experience was satisfactory. I must stress that the net result of our overall operations in the United States produced a substantial dollar surplus for the benefit of Stockholders. Our interest earnings there far outweigh any underwriting losses we have experienced in unfavourable years.

Our investment income was again buoyant and contributed £12.6 millions to the overall earnings of the year's operations—an increase of £400,000 over 1960. Our consolidated profit, after providing for taxation and Pension Fund contributions, was £6.3 millions.

DIVIDEND

At the time of the Rights Issue, it was too early to give any reliable estimate of profits for the year but your Directors then stated that they expected to be able to recommend a final dividend of 9d. per 5s. unit. In confirmation of that expectation, they now formally recommend a final dividend of 9d. per 5s. unit on the capital as increased.

OVERSEAS

Our total Group premium income in the United States showed little change over that for 1960. This is the natural result of our policy of recent years of refining our extensive portfolio and of continuing to place the emphasis on quality of business rather than on quantity. The joining of forces with the "London and Lancashire" should, in the course of time, enable all our Companies to benefit from an even broader base for our American operations.

The cost of claims arising out of Hurricane "Carla" in September last was not as heavy as that for Hurricane "Donna" in 1960, but it was sufficient to rob us of the underwriting profit we would otherwise have enjoyed on our American Fire operations last year. Our substantial United States Casualty account failed to maintain the improvement which the 1960 experience had encouraged us to hope for, and in fact produced a loss which had a considerable effect on our overall results.

In Canada it is gratifying to be able to report once again that despite highly competitive conditions, a very satisfactory profit emerged in all departments.

In Australia and New Zealand our business continued to expand and to be profitable and progress was also maintained in Southern Africa, where the underwriting results showed a marked improvement on those of the previous year.

Elsewhere overseas the volume of our business steadily increased in both Fire and Accident Departments.

FIRE DEPARTMENT

The underwriting surplus of £1.142,857 (1.5 per cent of Premiums totalling £76,464,983) was earned in spite of heavy fire wastage and storm damage at home and overseas.

The increase in premium income overall was relatively modest, although in most important territories, other than North America, expansion was satisfactory.

At home, in a year when the national fire wastage was again at a high level and there have been exceptional storms and floods, our business produced a modest increase in profit and a satisfactory increase in premium income.

ACCIDENT DEPARTMENT

The Group's Accident Department income again expanded—to £109,932,341—but showed a disappointing underwriting surplus of only £217,155 (0.2 per cent of Premiums). This was due entirely to the unfavourable experience in the U.S.A. ; elsewhere, the results of our operations were satisfactory.

Generally, the Home results in the Accident Department have been encouraging. Motor, the principal class in the portfolio, has benefited from Commercial Vehicle rate increases and from adjustments in some Private Car rates. We are trying, by discriminative underwriting, to maintain a modest favourable margin in the account, but with traffic density increasing at the present rate of approximately 8 per cent per annum, cars capable of ever greater speeds coming on to our congested roads, and damages and repair costs mounting in sympathy with the general level of prices, it would be optimistic to believe that we have reached a prolonged period of stability.

The leading position enjoyed by our Engineering associate, the "British Engine," has been well maintained, and once again it is my pleasure to report a favourable margin on a rising income.

MARINE DEPARTMENT

Net Premiums for 1961 in this Department amounted to £13,086,315 and the transfer to Profit & Loss Account, mainly in respect of 1959 underwriting account, was £1,029,031.

During 1961 several large new passenger ships were commissioned and the growing capacity of the Marine market was demonstrated by its ability to absorb insured values higher than ever before ; the British liner "Canberra" (£17 millions) and the French liner "France" (£24 millions) were two such cases.

Hull insurance once again gave cause for concern. Although total losses during 1961 were lower than in the exceptionally bad year of 1960, they were higher than the average of the previous five years and the number of partial losses was greater than in any year since 1956.

LIFE DEPARTMENT

Our Life Department figures now include those of the Law Union & Rock Insurance Company, an associated office of the "London and Lancashire," and once again show a substantial increase. New sums assured amounted to £97,111,170 ; new annuities to £3,281,684 ; and new premium income was £4,307,773. The increase noted last year in the volume of new pension scheme business has been maintained and, in addition, in 1961 there was a large increase in the amount of our new immediate annuity business.

INVESTMENTS

Our invested assets this year have increased not only from the normal accrual of cash for investment and the consolidation of the "London and Lancashire" and the "Western"/"British America" Groups' investments, but also from about £7 millions remaining from the net proceeds of the Rights Issue after the purchase of the share capitals of the "Western" and "British America."

The balance sheet value of our investments now totals £295,366,587 in the General Fund and £133,742,356 in the Life Funds.

MANAGEMENT, STAFF AND AGENTS

I greatly value the opportunity which this Statement gives me of expressing to the Management and Staff our appreciation of the ability and enthusiasm they have shown in the conduct of our operations during the past year. To all those who have served the Group at home and overseas—and I include in this great number the many Agents of our Companies—I extend our sincere thanks for their enterprise and devoted efforts.

Costain aim to undertake 50% or more of its business in overseas territories

"THE GROUP IS WELL PREPARED AND EQUIPPED TO TAKE ADVANTAGE OF ANY RELAXATION OF CREDIT RESTRICTIONS"

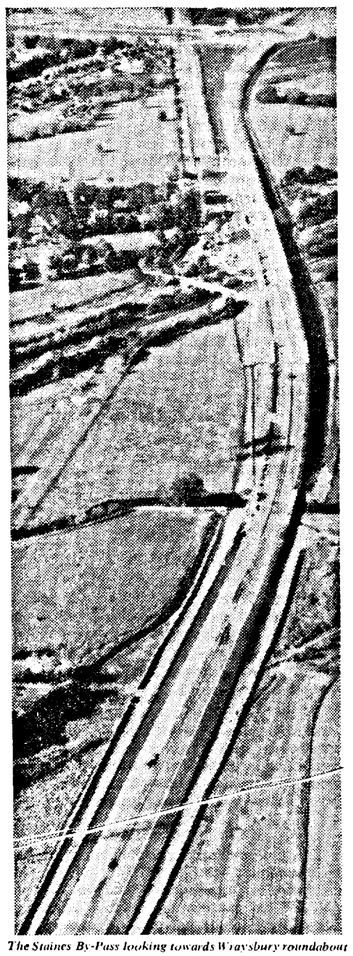
—Sir Richard Costain, CBE, Chairman

The Annual General Meeting of Richard Costain Limited will be held on June 19th in London.

The following are extracts from the circulated statement of the Chairman and Joint Managing Director, Sir Richard Costain, CBE.

As I anticipated in my interim statement the effects of the Government's economic policy have been to reduce our profits over the second half of 1961. Although the Group Profits show an increase before depreciation we have during the year increased our plant holdings with the result that the charge for depreciation has been significantly increased, and the much reduced charge for taxation is in part due to the capital allowances accruing on this plant. The incidence of higher interest rates and the adverse effects of the tight credit squeeze on some of the activities of the Group resulted in lower profit margins; even so, this was to some extent offset by a substantial increase in the turnover. Political disturbances in the Middle East and Central Africa have resulted in losses in these areas during the year.

During 1961 the proportion of unremitted profits arising from areas overseas in which the rate of taxation is substantially lower than in the United Kingdom has shown a considerable increase over previous years. These profits will attract an additional tax charge if they are eventually remitted to this country. The lower charge for taxation and the smaller proportion of pre-acquisition profits results in the slightly increased balance of net profit applicable to Richard Costain Limited of £435,388 (£405,493). This provides a cover of 2.7 times the total net dividend recommended for the year. The profits of the Group before making any provision for taxation thereon were £710,144 (£804,853) and before charging depreciation were £1,669,039 (£1,609,048).



UNITED KINGDOM

It is pleasing to record that the volume of work carried out in 1961 was appreciably higher than in 1960, and the current state of the order book is most encouraging. Although the value of orders for Industrial Building available to the contracting industry as a whole fell sharply during the final quarter of 1961, this was to a large extent offset by increases in orders for other work. The Group is well prepared and equipped to take advantage of any relaxation of credit restrictions.

Civil Engineering and Building. During the year the Staines By-Pass was completed and excellent progress has been made on the Slough By-Pass and other projects. The Research Department of Richard Costain (Construction) Limited has developed a new method of construction of the higher multi-storey buildings, known as the "Jackblock System" which has evoked world wide interest. Construction of a 17-storey block of flats at Coventry to be built on this principle has begun this year, and is expected to be completed in August, 1963.

Housing: In the early part of 1961 the progress I was able to report last year continued, but the impact of the Chancellor's measures in July, resulting as they did in reduced mortgage facilities, was felt in the latter part of the year. The promised abolition of the Schedule A tax should further encourage owner-occupation and any improvement in the mortgage situation would increase demand.

Concrete: Since the end of 1961 there have been indications that the demand for railway sleepers from the British Transport Commission may not be sustained.

The Staines By-Pass looking towards Wraysbury roundabout

COSTAIN

Siporex: During the year there has been a satisfactory increase in production and sales, and the varying nature of the uses to which this material has been put by our clients is further evidence of its excellent qualities.

ABROAD

I welcome the steps which have been taken during the year, both by the City Institutions and by ECGD. to place UK Exporters on a more competitive basis *vis-à-vis* their Overseas Competitors. It is essential, however, that British Contractors should not be placed at a disadvantage as compared with those of other countries in the treatment of certain taxes levied abroad, and I hope that HM Government will give this matter urgent and sympathetic attention.

Since the close of the year, we have agreed to an association with the firm of MacDonald, Layton & Co. Ltd., Building Contractors and Boat Builders of Pakistan, under which we are subscribing for a 49 per cent interest in their business, it being advantageous for local control to be maintained. This is a well-established and successful Company and with the increased capital available it is intended to expand their existing activities, and to enter the Civil Engineering field.

The Chairman then reviews the Group's interests in Australia, Canada, Libya, the Middle East, Nigeria, Rhodesia and Argentina and continues:—

PROPERTY INVESTMENT AT HOME AND ABROAD

During the year a new Company, Triland (Coalville) Limited was formed in which we have a controlling interest, to undertake the development of a £1 million Shopping Centre in Coalville, Leicestershire, which it is hoped to complete towards the end of 1963. Provisional arrangements for letting about half of the available space have already been made.

The first two re-development schemes undertaken by Rank Property Development Limited have been virtually completed and letting arrangements are well advanced; further schemes are nearing fruition.

Construction of an eleven storey office block, which includes premises for the Salisbury Club, was completed in Rhodesia; only the ground floor remains to be let.

FUTURE PROSPECTS

It is the aim of the Group to undertake 50 per cent or more of its business in overseas territories. We thereby aspire not only to make a worthwhile contribution to British exports but also by diversifying our activities seek to ensure, as far as is possible, the maintenance of an adequate level of profit for the Shareholders.

In view of the current state of our order book and the general progress at present being made on our contracts a further increase in turnover is anticipated in 1962, but, as I have stated earlier, difficulties in some areas abroad are likely to continue and the conditions at home which reduced our profits in 1961 may well remain. The indications are, therefore, that the profits for the current year will not show any considerable variation from those of 1961.

PETROFINA SOCIÉTÉ ANONYME

BRUSSELS, BELGIUM

PROFIT MAINTAINED

DANGER OF DEPENDENCE ON RUSSIAN OIL

CUT PRICE PETROL SUPPLIES PRECARIOUS

The Annual General Meeting of Petrofina SA was held in Brussels on May 11, 1962, and the following are extracts from the Board of Directors' Report to the shareholders for the year ended December 31, 1961.

The death of the Viscount van de Vyvere on October 22, 1961, has been a particularly painful blow for us. We have lost a great Chairman.

GENERAL REVIEW

The year 1961 was not very different from the years 1959 and 1960, the true prices at which business was done in crudes and finished products remaining, generally speaking, at levels which were appreciably below world list prices and were too low to provide the margin which our industry needs for reinvestment to take care of the continued growth of demand.

It seems that the growth of Russian exports to non-Communist countries compared with the year 1960 was of the order of 5 to 6 million tons, of which only a part went to Western Europe. For their part, the countries of the West cannot afford to neglect the security of their supplies, which could be interrupted by a deterioration in international relations if they were overmuch dependent on Soviet sources. The governments concerned seem to be displaying a growing awareness of the seriousness of the problem, but the problem remains unsolved nevertheless.

We repeat the view that the cost of crude, of which the biggest constituent is the dues going to the governments of the producing countries, cannot but tend to rise. Consequently, normal prices of fuel oil—a steadily growing proportion of the products from crude—cannot remain at the unrealistically low level that they have reached in many parts.

From the point of view of the consumer, it is clear that, generally speaking, he derives no benefit from reductions in prices by the oil companies, since most governments, taking advantage of low oil prices, have simply imposed higher excise duties on liquid fuel, claiming as justification the need to protect their countries' coal industry.

CONSUMPTION AND PRODUCTION

The growth of the world consumption of oil in 1961 compared with 1960, excluding Communist countries, was of the order of 7 per cent, which overall was in accordance with forecasts. In the United States, however, it was little more than 1 per cent, while in Western Europe growth was faster than was expected and reached 13 per cent.

Outside the United States the demand for fuel oil was again responsible for the greater part of the increase in consumption, but its growth was relatively slower than in the previous year, and there was an appreciable increase in the consumption of motor spirit in Western Europe, following a higher standard of living. There are good consumption forecasts for 1962 for all petroleum products.

World production exceeded 1,100 million tons, an increase of 6.5 per cent over the previous year. In the Middle East production increased by less than 7 per cent, spread unevenly over the different producing countries. Saudi Arabia and Iran had a substantial increase, Iraq a smaller one, while Kuwait production remained unchanged. This slowing down in the rate of expansion is the natural result of the growing share taken by the Sahara in supplies to Europe.

TRANSPORT

The volume of laid-up tanker tonnage, which for some years now has depressed the freight market, went down again, falling to a little over 2 million tons at the end of the year, against 5½ million tons two years ago, and the proportion of new vessels laid up is very small. The reduction in the number of ships laid up is partly accounted for by the conversion of a certain number of tankers into bulk carriers, and by the more widespread use of tankers for the grain trade, but the marked improvement in the statistical situation has not prevented voyage freight rates remaining extremely low.

DISTRIBUTION

Keen competition was the feature of most markets, both in Europe and in America and Canada. There was a trend towards chains of service stations selling at much below normal prices in some countries, notably in Great Britain and Belgium. Their main source of supply is refineries which do not have enough secure outlets, and which treat the quantities that they can dispose of in this way as marginal. This method of supply seems distinctly precarious, because the marginal quantities will disappear as soon as the balance between supply and demand is restored.

REVIEW OF OUR GROUP'S ACTIVITIES

For reasons beyond our control, we have had to give up our share in the International Egyptian Oil Company, which has reduced our production of crude oil, and we have thought, in consequence, that we should make further efforts to reduce the lack of balance between our crude requirements and our own production. With this in mind we have signed an agreement for a concession covering an area of some 5,500 square miles in Morocco.

Our group has adjusted itself to the unfavourable conditions through which the oil industry is passing, and is today particularly well placed to take full advantage of any improvement in the situation.

In some countries, and for some products, more than usually low selling prices have led us to limit temporarily the normal scope of our subsidiary companies, but, in spite of selecting with more than usual care the business which they thought worth doing, the group companies in 1961 sold 9,400,000 tons of finished products, an increase of 7 per cent over 1960.

FINANCE

In order to take advantage of favourable conditions in the financial market, we issued a loan of 50 million Swiss francs in the course of the year.

We have not abandoned the strict financial caution which present conditions in our industry dictate, but what has happened in the past year, and the situation at the present time, serve only to strengthen our confidence in the future of the petroleum industry as a whole, and of our own company in particular.

Our writing down of our assets has been consistent with the method which we followed last year, and we have adhered to our policy of giving our shareholders a fair return on the capital which they have invested. Accordingly we are recommending to you the payment of a dividend of 80 Belgian francs on all shares. As usual the dividend will be free of any scheduled tax, but may be liable to a withholding tax.

Profit for the year ended December 31, 1961, amounted to 681,553,136 Belgian francs (approx. £4,868,000) (1960, approx. £4½ million) including the balance brought forward from the previous year of 90,670,379 Belgian francs (approx. £648,000). This profit has been arrived at after charging the Profit and Loss Account with 478,328,717 Belgian francs (approx. £3,417,000) for depreciation, research and decrease in the value of assets.

We propose that the profit should be appropriated as follows:

To a dividend of 80 Belgian francs on 6,500,000 shares (1960 the same on 5,100,000 Old shares and 40 Belgian francs on 1,400,000 New shares).....520,000,000 Belgian francs (approx. £3,714,000) (1960, £3,314,000).

To directors' remuneration ..... 39,139,785 Belgian francs (approx. £280,000) (1960, £250,000).

To the legal reserve.....30,000,000 Belgian francs (approx. £214,000) (1960, the same).

To be carried forward.....92,413,351 Belgian francs (approx. £660,000) (1960, £648,000).

TOTAL: 681,553,136 Belgian francs (approx. £4,868,000) (1960, £4,426,000).

The report, accounts, and the proposals submitted by the Board were adopted.

THE WEIR GROUP

G & J WEIR HOLDINGS LIMITED

Extracts from the Statement by the Chairman, The Viscount Weir C.B.E., for the year ended 31st December, 1961.

GENERAL REVIEW:

The year 1961 was one of great difficulty for those engaged in the heavy sector of British Industry. With its crisis leading to the Little Budget and the Pay Pause, it proved more clearly and strongly than ever before the need for the Government to prepare, adopt and abide by a long-term financial policy for the nation. The short-term alternations in credit, which have been a feature of the last three years, are a powerful deterent to free enterprise and initiative. In my review last year, I referred to the effects of this situation on capital investment; those effects were intensified in 1961 and it is in their light that our performance for the year should in general be regarded.

The results now before you unfortunately confirm these anticipations.

The principal factors contributing to the major contraction in our earnings were:

1. The low level of output experienced by the two main Subsidiary Companies, particularly G. & J. Weir, Limited. This was a direct result of the poor intake of new orders during the years 1959 and 1960 and during the first quarter of 1961. Orders for new work were conditioned by the low demand for marine auxiliaries and directly reflected the continued recession in the shipbuilding industry.

2. Certain contracts were accepted at price levels which, although unremunerative, represented the best obtainable under current competitive conditions. While the work so obtained represented valuable additions to our load, the final results of these contracts, under higher cost conditions, turned out to be worse than we anticipated.

3. Weir-Pacific Valves Limited had still to complete their programme of new equipment for the manufacture of the Pacific valve range and, although showing marked improvement over 1960 in sales, incurred a loss on their trading.

Weir Housing Corporation Limited had a good year and the smaller companies had satisfactory results.

I am glad to report that for the first time for several years there was a marked upward movement in the orders received by the Group for new work. This increase in orders was substantial—in certain cases very substantial—with the result that we entered 1962 greatly encouraged by the augmented order books. It is also satisfactory to report that the flow of orders continued at a promising rate during the first quarter of 1962.

Our continued growth is the result of our policy of product development and diversification designed to lessen our dependence, particularly of G. & J. Weir, Limited, on the fortunes of the shipbuilding and heavy power plant industries. Although I have referred to this policy in previous Statements, it is perhaps desirable that this year I enlarge somewhat on the principles which lie behind it and its three main objectives, which are—

1. To build up manufacturing load by new product development.

2 To enter process fields other than power, whether in the marine field or on land.

3. To acquire interests in allied or associated undertakings, this increasing the range of the Group's activities and strengthening certain existing ones.

This process of expansion must necessarily be followed by a period of consolidation.

I find evidence accumulating which confirms the correctness of our policy in the changed emphasis we have now imparted through our entry into other markets and fields of engineering. In them the rate of new investment tends to be steadier, and they offer greater growth possibilities than the more traditional outlets for our activities.

DEVELOPMENTS:

I have to record the following developments in your Group during 1961.

Pulsometer Group: In my remarks at the last Annual General Meeting, I referred to our joint acquisition with Booker Brothers, McConnell & Co., Limited, of the Pulsometer Group of Companies. Under the arrangements made we acquired the following:

1. The licence and other assets relating to the range of process pumps formerly built by Pulsometer to the designs of Pacific Pumps Inc., of the U.S.A.

2. The business formerly conducted by Joseph Evans & Sons (Wolverhampton) Limited. This old-established Company has a considerable reputation, particularly in the supply of reciprocating pumps for mining purposes.

3. The vacuum pump business formerly carried on by Pulsometer at their Reading works. This opens up a field of pumping applications hitherto untouched by any member of the Group.

4. The water treatment business of Pulsometer and a controlling interest in G. S. Tett & Co. Limited of Slough, a small concern who for some time have conducted a successful business in the supply of industrial and domestic water treatment units.

5. B.A.L. Limited, of Dudley and Halesowen, Worcs., who are specialists in the manufacture of seals and packings made of moulded rubbers and other materials.

C. F. Taylor (Metal Workers) Limited: During the year your Company had the opportunity of acquiring a substantial interest in the equity of this Group of companies. Although primarily noted for their sheet metal work—such as in fuselage assembly and fittings for aircraft, coachbuilding, tanks and pipes—C. F. Taylor have a wide range of other interests. Examples are reinforced plastics, heating and ventilation work and design services. Zwicky Limited, as substantial purchasers of tanks for refuelling equipment, have had extensive dealings with the Taylor Group.

THE ACCOUNTS:

The conditions to which I have already referred resulted in the reduced trading surplus of £664,197 against £1,796,323 for 1960. Owing to the change in composition of your Group, due to the additions made to it in 1961, output cannot be strictly compared with the year 1960, but on an appropriate basis there was a decline of approximately 5 per cent in value between the two years, so that the total Group output fell below £19 million.

The Group net profit, after adjusting minority shareholders' interests, amounted to £277,982 against £795,993 for 1960. Of this net profit £89,461 was retained by subsidiary companies leaving an available net profit to the Holding Company of £188,521 against £700,690. With the addition of the carry-forward from the previous year, the amount available for appropriation by the Holding Company is £879,058 against £1,290,878 for 1960.

After a careful review of your Group's position and prospects the Board feel justified in recommending that the final dividend be maintained at 12 per cent making a total distribution for the year of 18 per cent. This will absorb £456,526 and will allow £422,532 to be carried forward in the Profit and Loss Account of the Holding Company.

The Consolidated Balance Sheet shows the full impact of the developments which took place during 1961. Investment in fixed assets increased by £2.3 million and the working capital employed throughout the Group (excluding cash) was £2.7 million more than last year—a total of some £5 million. Basically, this was the main reason for the movement in our cash resources from £3.5 million on hand at the end of 1960 to an overdraft of £2.4 million at the end of 1961. This position was relieved early in 1962 by the receipt from Peacock Brothers of a substantial proportion of the sum of $2,500,000 (Canadian), Peacock having sold their Nordstrom valve business for that amount in 1961 to the Rockwell Group of the U.S.A.

PROSPECTS:

I hope to be able to report to Stockholders at our Annual General Meeting my views on our prospects for 1962 in the light of the latest information available at that time.

There can be no question that 1961 undoubtedly produced a very marked improvement in the demand for your Group's products in contrast to the two preceding years when it contracted.

For the Group as a whole, the favourable trend has continued throughout the first quarter of 1962. We have accordingly planned for a total Group production exceeding previous years but the achievement of this will depend upon a continuance of the existing level of orders.

To sum up the more immediate prospects, therefore, I would expect 1962 to see an improvement in our gross earnings, towards which the new acquisitions should contribute.

Copies of the Report and Accounts may be obtained from The Secretary, G. & J. Weir Holdings Limited, Cathcart, Glasgow, S.4.

This notice is under no circumstances to be construed as an offering of these securities for sale or as a solicitation of offers to buy any of these securities, but appears solely for purposes of information.

THE RIO TINTO COMPANY LIMITED

The Annual General Meeting of The Rio Tinto Company Limited, will be held on June 7th at Barrington House, 59, Gresham Street, London, E.C.2. The following are extracts from the Statement by **Mr Gerald Coke,** *the Chairman, which has been circulated with the Report and Accounts for the year ended December 31, 1961 :*

ACCOUNTS

The increase in the consolidated profit before taxation from £4,635,000 to £7,150,000 is due to the inclusion for the first time of dividends from Rio Algom and Preston Mines. The figure also includes the first interim dividend from our holding in British Petroleum. The figure of £375,000 for amortisation of investments has this year been increased to £1,057,000 by reason of the Canadian charge referred to below.

The Exploration and Development Expenditure shown in the Consolidated Balance Sheet of £2,027,000 is considerably lower than last year, the principal reason being that the Palabora project previously consolidated has now been treated as an investment in a non-consolidated subsidiary. The increase in the value of the quoted investments, other than that in Compania Espanola de Minas de Rio Tinto, S.A., from £3,618,000 to £10,617,000 is due principally to the acquisition of shares in British Petroleum in exchange for assets of Kern Oil.

During 1961 our beneficial interest in Rio Algom (the main operating company in Canada) was built up from 37 per cent to 53 per cent. This necessitated considerable temporary borrowings from the bank, which it is expected will be substantially repaid by the end of 1962.

Rio Algom paid its first dividend of $1.50 per share in December, 1961. Tinto Holdings Canada (our wholly-owned Canadian subsidiary) set aside approximately one-third of this dividend as being attributable to pre-acquisition profits and wrote down its investments by this amount. Out of the balance of the dividend about half was charged against profits and credited to the Provision for Amortisation of Investments, in view of the uncertainty of the uranium situation after the expiration of present contracts.

The Chairman's Statement last year welcomed the Chancellor of the Exchequer's initiative in announcing his intention of securing to British companies operating overseas and to their shareholders the benefit of the tax reliefs granted to them by the Governments of the overseas countries concerned. Unfortunately section 17 of the Finance Act, 1961, as presented in the Finance Bill contained serious technical flaws which would have in large part destroyed its value to the Company and its shareholders. As a result of representations to the Inland Revenue, a Government amendment was introduced which corrected some of these flaws. A promise was also made for further amendment of the section, which the Chancellor has since announced will be carried out in this year's Finance Bill. So far as is known, however, the section will not work until the appropriate reliefs are written into existing double taxation treaties. This may well be difficult to effect, and if this is so, the basic object in introducing the section will be frustrated. It is hoped that the Chancellor will bear in mind this fundamental weakness in the present wording of the section and consider amendments to make it unilateral, so that his stated intention will in fact be achieved.

THE MERGER WITH THE CONSOLIDATED ZINC CORPORATION LIMITED

The events of the year under review must, of course, now be viewed in the light of the proposed merger with The Consolidated Zinc Corporation. Shareholders' attention is particularly drawn to the paragraph in the Explanatory Statement which gives the views of both Boards on the dividend prospects for 1962.

It must be emphasised that this is a merger and not a take over of one company by another. This merging of complementary but not competitive interests will provide for the shareholders of both Companies a far greater geographical and functional spread. The proposed new company will have a wider spread of earnings to cover its dividend and far greater strength on which to base its future expansion.

CONCLUSION

The Rio Tinto Company has a long and distinguished history. Its shareholders will have seen their holdings pass through many phases and have remained loyal to the Company. For their support through good times and bad and their understanding of our problems I must offer them first a word of thanks. I hope that they will feel that their confidence in the Company and in those who direct its fortunes has been justified and I am sure that a bright future lies before them.

Next I would wish to offer a word of sincere thanks to all those in Rio Tinto, throughout the world, and especially to the staff of the London Office, who have so admirably and so efficiently given me their support.

To my colleagues on the Board, who have honoured me by electing me annually to be their Chairman, I offer my deepest gratitude. I have had nothing but pleasure and interest from our association, and their wisdom in affairs and unfailing forbearance and kindness to me personally have made it appear deceptively easy to preside over our deliberations.

Finally to the Managing Director, Mr Duncan, shareholders owe a great debt. The present and future shape of the Company is of his building and, as he is continuing as Managing Director of the proposed new company, shareholders will have many opportunities in the future to express their gratitude. I can only say how sorry I am that the happy relationship which has existed between us will shortly come to an end. It is impossible for me to express adequately my gratitude to him for his consideration and support.

To all associated with The Rio Tinto Company I can give the assurance that I am handing over to a Chairman who is fully conscious of the traditions and standards of the Company and who will safeguard their interests to the best of his ability. Mr Baer will take on the chairmanship of the proposed new company with the good wishes and complete confidence of all of us.

Mr Val Duncan (Managing Director), in his Review of Operations, surveyed the continuing policy of diversification covering the Company's activities in Africa, North America, Australia, Europe and their interests in nuclear fuels. One matter of great importance to Rio Algom, he said, was the outcome of the present discussions between the UKAEA and Canada on what had become known as the hidden contract.

The quantity of 24 million lb uranium oxide is regarded as firm, but the price to be paid for this and the basis of distribution among Canadian producers have yet to be decided. Based upon the amounts of the initial contracts and upon capital expenditure incurred, it is believed that Rio Algom is entitled to a substantial allocation, all of which could be produced from its ample ore reserves after the expiry of its existing contract at the end of 1966.

In Southern Rhodesia soon after the Cam and Motor Mine was acquired at the end of 1959 and management assumed in April, 1960, a detailed investigation was undertaken. This was completed early in 1961. As a result, a major re-organisation was carried out in the middle of the year, and although the tonnage mined and milled has been considerably reduced, gold production has increased without overmining.

In the Republic of South Africa the pilot plant at Palabora came into operation early in 1961, and throughout the year has been operating satisfactorily on ore supplied from underground development. A preliminary plant estimate has also been made. A basic design and cost study is now being carried out and should be completed by the end of 1962.

In Australia, operations at Mary Kathleen continued satisfactorily and the tonnage of ore treated increased by about fifty thousand tons. As a result of the use of the electronic sorter the grade of ore milled improved considerably. For the above reasons, and due to increased efficiency and to the completion of overburden removal, operating costs were reduced appreciably.

If the present high rate of production is maintained the contract with the UKAEA for the supply of uranium concentrates will be completed at the end of 1963. Every effort is being made to find alternative activities to occupy Mary Kathleen until the uranium market recovers.

Rio Tinto Australia has acquired prospecting rights in North Western Australia where preliminary exploration has indicated the existence of large and promising iron ore deposits. Whether these deposits can be the basis of a profitable operation depends upon many factors.

THE CONSOLIDATED ZINC CORPORATION

MR A. M. BAER'S REVIEW

The Annual General Meeting of The Consolidated Zinc Corporation Limited will be held on June 7th at 6, St James's Square, S.W.1.

The following are extracts from the statement by **Mr A. M. Baer,** the chairman, which has been circulated with the Report and Accounts for the year ended December 31, 1961:

The Group profit, before mining royalty and taxation, amounted to £1,800,987 compared with £3,636,434 for 1960, a reduction of £1,835,447, which was accounted for primarily by the low level of lead and zinc prices during the year.

The average London Metal Exchange price for lead during 1961 was £64 4s. 3d. compared with £72 2s. 11d. for 1960 and the average prices for zinc were £77 14s. 7d. and £89 5s. 11d. respectively.

The Zinc Corporation, Limited decreased its output of ore by approximately 10 per cent and, as in 1960, production was adjusted to extract ore of a lower average lead grade and a higher average zinc grade, in order to keep lead output in line with the reduced level of realisations announced at the meetings of the International Lead and Zinc Study group. As a result of decreased output and reduced metal prices, the profits of this company were severely reduced.

The results of Sulphide Corporation Pty. Limited were adversely affected by the expenses and problems inherent in commissioning an entirely new plant. Titanium and Zirconium Industries Pty. Limited had a less profitable year due to the weakness of the rutile market. The profits of the other various activities of Consolidated Zinc Proprietary Limited were also reduced.

In the United Kingdom, the effect of the increase in the production of zinc due to the first full year of operation of the Imperial Smelting furnace at Swansea was offset by the depression in those industries affecting our products and trading results were most disappointing. Revenue from licensing the Imperial Smelting process, less expenditure thereon, amounted to £113,551, a decrease of £169,790 compared with 1960. During the present stage when revenue consists primarily of downpayments it is inevitable that the revenue should fluctuate from year to year.

Income from trade investments amounted to £1,401,694 compared with £1,105,786 for 1960. The increase is mainly attributable to the higher dividends received during the year from British Titan Products Company Limited and New Broken Hill Consolidated Limited out of profits earned by these companies during the preceding year.

Mining royalty payable to the New South Wales Government on the mining profits of the Zinc Corporation, amounted to only £8,726 compared with £163,789 for 1960. The decrease reflects the lower profit of the mine, referred to earlier.

Australian taxation amounted to £153,120 compared with £725,201 and United Kingdom tax to £145,687 compared with £420,381 for 1960.

The consolidated net profit for the year amounted to £1,526,403 compared with £2,295,660 for 1960.

The directors recommend that a final dividend should be paid of 2s. 3d. per share compared with 2s. 9d. per share, giving a total distribution for the year of 3s. per share compared with 4s. per share for 1960.

Capital expenditure on buildings, plant and equipment during 1961 amounted to £2,827,693.

Capital expenditure commitments at the end of the year amounted to £954,000, a considerable reduction on the commitments at December 31, 1960, of £3,765,000.

At Avonmouth the modernisation programme for the vertical retort zinc distillation plant was completed during the year and as a result the output has been the highest yet recorded. The development furnace operating the Imperial Smelting process has again made an important contribution to the total production of zinc.

IMPERIAL SMELTING PROCESS

The process has continued to attract widespread interest. During the course of the year, two further option agreements have been signed, namely, by the East Coast Smelting & Chemical Company Limited of Canada—who are interested in the New Brunswick field—and by Sumitomo Metal Mining Company Limited of Japan.

BRITISH TITAN PRODUCTS COMPANY LIMITED

British Titan Products Company Limited, in which we hold approximately 30 per cent of the equity capital, has again achieved a record output of titanium dioxide pigments, and sales and profits have been well maintained.

LEAD AND ZINC MARKETS

In the chairman's statement last year the point was stressed that the prospects of growth for lead and zinc were showing a divergent trend. This situation has continued to develop during the year under review and although the price of zinc has shown a disappointing fall, the fact nevertheless remains that increased consumption of this metal still continues to provide a measure of encouragement. World stocks have shown a tendency to decline and it is doubtful whether current unrestricted production is greater than consumption. However, the decline in stocks is not as yet sufficient to correct the price situation and at a recent Study Group meeting some of the more important producing countries indicated a strong desire to bring zinc back into the restriction fold.

At the time this statement is being prepared no final agreement has been reached between producing countries, and in my opinion a great error of judgment would be made if plans for curtailment were adopted at a time when it is known that new mine production is being developed on a considerable scale and will be entering the market in the course of the next two or three years.

With regard to lead I regret to say that the transfer of the surplus stocks from the Australian and Canadian producers to the barter stockpile has not evoked any response from the market, and lead prices have sunk during the past few months to levels below those ruling at any time since free dealings were resumed on the London Metal Exchange in 1952.

Shareholders will remember that both the Zinc Corporation and New Broken Hill mines have for some years curtailed their production far below their existing capacity and indeed far below the outputs achieved in 1957, and I am convinced that no useful purpose can be served by continuing these restrictions any longer. We have, of course, been disappointed that the action we have taken over the past few years has met with such little support by other producers, and we can see no good reason why we should continue to bear this heavy and expensive burden to the benefit of others. It is, however, gratifying to know that lead consumption during the past year has held up remarkably well despite the recession in industry both in the U.S.A. and the United Kingdom and we are encouraged to believe that with any improvement in world industrial conditions the small surplus of current production over consumption may well be eliminated.

I have every reason to believe that if the governments of the major industrial countries withdrew their protection by way of subsidy quota or tariffs from their own domestic mines the lead problem would be solved with great rapidity and a higher price might be established for those mines which were in a sound economic condition.

The days have surely passed when lead and zinc can be deemed to be strategic metals, and the heavy expense of subsidising the whole of a country's output to safeguard the interests of a small minority makes nonsense of a situation that if left alone could prosper reasonably well.

It is of interest to record that at the present depressed levels the prices of lead and zinc are approximately four times as high as they were in the pre-war decade. I suggest that this appreciation is reasonably in line with the cost today of other commodities, goods and services, provided of course increased taxes in specified instances are not taken into account. Perhaps, therefore, these so called 'depressed' price levels of today are not out of balance with the rest of the world's economy.

I must also repeat the comment frequently made in previous statements, namely that the threat of substitution for both lead and zinc remains as strong as ever and that it is therefore our duty as long term producers to make sure that we can make available to the world our production at the lowest possible figure that our costs will permit.

We are indeed determined to pursue this course unless and until a suitable international scheme is evolved that we are satisfied can do no lasting harm to our interests.

MERGER WITH THE RIO TINTO COMPANY LIMITED

Although this has come about since the close of the year under review, I would refer to the proposed merger with The Rio Tinto Company Limited. The advantages of the merger are explained fully in the documents which have been sent to shareholders and I would add that your directors are satisfied that the merger, if approved, will be a great benefit to both companies.

I am deeply conscious and proud of the honour which my future colleagues on the board of the Rio Tinto Company and my present colleagues on the board of Consolidated Zinc have paid me by their invitation that I should become the first chairman of the new company, The Rio Tinto-Zinc Corporation Ltd. This is an office which I look forward to discharging to the very best of my ability and in accordance with the high traditions of both the merging companies.

UNION CORPORATION LIMITED

(Incorporated in the Republic of South Africa)

THE FOLLOWING IS EXTRACTED FROM THE REPORT OF THE DIRECTORS FOR 1961

As was foreshadowed in last year's Annual Report, the Accounts have been drawn up in Rands and cents, the new decimal currency of the Republic of South Africa. The Sterling assets, liabilities and transactions of the Corporation have been brought into the Accounts at an exchange rate of £1 Sterling = R2. A comparative column expressed in Sterling has been included in the summary of the consolidated results for the year set out below.

During the year the Corporation's non-African interests were transferred to a wholly-owned United Kingdom subsidiary company, Unicorpora Limited.

RESULTS FOR THE YEAR. The Consolidated Profit for the year amounted to R6,392,542. Appropriations have been made from it as indicated below.

1960 R		R	1961 R	£
7,376,916	Consolidated Profit for the Year attributable to the Corporation (after providing for taxation)		6,392,542	3,196,271
	DEDUCT:			
1,454	Expenses of Note and New Share Issues	14,201		7,101
2,462,500	Dividends declared	2,500,000		1,250,000
2,463,954			2,514,201	1,257,101
4,912,962	Retained Balance of Consolidated Profit for the Year		3,878,341	1,939,170
2,402,632	Balance brought forward from 1960		2,465,594	1,232,797
7,315,594			6,343,935	3,171,967
	DEDUCT: Transfers to Reserves—			
650,000	Exploration Reserve Account	500,000		250,000
3,000,000	General Reserve Account	2,500,000		1,250,000
1,200,000	Capital Reserve Account	1,000,000		500,000
4,850,000			4,000,000	2,000,000
R2,465,594	Balance carried forward to 1962		R2,343,935	£1,171,967

The profit of R6,392,542 is arrived at after allowing R350,000 for the wasting nature of a substantial part of the portfolio.

As was the case last year, the consolidated profit includes the Corporation's equity in a subsidiary mining company's profits, a substantial portion of which was retained by that company for financing shaft-sinking and other capital expenditure. Profits retained in this way are not available for distribution and to reflect this fact the Directors have placed R1,000,000 to Capital Reserve Account, the corresponding transfer in respect of the year 1960 being R1,200,000.

The Corporation's commitments to its subsidiary mining companies were reduced during the year by R10,700,000 to a little under R2,000,000. Subsequently the final calls on the subsidiaries' capitals have been paid so that the Corporation now has no commitments on its shareholdings in these companies. To assist in meeting this large outflow of funds and bearing in mind that, as the sponsoring house, the Corporation has to be prepared to make temporary finance available to Bracken Mines, Limited, and Leslie Gold Mines, Limited, should this be necessary during the next year or so, the Directors have arranged to borrow in South Africa R4,000,000 at 6¼ per cent per annum interest. At December 31st last R800,000 of this loan had been received. The balance of R3,200,000 will be received at the rate of R200,000 per month up to April 30, 1963. Repayments at the same rate will commence on May 31, 1964, and will extend over twenty months to December 31, 1965, unless earlier repayments are negotiated.

The profit on the realisation of investments shows a substantial fall when compared with each of the last two years. Whilst this is largely due to share market conditions it must be borne in mind that in both 1959 and 1960 investment profits included to a large measure profits arising from the flotation of the new mines of the Kinross goldfield.

After careful consideration, the Directors have thought it prudent to maintain the final dividend for the year at last year's figure of 18½ cents per share, free of United Kingdom income tax. This makes, with the interim dividend of 6½ cents per share free of tax, a total distribution for the year of 25 cents per share free of tax, a slight increase on the total distribution in respect of the previous year which amounted to the equivalent of 24⅝ cents free of tax.

THE UNION CORPORATION GROUP OF COMPANIES

Among the older mines of the Group on the East Rand, The Grootvlei Proprietary Mines (which milled a record tonnage) and Marievale Consolidated Mines produced profits only slightly lower than in the previous year. At East Geduld Mines mining difficulties again increased, largely as a result of extracting pillar remnants in many areas. Van Dyk Consolidated Mines showed a further substantial drop in profits and is now near the end of its life; the No. 2 shaft was closed down in August, 1961. At Geduld Proprietary Mines net profit from mining is now a small figure by comparison with investment income and the company continued to build up its investment portfolio which consists predominantly of mining shares.

Of the Group's newer mines, St. Helena Gold Mines in the Orange Free State achieved records for tonnage milled, grade and working profit. For the first time the company's mining profits bore the full impact of taxation but it was nevertheless able to make a further increase in dividend payments. In the Kinross Area, Winkelhaak Mines recorded further advances in tonnage milled, grade and profits. Rapid progress was made at Bracken Mines and Leslie Gold Mines, both of which were able to make their first announcements of ore reserves at the year end.

South African Pulp and Paper Industries had another excellent year and work on the expansion programme which will double the capacity of the company's Tugela Mill is going according to schedule.

In Mexico, as a preliminary to the introduction of Mexican capital, San Francisco Mines of Mexico transferred its mining assets to a Mexican incorporated subsidiary during the course of the year. Profits were severely affected by the low level of base metal prices and high Mexican taxation.

In the United Kingdom, Bay Hall Trust achieved a 10 per cent rise in net profit while Wilkes Berger Engineering Company had another good year in 1961. The Harlow factory of Unicases Limited came into production towards the end of 1961.

EXPLORATION

Further exploratory drilling outside the three lease areas in the Kinross field was carried out during the year and in addition the Corporation continued to be active in the search for gold and other metals and minerals elsewhere.

DIRECTORS

The Rt. Hon. The Viscount Leathers, CH will retire from the Board at the Annual General Meeting in June and is not seeking re-election, having expressed his desire to retire from business affairs. Mr. H. W. Higginson has accepted an invitation to offer himself for election to the Board in Viscount Leathers' place.

The full Report and Accounts (copies of which can be obtained on application at the London Office, 95, Gresham Street, London, E.C.2) include further details of the progress of the companies under the administration of the Corporation, brief particulars of the progress of other companies in which the Corporation is interested, sections dealing with the South African Gold Mining Industry and statistics of World Gold Production, Consumption, Distribution and Reserves and the Corporation's Trade Cycles Chart, revised to date.

OTTOMAN BANK

WIDESPREAD INTERESTS REVIEWED

LORD LATYMER'S SPEECH

The Ninety-fifth Annual General Meeting of the Ottoman Bank was held on May 9th in London.

The Right Honourable Lord Latymer, the chairman, presided and, in the course of his speech, said:

I have to refer to proposed arrangements in connection with our business in Iraq.

For some time past local public opinion has been strongly in favour of the general policy that most major commercial undertakings in the country should be predominantly in the hands of Iraqi Nationals. The large majority of non-Iraqi trading concerns have either transferred their businesses to local Companies in which Iraqi participation in the capital preponderates, or they are in the course of doing so.

In view of this trend, your Committee have had discussions over a period with certain Iraqi Bankers and businessmen, which culminated in April of this year in an agreement, in principle, being signed covering the sale of the Iraq business of the Ottoman Bank to a new Bank to be incorporated in Baghdad.

It is intended that the Paid Up Capital of the new Bank will be ID.1,000,000, of which 40 per cent will be subscribed by the Ottoman Bank.

The Committee feel that the proposed arrangement will be in the long term interest of your Bank.

TURKEY

In Turkey the authorities took advantage of the period of stabilisation which marked the economic situation of 1961 to establish the general lines of the country's long-term development programme.

Of the steps destined to stimulate economic activity the lowering of the discount rate and the reduction in interest rates on loans from and deposits with the Banks must be mentioned; credit restrictions, in force since 1958, which had already been relaxed from time to time since then, have been completely removed.

Turkey's foreign trade figures in 1961 expressed in dollars were as follows: Imports $509,500,000 against $468,200,000 in 1960; Exports $347,200,000 against $320,800,000 in 1960. The adverse trade balance thus reached $162,300,000 against $147,400,000 in 1960.

SUDAN

In the Sudan the general economic situation continued to develop satisfactorily throughout 1961. It was a year of stable conditions. The cost-of-living index remained unchanged. The Government had no need to reimpose the restrictions on imports previously necessary.

The trade figures for the year were: Exports £S.61,300,000 (£S.63,400,000 in 1960) and Imports £S.77,600,000 (£S.63,000,000 in 1960), the United Kingdom being the main supplier and consumer. Total bank advances at December 1961 were £S.37,000,000 (1960: £S.33,000,000) and currency in circulation at the same date £S.26,000,000 (1960: £S.22,000,000).

JORDAN

Following three years of drought, 1961 was a year of heavy and widespread rain with consequently good harvests.

During the year the Jordan Development Board collaborated closely with the various United States aid agencies in the country for the provision of agricultural guidance and encouragement of rural development.

The trade figures for the year were: Exports JD4,300,000 (1960: JD.3,600,000) and Imports: JD.41,300,000 (1960: JD.40,400,000). Currency in circulation at December 31, 1961, totalled nearly JD.17,000,000.

IRAQ

In Iraq it was an encouraging year. Indeed with the exception of rice there was an increase in all major 1960/61 agricultural harvests.

Oil production advanced to some 48,000,000 tons from some 46,000,000 tons in 1960 and oil royalties rose to ID.94,000,000 from ID.90,000,000. The trade figures for the year were: Imports ID.145,700,000 and Exports (excluding oil) ID.7,900,000. The currency in circulation was ID.79,700,000 at December 31, 1961, against ID.80,300,000 at December 31, 1960.

CYPRUS

It was the first full year of independence for the Republic of Cyprus and it was a year of progress. I know it will please you to hear that your Bank continues to be the Bankers to the Government of the new Republic.

The trade figures were Exports £Cyp. 15,600,000 in 1961 (against £Cyp.19,200,000). Imports £Cyp.40,300,000 (against £Cyp. 39,200,000). The currency in circulation remained remarkably steady at about £Cyp. 10,250,000.

Our affiliated Institution the Agricultural Bank of Cyprus Limited maintained its services in providing long-term finance to the farming community.

QATAR

In Qatar developments sponsored by the Government have made new advances.

It is, of course, upon oil production that the continued prosperity of Qatar depends. 8,144,000 tons of crude oil were shipped by the Qatar Petroleum Company from Umm Said in 1961 against 7,978,000 in 1960. The 1961 figure incidentally is a record.

EAST AFRICA
(Kenya, Tanganyika, Uganda)

Of the three countries in which your Bank works in East Africa one, Tanganyika, attained independence in December 1961 and another, Uganda, is looking forward to independence this year. For East Africa generally 1961 was a difficult not to say a critical year. The impending constitutional changes increased, temporarily at least, the general feeling of uncertainty and impermanence as divisions between political parties deepened. But the factor which probably rests most vividly in the general memory is 1961's calamitous weather.

There was a marked deceleration in the flight of capital which had been noticeable in 1960; but the market is still notably short of money for export finance so that the steps taken by the East African currency Board in 1961, to assist banks with accommodation and discount facilities for this purpose was a very welcome measure indeed.

THE FEDERATION OF RHODESIA AND NYASALAND

1961 was in one way a disappointing year in that no finality was achieved regarding a new Constitution for the Federation: yet some progress was made during the year.

It was a record year for external trade; exports totalled nearly £214,000,000 and imports £155,000,000, leaving a record favourable balance on visible trade of £59,000,000. The export figure quoted is also a record.

The Bank is now well established in Salisbury and Bulawayo and as opportunities occur to expand our business in the Federation, we shall not be slow to take them.

LONDON AND PARIS, ETC.

The Paris and London Offices, and the Branches at Marseilles and Casablanca, maintained in 1961 their traditional activity; the Geneva Office also continued to show satisfactory business development.

BALANCE SHEET

The total shows little alteration compared with last year. There are small decreases in "Current, Deposit and Other Accounts" and in "Acceptances, Endorsements and Guarantees."

The position remained liquid with "Cash," "Money at Call and Notice" and "Bills Receivable" again totalling 47 per cent of the "Current, Deposit and Other Accounts." Investments are at much the same figure as last year, whilst there has been a reduction of just over £1,000,000 in "Advances to Customers and Other Accounts."

The total amount of profit available, including the balance of £24,435 brought forward, is £471,489, compared with £474,435 last year. After again appropriating £200,000 to "Reserve for Contingencies," the balance remaining is £271,489. The Committee propose that the dividend be maintained at 10s. per share, absorbing £250,000 and leaving £21,489 to be carried forward to 1962.

In connection with this proposal and in view of articles which have appeared in some financial papers outside this country, I feel it wise to restate words which I used in reply to a question at last year's Annual General Meeting.

The suggestion then made was that the Reserves of the Bank were so great that an increase in the paid up Capital of the Bank from Reserves and a larger distribution to shareholders would be justified. In the opinion of your Committee this is not the case, Reserves being no more than adequate to ensure the proper conduct of the business in view of the risks involved. No credence should be given by shareholders, therefore, to any suggestions to the contrary.

The report was adopted.

EAGLE STAR INSURANCE

"If we show sympathy for local ideas, if we are on the spot, if we can match our natural aptitude for insurance work with a willingness to approach it from novel points of view, there is still plenty to be done."

SIR BRIAN MOUNTAIN'S REVIEW

The Annual General Meeting of Eagle Star Insurance Company Ltd. will be held on May 31st in London.

The following are extracts from the circulated statement of the chairman, **Sir Brian Mountain, Bt :**

I am pleased to be able to submit accounts for 1961 which show our continued expansion and strength. Despite the fact that there has been a relatively poor underwriting experience, we have been able to show a modest profit in every department.

In 1961 we maintained the growth record we have set ourselves over the past 10 years. In the Life, Annuity and Capital Redemption Departments premium income reached nearly £18 million and £9 million interest was earned on these funds which total £165 million. In the Fire, Accident and Marine Departments an advance of nearly 10 per cent brought premiums retained for our own account to almost £30 million. The total assets of the Company rose by £29 million to a total figure of £241 million.

In these days when exports are vital to the Country it is perhaps as well to remember that Insurance Companies have for many years played a leading role in contributing substantial sums to our invisible exports. This has not been done without difficulties and hazards but we have solved these in the past and we believe that we shall continue to do so in the future.

OVERSEAS POSSIBILITIES

All the same it is just as well to recognise that the main current of political and economic change in our time is unlikely to work in favour of the remarkable international network of service and protection which for generations has been provided by the British Insurance Companies. Insurance is a difficult commodity to sell, as there is nothing tangible to demonstrate what we have to offer and our customers naturally hope that they do not have occasion to test the value of our promises. In such circumstances we should not expect nationals of other countries, within or without the Commonwealth, to prefer us over the competitors from their own or other lands simply because we are British. On the contrary this may impede our business in certain countries, and some of our newly independent friends understandably tend to go elsewhere simply for a change or to try their own hands at a game, which, from the outside, seems easy enough to play.

If we show sympathy for local ideas, if we are on the spot, if we can match our natural aptitude for insurance work with a willingness to approach it from novel points of view, there is still plenty to be done. The upsurge of demand in this expanding world will more than take care of such attrition as political or other changes may bring about and we intend to expand our Eagle Star export order book in every way possible.

The insurance field at home is very wide and our Company writes all classes of risks from Life Assurance to Pluvius, and we provide a comprehensive service to the public which is of very high order. However, an inescapable fact facing the insurance world is that a large proportion of policyholders are under-insured. Rising costs and inflation have had more than their fair share of effect on people's pockets, and therefore many are loath to increase the value of their insurances to take care of enhanced values because of the extra premium involved, but in so many cases the insured is the loser when under-insured, and I only wish that we could persuade all our policyholders of the importance of insuring at present day values.

INVESTMENT POLICY

As you will see from the Balance Sheet, book values of our investments rose by £29 millions in 1961, of which about £16 millions reflected growth of the Life Funds, and £10 millions came from the one in four Rights Issue in October. The successful investment of policyholders' and shareholders' funds is of very great importance, and within this sphere our activities are themselves diverse, both in the sources of our funds available for investment and in the uses to which they are put. We believe in pursuing an active investment policy, and keeping our money turning over when any suitable opportunity arises.

We are guided in the search for profitable outlets by our general feeling for the future, as well as by our concern for the safety of the funds. You will be able to judge from the Balance Sheet the extent to which attractive yields obtainable on fixed interest stocks and mortgages drew us in these directions in 1961, although the book value of our equity portfolio also increased by a further £6 millions.

DIVIDEND

The new money raised by the rights issue was not available in time to bring much benefit to the Accounts for 1961, and will only be fully reflected in shareholders' interest earnings during 1962. Nevertheless, the new shares issued in October 1961 will participate in the final payment of 2s. per share at an additional cost of £259,938 after tax. In these circumstances, your directors' decision to hold the dividend at 2s. 9d. per share appears amply justified apart altogether from the restraint requested from us by the Chancellor of the Exchequer.

THE CHLORIDE ELECTRICAL STORAGE CO. LTD

REPORT FOR 1961

The following are extracts from the review by the Chairman, Mr. A.W. Browne, O.B.E., M.I.E.E., circulated with the report and accounts for the year to December 31, 1961: —

There is a tendency to link the Company's fortunes to the motor industry. This is only partly correct, because our interest in batteries embraces many other types besides those used by the motor industry.

It must also be remembered that we have successfully diversified into products which are in no way concerned with batteries.

An approximate split of the record turnover for 1961 is 45% in batteries connected with the motor industry, 35% in batteries of types not connected with the motor industry, and 20% in products other than batteries.

FUTURE PICTURE

To divide your Company's business in this way is also helpful in presenting a picture of the future.

In the case of batteries for the motor industry the potential business now available is, of course, very large, and the probable growth of that potential is very large also.

As I have explained in previous Statements, the world picture of the automotive battery market is one of increasing competition. This is only to be expected in a market with so great a future growth potential.

It follows that battery manufacturers in all countries tend to plan their production facilities so as to take care of this future potential with the result that any pause in the economic growth of a country quickly produces a position of excess production facilities. Examples of this happening are seen today in Canada and Australia.

A further consequence of this expectation of increasing future potential business is to be seen in the new emergent countries. If our Group is to retain its proper share of these markets we must be prepared in certain cases of investment to accept a period of low return on capital employed in order to ensure our position for the future.

TRADING REVIEW

For the purpose of reviewing the results for the year it is convenient to divide our business rather differently, namely, the U.K. battery business, overseas battery business, and U.K. non-battery business. Such analysis is not entirely clear-cut, as part of our non-battery business in the U.K., namely the plastic manufacturing companies, supply among other things containers and separators to the battery companies.

The U.K. lead battery companies show a useful increase in trading income. Unfortunately, the increase was somewhat reduced by a fall in the profits of the Alkaline Battery Company.

The overseas picture shows that the reduction in profits compared with last year has more than offset the increase in the U.K. income mentioned above.

The U.K. non-battery business had a difficult year, principally in those companies dealing with plastic products, as throughout the industry there was a lessening in demand and a radical reduction in selling prices as a result of increased competition. Despite this and certain non-recurring expenses in the United Eboulte and Lorival Company (proceeding from the installation of new plant and equipment to increase the production of battery containers) the division as a whole earned a similar satisfactory income to last year. In particular the Hymatic and Ferrostatics companies continued to progress and enlarge their contribution to Group profits.

THE ACCOUNTS

The reduction in income from investments results from working during the year on much smaller cash margins, thus reducing the interest receivable on surplus funds. On the other hand, depreciation at £688,000 is approximately 18% more than last year. Both these factors have depressed profits in the current year and both are direct results of the heavy capital expenditure which we have embarked upon in the last few years.

The taxation charge has been reduced by £171,000 and the balance available for appropriation at £1,506,894 is somewhat less than last year. £500,000 has been transferred to General Reserve, and your Directors recommend a final dividend for the year of 12½%, making a total of 20% for the year.

Although, as I have explained, we must expect increasing competition with lower margins, I can report that at the time of writing, the Group turnover for the current year is ahead of that for last year. This is somewhat more significant in the case of our main overseas companies than in respect of our U.K. companies because the year of the former starts on 1st September as opposed to the year of the latter which starts on 1st January.

New Sales Record for ALFA-LAVAL

NEW PROCESSES AND PRODUCTS IN DEMAND

International Manufacturers and Suppliers of ALFA-LAVAL Farm Separators, Milking Machines and Dairy Plant and DE LAVAL Industrial Separators, Plate Heat Exchangers and Industrial Plant

International sales of the ALFA-LAVAL/DE LAVAL Group of Companies to outside customers in 1961 created a new sales record at 902 million Swedish kronor (approx. £63 million) compared with the 1960 figure and previous record of 795.1 million Swedish kronor (approx. £55.2 million).

The increase in group sales was particularly marked within the categories: milking machines, separators, plate heat exchangers and dairy equipment, which account for nearly 50 per cent of the total Group turnover.

Swedish sales accounted for 258.1 million kronor as against 241.8 million kronor (approx. £16.8 million) in 1960.

The average number of persons employed within the Group during 1961 totalled 18,575 (17,769 in 1960) of which the companies outside Sweden employed an average total of 9,487 (9,038).

PRODUCTION AND SALES OF AB SEPARATOR
(The Alfa-Laval Company of Sweden)

The Company's main factory at Tumba for the manufacture of heavy separators has been put into full operation during 1961. As a result the capacity for industrial and dairy-separator deliveries has grown considerably.

All Swedish factories have been highly productive. However, the scarcity of skilled labour put a check to production, especially during the first part of the year.

From a value of 158.3 million kronor (approx. £11 million) in 1960 the deliveries of the Swedish Alfa-Laval Company, AB Separator, rose to 192.6 million kronor (approx. £13.4 million) of which 70 per cent were for export.

Exports went to 93 countries, the biggest buyers being the German Federal Republic, Japan, France, Finland and the United Kingdom.

Major deliveries in 1961 included complete milk treatment plant for two large Finnish dairies and a large plant for special sour milk production in the U.S.S.R.

The EEC group received some 30 per cent of total deliveries and EFTA 25 per cent.

Throughout 1961 there has been a strong demand for the Company's products, including very important orders by the Jugoslav aluminium industry, two De Laval Centripure soap plants for the U.K. and industrial separators for the Peruvian fish refining industry.

In 1961, the Company's new department for delivery of complete factories received an order from the U.S.S.R. for a considerable number of slaughter-house plants amounting to about 160 million kronor. These plants are expected to be completely delivered during 1962 and 1963, partly with the aid of some forty sub-contractors, one of the most important being the German member of the Group, Bergedorfer Eisenwerk AG, Hamburg-Bergedorf.

DESIGN AND DEVELOPMENT WORK

A new process for producing a high-quality sterilised milk has been developed and the plant conclusively tested at the Swedish University College of Dairy Engineering at Alnarp. Unchanged in taste and food value, the sterilised milk keeps fresh for at least a month at room temperature. Such plant used in conjunction with aseptical filling will make it as convenient to distribute milk as other beverages, and may open up milk distribution in tropical areas.

A new low-cost milking machine with many plastic components has been introduced in some markets to meet competition and as a complement to the Alfa-Laval stainless steel milking machine.

In the industrial section, large yeast separators have been field tested, small continuous sludge discharge centrifuges ("Desludgers") have gone into production, while self-opening separators have been perfected for various operating conditions, thus further broadening the field of industrial application of these machines.

The plants for treating animal fat and fish oil and for continuous soapmaking have been adjusted with regard to capacity and equipment and a new process and plant for continuous fractioning of tallow has been developed.

In the thermal field, development work on plate heat exchangers and evaporators has been intensified since the new process laboratory was completed at Lund in southern Sweden. Two new sizes of the rotary thin film evaporator "Centri-Therm" have been designed.

AFFILIATED COMPANIES

All the non-Swedish members of the Alfa-Laval/De Laval Group report increased sales figures for 1961, particularly noticeable increases were recorded by the English, French and German companies.

The dividends for 1960 received during 1961 are somewhat bigger than in the previous year. On the basis of the 1961 results some companies are announcing a certain increase in dividends.

The reconstruction and extension scheme has been completed for the German plant at Hamburg-Bergedorf. The Austrian company has built an assembly shop for agricultural machinery at Wimpassing near Vienna.

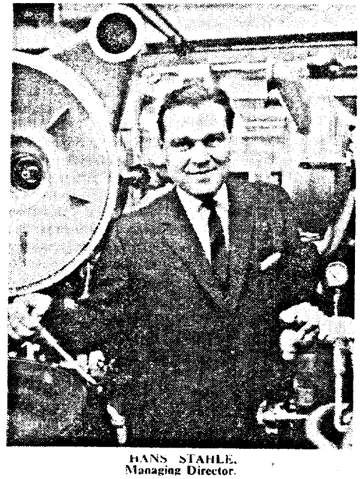
Production capacity is being increased at the works at Nevers (France), Groningen (Netherlands) and Peterborough (Canada).

The newly established affiliated company in India has started building a factory at Poona for the manufacture of certain dairy and industrial equipment.

Olofström (South Sweden), producers of motor bodies for the Volvo motor car, proposes a 1961 dividend of 1.8 million kronor; the 1960 dividend was 1.6 million.

BALANCE SHEET

Through extensive investments in the new Tumba and Lund works the entry "Factories and other real estate" has increased by 7.2 million kronor, approximately 2.7 millions of which has been transferred from "Buildings under construction."



Plant and equipment purchased during 1961 totalled 8.3 million kronor in value.

There has been a further increase in the Company's stocks of raw materials and work in progress, mainly due to the large production increase in 1961 in conjunction with the big prospective deliveries for 1962.

The accounts receivable from customers have increased by higher invoicing as well as by granting credits on a more liberal scale, which is necessary to secure important orders and hold the Company's share of the market in the growing number of countries where there is lack of capital.

BOARD OF DIRECTORS

J. Wallenberg (Chairman), Gösta de Geer, Nils Eriesson, Karl Granfors, Walter Wehtje, Hans Stahle (Managing Director).

HANS STAHLE,
Managing Director

PROFITS AND DIVIDENDS

Net profit for 1961 amounted to kr. 11,297,369, which, together with kr. 28,072,629 brought forward from the previous year, produced a total of kr. 39,369,998. It is proposed to distribute kr. 10,800,000 in the form of a dividend of kr. 12 a share and to carry forward the balance of kr. 28,569,998.

The report and the accounts will be placed before the Annual Meeting of shareholders on Friday, May 25, in Stockholm.

It was further resolved to transfer Lit.300,000,000 to reserves and to distribute a 10 per cent dividend.

COMMERCIAL UNION ASSURANCE

MR RONALD C. BROOKS' REVIEW FOR 1961

The one hundredth Annual General Meeting of the Commercial Union Assurance Company Limited will be held on May 28th at the Head Office, 24, Cornhill, London, EC. The following are extracts from the statement by the chairman, **Mr Ronald C. Brooks, OBE, MC,** circulated with the Report and Accounts for the year ended December 31, 1961:

The North British & Mercantile premises in Threadneedle Street have been bought by the Stock Exchange in connection with their re-development plans. They will be vacated shortly and the co-ordination of the North British & Mercantile head office staff with those of the other Group companies will thus be completed. Our plans for the erection of a new Group building in Great St Helen's and St Mary Axe are proceeding satisfactorily and it is expected that the work of re-developing the site will start early next year.

You will no doubt recall that in Australia the Commercial Union Assurance Company of Australia was formed in 1960 to conduct our business in that continent and in pursuance of our policy the North British & Mercantile Insurance Company of Australia has now been formed to take over the business hitherto conducted by the North British & Mercantile Australian branch. The final stage of the operation—that is the purchase of the shares of the North British & Mercantile of Australia and of the Insurance Office of Australia by the Commercial Union of Australia—is nearing completion. We have every reason to be satisfied with the result of our policy; for the formation of the Commercial Union of Australia has been attended by success and the dividend which was initially forecast has been exceeded. The Group is in an excellent position to share in the expansion resulting from the economic development of that country.

Our results have been overshadowed by our heavy underwriting losses in the United States. Our business there represents some 40 per cent of our world-wide total, so that although our trading in the rest of the world has been profitable, I regret that I must report a considerable underwriting deficit overall in the Fire and Accident departments. Our Marine operations have, however, again been profitable, while our Life department has once more succeeded in achieving a record total of new sums assured

THE AMERICAN SCENE

The continued losses in America give rise to grave concern, more especially as our expectation that some improvement was in sight has not been fulfilled. The direct causes are to be found in the heavy fire wastage, the abnormal windstorm damage, and a turn for the worse in the automobile business, which in 1960 had shown a better trend.

Our fortunes in America have ebbed and flowed over the years like those of other companies. The insurance market there has historically been fraught with difficulties, stemming largely from the close control exercised by the State Supervisory Authorities over premium rates, which have not kept pace with inflationary increases in the cost of claim settlements. The upward trend of losses has emphasised the need to reduce the ratio of operating expenses to premiums. This can be achieved in two ways, namely, by increasing premium income and by economies in our administration. Competition for additional premium income has been intense in spite of unfavourable underwriting conditions and it is necessary to exercise the greatest care in the search for additional business. The more economical working to be expected from a larger American business was one of the principal considerations in our acquisition of the North British & Mercantile. However, the benefits from integration necessarily take some time to mature, and we have made and planned economies of which the effect should from now on be increasingly evident.

It should be borne in mind that arising from the conduct of insurance business in the United States we have the use of large funds in that country and the value of our investments has continued to grow. In 1961 they increased substantially and our "Surplus to Policyholders," which constitutes the excess of our net assets over net liabilities there, rose by more than £6 million to a record figure of £52 million, and our interest income and realised capital gains exceeded our underwriting losses.

DEPARTMENTAL RESULTS AND BALANCE SHEET

Fire Department: Net Premium Income £48,465,406 (£47,723,463). Underwriting Loss £1,801,597.

Accident Department: Net Premium Income £61,929,751 (£59,727,139). Underwriting Loss £1,148,335.

Marine Department: Net Premium Income £5,424,109 (£5,289,143), and out of the surplus of the 1959 underwriting £845,782 has been transferred to Profit and Loss Account.

Life Department: Net new sums assured totalled £87,926,829 (£73,327,371) and new Annuities per annum £3,561,175 (£2,733,053).

Profit and Loss Account: Gross interest, dividends and rents at £8,802,623 show a very satisfactory increase.

Our reserves are little changed from 1960, though there has been some increase in our departmental insurance funds. Changes on the assets side of the balance sheet are, however, more marked. There has been a reduction of some £8 million in the amount of British Government securities, offset to the extent of £4 million by increases under other Stock Exchange headings, notably ordinary stocks and shares; but the book value of our total Stock Exchange securities has fallen by some £4 million from £132 million to £128 million, against which our advances on mortgages and our cash on deposit have together increased by £4 million.

Our freehold and leasehold property investments have increased by £12 million to a total of £20 million which includes the value of the freehold site and buildings in Great St Helen's and St Mary Axe to be redeveloped as our new head office. Payment of this item is not due until the end of the current year, so that a corresponding sum has been included in the amounts due to others on the liability side of the balance sheet.

BUTTERWORTH & CO. PUBLISHERS (LIMITED)

CHAIRMAN'S STATEMENT

The forty-eighth Annual General Meeting of Butterworth & Co. (Publishers) Limited will be held on June 4th at the Connaught Rooms, Great Queen Street, W.C.2.

The following is a summary of the statement by the Chairman, **The Earl of Rothes,** which has been circulated with the Annual Report and Accounts for 1961:

The trading results for 1961 on the whole are satisfactory. The Group turnover has now passed the two and three quarter million mark, a rise of 12 per cent over 1960. The profit, however, is 10 per cent down on the previous year's figure. This is due partly to a fall in profit margins and partly to the incidence of publishing to which I have referred in previous statements. In 1960 the incidence of publishing was in our favour, in 1961 it was against us. For the year ended December 31, 1961, the Group profits before providing £190,143 for taxation amount to £355,911 compared with £396,438 in the previous year. The sum of £70,000 has been allocated to General Reserve bringing it up to £583,000 and £11,160 to Staff Contingency Reserve, bringing that total, after allowing for outgoings, to £56,980. The balance carried forward on Profit and Loss Account is £155,644 against £150,284 brought in from the previous year.

The directors recommend a final dividend of 20 per cent making 35 per cent for the year, the same as for 1960.

Both at home and abroad we are pushing into new markets and in these circumstances it is essential that prices should be kept as low as possible. In the past most of our legal books, the backbone of our business, have been sold direct to customers. But it has now become essential that certain of our products, particularly scientific and medical books, be sold through retailers with a consequent lessening of our profit. Furthermore we have to face a steady increase in costs, many beyond our control, as well as increased competition.

With the exception of trade on the African continent, our overseas interests have prospered. Butterworth Inc., started in June 1960, is getting a firm footing in the United States, and we feel even more confident than last year that this venture will in due course become profitable. Our two subsidiaries, R. J. Acford Ltd. and Woodman, Marshall (Bookbinders) Ltd., exceeded their previous record of sales, but only in the last quarter of the year was it possible for them to increase prices to cover to some extent increased wages and other costs.

I continue to look forward to the future with confidence, but the next few years will be years of sound consolidation and hard work, particularly in America. I see no reason why 1962 may not be as good for the Group as 1961 and hope it will be better.

Mr J. W. Whitlock, who has been a Managing Director since 1950 and a member of the Board since 1937, retired from the Executive at the end of the year. We are very grateful indeed to him for thirty-eight years of most valuable service. He has been reappointed to the Board.

Once again I would like to pay a tribute to the staff of all grades, at home and abroad, who have done a splendid job of work during a difficult year.

THE GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION LIMITED

The seventy-sixth Annual General Meeting will be held on May 30th at Perth. The following is an extract from the circulated address of the Chairman, **Sir Stanley Norie-Miller, Bt, MC, DL, JP:—**

In 1961 income from all sources increased by £6,685,576, to reach the record figure of £93,480,540.

The Revenue Balance for the year was also the highest in our history. It amounted to £3,868,589 compared with £3,852,501 the previous year. Adding the amount brought forward from 1960, namely £1,777,505, there was available for appropriation the sum of £5,646,094. From this, £950,000 has been transferred to the Accident and Fire Departmental Funds, and £500,000 has again been added to the General Reserve, raising the latter to £5,000,000.

We dealt with many thousands of claims for storm, flood and burst pipes, both at home and abroad. Hurricane Carla did enormous damage in the United States, unusually violent weather conditions were experienced in Ireland, and, towards the close of the year, damage by frost took its toll in England. It is perhaps worthy of mention that we now handle a greater number of claims for "bad weather" damage than for ordinary Fire damage, and this feature is likely to become even more pronounced as householders, shopkeepers and property owners in the United Kingdom take advantage of the wider cover now available.

Times Furnishing

The 14th Ordinary General Meeting of THE TIMES FURNISHING (HOLDINGS) LTD. was held on May 3rd in London, **Mr Henry Jacobs,** the Chairman, presiding. The following are extracts from his circulated statement:

Profits before taxation were £817,643—somewhat less than for 1960. The total dividend for the year is 13¾ per cent less tax (*same as* 1960). Bad debts have again been less than half of one per cent.

Times Furnishing H.P. trading was made difficult by the continuation of restrictions together with the impact of the "Little Budget" in July. Cash and short-term credit sales showed a substantial increase. Profits were affected by the continued rise in working costs plus expenses of opening and operating new branches.

Willerbys Tailoring showed an increase and trading profit was maintained. Their workrooms in Basildon were considerably enlarged.

New furnishing stores were opened in Plymouth, Bristol, Altrincham and Ealing and a new Willerbys in Worcester. Some £400,000 increase in fixed assets was largely brought about by the acquisition of new properties and modernising and extending existing premises.

Turnover of Times Furnishing has been maintained during the current year and that of Willerbys is showing a steady increase. Relaxation of H.P. restrictions could be expected to produce substantial increase in the H.P. trade of Times Furnishing.

The Directors express sincere thanks for the loyal co-operation of all those in the Company's employ.

MOORES STORES LIMITED

RECORD YEAR'S TRADING—YEAR ENDED 13th JANUARY, 1962

CURRENT DIVIDEND 30% for the year on increased capital (previous year 27½%).
BONUS ISSUE of one Ordinary Share for every eight held on 24th April, 1962.

PROGRESS REPORT

Year Ended January	Trading Profit £	Depreciation £	Net Profit before Tax £	Taxation £	Net Profit after Tax £	Fixed Assets after Depreciation £	Goodwill £	Net Current Assets £	Total Issued Share Capital £	Total Capital and Revenue Reserves £	Net Ordinary Dividend £	Rate %

* Preference Capital increased by £200,000. † After One-for-Four Rights Issue.
‡ After One-for-Five Rights Issue and One-for-Ten Bonus Issue.

The following is an extract from the chairman's statement:—

STAFF RELATIONSHIPS

Your company is very fortunate in having a wonderful team of executives with long practical experience in the grocery trade. Many have been with us all their working lives and have progressively accepted more responsibility as the Group has expanded. They are all able and virile enough to accept the challenge of changing conditions in food distribution. To these executives and to all our staff, including shop managers and assistants, drivers and warehouse personnel, I convey my sincere appreciation of their magnificent efforts during the year.

I am pleased to report that the various Pension Schemes in operation in the Subsidiary Companies were consolidated as from 1st April, 1962, into one Group Pension Scheme, the scope of which was widened to include a larger number of staff than formerly. I am pleased to say that the reception by the staff of the new scheme has been most gratifying. As a progressive company, we do offer to men and women with a zest for the trade an interesting and remunerative career with excellent working conditions and promotion prospects.

RUGBY PORTLAND CEMENT

RECORD RESULTS

SIR HALFORD REDDISH'S REVIEW

The Annual General Meeting of The Rugby Portland Cement Co. Ltd. will be held on June 1, 1962. The following is an extract from the speech of **Sir Halford Reddish, FCA,** which has been circulated with the Accounts.

It was indeed a strenuous year for the whole Group, with the highest production, the highest tonnage of deliveries and the highest net profit we have ever achieved: and it was our sixteenth successive profit record. It is perhaps worth noting that throughout these last sixteen years the figures owe nothing to the acquisition of any other business.

In the home market demand remained at a high level throughout the year, deliveries of the whole industry being just over 10 per cent in excess of those for 1960. Our own deliveries increased by 25 per cent. We were fortunate in having good stocks on hand at the beginning of the year, for deliveries substantially exceeded production. The new kiln at our Southam works, to which I referred last year, came into operation in November and so had virtually no influence on the year's results.

We have made a careful, though conservative, revaluation of the fixed assets of the Group as at December 31, 1961. This shows a surplus over book-values of some £5,250,000, of which £3,150,000 is attributable to the parent company and its UK subsidiaries.

DIVIDEND POLICY

You will expect a word from me on the policy behind our recommendations that the dividends on the Ordinary shares should be repeated at the same rate as last year, notwithstanding the increased profits. In the absence of compensating factors, such as a scrip issue or a rights issue on favourable terms, mere maintenance of the dividend at the same rate is an effective reduction of the real return on the shareholder's capital interest in the company, since this is increased each year by such part of the profits after taxation as is not distributed as dividend. We have provided such "compensating factors" from time to time in the past and it remains our policy to try to do so in the future.

I believe that the dividend policy which we have followed through the years has without doubt contributed to the high standing which our Ordinary shares have enjoyed on the Stock Exchange.

Considerable extensions to our productive capacity at home and abroad are planned for the next two or three years. It is expected that for the most part extensions abroad will be financed by our overseas subsidiaries without recourse to the parent company. At home, in addition to finance required for further expansion, the parent company's Unsecured Loan Stock is due for redemption at par at the end of this year. We have therefore made the recent "rights" issue to the holders of our Ordinary shares on the basis of one new share for each four shares held. The price of issue, 45s. 6d., compared with a cum rights price of about 71s. 0d.

The results produced in 1961 by our manufacturing subsidiaries overseas have followed my expectation a year ago: happily a steadily increasing demand and better profits from Western Australia, unhappily lower figures from Trinidad, where an outbreak of violence and lawlessness affected our own and other industries in the early months of the year. There is a reasonable hope of rather better results from Trinidad this year.

Under the present Government in Western Australia—deservedly returned at the State election in March this year—quite outstanding progress has been made in the further industrialisation of the State and there is every indication that this will continue. Plans are now almost completed for a large expansion of the manufacturing capacity of our subsidiary company, Cockburn Cement Pty. Ltd.

DISAPPOINTING BUDGET

The recent Budget did little if anything to stimulate the economy and in that respect was disappointing: and even more regrettable was the failure to make wider share-ownership more attractive and less difficult for the uninitiated. The profits tax, discriminating against the holders of Ordinary shares, is still with us. The two per cent stamp duty still makes investment unnecessarily expensive. The man who saves and then assists the national economy by investing his savings still has his dividends treated as "unearned" income. We have travelled a long way from the time when taxation was levied solely to enable a Government to ensure the safety of the realm and to maintain law and order. Too much of our taxation today is imposed for reasons of political expediency, the latest example being the tax on short-term speculative gains which is frankly admitted to produce little or no yield but which must add substantially to administrative costs.

THE OUTLOOK

Signs are not lacking, however, that there will be some recovery in the economy in the coming months. I am certainly not pessimistic as to the outlook for the cement industry.

Not only did 1961 produce our company's sixteenth successive profit record: for the first time our net profit exceeded £2m.

Impressive though this may appear at first sight, we do not for one moment overlook the fact that past records are no automatic guarantee of continuing success: that it is quite possible for a business earning good profits today to have already within its fabric the seeds of future decay. We who are here in Rugby Cement now must never forget that we have a duty to try to lay the foundations on which the company's continuing success in the future can be built by those who follow after.

We have passed another milestone. There are others ahead.

A copy of the full speech may be obtained on application to the Secretary, Crown House, Rugby.

THE PYRENE COMPANY

REDUCED PROFITS FROM MOTOR INDUSTRY TRADING

The forty-eighth Annual General Meeting of The Pyrene Company Limited will be held on June 5th in London.

The following is an extract from the circulated statement by the chairman and managing director, **Mr Francis A. J. Harrison:**

The Group Trading Profit is down from £912,506 to £661,103 and the Net Profit before tax amounts to £469,370, compared with £755,825 in the previous year.

In May last, when announcing the Rights Issue, it was stated that "provided no unforeseen set-back is encountered the Directors expect to recommend a total distribution of 30 per cent." Subsequently, however, I regret to report there was an unforeseen set-back and these circumstances reduced profits severely just when they had been expected to increase. Having in mind also the substantial tax relief received by way of initial and investment allowances, peculiar to the 1961 accounts due to the heavy capital expenditure, the Directors feel it wise to recommend that the second and final dividend should be reduced to 13½ per cent.

The Pyrene Company Ltd.: The fact that overall sales were only fractionally increased indicates the effect of reductions in Motor Car Bumpers and in Metal Finishing Division shipments. The Fire Division sales were well up, both at home and in the export territories. The value of export sales was increased by nearly 6 per cent.

LOOKING FORWARD

Actual sales of the Parent Company for the first quarter of 1962 are some 12½ per cent higher than those of 1961. It is estimated however that profits from these sales will be not materially lower than those of the corresponding period of last year. The Fire and Metal Finishing Divisions' sales are also ahead of budget, but Bumper shipments are some 20 per cent below budgeted schedules. They are expected to increase during the remainder of the June quarter, but at present there is uncertainty as to the rate of requirement after July.

A range of entirely new types of Fire Extinguishers has been developed employing various modern fire extinguishing media in compact and readily operated units. A further important new product with international scope is the Super-jet Foam Monitor which can project up to 5,000 gallons of foam per minute.

The new Fire Detector and Alarm Division is an important additional activity—a break through into fire prevention as distinct from fire protection. The great advantages afforded by these new "Pyrene" Fire Detector and Alarm Systems should enable us to build up considerable additional business.

There are other developments coming along, each bringing the possibility of a new class of business but of which it would not be right for me to divulge information just yet. In short both Parent Company and subsidiaries are developing new ideas, some within our established range—which keeps the name "Pyrene" pre-eminent in Fire Protection all over the world, and others which will help to broaden sales scope, diversify our activities and improve the potential of the Group.

THE HOFFMANN MANUFACTURING COMPANY

CONTINUING EMPHASIS ON MODERNISATION

The annual general meeting of The Hoffmann Manufacturing Company Limited was held on May 9th in London, **Mr J. W. Garton, JP** (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

The profit of the Hoffmann Group for 1961, before taxation, but after all other charges amounts to £1,893,412 and compares with £1,735,953 for the previous year. Income Tax and Profits Tax absorb £927,762 against £686,563 in 1960. The net profit of the Group for the year 1961 after taxation is, therefore, £965,650 and compares with £1,049,390 for 1960.

For the first six months of the year the Company was fully occupied, but when the credit squeeze came into effect there was a shortening of the order book for bearings for consumer goods. This allowed us to build up bigger stocks, which will put us in a better position immediately there is some easing off of restrictions. The Directors have decided to recommend the same Final Dividend as the previous year of 13 per cent less tax, which with the Interim Dividend paid of 7½ per cent, less tax, will make a total distribution of 20½ per cent, less tax.

The Fixed Asset Replacement Reserve of the Group has been increased by a transfer of £375,000 which brings the Reserve to £2,400,000.

A transfer of £300,000 has been made to the Group General Reserve which now totals £1,750,000.

The value of stocks at December 31, 1961, has risen by £652,634.

Debtors have fallen slightly at December 31, 1961, by £77,462. The liquid resources at the end of the year totalled £2,540,334 which compared with £2,265,134 at December 31, 1960.

The excess of Current Assets over Current Liabilities at the close of 1961 amounted to £5,709,839 compared with £4,699,321 at the close of 1960.

CAPITAL EXPENDITURE

The Group Capital Commitment for buildings, plant and machinery, at December 31, 1961, amounted to £835,696. The major portion of this is in connection with the erection and equipping of the new building at the Gloucester Works, which will house new ball making plant and other production machines.

The Directors continue to give every attention to the repairing and maintenance of buildings, plant and machinery which is so essential in the high precision engineering work in which we are engaged.

We have spent much time in the last year studying the extent to which technical change is affecting the roles and responsibilities of our staff, especially at foreman level, and believe we are now in a strong position to increase individual satisfaction and overall efficiency.

The less favourable trading conditions which have been operating since the time of the Chancellor's "little budget" make it difficult to assess with confidence the outlook for the future, but we have a reasonably good order book at the present time. During the last few weeks I am pleased to say that there has been a slight increase in the demand for our products which we hope will grow so that we shall be able to keep all our Workpeople and plant fully employed. I have every confidence that your Company will secure a fair share of the bearing business of the country.

The report and accounts were adopted.

Storeys OF LANCASTER

Manufacturers of "Con-Tact," "Stormur," Vinyl Curtaining, Vinyl Sheetings and coated fabrics for industrial and domestic uses.

	1961 £	1960 £
Trading Profit	859,000	1,098,000
Net Profit before Taxation	617,000	880,000
Net Profit after Taxation	307,000	463,000
Depreciation charged	178,000	148,000
Dividend on Ordinary Shares	30%	30%

The following are extracts from the Chairman's Speech:

"It is with regret that I have to report profits substantially lower than those for the preceding year. In a sentence, I would say that 1961 was a year of disappointment, but also of consolidation and preparation for the future."

"Sales for the first nine months of the year were somewhat less than for the corresponding period in 1960, but in the December quarter they rose sufficiently to result in a very slight increase on last year as a whole, so that the year did end on an encouraging note."

"I am glad to report that our well-known "Con-Tact" Self-Adhesive Plastic continues to be in good and steady demand. In this range and a number of other plastic ranges, a new photographic technique has resulted in a fresh type of design, with exceptionally good colourings, being introduced. These new designs and the very realistic wood effects have met with a ready response. Our plastic wallcovering material, "Stormur," has been used with success on a number of industrial and commercial buildings. On the other hand, our "Stor-Decor" business has declined substantially owing to cheap cotton prints and other materials which are now available on the market."

"Our business with the Perambulator, Travelware, Radio and other trades has again been good, and present prospects are most encouraging."

"We are already represented by various selling Companies on the Continent and we face entry into the Common Market with confidence."

A copy of the Accounts and the Chairman's Speech may be obtained from:—

The Secretary,
STOREY BROTHERS AND COMPANY LIMITED,
WHITE CROSS, LANCASTER

TWINING CROSFIELD & COMPANY

EXPANSION OF TRADE MAINTAINED

The forty-fifth annual general meeting of Twining Crosfield & Co. Limited was held on May 3rd in London, **Mr H. W. Backhouse** (chairman and managing director) presiding.

The following is an extract from his circulated statement:

The Group Profit before taxation at £157,000 is £17,000 higher than last year but on our larger ordinary capital. We propose to recommend a final dividend at the rate of 10 per cent., which is the same as last year on the increased capital and, if this is approved, we shall add £16,000 to the figure we carry forward in our Consolidated Account. It should be remembered that during this period the cost of integrating the Barber acquisition was met and the economies effected as a result thereof will not be fully realised until during the current year. We have added some very capable members to our staff as a result of this and the expansion in our trade has been maintained. We had to contend with the difficulties resulting from the Tally Clerks' strike at the end of 1960 which was very costly and we were adversely affected by the increase in the Bank rate. The tea market was difficult for our purposes until about June, 1961, which naturally affected our net profits.

During the year we have made an investment in the development of Coffee Houses which shows promise of good results.

I should like once more to express our appreciation for the most excellent service we have received from our staff and employees. They had a particularly trying year because of our acquisition of Barbers' business which meant a lot of extra work.

While we have made a good start in 1962 we continue to face very keen competition. In the retail trade this often takes the form of price cutting and the public is looking for bargains at cut prices. With our increased sales organisation I look forward to further expansion and if the tea and coffee market remains favourable to a good year's trading.

The report was adopted.

IMPERIAL CHEMICAL INDUSTRIES

STEPS TO IMPROVE COMPETITIVE POSITION

MR S. P. CHAMBERS ON VITAL ROLE OF RESEARCH AND DEVELOPMENT

The thirty-fifth annual general meeting of Imperial Chemical Industries Limited was held on May 3rd in London.

Mr S. P. Chambers CB, CIE (the chairman), presided and, in the course of his speech, said :

We were naturally disappointed that the profits in 1961 were so much lower than those of the previous year, although it has to be remembered that 1960 was very much a record year and that in only one other year, 1959, has the 1961 profit been exceeded. Profits are always liable to fluctuation with varying commercial conditions and a simple comparison of 1960 and 1961 profits gives an exaggerated picture.

The most significant fact about the fall of profits in 1961 is that it was not due to a reduction in the physical volume of sales at home or abroad. In fact they established new records, so that it would be quite wrong to think of 1961 as a year of decline or recession. The fall in profits was due largely to lower prices which resulted in turnover expressed in money terms being about 1½ per cent lower than in 1960 and which also lowered profit margins.

Highly competitive conditions are likely to continue with production capacities for many chemical products remaining in excess of demand for a time. It must therefore be the Company's aim to secure reasonable profits with a growing volume of business at lower prices rather than rely on a smaller volume of business at higher prices. To do this it will be essential to intensify our efforts to achieve the lowest possible costs of established products and more desirable than ever that we should be in the van with a succession of new and profitable products.

IMPORTANCE OF RESEARCH AND DEVELOPMENT

Your Directors have been devoting a great deal of attention to these important problems, the solution of which demands a different approach from that applicable to conditions obtaining up to a relatively short time ago. Then the emphasis quite properly was on the increase of production capacity to meet demand with minimum delay. Now a forward outlook is still more necessary to ensure that production is based on the cheapest and most modern processes.

Research and development are two of the key activities in this connection. Although a good deal of the Company's research and development effort is now being applied to the search for new processes for manufacture of established products, the equally important objective of discovering entirely new chemical products is by no means being neglected.

To obtain the full advantage of the discovery of new products, production on a commercial scale must begin with minimum delay. This applies particularly to pharmaceutical products and is one of the reasons for our decision to erect new pharmaceutical manufacturing and packaging plants at Macclesfield. The links between research, development, scientific control and commercial production will be shorter and stronger than what is possible with the existing manufacturing facilities.

Although we spent about £15 million in the United Kingdom alone on research and development, this represents a small proportion of the total expenditure on research and development by the chemical industries of the world. Much time and care, therefore, is devoted to the study of developments outside our own organisation, and we do not hesitate to seek licences for any process or product likely to be of value in our own business.

Apart from research and development there are three other ways in which the problems of cost reduction are being attacked. Greater attention is being paid at the design stage of our plants to ensure that the capital costs are a minimum and that when the plants are erected production costs will also be as low as they can be made, consistent with effective operation. I do not wish to give the impression that hitherto these matters have been neglected, but in years gone by the need to get plants erected to meet the known demand for products had sometimes to take precedence over achieving the lowest costs, particularly when plant items were difficult to obtain.

Another way in which we are attacking costs is to review and to modify the Company's organisation to meet changing conditions. The formation of Imperial Metal Industries Ltd., under the Chairmanship of Dr James Taylor, to control the Company's extensive metal interests (other than in aluminium) is an example. In addition, it is proposed to transfer the control of Wilton Works to the Heavy Organic Chemicals Division. The Wilton Council has done exceptionally good work in harmonising the interests of the different Divisions operating on the Wilton site, and its abolition is just a change of organisation to deal with the new conditions now that the site is so well developed. Other changes are also under consideration.

Finally, we are examining critically every form of expenditure throughout the Company and the reasons for it. The whole operation will take some considerable time but when it is completed we expect to get some substantial reductions in costs without loss of efficiency.

PROSPECTS

Although some improvement in 1962 may be expected from higher turnover, the main source of additional profits must be sought in improved profit margins due to greater efficiency. In the nature of things, any improvement in profits achieved in this way is likely to be moderate.

In the first quarter, turnover at home and in exports taken together was a little above the corresponding quarter of 1961. It is too early for me to make any more precise forecast for the current year. Taking a long view and bearing in mind the new plants which will be coming into production in the next few years, the Company's prospects are, in the opinion of your Directors, as bright as ever and its competitive strength is being further improved by the measures of which I have given an outline today.

The report and accounts were adopted and the proposed final dividend of 1s. 6d., less tax, making 2s. 9d., less tax, for the year on the Ordinary Stock was approved.

W H S

W. H. SMITH & SON (HOLDINGS) LIMITED

Extract from the Chairman's Statement

The Year's Results The programme of development to which I referred in my Statement last year has proceeded according to plan. While the full impact of the programme will not be reflected in our results immediately, there are encouraging signs that your business is already showing the benefit of the capital expenditure on modernizing shops, bookstalls and wholesale houses and of the extensive staff training programmes to which I shall refer later.

I am able to report better results for this past year as compared with the previous year. They represent a return to the scale of profits made in the three years prior to 1960-61. While it was more difficult to earn additional profits by reason of the economic conditions in the country the year's trading was free of interruptions arising from industrial disputes outside the business and for forty-eight weeks sales benefited from the raising of the price of the national daily papers. However, even after discounting the favourable factors, the trend of profits is in the right direction and given a reasonable trading climate, I look for further improvement as our plans, policies and capital expenditure become increasingly effective.

Accounts The Consolidated Profit before taxation for the 53 weeks was £2,101,167 compared with £1,753,138 for the preceding 52-week period. Taxation absorbed £1,178,055, leaving £923,112 for appropriation. Net Dividends for the year on the Preference Shares, together with the Interim and Proposed Final Dividend on the Ordinary Shares amount to £505,925. After these allocations we were able to put to General Reserve £384,000 and to increase the carry forward by £33,187.

Dividend We have decided to recommend a Final Dividend of 9 per cent, making 13 per cent, for the year.

INSTITUTE OF CHARTERED ACCOUNTANTS

ANNUAL MEETING

Mr. P. F. Granger, F.C.A.

In the course of his address to the 81st annual meeting of The Institute of Chartered Accountants in England and Wales on 3rd May 1962 the President, Mr. P. F. GRANGER, F.C.A., said:

STATEMENTS ON AUDITING

Last August the Council issued the first of a series of Statements on Auditing. The No. 1 Statement dealt with GENERAL PRINCIPLES OF AUDITING and the No. 2 Statement, issued last March, dealt with STOCK-IN-TRADE AND WORK IN PROGRESS. Further Statements are in preparation. The Council regards them as most significant additions to the range of important technical documents emanating from the Institute. I must, however, emphasise that in issuing these auditing Statements the Council is doing no more than offer guidance to members. It must still remain with the individual auditor to decide, in the circumstances of each particular audit, the nature and extent of the tests and examinations he should make in order to enable him to discharge his responsibility. In so doing he must rely on his professional training, experience, skill and judgment.

TERMS USED IN PUBLISHED ACCOUNTS

We are issuing a statement entitled TERMS USED IN PUBLISHED ACCOUNTS OF LIMITED COMPANIES. It is intended for reference purposes as and when the occasion arises. The terms suggested by the Council are suggestions only and will not necessarily be appropriate in the circumstances of a particular business. The Council is not aiming at regimentation or standardisation.

TAXATION

The Council is able to draw upon a vast amount of experience throughout the country and in this way is well fitted to direct the attention of the Chancellor of the Exchequer and the Board of Inland Revenue to anomalies and uncertainties in existing taxation legislation and in Finance Bills. Our representations are often the subject of discussion between representatives of the Council and representatives of the Board of Inland Revenue. We do not always agree with the Revenue view but we greatly value these opportunities for discussion and we believe them to be of mutual benefit.

BANCO DI ROMA

Capital : Lire 12,500,000,000 — Paid up : Lire 10,200,000,000
Reserve : Lire 6,400,000,000

The Meeting of Shareholders of BANCO DI ROMA, held on April 16, 1962, under the chairmanship of Gr. Uff. Avv. Vittorino VERONESE, approved the Balance Sheet and Profit and Loss Account as at December 31, 1961, and the allocation of the profit for the financial year.

After having paid tribute to the Chairman, Cavaliere del Lavoro Ugo FOSCOLO, and the Auditor, Prof. Mario BOSSI—who recently passed away—the Board of Directors pointed out the continued, favourable progress made by the Bank in the various sections of activity. Compared with 1960, funds have risen by 194,000 million Lire (equal to 23 per cent), to reach 1,030,000 million Lire, in addition to the balance of circular cheques of 24,000 million Lire. Investments have risen to 698,000 million Lire, with an increase, in the year, of 133,000 million Lire (over 23 per cent). Immediate availabilities equal 41 per cent of the funds. The triennial period 1959-1961 has seen customers' funds and investments increase respectively by 45 per cent and by about 70 per cent, as compared with December 31, 1958. The net profit balance for the year, of over 1,351 million Lire, has made it possible to distribute once again a dividend of 10 per cent, and to allocate 500 million Lire to reserve, which is thus raised to 6,400 million Lire, equal to over 62 per cent of the paid up capital.

The Meeting re-elected for the three-year period 1962-1964 the retiring Members of the Board. The Board of Directors met immediately after the Meeting and confirmed, in their respective appointments, the Chairman, Gr. Uff. Avv. Vittorino VERONESE, and the Deputy Chairman, Baron Prof. Dott. Francesco Mario ODDASSO and Dott. Massimo SPADA.

The Managing Directors are Gr. Uff. Raffaele MANCINELLI and Dott. Achille RUTA.

To complete the Board of Auditors, Dott. Sergio Ruggeri has been elected Auditor.

TRADE INDEMNITY COMPANY LIMITED

MR H. T. SILVERSIDES ON CREDIT INSURANCE

The 44th ordinary general meeting of Trade Indemnity Company Limited was held on May 3rd in London, **Mr H. T. Silversides** (the chairman) presiding.

The following is an extract from his circulated statement:

The Accounts and Balance Sheet show results which closely reflect the fluctuating fortunes of this country's economy.

The gross premiums earned in 1961 on all Underwriting Accounts amounted to £1,778,715, an increase on the previous year of approximately 1.80 per cent. The retained premiums after reinsurance amounted to £603,847, an increase of approximately 2.64 per cent. The increases, although small, are, I think, satisfactory inasmuch as they have been achieved during a period when national productivity has been virtually static.

During 1961 claims paid and other outgo, less salvages, amounted to £1,071,656, an increase of no less than 91.4 per cent on 1960. A little over one half of this figure is attributable to the 1961 Underwriting Account and, as a result, after charging expenses of management, this Account had a debit balance of £37,949 at the end of the year.

In so far as the resultant debit balance is concerned, there are, of course, two years to go before the Account is closed and, consequently, there is still time for sufficient additional premium to be earned to reverse the position.

After various adjustments and charges, including a dividend of 17½ per cent, the final balance on Profit and Loss Account to be carried forward to next year is £305,568.

I think you will regard these results as satisfactory in circumstances which make the underwriting of commercial credit risks extremely difficult.

Although the present need for dividend restraint precludes any larger distribution than that which has been proposed, your Directors are not unmindful of the substantial surplus that arises on the Profit and Loss Account. They propose that £100,000 of undistributed profits should be capitalised and issued in the form of fully paid up £1 Ordinary Shares in the proportion of one Share for every five Shares held. The Directors hope that circumstances next year will permit them to pay the same rate of dividend on the increased capital.

GENERAL REMARKS

In his general remarks on trading conditions generally and on the effect of the Government's economic policy, the chairman said: The feelings of insecurity and uncertainty which the lack of a clear and consistent economic policy have aroused in the minds of most businessmen are known to you all. A climate of uncertainty is one in which the advantages of Credit Insurance become more readily apparent and we have endeavoured to make the most of our opportunities. New business added to our books in 1961 was over sixty per cent higher than in the previous year and was well up to the peak levels of the middle fifties. As yet, the increase in new business is not reflecting, to any great extent, the efforts of the new sales force, to which I made reference in my previous report. I can,

however say that there is a considerable volume of potential new business in the pipeline which stems from their activities. Our hopes are, therefore, that our new business figures will rise still further in 1962 as the full weight of our sales force is brought to bear.

I am pleased to be able to tell you that efforts to make our facilities to exporters more widely appreciated have met with a considerable measure of success and that our export turnover and premium income have risen appreciably over the past twelve months. This has, in fact, reversed the previous downward trend.

If Britain decides to join the Common Market, it would open up new opportunities for expanding our business. Your company would have a most important and, I am tempted to say, special part to play. Not only would there be every incentive for manufacturers and merchants in this country to use Credit Insurance to protect themselves against the repercussions on their United Kingdom customers of tariff-free competition from the Continent, but they would face the additional need for cover on their sales to new and untried customers in the countries of the "Six." Our contacts and sources of information in Europe are, through our membership of the International Credit Insurance Association, widespread and effective.

The report was adopted and at a subsequent extraordinary general meeting the capital proposals were approved.

SMITH & NEPHEW ASSOCIATED COMPANIES LIMITED

ANNUAL GENERAL MEETING 8th MAY, 1962

YEAR OF EXPANSION

The twenty-fifth Annual General Meeting of Smith & Nephew Associated Companies Limited was held on May 8th in the Great Hall, 2 Temple Place, Victoria Embankment, London, **Mr. G. E. Leavey** (the Chairman), presided.

* * * *

The following information was given in the Chairman's Statement which had been circulated previously:—

TRADING RESULTS

	1961	1960
Group Profit Before Tax	£2,702,797	£2,244,934
Group Profit After Tax	£1,281,318	£1,121,057

DIVIDEND

Bearing in mind the request of the Exchequer that Companies should exercise restraint, but taking into account that the improvement in the profits arises mainly from increased productivity and not by price increase, the Board recommends that the total dividend rate is increased only from 12½ per cent. to 13½ per cent., thus a final dividend of 8¼ per cent. on the Issued Share Capital is recommended.

CAPITALISATION OF RESERVES

The Reserves of the Company now exceed the Share Capital, and the Board recommends the distribution to Shareholders of ONE New Ordinary Share for every THREE Ordinary Shares held at the close of business on 11th May, 1962.

GENERAL REVIEW

The year under review has witnessed some major decisions on policy. There is a realisation that in a changing world investment in a new range of raw materials is necessary. Paper is becoming more important as a means of meeting the demand of the hospitals and medical world for disposable products, and consequently the Company is developing a rapidly increasing trade in products mainly of paper.

Plastics have been under constant review as being of outstanding importance to many of our products. This Division of the business has recently been authorised to plan a large extension of plant in its own field, in which it has shown a modest success, and in addition a small manufacturing company with special experience in injection moulding has been acquired.

* * * *

At the Annual General Meeting the following announcements were made:—

PRESIDENT

After seven years Mr. G. E. Leavey relinquishes the Chairmanship of the Board and at the invitation of his Colleagues has accepted the Presidency of the Company.

CHAIRMAN

Mr. C. A. F. Hastilow, who joined the Board of the Company in 1958 at the time of the fusion with Southalls (Birmingham) Ltd., has accepted the Office of Chairman of the Board.

DEPUTY CHAIRMAN

The growth of the Company necessitated a change in the Articles of Association so that the Company could appoint more than one Deputy Chairman. The appropriate Resolutions were passed and the appointment of Mr. G. Whittaker as Deputy Chairman and Managing Director, Mr. L. F. Long and Mr. S. N. Steen as Deputy Chairmen (Executive) and Mr. J. A. Leavey as Deputy Chairman was announced.

The Report and Accounts were adopted and the ONE-for-THREE scrip issue approved.

PRINCIPAL PRODUCTS

Surgical Dressings: Elastoplast First Aid Dressings, Bandages & Plasters; Nivea Creme Oil & Lotion; Gypsona Plaster of Paris Bandages; Dr. White's Lilia, Lil-lets Sanitary Protection; Ozo, Conquest Toilet Paper; Parozone Bleach; Land-o'-Nod Clothing; Tuberculostatic Drugs; Pharmaceutical Products; Hypodermic Syringes & Needles; Industrial Adhesive Tapes.

POWER SECURITIES CORPORATION LIMITED

LARGER PROFIT

The Thirty-ninth Annual General Meeting of Power Securities Corporation, Ltd., will be held on May 31st in London.

The following is an extract from the circulated statement of **Sir Andrew M. MacTaggart,** Chairman and Managing Director.

The consolidated profit before taxation of £790,837 compares with £715,142 in the previous year, an increase of £75,695.

The consolidated profit after taxation at £494,026 is £114,761 higher than the comparable figure in 1960.

The Directors recommend dividends at the same rates as those declared for the previous year, namely 15 per cent on the Ordinary Shares and the maximum rate of 10 per cent on the 7 per cent Participating Preference Shares.

Work in progress has increased by over £2,000,000 compared with last year. This is mainly accounted for by building contracts, and is reflected in the increases in creditors and the amount due to our bankers.

After dealing in detail with the contracts completed and in hand by Balfour, Beatty & Co., Ltd., the chairman referred to the subsidiary companies, in the course of which he said that the activities of Tersons Limited throughout the United Kingdom had increased considerably; Stent Precast Concrete Limited had worked to capacity and had a successful year; Duncan Watson (Electrical Engineers) Limited had obtained important contracts and James Kilpatrick & Son, Limited, had achieved a record turnover. Metropolitan Construction Co. Limited, had been fully occupied.

AUTHORISED CAPITAL

The chairman's statement continued: It is the Board's intention to propose a resolution at the Annual General Meeting increasing the Authorised Capital from £2,500,000 to £4,000,000 by the creation of 1,500,000 additional Ordinary Shares of £1 each. It is not the present intention of the Directors to issue the whole of the proposed new Ordinary Shares in the first instance.

FUTURE PROSPECTS: In the United Kingdom the Group companies have been fortunate in maintaining a fair share of business, particularly in the building and allied industries, and subject to conditions remaining comparatively stable, the year 1962 should show not less favourable returns than 1961. In civil engineering construction, however, competition remains very keen, making profit margins very small. On the electrical side we continue to obtain a reasonable amount of work, and we look forward to maintaining, and I hope improving, our position in this section.

Overseas, short of being a Mohammed, it is difficult to prophesy what the future has in store, particularly in the Middle-East, and East Africa where lack of political security is the greatest deterrent to long-term investment, so essential to expansion of our interests in electric power. We are equipped with the necessary knowledge and resources to deal with most problems and we feel confident in being able to hold our own where the situation is truly competitive.

THE TELEGRAPH CONDENSER COMPANY

REDUCED HOME DEMAND LARGELY OFFSET BY RECORD EXPORT BUSINESS

CONTINUING EXPANSION OF ACTIVITIES

MR W. C. HANDLEY VIEWS FUTURE WITH CONFIDENCE

The twenty-ninth annual general meeting of The Telegraph Condenser Company Limited was held on May 2nd at the offices of the Company, Wales Farm Road, North Acton, London, W3, **Mr W. C. Handley, BSc(Tech), MIEE** (the chairman), presiding.

The following is his circulated statement:

It is with profound regret that I have to record the death of Mr T. H. Martin Harvey on July 9, 1961. Mr Martin Harvey had been a Director of the Company since 1948, and Deputy Chairman from 1950 until his death. He had enjoyed a long and distinguished career in the electrical industry, and his colleagues will remember him both for his valuable service to the Company and for his wise counsel over many years.

ACCOUNTS

The Group trading profit for the year ended December 31, 1961, amounted to £674,560, which compares with £701,737 for the previous year, and the net profit, subject to taxation and appropriations, is some £25,000 lower.

After taxation and adjustments plus the balance of profit brought forward from previous years, there remains a balance of £472,448, against £477,048, to be appropriated.

An interim dividend of 5 per cent less income tax, has already been paid. It is proposed to place £130,000 to General Reserve to pay a final dividend of 12½ per cent, plus a cash bonus of 5 per cent, on the issued capital, and to carry forward £210,665 on Profit and Loss Account to 1962.

COMMENTS ON 1961 TRADING CONDITIONS

As forecast in my last statement to Shareholders, trading conditions during 1961 were rather less favourable than those pertaining to the previous year. Demand for our products originating from the UK Television and domestic appliance industries was below the Company's productive capacity, particularly during the first six months of the year, and there is no sign at the moment of a return to 1959 levels.

The current recession has not deterred your Board from proceeding with expansion both in manufacturing facilities and product range. The extension to our Scottish factory at Bathgate is nearing completion and, during the year, we purchased a factory at North Acton, adjoining our headquarters, which will give us valuable additional manufacturing space in an area where expansion would otherwise have been impossible.

Our new products have been well received by manufacturers and substantial orders may be anticipated during the current year, particularly if the UK Market improves.

Turning now to our overseas trading during 1961, I am pleased to be able to report that incoming orders and despatches broke all previous records by a substantial margin and went a long way towards offsetting the reduction in home demands. The appointment of new agents in several countries is expected to prove beneficial.

Sales to European countries were particularly good and more than offset some decline in demand from the British Commonwealth, where, generally, conditions have been somewhat difficult throughout the year.

OVERSEAS INTERESTS

Our partnership with Sprague Electric Company, to which I referred in my 1961 Statement, is proving of great mutual benefit, due to regular exchanges of know-how and techniques and to the understanding and trust which has been built up between the parties.

Two major changes took place last year in connection with our Associated Companies. The controlling interest in our Canadian subsidiary was acquired by Sprague Electric Company, and the Company was renamed Sprague-TCC (Canada) Limited. Under the terms of the arrangement, the Canadian Company will have sole distributing rights for Sprague products in Canada plus the benefit of Sprague know-how in manufacture and development. The new Company will remain exclusive agents for the sale of your Company's products in Canada.

The other change was the acquisition by your Company of a majority interest in our Australian associate—United Capacitor Company (Pty.) Limited. This should prove of benefit when the Australian market for our products emerges from the present recession.

PROSPECTS FOR 1962

Since our prosperity is closely linked with that of the entertainment and domestic appliance industry, which is at present in a depressed state, it would appear that we should do well to maintain the current level of output and profit during 1962.

Competition for available business will undoubtedly be keener than ever and thus it will be necessary to make every possible economy in manufacture whilst maintaining the world renowned quality of our products.

Your Board and Executives are keenly alive to the difficulties still to be encountered and surmounted in 1962, not the least of which is uncertainty regarding Government policy which can affect us so directly. We are hopeful of achieving reasonable results if there is no new factor to depress further the overall demand.

PERSONNEL

I should like to take this opportunity of expressing the gratitude of my colleagues and myself to everyone in the organisation for their outstanding efforts in the past year. We have a skilled staff, good workpeople and excellent equipment. I have every confidence in the Company's future.

The report and accounts were adopted.

TAYLOR WOODROW LIMITED

The Twenty-seventh Annual General Meeting of Taylor Woodrow Limited will be held on June 4th in London. The following is an extract from the statement by the Chairman, **Mr Frank Taylor,** which has been circulated with the Report and Accounts for the year ended December 31, 1961:

The trading results of the year ended December 31, 1961, are higher than those of the previous year, which can be considered as not unsatisfactory in view of the continuing intensive competition which your Group has had to face.

ACCOUNTS

The turnover of the Group (not including Associated Companies) for 1961 was £35½ million against £33½ million in the previous year. The Group Trading Profit increased from £1,745,229 in 1960 to £1,972,099 in 1961. The Net Profit of the Group is £537,561, compared with £446,003 in 1960. I again stress that the overall results of a Building and Civil Engineering business where contracts in some instances extend over a number of years should be judged not by the results of a single year, but by those of a number of years.

The Directors recommend a final dividend be paid for the year on the issued Ordinary Share Capital of 7½d. per share (less tax), which is the same as for the previous year.

AT HOME

Building, Civil and Mechanical Engineering—It is a pleasure to report that the value of work carried out during the year in this main field of our business reached a new peak. This growth in turnover is, of course, assisted by our participation, in collaboration with The English Electric Company, Limited and Babcock and Wilcox, Limited, in the atomic power station development programme.

Myton Limited—The past year has been marked by the successful completion of several large projects.

Good progress is being made on our many current contracts in various parts of the country and we have a substantial volume of future work on hand.

House Building—The new houses and bungalows we have introduced this year have proved popular to the house buying public.

Arcon Export and Home—In spite of intense competition and narrow profit margins the value of the exports of Arcon Buildings in 1961 exceeded all previous figures.

OVERSEAS

Australia: Trading conditions in Australia during the past year continued to be very difficult due to credit restrictions.

Canada: Further contracts have been obtained during the year and these are progressing favourably. The prospects for 1962 appear very promising.

West Africa: Our associated companies in West Africa suffered along with other concerns the effects of a lull in development. Towards the end of 1961 the picture brightened considerably and we commenced 1962 with a substantial amount of work on hand.

Your Company will continue to seek out profitable work consistent with the Company and British prestige.

ROCKWARE GLASS LIMITED

IMPROVED TRADING RESULTS

ADVANCES IN GLASSMAKING TECHNIQUES

The Statement by the Chairman, **Mr R. Graham Bailey,** circulated with the Annual Report and Accounts for the year ended December 31, 1961, makes the following points:

During 1961 sales advanced at a greater rate than those returned by the Industry in general and there was a record turnover well ahead of the 1960 figures. The Trading Results show a Group Trading Profit of £644,775 (1960: £530,457). After crediting interest and dividends and charging depreciation the Net Profit for the year before taxation amounted to £482,839 (1960: £373,856; 1959: £355,714). In view of the Government's request for dividend restraint and the need to conserve cash resources for a substantial capital expenditure programme on plant and machinery, the Board recommends the payment of a final dividend of 9 per cent making a total of 14 per cent (1960, 14 per cent).

The improved trading results, achieved in the face of increased competition and costs, were assisted by a 5 per cent advance in selling prices which operated during the latter five months of the year. Efficient use of productive capacity and supporting services also played an important part in the better financial results.

1962 has started quietly for the Company but the Board is confident that the market for glass containers will continue to expand, and that the Rockware group of factories will obtain a fair share of the increased volume. This confidence is partly attributable to the Company's advances in light weighting techniques. Recently it has made two developments of particular significance; firstly, the introduction of the one-trip beer bottle which offers beer to the consumer in its traditional pack with the convenience of "no deposit and no return," and secondly, the Company is marketing the "cheapa lighta pinta"—a lighter weight milk bottle which it is confident will replace the existing design in many dairies.

ROYAL DUTCH PETROLEUM COMPANY

N. M. Rothschild & Sons announce that the General Meeting of Shareholders of Royal Dutch Petroleum Company on May 3, 1962, have decided to declare a total dividend in cash of Fls.5.25 per share in respect of the financial year 1961 to be paid on each of the 81,223,348 ordinary shares outstanding at December 31, 1961. The amount of Fls.5.25 includes the interim dividend of Fls.2.25 which was made payable in October, 1961.

The cash dividend now becoming payable amounts to:
Fls. 150—per bearer certificate for 50 shares.
Fls. 15.—per bearer certificate for 5 shares, and
Fls. 3.—per registered share respectively.

A. ON THE BEARER SHARES.

This final cash dividend will be payable against surrender of Coupon No. 125 on or after May 8, 1962, at the office of N. M. Rothschild & Sons on business days, Saturdays excepted, between the hours of 11 a.m. and 2 p.m.

Payments will be made in sterling at the buying rate of exchange on Amsterdam current at 2 p.m. on the date on which the coupons are so surrendered. In view of the fact that guilder funds are being provided by the company for payment of this dividend the usual foreign exchange commission will be deducted from the sterling proceeds.

In the case of shareholders not resident within the Scheduled Territories the paying agent may, at the request of the Authorised Depositary presenting the coupons, pay the dividend in a different currency. Information in this respect will be supplied by the paying agent upon request.

Coupons must be accompanied by a declaration in triplicate signed by an Authorised Depositary reading "We declare under our responsibility that sufficient evidence has been submitted to us that the securities from which the coupons enumerated below have been detached:

(a) do not belong to residents of the Netherlands;

(b) are provided with red export certificate, issued by the Nederlandsche Bank."

From the gross dividend the Netherlands dividend tax of 15 per cent. is to be deducted, except in the case of coupons presented on behalf of:

(1) Residents in the United Kingdom, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.K." in duplicate;

(2) residents in the U.S.A., provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.S." in duplicate, together with a single affidavit form "Inkomstenbelasting No. 92a, V.S."; however, where form No. I.B. 92 V.S. is signed, in virtue of an authorisation by the Inspector of Taxes at Amsterdam, by the bank presenting the coupons, and the share certificate(s) in question is (are) in the custody of that bank, the production of form No. I.B. 92a V.S. (affidavit) is unnecessary;

(3) residents in Sweden, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 ZWE", duly completed by the Swedish tax authorities;

(4) residents in Finland, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 FIN", duly completed by the Finnish tax authorities;

(5) residents in Denmark, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 DEN", duly completed by the Danish tax authorities, and

(6) residents in France, in which case either a French declaration Model A signed by the shareholder with the certificate on the back duly completed by the appropriate French inspector of taxes or a French declaration Model B, in duplicate, duly completed and signed by an authorised French bank, must be provided.

As regards holders resident in France, attention is drawn to the fact that the regulations giving effect to the France-Netherlands tax convention provide that unless Model A or Model B declaration referred to above is lodged when dividends are collected, dividend tax will be deducted and there will be no possibility whatever of reclaiming this tax.

In cases (2), (3), (4), (5) and (6) above the usual affidavit certifying non-residence in the United Kingdom will also be required if payment is to be made without deduction of United Kingdom income tax.

Coupons must be left for an appropriate period for examination and must be handed in personally. Coupons cannot be paid through the post.

Coupons must be listed in triplicate on special forms, embodying the declaration quoted above, which can be obtained on application.

B. ON THE REGISTERED SHARES.

As to the shares registered in the United Kingdom section of the Amsterdam register, the following arrangements have been made for the payment of the final cash dividend amounting to Fls. 3.- per registered share (nominal value Fls. 20).

May 3, 1962, is the date for the fixing of the sterling amount of the dividend on the basis of the sterling-guilder rate of exchange current in Amsterdam on that date.

May 11, 1962, will be the record date. Shareholders registered at the close of business on that date will be entitled to receive the dividend.

On or before June 6, 1962, dividend warrants will be posted by the transfer agent, Nederlandsche Handel-Maatschappij N.V., Amsterdam, to shareholders registered in their books on the record date.

A further announcement will be made as soon as possible giving the rate of exchange, the amount of the dividend in sterling per share, and the amount of the 15 per cent. Netherlands dividend tax in sterling per share.

New Court, St. Swithin's Lane, London, E.C.4.
May 4, 1962.

SELANGOR RIVER RUBBER ESTATES

The thirtieth annual general meeting of Selangor River Rubber Estates, Limited was held on May 9th in London, **Mr G. D. Wreford-Brown, OBE** (the chairman), presiding. The following is an extract from his circulated statement:

I present the report for the thirtieth financial year of the Company which continues to show progress. Despite the lower net price realised for our crop it is gratifying for the Parent Company to be able to show a very slight increase in profits. Group profits, however, were down by some £5,000, but, with revenue from our chief source of income, sales of rubber, over £50,000 lower, the final result, in the maintenance of our total distribution for the year at 30 per cent, less tax, and the transfer of £25,000 to reserve, I am sure, will be received with satisfaction.

Our Group crop was almost the same as for the previous year, but, with a wages agreement geared to the price of rubber, our cost of producing the crop was down by £15,000.

The Balance Sheet shows improved strength in our liquid position with Group net current assets at £114,482.

I feel the outlook for natural rubber is satisfactory although one must not look for high prices as in the past. Labour costs will rise under the new wages agreement but against that good estates are obtaining increasingly high yields per acre and it is hoped that your Company's yields will be no exception. We must, however, expect some decrease in profits with rubber at its present price.

The report was adopted.

HENEKEYS LIMITED

●

HENEKEYS LIMITED announce their intention of making a rights issue on the basis of 1 new Ordinary Stock Unit of 5/- for every 4 'A' Ordinary and/or Ordinary 5/- Stock Units held on the 29th May, 1962. The issue price will be 18/- per stock unit and it is hoped to circulate full details on the 18th May. Subject to the necessary Resolutions being passed at an Extraordinary General Meeting proposed to be convened for the 4th June, 1962, Provisional Allotment Letters will be posted on the same day.

METAL CLOSURES GROUP LIMITED

EXPORTS SHOW CONTINUED EXPANSION

The twenty-sixth annual general meeting of Metal Closures Group Limited will be held on May 30th in London.

The following is an extract from the circulated statement of the chairman, **Mr K. D. Erskine:**

In common with many other companies we experienced in 1961 some recession in profits compared with the high levels of 1960. Nevertheless it was still a successful year by any previous standards.

In 1961 the Group earned a profit of £913,891 before deduction of minority interests and before taxation, compared with £1,121,177 for the previous year. Your directors recommend a final dividend of 6½ per cent on the Ordinary Share Capital making a total distribution of 11¼ per cent which is the same as for the previous year. The amount retained in the business out of the profits for the year is £226,437.

A year ago I said that demand for our products continued good but that competition was increasing and that it was becoming less easy each year to find further ways to combat rising costs. In the event the poor weather last summer and the "Little Budget" in July led to a significant falling-off in the demand for the Group's products in the second half of the year. As a result sales in the home market reached only about the same level as in 1960.

Our export business continued to expand in 1961. The sales value of our direct exports reached nearly three-quarters of a million pounds on which we obtained a satisfactory margin of profit. The income from licensees manufacturing some of our products under "know-how" agreements in many countries throughout the world also reached a new high level and made an important contribution to our results. We believe that both these forms of export income offer scope for further expansion.

Your Board have considered that the right policy of expansion to adopt at the present time should in the main be in products naturally complementary to those we already produce and the consolidation and extension of our overseas business. Our overseas interests were extended in several important territories.

Last year I said that we had reached the stage when we must move on from co-ordination between the different companies in the Group, following the merger between Metal Closures Limited and John Dale Limited, to integration. Substantial progress has been made in this direction. As the new organisation takes effect we shall begin to reap the fuller benefits of the merger.

It would be wrong for me to hold out high hopes for advance during 1962 but the modernisation of operating plants should presage the continued growth of your Company in future years.

Competition is growing stronger and profit margins narrower. Nevertheless, our efficient manufacturing units should enable us to maintain a leading place in the packaging industry which is destined for further expansion.

The Company has occasionally had periods of pause after advance; this is perhaps all to the good. Nevertheless, over the years, we have always surged forward and we believe that this basic pattern will continue. We realise that we are living in a sterner economic world. Our policy is to make the utmost economies possible without damaging the business.

CAPITAL FINANCE COMPANY LIMITED

A YEAR OF EXPANSION

MR J. C. H. DUNLOP ON CAPITAL PLAN FOR TAX RELIEF

The eleventh annual general meeting of Capital Finance Company Limited will be held on June 7th in Edinburgh.

The following is the statement by the chairman, **Mr J. C. H. Dunlop, CA,** which has been circulated with the report and accounts:

The year under review has been a difficult one in the Hire Purchase industry. A comparison of this year's profit of £109,430 with that of last year—£50,994—gives the impression that we have escaped all the difficulties. Such a comparison would not be correct for, as you will see in one of the notes to the Consolidated Profit & Loss Account, we have during the year changed our method of computing charges from a straight line basis to a method which as nearly as possible takes account of profits as and when they are earned. This has resulted in our bringing into account nearly £48,000 of profit which might have been regarded as having been earned in previous years. This year's profits have been restricted primarily by our having had to pay high rates of interest on money borrowed, due to the high Bank Rate ruling during the greater part of the year; also your Company has not entirely escaped the cold wind of bad debts that has afflicted the industry so severely in recent years. Despite this, there has in fact been a real increase in our profits even after making a generous allowance for bad debts before striking a final figure. While we feel that we should have been justified in increasing the dividend on our Ordinary Capital to 15 per cent your Board have decided to recommend that it should be held at the rate of 10 per cent in view of the Chancellor's request for restraint.

PROGRAMME OF ACTIVE EXPANSION

The satisfactory result is largely due to the programme of active expansion on which we embarked shortly after the close of our last accounting year. The Rights Issue of £150,000 to which I referred in my last statement brought new money into our hands in May; and you will remember that—so urgent were the demands for our services—in June your Directors decided that a further Rights Issue of a similar amount would be advisable. However in view of the request from the authorities which followed the "little budget" of July this Rights Issue has not in fact been made.

We have adjusted ourselves to this stringent position in various ways. It has been our policy up to the present to balance our business in more or less equal proportions in three different types of hire purchase activity—small unit business, block discounting transactions and motor cars. The most urgent demand for our services during the past year has come from the motor trade, and we took advantage of an opportunity profitably to close one large block discounting account in order to liberate more funds for the motor business: we have followed this by reducing block discounting advances in other quarters and propose to pursue this policy further during the next two years—all with the object of putting ourselves in a position to increase our motor business.

NEW SUBSIDIARY

The expansion of activity in England requires some explanation. In February 1961 we were asked by the Industrial Bankers Association to assist one of its member companies which had got into financial difficulties—Hillvic Finance Co. Ltd. of Bournemouth. We took over this company subject to a number of guarantees, and reorganised the capital. Later in the year it was decided to establish a new motor financing business in the prosperous Midland area and Northampton was carefully chosen for the head office in view of its excellent communications and central position. The registered office was moved from Bournemouth to Northampton and the name of the Company was changed to that of Capital Finance (Southern) Ltd.

Through this subsidiary we have developed branches at Banbury, Bedford, Birmingham and Isleworth and I am pleased to be able to tell you that most satisfactory contracts have come from all these branches during the latter part of the current year. It would be true to say, however, that it will be some time before this expansion of activity will favourably affect our accounts. Our branches at London, Manchester and Carlisle are now well established.

The special features of our motor business in Glasgow also deserve some comment. From our earliest years in Glasgow we have always had an interest in the motor trade in that city as true traders and not merely as hire purchase financiers. In view of our excellent experience of hire purchase business emanating from such a source, this year we decided to acquire two other trading companies in Glasgow. Already it would appear that this policy is paying off well.

COMMISSION HELD AT FIXED RATE

During the year we resigned from the Industrial Bankers Association. We also withdrew from the Finance Houses Association owing to a difference of opinion over details of the Code which we considered to be restrictive. Not long after our resignation from the latter association the Code was altered as regards Dealer Commission, the rate payable to dealers being reduced from 15 per cent to 10 per cent. In the course of the last two months there have been further fluctuations but throughout the year we have held our commission at a fixed rate because the motor dealer prefers to know where he stands and can hope to stand permanently in what to him is clearly a matter of importance; we believe that a consistent policy on this point will earn us goodwill with our traders.

THE "CAPITAL PLAN"

I mentioned last year that your Company had introduced the "Capital Plan" by which private individuals can acquire motor cars and other substantial durable consumer goods and obtain Income Tax and Surtax relief on the charges involved. I said at the time that it was my

belief that this form of instalment buying would become increasingly popular; it is pleasant now to record that our expectations are being slowly but surely realised, that the business has been increasing throughout the year, and that its quality is excellent. When it is pointed out that the net rate to a hirer who pays income tax at the standard rate is only 5.6 per cent compared with a rate of 8 per cent which is what would be paid on a conventional hire purchase transaction, and that this can mean a saving of £53 on an advance of £750 over a three year period, it will be readily appreciated that through the "Capital Plan" your Company is offering a service which it can reasonably expect will become increasingly popular.

It is customary at this point to express thanks to all the staff who have done so much during the year but I want to go further and say that great progress has been made in recruiting personnel of ability and experience and we have enlarged and strengthened an organisation in which your Directors have great confidence for the future.

NEW BROKEN HILL CONSOLIDATED

MR A. M. BAER'S REVIEW

The twenty-sixth Annual General Meeting of New Broken Hill Consolidated Limited will be held on June 7th at 6, St James's Square, London, S.W.1.

The following are extracts from the statement by **Mr A. M. Baer,** the Chairman, which has been circulated with the Report and Accounts:

In 1961 the output of ore was greater than in 1960, but was regulated to extract ore of an even lower average lead grade than for that year, and higher average zinc grade than would normally be extracted. The result was slightly to reduce the average cost per ton of ore extracted, to keep lead output in line with the reduced level of realisations announced at the meetings of the International Lead and Zinc Study group and to increase production of zinc concentrate. The entire production of both lead and zinc concentrates was realised.

The average London Metal Exchange prices during 1961 were £64 4s. 3d. for lead, compared with £72 2s. 11d. for 1960, and £77 14s. 7d. for zinc, compared with £89 5s. 11d. for 1960.

The result for the year was a trading balance of £1,042,839, compared with £2,075,534 for 1960, the reduction of £1,032,695 being mainly due to the substantially lower metal prices.

Depreciation amounted to £235,765 compared with £301,450 for the previous year and, after deducting other charges and adding miscellaneous income, the profit before taxation amounted to £835,012 compared with £1,806,472 for 1960.

The provision for Australian and United Kingdom taxation on the profits for the year amounts to £264,000 compared with £669,087 for 1960.

The result is a net profit available for appropriation of £571,012 compared with £1,137,385.

A transfer of £160,000 has been made to mine amortisation reserve compared with £395,000 for 1960.

The directors recommend that a final dividend be paid at the rate of 1s. 0d. per share, free of tax, compared with 2s. 0d. per share, free of tax.

This gives a total free of tax dividend of 1s. 6d. per share compared with 3s. 0d. per share.

Production: As a result of the voluntary restrictions on the output of lead which operated throughout the year, production was again well below the capacity of the mine.

Realisations: In 1961 54,959 tons of lead, 1,291,176 ounces of silver and 154,945 tons of zinc concentrate were realised, compared with 55,498 tons, 1,462,552 ounces and 157,149 tons respectively in 1960.

Long-term Concentrates Agreements: Under the sale agreements with Sulphide Corporation the Company supplied 22,561 tons of lead concentrates and 12,947 tons of zinc concentrate for the new smelting plant.

Ore Reserves: The ore reserves fully outlined and developed ready for stoping or in the process of being stoped as at December 31, 1961, were estimated at 4,800,000 tons containing 11 per cent lead, 2.8 ounces silver and 12.8 per cent zinc, compared with 4,400,000 tons containing 10.7 per cent lead, 2.7 ounces silver and 12.9 per cent zinc as at December 31, 1960.

At present metal prices portions of the lower-grade sections of the reserves could not be extracted profitably.

Development and Diamond Drilling: During 1961, development and diamond drilling were mainly concentrated on the detailed testing of the siliceous zinc lode between Nos. 12 and 14 levels from the northern lease boundary to section 84 (approximately 2,500 feet south) and on delineating this orebody southward by diamond drilling to section 100 (approximately 3,500 feet from the northern lease boundary). The exploratory drive south on No. 16 level advanced 519 feet in medium- to high-grade siliceous zinc lode ore. At section 100, a west crosscut of 395 feet was completed to provide sites for easterly fan drilling of the zinc lodes on this section. Over the whole strike length of 3,500 feet the siliceous zinc lode is well developed showing low-grade lead and medium- to high-grade zinc ore mineralisation.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

Mr F. Seebohm reports on progress

Total Funds now £116,000,000

Group New Business exceeds £71,000,000

The One Hundred and Twenty-ninth Annual General Meeting of the Friends' Provident and Century Life Office was held on May 9th in Carpenters Hall, 1 Throgmorton Avenue, London, EC2.

Mr F. Seebohm, the Chairman, presided.

In the course of his Statement the Chairman said:

The Report and Accounts show a fine record of progress and established strength in our Life Fund, and over the past three years we have seen records in the Group for new life business and for premium income, as follows:

	NEW Life Sums Assured	Life and Annuity Premium Income
1959	£45.2m.	£12.3m.
1960	£53.9m.	£13.7m.
1961	£71.7m.	£15.3m.

The Actuary's review of the valuation of the Life Fund enabled him to recommend to the Directors that the Interim Bonus on our with-profit policies should be increased. The rate of interim bonus is now 55s. per cent compound which is the highest level yet declared in the history of the Office. I am sure that this will give great pleasure to those members who hold with-profit policies, and with the future prospect so fair there will no doubt be many more to join their number.

The rate of interest earned on our funds shows a further increase from £6 7s. 4d. per cent to £6 9s. 3d. per cent and a further £200,000 is transferred to Inner Reserve in accordance with our policy of making regular transfers of this nature. Our Group funds have reached a total of £116 million.

You have before you the accounts of our main Subsidiary, The Century, and here the picture of growing profits is marred by the trading losses in the USA and Canada.

In the Home Fire Account a record profit was earned. In the Home Accident department our experience was slightly better, but even with a profit in the Motor section we were not able to avoid a loss.

The Fire and Accident accounts in our overseas branches and agencies, other than in the dollar countries, continued to expand, bringing satisfactory profits in the Fire department, but in the Accident department we again incurred losses.

The Marine Department closed their account for 1959 which was an exceptionally profitable year. The Marine Fund now represents 154.6 per cent of the Premium Income.

In The Century we have two long term funds in our Sinking Fund account and Continuous Disability account. In the latter we write our non-cancellable sickness and accident policy in which The Century has always led the field since we devised the scheme nearly 80 years ago. We now provide this splendid protection against prolonged or repeated incapacity under a group policy on terms which must be attractive to employer and employee alike.

The net dividend declared by The Century is increased from £300,000 to £325,000 and a further £75,000 is transferred to Revenue Reserve bringing this reserve up to £400,000.

I feel sure that this account of our year's trading will give members satisfaction when they consider the strength and continuing progress of the Friends' Provident which bring full advantage to all members of a mutual fund. Throughout the whole Group we are expanding our business steadily and soundly.

CANADIAN PACIFIC RAILWAY COMPANY

(Incorporated in Canada with limited liability)

The eighty-first annual general meeting of the Company was held on May 2nd in Montreal. The following are extracts from the address by **Mr N. R. Crump,** Chairman and President:

The Annual Report of your Directors for the year 1961 records substantial achievements by your Company in the face of formidable difficulties. The various services of your widespread transportation and communications system were improved and extended. Sales promotion and marketing activities were intensified. At the same time, operating performance attained new, higher levels as a result of steady efforts to improve efficiency.

Your Company anticipates on the basis of present and estimated traffic trends, that the total volume of business to be handled by your diversified freight and passenger services in 1962 will show an improvement over the preceding year. This favourable condition reflects the increasing buoyancy of the economy, expansion and betterment of Canadian Pacific routes and services, and the increasing effectiveness of your Company's enlarged sales programme.

Railway traffic in the first quarter of the current year has shown some improvement, in contrast to the corresponding period of 1961 when the trend of business was downward. Railway revenues, however, show a small decrease when compared to the first quarter of 1961, restated to include the appropriate apportionment of the interim payments received from the Government of Canada related to the recommendations of the MacPherson Royal Commission. Railway expenses reflect the additional costs of moving the larger volume of traffic, as well as higher wage rates in effect and consequently net railway earnings for the period are $2.7 million lower.

Prospects for your ocean steamship operations improved during the early part of 1962. The winter cruises enjoyed one of the most satisfactory seasons of the past decade. The cruising programme from British ports inaugurated last winter will be expanded for the 1962-1963 season, contributing to better utilisation of your "White Empress" fleet. Current bookings show an improved position over last year.

On the St. Lawrence route to Europe, barring adverse developments, prospects are promising for the summer season and your Company should maintain its position as the leading passenger carrier in this service. Forecasts recently released indicate greater tonnage will be using the St. Lawrence Seaway this season. The freighters owned and chartered by your Company for operation on this route should participate in this projected increase.

The prospects for your Air Lines this year are somewhat better. 1961 was an unusually adverse year for the industry generally and, along with other carriers, your Air Lines were burdened with the twin problems of heavy jet aircraft development cost and insufficient traffic volume to utilise the increased capacity of the new equipment. Your Air Lines report a 17 per cent increase in system traffic volume for the first quarter. Traffic on the transcontinental route increased to an even greater extent. Super DC-8 aircraft operated by your Company have made non-stop service possible on such long routes as between Vancouver and Tokyo, Western Canada-Europe and Montreal-Rome.

Canadian Pacific looks to the future with confidence. We believe that hard work and flexibility on the part of labour and management will improve Canada's productivity and ability to compete.

SNIA VISCOSA

SOCIETA NAZIONALE INDUSTRIA APPLICAZIONI VISCOSA

CAPITAL LIRE 40,031,250,000

MANUFACTURERS OF MAN-MADE AND SYNTHETIC FIBRES

MILAN, ITALY

The Ordinary and Extraordinary General Meeting of "Snia Viscosa" was held on April 7th at Milan, under the Chairmanship of **Mr Franco Marinotti.**

The Report was read at the Ordinary Meeting at which information was given concerning the position occupied by artificial and synthetic textile fibres in the world as a whole, and in Italy specifically, with particular reference to the position of the Snia Viscosa Group.

PRODUCTION

In 1961, the Group produced 120.5 million kilogrammes of fibre, compared with 109.5 million kg. in 1960, i.e. an increase of 10.1 per cent. The quantity of rayon produced in 1961 was approximately the same as that produced in 1960, but there was an increase of 14.7 per cent in the production of staple fibres.

There was a marked increase in the production of synthetic fibres, which were up by 19.5 per cent, this being mostly due to the production of "*Lilion.*" Even more conspicuous was the increase in the output of "*Marinova*" proteic fibres, which were 31.2 per cent higher. Very large quantities of all these fibres have been exported.

DEVELOPMENTS

Reviewing the developments, both in quantity and quality of the individual fibres, it was pointed out that a special "*Koplon*" viscous fibre has been marketed, this fibre having strength and dimensional stability very similar to that of cotton. Concerning synthetic fibres, we were informed that a much higher level of production is expected from the "*Lilion*" plant during the first half of this year, notwithstanding the fact that present production is 1.2 million kilogrammes per month. A plant for the manufacture of "*Lilion*" cord for pneumatic tyres, has already been started up. Production of the acrylic fibre "*Velicren*" has also commenced. The raw material used in the production of "*Lilion*" is also used for making plastic materials under the name of "*Aniamide.*" Production of goat's milk fibre has been stepped up, the process used having been invented and patented by the Experimental Research Station at Cesano Maderno. Present production is 10 million kilogrammes per annum, but this will be doubled during the next few months. The licence for the manufacture of goat's milk fibre by this new process, has already been granted to the U.S.A., U.K. and Japan. Negotiations are in process for the issue of licences to other countries.

FOREIGN TRADING

The equipment of the Company's factories and those of the Group was increased and modernised in 1961. There was a remarkable increase in S.A.I.C.I.'s production of cellulose, which is now 100 million kilogrammes per annum. Good progress has been made with the construction of the new hydroelectric plant at Alto Meduna. New machines have been designed to equip the Group's plant and to meet export requirements. In India, a plant for the production of rayon and staple fibre is nearing completion.

A large quantity of machinery has already been despatched to the Allied Chemical Corporation for use in a plant for the production of polyamide fibres. Machinery has also been supplied to the U.S.S.R. for the production of polyamide fibres of the "*Lilion*" type and also for the extraction of goat's milk fibre. The S.A.I.C.I. have made a contract with the U.S.S.R. for the supply of a plant for the production of cellulose. A contract has been signed with Japan for the supply of a plant for the production of polyamide fibres of the "*Lilion*" type. Negotiations are in progress for the supply of similar plants to other countries.

The activities of the many shareholding companies in the Group, both in Italy and abroad, were then reviewed. These companies all reported satisfactory progress, both from the technical and financial standpoints.

Finally a detailed report was given concerning the balance sheet for the year under review, which closed with a net profit of 5,129 million lire (against 4,343 million lire in 1960) after allocating 7,500 million lire to depreciation (against 6,000 million lire in the previous year). It was therefore possible to propose to the Meeting a dividend allocation of 140 lire per share.

EXTRAORDINARY MEETING

At the Extraordinary Meeting, it was proposed to increase the share capital from 40,031,250,000 lire to 56,043,750,000 lire, i.e., by an amount of 16,012,500 lire, such increase to be made as follows: 8,006,250,000 lire by the issue of paid shares to be offered in option to the shareholders at the nominal price plus Lire 500 (including dividend adjustment and reimbursement of expenses) and Lire 8,006,250,000 by the transfer to capital account of currency revaluation balances, and the consequent issue of a free share to be distributed among the shareholders. All the new shares will be profit-bearing as from January 1, 1962.

During the discussion the Chairman, Mr Marinotti, explained in detail some of the points made in the Report, emphasising that the prospects for the Company in general were favourable both in home and foreign markets.

He also stressed the importance of the results achieved by the production and export of plant and machinery for use in highly specialised manufactures, this again being a field in which Italian technicians have taken the lead. Lastly, he explained the work which Snia were doing to give consumer service by supplying specialists to assist the manufacturers. Without neglecting quality, indeed improving it, Snia, by increasing total production, are able to withstand the repercussions caused by any rise in prices.

The Agenda was then unanimously approved and the Chairman, Board of Management and the entire staff were congratulated upon their work, which had enabled the Company to advance both in quantity of production and in efficiency. The Balance Sheet and Profit and Loss Account were also approved, likewise the proposed dividend. The Meeting then approved the proposed increase in the share capital at the rate of 2 new shares against payment, for every 10 shares, at the nominal value plus premium already mentioned, two new free shares being given for every 10 shares held.

RAGUSA LIMITED

The twenty-seventh Annual General Meeting of the company was held in London on May 4th.

The following are extracts from the Statement by **Mr John Hadfield,** the Chairman:

The net assets on the Consolidated Balance Sheet amount to £680,473 against £360,507 issued Ordinary Shares. The Directors are of the opinion that the net value at which investments are shown in the Balance Sheet is reasonable in relation to the current value of the interests concerned.

Welwyn Metal Products Limited: The Company, in common with others in the steel equipment industry, experienced difficult trading conditions during the year. The results, which approximate to those of 1960, must be considered very satisfactory.

As regards current trading, the outlook is encouraging. The first quarter has seen a substantial increase in turnover compared with the corresponding period last year and profit margins are being maintained.

Amasco: Although audited Accounts for the year 1961 are not yet available, the preliminary figures indicate that a profit was made but no dividend will be paid. Amasco is now soundly founded on a profit-earning basis, and I look for a continuing increase in the profits.

Prospects: The profit earned by your Company's assets during the period under review was low and was no reflection of those very real values which lie in the assets. I expect an improvement in the earnings during the year, particularly at Welwyn, and, I hope, on the basis of increased diversification.

The report was adopted and a dividend of 6 per cent approved.

AUSTIN REED

EXTRACTS FROM MR DOUGLAS REED'S REVIEW

TRADING RESULT

The trading result of the group for the financial year which ended in February last showed that our trading profit before tax was £278,504 against a figure of £293,972 for last year.

DIVIDEND RECOMMENDATION

Your directors are, however, pleased to recommend a final dividend of 11½ per cent making 16½ per cent for the year to all holders of ordinary shares, which is the same as for last year, but with an added benefit that 1½ per cent of this total should be in the form of a capital distribution which would be completely free of tax.

In my 1959 report I hinted that the directors at some future date might consider making a distribution to shareholders out of the capital surplus which had been earned on leaseback transactions and it is hoped that the shareholders will be able to participate in this benefit in future years.

During the year our freehold properties were professionally revalued and this has shown a surplus of some £516,750 which has been put to the Capital Reserve Account.

BONUS ISSUE

Later in the year your directors will call an Extraordinary General Meeting when they intend to propose a bonus issue of A Ordinary shares in the proportion of four to five to the holders of all classes of ordinary shares.

EXPANSION

During the last year your directors have been quite active in this direction. We acquired on a long lease, premises at Brompton Road, Knightsbridge, where we hope to open towards the end of the summer of this year. Your directors have felt for a long time that your company should be represented in this very prosperous part of London where new office buildings are being erected every day, and now that the new flyover bridges have opened up the road from the West, many of our customers who have found it increasingly difficult to enter the West End owing to the very bad parking facilities, will stop short in Knightsbridge and Kensington.

In Birmingham, where we have been represented for nearly fifty years and where in a few years' time we expect to be demolished and rehoused on our present site if rents permit, we took the opportunity of taking a site in a new shopping area just outside the centre of the city known as Five Ways. This is being redeveloped into a very high-class district, where again we feel many of our Birmingham customers will halt and shop rather than enter the very congested centre. Those of you who have visited Birmingham in recent months will have seen the tremendous amount of rebuilding that is going on in that city, which of course is the second largest in the United Kingdom.

We have also taken a lease on premises in the City at St Paul's Churchyard. This is a part of the City where we have never been before, but apart from this it is going to assist us very considerably in helping to retain custom we shall expect to lose when we have to close down our present shop in Cheapside for rebuilding.

Finally they have completed their plans to expand the Brighton and Bournemouth branches and they have several other projects still under review. So that with the very valuable additions mentioned above we look forward to increased trade in the future.

APPOINTMENTS

UNIVERSITY OF BELFAST

The Senate of The Queen's University of Belfast invites applications for an Assistant Lectureship in Economics from October 1st, 1962. The salary will be on the scale £900 x £50 to £950 plus F.S.S.U. Initial placing on the scale will depend on experience and qualifications. Special consideration will be given to applicants with qualifications in mathematical economics or statistics, but other applications will also be considered. Applications should be received by May 21, 1962. Further particulars may be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary to the University.

COLLEGE OF ADVANCED TECHNOLOGY, BIRMINGHAM

Applications are invited for a

RESEARCH FELLOW

in the Industrial Administration Research Unit

The Unit is conducting sociological and psychological studies of industry and consists of one Senior Research Fellow, one Research Fellow and two Research Assistants working in this field. The D.S.I.R. is sponsoring a series of investigations within which the person appointed will be able to develop his own studies.

The Fellowship is open to Social Scientists with experience of industry or industrial research. Salary scale within the range £1,000-£1,350 p.a., depending on qualifications and experience.

Further information may be obtained from Dr. I. Lupton, Head of the Department of Industrial Administration, College of Advanced Technology, Costa Green, Birmingham 4, to whom final applications should be sent.

THE UNIVERSITY OF LEEDS

POSTS IN PURE MATHEMATICS AND IN APPLIED MATHEMATICS

Applications are invited for appointment as Lecturer or Assistant Lecturer in Pure Mathematics (one post) and Lecturer or Assistant Lecturer in Applied Mathematics (one post) at salaries on the scale £1,050 x £50 —£1,400 x £75—£1,850 (efficiency bar at £1,550) a year for a Lecturer, or within the range £800-£950 a year for an Assistant Lecturer, according to age, qualifications and experience. Applications (three copies), stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained) not later than May 19, 1962.

UNIVERSITY OF EDINBURGH

DEPARTMENT OF GEOGRAPHY, LECTURESHIP

Applications are invited for the post of Lecturer in the Physical Geography of Intertropical Lands and in Survey and Cartography in the above Department. Preference will be given to candidates with African field experience who are interested in the geography of soils and the conservation of resources. Salary Scale £1,150 x £50 to £1,350; Bar: £1,400 x £50 to £1,900 x £75 to £1,950 per annum, with placement according to qualifications and experience, and with superannuation benefit and family allowance where applicable.

The successful candidate will be expected to take up duty on October 1, 1962.

Further particulars may be obtained from the undersigned, with whom applications (six copies), giving the names of two referees, should be lodged not later than June 5, 1962.

CHARLES H. STEWART,
Secretary to the University.

May, 1962.

GOVERNMENT OF SENEGAL

A vacancy exists for an Economist to assist in research projects in the Dakar office of the Institute of Applied Economics. Candidates must possess, or obtain this summer, a good relevant degree; and must have a first class knowledge of French. It will be an advantage to have studied the economic problems of underdeveloped countries.

Length of contract by arrangement: one year in the first instance would be acceptable. Salary, for a young recent graduate without research or practical experience, about £110 per month; otherwise, to be assessed in accordance with relevant experience, subject to an initial maximum of about £220 per month. Free accommodation; free annual return passages; income tax at local rates.

Further particulars and application forms from Director of Recruitment, Department of Technical Cooperation, Sanctuary Buildings, Great Smith Street, London, S.W.1, quoting reference RC 323/130/01.

For further appointments and other classified advertisements see pages 627 and 628

THE UNIVERSITY OF LIVERPOOL

ASSISTANT SECRETARY, APPOINTMENTS BOARD

Applications are invited for a post of Assistant Secretary to the Appointments Board from men graduates, preferably in Engineering, with some years' experience in industry. The initial salary will be within the range £1,200 to £1,650 per annum with F.S.S.U. and family allowance benefits.

Further particulars may be obtained from the Registrar, The University, Liverpool, 3, to whom application, together with the names of three referees, should be submitted not later than May 26, 1962. Quoting ref CV/76/E.

BBC REQUIRES PROGRAMME PLANNING ASSISTANT, TELEVISION. Duties involve assistance with logistical planning over whole range of BBC Television programmes. Essential qualifications: an eye for detail, ability to negotiate and to work under pressure. Based Television Centre, W.12. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a. Requests for application forms and further particulars, enclosing addressed envelope and quoting reference 62/64/177 Ec., should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

STATISTICAL ECONOMIST required by The Economist Intelligence Unit (Economic Council Development and Industry) for their Research Division. This position involves econometric work as well as the formulation of policies covering a wide economic field. The successful candidate is likely to be an honours graduate in his late twenties. Application should be made to the Head of the Administration Division, The Economist Intelligence Unit (Economic Council Development and Industry), 1 Castle Street, Edinburgh, 2.

THE ECONOMIST INTELLIGENCE UNIT LTD. is again expanding its Research Divisions. Candidates for further posts should have a good degree, preferably, but not necessarily, in economics and/or statistics; they should also have experience of consumer market research and of research into marketing problems. Age preferably between 25 and 35, salaries according to experience and qualifications.—Please send full particulars of qualifications, experience and present salary to "Research," The Economist Intelligence Unit Limited 5 Bury Street, S.W.1.

COMPANY AFFAIRS

The London stock market has presented a cheerless appearance this week with the threat of a dock strike and the sharp fall in Wall Street major factors in restraining buyers. But selling also has increased and The Economist *indicator fell 5.7 points to 356.7. Losses have been widespread and there has been further profit taking in brewery and property shares; bank shares have fallen on the two rights issues and insurance shares have weakened following some disappointing company reports. Interest in the gilt-edged market has centred on the further issue of 5 per cent Treasury 1986-89 but generally business has been quiet.*

Rugby Portland Cement Bids for Eastwoods

THE report and accounts of Rugby Portland Cement have been overshadowed by another event affecting shareholders, namely, RPC's bid for Eastwoods. This has brought in its wake a "leak" enquiry and some controversy about Rugby's "A" shares. Rugby's bid of one 5s. share plus 52s. 6d. in cash values Eastwoods at 117s. 6d. At the beginning of April, Eastwoods were below 100s.; they gained 6s. 10½d. to 116s. 10½d. last Thursday before the bid was announced. On the same day Rugby Portland ordinary fell by 2s. 4½d. and at the request of both chairmen the Stock Exchange is to hold an inquiry into recent dealings in both shares. The market's first reaction to the bid was to mark up RPC's 1s. "A" shares from 123s. 9d. to 150s.; about half of these are held by employees of the company. Holders of £50,000 of "A" capital are entitled to £70,000 plus 20 per cent of any pre-tax profits in excess of £964,000 with a maximum of 12½ per cent of total profits before tax. The gross amount attributable to the "A" shares is therefore currently about £250,000 and this will rise to about £400,000 if the merger goes through.

	1957	1958	1959	1960	1961
	£ mil.	£ mil.	£ mil.	£ mil.	£ mil.
Trading profit	1·4	1·5	1·9	2·2	2·5
Gross profit	1·1	1·2	1·5	1·8	2·0
Net equity earnings	0·7	0·8	1·0	1·1	1·2
Retained cash flow	0·8	0·9	1·4	1·2	1·3
Net fixed assets	7·0	6·9	6·8	7·2	7·3
Net current assets	1·6	2·5	3·9	4·3	5·0
Net liquid assets	0·5	1·1	3·0	3·4	4·1
Net equity assets	5·9	6·4	8·3	9·3	10·3
	%	%	%	%	%
Ord. earnings	65·9	71·7	68·3	79·9	86·7
Ord. dividend	19·7	21·9	21·9	25·0	25·0
Gross profit/net equity assets	18·6	18·8	18·1	19·4	19·4
Net earnings/net equity assets	11·7	12·5	12·0	11·8	11·7

Price (5s. shares): 65s.xr. Earnings yield: 6·7%.
Dividend yield: 1·92%. equal to 14·9 years' earnings.

It is not surprising, therefore, that although the first reaction to the bid by Eastwoods' directors was favourable, they have asked for clarification about the proportion of Eastwoods' profits that would go to "A" shareholders in RPC and are considering whether more explicit safeguards are needed for Eastwoods' employees. The chairman of Rugby Portland, Sir Halford Reddish, replied promptly that the directors had no intention of suggesting any alteration in the rights attached to the "A" shares. Can the two companies and their advisers reach a suitable compromise over this issue? Eastwoods' shareholders must be keen to accept the offer in the absence of any other bidders, but the employees of Eastwoods will no doubt feel disgruntled if they are not invited to participate in RPC's "A" shares.

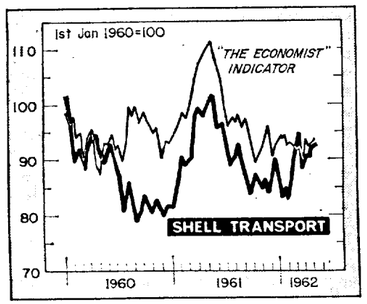
A merger with Eastwoods, which makes cement as well as bricks, would raise RPC's share of the cement market to about 12 per cent. RPC's share of the market has been growing consistently and, in 1961, home deliveries rose by 25 per cent, compared with about 10 per cent for the industry as a whole. For the sixteenth successive year the company added to its profits which exceeded £2 million before tax for the first time. Prospects for the seventeenth year seem bright; deliveries and profits were higher in the first quarter despite bad weather conditions. In 1962 there will be a full year's output from the new kiln at Southam, which began production in November, and a full year's improvement in margins following the price increases last May.

With the completion of the Southam kiln, capital commitments at the end of 1961 were more than halved at £465,000, but Sir Halford says that considerable extensions to capacity both at home and abroad are planned for the next two or three years. With liquid assets of £4 million (apart from investments worth £2¼ million) and a further £4½ million to come from the recent one for four rights issue, the group seems well placed to finance further expansion, although it has to repay £1½ million of unsecured loan stock this year. But now £5¼ million of the surplus will be required to satisfy the cash portion of the bid for Eastwoods. Following the repayment of the loan stock the directors might consider the issue of a prior charge stock, though there is apparently no intention of doing so at the moment.

Ex the rights issue and after the bid, Rugby Portland 5s. shares at 65s. xr still yield just under 2 per cent on the indicated dividend of 25 per cent on the increased capital. The price and yield were the same a year ago, but meanwhile shareholders have had the benefit of a rights issue on favourable terms. As the merger should bring economies in distribution and buying as well as in capital expenditures, it is likely to maintain RPC among the growth stocks of the London market. But will there be a competing bid?

Imperial Chemical Industries

MR PAUL CHAMBERS addressing ICI shareholders at the annual general meeting was bound to cover much of the ground already traversed in the Courtaulds struggle. As competitive conditions are likely to persist while productive capacities remain in excess of demand, ICI's aim, Mr Chambers said, should be "to secure reasonable profits with a growing volume of business at lower prices." To do this it would be essential to cut production costs and to find "new and profitable products"; until recently "the emphasis quite properly was on the increase of production capacity to meet demand with minimum delay" but now it is essential that production should be "based on the cheapest and most modern processes."



Here, research and development are "key activities" and Mr Chambers described some of the improvements in processes that had resulted from ICI's work. These will help to reduce costs and, through licensing agreements, provide "a valuable source of additional cash." He mentioned the pharmaceuticals development at Macclesfield as an example of cost cutting through rationalised production. Costs are being reduced in three other ways: first, by designing plants to secure minimum capital costs and low production costs; secondly, by changes in the company's organisation to meet changing conditions; and thirdly by a lengthy study of all spending in the company and the reasons for it. From such self-analysis Mr Chambers hoped for "substantial reductions in cost without loss of efficiency."

Mr Chambers saw no reason to alter his earlier forecast about prospects this year. He expects trading to be better than in 1961 and more profitable, although "the improvement will be mainly in the second half of the year." This opinion is supported by the evidence of trading so far this year: in the first quarter turnover was "a little above" the first quarter of 1961.

On ICI's shareholding in Courtaulds Mr Chambers had little to add, though he again reiterated his belief in the advantages of integration within the man-made fibres industry. Commercial relations with Courtaulds "remained unimpaired" and some progress is being made towards "establishing more satisfactory relationships in other fields."

Royal Dutch/Shell

OIL shares have been a little more active recently and now at 31s. 1½d. "Shell" offers a gross yield of 6½ per cent to a private investor subject to tax at the standard rate and a yield of 4 per cent to a gross fund getting no tax refund. The shares are not as attractive to tax-free funds as, say British Petroleum and Burmah Oil; but the private investor who does not already have "Shell" in his portfolio may be wondering whether this is the time to remedy the omission. Dreams of growth in the industry have been shattered by the hard facts of a surplus of oil and fierce competition but the prospects for Royal Dutch/Shell now look a little brighter than they did a year or two ago and in this context the comments that the chairman, Mr F. J. Stephens, made at the annual general meeting were reassuring.

Last year was not, as he explained, an easy one for the group but a general improvement in performance, based on a substantial increase in the volume of sales, became marked in the fourth quarter. Over the year as a whole operating income did not rise in line with the volume of sales as prices remained under pressure. But the drive for economy and efficiency within the organisation is now yielding results and the downward trend in unit costs should, Mr Stephens believes, enable the group to take advantage of a further expansion in sales. The decline in selling prices, he adds, appeared to be less steep last year. A further improvement in sales and the continuing control of expenditure pushed profits up again in the first quarter of this year, in which the group's net income of about £48 million was about 14 per cent higher than in the first quarter of 1961. Mr Stephens admits that the prospects for the remainder of the year, are difficult to assess, as much will depend upon whether or not hopes of greater stability in prices are in fact fulfilled and whether the group will fully participate in the expected expansion in the market for oil products. But he is confident of the group's ability to reap the benefits of this growth and to face the challenge of continued competition and he describes future prospects as "encouraging."

Less Growth in Marks and Spencer?

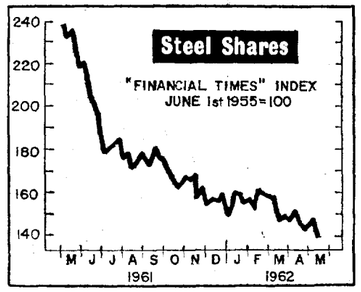
THE past year was difficult for the retail trade and Marks and Spencer enjoyed a more modest rate of growth in the year to March 31, 1962, than in earlier years. The increase in sales of 3¾ per cent compares with 10 and 12½ per cent in the previous two years, most of it again coming in the spring and summer; in the second half of the financial year sales increased by only £1 million. Profits have at least kept pace with the small increase in turnover and the table shows that margins were unimpaired. This is no mean achievement if, as seems likely, much of the rise in sales has been in the expanding food sections where margins are generally smaller than on clothing. Moreover, in the latter part of the trading year the group's margins reflected price cuts made on a wide range of clothing.

	1961 £'000s	1962 £'000s
Sales	166.501	172.826
Trading profit	23.101	24.076
Depreciation	2.606	2.741
Gross profit	20.495	21.335
Tax	10.200	10.800
Net profit	10.295	10.535
Ordinary dividend	6.317	6.949
Ordinary dividend (per cent)	43·2	47·5
Trading profit/sales	13·9	13·9
Gross profit/sales	12·3	12·3
Net profit/sales	6·2	6·1

As expected the dividend has been left unchanged at 47½ per cent on the capital as increased by the one for ten scrip issue; this payment, which represents an effective increase of 4.3 points, absorbs more than the slender increase in net profits and thus the earnings cover is slightly lower at 1½ times. On the bigger dividend the yield on the "A" shares at 95s. 4½d. is 2½ per cent. They have always offered a very low yield but the results have consistently justified this ranking. Do the 1961-62 results represent merely a temporary break in the trend? The steady and continual extension to Marks and Spencer's range of products clearly indicates that the directors are fully alive to the fact that competing chain stores have raised their standards of service to the customer. The advent of the discount store and the entry of C and A into the shirt market are two other factors which must be engaging their attention. Investors who buy the shares at the present level are unlikely to regret their purchase in the long term, but a less buoyant rate of growth than in the past seems in prospect.

Guest, Keen and Nettlefolds

THE first warning that Guest, Keen and Nettlefolds would earn lower profits in 1961 was made by the chairman a year ago. He then said that 1960 saw "an exceptionally high rate of activity" and added that it was not being maintained. In November the interim statement referred to the decline in activity and the continued pressure on margins, and the directors then forecast a fall of between £7 and £8 million in gross profits. In the event the fall has been bigger than this, amounting to £9.2 million. Following the fall in gross profits from £30.6 million to £21.4 million the tax charge was lower but net earnings fell from 54 per cent to 34 per cent so that the maintained dividend of 16 per cent is now covered just over twice. The results did not shock the stock market where the ordinary shares made good the losses recorded ahead of the results. They now stand at 78s. 3d. to yield 4.1 per cent; a year ago the yield was 3.4 per cent.



The fall in GKN's turnover from £251.5 million to £238.1 million reflects the difficult trading conditions encountered by the group last year. The steel companies in the GKN group, which earned £12¾ million or about 30 per cent of GKN's total profits in 1960, earned appreciably less last year. The profits of John Lysaght (Australia) in which GKN has an 80 per cent holding, fell from £A3.3 million to £A1.8 million and its ordinary dividend was cut from 10 to 8 per cent. GKN supplies a wide variety of steel and engineering products at home and overseas and it has spent heavily on capital account in the last few years. In 1961 many sectors of its business must have been working below capacity and clearly profits from the engineering side of its business could improve quite sharply if industrial production expands and if the demand for motor cars continues to rise. GKN must be put among the recovery stocks in the cyclical group of equities.

South Durham Steel and Iron

APART from the short-lived rally that followed the February increase in steel prices, steel shares have been in the doldrums for many months. The only cheer from the interim dividends to be declared in the next few weeks will be if they are all maintained; the passing of the South Durham Steel and Iron interim will almost certainly remain the worst of the announcements. Yet even this can hardly have come as a surprise to shareholders in view of the cut in the 1960-61 total payment from 12 to 10 per cent and the facts revealed by the full report and chairman's statement. South Durham is primarily a producer of plates, rails, tubes and heavy sections and it is this section of the steel industry which has been particularly hit by a fall in demand. The South Durham directors now say in the interim statement that the continued recession in the heavy steel industry has had "grave effects on the level of profits secured during the first six

months of the present financial year;" they do not give any figures for the profits earned but "grave" is a strong word.

The fall in trading profits, both pre-tax and net, will almost certainly have been accentuated by the high gearing of the ordinary capital. This reflects the big loans made to the company by the FCI and Barclays Bank to finance the expansion programme centred on the new plant at Hartlepools. This programme is now completed but the increase in capacity coincided with the recession. The first repayment of the loans falls due next year and in January the directors said they intended to raise £10 million over the next eighteen

months. They will find it difficult to frame such an appeal for new money: the issue of more prior charge capital would simply replace one burden with another and a rights issue is out of the question with the £1 shares standing at only 13s. 3d. Perhaps the worst of the recession in the steel industry is passing but so far this is evident only in the improved output of sheet steel and this does not provide any comfort to shareholders, such as those in South Durham, in the heavier end of the industry.

W. H. Smith

THE trading results of W. H. Smith and Sons for the year to January 28 pleased the stock market; trading profits rose by 20 per cent from £1,753,000 to £2,101,000 and the ordinary dividend was raised, unexpectedly, from 12 to 13 per cent. In part the comparison benefits from the fact that 1960 was a bad year, but the results for 1961 must be judged satisfactory as the group is still in the middle of a reorganisation programme which the chairman has said would not be completed until 1964.

The advance in profits was helped by increased newspaper prices which helped to improve margins which earlier had been eroded by higher distribution costs. The group continued to switch its trade out of older and less profitable sectors of the business, such as lending libraries, into newer and more profitable ones, such as gramophone records. The growth of the number of departments selling records and photographic equipment had an important influence on the rise in profits. But this was part and parcel of a policy designed to attract more customers into the 380-odd shops owned by the group. Such a policy requires substantial capital expenditure, in 1961-62 this absorbed more than £1½ million, mainly in the retail group. Another factor making for the rise in profits was a more economical use of the labour employed by WHS. Major economies in the use of staff were achieved last year, not least because wage increases granted in 1960 provided the right kind of stimulus. Elsewhere within the group the wholesale houses had a successful year, as did Versatile Fittings, the subsidiary which supplies shop fittings to supermarkets; but the Alacra printing subsidiary made a loss and so did the Canadian subsidiary.

The chairman, the Hon. D. J. Smith, makes no explicit forecast about profits in the current year but he seems confident about the future. He says that while the full impact of the programme of development will not be reflected in our results immediately, there are encouraging signs that the business is already showing the benefit of capital expenditure and extensive staff training programme. After "discounting the favourable factors the trend of profits is in the right direction and given a reasonable trading climate," he looks for further improvement. The £1 ordinary shares at 81s. 3d. yield just under 3¼ per cent. This is not another "Boots," whose shares yield less than 2 per cent; but clearly investors believe that the modernisation of the WHS shops will produce higher profits in the future.

Insurance in North America

INSURANCE shares have fallen back this week as a number of chairmen of composite companies have emphasised the difficulties experienced by their companies in the North American fire and accident market. These were most clearly illustrated in the report of **Commercial Union**, whose business in the United States accounts for about 40 per cent of the total. Though underwriting in the rest of the world was profitable and the marine account earned a bigger profit the group's net underwriting loss of £2,104,000 compares with a loss of £218,000 in 1960. Economies from the merger with North British and Mercantile have scarcely begun to appear though the chairman, Mr Renald Brooks believes their effect should become "increasingly evident." A further consoling factor is that interest and capital gains on funds invested in the United States exceeded underwriting losses.

The **Royal** also describes its underwriting experience as disappointing and few would disagree with the chairman, Mr T. H. Naylor, that an underwriting surplus of £2.4 million on the premium income from fire accident and marine business of £199 million is "a very modest margin of profit indeed." But like Mr Brooks, Mr Naylor emphasises that the company's income from its investments in the United States more than offsets any underwriting losses. While the chairman does not appear to expect any early improvement in business in the United States he expects some benefits to emerge from the economies which should result from the merger with the London and Lancashire.

By contrast the third of the big British insurance companies operating in the United States achieved a satisfactory profit there in 1961. Despite "Carla," **General Accident** reported a slight increase on the fire account surplus and the fall in the accident surplus from £1,097,000 to £820,000 was more than accounted for by an increase in overseas taxation. Reflecting the increased demand for pension schemes its new life business rose from £52 million to £82 million and the sharp growth in life business may well have influenced the directors' decision to raise £13 million by a one-for-ten rights issue at 60s. a share. It seems likely that a fair part of the new funds will go into mortgages and property.

This was the main field for new investment by **Eagle Star** last year. The amount invested in mortgages and loans rose from £40 million to £52 million and further sums were invested in property equities. Eagle Star has links with Bernard Sunley and with Webb and Knapp in North America but it is not heavily involved in the fire and accident market in the United States. Even so its underwriting experience was still disappointing with the surplus on the fire account down from £289,000 to £119,000 and that on the accident account from £346,000 to £111,000. Against this however there was a useful increase in investment income although this does not yet reflect the full use of the proceeds of last year's £10 million rights issue. In addition the chairman, Sir Brian Mountain, expects "some of our newest property enterprises to produce substantial revenue in the near future." Eagle Star failed in its bids for London and Manchester and the New Zealand Insurance Company. But the announcement that Great Universal Stores and Sears Holdings are each to take a third interest in the Liverpool Insurance Society, formerly a wholly owned subsidiary of Eagle Star, may add spice to the current low yield.

	Net underwriting Surplus 1960 £'000	1961 £'000	Gross investment Income 1960 £'000	1961 £'000	Dividend per share	Price	Yield per cent

Penguin Books

IN April 1961, the Penguin prospectus forecast gross profits for 1961 of £250,000 including those arising from the sale of "Lady Chatterley's Lover." It also said that fluctuations in profits because of the book stock valuation formula were likely to occur in the future. In November the chairman, Sir Allen Lane, said in an interim statement that rising costs and a slight deterioration in trading conditions would leave gross profits short of the forecast; the directors said, however, that they expected to maintain the ordinary dividend at 13¾ per cent. In the event the dividend has been maintained in the face of a decline in gross profits from £361,000 to £221,000. The full dividend is covered 2½ times but a portion of the dividend has been waived by Sir Allen. The ordinary shares at 14s. 9d. are 2s. 9d. above the offer price but they have fallen sharply from last year's peak of 24s., declining by 3s. since the preliminary results were published last month.

Sir Allen says that the fall in profits below the original forecast was more than accounted for by the additional depreciation charged on books under the valuation formula following a build up in stocks; in addition the company had to contend with a bad debt of £12,000 and an "unexpected rise" in the expenses of one department. Margins have clearly been reduced as sales actually rose by over 2,000,000 to 16,956,000 books (excluding "Lady Chatterley's Lover") but the directors apparently anticipated such an increase when they pitched their original forecast of gross profits at £200,000 (without those arising from the sale of "Lady C."). The group did well abroad, increasing its sales in export markets by 10 per cent so that they accounted in the end for 38 per cent of total turnover. Sir Allen hesitates to make any forecast for the current year because stock valuation can have "a considerable influence on profits." Profits in the Australian subsidiary, which doubled last year, should be maintained but the group's new link with Houghton Mifflin may reduce income received from the United States since now only 51 per cent of the American subsidiary's net profit will be consolidated plus any dividends from Houghton Mifflin. Sales for the group as a whole, again excluding "Lady C.", rose in the first quarter of the current year, but Sir Allen adds that "margins are becoming increasingly difficult to maintain." He concludes that "unless stock depreciation is unduly high, and in the absence of unforeseen circumstances, profits should be reasonably satisfactory having regard to the conditions now prevailing." As the yield is only 3¼ per cent, the stock market seems to believe that the group will be able to withstand the growth of competition in paperbacks.

Consolidated Zinc and Rio Tinto

THE new group resulting from the marriage of these two complementary mining concerns should get off to a very good start. In their statement accompanying the details of the proposed merger, both boards confidently predict substantial increases in profits this year. It is intended that the new holding company will pay an ordinary dividend of not less than 15 per cent (1s. 6d. a share) for 1962. On the basis of 41 new shares for every 20 Rio Tinto units, the effective increase for Rio Tinto holders is no more than a rounding up from 3s. to 3s. 0.9d. a share. But Consolidated Zinc's shareholders, who receive 58 new shares for every 20 held, will have their dividend effectively raised from 3s. to 4s. 4.2d. a share. In 1960, Consolidated Zinc paid only 4s. a share, so the immediate advantages of the merger to its shareholders are obvious.

The low level of lead and zinc prices in 1961 was the main cause of the halving of Consolidated Zinc's profits before tax to £1,835,000. It is clear from the chairman's statement with the full accounts that an improvement is expected from these mining operations this year despite the probability of lower average prices. The Australian producers have dropped all output restrictions. Last year voluntary cuts in production according to international agreements sharply curtailed output of lead and to a lesser extent the production of zinc. This year the group should therefore achieve a higher level of output and benefit from a reduction in overheads. Whether the move was wise from a long-term point of view is less certain, but the group will now have the backing of a wider spread of interests in risking a showdown in the lead and zinc markets; this might result in still lower prices or less favourable access to world markets for Australian metal. On the industrial side some improvement may be expected in the demand for sulphuric acid from the sheet steel industry in South Wales and for zinc alloys by the motor industry. New plant commissioned by the group is also expected to give a better account of itself this year. Last year major teething troubles affected profits.

Rio Tinto's profit before tax rose from £4,635,000 to £7,150,000 last year. The group's share of the first dividends from the uranium producers amounted to £2,800,000. Pre-acquisition profits of £921,000 were absorbed in writing down the value of investments in non-consolidated subsidiaries. A further £921,000 from the net amount of £1,879,000 has also been set aside to amortise investments in the Canadian companies. The net profit of the group was £839,000 higher at £2,881,000. All the provisions made swell liquidity and the group's liquid assets rose from £4,119,000 to £6,777,000. Consolidated Zinc's aluminium project is moving forward at a rapid pace, and the New Zealand government has agreed to utilise the surplus power produced by the projected hydro-electric scheme at Manapouri. The growth of Rio Tinto's liquid funds is an essential reinforcement of the resources Consolidated Zinc needs to finance its outstanding commitments.

Cammell Laird

GOOD news from shipbuilders is rare these days and any shred of comfort is welcome. Shareholders in Cammell Laird will not therefore miss the significance of the statement by the chairman, Admiral Sir Michael Denny, that profits "will not increase notably in 1962." This, at least, will prevent any need for gloomy prognostications about a sharp fall this year. Last year Cammell Laird's trading profits rose from £1,430,000 to £1,653,000 and even if the £200,000 received on a long term contract is excluded from the reckoning there was still a small advance. But the income received from associated companies fell from £545,000 to £317,000, reflecting the passing of the ordinary dividend by Metropolitan-Cammell Carriage and Wagon Company, which Cammell Laird jointly controls with Vickers. The fall in investment income and the rise in the depreciation charge left net income 22½ per cent lower at £470,000 and the ordinary dividend, cut from 12 to 10 per cent, is now covered 1.4 times.

The group should benefit from the completion of the first phase of its reconstruction programme and the new dry dock, but the state of the order book and the keen competition prevailing in the shipbuilding industry will keep profits low. The Patent Steel Shaft Works is expected to make a further loss this year. Metropolitan Cammell has won more orders for bus bodies, but its margins must be slim and orders for railway rolling stock are still falling. In the first quarter production at English Steel's works, in which Cammell Laird has a 25 per cent interest, was at a very low level and unless there is "an early and marked improvement in demand" the prospect is far from bright. It is hardly surprising that the 5s. shares at 5s. 1½d. xd. yield 9.8 per cent.

EXCHEQUER RETURNS

For the week ended May 5, 1962, there was an "above-line" surplus (after allowing for sinking funds) of £58,498,000 compared with a deficit of £60,632,000 in the previous week and a surplus of £51,476,000 in the corresponding period of last year. There was a net expenditure "below-line" of £11,731,000 leaving a total cumulative deficit to date of £90,071,000 compared with £29,508,000 in 1961–62.

THE MONEY MARKET

THE discount market's response to the latest cut in Bank rate has been very guarded. Immediately after the cut it raised its agreed bid by only 9d.; and at last Friday's Treasury bill tender it left its bid for the 91-day bills unchanged at £98 19s. 5d. The average rate of discount moreover actually rose by 9.18d. to £4 1s. 9.27d. per cent; the outsiders, caught into taking large allotments in the previous week, lowered their bids towards the syndicate's level. However the market's unchanged bid and a sharp increase in total applications of £20 million to £406 million for the unchanged offer of £220 million, meant that the market received a very low allotment of about 20 per cent—after including a full allotment of the 92-day bills on offer. This compared with the previous week's allotment of 26 per cent.

Credit was comfortable before the weekend but on Saturday the quarterly transfer of purchase tax to the Exchequer produced difficult conditions which the authorities mitigated with a large amount of special bill purchases. The authorities also helped the market on the first three days of this week, but on Tuesday a large amount of help was insufficient and four or five houses borrowed a moderate amount at Bank rate.

(7) Average for first quarter.

APPOINTMENTS

MSL have been retained to advise on this appointment.

EUROPEAN MARKETING MANAGER

for a British company manufacturing equipment for the electrical and telecommunications industries. He will probably reside in Brussels and will be responsible to the Commercial Director in London for developing and expanding sales in Europe, the present turnover being about £1,000,000. His sphere of operations will be the E.E.C. and E.F.T.A. countries.

Candidates, aged 35 to 45, must be British nationals, preferably holding a degree in arts or sciences, and fluent in French or German. They must have sales or marketing experience on the Continent, not necessarily in engineering. Salary will be in the £3,000 to £6,000 range with the usual benefits. Please send brief details in confidence, quoting reference S.3268 to H. C. S. Brand.

In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED

17 Stratton Street, London, W.1

COMMONWEALTH ECONOMIC COMMITTEE invite applications for a vacancy in the post of Economic Assistant, Grade A, from graduates with a good Honours Degree in economics or cognate subjects with post-graduate experience in the analysis and interpretation of basic statistics and with the ability to write well rounded reports. The work will be concerned with Commonwealth trade, agriculture and related subjects. Starting salary according to approved experience in Scale £1,402 to £1,719. Contributory superannuation scheme (F.S.S.U.). Applications, giving curricula vitae, qualifications, experience and employments, names of referees, availability, etc., to the Executive Secretary, Commonwealth Economic Committee, Marlborough House, Pall Mall, London, S.W.1.

PART-TIME TEACHERS required for evening courses starting September 24, 1962: (a) TEACHER for G.C.E. "O" Level Economics, Tuesday and Friday 6.15–7.45 p.m. (b) TEACHER for G.C.E. "O" Level Geography, Monday and Wednesday, 6.15–7.45 p.m. Rates of pay in each case 38s. 9d. per one and a half hour period.—Please write for application form to Working Men's College, Crowndale Road, N.W.1.

RESEARCH SCHOLARSHIP

A scholarship to the value of £500 tenable at the Co-operative College, a residential college for adults, in the session beginning October, 1962, is to be awarded to a student qualified to carry out research work related to the development of the Co-operative Movement. Research may be addressed either to the economic activities of the Movement, or to its social significance.

Information concerning the Co-operative College and the main regulations and conditions governing the award of the scholarship, is available in the College Prospectus, a copy of which may be obtained on application to the College Administrative Officer. Application forms are to be returned by June 11, 1962.

THE DURHAM COLLEGES

IN THE UNIVERSITY OF DURHAM

Applications are invited for the post of TEMPORARY LECTURER IN ECONOMICS for two years from October 1, 1962.

Applications (three copies), together with the names of three referees, should be sent not later than June 11, 1962, to the Registrar and Secretary, 38 North Bailey, Durham, from whom further particulars may be obtained.

Chief Executive

• A GROWTH Company within a large international organisation in England has set up marketing subsidiaries in Europe, and a Chief Executive is required for the Italian operations, based in Milan.

• HE will be directly responsible to the Managing Director of the parent company in London for the efficient and profitable running of the Italian subsidiary comprising Sales, Service, Accounting and Administration departments with a total staff of about 140.

• HE will be a man of successful achievement in the field of management and marketing and possibly in selling office machinery. Whatever his nationality he must be bi-lingual in English and Italian, fully conversant with Italian commercial practice and with experience in planning and budgetary control.

• HE will be aged between 35 and 50. His salary will be negotiated and he will now be earning the equivalent of at least £3,000 in U.K.

Write in confidence to D. M. Sidney.

JOHN TYZACK & PARTNERS LTD

10 HALLAM STREET · LONDON W1

GKN

GROUP OPERATIONAL RESEARCH SERVICE

Applications are invited for a number of posts in the Midlands Unit of this Consultancy Service. The Unit is based on Wolverhampton and serves the engineering companies of the Group.

Applicants must be 1st or 2nd Class Honours graduates, preferably between 25 and 30.

We are particularly interested in

ENGINEERS who are members of the appropriate institution and have experience in production or plant engineering.

ECONOMISTS who have good experience of marketing problems or are qualified accountants.

SCIENTISTS with consultancy, management, or other industrial experience.

The work consists of:

Diagnosing problems of Production Method, Organisation, Production Control, Stock Control, Capital Investment, etc.
Devising solutions
Convincing the Managing Director, Managers, and office staffs and work people who are affected, that the proposals are sound.
Implementing the proposals when required, whilst retaining the co-operation of the people affected.

High intelligence is necessary for this work, but personal qualities are equally important. The ability to inspire trust and respect in difficult situations is essential.

Working conditions, salaries and prospects are good. The men recruited will work under supervision at first, and thereafter they will be given as much responsibility as they can carry.

Please write, giving details of age, experience, qualifications and present salary, to the:

Personnel Officer, G.K.N. Group Research Laboratory,
Birmingham New Road, Lanesfield, Wolverhampton.

GENERAL MANAGER

LIVINGSTON DEVELOPMENT CORPORATION

APPOINTMENT OF GENERAL MANAGER

Applications are invited for the post of GENERAL MANAGER to the LIVINGSTON DEVELOPMENT CORPORATION. The General Manager will be in complete charge of the Development Corporation's organisation and the qualifications necessary are considerable administrative experience, outstanding initiative and practical organising ability. Technical qualifications of a specialised nature are not essential, but administrative experience of the technical problems associated with the planning and development of a project of this character would be a considerable advantage.

The salary range for the post will be £3,900–£4,500 per annum and the initial salary payable will depend upon qualifications and experience of the successful applicant.

The post will be superannuable either under the Local Government Superannuation (Scotland) Act, 1937, and the Local Government Superannuation Act, 1953, or under the New Towns Pensions Scheme.

Canvassing, directly or indirectly, of the members of the Development Corporation will constitute an absolute disqualification.

Applications, containing full details of the candidate's age, qualifications and experience, together with the names and addresses of referees, should be submitted in twelve copies to the undersigned not later than June 5, 1962. Envelopes should be marked "General Manager".

There is no prescribed form of application.

THE CHAIRMAN,
LIVINGSTON DEVELOPMENT CORPORATION,
YORK BUILDINGS,
QUEEN STREET,
EDINBURGH.

NORTHERN IRELAND YOUTH EMPLOYMENT SERVICE BOARD

DEPUTY DIRECTOR OF THE YOUTH EMPLOYMENT SERVICE

The Board is charged under the Youth Employment Service Act (N.I.) 1961, with the provision of a comprehensive Youth Employment Service in Northern Ireland and applications are invited from suitably qualified persons for the post of DEPUTY DIRECTOR OF THE SERVICE AND DEPUTY SECRETARY TO THE BOARD. The appointment offers considerable scope and interest in the planning and development of youth employment work in Northern Ireland.

Preference will be given to candidates who have a good University Degree or equivalent qualification and have experience of youth employment work in a senior administrative post, or in some capacity offering sufficient appropriate experience. Preference will also be given to suitably qualified ex-Service candidates. The Salary scale is £1,500 to £1,825, commencing salary according to experience and qualifications, and the post is superannuable. Canvassing will disqualify.

Application forms and further particulars may be obtained from the undersigned, to whom the forms should be returned not later than May 25, 1962.

C. P. BLACK,
Acting Secretary to the Board.
Ministry of Labour and National Insurance, Stormont, Belfast, 4.

For further appointments and other classified advertisements see pages 618 and 628

SECOND year students L.S.E. required, part-time work, social/marketing study. Six weeks beginning third week May. London area.—Ring Barden, GROsvenor 5740.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION requires one outstanding young man to fill a senior position in the Pensions Department. Some actuarial training an advantage, but not essential provided ability and experience can be proved. Applications, which will be treated in strict confidence, should be addressed to the Managing Director, Provident Mutual Life Assurance Association, 25-31 Moorgate, London, E.C.2.

MARKET INVESTIGATION

WOMEN RESEARCH ASSISTANTS

As a result of an expansion of their activities in the Market Investigation field, Urwick, Orr & Partners now have vacancies for additional female Research Assistants.

A degree in economics is advisable; a sound knowledge of investigating practice and statistical method is essential. The Marketing Unit is concerned with market investigations, forecasting and economic intelligence activities both in the U.K. and overseas. The current pattern of work shows a bias towards the industrial and consumer durable fields. Initial duties will include the collection, synthesis and interpretation of information and the preparation of detailed reports to clients in many and diverse types of industry.

Age should be about 25-35. Sound Marketing experience would be advantageous but an enquiring mind is an essential qualification. Starting salary would be in the range £750-£1,200, with regular progress beyond this figure according to merit.

Apply to Urwick, Orr & Partners, Ltd., Kinbox House, Wellington Street, Slough, quoting reference MU/1111/1 on the envelope.

CONNAUGHT FOOD PRODUCTS

part of Schweppes Limited, comprising Chivers and Sons, William P. Hartley and William Moorhouse and Sons Limited, have the following vacancies at their London Head Office :—

COST ACCOUNTANT

This post would only suit an ambitious man ready to take responsibility and willing to travel fairly extensively—but not normally at week-ends—throughout the British Isles. Must be fully experienced in standard costing and budgetary control. Some knowledge of the preserves industry would be an advantage.

ORGANISATION AND METHODS OFFICER

with experience of mechanised accounting to study and re-organise the flow of information between head office, factories and distribution depots. The starting salary would not be less than £1,300 per annum.

Interviews will be carried out by the Chief Accountant and Methods Manager respectively, but applications, giving brief details of qualifications and of present and past responsibilities, should be sent in the first place to **Personnel Manager, Connaught Food Products, Green Walk, London, SE1.**

CHIEF FINANCE OFFICER

LIVINGSTON DEVELOPMENT CORPORATION

APPOINTMENT OF CHIEF FINANCE OFFICER

Applications are invited for the post of CHIEF FINANCE OFFICER to the LIVINGSTON DEVELOPMENT CORPORATION.

The salary range for the post will be £2,700-£3,400 per annum and the initial salary payable will depend upon qualifications and experience of the successful applicant.

The post will be superannuable either under the Local Government Superannuation (Scotland) Act, 1937, and the Local Government Superannuation Act, 1953, or under the New Towns Pensions Scheme.

Canvassing, directly or indirectly, of the members of the Development Corporation will constitute an absolute disqualification.

Applications, containing full details of the candidate's age, qualifications and experience, together with the names and addresses of referees, should be submitted in twelve copies to the undersigned not later than June 15, 1962. Envelopes should be marked "Chief Finance Officer."

There is no prescribed form of application.

THE CHAIRMAN,
LIVINGSTON DEVELOPMENT CORPORATION,
YORK BUILDINGS,
QUEEN STREET,
EDINBURGH.

NATIONAL FEDERATION OF MEAT TRADERS' ASSOCIATIONS

The National Federation of Meat Traders' Associations is to make two new staff appointments.

A Public Relations Officer
An Economist

Interesting and responsible work. Applications, stating qualifications, experience and salary required by May 21st to: General Secretary, NFMTA, 29 Linkfield Lane, Redhill, Surrey. Envelope to be marked "Appointments."

THE NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH

will have a vacancy next autumn for an Assistant Research Officer, salary £750 x £50 to £950, with F.S.S.U., and family allowances. Initial appointment for one or two years. Candidates should have a good degree in economics, with statistics (or be hoping to have one by the autumn). Please send curriculum vitae and names of two referees, by May 21st, to the Secretary, N.I.E.S.R., 2 Dean Trench Street, Smith Square, S.W.1.

A large overseas marketing Board is seeking a trained

ECONOMIST

to fill a newly created post on the European headquarters staff (probably in London). He will be developing and applying new techniques for price forecasting and logistic control, also providing a conventional market intelligence service.

The successful applicant will be a graduate with experience already in a business atmosphere, and will be able to express himself clearly and succinctly, verbally and in written reports. He will probably be in his early thirties, but must be able to win the confidence and respect of line management throughout Europe.

Initial applications should include a brief career resumé, with details of current appointment, age, salary and other relevant information. These should be addressed to Urwick, Orr and Partners International Ltd., who are advising on this appointment, at 5 Buckingham Palace Gardens, London, S.W.1, quoting reference MJB/1628/J on the envelope. No information from applications will be disclosed to our client without permission.

THE ELECTRICITY COUNCIL

Principal Assistant
(ECONOMICS and STATISTICS)

Applications are invited for the superannuable post of Principal Assistant in the Commercial and Development Department at Headquarters in London. Duties will be to assist in the provision of a statistics and economic intelligence service, the organisation of consumer sampling and market surveys and the formulation of long and short term estimates of electricity requirements. Candidates should have an honours degree in economics and a sound knowledge of modern statistical techniques. The salary for the post will be within the range **£1,300-£1,550 p.a.,** inclusive of London Allowance, commencing at a point dependent on the applicant's qualifications and experience. Applications, stating age, qualifications and experience, present position and salary, to the Establishments Officer, The Electricity Council, Winsley Street, London, W.1, by May 19, 1962. Quote Ref. ECO/161.

For other appointments see pages 618 and 627

YALE

TRADE MARK

require a

MARKET ANALYST

This is a new appointment, directly responsible to the Sales Director.

The primary duties are: to prepare reports and statistical data as necessary on competitive activities, and to forecast sales in the domestic and export markets in the Material Handling equipment field.

A graduate with relevant qualifications is desirable, but applications from those with previous experience of Market Research would be welcomed.

Please apply, in writing, stating full details of education, experience, present position and salary to the

Personnel Manager,
YALE & TOWNE MNFG. CO
Wednesfield, Staffs.
Tel.: Willenhall 65511.

Computer beats basically botanical bogey

Not long ago, the Forestry Commission acquired a collection of trees, including many rhododendrons and other exotics. The task of cataloguing, however, was very far from exotic, since the entire collection had to be classified, and then indexed both in alphabetical sequence, and by reference numbers. The Forestry Commission solved their problem by taking it to the Ferranti Computing Service. Using the Filecode automatic commercial programming system, they were quickly able to write their own program, which was then fed into a Sirius computer—and the work of several months was completed in a few hours.

Computer guidance pays

The case above is only one of many where slashed costs and greater efficiency have resulted from computer guidance. Computers can perform an immense range of tasks with equally immense rapidity. Once properly programmed, they can cut through apparent jungles of information to reach relevant and practical conclusions. And because computers consider every aspect of a problem, every combination of variable factors, decisions based on their guidance are happily free from bias or over-simplification. Computers don't play hunches, but they *can* test them.

However large or small your problem, hired computer time might be able to solve it. There is no need to own a computer—and no need to worry about the technicalities of computing—you can hand your problem to Ferranti and they will do the rest, or they can teach you, in a few hours, a simple "do-it-yourself" programming technique. Why not get in touch with the Computing Service? They will be glad to advise you whether or not you could profit by computer guidance. *The Ferranti Computing Service, 68, Newman Street, London, W.1. Weir BOILER FEED PUMPS

Turbofeeders and Electrofeeders

for the Power Generation Industry

Weir boiler feed pumps have for many years enjoyed a high reputation for efficiency, reliability and ease of maintenance in the power stations of Britain and abroad.

Recently completed units include those for three of Britain's nuclear power stations, and a number of very large pumps are under construction for thermal stations, including the world's largest capacity boiler feed pumps for the C.E.G.B.'s Thorpe Marsh power station. Twelve very large Weir units are also on order for their new Ferrybridge "C" 2,000 mw station.

Pre-eminent in the design and manufacture of

CONDENSING, FEED HEATING, FEED PUMPING, FEED REGULATING AND DE-AERATING PLANT

for the efficient and economical operation of Power Stations of the smallest or the greatest size, Industrial and Public Utilities.

£500 A YEAR TAX FREE FOR YOUR FAMILY

The Equitable offers you a special plan to protect your family's future at the lowest possible cost. Should you die within a period of 20 years your dependants will receive £500 a year tax free for the balance of the period.

You only pay premiums for 15 years and if you are 29 now the cost is as little as £18.5.0. a year—about 7/- a week. The premiums for larger benefits are in proportion.

The Equitable offers attractive terms because it has no shareholders to take any part of the profits and pays no commission for the introduction of business.

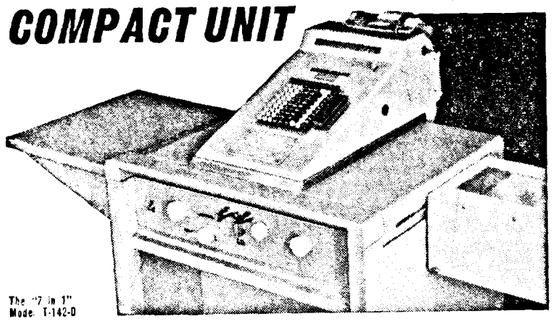
DO YOU KNOW that this crane hook could land you in real trouble?

VULCAN KNOW The most simple things can cause a disaster to all kinds of industrial machinery. But simple or complex, every potential danger spot needs an expert eye to find and correct it. The expert who knows where to look, and what to look for, is the Vulcan Engineer Surveyor.

Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection and protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!



We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

Vulcan ARE SPECIALISTS

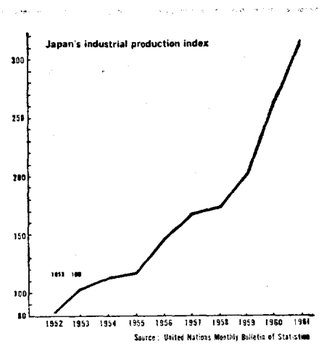
THE VULCAN BOILER & GENERAL INSURANCE CO. LTD.
DEPT. 17, 67 KING STREET, MANCHESTER 2

* *Most lifting appliances or tackle end in a hook. It has happened that the hook has fractured. Cause: embrittlement of material just not suitable for use with such an appliance. And that's just one reason for a disastrous accident, maybe costly. Maybe tragic. Maybe both.*

COMPLETE CHEQUE CONTROL IN ONE COMPACT UNIT

The "7 in 1" Mode T-142-D

New Protectograph Control Centre Unit writes, signs, dates, lists, adds, counts and controls cheques in a single operation at speeds of up to 1,500 per hour.



This new Control Centre Unit Model T142D, for the first time, does the work of seven different business machines in one completely controlled unit . . . accurately, safely and quickly. It handles accounts payable, dividends, payrolls —in fact all disbursements—speedily and easily. Built-in controls give complete security, even with an unskilled operator, relieving top executives of the drudgery of cheque signing and checking. A demonstration will convince you—

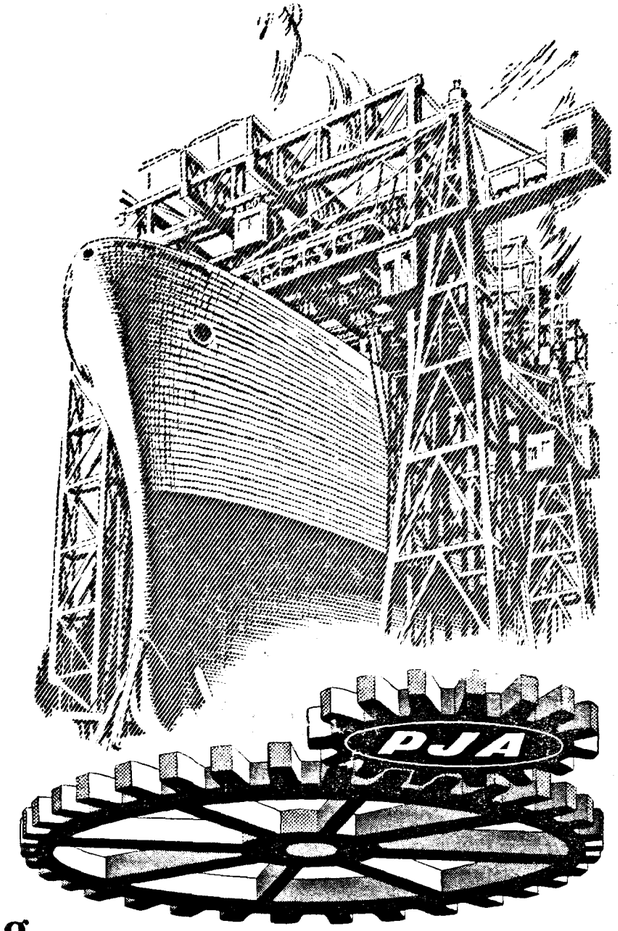
What Reed do for growers and students of growth

Paper flowerpots . . . paper 'dustbins'—just two imaginative ways this supremely versatile material works for you.

Today Reed paper products play a key role in almost every industry and activity. To agriculture—and horticulture—the Reed Paper Group means sacks for fertilisers and foods . . . packs for eggs and apples . . . punnets for soft fruit . . . pitch fibre pipes for drainage . . . as well as the materials for seed packets and paper flowerpots.

GENTLE STUDIES

And we make paper for less unusual purposes. Newsprint. Writing paper. Wrapping paper. Paper for books and notebooks—such as those in use by the young ladies above. With which we hope they will successfully pursue their gentle studies.



Reed PAPER GROUP

REED PAPER GROUP

PAINT IN MESH WITH INDUSTRY

Shipping . . .

When, in the 1850's, Brunel launched the "Great Eastern"—the world's largest iron ship, sceptics thought she would sink. But Brunel was more concerned about corrosion than displacement. He appreciated a real problem—the action of salt water on iron. He found the answer by protecting his ship with a special paint made by a company which is now the **RED HAND MARINE DIVISION of P.J.A.**

Since then **RED HAND** anti-fouling compositions and anti-corrosive paints have become known in every port of the world, notably for tanker fleets, where corrosive conditions are most severe.

Other P.J.A. Divisions playing an important part in this major industry are:—

CELLON DIVISION Wood finishes for ships' interiors.

DOCKER BROTHERS DIVISION Transport finishes on trains and vehicles feeding the world's docks.

PINCHIN JOHNSON INDUSTRIAL DIVISION Electrical insulating materials for the manufacture of marine power and lighting plant to Lloyd's standards.

P.J.A. DECORATIVE PAINTS DIVISION Protection for dock buildings, cold store rooms, cranes and gantries (**GAYMEL** for the general public).

ROBT. INGHAM CLARK DIVISION Finishes for refrigeration plant. Linings for drums that make possible the economical export of corrosive materials.

Oil Companies and Governments

Surrender at the Docks

Dumping Chemicals

It's just struck me. Of course. Though Halex will have the answer, too—they're always thinking years ahead in plastics. They've probably already worked out that if you under-rallify the potterpin, using a moulded oval *whirly, the whole sprig-system will be revolutionised. Difficult—but Halex will be able to do it, with their knowhow and facilities. I expect they'll be delighted to find someone as forward-looking as themselves, when I ring them. Wonder what plastics problems of 1972 Halex and I will be solving in 1967?*

If you've a problem—*any* problem—involving plastics, then Halex can do a great deal to help you with it. The size of the problem doesn't matter a bit. The bigger the better. Halex are in business to offer a total plastics service—a service which begins with one of the most effective consultancy services in the plastics industry through to development and final production. As a division of the British Xylonite Company Limited, Halex can offer you the most *comprehensive* plastics service in the country—perhaps in Europe. If you need *any* help on *any* problem involving plastics, all it takes to secure the facilities Halex command is a phone call to LARKSWOOD 2345

INTERNATIONAL

Europe and the Old Men

Panic about Britain's negotiations with the common market is not justified by facts. Doubts in Paris and Bonn do not mean that there has been a clear-cut decision to block Britain's entry (p. 649). Indeed, the negotiations in Brussels are gathering speed (p. 650).

Dr Adenauer's strange remarks in Berlin about the Anglo-Saxons have revived speculation in Bonn about getting rid of him (p. 678).

General de Gaulle's press conference has dismayed French "Europeans," as well as prompting renewed speculation about his terms for British entry to the common market (p. 678).

M. Pompidou's new government is being harassed by strikes, now that the Algerian national emergency is past (p. 657).

Indochina's Crumbling Walls

American troops have had to land in Laos to prove to friend and foe that America is prepared to use force if things go really wrong, but there is still some prospect of achieving a neutral Laos (p. 653), as Washington still hopes (p. 690).

The flood of American aid to **south Vietnam** has failed, so far, to check the communist guerrillas (p. 683).

Overcrowded **Hongkong** has had to turn back 25,000 refugees trying to escape from China (p. 677).

The **Philippine** claim to **North Borneo** is a threat to the grand design of a federation of Malaysia (p. 661).

Kennedy and The Economy

The **Area Redevelopment Administration** has celebrated the first anniversary of its attack on the hard core of chronic unemployment (p. 687).

President Kennedy is **wooing businessmen** with tax concessions and with firm statements on wage increases (p. 690).

Americans have a lesson to learn from Europeans about how to spend their country into prosperity (p. 690).

Republicans are throwing away their chance of victories in Maryland in next November's election (p. 693).

Soon the United States, like other countries, may have only one **airline** flying the **Atlantic** (p. 694).

Labour Pains

Strikes in **Spain** have shaken the structure of the official trade unions and produced something like what democracies mean by wage bargaining (p. 679).

Aden's trade unions show too much concern for political power and too little for the welfare of their members (p. 684).

Racial Partners

The **Congo's** future depends on the success of current talks with the Belgians (p. 658).

Bridging the gap between races, says Mr Sandys, is the **Commonwealth's** grandest task (p. 662). In **Rhodesia** Mr Butler is seeing some of the difficulties in practice (p. 658).

HOME

Oily Waters

Caught between acquisitive governments and competitive markets, the international oil companies are left with less room for manœuvre (p. 697).

Governments will soon make their choice on the best means of crossing the Channel (p. 710).

Wall Street appears to have weathered one of the worst storms of its postwar history (p. 701).

Rough Passage

The local elections give a grim augury for Tories—including some of their leading lights (p. 654).

Montgomery confirms the Liberals' national advance (p. 657).

As releases of American stockpiled tin draw near, the London Metal Exchange can expect some stormy sessions (p. 705).

The British economy may be drifting into expansion (p. 700).

Both exports and industrial production show modest improvements (p. 700).

Half Seas Over

The Government, above all, is to blame for the inflationary debacle of the dock wages settlement (p. 652).

Now ministers are under even greater pressure to increase the pay of nurses: but what is really needed is more for the qualified hospital staffs (p. 657).

Yachtsmen are crying out for more homes for their boats (p. 668).

Rock Bottom

The overgrown chemical industry is gradually being deprived of its dumping grounds (p. 699).

Tomato growers cannot have welcomed the wise words of a top farmer this week (p. 662).

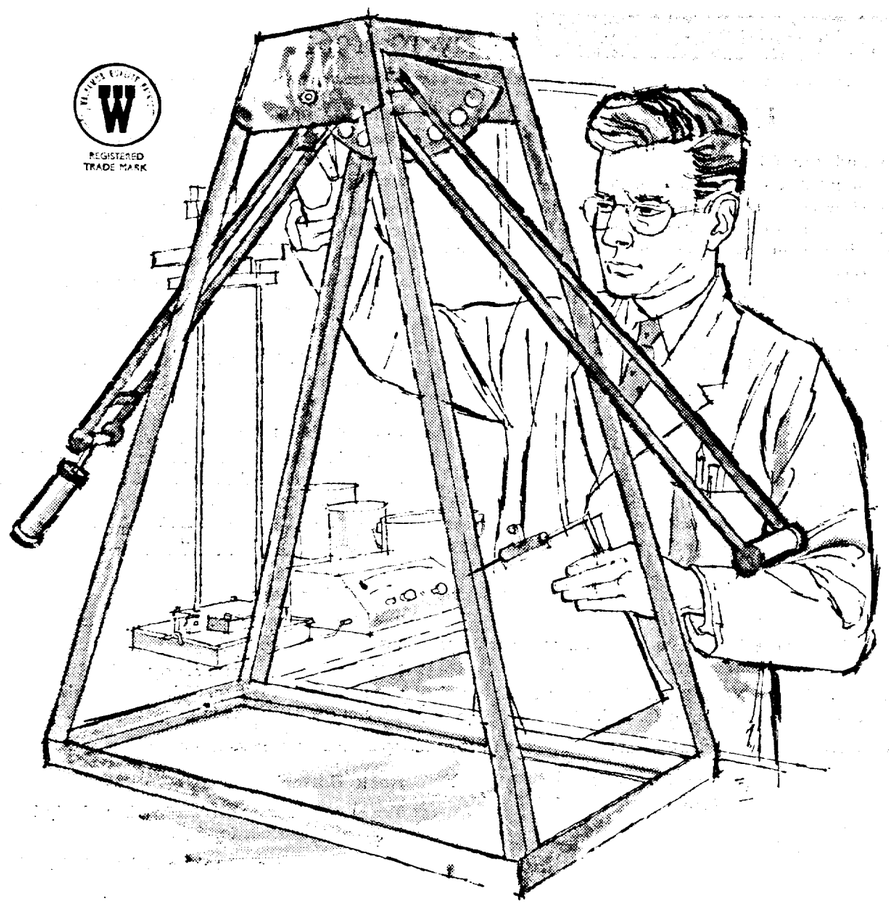
If it is to regulate London's new cut-price taxis, the Government should take a more liberal course than any suggested in the Commons this week (p. 658).

It should also risk facing some unpopularity by restricting boxers' freedom to maim each other for cash (p. 662).

Gambling is the last obvious field where the state could raise more money but does not (p. 662).

Ground Swell

The new universities that are yearning for benefactions promise to set a new and exciting pattern for higher education (p. 665).



Adult education, however, is becoming more rarified (p. 668).

Urban Renewal: some sense from a Fabian (p. 660).

Housing: the Government's projects for new private building and for aid to landlords need a fresh drive (p. 660).

Justice: more judges—and new courts—are still needed for northern litigants (p. 666).

REGISTERED TRADE MARK

Trial by collision

This is the Walpamur cylinder impact test. Two painted cylinders, each mounted at the end of a long steel pendulum, swing together like trapeze artistes and collide with terrific force. The resulting impact is roughly equivalent to that caused by a domestic washing machine being pushed sharply against a wall. It is testing such as this —ruthless and ceaseless—which conserves the quality of Walpamur Quality Paints. And it is thus that The Walpamur Company, with its overseas factories and multiplicity of branches, maintains its position of pre-eminence in the world of paint.

DEPARTURE: *Salt Sticks in Colombia, Salt Water in Ceylon— Both can taste good because of AMF equipment!*

It is only a few years since the people of Colombia and other countries of Latin America began to depart from their centuries-old custom of eating only hand-baked bread and began enjoying bread, rolls and other bakery goods made by machinery. This change was brought about by AMF. Today, AMF makes bakery equipment on four continents, sells it in over 35 countries. And in any country where there's a fresh water shortage, low-cost, efficient AMF water desalinating machines can make salt or brackish water potable and useful to industry. Baking and water purification are only two of the vast number of AMF products. In many fields, in many lands, in many product lines, new departures take place every day — thanks to AMF International. In England, contact: AMF Limited, 4-6 Savile Row, London W1, England

AVERY
Electronic control brings push-button weighing to industry

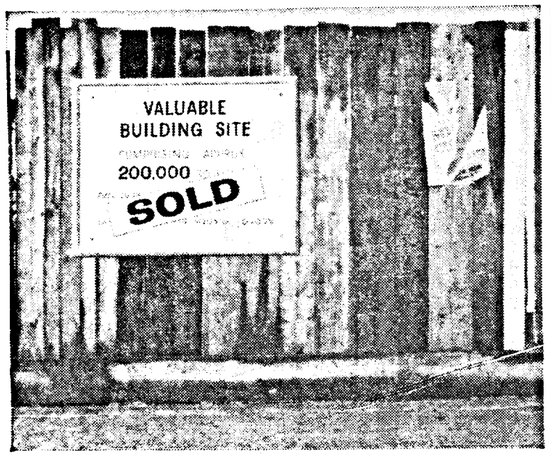
Push-button weight control by Avery is increasing the profitability of many industrial processes. More and more manufacturers are turning to automation, using Avery weighing equipment with electrical and electronic control systems. In the science of weighing control by electronic methods, Avery have proved, in widely varying applications, that there is no substitute for the combined accuracy and flexibility of orthodox lever systems provided with the means of giving a suitable electric output. Avery have perfected weighing mechanisms that take instructions from (and give instructions to) punched card and tape machines; thus providing fully automatic and foolproof operation in all kinds of weighing, batching, blending, continuous flow, totalising, testing, checking and recording processes. The use of electronics —especially the growing range of transistors—has enabled these ultrasensitive weighing mechanisms, even at zero energy, to operate controls, computers, electric typewriters and other business machines. Where a lower order of accuracy is acceptable and site conditions demand a more compact installation Avery also supply load cells with the associated instrumentation and control systems. By linking such modern sciences as electronics and solid state physics with two centuries of experience in weighing, Avery have achieved a combination that is profiting trade and industry throughout the world.

Starter cubicle. The first compartment contains digitising and sequence controls. The remainder house contactors, relays, etc., for controlling screw feeders.

AVERY Electronic Control Systems

400 FORMULAE UNDER PUSH-BUTTON CONTROL

The new automatic blending plant at the Belfast Mill of Associated Feed Manufacturers Ltd., produces animal feeding stuffs to over 400 different formulae. The electronically controlled weighing equipment recently installed by Avery is making a major contribution to the productivity of the mill by ensuring maximum efficiency of labour and machines at the blending stage, with maximum quality control provided by the sustained accuracy of weighing.



There are 48 material blending bins, arranged in nests of 4, each nest supplying one of the 12 fully programmed hopper scales. Eleven of these hopper scales are fitted with electronic switches to control the material flow from 2-speed twin-worm dischargers. An accuracy of 0·2% is maintained. At any one of these hopper scales, the weighman selects the required ingredients, pre-sets the scale to the correct weight required of each material, and presses the starter button. Weighing and discharging is then fully automatic.

The twelfth hopper scale is fitted with an analogue generator and digitiser, and installed beneath the nest of bins containing the common mineral additives. Four banks of decade switches enable the weighman to pre-set weight values, without the need for further attention when changing from one material to another. This is the most significant step yet made in blending mill automation, and a striking example of Avery's technical leadership in this complex field. (Complete case-history on application)

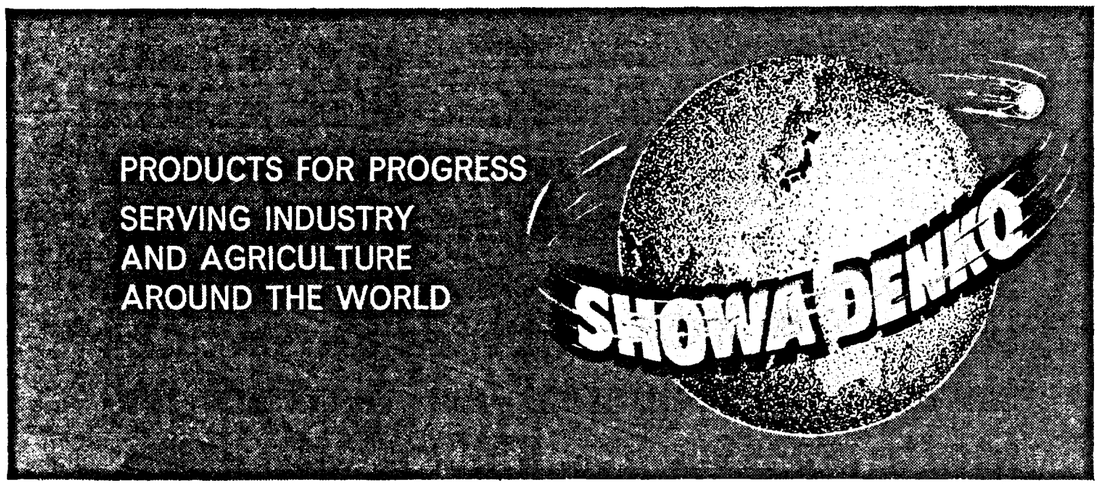
Come, fill the case...

Breadless, wineless, sadly songless in an unpoetic wilderness known as "the doghouse." Such poetic justice may well descend upon that dream-filled head of yours. For if you scatter your quatrains to the four corners of the living-room, don't feign surprise when you're hauled onto the carpet—Persian or otherwise—and faced with a wife waxing anything but lyrical. The gist of her few-thousand-word sermon being: "The proper place for books is a bookcase." Who can deny it?

Minty have specialised for years in making superb bookcases that house your many-splendoured books in dust-free distinction behind very elegant sliding glass doors. Easy on the eye—and the pocket—they allow you to go your merry way reading books, buying books, for Minty bookcases are sectional and may be started for as little as £12.19.0—on deferred terms if you prefer.



Only at the Minty Centres shown below can you see and buy Minty bookcases (and furniture). The Centres are so placed that Minty furniture is within reasonably easy reach of most people. If, however, for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post ordering. Write to Dept. E.20 Minty Ltd., 44-45 High St., Oxford.

INDEPENDENT TELEVISION FOR SCHOOLS Broadcasting plans for 1962/63

Ten programmes will be transmitted each week on the Independent Television Network during the School Year 1962/63. Transmission times are given below. Between them, the ten series are designed to meet the needs of all children in primary and secondary schools between the ages of 9-18. They have been approved by the Educational Advisory Councils and Committees of Associated-Rediffusion, Associated TeleVision, Granada TV, and for Scotland.

PROGRAMMES IN THIS TIMETABLE ARE NETWORK PRODUCTIONS FOR ALL REGIONS

Monday	**2.35** (15 minutes)	German	*IV and V Forms*
	2.54 (13 minutes)	Junior Mathematics	*Age about 10*
	3.11 (20 minutes)	Secondary Science	*Age 14 and over*
Tuesday	**2.57** (25 minutes)	Discovery	*VI Forms*
	3.26 (25 minutes)	Drama	*Age over 13*
Wednesday	**2.57** (25 minutes)	Arts	*VI Forms*
Thursday	**2.35** (15 minutes)	Elementary French	*2nd and 3rd Year*
	2.54 (18 minutes)	The World Around Us	*Age 10*
Friday	**2.35** (25 minutes)	Music	*Age 13-15*
	3.04 (18 minutes)	Story Box	*Age 9-10*

Besides these programmes, networked throughout the United Kingdom, additional ones will be transmitted in their own regions by the Independent Television Companies listed below. Details can be obtained from the Education Office of your local Company.

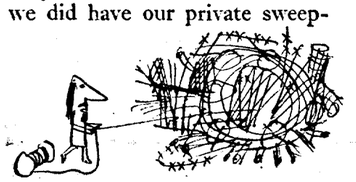
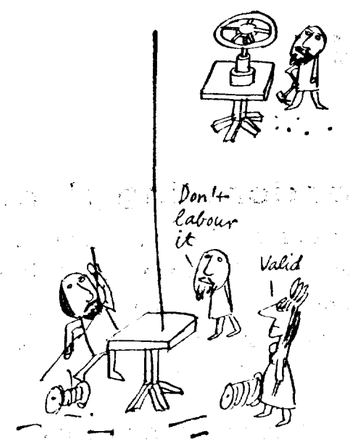
PROJECT 304

The story of the great
Shell Chemicals
Sculpture Competition
by A. N. Other—Carter

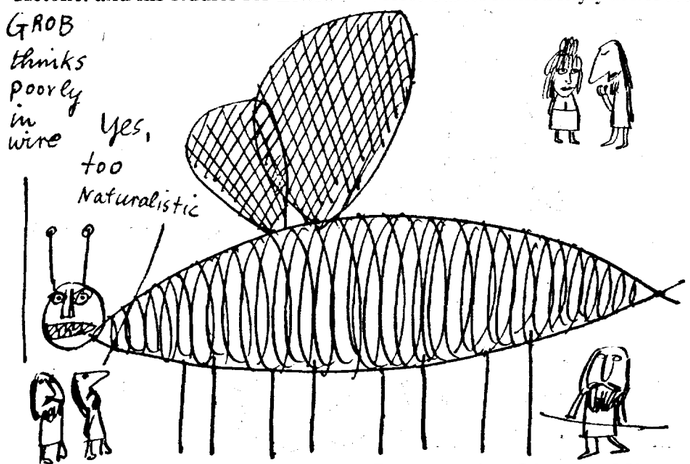


Chapter Eight:
Who Will Win?



Of course, many of us at Shell Chemicals—men like Carter from Ketones, Carter from Polyolefins, Carter from Low Pressure Waxes and Greases—had always been interested in sculpture, and I myself had studied in the old days in Paris (ah, Isobel!). 'After all, it's the queen of the plastic arts,' said Carter from Polystyrenes, 'and we're plastic scientists, aren't we, hey?' 'Speak for yourself,' said grumpy old Carter the Demonstration Farm Manager. 'I should have thought it was pure, abstract form and balance that would appeal to a sculptor, not this decadent, sensuous rot.

Take the formula for Trifolex a selective weedkiller for the con-



trol of weeds in cereals, undersown cereals, new leys, grassland and some varieties of peas based on the sodium salt of—' ' — 2-methyl-4-chloro-phenoxybutyric acid,' we all chanted. But we did have our private sweep-

stakes as the studies and maquettes for the sculpture competition for *The Spirit of Shell Chemicals* began to come in. Carter from Ketones fancied the chances of that old war-horse Henry Jollifant ('our leading *derrière-garde* sculptor' someone had spitefully called him, dear old man). He'd had experience in this field, a centenary bronze of the famous American woman novelist Ethyl Amyl Ketone: and his studies for Elvira

(dry-cleaning aid for either white spirit or chlorinated solvents) and Liquila (exterminates blackfly, aphids, thrips, whatever they are, leaf miners, etc.) were lovely things. Carter from Polyolefins was enthralled by the preliminary work of Max Grob, the Destructionist, on his brooding monster-figure of Dielmoth (a moth-proofer), seen as a kind of devil-behemoth. I myself fancied that weird, shaggy outsider, the Welshman, Jones the Statue. 'I believe in everythingness, man!' he told me, 'I'm a pan-artist, isn't it, just right for Shell Chemicals, all over the place they are, printing inks to fertilisers.' So the Spanish sculptor Paella discovered. Down at our labs. at Egham he saw a most lovely girl having a hair-set (monoethanolamine is the preferred amine for neutralising thioglycollic acid in home-perm preparations, and a client's snag was being smoothed out), and many delicate retorts and pieces of equipment were broken as he pursued her with loud Spanish cries. The uproar was unnoticed in another room where Carter from Triethylene Glycol was standing before an intricate molecular model. 'What calm in the heart of action!' said Isobel, in that thrilling husky voice. Carter smiled shyly at her...

Not to Panic

A SPECTRE is haunting Europe again; not Marx's, this time, but the spectre of two authoritarian old men trying to run western Europe in a way that means the exclusion of Britain. This apparition is not wholly a figment of the imagination of people, like Lord Beaverbrook, who are disposed to think that bogeymen begin at Calais. Recent events have added just a little weight to the possibility that Dr Adenauer and General de Gaulle might really be coming to the joint conclusion that their ideas about the future of Europe are incompatible with Britain's, and therefore that Britain had better be kept out of the common market. Our Paris correspondent describes on page 678 the press conference on Tuesday at which General de Gaulle combined a salute to "Franco-German solidarity," and some notably Adenauerian comments on east-west relations, with a quizzical reference to Britain's place in the world. Our Bonn correspondent discusses on the same page the aftermath of Dr Adenauer's apparent hint a week earlier that he might shift his weight from the side of the scales favouring Britain's entry into Europe to the side opposing it.

Before despair sets in, however, the obvious thing to be said about this suspicion that Dr Adenauer and General de Gaulle are ganging up against Britain is that it remains no more than a suspicion. It is perfectly natural at the present stage of the negotiations that both men should want to be seen pursing their lips about the British application, but this does not necessarily mean, and neither has said clean out, that they will set their face against it in the final test; indeed, their official spokesmen (for what weight they carry in these circumstances) have solemnly denied that they mean to. This week's events have not materially changed the prospects of Britain's going into the common market compared with what they were a fortnight ago. The best way of seeing this is to set out briefly the circumstances in which Britain might decide it could not go in after all. The exercise suggests that these prohibitive circumstances are still pretty remote.

The first thing that could make Britain change its mind would be the imposition of unacceptable terms in the Brussels negotiations. It is fairly clear, in our opinion, what would amount to unacceptable terms. The Six might refuse to accept provisions that would give Canada, Australia and New Zealand a reasonable hope of maintaining the present value of their food exports, or something fairly close to the present value, until the expected time comes when world-wide arrangements will take care of their interests. The Six might also refuse to come to a reasonable understanding with the neutrals of the European Free Trade Association, a "reasonable understanding" being either the offer of associate membership of the common market or else the opening of the Six's tariff walls to the principal exports of these countries.

Either or both of these things would mean that the Six were publicly and humiliatingly testing whether Britain would break its word. In either case, but in none other that comes easily to mind, a sense of what one cannot decently do to old friends might require Britain to withdraw its application—even though Britain's own economic and political interests might suggest swallowing hard and carrying on.

But, as our special correspondent in Brussels points out in the following article, the opening of the really serious stage of the negotiations last weekend yielded no evidence that such unacceptable terms are in fact going to be imposed. This

is not conclusive proof that they will not be imposed later; if Dr Adenauer and General de Gaulle are toying with the idea of keeping Britain out, it is unlikely that their ruminations would have seeped down to their negotiators in Brussels. Yet the very fact that no change in intentions has trickled through to Brussels must surely mean that the two men are not—at the most—doing more than toy with any such idea; they must realise how tricky a business it would be to force Britain's withdrawal by such tactics. It would be tricky because, whether or not Dr Adenauer is changing his mind about wanting Britain in, Italy, Belgium and Holland have not changed theirs, and a brutal banging of the door in Britain's face would shake the joists and beams of the whole European community. It would, moreover, offend the United States—which five of the Six, at any rate, are presumably still reluctant to offend.

The other thing that might make Britain change its mind is a feeling that, even if the terms for joining the club are perfectly acceptable, it is just not going to be the sort of club that Britain wants to be in. If the wily old tacticians in Bonn and Paris really wanted to keep the British out, their best tactics would be to play quietly and persistently on this feeling. The feeling would be encouraged by their doing two things calculated to raise British goose-pimples: by General de Gaulle expressing his support for Dr Adenauer's attitude on east-west negotiations; and by Dr Adenauer hinting that he rather admires the general's views about the potential self-sufficiency of continental western Europe. Is it fanciful to detect signs that the pair are doing just this?

Even if they are, however, the right British response is to say quite pointedly that this is unlikely to deter Britain from wanting to come in. The banding together of Dr Adenauer and General de Gaulle on the two propositions that cut right across the grain of British foreign policy (supposing this banding together is really taking place, which is not clear) would undoubtedly be a cause of serious friction if Britain were inside the common market; but the likelihood is that the cause of friction would be temporary. As the general engagingly admitted on Tuesday, mortals are mortal. Only if there were a fair degree of certainty that the present leaders in Bonn and Paris would be succeeded by others who would perpetuate a Franco-German alliance on these two points—intransigence towards eastern Europe, and a gradual detachment from the United States—might Britain reluctantly feel obliged to stay out of a community led by people with such views.

But in fact the evidence points in the opposite direction. Pressures are rising—almost certainly in Bonn, and very probably in Paris too—which will sooner or later give people whose ideas are more like those of the British a chance to lay their hands on the levers of power. This is exactly the sort of situation in which it will be desirable for Britain to be inside the community; it will then be able to encourage and support the forces favouring conciliation in central Europe and a continued close attachment to the United States. To misappropriate Kipling: if Europe were going to be what Europe sometimes seems to be, under these two veterans, how soon we'd drop her. But the odds still are she ain't.

Foglamps in Brussels

Our special correspondent shows that the actual negotiations on the common market are gaining speed

For some time Britain's negotiations with the common market have resembled a straight road to a predestined goal obscured by thick fog. For over a year the key men in Brussels and Paris have been able to suggest in principle how the Commonwealth problem would eventually be solved. The road, however, has not been easily traced by the negotiators in Brussels, groping amid the obscurities of thousands of tariff items, and held up by the time-consuming need for the Six to agree amongst themselves. Now that only two months remain if solutions are to be found before the summer holidays and the Commonwealth conference in September, there is a pressing need for greater speed.

The meeting of ministers from the Six and Britain on May 12th provided Mr Heath with the occasion to give the necessary shove. He did so with a classic combination of concessions and demands. The concession was formal British agreement that the common tariff should eventually apply to imports of manufactures from the developed Commonwealth countries—Canada, Australia and New Zealand. The demands were, first, that this application of the common tariff should be delayed and its effects reviewed from time to time and, second (the biggest issue in the negotiations), that agricultural exports from these countries should be given outlets "comparable" to those they have today. Mr Heath backed the new proposals by some rumbustious talk designed to get away from the platitudes of the last few months and to stimulate the Six to hard negotiation.

He was rewarded by the best debate the seven ministers have yet had. Since the British proposal on manufactures was modelled on (and in part designed to forestall) a proposal from the Six, a good deal was common ground. It was agreed that an effort should be made to lower the common tariff in negotiations with the United States, and the British suggested that there should be formal consultation between the common market and the Commonwealth at various stages before the tariff was finally applied. Here is a valuable precedent which might be applied to other fields. On manufactures there are still some disagreements. How much delay is the Commonwealth to be allowed before the common tariff is applied to them, and on how many products? But these are matters that can be settled in the last phases of bargaining.

The talks did not make equal progress on the demand for "comparable" outlets for the old Commonwealth's farm produce. But that is due as much to the vagueness of the request as to the obstinacy of the Six. "What is a comparable outlet?" they ask. "The same exports as the Commonwealth sends today, at the same price, for all time? . . . We cannot be asked to give far firmer guarantees for the future of Commonwealth exports than Britain gives today."

The British have now accepted the idea that world-wide agreements might ultimately be used to solve the problem, as the Six propose. But the by now classic problem of the "link" or "hinge" (described on page 234 of *The Economist* of April 21st) has still to be overcome. The British demand firm guarantees for the old Commonwealth until the world-wide agreements work. The Six retort that, if the guarantees for Commonwealth countries are too effective, they will have an interest in blocking the world-wide agreements altogether. Some formula has still to be found to link the transitional Commonwealth arrangements smoothly to the eventual world-wide answers.

In the next few weeks officials are to try to find the answer by concentrating on one key group of products, cereals, as a model for others. Some ideas are floating in the Brussels air that might provide the answer. Might it be laid down that there should be a world-wide agreement after, say, five years, with a saving clause that there shall be continued though limited Commonwealth arrangements if this wider effort fails? Could the ultimate level of the common market's cereal prices be fixed in advance at a low level? The European Commission's recent proposals on the common policy for dairy products look helpful to New Zealand. As in Britain, the policy is mainly aimed at maintaining a high price for milk, leaving scope for a low butter price competitive with the price of margarine. The Six's negotiators are beginning to realise that Mr Macmillan must have something definite to offer Mr Holyoake, Mr Menzies and Mr Diefenbaker when he meets them on September 10th.

On the other three Commonwealth subjects—Africa, Asian manufactures, and the so-called "zero tariff" list—there is quiet progress. On "zero tariffs" the two sides have hitherto been frozen in extreme positions, with the British asking for the common tariff to be reduced to nothing on forty vital products and the Six saying no. Now officials have been told to examine all kinds of alternative solutions (including tariff quotas, or fixing the tariff somewhere between zero and the present level). An understanding that textile exporters in India and Pakistan shall continue to enjoy an assured market has been reached already. It remains to work out details and see how far the principle is to apply to other Asian exports, from cricket bats to combs. On Africa, the principle of association has long since been accepted by both sides.

THE Commonwealth question, the heart of the matter, thus does not justify the pessimism lavished on it lately. Perhaps the slow pace of the negotiations has encouraged some journalists who descend on Brussels once a month in search of a scoop to see sensations where none exist. But, though the negotiations are now moving, as Mr Heath told the House of Commons on Wednesday, into a second and more active phase, three major problems still have to be faced.

The first is a problem for the British Government—the problem of its own farmers. There are signs that the Six understand the complexity of the Commonwealth problem, but there are no signs whatever that they are ready to grant the quite excessive British demands for protection for British farmers. The Six seem happy to absorb the idea of an annual review of farm incomes into the common agricultural policy, and to make other minor adjustments. But they are not going to grant one of the most efficient farming industries in Europe a national feather bolster in addition to the comfortable common mattress already laid out for Europe as a whole. How, ask the Six, with impeccable logic, can Britain expect the community to lower its prices to help Commonwealth imports and at the same time raise them to protect British farmers?

Lack of time is the second major problem which may have to be faced by the negotiators soon. Though the work is now gathering speed, and three ministerial meetings may be held by the end of June, it may still be necessary in a few weeks' time to find further ways of speeding things up. For every hour of negotiation with the British, the Six need two or three hours to sort things out among themselves. Will it be possible, as time runs short, for the Six to put a full-time team on the job?

The third problem, smouldering beneath the surface of the negotiations, is the uncertain attitude of France. So far the attitude of the French negotiators has been one of reluctant acquiescence. The French are still acting as the backstop of the Six, occupying extreme positions, teasing the British tactically when they get the chance. But last weekend, as before, there was no sign of any rigid French (or for that matter German) obstruction. And the further the negotiations go, the less easy it is for anyone to go back.

Mr Macmillan's visit to Paris on June 2nd could have a limited but real bearing on the negotiations. He and General de Gaulle can hardly be expected to decide the tariff on

The Economist

MAY 17, 1862

SOUND BANKING

¶ It is now possible that any number of persons should combine together to form a bank; it is likewise possible that these persons should stipulate, if they please, only to be liable for a stipulated sum. We may, therefore, inquire what is the best constitution for a bank which is starting *de novo*, which has its rules and limitations to choose. Banking differs from most kinds of business in one important respect. A bank, as such, lives on its credit. Till it is trusted it is nothing; and when it ceases to be trusted it returns to nothing. It is not only essential, therefore, that a bank should do its business well; it is at least equally essential that it should be *thought* to do its business well. It must not only be sound in reality, but must be believed to be sound by those who do business with it. . . . Some apprehension has been entertained that the system of limited liability would encourage speculative management. It is said that directors who risk their whole property will be more careful than those who risk but a portion of it. The experience of the Bank of England proves, however, that this is not necessarily the case. Everybody admits that in its choice of securities the Bank is careful and cautious enough. And, in the long run, a good board of directors, who have a considerable stake in the undertaking, will take adequate precautions—will take much more careful and more effectual precautions than a *bad* board of directors, though all their means (if any) are exposed to loss and ruin. It is necessary that directors should have a large risk in the undertaking; but there is no advantage in making that risk excessive; it may even encourage alarm and *panic*. The system of *un*limited liability is that which fosters the *most* speculative management. It is that system which makes bankers out of men who have nothing to lose—who do not object to subject *all* their property to liability, because they have *no* property—who are as reckless in the use of money as in the mode of obtaining it—who have never known the caution which the very possession of property teaches—who, like the Directors of the Royal British Bank, squander idly what they have acquired improperly. . . .

Australian exports of canned peaches (sliced). But the two men could ensure that the fatal decision to dig in and block the negotiations altogether is never taken by General de Gaulle. If the Prime Minister can persuade the French president to give a word of positive encouragement to his negotiators, it would be better still. The elder statesmen surveying the world scene cannot on their own dispel the Brussels fog. But at least they can make sure that the negotiations do not suddenly run blindly into a large barricade marked "*entrée interdite*."

Surrender at the Docks

THE port employers' surrender which bought off the dock strike was even further out of line with the Government's incomes policy than the nationalised electricity industry's inflationary wage award last November. All dockers have got an extra 3 per cent on piece rates or an extra 4½ per cent on time rates immediately. From August 27th they will also enjoy an extra two hours a week paid at overtime rates, which will increase their earnings from present output by something over another 4 per cent. From the end of next August, therefore, the cost of shipping individual exports will be between 7 and 9 per cent higher than it is now; it is true that the indicated annual rate of inflation in dock wages will be only just over half of this—the last national increase in the docks was in August, 1960—but the figure will still be well in excess of the Government's guiding light.

This degree of wage inflation has been achieved in an industry where it cannot possibly be said that inflation was rendered inevitable by an exorbitant pressure of demand or by an urgent need to recruit more workers. On the contrary, the docks industry is at present working at a more depressed level of activity than for some time past; in Liverpool—the most militant area—an average of 8 per cent of registered dockers were unemployed every day in the first quarter of this year. Most of those who want to check inflation by depressing demand would presumably not wish to go so far as to push unemployment higher than 8 per cent in every industry that has strong trade union organisation right across the country. Nevertheless the weaker spirits in the Government will now cite this docks experience as proof, not that demand deflation and the "threat of unemployment" do not work as methods to check cost inflation, but that the more direct method of encouraging pay pauses and resistance to strikes does not work either. Once again, the pessimists will say, it has been shown that governments are impotent to push back the tide of wage inflation because private employers, at the final pinch, will always give more than the state of the national economy warrants.

If this were true then, given the country's unwillingness to resort to really mass unemployment, it would mean that Britain's main economic problem of avoiding inflation was insoluble. But in fact, in the present case, this complaint about official impotence was quite unproven. The Government's incomes policy was breached in the docks dispute because the Government made no attempt to implement it.

Ministers could have stopped the final large breach of their guiding light (even if not the smaller, initial one) at any time up to Saturday of last week, simply by saying that in their view a further inflationary increase in the employers' offer would be an even worse disaster for the national economy than a full-scale national strike. But the Government never said this; instead, as the battle drew near its crunch, it put up its Minister of Labour in the House of Commons to explain that it had now no sort of incomes policy in this matter. "It is not the duty of the Minister of Labour," said Mr Hare, in flat denial of every brave word spoken about incomes policy before the event, "to comment on the detail of these negotiations." When asked by Mr Gaitskell (who was in an equally irresponsible mood) whether the Government had brought any "pressure to bear on the employers not to make a further offer," Mr Hare said indignantly: "The Government have not brought pressure to bear on the employers. I made that absolutely clear." He went on to say that to require him to answer such questions was "not fair to me" and would "not be helpful to a settlement"; this ignored the fact that an inflationary settlement was precisely the thing that one did not wish a Cabinet minister to be helpful to.

ONE could excuse the Government's retreat from any attempt to use its influence to implement its incomes policy if it had decided, as a definite act of policy, that a dock strike would have such appalling special disadvantages for the economy that this was one case where it was economically better to run away. But no such decision was taken. Mr Hare (supported by the Prime Minister, who flew down from Inverness for the occasion) was merely adamant for indecisiveness, tolerant for drift, peacemaking by hoary and unreflective instinct. When the terms of the settlement were announced Ministers expressed some private shock; while the negotiations proceeded they expressed no public alarm at the prospect of an inflationary settlement.

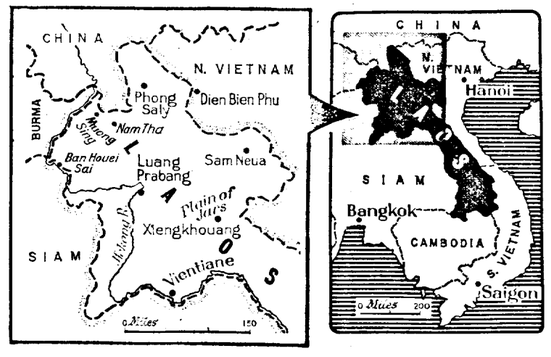
It was therefore not surprising that the port employers should butter up Mr Cousins with soft words before the final meeting at the Ministry of Labour ("he has shown a wise statesmanship in these negotiations"), and that during the meeting Mr Cousins should stand out for and get slightly more than he had originally asked for four days earlier. The Government, after all, had not been stomping the country to say that it would disapprove of any new twist to inflation, which it will now allow to be passed on to export costs. The one sensible remark made after this disaster was Mr Enoch Powell's observation that when the line of incomes policy has been breached in one sector, this makes it all the more necessary to hold the line with redoubled vigour in other sectors; but the logic of that will not appeal to hospital nurses and others, until the Government and the country at last come to realise the folly of constantly encouraging employers to run away from any threat of national strikes—and until it has become invariable Government practice publicly to blazen forth the guiding light during each crucial wage negotiation.

Gunboats to Laos

The American forces despatched towards Laos are meant less to win battles than to influence people

THE movements of the American 7th Fleet and the landing of marines in Siam on Thursday are part of an exercise in "credibility." In an earlier age this kind of operation was known as showing the flag, or sending gunboats. By a visible display of strength, the United States, (with a promise of British support, in good time) is trying to show that it means, if necessary, to use it. The effectiveness of the display depends on whom it is intended to impress.

The answer is various, and so perhaps will the consequences be. There are friends to be encouraged, and other people to be deterred. On May 11th, the State Department's spokesman expressed the view that the Russians had it within their power to halt their communist friends in Laos who, by seizing the town of Nam Tha and two villages in the north and routing the troops of the right-wing Boun Oum government, precipitated the present crisis. The Russians and the Americans agreed in Washington on Tuesday evening that it was necessary to restore the fragile cease-fire in Laos. But the theory that Moscow has only to say the word and the Pathet Lao (Laotian communists) and Viet Cong (Vietnamese communists) will spring to attention is almost certainly an oversimplification.



True, the Russians have been supplying arms to the Pathet Lao since the summer of 1960—very likely with the object of being better placed to control events in Laos. But the Vietnamese communists, who have always led the Pathet Lao from the rear, have ambitions of their own in what used to be French Indochina. It has probably suited President Ho Chi Minh of north Vietnam to have the Russians involved in Laos rather than the Chinese (who are uncomfortably close); but he is capable of turning to the Chinese for arms should the Russians seriously obstruct his plans. He would probably listen, on the other hand, if the Russians told him that it would be inconvenient for the Pathet Lao to take Vientiane or Luang Prabang just yet.

The attitude of the Chinese is therefore crucial. The patient efforts of Mr Averell Harriman, who led the American delegation in the early stages of the Geneva conference on Laos and who is now in charge of Far Eastern affairs in the State Department, have apparently convinced the Russians that the Americans are sincere in their support for a policy of neutrality for Laos. There is no evidence, however, that the Chinese have been convinced. Unlike the Russians, the Chinese have no interest in keeping relations with the Americans tolerably civilised. The Chinese did in the end agree with the Americans and everybody else at the Geneva conference on Laos last December on the essentials of a neutralised Laos. But the apple-cart on the doorstep is a tempting thing to kick at every now and then.

In the end, the Chinese will act as their self-interest dictates. Though Peking may not regard a general reduction of tensions as part of its interests, it is clearly alive to the advantage of getting the Americans out of Laos. The plan for a neutral Laos seems the best way to get the Americans out, if it can be made to work. So long as it retains the slightest chance of succeeding, it will not be in the interests of China to sabotage the tentative Geneva agreements; indeed, egging the Pathet Lao on beyond the breaking point of American patience would be the best way of ensuring direct American intervention in Laos—which it is hard to believe the Chinese really want. However confident they might be of outmatching the Americans in another "Korea" under Laotian conditions, China is hardly in the shape for a major war just now.

The communist leaders of north Vietnam, next door to Laos, have a slightly different viewpoint. A Pathet Lao victory in Laos would be a major stage in the fulfilment of an old ambition of theirs, and perhaps a guarantee of long-term victory in south Vietnam. Complete communist control of the Laotian countryside would allow a major build-up of Vietnamese communist forces designed to bring about the final "liberation" of Vietnam south of the dividing line. North Vietnam, however, despite the tested prowess of its army, is not a great power and cannot, in the last resort, ignore the counsels of its larger brothers. Despite Sino-Soviet differences, the Chinese, as well as the Russians, probably agree that the prospect of an American landing at Hanoi, the capital of north Vietnam (which would be a more logical place to land than somewhere in the trackless jungle of Laos), would be too high a price to pay for victories on the periphery of north Vietnam. If a landing at Hanoi is the "last resort" the Americans are talking about, then the Pathet Lao may yet be stopped in their tracks.

AMERICA'S smaller allies are proving as troublesome as Russia's; the smaller they are, the more troublesome. If the movements of the 7th Fleet are designed to impress the communist capitals, their twin purpose is surely to reassure the Siamese and south Vietnamese and restore some sense to Prince Boun Oum's government in Vientiane. The Siamese have been bitterly disappointed at the failure of Seato (the south-east Asia treaty organisation) to intervene in the successive Laotian crises, though the organisation met in emergency session in Bangkok on Wednesday. Now Marshal Sarit seems resigned, if not to the need for a neutral Laos, at least to the need to stop inciting his nephew General Phoumi Nosavan, the "strong man" of the right-wing government in Laos, to sabotage a Laotian settlement. The presence

of American marines would be a fair payment for the marshal's restraint.

The right-wing Vietnamese and Laotians are more difficult to satisfy. President Ngo Dinh Diem (as a special correspondent points out on page 683) is in a grave situation in the face of the Viet Cong offensive, and it could become desperate if the communists really controlled Laos. He will therefore welcome any sign of deeper American involvement in Laos.

The Laotian government led by Prince Boun Oum is the most troublesome of all. The behaviour of the prince and General Phoumi Nosavan is consistent only with a desire to wreck the Geneva formula and embroil the United States in a shooting war designed to make Laos safe for the general and his friends. After the rout of his forces, and under American pressure, he seems, however, to have agreed to "allow" Prince Souvanna, the neutralist leader, to be his own minister of defence and the interior in a coalition government of right, left and centre. Until such a coalition government has been formed the draft Laotian settlement cannot be applied. General Phoumi may be encouraged to let the right-wing group join a coalition by the sight of American marines lined up on the Siamese bank of the Mekong, and casting a stern if fatherly eye on him.

LAOS probably sounds far worse than it really is. The alternative to neutrality, a formal partition, would be impractical. The present situation is worrying, but not much worse than it has been, and it can be lived with for a time yet. There is nothing new in the rout of the right-wing troops, and their defeat is counterbalanced by the successes of the tribal allies of the government, Meos in the north, Khas in the south, who control large stretches of countryside behind the communist lines. In fact, and in an untidy jig-saw way, Laos is already partitioned.

If nerves remain steady, the solution of a neutral Laos may even at this late stage come into focus again. There is, after all, no overriding need for it to be applied by the present set of right-wing leaders, who were backed by the State Department in Mr Dulles's day because of their intransigence. There may be more co-operative Laotian anti-communists, such as the former premier, Mr Phoui Sananikone, waiting in the wings.

Slide From Conservative

Last week's swing in the local elections went from Tory to Liberal when a Liberal fought the seat, from Tory to Labour when no Liberal appeared

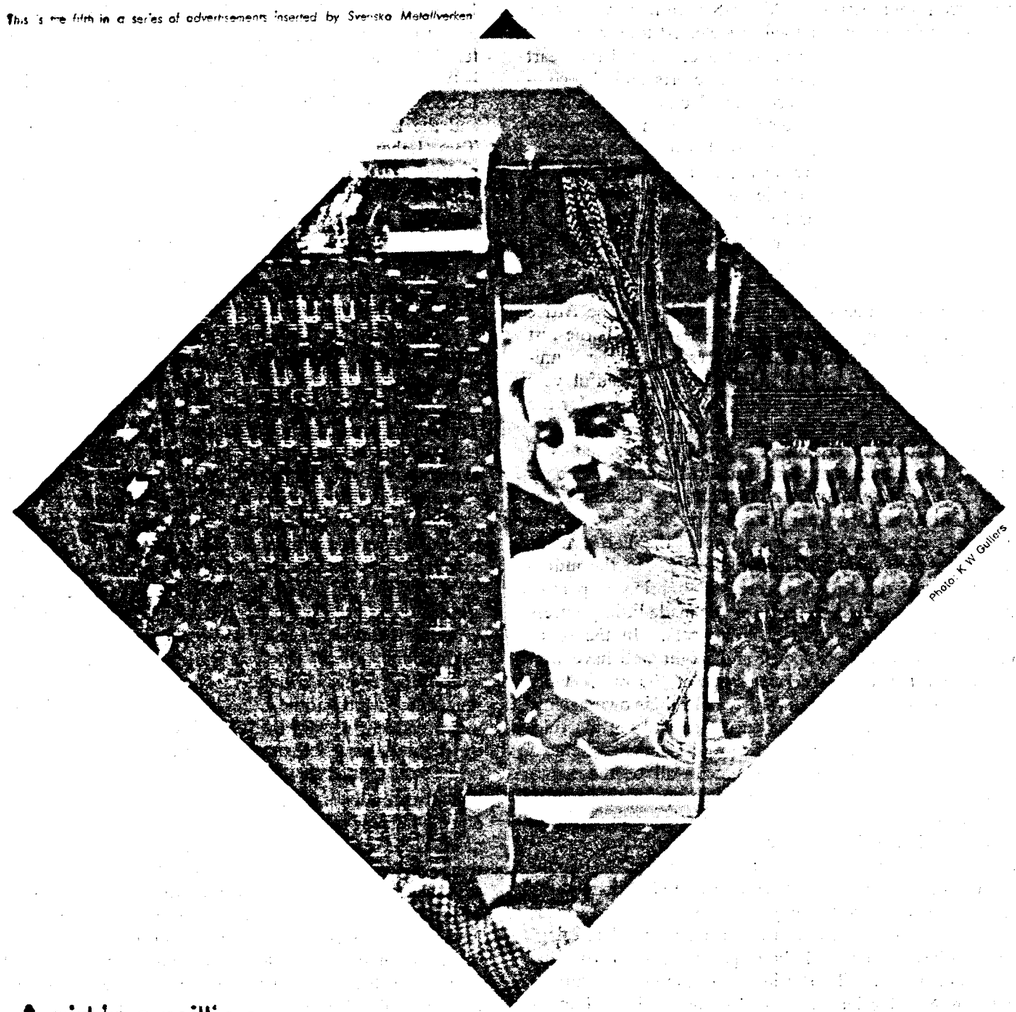
RIGHTLY or wrongly the electorate nowadays treats local elections as a plebiscite on the Government. The result of the plebiscite in England and Wales last week was that the Conservatives suffered their worst drubbing ever, and the Liberals put up by far their best performance. Labour did not return quite to its peak during the last Parliament, nor to its previous peaks in 1945 and 1952; to that extent it could be said to have fallen below the triumphant bogey it had set in local elections in Scotland the week before. But there are signs that Labour did better last week than first analysis of the bare figures might suggest; this poll has considerably increased the possibility that Mr Gaitskell may be prime minister after the next general election, and not just because of Liberal interventions either.

The best first places in which to assess the figures are in the boroughs outside London, where one-third of the 10,000 councillors are re-elected each year; most wards have three councillors, so that the same electors vote in about 3,300 wards each year, which makes it possible to compare these borough results, not only with 1959 (when most of the year's retiring councillors were elected), but also with last year—and, perhaps most interestingly, with the equivalent Torrington period of anti-Conservative swing in the middle of the last Parliament. In 1958, at Torrington-time, the Conservatives held 1,300 of these annually contested borough seats; a year ago they held 1,500; last Thursday they fell to only a thousand, for the first time since these contests started to be fought on mainly party lines. Labour won or held 1,541 seats last week; this was 200 more than last year but 60 fewer than at Torrington-time in 1958. The Liberals, who had elected only 120 provincial borough councillors in 1958 and 200 in 1961, last week elected a record 456.

The Liberals' sensational advance was made overwhelmingly in Tory constituencies. In normally socialist towns the Liberals won only about one out of twenty of the seats, and in the marginal boroughs only about one out of eight—Labour outnumbering them by 14 to 1 in the first group and by 7 to 2 in the second. But in towns where Labour is normally in, say, a 60-40 minority to the Tories, Labour held on to about a third of the seats this time and the Liberals proceeded to win another quarter of them—so that the Conservatives were reduced to a minority in many of their own previously safe seats. And in places so non-political (or so solidly Tory) that Labour has never made any headway at all, the Liberals marked up even more astonishing successes. Bexley and Buxton, Sale and Salisbury, Worcester and Weston-super-Mare returned only a single Conservative councillor each (out of between eight and twelve wards contested in each place); these defecting Tory boroughs, be it noted, include the parliamentary seats of Mr Erroll and Mr Heath. Exactly the same thing—it is surprising that the newspapers did not make more of this—happened in the prime minister's own parliamentary constituency of Bromley; here the Conservatives held on to only one ward out of seven, while Labour (with two seats, one a gain), the Liberals (with three gains from Tory) and an Independent (who unseated a Tory) took the rest. If there is no such thing as a personal vote for a candidate, Mr Macmillan might now theoretically be expected to lose his own seat at the next general election. And in Aldershot, Maidenhead and Kingston-upon-Thames, the Tories actually lost every single ward; it looks as if Mr Boyd-Carpenter may very well lose Kingston to a Liberal next time.

The balance of Liberal representation on local councils has therefore been transformed. Most Liberal councillors now come from southeast of the Wash-Severn line, where only a quarter of their far smaller total was elected four years ago. Their especial triumphs came in what once seemed the heart of Conservative England: the seaside resorts and the commuter suburbs. Clearly the recent by-elections at Blackpool and Orpington were not isolated freaks. From Scarborough to Torquay, by way of Southend and Bournemouth, the seaside landladies last week were on the march; there are now over a dozen seaside constituencies where the Liberals have a serious chance of winning parliamentary seats. But far more dangerous for the Government is the revolt of suburbia. At the time of Torrington the Liberals elected exactly eight councillors in the whole of outer London; last week they elected a hundred. The suburbs began to destroy the Attlee government in 1950 by swinging three times as far as the rest of Britain; their defection had been presaged in the municipal elections of 1947 and in Labour's most dreadful year of 1949; the same writing now seems to be appearing for the Conservatives on those trim commuters' walls.

Although Labour's losses were mostly to Liberals, the Conservatives lost seven times as many seats to Liberals as Labour did. But it does not follow that without the Liberal surge the Conservatives would have had a comfortable victory against Labour; on the contrary, there are signs that the Tories might then have lost more seats to Labour directly. In the industrial north, where the Liberals were still fighting as part of an anti-socialist combination, the Liberals made little progress and Labour did as well as in its best years. In the south Labour shared in the Tory spoils, and might well have won more seats if the Liberals had been out of the race. Only in the Midlands did the Conservatives hold their own against both rivals; but this area was the exception and not the rule. In the 28 metropolitan boroughs of central London—the area of the doomed London County Council—all of the 1,350 councillors (not just a third of them) came up for re-election. Here the Liberals made little impact, electing only a dozen councillors to Labour's 923 and the Conservatives' 400—again the worst Tory year since the "forty-five." Labour won both Wandsworth (where Tory Central Office blamed the Liberals) and St Pancras (the only borough where the Liberals fielded no candidates); here, in the former home of red flags and rent strikes, a purged Labour party captured 19 seats and control of the council. But in the neighbouring terminus boroughs of St Marylebone and Paddington local Labour parties possessing unpurged extremists continue, alone in London, to stagnate at Labour's previous disaster level.



BUT, aside from the areas where Labour has such little local problems, there was one clear new trend last week which must gladden Mr Gaitskell's heart. To a surprising extent the Conservative defector, in default of a Liberal, seems to have voted Labour last week—especially in the south. So far from Labour winning most Tory seats where the Liberals were strongest (as one would expect if the Tory defeat was primarily due to Liberal intervention) the two opposition parties seem to have operated as alternative repositories of anti-government feeling. Liberals were the gainers from it in Eastbourne, Labour in Hastings; Liberals in Bury, Labour in Radcliffe; Liberals in Hertford, Labour in St Albans; Liberals in Ipswich, Labour in Norwich; Liberals in Richmond, Labour in Surbiton. In those county boroughs where Labour maintained its strength of 1956-58 the average Liberal gain was less than one seat per council; in those where Labour fell below its previous peak, the average Liberal gain was between 2 and 3 seats (and the difference persisted in pro-Labour and anti-Labour towns alike). In the South Midlands and the Lancashire textile towns, on Mersey and Tyne and Tees, Labour did about as well as in 1956-58; here a high proportion of the Tory losses went to Labour. In outer London (especially Essex), in Cheshire and the Manchester area, and in the Midlands Labour dropped badly behind its "Torrington" figure of four years ago; apart from the Midlands (where the Conservatives really did rather well), these were precisely the regions where the Liberals scooped up the spilt Conservative cream.

Detailed voting figures give no more comfort to the Tory Central Office. There were large Conservative defections (usually over 20 per cent), not only where Liberal candidates appeared in 1962, but also where they had already stood in 1961—and equally where there was a straight Conservative-Labour fight both times. The Labour vote went up in most places, often sufficiently to have won seats even if no Conservative voters had defaulted since last year. The Liberal poll jumped everywhere in the south, but often a new Liberal candidate brought a much higher turnout rather than simply siphoned Tory voters away. In Watford, for instance, (where Labour won three seats and gained control) Conservative losses seem to have been only marginally affected by Liberal intervention. Nine wards had three-cornered fights in both years; in these the Liberal vote was up by 52 per cent, the Labour vote up by 27 per cent and the Conservatives down by 9 per cent. One ward had no Liberal in either year; Labour's vote was 6 per cent up and the Tories' 34 per cent down. In one ward the Liberal fell out in 1962; and here Labour's vote rose 24 per cent while the Conservatives' rose only 10 per cent.

The naturally jubilant Liberals should perhaps take heed of one warning sign: they have done best where they were newest and least known—as they did at the last general election. A year ago they were more successful in towns where they were unrepresented than in those where they already had some strength; this year their biggest advances have come in their areas of greatest weakness, and they actually lost seats in old strongholds like Rochdale and Huddersfield. Moreover, the Liberal tendency to score successes where they are least profitable has hitherto applied over time as well as over space. Only once recently have they elected fewer borough councillors than the year before: this was in 1959, when they returned only 80 against 120 in 1958. Tories still hope that a general election will again weaken the Liberal appeal.

History will tell whether this hope is to be confounded. It is at least possible that recent Liberal advances may convince more voters that a Liberal vote will not in future be thrown away, especially now that in some towns (like Oxford and Bolton) Liberal advances have brought them to a stage where all three main parties are fighting neck and neck. Plainly the Liberals are now at a threshold. If they fall back from it there were some faint signs last week—because of the surprising swing to Labour where no Liberal appeared—that the Conservatives might profit rather less from any eventual Liberal ebb than both parties seem to expect. But if the Liberals cross that threshold the omens for the Conservatives will plainly be grimmer still.

This is the fifth in a series of advertisements inserted by Svenska Metallverken

A girl in a million – a million nickel silver springs in a Swedish-built L.M. Ericsson telephone exchange. Each spring is made to handle up to 35,000 contact operations a day for 40 years. If one spring fails an important call may not go through. But this rarely happens. The L.M. Ericsson equipment has won world renown for reliability built on such things as the nickel silver plate supplied by Svenska Metallverken for these contact springs. Yet another example where Svenska Metallverken has helped make a good product better.

NOTES OF THE WEEK

FRANCE

The Dead and the Quick

No longer a general, M. Salan did his best on Wednesday at his trial to make himself appear an honourable martyr of the cause of French Algeria; but he already seems like a ghost. In spite of the great difficulties still confronting the government in Algeria, the French people have, with surprising quickness, decided that the Algerian problem is dead. They have taken up other disputes—such as strikes.

The government of M. Pompidou has just been hit by a storm that has come at least four months before it was expected. Instead of waiting for the talks due to take place between government, employers and unions in September on the subject of sharing out the national income—and thus giving M. Pompidou time to familiarise himself with the problem—the unions have acted now, and all at once. On Monday workers on the Paris bus and underground systems held a lightning strike; on Tuesday the entire railway system of France was paralysed by a 24-hour strike of the railwaymen; another on Wednesday threw the post and telephone system into disarray. For the weekend the country is promised a strike among the gas and electricity workers, and next Friday, May 25th, a twenty-four hour strike of civil servants.

All these strikes have a common origin. The foundation stone of the Fifth Republic's economic policy has been the rigid control over wages and prices exercised by the ministry of finance. The sacrifice involved was acceptable to most workers so long as the national emergency of the Algerian war lasted. Now the war is over—but, in the government's view, the economic control is as necessary as ever. Such is not the view of the government's employees, and it is state employees, in every case, who have resorted to the strike weapon. As in some other countries, private industry is by no means as stubborn in defence of a pay pause as perhaps it ought to be, and so its employees do better in the struggle to get bigger wage packets and shorter working-hours.

MONTGOMERY

To Liberal Everywhere

The Liberals are naturally cock-a-hoop over their triumph in the Montgomeryshire by-election, where they have followed up their local election successes by nearly trebling the late Mr Clement Davies's majority. The other people who have been vindicated by this result are those dreary statisticians who insist that Britain is very much one homogeneous country. After all the talk of local issues, of very special cases, and of candidates' personal local votes, this remote rural fastness of Wales seems to have followed something very like the average national swing. In a fantastically high (85 per cent) turn-out 9.2 per cent more of the polling electorate than in 1959 voted Liberal, and 9.4 per cent less voted Conservative. The newly appearing Welsh Nationalist picked up only 6.2 per cent of the poll, and Labour's share dropped by 6 per cent exactly.

Montgomery's value to Mr Grimond is mainly a negative one. Had the Liberals lost the seat it would have been a severe psychological blow, and given great force to the argument that Liberals are much better liked as picturesque novelties than as Members of Parliament. The result makes the Liberal revival look more real and by that very fact may help to make it so. It will certainly encourage Liberals to make a furious effort at both West Derbyshire (where the Tories in 1959 had a majority of 22.5 per cent over Labour in a straight fight) and West Middlesbrough (Tories' 1959 majority 19.4 per cent in a straight fight). It will be another remarkable achievement if they win either of these, but they may well make both of them a desperately close run thing between all three parties.

NURSES' PAY

2½ Per Cent Plus?

For all the official disavowals of responsibility for the terms of the settlement in the docks, the dockers' victory gave added punch to Labour's attack in Monday's debate on nurses' pay. It also clearly worried the Government's own supporters, who could perhaps see the consistent logic of the argument that as dockers had taken more of the national cake other people must now get less—but did not find it politically attractive. Yet the Minister of Health and the Financial Secretary to the Treasury, who wound up the debate, managed to stand their ground.

So far as the nurses are concerned, they have been offered new negotiations in the Whitley council immediately, and these negotiations will include "a constructive review of the pay structure of the profession." But at present they will not receive more than the pay increase of 2½ per cent already offered—and scornfully rejected. Any additional increases arising from the proposed review will be implemented in stages in accordance with the Government's incomes policy. Were, however, the nurses to take their claim to arbitration, Sir Edward

After the dockers

Boyle confirmed that the Government would be bound by the industrial court's findings, even if it awarded the nurses more than 2½ per cent immediately.

In the long run, trained nurses would surely benefit much more from a radical revision of grades and salaries than from an arbitration award. Too much was talked in the debate about the small take-home pay of a student nurse. In other countries, such as America, student nurses do not get a settled training allowance at all, but have to pay for their training like any other students—although, admittedly, they can then expect to be treated more like students and less like regimented unskilled labour. By any real international comparison the underpaid nurses in Britain are the ward sisters and staff nurses. There can be little doubt that the hospital service should come to depend much more on a larger body of fully-trained staff—many of them married women working part-time—and less and less on misuse of the work of a fluctuating mass of student nurses, many of whom fail to complete their training. Anything the Whitley council review can do to encourage this trend will be of immense long-term benefit to the nursing profession and to the hospitals.

CONGO

Black Belgians

QUIETLY, the centre of Congolese gravity has returned to Brussels. On April 19th Mr Tshombe left off talking in Leopoldville and returned, gravely displeased, to Katanga. Since then he has daily been just about to leave for Leopoldville again. So far he has not quite made it, although on Monday Elisabethville radio said he would return to resume his talks with Mr Adoula, the prime minister of the Congo, this Friday, May 18th. Meanwhile, Mr Tshombe's regime has seemed sure enough of itself to release political prisoners and arrange, gentleman-like, with the United Nations for the repatriation of 40,000 Baluba tribesmen from their refugee camp in Elisabethville to their homes in the north. But while Mr Tshombe and Mr Adoula remain apart, the possibilities for progress must be looked for in Belgium.

On May 1st the Belgians and the central-government Congolese began their talks about the amount of money each side thinks the other owes it; World Bank officials are acting as referees. The Belgians want the Congolese to take over the huge national debt of the former Belgian Congo; the Congolese want the portfolio of shares (and dividends, plus tax) that the Congo inherited at the time of independence to be handed over. Simultaneously, a representative of the United Nations is talking to the Belgian government, and to the Union Minière company, about sending Belgian technicians into the Congo, and about diverting Union Minière payments from Mr Tshombe's treasury to Leopoldville. The Belgians and the UN also have ideas about how much each owes the other. So far, it is enough that the talks have started; a rapprochement between Katanga and the rest of the Congo may depend on what is being arranged now in Brussels. The ability to make it last may depend upon how many Belgians, approved by the Congo government, can be found to return and help set the Congo machinery going again.

RHODESIA & NYASALAND

Rab's Blooding

MR BUTLER was greeted on his first Monday in Salisbury with a partly successful strike, riots, shooting by police on Africans and, as a result, two African deaths and many more injuries. The Home Secretary was also able to learn at first hand the meaning of the good old Rhodesian principle that "there are plenty more where they came from"—several thousand strikers were summarily dismissed, although many employers later relented and took some back. None of this makes life any easier for those who want Southern Rhodesia's Africans to show restraint. Yet Monday's strike was partly the result of an ideological squabble among the African leaders over which international organisation Southern Rhodesia's black workers should affiliate themselves to. In spite of the toughness shown by Sir Edgar Whitehead's government, the African politicians would do better to talk to Mr Butler than to boycott him; they would make better progress towards winning power peacefully by fighting Sir Edgar's elections than by boycotting them. And all Southern Rhodesian Africans might be better off if their leaders concentrated, at least until the day of power, on internal rather than international politics.

On Tuesday Mr Butler left for Nyasaland where, by contrast with white-governed Southern Rhodesia, the new black government under Dr Banda radiates peace, calm, and sensible statesmanship. In his next port of call, Northern Rhodesia, where he was due on Friday, Mr Butler faces a continuing strike by the Africans in the Copperbelt mines, an election campaign, and racial emotions as highly inflamed as Southern Rhodesia's. This week has given him plenty to see, plenty to tell the British Government about when he returns, and plenty to explain away next time the United Nations committee on colonialism returns to its favourite hunting-ground.

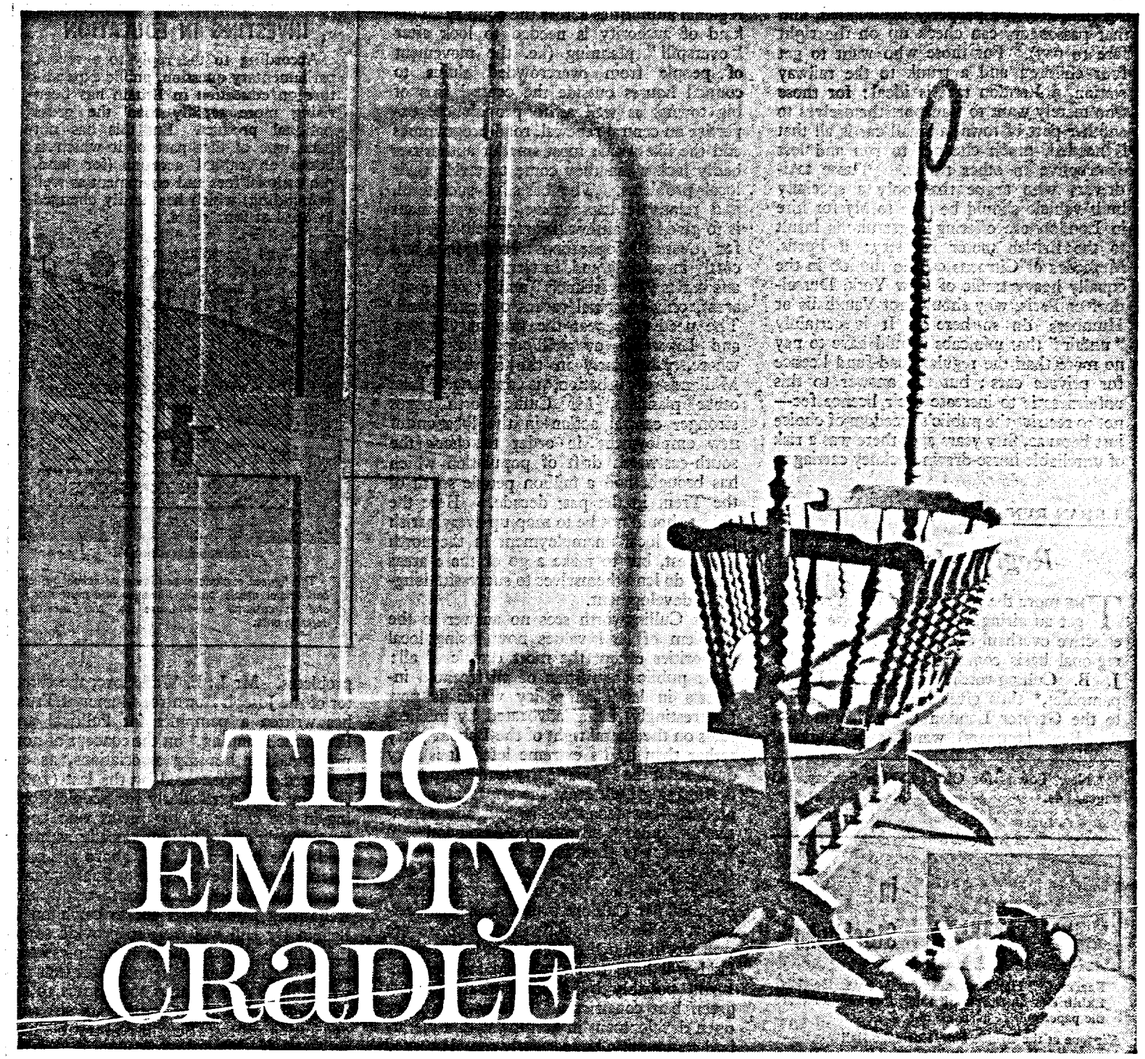
RUMANIA

Back to the Furrow

RUMANIA, whose past efforts at collectivisation have lagged a good way behind those of the rest of the Soviet block (except Poland), has suddenly become an exponent of what might be called *avant garde* methods of communist agricultural administration. The completion of collectivisation was announced in mid-March. Officially, it had not been planned to finish the business before 1965, but the stepping-up of the collectivisation campaign over the past year, and particularly during the past three months, made it unlikely that the remaining private farmers (and those in the loosely-knit agricultural associations) would be able to enjoy their independence much longer.

A special session of the Rumanian national assembly met on April 26th to celebrate the completion of the process, and to approve far-reaching changes in the administration of farming, which are obviously largely inspired by the recent Soviet changes. The "overwhelming majority" (according to the party leader, Mr Gheorghiu-Dej) of the agricultural specialists are to be uprooted from their comfortable town offices and attached to the collective and state farms. The ministry of agriculture is to be abolished and replaced by a Higher Agricultural Council of some 800 to 1,000 members (all specialists in farming) with an executive council, probably with fifteen to twenty-five members. On May 8th it was announced that Mr Dalea, a secretary of the party central committee, had been made chairman of the new council. He will have a seat in the cabinet and will—contrary to the usual present practice—retain his party post. He is young, experienced in agricultural matters and reputed to be tough and vigorous.

It looks as if the Rumanian regime means to try to avoid the mistakes which its neighbours, plunging more hastily into collectivisation, have all too obviously made. Campaigns to drive the peasants into collectives are usually followed by a fall in production. In Rumania, where until lately collectivisation has been pursued with circumspection, grain production has still failed, year after year, to reach its scheduled target. The regime will naturally want to avoid further setbacks to increased production; the recent changes evidently represent a determined effort to make collectivisation work from the beginning.



MINICABS

Maximistake

THE "minicab war," in which drivers of some traditional London taxis physically assaulted their new rivals in small radio-controlled hire cars, has died away: now the legislators are getting around to looking at the problem that gave rise to the hostilities—and are doing so in the worst possible way. Under an act of 1869, in the heyday of the hansom, taxis have to satisfy stringent police specifications before they can ply for hire, and their drivers must both have a clean record and prove that they have an encyclopædic knowledge of the streets of London. In exchange the number of cabs and of drivers is limited by law. Minicabs, which do not ply for hire in the sense of picking up passengers on hail, do not suffer from any such restrictions. The aim of a bill presented on Wednesday in the Commons by Sir Hugh Lucas-Tooth, and mistakenly granted a second reading, is to compensate for this "unfairness" to taxis by restricting the freedom of action of hire cars which are hailed by telephone or radio. But this, in turn, would be even more unfair to the public.

The verdict of Londoners on the new service has been to adopt the proprietary name "minicab" into the language, as "macintosh" was once so incorporated, and (although the hopes of some of the original promoters have been disappointed) to keep up a regular demand for them. But they have not swept the taxis off the streets: the taximen's one real complaint is that it is now harder to find fares back into town from the fringe areas where people automatically ring for a minicab (that is, in just the areas where the taxi service has always been inadequate).

The right answer should be to do away with most of the outdated restrictions on conventional taxis, while subjecting the small hire cars to exactly the same rules (see-

Forty years ago infant mortality figures were appalling. More than 8 out of every 100 babies died in their first year of life. Worst of all, this waste of human life was accepted as "normal". The empty cradle was a common tragedy.

But not everyone accepted it. Men of medicine worked unceasingly to reduce the perils of birth and infancy. The laboratories of the great private-enterprise companies such as Cyanamid joined the battle. Millions of pounds, millions of hours were devoted to the search for drugs to save lives. The antibiotics which have been developed by Cyanamid's Lederle Laboratories are now prescribed by doctors all over the world, to reduce the hazards that once robbed us of so many young lives.

Today it's a happier picture. Infant mortality has been cut by 75%. This year in Britain alone, some 34,000 babies will live who would have died under 1935 conditions, before the discovery of sulphonamides. Today, 98 times out of a 100, a young mother can confidently expect to bear and raise a happy, healthy baby. Now the "normal" thing is—"mother and baby doing well".

They'll do better yet. Research goes on. Cyanamid will invest over £11 million this year in research of all kinds. Research to find drugs that will conquer human ills; to find new and better ways to produce more food: to find better ways to make life happier and more abundant.

In this and in a thousand other ways

CYANAMID

RESEARCH SERVES BRITAIN

CYANAMID OF GREAT BRITAIN LTD., BUSH HOUSE, LONDON, W.C.2.

ing that they are properly maintained, and that passengers can check up on the right fare to pay). For those who want to get four children and a trunk to the railway station, a London taxi is ideal: for those who merely want to transport themselves to another part of town, a small car is all that is needed, much cheaper to run and less obstructive to other traffic. Those taxi-drivers who argue that only a specially built vehicle should be able to ply for hire in London are offering a gratuitous insult to the British motor industry: if Fords, Mercedes or Citroens can do the job in the equally heavy traffic of New York, Dusseldorf or Paris, why should not Vauxhalls or Humbers do so here? It is certainly "unfair" that minicabs should have to pay no more than the regular road-fund licence for private cars; but the answer to this unfairness is to increase their licence fee—not to restrict the public's freedom of choice just because, fifty years ago, there was a risk of unreliable horse-drawn hackney carriages.

URBAN RENEWAL

Regional Efforts

THE more the problems of urban renewal get an airing, the more the case for an effective overhaul of local government on a regional basis comes to be accepted. Mr J. B. Cullingworth, in a new Fabian pamphlet,* thus gives a qualified welcome to the Greater London Council, and (like the Bow groupers) wants a network of regional authorities across the country. This kind of authority is needed to look after "overspill" planning (i.e. the movement of people from overcrowded slums to council houses outside the central area of big towns) as well as to provide the expertise on central renewal, road programmes and the like which most smaller authorities badly lack when they come to tackle their local problems. The basis of successful, and relatively inexpensive, redevelopment is to give local authorities more elbow room for overspill operations: high flats are costly in subsidy and, in terms of necessary ancillaries like schools and recreational areas, only marginal savers of actual land. The need to repeat the present Glasgow and Liverpool overspill operations elsewhere, particularly in the crowded west Midlands conurbation, is pressing. Like other planners, Mr Cullingworth urges stronger central action in the location of new employment in order to check the south-eastwards drift of population which has brought half a million people south of the Trent in the past decade. Here the object should not be to mop up every parish patch of local unemployment in the north and west, but to make a go of those areas which do lend themselves to successful long-term development.

Mr Cullingworth sees no answer to the problem of land values now facing local authorities except the most drastic of all: "the public acquisition of all freehold interests in land," a policy which is now (interestingly) being advocated by intellectuals on the liberal right of the Labour party rather than by its extreme left. It is very doubtful if the Labour party leadership (now disengaging itself from the apparently more modest—but economically and administratively quite unworkable—proposal in "Signposts to the Sixties" to purchase all development freeholds) will swallow this political vote-loser of an idea; this makes some of Mr Cullingworth's thesis unnecessarily academic. But two other points are well worth following. The first is that more land will have to be released for development, possibly by a reappraisal of some green belt constrictions to allow for more open development in keeping with a motorised community, but certainly complemented by more new towns, in which private enterprise can play a part. Secondly, while private developers are generally keen to revamp town centres, the clearance of the "twilight" residential areas in the inner ring carries little or no prospect of profit under existing rental policies. Mr Cullingworth is not a great advocate of free market rents, but he would like to delegate responsibility to redevelopment agencies on the model of the new town corporations.

Make New . . .

TWO other facets of the problem of rehousing the people have been in the news this week, and both really raise the same (apparently politically unmentionable) problems. Mr L. E. Waddilove, the director of the Joseph Rowntree Memorial Trust, has written a pamphlet for Political and Economic Planning,* on the concept of non-profit-making housing associations, as encouraged and sponsored by the last (1961) Housing Act: particularly for people working in the centre of big towns who could increasingly afford to rent something better (and more convenient and, above all, more quickly obtainable) than the ordinary council house. Mr Waddilove argues forcefully that if housing associations are to catch on in Britain Dr Hill will have to provide something more than his present pump-priming grant of £25 million; he estimates that this will add no more than 7,000 houses to the national stock without starting up any self-generating process. But the real trouble here is surely that few people of great organising ability are going to go to the considerable trouble of starting, arranging to attract capital for, and running dynamic housing associations if associations that qualify for any Government aid have to be strictly non-profit-making bodies. At one time it seemed just possible that non-profit-making housing associations might be like non-profit-making bingo; some bright commercial sparks might find that there was some gravy in them, to be gleaned from strictly "ancillary" fees of course. But now it looks as if this will not happen; so the whole housing association idea—which could be a boon to many badly housed people, and a money-saver to the Government in the end—is probably simply not going to work.

* Housing Associations. P.E.P. 39 pages. 4s.

INVESTING IN EDUCATION

According to the reply to a recent parliamentary question, public expenditure on education in Britain has been rising more rapidly than the gross national product. But this has not been true of that part of it which is borne on capital account (for land, professional fees and equipment as well as building) which has hardly changed in the last four years.

The figures exclude expenditure on school milk and school meals, public libraries and museums, and educational expenditure by the service departments.

. . . Or Mend?

THE same considerations apply to the renewed efforts which the Ministry of Housing is making to find more landlords who are willing (and who have willing tenants) to take advantage of its scheme of improvement grants: the scheme under which the Government is willing to pay half the cost (up to £310) of improving the vast store of obsolescent and bath-less houses (probably between 2 and 3 million of them) which could be given proper plumbing and put into good repair, but which are now in danger of falling into slum-like decay. The number of house owners receiving improvement grants in this way rose from 30,000 in 1958 to over 125,000 in 1960, but only one-fifth of these were for privately rented houses.

Officialdom apparently believes that the biggest scope for action is at the local level in street-by-street campaigns, in which the opportunity to receive grants and the availability of local authority services are impressed on owners and tenants alike. But a real trouble here is that the landlord is allowed to recoup his outlay by raising the annual rent only by an amount equal to 12½ per cent of his share of the capital cost; if he borrows the money at 6½ per cent, and then pays the standard rate of income tax on the increased receipt of rent, he (or she) is left with a net recoupment of about 3¾ per cent—so that, if he has to bear any increased maintenance charges at all, he may recoup his capital only after twenty years (by which time the improved asset installed in his property will often have worn out). Most of the (far too few) improvements to rented property nowadays take place without benefit of any Government grant, just after the property concerned has become rent-decontrolled because the sitting tenant has moved out. The real way to tackle the problem of obsolescent old rented tenement accommodation is by full-scale rent decontrol—whether the property remains in private hands or has been bought by some redevelopment agency; but politicians hate the thought of that.

EGYPT AND SYRIA

Bull among the China

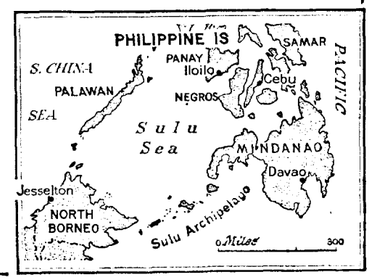
GINGERLY, the politicians in Damascus have been sidling round the supremely delicate question of Syria's future relations with the United Arab Republic. Whether it likes it or not, the new government is committed to the pledge that the army officers made at Homs on April 1st. Wisely, as it now seems, the Homs agreement has never been published, but it surely included some sort of promise to hold a referendum on union with other Arab countries, and specifically with the UAR. On May 13th the prime minister, Dr Bashir Azmeh, announced that a committee had been formed to study the question of Arab unity, and to devise a plan on ways and conditions of carrying it out. The members include several notables, among them Mr Michel Aflaq, a Ba'athist leader who still gives his support to a close link with the UAR, and Mr Akram Haurani, a Ba'athist who has been proclaiming his opposition to any such project.

With his attack on President Nasser's "dictatorial and fascist system," Mr Haurani has blasted his way through the government's tact. The former vice-president of the UAR now feels obliged to reveal the secrets that worried him during his time in office. The Cairo press, which has found Mr Haurani guilty of opportunism and personal ambition, seems, for once, to be not too wide of the mark. His outspoken tactics may signal his re-emergence as a prominent figure in Syrian politics.

President Nasser has responded with a forbearance lacking in most of those who work for him. In an interview with a Lebanese newspaper on May 13th, the president warmly praised the Syrian army and evinced benevolent goodwill towards the Ba'ath, although, he said, certain of its leaders had blundered. Direct relations between Cairo and Damascus could not be resumed, he said, until the Syrian people expressed their free will, and the Arab League was allowed to investigate, among other things, the economic consequences of the collapse of the union.

The Syrian people are unlikely to be greatly impressed by the hero's welcome that Cairo has given Colonel Sarraj, who escaped last week from the Mezze prison in Damascus. Colonel Sarraj fell from Egyptian favour just before the Syrian secession in September, and harsh words have been said about him in Cairo. But memories have proved usefully short. In Syria, probably, the memory of the colonel's security system will take longer to die.

NORTH BORNEO



Voice from the Past

THE Philippine claim to British North Borneo, which as yet has not been officially stated, is one of those recondite issues that delight international lawyers. It would be of little interest to anybody else but for the fact that, if conceded, the claim might deal a death blow to the proposed Greater Malaysia project, which is designed to link the three British territories of Borneo (North Borneo, Sarawak and Brunei) with Singapore and the Malayan federation. The importance of the Greater Malaysia project is so great, as a potential contribution to the stability of south-east Asia as a whole, that ordinary people, including politicians, will have to take a closer look.

Though of long standing, the Philippine claim was dormant until earlier this year, when articles in the Manila press drew attention to it. In March, the Philippine House of Representatives passed a resolution urging the government to take steps to "recover" North Borneo. This probably embarrassed President Macapagal, who had never shown any enthusiasm for the claim before coming to office at the end of last year. Vice-President Pelaez, however, is known to be in favour of pressing the claim, and if it ever is pressed it is he who will do the pressing, as he is also the foreign minister.

As a talking point, the North Borneo controversy has its attractions. It is redolent of a romantic past when countries changed hands like used cars. At the beginning of the 18th century the Sultan of Sulu had sovereign rights over much of North Borneo, but in 1764 he ceded it to the East India Company. In 1851, however, the Sultan acknowledged Spanish sovereignty over Sulu and its dependencies, without saying whether these included North Borneo. Then in 1878 Baron de Overbeck, the Austrian consul-general in Hongkong, with his British partner Alfred Dent, acquired North Borneo from the Sultan (although the East India Company's title had never been rescinded). The British North Borneo Company (Chartered) took over the Overbeck-Dent interests, and in 1888 North Borneo came under British protection.

The Filipinos now argue that the Sultan of Sulu did not renounce sovereignty over North Borneo in 1878 and that, Sulu being Philippine territory, so is North Borneo. The British point out that the Philippine constitution of 1946 recognises the present boundaries. At best, the Philippine claim is flimsy, and it may be hoped that President Macapagal, who values the friendship of Tunku Abdul Rahman of Malaya, will not strain it by pressing on regardless.

GAMBLING

Twist or Bust

MR MCADDEN'S rejected amendment to the Finance Bill last week sought to reduce the taxation on football pool betting from its present level of 33 per cent (the old 30 per cent with the "regulator" surcharge of 10 per cent consolidated) to 25 per cent. But his best argument was not the need to ease the plight of pools promoters and their customers, who generally do very nicely: the real point at issue is that the Government, having found a convenient and sensible source of money, has tapped it to the tune of £30 million a year, but is still ignoring richer though less easily tapped sources. Dog-racing bets, for instance, are taxed by a 10 per cent levy on the tote and by a special licence fee for bookmakers on the course but not off it; other bets (including horse-racing bets) are not taxed at all, and the large sums that change hands at bingo, or at organised games of *chemin de fer*, bridge and poker, go unmarked by the Treasury's fingers.

Until this year, the Government could defend itself on the reasonable argument that it would not be able to collect a tax on off the course betting, because the Inland Revenue could not very easily go running round the street corners after illegal bookmakers' runners. But now that licensed betting shops are established, collection of a tax would be much easier; and it is a great mystery why Mr Selwyn Lloyd did not resort to one in his budget. The churches' council on gambling has estimated that, thanks partly to the easing of Government restrictions, turnover on gambling rose by a sum estimated at £79 million last year, all of it untaxed. It believes (admittedly, pretty tentatively) that £762 million changed hands last year in betting and gaming, of which £440 million went on the horses (with a further £33 million through the tote). Bingo provided a resting place for £25 million; football pools ran away with £101 million (but this total is going down, thanks partly to the fact that other bets are untaxed); while the other £150 million odd is estimated to have been lost and won on the dogs, card games and other betting. Theoretically, a 20 per cent tax on gambling turnover all round (or its equivalent in licence fees) would more than pay for 6d. off the standard rate of income tax.

BOXING

Ignoble Art

BARONESS SUMMERSKILL, whose bill against professional boxing was rejected by the House of Lords last week, will have—or ought to have—a lot of sympathy from everyone who was subjected to the spectacle of Benny Paret's public execution on the BBC's "Panorama" programme the previous Monday. Whatever defenders of these gladiatorial exhibitions may say—and they said some extremely fatuous things in the House of Lords—and whatever criticism may be made of the eccentric lengths to which the noble Lady goes in the conduct of her crusade, posterity will look back on a sport which has tolerated beatings on this scale with the sort of horror that contemporary Englishmen reserve for cock or dog fighting, for bull or bear baiting. Nobody knows exactly how many boxers and ex-boxers today are "punch-drunk," their reactions slowed, their reason diminished, their vision faded; but the previously unsuspected susceptibility of the brain to irreparable damage from quite minor blows to the skull makes it seem increasingly likely that not many long-service professional boxers escape into retirement without some hidden injury.

The risk is less among amateurs than among professionals; but amateur fights are of three rounds, totalling nine minutes, and they are stopped at the first sign of distress or injury. Professional fights may last ten or fifteen rounds of three minutes each, stop only when one of the boxers is incapable of further effort or is knocked insensible, and are conducted for the satisfaction of an extremely demanding audience on whose bounty the boxers' livelihood depends.

English standards of supervision and control are already much higher than those of many other countries, but they are not high enough to make the "art" a noble one. If they are ever to be high enough—and that would be high enough to kill boxing as a popular spectacle—there is a strong case for saying that a brave Government, at the risk of being labelled a killjoy, should now proceed to appoint a commission of inquiry into boxing; and interested people should campaign for an international convention which would extend tighter control to all countries.

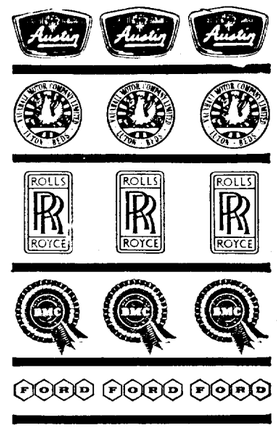
TOMATOES

Treason at the Top

BRITISH tomato growers, still exulting over their success in persuading the Government to extend the annual period in which high duties are charged on imported foreign fruit, must have felt as if the world had ended on Monday, when Mr David Fenwick, a leading light of the National Farmers' Union, publicly forecast the death of tomato growing in Britain within 20 years, if not sooner. And he was quoted as saying that it was nothing less than stupid to grow tomatoes slowly and painfully under glass in Britain when, an hour or two away by air, the Italians could grow them without much trouble, cost or heartache, in their open, sunny air; and that when the tariffs had to go after Britain entered the common market, Italy and Holland would between them end the Elysium in which British horticulturists have been living. All this was said on the eve of the announcement that a working party has been set up in Brussels to discuss what on earth to do about Britain's reservations about horticulture in its application to join the market.

Mr Fenwick's words will undoubtedly confirm the worst fears of those British farmers whose livelihood has depended these past few years, not on the efficiency which will prepare the rest of the industry for European competition, but on the willingness of the Government to subsidise the high-cost growing, under glass, of many horticultural products. But it will encourage those people who have maintained, against all the signs, that there are some farmers who know how many beans make five; and that there are enough of them to keep British agriculture, growing the right crops, from any danger of ruin.

THE COMMONWEALTH



The Way to What?

"TO show the way—that is the supreme mission of our modern Commonwealth." This is the concluding sentence of a booklet published this week* in which the Secretary of State for Commonwealth Relations seeks to explain to the general reader, particularly in other member countries, "what it means to us in Britain." It may be recommended just as warmly to non-Commonwealthians.

Some curious comment on this booklet has already appeared. The most curious, perhaps, was a leading article in *The Times*, which thought it saddening that Mr Sandys had found it so hard to explain to the inquiring young what the Commonwealth stands for. This article passed right over what is surely the key passage in his booklet, in which he describes "the greatest challenge with which the Commonwealth has yet been faced." This is the problem of race relations, "the most complex and intractable problem of the second half of the twentieth century." He argues that the withdrawal of South Africa, and the clear dissociation of the Commonwealth from racial policies, is not enough.

"The greatest multiracial association the world has ever seen" has a more positive job to do—the job of showing by example that peoples of different races can understand and respect each other, and work together in friendly confidence. There is, in fact, a good deal more in Mr Sandys's booklet than the familiar bunch of platitudes. Dissatisfaction is here more noticeable than the customary complacency. He notes the manifold unofficial links between the peoples of the member countries, but urges that they are "not nearly enough" in the changing conditions of our time. He holds it essential that member countries should develop more direct links with each other, instead of channelling everything through Britain.

* The Modern Commonwealth. By Duncan Sandys. 28 pages. HM Stationery Office, 2s.

Taking the brake off store traffic. Immediate accessibility... fast handling... free flow... maximum space saving... these are the essentials of modern storage efficiency, and they have been achieved in some of the car industry's greatest and most famous factories by the installation of the Gascoigne Kee Klamp Storage System. Because the Kee Klamp System is completely flexible, and because of the specialised knowledge that goes with it—knowledge gained throughout the field of industry—the storage, selection and handling of virtually any materials can be similarly streamlined. From a searching study of your storage, and store traffic requirements, our storage engineers will evolve for you a Gascoigne Kee Klamp installation that will make a major contribution to overall efficiency. May we discuss this with you in detail? GEO. H. GASCOIGNE CO. LTD., 615 Gascoigne House, Reading, Berks. Telephone: Reading 54417 (3 lines). TL.3

Growing Pains

FROM OUR SPECIAL CORRESPONDENT

York's vice-chancellor: Lord James of Rusholme

THE two newest and rawest (but certainly among the most exciting) of British universities have stood up this week, announced their intentions and asked for money. York is appealing for £2 million, of which £750,000 is said to be in the kitty already. East Anglia, whose chancellor-designate, Lord Mackintosh of Halifax, is no slouch at fund-raising, wants £1½ million. Much of the money is needed for living and recreational accommodation for students (providing the "university atmosphere") to which the Treasury is markedly, and at present rightly, less devoted than the University Grants Committee and the advocates of residential education would wish. York wants to get half its undergraduates in residence from the outset, and eventually to increase this proportion to two-thirds—which is actually more than Oxford and Cambridge have at present. Since York has decided to adopt a version of the college system it has, at a rough guess, added anything up to £1 million to its immediate development costs. It happens to lie at the centre of a proud and comfortably-off province, and in a city with more than its share of social benefactors: it can be reasonably confident of raising the extra wind. Other new universities, either coming into being or in the Robbins committee's pipeline, may not be so lucky.

The capital fact for the future is that if new universities are founded (by Treasury decision) in small cities like York and Norwich the accommodation problem is bound to raise its head from the beginning. There are simply not enough local landladies to take in student lodgers, and the new universities dare not rely too heavily on this resource. *The Economist* has regularly argued that in the necessary crash-programme for expanding higher education the logical place for new universities is in the suburbs of large conurbations, where a fair proportion of students can commute from digs or from their own homes. There are obvious objections to this (e.g., the new kind of student may well come from an overcrowded home which has little experience or tolerance of the academic life) and many dons are strongly opposed to letting the Treasury get away with second-best institutions at any time. The sole, and sufficient, answer comes from those sixth-formers who will not get a higher education of any kind if the Oxbridge tradition remains the actual, or unspoken, standard for every university promotion committee in the next decade.

But York, to its credit, has set one target that deserves encouragement and emulation. Like its immediate predecessor, Sussex, it aims at a student population of 3,000 in ten years' time; since East Anglia is doing the same, the numerical doldrums into which Keele has fallen (800 undergraduates after 12 years) can probably be written off as an unfortunate and introspective case. But York is looking still further ahead. Its development plan envisages a continuing expansion to 7,000 undergraduates, and conceivably even more. The new universities, provided they pick the right sites and provided they aim at continuous growth in this way, can be expected to make a much bigger contribution to expansion in the 1970s than those which have stabilised their numbers at 3,000 or so. York reckons that it takes five years to replace a building and development apparatus once it is dismantled: there is clearly a strong case for thinking now in terms of institutions which can expect to push steadily on towards 10,000 places.

This would be a very large scale indeed for a British university (although London has 22,000 students and Oxford and Cambridge just under 9,000 each). But universities of this size are quite common form elsewhere. They invoke educational and administrative problems to which York's answer—the college unit of 300—is not the only solution. If the new universities are worth their salt they should find themselves stimulating a demand for their kind of education on which it would be utterly criminal to slam the gates. With their bright ideas on syllabuses and inter-related studies, these are the places where the livelier type of sixth former should be most anxious to go. Both Sussex, with its interest in European studies, and York, which has the desire and opportunity to set a national pace in the social sciences, may soon be opening up quite new vistas of what a university should teach.

IF the seven new universities already set afoot do, in fact, achieve the Sussex-York rate of growth they will be providing only 21,000 of the total of 170,000 university places which the Government wants by 1973-74 (and which will certainly be inadequate by then). The other 35,000 new places will have to come from the enlargement of existing universities and colleges—with a sizeable contribution needed from the dozen established institutions which have been jogging along for years with under 2,000 students apiece. The new signs of enterprise in these quarters are all the more welcome just now, but here, too, the need for private donation is sometimes even more painfully obvious. Southampton, for example, has just launched a centenary appeal (the centenary being that of the original Hartley Institution in Southampton) to help it to rise from 1,750 places to 4,000 by 1980. Its present endowments bring in only £2,500 a year; not unnaturally, it is now asking for the sum of £400,000 from industry, alumni and others. This month St Andrews, with a strong residential tradition, has appealed for £1 million to raise its numbers from 2,500 to 4,700. Usually the money comes in. The new Churchill College at Cambridge ran a spectacular appeal for £3 million. The University College of Swansea announced this month that it had raised 90 per cent of the £500,000 it needed for new halls of residence. Last July three London colleges got £250,000 each from a single, anonymous benefactor—all to build halls of residence.

But new problems are appearing. As Sir Douglas Logan, principal of London University, pointed out last week, the impression seems to be growing that the provision of new buildings specifically for teaching can safely be left to the UGC and the Treasury. This is simply not so, as this week's university protests against Treasury policy should again make plain. "We yearn for further

benefactions," Sir Douglas announced unashamedly, and he quoted the university's difficulty in getting an adequate computer—for which public funds will pay only one-quarter of the cost. The university means to hire out computing time to commercial firms, and has had to form its own company, Computers (Bloomsbury) Ltd., to do so. It is an old gambit of science departments to get new equipment by devoting themselves to research for outside customers; it is not always an ideal arrangement.

The rapid growth of the postgraduate university population, an inevitable and necessary complement to undergraduate expansion (and taking up 13 per cent of all places), is also causing fresh headaches. Not all postgraduates want to live in college, but most of them (particularly the married ones on small grants) need help with accommodation. At Oxbridge this has brought new institutions into being, although individual colleges like Corpus Christi at Cambridge have made commendable efforts on their own. Elsewhere the answer may have to be special postgraduate flats. Since York is keen on 4-year courses (the last year leading to a master's degree), it will need to make an extra effort for its postgraduates. Even for their administrative staffs the growing universities have a housing problem on their hands: a number of them are looking into the idea of setting up non-profit-making housing associations, which could benefit from Government aid.

All these are the pains of expansion. They are taken much more hardly by settled academic communities (with their resistance groups who do not want expansion anyway) than by the new universities which are picking the men they want and giving them the stimulus of rethinking every issue, ranging from curricula and teaching methods to planning social nuclei on the campus and improving teacher-student relationships. In the end it will be the Sussexes, the Yorks, the Norwiches and their successors that will do most to set a new pattern for British university life with fresh ideas and on a broader, more popular scale. The pity is that they have not had the opportunity and the incentive to do so sooner.

Streatfeild on Trial

FROM A CORRESPONDENT IN LEEDS

In February, 1961, Mr Justice Streatfeild's interdepartmental committee on the business of the criminal courts published its recommendations for improving the administration of justice in England and Wales. In particular it recommended a reduction in the time accused persons spend awaiting trial; it thought eight weeks should be the maximum for such delays.

If in what are already known as "pre-Streatfeild" days the time-honoured assize circuit system was not quite creaking to a halt, it most certainly had reached an alarmingly congested state. So many criminal cases awaited the attention of the itinerant judges that civil litigants were being denied justice. Time after time term ended, particularly on the north-eastern circuit, with a high proportion of civil cases unheard, although as many as five judges attended assizes in Leeds and others were sent to hold occasional special sittings for civil work at Durham.

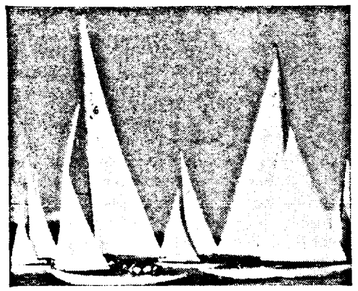
Many of the Streatfeild committee's recommendations were implemented in the Criminal Justice Administration Act to which the royal assent was given last March. The number of judges was increased and May 1st saw the opening of the first legal term in which the new circuit arrangements are being operated.

The revised itineraries provide in practice, if not in theory, for the division of each circuit into general and special categories. Thus some of the judges assigned to a circuit for a term are intended to spend more time at the busier towns and to visit them more frequently. On the north-eastern circuit Mr Justice Phillimore and Mr Justice Roskill opened summer assizes in Leeds on May 2nd and will sit there until May 25th before moving to Sheffield. They are due back in Leeds on June 19th and will remain until July 13th, when they will return to Sheffield until term ends on July 31st. For the July weeks of their Leeds visit they will be joined by two judges for divorce work. Meanwhile Mr Justice Sachs and Mr Justice Atkinson are on the other section of the circuit and will visit Newcastle, Durham and York twice during the term.

At first sight this plan might be expected to meet the needs of what has been recognised as the most congested circuit. It is already clear, however, that it will not. The situation in Leeds is worsening. On May 2nd the two judges faced a criminal calendar of 67 accused persons and a cause list containing sufficient civil actions to occupy two judges for at least 20 sitting days.

The criminal business is expected to occupy both judges fully until May 25th. The civil cases will almost certainly become *remanets* to the Leeds sittings fixed for June 19th, when they will join the cases now being set down for hearing at those sittings, at which, of course, there will be a substantial criminal calendar as well. It seems certain that unless extra judges are sent to Leeds before the end of the term many litigants will still be denied justice until the autumn. Newcastle, Durham and York are all busy assize towns and it is unlikely that the judges on that part of the circuit will have much, or indeed any, time to assist their hard-pressed brethren in Leeds, where late court sittings have been the rule rather than the exception for too many years.

It is accepted that criminal work, in which the liberty of the subject is involved, must have priority on judicial time. The establishment of more permanent crown courts on the Liverpool-Manchester pattern has been rejected for the reasons advanced in the Streatfeild report—risk of judicial staleness, the sense of isolation which besets judges in such courts and the danger of the judges becoming prosecution-minded. "A judge," said the report, "cannot be expected to remain at his judicial best when he is dealing with the same kind of case all the time in the same place, with the same police officers, the same advocates and very often the same criminals before him."



So delayed litigants can only look hopefully to the Lord Chief Justice, who arranges these matters, to show an awareness of north-eastern problems. It is felt locally that this awareness could be expressed in no better way than by the immediate despatch to the West Riding of extra judges, or if none are available, of specially appointed commissioners.

In Leeds particularly, these problems are accentuated by the poor accommodation available. In its Victorian town hall there have been days in recent years when three old-fashioned courts and several makeshift and inconvenient ones of recent construction have accommodated five assize judges and four or more magistrates' courts. The city's other magistrates' courts, six or seven of which sit daily, have on such occasions been banished to adjoining buildings. At least they have been free there from the all-pervading cooking smells of which the town hall has never been rid since its basement became a civic restaurant. Many a judge has publicly and strongly condemned the building as unfitted for the administration of justice, but even after inquiries from the Lord Chief Justice the new law courts which have been talked about for a quarter of a century are still only being talked about.

Sacred Cowes?

FROM A CORRESPONDENT IN HAMPSHIRE

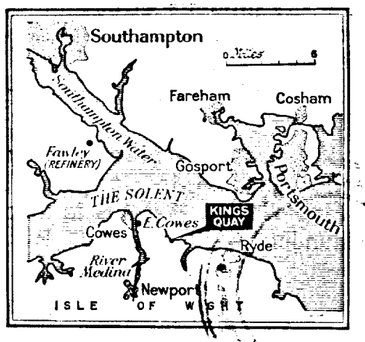
MESSING about in boats is the pastime of an increasing number of devotees from the Duke of Edinburgh and Mr Uffa Fox downwards. Cowes, the recognised mecca of yachtsmen, is trying to reconcile the traditions of its glorious, if prim, past with some aggressive plans for tapping the profits that are to be found in this expanding sport.

With a population of 17,000, Cowes depends upon its tourist trade, and that in turn hangs on the fame of Cowes Week (the first week of August) when a series of regattas is held by the seven chief yacht clubs in the town. Top yachtsmen (not women) belong to the small but influential Royal Yacht Squadron; past members include Louis Napoleon, Kaiser William and most English kings and princes since George IV. It is said to be easier to become a member of the House of Lords than to be elected to the squadron. At the other extreme the Island Sailing Club caters for the bulk of Cowes Week enthusiasts; its membership is now a record 2,700.

Though some stalwarts of the RYC still hanker after the 1930s, Cowes as a whole pursues the main chance. Entries for the regattas last year were the highest ever; an average of 300 craft were competing on each of the 10 days of the "week." Hundreds of other vessels of all shapes and sizes crowded neighbouring areas as harassed mariners in the Solent can testify. Most sailing clubs announce record memberships.

The sailing boom has brought changes not only in the size of Cowes week, but also in the craft taking part and in their owners. Boats tend to be smaller, for the cost of larger yachts takes them out of reach of most pockets. A seaworthy boat cannot be built for less than £400 a ton, while a superlative yacht may run to as much as £1,000 a ton. These prices no doubt account for the popularity of "do-it-yourself" kits and the growing numbers of dinghies. Today's yachtsman is often a white-collar worker, seeking refuge on the seaways from the crowded summer roads of the south. Boat ownership is yet another status symbol, much to the delight of hire purchase companies which seem (so far) to find boat owners a better risk than car buyers.

Two proposals by Hampshire businessmen have emphasised the changes that have come to Cowes. One plan is to build a "botel" in a disused boatyard in East Cowes; it would have 150 chalets, a heated swimming pool, ballroom, and three slipways into the River Medina. The company would run its own fleet of boats for hire to holidaymakers who want to learn to sail. Since the idea comes from a man who is almost a local Billy Butlin (with three holiday camps on the Isle of Wight) commercial success is likely—if planning permission can be had.



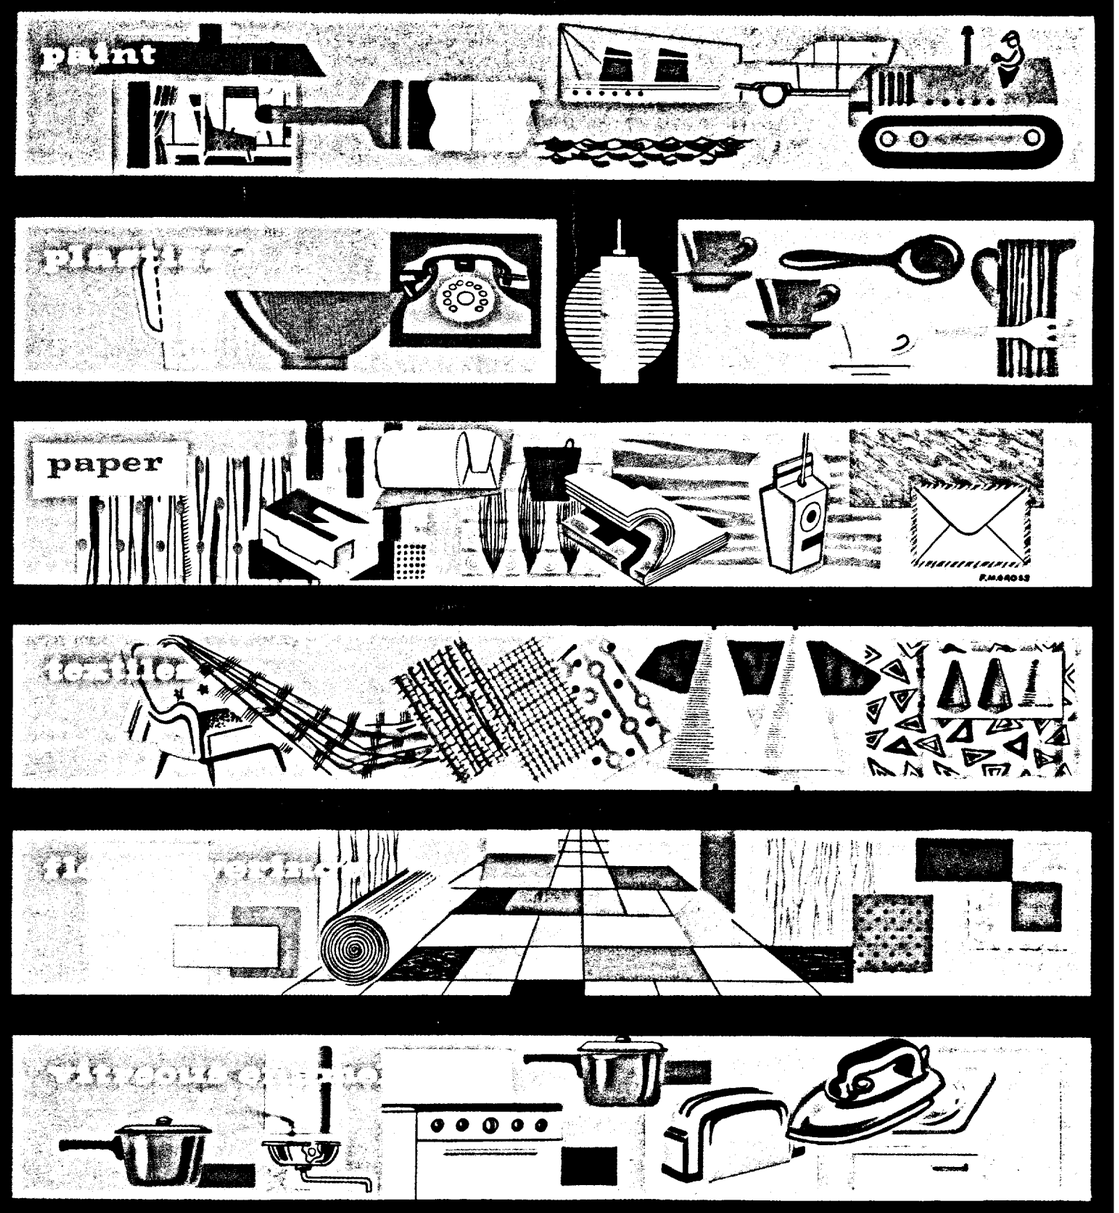
The second, and somewhat similar, plan is for a yacht "marina" (a stretch of sea water enclosed for small boats) at Kings Quay near East Cowes. The marina would be able to accommodate 500 vessels as well as provide a public service by protecting the wooded cliffs from erosion by the sea.

WHILE local boatbuilders (who rarely employ more than ten men) tradesmen and hoteliers are by no means averse to such developments, strong opposition has come from the Solent Protection Society. These stalwarts of a silent Solent are aghast at disturbing an "unspoiled" area. Yet it seems likely that an unplanned hotch-potch of inadequate facilities that would grow in the area anyway would do rather more damage than any marina. It is also claimed that the Kings Quay marina would not provide a haven for yachts when a north-easter was blowing; hydrographic experts say these fears are baseless.

The society is concerned about the threat of further industrialisation along the Solent, notably between Fawley and Calshot Spit on the mainland. The spectre of a "second Merseyside" has been invoked, and only to stop this is the society prepared to accept a yacht marina. It seems that what is good for the Solent in general is bad for Cowes in particular, that a marina is preferable to a factory—but nothing at all is even better.

Rather nearer the bone the society has attacked the Cowes harbour commissioners for "slumbering away on past glories" by providing insufficient moorings for the Cowes week influx of boats. The harbour board is smarting under this "unfair and frivolous attack"; its indignation seems righteous enough, for at a meeting last week it was pointed out that 296 moorings were laid down last year—although yachts entering Cowes pay neither fees nor dues. Most yachtsmen would agree that the facilities, though cramped during Cowes week, suffice for the rest of the season. The East Cowes schemes would certainly help at the peak periods.

Whatever happens to these particular proposals, the future of Cowes seems safe enough. In the last decade the population of West Sussex increased by over 20 per cent and that of Hampshire and the Isle of Wight by over 10 per cent, notably near Portsmouth-Southampton. There are plenty of potential yachtsmen coming along.



Educating the Educated?

THAT the old popular image of adult education needs to be overhauled is shown conclusively in the latest report of the Universities Council for Adult Education. Sample surveys in the large cities suggest that the people who take advantage of these classes are not so much those who missed earlier opportunities at school but may well be actual university graduates or former grammar school children. Thus Nottingham reports that its student group is "drawn predominantly from the professional middle class"; nearly 40 per cent had a full-time education beyond the age of 19. Newcastle found that 69 per cent of the men and 68 per cent of the women went to grammar schools—and 8 per cent of the men and 11 per cent of the women had been at public (i.e. independent) schools. At Middlesbrough, where a fifth of the students had been at university, the comment is made: "It is surprising to learn how comparatively few people, in this area of great chemical and steel industries, actually come from industry. It would seem that adult education is still making only a minimal impact among industrial workers of all grades."

The added numbers (and visible enthusiasm) of industrial workers attending day-release classes have plainly still to spill over into the general field of adult education. The universities are making efforts to cater for the demand for adult vocational courses of all kinds, but there is a danger that the wider generation of interest may be handicapped when new applicants, using this "alternative ladder," discover that the social and cultural atmosphere can be very much one of rarified minority group interests and pursuits. A more balanced intake would be better, for all concerned—without necessarily resulting in any diminution in the academic quality of the classes provided.

LETTERS

Three Hands in Kashmir

SIR—The article in your issue of May 12th creates the impression that the Sino-Indian dispute is a result of the Indian role at Belgrade. Since the dispute antedates the conference at Belgrade this misjudgment of emphasis is unfortunate.

No one can state with absolute certainty what the Chinese motives are in this dispute but we can make some guesses. Since theoretically they do not approve of neutralism their laudation of Sukarno may not have as much significance as you seem to imply.

May I venture, however, two more reasons for the Chinese intransigence. While they have not succeeded in isolating India from its neighbours, they have achieved one result from their stick for India and carrots for others policy. When it comes to a serious clash between the two countries, the neighbouring countries with common frontiers with China will remain neutral for fear of jeopardising their border settlements.

Secondly, the Chinese action has resulted in a vociferous pressure group in India seeking to align the country to the West and it has split the Communist Party, inhibiting its immediate growth. They can legitimately use this as an excuse for scoring points against Russia in the ideological battle. In the long run this is important for them although so far they have failed because Mr Nehru has remained firm against the right-wing pressure from the Swatantra and the Praja Socialist parties.—Yours faithfully, DEV MURARKA

London, NW2

Redundancy

SIR—In your issue of May 5th you state the case for "compensation for sacked workers" according to the time they have been in employment, the benefits being expressed as a proportion of each worker's earnings while in work. You suggest this calls for hard thinking.

In 1919, the late Seebohm Rowntree took the initiative in forming a small non-party study group, which included Lord Astor of Hever, the late P. J. Pybus and others, including the writer. In 1920, we published a statement advocating national unemployment insurance on the basis of 50 per cent of average earnings, plus 10 per cent for a dependent wife, and 5 per cent for dependent children; up to a maximum of 75 per cent. Benefits at this rate would be related to length of service. Contributions would be made by employers, employees and the state; the redundancy cost falling on employers.

These proposals were not adopted by the state; but the Rowntree company adopted a supplementary unemployment benefit scheme to achieve the same ends for company employees; including provision for organised short time. This scheme, with improvements, still continues. The cost was originally estimated at 1 per cent of the wages bill, but has proved to be less. Provision was made for lump sum settlement where this would secure alternative employment or other means of livelihood. The scheme is fully described in Seebohm Rowntree's "Human Factor in Business," and in my own "Prescription for Partnership."

Such a scheme (which has continued for over 40 years) could form a working basis for the redundancy provision for which you seek. If thought fit, the special redundancy benefits could be at a higher percentage for one week for each completed year of service to the extent that unemployment continued for so long.—Yours faithfully,

WM. WALLACE

Moretonhampstead, Devon

Local Elections

SIR—One of the curiosities of British press reporting is the treatment of local election results. Every year it is the same story. The boroughs poll on a Thursday in May; and next morning every paper devotes most of a page to printing the available results. These, of course, include all the places which have unopposed returns or are small enough to poll early; so the reader can learn with no difficulty every year that Aldeburgh, Cowbridge and Lostwithiel each elected four Independents again. But Birmingham is bigger than Bishop's Castle, and Manchester much larger than Montgomery; so their results come in later. The public, which on Friday was presumed to be thirsting for news of the tiniest Cornish borough, on Saturday has apparently lost all interest in municipal affairs; and if Liverpool missed the last edition, Liverpool will be left out for good.

Local dailies sometimes have the same strange attitude; for example, the exile from Birmingham who gets the wrong issue of his local paper will have no information this year about the elections for his own city council. And the student of local government who wants to investigate previous election results will find himself unlucky. Since *The Times* never prints a missed result in the next day's paper, there is no published source from which he can be sure of learning what happened in the big cities in a given year. As for the London boroughs, the *Evening Standard* used to print the votes in full; now it merely gives the winners' votes—except, of course, for the most interesting boroughs which, being marginal, come in too late. No one will be very surprised at the inadequacy of the evening papers; but one might have expected that a journal of record would take its pretensions a little more seriously.—Yours faithfully,

Oxford PHILIP WILLIAMS

Service Overseas

SIR—It so happened that I was reading the article "Expatriatism Is Not Enough" in your issue of April 21st while listening to a debate on this very subject which took place in the programme commission of the 17th plenary assembly of the World Federation of United Nations Associations in Liberia, during the week from April 30th to May 5th.

While in general agreement with the contents of your article, may I be allowed to point out that this is not only a British or Commonwealth problem. The federation, as well as our affiliate, the International Student Movement for the United Nations (ISMUN), are constantly under pressure from youth organisations and even elderly people in many western countries to achieve a measure of international co-ordination of supply and demand in this field.

It is frequently pointed out to us that if voluntary services are to be handled exclusively on a national basis they might easily become a new element in the cold war. Some even maintain that this is already the case today.

The subject under discussion in our Monrovia assembly was the result of a proposal from the United Nations Association of Switzerland that the federation's secretariat in Geneva should have a special section devoted to voluntary service. The assembly considered that while the international voluntary service problem is playing an increasing part in the programme and activities of member associations and ISMUN and that the federation should make every endeavour to increase opportunities for such service, this should be done within the framework of the United Nations family.

Within the UN programme of expanded technical assistance there already exists, although on a modest scale, a junior expert programme. One of the many problems that will have to be studied is whether this programme can be extended. Another and psychologically very important problem is how to give satisfaction to the ambitions and ideals of a large number of young, not necessarily skilled, people who, before starting upon a career, desire to devote a year or more to voluntary service in developing countries.— Yours faithfully, A. PELT

Secretary-General, World Federation of United Nations Associations

Monrovia

BOOKS

The New Scramble in Africa

Africa and the West: *Elements of Free-World Policy.*

By Arnold Rivkin.

Thames and Hudson. 251 pages. 21s. (10s. 6d. paperbound).

WHAT is Africa to the world, apart from a source of raw materials and trouble? The question must come before asking what the world can do for Africa. Different countries are still prospecting to see whether there is anything of value in the dark, now deserted, continent. Europe is bound to Africa by more than the Mediterranean: trade and cash flow in both directions; if the flow is more in one direction than the other it is, even so, sustained by the strong emotional ties that bind some black countries to their former white mothers. The mental horizons of modern Africa are drawn within the imaginations of black men educated in Paris or London, or by French or English teachers. The Portuguese apart, almost all colonies have been liquidated—yet in European and African minds parts of the continent are still either "French" or "British Commonwealth" or even "Belgian."

Now that the governors have withdrawn, there is room for newcomers. Today's explorers wear Russian, American, Israeli, or Chinese helmets; some paramount chiefs welcome them because this is evidence of independence. From the African point of view the rivalry between the Russians and the Americans is a kind of security against re-colonisation by one of them. But the Americans are faced with a double difficulty: they must decide how to keep the Russians out; and how to build up close contacts with the Africans without upsetting European governments that may instinctively regard African ground as still essentially theirs.

All this is implied in Mr Rivkin's book, which, as he points out, is a collection of already published articles, polished up and refurbished. The result is some repetition and some upsetting use of words ("pragmatic authoritarianism," for instance); these obstacles apart, the book is a useful exposition of several African problems. But Mr Rivkin is not satisfied with mere exposition; he cannot rest without making proposals for change. Some of these seem original, some merely grandiose; nearly all contain grains of usefulness within the sweep of enthusiasm.

For instance, Dr Nkrumah's phrase about achieving a "jet-propelled" rate of economic growth is taken as a theme; all other African leaders, it is found, want much the same thing. And, with wide variations, nearly all of them seem to be going broadly the same way ("pragmatic authoritarianism") about getting it. Here, in his boyish American way, the author scents danger. Is the communist way going to prove too attractive? Maybe not—and there is some hope in the Israelis, who, as a "third force," get a whole chapter. Israel and Ghana, it is pointed out, get along well together; there can be no fear that Israel will take a country over, and, like the countries it assists, Israel is young, enthusiastic, underdeveloped. Israel has what Africa needs most—technical expertise. Because of Israel's special qualities, Mr Rivkin suggests, a "free-world state" might do well to channel assistance to Africa at least partly through the Israelis.

Again, the giving of aid to Africa would be better organised, and more acceptable to Africans, if a kind of Colombo Plan for Africa were devised; this would reconcile the interests of America and Europe as well as the existing international organisations. It would be flexible, Mr Rivkin says, and allow for bilateral agreements within it. Using the United Nations would not do so well, because communists will not seriously give aid through an organisation they cannot control. Such a western body, for all the naivety with which Mr Rivkin puts it forward, might well suit the Africans better than United Nations aid, for it would leave at least one other source—the communists—to go to in competition.

But this is not the only exposition-and-advice in the book. African states are arming rapidly; Mr Rivkin assembles the facts in a typically useful chapter. What to do? Agree through the United Nations not to sell arms (except those used in keeping internal peace) to African states; at the same time get everyone to guarantee Africa against aggression and externally supported subversion. This, says the author, would largely remove the incentive to arm. If so, Africa is better than anywhere else, and feels safe more easily.

Turning the tables, Mr Rivkin gives advice to the United Nations, too. In three countries, he points out, former UN trust territories (Cameroun, Togo, Somalia) have been set off to independence with empty treasuries, in a state of war or in danger of it, and without real means of self-protection. A detailed charter for a proposed standing committee to tackle the matter is offered.

For all that it may seem presumptuous, this list of topics about African policy in the west is worthwhile; people are rushing too fast into Africa, and not thinking slowly enough. Mr Rivkin writes with an enlightened, if stodgy, pen; he does seem to have recorded what the African politicians want, and what western politicians are thinking about what African politicians want. If he also sets down what Mr Rivkin wants, no matter. It is a starting point.

Economics Applied

Studies in an Inflationary Economy

By F. W. Paish.

Macmillan. 345 pages. 45s.

PROFESSOR PAISH is interested mainly in what the highbrows called "applied macro-economics," and a selection of his writings of the past decade (plus two new papers) reflects this. Radcliffery, inflation, the balance of payments and the capital market occupy most of the book, and Professor Paish attacks these topics with a slide-rule for sword and a national income blue book for bible. The results are clear, capable and, in some cases, contentious.

A considerable amount of the analysis relates to problems that have been much discussed in the last few months, both in connection with the pay pause and with NEDC. In the last chapter, a new and extended version of articles in the *Financial Times*, Professor Paish argues that since inflation occurs when incomes grow faster than output and because the rate of growth of incomes depends on the proportion of productive capacity employed, it can be avoided only if unused capacity is kept sufficiently high and sufficiently steady. He then boldly estimates the percentage employment of capacity quarterly throughout the decade and relates it to the development of the price-level. His conclusion is that 5-7 per cent unused capacity (2-2½ per cent unemployment) will enable Britain to avoid inflation. He also argues that a temporary stimulus to growth, by raising the employment of capacity, will react on prices only after a lag, when the rate of increase of incomes has begun to respond to the higher pressure or demand. It follows that he can agree with the expansionist of today that a boost to demand would raise output a lot and prices a little this year, while differing fundamentally from them about the desirability of securing growth by expanding demand here and now.

Another implication of the argument is that inflation does not result from an upward wage push by the trade unions. Indeed in an earlier chapter Professor Paish asserts that, at times of heavy inflationary pressure, collective bargaining has actually lengthened the lag between an increased demand for labour and higher wage rates. He goes on to argue that if the unions had forced up the general level of wage rates, earnings would not have risen faster than rates.

This brief summary shows that Professor Paish holds views that are far from universally accepted. Even his leftest critics, however, will admire the way he puts them. This book is the sort of economics that convinces the non-academic that economics is a useful art.

Whose Allegiance?

Dual Nationality

By N. Bar-Yaacov.

Published under the auspices of The London Institute of World Affairs by *Stevens.* 324 pages. £2 10s.

DUAL nationality gives rise to many problems, which are most acute in time of war. A man born in the territory of country B of parents who are nationals of country A may sometimes find himself guilty of treason against one or other of the two countries if he takes sides in a war between them. Great hardships may also arise in time of peace; for instance, when individuals possessing two nationalities are called upon to undergo military service in both of the countries to which they owe allegiance. Unfortunately, as Dr Bar-Yaacov points out in this extremely competent and timely book, nationality is primarily a matter for each state to decide for itself; international law provides few restraining principles or guides.

Dual nationality may therefore be acquired at birth by a man born in a state recognising the *jus soli* of parents who are nationals of a state which has adopted the *jus sanguinis*. It may also arise if a man naturalised in one state continues to retain his former nationality. Again, marriage may give a new nationality to one of the spouses, without necessarily leading to loss of a former nationality. And lastly dual nationality may result from the transfer of territory where the inhabitants acquire a new nationality without losing their old one.

Some attempts have been made to rationalise this confusion by an international action. The Hague Codification Conference, convened by the League of Nations in 1930, was responsible for a Convention on the Conflict of Nationality Laws, by which the United Kingdom and some eleven other countries (not, however, such major countries as the United States, France and Germany) are bound. Apart from the limited sphere of its operation, the convention gave only modest encouragement to the elimination of dual nationality, mainly because of the reluctance of states to relinquish their control over nationality. A protocol, dealing with the specific problem of military service in cases of dual nationality, has however been ratified by thirteen states, including the United States and the United Kingdom. Since the last war, the United Nations has returned to the subject and a special rapporteur has prepared a report on multiple nationality for the International Law Commission. The outcome is uncertain, mainly because, although the ideal of one "effective" nationality, giving expression to the real links between a person and a particular country, is generally recognised as the desirable and single aim, there is much room for controversy on what constitutes the reality of such links. Meanwhile particular problems caused by dual nationality are to some extent dealt with rather haphazardly by bilateral conventions, especially in relation to military service.

The nature of the problem, with its roots in the national legislation of each country, makes it a very difficult theme for a readable book. An immense amount of highly technical detail is inevitable, as attention is directed first to one country and then to another. Dr Bar-Yaacov has carried out his task with great skill, giving a fair example of the laws of particular countries but attempting in his consideration of judicial decisions bearing on them to extract as much as possible that could be used as a common basis for an international agreement. His general conclusion is the need for international recognition of a modified *jus soli*, by which nationality is acquired by birth in the country where the parents have established their permanent residence. This is a possible solution, but in the increasingly fluid circumstances of modern life it may be doubted whether the permanent residence of the parents is a reliable indication of the likely loyalties of the children. However, Dr Bar-Yaacov's book does not claim to have solved the problem of dual nationality; what he has done is to set out, in this form and detail perhaps for the first time, the essential material for a further attempt to deal with it. Incidentally he provides a most interesting account of the nationality laws of Israel; these are particularly important in view of the mass immigration of persons already possessing nationality in one or more other states.

"Carronades"

Carron Company

By R. H. Campbell.

Oliver & Boyd. 358 pages. 30s.

THE affairs of the Carron company effectively dealt with in this bicentenary study by Mr Campbell fall into three periods. The first (and most famous) runs from the origins of the ironworks in 1759 to the end of the Napoleonic wars. The second, of conservative and even restrictive management, ends with the partnership squabbles and financial-legal preoccupations after 1850. The third deals frankly with the redevelopment after 1870, which did not always produce the desired results. The Carron works, although giving an original impetus to the Scottish industrial economy, was not typical of nineteenth century experience. For much of the time Carron was able to rely on an established trade in its quality products, which allowed it to lag behind in technical innovations (it was one of the last Scottish concerns to adopt Neilson's hot blast) without paying the penalties that some high-cost Scots producers suffered. In the early days the company owed much to the risk-taking of the Scottish banks and to the resilience of the Glasgow merchant houses.

The legendary success (and much of the early prosperity) of Carron came from ordnance, in particular the "carronades" of the American, French and Napoleonic wars. It is fascinating to learn of the company's initial disasters in this field; in 1773 the Board of Ordnance actually ordered Carron guns to be removed from all ships. The "carronades" had to prove their success with Liverpool merchantmen before official approval was won. This was what the partnership had relied on, as the scale of its initial enterprise demonstrated. But throughout the years of dazzling fame profits fluctuated according to rumours of war; later conservatism seems to have cost the company the benefits of, for example, the railway boom of the 1840s. Mr Campbell's is a valuable contribution to Scottish economic history, with an eye on the occasional social curiosity, too: a lucrative sideline in the business of the Carron coastal fleet was the War Office's habit (as late as 1895) of moving troops from Scotland by sea.

British Railways

The Geography of Communications in Great Britain

By J. H. Appleton.

Oxford University Press for University of Hull. 270 pages. 30s.

IT could be said epigrammatically of this book that it is practically useless. But this would be only in the sense that it is scarcely conceivable that anyone would ever use it in planning communications. It is, on the other hand, for the most part very readable, and clearly reflects the great enthusiasm of the author for his chosen subject, which can be described as the historical geography of railways in Great Britain. Other means of communication are not neglected—the author, for example, supplies a lot of interesting information about canals—but it is not unfair to say that railways get the biggest bite out of the cherry.

The table of contents would not immediately reveal what were the main themes, but this becomes clearer when one has read the introduction. Communications are discussed as parts of the landscape, and as Mr Appleton remarks, "the present work is a study of anatomy rather than of physiology." Further, "about half the book deals with the relationship of communications to the land surface." All this is fair enough, but it must be pointed out that, with the exception of the last two chapters, "airways and other forms of transport," and "postwar plans and progress," railways seem to be the main elements which Mr Appleton sees in the scene around him.

The book is probably of greatest value to the student of geography, professional or amateur, for its nearly unique discussion of communication development in relation to geomorphology, that is, landscape forms in modern genetical terminology. The more general reader, especially if he is an amateur of railways, will enjoy chapters V, VI and VII, which deal with "the form and function of communications," "evolution," and "nodes and junctions," though probably

few will find that they can really share to the full the author's intense interest in the latter.

A minor blemish is that the book is not always quite up-to-date. For instance, it is no longer true that the River Tamar is crossed by a railway bridge many miles below the lowest road bridge. A more serious criticism is that the book is so exclusively, even myopically, concerned with the British Isles that it fails even to refer to the way in which British nineteenth century economic policy and political thought have left their imprint on the communications landscape of these islands, and made it different from that of even their nearest neighbour, France. "What can they know of England who only England know?"

The book is very well illustrated by maps and photographs. It is, within its limits, a very readable, thoughtful, and informative book for students of geography.

Political Buganda

The Political Kingdom in Uganda

By David E. Apter.

Princeton University Press. London: *Oxford University Press.* 514 pages. 60s.

THE kingdom of the book's title is Buganda, and Professor Apter's aim is to explain the uniqueness of its political development.

The book is admirable for its comprehensive approach to political analysis. Its historical sections are not merely "background"; they also give a full account of the most important events of the past seventy years, with proper attention to religious, social and economic changes, as well as political affairs. The present-day economic and social scene in Uganda is also described; and the quality of political life in Buganda is sketched in a few brilliantly observed pages.

Professor Apter's main argument is that Buganda adapted itself almost too well to foreign influences and the British Protectorate. New elements were assimilated into the political system with the same success as has marked Buganda's absorption of emigrants from neighbouring tribes. Yet adaptation stopped short of altering the basic structure of tribal authority. Suddenly it seemed that changes were coming too fast, both as a result of spontaneous developments in Buganda and because the Protectorate Government began to force the pace of political evolution, and the modernised tribal state was seen to be in danger of collapse. This moment of discovery coincided with the Kabaka's opposition to Sir Andrew Cohen in 1953.

The deportation of the Kabaka strengthened all the tendencies already driving Buganda apart from the rest of Uganda. Neo-traditionalism was now so strong that Buganda became its own political "party." As a result, the growth of territorial political parties on the normal African pattern was stunted; and Professor Apter concludes that the best chances for future political development in Uganda lie in a federal system of government.

There is nothing to quarrel with in an explanation that makes much sense. Professor Apter does risk losing his readers' sympathies, however, when he lapses into sociological jargon—how unnecessarily is shown by the notably clear section at the end of the fourth chapter. Then, too, it might have been better if the author had ended his book at a fixed point in time. As it is, he has tried to keep up to date in a scrambling fashion that makes the latter part of the book confusing and sometimes misleading. For instance, the chapter on political parties is written in the present tense, but gives very little attention to the two major parties of 1961.

These are minor criticisms, however, of a book that is an authoritative contribution to modern African history and political science. Professor Apter has seen remarkably clearly through the miasma of local politics, and has provided a cogent account of the past and present political situation of Buganda in its relations with Uganda.

Two Cultures

The Tribe and its Successors

By *William Rayner.*
Faber. 239 pages. 30s.

MR RAYNER has set himself the ambitious task of describing the impact of white settlement on the Mashona tribes of Southern Rhodesia in terms of anthropology, history and current politics. It may seem too much for the compass of a fairly short book, but "The Tribe and its Successors" will give the general reader an adequate and lively summary of the collision of two cultures over a period of seventy years. The consequences of the white presence in Africa are as far off resolution as ever, and Mr Rayner helps to explain why.

It is only in recent years that a serious attempt has been made to explore the African past. The Boers, who set the tone for the exploitation of the land south of the Zambesi, regarded the Bushmen and Bantu as the children of Ham, an inferior species to be used and ill-used like the beasts of the field. The missionary effort of the mid-nineteenth century, and the anti-slavery movement which it inspired, brought a modification of this view; it came to be accepted that churches and schools for Africans were desirable. The black man had become human, but only just. His emancipation was infinitely slow and conflicted entirely with the motives of the white men who were then digging feverishly for diamonds and gold. Cecil Rhodes emerges as the central figure of the book, a man obsessed not with money (although he was a millionaire before he was thirty), but with power and juvenile dreams of glory. In the face of scepticism in Whitehall he imbued the City with his own vision of the riches to be exploited in Mashonaland, and support was readily forthcoming. There was a Rhodesia lobby in those days, too. But he failed to find another Kimberley, and the copper belt of the northern province only became important long after his death.

In his dealings with Africans Rhodes was devious and ruthless, and he remained to the end a racialist at heart. By contrast, Lobengula, the last king of the Matabele, appears as a man of honour, a noble savage, whose primitive values were no match for white men who clinched every argument with a Maxim gun. Mr Rayner tells the story well; and in these days, when Sir Roy Welensky and others extol the achievement of the pioneers in opening up the country, it is useful to be reminded that they were little more than a ragbag of mercenaries on the make. Later settlers did make a contribution, however reluctant, to African advancement, but too often it was linked with contempt and distaste. Mr Rayner's last chapter, expressing a personal view of the future, is detached and fair. Like most other observers who know the Federation well, but who do not belong, he takes it for granted that the days of white supremacy are numbered.

OTHER BOOKS

THE COMPLETE GUIDE TO PERSONAL INVESTMENT. By P. J. Naish. *Evans.* 256 pages. 21s.

This book, written by a financial journalist, treats investment in a way suitable for the novice without dodging its complexities. Thus, while he advocates the unit trust as a good medium for the small investor, he also gives a useful introductory guide to the various sections of the equity market. His opinions are balanced and the book is laid out clearly and simply. In offering advice to the investor, potential or practising, Mr Naish *is on ground well worn in the last few years*; but, unlike some of his racier contemporaries, who lack both depth and breadth, he has produced a useful work.

WHAT'S WHERE IN LONDON. 1962 edition. By Denys Parsons. *Kenneth Mason Publications.* 138 pages. 7s. 6d.

This fascinating guide to where you can hire peers' robes, dump a baby, take your brass repairs and buy a backscratcher or shoes for difficult feet is sensibly being made an annual fixture. The 1962 edition includes a new chapter on how to find out—a guide to reference libraries. At 7s. 6d. this unique booklet—the original manuscript was turned down by thirteen leading publishers—is first-class value for both amusement and instruction.

THE INTERNATIONAL JOURNAL OF PRODUCTION RESEARCH. *The Institution of Production Engineers.* Annual subscription, five guineas; individual copies, 30s.

This new journal is intended to provide a centre of information on the many aspects of production, human as well as technical. By bringing them together, its founders hope that they will help to encourage the development of a unified science of production. Readers will welcome a journal that is less specialised than most newcomers.

ROBBERY IN LONDON. Cambridge Studies in Criminology, edited by L. Radzinowicz. By F. H. McClintock and Evelyn Gibson. *Macmillan.* 166 pages. 30s.

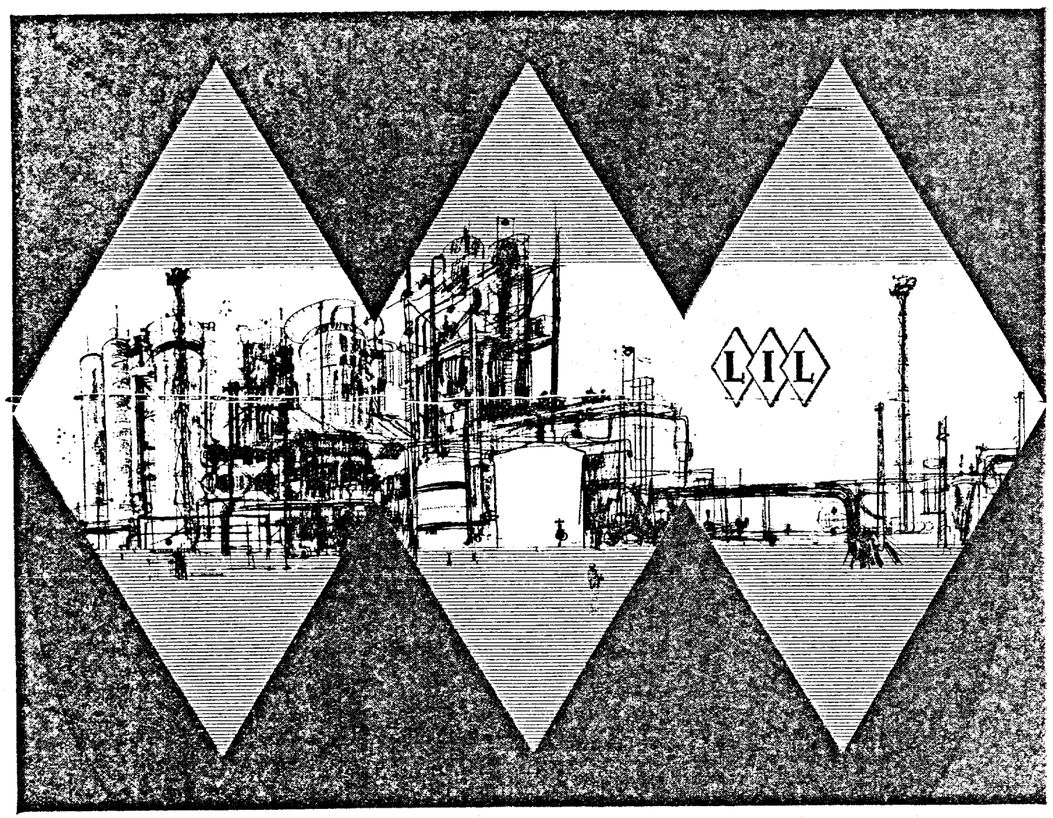
The gist of this report by the Cambridge Institute of Criminology appeared in an article in *The Economist* on November 26, 1960.

DOCUMENTS ON INTERNATIONAL AFFAIRS. 1958. Edited by Gillian King. Published by *Oxford University Press* for the Royal Institute of International Affairs. 624 pages. 84s.

Chemicals from Whitehaven

...and Susan Yeoman's shampoo

Quite a gathering, Susan's shampoo night. Henry Yeoman stands by with the rinsing water—a two-parent job, this—while mother finishes off the lathering. And that's where chemicals from Whitehaven come in.



Marchon Products Limited—one of the companies of the Albright & Wilson Group—makes shampoo raw materials at Whitehaven. These are supplied in bulk to the makers of many famous brands of shampoo and similar products. That's how chemicals from Whitehaven may find themselves in Henry Yeoman's car-wash, in Mrs. Yeoman's carpet cleaner ... in Susan Yeoman's shampoo.

This is only one of the many ways in which A & W chemicals play a part in the life of the Yeoman family. As one of the biggest organisations in the British chemical industry, the Albright & Wilson Group contributes—but we could go on like this ...

The Albright & Wilson Group

LS/62

LAPC

LAPORTE STANDS FOR PROGRESS IN THE CHEMICAL INDUSTRY

Functional, efficient modern chemical plants are a mainspring of industrial progress. Most interests or activities in the world of the 'Sixties will be affected by what they produce. The Laporte plants are outstanding of their kind and render a valuable service to the industries which they supply.

LAPORTE INDUSTRIES LIMITED, Hanover House, Hanover Square, London W.1.

ORTE

THE WORLD OVERSEAS

The Exodus to Hongkong

FROM OUR HONGKONG CORRESPONDENT

Wednesday

THE great exodus from China into Hongkong continues. In the past sixteen days approximately 25,000 exhausted refugees have forced their way across the border of the colony's New Territories. And they are still coming. They swarm over, or break down, the eight-foot barbed wire fence in the greatest mass crossing of the frontier since the Japanese invasion in 1941. They then bow respectfully to waiting Hongkong police and Gurkhas, submit fatalistically to detention, gulp down a meal and accept their return to China literally by the truck-load. In pillboxes on the mountain ridges, surveying the ravines and precipices of the border, impassive communist guards, who three months ago would have shot down in cold blood any refugee seeking to escape, watch the jostling waves of "escapees" huddle along the fence to wait for nightfall; they even direct latecomers to more convenient points of entry.

Late last year—as reported in *The Economist*—the mainland grapevine brought word to Macao that in a planned campaign for "thinning out" the population in the drought-ridden Kwangtung province (bordering Macao and Hongkong) the Canton authorities proposed to force elderly, infirm and disabled "useless mouths" on both colonies. In a rare public statement on the touchy subject of the refugees, the colonial secretary in Hongkong, Mr C. B. Burgess, announced that because Hongkong's population of 3,500,000 was so dangerously swollen, illegal entrants would all perforce be turned back.

Now the deluge has come. But the swarming refugees are not "useless mouths"; they are mostly young and ablebodied and they are neither starving nor manifesting signs of malnutrition. They attribute their flight to hardships, food shortages and fear of worse hardships and food shortages. Many of them are former factory workers who have been transferred from Canton to work in farm communes—which apparently did not welcome them. Some have "exit permits." Some have tramped for up to six days from remote Kwangtung areas—which means that they had accumulated sufficient food for the trek. Some came by train—which means that the authorities knew they were going and why. Some have told of passing through small villages whose inhabitants, learning of their destination and hopes, left *en masse* with them. Some have persisted in their escape attempts, making two or even three crossings.

It is altogether an amazing story—with dark and alarming undertones. One implication is that communal discipline has crumbled; certainly a bloody reaction will be unavoidable if the authority of the communist border guards is to be restored. So far the guards have accepted Hongkong's compulsory return of 25,000 "escapees" whose flight they had previously authorised if not encouraged. But a screening system is in official operation; occasionally returned refugees are brought back to the checkpoint at Lowu and it is pointed out that they hold Hongkong identity cards; these

are then accepted. The ominous prospect of course is that the refugees may be ordered by the communist guards to resist return, or that the guards may refuse to accept the returning truckloads. Portuguese Macao, too weak to resist its swollen flood of refugees with "exit permits," is now crammed with arrivals who, because of tightened security by the Hongkong authorities, are no longer able to make the night smuggling run to Hongkong as easily as in the past.

How much Peking knows or cares about this Kwangtung exodus is purely a matter of conjecture. In non-communist history Chinese peasants, and families have always been accustomed, under the flail of famine, to migrate to cities and new areas. There are reliable reports by visitors that in Shanghai tens of thousands of urban workers are also being removed to rural communes in the campaign to reduce the teeming city's population by one-third. The Mao regime has consistently disdained world opinion on Chinese internal conditions, so that the natural assumption that a question of "face" is involved in this tolerated revelation of such widespread discontent cannot be sustained.

The Hongkong government must be congratulated on having handled the sudden macabre crisis with a shrewd combination of diplomatic discretion and administrative efficiency. The dog-tired police have shown patience and sympathy in dealing with the invasion. Those refugees—some are barefooted—who have been injured or hurt in flight are in hospital and presumably will not be returned. There have been pathetic scenes as Hongkong residents carrying provisions move around the outskirts of the camps where the refugees are assembled for their return, crying aloud the names of relatives and friends who they suspect may be among the escapees.

Belated humanitarian intervention by Formosa—which in the past has shown interest in accepting only able-bodied refugees from Hongkong—could have embarrassing political side-effects for Britain. Cash donations by the United Nations will not touch the problem. Offers by a small number of countries prepared to accept refugees will still necessarily be subject to delays and the provision of temporary accommodation already heavily overtaxed in the overcrowded and water-rationed colony. The vital question in Hongkong is whether, having allowed his people to go, Mao will now try to stop them or exploit them as a strange new instrument of disguised aggression.

Unscrambling in Bonn

FROM OUR BONN CORRESPONDENT

It is planned that Dr Adenauer shall pay a state visit to France from July 1st to 6th, and that General de Gaulle shall be a guest of the Federal Republic some time in the autumn. The federal foreign minister, Herr Schroeder, had a word with the French ambassador in Bonn on Tuesday about these arrangements. Such comings and goings naturally excite those who have lately been scenting a change in Dr Adenauer's foreign policy—a change, perhaps, that would compound France and the Federal Republic into something of a counterweight to the Anglo-Saxon influence in Europe. But this week's clarifications of German intent (which had been obscured by Dr Adenauer, more in sorrow than in anger, at his meandering press conference in Berlin on May 7th) convincingly dispel the shadow of an impending change of any substance. It is unlikely that, when they meet, the two venerable statesmen will decide upon anything more tangible than they have at previous councils. No one has yet been able to discover precisely what the general and the chancellor say to each other when they are alone. Their encounters are mystic, wonderful—yet symbolic, at least, of the two nations' sensible resolve in future to live constructively alongside each other.

That the Federal Republic continues both to trust the Anglo-American allies in their attempt to find a workable Berlin settlement, and to want Britain to be a full member of the European Economic Community, was the burden of assurances given in Bonn this week by Dr Adenauer to the American ambassador, by Herr Schroeder to the British ambassador, and by state secretary Carstens to the French ambassador. Such reaffirmation should scarcely have been necessary: for, short of embracing communism, the west Germans have in the last resort no choice but to accommodate themselves to the wishes of their chief protector. One of Dr Adenauer's explanations for his contrariness has been that he did not want the east German journalists who attended his press conference to go away with the impression that west Germany was in a capitulatory mood. (To one who had asked him whether it was not wrong that certain agents were trying to undermine the east German Democratic Republic from west Berlin, Dr Adenauer countered gently, "There's not really much to undermine, is there?") In private the chancellor has once again deplored what he often suspects to be a standing conspiracy by some western journalists to trip him.

The confusion and annoyance which Dr Adenauer engendered, and his long absences from Bonn, have renewed speculation about his fitness to stay in office until the end of 1963—which is generally assumed to be the latest possible moment for him to carry out his promise to the coalition to retire in time for his successor to have a chance to establish himself before the general election of 1965. The Social Democrats have been clamouring that the "impossible chancellor" should be sent packing. The Free Democrats, whose leader, Herr Mende, refused last September to serve in a coalition cabinet headed by Dr Adenauer, have confined themselves to applauding pointedly Herr Schroeder's expressions of confidence in what the Americans are doing. So have most of the Christian Democrats who believe the time has come for the 86-year-old to make way for a younger man. Permanent civil servants at the foreign ministry and elsewhere are confiding to friends their dismay at the difficulties caused by the chancellor's intrusions and prejudices, and their hope that Herr Schroeder will resist them more effectively than his predecessor, Herr von Brentano, did.

Herr Schroeder seems to be succeeding, and in the process earning the respect of both the diplomatic and the political communities. Having taken all three parties in the Bundestag into his confidence, he has persuaded them of the usefulness of the American negotiations with the Russians, and of the unprofitability of holding at this juncture a foreign affairs debate from whose acrimonious confusion the enemy would assuredly derive comfort. There is much approving talk of Herr Schroeder's "new style," of his "flexibility" and "pragmatism."

In the course of the past few days the foreign minister has been showing his paces in the framing of some radical but constructive amendments to the Anglo-American proposal for a thirteen power authority for controlling the communications between west Berlin and the Federal Republic. The gist of these amendments, which are to be despatched shortly to Washington, is that only six governments should be represented on the authority—those of the Soviet Union, the United States, France and Britain, all with full voting powers, and those of west and east Germany, with no right to vote at all. But how far Herr Schroeder's "pragmatism" will go in the long run is still an interesting matter for conjecture. Many of the younger generation of Germans would be relieved if the foreign minister had the moral courage to declare unequivocally that the existing eastern frontiers must be considered permanent. As it is, the senseless agitation for revision continues.

Yet, however realistically Herr Schroeder may be setting about his difficult and discouraging job, it should not be supposed that he would ever be ready to accept responsibility for recognising the sovereignty of an independent east Germany. There is no west German politician in sight who would. For the communists have made their objective perfectly clear. One newspaper has recalled this week Mr Khrushchev's observation at the Leipzig fair in 1959: "The west Germans will yet come to appreciate that it would not be so bad after all to have Walter Ulbricht as federal chancellor and Otto Grotewohl as president of a united German people's republic of workers and peasants.... If the people in west Germany are not ready yet, there's no hurry. Let there be two states for the time being." Another has published a factual report concerning the works' militia in east Germany, whose 380,000 members, all evangelical communists, are being trained to seize power in the Federal Republic should an opportunity present itself.

Hard-Boiled in Paris

FROM OUR PARIS CORRESPONDENT

France's European crisis has been precipitated earlier than was expected after General de Gaulle's press conference on Tuesday. Few people thought that his words would have such an immediate effect. At the conference the journalists followed the now customary procedure of providing cues for the presidential monologue, and this time the monologue was centred around Europe and its place in the world. Nothing in it was really a surprise to those familiar with the gaullist doctrine, but the general's public restatement of his opposition to the idea of integration, and the contemptuous way in which he made it, proved too much for the European conscience of the Christian Democrat (MRP) ministers. That same night all five of them handed in their resignations from the one-month-old government of M. Pompidou.

In his press conference General de Gaulle simply dotted the i's in the historical record. He denied the authorship of the expression *"L'Europe des patries"* and claimed that he preferred a Europe of states, because nothing solid can be built except through the co-operation of states. Whatever the formula, the general did not hide his aversion from any idea of supranationality. Nobody in western Europe, in his view, now has the power to impose a federation, and therefore all federal solutions are simply ridiculous flights of fancy. True, if Europe abdicated its role, an outsider could impose a larger federation; but if this was the aim of the integrationists they should say so plainly.

There was no doubt among the general's audience about whom he was thinking when he referred to the outside federator. In this way he shifted the European quarrel to its Atlantic level and suggested that the real dispute was over the American leadership of the western block. Admittedly he described Nato as an indispensable alliance. He also granted that the United States assumed the biggest share in the western military effort, and was therefore entitled to "sound" the Russians if it chose. Yet he immediately added that Paris, like Bonn, considers such talks to be harmful and has no intention either of taking part in the atomic farce at Geneva. He also emphasised that the international situation had altered radically in the thirteen years since Nato was created. The Russians have acquired the means of annihilating the United States, and by the same token have undermined Europe's faith in the American shield. Europe must have a deterrent of its own, and the general modestly brandished the budding French strike force as a suitable substitute.

The gaullist vision of a future European equilibrium from the Atlantic to the Urals is very nebulous. The immediate concrete prospect is of a continental coalition based on Franco-German foundations. General de Gaulle refused to say whether there would be room for Britain in such an edifice, but the general impression here is that when Mr Macmillan comes to the Chateau de Champs early in June he may well find that the French are trying to raise the price of admission for newcomers. Dr Adenauer, who will be the general's next visitor, should provide the answer to another awkward question: Will the Germans, despite their present differences with Washington, in fact help to lay the foundations of a construction of which the Americans so obviously disapprove? But even before the reactions of Bonn and other European capitals could be learned, the resignation of M. Pflimlin and his four colleagues showed how shocked the French "Europeans" were by General de Gaulle's ideas.

Shock may be too strong a word. Since nothing in the general's remarks was entirely new, the MRP leaders' surprise is surprising. Only a month ago, when M. Pompidou replaced M. Debré, they agreed to add two portfolios to the three they already held in the previous government. Why the sudden change of heart? The MRP ministers have put forward the following explanation. Admittedly they knew the general's views on Europe, but they thought that they could influence his policy within the government and work towards a compromise on both the European and the Atlantic fronts. The general's press conference convinced them that the influencing might be the other way round, that they might be made use of to bury European integration just as M. Debré was used as the grave-digger of French Algeria. Hence the catholic trade unions are restive, and the MRP feels it has nothing to lose in a general election.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

CANADA

Out next week:

The recent devaluation overshadows other economic topics; the Review considers the likely impact of the cheaper dollar on the trade balance, and the awkward implications of a fixed rate for Canadian monetary policy. The significance of the latest economic indicators for the future course of the recovery and Mr. Diefenbaker's chances in the general election are among the other features examined.

Further details from:
THE ECONOMIST INTELLIGENCE UNIT LTD.
5 Bury St., S.W.1. Tel: WHI 0353 Ext. 35
60 East 42nd St., New York 17 Tel: Murray Hill 7-6850

A government reshuffle, however, does not require a general election. M. Pompidou, having filled the gaps in his cabinet (he promoted secretaries of state to ministerial rank and brought in only one newcomer), can get on with the job. General de Gaulle, convinced more than ever that parties are a nuisance, can wait for a better opportunity to weaken their influence. Everything is happening as if France had already finally got rid of the Algerian problem. The trade unions call more and more strikes. The general has his eyes on the European horizon. The "Europeans" are mounting a counter-offensive. And the Algerian massacre goes on just the same. In real life, unlike the history books, chapters do not end with a clear full stop. Nor do they start on a new page.

Labour Unrest in Spain

FROM OUR SPECIAL CORRESPONDENT

"Asturias" is one of the most emotive words in Spanish—sinister or heroic, according to the mouth which utters it. It was in Asturias in 1934 that socialists, communists and anarchists succeeded, for the first and last time, in surmounting their doctrinal differences and establishing a workers' soviet. It was in Asturias that General Franco, assigned the task of crushing the revolutionaries, made his first harsh impact on Spanish internal politics. Nothing could have startled the general's present supporters (and some of his opponents) more than the sudden resurgence of the word—whispered at first, then chalked on walls, then emblazoned on handbills—in every industrial province in Spain.

During the previous six months there had been strikes involving tens of thousands of workers in Barcelona, Berga, Cadiz, Cartagena, Valencia and many Basque towns. At Beasain, near San Sebastian, workers had demonstrated against the *sindicatos* (the official, falangist-dominated "vertical syndicates" to which workers and employers alike must pay dues) and demanded free trade unionism. In February, Sr Jiménez Torres, the general secretary of the *sindicatos*, alarmed by his officials' reports of working-class discontent, submitted to the minister responsible for syndical and falangist affairs, Sr José Solís Ruiz, a suggestion for liberalising what he called the "outmoded" structure of his organisation. The two men, hitherto close friends, quarrelled, and Sr Solís accused Sr Jiménez Torres of being a "*vaticanista*" seeking to strengthen Catholic Action influence in the unions. Sr Jiménez Torres resigned, a more pliable official—Sr Lamata Mejía—was appointed in his place, and the crisis was swept under the mat. But workers continued to go on strike. As a group of Basques told your correspondent recently, "even fear retreats before hunger."

Spanish workers are hungry not only for better and more varied food but for decent homes and consumer goods. They ask: "Why

should we have to emigrate to obtain a civilised standard of living?" The tales told by vacationing emigrants, and the example of working-class tourists from France and Germany, tantalise them; their appetities are excited by crude hard-selling press and radio advertising and glittering display-windows; but their earnings for a nine-hour day rarely exceed twelve shillings, and it is harder for them than for clerks, teachers and lawyers to hold a second job. The Basques already quoted said: "We want our share of these marvellous economic achievements the papers and radio are always telling us about. After all, the workers bore the brunt of the stabilisation programme." ("How right they are!" commented a distinguished Spanish economist to whom this was repeated.)

Strikes are still illegal in Spain, and strikers may be charged before a military tribunal with rebellion against the state; but except in fairly isolated communities, or where a small group of ringleaders (invariably described as "communists") can be speedily identified and arrested, outright repression is now rare. Army officers are increasingly unwilling to serve on "political" tribunals and sometimes mark their displeasure by awarding minimal sentences. And the government is restrained by the knowledge that Spanish affairs are under close scrutiny in the countries belonging to the European Economic Community, where liberal and socialist publicists are ready to pounce on any impropriety that will justify Spain's exclusion from the community.

When the seriousness of the latest Asturian and Basque strikes became apparent, the government tried at first to intimidate the workers by moving in security forces and ordering employers to impose a lock-out. Forty or fifty arrests were made. But where strikers stood firm they and their employers were soon informed, generally within a week, that they were at liberty to negotiate a settlement, and were assured that the government would observe a neutral attitude. (The government contributed to a settlement by authorising the mine-owners to increase the price of coal. The civil governor of Oviedo province helped to ease tension by persuading managements to allow strikers to obtain food on credit from company shops.) Strike procedure came, in fact, to resemble that followed in the decadent democracies. *Sindicato* officials were either by-passed or obliged to forget their "vertical" pretensions and negotiate on the workers' behalf—with unofficial strike-leaders breathing down their necks. Some employers, in Beasain and Bilbao, have told the workers' representatives that they prefer this method of negotiating and are in no hurry to return to the cumbersome "vertical" system in which union officials represent no one but themselves and every dispute is apt to be dramatised and treated as an incipient insurrection.

A PERSONAL representative of Sr Solis toured the Asturian and Basque strike centres early in May to inspect the damage suffered by the *sindicato* system. After studying his—pessimistic—report, worried *sindicato* and falangist officials from several provinces, meeting in a monastery near Madrid, drew up a list of the measures they considered the government should take to prevent a further deterioration of the industrial situation. Understandably, they saw little need for serious political or structural reforms; but they recommended economic concessions.

Government economists are worried, too—and are strongly critical of the coal-owners who, they say, pocketed the big profits they made during the easy years of protection and autarchy instead of investing in mechanisation. For their short-sighted reliance on cheap labour many other industries may now suffer. Inflationary breezes are, indeed, already sweeping the main industrial regions. Soon after it became known that the miners were being offered 157 pesetas a day (plus a productivity bonus of 78 pesetas a ton for *picadores*), workers went on strike in Vizcaya province for a minimum wage of 160 pesetas. (166 pesetas = £1.) Leaflets signed "MOS" ("trade union opposition movement") appeared in Catalonia demanding a similar minimum. Strikes broke out in León, Guipúzcoa, Jaén and Córdoba. Then "MOS" leaflets distributed in Madrid urged "catholics, communists, socialists and anarchists" to forget their differences and prepare a general strike "for decent wages and liberty."

So far the strikes have been economic and scrupulously non-political, but their political consequences are being felt. In Asturias and the Basque provinces they were led by organisers of the clandestine Christian Democratic Left and Socialist Labour party, which form the core of the Union of Democratic Forces: the UDF has undoubtedly gained influence and prestige in consequence. The liberal monarchists of *Unión Española* have expressed sympathy with the strikers and protested against the censorship. Communist influence has nowhere been decisive, and in the Basque country it has been almost imperceptible; in Gijón workers are reported to have made angry remarks about "communist strike-breakers" when a Polish ship arrived with a cargo of coal (it had to be unloaded by the army). The regionalist movements, however, have been encouraged to step up their agitation—not only in Catalonia and the Basque country but in the Canary islands.

Twenty-four influential intellectuals—including José María Gil Robles, leader of the right-wing Christian Democrats, and Dionisio Ridruejo, once the Falange's propaganda chief, now a left-of-centre critic of the regime—have signed and circulated a statement on the strikes in which they call for the establishment of a situation "as near as possible to liberty, justice and concord" and urge all Spaniards to address petitions to General Franco advocating freedom of expression and "normal, non-totalitarian" trade unionism. Students have demonstrated boldly in the centre of Madrid and Barcelona in support of the strikers and against the "plutocratic" *Opus Dei* wing of the administration. They distributed handbills reading: "1962—last year of the dictatorship."

Canadian Waterloo?

FROM OUR OTTAWA CORRESPONDENT

CANADIANS go to the poll on June 18th, which is the anniversary of the Battle of Waterloo, and the election now looks like being another "damn close run thing." The confidence which the Liberal leader, Mr Pearson, has long shown now appears more reasonable than it did even a month ago. In the early weeks of campaigning, Mr Pearson's appearances have aroused warmer enthusiasm than was generally expected, while Mr Diefenbaker's campaign has fallen rather flat. The comparison is perhaps unfair, since the response to Mr Diefenbaker is inevitably seen against the fervour which he aroused in 1957 and 1958, while Mr Pearson's performance follows very modest forecasts.

But the universal impression of reporters who have followed the two leaders through their erratic airborne election tours from one province to another is supported by a Gallup poll published last week but taken two weeks earlier (that is, before devaluation). It gave the Liberals 45 per cent of the decided vote, against 38 per cent for the Conservatives. This was a switch since January of three per cent to the Liberals from the New Democratic party, formerly known as the CCF. The Conservative share was unchanged, and so was the eight per cent shown for "others," mainly Social Credit. Only in the four western provinces were the Conservatives ahead, with 35 per cent against the Liberals' 31 per cent. It is in the west that the New Democratic party and the Social Crediters have their chief strength, though Social Credit is becoming a factor in parts of Quebec.

If the popular vote follows the poll it still would not assure a Liberal majority because most constituencies will have three or even four candidates. But the decline of the New Democratic party must be especially encouraging to the Liberals, apart from the

IHI's after-service is your assurance of quality

IHI's many-sided operations include the designing, engineering, procurement, and construction of chemical plants and components. After installation IHI backs up its products with continuous expert after-service, sending many technical consultants to perform on-site supervision.

From tanks, kilns, digesters, and vacuum distilling apparatus to chemical plants, oil refineries, paper mills, and cement plants, IHI's processing plant production ranges over the entire field of industrial chemistry.

IHI is Japan's leading heavy-industry company. In addition to chemical plants, it designs and manufactures all kinds of heavy equipment — from ships, engines, and boilers to heavy machinery for use in the construction, iron and steel, power generating, and mining industries. Brochures outlining IHI's capabilities and our informative quarterly "IHI Letter" will be sent on request.

psychological effect of being in the ascendant so early in the campaign. Mr Diefenbaker's early performance has persuaded some reporters that he is "holding back," others that "the old magic is not working." A few days' sally through Quebec was received with notable coldness. At one town where the crowds were larger than usual, a reporter asked why, and received the reply: "*Les gens ne sont pas pressés. Vous savez, il y a pas mal de chômage.*" Quebec is Mr Diefenbaker's weakest area. His strongest are the prairies and the Maritime Provinces. Ontario with its 85 seats, of which the Conservatives won 67 in 1958, looks like the crux in so far as there can be any crux when so much depends on the hazard of split votes.

The only real issue which has emerged so far is Canadian prosperity. The Liberals are pounding away at the theme "the wasted years," comparing Canadian prosperity and prestige before 1957 with unemployment and loss of foreign confidence since then. Mr Diefenbaker devoted his first national television address on Monday to ridiculing the "wasted years" slogan, and reciting his government's accomplishments. But he still gets a greater response on the platform when he attacks the former Liberal regime in 1958 style and equates it (rather incongruously) with the new men around Mr Pearson.

The Liberal leader faces the double task of driving home his "wasted years" theme and of establishing the still weak image of himself as a national leader. He is going at it with gusto. But it will take a big sweep to reverse the Conservatives' 1958 majority. Mr Diefenbaker could lose 70 seats and still have an overall majority of the 265. Both smaller parties are expected to make some gains. So the next government will depend on whether Mr Diefenbaker or Mr Pearson wins more seats; in either case it could be a minority government. At this stage the running is so uncertain that remarkably few bets are being placed.

The War in Vietnam

FROM OUR CORRESPONDENT LATELY IN SAIGON

THE Americans are becoming more and more embroiled in south Vietnam, yet the situation there grows worse and worse. For a while in February and early March it seemed that the Vietnamese forces were having some success, but in April the Viet Cong regained the initiative and there was a record number of "incidents." Now communist successes in Laos will stimulate the Viet Cong and make it easier for supplies and men to reach them from across the border.

No part of the country is wholly free from Viet Cong infestation, and incidents occur even on the outskirts of Saigon. The city itself presents a deceptively smiling face, with its French boulevards and well-stocked shops, and the adjoining Chinese city of Cholon is apparently as busy as ever with buying and selling. But one leaves Saigon at one's peril—the diplomatic corps cannot even get to its favourite beach. A fine road which the Americans built to help the army go out and fight is in Viet Cong hands except for the first few kilometres. The countryside is perilous with possible ambushes and strewn with booby traps—such as buried concrete blocks bristling with barbs that tear into soldiers' feet. Brother fights brother in this hideous little war that could so easily become a major international one.

The United States is firmly committed to prevent the triumph of communism in south Vietnam, whose loss could lead to the loss of all south-east Asia. Mr George Ball, the American under-secretary of state, recently said at an Economic Club dinner in Washington that American personnel in south Vietnam would be increased to 8,000 this year. Americans have been multiplying enormously during the last few months and now number between 5,000 and 6,000, all behaving very carefully and discreetly. None of them however are combat troops; few are armed with anything more formidable than a cigar. Some two thousand are connected with the various projects of economic aid, and military assistance consists of supplying material, instructors and technicians. The Vietnamese army, numbering 174,000, has American weapons and is trained by Americans. Americans pilot the helicopters that carry Vietnamese troops to trouble areas, and the Lockheeds that take supplies to outposts. Large, white and conspicuous, Americans advise Vietnamese commanders in the field, meticulously calling them Sir.

By the end of June, 1961, the United States had spent a total of $2,135 million on aid, economic and military, to south Vietnam; now it is spending something like a million dollars a day. All this is to defeat a mere 25,000 ill-armed guerrillas, and so far it is not even succeeding.

What is needed, rather than more aid, is greater efficiency in its use. Administration, for example, tends to be paralysed by palace control. A properly co-ordinated intelligence system should replace President Ngo Dinh Diem's private lines. There should be a proper chain of command in the army, which might be quite effective but for the interference which results from the president's distrust of it since the army coup of 1960. Very little progress has been made with the joint American-Vietnamese programmes agreed on some months ago for fiscal, economic and administrative reforms.

Worst of all, although good campaign plans are made, progress in carrying them out is slow. The Vietnamese government has the advice not only of the Americans but also of a small British military mission under Mr R. G. K. Thompson, who was secretary for defence in Malaya and knows all about fighting guerrillas. From this co-operation a plan has emerged which aims at clearing the Viet Cong from one area at a time. Villages are ringed with barbed wire and the villagers armed and trained to defend themselves, while hamlets that are too small to be defended are abandoned and their inhabitants resettled in new strategic villages. While operations are going on, restrictions of all kinds are imposed on the peasants; these are designed in particular to prevent food supplies from reaching the Viet Cong, in order to force them in the end to abandon the district. Once the area has been declared "white" the restrictions are lifted, so that the peasant has an interest in keeping it so, and, it is hoped, at least enough confidence in his security to co-operate with the authorities.

That is the theory. The practice has been rather different. A start was made in Binh Duong province just north of Saigon, where of 56 villages only about 10 were still under government administration. "Operation Sunrise," it is grandly called, but there is no indication that it has achieved any definite and permanent result. Meanwhile no start has been made on a similar plan for the Mekong delta south-west of Saigon. Effort still seems

to be dissipated over the country in so-called strategic villages (sometimes fortified purely symbolically with a fence of crossed bamboo) which have no hope of holding out in isolation.

A weakness of all such plans is that it is not easy to get the love and loyalty of the peasant when you are turning him off his land at bayonet point and forcing him to start all over again, first building himself a house. It is still more difficult if, as the Vietnamese government does, you impose on him a heavy levy (between 700 and 1,200 piastres per family) to pay for his own defence. No thoughts of all the schools and hospitals that have been built with American aid are likely to console him. It must seem preferable to be subjected to a Viet Cong raid, which could result in nothing worse than the atrocious murder of the government's headman, the removal of some young men to train as guerrillas, the surrender of food, and of the weapons, if any, just supplied by the government. The peasant is for the regime that will let him till his land in peace.

It is no answer to the need for greater vigour and efficiency to say that support should be withdrawn from the regime of President Diem. Unpopular and nepotist it may be, but no effective alternative is available. Nor is it helpful to suggest that the Americans should be firmer with their clients. As it is known that they cannot let Vietnam go under, the threat to cut off aid would be ineffective. One can only hope that the new gravity of the situation will produce a new tempo and a new sense of priorities.

Militants Against the Military

FROM A CORRESPONDENT RECENTLY IN ADEN

About a third of the six thousand union members who work for the British forces in Aden met at the Trades Union Congress compound in Aden on May 11th to hear an invisible and anonymous leader incite them to a 48-hour illegal strike. Belligerent words boomed at them from a loud-speaker fed by a tape recording. This ingenious, if impersonal, approach to trade union militancy was used by the union to avoid the fate of the five members of its emergency committee who are in prison for trying to persuade the workers to down tools by more old-fashioned methods.

The Forces and Associated Employees Union is demanding higher wages, housing allowances and indemnities on termination of service. It derived its courage to defy the government from its strength, which is greater than that of the many other unions that pepper the Aden industrial scene and which, by a process of fragmentation, seem to be increasing as time goes on. Even so, the forces union called only for a two-day strike, which may have been inconvenient but was hardly damaging—for one presumes that at a pinch serving men can serve themselves for a while.

The significance of the union's action lies less in its demands than its importance as a challenge to the government, and as evidence of still more industrial unrest. For several years before 1960 union leaders led their workers into so many strikes that, in August, 1960, the government introduced an industrial relations ordinance which made strikes and lock-outs illegal. There was peace in 1961, during which legal proceedings under the ordinance were taken in only two cases. In his speech to the legislative council last January, the governor, Sir Charles Johnston, attributed this happy state of affairs to the new law, and no doubt it played its part in establishing the method by which settlements could be reached before the strikes took place. But Sir Charles admitted that most of the 99 disputes successfully ended by conciliation and negotiation "were settled in favour of the workers, who obtained part or all of their claims." The Aden chamber of commerce goes further; it contends that the retroactive pay awards were extravagant and sometimes exceeded the highest hopes of the unions themselves.

On the face of it, it seems premature to claim too much virtue for the ordinance, the coercive effects of which were not tested by results that consistently favoured the unions. The recent behaviour of the unions shows that their challenge is now directed against the ordinance itself and this, in turn, suggests that the testing time lies immediately ahead. At least two of the strikes this year were deliberately designed to flout the law and the leaders were consequently prosecuted and imprisoned. Even the strike of schoolgirls against their headmistress's treatment of a Palestinian pupil had political undertones; veiled teenagers, looking for all the world like diminutive Ku Klux Klanners, refused to go to school, damaged the buses that were sent to take them there and stoned the police who tried to prevent them. There are still innumerable claims that might reasonably be made regarding wages and conditions, but these are not the essence of the current situation, for, as the record of the 1960-61 settlements shows, the unions have every reason to play the ordinance as long as their lucky run lasts. Workers and their wages, genuine aspirations or otherwise, are caught in a mess of politics.

The ordinance may not be numbered among the most liberal of dispensations for unions, but it was not entirely coercive in its intentions. (It was introduced by an elected Adeni minister and passed by the legislative council on which the elected members have a majority.) If workers reach a collective agreement with their employer the ordinance restores their right to strike, the idea being that the unions should win back their freedom by first entering voluntarily into agreements. It is difficult to escape the conclusion that to encourage the unions the employers were called on to pay the piper while the government called the tune. It failed, nevertheless, to charm the TUC, which has exerted its influence consistently to stop the unions from using the ordinance, or indeed from working with the ministers of the colony at all.

As usual in cases like this, employers and people in the government suspect subversive influences ranging from Cairo to Moscow. The forces union is suspected of hatching plans to undermine the military base. It is just as likely that the dizzy whirl of ideas that passes for politics in the colony, and which has numerous conflicting currents within the broad stream of nationalism, has brought to the surface of union activity a political strategy that defeats the outsider's comprehension. There are also domestic factors; the TUC, for example, supports the union with Yemen because it has a majority of Yemeni members, although no unionist in his right mind could seriously seek the Imam Ahmed's rule. If anybody wants coercion he can find it in the Yemen, where a four-year-old boy can be chained to a wall until his parents come back to pay their taxes. Yet this support for Yemen is one element in the TUC opposition to government policy.

The pity of it is that both the colony and the workers need good unions. There are still a great many workers whose lot could do with improvement, but this could best be achieved by industrial action directed strictly to industrial ends. Instead, many of their leaders are seeking to acquire power for themselves by destroying the effectiveness of the Aden upper class, which is now becoming fairly powerful. The colony needs stability both for economic reasons and to pursue its constitutional evolution successfully. Its entrepôt trade is declining, and although the port is used more than ever, it has not had its proper share of the increased shipping of the Red Sea. Djibouti, the capital of French Somaliland, is thriving and industrial troubles that drive ships to that port can do long-term harm to the prosperity of Aden. Fortunately for the colony, it is highly unlikely that the forces union will ever be able to drive away the military bases, which put about £11 million into circulation in Aden every year.

Do you take the lift . . . or the elevator?

The difference may be slight . . . but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages —and with the ways in which they differ *among* the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad . . . it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

THE CHASE MANHATTAN BANK

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

Development Begins at Home

The whole State of Alaska, the island of Hawaii in the State of Hawaii, a large part of Puerto Rico, the Virgin Islands, Guam and American Samoa have also been designated as eligible for aid under the Act.

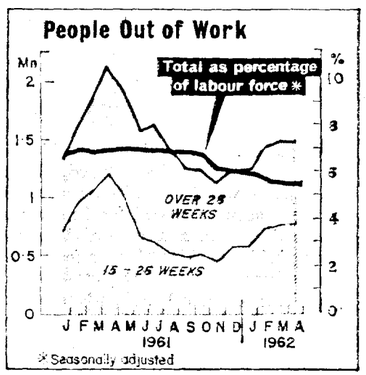
THERE were 66,824,000 Americans at work in April, a record for the month, and the number out of work was below 4 million for the first time since November. But 5.5 per cent of the labour force was still unemployed and 719,000 people had been jobless for over six months. Even if the economy expands fast enough, and long enough without a check, to reduce this rate to 4 per cent of the labour force by next year—and it now looks as if, after all, this official forecast may be fulfilled—the hard core of long-term unemployment is likely to persist, at least in some communities. It is years since a nationwide recession or a nationwide boom made much difference to the depressed iron-mining regions of Minnesota, the coal-mining sections of the Appalachians or the textile towns of New England. For places like Detroit and Pittsburgh sustained unemployment is a newer experience, the result of the replacement of semi-skilled labour by machines, but it may prove to be almost as permanent there as elsewhere.

President Kennedy was plunged into this problem right at the beginning of his election fight, when he campaigned in West Virginia, the most depressed of all depressed areas. His gratitude to the citizens of that state for putting him on the road to victory reinforced his natural desire to do something quickly about chronic unemployment. One of the first measures to be approved by the new Congress was the Area Redevelopment Act, to create new jobs for the unemployed in such communities; it had already been vetoed twice by President Eisenhower. It was followed this year by the Manpower Retraining Act, to teach new skills to those who have been out of work for long periods. But both of these measures are comparatively long-term operations and will have only a limited impact before this autumn's congressional elections. Nor will they provide much immediate stimulus for the economy. So President Kennedy has now asked for $600 million to be spent at once on needed public works which could be started without delay—and it looks as if he may get a favourable answer.

These outlays would be confined mainly to places eligible for aid under the Area Redevelopment Act. At the beginning of May, one year after the Act had been signed, the Department of Labour or some other authority had designated as eligible:

(1) 148 urban-industrial areas where the rate of unemployment had averaged 6 per cent of the labour force for from one to three years and had also been far above the national average;

(2) 735 rural areas and "small labour markets" where workers were consistently underemployed and incomes consistently low;



(3) 50 Indian Reservations where similar conditions prevailed.

There were 34.7 million people in these areas, with more than 1.4 million of them out of work; they contained 19 per cent of the national labour force but 31 per cent of the unemployed. In some of them over 20 per cent of the workers were jobless and the average was above 10 per cent. The median family income in the areas of underemployment, at $1,560 a year, was only about a quarter of the national median. Altogether nearly 1 million new jobs are said to be needed. To fill the gap the Area Redevelopment Administration is relying not only on the work created directly by its projects but also on that created indirectly by the need for supporting services and by added purchasing power in the districts concerned.

Once designated, a redevelopment area is eligible, over a period of four years, for:

(1) Loans, to be made to official or private applicants, to buy, develop or improve land or facilities for building or expanding factories; altogether $200 million will be available for these purposes but the ARA may not put up more than 65 per cent of the cost. By May 1st, 21 such loans had been approved, for projects ranging from the distribution of peat moss in Maine to a bottling plant for soft drinks in New Mexico.

(2) Loans of up to 100 per cent of the cost ($100 million is available) or grants ($75 million was authorised and $40 million appropriated) for building or improving public facilities; 7,285 was the estimated number of permanent new jobs to be created by the 19 loans and grants approved so far, mainly for water and sewage facilities but also for a ski jump and other ski-ing facilities to bring visitors to northern Michigan.

(3) Technical assistance—advice, economic surveys, research into new uses for resources, a study of food marketing practices in Samoa, and so on.

(4) Job retraining programmes, to cost $14.5 million; the hundredth has just been approved.

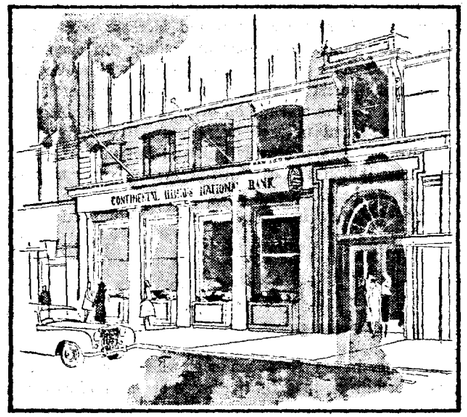
Only three states—Vermont, New Hampshire and Delaware—are without redevelopment areas and it has been contended that there are far more of them than are needed or than the money available will cover effectively. To the second of these arguments Mr William Batt, the head of ARA, replies that the loans and grants from his agency are "seed corn"; they stimulate local initiative and self-help and force the distressed areas to mobilise their resources, and those of state and federal governments to analyse their problems and to plan their own programmes. The financial assistance from ARA brings a crop of new investment from local authorities and from private enterprise.

It has been suggested that ARA is duplicating work already being done by state and local agencies and that many of these projects would have been undertaken if no help had been offered by Washington. This suggestion comes from bankers, among others, who think that they have been done out of business by cheap loans, although some people feel that the government itself charges too much interest in the circumstances. There are also people who say that ARA encourages communities to think that all that they need to do to ensure satisfactory industrial development is to build a new plant with government help.

The first and most publicised project under the new Act answers these complaints—but it also gives rise to new ones from some of the liberals who have been among the most ardent supporters of redevelopment. In Mountain Home, in Arkansas, a rural area with exhausted soil and no assets except its people, those people had already, by their own efforts and by increasing their taxes, raised the money to build a factory and lease it at an uneconomic rent to a manufacturer of shirts. They then found that they could not afford to supply the additional water which was needed. ARA provided $160,000 for a new water system and some 500 people, mainly women, got jobs and are spending their wages in the local shops. Another factory to make boxes for the shirts may be set up soon. But wages are still very low in Mountain Home—it was this which attracted the shirt-maker in the first place—and he extracted a promise that no trade union would come into his factory.

The question now is whether federal funds should be used to help operations of this type, common as they are and badly needed as they are in the South, particularly since such manufacturers tend to be inefficient and unprofitable and to move on to other communities which offer better terms. Thus they do not provide the stable employment which is one of the purposes of the Act. It contains strong "anti-piracy" provisions to ensure that the industry it brings in is genuinely new, not stolen from somewhere else, but this does not prevent "pirates" who are industrialising without ARA from drawing this industry away again. And then there is the deeper question of whether in the long run it is desirable to keep a dying community alive; would it not be better for the people to move away entirely, as many of them have done already, to places where there are broader opportunities for them and for their families?

THE main reason for these difficulties is that rural communities as well as industrial ones are eligible for aid under the Act. This also explains why its benefits are spread so thin. There is little argument about the need for help for towns whose source of livelihood has gone as a result of changes in demand or technique, leaving behind a skilled labour force and all the other things—communications, power lines, etc.—which industry needs. Such a district is southern Illinois, where coal mining no longer pays; if ARA's Rend Lake project there proves practicable, it will supply the district with the water which modern industrial processes must have and which is all it lacks—or so it is hoped—to make it attractive to new industry. Developments under the Act may even, it is thought, attract industry from abroad to some redevelopment areas; foreign companies would be welcomed as American companies have been in similar areas in Britain.

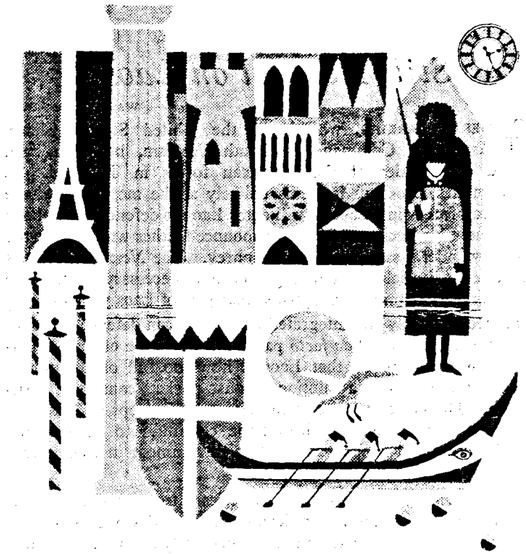


But the congressional representatives of rural areas made it quite clear that, unless their constituents could benefit, they would not vote for area redevelopment, and so the conditions for receiving aid under the Act were made broader than the experts had advised. They were also made broader than some of the communities themselves desired; last year a group of counties in Texas protested violently against the insult of being labelled depressed. But all Congressmen like to come up for re-election bearing concrete benefits from Washington. At one point it looked as if they would not have much to show from the Area Redevelopment Act, at least not in time for next November. There was much criticism of the slowness with which Mr Batt was producing results. But to comply with all the provisions of the Act is necessarily a slow process, and Mr Batt is determined not to lay himself open to charges of having flouted Congress or of having set bad precedents. First the areas must be certified as eligible for aid. Then each one is required to produce its own development plan, which must be approved by the state and then by the federal authorities as justifying the investment involved. Only after that can specific projects be considered. Thus it was not until April that the programme really got going; in that month more "job-creating" projects were approved than during all of the previous six months. Then one of the main purposes of the scheme is to co-ordinate all the government resources available and all of the existing programmes, such as those for channelling as many government contracts as possible into depressed areas and for new highways. Such consultation, and the sharing of authority with other departments, take time and can be frustrating but they prevent overlapping and duplication.

Retraining programmes were one of the first activities to be started in several places; money is provided for tuition and subsistence allowances and unemployed workers are trained for jobs that either are available—repairing automatic transmissions, for example—in the community or will be available—operating turret lathes, for instance—when a planned industrial project actually begins. There have been some setbacks: the number of nurses' aides needed in one West Virginia community was overestimated and the trainees could not get work. Many unemployed people are unwilling to admit that they will never get their old jobs back and many, especially in mining areas, cannot pass the required aptitude tests or have insufficient education to cope with complicated mechanical processes which modern industry requires. One promising project for training tractor drivers in Mississippi foundered on a combination of racial prejudice and fear of interference from Washington. But the scheme has provided valuable preliminary experience for the new and more far-reaching Manpower Retraining Act, which offers training for a much longer period and covers the whole country.

It is not only in retraining that the Area Redevelopment Act is a pilot operation for other undertakings. It will provide valuable experience also for those who handle the readjustment provisions of the coming Trade Expansion Act, designed to help businessmen and work people who suffer from increased competition from abroad. ARA's insistence on development plans parallels that which now comes from foreign aid officials dealing with under-developed areas abroad and the problems are often very similar. Both types of assistance are intended to provide new opportunities for those who have lacked them in the past. Area redevelopment is an official recognition—a rather belated one, many people think—that the United States has at home some of the same deficiencies that it has long been trying, at great expense, to remedy abroad.

Chicago's Oldest Bank Opens the Newest Bank in London



Address: 58/60 Moorgate, London, E.C. 2

Now in London—just as in Chicago—Continental offers a complete range of commercial and international banking services. The members of our London staff have been selected for their experience in both fields. You'll find them equipped to serve you well.

Still Neutral on Laos

WASHINGTON, DC

GENERAL HARKINS, who heads the United States Military Assistance Command in South Vietnam, has also been named commander of the American forces in Thailand. In between lies Laos but it seems unlikely at the moment that the American forces in Thailand will enter Laos to defend the Mekong river line. No decision has been announced either way. "Let the enemy wonder," said Senator Humphrey. The *New York Times* suggested editorially that it might become necessary to preserve from further communist aggression that part of Laos which can be defended militarily and integrated with American defence of South Vietnam, calling this "*de facto* partition." But the official American view seems to be that Laos is now too full of communist pockets for this to be a solution because pockets cannot be partitioned. Therefore, in spite of the dispatch of troops to Thailand, apparently the main American hope continues to be that the Russians will still support a coalition government in Laos under a neutralist prime minister.

The Soviet reaction to the American troop movements is regarded in Washington as relievingly mild and Congress's reactions to the situation in Laos is described aptly as more mute than militant. There appears to be no plan to delay the release by August of the 145,000 American National Guardsmen and Reservists who were called up last autumn because of Berlin. While the Americans, not for the first time, are fervently hoping that Mr Nosavan will henceforth content himself with being a bad general instead of insisting on being an even worse politician as well, all faith in the fighting qualities of the anti-communist Laotians seems to have been lost finally. Some complain that, if only the United States government had withheld the general's pay cheque earlier, he could have been compelled into a coalition without the current disaster. The likeliest explanation for the failure of the United States to do this seems to be that the Administration was mortally afraid of being accused by Republicans of cutting off funds to "staunch" anti-communists. Certainly President Kennedy has shown little disposition to believe the reports from the Central Intelligence Agency that the general was really worth backing.

Some Americans are waking up to the fact that a neutralist government in Laos, even if achieved, will now really be only a thin cover for American disengagement from Laos. This in turn makes South Vietnam's situation more precarious. For some time it has been feared that factionalism within South Vietnam between Mr Diem and his non-communist opponents might by itself open the door to a successful communist take-over there. But the United States is committed to both Thailand and South Vietnam; this provokes sobering thoughts of American soldiers once more fighting communist Chinese.

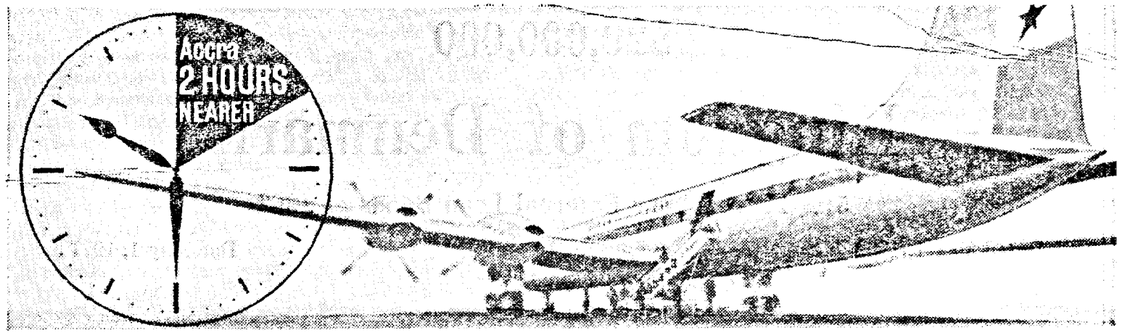
Even-handed President

LAST week, while the President flew off to Atlantic City to lecture the United Automobile Workers on his wage policy, seven high-level members of his Administration were in Virginia, at a meeting of the Business Council, exchanging olive branches with Mr Blough, its head and the President's late antagonist on the steel front. Suspicion that the Administration is "anti-business" will be hard to eliminate, but none of the big businessmen present could deny that its spokesmen came bearing real gifts. The Treasury promised that more generous tax allowances for depreciation of capital assets, which have been long delayed and are greatly desired, will definitely be available to businessmen when they make their tax returns this year. And Mr Heller, the chairman of the Council of Economic Advisers, repeated his hint that substantial reductions in taxes, both on corporations and individuals, will be proposed this summer, in good time for Congress to act on them during 1963.

At the UAW convention Mr Kennedy plainly felt himself among friends, as he had not when he addressed the Chamber of Commerce. But he faithfully told the trade unionists that he expected them, as well as businessmen, to take account of the national interest in negotiations affecting wages and prices. He had two reasons for speaking with particular firmness. Mr Walter Reuther, the UAW president, hastily and tactfully agreed that in the long run wage increases should come out of increased productivity, not out of the consumer's pocket. But he argues that in the short run wage increases should exceed increases in productivity, partly because he thinks that real wages have lagged in the past, partly to enlarge effective demand and stimulate the economy into more rapid growth. The second reason for Mr Kennedy's outspokenness is that the UAW is involved in two sets of wage negotiations which businessmen regard as tests of the sincerity of his wage policy—in aluminium and, more importantly, in the aerospace industry, whose main customer is the government.

Any union—or businessman—tempted to defy the President had a new demonstration last week of how harshly he can turn on pure self-seeking. He pointed out icily that it is the savings and loan associations, that have paid practically no taxes up to now, which are stirring up a whirlwind of popular protest against the tax revision Bill. The House has passed it and it is now before the Senate Finance Committee; it would increase taxes on savings and loan associations. But their misleading propaganda has led many people to think that the provision for withholding taxes on dividends and interest is a new imposition. In fact it is only a measure to collect the revenue on over $4 billion of income which goes unreported and untaxed every year. The impression that the poor would suffer is equally untrue. But the Treasury would gain about $1 billion a year which at present other taxpayers are being forced to provide. This money would almost pay for the tax credit to spur new investment which is authorised in the same Bill.

Deficits Pay



FROM AN AMERICAN CORRESPONDENT IN EUROPE

THERE must be an American somewhere—and a place surely exists for him on the editorial board of the *Wall Street Journal*—who can contrive to demonstrate that the economic performance of the United States in the past five or six years has been better than that of western Europe. As the mediaeval metaphysicians showed, a properly armed theoretician can prove anything and economic theory is most rewarding in this respect. At the very least, such an American should be able to argue convincingly that the continental Europeans, who have clearly done everything wrong, are headed for grave trouble in the "long run"—even though they may have been growing faster, investing more, making more profits, raising wages and living standards faster, avoiding recessions and maintaining full employment up to now.

By all the truths Americans have lived by, the continental Europeans must be in for dire trouble. Their economic sins are almost unspeakable. First, and by all odds foremost, their governments never balance their budgets—at least as Americans understand the term. More awful still, they do their best to avoid surpluses in these budgets. All of them have some nationalised industries; not one, for example, has that pillar of free enterprise, a privately-owned railway system. Almost without exception, they take more from their people in all forms of taxation than does the United

Accra next stop!

by GHANA AIRWAYS Express

Ghana is two hours nearer now that Ghana Airways Express flies direct from London to Accra. Every week a sleek, modern Britannia Jet-prop Aircraft takes off in the evening from London and touches down in Accra the next morning. This is the first non-stop air service between the United Kingdom and Ghana. It is the quickest way to travel between the two countries.

The Express Service leaves London every Tuesday evening and is only one of 5 regular flights every week operated in association with B.O.A.C.

New York, N. Y., May 10, 1962

States ; yet, unaccountably, " incentives " have not been dulled and " risk capital " has not dried up. Government spending in European countries rises giddily year after year, much faster than in the United States, and the welfare state knows no bounds. Most subversive of all, Europeans have been living in sin with creeping inflation for ten years, with hardly a dire consequence to show for it. They are virtuous enough to say that they hate themselves for doing it but they do it and nothing much happens.

It is clearly an unjust world that permits such economic sinners to go on getting richer and richer and at the same time permits them to take away nearly a billion dollars worth of American gold each year. The continental Europeans, in fact, are doing in economics what any sensible man knows is impossible: they are spending themselves rich. Unfortunately, all this has gone on with such good results for so long that the painful question arises of whether virtue and sin have not changed places. In the " long run " Europe may be doomed to suffer, but the long run seems to fade farther and farther into the distance. Europe is now in its fourth consecutive year without the shadow of a recession and looks like repealing the business cycle altogether. What moral does this hold for America ?

THE first thing is to decide which economic transgression has been most effective. Many of the people who have come to admire the profligate way of life in Europe have centred their gaze on a number of small things instead of on the essential big one. There has been study and approval of such factors as Monnet type national planning, a heavy concentration on indirect taxes in the " mix " of taxation and the aggressive use of rapid depreciation allowances for industry. These are all no doubt important and useful. But the one big reason for continental Europe's success story is the way government policy has affected total demand. By avoiding surpluses in their budgets by means of rapid rises in spending and occasional cuts in taxes, by keeping the supply of money expanding constantly, European governments have given Keynes in heaven (or at least in purgatory) the satisfaction of having been right. They have shown that a fiscal and monetary policy aimed, above all things, at high demand—when necessary created through bigger budgetary deficits and never curtailed by surpluses —is the way to make an advanced economy work well.

Between 1941 and 1953, when Americans, wringing their hands over the awful things which they were doing, had big and purposeful deficits and a steadily expanding supply of money, they also had a successful economy. Of all the " old days," the most pleasant to contemplate are those only a dozen years ago when it was generally hard to find labour in America—and those days saw the country " automating " considerably faster than it is doing now, measured by the rate of investment in plant and equipment as a portion of total activity. Nor is there any need to go to war to practise the sin of spending yourself rich. Building schools, for example, does just as well.

In 1953 Americans returned to the path of virtue and a policy of holding back demand by curbing the rise in government spending and making money scarce. There was a vast sigh of relief that sanity had come back. But by about 1957, plainly things began to go sour. Ever since then, Americans have been telling themselves all the wrong reasons why the economy has been working badly and growing slowly. They have ended by doing slightly better than the profligates across the Atlantic in the battle against the dragon inflation, but it is doubtful whether the spiritual comfort of this victory compensates the 4 million unemployed in America for the loss of the more crass pleasure of having enough to eat.

The conclusion to be drawn is that the American government should also try to spend its country rich. This means setting out aggressively to create, and then to maintain, a rapidly rising aggregate of demands. Probably the goal of surpluses in the budget should be dropped for good. A deficit of $5 or $6 billion in the forthcoming fiscal year should invigorate a recovering but still under-employed economy—always provided that the deficit is brought about intentionally by higher spending or a tax cut and not inadvertently through the failure of a sluggish economy to produce the expected receipts from taxes. To be successful, one must sin with a certain style. The tragedy of the recent American deficits is that they were unwanted and thus did not stimulate the economy very much.

But the economic Puritans will ask: what about the balance of international payments ? The answer is that the American balance of payments abroad fares better when the American economy at home fares better. With the exception of France, which for a while overdid sin and inflated right out of sight, the same has been true for Europe ; and now France, back to mere creeping inflation, is doing best of all. There is, in short, no evidence that a payments deficit is increased necessarily by full employment and rapid growth and they may easily reduce it. As for " confidence " the only real attack on the dollar occurred late in 1960 when the United States was heading into the most recent recession in its dreary series. Some European bankers may shake their heads about budgetary deficits in America, but these do not deter them from investing on Wall Street when the stock market looks good.

Corrupt and Discontented

REPUBLICANS in Maryland have only themselves to blame if, as seems probable, they fail to elect a Governor in November. In Tuesday's primary election they chose two lack-lustre candidates, Mr Small for Governor, Mr Miller for the Senate in Washington, while their best vote-getter, former Governor McKeldin, sat on the side-lines. He had refused to stand, allegedly because the rich men who normally finance Republican campaigns threatened to sit on their money-bags if Mr McKeldin were the nominee ; he is too moderate and too modern for them. Yet if there were ever golden opportunity for Republicans in Maryland, where they are often outnumbered, it is this year when the two top Democratic candidates have been slinging mud at each other. As a veteran district leader in Baltimore said with heart-felt feeling: "This is the worst I've ever seen ; it's a terrible thing when the public finds out what's going on."

Mr Tawes was renominated for Governor by the Democrats, but he won only 176,000—about 45 per cent—of their votes, compared with 261,000 in 1958. Over 124,000 votes went to Mr Mahoney, a rather shop-worn perennial candidate for high office, and 117,000 disgusted Democrats gave a big protest vote to Mr Hume, a candidate who had hardly any support from local Democratic organisations but whose strength was his insistence that the level of politics in Maryland must be raised. Early in the campaign the over-riding issue was the savings and loan (building society) scandal which has been rocking the state for years. But in the closing weeks Mr Jack Pollack of Baltimore, one of the very few remaining old-fashioned city bosses, dropped a bombshell: he invited newspapermen to listen to an alleged tape-recording of a conversation which he had held with Mr Tawes in 1958. This left few doubts that the Governor had promised a number of judicial appointments to the Baltimore boss in return for an immediate contribution of $5,000.

At first Mr Tawes protested that the tape was forged ; then that conversations about patronage with political leaders were normal practice ; finally that he did not give Mr Pollack all of the appointments which the boss demanded and indeed had kept Maryland out of his clutches. In fact the two fell out very quickly over patronage but until quite recently the Governor seems to have hoped to win back Mr Pollack's support. All this would have been

gravy for Mr Mahoney if he had not been the recipient of Mr Pollack's transferred loyalty; the voters were urged by the other candidates to wonder what Mr Mahoney might have promised. This boomerang effect may have saved the Governor's bacon: but Mr Tawes still has to reckon with a grand jury which started this week to determine whether he had violated the state laws against corruption.

Grain of Comfort

By a combination of procrastination, pressure and judicious lobbying the Administration has squeezed out of the House Agriculture Committee a Bill which extends to all the major grains the strict crop controls already applied to wheat, cotton, rice and tobacco. This means that the President's farm policy is still alive in spite of the fact that the Senate Agriculture Committee gleefully rejected almost all of his proposals for tackling the mountain of surpluses not by reducing price supports for farm commodities but by fiercer restrictions on production. But even in the House committee the final vote—which was only 18 to 17—had to be postponed five times to secure one vital Southerner; every Republican and three southern Democrats voted against the Bill. The Administration now hopes that the House will accept its committee's report and that the Senate will have second thoughts. The emergency programmes adopted for wheat and feed-grains are about to expire and need to be replaced by permanent legislation.

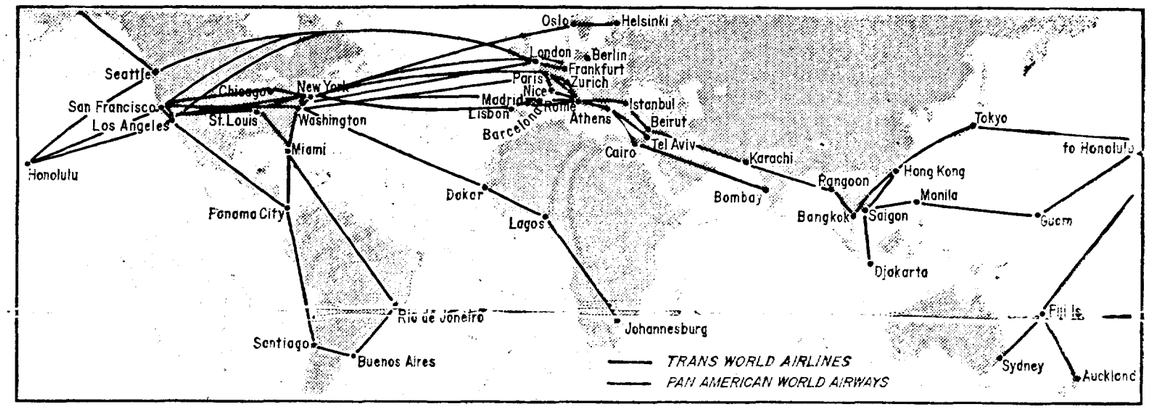
The Administration fared less well over its proposals to dam the flood of milk. The House committee would agree only to a voluntary scheme of incentives for producers who curb their output while the Senate committee eliminated the dairy section of the Bill completely. It also refused to make wheat farmers choose between cutting their production by 20 per cent or doing without price supports. The heart of the Administration's Bill, however, was its plan to bring maize and other feed grains under rigid controls for the first time. Farmers would have to accept these or sacrifice all supports for their prices. Over the objections of the Republicans and the Southerners, who are concerned about supplies of feed for their expanding herds, the House committee agreed. But its opposite number in the Senate kicked over the traces and substituted Senator Proxmire's suggestion for extending the present voluntary system, which makes individual farmers ineligible for price supports unless they reduce their plantings by at least 20 per cent from 1959-60. They are compensated for turning the land thus freed over to soil-conserving uses. The programme is popular with farmers and has been quite successful in reducing plantings, but less so in reducing production, since non-participating growers have stepped up their output and yields continue to rise. Senator Proxmire's objection to compulsion was that it would never obtain the approval of two-thirds of the producers of feed grains needed to bring it into force; too many of them grow feed only for their own use.

The Administration can take comfort, however, from the fact that both committees approved in principle of its plan to get farmers to convert some 50 million acres of crop land to other uses during the next twenty years. Land retired under the original soil bank is now being brought back into production as contracts expire and the most promising solution seems to be to persuade farmers to find other permanent and profitable uses for excess acres. These include recreational purposes, wild-life refuges and turning the land over to trees or grass.

Pan World Airline?

The two American airlines which compete across the Atlantic Ocean, Pan American World Airways and Trans World Airlines, carried only 37 per cent of transatlantic passengers last year, 3 per cent less than in 1960 and 26 per cent less than in 1950, although the total traffic on these routes has increased enormously, TWA lost nearly $3 million on its international operations last year (and a great deal more on its domestic ones) while Pan Am's profits were far lower than in 1960. In the circumstances it is not surprising that both the airlines and the Civil Aeronautics Board, the government agency which regulates them, are concerned about the situation.

The CAB is considering a staff report which proposes a return to the controlled competition which prevailed between the two airlines for a few years after the war, with Pan Am serving only the northern European centres, London and Frankfurt, and TWA having exclusive American rights to the southern routes to Europe but giving up its services east of Cairo. Pan Am would certainly not want to lose its lucrative traffic to Paris and Rome. Its solution is a complete merger of the two airlines, which would give the United States the single overseas air carrier which other countries already have and which Pan Am has always favoured—provided, of course, that Pan Am itself was this "chosen instrument." The merger would also give Pan Am the other thing which it has always wanted, domestic routes inside the United States. These the CAB has refused firmly to allow Pan Am to have and for this reason, among others, many people think that the agency would refuse to approve the merger if it ever becomes a formal proposal. Some guidance as to whether the CAB would agree to such a concentration of power in the air may come from its decision, not expected before the end of the year, on the proposed merger between American Airlines and Eastern Air Lines, now the second and fourth largest domestic carriers; United Airlines is the largest and TWA comes third. Together American and Eastern account for over a third of the internal traffic.



But even if the CAB accepted a single international airline as a matter of economic necessity, the Department of Justice's trust-busters might object and, as this is a question of foreign policy, the President's approval would also have to be obtained. Meanwhile, however, the negotiations between the companies themselves cannot get very far until the complicated problem of who controls TWA is settled. Mr Howard Hughes owns four-fifths of the voting stock but he was forced to put this into a voting trust in 1960 to get the airline out of financial difficulties. Now he is trying to regain control and, if he succeeds, Pan Am will have the almost impossible task of bargaining with this eccentric recluse.

Free Schooling till Twenty?

FROM A SPECIAL CORRESPONDENT

In all the controversy over education little attention is paid to the junior college. Yet there are now about 700 of these "in-between" institutions, with around 750,000 students—more if summer courses are included—or about one-fifth of all enrolment beyond the high school. A junior college usually offers two-year continuation courses for high school graduates, either in technical and vocational skills or in academic subjects as a preparation for further higher education. These institutions are often known as "community colleges" since their students, who usually include some older people, come as a rule from the surrounding neighbourhood and thus can live at home. Most of these colleges are supported by state and local taxes.

The junior college is the fastest-growing division of American education. Every year there are about 35 more of them; their students increased by 110,000 in 1961 and have quadrupled since 1950. California alone has 70 such junior colleges, with 100,000 students, and expects to have 300,000 in junior colleges by 1972. New York has 16,000, expects to have 80,000 by 1970 and plans to make its junior college system "the broad base of all state-supported higher education." A junior college tends to be started when the leaders of a community realise that many of its young people are being stranded on the educational beach after high school. One of its purposes is to give them the training—in nursing, typing, industrial electronics and so on—needed to find jobs. But it also encourages the abler students to go on to complete a four-year college course. Indeed, quite often a community becomes ambitious and turns its junior college into a four-year one—usually to the detriment of its vocational work.

The main problem of the junior colleges is that they have to compete—for funds, teachers and students—with the more powerful and better-known institutions. (As the president of one junior institution noted "If a body's warm and has a PhD, it's probably teaching in a university.") The junior colleges' main opportunity for growth comes from the enormous demand for better-educated citizens and trained technicians, particularly in electronics. Congressman Brademas of Indiana is sponsoring a Bill for federal aid to the junior colleges to train technicians—the "indispensable chief petty-officers of industry." Some educationists are even beginning to argue that twelve years of universal free education is not enough and that, in a period when man's knowledge is increasing so fast, everyone capable of profiting from two more years of education should be encouraged to do so. According to the President's Commission on Education Beyond the High School, just under half of all young people would benefit from fourteen years of schooling.

SHORTER NOTES

Hopes that a Philippine contingent may join the American forces in Thailand come at an unfortunate moment in US-Philippine relations. President Macapagal has just called off the state visit which he was to make to Washington next month because the House of Representatives has unexpectedly rejected a $73 million measure to clear up Philippine claims for war damage. Small claims—under $500—have been paid in full but only just over half has been paid on 86,000 larger ones. Some Congressmen suspect that the Bill would simply bring windfalls to Philippine businessmen who have done nothing to rehabilitate their country. There is hope that the House can be induced to change its mind.

* * * *

Governor Faubus of Arkansas has decided that he is well enough after all to run for an unprecedented fifth term. The improvement in his health was reinforced by public opinion surveys which suggested that he would win the Democratic nomination in the primary election next July but he faces very strong opposition.

Trading with EUROPE

Since negotiations began for Britain's entry into the Common Market the Midland Bank has still further extended its services for traders both at home and abroad. In particular—

1 **A Panel for European Trade, consisting of officials experienced in international trade and economic affairs, has been set up to help traders in developing markets abroad.**

2 **Mr. Bruce Smith, a Divisional Foreign Manager and a specialist in foreign trade, is responsible for 'in the field' matters concerning European trade and spends much of his time on the Continent.**

3 **Representatives are available to visit any part of the United Kingdom to join in discussions of problems and prospects and are available for 'on the spot' discussions with businessmen visiting the Continent.**

You can make use of these services through any branch of the Bank, or, if you prefer, write direct to the Panel at Overseas Branch or telephone MONarch 9944.

These services have been developed especially to assist businessmen to take full advantage of new opportunities in European trade. ***Please use them.***

Oil Companies and Governments

It is to the interest of responsible oil companies to avoid as far as possible unduly high or low prices or violent fluctuations in the volume or direction of traffic from year to year—which have proved to be the usual concomitant of government to government agreements.

—THE HON. M. R. BRIDGEMAN, chairman of British Petroleum, annual statement to shareholders, 1962.

IN Ceylon this week the government-owned Ceylon Petroleum Corporation went on snaffling the best petrol stations and kerosene selling points on the island, for use in conjunction with storage tanks similarly seized from international oil companies to distribute the petroleum products it is buying from Russia's governmental *Sojuzneftexport*. Caltex, with a bellow of protest, closed its marine bunkering station and seemed on the verge of pulling right out of Ceylon. Stanvac and the joint Shell-BP marketing company there, which has suffered at least as much as the American companies but has the largest stake in the local market and in marine bunkering there, seemed for the moment prepared to sit tight.

Russian products are being distributed by a governmental marketing corporation, too, in India—though with less incursion upon the established companies operating there. That is not all that is at issue between these companies and the Indian government. But a fortnight ago Burmah-Shell, the biggest refining and marketing company there, offered unilaterally to tear up an operating agreement in India that the government contends is onerous, and operate under a normal industrial licence with a rupee company. Clearly, it hopes to be able to negotiate on all the issues between it and the government, but it is not making its offer conditional upon any particular points involved in them.

In Iraq, again, BP has been lifting oil from the new offshore tanker terminal south of Basrah harbour that the Iraq operating companies began to build before the port authority put exceptional cargo dues on Basrah oil, and long before General Qasim decided to ban company operations everywhere in Iraq except the small areas where they are actually producing. The companies do not recognise Iraq's act of expropriation as legal, but go on operating; General Qasim continues to rumble about further measures to restrict them, but reserves his noisier fulminations for Kuwait. And in Kuwait, as if to emphasise that companies have to be selective between host governments, BP and the Gulf Oil Corporation of Pittsburgh have just agreed to relinquish 50 per cent of the area of their onshore and coastal strip concessions, even though there were no provisions for relinquishment of any kind in the Kuwait agreements.

Companies engaged in the international oil business have at all times more kinds of governments than one to deal with, and different shades of government within each kind. What is common to almost all of these, nowadays, is an increasingly direct interest in oil; and some, of each kind, are seeking common interests in it and the influence to further those interests jointly. The "responsible oil company"—which in Mr Bridgeman's context means one not finally responsible to any one government, even if one government owns half of it—is naturally uneasy about this:

> Companies such as ours have a double function to perform in that it is their business to ensure at the same time a market for the producer and a dependable source of supply for the consumer. These objectives cannot be achieved by direct agreements between the governments of the producing and consuming countries except through arrangements which, by disrupting the normal channels, tend to leave the producer at the mercy of the consumer or vice versa, whenever the contracts are due for renewal.

So far, there has not been much talk about long-term contracts between governments—except, recently, in a cold-blooded analysis of the world oil market, characteristically inimical towards the major companies, produced by the Italian ENI (*Ente Nazionali Idrocarburi*) group. But Mr Bridgeman's apprehensiveness about the temptation for groups of consumer governments to get into direct touch with groups of producer governments is well-based.

CIRCUMSTANCES of surplus such as continue to surround the world oil industry, almost inevitably set many a government wondering whether it could not itself improve on the performance of such parts of the job done by the internationally-integrated companies as affect it. Non-integrated buyers of crude oil, be they independent companies established in some market or governments with some control of access to a market, can nowadays get oil at lower prices than those at which it is invoiced to affiliates of the international groups within their borders. Producer governments certainly cannot get better prices for their crude oil than those "posted" by the companies controlled by the international groups there. But some of them may feel they

can still get apparently better kinds of royalty and tax deals from newcomers to oil production—and perhaps later get these generalised to include existing concessions. And they may also feel that a united producers' policy may enable them to stabilise or raise prices, and even to reach some overriding understandings with consumer governments—not all of which want petroleum products, at least, sold at the lowest prices that competition can exact.

These circumstances of surplus are circumstances that have reduced BP's net return on integrated oil operations from 14.4 per cent in 1957 to 9.2 per cent in 1961. They reduced Shell's net integrated return from 15.3 per cent in 1957 to 8.5 per cent in 1960, though the decline was arrested last year and the percentage net return remained the same. Anyone even distantly cognizant of the tax angles involved in "net integrated return" for the international oil companies—each of which has a different spread of assets on which profits are made or taxable profits shown across the world—recoils from generalising comparisons here. But Shell in 1961 took credit for having achieved the same sort of internal rationalisation as some of the American integrated companies had carried through about a year earlier. This process earns no mention in the BP statement to shareholders. Perhaps BP feels that it put itself through the wringer after the Abadan affair, and ever since been as lean as some of the companies that now pride themselves on having taken a course of slimming. (This, it need hardly be said, would be debated.)

The surplus continues. So, it should be said, does an increase of about 4-5 per cent a year in oil consumption in the non-Communist world. Capacity to produce oil also increases at about the same rate; this results from a continued and hectic exploration to locate more capacity to produce oil. Various institutional and political factors are built into this exploration effort; tax offers its temptations here too; and there are some genuinely gambling incentives, over time, to go on exploring, since the return on expenditure on exploration is random and may be fabulous. The pressure to spend money that will keep the surplus in being is high; the likelihood—one Middle East having been discovered—that the surplus of productive capacity will continue for quite a while is even higher.

As Shell pointed out last month, the officially "posted" prices in the Middle East, which commemorate circumstances of market power no longer available to the major companies, have ceased to "represent the commercial value of crude oil." This is lower than these prices wherever deals are made freely with independent customers (and on occasion, even where deals are made with affiliate companies). If they invoice crude oil at these prices to affiliates in consuming countries, in most cases the integrated companies have to take losses on refining, since the prices they can get for refined products are influenced if not wholly set by the offers that independent marketers—let alone Russians—can make. The ruling level of product prices, for some months, has not been slipping much (though completion of the next instalment of refining capacity may bring it down again). But payments to producing governments—via royalties and taxes to bring the level up to 50 per cent of apparent profits—are based on the posted prices of crude. And this makes these artificial prices, meaningless except in an internal company context, practically irreducible. The royalties and tax paid to producing governments—in effect, an inescapable cost of crude—have therefore squeezed the net integrated return available to integrated companies. For these companies cannot, in their turn, escape meeting market prices for the petroleum products that they finally sell. Those product prices are not in all countries (consider Britain) quite as low as in the most freely competitive markets such as Sweden and Italy; but they are becoming more realistic everywhere.

To a cool if friendly observer (such as, say, the European Common Market) it must seem possible that in the medium run this pressure on the net integrated return, from the production end, will continue to gain ground. This need not necessarily mean much further shrinkage of the total return—which in the cases of companies such as Shell and BP, on Middle East oil, must now be down close to the level of the public utility return that some of its critics would like to impose on this industry. It is certainly down to the level that might begin to inhibit the self-financed exploration for diversified sources of oil which some European authorities still believe to be a practical insurance against price-fixing by producer governments. This might, therefore, in accordance with pressure to protect domestic fuel industries, lead consumer governments such as those of the common market to support product prices; or even to offer help in making funds available to carry on the exploration that the integrated companies have been accustomed to self-finance out of integrated profits on oil (shown, as a matter of convenience, on crude).

It is entirely reasonable to postulate a steadily continued, or even somewhat improving, rate of growth in demand for oil; and once a major company has cut out much of its deadwood costs, as Shell clearly has, there seems room for a steady growth in gross income with some moderation in the growth of internally-controllable costs. It is a little less easy to assume that relative stability will continue in those elements of costs that are largely outside the integrated company's control, such as producer government revenues. The money may well be forthcoming to finance the requisite investment in downstream facilities and even in exploration that these integrated companies consider wise—though not automatically from self-financing. But it is becoming difficult to postulate circumstances in which the integrated international companies regain more freedom to manœuvre—or even to retain as much as they have today.

Dumping Chemicals

Last week, six months after certain British plastics producers had applied to the Board of Trade for anti-dumping duties on polythene from Italy and the United States, the Board announced that a case for action had been established. But there is in fact no call for it any longer: the dumpers have increased their prices. The Board of Trade has said that it will have to consider putting on a duty if polythene from Italy and the United States is dumped again. This threat should make it unlikely that more dumping will take place.

Before an anti-dumping duty is imposed, the Board of Trade must be satisfied that what is complained of really amounts to dumping, i.e. that goods are being imported and sold here at prices which are less than "the fair market price in the exporter's country." There must also be clear evidence that this is causing or threatening material injury to the British industry complaining, or will retard its establishment in this country, and that protection against dumping will be in the national interest. None of this is easy to prove; the documentary evidence demanded is rightly formidable. The most difficult matter of proof is "material damage." The producer has to show that imports are taking a substantial part of the market and damaging his business, or that prices have been forced down by the competition to a level where he is unable to make a reasonable profit. The application is advertised and the Board of Trade invites the alleged dumpers to argue against action. This is a lengthy process, but the board is happy that it should be. It would rather not impose duties at all, and these things have a way of sorting themselves out, given enough time. Since the Dumping and Subsidies Act was passed, in 1957, there have been 32 applications, of which 13 were for duties on chemicals. Three orders for anti-dumping duties on chemicals have been made, out of a total of only five anti-dumping orders altogether.

These figures suggest that the chemical industry is peculiarly prone to dumping (or, at the least, to complaining about it). The high cost and large size of modern chemical plants make it overwhelmingly attractive to operate them as close to full capacity as possible, and to export surplus production at prices which can, if necessary, go down to marginal cost. The practice is only stigmatised as "dumping" when the goods are sent at a low price into another producing country—which may happen as soon as the traditional "third" markets of the non-producing countries are saturated. Many of these third countries have begun to build their own chemical industries and to protect them fiercely. Thus the gentlemanly system under which chemical producers only cut each other's throats far away from home has broken down. Moreover, the penultimate check against dumping—dumping right back—does not work against the main offender, the USA, protected by tariffs on chemicals which are among the highest in the world.

Historically, there are good reasons why Britain and the USA should have protected their chemical industries; the first World War exposed the danger of relying on production in other countries. Both tariff systems remain basically as they were first conceived about forty years ago, and the chemical industries of the two countries which have grown strong enough to stand by themselves under this protection, have not exerted much pressure to have them changed. The Americans have at least been consistent by including in the old categories new chemicals as they were developed. Plastics, most of which were never thought of when the tariffs were first put on, are included as resins and carry a duty of about 40 per cent. In Britain they are not considered to be "synthetic organic chemicals" and carry a duty of 10 per cent, although the "chemicals" from which they are made carry 33⅓ per cent. Moreover, American duties on coal tar chemicals, a category that can be made to include almost all organic chemicals, are based not on their landed values but on the American selling price, which results in higher duties than the 40 per cent laid down; for dyestuffs the duty is effectively between 80 and 120 per cent. The difference between tariffs in the United States and in most Continental countries is even sharper, some countries (Benelux, Scandinavia, Austria) having virtually no tariffs on chemicals at all. American chemical producers are thus in the happy position of being at the right end of a one-way valve, through which they can siphon off their surplus production without fear of reprisals. In few cases only is competition felt within their home market.

The chemical industry in the United States is by far the biggest in the world, with a turnover in 1960 of about $27,000 million compared with western Europe's $19,750 million. Even if there were no tariffs, size in this heavily capital-intensive technology gives American producers a great advantage in world markets. In this fast-growing industry capacity has outstripped demand, particularly in petrochemicals, its fastest-growing sector, where a habitual optimism (which has been called "impulse buying on a grand scale") unhappily bore fruit at a time of slight recession. The scramble from outside to get into the chemical industry, mostly by oil companies, has helped bring about massive surpluses: for instance, polythene capacity in the United States was about 180,000 tons ahead of consumption in 1961, which is more than the total British production. The effects of surpluses of this size on world markets have been dramatic. The price of polythene in Britain has dropped by half in recent years. In Europe, prices of many plastics, solvents and intermediates have dropped below the level where, according to some manufacturers, it is possible to make a profit. This is probably an overstatement, but chemical companies' results for last year showed drastic falls in profits in spite, in many cases, of an increased volume of sales.

Petrochemicals are not the only chemicals to be dumped, nor is the USA the only offender. The most recent anti-dumping order concerned ammonium sulphate imported from East Germany; this and other fertilisers command prices in the free market—i.e. in non-producing countries—that are only a half to two-thirds of the prices in producers' home markets. The chemical industry in Italy has been growing at more than 12 per cent a year since 1953, and its petrochemical capacity will be growing by more than four times in the five years 1958-63 on present plans. This is another situation leading to surpluses and dumping, and Italy has

figured as the shipper in five of the applications for duties on chemicals. The problem is a general one: The United States, Britain, Italy and Japan are all dumpers of chemicals. But it is most aggravated by the massive size of American surpluses.

Ideally, everyone agrees, there would be no tariffs and dumping would look after itself. This is the solution proposed in the Rome Treaty for trade within the common market: while tariffs are being reduced between member countries, imports can be returned to the exporting country without the payment of further duties. But even if dumping can be dealt with in the common market in this way, there will still remain the problem of the United States. American chemical manufacturers are understandably seeking to hold their advantage and are bitterly resisting President Kennedy's attempts to liberalise trade. So long as there is a substantial difference between US tariffs and the common market external tariff, Europe will tempt American producers as a dump for their surpluses.

At the moment, no joint common market policy on dumping has been approved, but the Rome treaty lays down that, after the expiry of the transitional periods, the common commercial policy will include protective commercial measures to be taken in cases of dumping or subsidies. The acceleration of internal tariff cuts makes agreement on this more urgent than ever and in March, proposals on common commercial policy were submitted by the Commission to the Council. The first common action was taken this week, when the council drew up a list of products on which it may impose retaliatory duties if the USA decides to go ahead next month with increases of duties on carpets and glass; the list will probably include polythene and hydrocarbon solvents. The policies of common market members on dumping are widely different: France has shown her attitude by her recent quick action against imported US polythene and, the point made, removal of the duty; Italy and Germany are both considering legislation but the Low Countries have none at all. In Britain the 1957 Act is applied carefully and reluctantly by the Board of Trade, which considers that almost anything is better than more protection. (The department is sometimes called by interested parties, perhaps with a touch of bitterness, the "Board of Free Trade.") It is important that the differences between these countries should be aligned in a joint policy, but it is to be hoped that duties will only be imposed as a last resort.

BUSINESS NOTES

THE ECONOMY

Figures Fit the Optimism

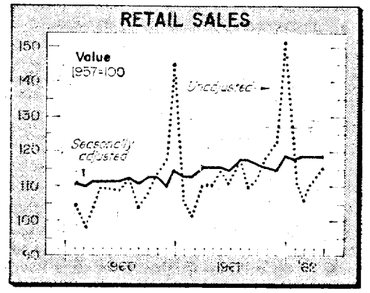
ALTHOUGH the improvements in industrial production and in Britain's overseas trade recorded in official statistics published this week are not exciting, they are distinctly encouraging, and now arguably consistent with the optimistic forecasts about the economy that Whitehall has been offering for some time. They emphasise, incidentally, the difficulty of forming outside opinions on monthly data without the more elaborate forecasting upon which the Treasury and the National Institute of Economic and Social Research now rely.

A rise of £2 million a month in exports, allowing for seasonal variations, which was achieved in April as during the first quarter of the year, is consistent with an increase of about 9 per cent a year in exports. That was the figure that the Institute forecast for 1961 in its *Economic Review* last week, and it is one with which the Treasury is now at pains to say that it has no quarrel (it firmly denies ever having put out higher forecasts).

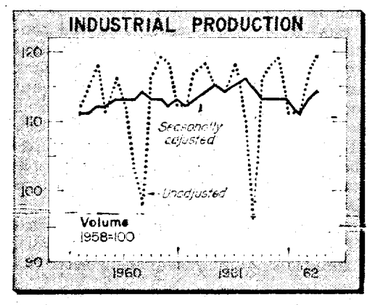
Similarly, one could argue that a rise of one point in industrial production in one month—such as is estimated to have occurred between February and March, after a two-point rise between January and February—could imply an increase in output of twelve points a year, or about 11 per cent. Nobody at present is drawing this comfortable conclusion from the current figures. For one thing, this index is quoted to the nearest whole percentage point. An increase from 113 (1958 = 100) to 114 can therefore mean anything from an increase between 113.4 and 113.6 to an increase between 112.6 and 114.4; there is a whole range of "underlying rates of increase" with which it is consistent.

A one point change, also, has a sizeable chance of being wrong; indices for particular months are often adjusted by a point (as those for the last quarter of last year were in the figures published this week). Upward revision of that quarter's figures, moreover, makes the average for 1961 itself nearly 114; although this has nothing strictly to do with what is occurring now, the rough-and-ready observer from outside may be unwilling to predict a boom simply from a recovery in output back to the level of March, 1961.

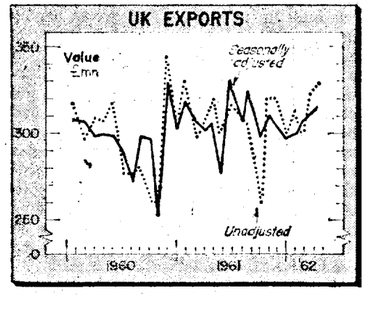
On the side of demand, the official economists remain confident about the rise of 4 per cent from April to April in consumer spending which the Chancellor predicted in his Budget speech. They have some questions about the latest figures on hire purchase spending; without too much reliance upon elaborate theories about the hire purchase cycle, they do expect quite an increase in new contracts this year as repayments run off. Nor are they as convinced that private investment is falling as some economists outside. On these assumptions, and taking into account increases in public consumption and public investment that are quite certain, they do not need to assume an impossible increase in exports to support their guesses that national output during the next twelve months may achieve the rate of growth that their new semi-official colleague, NED, would consider respectable.



OVERSEAS TRADE



Not Brilliant but ....



EXPORTS rose in April to continue the remarkably steady improvement since the turn of the year. But there is still not much steam behind this improvement; one bad month now could easily blot the copybook. Exports, seasonally adjusted, edged up £2 million to £314 million in April, the fourth consecutive monthly rise since the very low December figure of £297 million. But the average for the first four months of this year is still no more than ½ per cent higher than the average for the whole of 1961. The position looks a little brighter when exports in the latest three months are compared with those in November, December and January; on this basis exports show an increase of 3¼ per cent. But the average for the January-April period of £308 million is exactly the same as for the same period of 1961. Imports in April also rose fractionally, to £359 million, so that after crediting re-exports of £14 million the crude trade gap fell to £31 million—the smallest for eight months. Putting the valuation of imports and exports on the same footing, the trade account in April would actually be in the black.

WALL STREET

After the Storm

A correspondent cables:

FOR the moment at least, Wall Street appears to have weathered one of the worst storms in its postwar history. In the wild trading session on Monday prices seesawed from an early loss of over 9 points on the Dow Jones industrial average to a gain of 6 points at the close. There have been wider swings in prices since 1945, as in September, 1955, when President Eisenhower suffered his heart attack, but at no time since 1933 have so many small investors selling in tiny lots tried to get out of the market all at once. At one point, the stock exchange's high speed ticker lagged 34 minutes behind transactions on the floor. The great army of shareholders that the New York Stock Exchange has recruited, now estimated at some sixteen million people, came within a hair's breadth of panic, induced apparently by the possibility of hostilities in Laos. Though the machinery of the stock exchange nearly broke down, the actual trading volume was only 5.9 million shares—a busy day but not one, had it not been for the preponderance of small orders, to cause such extensive mischief.

The malaise was not caused by Laos alone. American investors have long thought inflation to be the *raison d'être* of equity investment, and they have still to adjust their sense of values to an economy where rising prices are no longer the order of the day. Foreign investors, who hold about 6 per cent of the shares listed on the New York Stock Exchange, are also becoming increasingly restive about the long term outlook for the American economy, particularly about the continued loss of gold and the unanswered question whether the United States may be forced to consider foreign exchange control as a means of meeting its balance of payments problem. In addition, the searching probe that the Securities and Exchange Commission is conducting into the affairs of Wall Street has inevitably chastened some of the speculative elements in the market.

Monday's turnaround came, as many observers had expected, when the institutional investors in general and the mutual funds in particular came back into the market just at the point when selling by private investors had reached its climax. This arrested the decline in the Dow Jones average at 626, roughly 14 per cent below the peak touched late last year. The market then rallied and by the middle of the week the average had climbed to 660. There appears to be little reason to expect a further upturn in equity prices now but, by the same token, the selling has cleared the air and brokers are not fearing an early resumption of the dumping of stocks that has characterised the market in the last few weeks. The basic reason for this belief is simple: business is still good and while the rate of advance in the economy may be disappointing to those who took Mr Heller's prediction of this year's gross national product of $570 billion seriously, it is nonetheless vigorous. Industrial production rose by another one per cent in April to a new record of 117 (1957-59=100); overtime worked in industry has gone up; and industrial profits are rising. With a rise in earnings coinciding with a fall in prices, shares are now more realistically valued. Using the broadly-based gauge of the 125 stocks included in Moody's Investors Service's industrial average, the market is now selling 17 to 18½ times its 1962 earnings, compared to over 22 times at the end of last year. By London's yardstick this may still look high but there are plenty of institutional investors who are quite willing to take the risk.

THROGMORTON STREET

Bright Periods and Showers

WHILE the gilt-edged market is convinced that a further relaxation of the credit squeeze, through the release of special deposits, is not too far away the equity market still wonders what is in store for the economy. Gilt-edged stocks have risen steadily, particularly in the medium range where some institutional and foreign buying has been reported, but equities have swung up and then down again, with the result that *The Economist* indicator over the week to Wednesday's close was 1 point lower at 355.7. Relief that the dock strike was settled pushed equities up early this week but the rally was not strongly based and the cut in the Rolls-Royce dividend unsettled the market. Steel shares again lost ground, partly on consideration of the latest by-election result, though they rallied slightly on Thursday.

A year ago the stock market might automatically have characterised the dock strike settlement as inflationary and marked equities up; but today British dealers, like their American counterparts, are more sceptical how far prices will rise even when industrial production expands. They agree that industrial profits should start moving up again as the recovery in the economy gets under way; but they are equally convinced that competitive pressures will keep the advance in earnings within fairly tight bounds. The market, too, has been having second thoughts about some of the equities—such as brewing, banking, insurance and store issues—which have been bid up to high prices and offer low earnings yields. In general, the improvement in production in March and the better trade figures for April have done more to hearten gilt-edged stocks than equities.

The speculative gains tax may also be having an effect on the industrial market. Before it was introduced a fall in prices often brought short-term speculators back into the market as buyers. Now there are signs that the new tax is inhibiting their actions and is widening the movement in

prices. The tax did not prevent the attractive offer by Ready Mixed Concrete (United Kingdom) of 750,000 ordinary shares of 5s. each at 24s. and a yield of 4½ per cent from being oversubscribed 60 times. The existence of the tax means that new issues terms have to be that much more attractive ; but clearly it was the five-fold increase in the profits of Ready Mixed Concrete in six years which ensured the success of the issue. This offer for sale was underwritten but the £9.8 million rights issue by Thorn Electrical of "A" non-voting ordinary shares, which are unpopular with the institutions, was not. On the other hand, "substantial shareholders" entitled to more than a third of the new shares have indicated that they will exercise their rights. Two years ago the institutions successfully blocked a scrip issue by Thorn of non-voting ordinary shares. Whether the attractive terms of the rights issue will outweigh the objections this time or whether the institutions will sell their rights in the market remains to be seen. Both ordinary and "A" ordinary shareholders are offered one "A" share at 45s. for every two shares they own ; helped by the forecast of maintained profits and a higher dividend (27½ per cent, against 25 per cent) the existing "A" shares stand at 76s., to make the rights worth 10s. 3d. The indicated ex-rights yield, however, is no more than 2 per cent.

THE EXCHANGES

New Rate Under Pressure

WITHIN a fortnight of its effective devaluation to 92.50 cents to the United States dollar, the Canadian dollar has fallen well below its parity and touched a low point of 91.80 on Wednesday. Nothing seems to go right for the Canadian authorities. The floating rate failed to float ; Mr Fleming's "significant discount" at first appeared only reluctantly and later was restrained from galloping away only at great cost to Canada's reserves. Now the new fixed rate is looking sick.

Immediately before the rate was fixed the Canadian authorities were large sellers of Treasury bills ; the inference is that they wanted to build up funds of Canadian dollars in the belief that the exchange rate, once fixed, would move towards its ceiling. That the rate has moved in the opposite direction suggests that authorities misjudged the margin of devaluation necessary to hold the downward pressures on the rate. Mr Rasminsky, governor of the Bank of Canada, now has the difficult job of managing this rate. Although the official support points for the Canadian dollar (under IMF rules) are around 91.57 and 93.43, the authorities let it be known after market hours on Tuesday that they would support the rate at 91.74 and 93.24. Since then the rate has tended to recover, and it closed on Thursday at 91.90. It is also reported that some of the grain companies who have been running substantial short positions since the devaluation are now taking their profits with consequent improvements in the rate. The Bank of Canada has certainly been in the market, although to what extent is not known ; it is possible that Mr Rasminsky will take the opportunity of squeezing the bears and convince the speculators that Canada intends to stick to its new rate.

Sterling has strengthened this week on two pieces of news. The dock strike that did not materialise took the rate against the US dollar up a 1/16 cent to $2.81 5/16, and the reaction to the trade figures on Wednesday added a further 1/16 cent. There has been a substantial inflow of foreign money to the London local authority loan market this week, attracted by the interest differential of around ¼ per cent on a covered swap from Euro-dollars. The premiums on hard and soft dollars and the discount on security sterling have widened over the week. So far the market is unwilling to attribute these movements to any particular cause, but one explanation that finds favour is that the uncertainties on Wall Street have induced some Americans to cut-back their British investments, for which they receive security sterling, while some of the demand for hard and soft dollars is reported to come from British investors looking for bargains on Wall Street.

COTTON TEXTILES

Bad After Good?

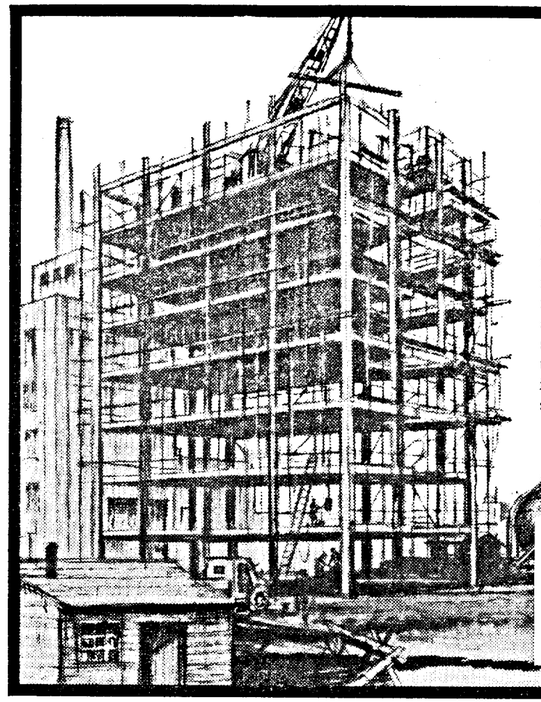
No doubt a large section of the cotton industry believes that the Estimates Committee on assistance to the industry gave a clear cut endorsement of its case against imports in its report published on Monday. The conviction that the industry was rebuffed yet again when it put its case before the Prime Minister on Tuesday seems equally deep-rooted. The Estimates Committee found that though the money voted by Parliament had been used in the way intended to promote the modernisation and efficiency of the industry, "failing a speedy and satisfactory solution to the related problems of imports, marketing and the fuller use of plant and machinery, much of the expenditure incurred will have been to no purpose."

In these circumstances it might be as well that less than £25 million of the estimated cost of £30 million for the reorganisation scheme will probably by committed in this way. When the scheme was launched outsiders were allowed to labour under the misapprehension that the money would eventually make this industry viable without further expedients. If limitation of imports is to be the main bastion in the industry's defences, the money could have been spent to better purpose elsewhere. If it is not intended to bring the industry to the pitch of efficiency at which it can compete on level terms with imports, there is only a shaky case for spending government money to raise the industry from one level of uncompetitiveness to another.

The industry's plea to the Premier was that it should not be expected to wage a war on two fronts. Relieved of anxiety over Asian competition in the rear, it believes that it would be a match for European rivals. If it were not there could hardly be any grounds for discussion. The Cotton Board delegation asked for an extension of the period of assisted re-equipment, and lower limits on imports of Commonwealth cottons. In contrast to earlier agreements, it wants the government and not the industry to take the initiative in negotiating a renewal of restrictions with Hongkong, India and Pakistan, and asks for new import quotas to be based on the current level of imports, which is well below last year's peak. Above all, it wishes to check the habitual expansion of these quotas on renewal, and to see other countries bear a fairer share of the burden. What other countries do is mainly their own affair. But it is doubtful whether the new statement promised by the government will reveal any desire to protect its "investment" in this troubled industry.

SOUTH AFRICA

Embarras de Richesse



A Johannesburg correspondent writes:

FROM a low point of little more than £70 million last June South Africa's foreign exchange reserves have climbed steadily to over £180 million—higher than they have been since 1947. And last week South Africa received a £3½ million loan from the Deutsche Bank at 6 per cent for 10 years—terms that indicate a marked confidence in South Africa's future. Indeed only five months ago the Deutsche Bank made a similar loan to South Africa, but on that occasion it was for only two years with the possibility of a one-year extension. The rise in South Africa's reserves has been due not only to control on current and capital transactions ; it has also been helped by the sluggish business conditions and slack consumer demand which have bedevilled South Africa's economy since Sharpeville. Indeed it is possible that total imports would have been little higher in 1961-62 had there been no quotas at all.

As the reserves have piled up, liquidity has built up too. This pressure of money first checked and then reversed the previous rise in short-term interest rates and eased a tight capital market to allow a reduction in Bank rate last December to 4½ per cent from the 5 per cent to which it had been raised in May, 1961. This cut was supposed to give the green light to business to make use of the ample credit for expansion which earlier had been affected by political uncertainties. But business spending has shown little reaction so far because in many industries there is still under-utilised productive capacity.

Further increases in reserves, heavy over-

A MERCHANT BANK AT WORK

Long Term Finance

Progressive companies of standing who do not wish to finance expansion by additional permanent capital frequently supplement their own resources by long-term borrowing, thus enabling them to develop their businesses more widely and rapidly. For example, a company wishing to build a new factory and to equip it, might decide to find the necessary funds for such a venture by the issue of debentures. We, as merchant bankers, are experienced in arranging finance of this nature. On the one hand, our close connections with industry and commerce enable us to make an accurate assessment of the status of the borrowing company; on the other hand, we enjoy the confidence of insurance companies and other institutional investors, and are thus able to be the link between those seeking long term finance and those interested in providing it.

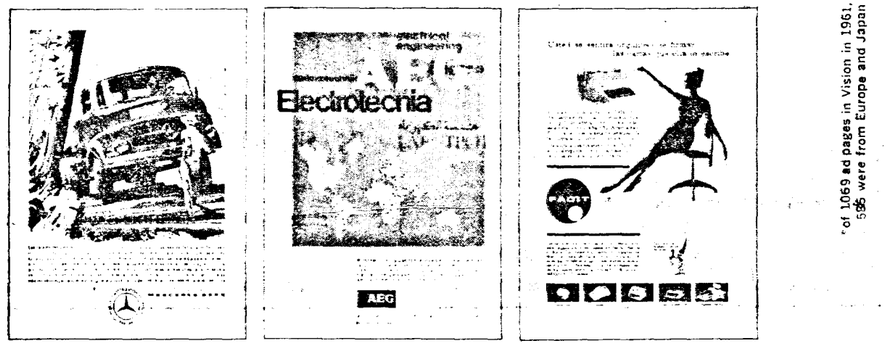
AESOP-TO-DATE

The Lady and the Lion Cub

A Lady bade her faithful Swain
Caress her Lion Cub,
But when he would perforce refrain
He earned himself a snub.
Milady's cub was full of spite
To scratch it was not loth.
Its teeth could give a nasty bite,
And harm could come from both.
So when Milady said, Begone
And darken not my door,
Her Swain sought con-so-la-tion
In Guinness at "The Boar".
'Twas here that later he was told
Of his successor who
Had by the beast been roughly mauled.
(The Cub's now in the Zoo).



MORAL (*Ladies Only*)
Don't make him love you *and* your pet
And so become a bore,
Or you may find to your regret
That he loves Guinness more.

Guinness is good for you—and me

subscription of new issues, and the steep decline in money market rates, have renewed pressure on the Reserve Bank for another cut in Bank rate. Last week Dr M. H. de Kock, its governor, made it plain that he had set his face against one. His view is that the economy may forge ahead again towards the end of the year under the impact of the big spending on public sector projects. And he emphasises the difficulty of the central bank in persuading the commercial banks and building societies to follow its lead by reducing their lending and deposit rates.

So Dr de Kock has chosen instead to unhitch Treasury bill re-discounts from Bank rate. As the bill rate has declined to less than 3 per cent, the penalty gap has widened steadily to more than 1½ per cent, and the money market's month-end journeys to the Bank have become increasingly expensive. The gap has also been costly to the National Finance Corporation which, when faced with large withdrawals of call money, had to raise cash by heavy rediscounting of Treasury bills. For the time being the Bank will therefore set a special re-discount rate for Treasury bills at ½ per cent above the current tender rate. This move has been criticised as evidence of the Reserve Bank's failure to show the banks and building societies who decides monetary policy in South Africa. But the fact that the legislation under which they operate—and compete for deposits—is currently being examined by a committee of enquiry can hardly set aside the Bank's responsibility for keeping interest rates as low as may be safe, particularly when everyone is demanding an early and sustained business revival. A possible upturn in business by the year-end is surely no argument for not lowering rates now.

BUILDING SOCIETIES

Another Voice

STATISTICS published by the Building Societies Association, covering about 77 per cent of the total assets of the movement, show that net receipts in the first quarter of this year were better than in the fourth quarter of last year. Excluding interest credited to investors' accounts, the net inflow in the first quarter amounted to £49 million compared with £26 million in the fourth quarter. The poor inflow of funds towards the end of 1961 is reflected in the low level of mortgage advances in the first quarter of this year: at £88 million advances were the lowest for any quarter for three years. The societies were deliberately maintaining their liquid resources at a high level and the liquidity ratio of 15.4 per cent at the end of March compares with 15.3 per cent at the end of December and with 14.5 per cent at the end of March, 1961.

The decision by members of the association to leave their rates unchanged while interest rates elsewhere in the economy are falling should stimulate the inflow of money this year. The amount advanced on new mortgages will certainly rise in the current quarter. But not every society agrees with the association that lending and borrowing rates are unlikely to be reduced this year. The biggest of them, the Halifax, is still outside the association; at the annual general meeting, the president, Mr L. A. D. Maclean, has again proclaimed its independence with the statement that "circumstances might arise which would make it both prudent and desirable to make some changes" in the Halifax's interest rates. When the Halifax offers and charges the same rates as other big societies, its inflow of money is stronger than theirs. This can be embarrassing in the sense that the Halifax then has to push up its mortgage lending, with the risk that expansion can soon become so fast that its reserve ratio is threatened. Its habit of thinking and acting independently and differently from the other societies has its own logic.

TIN

Stockpile Jig

IT now seems almost unbelievable that three years ago the International Tin Council's buffer stock manager was holding the price of tin so stable that he drew protests from dealers on the London Metal Exchange that he was ruining their business. The price of tin is now fluctuating so unpredictably that some regular users of the exchange are temporarily nonplussed. On Friday of last week cash tin fell £11½ to £904 a ton, the culmination of several weeks of tumbling prices. Over the week-end the International Tin Council owned up to having met last week and despatched a letter to the American authorities concerning releases of tin from its strategic stockpile. The council has also called a full meeting for May 22nd to discuss the matter, though its next session had been fixed for July 10th.

Cash tin rebounded £17½ to £921½ a ton on the news and the recovery was extended to £925½ on Tuesday. But overnight reports were received that the full Armed Services Committee of the House of Representatives had endorsed its sub-committee's approval of the government's request for permission to sell 50,000 tons of tin from the stockpile, an event that could clearly be foreseen. But cash tin dropped £15½ to £910½ a ton in the Wednesday morning session of the Metal Exchange. Later in the day a message was received from Malaya that its government proposed through the ITC that a "cut-off" price should be agreed for sales of American tin. The "cut-off" price was set—optimistically it appears—at the ITC "ceiling price" of £965 a ton. Tin promptly bounced back to £916½ a ton.

This Gilbertian setting leaves no scope for weighing customary market influences such as the level of stocks and possible developments in Laos. The ITC has helped no one by not revealing the nature of its communication to the United States. But that is a minor imponderable in this messy situation. Some large purchases of spot tin were coupled with sales of forward metal. On the first three days of this week the prices of spot and forward tin have been identical, a rare occurrence that bears witness to the market's cruel dilemma. On Thursday, spot tin bounded up to £924½ a ton, but then fell back to £919½-£921½ an exceptionally wide quotation in the afternoon.

OFFICE STAFF

Girls for Hire

OFFICE workers' summer holidays provide "the London season" for flocks of migrant shorthand typists—and the bread, butter and jam for the people who provide the typists. Clerical staffs have a chronic tendency to multiply, and with them increases the demand for temporary staff—which persistently runs ahead of supply during the holiday period, in spite of the rapid growth of agencies specialising in supplying temporary secretaries. It is quite common for a girl who earns 10 guineas a week to be replaced when away by one who costs 14 guineas—a difference which, multiplied several times over, makes quite a large addition to the employment bill.

Frequently, indeed, the difference in cost represents mainly the fee charged to the employer by the agency—which remains her formal employer. A temporary shorthand typist may well be hired out in London in the summer for 9s. 6d. an hour for six hours of work a day; of this, she will perhaps receive 7s. 6d. plus insurance contributions from the agency. Overtime rates—admittedly often paid out of the petty cash and not reported—usually go to the agency only, not to the typist. Experienced secretaries do no better at temporary than permanent work, though many married women prefer occasional employment for other reasons.

At the height of the summer and the shortage, some agencies seek and offer typists at rates well above even the more expensive standard fees. The Employment Agents Federation is now attempting to control this free market by "insisting," this year, on the observance by its 193 member agencies in London of maximum payments to temporary typists. During the summer these maximum rates are 7s. 4d. an hour for a shorthand typist and 6s. 4d. for a copy typist. Last year virtually all the federation's members kept to the recommended maximum without obligation. So

this year's gesture must chiefly be regarded as a weapon for the association against non-members, who make up about 40 per cent of London agencies. These non-members, while the demand holds up, may prefer to secure the services of the girls by paying more, so long as this enables them to get more business and their cut of what employers are prepared to pay.

Nobody has made any rules, however, about the size of the cut to be taken by the agency, or recommended maximum scales of charges to employers. Some agencies vary wages according to ability but charge the same fee to the employer, whether the girl herself is actually paid ten or twelve guineas a week. Relating fees directly to earnings would mean a more elaborate scale of charges. But this might be a small price to pay for greater fairness to the temporary worker and the employer for whom she actually works.

ELECTRICITY GENERATION

Backing Both Horses

THE million-megawatt power station that the Central Electricity Generating Board wants to build at Kingsnorth on the Medway estuary will be the first in Britain designed from the outset to burn either coal or oil. For a station that is close to the refineries of the Thames estuary and can also get coal in by sea from the north-east coast or south Wales, such flexibility has an obvious appeal as a means of strengthening the CEGB's bargaining position with its rival suppliers. The extra cost of the station does not seem to be very great; equipment for storing and handling two fuels instead of one has to be installed and the furnaces designed for both. But if the estimated cost of under £40 million is attained, the price of flexibility would be only £2 or £3 a kilowatt. Like the 14 stations in Britain that already burn oil—out of the 232 the CEGB runs—Kingsnorth will be designed to use heavy residual fuel. The board has not gone as far as some Japanese stations in designing plant to burn crude oil if necessary—ignoring the "valuable" light products that are often nowadays hard to sell—but it probably could not buy crude oil as cheaply as Japan can. It takes quite a time to convert one of the other 14 stations to burn coal—the burners have to be replaced—and the cost of changing rules this out unless something really dramatic happens to fuel prices.

The Kingsnorth station could be built by 1967 if the CEGB gets the planning permission it has requested from the local authorities and consent from the Ministry of Power. The site is marshland which the CEGB already owns, and is big enough to allow the station to be expanded to a capacity of 4 million MW. Feeding into the grid at Northfleet, 12 miles away, the new station will help ease the problem set by the growing demand for electricity in south-east England. But the Board says that this would not affect its desire to build other stations, nuclear or conventional, along the south coast.

JUTE

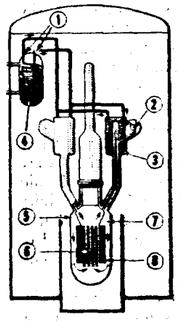
Pakistan Stumped?

ALL Pakistanis, it seems, do not play cricket. The authorities have therefore been forced at last to declare a temporary end to export price control of jute after a stubborn innings. The working—or malfunctioning—of EPC was simplicity itself. An export price was fixed from time to time which should have ensured that Pakistan obtained full benefit of its virtual monopoly of raw jute supplies for the outside world. An absolute minimum export price was also fixed for the season, below which no exports were to be permitted. The flexible EPC price has not been scrupulously observed, to say the least, by shippers. Neither has the long stop seasonal minimum. The tug-o'-war between western spinners and Pakistan over prices has been going inexorably in the spinners' favour this season, and the shippers' readiness to court displeasure has prevented Pakistan's delaying tactics causing a bigger disruption to the flow of normal trade than it did.

A holiday in the East muffled the impact of this week's suspension of EPC. For jute firsts the absolute seasonal minimum was £13 a ton below the last EPC rate. But lightnings were within £2 a ton of the bottom rung, and hearts were already at rockbottom and being freely dealt in unofficially below the minimum. Following news of the supension of EPC, London Jute Association firsts fell by £4 to £105 a ton, though they already discounted the prevailing EPC rate. Following the jute famine, this grade is still relatively scarce. No decision has yet been taken by the Pakistani government on the establishment of a jute buffer stock, which was the subject of a recent international meeting.

Pakistan has already been jostled out of its formerly impregnable position in jute. It seems unlikely that it will again be capable of independently restricting jute acreage under any pretext to raise prices. Since partition, India has expanded its output of jute until it is comparable with that of Pakistan, and aims at self-sufficiency. It has just agreed to sell up to 100,000 bales of low grade jute to Russia, its first export for some time, which contrasts with the recent shortage of jute in India. In fact, India has now been compelled to establish a buffer system to protect prices. The deal with Russia might have influenced Pakistan's decision to scrap its price controls temporarily; it seems that competition in raw jute between the two countries might not be far away.

For its part, Pakistan has built up its mill capacity, aided by the weighting of jute export prices against foreign competitors, who enjoy the protection of their own governments only in their home markets. A further four mills are planned in addition to five new ones already decided upon, which will bring the total to 23. Like a worm sliced asunder, partition has produced two integrated jute industries in the Asian subcontinent where only one previously existed. Though weather conditions have improved it is said that a substantial fall in jute production is likely this year, and it has been questioned whether the present, and relatively low, price level, which might have discouraged growers, will benefit the jute industry. What does seem certain, however, is that high prices encouraged a rapid increase in substitute fibres such as kenaf in Thailand, and probably stimulated greater substitution for jute goods by other materials.



Curtain-Raiser for Euratom

THE Atomic Energy Authority has had some small foretaste in the past three years of what it will be like to work as a member of an international team like Euratom. In 1959, the OEEC's European Nuclear Energy Agency agreed to contribute £5.7 million and about half its senior technical staff towards the estimated £13.6 million cost of a five-year investigation into the promising nuclear system now known as Dragon at the AEA's Winfrith Heath establishment. At the end of the period, the reactor was to become the property of the AEA. Whether anyone seriously believed that Dragon could be harnessed so quickly or cheaply is open to doubt. Certainly after three years' work, during which the estimated cost has risen by a relatively modest 15 per cent, the twelve countries sharing the experiment are reconsidering their position. A "stretch-out" of the programme has been proposed from five to eight years; this would bring the probable cost to £24 million, which may lead some of the smaller countries to ask for their share in the experiment to be reduced and also to some re-assessment of the AEA's role, since it will no longer be so attractive to the authority to take over the reactor at the end of this longer period.

The OECD countries have no reason to feel displeased with their investment. The Dragon system is difficult to build, and it is not a candidate for commercial nuclear power before 1970. But it is one of the most promising of the advanced reactors on the stocks. The system on which it works sounds disarmingly simple. Take a Calder Hall reactor, shrink it in size, increase its temperature to more than 1,000°C, and the result is a compact, highly efficient system of nuclear power. In practice, the difficulties of engineering this concept are great. The high temperatures involved mean that the internal structure, including the containers for the fuel, must be made entirely of graphite, a material with many weaknesses. One of these is that at high temperatures it reacts with every suitable cooling gas except helium. Somehow, to save the graphite from attack, chemists must remove 99.9999 per cent (to four decimal points) of the impurities present in the helium before they allow it into the reactor. This can certainly be done in the quantities required for Dragon, which gives no electricity and only 20 MW of heat, but power station engineers may flinch from the thought of repeating the process on a commercial scale.

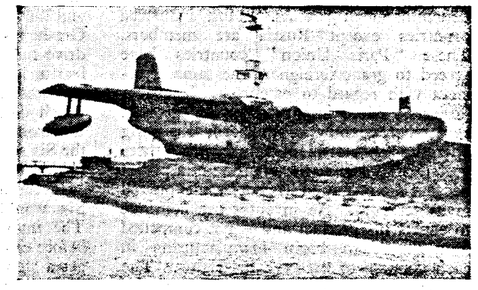
Once in, the gas must be protected against re-contamination through leaks, and fascinating tricks have been thought up to produce a virtually leak-tight structure. The right form of fuel now remains one of the biggest headaches. One design will inevitably contaminate the helium with radio-active gases produced at each fission, and unless these can be purged out of it all the cooling circuits will become steadily more radio-active. This purging can be done, but it adds to the capital cost. The other type of fuel should in theory prevent any of these fission wastes from escaping at all, but this may be difficult to achieve in practice.

Dragon will test both systems when it is loaded with fuel late next year. Its importance to the British and European nuclear programmes is that it introduces thorium, cheap and freely available, as a possible nuclear fuel (thorium turns into a form of uranium suitable for reactors) for future generations of reactors. Also—most important for Britain—it is a backstop against trouble with the elaborate "fast breeder" system being developed for the 1970s at Dounreay. The Dragon system, with its high gas temperatures and graphite structure, is also being developed in the United States, which speaks volumes for its commercial promise.

COARSE GRAINS

Dear Barley

BARLEY which Mr Maudling refused to have dumped here at £15 a ton last summer during his spell at the Board of Trade would recently have fetched £25 a ton. Though this appears to have been bad business, it was not sheer folly; the deficiency system of subsidising agriculture produces a twisted reasoning of its own. Britain is nearing self-sufficiency in barley grown under a system that ensures the farmer a return of £27 11s. 8d. a ton. When the world price for barley, which still mainly dictates market prices here, reflects a glut of cheaply produced barley the bill for deficiency payments is unbearable. Hence Mr Maudling's ban on barley landed here, duty paid, for less than £20 a ton. Animals eat most of the barley. If the government bows to pressure to raise the minimum import price towards the common market's lower price target of about £25 a ton they will be the chief sufferers from dear food and the Exchequer will get most of the protection.



Barley has made nonsense of many widely held beliefs, including the idea that barley and maize are largely interchangeable so that their prices cannot diverge far. This belief has been shaken by the incontrovertible evidence that barley is about £25 a ton, not much cheaper than the best quality wheats, while maize remains at about £20 a ton. Barley is dearer than at any time since 1957; maize, which is considered more nutritious, is no dearer than a year ago. Following the draught in North America, available stocks of barley have been depleted. Conditions on the prairies have only recently been improved by rain. China has bought barley, but as the United States will still not deal with China, America's huge surplus of maize has not been drawn upon directly, though it is to be reduced by stronger curbs on production.

Compounders of animal feeding stuffs are said to be using very little barley at current prices. Maize is good enough for most animals except for pigs. Imports of barley in the first four months of this year dropped to a very low level; imports of maize rose sharply. If the enhanced value of barley exports is taken into account, the combined bill for maize and barley imports was little changed from last year. The late spring and prospect of poor supplies of early grazing increased the need of animal feeding stuffs. High prices for home grown barley have brought hopes of a much reduced bill for barley subsidies this year, but prices might not behave so considerately when the main weight of the harvest is felt.

The worst of the squeeze on barley

AIRCRAFT

£9,000,000 Down

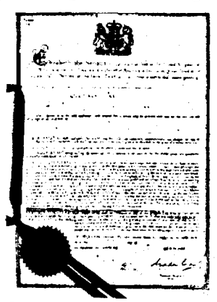
THE flying boat possesses a sentimental appeal to the pioneer air traveller rivalled only by the airship; these were the only aircraft in which one could walk about—quite apart from the nautical parallels. But now the flying boat is nearly as dead as the airship, and the sale of the three Saunders-Roe Princesses for little more than their scrap value—probably under £100,000—seems to mark the end of this chapter in British aircraft development, though the Government had spent more than £9 million on these machines alone. The buyer of these vast hulks, which have become a familiar landmark on the Solent as they lie cocooned on its shore—one at Cowes and two at Calshot—is the Winder Aircraft Corporation of Florida, which hopes that it will be able to use the aeroplanes for testing nuclear engines. Shifting them to America will be a tricky problem in itself; to make them flyable would be expensive, for they now lack engines, and they are bulky for sea transport. Towing is one way that has been suggested.

Once the superior efficiency of landplanes was demonstrated after the war, and a network of aerodromes became available through the world, the commercial appeal of the flying boat had gone. In prewar days, when aerodromes were still grass fields, a long-range aeroplane that needed plenty of space to take off could find it only on the water—and being able to land on the sea was still considered comforting by passengers and crew. Enough of this tradition survived the war for giant flying boats to be part of the Brabazon committee's recommendations for civil aircraft development. But by 1951 British Overseas Airways Corporation had decided that it did not want to split its fleet between landplanes and flying boats—a year before the Princess first flew. So the career of this type was always of somewhat academic interest, even if it managed to live on rather longer than its landplane equivalent, the Bristol Brabazon.

Patents in Europe

DISAGREEMENTS between members of the common market have recently stolen the headlines, but the Six have invited no publicity for a supra-national project in which they appear to have made remarkable progress. This veil of near-secrecy has obscured their negotiations for a European master patent. Now they have reached the stage of drafting an agreement and, so far, have shown no disposition to discuss it with others—even those, like Britain, who reckon to know a thing or two about patent legislation and would be directly affected by any system that EEC might adopt before Britain came in.

Patent rights vary between different countries, including the Six, and are not a field in which easy victories are to be won—the Commonwealth never achieved as much. Reason says that there should be international recognition of common industrial property rights; but people have to muddle along with an unco-ordinated collection of independent national examinations and searches. The law under which the Patent Office Seal is administered is as majestic as that which governs the Great Seal of the United Kingdom, but its practitioners would not claim that it is streamlined.



An international convention originating in the nineteenth century and revised from time to time provides the highest common denominator in patents. Most industrial countries except Russia are members. These "Paris Union" countries have agreed to grant foreigners the same treatment with regard to patents as their own subjects. More importantly, they prevent a member country compulsorily throwing open the rights of manufacture within three years of the date of the granting of a patent because the invention has not been exploited in its territory. An inventor can continue to export his product and is not compelled immediately to begin manufacturing in each country to preserve his rights. The convention also gives the inventor priority in taking out a patent in all other member territories for a year after he first files his specification in any country.

These are useful but minor essays in co-operation. They even involve slight infringements of national sovereignty. But despite several attempts to extend the area of agreement, most countries have hung on to their traditional ways, though some progress is being made toward international classification of inventions. About the time the Six began discussions for a Euro-patent in 1959, Britain (which originally had no knowledge of them) proposed a more dilute international system to the Council of Europe, by which there would be a patent granted by an international office which was prima facie valid in all member countries; but after that its validity and scope would be determined in each particular country according to that country's laws. Because the scheme proposed by the Six is so far forward, the British plan has been shelved.

Britain's feeling for sovereignty may have mellowed of late, but it does not follow that its preference for a looser patents pact than the one envisaged by its prospective European partners has itself weakened. Patents and the associated field of trade marks are not within the ambit of the Treaty of Rome. The discussion of a pact stems from a meeting of foreign ministers who wished to harmonise their practices in these complicated matters and to reduce the duplication of work in their separate patent offices.

Examination and search for novelty of inventions, not to speak of the presentation of the inventor's applications to many national patent offices, absorbs the energies of a remarkable number of talented people. The Six plan to set up a supra-national search office, possibly at The Hague where a search organisation already exists, and to found a separate body to examine inventions. It will be open to European inventors to apply for the Euro-patent or national patents for both will co-exist, at least for a period. The Euro-patent must bridge the wide gap in patent practice between France, Germany and Italy. One can hope that, by an inverse Gresham's law, good patent practice will drive out bad. British patents experts are fearful lest the European code does not incorporate all that is best in British practice which dates back to the time of James I. But from what is known of their intentions, the Six seem resolved on something approximating to practice over here.

In one major respect the proposals of the Six would conflict with British practice. The intention is to publish specifications before examination, so that competitors will get a sight of the rabbit much earlier than under the British system. Details would be published within 18 months of filing an application for a patent, whereas in Britain they may be withheld for up to 3 years longer. The British Patents Act is replete with safeguards for consumers. For example, an inventor applying for a patent in Britain must write a specification that can be readily understood by people of ordinary proficiency in the affected trade. He must even state the best method of performing the invention known to him, and he has to define the scope of the invention claimed so that when others widen the field he cannot retrospectively become much more ambitious for his discovery. Would the European legislation be so considerate?

By permission of the Comptroller-General of Patents

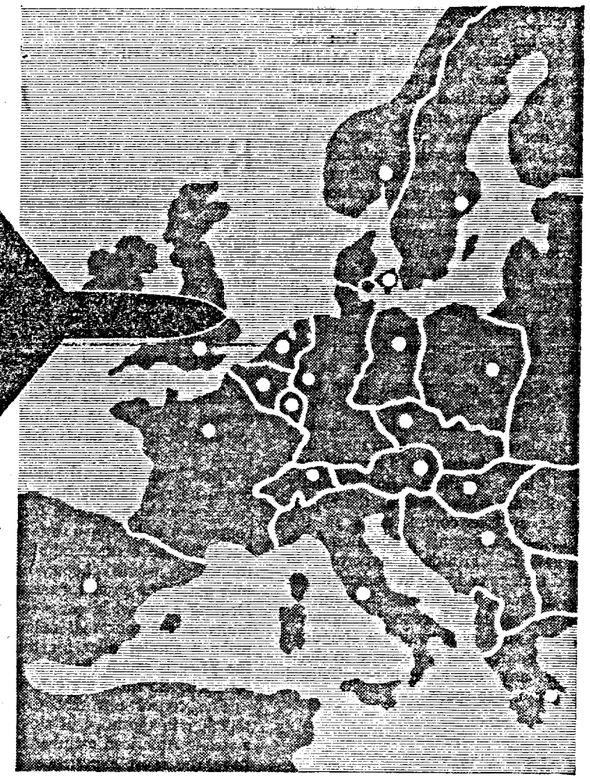
TRACTORS

Who's Doing Better?

TRACTOR production rose by 11 per cent in the first quarter of this year compared with the same period of 1961, according to the Agricultural Engineers' Association; but the two biggest manufacturers, Fordson and Massey-Ferguson, are oddly coy about revealing their own figures. One of them must have been doing better, but neither will admit to this—one might guess, however, that it was Massey-Ferguson, which was not enjoying a particularly successful period in 1960 but has been doing rather better in the last year. Its sales of all types of machinery at home rose 16 per cent in 1961 while its exports rose 12 per cent. Fordson reports a 10 per cent rise in home sales last year, suggesting that Massey-Ferguson was regaining some lost ground. Among the smaller companies, David Brown made 29 per cent more tractors in the first two months of this year, and BMC's output is about 15 per cent up—the move to Bathgate, which will nearly treble its capacity, will start soon.

The companies agree in optimism about their prospects for the rest of the summer at least. The home market began the year more buoyantly than one might have expected from the number of tractors in use, with sales running six per cent above last year's in January and February, but March saw a sharp fall, as with cars. Export business was ten per cent higher in the first quarter. Europe, Australia and America are the biggest export markets; shipments to West Germany, Canada and the United States were all roughly double the 1961 level. Markets like South America, Africa and Australia, however, showed falling sales.

KUWAIT



Middle East Manufacturing

NEWS that a German consortium is to make a project study for a steelworks in Kuwait may raise some Western eyebrows seems to have passed. Despite the hostile elements, a large acreage has been sown to barley. Barley futures are up to £3 a ton cheaper than immediate supplies. Current high prices might attract more barley from non-Commonwealth sources and when Russia is relieved of the obligation to limit its exports to this country at the end of June, its exports might increase. But Russians have recently shown particular interest in the British compounding industry. To increase meat production in Russia, exports might be forfeited in favour of the production of animal feeding stuffs.

MARCONI'S 7,000 Mc/s radar data link system

designed to make International Integrated Air Traffic Control a reality NOW

✳ Radar data links allow radar aerials to be sited remotely from control centres to take full advantage of ideal site conditions.

The U.K. airways system uses Marconi 7000 Mc s radar data links.

brows. There is no present or apparently imminent shortage of steel capacity in the world as a whole, or in areas able to supply the Middle East fairly conveniently; and though there are some known deposits of iron ore in the Middle East, Kuwait has seldom figured in the surveys of ore resources there. On the other hand, it has vast resources of ultra-cheap fuel, oil and natural gas; it could probably import pig iron from India fairly cheaply; and if it should be thinking of an integrated works, many of the new ones being built around the world are based on imported ore, and new techniques of iron reduction with natural gas are now available. But the limitations on demand for steel in Middle Eastern markets may be a more important commercial obstacle than the technological conditions of materials supply.

This is not the first study ever to be made of establishing secondary industries in the Middle East to use its abounding fuel resources, and in so doing to reduce its dependence upon the extraction and shipment in crude form of one natural resource. Because more and more oil is now shipped as crude, the proportion of the area's income coming from manufacture—processing oil in refineries—must indeed have been falling. There have been several studies made of petrochemical processing in Kuwait and other oil countries in the area or of industries such as cement that have very high fuel costs. Most of them have been defeated by the limitations of the market, or by the inconvenience of transporting some of the materials that could be produced at relatively low cost there. But it is only a matter of time before one of these projects breaks surface commercially in the Middle East—as ammonia production from natural gas in Trinidad, exported in specialised tankers and able to undersell that produced in most industrialised countries, has already suggested. It cannot be ignored that countries such as Kuwait are abundant in another resource that is essential to steel-making or any other highly-capitalised industry—capital to spare.

CHEMICALS

Pfizer's New Venture

NEXT month Pfizer intends to market polyethers imported from Jefferson Chemicals of the USA and in 15 to 18 months it should be able to supply them from its own plant at Baglan Bay, near Port Talbot. Propylene feedstock will be supplied "over the fence" from a nearby British Hydrocarbon Chemicals plant. Details of the plant which will use processes licensed from Jefferson Chemicals have not been published, but it is thought that its capacity will be of the order of 6,000 tons a year. Pfizer is best known for its pharmaceuticals but it already has a chemicals division to market a range of fine chemicals. If this project, the first attempt by Pfizer to enter the field of petrochemicals, is successful, the company will manufacture other products at Baglan Bay, where it has an option on enough land for sizeable expansion.

The choice of polyethers for a first throw is interesting and not wholly unpredictable. These are materials used in the manufacture of polyurethanes, which have long been among the most promising of new chemicals. The rate of growth of polyurethanes has mostly been due to their use in the manufacture of rigid and flexible foams. Rigid foams are used as insulation in refrigerators and, the industry hopes, increasingly in building; flexible foams are used in upholstery and in the motor industry, which offers the best prospect of growth. The main advantage of the foams is their cheapness and the relative cheapness of the machinery required to make them. But the attractiveness of this market has not passed unnoticed: in the USA it has been estimated that polyether capacity is three times the demand and the gap for polyurethanes is even wider, they are over supplied by between ten and fifteen times. However, the market will increase steeply in the next few years, by about three times in the next eight years.

In Europe the possibilities for expansion are even greater and it is probably this, rather than the British market, that has attracted Pfizer. In Britain two companies already make polyethers and two more besides Pfizer are thought to have plans to manufacture. Estimates of the size of the polyurethane market vary widely (9,000 to 20,000 tons in 1961) but the consumption of polyethers is probably not more than 10,000 tons, and it may be as little as 7,000 tons. Present production is slightly less than 10,000 tons, which does not leave much margin of expansion for the new projects. It is perhaps as well that plants for making polyethers can easily be converted to other products.

CROSSING THE CHANNEL

Lobbyists Galore

RECOMMENDATIONS from British and French civil servants about the type of solid Channel crossing—if any—that ought to be chosen are expected by their governments in a matter of weeks; accordingly, the pressure from interested parties is increasing. Last week M. Jules Moch, president of the *Société d'Etude du Pont sur la Manche,* went to see Mr Marples after lecturing the press on the virtues of a bridge and perils of a tunnel; the week before Sir Richard Costain had reminded the press that a tunnel need not be dug, but can just be sunk. Sir Richard added that this "immersed tube" could be built by the consortium that he heads for a guaranteed price.

The Channel Tunnel Study Group, which began all this activity back in 1960, has to compete with the *SEPM* for a government concession to build—a tunnel or a bridge—but it has an open mind about the type of tunnel it would choose, especially as it may get a firm price for the immersed tube. Drilling a tunnel involves so many risks of faults in the rock that nobody is likely to make a similar offer for this system, and the price is much the same—£130 million for each. So tubes are getting warmer.

The consortium that Costains has got together in the hope of sinking a tube has a strong American membership. Americans have the most experience of this sort of construction (although it was first suggested by Richard Trevithick in the 1800s for a tunnel under the Thames). The Los Angeles outfall sewer, built by one of the American members, Hyperion Constructors—itself a consortium—is the closest parallel to a tube under the Channel; it runs seven miles out into the Pacific and is 14 feet in diameter, whereas a Channel tunnel would be 41 feet in diameter. The other American members are Kaiser Engineers and Constructors, the engineering branch of the Kaiser empire, and Ellicott Machine Corporation, makers of dredging machinery—which would be needed to dig the trench under the Channel into which the tube would be sunk. On the British side, Costains do all sorts of civil engineering; Balfour Beatty is another civil engineering firm, specialising in tunnelling and electrical work; Swan, Hunter, as shipbuilders, would be interested in building the platforms from which the tunnel would be lowered. The sole French member of the consortium, *Entreprises Campenon Bernard,* is a big civil engineering contractor; the concrete sections of the tunnel would probably be made in France under its supervision.

SEPM is a combination of industrial companies that would be interested in building a bridge or supplying the material for it, trade associations and some big French banks. The *Compagnie Française d'Entreprises* has designed the bridge; the *Compagnie Industrielle et Financière des Chantiers et Ateliers de Saint-Nazaire Penhoët* are shipbuilders and engineers; the *Société des Forges et Ateliers de Creusot* are steelmakers; and there is another consortium called the *Association Françaises d'Etudes.* Among interested trade associations there are the *Chambre Syndicale de la Sidérurgie Française,* the *Union des Chambres Syndicale des Industries du Pétrole,* the *Union Routière de France* and the *Chambre Syndicale des Constructeurs d'Automobile.* The banks concerned, which might lend the company money—and it would need about £230 million—are the *Crédit Lyonnais,* the *Banque Nationale pour le Commerce et l'Industrie,* the *Société Générale* and the *Banque Française pour le Commerce Extérieur.* Dorman Long and Merritt Chapman and Scott, which started the present bridge campaign in 1960, would probably take part in building any bridge. On the financial side Lord Gladwyn is trying to drum up a British Channel Bridge Company as a partner to *SEPM.*

The Channel Tunnel Study Group, the Establishment in this pond, is by contrast devoted to those who only want to invest their money: the Suez Canal Company, the Channel Tunnel Company and its French equivalent, the *Société Concessionnaire du Chemin de Fer Sous-Marin Entre la France et l'Angleterre,* and a consortium of American banks, Technical Studies, Incorporated. Its members are not, therefore, likely to be directly involved in the risks and technical struggles that building anything across the Channel is bound to involve.

OIL REFINING

East German Giant

AT the western end of the 2,000-mile pipeline that is being built to move Russian oil to central Europe—and which is also making western oil companies apprehensive about exports moving farther afield—the East German regime is building a refinery planned for an ultimate capacity that few people in western oil would consider nowadays. The new plant, at Schwedt on the Oder, is designed for an initial capacity of two million tons a year when it comes on stream in 1963. But the plans, on paper at least, are for four million tons in 1965, eight million tons by 1970, and 24 million tons by 1975.

Whether, by then, this might be the world's biggest "single" refinery is impossible to guess. Abadan in Persia and Baton Rouge in Louisiana have capacities of more than 20 million tons a year. But both are oilfield-centred refineries built in the era when few markets were large and diverse enough to take the whole range of petroleum products, and the balance of economic factors clearly favoured refining at source in giant plants that could gain considerable economies of scale. Since the war, this balance has shifted somewhat (economies of scale in crude oil transport being even more dramatic than those in refining); political factors have come in, too, to favour refining near markets. Most recently, market-centred refineries have begun to be built inland at the end of crude oil pipelines rather than on the coast. As markets grow, certainly, the refining complexes serving them will develop too. But none of the plants now being built in south-east Germany and north-east France, at the end of these pipelines have capacities larger than four million tons a year, or have announced plans for expansion of the order of those being talked about for Schwedt.

One reason for choosing to plan a refinery of this size is that East Germany was deprived of all its significant sources of power by the transfer to Poland of Silesian coalfields east of the Oder-Neisse line. Though a relatively large proportion of the Schwedt refinery output will be directed to manufacture of petrochemicals, its main significance will be in the power that it will provide for the hungry East German industries. Today East Germany is spending 13 million marks a year on storage of crude oil alone in Polish, West German and other nations' ports. The new refinery's storage will reduce this figure (it will hold 180,000 tons). Though even today East Germany is claimed to be more industrialised than Italy, it is planning for further growth at about seven per cent per year.

Short of hydro-power, bituminous coal and, so far, oil, East Germany is putting its other fuel investment into the development of lignite deposits, in which 25,000 million tons are known to exist and reserves may total 40,000 million tons. A pilot power station at Leuna is designed to use lignite with high salt content, though deposits of lignite in this area will be exhausted by 1975. The present East German electricity output is about 40,000 million units per year, and if electricity consumption expands with the economy at the rate of about 7 per cent per year, then by 1975 about 90 million units would be needed annually. In heating value, as distinct from diesel fuel and petrol, 24 million tons of crude oil would produce fuel oils equivalent to 25 million tons of bituminous coal or yield electric power of about 55,000 million units. So the huge refinery capacity planned for Schwedt might do no more than fill the gap between power requirements for eastern Germany and its severely limited local fuel resources.

PACKAGING

Foreign Policy

SQUARENESS, in containers, is hip. The obvious space saving advantages of flat-sided vessels are bringing them into favour, particularly with the chemical industry. But dockers will always find it easier to roll a barrel or drum than to lift a cube. What is ideally suited to mechanical handling may also have to be dealt with manually at some stage in its journey; what is convenient for exports may not be welcome in imports, and so on. The use of pallets for loading miscellaneous items provides big savings in time, space and labour. But when it comes to unloading general cargoes for diverse destinations by this means, the complications of sorting goods on pallets are so great that direct handling is still usually preferable.

This particular problem is not one often faced by the chemical industry, whose products lend themselves to more easily streamlined bulk handling. In its ultimate form, the pipeline or the carry-and-store demountable tank, bulk movement of chemicals dispenses altogether with special packing for transport. But for smaller quantities, growing use is being made of non-traditional materials for chemical drums—fibreboard, plastic or special alloys. Here, too, export markets threaten to complicate the use of new materials by imposing differing standards. Exporters are most anxious to avoid a repetition of the anomalies that have grown up around the transport of many familiar containers: to give only one example, Australia and New Zealand have totally incompatible regulations about valves on gas cylinders. This was among the questions raised at a conference called this month by the British Standards Institution, which it is hoped will eventually lead to action on a world-wide scale by the 45 member countries of the International Standards Organisation.

SHORTER NOTES

An Economic Planning Advisory Council for the Construction Industries has been set up with Sir Harry Pilkington as its chairman. Ten organisations connected with the industry are represented on it, though one of the biggest, the National Federation of Civil Engineering Contractors, is keeping out. The new council will seek to act as the official spokesman of the whole industry in its dealings with the National Economic Development Council; the civil engineers propose to do so separately through a committee consisting of the Federation, the Institution of Civil Engineers and the Association of Consulting Engineers.

★

The Thomson Organisation is to buy Thomas Nelson and Sons, the publishers. The acquisition will involve no issue of shares as it will be entirely on a cash basis; the price is thought to be about £2 million.

COMPANY AFFAIRS

Prices of equities have moved irregularly on the London stock market this week but on balance they were lower and The Economist *indicator lost one point to 355.7. Relief at the ending of the dock strike threat brought a brief halt to last week's slide in prices but some disappointing company results (notably from Rolls-Royce) and the Montgomeryshire by-election result led to further selling. By contrast gilt-edged, helped by some foreign buying, made steady gains. Among equities steel shares were particularly dull but they rallied on Thursday; A. E. Reed made a bright showing among paper shares.*

Overcapacity in Paper

OVERCAPACITY in the paper industry in Europe and throughout the world has sharply reduced profits. And the industry may be afflicted by slender margins for some time to come, for the gap between demand and capacity may not narrow much in the next two or three years. At the moment, for instance, **Bowater Paper** is running its mills in this country and Canada at about four-fifths of normal capacity. Unit costs are high and competition between the paper-makers to operate their modern mills as fully as possible is keeping prices down. Paper groups in this country, moreover, are having to bear the full brunt of Scandinavian competition resulting from the successive EFTA tariff cuts. The British paper-makers therefore welcome any steps which will bring the EFTA and common market countries together for they would be less exposed behind the common tariff of the EEC.

Price (£1 shares): 37s.3d. Earnings yield: 9·6%.
Dividend yield: 7·4%. equal to 10·4 years' earnings.

This looks beyond the immediate future and as Bowater shareholders thumb through the pages of the annual report and accounts they may be haunted by fear of a lower dividend. Over the past year the price of the £1 shares has fallen by a third and now at 37s. 3d. the £1 shares yield 7.4 per cent; with the current dividend covered only 1.3 times the possibility of some further reduction in income is implicit. The group's long-term growth potential, however, is a different matter; many substantial developments both in Europe (where its investment now amounts to £14 million) and North America are still contributing little to profits, while the associated companies, Bowater Scott, makers of tissue products, and the Tasman Pulp and Paper of New Zealand are ploughing their profits back and not currently paying dividends. All this is reflected in the low return earned on capital employed. But capital expenditures have remained high and at the end of the year Bowater Paper was deeply in debt to its bankers. The loan of £5 million raised in Switzerland since then has only partly lightened the burden.

Pressures on the paper-makers in the British market will remain intense and the directors of **Wiggins Teape** have already said that sales and profits in the first three months of 1962 have been below those for the corresponding period in 1961. Wiggins Teape's trading profits fell last year from £6,008,000 to £4,977,000 but £430,000 of this fall can be attributed to the transfer of assets to Millbank Paper (which Wiggins Teape now owns jointly with British American Tobacco). Nevertheless the figures point to a decline both in sales and profit margins, especially in the second half of the year. The emphasis put by Wiggins Teape on specialised and high quality papers may give profits some protection that Bowater with about half of its profits coming from newsprint may not enjoy. This is reflected in the slightly lower yield of 6 per cent offered by the £1 shares in Wiggins Teape at 47s. 3d. on the maintained dividend of 14 per cent, covered 1.8 times.

By contrast, Spicers report a fall in trading profits in 1961 of only 2 per cent from £1,243,000 to £1,220,000 but after higher charges for depreciation and tax net profits fell from £583,000 to £494,000. In this case the decline in profits is probably understated as the latest figures include nine months' profits from the Boyden group, an acquisition which could well have added £200,000 to gross profits. Against this, however, Spicers received less in investment income in 1961 having reinvested the proceeds of its earlier sale of British Waxed Wrappings in Boyden. The fall in trading profits was much steeper in the second half of the year than in the first half and the cover on the maintained dividend of 12½ per cent has fallen to 1.8 times. At 39s. 9d the £1 shares yield 6.4 per cent.

Disappointing results from other paper producers had led the stock market to canvass the possibility of a cut in the dividend from **A. E. Reed** for the year to March 31st. Wednesday's surprise announcement of a maintained dividend of 16 per cent and better trading results in the second half of the year produced a sharp rise in the price of the shares, the ordinary gaining 5s. to 42s. and the "A" ordinary 5s. 10½d. to 40s. 7½d. The latest profits include a full year's earnings from Imperial Paper and Anglo-Canadian Pulp and Paper, both acquired from the Daily Mirror group. Not surprisingly, therefore, net sales of the group rose from £71.4 million to £95 million, gross profits from £6.6 million to £7.8 million and net profits from £3.7 million to £3.9 million. A better guide to the year's outcome is provided by the directors' statement that "the rate of earnings overseas has generally been maintained, but profits in the United Kingdom have fallen considerably" and that "the profits of the group as a whole have improved in the second half year." Two principal reasons are given for this improvement; the seasonal nature of the industry in Canada; and "the gains which have arisen in the United Kingdom from improved efficiency and lower operating costs."

Compared with the first half of the financial year gross sales in the second half were £2 million higher at £58 million, gross profits, £1.2 million higher at £4.5 million and net profits £700,000 higher at £2.3 million. On the increased capital of £28.7 million the ordinary dividend of 16 per cent is covered only 1.3 times.

Rolls-Royce

A GLOOMY interim statement from Rolls-Royce in October dashed any hopes of increased profits or dividends but the stock market was not prepared for the shocks which this week's preliminary statement revealed. The cut in the ordinary dividend from 11 to 8 per cent and an effective loss on trading, if all development expenditure had been charged in the 1961 accounts, sent the shares down by 2s. to 29s. 9d. Yet Rolls-Royce's total sales revenue rose from £109¼ million to £123¾ million, reflecting the major re-equipment programmes of many airlines. The order book is thinner; orders in hand of £96 million at the end of 1961 are £20 million less than at the end of 1960, the reduction occurring largely in civil aero engines.

Last year's costs rose more quickly than sales and profits were badly hit by lower margins in the aero engine business (where the Tyne engine alone absorbed £2½ million in special costs) and the effect of lower sales of motor cars. A substantial increase in stocks and high interest rates are reflected in the sharp rise from £409,000 to £1,787,000 in interest charges and the consolidated trading surplus fell from £11.6 million to £8.9 million.

If the year's development and research expenditure of £10.5 million, against £7.7 million, had been charged in full against the surplus, Rolls-Royce would have made a loss of £1.7 million. This, in the directors' opinion, "would not fairly reflect the experience of the year's trading" as part of the development expenditure will ultimately be recovered by sales of engines already ordered by customers. They estimate the total recovery at £6.6 million, of which £2.4 million relates to 1960 and £4.2 million to 1961. This sum has been capitalised, so that the amount charged for development directly against revenue in 1961 has been reduced to £6.3 million. On this basis, the year's gross profit is £2.5 million; as there is no tax charge it is the net profit as well and, on this new basis of accounting, covers the smaller dividend 2½ times. The fall in orders and the decision to capitalise part of the development expenditure are worrying portents and investors should take another critical look at the yield of 5½ per cent.

Hawker Siddeley

WHILE the results of Rolls-Royce were worse than expected, those from Hawker Siddeley were better. But twelve months' profits in 1961 are compared with 17 months in 1959-60. Hawker Siddeley's sales at £320 million in 1961 seemed to have run at the same level as in 1959-60 when they amounted to £458 million. On the other hand trading profits in Britain of £23,881,000 were at a lower level than in 1959-60 when they amounted to £35,061,000; but proportionately more profits relating to prior years were consolidated into the trading surplus in 1959-60 than in 1961. Last year the British group spent proportionately less on research and development though the total remains heavy at £9.8 million, against £15.6 million. But while the gross profits actually earned by the British group last year were running at a slightly higher level, the net loss of the Canadian group rose from £537,000 to £813,000 so that the net income of £4,717,000 was proportionately less than the £7,771,000 recorded in 1959-60. The latest figure is subject, moreover, to exceptional charges for certain Canadian losses and exchange adjustments and these reduce the cover on the dividend as rounded up from the equivalent of 10.6 per cent to 11 per cent, to 1.2 times.

The directors say the order book is at a substantial level. In Canada, several new contracts have been won and there are now "definite signs of improvement." Hawker Siddeley is still predominantly an aircraft group and its ventures in other industries, both in Britain and Canada, have not been especially happy. Not surprisingly, therefore, the £1 shares, which gained 3s. 6d. to 23s. 6d. on the results, yield as much as 9.4 per cent.

Bristol Aeroplane

AFTER the good reception of Bristol Aeroplane's profits for 1961, Sir Reginald Verdon-Smith now reveals that far-reaching changes in the structure of the industry initiated in 1959-60 have begun "to achieve demonstrable results." This is reflected in the rise of 5½ per cent in Bristol's gross profits from £2,048,000 to £2,162,000 and in the dividend from 12½ to 13½ per cent, now covered 2.2 times.

Bristol is now largely a holding company, deriving 79 per cent of its income last year from investments in associated companies. These include a 50 per cent holding in Bristol Siddeley engines, 20 per cent in British Aircraft Corporation, 15¼ per cent in Shorts and a 10 per cent holding in Westland. Last year's income from these holdings was hardly changed, at £1,890,000. Bristol Siddeley paid an unchanged dividend, Short Brothers made a loss and BAC did not pay a dividend, as it is ploughing profits back to cover development expenditure. In direct trading, Bristol's companies in this country benefited from "satisfactory results from pre-merger aircraft and missile contracts executed on our account by British Aircraft Corporation" and the trading profits of all the British companies rose from £255,000 to £417,000. Overseas subsidiaries, notably in Canada, did not fare so well and their trading profits fell from £281,000 to £83,000.

Sir Reginald says that the changes in the industry have strengthened its structure and efficiency and that the group's associated companies have full order books for the next two years. The 10s. shares stand at 16s. 9d. and yield 8.1 per cent.

Food and Drink

FOOD and drink equities have retained their popularity with investors on the grounds that they are among the last to be affected by a downturn in the economy and that they should benefit from the expected rise in consumer expenditure last year. Their defensive attributes are plain but their growth potential has probably been exaggerated. Competition is fierce; costs are rising; profit margins are slimmer; and last year's profits can be regarded as no more than satisfactory. This has been particularly true of the British market; but trading internationally has its own problems. The profits of **Reckitt and Colman** rose last year by no more than one per cent though sales were 10 per cent higher; this was largely due to lower margins at home and to exchange losses abroad. It is not clear from the preliminary statement of **Bovril** whether unsettled conditions in South America had the same effect on its profits as they had on Reckitt and Colman's; but the fall in Bovril's profits for the second year running can hardly be explained by lower margins alone. The branded products of Bovril and Reckitt and Colman are equally well known; but investors believe there is more spring and elasticity in Reckitt and Colman, which on the basis of profit retentions has extended its trade overseas and which is looking forward to bigger sales and profits this year.

	Gross profit		Net profit		Ord. dividend per cent		Price	Yield per cent
Years to December 31	1960	1961	1960	1961	1960	1961		
Reckitt & Colman	9,691	9,747	4,918	4,719	12	12	76/-	3·2
Beecham Group	7,950	7,512	4,018	3,919	30	30	45/3	3·3
Allied Suppliers	3,475	3,992	1,435	1,716	10	10	25/6	3·9
Schweppes	3,788	3,584	1,841	1,606	24	24	31/9	3·8
Bovril	1,465	1,136	600	382	12	12	51/-	4·7

About half of the sales of the **Beecham Group** are in food and drink products, largely in the home market; its branded toilet and medicinal products are sold more abroad than at home and in all about a quarter of its total sales are made overseas. Thus it is more dependent on the home market than Reckitt and Colman and not surprisingly the pressure on margins is more apparent in Beecham's results than in Reckitt and Colman's. In the year to March 31st Beecham's total sales rose by 4 per cent, from £56.3 million to £58.6 million, but its gross profits fell by 5½ per cent from £7,950,000 to £7,512,000. The fall in profits was most marked in the second half of the financial year when the gross profit margin was 11.7 per cent and the net margin 6.4 per cent, compared with 14.0 per cent and 7.4 per cent respectively in the first half. Beecham's margins in the winter, when its advertising expenditure rises to a peak, are usually smaller than in the summer; but the latest ones are lower than those recorded in the winter of 1960-61 (12.9 per cent gross and 6.6 per cent net).

In the American and British markets, however, the bargaining power of retailers has been strengthened by the establishment of bigger empires and this poses a further threat to the margins earned by suppliers. The brewing combines and the big multiples and super store chains in the grocery trade are demanding and getting, the chairman of **Schweppes**, Mr R. Hanning Philipps says, bigger discounts or increased promotional allowances on their bulk orders. This is squeezing Schweppes' profits at a time when the growth of its sales at home appears to have been checked. Schweppes has turned its thoughts to expansion overseas and to a wider spread of interests at home, where it is trying to consolidate its interests in the preserves industry. This reorganisation has imposed its own strains: while Wm. Moorhouse added to its profits both Chivers and Hartley made losses last year. These two companies should soon be earn-

How to judge gin

ıe great international jury assembled at the Hospes Exhibition in Berne gave the gold medal to Burnett's gin. And added their ılicitations. How do you judge that one gin is better than another? It's done mainly by nose. First you check that the spirit is ean and pure, smooth not harsh. You consider the character. Then, and only then, do you sip. This is how the internatio al ıry judged Burnett's gin. They were very favourably impressed. You will be, too. Try Burnett's, and follow your no se.

BURNETT'S GIN

Continued from page 714

ing profits again; but the chairman says that Schweppes will find it hard to maintain its volume of soft drink sales this year.

Competition at the retail level is as fierce as it is among the suppliers and it has forced the multiples to spend heavily on modernisation. **Allied Suppliers,** for instance, is traditionally regarded as a chain of small grocery shops and in the past it has been criticised for its slowness in adapting its stores to self service. But it now seems to be hotting up the pace of development. It is closing small, uneconomic branches and letting them out to other retailers; from money released by the sale of some freeholds it is modernising and extending its bigger stores. At the end of 1960 it had converted over 500 of its 3,800-odd stores to self service; by the end of 1961 it had 3,500-odd stores open, of which nearly 670 were self service. The new impetus in Allied Suppliers must be largely responsible for the recovery in its profits last year.

British Petroleum and Burmah Oil

THERE is much to commend in the way **British Petroleum** presents its trading results for 1961. For the first time the accounts of subsidiaries with one or two minor exceptions have been fully consolidated and a comprehensive five-year table is included. The extracts from it set out in the table show how much margins have been under pressure. In his statement Mr Maurice Bridgeman makes it clear that any improvement in profit margins is more likely to come from lower operating costs than from any general improvement in prices. The dividend on **Burmah Oil's** holding in BP forms an important part of its income. The 1961 accounts of Burmah Oil reflect the higher dividend paid by BP for 1960 while this year's accounts will include the fractional increase in the final dividend of BP for 1961. Considerable changes in the sources of Burmah Oil's income have arisen from the altered status of joint venture companies in Burma and India; as the governments in these countries have increased their stakes in them, what were subsidiaries of Burmah Oil have become trade investments. The pressure on Burmah Oil's own operating margins has been partially offset by bigger sales of its marketing subsidiaries; another factor leading to the increase in pre-tax profits from £18½ million to £20¼ million was the substantial fall in the charge for exploration expenditure particularly in the United States.

In 1961 BP invested £124 million in exploration and other items, £15 million more than in 1960. All but £6 million of this came from internal resources while outside borrowings of £8¼ million (including the £5 million Swiss loan) were the lowest for some years. Of its total "properties and operating assets" of £396 million the report shows that only £61 million represents production and exploration; tankers account for £42 million, marketing £120 million and refineries £173 million. In addition BP has big investments in associated companies, including Kuwait in production and Shell Mex and BP in marketing. The profits earned on this vast array of assets in Mr Bridgeman's view refute suggestions that the profits of integrated oil companies are excessive. This is certainly not the view of the stock market where BP at 33s. and Burmah Oil at 35s. 3d. offer returns of almost 9¼ per cent.

Pressed Steel

THE reasons for Pressed Steel's loss of £2,668,000, against a profit of £1,885,000 were given in the preliminary statement. Mr Alex Abel Smith, the chairman, now has some important things to say about the future. Profits should stage a good recovery this year; Pressed Steel returned to profitable trading in the first quarter and Mr Abel Smith hopes for "much improved results." The refrigerator division is unlikely to help much; intense competition makes it difficult for any manufacturer, however efficient, to earn a satisfactory return on invested capital. The railway carriage and wagon division, too, is expected to make only a "modest contribution." The Beagle aircraft subsidiary is still in the development stage, writing off expenditure and not making profits.

Everything, therefore, turns on the motor body division. Mr Abel Smith holds that the motor industry "has once more entered on an upward cycle" and he expects a steady build-up in production for the next four or five months at least. By the end of the year the expansion programme will be completed. There must be a permanent rise in the demand for cars to justify the money that is being spent on this programme. The decision to push ahead with expansion when the company was making losses has made its mark on the company's finances. Nearly £4 million was borrowed from the banks and £5 million from the Board of Trade. As the programme will cost about another £9 million to complete, Pressed Steel has arranged to borrow another £4½ million from the Board of Trade and its bankers have agreed to bridge any gap. Money from the Board of Trade at 5½ per cent is cheap; but the loan of £9½ million is repayable between 1964 and 1972 in equal annual instalments of £1,100,000. This could take some of the gilt off earnings. It could prove an onerous burden if Pressed Steel, with greatly increased capacity, suffered a setback similar to last year's. Clearly there is scope for recovery in the 5s. shares, now standing at 17s. 9d. and yielding 1½ per cent on the nominal dividend of 5 per cent; but last year's results have drawn attention to its vulnerability and investors will be more careful in bidding the price up than they were in the past.

Rank and Mecca

THE leaders of the Bingo boom have been the Rank Organisation and Mecca but it seems to have influenced the results of Mecca more than those of the Rank Organisation. Last year **Mecca's** trading profits rose from £818,000 to £1,093,000; this reflected in part the contribution made by new acquisitions, notably the Hammersmith Palais, though Mecca's entry into ice skating came too late in the year to add much to profits. Net profits benefited from a more favourable basis for charging depreciation and rose by 29 per cent to £461,000 to provide earnings of about 30 per cent on the increased ordinary capital on which the dividend has been raised from 20 to 22 per cent. Mecca's prospects still beckon but the yields of 1¼ per cent offered by the 5s. ordinary shares at 60s. and of 2¼ per cent on the "A" shares at 39s. 7½d. point to a long pilgrimage.

The news from the **Rank Organisation** is less encouraging, for the directors in making a formal offer for Murphy Radio forecast a fall in profits before tax from £6,451,000 to about £6,000,000 in the year to June 30th next. Profits from cinemas are expected to be slightly smaller but the profits of the industrial subsidiaries, particularly Bush, Rank Cintel and Rank Precision, are expected to be "materially lower." These reductions will not be fully offset by a marked improvement in profits from the group's miscellaneous activities. The directors expect net equity earnings to fall from £1,595,000 to about £1,330,000 to cover the forecast dividend of 25 per cent (against 22½ per cent) about 1¼ times. Not surprisingly the ordinary shares fell back on this forecast which coincided with the first dealings in the

new 6¼ per cent convertible unsecured loan stock. In an excited market the stock touched a premium of 20 on the issued price of 99 before falling back to 10¼ premium. In buying the stock at this sort of price investors were clearly prepared to look beyond current profits and to hope that in a few years time such interests as bowling centres, television rental and relay and Xerography will be real money-spinners. At the current premium the loan stock puts an effective price on the "A" ordinary of 36s. in 1963, compared with the current market price of 30s. 9d. and yield of 4¼ per cent.

Boots Pure Drug

BOOTS PURE DRUG has yielded not much more than 2 per cent for well over a year and investors now have to examine more critically the growth expectations of the shares. To those who hoped that the policy of modernising its stores and extending their range would counteract the difficult conditions in retail trade last year the preliminary statement must have seemed disappointing. Boots' gross profits in the year to March 31st rose by 5 per cent from £8,826,000 to £9,271,000 but this is not quite the drive that investors had expected. The turnover figures published in the full accounts will show how severe the squeeze on retail margins was and how far sales of pharmaceutical products, which accounted for 14 per cent of the group's turnover in 1960-61, may have been held back by the higher charge for NHS prescriptions.

The tax charge was higher so net profits rose by less than 2 per cent from £4,263,000 to £4,340,000, raising earnings fractionally from 26.8 to 27.3 per cent. The ordinary dividend was maintained at 12 per cent; the stock market had hoped for 13 per cent and its disappointment was mirrored in the fall of 1s. 3d. to 30s. 9d. in the 5s. shares. They now yield 1.9 per cent on the dividend and just over 4.4 per cent on earnings; thus they discount expansion well beyond the current year.

De Beers

STOCKS of diamonds held by the De Beers group increased still further last year even though record sales were made through the Central Selling Organisation. The latest rise of R2 million (1 Rand = 10s. sterling) brings their book value up to R37 million, and the directors say that the market was unable to absorb certain qualities of small diamonds. Steps are being taken to improve the market for these stones. Diamond sales rose by R12 million last year; the directors claim that the increase in stocks resulted from bigger purchases from major producers, particularly Russia, and from the West African alluvial diamond fields.

De Beers own mines stepped up their output last year, though the production of Consolidated Diamond Mines of South-West Africa declined. The group's income on diamond account rose from R65.3 million to R70.5 million, more than offsetting a reduction from R23.4 million to R21.6 million in investment income. A note in the full accounts says the tax charges fully provides for the recently announced increase in tax on diamond mining in South West Africa, and after tax the group's net profits were R44 million, against R40.4 million. The increase in the dividend from 12s. 6d. to 14s. per deferred share has raised dividend disbursements from R22.9 million to R25.4 million. Transfers to reserves have reinforced liquid resources still further: Holdings of cash have risen from R115.6 million to R123.4 million and further sums have been invested in readily realisable assets. The yield on De Beers deferred at 156s. 3d. is 9 per cent.

Sears Holdings

LAST year the trading profits of Sears Holdings rose by 5 per cent from £10,416,000 to £10,920,000: British Shoe Corporation's profits rose from £5,740,000 to £5,892,000 (accounting for 54 per cent of the total), and Sears Engineering's profits rose more sharply from £4,005,000 to £4,399,000 (40 per cent of the total). The group's turnover rose by nearly 6 per cent and exports, accounting for over a fifth of sales, rose by 12 per cent. The chairman, Mr Charles Clore, says that the group experienced more intense competition at home and abroad and had to absorb higher costs; he attributes the advance in profits to an improvement in "internal efficiencies." The ordinary dividend of 25 per cent, covered twice by earnings, was maintained on the capital as increased by a one-for-five scrip issue in June.

The balance sheet reflects the effect of Sears' expansion. Stocks and debtors rose from £29¼ million to £35¼ million and this, together with stock market purchases of shares in Saxone prior to the merger, brought net liquid assets down from £7,693,000 to £242,000. But the £5 million debenture placing made recently by British Shoe has reinforced cash balances and the group's retained cash flow is about £4 million. Profits should rise again this year; 1961 was a difficult year for the retail shoe trade but 1962 should produce some benefits from the merger with Saxone. In Sears Engineering the Bentley Group, which makes hosiery knitting machinery, should be working at full capacity this year; but Mr Clore says that Furness Shipbuilding "will be barely fully occupied in 1962." The 5s. ordinary "A" shares, now standing at 39s. 7½d., yield 3.2 per cent on the forecast of a maintained dividend of 25 per cent on the capital as increased by the proposed one-for-six scrip issue.

Insurance Reports

THE latest batch of insurance reports make generally more cheerful reading. Most of the companies in the table earned a better underwriting surplus in 1961; this largely reflects a reduction in their commitments in North America. The slight fall in the surplus of London Assurance stems from a substantial underwriting loss of £760,000 in the accident department as a result of the hurricanes. The elimination of unprofitable business has been of benefit to the Guardian and the Sun Alliance, though the latter still has an underwriting deficit in the United States. The Guardian operates on only a very limited scale in the United States and the slightly lower surplus on its accident business stems from the loss on the motor account. Northern and Employers reports a loss on its fire account as a result of its experience in the United States; but its US business as a whole earned a profit. By far the biggest increase in underwriting surplus is reported by the Royal Exchange; this reflects a sharp rise in premium income.

The investment income of all the companies has risen—notably so in the case of the Guardian, which made a two for one rights issue last year. The full benefit from the investment of the proceeds of that issue will be seen in the current year's accounts. Most of the offices have invested considerable sums in property developments but more than one chairman stresses the long term nature of such investments. Meanwhile most of the offices, in the words of Lord Knollys, the chairman of Northern and Employers, have "made a reassessment of the prospects of ordinary shares and fixed interest securities." Not surprisingly the balance of new investment in the past year swung back towards high yielding fixed interest stocks but equities were by no means neglected. The Royal Exchange, for example, was a seller of equities in the early months of 1961 but it came back into the market as a buyer later.

THE MONEY MARKET

FOLLOWING poor allotments of 26 and 20 per cent in the previous two weeks the discount market syndicate "went for the bills" at last Friday's Treasury bill tender and raised its bid by 8d. to £99 0s. 1d. Total applications increased by £7 million to £413 million, but the outsiders did not raise their bids as sharply as the market and the average rate of discount fell by only 2s. 1.01d. to £3 19s. 8.71d. per cent. As a result the market received a satisfactory allotment of 57 per cent.

Credit was comfortable at the end of last week and, more unusually, on Monday of this week. On Friday and Monday the authorities sold small amounts of bills to absorb the surplus credit. On Tuesday and Wednesday, however, the market was forced to borrow from the Bank of England at Bank rate, although on both days the authorities helped the market by the special purchase of bills. On Tuesday one or two houses borrowed a very small amount, and on Wednesday three or four houses shared a small amount. The authorities obviously feel that last week's reduction in the bill rate was too sharp for present policies.

In New York this week the bill rate fell to 2.646 per cent from 2.720 per cent.

(7) 25,000 workers had wage cuts (but over the whole of 1961 no worker had a net decrease). (8) Index of building costs. (9) Average for fourth quarter. (10) Using the revised retail price index based on January, 1962=100: March: all items=100·5; food=100·9. (11) Average for first quarter. (12) April 101·6. (13) April 118·2.

COMPANY MEETINGS

THE BRITISH PETROLEUM COMPANY LIMITED

REPORT AND ACCOUNTS FOR 1961

The fifty-third Annual General Meeting of the Company will be held at Britannic House, Finsbury Circus, London, EC2, on Thursday, June 7th.

CHAIRMAN'S STATEMENT

The following is the Statement by the Chairman, the **Hon. M. R. Bridgeman, CBE**, which has been circulated to Stockholders with the Report and Accounts for the year ended December 31, 1961:

Since our last meeting there have been several changes in the Board. Sir Harold Snow retired from his position as Deputy Chairman and Managing Director at the end of last year, though I am pleased to say that he remains a member of the Board, where we benefit from his 40 years of experience with our group. Mr A. E. C. Drake, who joined the company in 1935, has succeeded him as a Deputy Chairman. In addition, we have filled three of the four additional vacancies created by the amendment to the company's articles last October. In February we appointed Lord Cobbold a Director, and I need hardly say how greatly we shall value his immense knowledge of the City gained by his service at the Bank of England, and his 12 years as Governor. We are also appointing as Managing Directors Mr A. F. Down and the Hon. William Fraser, making seven Managing Directors in all instead of six, which will help to spread the load more evenly. I regret to say that Mr Desmond Abel Smith has decided not to seek re-election. He became a Director in 1951, and we shall greatly miss his advice and help.

LARGER WORLD OIL CONSUMPTION AND PRODUCTION

Turning to the main developments and trends in the oil industry during the past year, energy consumption in 1961 outside the Communist zone rose by some 3 per cent, a little more than half the increase in 1960, and oil consumption expanded by 5 per cent, but the incidence of the increase was uneven. In the USA the gain was less than 1 per cent; in Western Europe it rose by 11 per cent, and in Japan by 26 per cent. Total world production of crude oil and natural gas increased during 1961 by 73 million tons, of which some 20 million tons were in the Communist zone. Middle East production rose by 18 million tons, or just over 7 per cent, and there was a further rapid expansion in North Africa, where exports of crude oil from Libya began in the autumn, and are expected to increase considerably during 1962. Exports from the Communist zone during 1961 increased by just over 3 million tons to 30 million tons. Most of the additional shipments were made to Western Europe and supplies from that source now account for nearly 9 per cent of the area's total requirements.

COMPETITIVE CONDITIONS CONTINUE

Competitive conditions persisted throughout the year, particularly in the European markets where about 40 per cent of our sales are made, and there is no immediate sign of their easing. The cause of this state of affairs is to be found in the smaller increase of world demand, although it is still substantial, in the surplus capacity now existing in all the main exporting countries, in the development of exports from new producing areas, and especially in the continued expansion of suppliers from the Communist area. Conditions of this kind naturally lead to increasing pressure on prices, though crude oil posted prices at world export centres remained unchanged throughout the year. The impact of Russian oil on the European market has a more far-reaching implication than the short-term dislocation of prices. If prolonged, the present low selling prices, in which Russian oil plays a major part, could at some future date endanger the energy supplies of Europe by making it difficult to finance the development of facilities for bringing oil to the consumer in the growing quantities necessary.

BP GROUP SALES INCREASED

In spite of these unfavourable conditions, BP group sales of crude oil and refined products in 1961 again increased, and totalled over 78 million tons, a rise of some 7½ per cent as compared with 1960. The same rate of increase applied equally to crude oil and products. Our own resources are more than enough to meet the requirements of our markets, but we are obliged to buy substantial quantities of crude oil from the franc area for our French refineries. In spite of the position in the USA, where the limitation of imports affects our trade, there is every prospect that the world demand for petroleum products will continue to expand, and I am confident that BP will continue to obtain its share of this expanding market.

In general, our relations with the governments of the producing countries are good, but one of our greatest difficulties in recent years has been to demonstrate effectively that their interests and ours are complementary and not conflicting, since through the existing arrangements for sharing the profits, both sides are equally interested in reducing costs, increasing output and avoiding rapid fluctuations in price. It is unfortunate that those who try to play their part in the progressive development of natural resources on the basis of freely negotiated agreements—and this applies particularly to the management and staff of the operating companies—should in some quarters be branded as exploiters and imperialists. It is our continuing hope that we can succeed in demonstrating that this is not the case.

OPERATING CONDITIONS: "FIFTY-FIFTY": RELINQUISHMENT OF TERRITORIES

Next, I think it may be useful to make some reference to the conditions under which the oil companies operate. It is not everywhere understood that a 50/50 division of profits based, as it is in our case, on posted prices would, if the calculation were based on the prices actually realised, be the equivalent in present conditions of a 60/40 or even 70/30 division in favour of the producing country. It is also not generally understood that under the so-called 75/25 system, where the producing country is obliged to contribute half the cost of development, the net revenue per ton has not in any single instance, as far as we are aware, been higher than that obtainable under the more normal type of 50/50 arrangement, and in cases where the quality of the oil is below average, or the cost of production higher than average, it is almost certain to be significantly less.

Another point I would like to make on this subject is that there is nothing abnormal in a system which provides for the gradual relinquishment of unexploited territory. But measures which involve the compulsory relinquishment of areas which are already fully or partially developed, or which deny to those who took the original risk the right to choose areas of reasonable size to be retained for future exploration, are not only inequitable in themselves but are likely to damage the confidence of those who look to the long-term rather than to the more speculative short-term aspect of oilfield investment. It is also open to question whether the immediate re-allocation of relinquished areas at a time of world surplus is likely to bring any benefit to the country concerned, since it cannot influence the total tonnage consumed, but may well depress the price level at which current production can be sold.

PROFITS ON INTEGRATED OPERATIONS NOT EXCESSIVE

In some quarters the view has been expressed that the profits of the integrated oil companies are excessive. Our own results for the year 1961 show, I think, that this is not the case. An integrated company like our own is of course a concern which produces and trades in oil throughout all the stages involved in finding the oil and in bringing it to consumers in the form they need. For if oil in the ground is to acquire a value, those who have access to it must also have outlets for its sale. An integrated company must therefore not only be sure of its supply of crude oil, but must have refineries, ocean-going tankers, storage installations and marketing networks.

We believe that it is impossible to assess in isolation the true profitability of any one of the several functions which are involved, such as the actual production or transport or refining or marketing of the oil, without making assumptions which are largely arbitrary as to the part which each plays in determining the price at which the product is sold. To say that an inte-

grated oil company makes a profit at the producing stage is like saying that the profit of the village baker is derived from mixing his dough. The baker cannot make a profit until he has bought an oven, and probably a van as well, and has baked and delivered his bread and been paid for it. The only figure that really matters in the case of an integrated oil company is the net income after tax remaining with the group when the results of all its constituent elements have been set one against the other.

GROSS INCOME EXCEEDED £1,000 MILLION

The financial results for the year are set out elsewhere in the report, and it is hoped that the new form of presentation will give a clearer picture of our progress and results.

It will be noted that for the first time our gross income has exceeded the £1,000 million mark, but in spite of this our net income after tax at £60 million was slightly lower. This is due almost entirely to narrower profit margins, the reasons for which have already been explained, since, by comparison, operating expenses are much the same as in the previous year. As, however, there is little sign of any general improvement in prices, it is to lower operating expenses that we must chiefly look if our present profit margins are to be improved. We are therefore constantly examining each phase of our operations to ensure that, by the adoption of newer techniques, the cost of our operations is reduced to a minimum.

PROFIT LESS THAN 1d. A GALLON

It will be seen that our rate of return on capital employed has fallen from 14.4 per cent in 1957 to 9.2 per cent in 1961. Putting it in another way, our group profit over the last three years has amounted to £185 million and our sales to 214 million tons. So for these three years our margin was less than £1 per ton or, in more familiar units, less than 1d. a gallon. In 1961 it was 15s. per ton or rather more than a halfpenny a gallon. Bearing in mind the considerable risks which an integrated oil company has to assume, this rate of profitability is far from excessive, especially since out of our net return we must find a large part of the capital needed for further development.

In assessing the position of an integrated group like our own there are several important considerations to be borne in mind. One is that periods of surplus like the present, may produce a situation in which the newcomer with negligible overheads may seem to have the edge over the integrated company, because he is operating in a small way in a restricted area. But such situations do not last for ever, and I do not think that, if the bulk of the world's oil trade had been handled during the last 15 years by a large number of smaller concerns, each dealing with one only of the many functions which are involved, the interests of the consumer would have been satisfied so well or at such small expense. Moreover, the integrated companies have been able to ensure to the producing countries prices which have enjoyed a greater stability than those of most other raw materials. I do not think this would have been possible if the producing industry had been divorced from refining and marketing.

OIL COMPANIES' DOUBLE RESPONSIBILITY TO CONSUMER AND PRODUCER

Companies such as ours have a double function to perform in that it is their business to ensure at the same time a market for the producer and a dependable source of supply for the consumer. If one market becomes blocked for fiscal or political reasons, it is our business to develop another, and to ensure that no producing country is deprived of an outlet for its exports, and that no consuming country is in danger of being left without several alternative sources of supply at economic prices. These objectives cannot be achieved by direct agreements between the governments of the producing and consuming countries except through arrangements which, by disrupting the normal channels, tend to leave the producer at the mercy of the consumer or *vice versa*, whenever the contracts are due for renewal. It is to the interest of responsible oil companies to avoid as far as possible unduly high or low prices or violent fluctuations in the volume or direction of traffic from year to year—which have proved to be the usual concomitant of government to government agreements.

The most obvious example in recent years of changes due to political as opposed to economic considerations was the diversion of virtually the whole of Cuba's oil imports from Venezuela to Russia. Less obvious, but perhaps as serious in their implications, are the imports, particularly into Italy and Sweden, of Russian oil at very low prices, with which importers of Middle Eastern oil cannot compete if payments of royalties and taxes to those countries are to continue at their present level. Arrangements of this sort necessarily disturb the normal relationship between the producer and consumer in a manner inimical to one or the other, and, eventually maybe to both.

BP AND THE COMMON MARKET

It would perhaps not be out of place for me to say something about the Common Market in so far as our own business is likely to be affected. From one point of view, the ultimate decision on whether or not Britain enters the Common Market will not directly affect us, since we and our associates already market our products in all six of the European Economic Community countries and are interested in eight oil refineries and two petroleum chemical plants within that area. On the other hand, there are already considerable divergencies of policy, on oil in particular and energy in general, as between the present members of E.E.C., and if the trend is to be towards the adoption of a common pattern, it is not yet possible to foresee what form this pattern will take.

Italy, for instance, has aimed at buying energy at the lowest possible price, whether it be oil from Russia or coal from the United States, irrespective of other considerations. Other countries, including France, which has adopted a system which involves the purchase by French refiners of large quantities of Saharan oil at higher prices, are primarily concerned with securing preferential treatment for certain of their associated overseas territories. Others again are preoccupied with the relationship between imported fuel oil and their domestic coal industry. Here plainly is a potential conflict of interests which, if it is to be resolved, will necessitate a considerable measure of compromise. The solution, whatever it may prove to be, will certainly have an important bearing on the economics of the oil industry and in particular on that of the main producing and exporting countries.

REPORT OF DIRECTORS

The following are extracts from the Directors' Report:

The accounts of the group are presented in a new form. In the past it has been the practice to submit consolidated accounts comprising the parent company and certain subsidiary companies. A large number of subsidiary companies, dealing mainly with the distribution of oil products in overseas countries, were not dealt with in the accounts though in recent years a statement has been attached setting out the income of the group as a whole with the exception of The Tanker Insurance Company, Limited, whose accounts were given separately.

For the year ended December 31, 1961, the group accounts comprise a consolidation of the parent company and all its subsidiary companies excluding only certain minor companies with insignificant income whose consolidation would have caused undue delay in presentation. Figures for the year ended December 31, 1960, provide a true comparison with the 1961 figures.

The accounts now consist of:

(1) An income statement, with schedules.
(2) The balance sheets of the group and the parent company, with schedules.
(3) Notes on accounts.

In the income statement and balance sheets broad classifications are shown, details being given in the schedules. Figures are given in £ million.

Immediately following the accounts is a statement of capital expenditure, a summary of group finance, and comparative statistics for the years 1957 to 1961.

RESULTS FOR THE YEAR

Income of the group before taxation at £142.1 million compares with £144.9 million in 1960.

Sales of crude oil and products, which exclude transactions of a reciprocal nature, were 78.3 million tons, a 7½ per cent increase over the previous year. Sales income is still adversely affected by the continuing intensive competition in the industry.

The taxation charge is £81.5 million (£82.5 million in 1960) made up of overseas taxation £88.8 million (£92 million) and a United Kingdom tax credit of £7.3 million (£9.5 million).

The net income of the group is £60.1 million (£62.2 million) of which £57 million is dealt with in the accounts of the parent company which also has a balance brought forward on revenue account of £7 million.

Your Directors have appropriated £30 million to general reserve. The preference dividends (net) and interim ordinary dividend paid amount to £7.9 million. After providing £18.5 million for the recommended final dividend of 1s. 5d. per £1 unit of stock, free of income tax, there is £7.6 million carried forward on revenue account to 1962.

At January 1, 1961, the parent company's general reserve was £195 million of which £11.5 million was capitalised in accordance with the resolution dated October 26th. To the balance of £183.5 million has been added the appropriation for the year 1961 of £30 million mentioned above and £15 million of provisions no longer required against investment in associated companies, making a total at the end of 1961 of £228.5 million on general reserve.

In accordance with the resolution dated October 26, 1961, the authorised and issued capitals were increased. Additions to capital reserves of the parent company during the year amounted to £12.7 million of which £2.5 million was the fifth of ten equal instalments received from the Iranian government under the terms of the 1954 Agreement and £10.2 million was received from the companies with whom your company is associated in Iran.

CAPITAL EXPENDITURE AND FINANCE

Capital expenditure incurred by subsidiary companies in 1961 amounted to £84.7 million and the group's proportion of capital expenditure by associated companies was £39.2 million, making a total of £123.9 million (£109.1 million in 1960).

Finance to meet this capital expenditure arose mainly from capital receipts, income retained and depreciation amounting to £117.7 million (£112 million in 1960).

The net assets representing the stockholders' interest at £605.5 million have increased by £68 million. Properties and operating assets have increased by £40.5 million and, after transfer of £15 million of provisions no longer required, the investment in associated companies is up by £25.4 million.

PAYMENTS TO MIDDLE EAST COUNTRIES

Of the £88.8 million overseas taxation for the year £83.6 million arises in Iran, Iraq, Kuwait and Qatar, in which territories payments in the nature of royalties of £43 million have also been made and are taken into account prior to arriving at the group income before taxation. The total for the Middle East countries from the group in 1961 is therefore £126.6 million which compares with £128 million in 1960.

SURVEY OF OPERATIONS

The following are extracts from a Survey of Operations attached to the Chairman's Statement:

From the BP group's production sources (Iran, Iraq, Kuwait, Qatar, Egypt, Trinidad, Nigeria, U.K., Canada, U.S.A. and Germany) we obtained in all some 79 million tons of oil in 1961.

In Kuwait work has begun on an artificial island to enable testing to be carried out in a structure underlying Kuwait Town. Development drilling has continued in the Murban field in Abu Dhabi and plans are being made to export this crude oil to world markets. Further wells have been drilled in the offshore field at Umm Shaif. It is expected that the first shipment from this field will be made from Das Island during the second half of 1962. In our joint undertaking in Nigeria the new crude oil loading terminal at Bonny was completed. At the end of the year oil was being exported at a rate in excess of 3,000,000 tons per annum.

We continued throughout the year to participate in oil exploration in the Algerian Sahara. In Libya encouraging signs have been obtained from two test wells in an area in which we recently acquired a half interest.

In Australia, Frome-Broken Hill, in which we hold one-third interest, carried out further surveys and drilled two more wells. No commercial discovery was made. In New Zealand gas at great depth was met in one well. At the end of the year production from all our land areas in Trinidad was at the rate of 1,485,000 tons per annum. Production from the offshore Soldado field in which we have one-third share, at the year end was at the rate of over 1,500,000 tons per annum. Five successful wells were drilled in the Provincia field in Colombia and plans are being made to link the field to an existing pipeline which will connect it with the Atlantic Ocean.

COMPARATIVE STATISTICS

	1961	1960	1959	1958	1957
Group Sales in millions of tons	78·3	72·9	63·2	60·4	51·1

Long-term Money Borrowed and Tanker Finance – £ million	8·3	20·2	37·2	49·8	23·3

RECORD REFINERY THROUGHPUTS

The total quantity of oil refined on our account at refineries in U.K., Aden, Australia, Belgium, Canada, Eire, Egypt, France, Germany, Iran, Italy, Kuwait and Lebanon, was approximately 51,000,000 tons or 4,000,000 more than in 1960. To achieve this high throughput many of the refineries were run at maximum capacity for prolonged periods and record throughputs were achieved at Aden, Dunkirk, Hamburg, Kent, Kwinana and Lavera.

We have arranged for the supply of gas by pipeline to the Scottish Gas Board and the Wales Gas Board from Grangemouth and Llandarcy respectively while our supply arrangements at Kent with the South Eastern Gas Board continue to expand.

The number of jointly owned projects in which we are participating with other oil companies continues to increase. We now have an interest in 11 of these new projects, all in various stages of development (Mersin in Turkey, Algiers, Durban, Mombasa, Port Sudan, Strasbourg, Whangarei in New Zealand, Port Harcourt in Nigeria, Abidjan on the Ivory Coast, Dakar in Senegal and Umtali in S. Rhodesia).

The group has interests in the manufacture of petroleum chemicals in the U.K., France and Germany and also in the manufacture of anti-knock agents. Up to the end of 1961 the capital expenditure of the companies concerned was £122 million. Of this the group's share was about £54 million. The total production of chemicals was 440,000 tons.

SEA TRANSPORT

The number of sea-going tankers was 120 at the end of 1961 compared with 144 at the end of 1960.

During 1961 existing orders with two builders were rearranged to include two 100,000-ton tankers in place of smaller vessels. These tankers are for delivery in 1965 and 1966 and so far are the largest ordered in British shipyards. They should show a considerable economy in transport costs. At the end of 1961 27 tankers with a total deadweight of about 1,300,000 tons still remain to be delivered in respect of orders placed by the BP Tanker Company in previous years.

MARKETING

Sales of products showed a satisfactory increase generally in line with the rise in total consumption in the areas where we market. We are continuing to fill the gaps in our petrol sales network and by modernisation and improvement are increasing sales through existing facilities. Competition has emphasised the need for new ways to attract the customer and we have achieved some success in this respect.

The BP Touring Service, providing help and advice to those touring with their cars, has been improved, and we are now catering for the special needs of the growing number of motor-boat users.

We have had conspicuous success in the rapidly expanding market for domestic heating oil.

The development of new equipment and the use of operational research techniques have been directed towards reducing the cost of distribution and sales of our products.

In Scandinavia the impact of cheap Russian oil is particularly acute and we have adopted a more selective selling policy in this area.

In other countries in Europe, noticeably Germany and Italy, our sales have shown an increase in all products.

RESEARCH

The application of operational research methods to our supply and manufacturing operations has produced important advantages. These methods are now in routine use, but can still be greatly extended in scope, and research is proceeding to this end. It is now evident that the largest and fastest computer available will be required for these calculations, and for this reason we have taken a share in the Atlas computer being installed by London University.

We have joined with National Research Development Corporation, British Ropes and Guest, Keen & Nettlefolds in the formation of Energy Conversion Ltd. to further research into fuel cells and other new means of producing electrical energy from oil.

STAFF

The increasing competition and narrowing margins of today provide a stimulus to our staff to which they are responding admirably.

The group's need for capable men and women ready to accept hard work and good but not extravagant conditions will continue to grow, although the expansion of our staff will probably be slower than that of our business in general.

We intend to maintain and strengthen the understanding and confidence between management and employees which has existed in BP for so long, because we believe that the success of a group like ours rests largely in the skill, ability and energy of those who work for it.

THE ANGLO-PORTUGUESE TELEPHONE COMPANY

75 YEARS OF PROGRESS

MR ALASTAIR F. ROGER ON A FIRST-CLASS SERVICE AT LOW RATES

The seventy-fifth annual general meeting of The Anglo-Portuguese Telephone Company, Limited will be held on June 5th at Strowger House, 8, Arundel Street, London, WC2.

The following is an extract from the statement by the Chairman, **Mr Alastair F. Roger,** which has been circulated with the Report and Accounts:

The Accounts for the year to December 31, 1961, show that the satisfactory progress of your Company continues.

Total Revenue for the year at £4,021,936 is £306,365 higher than the 1960 figure.

Total Expenses including Royalties to the Portuguese Government, Renewals of Telephone Plant, Depreciation, Taxation, Directors' Remuneration, and Service of Debentures, amount to £3,273,452, an increase of £171,472 over the previous year.

Net Profit is £748,484 as against £613,591 in 1960, an increase of £134,893.

Your Directors recommend and the Accounts provide for a final dividend of 6 per cent on the issued Ordinary Stock which, together with the interim dividend of 3 per cent paid in November last, make 9 per cent for the year. A dividend of 9 per cent on the "A" Ordinary Stock is also provided for in the Accounts.

These dividends, together with the dividend on the 6 per cent Preference Stock require £428,137. General Reserve is increased to £1,800,000 by a transfer of £250,000 and the balance on Profit and Loss Account carried forward is increased by £70,347 to £426,919.

Provision for Renewals has been increased by £513,049, and now totals £4,220,312, which is equal to 22.6 per cent of the original cost of installed plant. Our Consulting Engineers have made their annual investigation and have reported that, in their opinion, the provision is adequate and not in excess of what is reasonably necessary.

GENERAL PROGRESS

Throughout the 75 years which have passed since your Company was formed we can justly claim to have rendered a most valuable service in Portugal and to have built up a telephone network which, size for size, compares favourably with any in Europe and, perhaps, in the world. In return we have always enjoyed conditions of complete amity with the Portuguese Authorities who have at all times shown a ready understanding of the problems and difficulties involved in providing and operating a large public utility service.

Our tariff structure has not changed materially since 1950, the monthly rental of a telephone in Lisbon and Oporto costs 7s. 6d., and the cost of a local call is 1½d. The comparable charges in the United Kingdom for a business line are, rental £1 3s. 4d. per month and 3d. per local call.

There is no single factor which enables us to provide a first class service at such low rates but undoubtedly a prime reason is that, over the years we have been fortunate in being served by an enthusiastic administration and a loyal and energetic labour force.

In my statement last year I said that while additional profitable business continues to be available to us we must proceed with due caution in planning our future capital development. This is no less true today that it was a year ago, but, I am glad to say that there are already signs in international financial circles of restored confidence in the strength of the Portuguese Economy after the setback caused by disturbances in Africa last year.

Our gross capital expenditure in 1961 amounted to £2,140,000 and the total Fixed Assets in the Balance Sheet stand at £19,583,600.

The Waiting List numbered 6,220 at the end of the year and the total number of stations in service was over 299,000.

Requests for service shows no sign of diminishing and applications are still being received at the rate of over 2,200 per month.

Subject to unforeseen circumstances the outlook for 1962 is satisfactory.

ASSOCIATED FISHERIES

The annual general meeting of Associated Fisheries Limited was held on May 11th in London, **Sir Hugh Fraser, Bt, DL, JP** (the chairman), presiding.

The following is an extract from his circulated statement:

The year has been one of progress. The Group trading profit, after charging depreciation of fixed assets and all working expenses, increased by £383,224 to £1,010,971, to which new Subsidiaries acquired during the year contributed £157,533.

The profit for the year was derived from our interests in trawling, cold storage and distributing businesses, other than "Eskimo" frozen foods, where profits have again been ploughed back in substantial promotional investment designed to increase rapidly the "Eskimo" share of the fast expanding market in frozen foods.

The net Group profit of the year amounted to £602,455 as against £423,531.

I mentioned last year that Eskimo's growth was at more than double the rate of overall market increase; during this past year our growth has speeded up still further to nearly five times the industry average.

Eskimo is fast becoming the major name for the Top quality frozen food.

The Future: I am satisfied that your Company is well endowed with the right spirit and well equipped to overcome whatever difficulties are encountered and, looking ahead to the anticipated progress of Eskimo frozen foods, I view the future with confidence.

The report was adopted and a final dividend of 16 per cent approved.

VOSPER LIMITED

(Shipbuilders & Engineers)

The twenty-fifth annual general meeting of Vosper Limited will be held on May 23rd at Portsmouth.

The following is an extract from the circulated statement of the chairman, **Mr Owen R. Guard:**

As the Accounts show, we have succeeded in turning a loss of £29,828 into a profit of £4,038. It is regretted that your Directors are once again unable to recommend the payment of a dividend.

It will be appreciated that the shipbuilding industry in Great Britain as a whole has been going through a very difficult time.

I am glad to say, however, that the volume of orders booked and work in hand at our yards constitutes the highest total achieved for many years.

Our roll damping division continues to obtain an ever-increasing volume of orders.

Continuing our efforts to exploit the most successful development of the "Brave" and "Ferocity" types of gas turbine fast patrol boats, we have recently signed a contract with the Royal Danish Navy for two of these vessels.

A letter of intent has been received for the construction and delivery to the Ghana Navy of two corvettes. This is a joint operation with Vickers Armstrong. In addition, we have an order for six patrol craft for the Royal Malayan Navy.

Taking into account all factors, and with the knowledge that all our departments will be fully at work during the current year, prospects seem to be brighter.

THE BURMAH OIL COMPANY LIMITED

CONDITIONS AFFECTING RESULTS

FURTHER EXPLORATION CONCESSIONS: PROSPECTING PROGRAMME INTENSIFIED

NATURAL GAS PRODUCTION INCREASED: GOOD REFINERY AND PIPELINE PROSPECTS

MR W. E. EADIE REVIEWS WIDESPREAD ACTIVITIES AND DEVELOPMENTS

The Sixtieth Annual General Meeting of the Burmah Oil Company Limited will be held on Friday, June 8, 1962, in the Merchants Hall, 30, George Square, Glasgow.

The following statement by the Chairman, **Mr W. E. Eadie,** has been circulated with the Directors' report and accounts for the year ended December 31, 1961:

ACCOUNTS

In 1961 the demand for petroleum products in Burma, Pakistan and India, in which countries your Company has long had interests, rose by

Mr W. E. Eadie

8 per cent over the previous year, by comparison with a total free world increase of between 5 and 6 per cent. Sales in these countries totalled 10,300,000 tons, the increase over 1960 amounting to some 770,000 tons. Of the total volume of products sold in these markets your Group's share was 2.2 million tons.

The Group Trading Income, which includes the Profit on Trading and also Dividends from Trade Investments, amounted to £7,796,998 in 1961 compared with £6,663,974 in 1960, an increase of £1,133,024. The Profit on Trading, which is the profit made by our trading subsidiary companies less the cost of exploration programmes, at £4,456,515 shows a decrease of £516,515 compared with the 1960 amount of £4,973,030. This reduction is due partly to adverse trading conditions, although the increased volumes of sales by our marketing subsidiary companies have to some extent compensated for the lower profit margins. The main reason for the reduction is the change in our shareholding interests in the joint venture companies in India and Burma whereby our holdings in these companies now come in the category of Trade Investments, our share of the profits from them, when received, being treated as Dividends from Trade Investments. These profit reductions have been partially offset by the inclusion of the Group's interest in the 1961 profits of The Tinplate Company of India Limited and by a substantial decrease in the charge for exploration expenditure. Now that certain areas of production have been established off-shore in Louisiana drilling expenditure in these proved areas is capitalised and will be written off over their estimated production life, thus enabling the cost of finding these reserves to be spread over a number of years.

In India, the change in the Group's interest in the joint venture arises from an agreement with the Government of India under which there has been a reduction from 66⅔ per cent to 50 per cent in your Company's shareholding in Oil India Limited. In Burma, as I mentioned in my Statement last year, the reduction in our holding in The Burma Oil Company (1954) Limited was effective from September 1960.

The provision this year for depreciation of £719,622 is £478,807 lower than that for 1960. This has arisen mainly because of the transfer of our interests in Oil India Limited and The Burma Oil Company (1954) Limited to Trade Investments. Dividends from Trade Investments are not taken into account until they are received, and income under this heading at £4,060,445 shows an increase of £1,171,072 over 1960 due to increased dividends having been received from our marketing and refining interests and to the inclusion under this heading of dividends received from The Burma Oil Company (1954) Limited. Oil India Limited is expected to declare its first dividend in respect of the year 1962.

Other Dividends and Interest received during 1961 amounting to £12,386,476 are £604,357 greater than in 1960 due in the main to the increased final dividend for 1960 received on our holdings in The British Petroleum Company Limited.

After charging taxation and deducting retentions by subsidiary companies the profit dealt with by your Company is £11,041,983 compared with £9,235,798 in 1960, an increase of £1,806,185.

Including the balance of unappropriated profit of £582,661 brought forward from 1960, there is available £11,624,644, from which your Board has appropriated £2,000,000 to General Reserve. After deducting the Preference Stock dividends for the year and the Ordinary Stock interim dividend of 6d. per £1 unit of Ordinary Stock free of income tax which was paid on December 5, 1961, there remains £7,380,417 for disposal, out of which your Board recommends that a final dividend of 1s. 7d. free of income tax per £1 unit of Ordinary Stock should be paid on June 22, 1962, amounting to £6,524,843, leaving a balance of unappropriated profit of £855,574 to be carried forward to 1962.

Turning to the Parent Company's Balance Sheet the decrease under Subsidiary Companies and the increase in Trade Investments and Debtors reflects the reduction of our shareholding in Oil India Limited to 50 per cent, resulting in that Company now being treated as a Trade Investment. During the year your Company invested in Great Plains Development Company of Canada Limited and this is included under Other Investments quoted outside Great Britain. The Loan to the Government of India of £1,500,000 is in respect of the cost of the shares in Oil India Limited purchased from us by the Government of India to increase its interest from 33⅓ per cent to 50 per cent.

The Unsecured Loan of £4,325,443 shown under Long-Term Liability is the amount advanced by your Company's Bankers for the construction of the Oil India Limited pipeline, to which reference has been made in previous statements. The full amount of the loan is expected to be approximately £10 million and this total may be reached early in 1963. Your Board is presently examining proposals to fund this amount on a long term basis.

In the Consolidated Balance Sheet, your Company's Investment in Oil India Limited accounts for £10,500,000 of the increase under Trade Investments with corresponding movements under other main headings in the balance sheet. With the earlier receipt of accounts of The Tinplate Company of India Limited it has been possible this year to consolidate them in the Group accounts.

In last year's Statement I referred to the position at that time of the claims filed in the Courts of Burma in respect of war-time "denial" operations in that country. I now have to report that in October 1961 suits were filed in Edinburgh by four of our subsidiary companies against Her Majesty's Government claiming compensation in respect of the damage they suffered in 1942 when the oil installations and other assets owned and operated by them were destroyed in order to deny their use to the advancing Japanese forces. As the proceedings are now before the Court further comment would be improper at this stage.

Before reporting in detail on our interests in the various countries in which we operate and trade I should like to comment on the general position of the Group as it stands today.

In Burma we have a 40½ per cent shareholding in The Burma Oil Company (1954) Limited, a joint enterprise with two other oil companies and the Government of Burma, the latter having a 51 per cent shareholding. This ratio of interests was established in September 1960 when the Government of Burma exercised its option under the Formation Agreement of The Burma Oil Company (1954) Limited to take up additional shares. In my Statement last year I reported that the Government of Burma had also decided to exercise its option under this agreement to acquire an interest in the marketing facilities and installations of our trading subsidiary company in Burma. The negotiations to that end which were then taking place were suspended and have not yet been resumed.

In Pakistan, where private enterprise enjoys relatively full freedom, Pakistan Petroleum Limited, in which our shareholding is 70 per cent, has now reached the dividend paying stage chiefly as a result of the development of the

natural gas industry following the discovery of the Sui gas field.

At last year's Annual General Meeting I was pleased to report the conclusion of an agreement with the Government of India under which the Government of India and your Company became shareholders on a 50:50 basis in Oil India Limited. To enable Government to take up this additional interest we loaned them free of interest £1,500,000 which is repayable in four equal annual instalments commencing in 1962. Under this agreement we are assured of earning a reasonable return on our investment and Oil India Limited has been given the right to exploration concessions in further areas.

These developments are major steps in the reshaping and consolidation of the Group's operational interests in the East following the grant of independence to Burma, Pakistan and India. An increased measure of stability of these interests has thereby been achieved in each of these countries and I hope that this will be maintained for many years to come.

It will be noted from my comments below on our operations that there is an expanding market for energy in Burma, Pakistan and India. Our distributing and marketing interests in these countries are well placed to share in the expected increase in the demand for petroleum products.

Stockholders will recollect that a start was made with a geographical spread of our interests some three years ago when we became associated with Murphy Corporation in the United States, Canada and Australia. A further step in this direction, to which I refer in detail later, was taken when we arranged to acquire a progressive shareholding interest in Great Plains Development Company of Canada Limited. These interests will, I hope, in due course make a valuable contribution to the future prosperity of the Group.

I now turn to the main features of the year's operations and activities in the various countries in which the Group has interests.

BURMA

TRADING

Apart from a few instances of insurgent activity, orderly conditions prevailed throughout the year. A new Five Year Plan, the second to be introduced in the country, was launched in August, giving priority to agricultural programmes, the development of improved transportation and communication facilities, the consolidation of existing industries, and the establishment of improved security conditions.

Rice production is the dominant factor in Burma's economy. Unfortunately the 1960-61 crop was so affected by bad weather that exports diminished by comparison with the previous year, leading to a reduction in the country's foreign exchange earnings.

The total demand in Burma for all petroleum products in 1961 was approximately 450,000 tons. The market for main products continued to expand, the increase over 1960 being 6.6 per cent. The crude oil production of The Burma Oil Company (1954) Limited was insufficient to provide for this expansion in consumption and that Company imported some 21,500 tons of products to meet the deficiency.

PROSPECTING AND OILFIELD OPERATIONS

Crude oil production from the oilfields of The Burma Oil Company (1954) Limited increased by 3.7 per cent during the year.

The extensive prospecting programme was intensified, and five test wells were drilled at Payagon, Tharrawaddy (2), Kyun Nyogi and Yedwet. It is extremely disappointing that all these efforts have so far failed to result in any discovery of importance. At the end of the year, tests were being drilled at Yenangyat, Aunglanmyo and Kyundaw. An engineering survey was made at Indaw in the Chindwin region in preparation for the deep testing of this structure, the site of a pre-war shallow oilfield, which is very difficult of access.

In the Chauk-Lanywa field development drilling was continued and preparations were made for secondary recovery operations. Outstep drilling was successful in parts of the old Yenangyaung field and oil production was materially increased. A deep test well was drilled in this field under difficult conditions through high pressure water sands but failed to find additional reserves. Operations were resumed at the old Palanyon field, for the first time since the war, with the drilling of relatively shallow wells from which a small production has been obtained. A deep test well is at present being drilled in this field.

REFINERIES

The refineries at Syriam, near Rangoon, and at Chauk, in Upper Burma, operated satisfactorily throughout the year. Work on expanding the Syriam refinery is now well in hand and the new plant is expected to start operating in mid-1963.

To achieve increased economy in operation it is proposed to link the refinery at Syriam with the distribution installation at Dunneedaw by a submarine products pipeline under the Pegu River.

PAKISTAN

TRADING

The economy of the country continues to develop and there was an encouraging increase in both industrial and agricultural production in 1961.

Demand for petroleum products amounted to some 2.3 million tons in 1961. Although competition in this market remains extremely keen, the increase in the Group's sales over the previous year was approximately 5 per cent.

PROSPECTING AND OILFIELD OPERATIONS

In recent years several international oil companies have been active in the search for new oilfields in the country but the results in 1961 were again disappointing.

During the year the Government formed the Pakistan Oil and Gas Development Corporation which has already started exploratory geophysical work in the Punjab with the assistance of Russian personnel and finance.

Our own prospecting operations are carried out by Pakistan Petroleum Limited and these operations were on a reduced scale during the year. The opportunity was taken to review the accumulated geophysical and geological data and to make an examination of further prospects in both the west and east wings of the country.

One gravity and one seismic party were employed for part of the year in concessions in Sind and the northern part of the Punjab. The well at Dasori in Sind drilled jointly with Pakistan Sun Oil Company was unsuccessful.

Natural gas produced from the Sui gas field of Pakistan Petroleum Limited amounted to 26,618 million cubic feet, an increase of 15.6 per cent over the production for the previous year. Since this field was brought on to production in October 1955 nearly 89,000 million cubic feet of gas, the equivalent of more than 2 million tons of oil, have been transmitted through the pipeline network. In terms of foreign exchange savings this represents around Rs.160 million (£12 million). During the year discussions have taken place, and are still continuing, with the Pakistan Government on proposals to extend the northern gas transmission line from Multan to Rawalpindi.

The Balkassar oilfield, which is operated jointly by Pakistan Petroleum Limited and The Attock Oil Company Limited, continued to maintain its small but steady production of oil.

In East Pakistan, gas production was taken from the well at Chhatak throughout most of the year for use in a nearby cement works. Production from the Sylhet gas field, so far on a small scale, increased during the year and preparations have been made for the drilling of another development well. This gas is being supplied to the Government's fertiliser factory at Fenchuganj, which is now expected to come on to full production in 1962. Gas production in Sylhet is accompanied by a small quantity of liquid hydrocarbons which is being separated and marketed.

REFINERIES

The refinery at present under construction at Karachi by Pakistan Refinery Limited, in which your Company will have a 15 per cent shareholding, is now well on the way to completion and operations are expected to start towards the end of 1962. Proposals for the construction of a refinery in East Pakistan were under examination at the end of the year.

INDIA

TRADING

India's economy continues to advance and under the third Five Year Plan, as in the preceding plans, there is heavy reliance on external financial assistance.

The planners estimate that by 1966-1967 the annual requirements of oil will exceed 14 million tons.

Total demand for petroleum products in 1961 amounted to some 7.6 million tons, an increase of approximately 9 per cent over the previous year's figure. In the face of competition, in which the Government-owned marketing organisation—Indian Oil Company—is now a factor, sales through our Subsidiary and Associated Companies increased by approximately 6.5 per cent.

The Oil Price Enquiry Committee set up by the Government of India, to which reference was made last year, completed its report during the year and the price recommendations contained in it were made effective on October 1, 1961. The prices and profit levels formulated by this Committee are the subject of further discussions between the established oil companies and Government.

PROSPECTING AND OILFIELD OPERATIONS

Assam continues to be the major oil producing State in India and crude oil production by Oil India Limited from its Nahorkatiya field was increased in 1961 to supply initial test requirements of the Government-owned refinery at Nunmati, near Gauhati. The Nahorkatiya field continued to provide crude oil to supplement the production from the Digboi field for the Assam

Oil Company's refinery. There should be a considerable increase in production from Oil India's fields in 1962, when the Nunmati refinery becomes fully operational and a further substantial increase in 1963 when the other Government-owned refinery at Barauni, in Bihar, comes on stream.

Oil India Limited has the right to explore in new concessions of 1,880 square miles in the north-east part of Upper Assam. No exploration was undertaken in these new areas in 1961 because of delay in the grant of licences.

In the Nahorkatiya, Hugrijan and Moran concessions of Oil India Limited, exploration and development drilling during the year has again been successful. Thirty wells were drilled, of which 25 were completed as good potential oil producers.

The Assam Oil Company's Digboi field continued to produce throughout the year. Special attention is being paid to gearing the organisation and operation of this Company to the diminishing scale of production from its old-established field.

REFINERIES

The Assam Oil Company's refinery at Digboi and the Burmah-Shell refinery at Bombay continued to operate satisfactorily throughout the year.

OIL INDIA PIPELINE

Progress continued on the construction of the pipeline and related facilities by which crude oil from Oil India's fields will be supplied to the Government-owned refineries at Nunmati and Barauni. The construction of this 720-mile-long line, the second longest crude oil pipeline in the eastern hemisphere, is an engineering project of exceptional magnitude and difficulty. Conditions of weather and terrain inevitably affect an undertaking of this nature, and a particular problem is the crossing of 78 rivers. Over 36 of these, the line makes use of existing bridges, but in the case of 33 rivers it has to be submerged below river bed scour levels. A further eight rivers are traversed by means of specially made pipeline suspension bridges, while over the Brahmaputra River, the most formidable hurdle of all, it will fortunately be possible to carry the line on the road and rail bridge which is now under construction.

Another problem is the crude oil itself, which, because of its high wax content, will require special conditioning at the oilfields when the pipeline system comes into full operation, and this part of the project called for extensive research in Assam and elsewhere by many chemists and engineers. The Oil India pipeline makes the fullest use of modern remote control and automation techniques and, when complete, will be one of the most technically advanced systems of its size anywhere in the world. The design and engineering of this project is in the hands of our wholly-owned subsidiary company, The Burmah Oil Company (Pipe Lines) Limited.

PUBLIC SECTOR OIL OPERATIONS

High priority is accorded to indigenous oil production in the third Five Year Plan, a provision of Rs.202 crores (approximately £151 million) having been made for oil exploration and production in the public sector as against Rs.26 crores (approximately £20 million) in the second Plan.

The Oil and Natural Gas Commission of the Government of India has found crude oil in commercial quantity in western India. Pending the construction of a Government refinery to process this oil, supplies of crude are being delivered by rail at the rate of some 160,000 tons per annum to the Burmah-Shell refinery at Bombay. The Oil and Natural Gas Commission is also carrying out prospecting in other parts of India, including Assam.

The Government-owned refineries at Nunmati and Barauni for the processing of Oil India crude oil are referred to above.

In the field of marketing and distribution, the Government-owned Indian Oil Company sold some 150,000 tons of kerosene and diesel oils, supplies of which were obtained from Russia.

USA

PROSPECTING AND OILFIELD OPERATIONS

In joint operations with Murphy Corporation and Ocean Drilling and Exploration Company, a Murphy Corporation associate, The Burmah Oil Western Company participated during 1961 in drilling in the offshore area of Louisiana. Drilling was carried out by Ocean Drilling and Exploration Company as operator.

Three wells were completed in the offshore field in the Eugene Island area, but our production has unfortunately declined rapidly. In the field in the South Pelto area, five wells were drilled in the year, four of them being potential producers. Production was started at the end of the year using a new type of submerged storage facility designed by Ocean Drilling and Exploration Company. It is hoped that increased production will be obtained from this promising field in which additional drilling is planned during the coming year. In a third field, in the Ship Shoal area, three dry holes and one successful well were drilled; arrangements were being made at the end of the year for the start of production. The Burmah Oil Western Company also participated during the year in a number of marine seismic surveys in the Gulf of Mexico.

CANADA

PROSPECTING AND OILFIELD OPERATIONS

In joint operations by BOC of Canada Limited and Murphy Oil Company Limited, two unsuccessful wildcat wells were drilled in the Liard River area of Northwest Territories.

In September your Company made an agreement with Great Plains Development Company of Canada Limited whereby it acquired from that Company 200,000 shares of its capital stock at $15.00 per share with the option, up to the end of 1964, to take up in whole or in part an additional 300,000 shares, the option price being $15.00 per share plus 4 cents per share for each month which elapses between September 30, 1961, and the date of purchase. In addition to acquiring these shares your Company purchased 60,000 shares of Great Plains Development Company of Canada Limited on the open market during the year. Subject to the exercise in full of the above option, your Company has also obtained from Great Plains the right of first refusal to the purchase of any shares up to a total equity shareholding of 51 per cent, which may be issued by that company prior to September 30, 1976.

Great Plains has concessions in Alberta, the Yukon and Northwest Territories, with growing oil and gas reserves in Alberta. Production of oil and condensate increased by 10 per cent in the year compared with 1960. Gas sales started at the end of the year and are expected to increase during 1962. Great Plains participated in ten successful well completions during the year—five for gas development and four for oil production with one exploration well finding gas.

The oil industry in Canada shows signs of improving. Internal demand, for both oil and gas, has lately been rising, crude oil production is expanding, and additional petroleum reserves are now needed. It is hoped that your Company will be able to participate in the expansion of the industry through its present interests in the country.

AUSTRALASIA

PROSPECTING AND OILFIELD OPERATIONS

BOC of Australia Limited completed a marine seismic survey in the Gulf of Papua on behalf of a group which includes also Murphy-Australia Oil Company, Australian Pacific Oil Company Pty. Limited and Union Oil Development Corporation. The Australian Government paid 50 per cent of the cost of this operation in accordance with its arrangements for subsidising exploration.

BOC of Australia Limited, jointly with Murphy-Australia Oil Company, obtained a year's option to acquire an interest in the concessions of Australasian Petroleum Company Pty. Limited and Island Exploration Company Pty. Limited in Papua. Consideration is now being given to the possible utilisation of gas reserves which have been indicated, but not yet proved, in these concessions.

TANKERS

Our small fleet was further reduced by the sale at the end of the year of m.v. "Burmah Sapphire" at the conclusion of eight years' trading. The remaining two vessels operated satisfactorily throughout the year.

INDUSTRIAL RELATIONS

In all spheres sound relations between labour and management were maintained and long-term agreements on major terms and conditions of service for workmen have been successfully negotiated, leaving a small number of individual issues still to be resolved.

Of particular interest is the agreement, covering employees in both Assam Oil Company Limited and Oil India Limited, reached with the Labour Union of the Assam Oil Company by which a job evaluation programme was accepted as the basis for resolving future job grading problems.

TRAINING

During the year 18 employees and ten scholars came to the United Kingdom for training courses and education. A further 21 men came here under the auspices of their respective High Commissions on scholarships financed by your Group through the Governments of India and Pakistan.

STAFF

The problems confronting our staff throughout the organisation steadily increased in volume and complexity. Against this background, the managements and staffs of all companies in the Group continued to serve with energy, enthusiasm and loyalty, and I have pleasure in conveying the Board's best thanks to all staff at home, overseas and afloat, for the very satisfactory way in which they have worked during the year.

MR CHARLES CLORE LOOKS TO ANOTHER YEAR OF PROGRESS

The Annual General Meeting of Sears Holdings Limited will be held on June 7th, at the Dorchester Hotel, London, W.1.

The following is an extract from the statement by the Chairman, **Mr Charles Clore,** circulated with the report and accounts for the year ended December 31, 1961:

TRADING RESULTS FOR 1961

Our total sales have shown an increase of nearly 6 per cent over those for 1960. Exports (which, as I explained last year, account for about one-fifth of our total turnover) have increased more than proportionately.

The analysis of our trading profits between the main subsidiary groups of which Sears is now comprised, is set out below:

	1961 £	Percentage of Total	1960 £	Percentage of Total
British Shoe Corporation	5,892,000	54	5,740,000	55
Sears Engineering	4,399,000	40	4,005,000	39
Motor Distribution	269,000	3	268,000	3
Mappin & Webb Group	309,000	3	355,000	3
Other Income (net)	51,000	—	48,000	—
	£10,920,000	100%	£10,416,000	100%

Later in this review I shall refer in detail to the merger of Saxone, Lilley & Skinner (Holdings) Limited with the British Shoe Corporation. At this point I only remind you that this important event took place after the end of 1961, so the figures set out above are not materially affected by the acquisition of new businesses.

APPROPRIATION OF PROFITS AND DIVIDEND

After providing for Loan and Debenture Interest, total profits before taxation amounted to £10,718,000 (1960—£10,206,000). Taxation has absorbed £5,518,000 compared with £5,200,000 in 1960. After providing £137,000 for the preference dividends payable by Sears Holdings Limited, there remains £4,783,000 (compared with £4,653,000 last year) available for the ordinary shareholders.

Your Directors recommend an ordinary dividend of 25 per cent less income tax for 1961. This is the same rate as that paid for 1960, but as the capital on which it is payable was increased by a 'one-in-five' scrip issue in June last, the effective dividend on the capital as it existed a year ago would be 30 per cent, or an increase of one fifth.

The proposed dividend will absorb £2,357,000 and is thus covered a little over twice by the net earnings in 1961.

PROPOSED SCRIP ISSUE

In previous years I have explained the substantial calls upon our resources which have to be met in order to provide for the capital cost of the various expansion schemes which are in hand, or are planned, for our subsidiary companies. So far as is reasonably possible we seek to provide a large part of these requirements from retained profits; in 1961 alone the profits retained amounted to £2,426,000.

Once again we feel we should recognise this capitalisation of our profits and your directors recommend that £120,433 out of Capital Reserves and £2,444,933 out of the Retained Profits shall be used to pay up in full 10,261,463 'A' Ordinary Shares of 5s. each, to be allotted to Ordinary and 'A' Ordinary Shareholders in the ratio of one new 'A' Ordinary Share for every six Ordinary or 'A' Ordinary Shares held at the close of business on April 19, 1962.

Having regard to the profits which we anticipate for 1962 and provided nothing unforeseen occurs, it would be our hope at least to maintain the same rate of dividend as for 1961, i.e., 25 per cent, on the capital as increased by the proposed scrip issue.

BALANCE SHEET

The Consolidated Balance Sheet shows clearly the increased utilisation of our resources arising from our expansion programmes. Thus, even after deducting the year's depreciation charge, Fixed Assets have increased by £1,750,000, whilst Stocks and Debtors have, together, gone up by nearly £6,500,000.

The increase in the amount of Investments is largely accounted for by purchases of shares in Saxone, Lilley & Skinner (Holdings) Limited.

As a result of these substantial outlays, our cash balances had been depleted, but since the end of the year, approximately £5 million has been raised by the issue of Debentures by British Shoe Corporation.

BRITISH SHOE CORPORATION

You will be aware that, following an offer to the ordinary shareholders of Saxone, Lilley & Skinner (Holdings) Limited, the latter company has become a subsidiary of British Shoe Corporation Limited. The offer was made partly in Ordinary Shares and partly in 7 per cent Debenture Stock of British Shoe Corporation Limited. As a result approximately 14 million Ordinary Shares and just over £5 million 7 per cent Debenture Stock in British Shoe Corporation were issued to former 'S.L.S.' ordinary shareholders.

The 'S.L.S.' group comprises over 500 retail units trading principally in the names of 'Saxone,' 'Lilley & Skinner,' 'Benefit' and 'Cable.' It also includes four major shoe factories, a number of repair depots and extensive warehouse accommodation.

At the time that the merger was announced, there were references in various places to the dangers of a monopoly in the retail footwear trade. The President of the Board of Trade, was, however, able to state the facts during the debate in the House of Commons on February 14th last. I quote from his statement to the House of Commons:

	Percentage Controlled by B.S.C.
Production of U.K. Footwear	8%
Retail Outlets	12%
Retail Sales	22%

I think these figures dispose of the monopoly 'bogey' very effectively, but even if they did not, it is obvious that any footwear retailer who sought to abuse its power by raising prices unreasonably or by failing to offer to its customers the merchandise they preferred, with good service, would merely encourage independent retailers to set up in competition. It is virtually impossible to conceive of a monopoly in a trade such as retail footwear, because at any time independent retailers can establish themselves if they think the trade is sufficiently attractive to justify it.

There can be no doubt that whilst we have already benefited from the integration so far achieved within the large retail group which we comprise (and we shall continue to benefit more in the future), these benefits are and will remain but a small share of the much greater benefits which our customers have enjoyed and will increasingly enjoy through lower prices, better quality and more attractive merchandise.

The merger with 'S.L.S.' became effective approximately from the middle of February, 1962, and so it does not affect the accounts now before you.

It is well known that 1961 was a difficult year for the retail footwear trade. Costs have continued to rise and competition has remained very keen, whilst the credit squeeze and wage pause have tended to restrain the increasing demand. Besides these factors, 1961 has witnessed a more complicated fashion problem than ever before, as a result of which exceptionally heavy stocks have had to be carried and losses arising from price reductions have been abnormally high.

Despite these difficulties, the B.S.C. group has achieved a considerable increase in sales and the fact that we have, besides, secured an increase in trading profits, is, we believe, creditable under the circumstances.

As a result of the opening of forty new branches and the modernisation of a further sixty branches, as well as the acceleration of the programme for maintaining our factories with the most modern plant available, the investment in fixed assets has increased by nearly £1,500,000, whilst the net increase in working capital has been about £2,000,000.

We have every intention of maintaining our expansion programme, the cost of which must increase with the addition of the Saxone, Lilley & Skinner group. In 1961 we expended more than the total profits of the group after taxation, so it is apparent that we cannot maintain our programme out of retained profits alone. For this reason we took the opportunity, whilst creating a 7 per cent Debenture Stock 1980/82, for the purposes of the 'S.L.S.' offer, to place approximately £5 millions of the same stock for cash at par.

At the time of the offer to the 'S.L.S.' shareholders, we made a forecast that the profits of the old 'B.S.C.' group, and the 'S.L.S.' group, would each show some improvement in 1962. The year has begun as anticipated and, subject to my usual qualification that we are very dependent on the maintenance of prosperity amongst our customers, the enlarged group should show satisfactory progress in 1962.

SEARS ENGINEERING

The constitution of the Sears Engineering group has not been changed since it was established as a separate group in the autumn of 1960.

(a) THE BENTLEY GROUP

At the beginning of the year we were unable fully to meet the demand for some types of Bentley machines, whilst the demand for other types was showing a tendency to increase to an almost embarrassing extent. Soon after the middle of the year, however, the worldwide demand for 'seamfree' stocking machines changed considerably and the volume of new orders fell away, which necessitated a rapid reorganisation of our production departments. As a result, the increases in output, sales and profits were less than we were entitled to expect at the beginning of the year.

Almost two-thirds of our production of knitting machines is exported. In view of our established reputation, we welcome the prospects of the Common Market, but it will then become even more important that, when the 'wage pause' comes to an end, wage increases should be coupled with increased productivity. This is an industry which has to meet the competition of European manufacturers whose wage rates, up to the present, have been lower than our own; our higher wage rates and standards of living can, therefore, only be maintained if we produce relatively more and relatively more efficiently.

We maintain our conviction that this is an expanding industry, whose products and those of our customers who use our machines, will be increasingly sought as the standards of living throughout the world are raised. It is, however, vital in a business such as this, that we do not relax our efforts to be not only up to date, but ahead of our competitors in all phases of our business. We must lead in development, design and quality and we must ensure that our customers have the benefit of rapid and efficient production and service, so that we can maintain and enhance the reputation of the group.

(b) FURNESS SHIPBUILDING

During 1961 the Furness yard has been fully occupied on orders booked some years ago and on the construction of a floating dock ordered by the Polish Government early in the year. Work on old orders is still progressing and in December last, we succeeded in booking a substantial new order from Norwegian owners for a 53,000 tons d.w. bulk carrier. Even so, we shall be barely fully occupied during 1962 and like all our United Kingdom shipbuilding competitors, we are in need of a sufficient revival in the shipping industry to tempt owners once again to hasten their fleet replacement programmes.

It is our intention to spend nearly £3 millions on the yard and when the work is complete we shall possess one of the most up-to-date shipyards in the world, capable of building tankers up to 100,000 tons deadweight and a full range of dry cargo vessels according to the requirements of our customers.

In the absence of an earlier improvement in the shipping industry than it is possible to forecast, we shall be well satisfied if Furness, with its structural steel department and its pipework subsidiaries, is able to maintain in 1962, the profits of 1961.

(c) ALEXANDER FINDLAY

During the year there was a further falling off in the demand for structural steelwork and the state of competition in the industry is such that the trade generally is quoting prices which do not admit of any profit. The fact that during 1961 we earned a reasonable profit and still have a satisfactory order book, is due to our policy of equipping ourselves to handle large and difficult contracts, involving exceptional facilities and techniques. I cannot, however, forecast a return to the relatively satisfactory profit levels of a year or two ago, unless and until competition has been reduced to a level which avoids the need to quote at a loss for all but the most specialised types of work.

(d) PEGSON

Production and sales by Pegson have again been at record levels and there was a further improvement in profits in 1961. Competition remains intense and only by maintaining maximum efficiency and a high level of production in the works can a reasonable profit margin be secured.

We shall continue our expansion programme at Pegsons and remain confident that this will bring its rewards in due course. In 1962, as well as in the succeeding years, we can expect an increase in turnover and profit, so long as there is no world recession which would call a halt to the industrial and economic development of those countries where development is most needed.

(e) PARMEKO

The main features of the year's trading by this member of our group have been a high output with record sales and total trading profits no more than maintained at the 1960 level.

Considerable progress has been made in the development of equipment for industrial use and the expansion programme referred to a year ago has been put in hand. It is expected that it will be completed by about the middle of the present year and should become revenue producing very soon thereafter.

(f) GENERAL

That, despite special difficulties in the hosiery knitting machinery market, Sears Engineering should have achieved record sales and higher profits in a year when, mainly owing to narrower margins, industry as a whole and the engineering industry in particular has suffered a

decline in profits, justifies our faith in this group.

MOTOR DISTRIBUTION

Although we have just maintained our profits in 1961 compared with 1960, this has been achieved only by including in the 1961 profits approximately £14,000 in respect of the profits of Carmo (Holdings) Limited for the period subsequent to its acquisition by the Sears group.

By the acquisition of the Carmo group, we have been able to strengthen considerably our Vauxhall/Bedford distribution business. The Carmo (London) territory adjoins that of Shaw & Kilburn, so that the opportunities for co-operation between the two concerns are considerable. In addition to the London territory, the Carmo group brought with it a substantial business in South Wales. Nash of Cardiff Limited, which has enabled us to extend our territory in a suitable area.

Assuming that the credit squeeze will be eased rather than tightened in 1962, this side of our business should provide a satisfactory increase in profits in 1962. Looking further ahead, I remain confident that under the powerful auspices of General Motors of America, the range of vehicles to be produced by Vauxhall Motors will be such as to enable us to compete satisfactorily with distributors handling any other make of car or commercial vehicle. Until this day comes, however, Vauxhall/Bedford distributors operate under a handicap arising particularly from the absence of a small car in the popular price range.

MAPPIN & WEBB

The trading profits of the Mappin & Webb group showed a decline in 1961, but this was largely due to higher rental charges which, in the total profits, were compensated by increased interest receivable.

Record sales and profits were achieved by the jewellery businesses, which continue to expand. During the year we acquired the old-established Birmingham retailer, Nathan & Co. (Birmingham) Limited, and the association of this high-class business with the new Mappin & Webb retail branch in Birmingham is proving successful. The modernisation of the Sheffield factories has made further progress.

We have plans for major improvements to the large Robinson & Cleaver store in Belfast, whilst the London store is now in course of being reorganised on lines which will emphasise its original and traditional speciality—high class linens. During the year the smaller subsidiary stores in Nottingham and Newcastle were closed and the properties either sold or planned for development for other uses.

GENERAL

My co-directors and I are confident that we shall be able to report another year of solid progress when, this time next year, the time arrives for me to report upon and review the tenth year of my chairmanship of your Company. Economic conditions beyond our control are likely to be the factors which will most affect the extent to which that progress is reflected in increased profits.

STAFF

It is again a pleasure to be able to record the enthusiasm and hard work of the large numbers who work within the Sears group. Our thanks are due to them for their sustained efforts, without which progress would be impossible.

THE SANDVIK STEEL WORKS CO. LTD.

(Iron and Steel)

SANDVIKEN, SWEDEN

100 YEARS OF STEEL PRODUCTION

EXTENSIVE INVESTMENT PROGRAMME

The Annual General Meeting of SANDVIKENS JERNVERKS AB was held at Sandviken, Sweden, on May 5th. The following is an extract of the report circulated with the accounts:

REVIEW OF THE TRADING YEAR

The invoiced sales of the SANDVIK Group of Companies for iron, steel and cemented carbide products amounted to £35.6 million, as compared with £31.6 million in 1960. The turnover of the Parent Company amounted to £29.2 million, an increase of 13 per cent.

The value of exports rose to £19.4 million and represents 68 per cent of the Parent Company's sales.

CENTENARY YEAR

In June of this year, the Company will celebrate its centenary and will look back on one hundred years of high grade steel production. Since founded in 1862, on the first commercial application of the Bessemer process, the Company has grown into the largest producer of special quality steels and cemented carbide products in Sweden.

SUBSIDIARY COMPANIES

The Company now has 25 subsidiaries throughout the world with employees numbering approximately 11,000. Two new subsidiaries *Sandvik Australia Pty. Ltd.* and *Sandvik Far East Ltd.*, have been formed for the sale of SANDVIK products in Australia and Japan respectively.

The two U.K. subsidiaries are *Sandvik Swedish Steels Ltd.*, Halesowen, Birmingham, responsible for the sales of steel, cemented carbide products and saws as well as for the manufacture of certain carbide cutting tools and clicking press knives, and *Sandvik Steel Band Conveyors Ltd.*, Selly Oak, Birmingham, specialising in steel band conveyors. Three hundred people are today employed by these two subsidiaries.

INVESTMENT PROGRAMME

The investment programme of the Parent Company which was more extensive during 1960 than in any previous year was further increased in 1961. In June last year, His Majesty King Gustav Adolf VI officially opened a new research laboratory, the largest of its kind in Sweden. Other major investments include a new mill for the extrusion of stainless steel tubes which will be completed by mid-1962. This plant will be completed at the cost of £2.5 million. The facilities for coldworking and hardening of strip are also being extended and a new factory for the manufacture of tungsten oxide will start production shortly. It is estimated that investments in 1962 will exceed the £5 million mark.

RESULTS

The trading results of the Parent Company after depreciation of plant, machinery and buildings by £1.72 million (1960: £1.04 million), were as follows:

	1961 £ millions		1960 £ millions	
Profit before tax.		3·83		4·36
Less Reserves:				
Pension Fund..			0·12	
Investment Fund	0·69		0·69	
Stock Reserve.	1·62		2·49	
		2·31		3·30
		1·52		1·06
Taxes.....		0·66		0·42
Net Profit		0·86		0·64

NEW CAPITAL

The increase in the share capital approved at the 1961 Annual General Meeting has been effected and 276,000 new shares, each of a nominal value of 100 Sw.Kr., have been issued. This represents an increase of the share capital from £5.72 million to £7.63 million. Existing shareholders were given preferential right to buy one new share for every three held.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

BOARD OF DIRECTORS

Gustaf Söderlund, *Chairman*: Hugo Stenbeck, *Vice-Chairman*: Tage Wärn; Wilhelm Haglund, *Managing Director*: George Ekman; Lennart Magnuson; Göran Lindblom.

JAEGER

MR HUMPHREY TOMALIN'S STATEMENT

The seventy-ninth Annual General Meeting of Jaeger Holdings Limited will be held on June 6th in London, **Mr H. R. Tomalin** (the Chairman) presiding.

The following is an extract from his circulated statement:

Consolidated profit of £434,107 after all charges but before tax is £40,575 ahead of last year's £393,532. Heavier taxation on the year's results leaves net profit £193,249 compared with £192,911 last year. Your Directors recommend a final dividend of 8 per cent on the ordinary share capital which, with the 4 per cent interim dividend already paid, amounts to the same total of 12 per cent distributed last year.

Three new shops were opened during the year and two moved to larger premises. Six existing shops were adapted to include Young Jaeger departments. A new West-end showroom, for trade buyers, was opened. Production in the Group's factories expanded to meet the requirements of increased sales.

Export sales to and in overseas markets advanced by 8 per cent. A consistent decline has occurred in the English speaking Dominions. I therefore welcome the prospect of being incorporated in the Common Market.

It is impossible at this stage to estimate probabilities for the current year in view of the fact that our maximum activity occurs in the latter half, but I consider the Group well poised to take advantage of an up-swing in the economy.

In conclusion I want to express appreciation of the high standard of management displayed by all those holding positions of responsibility in the Group.

THE BRISTOL AEROPLANE COMPANY LIMITED

SIR REGINALD VERDON SMITH ON NEW COMPANIES' "OUTSTANDINGLY GOOD PROGRESS"

COMPANY'S STRENGTH AND WIDESPREAD INTERESTS GIVE CONFIDENCE IN FUTURE

The fifty-second Annual General Meeting of The Bristol Aeroplane Company Limited will be held on June 7th at Filton, Bristol.

The following are extracts from the Statement by the Chairman and Joint Managing Director, **Sir Reginald Verdon Smith, LLD, MA, BCL,** which has been circulated with the Report and Accounts for the year ended December 31, 1961:

The far-reaching changes in the structure of the industry which were initiated in 1959-60 began during the year under review to achieve demonstrable results—results which have already thoroughly justified the confidence with which in last year's statement I commended them to our stockholders—and a further step in the integration of the aero engine industry has recently been taken in that by agreement between Hawker Siddeley Group Limited and ourselves Bristol Siddeley Engines Limited has acquired from Hawker Siddeley Group de Havilland Engines Limited and Blackburn Engines Limited. All these changes have greatly strengthened the structure and efficiency of the industry as a whole, and in so doing they have benefited your own Company's chosen position as a holding company interested in the growth and success of so many constituent members of the industry.

Having mentioned a selection of the extensive projects on which the associated companies, including British Aircraft Corporation Limited, Bristol Siddeley Engines Limited and Bristol Aerojet Limited, were engaged, the Chairman continued:—

BALANCE SHEET

The net assets show an increase of £615,000 during the year; major variations include a reduction in bank overdraft of £3,133,000 to £1,797,000—the lowest year-end figure since 1952.

The significant changes in the appearance of the Balance Sheet during the year are all attributable to the progressive transition from pre-merger aircraft and missile work for the account of the Bristol Aeroplane Company to new work done by British Aircraft Corporation. This trend will continue during 1962 and 1963 with consequent release of funds to your Company which will then be available for further investment in British Aircraft Corporation and our other interests.

The Consolidated Balance Sheet cannot conveniently incorporate the balance sheets of the associated companies in which we have minority interests and therefore does not give stockholders a comprehensive impression of the scale of the operations with which in total we are concerned. For example, the value of orders held by the associated companies in the U.K. is of the order of £375 million.

PROFIT AND LOSS ACCOUNT

Net profits before taxation at £2,162,000 have increased by £114,000 compared with the previous year.

Profits of home companies, up by £162,000, have had the benefit of satisfactory results from pre-merger aircraft and missile contracts executed for our account by British Aircraft Corporation, offset by a small loss incurred by Bristol Aeroplane Plastics Limited also arising from contracts and development work which this Company inherited at the time of the mergers. Profits from overseas suffered from disappointing results in Canada where trading conditions generally were difficult during the year and only a small profit was achieved.

Dividends and interest from associated companies provide the main source of the Company's income, amounting to £1,890,000.

The charge for taxation (£869,000) is higher by £58,000: this figure is less than might be expected, since profits tax is not charged a second time on dividends received from United Kingdom companies whose profits have themselves borne profits tax already.

After deducting from net profits after tax (£1,293,000) dividends on Preference Stock (£38,000) and two interim dividends totalling 8 per cent on Ordinary Stock (£340,000), your Board has transferred £600,000 to General Reserve and has recommended a final dividend of 5½ per cent (£233,000), leaving £82,000 to be added to the amount brought forward (£477,000), so that the total now carried forward will be £559,000. The Board, in reflecting the Company's satisfactory results for the year by an increase of 1 per cent only in the rate of the Ordinary Dividend, has had very much in mind the Chancellor's request for dividend restraint at this time.

It will be recalled that the second interim dividend paid in January last was exceptional: it did, however, have the advantage of spreading profit distribution rather more evenly through the year, and it will be your Board's intention in future, if the trend of results justifies it, to make the usual interim dividend a somewhat higher proportion of the total for the year than has been the case in recent years.

FUTURE PROSPECTS

In arriving at a balanced judgment about our future prospects I believe that one is entitled to be more confident and encouraging about our own affairs than the critics and commentators of the industry as a whole are willing to allow. In the short term, that is over the next two years, our associated companies have full order books and settled programmes: given freedom from industrial disputes in the factories, reasonable stability in the cost of materials and services, and consistency on the part of their customers, the manufacturing companies have as good a prospect of maintaining an efficient level of production as we have seen for some years. It seems to me that our principal associated companies are unquestionably moving ahead at present. If this view about a section of the industry is at variance with views recently expressed in the House of Commons and elsewhere about the industry generally, it is because those whose anxieties are most pressing inevitably attract the most publicity; the attention of the public is hardly ever drawn to those whose strength based on achievement enables them to look after themselves.

Taking the longer view, again there are solid grounds for confidence. This is not just the "shallow optimism" of which some of the critics accuse the aircraft industry. We in this country have within our grasp the chance during the next decade of reaping the results of major new technological achievements. The grouping of the industry has made it possible to deploy resources more efficiently and speedily. We have behind us declarations of policy by HM Government repeatedly asserting in plain terms the Government's determination to maintain in this country a strong and stable industry. The companies in which we are interested have defined for themselves the long-range tasks ahead of them: they have the brains, the skill and the leadership, and they have shown themselves to be effective international competitors whatever and whenever opportunities are open to them.

As for the market for their products—air transport will certainly continue to grow, as, over the traffic lanes of the world, air travel supersedes ships and railways. The share of the market now taken by British aircraft and aircraft incorporating British equipment is a striking and refreshing feature of air travel today and there is good reason to believe that the trend can be continued. At the same time defence production will continue to demand new solutions: in providing them we shall find that changing technology will continue to bring new problems, new adjustments of competitive capacity, and even reasons for new partnerships with, and possibly integration with, foreign companies. There is no reason to be frightened about these developments: the interest which our overseas competitors take in our activities is ample evidence that they at any rate have no doubts about our competitive strength; as in other sectors of industry, the wider the market open to us the greater our opportunity of justifying the high cost of development effort by a correspondingly high level of sales.

So in conclusion I would summarise my statement on this occasion by saying that the new companies, in whose formation and development we have taken so large a share, have already made outstandingly good progress; judging by what they have accomplished already, you can rely upon their capability, and you can look forward with justifiable confidence to the results of their efforts and achievements in the years ahead.

THE THARSIS SULPHUR AND COPPER COMPANY, LIMITED

MR W. P. RUTHERFORD'S STATEMENT

The Annual General Meeting of The Tharsis Sulphur and Copper Company, Limited, was held on May 9th at the registered office of the Company, 136 West George Street, Glasgow.

Mr W. P. Rutherford, chairman of the Company, who presided, said:

The Report and Accounts for last year were posted to shareholders on our register on April 14th. If you agree, I will take them as read and proceed with my review of last year's activities.

SHIPMENTS

Last year I was able to report an increase in our shipments of pyrites but in 1961 we had a decrease of 63,237 tons making our total shipments 645,647 tons. In addition we shipped 75,395 tons of pyrites residues to the United Kingdom.

MARKETS AND PRICES

The markets appear to have stabilised between sulphur and pyrites and whether one or the other material is bought depends on type of plant for burning. Pyrites has a natural preference where the residues are utilised for the extraction of the contained metals, principally copper and the iron ore known in the trade as "purple ore," which form a very important part of the proceeds of the extraction works. These are situated in West Germany which is our most important export market and where the purple ore is sold.

In Spain, which has progressively increased to become our largest consuming market, the price of pyrites remained unaltered last year. The residues are mainly exported to Germany for treatment and the pyrites burners thus get an important rebate on the price they pay for pyrites. The price paid to the mines, however, has so far remained unaltered, with the pyrites producers getting no part of the benefit from the cinders value. We have protested repeatedly about the low official price in Spain and have pointed out that the contention that our average price is satisfactory is no longer applicable, with the reductions in recent years in the export price. This important point is under review in Madrid and we and others have submitted figures showing irrefutably the justice of our case in asking for an increase in the price. At the moment we await, not unhopefully, for a decision which will assist all the pyrites mines in the Huelva district.

MINES

The mines, besides producing the tonnage sold, progressed favourably in development. We experienced extremely heavy rains towards the end of the year which caused some flooding. I am glad to say that this was soon overcome without much damage. It is one of the hazards of opencast mining about which I spoke last year.

The Centre Lode at Tharsis continued its estimated production of cupreous pyrites and Preparation also continued at North Lode and in the adjoining lode, San Guillermo, to the north. In this new lode our work has been confined to making the necessary openings to commence mining when required. Little has been done on investigation of its length and width, but I may say that we have no reason so far to alter our hopeful estimate.

At Calañas we have a lode which runs parallel to the original No. 1 Mass which is made up of, to us, abnormal quality pyrites. It contains on average 37 per cent of Sulphur and 1.8 per cent of Copper. This pyrites is too low in Sulphur to be exported so we have decided to concentrate it and produce suitable export products. We have had it submitted to tests in this country with satisfactory results. Ores of a similar type are being concentrated by other mines in the district. We have decided to erect a small plant to deal with 100 tons daily to try out this process on that scale to be later extended if entirely successful. We have found a plant for sale in this country which we will purchase subject to obtaining an import licence and hope to erect at Calañas this year. This is an interesting new line which I hope and trust will be entirely successful.

ACCOUNTS

The net profit of £181,916 shows a reduction of £14,789 from the previous year. The fall in income through the reduced shipments of pyrites was more than offset by the increased sales of pyrites residues and improved returns from our exports of cupreous pyrites. Although shipments of pyrites fell by 63,237 tons the mining costs remained fairly constant. For this year, however, the outlook is not good. As I have told you on previous occasions the residues produced by our customers from the roasting of our pyrites represents the major part of the value of the ore. At the beginning of 1962 the price received by the roasters for these residues was reduced and so we took the somewhat unusual step, in close co-operation with the copper extraction works in Western Germany, of subsidising the residues price to maintain it at its present level. This joint effort to stabilise the cost of the sulphur contained in the pyrites has been much appreciated by our customers whose confidence in the future of pyrites has been further strengthened. Unfortunately this sacrifice on our part cannot fail to be reflected in our accounts.

In view of the strength of our balance sheet some shareholders may wonder why the Board does not recommend a more liberal distribution of the funds. I am pleased that our liquid position is so satisfactory at the moment and that we have been able to build up our reserves over the years to the substantial figure that these now are. However, when considering the whole position, your Board has to recognise that the Company is operating abroad and that this presents certain problems which do not confront industry in this country. It is considered necessary therefore to keep substantial liquid resources available in sterling and the wisdom of this policy has been well proven over many years, difficult. With the possibility of diminished profits in the current year the Board with regret cannot see their way to recommend on this occasion a larger distribution.

DIRECTORS

Your Directors co-opted Mr Fonthier to the Board and he will come up for election by you presently. Mr Fonthier, a Belgian mining engineer, lived in Spain for thirty years and was manager of Solvay's Mine in North East Spain and has much experience of conditions in that country. He has been highly recommended to us and will, I feel sure, be helpful in our councils.

It now falls to me to speak about myself. It is fifty-two years since I joined the Company by special invitation to assist my father, personally. On the death of the first Lord Glenconner in 1920 the Board appointed me to succeed him as Chairman. I had previously been appointed Managing Director and so I have continued in both offices until now. But the years don't stand still and although I have enjoyed exceptional health, my colleagues have suggested, and I have agreed, that I should lighten the load by remaining as Chairman and leave the Managing Directorship jointly to my sons. Fortunately, they have both trained fittingly to take this responsibility, Neil as an Associate of the Royal School of Mines followed by seven years as a mining engineer with us in Spain and visits to some of the leading mines in USA, Canada and Europe. His brother, Iain, after leaving Cambridge with honours, qualified as a Chartered Accountant here in Glasgow. Both have served in Head Office since the war and for several years as Technical and Commercial Directors respectively, so that their promotion, while giving them more responsibility, is a change of title more than occupation. They have worked close to me during the last twenty-five years and I feel confident of their successful management.

Tharsis has been so much of my life that I feel I must take this opportunity of expressing the pleasure that I have derived from my association, with the support and confidence of my colleagues and shareholders and the goodwill of our people in Spain. But I must not make this a valedictory address, and I hope to meet you on future occasions as your Chairman and inform you of our continued progress.

I must not omit in this personal talk to remind you of our indebtedness to our Staffs, in Spain under the excellent management of our General Manager, Mr Mackenzie, and here under Mr Johnston, our Secretary.

The report and accounts were adopted, the retiring directors, Mr William P. Rutherford, Mr Antoine Velge and Mr Norbert Fonthier, were re-elected, and the remuneration of the auditors, Messrs Brown, Fleming and Murray, CA, was fixed.

The proceedings terminated with a very cordial vote of thanks to the Chairman, proposed

Schweppes Limited

Hon. R. Hanning Philipps on Rationalisation and Purchase Tax

The Sixty-fifth Annual General Meeting of Schweppes Limited will be held on June 7th at the registered office of the Company, Schweppes House, 1-6 Connaught Place, London, W.2.

The following are extracts from the statement by The Hon. R. Hanning Philipps, M.B.E., the chairman:

The consolidated profit, after charging depreciation and taxation, is £1,846,998 as against £2,049,547 last year. After placing to Reserves £731,467, there is with the amount brought forward from last year a disposable profit of £2,118,814.

Your directors recommend a final dividend of 16¼ per cent less tax, absorbing £775,293, making a total rate of dividend of 24 per cent for the year 1961, and leaving a balance of profit to be carried forward in the Group accounts of £941,398.

HOME TRADING

Trading for the year 1961 did not prove so buoyant as the first half promised. Sales of Schweppes products for the first six months increased 6¼ per cent, whereas for the full twelve months the figure was 5 per cent. There was a distinctly more difficult trading climate for the last six months of the year. However, despite reduced profit margins, for the year as a whole the profit on the trading of Schweppes (Home) Limited equalled the 1960 profit.

The trading results of two of our home subsidiaries—L. Rose & Company Limited and Jewsbury & Brown Limited—were substantially increased, and thus made a useful contribution to the Group profits.

Another home subsidiary, The Park Bottling Company Limited, showed a 20 per cent increase in their sales of Pepsi-Cola, but owing to rising costs their profit increase was not proportionate.

CONNAUGHT FOOD PRODUCTS LIMITED

Our main disappointment has been in the trading of two of our preserve companies, Chivers & Sons Limited and Wm. P. Hartley Limited. Both these companies have made losses as against profits in the previous year. Wm. Moorhouse & Sons Limited, on the other hand, has again had a successful trading year, with a substantially increased profit.

We have found it necessary to cut out overlapping production activities, and thus deal with under-employment of both production facilities and personnel.

Effective from 1st January, 1962, the sales staffs of Chivers and Hartleys have been combined under a new Selling Company Chivers/Hartley Sales Company—to handle both brands of products, backed up by the newly formed Connaught Food Products Depot and Transport organisation. With these substantial new re-arrangements, I believe we are on the way to making these two fine old companies profit earning again, but it will take time for the new team to produce the satisfactory results we confidently expect.

OVERSEAS COMPANIES

With the exception of two of our African subsidiary companies, our overseas subsidiaries have shown good profits.

Schweppes (Australia) Limited is now an Australian public company in which we hold 68 per cent of the equity, the remaining 32 per cent being held by the Australian public. Their results for the year to 30th June, 1961, were a record as regards both sales and profits.

Despite economic difficulties in the Union, **Schweppes (South Africa) Limited** again increased its trading profit for the year.

Sales were increased by both **Schweppes (U.S.A.) Limited** and **Schweppes (Canada) Limited** and the American subsidiary produced a higher profit.

During the year our widespread franchise arrangements, with but few exceptions, have continued to expand both their operations and the revenue we derive from them.

RATIONALISATION

There has been a "wind of change" blowing through the markets of this country during the last two years. The effect on the manufacturer has been that more and more of his trade is being concentrated into the hands of fewer, and potentially larger, buyers who expect to receive increased discounts or promotion allowances for the same volume of trade. Our profit margins are in consequence being continually squeezed.

As a result of this trend we instituted important changes in our home selling arrangements. On January 1, 1962, the sales force of Schweppes (Home) Limited was made responsible for selling to the licensed trade all brands of drinks handled by our Group. At the same time the sales force of the Rose Kia-Ora Sales Company Limited was made responsible for selling all brands of drinks to the grocery and allied trades.

The reactions we have had in the past four months show that both the licensed and the grocery trades welcome this rationalisation of our sales forces, and that it will strengthen our selling arrangements, as well as economising in sales representatives' time and effort.

NEW MARKETING ARRANGEMENT

During 1961 we made an arrangement with **J. Lyons & Company Limited** for our Sales Company, Rose Kia-Ora Sales Company, to market Lyons' Sunfresh range of concentrated soft drinks alongside our own brands—Rose's, Kia-Ora and Suncrush. With effect from January 1, 1962, we converted this company into a limited company in which we hold 51 per cent interest and the Lyons Group hold 49 per cent. The manufacture and the ownership of our branded products remains in our hands, and likewise Sunfresh in Lyons hands. At the same time we acquired a 49 per cent interest in the Lyons subsidiary, O. R. Groves Limited, who market through licensees sparkling fruit drinks and "Sunkap" Dairy Orange.

Salient Figures from the Accounts

	1961	1960

TRANSFER to RESERVES	731,467	618,424
CARRIED FORWARD	941,398	1,136,298

Your Board is dedicated to a policy of maintaining quality and service and will not contemplate any move that will vitiate that policy. We believe that our trade friends and our many consumers are in complete agreement with this.

With this in mind, your Board decided to increase prices of the Schweppes range of carbonated drinks by either 4d. or 6d. per dozen dependent on the size as from 15th January, 1962. This increase after 14 years of unchanged prices averages approximately 10 per cent.

We continue to hold unchanged our prices for squashes, but have decided to remove all our brands from the scope of Fixed Retail Price Resale Conditions, in line with the general climate of opinion that traders should be allowed to fix their own fair margins, having regard to the needs of their type of trade and the service they provide to the public.

OUTLOOK

The opening quarter of this year has been quiet, the prolonged cold weather, combined with a late Easter, having restrained stocking by our customers.

The Chancellor's 1962 Budget included an unexpected imposition in the 15 per cent Purchase Tax on all soft drinks. The cost of this tax we shall have to pass on to the trade and ultimately to the consumer. There is no device we can use to reduce the size or the contents of the drinks we offer, and to cut quality would be disastrous.

In general this tax will mean an increase to the consumer of 1d. per bottle for carbonated drinks and 4d. per bottle for concentrated squashes. Inevitably to begin with this will cause public resistance, but experience elsewhere indicates that in a comparatively short time this will be overcome. While it seems likely, therefore, that without considerable help from a hot summer we shall have a hard task to maintain our sales volume in 1962, in the long term this tax should not hamper your Group's home development.

ALLIANCE BUILDING SOCIETY

RECORD TOTAL OF ASSETS

The ninety-ninth Annual Meeting of the Alliance Building Society was held on April 27th, at Brighton.

The following are extracts from the speech by the Chairman and Managing Director, **Mr Lewis C. Cohen,** who presided:

For the year ending December 31, 1961, funds reached a record total of £81,979,805. Members and depositors increased to 113,966 from whom we received £15,271,956 and to whom we paid withdrawals of £11,253,730 (exclusive of interest).

Last year Societies found that investors' receipts were falling off as the 3½ per cent. interest per annum was not sufficient to retain, and attract, investors' funds wherewith the growing demand for advances on mortgage could be met. The Building Societies Association Conference recommended that a rate of 3¾ per cent. per annum, clear of income tax, be paid by Societies, which recommendation we adopted on July 1, 1961.

The events of 1961 are rapidly becoming forgotten. What I want to do is to give a public reminder that interest rates charged by building societies, and the Alliance in particular, *did not* go up in response to a Bank Rate change in 1961. The charges and the rate allowed to investors were put up when Bank Rank was 5 per cent.

It is useless for propagandists to try and talk down building society interest rates unless they wish to see societies starved of funds and unable to make loans to persons wishing to acquire their own homes.

A 3¾ per cent per annum rate of interest to investors, which with income tax at 7s. 9d. in the £ is equal to £6 2s. 5d. per cent per annum gross, is an excellent return on a Trustee investment which can be withdrawn in whole or part at very short notice without expense or loss. But it is currently no more than is required to maintain an adequate flow of money to meet the demands of would-be house purchasers.

1961 was characterised by a high level of demand for house purchase loans, and for the most part we were unable to meet the demand with the funds available to us. We lent £11,527,508 on 7,266 transactions, of which approximately 99 per cent were to individual borrowers connected with properties for their own occupation. The total amount owing on mortgages increased to £66,998,347.

While we take care to ensure that no borrowers take on a commitment beyond their capacity to carry out, we try to put house purchase within reach of as many people as reasonably desire it. We offer a thirty year term of repayment for the newer kind of houses and operate a scheme whereby, with insurance company guarantees, a borrower need only find one-twentieth of the total purchase price of the property he wishes to buy.

An allocation of £350,000 has been made to General Reserve. The reserves now exceed £3 million representing 3.66 per cent of the total assets of the Society. This reserve under-pins the security of our investors over and above the margin of security provided by every borrower.

The report was adopted.

HUDSON'S BAY

RECORD SALES

The two hundred and ninety-third annual general court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held on May 11th in London. **Mr W. J. Keswick,** the Governor, presiding.

The following is an extract from his circulated report:

The Company did well again in 1961/62. Profit before taxes amounted to £6,113,000. The net profit after taxes of £2,937,000 and depreciation of £1,793,000, was £3,176,000. Last year's profit was £2,600,000.

Total sales again set a record. £105,145,000, as against £88,032,000 in the previous year. Fur and consignment sales reached a new peak and Wholesale sales were up slightly.

In November, 1961, an interim trading dividend of 5 per cent and a distribution of 1¼ per cent from the Land Account were paid. The proposed final trading dividend is 7 per cent and the proposed final Land Account distribution is 1¼ per cent.

This makes a total trading dividend for the year of 12 per cent which is approximately 2s. 4½d. per share gross and 1s. 5½d. net after deduction of United Kingdom income tax. The total Land Account distribution is 2½ per cent and is not subject to United Kingdom Income tax. The above dividends and distributions are based on an increased capital of £13,553,428 and are approximately equivalent to the payments made last year on a capital of £6,159,824.

The report and accounts were adopted.

Royal Exchange Assurance

THE RT. HON. LORD KINDERSLEY, C.B.E., M.C., THE GOVERNOR, REPORTING UPON 1961:—

LIFE DEPARTMENT The Group's funds had a successful year as the following figures for 1961 show

Total Life & Annuity Premium Income	Total of Life & Annuity Funds
"Royal Exchange" Funds £5,834,980	£43,128,019
"Atlas" Fund ... £5,576,334	£48,294,256

The "Atlas" has declared a reversionary bonus for the three years 1959 to 1961 at the rate of 55/- per cent. per annum, calculated on sum assured and attached bonus, together with a special additional reversionary bonus of 15% of attached bonus.

FIRE DEPARTMENT The world-wide Group premium income in 1961 was £19,216,602, an increase over 1960 of £650,084 and resulting in a surplus of £688,047 compared with £296,008 for the previous year.

MARINE DEPARTMENT The sum of £418,129 has been transferred to the consolidated profit & loss account compared with £349,485 in 1960. The fund now stands at £4,838,323 representing 174.75% of the premium income.

ACCIDENT DEPARTMENT The world-wide Group premium income increased by £1,703,425 to £30,952,641, and the surplus of £447,358 compares with £153,251 for 1960.

INVESTMENTS The gross average yields of interest income on the principal life and annuity funds have continued their upward trend and the gross interest, dividends and rents derived from the proprietors' funds increased by £131,520 over 1960 to £3,507,413.
Once again there was a substantial favourable margin between the market values of the Stock Exchange investments and the aggregate values appearing in the balance sheets.

DIVIDEND A profit for the year of £2,350,937 has been carried to the profit & loss appropriation account and in the light of the results disclosed the Directors are recommending that a final dividend be paid at the rate of two shillings and three pence (less income tax) for each £1 stock, making a total distribution of three shillings and nine pence (less income tax) for the year.

LIMMER & TRINIDAD LAKE ASPHALT

RECORD RESULTS

The Ninetieth Annual General Meeting of Limmer & Trinidad Lake Asphalt Company Limited will be held on June 28th in London.

The following are extracts from the circulated Statement of the Chairman, **Sir Hathorn Hall,** on the 1961 Accounts:

In the contracting business, in common with other industries, the tide of profitability ebbed some two years ago and is still running out. Many firms have had to report worse results, lower profits and, in a number of cases, actual loss. The Limmer & Trinidad Group of Companies, however, obstinately continues to swim against the tide. Once again our Group has achieved record results. In 1961, for the first time in our history, the trading surplus before depreciation exceeded £1 million. The Group Profit before taxation was an all-time record.

REPUTATION FOR FIRST-CLASS SERVICE

While we may rightly claim that our Group has an unrivalled capacity to undertake asphalt contracts of any magnitude, it must be remembered that our success in the past has depended, not on the undertaking of a few spectacular contracts, but on the meticulous execution throughout the British Isles of a multitude of jobs, some comparatively small, and our reputation is firmly founded on the principle that our primary purpose is to give, throughout nation-wide organisation, really first-class service to those who employ us.

During the year under review we have acquired the entire issued capital of Peter Prendergast Limited, and have changed that company's name to Limmer & Trinidad (Contractors) Limited. Through this company we are undertaking a considerable amount of new road construction in north western Scotland. When these contracts are completed it is to be hoped that this beautiful but more remote part of Britain will be opened up to the tourist from overseas with resultant benefit to our "invisible exports."

Our activities abroad have continued at a satisfactory level. In Mauritius we have obtained an extension to our existing work. Farther north, in the Arabian Gulf, after successfully completing an airfield contract in Sharjah, we moved our plant and equipment to Entebbe, in the heart of Africa, where another airfield contract is now in progress.

OUTLOOK FOR 1962

I am happy to be able to report a very satisfactory current position as regards our order book. The general trend of orders, which took a slight downward turn with the completion of some of our very big contracts, is now improving once again, and I have good reason to believe that our turnover for 1962 will be at least as great as that for 1961. The erosion of profit margins, however, continues, demanding even higher standards of operating efficiency; but that is a situation with which our Group is becoming familiar, and I am not unhopeful that those qualities in our Management, Staff and Workpeople, which prevailed over the unpromising conditions of 1961 will repeat that success in 1962.

As already announced, in order to provide capital for the expansion of the Group's activities, it is proposed to make a Rights issue to shareholders. Details of the terms of the offer will be communicated to Members in due course.

GRATTAN WAREHOUSES LTD.

RECORD SALES

The Thirty-second Annual General Meeting of Grattan Warehouses Ltd. was held on May 11th at the Midland Hotel, Bradford. **Mr William J. Roach,** chairman and joint managing director, presided.

The following is an extract from his circulated review.

The financial year under review covers the 13 months' period ended on January 31, 1962. That means that your directors have altered the Company's financial year-end from December 31st. The reason for this move is that the new year-end now approximately coincides with the issue each year of our Spring and Summer catalogue, and this in turn considerably reduces the very heavy volume of work involved in stocktaking.

In order to compare the 13 months' trading profit of £3,646,501 with the 1960 12 months' profit of £3,168,874, it is approximately correct to say that half the increase shown is attributable to the extra months' trading, and the other half to the continued expansion of the business which we have been able to maintain, and this, needless to say, is the result of another large increase in sales to yet another record for your Company.

Profits Tax was increased in last year's Budget from 12½ per cent to 15 per cent, and as a result of this, and the increased profits which your Company has made, the amount taken in this tax alone has increased by £160,000. On the other hand, extraordinary credit computed at £98,000 accrues from the change in accounting date.

A Final Dividend of 25 per cent is recommended for your approval. This would make a total for the period of 38 per cent, which is equal to last year's equivalent total of 35.1 per cent plus 1/12th extra, covering the extra month included in the Accounts. Thus we comply with the Chancellor's request for dividend restraint.

PROPERTY AND CAPITAL COMMITMENTS

During the period an additional storey has been added to the Company's largest warehouse and this is now in use.

Plans are well advanced to commence building in June a new Administrative and Buying block in Ingleby Road of approximately 100,000 sq. ft. This will also house a capital commitment in the form of an I.C.T. 1301 Computer, due for delivery in 1963 at a cost of £190,000.

A further capital commitment, which brings the total to £1 million, is in the form of premises near the centre of Bradford. The plan here is to demolish the existing building to provide a site for a new, large office block.

You will gather from the foregoing that we have ambitious plans for the future. Since, at the time of writing, only seven weeks have so far passed in this current year, it is as yet too early to advise you of any definite trends.

The report and accounts were adopted.

At the subsequent Extraordinary General Meeting resolutions increasing the capital of the Company and allotting a free scrip issue of one Ordinary Share for every ten Stock Units already held, were duly passed.

BROWN BAYLEY LIMITED

MR J. W. GARTON'S REVIEW OF SUBSIDIARIES' ACTIVITIES

The sixth annual general meeting of Brown Bayley Limited was held on May 11th at Attercliffe, Sheffield, **Mr J. W. Garton, JP** (the chairman), presiding.

The following is the statement by the Chairman which had been circulated with the report and accounts:

During the year Mr E. Gordon Sykes, a partner of a firm who are the solicitors of The Hoffmann Manufacturing Co. Ltd., has been appointed to the Board, together with Dr F. P. A. Garton who is a Director of The Hoffmann Manufacturing Co. Ltd., and has been acting in a consultative capacity in connection with personnel for the last five years to Brown Bayley Steels Limited. These appointments should strengthen the Board and make it more representative of the interests involved.

The Accounts now presented cover the twelve months ended December 31, 1961.

The Profit and Loss Account shows a balance after tax of £207,477 compared with £207,601 in 1960. The income is the same as for 1960 as both The Hoffmann Manufacturing Co. Ltd., and Brown Bayley Steels Limited have recommended the same dividends as for the previous year.

The Interim Dividends already paid by the Subsidiary Companies and the Final Dividends recommended by them are included in this Account. On this basis your Directors have pleasure in recommending a Final Dividend of 9 per cent, less tax. This together with the Interim Dividend of 5 per cent, less tax, already paid, makes a total for the year of 14 per cent, less tax, which is the same as for 1960.

SUBSIDIARY COMPANIES

The Hoffmann Manufacturing Company Limited: For the first six months of 1961 this Company was very busy but when the "credit squeeze" came into effect there was a shortening of the order book for bearings for consumer goods. This enabled bigger stocks of finished goods to be built up so that they can take immediate advantage of any improvement in trade.

The major portion of the Group Capital Commitment will be expenditure in connection with the erection and equipping of the new building at the Gloucester Works. This will house new ball making plant and other production machines.

Much time has been spent in the last year studying the extent to which technical change is affecting the roles and responsibilities of their staff, especially at foreman level. This Company now believes it is in a strong position to increase individual satisfaction and overall efficiency.

The less favourable trading conditions which have been operating since the time of the Chancellor's "little budget," make it difficult to assess with confidence the outlook for the future. The Company has a reasonably good order book at the present time. During the last few weeks there has been a slight increase in the demand for their products. This, it is hoped will grow so that workpeople and plant will be kept fully employed.

The Accounts of this Company for the year

ended December 31, 1961, are published as part of the Directors' Report and show a profit before tax, but after all other charges, of £1,893,412 and compare with £1,735,953 for the previous year. Income Tax and Profits Tax absorb £927,762 against £686,563 in 1960. The net profit for the year 1961, after taxation is, therefore, £965,650 and compares with £1,049,390 in 1960.

Brown Bayley Steels Limited: Profit margins were adversely affected by the increased costs associated with the shorter working week, wages awards and fuel prices. These additional costs were not covered by the small price increase eventually granted by the Iron and Steel Board.

Since then the situation was further aggravated by a marked falling off in orders from the general engineering industry. It is hoped that in the near future official policy will realise the necessity for action that will stimulate trade.

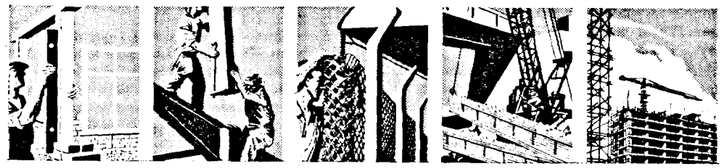
Considerable work has been done during the year in clearing the site and transferring plant in preparation for the developments associated with the new 32" Blooming Mill. Also, work is well in hand with the extension and roofing of the new ingot stock and furnace charging bay. The rate of progress obviously will be governed by future trading conditions.

There is no doubt that the capital equipment that has been installed by way of furnaces and forges over the last few years is helping considerably from a cost angle during these times when profit margins are low.

The profits of the South African Company are less than in previous years due to the difficulty of which everybody knows of trading in that country today and also by reason of making provision for a bad debt, part of the South African dividend was paid out of profits from previous years.

The Accounts of this Company for the year ended December 31, 1961, are published as part of the Directors' Report, and show a profit, before tax, after all other charges of £713,434 and compares with £1,080,901 for the previous year. Income Tax and Profits Tax absorb £258,261 against £478,959 in 1960. The net profit for the year 1961, after taxation is, therefore, £455,173 and compares with £601,942 for 1960. The Final Dividend recommended is 11 per cent, less tax, which with the Interim Dividend already paid of 5 per cent, less tax, makes a total for the year of 16 per cent, less tax.

The Farnley Housing Association Limited: The Association have again reduced the interest free loan by £200 and the balance now outstanding is £3,800.



The report and accounts were adopted.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

The Company Meetings Department,
The Economist,
22 Ryder Street, S.W.1.

Boulton and Paul Limited

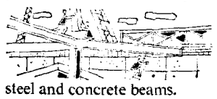
STEEL CONSTRUCTION • CONCRETE PRODUCTS • BUILDERS' JOINERY
WIRE & WIRE PRODUCTS • FENCING • BUILDERS' EQUIPMENT

The Annual General Meeting of Boulton and Paul Limited was held on May 11 at Norwich. In the absence of the Chairman, the Managing Director, Mr. J. S. Murray, presided. The following is an extract from the statement of the Chairman, Mr. J. H. Tresfon, circulated with the Report and Accounts.

Good Results

Last year I ventured the opinion that conditions were still favourable in our fields of operation. Our group profits for this year show a pleasing improvement. As regards to future prospects the results of some of our development work, fostered over some years, should begin to show. However, with conditions as they are at present, the likely benefit in terms of profit may be a little delayed.

Developments



Good progress has been made with the development of the site at Lowestoft.

During last year we also purchased a freehold factory at Mile Cross, Norwich, to house our chain link and fencing departments, thus freeing some space at Riverside for the expansion of other departments.

The installation of the mechanized fabricating plant at Moreland Hayne, our London subsidiary on the steel side, was completed and came into production during 1961.

Structural Engineering

The tonnage fabricated by Boulton and Paul and Moreland Hayne was well up compared with last year. The results also improved.

Good progress is being made with our plants for making combined steel and concrete beams.

The department dealing with the manufacture and sale of mechanized steel fabricating plants has continued to be fully employed.

Our dutch barns, covered yards, storage sheds, etc., provide a steady flow of business year after year.

Wire and Wire Products

In the fencing department the past year was a disappointing one. However, there are now signs that this phase is over; the order book has improved, the factory has settled down, and it has been found that the new works undoubtedly make for more efficient production.

Timber Products

Sales of our standard joinery increased again over the previous year's record figures.

There is every reason to believe that the Lowestoft development is well founded on most up-to-date and efficient lines and will help us to keep ahead in the competitive field of household joinery.

Builders' Equipment

The turnover of Stephens & Carter, our subsidiary in the scaffolding, ladder and builders' equipment trade, has continued upwards.

Concrete Products

Our associated companies forming the Anglian Group making concrete products and selling ready-mixed concrete, sand and gravel had a successful year.

Balance Sheet

Total Reserves and Provisions now exceed £3,000,000 or, if the Depreciation Provision is deducted, £1,900,000.

The capital commitments outstanding at the year end of £857,000 are almost entirely for Lowestoft. I am pleased to say that we have been able to arrange for financing the project without recourse to the capital market at the present time.

Group Profits

The group profits at approximately £385,000 show an increase of about £33,000 after excluding from 1960 figures the special surplus on revaluing stocks.

Substantial allocations have once again been made to reserves and after providing for the fixed Preference dividends, we are recommending an ordinary dividend of 12½% for the year.

Summarised Results

Group profits	100%	£385,729
Taxation	46%	£154,419
Retained profits	26	98,436
Distributed profits	34	132,874
	100%	£385,729

Group profits *attributable to Ordinary Shareholders before Taxation as a return on:*		
Issued Ordinary capital	£1,237,500	24½%
Net tangible assets	£2,822,237	10¾%
Ordinary dividend *before Taxation as a return on:*		
Issued Ordinary capital	£1,237,500	12½%
Net tangible assets	£2,822,237	5½%

The Report and Accounts were adopted.

THE LONDON ASSURANCE

A YEAR OF CONSOLIDATION

The Annual General Court of The London Assurance will be held on June 6th in London.

The following is an extract from the circulated statement of the Governor, **Mr Harald Peake:** The year 1961 has been one of much hard work, of consolidation and of marked progress towards the greater integration of the "London" group of companies. The effect of this should be shown by improved results in the years to come. Premium income has increased in all departments.

The Life and Marine Departments have continued to do well. The Fire Department has produced a better result than for a number of years. The Accident Department has had a very difficult year with substantial underwriting losses in many areas.

Overall the consolidated profit for the Group, after taxation, is very similar to that of the previous year. This is disappointing as we hoped to achieve rather better results than a year ago. In the current year underwriting continues to be difficult. The Group is, however, in a better position to meet present-day conditions.

LIFE DEPARTMENT: The premium income of The London Assurance for 1961 was £3,141,520. New Life Assurance business has increased considerably. Net sums assured, at £18,190,967, were £4,000,000 in excess of the record figure for 1960.

The interest income has continued to increase and amounted in 1961 to £2,140,104. The Life Assurance Fund amounted at the end of the year to £35,303,629.

FIRE ACCOUNT: The Fire Department shows a welcome improvement in profit for 1961. The consolidated total premium income was £11,935,248, an increase of approximately £650,000. The transfer to Consolidated Profit and Loss Account amounted to £279,674 compared with £41,417 in 1960.

ACCIDENT ACCOUNT: Total premium income increased by £1,325,000 to £18,524,000, but we have to record with regret a substantial increase in the underwriting loss. Once again our results in this department have been dominated by our experience in the United States.

MARINE ACCOUNT: In the Marine Department we have had results which justify a transfer of £850,000. After making the transfer, the Fund stands at £9,141,731 or 145 per cent of the premium income, which is virtually unchanged from last year.

PROFIT AND LOSS ACCOUNT: After deducting the usual charges and expenses the Group profit before taxation amounted to £2,322,642. After taxation the net available profit amounted to £1,592,743. The directors have recommended dividends on the Ordinary Shares totalling 1s. 9d. per 5s. share. The profit retained in the business as a result of the year's operations is £678,335, bringing the amount carried forward on the Profit and Loss Account to £4,346,023.

Further steps in integration are under review and we are confident that by continued improvements in our methods and organisation we shall be able to give even more efficient service to our policyholders.

NORTHERN & EMPLOYERS ASSURANCE

ANOTHER SUCCESSFUL YEAR

The annual general meeting of Northern & Employers Assurance Co., Ltd., will be held on June 13th.

The following are extracts from the circulated statement of the chairman, **The Right Honourable Viscount Knollys, GCMG, MBE, DFC:**

1961 was, for your Company, a good year. Premium income in every class of business increased satisfactorily and totalled £91,000,000. Underwriting produced a profit of well over one million pounds. Interest income increased by £386,000, or over 9 per cent. Our invested funds increased by £18,000,000 to £172,000,000.

But, before I report on the operations of 1961 in detail, I should like to tell you something of what I regard as perhaps the most important and satisfactory feature of the year, the progress of the integration of our Companies' organisations.

I reported to you a year ago that in the USA integration was already complete and that the Head Office underwriting departments were to be amalgamated on January 1, 1962. This took place as planned. We hope that the Home branches will be integrated, as forecast, by the end of 1964.

Good progress has been made overseas. In Canada, Australia and East, Central and South Africa and senior joint appointments have been announced, and plans for joint offices are well advanced. I have been able to see, on recent tours, how anxious our staffs in different parts of the world are to be able to find themselves working side by side as soon as possible. The benefits to our Companies of integration are certainly evident to them.

Successful mergers, once mutual confidence and good will are established, depend on careful planning and deliberate action for their lasting efficient results. Decisions must not only be sound and fair but must be seen to be so. I think you would be pleased with what has been achieved so far in this direction.

RESULTS FOR 1961

The non-Life premium income for 1961 was £81,771,000, an increase of £2,897,000 over that for 1960, and the total non-Life underwriting profit was £982,000, made up of a loss of £164,000 on Fire Account and profits of £635,000 on Accident Account and £511,000 on Marine Account. It is gratifying that a profit was earned on our United States operations in a year which was a difficult one for the whole industry there. The total profit after taxation was £2,383,000. In view of the largely increased investment income, the satisfactory underwriting results and the low proportion of investment income being distributed by way of dividend, your directors would have felt justified in recommending at least a 2 per cent increase in the Final Dividend. They felt bound, however, to pay heed to the Chancellor's appeal for restraint and therefore have limited the recommended increase to 1 per cent, making 21 per cent for the year. After meeting the cost of the interim (8½ per cent) and final (12½ per cent) dividends, the amount carried forward on Profit and Loss Account is increased by £1,041,487 to £5,899,707.

FIRE

The loss shown in the Fire Revenue Account of £164,000 is due to the United States, where our experience was in itself disappointing and the Fire results were affected by a large increase in reserve for Unexpired Risks. Elsewhere good or fair profits in certain territories, including Great Britain, Canada, Australia and South Africa, were partially offset by moderate losses in others. The impact on our results of "Carla" and other hurricanes in the United States was not severe. Freedom from serious conflagrations helped to reduce the cost of Fire losses met by all insurers in Great Britain from £44,000,000 in 1960 to just under £40,000,000 in 1961.

ACCIDENT

Our United States interests again made a good contribution to the profit on this Account. In other parts of the world, results, as on the Fire Account, were mixed. Canada produced a good profit, and in Australia we just broke even, but there was a loss in South Africa. In West Africa political changes have produced new and interesting problems for us to master both in

* 1960 figure not comparable.

underwriting and in the financing of our operations there, which have been built up substantially in recent years. At Home we made an underwriting profit, but conditions are so difficult that we have been concentrating on a very careful selection of risks, and we shall pursue this policy at the expense, if need be, of any growth in premium income for the time being.

LIFE

The new Life business written by The Northern Group during 1961 maintained the high level of 1960, and the new sums assured, after deduction of reassurances, exceeded £60,000,000. In addition, annuities of over £3,700,000 per annum were written, and the total premium income in respect of Life and Annuity business increased by £496,000.

MARINE

Last year saw the close of the 1959 Account, and I am glad to be able to report that the result

was satisfactory, largely because there were no major Marine losses in that year. A transfer has therefore been made to Profit and Loss Account of £511,000. It is gratifying also that, despite the heavy losses both at sea and in the air at the end of 1960 second year settlements for the 1960 Account have not been as heavy as was to have been expected, and there is reason to hope that the run-off of this Account will prove to be no less satisfactory.

Marine casualties were however consistently heavy throughout 1961, though the effect of these on the 1961 Account cannot yet be fully measured.

INVESTMENTS

The distribution of the invested funds is little changed from last year, but that the total value has gone up from £154,090,000 to £172,209,000. These figures are for book values, and I am glad to say that the substantial excess of market values at the end of the year over book values was even greater than that at the end of 1960.

In calling your attention last year to the substantial addition to our investment income derived from non-Life funds in 1960, which amounted to £722,000, I mentioned that it was an exceptional increase. I am however pleased to say that there was another good increase in 1961, not so large, it is true, as 1960's, but, at £386,000, as satisfactory as we could expect in a normal year. This important part of our Group profits has thus grown by £1,108,000, or over 30 per cent, to over £4,600,000, in the last two years.

STAR (GREATER LONDON) HOLDINGS LIMITED

FURTHER EXPANSION ENVISAGED

The second annual general meeting of Star (Greater London) Holdings Limited was held on May 11th in London, **Mr Sion Potel** (the Chairman) presiding.

The following is an extract from his circulated statement:

For the year ending December 31, 1961, revenue exceeds that for the period of the previous accounts and in view of this and your Directors' confidence in the further expansion of the Company's activities and earning capacity they consider themselves justified in recommending that a Final Dividend of 8 per cent be paid for the year to December 31, 1961.

The proposed acquisition of the site at Old Compton Street, London, W.1, has now been effected by the acquisition of Old Compton Street Property Investment Co. Ltd., in February of this year.

Our acquisition of Concord Investment Co. Ltd., and its subsidiaries is adding a number of investments and important projects from which benefits may be anticipated to accrue to Shareholders during the current and ensuing years.

I have appended a summary of the Group's schemes in preparation or under development.

In course of Construction:
19/23 Knightsbridge, S.W.1.*
"Odeon Site," Sheen Lane, S.W.14.*
58/58A Old Compton Street, W.1.
36/38 Finchley Road, N.W.8.
52/54 High Street, S.W.19.
North Orbital Road, Denham
51 Guilford Street, W.C.1.
32 South Hill Park, N.W.3.
24/27 Grand Parade,
St. Leonards/Hastings, Sussex.

In preparation:
454/458 London Road, Croydon.
91/93 Gray's Inn Road, W.C.1.
Hinton Wood, Bournemouth.

Site for future development.
"Hippodrome Site," Portsmouth.

The report was adopted.

* Through associated Companies.

HONGKONG TIN

MR ADDINSELL'S STATEMENT

The thirty-third annual general meeting of Hongkong Tin Limited was held on May 10th in London, **Mr Addinsell,** chairman, presiding.

The following is an extract from his circulated statement for the year ended September 30, 1961:

Production was unrestricted during the financial year and the dredge produced the very satisfactory total of 616¼ tons of tin-ore, and sales, which included the small stock held at the beginning of the period, amounted to 621¼ tons. The hopes I expressed last April of the continuation of a satisfactory rate of production have been fully realised, the average monthly production over the five months, April to September, 1961, being 67 tons. The dredge has continued to obtain very satisfactory results during the current financial year.

The profit for the year, after providing £43,050 for taxation, was £110,737 which, together with the balance from the previous year and a small return of capital from the Grab Dredger Syndicate, gives a total of £128,827. A dividend of 20 per cent was paid in January and we have transferred to Revenue General Reserve £40,000. Your Directors are recommending payment of a final dividend of 60 per cent, making a total of 80 per cent for the year.

During the period under review we received repayment of the Company's contributions to the First Buffer Stock amounting to £23,364. A further £3,750, being the proportionate profit thereon, has been received since the date of the accounts. Contributions to the Second Buffer Stock are now being made from current output and at the end of September, 1961, these amounted to £10,807.

The preliminary arrangements for the development of the opencast mining project, to which I referred last year, have progressed satisfactorily. This venture is one of long-term development, which, if successful, will considerably extend the life of the property.

The General Managers' anticipation of the maintenance of a satisfactory rate of production from the dredge during the current year is being justified by results to date.

The report was adopted.

SUN ALLIANCE INSURANCE LIMITED

Extract from the Review of the Report and Accounts for the year 1961 by the Chairman, Mr T. D. BARCLAY

Reporting on the combined results of Sun Insurance Office Limited and Alliance Assurance Company Limited.

FIRE DEPARTMENT

	1961 £	1960 £
Premiums	19,112,621	19,294,667
Claims	9,403,031	9,253,418
Surplus	1,496,134	1,427,165

The premium income shows a reduction on that for 1960; this mainly arises from a reduction in the premiums received from the United States and from certain other overseas areas.

Fire claims continued at a high level particularly in the United Kingdom and the United States of America, our two most important areas of operation.

The Account was also affected, as it so often is, by weather claims, the largest single item being the hurricane which struck British Honduras where the Group has a considerable amount of business. Damage to Belize as a result of this hurricane was catastrophic and our Group bore its full share of the insurance losses. In America wind-storms again contributed largely to the total of the claims. At home the severe frosts at the end of the year caused a number of claims from burst pipes.

The surplus which it was possible to transfer to the Profit and Loss Account was a good one.

ACCIDENT DEPARTMENT

	1961 £	1960 £
Premiums	23,291,994	22,553,364
Claims	12,905,425	12,765,075
Surplus	1,571,522	1,254,080

This Account showed an expansion in premium income and a very pleasing increase in the surplus which was greatly assisted by the improved results of the Sun's Casualty business in the United States.

The Motor account showed a profit which is a tribute to the very careful standards of underwriting adopted by the two Companies.

Our Burglary account was inevitably affected by the crime wave but we take pains to advise and encourage our insured to take all possible precautions and this has resulted in our experience being rather better than might otherwise have been expected.

Our Personal Accident account continues to expand rapidly and the specialist service that we can give to agents on this class of business is greatly appreciated.

The Engineering business conducted by The National Boiler & General Insurance Co. Ltd., again showed excellent results.

MARINE DEPARTMENT

	1961 £	1960 £
Premiums	3,646,179	3,624,290
Fund at end of year	5,722,673	5,933,065
Transfer to Profit and Loss Account	421,678	166,822

The premium income of the two Companies in this Department shows a modest increase and the transfer to Profit and Loss Account is substantially higher. This transfer relates to the results of the 1959 Account which was closed at the end of the year. The 1960 Account is unlikely to be so satisfactory having regard to the fact that the incidence of ship casualties involving both total and partial losses rose during the latter part of that year and continued at a high level during 1961. Nevertheless, the 1960 Account may, in the absence of any unforeseen circumstances, be expected to show a reasonable profit.

LIFE DEPARTMENT

	1961 £	1960 £
Net new sums assured	22,088,421	20,925,293
Premium income thereon	481,151	455,748
Total life premium income	3,671,803	3,368,415
Total annuity considerations	1,242,526	1,650,570
Claims by death	867,636	917,623
Life and Annuity Funds at end of year	47,272,245	44,082,598

The Life and Annuity business of the Group is entirely transacted by the Alliance.

The increase in new sums assured was less than during the previous year largely because with our substantial Building Society connection we were particularly vulnerable to the contraction in advances for house purchase and the consequent drop in demand for Life policies in connection therewith. The total Life premium income, however, showed a satisfactory increase.

The exceptional demand for immediate annuities shown during 1960 was not maintained and the purchase money received reverted to approximately the 1959 level.

Claims by death were below expectations in 1961 but it is not to be expected that this favourable trend will necessarily continue.

PROFIT AND LOSS ACCOUNT

Our underwriting profits expanded by £641,267, but this increase was more than offset by higher tax charges. The gross investment income credited to the Consolidated Profit and Loss Accounts of the two Companies increased from £3,160,063 to £3,298,977; other items show little change. The Directors have decided to maintain the dividend at the same rate as was paid for 1960, viz. 2s. 8d. per share. This calls for dividends from the Operating Companies of 11s. 3d. from the Sun and 5s. 4d. from the Alliance. The balance of profits, after making a provision of £100,000 in the case of the Sun against fluctuations in Foreign Exchange, has been left in the balances carried forward in the Profit and Loss Accounts. In the Sun Alliance Account there is a small increase in the balance carried forward making the total £9,804.

CHERSONESE (F.M.S.) ESTATES LIMITED

MR T. B. BARLOW'S REVIEW

The fifty-second annual general meeting of Chersonese (F.M.S.) Estates Ltd. was held on May 15th in London. The following is a summary of the review by the Chairman, **Mr T. B. Barlow:**

The profit for 1961 was £59,752 as compared with £85,132 a year ago. Despite the fall in profit of 30 per cent, the dividend (4d. per stock unit costing £31,063) is reduced by only 20 per cent. This dividend policy arises from the fact that we have made good the arrears of replanting, which has cost £325,439 and our replanting reserve is now adequate to bring existing immature areas into bearing after allocating £14,000 to replanting reserve this year.

In 1962 it is expected our rubber crop will increase by 100,000 lbs. to 900,000 lbs. with more immature areas coming into bearing it should not be many years before we reach the two million mark.

But planting is a continuous task and having brought most of our rubber up-to-date the Directors are considering replanting the last block of old seedlings—225 acres—with oil palms.

In the Krian district there are several areas of oil palms, which provide a crop that is much more profitable than coconuts. In view of the falling yield from our coconuts we feel that we should try a small block of oil palms.

GENERAL

My impressions during my recent visit to Malaya were that the country is as prosperous as ever and that the plan for Greater Malaysia would go through.

The average c.i.f. price of rubber in London was 24½d. per lb. during 1961 compared with 31½d. per lb. during 1960. The price now is approximately 23d. per lb. and at this level seems to be competitive with synthetic.

The price of copra last year in Malaya was approximately £50 per ton. The price so far this year has been £54 per ton which should enable the estate to earn a reasonable profit from copra.

The report and accounts were adopted.

CROSSLEY BUILDING PRODUCTS

The twenty-seventh annual general meeting of Crossley Building Products Limited was held on May 14th at Middlesbrough, **Mr Rupert Speir, MP,** the chairman, presiding.

The following is an extract from his statement circulated with the report and accounts:

Once again the Group has produced record results. The Group net profit, after charging Depreciation of £103,633 (1960, £64,064) and Taxation of £128,795 (1960, £86,743), amounted to £115,332, representing an increase of £24,598 over 1960. Your Directors recommend a final dividend of 12½ per cent on the Ordinary Shares, making a total of 20 per cent,, less income tax, for the year.

In the early months of 1961 some concern was expressed nationally lest the supply of bricks should fall short of the demand. We were able to augment supplies by some 15 per cent of our former production. During the present year it is our aim to begin a further expansion of production.

The scope for our three merchanting companies was very great, and the results they achieved were indeed most encouraging.

All things considered I would certainly think that a high level of building operations will be required in the years ahead, and your Board are planning a programme of expansion and development for the Group.

The report and accounts were adopted and resolutions were approved increasing the issued capital by the distribution of 177,600 Ordinary Shares of 5s. each in the proportion of one for ten and increasing the authorised capital by £250,000 by the creation of 1,000,000 Ordinary Shares of 5s. each.

ATLAS ELECTRIC AND GENERAL TRUST LIMITED

RECORD GROSS EARNINGS

The fifty-fourth Annual General Meeting of Atlas Electric and General Trust Limited will be held on June 7th in London.

The following are extracts from the circulated statement of the chairman, **The Right Honourable Lord Remnant, MBE:**

The accounts now submitted reflect the difficult conditions which obtained during the greater part of the year to March 31st last. For the first four months to the end of July gross income from investments showed a satisfactory increase of 8 per cent. The so-called "little Budget," introduced by the Chancellor of the Exchequer in July with the object of effecting restraint in wages and dividends, checked any further increase and, in fact, a large part of the increase gained in the first four months was lost in the remainder of the year.

THE REVENUE ACCOUNT

In the result, gross income from all sources, although constituting an all-time high record, increased by no more than £11,863. Expenditure showed very little change but taxation increased by £9,512. The net revenue after taxation showed a small increase of £2,431.

We have not to meet any New Issue Expenses this year, and the Directors feel justified in recommending a small increase in the final dividend on the Ordinary Shares making a total of 9½ per cent for the year against 9 per cent for the previous year. £200,000 is again transferred to General Reserve and the balance of unappropriated revenue is reduced from £302,872 to £295,435.

INVESTMENTS

The valuation of the investments at £31,208,721, shows an appreciation of 86.8 per cent over the book value. The appreciation in the previous year was 94.5 per cent and, having regard to the deterioration in market conditions, the Directors consider this result satisfactory. It would have been less so but for the appreciation in value of our holdings in the United States. It is useful in this connection to note that the Financial Times index of British Industrials was 342.2 on March 30, 1961, and 291.8 on March 30, 1962.

It will be seen in the classification of investments on page 8 of the Directors' Report that there has been little change during the year in the overall distribution, although there have been considerable changes within the various classifications. The withdrawal of South Africa from the Commonwealth obliges us to include our investments in that territory under the heading of "Asia and Africa, excluding British Commonwealth."

PROSPECTS FOR THE CURRENT YEAR

The current year has opened in an atmosphere which is far from reassuring for investors. The level of industrial profits and dividends still shows a declining trend but the Chancellor is optimistic with regard to the course of the economy this year.

The easing of the restraint in wages and dividends may induce the more prosperous industrial undertakings to increase their distributions to shareholders, but profit margins have been reduced in very many cases. In these circumstances it is unlikely that there will be any material change in the present level of the Trust's investment income.

THE A.P.V. COMPANY LIMITED

ANOTHER RECORD YEAR

MR WILLIAM E. JENKINS ON GROUP'S STRONG POSITION

The fifty-second Annual General Meeting of The A.P.V. Company Limited, was held on May 9th at Crawley, **Mr William E. Jenkins, CBE** (the Chairman), presiding.

The following is an extract from his circulated Statement:

The good results announced for the first half of 1961 were maintained during the rest of the year, and Group Profits before provision for taxation amounted to £900,300 as against £750,235 for 1960. This profit is again a record for the Company and was achieved without consolidating the profit from the Australian Company. We have disposed of a portion of our holding in this Company so that it is no longer a subsidiary.

The profit after taxation increased to £451,167 compared with £350,151 for 1960. At a normal time these results would have justified a substantial increase in the dividend, but in view of the request of the Chancellor of the Exchequer for restraint, the Board is recommending a final dividend of 8¾ per cent less tax on the Ordinary Share Capital, making a total distribution for the year of 12½ per cent as against 11¼ per cent last year.

Turnover of the Group as now comprised expanded to £7.4 million compared with £7.1 million in 1960.

The Board propose to capitalise a sum of £300,000 out of reserves by making a bonus issue of 600,000 Ordinary Shares of 10s. each fully paid in the proportion of one new share for every five Ordinary shares held.

Letters have been sent to Shareholders and to Debenture Holders advising of proposals to form a new subsidiary Company at Crawley to take over the present operating business and to change the name of the Parent Company to A.P.V. Holdings Limited.

SUBSIDIARY COMPANIES

A.P.V.-Paramount Limited, the Foundry Company at Crawley and largest subsidiary, has again improved upon the profits of the preceding year and made a substantial contribution to Group earnings.

The Company in Australia, A.P.V. (Aust.)-Bryant Pty. Ltd. was converted into a public company during 1961. It made record profits in 1961 and the shares stand well above par. The mutual benefit of the Trading Agreement between the companies remains as previously.

The subsidiary in the North of England, Stainless Steel Plant Ltd., had a successful year and made a good return on the investment. In accordance with original plans, we have purchased land in Blackpool and are building a new factory as the present rented premises leave no room for the expansion of business which we anticipate.

Most of the other subsidiary companies showed increased profits, notably India, France, Italy and Canada.

SALES

Most markets remained buoyant throughout the greater part of the year, and intake of orders was again a record. This was achieved in spite of a recession in several overseas markets. The resulting decline in export orders was fortunately matched by higher sales at home, especially to the Dairy, Brewery and Soft Drinks Industries. We are continuing to intensify our efforts abroad in view of the wide potential markets which we know to exist. The European Common Market is still engaging our earnest attention; the total of orders from this area continued to advance, which is a satisfactory achievement in the light of the tariff differentials which we have to meet. Business with the Common Market countries represents about a quarter of total exports.

RESEARCH AND DEVELOPMENT

The field of continuous brewing remains the largest single Research and Development project and we have made encouraging progress. In this development we have worked in close association with several of the largest Brewery companies where pilot plants and commercial plants have been installed. With such a radical revision to established technology, progress will of necessity be slow, but nevertheless we have faith in the eventual widespread adoption of continuous brewing techniques.

PROSPECTS

For several consecutive years I have been able to report progressively improved results and this past year has been the most prosperous of all, but like most companies engaged in industry we are dependent on an expanding economy and increasing trade in various industries, in our case notably the Brewing, Dairy and Chemical industries.

There has during recent months been some slowing down in the placing of orders for Capital equipment by these industries, and consequently our order intake has declined by comparison with the same period in the previous year. This of course means more intensive competition and pressure on profit margins.

At this early stage it is not possible to make an estimate of the current year's trading, but if markets again expand, as we hope they will, your Company is in a strong position throughout the entire Group to take full advantage of the improvement.

The Report and Accounts were adopted. The resolutions changing the Company's name, increasing the capital and approving the bonus issue were duly passed at the Extraordinary General Meeting held immediately following the Annual General Meeting.

REFUGE ASSURANCE COMPANY LIMITED

The Chairman in a statement submitted with the 1961 Accounts mentioned that in the Life Branches the annual premium income of new policies written in the year was £2,670,000, and that this, together with single premiums of £630,000 assured total benefits aggregating some £49 millions. The total premium income of the year was some £22 millions, and payments to policyholders £16½ millions, of which £12,400,000 was to living policyholders and £4,100,000 payments on death. At the end of the year there were in force 7,660,000 contracts assuring £435 millions, including bonuses, and annuities of £998,000 per annum.

The premium income of the Company's subsidiary, the Federated Employers' Insurance Association, which conducts most classes of insurance business other than Life, was £2,384,000. The under-writing results of the Motor Department had again deteriorated and showed an appreciable loss.

INVESTMENTS

The Company's assets of £180 millions shown in the Balance Sheets included £49 millions in securities of the British Government and Local Authorities, £39 millions in Debentures and Preference stocks, and £41 millions in Ordinary stocks. In addition there are mortgages, largely in connection with House Purchase, of £34 millions and property investments of £8 millions.

BONUSES TO POLICYHOLDERS

In the Ordinary Branch surplus of £2,701,000 was allocated to policyholders to provide a bonus on with-profit policies at the increased rate of £2. 10s. 0d. per cent on the sum assured in respect of each year's premium due in 1961 and paid. This bonus is the highest paid in the Company's history.

In the Industrial Branch the total surplus allocated to policyholders was £2,371,000. A reversionary bonus at the rate of 34s. per cent on the sum assured has been granted on premium-paying policies which were in force on January 1, 1962, subject to the completion of one year's premium payments. Certain other increases in benefits have been granted to policies becoming claims within the next year.

UNITED MOLASSES

STRONG FINANCIAL POSITION

The thirty-sixth annual general meeting of The United Molasses Co., Ltd., will be held on June 5th in London. *The following is an* extract from the circulated Statement by the Chairman, **Mr G. W. Scott, CBE:**

The Gross Profits of the Group for 1961 amount to £4,389,771, a reduction of £126,903 over the Gross Profits for 1960 and the Net Profits of the Group at £1,605,061 show a reduction over the previous year of £402,738.

Trading conditions in all spheres of the Company's activities have been most difficult during 1961, and the reduction in the Gross Profits is less than I thought would be the case when I indicated in my Statement last year the Gross Profits might well show a reduction over those for 1960. The greater reduction in the Net Profits is largely due to the incidence of taxation.

Last year I expressed the hope that we would be able to recommend dividends out of Revenue Profits for 1961 at the same rate as for 1960, and it is, indeed, a pleasure in these difficult times to be able to transfer £250,000 to General Reserve and to maintain the rate of dividend.

In view of the very strong financial position of the Company, your Directors have decided to supplement the return to Ordinary Stockholders by recommending a Cash Distribution of 2½d. per Unit, not subject to income tax, out of Capital Profits. Your Directors hope, barring any unforeseen occurrences, to maintain the dividends for 1962 at the same rate as for 1961, even though this might involve the payment of some proportion of the dividends out of the substantial amount carried forward on Profit and Loss Account.

MELBOURNE & GENERAL INVESTMENT TRUST LIMITED

SIR DENYS LOWSON ON AUSTRALIA'S GROWTH

In the course of his address which has been circulated to Shareholders, **Sir Denys Lowson, Bt,** says:

The gross revenue for the year to February 28th last amounted to £101,417, against £94,735 for the previous year. The proposed final dividend of 14 per cent is payable on the ordinary capital as increased by the Rights Issue and makes a total of 24 per cent for the year.

The market value of investments as at February 28th last shows an appreciation of 66.0 per cent over book value. Based on this valuation the geographical distribution was as follows: 53.24 per cent in the United Kingdom, 40.89 per cent in the Commonwealth, 4.38 per cent in the United States of America, and 1.49 per cent in South Africa; whilst as regards categories we had 2.08 per cent in fixed interest securities with 97.92 per cent in ordinary and deferred shares.

Almost all the Unquoted Investments are represented by this Company's substantial holding in Carlton & United Breweries Limited of Melbourne, Australia; and this represents 30.19 per cent of our total portfolio. Carlton & United Breweries continues to make satisfactory progress, and the dividend paid by it is still less than half the net cash flow accruing after all expenses and taxation. Among important additions made to that Company's assets during the course of the year has been the acquisition of the Queensland Brewery Limited; one of Queensland's two biggest brewing companies, which operates breweries in Brisbane and Toowoomba.

The future of Carlton & United Breweries depends, of course, to a great extent on the future of Australia. At the present time one of the great uncertainties confronting Australia is the possible effect on her trade should Great Britain join the Common Market. However, wool, which is still Australia's greatest industry, and represents over 40 per cent of her exports in cash value, will continue to enter the Common Market countries free of tariff.

In the past ten years Australia has been severely handicapped in that the terms of trade have moved against her more than against any other country. As a result she has now to sell 50 per cent more exports by volume than she did ten years ago, in order to buy the same quantity of imports. This situation has arisen because the prices of the industrial products which Australia imports have risen at a greater pace than those of the primary products which she exports, and which still form some 90 per cent of her total exports. It is very important, therefore, that Australia should increase her exports of manufactured goods and good progress has been made in this direction over the last ten years when the value of manufactured goods exported has risen from £A41 million to £A119 million per annum.

The progress in this development of secondary industries in Australia has been assisted a great deal by private investment from Overseas; and it is pleasing to note that during the past five years the United Kingdom has provided 60 per cent of this new private investment, with the USA and Canada contributing 30 per cent, and the other countries 10 per cent. Industrial development in Australia has still a long way to go, and this can only be achieved by further investment from Overseas.

BANQUE COMMERCIALE POUR L'EUROPE DU NORD

The Ordinary General Meeting of the BANQUE COMMERCIALE POUR L'EUROPE DU NORD was held in Paris on April 25, 1962, to approve the accounts for the financial year 1961.

CAPITAL INCREASES

Within the framework of development of the bank's activities, there have been four successive increases of capital during the last twelve months. On the basis of resolutions passed at the Shareholders' General Meeting of May 30, 1961, the board of directors effected a capital increase by incorporating reserves of NF2 million. In February, 1962, the shareholders subscribed, in cash, a capital increase of NF3 million; and an Extraordinary General Meeting authorised the board to raise the capital, in the coming years, to NF35 million.

This authorisation, and the results of the financial year 1961, enabled the board meeting held on April 25, 1962, to raise on the one hand the capital to NF30,000,000, by incorporating NF5 million of reserves, and on the other hand by the receipt of NF5 million from a new shareholders' subscription.

Thus, from April 1961 to April 1962, the BANQUE COMMERCIALE POUR L'EUROPE DU NORD, in order to establish a better relation between its capital and the business it does, doubled its capital, raising it from NF15 million to NF30 million.

In fact, the balance sheet as at December 31, 1961, shows a figure of NF2,103,596,934.44—a marked increase on that of December 31, 1960, which was NF1,778,280,386.27.

Within the framework of increased activity, together with International Commerce and services rendered to local clients, the board of directors presented a Profit and Loss Account, the gross results of which were ... **NF15,607,690.43**
compared with ... NF11,641,392.20
for the financial year 1960, while net profit was ... ... **NF 5,017,087.75**
against ... ... NF 3,680,488.45
for the financial year 1960.

GLENFIELD & KENNEDY HOLDINGS LIMITED

CHAIRMAN'S STATEMENT

The sixty-third annual general meeting of Glenfield & Kennedy Holdings Limited will be held at Kilmarnock on May 25, 1962. The following is an extract from the statement by the Chairman, **Sir James R. H. Hutchison, Bt, DSO,** which was circulated with the Report and Accounts for the year ended December 31, 1961:

"During 1961 our companies had to face difficult conditions similar to those experienced in 1960, except that competition was even more intense and costs continued to rise. This combination of circumstances, and also the setback caused by strikes and flooding at Kilmarnock, have inevitably had an adverse effect on group earnings for the year. The downward trend of profits at Kilmarnock and Brighouse and in South Africa has however been offset to some extent by the more satisfactory returns from Blackett Hutton and from our USA subsidiary.

Group earnings, after providing for taxation, including profits tax at the increased rate imposed in the 1961 Budget, have sufficed to cover normal dividends with a small margin, but have left no surplus for strengthening reserves. The company has, however, provided reserves on a generous basis in the past.

Your directors continue to give much attention to the question of employing group resources to the best advantage, and schemes have been put in hand with a view to reducing costs and increasing the earning capacity of our undertakings. It is anticipated that we shall begin to reap benefit from some of these expenditures by the end of 1962.

The total value of orders received by group companies was slightly lower than for the previous year, whilst total deliveries showed a small increase. Outstanding orders at approximately £5,000,000 therefore show little change from the position at the end of 1960.

Group companies increased by ten per cent their contribution to the export effort during 1961 and goods were despatched overseas to the total value of approximately £2,200,000.

Total sales by group companies showed an increase on the previous year.

Group profit before taxation £449,123, compares with £541,458 for 1960 after charging depreciation amounting to £268,538 against £252,648 for 1960. The other items indicated as having been charged in arriving at group profit show little change. There is, however, a substantial increase in interest earned on short-term deposits.

Taxation this year absorbs a higher proportion of earnings due to income tax capital allowances being receivable on a lower level of capital expenditure than was incurred in 1960, and also on account of the heavier burden of profits tax imposed in last year's Budget. Profit after taxation is £205,931 against £296,626 for 1960. Apart from a small credit of £3,947 for taxation adjustments there are no special items this year.

The directors recommend the same dividend

distribution as last year which requires £205,264, leaving £6,614 to be added to the carry forward which now amounts to £208,111.

The probable trend of business during the remainder of 1962 is still a matter of considerable uncertainty. An early general increase in demand for capital goods which would assist our undertakings may depend to a large extent on future government policy and on a successful outcome of the deliberations and recommendations of the National Economic Development Council.

There is no sign of the long expected revival in orders from the oil industry on which depends the prosperity of our Worcester factory. Our Guisborough steel foundry is likely to continue operating well below normal capacity until there is an increase in the demand for cast steel oil valves and an improvement in orders from the steel industry. It may be expected, however, that during 1962 we shall continue to receive a satisfactory volume of orders for standard products at Kilmarnock and Brighouse, and every effort is being made to achieve improved profitability at these and our other works through a policy of rationalisation and by employing all possible measures to reduce costs. Specialty products manufactured by group companies should make a valuable contribution to earnings again this year.

We are making every effort to improve the volume of exports. This involves constant visits being paid abroad by highly-placed executives. On these visits our representatives report that conditions are keenly competitive.

Since the war our experience in business on the Continent has been very limited and steps are now being taken to rectify this position by strengthening our group representation in Europe. In this and other ways we are preparing to meet the challenge and undoubted opportunity which will be presented to us if Britain enters the Common Market.

Whilst one hesitates to prophesy, it would not be unreasonable to hope that the results for 1962 will be at least no worse than those for 1961."

THE EVER READY TRUST COMPANY LIMITED

CHAIRMAN'S COMMENTS

The Annual General Meeting of the Ever Ready Trust Co. Ltd., will be held on June 4th at Bowman's Place, Holloway, London, N.7.

The following are the comments by the Chairman, **Mr A. V. Perry,** on the report and accounts for the year ended March 31, 1962, circulated to the Shareholders.

REVENUE

The Consolidated Accounts submitted to you reflect a full year's trading by our Subsidiary Company, Whittingdon Securities Ltd. In its first full year of trading this Company operated at a profit (after allowing for the write-off mentioned in the next paragraph) and we are satisfied with the progress it has made.

Gross Revenue for the year at £217,559 shows an increase on last year of £20,045 or some 10 per cent. Two factors have diminished the growth of our net Revenue this year. First, lower dividends on some of our investments, and secondly, provision for depreciation of investments in our Subsidiary Company at our year end. This provision, which is the difference between the book value and the market value of certain securities held by Whittingdon Securities Ltd. in its portfolio, is admissible for taxation purposes. This item will necessarily be a fluctuating figure from year to year in a dealing company. On this year's Accounts a provision of £7,434 has been made as a charge against Revenue.

CAPITAL

The Issued Capital of the Company, as increased by the scrip issue of last June, is now 3,600,000 Ordinary shares of 5s. each, or £900,000 nominal. At the year end the market value of our portfolio, plus current assets, less current liabilities at £3,610,106 showed a small diminution (2.4 per cent) on the corresponding figure for the previous year of £3,714,033.

£80,000 of the profit arising on realisation of investments has been transferred to Capital Reserve.

GENERAL

You will have already received a circular from the Company regarding a Rights Issue that your Board propose making. When this Rights Issue has taken place the Issued Capital of the Company will be £1,000,000 and will place our shares in the "Trustee" category.

Subject to unforeseen circumstances your Directors consider that the current rate of dividend recommended to you, namely 15 per cent. will be maintained on the capital as increased by the proposed new Rights Issue.

APPOINTMENTS

THE INTERNATIONAL NICKEL COMPANY (MOND) LIMITED

has an immediate vacancy in its

STATISTICAL DEPARTMENT

for a young Economist with a good knowledge of statistical method. The ability to read French and/or German would be an advantage. Salary will be according to age and experience. Assistance with housing can be given in appropriate cases.

Applications in writing to :

MR. A. E. JENKINS,
The International Nickel Company (Mond) Limited,
Thames House, Millbank, London, S.W.1.

COUNCIL OF EUROPE RESEARCH FELLOWSHIPS, 1963

A series of these Fellowships, which are offered annually and are of the value of 6,000 new French francs each, will be made in December, 1962. The Fellowships for 1963 will be for a period of 12-months starting on January 1st. They are intended primarily to encourage research into the following questions, considered in the light of their present-day importance :

(a) Political, legal, economic, scientific, applicultural, social, educational, and youth problems connected with European integration ;

(b) European civilisation (philosophy, history, literature, and the arts).

Candidates are invited to propose subjects which would be likely to make a positive contribution to the fields of study mentioned in *the preceding paragraphs,* with the object of writing a publishable work.

Candidates must normally be nationals of a member State of the Council of Europe or of a State which has acceded to the European Cultural Convention. Refugees from European countries which are not members of the Council, legally resident in the territory of a member State, are also eligible for awards.

Application forms, which must be returned by September 5, 1962, may be obtained from Universities Department, The British Council, State House, High Holborn, London, W.C.1.

THE UNIVERSITY OF SHEFFIELD

Applications are invited from graduates of any University for a DOUGLAS KNOOP RESEARCH FELLOWSHIP in ECONOMIC HISTORY tenable from October 1, 1962. Value £800 a year and normally tenable for two years. Applicants should be available for interview in Great Britain. Applicants who expect to graduate in 1962 will be considered. Applications (three copies), indicating the line of research proposed and including the names and addresses of three referees, should reach the Registrar (from whom further particulars may be obtained) by June 12, 1962.

For further appointments and other classified advertisements see page 745

UNIVERSITY OF BRISTOL

Applications are invited for the post of Research Assistant in Economics ; salary range £750 to £900 per annum.

Candidates must be graduates in economics, preferably with some training in mathematics and statistics. Candidates expecting to graduate in 1962 may apply.

Applications should be sent not later than June 15th to the Registrar, University of Bristol, Bristol 8 from whom further details may be obtained.

THE NESTLÉ COMPANY LIMITED

Promotion has created a vacancy at our London Head Office on the section which searches for new products and co-ordinates the subsequent development of these products. Published non-technical data on food production and consumption must be studied, catalogued, and reported on. In addition, food stores and exhibitions must be visited, so that we are fully informed of new products appearing on the United Kingdom Market.

Applicants should be in the age range 22-27, may be either male or female, and will probably possess a degree to deal with commerce, or Part A of the A.I.A. examination. Experience in the handling of information, or of the food industry, would obviously be advantageous, but in the main what we seek is an enquiring mind allied to a fresh and alert intelligence.

The person appointed will be directly responsible to the Head of the Department, and will frequently be called upon to display both initiative, and resource, in a field of commerce where one must always be at least two moves ahead of the game. Salary and prospects are excellent, as are the range of other benefits provided.

Please write, stating age, qualifications and experience to

THE PERSONNEL MANAGER,
THE NESTLÉ COMPANY LIMITED,
ST. GEORGE'S HOUSE,
WOOD STREET, LONDON, E.C.2.

CITY OF LEICESTER

COLLEGE OF TECHNOLOGY

Require Two Lecturers in WORK STUDY and to assist with MANAGEMENT STUDIES. Salary : £1,650-£2,000 p.a.

Apply to Registrar for further details and application form.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

(UNIVERSITY OF LONDON)

STUDENTSHIP IN SOVIET STUDIES

A Studentship in Soviet Studies is offered to men and women with good honours degrees or to those who have to obtain such degrees this summer. They need not have had any previous training in the field of Soviet Studies or the Russian language, but the successful candidate will be expected to learn Russian.

The Studentship will be of the value of at least £600 a year and the holder will be required to read at the School as a full-time student and to undertake research in some branch of Soviet Studies. His programme of work will require the approval of the Director.

Applications must be received by 11 June for the Studentship tenable from the following October and should be addressed to the Secretary of the Graduate School, The London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

(UNIVERSITY OF LONDON)

STUDENTSHIP IN THE ECONOMICS OF LATIN AMERICA

A Studentship in the Economics of Latin America has been established with funds provided by Business firms with interests in Latin America. The holder will be required to read at the School as a full-time student and to undertake research in the Economics of Latin America or advanced study preparatory to such research. His programme of work will require the approval of the Director.

The Studentship will be of not less than £600 a year, and provision will be made for the cost of approved travel in Latin America. Candidates must have obtained, or obtain this summer, good honours degrees in economics, but previous study of Latin America is not required. As the purpose of the award is the furtherance in the long term of Latin American studies in this country, preference will be given to candidates domiciled in the United Kingdom.

Applications must be received by 11 June for awards tenable from the following October by the Secretary of the Graduate School, The London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2.

A General Manager

is required for the U.K. Division of an international growth organisation selling a unique process in the office equipment field.

- HE will be based in London and be responsible to the Managing Director for the profitability and growth of the division with branches around the country and having a sales, service and administrative staff of some 250.
- HE must have a successful record in business with a background of sales, marketing and financial responsibility, including budgetary control. Experience in office machinery would be an advantage.
- HE will be aged between 35 and 50 and his salary will be negotiated. He will now be earning at least £3,000.
- BRIEF details should be sent in confidence to us as the company's advisers on the understanding that nothing will be disclosed to the company without permission.

Letters should be addressed to D. M. Sidney.

JOHN TYZACK & PARTNERS LTD
10 HALLAM STREET · LONDON W1

DEPUTY (ADMINISTRATION) TO INVESTMENT MANAGER OF THE CENTRAL BOARD OF FINANCE OF THE CHURCH OF ENGLAND

The rapid growth of the Funds administered by the Investment Office of the Central Board of Finance of the Church of England, which include the Investment Funds set up by the Local Authorities' Mutual Investment Trust, creates a vacancy for a Qualified Accountant or Secretary (preferably the former) to act as Deputy (Administration) to the Manager. The vacant post is not directly concerned with investment analysis or dealing, but applicants should possess some knowledge of and interest in investment matters. The qualities looked for are : flawless knowledge of accountancy, good draftsmanship, some knowledge of committee work, capacity for organisation and for control of staff. An aptitude for public speaking and an interest in local government would both be advantages. Other things being equal, the Board would feel elected to appoint a practising member of the Church of England. Age 30-45. Initial salary, according to age, experience and qualifications, £2,000 to £2,500 per annum ; non-contributory pension scheme. Send full particulars of education, experience and present remuneration to the Investment Manager, Central Board of Finance of the Church of England, Gondenough House, 33 Old Broad Street, London, E.C.2, making the envelope "Personal."

LARGE CANADIAN FINANCIAL INSTITUTION

with head office in Montreal requires

ECONOMISTS

Applications are invited from recent university graduates as well as graduates with practical experience. Candidates should have good writing ability in addition to a sound knowledge of economics. Familiarity with the Canadian economy and sources of Canadian economic statistics an advantage. Salary according to qualifications and experience. Superannuation plan and good staff benefits. Write Box H.2508, c/o Streets, 110 Old Broad Street, E.C.2.

BBC REQUIRES Current Affairs Talks Producer (Sound) to be a member of "Ian O'Clock" Editorial Group and to share responsibility for initiating and producing commentaries, interviews, discussions, etc., for "Ian O'Clock," for the weekly Current Affairs "Home Service, and for "Tonight's Topic" in Light Programme. Good education, sound U and journalistic experience a great advantage since the work is associated with news of the day and successful candidate will often be required to handle technical programme making facilities at high speed. Late evening work not more than twice a week. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a.—Requests for application forms (enclosing addressed envelope and quoting reference 62.G.183, Tel.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

Cadbury's

STATISTICIAN
(MAN OR WOMAN)

In The Economist this Week — May 26, 1962

INTERNATIONAL

Red Curtains

Iron: The idea of an international authority to watch over access to **Berlin** should not be dropped; it should be tried on the Russians (p. 764).

Bamboo: **Hongkong** has been as generous as it can be to a flood of Chinese refugees; other countries should offer equivalent space and food before criticising the quota system (p. 762).

Outwardly at least, Cambodia remains calm, neutral and sovereign (p. 771).

French Lace Curtain: **General de Gaulle's picture of Europe** includes no special place for Britain; but neither is Britain yet left out of it (p. 766).

Dark Recesses

Antimacassar: Ex-general **Salan** is not, after all, to lose his head. Surprisingly, too, neither the OAS nor the French regime was put in the dock at his trial (p. 795).

Duster: By letting **Dr Banda** secede, and by clearing away technical obstacles in the way of African politicians in **Northern Rhodesia**, Mr Butler can make the central African picture much clearer, with his emphasis on the economic realities (p. 766).

Under the Carpet: Dr Verwoerd, finding **South Africa still under** heavy attack, is more determined than ever to sweep his enemies out of sight (p. 800).

Mobile: President Nasser's new charter for an **"Arab Socialist Union"** provides inspiration, but nothing resembling a working blueprint (p. 767).

Leather Armchairs

Rocking Chair (1): So far President Kennedy's **tariff** proposals are having a surprisingly smooth passage through the United States Congress (p. 787).

Rocking Chair (2): The next item on the agenda of the American congressional Ways and Means Committee is help for **old people** when they are ill (p. 788).

Sagging Couch: The recent sharp drops in **Wall Street** prices (p. 809) reflect partly a change in the stock market's basic assessment of share values (p. 789), partly **a lack of business confidence** in the Administration (p. 789).

Two lumps, plus: The proposed revisions in the **sugar quotas** almost certainly go too far for the American Congress (p. 790).

Picture Window: **Texas** always does things in a big way; **the Estes scandals** are no exception (p. 789).

HOME

The Word

If Mr Lloyd's warning of "July measures" again in order to squeeze demand is seriously meant, the Government may be going to cut off its nose to spite the face that has been repeatedly slapped by pay pause-breakers (p. 759).

Coventry's new cathedral is a triumph for a church anxious to present its faith to the people in a contemporary way (p. 763).

The **Church of England** has put forward some sensible suggestions for a reform of its archaic liturgy; and the other established **church—of Scotland**—is sensibly trying to live down its fire-eating (and puritanical) past (p. 768).

Britain will be short of 50,000 **teachers** in 1970: Sir David Eccles's desperate proposals for alleviating that shortage should certainly not be laughed out of court (p. 760).

The Flesh

Bank employees are not quite as hard done by as they would like to appear (p. 784).

British Motor Corporation has introduced a new model to tempt Australians (p. 812).

Hard and soft dollars are now one (p. 811), but the **Euro-dollar** is likely to retain its independent existence (p. 821).

In support of that more common dollar (p. 807).

Cunard has to trim its sails (p. 815).

The Devil

Among the many specious "special cases" for breach of the Government's incomes policy there is at least one honest one—that of **probation officers** (p. 767).

The protected belts round many cities are not so much green as cabbage looking (p. 783).

Hampstead Garden Suburb has wrested victory from a take-over Goliath; now it must win the peace (p. 784).

Dr Hill's surrender to the parochial-minded on **London's outer fringe** has set a bad example for would-be stop-outs elsewhere (p. 771).

Labour's attempt to exorcise **Lord Russell** (and all *his* works) was rewarded by a flick of his sharp tongue: but Right will eventually triumph (p. 766).

And All His Works

Engineering production rose in the first quarter of this year, but new orders languished (p. 810).

Makers of **domestic appliances** have yet to feel the thrill that spring should have brought (p. 821).

Budd progress rides the rails

Budd has pioneered railway progress for over 25 years. Today, Budd-built passenger cars of all types—mainline, multiple units, self-propelled rail diesel cars (RDC) and subway cars—are in use on six continents. Railways around the world prefer cars built by Budd and its licensees because of the advantages of sound stainless steel construction: lightness, dependability, economy and low maintenance. They also like such extra features as unique Budd-designed trucks and efficient disc brakes. Budd continually seeks new ways to improve rail service, lessen maintenance and reduce operating costs. Unique skills in engineering . . . metallurgy . . . tooling . . . welding . . . research . . . testing and production have helped place Budd high among the world's 250 largest industrial concerns. For information about our railway activities, write THE BUDD COMPANY, INTERNATIONAL DIVISION, Philadelphia 32, Pa., U.S.A.

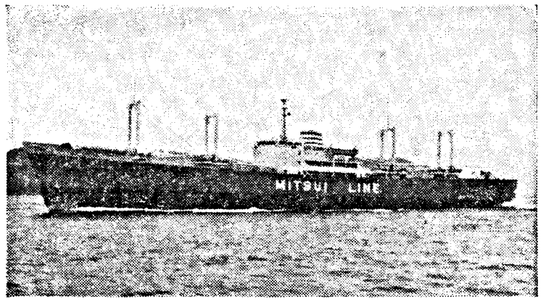
The problem the printer sets the papermaker is the turning of a substance, which at the start of the papermaking process is about 98% water, into a sheet of paper with certain well defined characteristics.



The proper blend has to be made, but the mixing and beating is of equal importance, for the same recipe, beaten differently, can produce both blotting and greaseproof papers.

This beating is not easy and it cannot be fully controlled by instrumentation in spite of modern scientific advances. So the beaterman has to be a craftsman, for without the aid of instruments he must control 430 variables which are enemies to a good paper.

All J. A. Weir's Beatermen are craftsmen. All beat the 430 enemies and produce a consistently good paper welcomed by modern printers.

Mitsui technology takes the lead

Remote control panels serve as "crew" on world's first automated cargo liner

An important first step toward full-scale automation of ocean-going vessels was taken by Mitsui Shipbuilding & Engineering Co. in the construction of the newly completed Kinkasan Maru. The main engine of this 9800 DWT cargo liner can be controlled directly from the bridge. Remote or automatic control of much of the engine room equipment can be handled from a sound-proof, air-conditioned control room located next to the engine room. These revolutionary features improve working conditions and make possible efficient operation of the ship with seven less crew members.

Other ships incorporating remote-control systems are already on the planning boards of Mitsui, pioneers in the application of the latest technological advances to ships, engines, and industrial and chemical machinery and equipment.

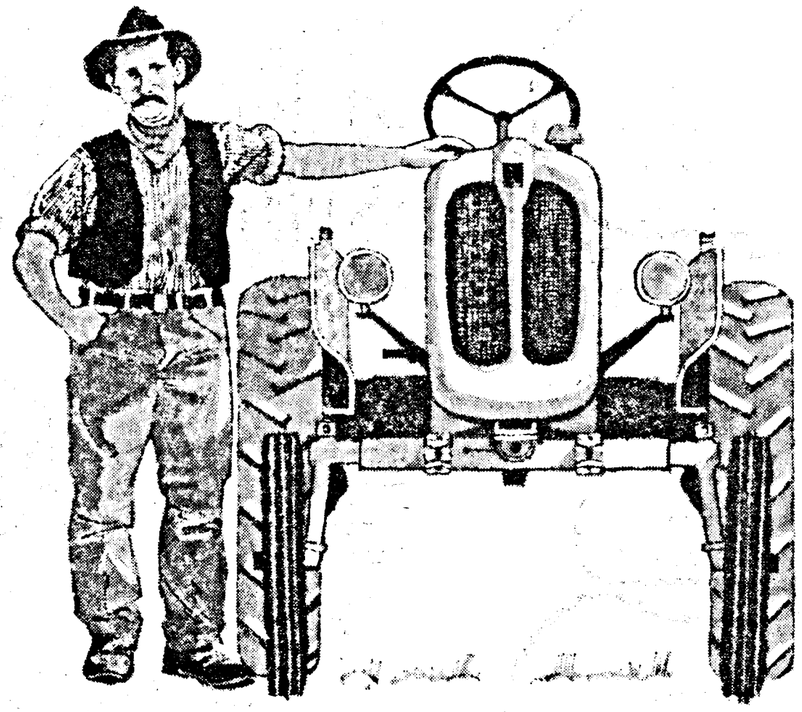
Certainly not..



Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself.

Status Symbol

For some people prosperity means owning a Cadillac. But for Signor Brunetti, living in a remote Italian village near Caserta, a Fiat 'Piccolo' represents the achievement of a long-cherished ambition. Formerly this was one of the poorest parts of Italy —over-populated and with its soil impoverished by endless cultivations.

Now, as part of the Italian Government's ten-year development plan for the South, roads, railways and aqueducts are being built and new water power projects carried out. For Signor Brunetti and millions like him, this means a new lease of life and a standard of living higher than they have ever enjoyed before.

Atlas Copco compressed air equipment and Sandvik Coromant drill steels were widely used to quarry rock for these vital engineering undertakings. And this is only one of the many major projects in which Atlas Copco and Sandvik Coromant equipment has played a part.

Its Own Executioner?

"WE shall not shrink," the Chancellor of the Exchequer told a conference of Conservative women on Tuesday, "from doing what we think is necessary." Mr Selwyn Lloyd never does shrink; that is why he has stayed to reach where he is. But what is it that he will not shrink from doing now? With some broken pieces of his incomes policy drifting away (instead of exports) through the dock-gates, he seriously contemplates putting all the wraps again, as he had to do last July, on demand, output—and expansion. It is like the Chinaman who burned down his house to roast his pig. Because the Government fears failure in its good bid to stop the push of inflating costs, it can think only, once more, of stopping everything. What will certainly shrink then will be the country's whole future prospect—and the Government's too.

Democratic governments dig their own graves. When they fail to persuade, to carry conviction, they fail to govern, and cease to be governments. "We cannot compel," Mr Macleod pleaded on Tuesday in pardon of the boltholes (77 industrial ones have been cited as well as the docks) in the Government's project to keep pay rises in line with production. But it is of no use for democrats to say that if only they had the power they lack to command observance of their policies, they could make these work; all they can, and should, command is respect. It is more relevant, sounder sense and better political philosophy to say (as Lord Hailsham says) that there are moral questions here for free citizens as well as their rulers to face; the state does not exist, as too many Tories and most Socialists believe, to make men good. But it does exist to help men to make the best of themselves.

No recognition of the responsibility of individual citizens, of the "selfish" employers and "arrogant" trade unionists the Prime Minister talked about on Wednesday, can chip the tiniest bit from the responsibility of representative parliamentary governments to make policies on the nation's behalf, and to make them stick: by outright persuasion and the frankest publicity, which are democracy's tools; and, because persuasion must never become just empty exhortation, by setting competitive incentives that will marry the citizens' and the nation's interests. "What the Government can do," Mr Macmillan said, "is to bring forcibly before the public—employers and employed alike—the need to match incomes with production." This it has not done. The tale of what happened in the docks two weeks ago has been told in too many contradictory ways; but clearly the Government, unable to command, did not really try to persuade or convince the employers where their, as well as the country's, true interests were. What is at issue is what the Prime Minister called, grandly, "the long-term shaping of the future"—which starts now.

It is not altogether surprising that foreign spectators of the melodramatic Tory downslide in the by-elections, which is not yet over, should conclude, too hastily yet, that the Government is down and out. What is astounding is that so many Tories themselves should be so death-wishful. Some, like Mr Lloyd himself, with the highest austere purpose, can see little choice but to go down into the shelters again and hope that better times will sound the all-clear. Others, weaker vessels, prefer appeasement: new measures, new men, anything to woo back the renegade voters. Without any doubt Mr Macmillan's government, in this over-long spell of Tory office, does need the new-blood transfusion and facelift that are talked about for July. But the charge of any new persons,

or new policies, must be to do right things better, that is more resolutely and more effectively, not to do different things for fear of fresh Orpingtons—or to run for cover against inflation into stagnation and recession.

Once, when Mr Lloyd embarked on the pause in pay, he had the chance of making history; even now, with his National Economic Development Council poised to make the pace for properly balanced and efficient growth, in world markets as well as at home, the chance has not gone. The plea to him now must be that he will have the positive courage of his conviction when he glimpsed the truth that the real spur to inflation was the push of incomes: but not the negative and self-defeating courage of his (and his counsellors') unfounded apprehension that the tide of demand may already be rising perilously. The complaint against the April budget was not that it ought to have injected a rip-roaring dose of added demand into the economy; it was that, having bravely started on a policy to contain incomes, not without effect, Mr Lloyd produced precisely the same, neutral, unstimulating budget that he would have had to produce if no incomes policy existed. And now he talks warningly, and depressingly, about another tightening budget in July. This is to give in.

The deepset difficulties of an incomes policy in a democratic country give no reason or excuse for not pressing forward with it. There are big misconceptions, as several ministers have recognised this week, about what is needed, or possible. It is nonsense to suppose, for instance, that keeping increases in line with production simply means giving everybody the same restricted rise. To give everybody, across the board, two or three per cent would be as absurd and as uneconomic (though by no means as calamitous) as giving everybody across the board ten or twelve per cent. The rise in output will set the total non-inflating rise in all incomes; but some will rise less, even not at all, and others more, perhaps much more. The proper test in a competitive economy is quite simply recruitment: scarcity of numbers in growing enterprises (and superfluity in declining ones); and, within the context of recruitment, rareness of quality and skill.

The trouble is, of course, that the British economy is not properly competitive. To make the incomes policy stick, to furnish the right incentives for it, the Government should already have embarked, without waiting for the common market, upon dramatic measures to give the process of pay and recruitment its right competitive setting: ranging from a large-scale lowering of high tariffs to the extirpation of resale price maintenance. This is what ministers should have been doing, instead of bewailing their impotence to make a pay policy work. But they should have been doing vastly more; they should have been loud every day by every means, and with detailed chapter and verse, about precisely what increases in this or that industry seemed to them to be in line with good national economics. They cannot wait for Ned to do this.

The danger now is that the Government may be going to throw away all that they have gained, yielding to the piecemeal claims of equity if not of pressure, and then curbing the whole process by curbing the whole economy itself, to the grievous hurt of exports as well as output. Cases in equity indeed there are, very different ones now from the days when coalminers were the least well rewarded of industry's workers. Scarce nurses and scarce teachers and probation officers and the rest, all these have claims that squarely meet the test of recruitment, which must be decisive, as well as of equity; but the cardinal criterion is that any increases must go to the right workers in the right places in the professions and industries beset by shortages of staffs or skills; the cardinal veto is that they shall not be given regardless to everybody else.

Easier said than done, the critics and the cynics and the politicians and the trade unionists will say. Yes, indeed: the upshot in a free society will at best be vastly less than perfect. But only by such endeavours can the country hope to grow forward, as it surely must, without inflation, its perennial parasite. And if the Government now looks away to any other resort it will be, politically as well as economically, its own executioner.

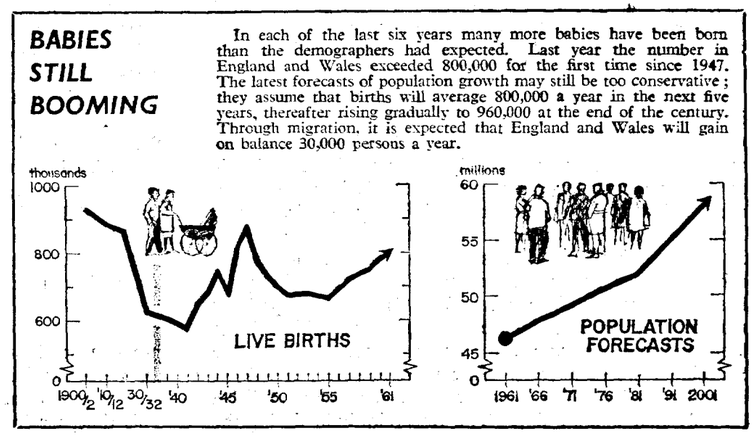
Chapter for Robbins

Britain's critical shortage of teachers is a direct result of past failures to expand higher education of all kinds

Love and marriage are the real culprits behind the crisis in English schools. Or so says the National Advisory Council on the Training and Supply of Teachers in its latest, rather hangdog, report published on Thursday. The predicament is quite simply stated. In 1960-61, 17,000 women joined the teaching profession after training—and nearly 16,000 left it, the older ones into retirement, but 10,000 young ones in order to get married or—more important—to have their first children. If this rate of wastage, which happens to have little or nothing to do with salary scales, continues to rise as it has been doing, the Minister of Education will be lucky if he gets a net gain of 500 women teachers a year in the mid-1960s; and this despite the doubling of residential training college places by 1966. By taking all the qualified men he can get (which may actually mean choosing them for training places instead of some more able girls) the Minister will have a net increase of about 5,500 teachers a year up to 1970. This is certainly less than half as many as the schools will need.

On the national advisory council's calculations, the teaching force in maintained schools in England and Wales (i.e., excluding independent schools, direct-grant grammar schools and special schools of all kinds) will have to increase by 100,000 over its 1960 figure of 264,000 simply to fulfil "current policies" in this decade. This means in order to absorb the intake from the second post-war population "bulge," to reduce classes to a manageable size, and to cater for the growing "trend" towards voluntarily staying on at school after the age of 15. Since the council seems to be banking on some levelling-off in the birthrate from now on, it may have made a conservative estimate of consumer demand. As the chart on page 761 shows, the birthrate has risen steadily (to the demographers' repeated surprise) for the past six years and may still have a kick in it yet. The minimum shortfall of teachers by the end of the 1960s will not be less than 50,000, and the problem will be particularly severe in the infant and primary schools, where women predominate. If the Government raises the school-leaving age to 16, as the Crowther report recommended and as most other advanced countries either have already done or mean to do in this decade, there will be a further shortfall of 20,000 teachers. But unless very drastic steps are taken to staff the schools, governments are likely to shelve the idea of raising the leaving age almost indefinitely. This is the measure of the crisis.

In the long run—that is, up to 1980—the only way to build up teaching strength is, as the Minister himself puts it in his letter to the chairman of the NAC, by "a massive expansion of the base of higher education." This is a sentence that should be digested by the Robbins committee and by the Treasury. (It may be remarked that the NAC, in its innocence, has based some of its present calculations on a more rapid expansion of the universities than the Treasury is currently prepared to countenance.) But two things are clear enough. The first is that any post-Robbins expansion is not going to add a single teacher by 1970. The second is that even a major training college expansion will not be enough to fill the gap by 1980 unless a substantial number of married women can be persuaded to return to teaching at the age of 40-45, when their own children are safely established at school.



It is possible that the flow of returners (2,600 have come back in the past year after a special appeal) will pick up in ten years' time. If women do have their children in the early twenties, there is a greater prospect of their wanting a job, or an interest, in early middle age than there has been under the previous professional pattern of later marriages and child-bearing. But this is still largely speculative. (If the women do not return, one incidental effect could be to produce a majority of men teachers before 1975.)

The urgent need now is to make the best use of the manpower and womanpower available. There is no longer (as there was in the mid-1950s) any shortage of qualified applicants who want to train as teachers; in fact, good candidates with at least one "A" level in the GCE are at present being turned away. The Minister is now asking the training colleges to squeeze in as many as they can and to accept day students, some of them commuting over long distances. More day colleges, particularly for older applicants who probably mean to make teaching a serious career, are to be started. These methods should provide an extra 7,500 places. More, too, can be made of returning part-time teachers: Sir David Eccles hopes to double the present number to make up a full-time equivalent of 15,000 by 1965. The chief snag here is that in comfortable suburbia (like parts of Kent) there are more part-time volunteers than the local authority needs, while in Gateshead and West Bromwich, which really do have over-size classes, there are not enough.

In the Commons last week Sir David floated two other proposals—one for auxiliary helpers in schools, the other for initial two-year training courses for girls with their eyes already on marriage—which have had a distinctly mixed reception. Those Labour members who howled down the idea of "child minding" may now be regretting their hastiness: even socialist strongholds like the London county council already employ auxiliaries in infant schools (i.e., for children between 5 and 7) to do the nannying and other odd jobs under the supervision of qualified teachers. The National Union of Teachers, whose executive also jumped the gun last weekend, has now wisely had second thoughts. Its secretary, Sir Ronald Gould, who seems to have grasped that the union has a public responsibility to fulfil, has since given a qualified acceptance to the auxiliaries. It may have been apparent to him that the only alternative would have been to raise the compulsory age of entering school to 6 at least. There are now 50,000 infant teachers; to cope with the "bulge" another 20,000 are ideally needed by 1970. If the Minister can get 10,000 auxiliaries, the worst need not happen.

Sir David's second proposal is something that even he does not seem entirely happy about. It would mean that a girl who did not expect to teach for more than five years before marriage or child-bearing would take a two-year training course. If she wanted to go on teaching after five years, or if she returned to the profession later, she would take a further year's training to achieve full qualification. The NUT is pretty sternly against this, regarding it as a means of introducing sub-standard teachers. The union is all the more sensitive on the point since it has just secured a three-year training period for all non-graduates—a step which should eventually lead to the training colleges giving their own degrees.

The notion of an interrupted course of any kind is still anathema to the cosy British academic tradition. But as the base of higher education expands people are going to have to get used to the idea of students dropping out (as they do in other countries) for all kinds of reasons and then returning to finish their studies. It is difficult to believe that two-year trained teachers could not play a very useful and acceptable part in, for example, team teaching—where the head of the

team dealing with a large class would always be a senior person. There is a great deal more that needs to be done in Britain in trying out new teaching techniques, and also in making the best use of mechanical aids—as efficient teachers are generally anxious to do. The NUT has every right to watch its own members' interests, but it will not win many friends if it gets into a habit of shooting down new ideas on sight.

It is obvious enough that a collective miscalculation, originating with the hapless demographers, has played a big part in the growth of this national predicament since the birthrate leapt upwards again in 1955. But even if more training facilities had existed, the high wastage rate among young women teachers in the last few years would probably have nullified most of the sizeable investment involved. The real lesson is that a country with as narrow an entry to higher education of all kinds as Britain still has, is bound to run into crises of this kind whenever a sudden strain is put on trained resources in any sector. In this decade Britain will not only need more teachers in the schools, it will need them in universities, technical colleges, commercial colleges—it will need trained people all round. And the demands in the 1970s will be even greater. This is why the country must take deliberate aim to raise the school-leaving age in order to exploit its full potential talents, and why the present bottleneck at 17-plus has to be removed by hook or by crook against all the resistance groups. More than anyone else, the NAC has written a key chapter for the Robbins committee.

Bread for Hongkong

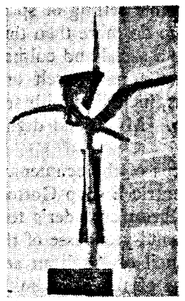
The refugees from China bring dangers that compassion alone cannot remove

THE refugees who knock illegally at the gates of Hongkong bear an unspoken message about conditions in China, though the exact value of the message may be hard to assess. Turning them away, as the colonial authorities have been doing, tells us a great deal, and in a more precise way, about conditions in Hongkong itself.

Turning refugees away is always altogether repugnant, but the humanitarians, including the international refugee organisations, have to reflect before they cast too many stones. When the second world war ended, Hongkong's population had fallen to 600,000; now it is well over three million. Nobody knows the exact figure. The uncertainty reflects the fact that there have always been two streams of immigrants from China, the legal and the illegal.

A legal immigrant, who may or may not be a refugee in the strict sense, is a Chinese from Kwangtung province, of which Hongkong is geographically a part, who arrives armed with a Chinese exit visa and a re-entry permit as well. If he comes from elsewhere in China, he would do well to have a wife or an aged mother living in the colony. In any one day, fifty immigrants from Kwangtung are legal; the fifty-first has to queue up next morning. For the rest of China, there is no quota and admission depends largely on the credibility of the life stories told on arrival.

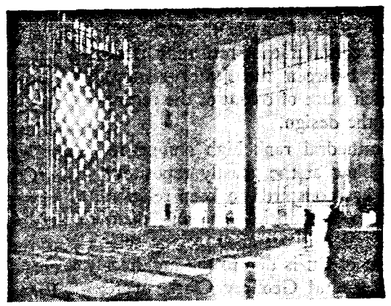
Since more than a million migrants have come to Hongkong in the last twelve years, the colony cannot be accused of inhumanity. The job accomplished in re-housing some tens of thousands who formerly clung to the hillsides in insanitary shacks has been remarkably efficient. There is misery, inevitably, in the crowded colony, particularly in Kowloon and the leased territories on the mainland, but there is little begging, and that is not the least of Hongkong's miracles. Now something dangerously like saturation point has been reached. Water, not food, is the worst problem (voluntary organisations have been generous with gifts of food and the Americans, for instance, are sending some $5 million worth a year). Just now, however, Hongkong is perilously dry. The rains are late and water is available for only four hours a day. The reservoirs built during the past few years provide the rationed trickle but would soon dry up if uncontrolled immigration were allowed. Moreover, on Wednesday the communist authorities, who are short of water on their side of the border, turned off the tap controlling supplies for Hongkong. The situation is thus grimmer than ever.



That, in its simplicity, is the predicament. Unless some country or countries come forward with offers of living room, not for small quotas, but for hundreds of thousands of immigrants, criticisms will seem out of place. President Kennedy's decision, announced on Wednesday, to admit 4,000 immigrants from Hongkong, though welcome, hardly touches the problem. Until last week the Nationalist authorities on Formosa were not prepared to take more than 1,000 a year, able-bodied and carefully screened. Now President Chiang Kai-shek, who has living room problems of his own and a growing army of new mouths and unemployed, has thrown Formosa open to immigrants from Hongkong. Nothing, however, has been said about providing transport to Formosa, and the offer has political overtones embarrassing for Hongkong which, now as always, survives by courtesy of Peking.

This is not, of course, the first refugee crisis in Hongkong's post-war history. In 1956, when restrictions were imposed after a period of latitude, the communist authorities reminded Britain that under the original treaty arrangements governing the cession of Hongkong, all natives of China were to have unrestricted access to it. True, the communists did not press the point, which they may have found embarrassing. The present difficulties have been discussed in Peking between British representatives and the Chinese government, but there is no sign that the Chinese intend to hold the British to the letter of arrangements that have become unworkable.

THERE are, however, baffling elements in the situation now. When previous waves of refugees appeared, the Chinese frontier guards often fired at those who sought to escape. This time, far from firing, they seemed, until this week, to be helping the refugees to find the best illegal routes into the colony. Were the Chinese authorities, beset themselves by starvation, seeking to find out what the traffic will bear? Or showing the discontented that, like it or not, they will have to stay put?



These are natural questions to ask, but no exact answers can be given. China has been short of food since 1959, when a cycle of natural calamities and poor harvests set in. Recent estimates of nutritional standards have varied greatly, ranging from the starvation level of 1,150 calories a day to the incipient undernourishment of 1,900. The latest arrivals in Hongkong have been hungry but not starving, but this fact, though interesting, is hardly conclusive. If people are starving in parts of China, they can be in no condition to seek refuge elsewhere.

The human problem of an undernourished population is bedevilled by politics. Officially, the Chinese government does not admit that there is a problem, and this non-recognition is itself as political a decision as America's non-recognition of the Chinese communist regime. Of the grain bought abroad, notably from Canada and Australia, during the past three years, much has gone to Russia, to settle debts, to Albania to keep a distant satellite friendly, to the Chinese army to keep it fitter and happier than the peasants who take the road to Hongkong, and to the cities most likely to be seen by foreigners. Russia is in no position to help, even if Mr Khrushchev thought it worth his while to aid ideological deviates. America still bulges with surpluses and the United Nations with good intentions, but the two are one in Peking's eyes and equally anathema. If this year's rains fall where they are needed and are not excessive, the Chinese people's plight may be eased. If not, the countries that have either space or food to spare (and Russia is among the first) may have to think fast and clearly.

Stones for Coventry

The new cathedral has its distinctive message for the modern church

THE consecration of Coventry cathedral this week is a great event for the Church of England, but its significance extends well beyond the confines of the Anglican communion. It constitutes a major breakthrough in the world-wide effort to present religion to the people in terms of contemporary art and architecture. Christianity may or may not be accepted as truth, but shrouded in out-of-date ecclesiastical architectural forms, masked so often by the shoddy and second rate, it does not nowadays look true in modern terms. The achievement of Coventry cathedral is to speak to this generation in its own idiom and to make religion once again seem relevant. Whatever disputes may rage over the precise place that Coventry should be accorded in the grand procession of European cathedrals, this fact will remain. And it could have happened in England in no more suitable place than Coventry, the Leeds of the twentieth century, a city stamped with the aspirations and failings of the age which has made it great and prosperous.

Architecturally, Coventry cathedral is extraordinarily simple. Sir Basil Spence, breasting the tide of criticism which for over seven years has threatened his creation with modification and at times even extinction, has remained faithful to the vision which first came to him, pacing the ruins of the old St Michael's in October, 1950. The juxtaposition of the old and the new, the pinnacle and the rock, suffering and resurrection, is satisfying both symbolically and architecturally. The porch connecting the two parts of the cathedral and framing the sky with its canopy and tall cylindrical columns is both beautiful and useful. Through it will pass a stream of men and women, moving from the factories to the city centre; glancing to the right through Mr John Hutton's soaring glass screen they will be able to join momentarily in the cathedral services. This openness to non-ecclesiastical life which would have so scandalised Pugin is a recurring theme in the cathedral, echoing along the unencumbered nave and reverberating in the chapel of Christ the Servant, a cylinder of clear glass which uses technological and industrial Coventry as a backdrop.

Simplicity of conception and construction are matched. The weight of the cathedral rests on the eighty-foot high double walls, an outer wall of pink Hollington stone (a real wall not a curtain), and an inner one of precast concrete blocks. A coarse textured grey-white plaster covers the inner wall which contrasts with the floor of black Kellymount marble from Ireland. Looking south, the nave with its concealed windows is a little austere but is saved from dullness by the graceful pillars of precast concrete which support the fan tracery of the canopy and taper down into bronze pegs only two inches square.

Sir Basil Spence, to whom a rood would be an abomination, has focused attention on the altar with its backcloth of Graham Sutherland's tapestry of Christ in Majesty. In colour and form this tapestry is masterly. The great central ellipse with its inner oval formed by Christ's clothing and four broken rectangles containing the symbols of the evangelists is best seen from the extreme end of the nave. On approaching nearer the serenity of Christ's face grows, but the clothing becomes more representational and takes on the distracting appearance of a woman's dress. The tapestry is so overwhelming that it tends to eclipse the altar, a long concrete table inspired by Leonardo's Last Supper at Milan. Graham Clarke's altar cross—perhaps the most beautiful single object in the cathedral—also suffers by half-merging into the Suther-

land crucifixion filling the lower part of the tapestry and forming the reredos to the Lady Chapel. The boys' wooden choir stalls projecting into the sanctuary are a further distraction which could have been lessened had they been made of Sir Basil's chosen material, metal.

COVENTRY'S glass, engraved screen and windows, has rightly been hailed as the cathedral's outstanding feature. Only one window is seen on entering, John Piper's and Patrick Reyntien's baptistery window, a great, glowing mass of red, blue, green and yellow glass, symbolising with great subtlety of colouring the light of the Holy Spirit penetrating the complicated activities of men. Below it stands the font, hewn out of a rough boulder from the valley of Barakat near Bethlehem. The ten nave windows, invisible from the entrance, are orientated south to form the angled window recesses. As the cathedral faces north this allows sunlight to pour in all day, but it also has a symbolic significance. Sir Basil's intention was that the full beauty of the cathedral should be revealed only to the communicant returning from the altar rails. The contrast between the rather sombre approach to the altar and the rich blaze of colour of the return gives deep religious feeling to the design.

The works of art in the cathedral rank high among its glories. They strike a death blow at the ghastly repository *bric-à-brac* which for so long has conspired to keep religion from worshippers. The cathedral authorities—*mirabile dictu*—gave Sir Basil a free hand and this act of sagacious self-abnegation has paid off. Great credit is due to the architect for his courage. Laurence Lee and Geoffrey Clarke were unknown students when Sir Basil selected them to design the glass for the nave. Epstein, who is magnificently represented by his powerful and compassionate St Michael, as well as by the captivating door knobs in the entrance porch, is not exactly the favourite son of the churchy.

Geoffrey Clarke's crosses are outstanding wherever they occur, as are Elizabeth Frink's little masterpieces. Her mitre crowns the towering bishop's throne, reducing the ordinary to his proper human size, and her bronze eagle, quivering with life, forms the lectern, ready, unlike the normal paralysed brass species, to pounce on any dozing member of the congregation. Outstanding also are Hans Coper's pottery candlesticks and the crown of thorns designed by Sir Basil for the Gethsemane chapel. Ralph Beyer's clear lettering in the nave reflects the genius of Eric Gill and John Piper's flowing vestments in the papal colours are both dignified and gay. The only weakness is Einar Forseth's Swedish stained glass which is in the worst tradition of Victorian glare, but is happily tucked away in a side passage.

THESE splendours, such is the corrosive power of original sin, have stirred up an undercurrent of criticism in Coventry itself. "Why this waste?" is being asked, as if it had not already received a reasonably authoritative answer. In fact, the cathedral has been astonishingly cheap, costing only £1½ million. The primary purpose of a cathedral remains what it always has been—to offer to God the best that man can give, and to enable the great religious ceremonies of the diocese to be conducted in a suitable setting of space and beauty. Yet Coventry is intended to do more than this. Like its medieval predecessors it will be a social and cultural centre. A theatre is incorporated in the nave itself and beneath the floor lies a network of rooms, including a library, a lecture hall and a broadcasting studio. Music and drama will centre about the cathedral.

Coventry is also intended to be a focus of the ecumenical movement, an idea fostered by the eccentric Bishop Gorton, which finds its chief expression in the grim crusader's tent of the chapel of unity. In June, a thousand-year lease of the chapel will be given to the Joint Council of Anglican and Free Churchmen. Yet another purpose of the cathedral is to support five chaplains who, freed from the distracting routine of parish life, will be able to concentrate on specialised work such as the industrial mission now being conducted by the Rev. Simon Phipps. These activities may help to win the hearts of down-to-earth Midlanders, but the cathedral's beauty should exercise its own sway. Its existence will challenge church builders everywhere to shake off their Gothic and tractarian chains and embark on the adventurous, if sometimes perilous, course of presenting religion to contemporary man in terms which he can understand.

Doctors Galore

Would an international body watching over access to Berlin help the patient, or just argue while he died of strangulation?

FOR fifteen years now, control of the access routes to west Berlin has been a question of life and death for the city. It is not surprising that there should be hot debate between Bonn and Washington about the composition of the international authority which, the Americans are now suggesting, should supervise access to the city and arbitrate over any disputes. The argument has been aggravated by one of Dr Adenauer's periodic bouts of alarm at the general posture of his Anglo-Saxon allies in east-west matters and by American irritation with his growingly unpredictable ways of asserting his views; and this has in turn stirred up all the latent doubts in German minds about Dr Adenauer's continued capacity for leadership. But this week the emotional dust has been settling a little. On Tuesday the Germans handed a counter proposal on the international authority to the Americans. The actual issue, the access authority, which should be a principal topic in the next round of exchanges between the Americans and Russians, deserves a closer look.

The American proposal is an attempt to find a means of bridging the gulf between the Russians, who assert that the German Democratic Republic already has the sovereign right to control access to Berlin, and the western powers, who assert that the allies, and the west Berliners, who do not even recognise the DDR, have rights which stem from the agreements reached with the Russians both at the end of the war, and in 1949, after the Berlin blockade. Why not, suggest the Americans, hand over control of the routes to Berlin to an international authority of some thirteen members, with five drawn from the east, five from the west, and three neutrals holding the balance? The inclusion of neutrals, it is argued, would take some of the sting out of the clash between east and west in Berlin, and subject the Russians and east Germans, as well as the West, to the critical gaze of world opinion. The inclusion of east and west Germany in the access authority would be a concession to the east German claim for wider acceptance in international affairs, without conceding or even raising the question of actual diplomatic recognition. The Americans know well that the gulf between themselves and the Russians on Berlin goes deep, but here at least is a plank which might be thrown across it.

Right from the start some features of the proposal caused alarm in Bonn; they were criticised quietly and sensibly by Herr Schroeder at the Athens meeting of the Nato Council, and loudly and annoyingly by Dr Adenauer at his press conference in Berlin on May 7th. The fears were systematically set out by Mr Sebastian Haffner in a characteristically carefully argued article in *Die Welt* of May 15th. For a start, Mr Haffner points out, a measure of recognition for the east Germans is in fact implied. Views are bound to differ on what degree of recognition may be really involved, but four other objections seem more pertinent. The east Germans would be judges in their own case, Mr Haffner suggests. They are the main people who are likely to obstruct the routes to Berlin; yet as members of the access authority they would help to decide on cases of obstruction. The west would also have a weak voting position in the new authority, he argues. The five western members would probably be less united than the five eastern ones and so less effective. And the neutrals would be insufficiently interested in the whole business to be really vigilant defenders of free access to the city. The three European neutrals (Sweden, Switzerland and Austria) whom the Americans propose for the tricky job of arbiter would be highly vulnerable to Russian pressure, and so reluctant to get into trouble by opposing the Russians on some crucial issue.

THE chaff of Mr Haffner's analysis plainly needs separating from the good grain. To argue that European neutrals would not be interested in the Berlin question or that they might lean to the eastern side is to push fears for Berlin's safety to excess. But there is obviously a real possibility that the Austrians and Swedes (though not the Swiss) could get into an awkward spot if they found themselves opposing Moscow in a major tussle between America and Russia. Some less exposed neutral umpires may have to be found. Plainly the role of the east Germans in the authority will also have to be examined carefully and will be a difficult part of the negotiation.

This week's proposals from the west Germans are an attempt at compromise between the original American suggestion and the doubts Mr Haffner voiced. What irked the Americans about Dr Adenauer's outburst in Berlin was the total absence of any constructive counter-proposals. Now the Germans have produced an answer. They have suggested that the four occupying powers shall remain responsible for access arrangements as they are today but they should be assisted by an "operating" body of neutrals who will take decisions by unanimous vote. The east and west Germans would help in a technical capacity without votes.

The difficulty is that this watering down of the American idea might make it even less acceptable to the Russians and east Germans. For some years they have been protesting that rule by the former occupiers is out of date. Perhaps the main flaw in Mr Haffner's arguments and in some of the current thinking in Bonn is the assumption that the present condition of Berlin is the best that can be had, and that it can be kept. Of course any international authority might provide opportunities for obstruction. Physically, after all, the east Germans and Russians are in a position to chop through Berlin's arteries today, either at a stroke or slice by slice. It seems better to seek to devise an arrangement which the Russians might conceivably operate with at least sporadic goodwill than to stand pat on a position which leaves the West vulnerable to communist harrying and involves incalculable dangers for both sides.

There is, of course, no guarantee that any reasonable western proposal for an international control authority would be accepted, or even considered, by the communists. In Prague last weekend Herr Ulbricht rejected the American ideas lock, stock and barrel. Allied troops must be withdrawn from Berlin, he declared. Sovereignty over the routes to Berlin belonged to east Germany alone. But opposition from Herr Ulbricht to moderate western proposals does not necessarily condemn them. He may have an interest in prolonging a state of tension in Germany—even to the brink of nuclear war—which Russia does not share. Before the proposal for an international control authority is dropped in disgust, it should at least be elaborated in a form which makes some attempt to meet Russian preoccupations, and tried out in one of Mr Rusk's encounters with Mr Dobrynin, the Soviet ambassador in Washington.

It would be both wrong and unfair to be too irritated with the west Germans for the resistance they have been putting up to this first modest American attempt to break the deadlock in central Europe. In the last six months, Bonn has moved some way from the rather rigid doctrines which immobilised German policies hitherto. The process is a painful one, and occasional cries of protest, like Dr Adenauer's in Berlin, are natural enough. The west Germans still have a way to go, if they are to play a helpful part in east-west exchanges. But this week's memorandum does reflect the recognition in Bonn (even by Dr Adenauer) that it is wiser for west Germany to co-operate with the United States and do its best to try to influence the unfolding east-west talks than merely to try to bar the way.

The upheaval in Bonn in the past fortnight also has a moral for west German domestic politics. As minister of the interior Herr Schroeder was not popular; he was regarded as one of Dr Adenauer's good boys. As foreign minister, he has in the past few weeks been acquiring the reputation of a man who can also stand up to Dr Adenauer in his errant moments and remind him of the painful necessities of German policy, like the alliance with the United States. And it is particularly encouraging that this show of ability to face up to the Chancellor successfully and adapt German policy to the new realities is winning him nothing but credit in his own country.

NOTES OF THE WEEK

NYASALAND AND RHODESIA

Mr Butler's Duty

Due back in London this weekend, Mr Butler seems to have left behind him in central Africa a distinct impression that Nyasaland will soon be let go. Indeed, Dr Banda will be in London during June; the discussions at the central Africa office that will then take place now seem likely to end in a plan for Nyasaland's secession from the federation that binds it to the two Rhodesias. At the same time, however, Dr Banda will be begged, earnestly and repeatedly, to count the economic cost—and, perhaps, to agree to loose links with a pair of economically (but not necessarily politically) associated Rhodesias. Mr Butler's disposition, in short, seems to be towards getting the best possible economic deal for central Africa. If this is to have any chance of working, the Government should look more closely than ever at Dr Banda. He is being allowed to secede because, indisputably, he has acquired a popular mandate to do so. For the same reason there is hope that, as head of an elected government, he will grow less intransigent.

There is only a shadow of such a hope in Northern Rhodesia. The rickety constitution under which the protectorate will go to the polls in October makes it a matter of luck whether or not a decisive account of the people's will can be given. Luck can, however, be given a helping hand by Mr Butler, whose duty it now is to remove all technical obstacles in the way of free politicking by the African parties.

This means, as Mr Kaunda has demanded, an impartial delimitation commission; freedom for African politicians to campaign wherever they wish; automatic registration of party branches; release of genuinely "political" prisoners (and opportunity for such people to vote); and removal of certain restrictions on the registration of voters. Registration, it seems, is more difficult for qualified Africans in Northern Rhodesia than it was in Nyasaland. A local newspaper has pointed out that Africans who have lived in the territory for decades, but were born outside it, must become federal citizens before getting the vote. This puts many educated Africans in a difficult position: either they have to register as citizens of the federation they are determined to break, or they lose their chance to vote against it. In small matters as in large, Mr Butler has much to do.

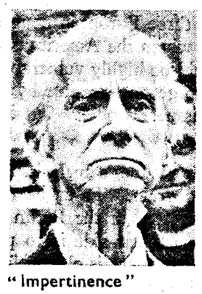
Roy and Rab

FRANCE

Dialogue of the Deaf?

Characteristically President Kennedy has not taken General de Gaulle's remarks on May 15th about Nato, the French deterrent and the role of the United States in the world lying down. At his press conference on May 17th the President voiced his disapproval of the independent French deterrent and spoke of the dangers of a proliferation of nuclear weapons. In a speech on May 19th he returned to the theme with greater emphasis. American willingness to bear "our full share in western defence is deeply felt, but it is not automatic." Europeans must not take it for granted. Put more crudely, if Europeans persisted in the kind of stubborn attempt to go it alone militarily which General de Gaulle was advocating, they might hasten the evil day of an American withdrawal from Europe instead of ensuring against it.

The President's fearsome words may have frightened some people, but there is no sign that they have affected President de Gaulle. In a speech at Limoges on May 20th he returned to some of his own pet themes. The Atlantic alliance was necessary, but France must have "its will, its personality, its soul, its policy." It now had the task of constructing a united Europe on the practical lines France had suggested.



On Monday Mr George Ball, the American Under Secretary of State, called on M. Couve de Murville, with the idea of urging him to accept Britain's application to join the common market. His plea was apparently a muted one, and rightly so. If the experience of the European Defence Community is any guide, forthright American advocacy of a European project is one of the best ways of stiffening Gaullist resistance to it.

Yet if President de Gaulle is not amenable to Anglo-Saxon persuasions, this does not necessarily mean he has definitely decided to block British membership of the common market. In Brussels the negotiations between the British and the Six in the past ten days have made little progress on two crucial issues—"zero tariffs" and "comparable outlets" for Commonwealth agriculture. But at the same time the Six are obviously making efforts to get their key men to Brussels to thrash things out. In Luxemburg on Tuesday the French blocked the starting of talks on British entry to the European Coal and Steel Community; but the trouble was mainly due, not to a French wish to obstruct the British, but to a dispute within the community between the advocates of an integrated Europe and *l'Europe des patries*. General de Gaulle's somewhat rigid picture of Europe does not expressly provide a place for Britain, but neither does it expressly leave it out.

LABOUR AND CND

Dissidents of May

Chiefly, it seems, because of Mr Crossman's advocacy, the Labour party's national executive committee decided on Wednesday not to expel Lord Russell (a) during his 90th birthday celebrations and (b) without giving him a chance to explain himself. These curious, if sentimental, grounds for a stay of execution were also extended to Lord Chorley, Canon Collins and, by implication, Lady Wootton — all, like Lord Russell, sponsors of a "general disarmament and peace" conference to be held in Moscow in July under the auspices of the World Peace Congress, a familiar communist-front organisation. The executive is obviously hoping for a belated change of heart from at least some of those on the carpet which would save it from the internal rumpus that getting to grips with the Campaign for Nuclear Disarmament would necessarily involve. All this is simply so much water off Lord Russell's back; even his sympathisers' request for an explanation he described as an "impertinence." The right-wing members of the executive (two of whom are said to have voted for outright expulsion) should not have to bide their time long.

"Impertinence"

The May Day rumpus is still reverberating at all levels. On Monday morning *Tribune* bought a full-page advertisement in the *Guardian* to give its report of the Gaitskell meeting in Glasgow, with strictures by Mr Michael Foot on the leadership's imitation of Moscow-style "democratic centralism"—by which Mr Foot means decisions by the parliamentary Labour party. What is not denied in *Tribune*'s account is that plans to stage an anti-Gaitskell demonstration were widely canvassed well in advance of the meeting by the Glasgow CND, the Committee of 100 and the Young Socialists. This hardly tallies with the favourite left-wing explanation that the barracking was spontaneous, prompted solely by the content of Mr Gaitskell's speech (i.e., those 10 minutes of it that were heard).

The party executive did agree on Wednesday to proscribe the independent nuclear disarmament election committee, an organisation of CND members which intends to run its own parliamentary candidates. CND itself has still to make its decision at its annual conference; if it climbs on the hustings officially it has been served clear warning that it invites proscription. As for the actual electoral chances of CND candidates, it is relevant that in Glasgow itself, with a population of one million, CND claims only 700 members.

2½ PER CENT

The Case for Probation

Still insisting on an immediate salary increase of more than 2½ per cent, the nurses have refused to resume Whitley Council negotiations until the management side has given an assurance that this is not ruled out. But nurses are no longer the only public service to feel they have been badly done by as a result of the Government's incomes policy—although they continue to have a monopoly of public sympathy. Last week, on the eve of their association's celebration of its fiftieth anniversary, probation officers were also told that they cannot have more than a 2½ per cent increase this year.

For probation officers the Government's decision is the more galling in that they have been hoping for a substantial revision of their salaries for some years but were made to wait until the Morison committee reported. The recommendations of that committee, published two months ago, were in fact as favourable as could have been expected: increases were proposed of between 30 and 40 per cent, which would have brought the maximum salary, outside London, to £1,350 for a trained probation officer and to £1,650 and £2,600 for the senior and principal grades. Because, however, immediate increases of this size would obviously not have been acceptable to the Government, the probation officers agreed in the joint negotiating committee to an interim settlement of 10 per cent.

Now this has been turned down. The Government would certainly have found it even more difficult to resist the nurses' claims if it had agreed to 10 per cent—and, like the nurses, the probation officers have been promised a wider review of their claim at the beginning of next year. But, unlike the nurses, the probation service is clearly short of recruits; in addition, it is having to train officers on the job and it needs to expand from its present strength of about 1,750 to 2,750 in the next few years in order to cope with the increasing amount of work put upon it. If there were ever a case in the public sector for the application of the right kind of flexible incomes policy, this is the one.

Break, break, break

Less deserving cases have been developing their techniques this week to break through the Chancellor's incomes policy in the dockers' wake. The theatre musicians have announced in a suitably grave voice that they are underpaid; and they have given notice that, unless the situation is remedied, they intend to withdraw their labour after the last performance on June 9th from every theatre in the West End of London—with the exception of Covent Garden and Sadler's Wells. Their employers (the Society of West End Theatre Managers) have offered them 9d. in the £1, or 3¾ per cent, but the musicians demand a rise of £5 on their present minimum of £14 for eight performances a week, and they are pressing for the employment of live musicians where records are now used in theatres.

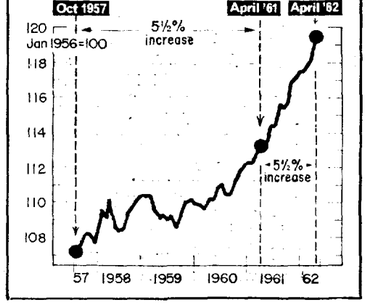
More subtly contemporary are the tactics of the 55 electricians at the British Motor Corporation's Cowley works, who downed tools and put 17,500 of their mates out of work while waiting for their claim to be settled—for 3s. 8d. a week each above the rise that the management had agreed to give them. Their view of the dispute has been that it is a fiddling amount, but a matter of principle; it does not seem to have occurred to them that the management would take the same view.

The most advanced technique of all is that employed by the civil servants, who are insisting that the doctrine of "comparability" should override every other consideration. Since the Treasury has gone on record as accepting this as a "primary" factor in the past, the civil servants' nagging on the point is a tricky one for a Chancellor pledged to hold the line in the public sector. If an incomes policy is to mean anything at all it should not countenance undiscriminating hoicks up of 5½ per cent all round regardless of the actual need to recruit, and conditions prevailing among particular categories of government employees. The arbitration court has now to make its choice between the stated policy of the Government, as employer, and the claims of "case-law" relating to the pay structure in the government service.

UNITED ARAB REPUBLIC

Arab Manifesto

Arab Nationalism, Arab Socialism and now, combining the beauty of the two concepts, an Arab Socialist Union. The new phrase is President Nasser's, created during the great five-hour speech with which, on Monday, he opened Egypt's National Congress of Popular Forces. The president was presenting a charter of action for the United Arab Republic; he was also, it seems, looking beyond Egypt in a bid to regain his lost leadership of the Arab people by defining what it is he can offer them. That the appeal was to people as distinct from most of their governments was brought home by his insistence that revolution is the only bridge to socialism and unity.



The charter provides inspiration, not working blueprints for socialism. But from the extracts so far available in London it is hard to disentangle what is firmly set on the far horizon and what is intended as a guide to present-day action. Insurance against old age and sickness, equality of the sexes are obviously, for Egypt, goals for the future; what, then, about freedom of expression or, say, the raising of local councils above the authority of the state executive? Two general principles emerge. First, the state should control all principal means of production, but people should still be allowed to hold and inherit a limited amount of land and property. Second, no single class of people should dominate the new co-operative society—but the former "capitalist exploiter" class no longer, it appears, count as people.

President Nasser's charter has been awaited with some anxiety. Substantially

RETAIL PRICES UP AND UP

The jump of 1.6 points in the retail price index between March 13th and April 17th was the largest for any month for six years. Part, but not all, of this rise must have been only seasonal; it was due mainly to higher prices for potatoes and other vegeables and increased local rates.

Over the last twelve months the index has risen as much as in the previous three and a half years.

less interest was aroused by the election, in February, of the 1,750 members of the national congress. The congress will be meeting this weekend to discuss the charter, each speaker being allowed 15 minutes. As the president recently told a Lebanese journalist:

> Actually, I do not believe in leaving matters to committees which meet, study and submit one proposal or another. I believe that it is more advantageous to turn over to committees clear-cut proposals which they can study, debate and amend.

The congress is unlikely to have much power even to amend. But it does, undoubtedly, represent groups that have never been honestly represented before. Probably its most useful function will be to act as antennæ for the presidency, keeping it more in touch than hitherto with what goes on in its revolutionary nation.

ARGENTINA

Wasted Years

HAVING failed to dragoon the politicians into submission, the Argentinian army has decided to do without them. On Sunday, the cabinet (which was nominated by President Guido, who, in turn, was appointed by the armed services) announced that parliament would go into recess until new elections are held in about a year's time. Meantime, the president will govern by decree. Lamely fighting back, the politicians turned up on Tuesday at the chamber of deputies to declare that this was all very unconstitutional. A cordon of police let most of them into the building, but tried to prevent some of the 47 Peronist deputies, whose election in March started the government on its slide, from getting in too. The incident ended in turbulence.

Tears for the collapse of representative government in Argentina should not be too freely shed. The economic and political record of the seven years since the fall of General Perón is lamentable. Despite the intermittent calls for a new economic policy of austerity and national self-sacrifice, the country's finances are in a wretched way. There are huge budget and trade deficits, the government is unable to pay its employees their salaries or pensions, the absurdly corpulent railway system has only been nibbled at, and the standard of living of the poorer classes has gone steadily down. Politically, the government could not be called democratic. When, through Dr Frondizi's over-confidence, the Argentinians were at last given a chance to vote for the people they wanted, a large number of them showed at once that what they wanted was to end the present state of affairs and return to Peronism.

Argentina's blessings have been squandered. Compared with other Latin American republics, Argentina is an advanced country. It is well ahead in economic development, its educational system is progressive, it is plentifully endowed with natural resources, and not vexed with racial problems. Whatever General Perón's failings (and they were manifest), he succeeded in smashing through the social taboos that strangulate some of the other republics. But these fortunes and advantages have not been greatly exploited by the leaders who, over the past seven years, have been fighting their endless tactical battles. Sadly, there is no evidence that the armed services, themselves scarcely less divided than the politicians, will provide enlightened leadership.

PAPER BULLETIN

analysing all sectors of the paper and board industry.

Special features in Current Issue :

- **THE COMMON MARKET - I;**
- **THE TREND OF BRITISH PAPER OUTPUT;**
- **TRENDS IN THE FIBRE-BOARD PACKING CASE INDUSTRY.**

Regular market analyses and statistical data on production and trade in the main pulp and paper producing countries.

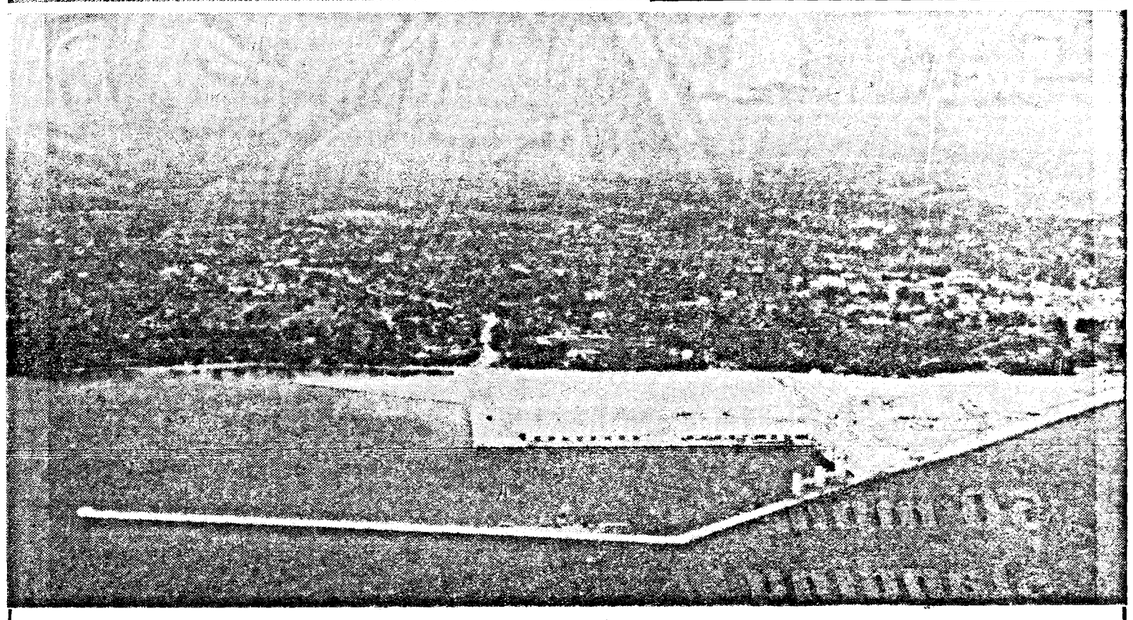
THE CHURCHES

Anglican Liturgy

THE three hundredth anniversary of the Book of Common Prayer in its 1662 form has been marked by some very reasonable suggestions by the Primate that the Church of England should be given a modest degree of autonomy in ordering its own liturgical affairs. The need for reform of the liturgy to bring it more into accord with contemporary thought and feeling is obvious. As the Archbishop of Canterbury has pointed out, it is hard for some modern worshippers to pray in the sustained literary periods of Elizabethan prose. In any case, the whole of Christendom has been affected by the ferment of new ideas about worship and liturgy, and the Church of England is no exception.

The principal legal change proposed by the Primate is that the two houses of Convocation, together with the House of Laity, should be given power by a two-thirds majority in each body to authorise alternative forms of service for experimental use for a period not exceeding seven years. A further seven years' grace could be given by the church bodies, but after that the authority of Parliament would be needed for any permanent change in form. All that the House of Commons would be asked to do, therefore, would be to give ultimate sanction to the accepted practice of the church. This would still preserve the state's last word, which is inseparable from continued establishment. As the proposed changes are so practical and so minor there is little fear that the *odium theologicum* involved in the 1928 Prayer Book debates will be generated once again. That is more likely to come when the Commission on Church and State makes its recommendations on ecclesiastical appointments.

Meanwhile the Prayer Book (Alternative and other Services) Measure promises to give the church a more flexible instrument for gradually reforming her liturgy than she has had so far. The danger of a once and for all reform is precisely that the reform will be tied to the age which produced it. The 1928 Prayer Book is already dated. But the potential partial re-writers of the Prayer Book would do well to heed the Primate's warnings, first that the note of mystery should be maintained, and second that any re-writing should be in good English.



Presbyterian Confession

THE other established church—the Church of Scotland—has also been looking ahead, to the dismay of its conservatives, at the General Assembly in Edinburgh this week. The retiring Moderator, Dr Craig, stood unembarrassedly by his visit to the Vatican which is, however unimportant in a strict ecumenical sense, likely to prove one of the major contributions to the social relationships of the catholic and presbyterian communities in Britain in this century. It is particularly important that this lead should be followed up locally, as a fair section of the kirk seems prepared to do. The kirk has also been confronted with a resolute attack on antediluvian sabbatarianism, presented by its church and nation committee. Since this questions one of the tenets of the Westminster confession of faith, it plainly marks a break with the diehard past. It may also be significant that the new Moderator, Dr Davidson, has for long been an advocate of revising the Westminster confession in modern terms.

The kirk is still sensibly wary of the Anglican conditions for formal union (the Church of Scotland already allows Anglicans to take its communion without any similar concession from Canterbury). But the presence in Edinburgh of the primate of the Swedish Lutheran church has been a salutary reminder of how close full intercommunion could be. Both the Church of Scotland and the Church of England are in intercommunion with the Scandinavian Lutherans—although not with each other. The beam here seems very much in the Anglican eye. Perhaps it will get smaller as a result of the Anglican-Presbyterian Conference to be held at Durham in July. This conference is not intended to formulate definite schemes of re-union but the question of unity will be, as the tactful official phrase puts it, "under consideration."

Plessey Laboratory
ILFORD
DESIGNED & BUILT IN 11 MONTHS

Barbados Harbour ***COMPLETED 4 MONTHS AHEAD OF SCHEDULE***

The £4½ million deep-water harbour at Bridgetown, Barbados, scheduled to take four years to build, was completed by Costain with a saving of four months. Here at home, Costain completed for The Plessey Company Limited a laboratory which was designed and built in less than a year. These two projects, completely different in every way — size, purpose, location — illustrate the scope of the Costain organisation.

LONDON SUBURBS

Maybe It's Because . . . ?

DR HILL'S geography is puzzling. His final definition of the outer boundary for the future Greater London Council excludes another four urban districts *in toto* (in addition to the three let off before the municipal elections), and another two—Chigwell and Epsom—are offered the judgment of Solomon: that is, the main built-up areas, including the Hainault housing estate in Chigwell, to go to the GLC and the remainder to placate the jealous county council. (Just what will local patriotism make of that?) In all, some 325,000 suburbanites have been relieved of having to call themselves Londoners and of fulfilling any responsibility towards the one place to which, in one way or another, most of them owe their living. Although Dr Hill rightly dug his toes in over another eight districts, this did not need too much moral courage: two of them actually declared that they wanted to be in the GLC area despite their county council's objections.

The Ministry of Housing and Local Government has so far had little to say about the criteria for these decisions. The authority Dr Hill has really had to placate is Tory Surrey, and to do this he seems to have decided to surrender those spinal developments that reach most conveniently into the green belt, although their physical attachment to the London conurbation can hardly be disputed. He can have paid little attention to where the populations concerned are actually employed. Banstead and Esher, each with a relatively high proportion of commuters, are both left out, but Yiewsley and West Drayton (with claims to be just about the most self-supporting of the fringe areas) stays in. In giving up Cheshunt, the one sop to Hertfordshire, the minister has overridden the Herbert commission's argument that the Lea valley development is primarily a London problem; both Edmonton and Tottenham have housing estates in the area. Finally, by releasing Staines and Sunbury, Dr Hill has set himself another little problem. Both these urban districts belonged to Middlesex, which, of course, is going to disappear anyway. So who will now get the waifs—predatory Surrey? Or are there no imperialists in Bucks? This has not been at all a happy exercise, and the backwash may yet be felt, not only when the GLC comes into being but also when the cries go up for exemption from some of the more imaginative proposals by the Local Government Commission elsewhere in the country.

FISHERY LIMITS

And Now Britain?

ANOTHER flutter ran through the fishery lobby when Mr Leburn, one of the Scottish under-secretaries, declared last week that the possibility of Britain extending its fishing limits was "under careful review." Mr Leburn had been pressed yet again to enforce the Herring Fishery (Scotland) Act of 1889 which would exclude foreign vessels from areas beyond the three-mile limit in the Moray Firth and elsewhere. Since this act was held (in 1907) by a later government to be contrary to international law, it is not enforced against foreign vessels although it is against British ones. Hence this particular recurrent outcry.

In the past ten years, while British distant-water and middle-distance trawlers have been conducting rearguard actions against the twlve-mile limits off Iceland and Norway, no government could well cave in to the herring men's demands, and it would be appalling tactics for anyone to think of doing so now, with the disputes over the Faroes (with Denmark) and the White Sea (with the Soviet Union) still unsettled. But it is already perfectly plain that a minimum of six miles is the best that can be got anywhere in the north-east Atlantic where there really are fish, and that probably (as off Norway) a ten-year phase-out period for trawlers between six and twelve miles is going to become standard practice. This was, in fact, the American-Canadian proposal that Britain voted for at the last, indecisive law of the sea conference in 1960. As an easy gesture of retaliation, the case for a general extension of British limits obviously has its appeal.

But the real, long-term need is not for the protection of local interests (whether they are Icelandic line-boats or Scottish herring-boats); it is to conserve particular fish stocks against the danger of general overfishing. This has always been the British argument against the flat imposition of national limit lines irrespective of biological factors, and it may have to be voiced again if other countries go beyond twelve miles and start claiming rights up to the edge of the continental shelf. One corollary to a common west European market in fish and fish products should be common rights of access to fishing grounds. If there ever is to be progress in this direction, it will not be helped by the British Government succumbing now to the protective pressures it has condemned in everyone else.

CAMBODIA AND KOREA

Death to Traitors?

WHILE Laos drifts and south Vietnam fights for its life, the other component of France's former Far Eastern empire, Cambodia, remains at least outwardly calm, united, neutral and sovereign. This does not mean, however, that the communists are not doing their worst. Last week fourteen of them, including Non Suon, the leader of the party—which in Cambodia

ENGLISH AND IRISH PRISONS

Captain Crofton's resignation of his position as Chairman of the Directors of the Irish Convict Prisons—a step we fear partly necessitated by the measure of economy which deprived him a year ago of one of his colleagues, partly by inevitable ill health—is a serious blow to the public interest. It is the misfortune of the better methods of treating criminals—as indeed it is of all the highest methods of dealing with men generally—that they depend much more on individual wisdom, tact, and sagacity, than comparatively mechanical systems. As it was long ago observed of political constitutions that the corruption of the higher is much worse than the corruption of the lower, so is it certainly of penal and reformatory systems. The truer and nobler they are, the more do they depend on the individual sense and judgment by which they are directed and inspired. Sir Joshua Jebb's system for the English prisoners has this advantage, and this only, over Captain Crofton's in Ireland, that it is far less dependent on the individually superintending judgment of Sir Joshua Jebb than is Captain Crofton's. . . . It would be the principal merit of Sir Joshua Jebb's system that it would not miss Sir Joshua Jebb. . . . But the very merits of the Irish plan are those features in it which make its efficiency depend very largely indeed on the hand which guides the helm. It is not a routine system, but an individualising attempt, which succeeds in the hands of men able to reach by a kind of instinct each convict's better nature, and which might fail deplorably in the hands of men with none of this swift instinct. It has been Captain Crofton's great merit and great fortune to succeed eminently in the choice of subordinates of this class. . . . If they do not understand the tempers and capacities of the convicts individually,—what are their dangers, what their virtues, what the motives which have the happiest power over them,—the comparative breadth and force of the whole scheme is lost at once, and it degenerates into something worse than the gang-mechanism of Chatham and Dartmoor. On the English system, as we have said, the rise from class to class is at once a routine rise which can be arrested only by very exceptional misbehaviour, and is not of much importance to the men, because it does not in fact put into their own hands the power of materially shortening their own sentence. Whatever term is remitted to them is remitted merely by rule, and only violent or extremely reprehensible conduct will delay it. But on the Irish system, the rise from class to class is really a difficult matter, involving hard voluntary effort, and rewarded by a real and considerable shortening of the term of penal servitude.

English or Arabic?

JORDAN is thinking of having its own university. Hence the visit last week to London of a Jordanian royal commission charged with studying education in the Middle East, Europe, Britain and the United States. But between the dream and fulfilment are many rubicons to cross. Who, for example, will pay for it? A killjoy, indeed, might ask if a country so small and dependent on foreign aid should really be so ambitious. Yet the project is well in line with a general Middle East tendency to localise education. In the past three years Egypt has opened two new provincial universities to supplement its three old foundations in Cairo and Alexandria. So, even if Arabs knew no frontiers and had no political quarrels, a university in Jordan would not now be out of place.

But where, when and how—if at all—and what kind of university? These are the questions that the Jordanian royal commission seeks to answer. The only proposals so far are those of a British team of experts who were last year invited to Jordan to make a preliminary study. And these, though thoughtful in detail, raise some problematical points. Little fault is likely to be found with their practical approach to curricula which relate the country's resources to the kind of people it needs. Jordan is a farming country with a wonderful range of antiquities. Agriculture and archæology are therefore seen as the foci round which to group science and arts faculties. But medicine and engineering are thought not to warrant the outlay in equipment for the number of students training.

The siting of a university and the choice of teaching language are much more debatable issues. The proposed position, just outside Amman, is considered by many Jordanians to be too disturbingly near the capital's political flurries. Some speak for Salt, more detached, but still in the heart of east Jordan and so within range of the bulk of the population. Others still plead for Jerusalem, where once it was hoped that there might be a sublime supernational university to which middle easterners from everywhere would think it a privilege to come.

As for the teaching language, the British experts call for English and thus send an anxious tremor through every nationalist heart. Jordanians, already conscious of being politically isolated, may hesitate to drift as well from the mainstream of Arab educational development. All over the Arab east universities are turning to Arabic, sometimes even for science and medicine. (Teaching is often in Arabic even when textbooks are foreign: there is all the difference between reading a textbook slowly and taking in all the nuances of lectures and discussion.) This is not just for nationalist reasons, but because foreign language teaching handicaps students who are not linguistically gifted but may have great talent in their own subjects. Their difficulties have grown more marked since secondary schools—as in Jordan—gave up English language teaching in general subjects, even in their higher forms. Arabic is seen as opening up opportunities to every type of student; English as favouring an élite.

Were a university placed in Jerusalem, where so many tongues are spoken and foreign institutions abound, teaching in English might not be unseemly. But in deepest east Jordan—just how English could they decently be? The British experts point to Beirut university as offering a healthy English teaching precedent. But that is an American foundation with an international character, whose degrees are often a passport to a well-paid job abroad. A national university in Jordan whose aim is to produce useful citizens, not necessarily cosmopolitans, is not a true parallel. But the goodwill that prompts the comparison should not be overlooked. If Jordanians would learn in English they could almost certainly count on help from British universities, not least in the provision of teaching staff. And by this—the quality of its teachers—their venture must stand or fall.

A suggestion, however, made in a letter to *The Times* by Mr Eric Fletcher, MP, that London University might sponsor a Jordanian university as it sponsors universities in the Commonwealth sounds almost like killing with kindness. Jordan, in its own right, deserves the most generous and sympathetic aid that British universities can give it. But to offer it the Commonwealth treatment is, not only politically clumsy, but linguistically misconceived. Commonwealth countries contain their many and varied languages within their own frontiers and each can decide, without prejudice, on the merits of having its higher education anglicised: English can even be a bond in a country where many dialects are spoken. But Jordan's language is that of a great system of Arab nations who, however disunited politically, are united in cultural pride. The problem of finding teachers for a Jordanian university would certainly be great and would have, in the end, to determine its language policy. Yet Jordan might find an uncommitted way by having no rigid policy, using Arabic or English empirically, according to the staff it can muster, but with perhaps a bias towards English in a subject like archæology, in which it might hope to enjoy some international prestige.

is known as the Pracheachon—were sentenced to death for plotting to overthrow Prince Sihanouk's government. The Cambodian chief of state, whose admirable if intermittent leadership keeps his countrymen in his debt, has never hesitated to speak his mind about communism and its local practitioners.

Luck has supplemented the prince's ability, and his realism has put it to good use. Unlike Vietnam, which was partitioned, and Laos, which had two provinces in effect amputated, Cambodia emerged in one piece from the Indochina war. The Laotian and Vietnamese communists achieved recognition during the Geneva conference of 1954, but the Cambodian communists were ignored. Another favourable circumstance is that the Pracheachon so clearly takes its orders from Hanoi and not from Peking (still less Moscow). This helps Cambodia to keep its neutral balance. The point was presumably taken in the right quarters last January when Prince Sihanouk, in a speech commenting on the arrest of the Pracheachon men, specifically absolved Peking from responsibility for the alleged plot and put the blame squarely on north Vietnam.

In south Korea, too, the death sentence is being used as an instrument of policy, but in very different circumstances. On Sunday, six soldiers were sentenced to death in Seoul for misappropriation of army funds. This must be seen as part of the continuing campaign against corruption initiated by the military dictator, General Park. There are, however, signs of a softening. Two weeks ago, General Chang, the original "front" man of the military regime, was released from gaol; and last week, 13,000 prisoners were pardoned. General Park, who celebrated the anniversary of the coup on May 16th, evidently feels more secure as time goes on.

Gracious service—her life's pursuit She's hostess on your

JAL JET TO JAPAN

In Japan, the supreme accomplishment for a girl is mastery of the arts of hospitality and courtesy. Your hostess on your JAL polar 'Courier' flight to Tokyo has learned from childhood to take pride in obliging others. Smiling, kimono-clad, she welcomes you aboard the new, mighty Fan-Jet DC-8. As you relax amid the tasteful elegance of the traditional decor, she waits on you with o shibori hot towels for your face and hands, serves you with exotic Japanese delicacies as well as the finest Western cuisine. Her one wish is your enjoyment of a most serene and memorable journey. London-Tokyo polar flights are twice weekly. The service is direct and there is no change of aircraft en route. JAL also operate frequent Trans-Pacific flights to Tokyo from the U.S.A. and a comprehensive service throughout S.E. Asia.*

BOOKS

Mr K's Aeroplanes

A History of Soviet Air Power

By Robert A. Kilmarx.

Praeger. 366 pages. 42s.

ANYONE essaying a complete, integrated and fully documented study of the history of Soviet air and rocket power from Tsarist days to the Soviet astronauts and space-flights of the early 1960s must know that his attempt will inevitably be punctuated by missing data and uncertain and conflicting statistics. This said, Dr Kilmarx has produced, on the whole, a scholarly, worthwhile book; it is to be recommended both to students of the subject and to the broader public interested in Soviet affairs or in aviation in general.

The book is scholarly because it is carefully documented. But the author himself does not appear to be a real aviation scholar. He occasionally makes a comment that seems either curious or a sort of *non sequitur*. In writing, for instance, about the effect of the Korean war on Soviet air thinking, he says that close-support air operations in Korea could enable Russia to "evaluate better the larger scale contribution atomic weapons might make to a future war," and also that "perhaps the number of UN aircraft downed by Communist ground fire encouraged [Soviet] advocates of surface-to-surface missiles." One would have thought that both East and West were still in the throes of evaluating primitively the contribution of atomic weapons to war and were getting progressively worse at the evaluation. It is hard to see how the Korean war could have contributed to Soviet air thinking under this heading. Then again, when Dr Kilmarx writes of the undoubted technical and tactical weaknesses of Soviet long-range bomber operations in the second world war, he mentions the poor planning, bad navigation and inaccurate bombing and adds that most of the operations were flown at night "without fighter escort." This was true of most of the best night bombing by the Royal Air Force or the Luftwaffe. Fighter escort and well-planned accurate night bombing attacks have no fundamental relationship.

But "A History of Soviet Air Power" clearly represents the fruit of much serious and worthwhile study and is a valuable addition to the growing bibliography of books on the subject of Soviet aviation. It underlines the fact, belatedly recognised by the West, that for the last twenty-five years the Soviet air force has been further advanced technically than was generally realised outside Russia. For instance, the Russians flight-tested their first jet engine as early as 1940, and, as Dr Kilmarx also points out, many of their fighter and short-ranged bomber aircraft of the second world war bore comparison with their equivalents in the Luftwaffe, the RAF or the United States Air Force.

On the whole, Dr Kilmarx preserves a sense of balance in assessing the weaknesses and strengths of Soviet air power. He covers a wide range of topics, including airborne forces, helicopters, strategic air defence, long range bombers, rockets, transport aircraft and space weapons—the latter inevitably in a rather speculative way. Usually he writes about them straightforwardly, historically and factually. But every now and then a politician seems to emerge from the text to confuse both the writer and the reader. For instance, Dr Kilmarx says that the Soviet civil aviation programme provides a cover for the further development of advanced military bombers. In fact, the reverse is true. Soviet jet bombers like the Bear, Bison and Badger preceded Soviet jet transport planes, civil or military; the supersonic jet Bounder bomber has arrived before a supersonic transport plane. There has been no secret about this, for these machines, jet transports and bombers, have all been paraded publicly on Soviet Air Days. The Tupelov 104 jet liner that you might fly in from London to Moscow is, in part, the child of the earlier Badger bomber and not the father.

As regards bombers, it is not quite clear which of two very divergent figures Dr Kilmarx would have his readers take as the current strength or potential strength of the Soviet long-range bomber force. In one place (page 254) he says that recent articles have estimated it at from 150 to 200 aircraft and then a little farther on (page 257) states that until new weapon systems are available, the Soviet long-range air threat will reside primarily in a force of about 1,500 bombers. But this is a rare case of what seems to be inconsistency. In general the author weaves a clear, sequential, pattern of trends and facts about a subject on which it has been rightly and often said that there are no experts but only degrees of ignorance. To point rather heavily at certain lacunae in "A History of Soviet Air Power" is to try to warn the lay reader. It is a good guide to most aspects of Soviet air power, about which too few books have been written and too many people, even in high places, have only the vaguest of notions.

Siamese Twins

Memoirs of a Special Case

By Chaim Raphael.

Chatto & Windus. 207 pages. 18s.

MR RAPHAEL leads two lives, successfully intertwined. He was brought up as an orthodox Jew, and he is a Hebrew scholar, pious in his devotion to his people and their customs. He is also, and very consciously, a modern Englishman: he has had a successful career as an Oxford don, a civil servant and a writer of thrillers (under the gentile pseudonym of Jocelyn Davey). This combination seems to lead to no conflict; he writes as a happy man, who gets pleasure from both his incarnations. But it does lead to a deep and constant preoccupation with the fact of his double nationality: not so special a case, perhaps, as he believes, but certainly an extreme one.

In this book he brings together some half-fictionalised memoirs or half-biographical stories—one hardly knows which, and it does not matter—all on this enthralling theme. They are written with charm and style, but with a little too much schmalz. The characters, other than Mr Raphael's own pleasant and civilised self, are from romantic stock; and they are all, Jews and goys alike, bathed in a somewhat rosy glow. But they are only the background to the author's real theme: of his changing feelings, at different times and in different countries—schooldays in the north and west countries, Jerusalem under the mandate, and more briefly London and New York during and after the war—about his two selves. There may be more rounds to come, but one has a strong impression that the Englishman in Mr Raphael has pretty well killed the Jew by kindness.

Female Labour

Woman in Parliament

By Jean Mann.

Odhams. 256 pages. 21s.

HISTORY is unlikely to record Mrs Mann, who retired from Parliament at the last election, as one of the great political figures of our era. Some will recall the campaign she waged to safeguard children from accidents at home; others may remember that it was apparently her vote which saved Aneurin Bevan from expulsion by the Labour Party's National Executive Committee in 1955. But the significance and sense of these memoirs is that they are essentially a view of politics straight from a typical Labour party woman's section.

While Mrs Mann is always fun to read and brings a rather engaging style to her task, it is only fair to say that her work lacks a firm structure. Proof reading, too, could be better. We are inclined to wander backwards and forwards over a patchwork of time and topics. On the way, however, we pick up many interesting crumbs from the political high table. Mrs Mann is very insistent that Aneurin Bevan, not George Brown, was the main figure in that House of Commons dinner scene with Khrushchev, and she attributes the spotlight of publicity that was focused on the present Deputy Leader of the Labour party to the efforts of the "red rebels" to deflect attention from their adopted hero's role. Like most

people, Mrs Mann is inconsistent towards her contemporaries. She has firm likes and dislikes. She liked Nye Bevan, while remaining earnestly critical of the damage he had done. She likes Jennie Lee. She paints a human picture of women MPs and has a pat on the back for everyone she describes, Tory as well as Labour ; Barbara Castle gets a good word. Mrs Mann is by implication rather less charitable towards some male contemporaries.

While she gives an understanding account of an MP's life, there is a rather pharisaical tendency to judge harshly those who may not be pulling their weight. She is ambivalent about intellectuals ; she seems to like them in politics when their theories and diagnoses accord with her own, but when an intellectual is, for instance, advocating a radical approach to moral issues with which she disagrees, she can be very scathing. But, prejudices and all, Mrs Mann has the common touch ; she understands issues which trouble voters. Whether she really understands the changing society of today is another matter. At least she tries.

View from the Top

The Commonwealth

By Patrick Gordon Walker.
Secker and Warburg.
408 pages. 36s.

THE Commonwealth sometimes seems to be all things to all men. The British Empire in disguise, the basis of a new world Third Force, a closely-knit economic grouping, or an association of states with certain historical and institutional similarities bound together for their own advantage: all these views and many others have their adherents. Mr Gordon Walker supports the last-named of these views. Admirer of the Commonwealth though he is, he recognises that a closer political or economic association is unlikely. He is also well aware that the romantic, or Beaverbrook, picture of the Commonwealth is dangerous, because it fails to recognise the absolute equality in status of all its members. What remains after the end of British paramountcy, the end of a common foreign policy and diplomatic representation, the dismantlement of sterling area controls, and the growing divergence of members' interests and policies ? Mr Gordon Walker believes that two linking factors are crucial—the English language and Parliamentary democracy. Because these underlie the Commonwealth, its members have been able to construct a network of consultation, discussion and advice, which extends from prime ministers to middle-aged civil servants, and embraces such subjects as telecommunications, agriculture and relations with the United States.

Reading Mr Gordon Walker's book, one is impressed that the Commonwealth works as well as it does, that countries increasingly absorbed in their own problems maintain and value their relations with other members in different continents. But it is difficult to be as sanguine about the future as he is. The English language, once independence is well established, ceases to be thought of as the language of imperialism. The danger is rather that standards of teaching the language are falling, especially in Asia, and the younger leaders do not come from homes in which English is regularly spoken, as many of the veterans did. As for Parliamentary democracy, Mr Gordon Walker's arguments on Pakistan and Ghana are a shade disingenuous. On Pakistan, he writes: "Parliamentary democracy was the only kind of democracy with which the people of Pakistan and the people who must ultimately devise the constitution were familiar." This, of course, begs the question whether Pakistan will in fact be a democracy at all, and that is surely a more important question than whether its system is Parliamentary or Presidential. On Ghana, he relies heavily on the 1960 constitution to establish the basically democratic nature of Dr Nkrumah's state, without asking how such a constitution is affected by the increasing tendency in Ghana for the state and the ruling party to become identified.

This, of course, is not to say that democracy is impossible in Afro-Asian countries, an attitude Mr Gordon Walker rightly condemns. But it is to say that institutions in the Commonwealth may diverge, straining its cohesion. Already there is a tendency for certain members to decree their own conditions of membership. Instances are Tanganyika's statement that it would not want to be a member if South Africa retained its association with the Commonwealth after becoming a republic, and the threat, as yet unconfirmed, that Ghana would leave if Britain were to join the common market. Such ultimata, however justified, may break up the whole association.

So may British handling of the remaining intransigent colonial problems, above all Central Africa. This book deliberately omits the colonies from consideration, as it omits the common market, though these are crucial to the Commonwealth's immediate future. For though the Commonwealth has moved further and further away from being Anglocentric, as the author explains, British behaviour is the touchstone of the attitudes toward the Commonwealth in the newly-independent countries. India and Canada were able to separate the British fiasco at Suez from their own membership of the Commonwealth to some extent ; but is it conceivable that Ghana would have done so if Suez had happened a year or so later? And here one encounters something without which no description of the Commonwealth can be complete: popular attitudes. As an ex-minister, Mr Gordon Walker is understandably interested in inter-government relations, senior civil servants, military heads and the like. But any association as amorphous and informal as the Commonwealth in the end stands or falls on the public opinion of its member-states. It is here that the new Commonwealth of which Mr Gordon Walker writes has yet to take root, not as a bilateral relationship with Britain, not as an uneasy successor to an Empire, but as a genuine multilateral association. Mr Gordon Walker deserves congratulations for a realistic, unsentimental yet sympathetic history of the Commonwealth and assessment of its present role. But it is a bird's eye view from the top ; the worms may yet turn.

Requiem for a Sovereign

The History of the Gold Sovereign

By Geoffrey Duveen and H. G. Stride.
Oxford University Press. 123 pages plus 18 pages of illustrations. 30s.

THIS book is much better produced and much more readable than the general run of books on coins ; in spite of this tribute it will certainly be valuable to collectors. It is the first to be written exclusively about sovereigns, and the authors have made good use of a lot of hitherto unpublished material from the records of the Royal Mint. Numismatically they cannot be seriously faulted, and descriptions of designs and of minting processes are full and accurate. To an extent they have written a brief history of the Mint, and especially of the more notable and skilful people who worked there, during the period academically known as modern history. But the book is also in a broader if still rather a special way an excellent history book, and should commend itself to historians, in that the authors have tried unusually and pretty successfully to place the fortunes and changes of the gold coinage against their proper background of political and economic causes.

Sovereigns have nearly always been beautiful coins, desirable aesthetically as well as for more obvious reasons ; the first to be issued, in 1489, set a fine standard. By the time sovereigns ceased to circulate, in the first world war, Pistrucci's superb George and Dragon had decorated most of the reverses for a century. Lloyd George was evidently not concerned with such frivolous thoughts when he proclaimed in 1914 that

> anyone who for selfish motive, of greed and excessive caution or cowardice goes out of his way and attempts to withdraw sums of gold and appropriate them to his own use, let it be clearly understood that he is assisting the enemies of this country.

Nowadays few people see a sovereign, and many of the young have never seen one. They are still occasionally minted, largely for export, and as it is always comforting for a reviewer to be able to show off by finding an error he will point to one in the inscription attributed (on page 92) to sovereigns of the current reign: "Britt: Omn:" only appeared on a handful struck in 1953 for national collections.

It is unlikely that gold sovereigns will ever again be used as normal currency in the United Kingdom, and this little history book is a fit and not too solemn requiem.

The Conservative Political Centre is a semi-detached institution created by the Conservative Party in 1945 to help to develop a better understanding of politics and to stimulate political ideas and discussion.

Details of its educational activities, its membership scheme, its Bookshop and its publications may be obtained on application to the address below. Four of its recent or forthcoming publications are listed opposite.

A Thousand Russian Years

Lord and Peasant in Russia: *From the Ninth to the Nineteenth Century*

By Jerome Blum.

Princeton University Press. London: *Oxford University Press.* 666 pages. 100s.

SHOULD their financial position ever enable the universities of this country to implement the recommendations of the Hayter report in the field of Russian studies, the many historical works of synthesis and the occasional studies in depth that have come from the pens of American scholars such as Vernadsky, Florinsky, Treadgold, Raeff and the author of this book among others will stand them in good stead.

Professor Blum unfolds and analyses the thousand-year-old history of the relationship between Russian lords and peasants. He sees this relationship as a "function of the political and economic evolution" of Russia. The demands of the state on the one hand and the long-term trends of economic growth and contraction on the other were the two controlling forces that in turn or in interaction shaped the mutual relations between lords and peasants. Although the working of these interrelated forces was in evidence from the earliest stages of Russian history, it became pronounced from the fifteenth century onwards, and ultimately led to the enserfment of the peasant by his lord and to the subjection till 1762 of the lord to obligatory service to the state. The growth of serfdom in Russia went *pari passu* with the evolution of autocracy, but the growth of absolute government as such did not bring about serfdom. It "only channelled and intensified already existing tendencies." Moreover Russia was not the only country in which serfdom emerged when it had largely disappeared in western Europe; its experience was shared by other countries of eastern Europe.

After 1649 when serfdom, though still loosely defined, became state law till 1861 when, under the impact of liberal ideas and political events, it was abolished by statute though still viable as an economic organisation, the vicissitudes of the lord-peasant relationship continued to be affected by the interaction of economic and political factors. Given this broad approach to his subject, it is not surprising that Mr Blum has written not just a monograph on landlords and peasants in Russia but a history of Russia from a particular point of view. There is no denying that the history of a country, where even by the end of the nineteenth-century a bare 13 per cent of the population was urban, can with impunity be written in terms of landlords and peasants. Nor is it possible to write narrowly about the landlord-peasant relationship in Russia, which was at the very core of the political and economic evolution. But was it really necessary to include so much background detail? The student of Russia has easy access to most of the sources quoted by Mr Blum; even the general historian without knowledge of Russian can obtain much background material for the period till the seventeenth century.

However, this is only a minor criticism of an important book in which the author comes to grips with fundamental issues of Russian history that are the subject of controversial interpretation.

Theory v Application

Money, Trade and Economic Growth

By Harry G. Johnson.

Allen and Unwin. 199 pages. 25s.

MOST of this book originated, as the preface explains, in a series of lectures given at a refresher course for Pakistani economists. Thus the first half provides, in a hundred pages, a survey of modern international trade theory that will be a gift to the advanced student. It is concise, authoritative and clear, dealing in turn with the mechanism of balance of payments adjustment, comparative costs, customs, unions and the relation between trade and growth.

Granted that this theory is all good stuff, what can we use it for? Here Professor Johnson is not very helpful; indeed, he rather gives the impression that the function of the real world is to illuminate theory instead of the other way around. It is disconcerting to find the chapter on trade and growth ending with a single paragraph which lists the complications that have been avoided in the preceding analysis by confining it to a world with only two countries where only two goods are produced.

Clearly, theory of this sort can never give a direct answer to a policy problem. A theory that took account of sufficiently many complications to be usable by, say, the United Kingdom negotiators in Brussels, on the other hand, seems impossible of achievement. The theory of international trade, therefore, is not like the potter's wheel or the surveyor's theodolite. Its function is nearer that of holy writ, to guide thinking in the right general direction and to confound error, for only the analytically pure at heart can avoid the simple fallacies to which ordinary mortals are prone. Those that are not with it are against it, since everyone has some theory implicit in his ideas, and most such implicit theories are inconsistent and therefore wrong.

With one exception the rest of the book is less important, though it never falls below the high standard which Professor Johnson has led his readers to expect. The exception is the revised version of an address to the American Economic Association commemorating the twenty-fifth anniversary of Keynes's "General Theory." Once again, this is a godsend for students. It points out some of the main characteristics and limitations of Keynes's great work in relation to subsequent contributions to economic theory.

The book ends with two lectures on the economics of opulence. The first of these explains how interesting it would be to put economic theory in different terms; this is merely superior after-dinner talk among economists. The second illustrates the proposition that not all professors of economics at Chicago are members of the Chicago School.

The Underdeveloped

The Backward Society

By R. Frost.

Longmans. 246 pages. 18s.

THIS book on underdeveloped countries is intended for a wide and unsophisticated audience. The discussion and description are general, the style is colloquial. The references to facts are seasoning, not substance.

Mr Frost is an economist in the International Bank for Reconstruction & Development with considerable experience of the development of the "poor and backward countries." He has set down his reflections on their problems, his criticisms of their policies and his prescriptions for what they should do to help themselves. He examines alternative patterns of organisation of national economic activity, placing more or less reliance on bureaucracy or the market, the objectives and principles of the allocation of factors of production and the obstacles to their efficient use in backward economies, and foreign trade. Backward countries lack capital "in the shape of goods and trained technicians"; these can be obtained in exchange for exports; it is therefore on production of more and varied exports that the "backward" countries should concentrate. To import capital goods, however, requires not foreign exchange alone but also saving. "The opportunity for progress" which Mr Frost describes in his concluding chapter is "the occurrence of a boom in the prices of [a country's] principal exports." The rapid rise in the income of exporters "provides an opportunity for making substantial savings," which can be used to advantage or wasted. This is the main theme of the book.

Mr Frost deliberately does not discuss foreign investment and foreign aid (he does not seem to draw much of a distinction between the two). A subsidiary connected theme is that more should be left to the market and to private enterprise.

In the course of the book, Mr Frost makes a number of shrewd observations and criticisms, but these sometimes lack many qualifications which ought at least to be suggested. No one would disagree with the statement that "whatever assistance the backward countries received their progress still depends upon their own effort, initiative, self-discipline, organisation and government." But it is unfortunate that a book which is addressed to the uninformed, and is meant to stimulate interest in the problems of the underdeveloped countries, should leave an impression of obstinate wrongheadedness on the part of these countries, and no sense of what has been achieved and learned in the past decade. It is also unfortunate that there should be little or no hint of the part played by the advanced countries, which are partly responsible for past errors, through their methods of aid-giving and their advice, and whose co-operation in trade (leaving aside their aid) is essential to the success of the policy suggested here.

Scotch Original

Agricultural Sir John

By Rosalind Mitchison.

Bles. 300 pages. 35s.

HE was that inexorably Scottish product —the bores' bore. Prodigious, didactic, unsquelchable, indefatigable Sir John Sinclair of Ulbster belongs to a long, lean line, the progeny of, one supposes, the superlative bore of all, the Admirable Crichton. His financial memoranda to Pitt and Dundas, his monstrous correspondence, his management of the (Sinclair-created, housed, dominated and distracted) Agriculture Board, his published Works, Reports and Codes are each, in their way, unspeakable. And yet there are sound, as well as merely solid, memorials. There is the First Statistical Account of Scotland, that necessary (and sometimes absorbing) mine. There is, still visible, the face and form of Caithness, from Thurso town out into the couthie fields under that broad, chill sky. There are the reverberations of the agricultural revolution quickening through late eighteenth-century Scotland at the direction of the reforming lairds.

It was the work of the Amateur and the Patriot in the age when these were qualities. When Sinclair died in 1835, as Mrs Mitchison writes, "the period when moderate intelligence, landed wealth and conscientious hard work could lead to fame was passing to an age of more professional ability." The verdict is rightly applied to the best of a generation of Sir Johns. This is an engaging and skilful book, good on the man, brilliant in such vignettes as the Caithness election of 1789, and soundly based on family and estate papers. It is recommended reading for outsiders drafted by government Whips into the galleys of the Scottish Grand Committee: Sinclair the parliamentarian would have run *that* if he had only thought of it.

Father of Parliament?

Simon de Montfort

By Margaret Wade Labarge.

Eyre and Spottiswoode. 324 pages. 30s.

SIMON DE MONTFORT caused controversy in his own time, and still does. Did he lead the baronial opposition to Henry III from selfish motives? Or was Stubbs right when he wrote "The idea of representative government had ripened under his hand."?

The facts of de Montfort's career are unusual and dramatic. He was born and brought up in France, but came to England in 1230 to claim his father's earldom of Leicester, which had been seized by King John. He succeeded in his claim, and rose in Henry III's favour, until in 1238 he married the king's sister Eleanor, widow of William Marshall. His marriage led to a long and bitter dispute with Henry over his wife's financial claims on her brother, and Simon gradually became the acknowledged leader of the increasing opposition to the king. When civil war broke out in 1263, he led the baronial forces. His victory at Lewes left him in control of the king and government; but at Evesham, a year later, he was defeated and killed by the future Edward I.

This new biography is an attempt at a reappraisal of de Montfort. As such it has something to offer, for Mrs Labarge takes the view that Simon's motives were largely self-interested. She lays considerable emphasis on the complicated dispute over Eleanor's dowry, the administration of Gascony, and the ambitious character of Simon. These sections of the book are detailed, and contain material of considerable interest.

Mrs Labarge is not so good on the wider reasons for baronial discontent. This is a pity, because the period is one in which the precarious equilibrium of the feudal state was lost, and it is therefore particularly interesting. Faced with an inefficient king, and an administration from which they were excluded, the feudal magnates tried to produce an alternative system of government. The Provisions of Oxford were the result of the same forces which had produced Magna Carta, and reveal in the same way the baronial view of administration. More important even than this, the period saw the beginnings of an embryonic parliamentary assembly, which included knights and burgesses in an attempt to widen support for the baronial aims. Whether de Montfort was responsible for this or not, his claim to be so is part of his legend and deserves full discussion.

Naval Strategy

The Strategy of Sea Power

By S. W. Roskill.

Collins. 288 pages. 25s.

THE Royal Navy has been singularly fortunate in finding within its own ranks a historian of such high quality as Captain Roskill to chronicle, examine and criticise the role it played in the last war. Equally fortunately for the navy and naval history, Captain Roskill has now broadened the horizons of his thought. Naturally enough his examination of naval strategy is primarily based on British experience; this is not so restrictive as it sounds and through careful distillation it has produced a short book that is a pleasure to read.

Captain Roskill is too modest a man to claim the originality of perception of such predecessors as Mahan, Corbett and Richmond; what he does is to draw upon their work with critical appreciation and subject their findings to the test of experience in modern war. His great gifts lie in exposition and comment. They appear not simply in the broader theme of the clash between the maritime and continental schools of strategy but in the more detailed passages linking strategical principles to tactical applications. The reader would naturally expect the chapters on the last war to be perceptive, but on opening the book he could not have anticipated that it would contain, for instance, the clearest exposition of the Battle of Jutland that has been written in the compass of a few pages. Because he writes with a just sense of perspective, Captain Roskill cannot be accused of special pleading in his comments on current strategy.

Saturn's Land

The Planet Saturn: *A History of Observation, Theory and Discovery*

By A. F. O'D. Alexander.

Faber. 474 pages. 63s.

THE publishers here extend, by the pen of a recent Director of both the Saturn and Jupiter sections of the British Astronomical Association, their valuable series on the solar system to "a history of observation, theory and discovery" of what, even in the smallest refracting telescope, assuredly seems the most bizarre of our fellow-planets. Dr Alexander takes us back 2,600 years, and forward thence through all the stages of advance in our knowledge of Saturn and his rings, satellites, "white spots," etc. It is heartwarming to realise that an excellent vaudeville comedian, the late Will Hay, was so good an amateur astronomer that he made as recently as 1933 one of the big forward jumps in our knowledge of the planet.

It is also worth consulting this beautifully illustrated and documented work—much of it hitherto unavailable in English—to learn how much practical astronomers still depend on the hand-sketches of amateurs all over the world. The drawings made by Italians in the last twelve years, using small telescopes, show up on Plates XXI and XXII much better than even the formidable photographs made on the 200-inch Mount Palomar reflector. Dr Alexander need not have been so modest about his work or style in his preface. This is going to prove a standard work of reference for both experts and laymen.

LETTERS

Growing Pains

SIR—As a relative newcomer to the University of Keele, but one who felt the objects of the college (as it then was) sufficiently important to justify uprooting myself and my family from a settled position in Cambridge, may I protest strongly against the implications of your special correspondent's reference on page 665 of your issue of May 19th to "the numerical doldrums into which Keele has fallen" and his suggestion that this "can probably be written off as an unfortunate and introspective case"?

These remarks suggest that the growth of this university has been arrested and that its planners have been unmindful of the national need for additional university places. The facts are quite otherwise. In spite of the difficulties that have attended the establishment of a new university in the past decade we are now ahead of the original programme, and the proposals which were submitted to the University Grants Committee for the coming quinquennium were to expand by a further 50 per cent. Naturally, a small university makes a proportionately small contribution to the provision of new places for the prospective students of the next decade. But numbers are not everything, and the pioneers of Keele believed that they could make an important contribution to higher education by meeting the needs of that group of students who want a wider but yet more integrated course of training than is provided by most of our sister universities. My colleagues and I believe that we are continuing to do this and that we can do it better if our numbers are not too great.

It is, of course, much more exciting to speak of proposed expansion in ten years to a student population of 3,000 than to remember the difficulties of carrying out our small but important pioneering experiment in the years of even greater financial stringency that immediately followed the ending of the war. But it should not be forgotten that the freedom with which the present new universities are able to plan their development owes much to the new principles for which the Keele pioneers fought so bravely twelve or more years ago when they insisted that we should have power to grant our own BA degree and to settle our own curriculum.

Even if one accepted your special correspondent's easy assumption that the country needed nothing but big universities, surely it would be ungenerous to "write off" what has been achieved at Keele? Many of us believe that the country needs small universities as well as big ones, and even in the United States with its very large universities there are well known and highly regarded institutions of about the present size of Keele.

Our programme for the coming five years was an expansion from 800 to 1,200. The fact that the Treasury grant now announced for 1962-67 falls far short of what we asked will clearly imperil that expansion. Increased private generosity and even more support from charitable foundations will be needed if we are to achieve our object, but such support depends on some measure of acceptance that our aims and our achievements are worth supporting. Such confidence in Keele might easily be upset if your special correspondent's ill-considered remarks were left unchallenged and it is for this reason that I am asking you to publish my belief that the Keele experiment has been worthwhile and is a success.—Yours faithfully,

HAROLD TAYLOR
Keele, Staffs Vice-Chancellor

Hongkong Textiles

SIR—In your issue of May 5th your Hongkong correspondent gives a distorted and misleading impression of the conduct and situation of the Hongkong textile industry which could seriously damage the industry's commercial relations in international trade. We trust you will allow us to correct the record as far as is possible within the space limitations of your correspondence columns. There are many features of your correspondent's criticisms which are completely refuted by the facts but to reply to them in detail would require more space than the original article. Certainly in our view the article did not present a fair and balanced picture.

As you are aware, the Hongkong industry has voluntarily restricted its exports to the United Kingdom since February 1958. Its undertaking to do so has been loyally carried out and has now been extended until December 31, 1965. Hongkong cooperated fully in last year's textile negotiations in Geneva because it too desires to see international trade in textiles put on an orderly basis free from arbitrary action by importing countries. Under this agreement the volume of exports for the year 1960/61 is not in any sense either a ceiling or a base level, as your correspondent suggests, but is relevant only as the minimum below which an exporting country should not be asked to exercise restraint. Moreover the long-term agreement, to which Hongkong also accedes, recognises that sudden requests for restraint may disrupt the trade of exporting countries and urges participants to use the restraint procedure sparingly. There is no question of "reckless Hongkong exporters" rushing to exceed a "base" level of goods. What happened was that in November, 1961, President Kennedy remitted to the Tariff Commission a proposal by the US Department of Agriculture that an import levy of 8½ cents per lb be levied on imports of cotton manufacturers. American importers, anxious to forestall this levy, sent an increasing flood of orders to Hongkong. It would, we suggest, be too much to expect that the individual mills reject these orders. Hongkong did not initiate a flood of textiles to the USA; it was the natural reaction to a flood of orders from the USA. And the orders were prompted not by any desire to violate the Geneva agreement but by the normal commercial practice of buying before prices rise.

The Hongkong industry does not object to the fact of the American action, but to its practical aspects: firstly, the delay in making a request leading to an abrupt request for immediate cessation; and secondly, the requests include certain categories where the "disruptive" effects of Hongkong exports is hardly credible and certainly has not been demonstrated; for example, the requested level of restraint for sweaters and cardigans was 7,055 dozen and for raincoats 10,831 dozen.

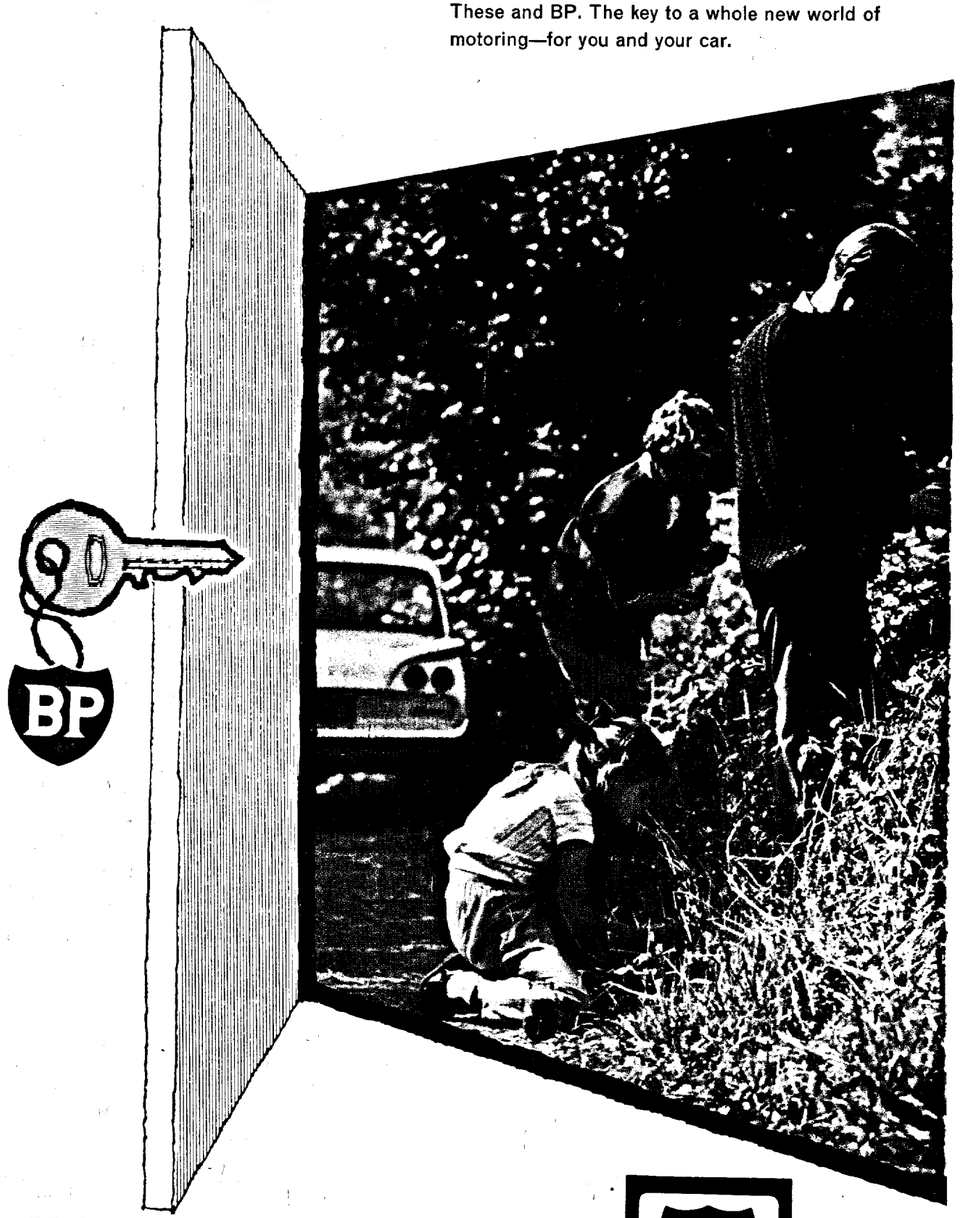
We should like to take this opportunity to confirm that the Hongkong textile industry remains in favour of a multilateral arrangement which will protect both importing and exporting countries from disruption of their trade and industry, while not putting obstacles in the way of the expansion and readjustment of world trade in textiles. We believe that in the light of these agreed aims, your correspondent's criticisms of the Hongkong industry are unjustified and uninformed.—Yours faithfully,

SIK-NIN CHAU
Chairman, Federation of Hongkong Industries

W. C. G. KNOWLES
Chairman, The Hongkong General Chamber of Commerce

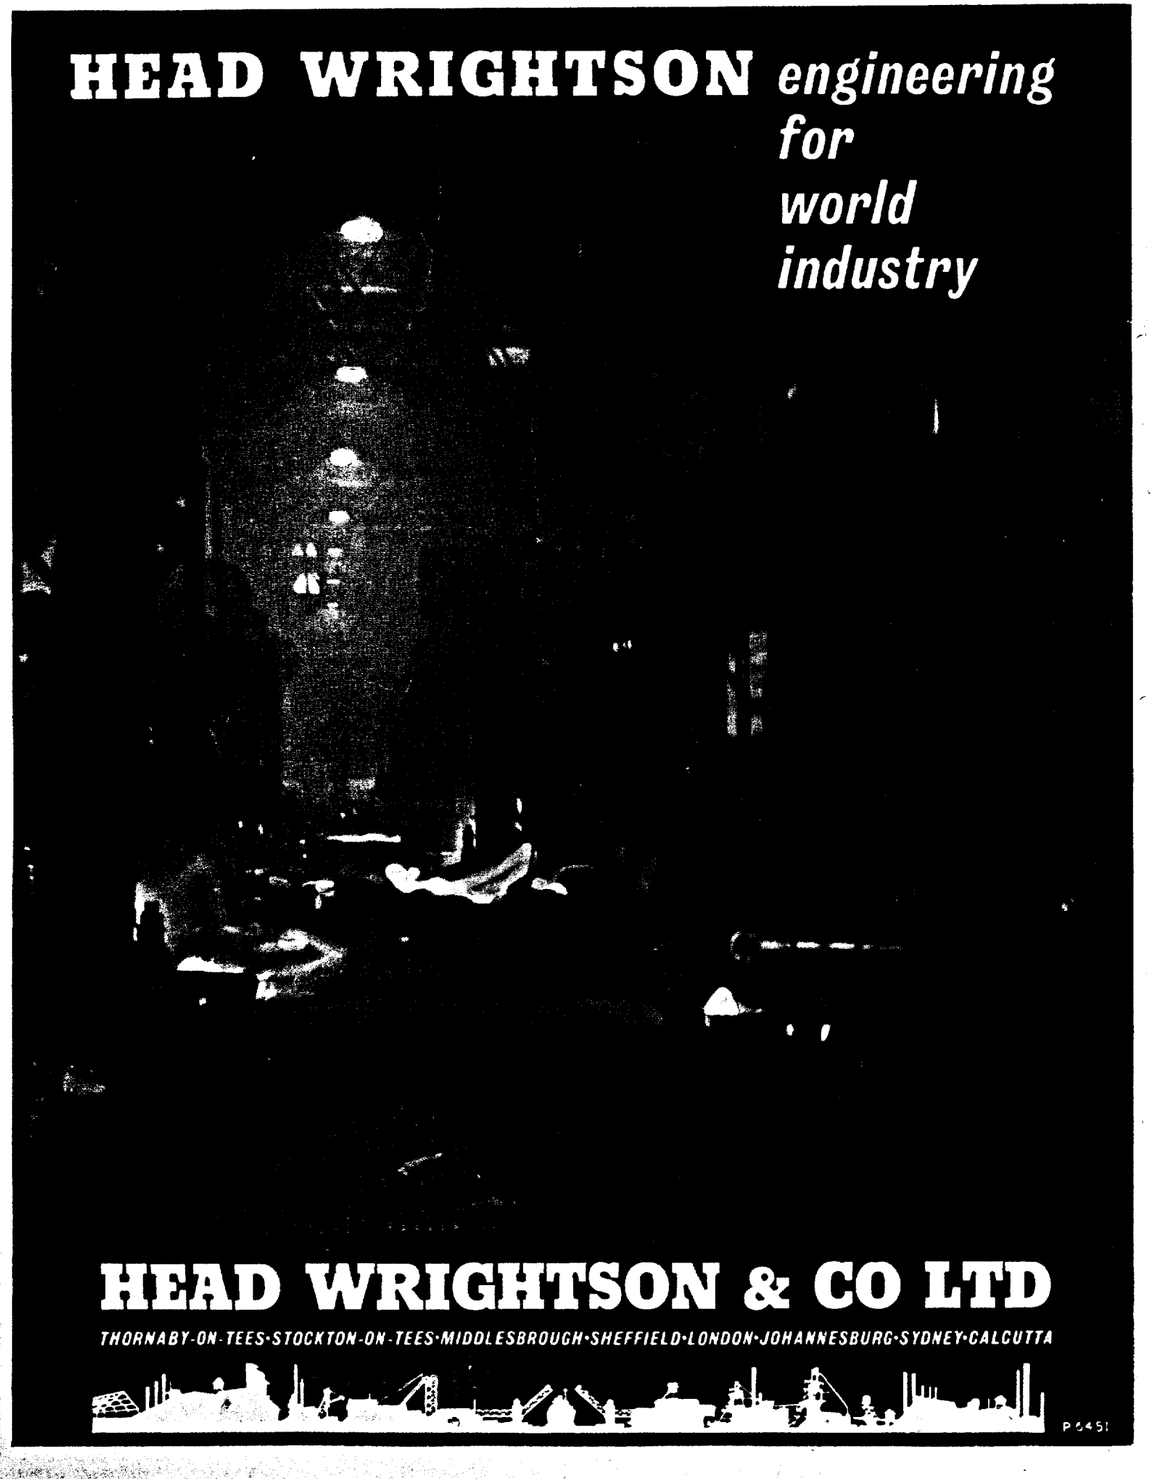
Maximistake

SIR—"Limitation" of the number of cabs licensed in London (your issue of May 19th) was removed in 1833, never again to be reimposed. Drivers were first licensed in 1838 (when "hackney carriage" was statutorily defined as one "plying for hire") and their numbers have never been limited.



Had you made a study of the Hindley report (1939), the Runciman report (1953), and the report lately made public by an independent committee of technical experts set up in July, 1961, to examine the existing taxi regulations and to advise "what, if any, modifications could be made in them consistent with the need to safeguard the public," quite the opposite conclusions must have been reached.

The ultimate responsibility for assessing "the public interest" is Parliament's and members have, in these three reports, sufficient factual information at their disposal to make a studied judgment. Since no private member's bill can reach the statute book unless the members, themselves, so desire, and since this is not a political issue, only the justice of our plea can place it there. *Magna est veritas et praevalet.*—Yours faithfully,



M. M. MELINSKY
London, SW9

BP IS THE KEY

At every BP Garage, this you will find. The responsive petrol—BP Super-Plus. The most advanced motor oil in the world—BP 'Visco-static'. These two are the key. These and BP. The key to a whole new world of motoring—for you and your car.

Things go better with BP SUPER-PLUS

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Green Fantasia

FROM OUR SPECIAL CORRESPONDENT

Along the precarious border

GREEN belts are often regarded as perhaps the most laudable innovation of British town planning. But what actually happens in a green belt? The recent findings of a skilled American observer* underscore the point that all that glistens on a map is not green on the ground. In actual fact population is growing at well above the national average in green belt areas around the largest cities. Within the London green belt live a quarter of a million recent arrivals, who according to the Abercrombie plan should not be there. Of course in the absence of planning controls these figures would be very much higher. The difficulty of preserving green belts is that these are precisely the places where people most want to live.

More surprising perhaps is Professor Mandelker's discovery that the Ministry of Housing is not quite as tough as it pretends to be in upholding green belts. It seems that local planning authorities may allow as many as half of development applications, although most of these are minor changes that are reasonably consistent with green belt principles. Of the refusals that go to appeal, the Ministry allowed 30 per cent of green belt cases in one home county compared with 46 per cent for non-green belt cases, and in a West Midland green belt area Ministry consents arose from 20 per cent (1955-7) to 42 per cent (1958-60). In view of the strong presumption that development should not be allowed in green belts, this hardly looks like firm Ministry backing for the policy.

But although quite a lot of development goes on in green belts, there are no clear rules as to what will be permitted and Ministry decisions often seem inconsistent. In general, however, building is much more likely to be allowed in a village (particularly in a large village) than in the open country; the development of spare sites within a village ("infilling") is more acceptable than peripheral growth; and the building of one or two dwellings is a more likely proposition than a larger scheme. These guidelines certainly work against large-scale or conspicuous developments. It is in victories over "spec" developers that the green belt policy has shown its teeth.

In fact though, planning control follows much the same lines in other rural areas than green belts. Administration is sometimes (not always) more lenient, but pressures are also weaker. Green belts are specially prized partly because of their promise of extra protection, partly because of their defensive role against the outgrowth of the big cities.

Clearly the wider a green belt, the harder (in general) it becomes to defend. The logical Scots have run a very narrow but effective green belt around Edinburgh. The muddled English prefer more diluted green belts and recent extensions in Buckinghamshire make the London green belt over 20 miles wide in places. Further extensions may follow as exurbanites and country lovers seek fresh cover against new development threats. But they can hardly hope to seal up so large an area when London is bursting at the seams.

What is needed over green belts is a little more clarity and realism, and the following three points might help to achieve it. First, it is useless to try to stop a city growing simply by encircling it with a green belt. If employment in a city grows the job-holders must live somewhere, and a tight green belt increases the numbers who must live a long way from their work. The growth of employment in offices and service trades is particularly marked in large cities, pre-eminently in London. There is everything to be said for offsetting this employment growth by stimulating the dispersal of industries and routine office work, but until these policies are effective, a tight green belt is bound to produce longer journeys to work, higher land prices, and scarcer housing.

Secondly, why have a green belt at all around the smaller cities—the Norwiches, Brightons and Swindons? It is impossible to check the growth of the big conurbations by manipulating minor extensions of minor towns; it would take 200 schemes like Haverhill or Bletchley to make any impression upon the London "overspill," and in any event industries and people will not move to hundreds of little places. If the planners are in earnest about curbing London, Birmingham and Manchester, they ought to give every possible encouragement to the growth of the solid, middle-sized provincial towns—and a green belt is the opposite of a stimulus to growth. Ordinary planning controls would still exist to guide development, and too much "green belting" will also blunt their use.

Finally, the design of green belts merits fresh attention. They ought to include (as they often do not) attractive accessible areas of the countryside with recreational value; conversely, duller land might be excluded except where it seemed desirable to establish a clear break between cities (for example, between Birmingham and Coventry or between Nottingham and Derby). The rules which govern development within a green belt ought to be clarified. The Ministry's general order of preferences is fairly sensible, but it needs applying more consistently and firmly. This will only be possible if housing pressures are more realistically met within urban areas.

At present green belts are being rapidly gestated by county planning authorities, and few of them have received final statutory approval. The danger is that the Ministry will let the counties play with green belts as if they were attractive but harmless toys, without insisting that they be realistic and workable in the national context. This would be a pity. Green belts are only one weapon in the town planners' armoury and are no substitute for routine control; but they could play a worthwhile part in shaping the landscape of the emerging urban regions.

* Green Belts and Urban Growth by Daniel R. Mandelker. University of Wisconsin Press, $5.00. (Obtainable from Town and Country Planning Association.)

Brothers at the Bank?

FROM A CORRESPONDENT

QUIET strife is still simmering between the bank staff associations and their everlasting rival, the National Union of Bank Employees. This autumn—possibly—the International Labour Office will consider a complaint put before it by the Trades Union Congress, alleging that the staff associations contravene an ILO convention, signed by Britain, which outlaws "workers' organisations under the domination of employers . . ." or financially supported by them. The staff associations, while conceding privately that their foundation some forty years ago may have been designed to counter the threat of the newly-formed guild (as it was then), most strenuously deny that they are now dominated by anybody. In particular they point to the salary increases (during the pay pause) that they have won by resort to arbitration.

Meanwhile the NUBE has put in a ludicrous claim for a 30 per cent increase in bank pay: and some employers, faced with a chronic need to compete for young entrants with other industries, have simply given more money anyway. Nobody could fail to agree that bank salaries are negotiated in an atmosphere of Gilbertian confusion. But it needs a fairly vivid imagination to see the events of the past six months as a planned operation by the managements, acting through their tools in the associations.

It is a good while now since the Midland staff association wound itself up as a gesture of disapproval of the way it was treated by the management. This was probably the first sign of real militancy in the internal bodies. In 1953 the Lloyds staff association negotiated an arbitration agreement with the bank, and since then several of the other associations have followed suit, including the Midland association that was formed after the first one died. The last half year has seen the queer logic of these separate arbitration agreements come to full flower. For last November, after the Lloyds association had taken the bank to arbitration, managers in that bank were awarded a 5 per cent increase, and chief clerks 2½ per cent, both back-dated to January, 1961. And last March another arbitration award gave all Midland staff, irrespective of rank, a flat 2 per cent, also back-dated to the beginning of 1961.

These concessions have not been allowed to disturb for long the near-uniformity of bank salaries. The timing of it all has been very ragged, and the exercise is not yet complete, but the end-products that have so far appeared show only minor differences. Thus, in April Barclays gave 5 per cent, 2½ per cent and 2 per cent, all back-dated like the others, to some extent combining the Midland and Lloyds awards. Westminster had given the Lloyds awards in January, but not the flat 2 per cent which had not then been born. In the meantime an additional 3 per cent, dated from April 1 this year, had come into the picture, presumably in connection with the cost of living, so that Barclays gave out its 3 per cent within a few weeks of its larger announcement, while Westminster killed two birds with one stone by combining the 3 per cent with the 2 per cent for its unappointed staff. Then Lloyds joined in with 3 per cent plus 2 per cent, but as senior staff as well as the unappointed had this increase, Lloyds managers have had in all a little over 10 per cent, compared with a little over 8 per cent for their opposite numbers in other banks.

The salary scales, which run from entry to about the age of 30 for men and rather longer for women, will presumably now range from just over £300, for men and women alike, at 17 to a little over £900 for men and about £650 for women, at 31. (In comparing one bank with another the incidence of pension contributions has to be remembered; the banks with non-contributory pension schemes pay proportionately less than those with contributory schemes.) These scales, however, apply only to those clerks unsuitable for promotion to higher ranks; one new entrant in every two, it is said, has a chance of becoming a manager.

MANAGERS' salaries are not published, except for minima on appointment and a vague "over £4,000" or "over £4,500" at the other end of the range. The minima for new managers should now be £1,700 or £1,750 instead of the £1,600 advertised before; the top figures may not change dramatically, for there has been a cut-off figure of £3,000 for some of the percentage increases; but a round £5,000 would be a good figure for a recruiting advertisement, if there are enough managerial salaries to justify it.

The staff associations that went to arbitration can take some pride in their success, and the individual bank-clerk will of course count his blessings; but his pleasure must have been tempered by the vaguely ridiculous atmosphere surrounding it. The banks must be less than happy at the further support provided for the impression that all questions of pay are centrally settled. (Probably the top men in the clearing bank managements are not averse to a quiet word with each other—and certainly the staff associations talk together informally in their central council.) The staff associations that did not go to arbitration, or indeed have no arbitration agreements, must wonder what their members make of it all—when they hear, for instance, that their colleagues in Williams Deacon's, where there is no staff association at all, are gettinfg the same rises as the rest. The union cannot be delighted by increases stemming from arbitration agreements which it has called useless. Was it chagrin that prompted the 30 per cent claim, which achieved remarkable press and broadcasting coverage although (or perhaps because) it had so little touch with reality?

Arbitration awards and the reluctance of other banks to let competitors' salaries get out of line have produced results for bank staffs that they can hardly have expected in an atmosphere of wage restraint. But the fact remains that bank clerks, who have been free these many years to choose the kind of representation they like, have remained obstinately divided. The squabbles between the two sides have been neither edifying nor useful to the staffs.

Have they been useful to the managements, on the principle of divide and rule? Surely not even that, in the long run—certainly not at the moment; of late the bankers must have been thinking wistfully how much easier it would be to negotiate—jointly—with one body, whatever its name, union, Central Council of Bank Staff Associations, or an alliance between the two. Each side blames the other for the repeated failures to reach a *modus vivendi*. With the coming of computers, the need for a five-day week to attract staff, and the approaching possibility of workers being paid by cheque, stirring times are certainly ahead for bank clerks. It seems high time to bury this hatchet, which is all the more hurtful for being rusty with age.

Henrietta's Hampstead

FROM OUR SPECIAL CORRESPONDENT

WHAT precise element it was in the climate of the early twentieth century which prompted people to utopian social experiments is still a matter for argument, but that there was one there can be no doubt. How else can one explain the existence in the whirligig mill of Britain of such oases as Letchworth and Hampstead Garden Suburb? There they are, neat, green, floral in the heart of the commercial desert; cherished and passionately beloved by their inhabitants; the despair of their wretched directors, grubbing along on peppercorn ground rents and fixed dividends; and the source of many a cool calculation in the boardrooms of property developers, to whom these planned and pretty wide open spaces are a reproach and a goad.

Not long since, Letchworth Garden City fought bravely to a victory in the House of Commons over the takers-over whom it thought were about to become oppressors of the ideals which founded it. Now it is Hampstead Garden Suburb's turn to rejoice

in the fall of the mighty, whose techniques are not yet proof against the ferocious counter-attacks of threatened Gardeners. In the High Court on Tuesday, Mr Justice Pennycuick found against a resolution of the controlling trust, made last December, to accept a take-over bid from Suburb Leaseholds Ltd. for the third of Dame Henrietta Barnett's brainchild not already owned by that subsidiary of Messrs Cotton's and Clore's City Centre Properties. The National Trust, who brought the petition, the Residents' Association and the suburb's protection society are jubilant; but their real fight, to overcome the financial difficulties which triggered the bid, is begun rather than ended with the judgment.

In 1906, when social consciences were hardly astir elsewhere, Dame Henrietta founded the Hampstead Garden Suburb Trust Ltd. with a capital of £75,000, issued as £1 shares, with the object of providing homes in pleasant surroundings for people of all classes. Profit was not the motive, and dividends were limited to 5 per cent. The project flourished, but in a way which brought tears to City eyes filled with visions of high-density terraces and numerous rents; and in 1954 the first bid was made—by the then independent company of Co-partnership Tenants Ltd., who already owned nearly two-thirds of the suburb.

The bid was resisted on the advice of the trust's board, and safeguards were instituted against any repetition: 60,000 1s. deferred shares were issued to four bodies thought to be in tune with the suburb's ideals: the suburb's Institute, the Barnett Board, the Bournville Trust and the National Trust. The deferred shares carried no voting power except in proceedings to wind up or alter the trust's purposes, when they carried two votes each—equalling the voting power of the ordinary shares. Meanwhile, Co-partnership Tenants had become Suburb Leaseholds.

BY late 1961, the development of the suburb was virtually complete: the trust had an income from ground rents of £31,500, enough to cover its expenses and dividend payments and a bit over; but some of its finance came from 4 per cent mortgages due in 1965 and 1966. Costs were rising, and in a few years, the trust claimed, the bit over would become a bit under. It was not alone in its calculations, for, while it was debating this incipient disaster, Suburb Leaseholds offered to buy it out in effect, by paying for the transfer of the assets to a new Community Trust from which Suburb Leaseholds would accept 2,000-year leases on the property and pay a rent of £10 a year.

The new trust would be primarily concerned with certain charities connected with the suburb, which would be guarded by covenant against unsuitable development (though the covenant would not be enforceable by the usual penalty of forfeiture of lease). On the new trust's board were to sit the directors of the present trust, five nominees of the institute (on whose board some of the present trust's members sit), two from the Barnett board (of which the trust's chairman is chairman), two from the takers-over (who already own nearly a quarter of the ordinary shares) and two from the Residents' Association to see fair play.

At an extraordinary meeting, the shareholders refused the bid by a show of hands, but had to accept it on a poll, since only a tiny proportion of the ordinary issue is in the hands of the residents affected. The first three of the deferred shareholders (now entitled to votes) likewise accepted. But the National Trust, feeling itself morally bound to uphold the residents, voted against, and later added its 30,000-vote voice to the protesting suburb's squeak to bring a petition against the resolution. The petition succeeded on the ground that the substitution, for those mentioned in the original memorandum of association, of different beneficiaries (the charities named in the formation of the new community trust) to receive the balance of assets in a winding-up did not comply with section 5 of the Companies Act.

So the threat, real or imagined, of tower blocks and terraces in the garden suburb has been turned aside, and most suburbanites will rejoice with the protection society that those who choose to involve themselves in a social experiment should be allowed to continue it unmolested. The financial problem remains, however, insoluble by such simple means as raising rents (there are 40 years to run before that can happen); and the real task of the protectors is now to produce plans for some other solution.

NEW YORK by Queen in a glorious long weekend!

You go aboard one of the great 'Queens' on a Thursday and are in New York on the following Tuesday. In between you have four carefree, invigorating days... tempted by magnificent menus... royally entertained... splendidly served. Whether you are business or pleasure bound, there is no better start or finish to your visit than this brief but bracing holiday at sea. It costs so little of the working week and pays such splendid dividends in rest and relaxation.

FARES BY 'QUEEN' LINERS

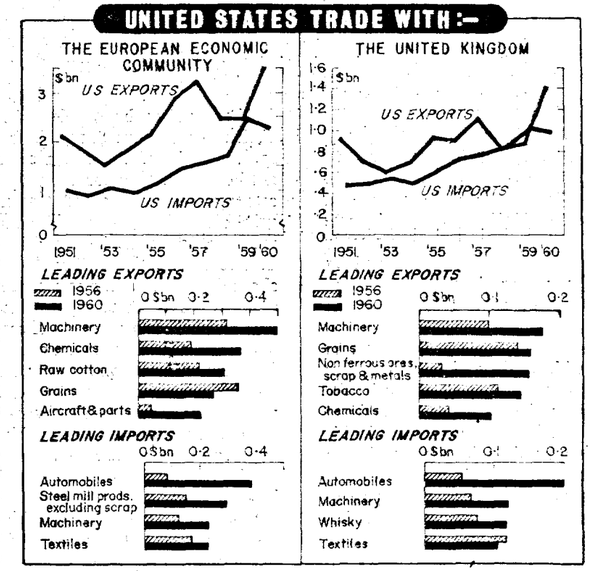
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.



Trading in a Grand Design

WASHINGTON, DC

THE Trade Expansion Bill which President Kennedy sent to Congress last January is expected to clear its first hurdle and to emerge from the Ways and Means Committee of the House of Representatives (probably while this issue of *The Economist* is in the press) in a form which gives the President almost all that he asked for. There is still an obstacle race to run, for beyond the floor of the House, where a satisfactory vote is expected, waits the Senate Finance Committee, which is much less free-trade minded than the Ways and Means Committee, and after that the Senate itself. But so far the new tariff legislation has had a surprisingly clear course.

The President has never concealed his view that the political aspect of this legislation is its most vital quality—though this "grand design" has served as a framework for some heterogeneous elements. In his original message to Congress on the subject the President spoke glowingly of an integrated western Europe, joined in trading partnership with the United States, which would shift the world balance of power farther to the side of freedom. But evidently it was felt that this would not be enough to move a Congress that is habitually besieged by lobbying protectionists. Therefore, the rather odd spectacle was witnessed of the Secretary of State, Mr Dean Rusk—there are few more high-minded and idealistic men than he is—boasting that the legislation, if passed, would be used to make a good Yankee trade, meaning to drive a hard bargain with the European Economic Community.

But in spite of the recent increase in duties on carpets and glass, the United States appears to be no more protectionist nowadays than it is isolationist. There seems to be a widespread, rueful recognition that the more powerful a country becomes, the less sovereignty it really possesses in the sense of being able to do what it likes or to go it alone. This sober realisation makes General de Gaulle's current posture or pose in France appear tragi-comic to many people on this side of the Atlantic. Nevertheless, President Kennedy felt obliged last week to emphasise not only the American commitment to the defence of Europe "since the threat to western freedom is basically indivisible," but also that it is a commitment to "a common defence," that the United States expects its allies to play their part and that it will insist on participating in the decisions affecting war and peace in Europe. "A coherent policy cannot call for both our presence and our absence." Mr Kennedy went on to say that he welcomed the rise of a united Europe, which would be a stronger partner, and that both it and the United States would become stronger yet if their economies were built up by expanding their trade.

As the trade Bill, which is designed to do this, emerges from the Ways and Means Committee it will give the President the power to abolish some tariffs altogether. The groups of commodities affected by this provision might include machinery of different kinds, railway vehicles, motor cars, cosmetics and some chemicals. All of them would be in categories where the United States and the European Economic Community together account for at least 80 per cent of world exports; the important assumption underlying this is that the EEC will include Britain, Denmark, Greece, Ireland and Norway. The President will also have authority to cut other tariffs in half, on entire categories of goods. These reductions and the abolition of some tariffs would both be spread out over a period of not less than five years from the time that negotiations with foreign countries for reciprocal concessions were concluded.

The President will have power, as well, to raise tariffs and by quite a lot—half as much again as the rate at which they stood in the middle of 1934, when American duties were still at or near their zenith. But it is not expected that this latter authority will be used, except in a dire emergency and as an extraordinary last resort. The Tariff Commission will continue to have the right to recommend increases in duties in order to protect industries; but the President will continue to have the right, that has been well exercised in the past, to reject such recommendations. The President will be empowered to provide loans and tax relief for firms which require such aid to enable them to adjust to the competitive conditions brought about by reduced tariffs. Workers who are laid off for the same reason may get part of their usual wages, for eighteen months, and also allowances while they are being retrained for new jobs at the federal government's expense. It is estimated that such aid, to firms and to workers, may cost the government $70 million a year.

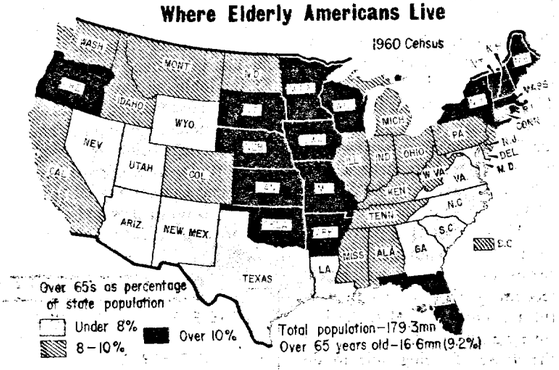
There has been a tendency in the Administration to look critics of the trade proposals straight in the eye and to declare that these proposals will prove to be a sovereign remedy for ills ranging from the deficit in America's international balance of payments to the slow pace of its economic growth, as if they were a kind of Buck-U-Uppo, the potent patent medicine in

the story by Mr P. G. Wodehouse. The dificit in the balance of payments is probably the tightest single rein on the sort of action with which Mr Kennedy might try otherwise to accelerate the rate of growth. Therefore it is perhaps natural that the two problems should appear thus in conjunction. The argument is that, if there were a broad and mutual lowering of tariffs on both shores of the Atlantic, American exports and imports would each increase by about the same percentage ; this would mean that the surplus which the United States currently enjoys on its trading account would expand and so reduce the deficit in the balance of payments. The Secretary of the Treasury believes that exports would increase proportionately more than imports and so increase the benefit to the balance of payments.

As their living standards continue to rise, the Europeans are expected to buy still more American goods. Since 1958 the six countries of the existing European Economic Community have increased their imports from the United States by 44 per cent. Hopeful collectors of statistics point out eagerly that at present these six countries have only twenty-three radios to every hundred persons, compared with ninety-five to every hundred persons in the United States, and that the Europeans lag even farther behind in refrigerators and washing-machines.

EUROPEAN farming is admitted, however, to be a problem and there have been warnings that the common market's variable import levies may reduce Americans and other outsiders to being mere residual suppliers of wheat and flour, feed-grains, pork and poultry to Europe. It is also confessed sadly that it is the United States which has shown Europe, by its example, the way to a system of high support prices for farmers and of agricultural surpluses which may mean competition for American farm exports in third markets. Reductions in American tariffs may be contingent on the EEC assuring the United States that Europe will remain a large market or even become a larger one) for American agricultural exports.

One of the central ideas of the " task force " which was originally set up by Mr Kennedy to consider what his tariff policy ought to be was that it should be aimed at bringing about a general liberalisation of trade. This became distended, however, into a " grand design." In an address to the National Association of Manufacturers last December, President Kennedy said that the trade Bill would make it possible for two great markets to be harnessed together in a team that would be capable of pulling " the full weight of our common military, economic and political aspirations." Some of Mr Kennedy's advisers feared that closer association of the European Economic Community with the goals of the United States might be hampered, or even prevented, by peripheral neutral Swedes and Swiss and Austrians or by the claims of the British Commonwealth or by political football played by parties in Britain. As a result the chief preoccupations became to ensure that what was called the European core was satisfactorily consolidated and to keep it from being perforated or diluted by every Tom, Dick and Harry crowding into the common market, perhaps trailing Commonwealth or ex-colonial cousins after them.



There may be second thoughts about dilution now that the core seems to have become overheated with illusions of grandeur. But even if the Trade Expansion Act turns out after all not to be the royal road to an Atlantic Community, Americans are unlikely to turn away from the dream which Mr Nelson Rockefeller, in his lectures at Harvard University this year, described as the historic choice that was fast rushing upon the West. The spectre of a narrow and inflexible Bonn-Paris axis (with its own striking power) may soften resistance to a wide, loose, pragmatic kind of association which has been frowned on hitherto as lacking the clear, sharp outlines of a grand design.

Medical Stakes

Now that the House Ways and Means Committee has finished its work on the trade Bill, it is free to take up a much more controversial domestic issue: the President's plan to finance hospital and nursing care for old people through the federal social security system. This explains why last weekend was chosen for rallies in over thirty cities ; the biggest of these was addressed by President Kennedy himself. Advocates of medicare—as the plan is called—think that the closed door against which they have been beating for years is beginning to give. Members of Congress came back to Washington after Easter with the impression that there was widespread support for a dignified federal scheme for dealing with the heavy medical costs which burden the country's old people and their relatives.

The President is not alone in believing, as he said this week, that, if the issue can be brought to the floor of the Senate and the House of Representatives, the response will be favourable. But in the House Ways and Means Committee, which held its hearings last year, the Administration has failed so far to win over the three Democrats whose votes are needed if the Republicans, with the help of two Democrats, including the chairman, Mr Mills, are not to block the Bill. Mr Kennedy himself is not as optimistic about success this year as he was once, but a failure can be turned into an election issue which may pay rich dividends ; more than 15 per cent of the voters are over 65 years old.

Where Elderly Americans Live

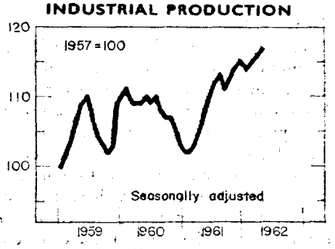
The day after the President spoke, the American Medical Association spent about $100,000 to answer him on television. Its spokesman called the plan a cruel and costly hoax, which would not help some 3 million old people who are not covered by social security ; he also asserted that it would destroy the flourishing private health insurance schemes and would lead to socialised medicine, lower standards and interference with the doctors' freedom to treat patients. The AMA has seen to it that complaints about the British health service are well-aired. In fact the payment of doctors' bills is carefully excluded from the scheme, which covers only hospital costs and those of care in nursing homes and at home. The AMA actually supports a measure which authorises the use of federal money to pay doctors ; this is the Kerr-Mills Act, which involves a means test, and leaves it to individual states to decide whether to help those who cannot meet their medical bills (only about half of the states now do this and most of the beneficiaries are in a handful of states). Some doctors are so intransigent that they are threatening not to treat hospital patients under the scheme if it is adopted—a piece of folly which only damages their own cause.

What most encourages the friends of medicare is the rash of compromises now being proposed by its critics and by individual Republicans. Progressive Republicans from New York suggest that old people should be given the choice of having their care paid for through social security or being given money to help them to pay for private health insurance. This would remove the taint of compulsion, although it might leave the federal fund with all the worst risks. But if a compromise of this kind—or like the proposal of Mr Harrison of Virginia to confine the scheme to catastrophic illness—is adopted, it will be the Democrats who make the running; the Republican leaders in Congress are still solidly hostile.

Wall Street's Reappraisal

FROM A CORRESPONDENT IN NEW YORK

In September, 1958, the giant pension fund of the American Telephone and Telegraph Company was authorised to invest in common stocks for the first time and this decision came to symbolise the new respectability of such investment. Thus the cult of the equity was born. On the premise that the American economy was on a treadmill of inflation, prices of common stocks were bid to the highest point, in absolute terms, in history. Similarly, investors demonstrated their willingness to pay more for a share per dollar of earnings than at any time since the bottom of the great depression, when the market was selling primarily on the hope of recovery rather than on the fact of performance. Now, Wall Street is engaged in unwinding the work of the past four years. Shares on the New York Stock Exchange are in a broad and general decline that has continued unabated since the middle of March, in spite of two major " selling climaxes " and a rash of confident statements from brokers that " value " has returned to the market and that buying opportunities are at hand. According to one major Wall Street brokerage firm, " for the first time in years, nearly every stock on the big board is in at least a minor downtrend."



Concern about the future and the possibility that the economy may be in recession by the early part of 1963 have played an important part in the thinking of investors during the current decline in the market. But Wall Street's professionals are taking a more fundamental view of the slump in prices. Inflation is not the potent force that it was once ; in fact, industrial prices were slightly lower at the end of 1961 than they were at the beginning of the year when the recession was at its depths. As this lesson begins to sink in gradually the investing public, and especially the major institutional investors, are starting to question the propriety, to say nothing of the wisdom, of buying common stocks on the promise of growth that under the best of circumstances may be twenty years away. This reappraisal is set against the backdrop of a strong and resilient bond market which, even after a healthy rise in prices (and a consequent decline in yields) since the first of the year, still provides investors with a most attractive return on their money. Long-term United States bonds are yielding close to 4 per cent compared to 3 per cent for common stocks, while top grade state and local issues, whose interest is exempt from federal taxation, yield over 3 per cent. In a word, Wall Street's concept of value is changing.

There has been no outright dumping of shares, but fears are developing that the market's decline may begin to feed upon itself, that the pessimism generated by declining share prices may be reflected in a contraction of businessmen's plans for capital spending ; this might mean even further declines in share prices. There are rumours that margin requirements (which govern the use of credit in buying shares) will be lowered from the present level of 70 per cent to give the stock market a much needed shot in the arm. But these reports are not taken very seriously and in the meantime investors are left, jittery, wondering at just what point the collective intelligence of the market place will decide that the mystic quality of value has returned once again.

Confident Statistics

In President Kennedy's view and that of most detached economic observers the statistics for April should have restored confidence to the stock market already. The latest of these indicators, and one of the most significant, came with the details of new orders placed for durable goods, which stopped going down in April. This put the final touch on the picture of an economy which had recovered from its new year hesitation and was all set for a record summer. Housing was another sector which had been doing badly, but the number of new houses started was up in April for the second month running, to the highest level for nearly three years. The output of the country's mines and factories rose by almost 1½ points on the index and personal incomes also went up again, as a result of the increased amount of employment in industry. Consumers are spending their higher incomes and apparently intend to go on doing so ; the volume of retail trade is very satisfactory, with motor cars selling particularly well.

INDUSTRIAL PRODUCTION

As a result of all this the President's advisers expect the economy to show a sustained upward surge well into next year. Businessmen's economic advisers, however, doubt if the recovery will have this much vigour and think that it may level off by the beginning of 1963. Some, at least, of this pessimism springs from their distrust of the interference with their activities which, they are convinced, will come inevitably from the Administration. Nothing that the President can do seems able to allay these suspicions ; nothing he can do, after all, can hide his fundamental lack of sympathy for the businessmen's point of view. Nevertheless, businessmen, led by Mr Blough, the villian of the steel episode,' are making a great effort to co-operate with the President, serving on various special committees which he has set up and so forth. Mr Kennedy wants both businessmen and trade unionists to give up their old arguments and to approach from a technical rather than a political angle the basic challenges which today lie behind all the bargaining over wages—how to ensure a steadily growing economy, for example, or how to stem the outflow of gold. This week's conference in Washington on national economic issues was an attempt to encourage this more sophisticated, creative attitude. The result was disappointing for all three groups of participants—businessmen, trade unionists and government officials—seemed as widely separated as ever, in public, at least.

Whose Scandal?

Last week when Mr Kennedy met the press he was well-primed for the inevitable questions about the spreading scandal surrounding Mr Billie Sol Estes, a Texan who is alleged to have greased the palms of government officials in order to obtain favourable treatment for his cotton and grain storage empire. The President insisted that the federal government, which has 76 investigators on Mr Estes's trail, had been the first to bring him to book for defrauding a number of finance companies ; Mr Kennedy also defended Mr Freeman, the Secretary of Agriculture, and then carried the war into the Republican camp. Most of the surplus grain stored in Mr Estes's highly profitable warehouses went there during the Eisenhower Administration. (Moreover, members of Congress of both parties had dealings with Mr Estes.) And

the President turned the whole affair to some advantage by warning Congress that opportunities for corruption would increase unless it brought agricultural surpluses under control by approving the Administration's farm Bill. The government already pays nearly $500 million a year to private interests for the storage of surplus grain and scandals in this field are not new.

Both of the subcommittees—one in the Senate, under Mr McClellan, and one in the House, under Mr Fountain—which are delving into the Estes affair will try to discover what it is in the system which made it possible for Mr Estes to become, in two short years, one of the ten largest storers of surplus grain in the country and to obtain, in a way now judged illegal, other men's valuable rights to grow price-supported cotton. This is considered to be more important than establishing whether civil servants accepted small presents in return for favouritism to Mr Estes, though this will also be investigated. So far four government employees have resigned or been discharged, three of them, including a former Assistant Secretary, from the Department of Agriculture and one, Mr Holleman, an Assistant Secretary of Labour, who was discovered to have accepted $1,000 to help to pay his bills in Washington from Mr Estes, an old personal friend.

The chief congressional forum will be Senator McClellan's subcommittee, which has an enviable reputation for non-partisan thoroughness; open hearings will probably start next month. Mr Estes himself, who has been warned not to leave the country, may prefer not to say much, as he has been indicted by both federal and state authorities. In Texas Mr Estes, some of his business associates and the Commercial Solvents Corporation, a big eastern chemical firm, have been charged with violating the anti-trust laws by trying to corner the market in anhydrous ammonia, a fertiliser which increases crop yields greatly and thus helped to fill Mr Estes's storage facilities. His main income—over $7 million in three years—came from storing government grain which is now being transferred elsewhere.

Labour's Leaders in the Net

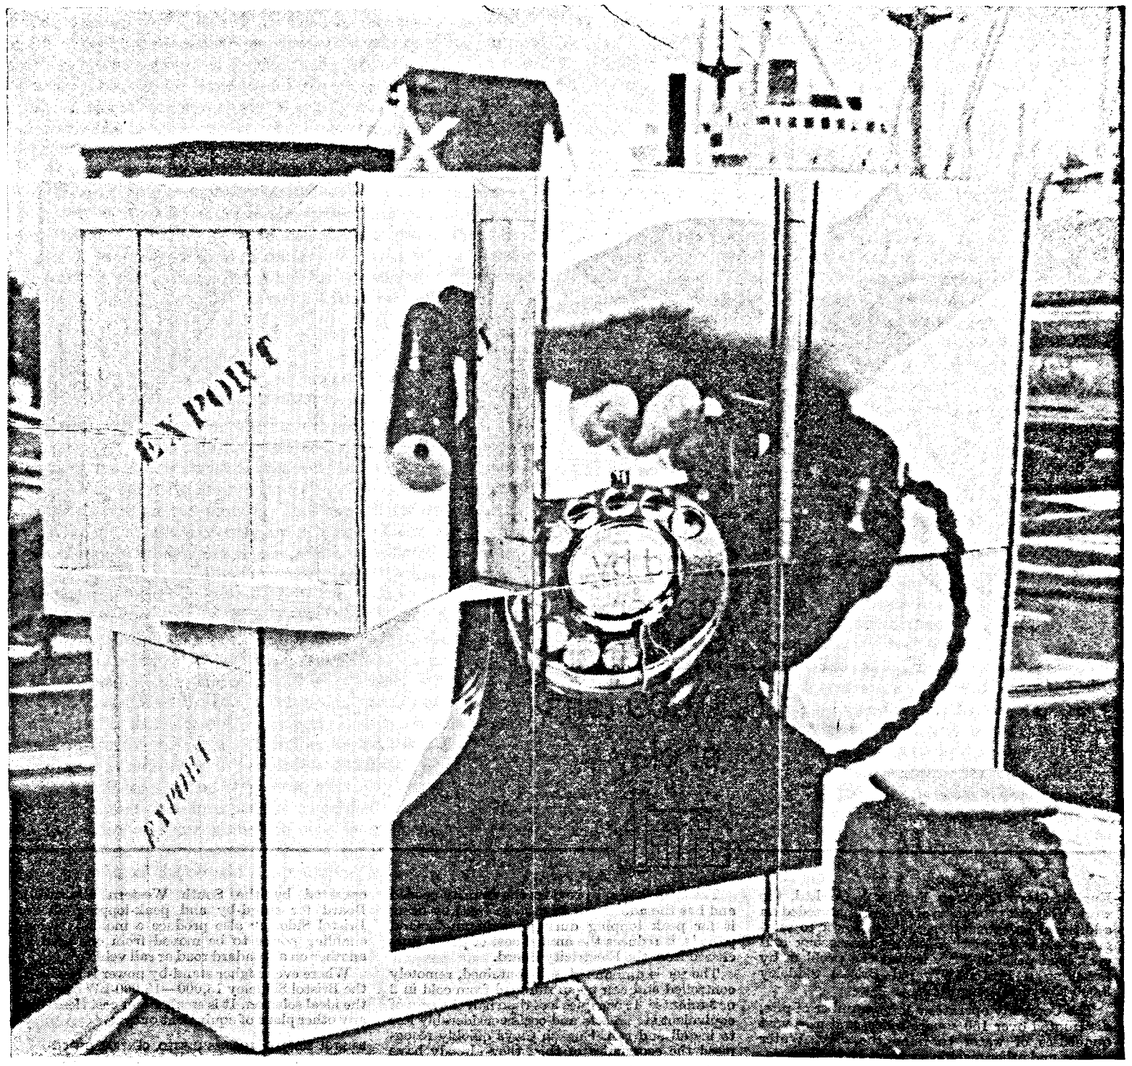
THE mills of justice grind slowly. But last week three prominent trade union leaders were in trouble which can be traced back to the famous hearings on labour abuses that Senator McClellan held between 1957 and 1959. The biggest fish is the one which has got away so far: Mr James Hoffa, the tough little president of America's largest trade union, the International Brotherhood of Teamsters. This union, which no longer confines its recruiting activities to lorry-drivers, was kicked out of the American Federation of Labour and Congress of Industrial Organisations in 1957 for corrupt practices. Mr Hoffa has now been charged with violating the Taft-Hartley Labour Relations Act by accepting large sums of money from a road transport firm with which he had negotiated a trade union agreement. Such transactions were made illegal to prevent employers from suborning the representatives of their workers.

Luck and the employment of high-priced legal talent have helped Mr Hoffa so far to evade the clutches of the law. But this charge—and another being brought in Florida, where he is accused of defrauding members of his union—might shake the loyalty of his teamsters and he seems to be rattled; only last week he was accused of beating up a member of his staff. In all, some fifty present or former leaders or members of the teamsters' union have been brought to court, about half of them during the Kennedy Administration, though the Attorney General, an old enemy of Mr Hoffa, is trying to discourage the idea that this is a personal vendetta.

One of these is Mr Beck, Mr Hoffa's predecessor as president of the teamsters, whose conviction on charges of embezzling union funds was confirmed last week in a 4 to 3 decision of the Supreme Court. He faces 15 years in prison on this charge. The troubles of the teamsters bring no tears to the eyes of the leaders of the AFL-CIO but the case of Mr Hutcheson, the president of the Brotherhood of Carpenters and a member of the executive council of the federation, is another matter. The Supreme Court has upheld his conviction for contempt of Congress; he refused to answer questions, some of them about a road scandal which later led to his being convicted on a serious charge in Indiana. If the second conviction is upheld, Mr Hutcheson will be barred, under the Landrum-Griffin Act, from holding union office for five years. But until this happens the AFL-CIO will be left holding the rather embarrassing baby; contempt of Congress, in itself, is only a misdemeanor and no bar to union office.

Global Sugar?

AT last Congress has received the Administration's proposals for revising the legislation which has stabilised the supply and the price of sugar in the United States and has protected domestic producers by a system of quotas since 1934. Cuba was by far the largest foreign supplier until its quota was suspended in 1960 after its new government had expropriated American property on the island. Since then the existing sugar legislation has been extended temporarily while attempts have been made to reach agreement on a new system. Even now these have not been entirely successful and it seems likely that there will have to be yet another temporary extension of the existing Act.



The total United States demand for sugar, on which the proposed new quotas are based, is put at 9.7 million short tons a year, to be supplied as follows:

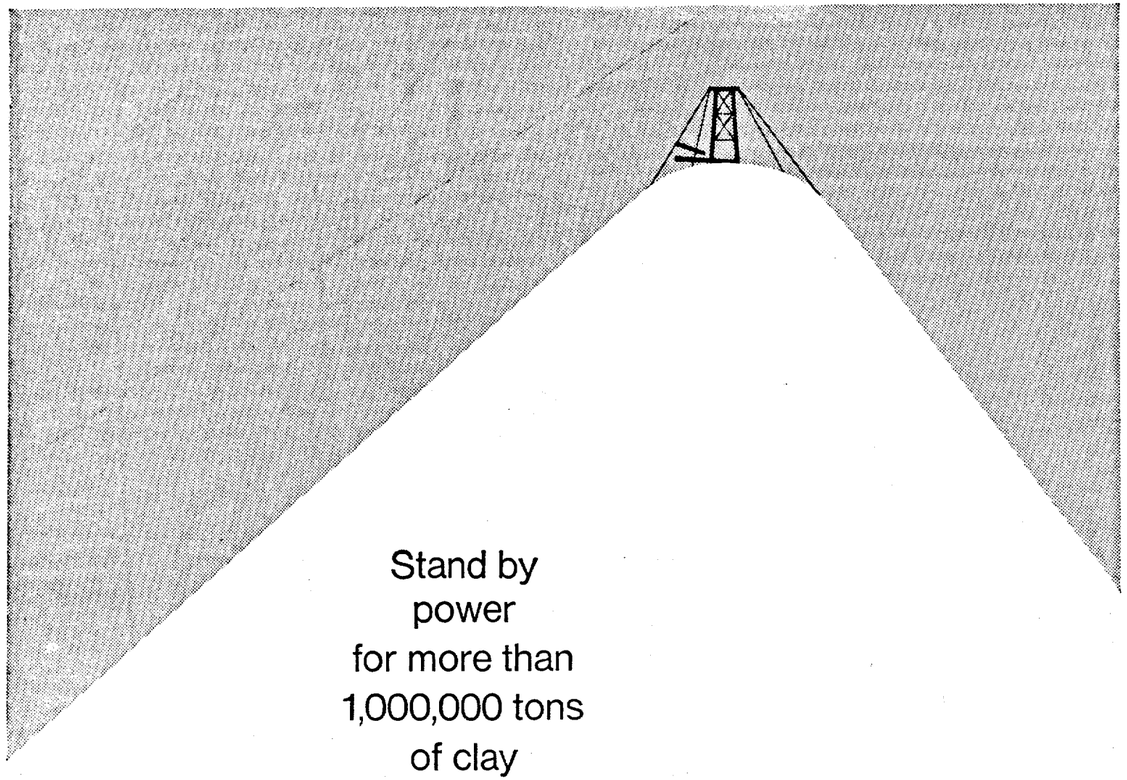
	Short tons
Domestic areas :—	
Mainland beet	2,650,000
cane	895,000
Hawaii	1,110,000
Puerto Rico	1,140,000
Virgin Islands	15,000
Philippines	980,000
Cuba	2,584,277
All other foreign suppliers	325,723

This allocation increases the share of the domestic producers on the mainland by over 6 per cent at the expense of the offshore domestic producers (who have not been filling their quotas) and of Cuba. In addition mainland producers would receive a larger share—63 per cent instead of 55 per cent—than in the past of the annual increase of about 150,000 tons in consumption.

This seems to be enough to satisfy the domestic producers, although the refiners object to Cuba still being allowed to ship as much as 250,000 tons in a refined state. In practice, of course, nothing at all is coming from Cuba and it is here that the argument really begins. The proposed legislation provides that, when the United States does not have diplomatic relations with a country, that country's share—meaning Cuba's share—of the sugar supply can be bought from any friendly foreign country subject to the payment of a fee covering the difference—usually from 2 to 3 cents a pound—between the world market price and the United States price. The Administration also wants to impose such a fee by stages on imports of sugar from all countries except the Philippine Republic (where special treaty arrangements are involved). This would eliminate gradually the present premium on imported sugar which is in effect a haphazard form of foreign aid to countries which sell sugar to the United States. The official view is that the premium no longer serves to ensure steady supplies because apart from Cuba there is no country which can guarantee to meet any sudden increase in American demand.

Mr Cooley, the chairman of the Agriculture Committee of the House of Representatives, disagrees, arguing that to drop the premium would bring back the era of violent fluctuations in sugar prices and would hand over control of the market to Russia and

"Export Ease" just a 'phone call away



Through its world-wide network of overseas branches and correspondents First National City is in constant contact with business conditions in almost every country throughout the world. As a result, they are in an excellent position to offer up-to-date information on the economic and political conditions of a given country.

But this is only a small part of the service you can get from First National City. For instance, for any client, they will be pleased to arrange a letter of introduction to the manager of any of its overseas branches or correspondents. Their knowledge of local customs, local laws, and local commercial practices is invaluable.

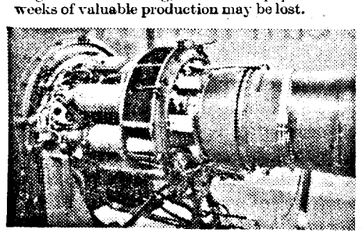
Whether it be the financing of exports, requests for credit information, the rapid collection and transfer of funds, or knowledge of local exchange control regulations, First National City are ready and willing to help ease your export problems.

There can hardly be a businessman in the export field who would not benefit from this sort of service. Why not get in touch with First National City at either 117 Old Broad Street, E.C.2 (London Wall 1221) or 17 Bruton Street, W.1 (Mayfair 6600)?

FIRST NATIONAL CITY BANK
NEW YORK
INCORPORATED WITH LIMITED LIABILITY UNDER THE NATIONAL BANK ACT OF THE U.S.A.

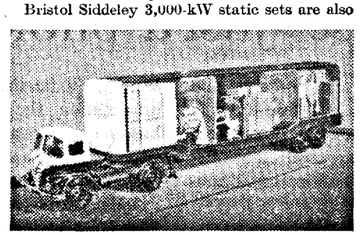
English Clays Lovering Pochin & Co Ltd, the world's largest producers of china clay, needed an additional independent source of power to safeguard their production during emergency and peak-load periods. They solved the problem by installing a Proteus-powered Bristol Siddeley 3,000-kW turbo-generator set.

The Company operates a large number of pits, distributed over 150 square miles, and uses vast quantities of water to mine the clay. Water pumps and other machinery must be kept operating to avoid flooding, otherwise equipment and weeks of valuable production may be lost.



The 3,000-kW set provides the security needed and has the additional advantage that, by using it for peak lopping during maximum-demand periods, it reduces the annual cost of power purchased from the Electricity Board.

The set is unmanned, self-contained, remotely controlled and can be on full load from cold in 2 or 3 minutes. It occupies less than half the area of equivalent steam sets and costs considerably less to install and run. English Clays quickly recognised the economics of this; they already have 17,500 kW of steam plant.



Bristol Siddeley 3,000-kW static sets are also operated by the South Western Electricity Board for stand-by and peak-lopping duties. Bristol Siddeley also produce a mobile version, enabling power to be moved from one area to another on a standard road or rail vehicle.

Where even higher stand-by power is required, the Bristol Siddeley 15,000—18,000-kW set offers the ideal solution. It is smaller and costs less than any other plant of equivalent output.

Cuba. He also suspects, with justification, that the whole scheme is a first step towards the Administration's objective of substituting a global quota, open to all foreign bidders, for individual country quotas. This, in his view, would lead eventually to complete abolition of the quota system. But allocation by countries lays the government open to charges of exerting economic influence and to pressures from those who want a share, or a larger share than at present, in the American market, as many countries do. The main concern of the Administration, however, is to prevent the American sugar market from settling into a new pattern of vested interests that would leave no room for Cuba should there be a change of government in that country. This is why a quota is still reserved for Cuba and why the Administration opposes Congress's desire to divide this quota among other suppliers.

Mining Water?

FROM A CORRESPONDENT IN COLORADO

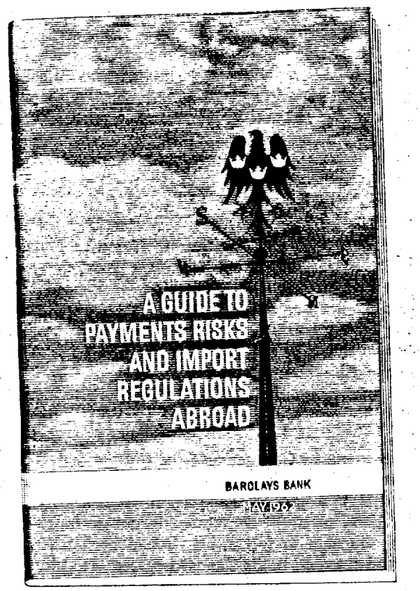
WHAT seems to be a simple income-tax case in a federal court in West Texas has all the water-conscious West looking on. For when it is finally decided—probably by the Supreme Court—this case may affect the entire country's policy on the use of water, particularly of "ground-water." This is water far enough underground to be recoverable only by drilling. There are immense stores of it even in some dry regions, since it has been accumulating for ages by slow percolation through porous underground strata from higher levels.

In some areas, such as in West Texas, New Mexico and Arizona, ground-water supports a large irrigated agriculture and geologists say that it is being exhausted much faster than it can accumulate, so that the supply is running out. Now a farmer in West Texas, Mr Shubet, contends that this makes ground-water a non-renewable mineral, rather than a renewable natural resource like water flowing on the surface of the earth. Therefore he has asked the court to rule that he is entitled to a "depletion allowance" on his income tax, specifically to a refund of $300 on his 1959 payment.

The depletion allowance permits owners of mineral deposits to escape taxation on some of their income, on the ground that they have to deplete their mineral capital to get it. The best-known example is that of the oil and gas producers, whose tax-free retention of up to 27.5 per cent of their gross income from production (if this does not exceed 50 per cent of their net income) costs other federal taxpayers more than a billion dollars annually. Congress has permitted smaller amounts of tax-free income on other minerals, usually 15 per cent, and it is to this group that the Texas farmer seeks to add ground-water where there is evidence that the supply is being exhausted.

This contravenes the general federal policy that all water is to be classed, and conserved, as a renewable resource. For example, Mr Udall, the Secretary of the Interior, only recently forbade the granting of any more applications for agricultural homesteads in areas where the water-table is declining—that is, where users are already depleting the underground store. If this policy is carried out it would restrict the use of ground-water as nearly as possible to the volume moving underground from the distant highlands. But if the Texas farmer should win his suit, it is estimated that farmers in Texas and New Mexico would get refunds and annual benefits of about $6 million a year; users of ground-water in other areas of declining water-tables would also benefit. The effect would be to encourage greater use and more rapid exhaustion of underground water everywhere, at the expense of the taxpayer.

Drilling for this water is very expensive, and relatively few farmers or ranchers can afford to go deeper than a few hundred feet or to pay the electrical bill for pumping. Yet the potential supply is immense. In the West as a whole there are billions of acre-feet (of 325,851 gallons each) available. Much of this water is tainted with salts and cannot be used until cheaper methods of cleansing it are devised; but much is fresh enough for use "as is." The supply is particularly large under the Great Plains, which are part of that vast sweep of the West that the water-experts say will exhaust its runoff (fresh water flowing over the surface) almost immediately, and which must curtail the use of water, or find fresh sources of it. If ground-water is treated as a minable resource, to be developed rapidly and exhausted, this would mean "ghost-towns" on the plains and in the deserts, like the deserted mining towns where ore deposits have been played out.



That the government is taking the West Texas claim seriously is shown by the elaborate evidence it put before the court. Its experts sought to show that it had taken the underground waters in Texas, at least, only a relatively few years to percolate hundreds of miles through underground strata from the higher ground—probably the Southern Rockies—where they first fell as rain. Opposing geological experts testified, on the other hand, that it had taken these waters hundreds of years to accumulate and that therefore they could hardly be considered as a renewable resource. Everyone in the West will keep a wary eye on this case until it is finally resolved.

Nutmeg State

REPUBLICANS in Connecticut—the nutmeg state—had to think fast last week when their one Senator, Mr Prescott Bush, decided that he would not stand again. It is less than a fortnight until his party meets in convention to choose its candidates and, with his campaign in full swing, it had been taken for granted that Mr Bush would be its standard-bearer. He pleaded ill-health and advancing years but his abstinence may be due, in part, to a poll of public opinion which suggested that he was likely to be beaten roundly if his opponent were Mr Ribicoff, a former Governor of Connecticut and famed vote-getter who is now Mr Kennedy's Secretary of Health, Education and Welfare. Instead the aspiring giant-killer is likely to be Mr John Davis Lodge, the brother of Mr Henry Cabot Lodge and Governor of Connecticut from 1951 to 1955; he was also Mr Eisenhower's Ambassador to Spain. Mr Ribicoff and Mr Lodge clashed in 1954, when the Democrat became Governor by a narrow margin.

Mr Lodge's emergence as a senatorial candidate means that there is one less Republican straining for the privilege of knocking out Mr Dempsey, the present Democratic Governor. Mr Dempsey inherited the office when Mr Ribicoff went to Washington and with it inherited also a host of problems: higher taxes, rising road deaths and the bankrupt New Haven Railroad. The Republicans are still not short of gubernatorial candidates—there are six of them—but the two in front are Mr John Alsop, brother of the newspaper columnists, and Mr Edwin May. Both are classed as liberals and if one of them is elected he would fortify the small band of progressive Republican Governors.

Mr Ribicoff has been pressed—probably not against his will—to step back into Connecticut politics because it is thought that he will help to pull Mr Dempsey through. With Mr John Bailey, the Democratic national chairman, strongly behind him in Connecticut Mr Ribicoff is likely to win the Democratic senatorial nomination handily. But he has stopped just short of announcing his candidacy and probably will not do so until July when the Democrats meet to choose their nominees. There is one small cloud on the horizon—Representative Kowalski, a Pole in a state where his countrymen form a sizeable minority and a man who has won a bigger vote than any other politician in the state's history. If Mr Kowalski, who is campaigning against "bossism," controls 20 per cent of the delegates to the Democratic convention, he can demand a primary election; this might leave some scars on Mr Ribicoff.

***Revised edition out NOW**

An up-to-date edition of this handy booklet is now available. Of special interest to Britain's exporters, it covers 80 countries, indicating the degree of risk of non-payment and giving a brief comment on market conditions, a summary of import regulations, the latest figures for currency reserves and imports from the United Kingdom, and the approximate exchange rates. The booklet, which is revised every four months, can be obtained from any of our branches. Alternatively, please get in touch with any of our specialised Foreign branches:

Salan's Surprise Survival

FROM OUR PARIS CORRESPONDENT

"By a majority vote . . . extenuating circumstances. . . ." The rest of the sentence was drowned in pandemonium. In the decorated hall of the palace of justice, the defence and their friends in the audience were singing the *Marseillaise* and chanting *Algérie Française*. Bewildered journalists could hardly trust their ears. The same military tribunal which, last month, had sentenced to death General Jouhaud, second in the hierarchy of the Secret Army Organisation (OAS), had now spared General Salan, the official leader of the organisation and the man who took full responsibility of all its actions. Once the cries and the jubilation had died down, the news came through that Salan had saved his head but received a sentence of life imprisonment. This surprising verdict, announced shortly before midnight on Wednesday, ended the strange seven days' trial of the general.

In fact, it cannot accurately be described as the trial of General Salan. The prosecution, in principle, wanted to restrict the proceedings to Salan's part in the *putsch* of April last year, and to the subsequent crimes of the OAS. But throughout the seven days there was relatively little talk about the thousands of victims, predominantly Moslem, who suffered at the hands of the OAS. The prosecution called only four witnesses, and it could hardly expect to get any information out of General Salan himself. The former commander-in-chief in Algeria, his hair still bearing traces of conspiratorial dye, rose on the second day of the trial to read, in a monotonous tone of voice, his declaration. The gist of this was that he had brought General de Gaulle back to power to prevent civil war and to keep Algeria French. Subsequently, General de Gaulle betrayed his word, and the OAS is the consequence of this betrayal. He, General Salan, had remained true to his pledge and accepts full responsibility for everything, but would not, he said, answer any questions. His silence throughout the trial was, tactically, a clever move. Thereby, he accepted responsibility in the abstract, but refused to be tarnished by concrete, criminal details.

Four witnesses for the prosecution ; sixty for the defence. Of these the most moving was the general's brother, himself a gaullist, but who pleaded that his brother had been deceived and should be spared. Otherwise the trial was a procession of advocates for French Algeria. A bunch of retired generals, some serving officers, a marshal's widow, a paratrooper priest in the *Torquemada* tradition, a professor of economics who presumed to speak in the name of youth, all came forward to assure General Salan of their sympathy and devotion. Self-confessed conspirators of 1958, MM. Biaggi and Delbeque, who subsequently parted company with the government over Algerian policy, explained how General de Gaulle had used Algeria as a stepping stone back to power. The usual contingent of Algeria's "*mal-élus*," and their French associates, retold the story of General de Gaulle's betrayal and its tragic consequences.

Yet, if the prosecution failed to put the OAS on trial, the defence, for all its opportunities, also failed to put the gaullist regime on trial. Nothing was seen of the famous incriminating evidence that Salan is supposed to hold in a safe in Madrid. For students of the last days of the Fourth Republic and of the birth of the Fifth, the trial did no more than confirm one old suspicion and suggest a new one. It has been confirmed that in May, 1958, General de Gaulle, while negotiating with M. Pflimlin for the legal succession, was simultaneously in contact with the insurgents in Algiers. The new suspicion concerns Corsica. If M. Arrighi is to be believed, the decision to invade Corsica was taken in Algiers after the arrival of a special gaullist emissary, a lady who afterwards became M. Debré's press officer.

Much of the tribunal's time was taken up with an even older case—the mysterious "bazooka affair." In January, 1957, a shot fired from a bazooka killed a French major at the Algiers headquarters. The real target had been the commander-in-chief, General Salan. It is generally believed that the attempt was part of the first plot to overthrow the regime, and that Salan was to be removed because, at that time, he was considered too loyal. The assassination was to be in Algeria, but the inspiration came from Paris. Persistent rumours have associated M. Debré with the plot. Now that he is no longer prime minister, M. Debré was able to deny these allegations categorically. He emerged unscathed from his duel with the defence counsel's admittedly tame attack. But the situation was less clear cut when M. de la Malène, his close associate, came to deny that, in August, 1958, he had gone to Algiers on behalf of M. Debré, who was then minister of justice, to negotiate with the army an arrangement whereby the bazooka trial should be held in camera and the accused put on parole. The confrontation at the trial between M. de la Malène and General Dulac was, to say the least, ambiguous. The correspondent of *Le Monde* summed up the general impression in the words of the French ditty: "I hold thee, you hold me, by the goatee. . . ."

Before the jubilation

This impression was not limited to one incident. True, it would not have been logical to expect the defence lawyer, M. Tixier-Vignancour—a Vichy man in 1940 and one of the stars of the extreme right since the war—to probe too deeply into the bazooka case. Such are the vagaries of politics that the lawyer who is now the chief defender of General Salan was then the counsel of his chief would-be assassin, a man called Kovacs, who, in the meantime, has vanished. But Maitre Tixier-Vignancour, who has a reputation as a famous destroyer of reputations, seemed relatively restrained on this occasion. It was he who, on Wednesday, delivered the final, lengthy plea for the defence.

He started from the premise that, rightly or wrongly, General de Gaulle had decided well before the end of the Fourth Republic

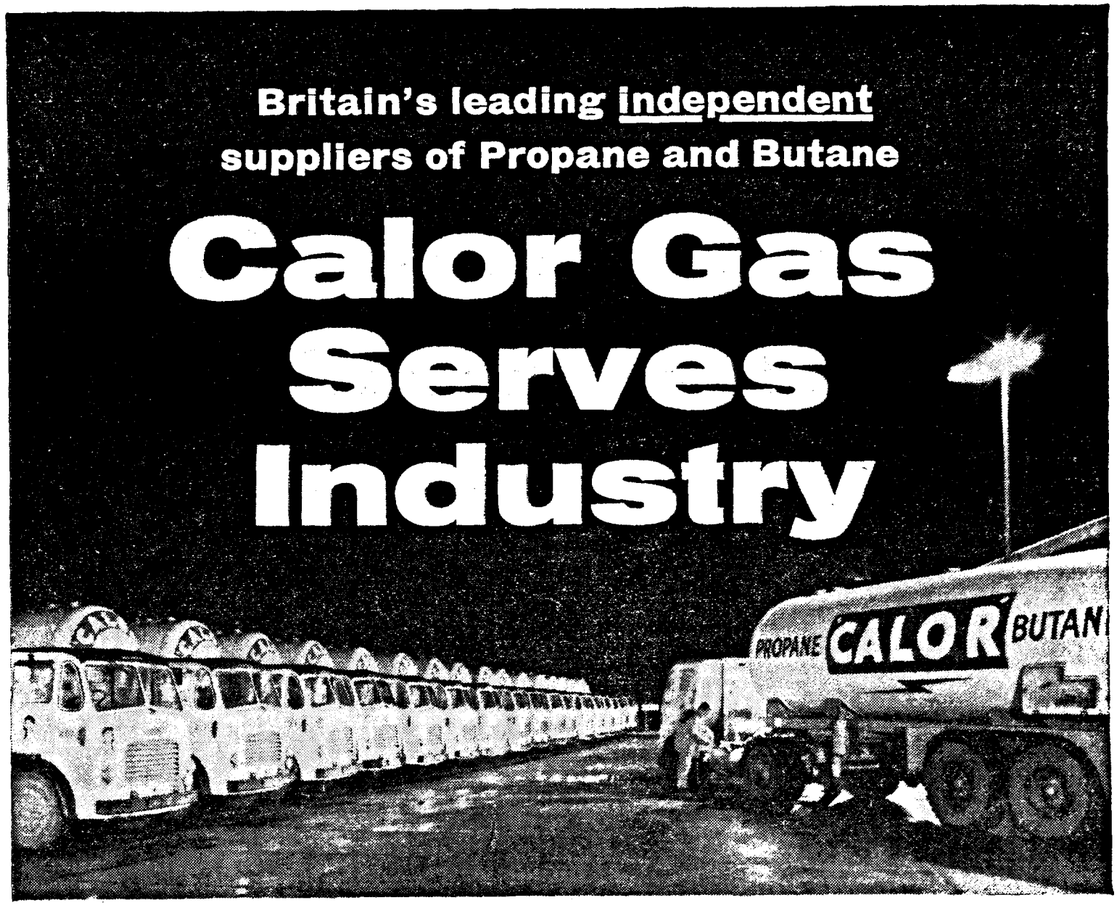
that Algeria must become independent. He could not reveal his decision because he needed the support of the army in Algeria to return to power. Some of the general's associates, for instance, MM. Debré and Frey, were in his secret. Others, such as M. Soustelle and General Salan, were not. General Salan appears in this version as the simple soldier fooled by the political general. He did not grasp the truth until the end of 1960. But, pleaded the lawyer, "Machiavelli never asked for the execution of those who did not guess his designs." As for the alleged crimes of the Secret Army, they are or should be exonerated as a natural reaction to the atrocities of the so-called forces of law and order. (The advocates of French Algeria, who used to shout treason whenever it was suggested that Moslems had been tortured, have developed a passion for the rights of man now that it is Europeans who are, apparently, involved.) There remained one obstacle—the precedent of General Jouhaud. M. Tixier-Vignancour offered a way out: a bill has been tabled in the chamber proposing the extension of the Evian amnesty to cover offences committed up to the end of April. The judges, it seems, were looking for just such an excuse.

Many people had hoped that the seemingly inevitable death sentence would be commuted. Some because recourse to the guillotine creates a dangerous precedent, others because they believe in mercy. But the verdict came as a shock. This is why, while lawyers were rejoicing, journalists and others were pondering. Some argued that if generals don't eat generals, General Jouhaud, too, must now be reprieved. Others maintain that it was too strange to be the whole story and that the real trial must have taken place out of court. The seven days of proceedings, during which neither the OAS nor the regime were effectively put on trial, have not cleared away the mystery of General de Gaulle's relationship with his officers, they have deepened it.

Mr Menzies's Mission

FROM OUR SPECIAL CORRESPONDENT

Not much more than a month has passed since Mr John McEwen, Australia's federal minister for trade, returned from an intensive visit to all centres of decision-making in the negotiations for the common market. Washington, Ottawa, London, Paris, Bonn, The Hague, Brussels, Rome—all were visited and everywhere prime ministers, economic ministers, agricultural ministers and trade ministers were given a forceful account of Australia's particular problems and needs. Now Mr R. G. Menzies, the Australian prime minister, is leaving this week for another round of talks—this time mainly in London and Washington. Moreover, he has persuaded leading members of the opposition to undertake a parallel mission of inquiry at the same time. In addition, Mr Arthur Caldwell, the leader of the opposition, will attend the meeting of the Commonwealth prime ministers in September. All these moves reflect both the present realities of Australian politics and the fateful importance that Australia attaches to the outcome of the common market negotiations.



Since last year's federal elections Mr Menzies's coalition of Liberals and members of the Country party has had to rely on a majority of a single vote. Such a situation does not necessarily strengthen the position of the leader under whose guidance the coalition lost its old comfortable majority. It leaves the government vulnerable to any well-aimed opposition attack. And it inevitably has most politicians looking over their shoulders at the possibility of an early dissolution and new elections. These three factors have played their part in dictating Mr Menzies's decision to go on his travels before the autumn meeting of Commonwealth prime ministers. He does not wish, at a time when his own leadership has been weakened, to see his energetic and redoubtable minister of trade acquire any monopoly in the well-publicised defence of Australia's vital interests. He wishes to associate the opposition inescapably with any decisions that have to be made. And he seeks to underline as dramatically as possible that the present government, for all its parliamentary precariousness, is grappling strenuously with a life and death threat to Australia's future prosperity. Some of his labour critics even accuse him of playing up the gravity of the crisis so that the government's handling of it may redound to its credit if and when a new appeal to the country is decreed.

The general reaction, however, is to concede the prime minister's view that action is needed and to applaud the "statesmanlike response" of Mr Caldwell and his colleagues. Ever since Mr Duncan Sandys visited Australia last year to announce Britain's decision to apply for membership in the common market, Australian public opinion has become steadily more aware that some large upheaval—still unspecified but undoubtedly important—may be about to overtake their prosperous, comfortable, productive land. They are not sure what its nature will be—indeed nobody is, including the negotiators locked in bargaining at Brussels. But enough is known about the shape of Australia's production and trade to make Australians realise—with some uneasiness—that very large interests are at stake.

In spite of one of the highest national incomes per head in the world and a steadily growing industrial sector, Australia is still in the first place a primary producer. Its exports overwhelmingly reflect this fact. Between 1957 and 1962 wool alone accounted for over 40 per cent of its exports. And this, together with foodstuffs, hides and skins, ores, concentrates and a very little processed copper, made up between 75 and 80 per cent of all exports. Britain has long been the largest single outlet for Australian exports and has had the largest share of Australia's market in return. It is true that the pattern is changing. Imports from Britain have slightly increased—from £A307 million in 1958-59 to £A341 million in 1960-61. But the proportion has fallen; total imports have grown from £A997 million to £A1,086 million and the share of the common market and of non-European suppliers has gone up sharply. Yet Britain still supplies Australia with nearly one-third of its imports. Australia's exports to Britain have fallen in recent years. They stood at £A257 million in 1958-59 and at £A232 million last year, at a time when Australian exports in general were growing—from £A811 million to £A970 million—and the share going to the common market and to non-European outlets, particularly Japan, had increased by £A184 million. Yet Britain alone still receives about one-quarter of all Australia's exports.

Nor do the percentages alone give the full story. In some sectors Britain absorbs virtually all Australia's exports. Sixty per cent of all the fruit that is canned in Australia is then exported and 90 per cent of it goes to Britain. Of Australia's exports of butter, apples and pears, 80 per cent is sent to Britain. Britain provides a guaranteed market for bulk purchases of Australian wheat, meat and sugar. Very large sums have been invested in building up a future metals industry with an eye on the British market. There is, too, the additional difficulty that many communities lie in single product areas. Isolated cattle stations in the Northern Territory, cane growers among their brilliant green fields in tropical Queensland, closely settled wine producers on the irrigated lands along the Murray and the Murrumbidgee—all these groups have an overwhelming dependence upon existing patterns of trade. And some at least of these patterns could shortly be exposed to considerable disruption.

It is not the whole flow of exports that is in question. Wool, hides, skins and mineral concentrates—making up between 30 and 40 per cent of exports to Britain—are not affected, since they enter the common market as well as Britain duty free. It is on the whole range of foodstuffs—bulk and processed—that Aus-

Calor Gas has the largest L.P. Gas Road-Tanker Fleet in the world and the widest research and service facilities in Europe!

NO MATTER WHERE YOU ARE, Calor Gas can serve you on the spot. You can depend on it.

There are seven modern Calor Gas filling stations and transport depots sited near major oil refineries throughout the country, which ensures that the full, specialist facilities of Calor Gas Service are never more than a short, speedy journey from Calor customers.

Calor Propane and Calor Butane are the modern, mobile, clean-burning industrial gases that fuel every kind of industrial process with new efficiency and economy. Calor Gas supplies them to you in cylinders or to bulk storage tanks on site. Wherever you are, Calor Gas is there to serve you, quickly and dependably.

monopolist for an hour

WHAT WOULD YOU DO if you *really* owned a built-up area, or one about to be built up? Could you bring to it the touch of genius that makes tycoons? How, for example, would you heat a street of houses, give everyone the most effective, most economical means of obtaining warmth and hot water? Would you install 400 boilers for 400 houses? Or *one?* A genius would install one boilerhouse and simply pipe heat to the whole street. A genius would, in a flash of enlightenment, extend the plan to encompass a whole district of houses, shops, hospitals, factories—a whole town, even.

This isn't just a vision. This is *vision*. Something very like it has already been done in Bristol. There you will find the Redcliff Precinct, designed by Albert H. Clarke, F.R.I.B.A., A.M.T.P.I., City Architect. This is a new grouping of living units in five towering blocks of flats, where the central heating and hot water for 407 homes comes from one full-automatic boilerhouse. Building of a second Redcliff project has now started, with a central boilerhouse heating four blocks plus an entire and entirely separate school.

In this project, Bristol Corporation are showing vision. They showed it, too, when they chose *coal* as fuel for the Redcliff boilers. For coal is the fuel of the future. Coal gives maximum heat for least cost. Coal, used with modern automatic equipment, is smokeless. And coal is here, now, in Britain, in inexhaustible quantities.

Like so many with vision in local government, in commerce, in industry, Bristol plans a glowing future on coal.

LOCAL GOVERNMENT PLANS ITS FUTURE ON COAL

ISSUED BY THE NATIONAL COAL BOARD

tralia's chief worries are concentrated. What happens to the £A70 million worth of wheat and flour sold to Britain, the £A43 million of beef and veal, the £A13 million of canned meat, the £A22 million of butter, the £A34 million of sugar, the £A11 million of canned fruit? (These figures represent the annual average since 1957-58.) Most of these products will be directly affected by the common agricultural policy of the common market according to which single prices will be fixed inside the market and levies imposed on foodstuffs coming in from outside to ensure that the domestic products within the market are not undersold. French wheat or Dutch butter would enter Britain at whatever prices had been fixed by market decision and Australian producers would have to get over the high wall that will be created by the levies. This protection for Europe could, moreover, increase output inside the market far beyond domestic demand. The levies might be used to subsidise exports and Australia could find itself competing fiercely in shrinking third markets against European wheat and meat exported at dumping rates. To this should be added a number of quite high protective market duties at present proposed for processed foods—over 20 per cent *ad valorem* for canned fruits, 26 per cent for canned meat, 9 per cent for dried grapes, a variety of duties on all types of wine. The total picture is to cancel all Australia's preferences in the British market and in fact to transfer them to European producers. This is the picture of difficulty and even doom that Mr McEwen has conjured up. And theoretically it could follow from a British entry into the common market unaccompanied by any safeguards for Commonwealth trade.

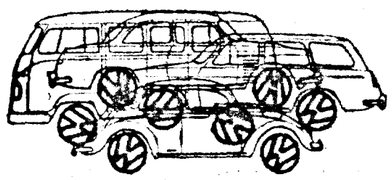
WHAT safeguards will Mr Menzies be bargaining for as he travels round in the next few weeks? In general, the Australians, like other primary exporters, hope for the largest possible extension of the market's duty-free list for raw materials. Again like other industrial exporters, they urge that industrial tariffs should be low—and in particular low enough not to cripple such nascent industries as the Australian venture into aluminium. They are profoundly interested in the American proposals that such temperate products as wheat and coarse grains must be regulated on a world basis through commodity agreements, fixed prices and export quotas. But such agreements are clearly for the future. Meanwhile, how is a violent disruption of Australia's vital trade in foodstuffs to be withstood?

Here Australia's chief emphasis is placed on securing in the common market as a whole "comparable outlets" to those now enjoyed in Britain. Nobody knows quite what they would be. Would a quota of such and such a size for canned peaches be the equivalent of so much cut off traditional exports of lamb? Might various categories of exports be grouped in comparable "baskets" and an overall figure be agreed with individual fluctuations? If the price of particular commodities went up, would the general quotas come down? Should the outlets allow for "reasonable growth"? Then there is uncertainty about the duration of special arrangements. Should they simply tide Australia over until world agreements are reached? Or is a permanent preferential arrangement with Europe envisaged?

They do not, however, throw much light on the chances of success. The Australians feel fairly confident that Britain will not enter the market without securing some safeguards for them. They know the United States is strongly opposed to any continued preferential arrangements. Mr Dean Rusk told them so firmly during the recent Anzus meeting and they responded with some resentment, reminding America of its duty against Australian wool, its restrictions on imports of lead, zinc and butter, and of its own preferential system for sugar. But they do not know and cannot guess whether the French negotiators might exploit the Commonwealth's need for special protection in order to confront Britain with an impossible choice: to enter the market only by abandoning Commonwealth pledges and responsibilities which in all honour it must maintain. Since the outcome is thus still so far from clear, few Australians have asked themselves the further question whether a British decision to remain outside the common market on their behalf might not ultimately do them more harm than good. Australia's prosperity, after all, depends on expanding world trade, yet few Australians seem to have considered the possibility that a check to integration in Europe might lead to increased American isolationism and hence to the ultimate extinction of expansion and élan throughout the free world.

The Volkswagen Tragi-Comedy

FROM OUR BONN CORRESPONDENT



IT would be possible for some latter-day Aesop to compose an engaging fable about a lowly beetle who caused an uproar among the lions. By reason of its numbers and social significance, the Volkswagen beetle is in fact capable of provoking an immense stir in the German economic and political jungle. Some 75,000 workers are employed at Wolfsburg in three daily shifts, making over one million people's cars a year. Volkswagen snouts and snortings are inseparable from the contemporary German street scene. Of the million new cars shipped from Germany last year (the Federal Republic is at present the foremost exporter of motor vehicles) approximately every other one was a Volkswagen. The people's car has even spawned people's shares. Little wonder, then, at the commotion caused when the manufacturing company raised the car's domestic price on April 1st by some £25 (DM 240 to DM 390, according to the model). Several other leading car manufacturers have followed suit. A confused, and often angry, debate has been in progress. It concerns fundamental economic principles in general, and in particular the dangers of inflation and common market competition. Several public personages have joined battle. Through the smoke some of them can be discerned fingering painful bruises, and mouthing what could be only four-letter words if the German language had any.

The Volkswagen serial, which is generally agreed to be a tragi-comedy, opened on March 21st within twenty-four hours of Dr Adenauer's departure for his customary spring holiday in northern Italy. It was then that Dr Adenauer's deputy, Herr Erhard, impetuously seized the opportunity to display qualities of leadership which some of his critics, including the Chancellor himself, had suggested he was lacking. In the dual role of minister of economics and pretender to the Palais Schaumburg, Herr Erhard broadcast with unusually earnest mien an appeal for "moderation"—warning his radio and television audience that disaster lay round the corner should the west Germans persist in expecting to receive more of the world's goods than they themselves were producing. The inexorable facts were that while wages and salaries had risen in 1961 by 12.8 per cent, production had increased by only 5.9 per cent, and that the workers were still pressing for more money and leisure, although since last year they had been receiving, he claimed, more of both than was the rule in western Europe. Herr Erhard made it clear that he expected employers to resist wage demands in future, instead of yielding, as on past occasions, and blandly passing the bill on to the consumer.

Herr Erhard often has an unlucky, as well as a lucky, touch in handling public affairs. His barbs that night were flighted too heavily in one direction. A leading trade union official in Lower Saxony, Herr Karl Hinkel, spoke up for the injured. Herr Erhard's broadcast, Herr Hinkel complained, had been in the main "a massive attack on the workers and the trade unions." The charge was widely repeated. Yet no sooner had the minister tried to correct this effect by broadening his range than he suffered the

smart of appearing to be contemptuously ignored. On March 27th the manufacturers of the Goggomobil car announced price increases of three to five per cent with effect from April 1st. The public took little notice. But it became instantly excited when, on March 28th, the prodigious Volkswagen hatchery announced that as from April 1st the home price of its standard model would be raised from DM 3.810 to DM 4.200 (mitigated to some extent by the installation of hydraulic brakes), that of the export model from DM 4.740 to DM 4.980, and that of the convertible from DM 5.990 to DM 6.230. Now everybody looked to see how Herr Erhard was taking it. To aggravate his discomfiture, similarly defiant price increases were announced in the course of the next few days by NSU, Ford, Daimler-Benz and BMW.

Herr Erhard tried at once to reverse these decisions. In his address to the Federation of German Industries on April 3rd, naming no names, he scolded car manufacturers who raised their prices immediately after granting wage increases for behaving "just as irresponsibly as the trade unions themselves." Behind the scenes Herr Erhard pulled what private strings he could to bring the insubordinate to heel. But in vain. On April 30th the Volkswagen board of management, headed by its director-general Herr Nordhoff, rejected a recommendation to revoke which had been submitted by the supervisory board under the chairmanship of the leader of the powerful metal workers' union, Herr Brenner. Herr Nordhoff

pointed out that while the men who made the Volkswagen had received substantial wage increases since 1957, and the quality of the car had been improved, its price had remained the same until April 1st, and even then was still below that of 1949. There were not only the workers, but also a million and a half shareholders to think of. Herr Nordhoff apologised to Herr Erhard for having embarrassed him. The company, unfortunately unaware of Herr Erhard's intention, had decided upon the price increases before the minister made his clarion call to the country. "It's a circus," Herr Brenner exclaimed, not without *schadenfreude*. To Herr Erhard's further mortification this remark, and the Social Democrats' "resounding box on the ear for Erhard," were widely used headlines.

Three days later, on May 2nd, Herr Erhard presided in the Chancellor's absence at a meeting of the cabinet which afterwards put out a communiqué affirming the government's extreme displeasure and its firm intention to continue its fight against Volkswagen. Largely at Herr Erhard's inspiration, the Christian Democrats in the Bundestag drafted a recommendation on May 8th to the effect that the import duty on cars of common market manufacture should be halved. Having in the meantime returned to Bonn and listened to the objections of heavyweights in the Federation of German Industries to Herr Erhard's dubious weapon of retaliation, Dr Adenauer tried to prevent its use, but for once was overruled. Hoping, none the less, to contrive some sort of compromise, the Chancellor, partly from guile and partly because of misunderstandings on the telephone, inspired a communiqué after a cabinet meeting on May 14th, promising buyers of the dearer Volkswagen a built-in radio for which no extra charge would be made. Within the hour, Herr Nordhoff had blown the cabinet's pretty pipe dream into thin air.

The ruffled ministers decided on May 16th (with the four Free Democrats in the cabinet dissenting) to ask the Bundestag to approve the suspension of fifty per cent of the duty on cars imported from common market countries. This would mean that cars with an engine capacity over two litres would pay duty of six and a quarter per cent *ad valorem* instead of twelve per cent, and that cars with an engine capacity of 800 cubic centimetres to two litres would pay five per cent instead of ten per cent. The minimum of 800 per cent, it was reckoned, would protect the makers of some of the very small cars, yet it would put Renault's Dauphine at an advantage by lowering its price, which is at present approximately that of the Volkswagen export model, by the equivalent of roughly £18. But on May 18th, when the time came for the Bundestag to vote on the government's proposal, so many dissenting Free Democrats had slipped away that there was an insufficient quorum. Once again the unlucky Herr Erhard had been thwarted in full view of the public.

On Tuesday of this week, the presence of a sufficient number of deputies having been assured, Herr Erhard got his way in the Bundestag by 331 votes to 81, with 21 abstentions. But it was not an occasion for congratulation, either for him individually or collectively for the Adenauer regime. Considerable doubt, if not displeasure, is being felt and voiced throughout west German industry by this unilateral manipulation of import duties for a domestic penal purpose, without any reciprocal favours from the foreign beneficiaries concerned. It is questionable whether the booming Volkswagen company will feel the slightest pinch. Herr Erhard is being criticised for having let concern for his prestige cloud his judgment. Alike from Right and Left the question is being asked whether Dr Adenauer is capable of maintaining adequate control much longer. The subject will certainly be raised at the annual conferences which all three parties represented in the Bundestag are holding in the Ruhr in the course of the next ten days.

Dr Verwoerd Fights On

FROM OUR SOUTH AFRICAN CORRESPONDENT

APARTHEID may be fraying slightly at the edges; the enmity the world shows towards South Africa is not. For these two reasons, Dr Verwoerd is concentrating more than ever before on making the South African laager as impregnable as possible—and as uncomfortable as could be for the opponents of his government's race policy. The "Sabotage Bill," debated in Parliament this week, is the latest, if not the most awesome, addition to Dr Verwoerd's armoury.

Tiny cracks are appearing on the hard stone face of apartheid. For business reasons, Japanese have been "accepted" as "whites." Afrikaans-speaking white selectors have nominated non-white athletes for inclusion in a South African team competing outside the borders of the republic; a Coloured (mixed-blood) man has been chosen as the workers' delegate to the International Labour Organisation conference in Geneva, against bitter opposition from Afrikaner Nationalist-orientated trade unions. The two latter events, both unique in South African history, are in conflict with the apartheid philosophy. In both cases the government has had no short-term option but to acquiesce with bad grace—with the assurance that "this will never be allowed to happen again." At times, of course, it is able to hit back hard at once, as when it changed the law after a Japanese had been classified as White by a state board.

Most significant of all the dents made in the white laager's fence, however, was the decision of Dr Verwoerd, after years of stalling and protesting, to invite two United Nations representatives to the republic. They were given freedom to go where they wished in the former mandated territory of South West Africa and see

and interview whom they liked. Here, no matter how the incident is explained, was an about-face which has puzzled many a fervent Nationalist reared in the conviction that the UN has no business in a South Africa that will tolerate no interference in its domestic affairs. The government realised, however, that the climate of world opinion was such that it had to ward off further frontal attacks and play for time. No matter how determined Dr Verwoerd's people remain, the fact is that the UN has now climbed over the laager fence and had a good look round. This might, incidentally, introduce a little more realism into the Trusteeship committee's handling of the matter. To add to Afrikanerdom's immediate worries there has been the patent failure of the "granting of self-government" to the Transkei tribes to impress South Africa's critics abroad, or even wholly to mollify African opposition in the territory itself or anywhere else.

On top of this, fourteen years of Nationalist rule have failed to destroy the hard core of outspoken resistance put up by both blacks and whites. Now Dr Verwoerd's government will restrict still further the area of personal liberty, and launch yet another assault on all liberal thought and action. The "Sabotage Bill"—actually a co-ordination of the provisions relating to subversion in other statutes, particularly the Suppression of Communism, Riotous Assemblies, and Criminal Procedures acts, is intended to make extra-parliamentary opposition as difficult and as dangerous as possible.

Man from the UN with escorts

As such it amounts to an act of intimidation and terrorism. Few people believe the threat of sabotage is anywhere near serious enough to justify a Draconian piece of legislation like this—death or a minimum of five years' imprisonment for sabotage; the onus placed on an accused to prove the innocence of his intentions; giving the minister the power to ban newspapers and prohibit the holding of meetings; confining "named" individuals, like Mr Albert Luthuli, to house arrest without trial and making it an offence for newspapers to publish statements from them; and restricting the discretion of the courts.

Even so moderate a critic as the leader of the parliamentary opposition, Sir de Villiers Graaff, has said that the bill shows that the government is unable to rule with ordinary powers. A former chief justice, Mr Centlivres, has labelled the measure the "Sabotage of Freedom" bill, and the Progressive party has taken the lead in organising country-wide protests. The Black Sash movement, born in the days of the vain fight to preserve the franchise rights of the Cape Coloured people, has re-emerged to demonstrate by public display its abhorrence of this further invasion of personal rights and threat to the rule of law. The bill has come as close to shocking White anti-Nationalist opinion as measures of this kind are capable of doing in South Africa's reactionary political climate.

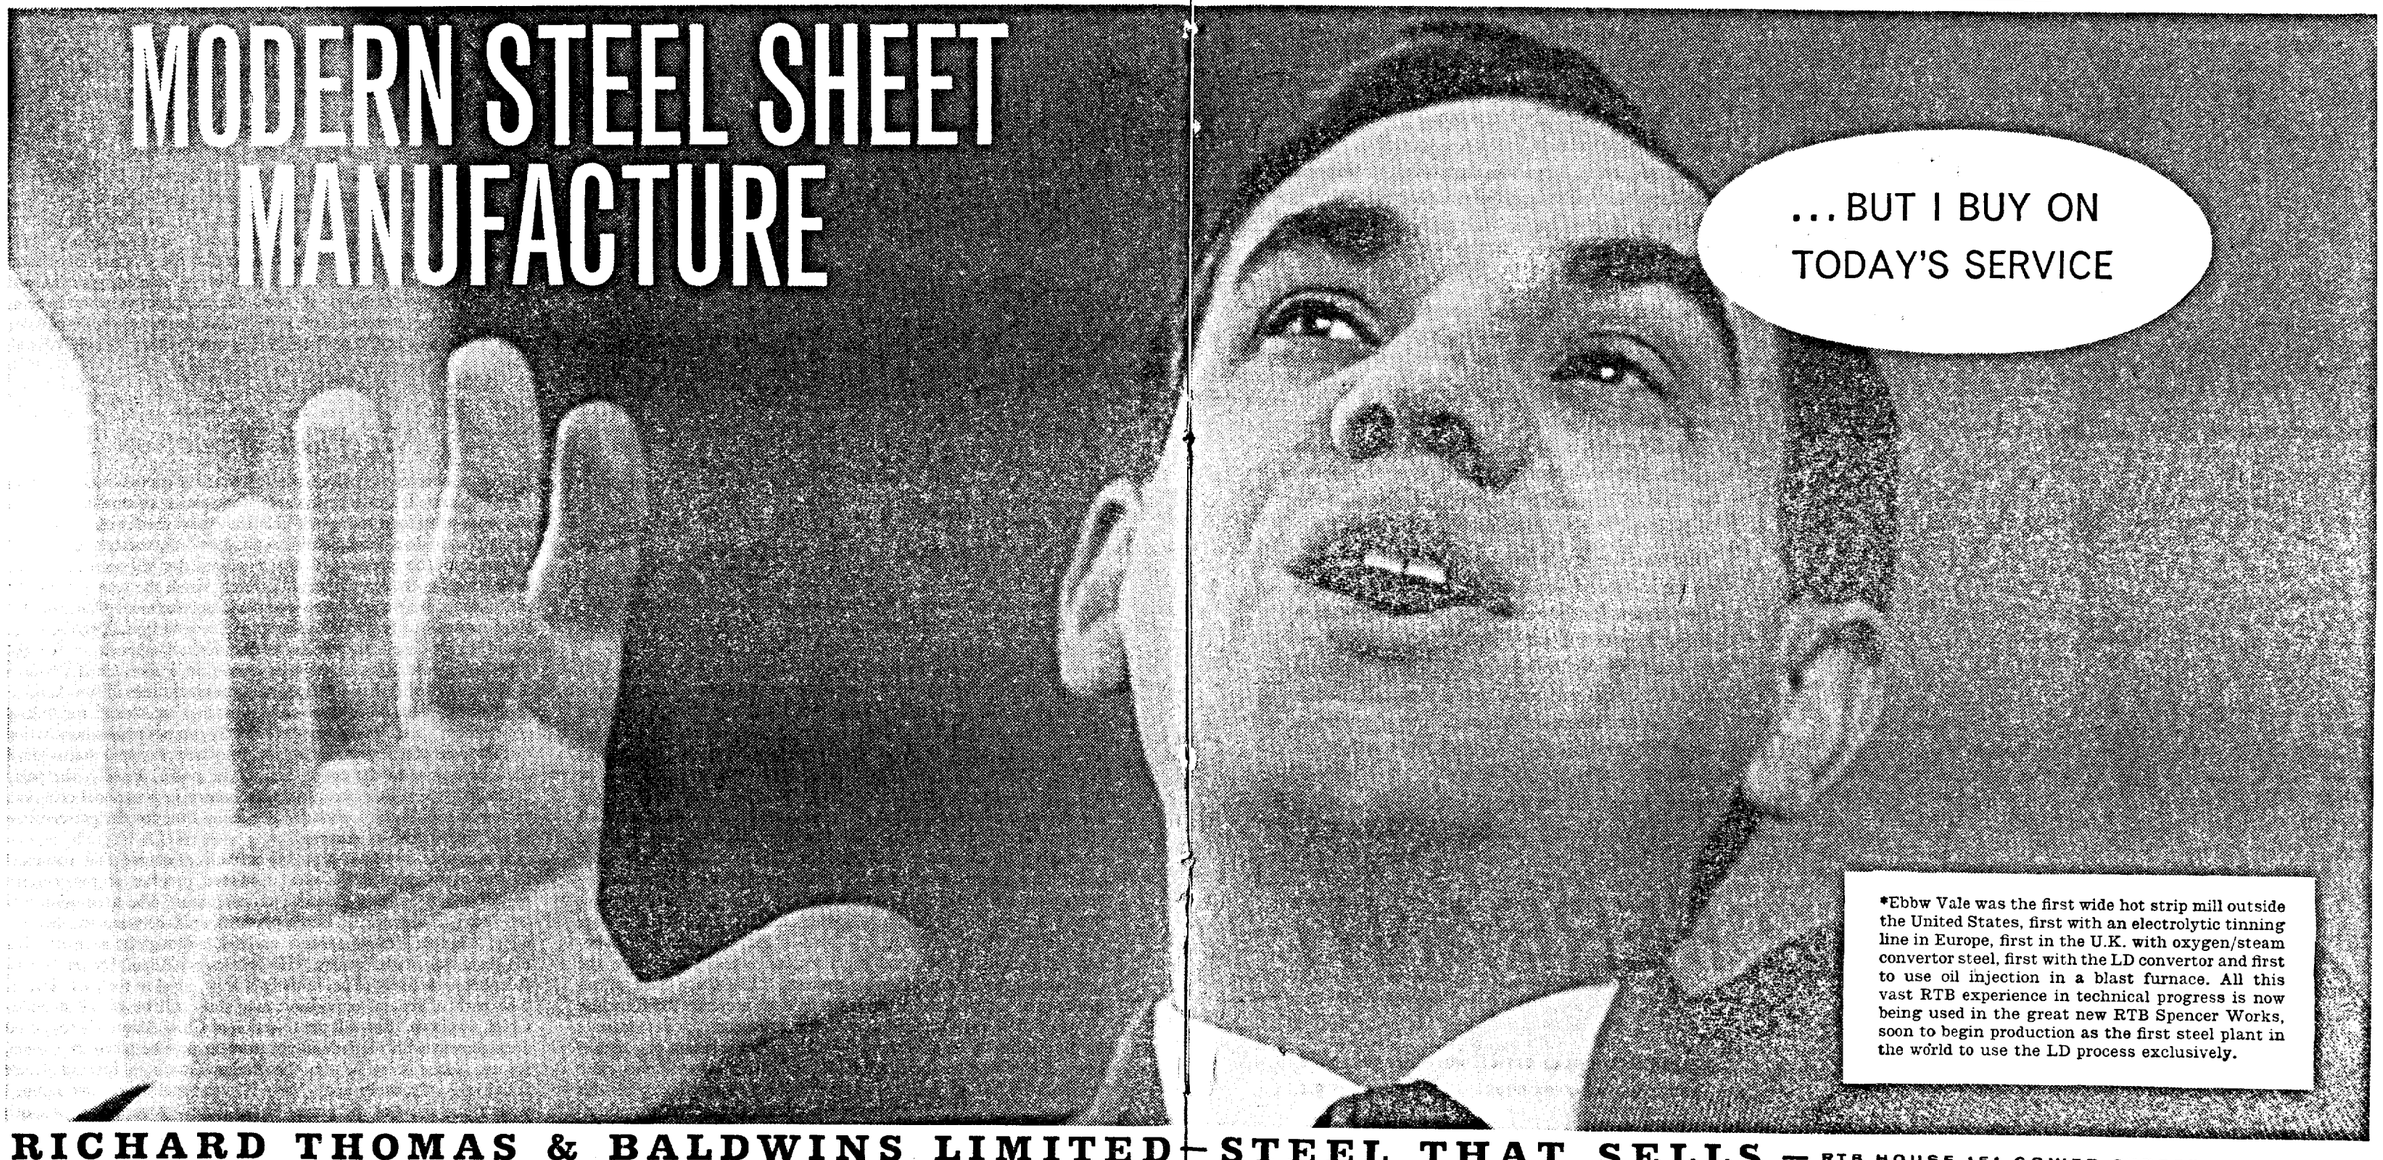
But the bill will soon become law substantially as it stands because most Whites are insensitive to the threat to western values inherent in such measures, and because the parliamentary opposition is powerless in the face of an administration ruthlessly determined to impose its will on its opponents. The old cry of self-preservation is being advanced as the justification for a measure which will reduce the rights of the individual as radically as any Afrikaner Nationalist measure of the last decade; for the majority of the Whites this is enough. The law was fathered, appropriately enough, by a minister of justice who was interned for two years in the second world war because of his sympathy for Nazism: he was a "general" in the fascist Ossewabrandwag movement which flourished during the war.

Inevitably the Bill will drive extra-parliamentary opposition further underground and stiffen the resolve of opponents beyond the borders of the republic to do whatever they can to bring about the end of apartheid. Against these possibilities the internal and external defences of the laager are being strengthened. South Africa is now calling up 10,000 men under 25 every year for military training, and is spending about 12 per cent of its budget on defence—more than during the war. The liaison between the army and the police is closer than ever before: both forces are being expanded at a rate unprecedented in peacetime.

But of course, as Sir de Villiers Graaff has implied, the government does not regard this as peacetime. It is certainly doing nothing to break down the impression that the country faces some dire peril—even if the peril is partly of its own imagination and partly of its own making. At the same time every agency is being used by the government, here and abroad, to spread the impression that normality and peace reign supreme within South Africa's borders.

Nigerian Re-action

THREE choices lie before the frustrated Action Group party of Nigeria. It can turn inwards towards its Yoruba-based tribal self and stick to running the relatively advanced western region, as part of it does now. This might, however, mean a dangerous increase in the pressure towards taking the region out of the federation; at the least it would severely strain the young country's unity at a time when its new economic development plan calls for solid national feeling. Alternatively, the federal branch of the party could resign itself to remaining the federal opposition for the foreseeable future (as, it seems, it must). Its leader, Chief Obafemi Awolowo, might then at least congratulate himself on keeping the flame of democratic opposition alive in west Africa: the federal government's attempts to frustrate this by promoting the non-Action Group part of the western region into new regional status must then be fought in the courts and at the polls. Finally, the party could join the ruling parties of the country in a national coalition, saving Nigeria's unity, perhaps, but doing little for the preservation of the liberties of its citizens.



It was this last (and arguably attractive) course that members of the party accused the now dismissed premier of the western region, Chief Samuel Akintola, of pursuing. The accusation was only part of a generally bitter personal feud between the leaders. Chief Akintola is now, it seems, out of it, although he is challenging his dismissal in the courts. His successor, Alhaji Dauda Soroye Adegbenro, is likely to be, initially at least, loyal to the party leader. The path of federal opposition may thus still be travelled under Chief Awolowo. But will the rejection of Chief Akintola's supposed arrangement with the federal government now be taken as a signal for the secessionists within the Action Group to intensify their activities? Probably not. Most Nigerian politicians are imbued with a fine sense of the power of the federal government to crush rebelliousness. But the possibility remains: within west Africa the reaction to Chief Akintola's dismissal may be felt for some time.

THE ECONOMIST MAY 26, 1962

RTB PIONEERED MODERN STEEL SHEET MANUFACTURE

Modern steel sheet manufacture began in Britain with RTB at Ebbw Vale*. RTB's constant development in strip mill production methods of hot rolled and cold reduced sheet, plate, tinplate and galvanised sheet, have all meant better service to industry, better availability of supplies and surer quality. And RTB service includes an ever-helpful technical advisory service, staffed by qualified engineers, ready to go anywhere at any time, bringing to your problems an unrivalled breadth of experience and knowledge.

RTB

*Ebbw Vale was the first wide hot strip mill outside the United States, first with an electrolytic tinning line in Europe, first in the U.K. with oxygen/steam convertor steel, first with the LD convertor and first to use oil injection in a blast furnace. All this vast RTB experience in technical progress is now being used in the great new RTB Spencer Works, soon to begin production as the first steel plant in the world to use the LD process exclusively.

RICHARD THOMAS & BALDWINS LIMITED — STEEL THAT SELLS — RTB HOUSE 151 GOWER STREET LONDON WC1

Man on the right lines

pleases by finding fault. A high wind is blowing in the Highlands. Two wires on the overhead transmission line begin to dance . . . and touch. There is a flash and a burn. This transient fault can be overcome—but it cannot be repaired until it has been looked for over the line's entire length. In rugged, mountainous country, and often in cruel weather conditions, the linesman must be out making laborious tests for mile after mile — and often week after week.

Ferranti have now found a way to make fault finding easier. With their Line Fault Locator, the maintenance engineer can detect the position of faults on high voltage transmission lines without leaving the substation. This is done by pulse reflection, the principle used in radar. The fault can be traced down to a short section of line, and quickly repaired so that the line is out of operation for the minimum time.

Our own day owes much to Ferranti's pioneer work in electricity. Transformers and summation meters for the Kariba Dam and the Niagara Falls Power Project . . . the world's largest generator transformers for the British National Grid . . . Ferranti have made them all. In the air and at sea, their research into electronics has made transport faster and safer. Atlas, the world's most advanced super-speed computer, comes from Ferranti. And Ferranti are leading the way into tomorrow.

THE BUSINESS WORLD

What Happened at Hunterston

IN February this year, Mr Norman Elliott became chairman of the South of Scotland Electricity Board. In January last year, Mr Arnold Lindley became chairman of the General Electric Company. These newcomers have a six-year-old tiger by the tail—the Hunterston nuclear power station that GEC is building and the SSEB is buying. Nothing is more remarkable about this project than the fact that, to this day, no contract exists specifying either a price or a completion date for it. It is not usual, to put it mildly, to order 360 megawatts of nuclear power capacity without checking the price. The two men have to sort out, if they can, an agreement on what the one side says Hunterston has cost and what the other side says would be a fair price. But first they have to secure that the station is finished and commissioned ; it was supposed to be on line this year, but to get full power from it by the end of 1964 will be possible only if it is quite remarkably free from teething troubles. This note of optimism, however, is welcome relief after the depressing history of Hunterston ; things are going better, and none too soon, but there is a legacy of inadequate planning and supervision that has still to be cleared up.

It may be said that this would be best left to the principals concerned—the board and GEC—and that inquests into what is already over the dam do no good. This is not how the matter strikes a responsible newspaper ; there is in question here a lump of public investment that, with its fuel, has a £70 million price tag on it. There is the liveliest public interest, too, in how the gap between what GEC has spent and what the SSEB says it would be prepared to pay can be closed. Who is to suffer more, the board using public money or the company using its shareholders' money ? Here is the major mischief in not proceeding by a contract. There have been attempts on both sides to get agreement. GEC's attitude, not unreasonably, is that it should be paid what the job has cost ; and this it reckons on the basis of a tender on 1956 prices and updated for cost and price additions since at just over £60 million, with another £3 million to be added for final items of cost, making £63 million in all. So far, the SSEB has paid around £35 million towards the cost, and GEC is reckoning on getting payments on account of £1 million a month for the next fourteen months. It is no use trying to hide the wide range between GEC's ideas of cost and the SSEB's ideas of price ; there is a gap of about £8 million between them. However the final figuring turns out, something has to give.

As the accountants argue back and forth, some account of how Hunterston's troubles came about is called for. The government's historic nuclear power programme launched seven years ago made no provision for building a nuclear power station in Scotland. Not until four atomic construction teams had begun to prepare bids for the first two English stations at Bradwell and Berkeley did the Scottish authorities decide to invite tenders. Since they had no site in mind, it was suggested that the atomic plant teams should bid for a station of about the same size and performance as Bradwell. The tenders were in by September, 1956 ; before Christmas contracts had been given to three of the four industrial consortiums, among them the General Electric Company and Simon-Carves. Initially, there was doubt about who should get which station, until research showed that certain nuclear data given by the Atomic Energy Authority to GEC were wrong and that the company had some re-designing to do. By this time the South of Scotland Electricity Board was meeting local opposition to its choice of site—at Hunterston on a sheltered bend of the Ayrshire coast opposite the Isle of Arran and backed by low hills. A public inquiry was clearly going to be necessary ; and as the delay could be put to good use by GEC, it was awarded the Hunterston station and not one of the English stations.

GEC had put in a bid of £37½ million for Bradwell ; the SSEB assumed, mistakenly as it turned out, that Hunterston could be built for the same amount and did not ask GEC to re-tender. Lacking planning permission, the board could tell GEC little in advance about the site ; the enormous differences in civil engineering work in Bradwell's clay and Hunterston's rock became apparent only when the men moved in. And this was not the only reason why the original guess of £37½ million no longer applied. The Atomic Energy Authority, after examining the tenders, ordered design changes in all three stations which added substantially to their cost ; the most expensive and extensive changes were asked of GEC. In the mood of atomic euphoria that prevailed in 1957 neither

GEC nor the Scottish board discussed who was going to pay for them. Each assumed the other would pay.

In an atmosphere of benevolent mutual misunderstanding the men moved on to the site in October, 1957. For a time all went swimmingly. GEC had taken responsibility for the whole job and only discovered by experience what it had bitten off. The SSEB, accustomed to large scale employment of consultants, appointed the Atomic Energy Authority as its nuclear consultants, and the firm of Kennedy and Donkin as engineering consultants. The two had equal authority; there was no single, ultimate responsibility for what happened on the site. When changes were recommended, there was no one to query their necessity. When decisions had to be taken, there was no one to take them.

Before long GEC discovered that its labour force included contrary characters from Clydeside, fractious and home-sick for the shipyards. In retrospect, the most charitable comment that can be made is that the men's complaints might have been forestalled if more care had been paid to the organising and costing of their work. The most vulnerable sub-contractor was the Motherwell Bridge and Engineering Company responsible for erecting the reactor shells and the boilers, key jobs that on other sites have been divided between at least two separate companies. Unofficial strikes reached a peak during 1959 when the men were coming in and out like a stage army, and in September that year GEC took the ultimate step and shut the site down, against the advice of the Employers' Federation. It was not opened again for four months, by which time strikes and lack of discipline had accounted for more than half the expected three years' delay. Since then there has been uneasy truce rather than genuine industrial peace on the site; and, despite improvement, the tempo and organisation of work still seem below par.

Yet had the men behaved like angels Hunterston could not have been finished on time. It had already suffered too many design changes, and this is where much of the extra cost can be run to earth. The changes were ordered by the Atomic Energy Authority in its role of technical consultant. Some of them were plainly necessary and corrected demonstrable faults in design. But it can be and is being argued even by the SSEB's own men on the spot, that the majority were refinements involving more cost and delay than they were worth, yet passed unquestioned by the SSEB.

Not until the end of 1960 did GEC realise that the SSEB had never accepted responsibility for these design changes and seemed, indeed, to regard them as GEC's liability. The board appeared willing to pay up to £37½ million, but to regard everything above that as open to negotiation. In its own management troubles, GEC's board had systematically stripped the atomic energy division of promising management material to fill gaps elsewhere. Thus the staff in charge of one of the biggest projects GEC ever tackled was constantly changing. And the company was running up bills on the site faster than money was coming in from the SSEB.

GEC began to remonstrate with the SSEB; in the spring of 1961 the company wrote the first letter actually threatening to stop work unless it was paid. This letter had no effect on the SSEB; but it had a startling effect on GEC's sub-contractors, who began to pull out. Work ran down, which was much what GEC intended. During this period Mr Arnold Lindley, who had founded GEC's atomic energy division, had moved up through the board from managing director to chairman; and last November, when he repeated his threat to close Hunterston first to the SSEB and then to the Secretary of State for Scotland, it began to look as if he meant what he said. GEC's bank overdraft by then was crowding £16½ million.

THE time had come for some rapid changes. The chief engineer of the SSEB had retired in October and the board had not yet replaced him; in January the chairman also retired, with his health broken. The SSEB's morale was at its lowest. A new chairman was not appointed until late in February, when Mr Norman Elliott, an engineer and a lawyer who was chairman of the South Eastern Electricity Board, agreed after hesitation to take this hot seat. He in turn has appointed his own chief engineer from inside the SSEB, and borrowed one of the Atomic Energy Authority's most experienced reactor builders to supervise the station. So, for the first time in six years, Hunterston now has a boss. There have been changes on the contractors' side, too, both at Motherwell Bridge and at GEC, whose atomic power division is now merged with Atomic Power Construction to form the United Power Company, which takes responsibility for Hunterston's construction, although the debt remains GEC's headache. Heroic efforts on the site to re-introduce an orderly working schedule aim at full power by end-1964. Major jobs have for the first time been tackled and completed on time, with a corresponding fillip to morale. If this were all the SSEB had to worry about, it could feel confident of having turned the corner.

Yet rejoicing would be premature. A contract with a firm price and completion date seems as far away as ever. Admittedly the deadlock between GEC and the SSEB has been breached and new men are wielding new brooms in a way that has sparked confidence in the discouraged and dispirited. But the area of difference between GEC and the board is still terrifyingly big. It turns on this one, all-embracing question—for how much of the extra cost of Hunterston is the board responsible, and how much must GEC write off against experience? In their anxiety to keep the site moving, engineers have pressed ahead with work without their masters agreeing who was to pay for it. For this they cannot be blamed, for their masters did not seem to care. The record at Hunterston is one of mismanagement at the top and growing demoralisation on the site until no man who valued his career was willing to be connected with it. Yet Hunterston started out as the finest, most advanced nuclear power station to be built in this country; GEC has shown in Japan that it can erect such stations to plan, and the SSEB is no laggard in building big thermal plants.

One of the parties that emerges with credit from this trouble is the civil contractor, John Mowlem, which has finished a £15 million contract, all but £800,000, to the original timetable—with some odd results. Work on Hunterston is now not only behind schedule; it is also out of phase. The lodge keeper stands in his finished lodge by the gates. The pastel tiles are going up in the turbine house beside turbines that will not turn for two years and the little laundry lies blue-and-cream under the shadow of cranes lowering hunks of metal on to incomplete reactor structures, while glaziers fight a full-bodied wind off the Firth of Clyde to fix glass walls around what parts are in place. The bill for civil engineering is higher than the figure quoted in the original (Bradwell) estimate, but is not an item that the SSEB is likely to dispute.

Things never go absolutely right with projects of this kind and size; the English atomic stations have their troubles and delays, too, and Hunterston might just catch up with them if it has the luck (and it can only be luck) of a clean start. But the delay is one factor in the recent increase of electricity charges to the SSEB's consumers and there will be further increases in costs to meet as the plant is paid for and commissioned. How expensive the station will be in terms of capacity installed is anybody's guess: between £165 and £200 a kilowatt (providing electricity at between 1d. and 1¼d. a unit, compared with ½d. from a modern thermal plant), according as the argument is decided on the eventual price. How expensive it will be running against the board's thermal stations, whose coal costs have lately gone up sharply, will depend partly on the success of GEC's design and its newly conceived charging machine, which will be most advantageous if it works well. And if it should be thought that nuclear power systems are hopelessly troublesome, it is only too likely that the next generation of thermal generating systems working at critical temperatures and pressures will hardly be less so. These creatures are difficult enough in all conscience. It is not necessary to make them more difficult by failures in legal, accounting, managerial and financial arrangements. Hunterston has started to put some of its extraordinary shortcomings right; but the two sides involved have a duty to themselves, their customers, their shareholders and the public to clear up the rest as early as possible.

Burden Sharing for the Dollar

IN the week to May 16th, the United States lost $35 million of gold, bringing the reserves down to $16,435 million. This year's losses so far amount to $455 million, against $364 million to the same date in 1961. Gold shares have been the only shares to advance against a gloomy background of losses in industrials and a renewed buzz about the price of gold. The dollar has been weak against continental currencies, particularly the Swiss franc and the Deutschmark. Restlessness about the dollar is increasing. Both those who mistrust it and those who want to see it strongly playing its crucial part in the world's monetary affairs must study two speeches, by Mr Douglas Dillon, the Secretary of the Treasury, and by Mr Robert V. Roosa, Undersecretary for Monetary Affairs, who seized the timely occasion of the American Bankers' Association Conference in Rome last week for major policy statements.

Mr Dillon's propositions were essentially simple: he argued for a "do-it-yourself" development of the European capital markets to relieve the strain on the New York market, and on the American balance of payments, imposed by foreign borrowing. Mr Dillon characterised the recent $25 million borrowing in New York by the European Coal and Steel Community as a "not very efficient use of the world's financial resources." To develop up-to-date capital market mechanisms is indeed one of the responsibilities that rests on Western European countries; to remove "no longer necessary" restrictions on free capital movements is another; and perhaps one might add the possibilities of inhibiting American buying of European portfolio investments could be examined by the American authorities. Britain in the common market could make a powerful difference to the mobilisation and distribution of European investment funds. Here Mr Dillon certainly struck home:

> Today the plain fact is that underwriting and distribution facilities in the industrialised countries of continental western Europe are generally inadequate to meet the foreseeable needs of domestic borrowers—much less those from abroad.

To reform these palpable weaknesses cannot be easy or quick. Britain might open the London market more freely to foreign borrowing; there are restrictions in Italy and France that could go; and Germany might begin to construct the modern capital market that it now virtually lacks.

The Roosa plan is of a far more portentous character. Brooding over the defence of the dollar, Mr Roosa has been examining the possible ways in which the outflow of gold can be staunched. He faces the obvious dilemma with utter frankness:

> A clear distinction has to be drawn . . . between the absolute and unconditional availability of gold to foreign monetary authorities for legitimate monetary purposes and the compulsion on us—in co-operation with foreign monetary authorities—to avoid any unnecessary dispersions of the United States gold reserve, on which our existing international system, in the last analysis, depends. The United States would in fact be just as derelict in its duty to help support and sustain a growing and viable international economy if it failed to defend the gold stock through improved techniques of monetary co-operation as it would be if it failed to make gold available to foreign monetary authorities on demand.

Since the United States is the only country that maintains complete interconvertibility between gold and its own currency at a fixed price, it must be a ready seller of gold on demand. The difference is that other countries are not necessarily sellers to the United States when they have exchange deficits, because their own gold reserves are cushioned by dollar reserves.

So Mr Roosa is concerned to develop methods that minimise

America's gold losses when the balance of payments swings into deficit—"by no means to avoid them, but certainly to avoid conditions that exaggerate them." And he draws some interesting lessons from the success that the United States has enjoyed in the past fourteen months in entering (for the first time since the late 'thirties) into foreign exchange transactions specifically for monetary purposes. These transactions have had the limited aim of alleviating temporary disturbances in the exchange markets, and have been conducted in co-operation with the monetary authorities in Germany, Switzerland, Holland and Italy. By selling the national currencies forward the Federal Reserve Bank of New York, acting as agent of the American authorities, has sought to temper the immediate possibility that dollar holdings accruing to individual countries in disconcerting volume might be converted into gold. In the case of the mark transactions, which reached a peak of about $350 million in mid-June, the American authorities in effect made it possible for recipients of dollars to continue to hold them, and to assure them of later convertibility into marks "if their acquisitions did in fact prove to be sustained"—which means, in part, if they were retained by private holders and did not ultimately come into official exchange holdings.

In the 14-month period, Mr Roosa estimated, total forward exchange operations of the US Treasury in the four currencies concerned have amounted to about $1½ billion—each transaction naturally involving the borrowing of appropriate local currencies to cover the "swap." He sees in this cautious experiment a potential approach to a system in which a key currency country could become an active participant in the international exchange markets. Would these methods assist towards stability in the mechanism of international finance? Could they reinforce the fundamental work of the IMF? Would they help international liquidity and strengthen the role of gold?

MR ROOSA discerned two themes from this recent American experience. First, the United States was increasingly aware of the dual nature of its balance of payments problem:

> We must gain and keep the initiative for influencing the factors that affect our balance of payments, but we must do so in the impeccable manner that assures and retains bankers' confidence. This means that, both as a trader and as a banker, the United States has to keep its markets open and free. We have, therefore, a major stake, which the western world shares with us, in resolving our balance of payments' problem within the framework of a free international economy, with stable exchange rates and an immutable gold price of $35 an ounce.

A sizeable deficit in American payments must almost certainly produce some increase in foreign central bank holdings of dollars, and hence to some further drain on US gold reserves. The disciplines which such movements imply are "fundamental and clear." But Mr Roosa added:

> With $8½ billion of liquid dollar holdings in the hands of private foreigners, we must make sure that speculative forces are not fed by uncertainty about either the ability or the determination of the United States to stand firmly behind the inter-convertibility of the dollar with gold at the fixed price of $35 per fine ounce.

To be able to test whether developments against the dollar might be deeply rooted and sustained, or whether short-lived and soon reversible, is therefore a valuable addition to monetary technique; it gives a chance of countering the irrational floods of funds from one monetary centre to the next.

So far, these exchange operations have been dictated by market developments. Do they serve as model for a continuous policy of holding moderate amounts of convertible currencies in defence of the dollar as a key currency? One difficulty here is how to acquire such currencies in a sustained period of payments deficit. But in time holdings ("comparatively small") of other currencies could be built up, through open or forward positions, that might be able to handle "a considerable part of the normal swings in payment patterns, leaving the gold reserves available to cover more fundamental and lasting adjustments." The suggestion, then, is for perimeter defences for the dollar that would economise the dependence on gold and enable strong countries other than those responsible for the two key currencies to take over, in effect, some part of their burden in international payments and investment.

Such a system, Mr Roosa suggested, might be a sensible way to provide for any large increase in long-run liquidity requirements. Many knotty problems would have to be resolved—through the Basle group, the Organisation for Economic Co-operation and Development, and the International Monetary Fund. But Mr Roosa concluded:

> Explorations along these lines are far preferable, it seems to me, to the often proposed types of action (involving still more difficult decisions and negotiations) that basically involve an oath of allegiance by all governments and central banks to a synthetic currency device, created by an extra-national authority bearing neither the responsibilities nor the disciplines of sovereignty.

In drawing so extensively on Mr Roosa's immaculately drafted speech, *The Economist* has had in mind the need to counter any cynical suggestion that the United States is trying to argue itself out of trouble. As Britain has every good reason to know, irrationality plays as conspicuous a part in international exchange as the safeguarding of commercial interest. The fact that the dollar is in trouble is in a sense a credit to American generosity and liberal policies as well as a relief to what was a dollar-starved world. But much is now working together for good in the exchange markets, by a number of international arrangements working in apposition to the IMF. If any monetary authority is foolish enough to seek individual advantage by undermining them, or failing to support them, it could set in train a disaster of monetary fission. The atom club has few members; the monetary club has many. Mr Roosa is urging them above all else to be clubable.

BUSINESS NOTES

IN THE MARKETS

Paying Less for Growth

ON every stock market in the western world equity prices are in retreat. Common market equities, as measured by the Euro-syndicat index, are at their lowest point since May, 1960; American equities, as measured by the Dow Jones average, at the lowest point since January, 1961; and British equities, as measured by the *Financial Times* index, at their lowest point since polling day in October, 1959. The stock markets are not anticipating a world-wide economic recession; but they are questioning the pace at which further economic growth will occur. In particular, taking their lead from Wall Street, they are wondering whether the calculations about equities based on the assumption of continued, if controlled, inflation are any longer valid; and whether in a world of more stable currencies the impetus given to earnings and dividends by an expansion in production and trade will be sufficient to justify the high prices and low yields that many equities command. The phrase "profitless prosperity" has made its impact, and without any great head of steam in profits investors have seriously begun to wonder whether returns of 3 per cent, 2 per cent and less on equities, when fixed interest bonds are yielding more, look forward to pie in the sky rather than to the hard competitive facts of domestic and international trade.

* Base = 10.

At times and in its own fashion, the London stock market has made its own obeisance before the altar of "growth"; but, largely because of the sobering and steadying influence of institutional investment, it has often been more discriminating in its worship than other stock markets. And investors do know what earnings they are buying in British and American stocks; in many European stocks they have no idea what the earnings may be. Some British stocks still discount the future a long way ahead—in some instances too far ahead; but British investors learnt a sharp lesson from the boom in the spring of 1961 about the dangers of bidding up the price of all equities indiscriminately. Thus there is less reason for London to panic about price/earnings ratios than there is in other stock markets.

British Problems

IN addition to the further fall on Wall Street, the British market had to contend with domestic problems. It was badly shaken by a gloomy set of company statements, notably those from Dunlop, Fisons and Averys, and then its ideas about industrial expansion later in the year and a further relaxation of the credit squeeze suffered a blow when the Chancellor said that he might have to reimpose economic restrictions if the policy of pay restraint is not allowed to succeed. His statement that "we shall not shrink from doing what we think is necessary" unnerved the stock market though prices became a little steadier on Thursday.

The speculative gains tax has had some effect on the market in the sense that it has inhibited some short-term speculators from "buying on a fall." The selling has not been heavy, but there are no buyers and the jobbers have been marking down prices ruthlessly. As a result, *The Economist* indicator lost 15.5 points to 340.2, its lowest point since the general election. Neither the fall in prices nor the speculative gains tax deterred the stags in the issue of ordinary shares by Ready-Mixed Concrete. When dealings began this week the shares at one moment touched 43s., compared with the issue price of 24s. before coming back to 35s. 1½d.

Apart from a momentary attack of nerves on Wednesday following the Chancellor's statement the gilt-edged market has remained firm. The prospect that the tap on the 1972 Conversion stock will soon run dry has attracted some switching and some outright purchases and the price has moved up quite sharply. The background to the £12 million offer by the City of Birmingham of a 6¼ per cent stock 1972-73 at 97 was thus favourable. The stock offered a running yield of 6⅞ per cent and a redemption yield of 6¾ per cent. The issue was oversubscribed and dealings began at a premium of ¼. Evidently the speculative gains tax is not a great hindrance even for new bond issues if the terms give investors a reasonable turn.

Wall Street's Reaction

A correspondent cables:

IN a speech to the American bankers in Rome, Mr Walter Heller, the chairman of the council of economic advisers, emphasised that in recent years the behaviour of equity prices on Wall Street has not always correctly predicted the course of the economy and once again he expressed his confidence in the economic prospect in the coming month. Mr Heller did not sway the market.

So despite Mr Heller, and without any special sense of panic, prices have fallen to another new low. By the close on Wednesday, the Dow Jones industrial average had fallen to 626, about 14 per cent below last year's high, and the gains made in last week's short-lived rally had been completely wiped out. There appears to be little indication that the bottom is in sight and by virtually every yardstick the market still looks weak and vulnerable. In Wednesday's fall, for instance, 460 stocks fell to new lows for 1962, compared with 236 stocks on Tuesday and 103 stocks on Monday. Moreover, about ten times as many stocks fell as the number that rose, and most of those that did rise were preferred stocks. Even the odd-lot investors, who traditionally go in the opposite direction to general movements in the market, are now bears though in the earlier days of the decline they had been buyers on balance. An important factor in the decline has been the sobering effect of the Securities and Exchange Commission's investigation of the stock market. A number of leading stock exchange houses have come under fire for loose branch office administration and for trading on "inside tips." The SEC has been careful not to alarm Wall Street, but its probe has undoubtedly made speculators more cautious and this has robbed the market of some of the technical support that might otherwise have been forthcoming.

THE ECONOMY

Unemployment Up

AFTER a pause in February, unemployment in Britain has continued to rise—in the sense that it has failed to improve as much as it should seasonally. Between February (the worst month for unemployment) and May, the number of people wholly unemployed can usually be expected to fall by about 60,000; this year the reduction was only about 20,000. Including those only temporarily stopped, there were 423,663 people registered as out of work on May 14th, equivalent to 1.9 per cent

of the labour force; a year ago the rate was 1.3 per cent.

Although unemployment worsened a little in May, the number of vacancies rose by about 6,000 in a period when normally there is no change. This is the first increase in vacancies, other than purely seasonal ones, since June, 1961. But with 109,000 fewer vacancies than a year ago and 108,000 more people wholly unemployed, there are eight people seeking work for every five jobs offered.

ENGINEERING

Output Up, Orders Down

THE engineering industry found its order books still shrinking in the first quarter of this year, though that is the time when it should be building up orders against the lean period that comes at the end of the summer. Total orders received were 13 per cent less in volume than they were in the first quarter of 1961. The fall was larger in home orders—16 per cent—than in export orders, which dropped less than five per cent. So the trend that was appearing last year has continued, with investment at home falling and forward export business, too, tending to decline. March by itself showed an even bigger fall in orders than the quarter as a whole—20 per cent—but the random manner in which large and small orders are booked means that this should not be regarded as too disastrous a sign for the industry.

The output of the industry rose throughout the quarter, which must account for much of the rise in the index of production. For March it was six per cent higher than a year before, helping to bring the volume of orders on hand down to 119 from 120 at the end of December. Export deliveries rose less than those to the home market, which the Board of Trade ascribes to the after-effects of the 1960 dock strike that inflated shipments early in 1961; in total they were four per cent higher in the quarter than a year before. Last year and in 1960 orders were coming in at a rate nearly 20 per cent higher than deliveries, which perhaps best illustrates the extent to which the industry is now living on its fat—in a seasonally adjusted sense.

GAINS TAX

A Look at Disclosure

THE key discussion on the Finance Bill this week was Wednesday's debate on the propriety of enforcing disclosure to the Inland Revenue by banks and other agents of their clients' affairs that might be concerned with the gains tax. The government had earlier promised to rectify the inadvertent drafting which would have brought the switching operations of the mutual life offices within the tax, so putting them on the same terms as the proprietary life offices. It also resisted efforts by the opposition to turn this short-term gains tax into a long-term capital gains tax—not the easiest exercise in logic, since Treasury spokesmen insist that it is "equity," not revenue, that the government is after. The danger remains that this expediently-framed legislation may be changed in the simple way that Labour amendments proposed into a bad capital gains tax, thus ruling out the possibility of a properly constructed one. A sensible amendment to exclude from charge gains of less than £100 was promptly rejected; the Financial Secretary, Sir Edward Boyle, took it upon himself to assure the House that the Inland Revenue would have "something better to do than chasing small investors about these small sums." Will they? How does he know? And is he qualified to say so?

The government has been moved, at least a little way, by criticism of the powers that are sought for the Inland Revenue to demand of bankers and other agents particulars of their clients' transactions. It would not concede that a High Court order should first be secured. The view of the Attorney General, Sir Reginald Manningham-Buller, was that the powers were necessary to secure a proper check but they could be exercised only for a named person, not in general enquiries, to check the accuracy of a return made by a particular tax payer. But he promised that before the report stage he would consider whether the powers could be more closely defined. He did not say why Section 414 of the Income Tax Act 1952 was insufficient for this purpose.

CANADIAN DOLLAR

Question Marks

THE Canadian dollar this week has been bumping along its artificial bottom of 91.90 American cents, betraying a lack of certainty, if not indeed of confidence, about the effectiveness of the devalution three weeks ago. *The Times* Ottawa correspondent has put more bluntly than anyone else the fears that now surround the Canadian dollar: "Any further devaluation before June 18th would seriously affect the chances of a further term in power for the Progressive Conservative Government." Even those informed Canadians who are full of questioning about the Canadian Government's policy would probably regard this as an extreme way of putting things. Without raising the possibility of a second devaluation within a few weeks of the first, they are asking whether electioneering is compatible with the right combination of economic and financial policies that is needed to make the first devaluation "stick." Government spokesmen have been making much of the fact that Mr Louis Rasminski, the Governor of the Bank of Canada, was behind the move to a 92½ per cent dollar—a compliment that has suggested to some realists who remember the Fleming/Coyne controversies that if devaluation goes wrong another Bank Governor can be publicly involved. This may sound a cynical view, but with the Prime Minister and Finance Minister out in the country electioneering, it has taken some hold. At any rate, the campaign is providing more opportunity for spending promises than for urging the kind of austerity and belt tightening that alone can make sense in Canada's present difficulties; and in this the Liberals are well abreast of the Progressive Conservatives.

Much is being made, too, of the support that Canada can now get from the IMF—$225 million in two bites before awkward disciplines are imposed from Washington—as if this could provide decisive support. Meanwhile, the Canadian authorities seem to have been much concerned to reassure the Toronto market that the dollar would be held at 92½ cents—an ear-stroking move that was not received as being made from strength. There is, indeed, every indication that the maintenance of an easy monetary policy by the Canadian authorities is itself financing the outflow of capital from Canada, and while the hand of the Bank of Canada may be at work in the rising level of bill rates, the almost gossamer-thin market for long bonds is coming under severe pressure. It looks more and more as if Canada must resort to a real, effective bank rate—not a residual bank rate determined by what is made to happen in the money market, but a meaningful use of interest rate policy. This would be a first psychological step towards making present devaluation effective.

OVERSEAS TRADE

Fine Not Dandy

THE government's tapping of the export barometer this year has produced such consistently encouraging readings that it is hard to resist the temptation to keep running out to check whether it really has stopped raining. Exports in April were still on the upgrade though not as pronouncedly so as in the earlier months of recovery. The seasonably adjusted rise of £2 million carried them to £314 million fob, the best monthly result since August of last year. If the Board of Trade had not made much of the consistent monthly improvement in exports to the sterling area since the end of 1961, it would possibly have been irrelevant to record that exports to the sterling area in April fell back quite sharply to around the February level after a heart-warming rise in March. In the past three months expansion in exports to Australia and New Zealand have been partially offset by setbacks elsewhere, which one hopes have been fully taken care of in earlier export prognostications. Nevertheless, an improvement in exports to the sterling area of 2½ per cent over the level of the previous three months was achieved.

The North American market stayed flat in April at the disappointing March level. Apart from the £2 million rise in exports to Western Europe, the progress was made in the miscellany of markets covered by "rest of world" (a rise of £4 million) and in exports to Russia and its satellites (up £3 million). However, an improvement smells as sweet whatever its regional classification. Exports of chemicals recovered quite strongly in the past three months, and exports of whisky flourished. Exports of basic materials and fuels were respectively 10 and 8 per cent higher than in November-January.

The fall in imports of basic materials continued in April, bringing the seasonally adjusted figure to £71 million cif, compared with a peak of £93 million in February of last year. In the last three months, imports were 13 per cent less than in the corresponding period of last year. Imports of foodstuffs rose by 5 per cent, compared with a year earlier; increased imports of fruit and vegetables contributed to the growth. Imports of potatoes in April were £4½ million, against £2½ million in April, 1961. The increase was entirely in old crop potatoes.

Though the Dillon round of reciprocal tariff reductions was completed by last week's announcement that Britain had agreed cuts on a range of goods mainly of interest to itself and EEC members, no date has yet been fixed for bringing them into effect. Imports from EEC countries worth £115 million in 1959 will benefit from the complete round of tariff reductions, mostly of 20 per cent. The common market countries bound themselves not to raise certain tariffs where the implementation of the common external tariff would otherwise have called for it. Cuts in tariffs on certain other products were also negotiated. Reductions agreed in the common tariff will not come into full effect until it replaces the individual tariffs of the member states. Only the first stage of this transition has been completed.

COAL

The Ruhr Cartel Loses

ON May 18th the European Court at Luxembourg dismissed with costs the Ruhr coal companies' appeal against the community's ruling of June, 1960, by which they were forbidden to set up a single Ruhr coal sales syndicate; but the German mine-owners are still hoping against hope that the last word has not been said. And one of their grounds for hope derives from the pending negotiations for Britain to become a member of the community (which France appears to have managed this week temporarily to block on an issue of procedure).

The German coal industry is arguing that if Britain joins ECSC it would be insupportable for the German companies to have to compete severally against the single marketing department of the monolithic National Coal Board, which has 200 million tons a year to sell at home and abroad. In such circumstances the European court has already admitted, there might be a case for reconsidering the situation. Coal marketers in west Germany are also arguing that the European Court cannot have taken into account the inroads of fuel oil competition into markets formerly served by coal. It is argued in Essen that the proposed sales syndicate is the only weapon with which coal can meet the competition of oil.

The Germans are prepared to argue that the validity of the Luxembourg treaty, which was framed in the light of the conditions prevailing in 1952, has been impaired by subsequent developments, and are suggesting serious efforts to "bring the treaty up to date" as soon as possible. They argue that revision would become imperative should Britain, whose coal output is almost as large as that of all the Six put together, enter the community. But it is appreciated that the process would be long and difficult.

INVESTMENT DOLLARS

Pooling the Pools

LAST week the Chancellor of the Exchequer announced the merging of the pools of "hard" and "soft" dollars—a move long advocated by outside observers—and an important relaxation of the highly debatable control of direct investment overseas he introduced last July. This imposed on companies wishing to invest outside the sterling area the condition of "clear and commensurate benefits to United Kingdom export earnings and to the balance of payments" in the short-run before they could get the necessary foreign exchange through the ordinary market. Companies unable to fulfill this condition may now use this new pool of "investment" dollars for such projects—which introduces a new element in the market for this fixed pool of currency, since its use has hitherto been limited to portfolio investment.

The unifying of the hard and soft dollar means that the pool available for buying European securities, previously soft dollars, is greatly enlarged. Hitherto the soft dollar could be used to buy securities anywhere

Stockholm Occupied

BRITISH industry has descended on Stockholm in its biggest ever promotion exercise. The centre-piece is a trade fair where over 500 British firms in 210,000 square feet of fairground are showing products worth £2 million on and around stands that cost over £500,000 to erect. Around this centre-piece are the trimmings of history: the ghost of Oliver Cromwell and his Anglo-Swedish Trade Treaty of 1654; and the British way of life with policemen, a double-decker bus, a 60-foot replica of Big Ben (complete with chimes) in Stockholm's main square; the Royal Navy, the Royal Air Force, the bands of the Royal Scots Greys and the Argyll and Sutherland Highlanders, Beryl Grey dancing with the Swedish Ballet Company, Burnley football club, British jockeys at a special race meeting, and Prince Monolulu.

A sudden deluge of British goods has filled the windows of Stockholm's stores and even the local television service has turned its nationwide facilities over to the fair promoters. All in all, the Swedes seem greatly impressed by the whole effort and the activities in Stockholm itself are persuading many that they ought to go and see the fair. In the first three days over 30,000 members of the public have seen the fair besides the many business visitors. The organisers and many of the representatives at the fair think that the Swedes have been "bowled-over" although they themselves add that Sweden is not a country used to big trade fairs. Most of the firms and industries have made a real effort to get their products across and many of the stands are very good, in particular ICI's, the shipbuilding industry's, and the National Coal Board's, though the fair as a whole lacks an air of unity. One unfortunate aspect is that Swedes who come to the fair on the London Transport bus from the centre of Stockholm are greeted at the entrance by a portable bus-stop and a vista of peanut and ice-cream stands. These do, however, at least hide a terrible Tudor-style public-house originally intended as the main-piece of this entrance.

Planning for the fair began eighteen months ago with the image of EFTA as its driving force; a wistful undertone is not therefore altogether surprising. One of the commonest question asked of the organisers was "why have the fair in a country that already takes 10 per cent of Britain's exports?" The organisers answer first that the fair is not limited to Sweden; businessmen from Denmark, Finland, and Norway are being flown to Stockholm; secondly, there is a limited number of countries where a fair can be held, and many countries have their own fairs in which British firms already participate; and thirdly, that it is as important to preserve established markets as to go after new ones.

in the world, including the dollar area, while hard dollars were available for the purchase of North American securities only. At the same time residents of overseas sterling area countries were allowed access only to the soft dollar market. Before investment in Europe became popular, this created a movement of funds from the soft pool to the hard pool; the reverse movement was prohibited so that the hard pool grew at the expense of the soft. The growth of investment in Europe created a strong demand for soft dollars and just before the amalgamation of the pools the soft dollar was quoted at a premium of 5½ per cent over the official rate, compared with 2½ per cent for the hard dollar. After opening at 3 per cent the rate for the new investment dollars rose to 4¼ per cent but has since returned to 3 per cent. So far there has obviously been little buying of these dollars for direct investment purposes, but once the market gets under way—and since the authorities do not intend to supply it with fresh dollars from the reserves—each purchase for direct investment will involve a permanent reduction of the pool and tend to create a higher premium.

These moves have two implications. First, the authorities presumably now feel that investment in factories and other projects overseas is at least as important as having a third line of reserves which in an emergency can be quickly called in and converted into foreign exchange. Secondly, the ending of a control which allowed funds to flow into but not out of dollar stocks, must suggest that the authorities now feel that the non-dollar element in this third line of reserves is as important as the dollar element.

BANK CREDIT

Playing Safe

THE movement of net advances of the clearing banks in the four weeks to May 16th confirms that the sudden increases in February, and to a lesser extent in March, were attributable to temporary demand to finance tax payments and that the lending policy of the banks has not changed. The fall in advances of £4 million compares with a fall of £7 million in the previous month to mid-April and is against the seasonal trend; in the same period of 1961 advances rose by £23 million and in 1960 by £40 million. Advances of the Scottish banks were virtually unchanged following the previous month's increase of £7 million.

There is no suggestion of a tailing-off in the demand for advances. The liquidity ratio of the banks has been stationary at 32.6 per cent for the last three months and is now the highest it has been for mid-May since 1957. In these circumstances there is no doubt that had the banks wanted to they could have increased their advances. That advances have in fact fallen suggests that the banks are determined to "play safe" until they receive a firm indication from the authorities, in the shape of a release of special deposits or a withdrawal of the official request for restraint in lending, that they are willing to see an increase in bank credit.

MOTORS

Output Lags

RISING home sales and exports were not reflected in the output of the motor industry in April. The weekly rate of production fell from 26,176 in March to 23,626 in April, though in fact this is no more than the result of the Easter holiday. Within the static total output dropped at the British Motor Corporation as the result of its strike in the first week of the month—which lost the company about 9,000 vehicles. This was offset by an increase of about 15 per cent at Ford as its new Zephyr-Zodiac range neared full output and that of the older models was stepped up to meet spring demand. The other firms do not seem to have altered their production rate significantly, though Standard-Triumph has started producing the new Vitesse, making for some increase, while Rootes has been suffering recently from troubles among its suppliers. With BMC's latest strike as well May is unlikely to show a rise in output either.

Stocks must have fallen sharply in April, and they will be continuing to do so this month. Though home sales did not rise quite as much as might have been expected after the budget, they reached 79,600, and with exports of 51,266 sales exceeded production by about 25,000. The home market seems to be more active this month, so that stocks will be falling even more in the absence of the rise in output that the industry, and especially BMC, had been planning. Delivery delays are now even more likely to appear soon for its cars. As happened last summer, BMC may find its share of the market falling because it cannot meet the demand. Ford already seems to have been regaining some lost ground with the spring.

The continued high rate of exports may still be a result of a change from de-stocking to stockbuilding in many markets, but it also reflects the increased competitiveness of British cars now that many new models are available and the older ones are being sold at lower prices—even though the higher sales that are being won in this way cannot add to manufacturer's profits. The United States, Australia and Europe continue to be the markets accounting for most of the increase in shipments. Exports of commercial vehicles, however, continue to be lower than they were last year—a disappointing reversal of fortune.

Selling to Australians

THE Australian market has given the British motor industry much pain since the war. The locally-built Holden has won a dominating position there, and local politics have forced British companies to invest heavily in local assembly plants; recurrent balance of payment troubles continue to cause sharp fluctuations in demand. Just now, sales are recovering from the last year's slump, caused by the government's efforts to curb home demand; sales in the first two months of this year were a third higher than a year before. The British Motor Corporation should therefore have a good start with the new Austin Freeway and Wolseley 24-80 models that it has just introduced as direct competitors for the Holden and the Ford Falcon—which between them account for nearly half of all sales in Australia.

The Freeway is a special model for Australia, though like the Austin Lancer and Morris Major this really means a unique combination of (modified) parts from other models in the BMC range. The engine is a smaller version of the six-cylinder unit used in the Austin A110; with the same cylinder dimensions as the 1,622 cc four-cylinder unit used in the Lancer and Major, so that it can be machined on the same line, it has a capacity of 2,443 cc and develops 80 bhp. The emphasis is on power at low engine speeds to give good top gear acceleration, so a three-speed gearbox is used. The body is that of the A60, with a slight increase in track and wheelbase, and modified steering and suspension. Priced at £A1,130, including a heater, it costs £A79 more than a Holden and £A41 more than the Falcon, which do not have a heater. It thus has a slight disadvantage to overcome in price when competing with these cars, as well as having to storm the entrenched position that the Holden at least now possesses—with the concomitant of high part-exchange values for used models.

Despite these efforts with special models, it is the Mini that has done most to improve BMC's sales in Australia, as in Britain. Introduced last year, it has brought BMC's share of the market up to nearly 16 per cent in the first two months of this year, against

7½ per cent a year before. This puts BMC ahead of Volkswagen, which has about 12 per cent of the market, and just ahead of Ford with 15½ per cent. But it is still far behind Holden, which accounts for 36 per cent of sales. BMC will have to pick up a good deal more before its investment of £A21 million in its Sydney plant is anything like as profitable as that of General Motors in the Holden.

LINERS

Cunard Has to Redeploy

THE results from Cunard fulfil the forecast made last October that there would be a "heavy loss" for 1961. The consolidated operating surplus has fallen from £4.5 million to £1.1 million but after depreciation and tax a net profit of £668,000 in 1960 has been replaced by a net loss of £1,729,000. This depressing news caused little stir in the market and the shares were unchanged at 16s. even though hopes of a token dividend held out by the directors in their forecast have been dashed. It is a sorry comment on the present fortunes of the shipping industry that with the passing of the dividend the Cunard shares are no longer eligible as an investment for trustee. The directors' decision presumably reflects the grim prospects both on the sea and in the air for the last balance sheet showed cash and investments of £17 million, equivalent to about 26s. a share.

Since the decision was taken last year to postpone the building of a replacement for the *Queen Mary*—and to abandon the idea of building a vessel of very similar characteristics—there have been several signs of radical rethinking by the Cunard Line in respect of its North Atlantic services. For example, the normal summer overhaul of the *Queens* has been dispensed with, so that the ships can take the fullest advantage of the high season; and it is proposed to try some cruises from New York with the *Queen Elizabeth*. This is in the nature of an experiment, for the vessel was never designed with the alternative purpose of cruising in mind, but it may prove commercially successful.

The intermediate passenger-and-cargo services to New York and Canada have been pruned. The *Media* and *Parthia* have been disposed of, and at least two of the four *Saxonia* class vessels are to be refitted for cruising; and it is possible that some sailings will be made from Continental ports. Meanwhile tenders have been invited from several British and European shipyards for the construction of four cargo vessels of 7,500 tons deadweight for the North Atlantic cargo services, at present being partly provided by vessels chartered from Sweden. Finally the *Mauretania*, when not cruising, will operate between New York and the Mediterranean in competition, mainly with the Italia Line. But so far as passenger traffic is concerned, it looks as though the Cunard Line is going to make a determined bid in the air, both across the North Atlantic and in Europe. The outcome of the present hearings before the Air Transport Licensing Board, therefore, are likely to be of great significance to the company.

CHARTER FLYING

Storm in a Teacup

THE minor fracas that occurred last week between British and United States aviation authorities over permits for chartered aircraft is a storm in a teacup mighty irritating to Cunard Eagle, but unlikely to disturb any of the other North Atlantic airlines unduly. Charter flights have become the accepted method of fare cutting on this route; last year, 256,478 passengers crossed in chartered aircraft at roughly half-fare. This is half as much again as the numbers who used chartered aircraft in 1960, and accounts for 13 per cent of all passengers on the route. It is business that the scheduled airlines can ill afford to lose. Although traffic is rising they have recently been selling less than half their seats, and are offering cut rates for parties of 28 or more to try to fill them.

Cunard, frantically searching for work to occupy a fleet that now include two Boeing jets representing a £6 million investment, has been trying since its licence for regular services was refused by the Minister to expand its charter business on the North Atlantic. It has come up against an American ruling under which, while permits are granted for almost unlimited charter flying by charter airlines, airlines flying scheduled services to the United States have their charter flights rationed to a fixed 10 per cent of those services.

America's Civil Aeronautics Board has threatened to apply this ruling to Cunard Eagle on the grounds that, although the main company has no regular services to the United States, its subsidiaries have. Strict interpretation of this rule would decimate the flights planned by Cunard. The CAB has no love for Cunard Eagle, and has let the airline cool its heels waiting for a decision for so long that this summer's plans have had to be cancelled and the Ministry of Aviation driven to intervene. The Ministry has pointed out amiably enough that further dilly-dallying by the CAB might prompt it to look at UK licensing arrangements for American charter flights into this country. But the two agencies have no intention of falling out over an airline that both regard as one of aviation's awkward squad, ever prone to rock the boat.

FERTILISERS

Come Muck-spreading . . .

IN a gloomy week for the fertiliser industry, Fisons announced that it expects its trading profit for the year to 30th June 1962 to be down by £1.3 million on the previous year's £3.6 million and that "there will have to be a modest reduction in the final dividend". Shell, ICI and Fisons also published lists of fertiliser prices for the 1962/63 season which show reductions for the third year in a row.

The price reductions match, as they have for two years, cuts in government subsidies; last year these provided nearly 30 per cent of the £114.5 million farmers spent on fertilisers. The subsidies are to be reduced by £2.5 million in the coming year and the reductions may well continue until they disappear altogether (which they must, if Britain is to join the common market). Although the Monopolies Commission found in 1959 that high profits were being made on some fertilisers, it is unlikely that these would allow manufacturers to match cuts in subsidies indefinitely. Indeed, if Fisons' profit estimates are anything to judge by, the industry cannot really afford the present reductions. Yet prices will probably move still lower to anticipate competition from abroad.

Even against this highly competitive background, Fisons' forecast of a drop of more than a third in profits for the current year is a shock. It reflects not only the price reductions, which were general throughout the industry, but also the effects of Fisons' special discounts last year. By inducing farmers to buy fertiliser in June, Fisons effectively maintained last year's profits at the expense of this year's. The fall suggests that earnings will not be more than about 10 per cent on the ordinary capital. The "modest reduction" in the final dividend that the board foresees is likely to be at least 1 per cent, making a total of 10 per cent, although a final of less is possible, particularly in view of the gloomy prospects for next year.

The fall is attributed to a drop in the sales of compound fertilisers, of which Fisons is the largest UK manufacturer, holding 40 per cent of the market, and to a "considerable loss" on the food side. The losses on food may not be repeated but those from fertilisers are likely to increase: this year's price reductions, although allegedly accounted for by "progressive efficiency," will cost Fisons an estimated £1 million—and this does not allow for a drop in sales. It seems that shareholders are aware of these arguments as the price of the ordinary shares has dropped by 5s. 6d. this week.

BIDS AND DEALS

Taking the Biscuit

AS in other branches of the food trade competition in the biscuit industry is keen and margins are under pressure. Competition has come from within the industry and from the confectionery trade, and although sales have shown a small but steady rise biscuit prices have risen only half as much as other food prices since the war. Costs have risen sharply, in advertising and in packaging. In recent years

chocolate biscuits have sold rather better than plain biscuits but these are now subject to a 15 per cent purchase tax.

Not surprisingly the trend is towards automatic processes, fewer lines and bigger units. Apart from Associated British Foods the two major companies in the industry making biscuits alone are Associated Biscuit Manufacturers, which includes Huntley and Palmers and Peek Frean, and United Biscuits, which resulted from the merger of McVitie and Price and Macfarlane Lang in 1948. Both these biscuit companies have recently published their results for 1961, showing increased sales but lower profit margins and lower net profits. With size clearly an important factor in this industry it is not surprising that United Biscuits, already the biggest manufacturer in this country, has now made a bid in shares and cash worth in all £6½ million for William Crawford and Sons, the biggest private company making biscuits in this country. William Crawford has factories in Edinburgh and Liverpool, and also owns 47 per cent of the capital of D. S. Crawford, a public company which operates a number of restaurants and bakery shops in Edinburgh and Newcastle. United is offering to acquire the remainder of the D. S. Crawford capital at a price of 65s. for the 10s. shares, quoted at 42s. in the Edinburgh market. In all this acquisition will add about £840,000 to United Biscuit's profits before tax of about £3 million, while the United Biscuit's ordinary capital will be raised from £6 million to £7.1 million. At the current price of 47s. 6d. the United Biscuit shares yield just over 3 per cent.

STEEL

Will Russia Pay for Knowhow?

When the Austrian Chancellor, Dr Gorbach, leaves for an official visit to Moscow at the end of June to persuade the Russians that some form of association between Austria and the European Economic Community does not violate its treaty obligation to remain neutral, it is likely that he will also discuss the problem of LD steelmaking in the Soviet block. This relatively new process of pneumatic steelmaking with oxygen was developed in Austria after the war; it is comparatively cheap in capital cost and particularly suited to very high production of standardised qualities of steel. Internationally it has been adopted more widely than any other of the oxygen processes.

At present there are 35 LD (Linz-Donawitz, after the two main Austrian works) steelworks in operation throughout the world with a total yearly output of 25 million tons, and a further 47 works planned to produce 45 million tons a year are under construction. According to these figures there should be 82 LD steel plants in operation by 1965 with a total yearly output of 68 million tons, so that LD output by then should constitute 20 to 25 per cent of world steel output.

Although the Austrian steel industry is nationalised, a special company, BOT (Brassert Oxygen-Process Co.) has been set up at Zurich to issue licences to produce and to exploit the LD process. The shares of this company are held, half and half, by the two big nationalised Austrian steel enterprises, Vöest and Alpine-Montan. Its accounts are a closely guarded secret, since both groups of shareholders are anxious to prevent licence holders knowing what the profits from the competitive sale of licences amount to.

The Austrians have so far refused to sell the rights of the LD process to any country in the Eastern block, although certain of these countries, USSR and Rumania, have made known that they were interested. On the occasion of Khrushchev's visit to Austria in 1960, the Russians expressed the desire for the Austrian iron and steel industry to build an LD plant with an output capacity of 2 million tons. But blowing a Bessemer converter from the top with oxygen is not beyond the wit of steelmen anywhere: there seemed little doubt that even if they were refused the LD rights the Russians could develop a similar process, and eventually the Austrians decided to negotiate.

The ensuing discussions, which have gone on since 1960, have broken down over the question of payment. The Russians were prepared to pay half in currency and half in goods—a large part of the goods they

NEW CARS

Vitesse, French and British

The Renault R8

High performance in relation to their size is common to the new Renault R8 and the Triumph Vitesse. The Renault, which will be officially announced at the end of June, is a supplement rather than a replacement, for the Dauphine. It has, according to *l'Auto-Journal*, the same 956 cc engine as the Floride S and Caravelle models introduced in March, with its engine power slightly reduced to 51 bhp; and it shares their other mechanical parts, including Dunlop disc brakes on all wheels—the first time a small mass-produced car has been so equipped—and a radiator mounted behind the rear-mounted engine. The R8 seems to have rather more body space than the Dauphine, and its performance should be substantially better with 21 more bhp available.

Though the price has not been fixed, it is likely that it will be higher than those of the Simca 1000 and Citroen Ami-Six, which cost about £475 in France. Renault seems to regard it as a competitor for larger-engined cars such as the Simca Aronde, Peugeot 403 and Volkswagen 1500. Though the R4 has not taken sales away from the Dauphine, the R8 seems bound to do so; but keeping the Dauphine going will allow Renault to get the full benefit from its by now depreciated investment in tools for this model, and to offer a wider range. One-model policy is becoming a thing of the past.

The Triumph Vitesse is a rather more specialised car: it is the Herald fitted with a 1,596 cc version of the Vanguard Six engine, dolled up with a new bonnet and four headlamps. Developing 70 bhp, this gives the car the performance that the Herald has lacked; acceleration is significantly better than that of the Mini-Cooper, and if the gears are used it is in fact little inferior to that of bigger cars like the new Ford Zephyr Six and the various 3-litre sixes up to 60 mph—which it will reach in second gear. At higher speeds, its acceleration is less good than that of the bigger cars, however; the maximum speed is nearly 90 mph while the bigger cars will mostly reach 100 mph, and acceleration in top gear is naturally inferior. But the Vitesse is a strong contestant for the traffic lights *Grand Prix*. The car can be cruised at up to 80 mph, though its directional stability begins to deteriorate at higher speeds. Disc brakes are fitted to the front wheels, and they are able to cope with the car's performance.

Selling at £837 for the saloon and £893 for the convertible, the Vitesse is £26 cheaper than the Ford Capri and comparable to the 1,500-1,800 cc saloons, but £197 dearer than the Mini-Coopers. Standard-Triumph reckons that it will tap a specialised market among those who want a small high-performance car, but something bigger than a Mini. It is certainly attractive in terms of performance for money. The new version of the Ensign, with the 2,138 cc version of the Vanguard four-cylinder engine used in the TR4, which S-TI has introduced at £848, should keep its stake in the medium-sized car market alive. Though this is a dated design, the price is that of the Ford Zephyr 4, and the car has a reputation for ruggedness.

E.C.G.D. COVERS YOU AGAINST BUYERS WHO DON'T PAY

When you're going into foreign markets it pays to know whether your customers' credit is good. ECGD can give you the answer. From up-to-the-minute credit reports on 140,000 buyers in 170 markets ECGD agrees the right ceilings for your buyers. It does more: it insures your business against default in payment for goods you have supplied, and a lot of other risks besides.

Are you out to expand overseas sales? ECGD is at hand to help—to back you (more cheaply than ever before) so that you can press ahead with singleminded confidence. Insured business is sound business. ECGD makes helpful bank managers even more helpful. Get in touch with ECGD straight away.

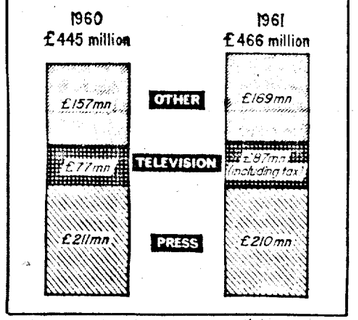
have in mind being oil. Their proposal, however, came up against opposition from the Austrian Department of Commerce which refused to sanction the transaction unless 75 per cent of the price was met in currency.

The Austrians demand at least $3 million for the LD patents. They have in mind, also, the question of contracts for building LD plant, particularly the converter vessels. The Voest company builds plant as well as making steel, and has gained quite a number of contracts for doing so at foreign LD plants. But Russia is a large scale exporter of steel plant too, though its expertise, like that of Britain or the United States until recently, has been more in the openhearth field than in plant for pneumatic steelmaking. The Austrians are naturally not anxious to add to the array of foreign plant builders now prepared to build LD steel plants yet another—and one whose commercial policies often have a strong dose of politics.

URANIUM



$5 *a Pound*

ALL that appears to be holding up the signing of the most toughly negotiated uranium contract of all time, under which the Atomic Energy Authority will agree to buy from Canada 12,000 tons of uranium that it does not want, is the Canadian government's own domestic problem of sharing the contract sensibly and equitably (the two are not synonymous) between existing mines. The terms of the contract had been settled by the beginning of the year, although when *The Economist* mentioned a price of $5 a pound, less than half what the Canadians were accustomed to and $3 less than they were asking, this was denied in Canada at the time. But the Canadian Prime Minister has now himself confirmed that agreement has been reached at prices reported from Canada to be between $5 and $5.25 a pound. This, roughly, sets the world price for uranium, which has been in a state of flux waiting for just such a large deal as this to show a price at which a large buyer would buy and a big seller sell.

The 12,000 tons, on which the Atomic Energy Authority had an option that it took up only under government pressure, is a lifeline for the Canadian uranium industry. Without it, the mines would almost certainly face closure in 1966, when present contracts expire. The AEA's order will keep them ticking over until the early 1970s, when prospects for atomic power might be expected to produce a demand for uranium that does not exist today. But the AEA already has eight years' supply of uranium either in stock or on order, the value of which it is already beginning to write down. This, in addition to the new contract, looks like meeting all foreseeable British uranium requirements for the next 12 years.

ADVERTISING EXPENDITURE

Spending on advertising and other forms of sales promotion last year once more reached a record figure, according to the *Advertiser's Weekly* annual survey, though the gain was less than had been expected earlier. As a proportion of national income the total remains at under 2.2 per cent. Though press advertising declined along with the number of newspapers, national Sunday papers, provincial dailies and provincial and suburban weeklies all increased their revenue from this source.

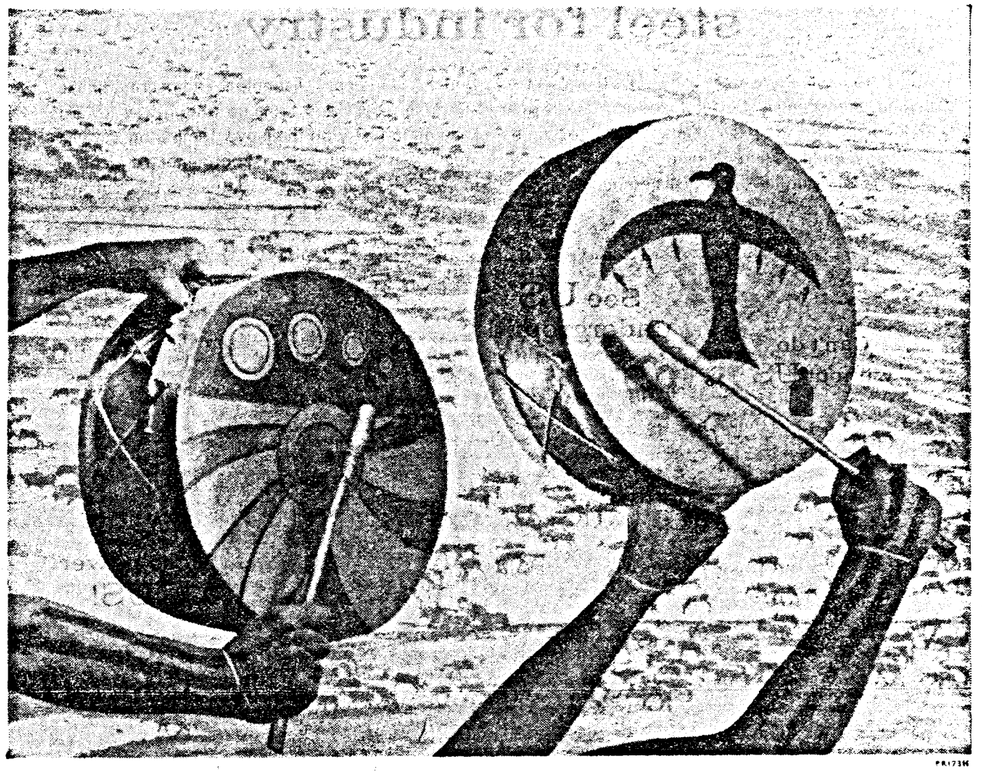
FINANCIAL STATISTICS

At Length

IN August, 1959, the Radcliffe committee recommended the "regular issue in a single publication" of all the statistics relating to the monetary system. Foreshadowed in the last budget speech that publication has now appeared. It contains within its 80 pages—63 of tables and 17 of explanation—all the available statistics on the monetary system, with the notable exception of those relating to insurance companies.

The announcement that this publication was to appear came as a surprise; the introduction of a quarterly bulletin by the Bank of England, with comments on policy and events along with a series of statistics, was taken as the authorities' compromise on the Radcliffe recommendation. The new publication is nonetheless very welcome. It in fact draws most of its material from the Bank of England quarterly and the monthly digest of statistics, but also includes a good deal of material which, while published regularly, has never before appeared in convenient table form, and some information that is entirely new. There are new tables on local authority borrowing, central government capital account, public corporations' appropriation and capital accounts, trustee savings banks, and local authority and other superannuation funds for public employees. The publication's great merit is that it collects all this information in one place and that many of the tables, particularly those on exchanges rates and interest rates, are more comprehensive than ever before. *Financial Statistics* is published monthly by the Central Statistical Office and costs 7s. 6d.

RUBBER



What is High?

THE chairman of the Rubber Growers' Association commented last week among deeper reflections that high prices are not always a blessing. For rubber growers his words are almost tragically accurate. But how much is high? Since 1959, rubber has never been free of rumours about stockpile releases. The system of releases has been changed so often that it hardly deserves to be called policy. It is a fair inference from the fairly low level of stocks, high rate of consumption, especially in the United States, but steady price of rubber that the latest bout of stockpile talk has prevented a recovery to a slightly more remunerative level than the current price of about 23¼d. a lb for RSS1. This is borne out by the relative strength of nearby supplies, particularly in New York, which command a premium. But with boasts about dramatic switches to new synthetics loud in the air perhaps this is no bad thing. Tremendous improvements in yields are being claimed by new natural rubbers. If there is going to be a struggle to retain natural rubber's share of the market, from the growers' point of view the battle cannot begin too soon.

The average spot price of the best grade of rubber fell 25 per cent to 24¼d. a lb last year. But in the free world, synthetic raised its share of consumption two points to 54 per cent and there is as yet no sign of a halt to this trend in 1962. Much of the blame for synthetic rubber's ascendancy is placed by Mr Charles Jackson at the door of the United States' stockpiling authorities. American manufacturers were deprived of natural rubber by government decree in order to build the stockpile. Mr Jackson wants similar restrictions placed now on synthetic producers in order to dispose of the stockpile. He reckons they might even welcome the opportunity that might present itself of raising their prices. Though actual prices paid for synthetic rubbers are not easy to ascertain, recent sharp reductions have slimmed the margin of profit.

While rubber consumption of all types is expanding, there would be something to be said for this argument if it were practical since the recent fall in rubber prices has occurred when natural rubber production and consumption were in balance. The current level of stockpile releases is likely to result in a further small surplus of natural rubber this year. Blunders in the disposal of stockpile rubber could obviously cause economic chaos in rubber producing countries. But since this is not a practical suggestion, the prospect is for some intensifica-

Drums *(non-returnable)* along the Athabaska

Under the midnight sun of Canada's far North-West, a line of barges creeps into Yellowknife—a gold-mining settlement on the desolate shore of a great lake. Their load—cyanide in drums—is prosaic, perhaps; but it has completed an adventurous journey that started 10,000 miles away at an I.C.I. factory in England: by sea across the Atlantic and through the Panama Canal to Canada's Pacific coast; down-river by barge, overland again for many a rugged mile, down-river once more to the waters of the lake itself.

Such odysseys are not uncommon for I.C.I. chemicals, and least of all for I.C.I. cyanide. Known for 50 years as the key for unlocking gold and silver from their ores, it is used almost everywhere these precious metals are mined—in the Australian deserts, in the rolling hills of Southern India, in the mountains of Colombia and the uplands of Fiji. And, like so many I.C.I. chemicals, it is no stranger to the world's engineering industries. Cyanide case-hardening salts from I.C.I., as well as degreasing solvents and metal pre-treatments, play a part in the production of everything from hypodermic needles to agricultural machinery.

The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1

talk about steel for industry

Apart from steel we use every day, there's steel behind the scenes. Diesel locos for steelworks and docks and chemical plant. Yorkshire Engine Company builds them. Mining machinery. Heavy castings for oil drilling, chemical engineering. Steelworks equipment. Distington Engineering makes all those. These two firms go a long way towards keeping industry on the move. Distington supplies steelworks plant to all five continents. An achievement, even for part of United Steel—one of Europe's biggest steel producers.

United Steel

tion of the pressure from stockpile releases. Higher production in Malaya and elsewhere has also to make itself fully felt.

CHEMICALS

Anti-Dumpers

A DEPUTATION from the Association of British Chemical Manufacturers headed by its chairman, Mr John Hanbury, visited the second secretary of the Board of Trade, Sir Leslie Robinson, on Thursday this week to discuss the impact of chemicals dumping on the British chemical industry. The industry feels that the Board's present policy, of only applying anti-dumping duties when all else has failed, is allowing dumping seriously to harm it and to hamper its growth.

One of the industry's main objections is to the time which the Board takes in dealing with applications. This is rarely less than six months by which time, the industry says, the damage has been done: the market, once depressed by cheap imports, never recovers to its former level. Indeed, the simple presence of such imports is sometimes enough to force down prices. Some members would like to see anti-dumping legislation here run more on the lines of the Canadian system, where the evidence of prices from import documents alone is considered sufficient basis for immediate action. At the least, the industry would like the Board of Trade to use its powers to act swiftly, as it sometimes has on agricultural imports.

The industry is also seriously concerned at the effect that dumping is liable to have on its growth, particularly on petrochemicals. It argues that if the chemical industry is to maintain its record of rapid growth, about 40 per cent faster than manufacturing industry in general, new investment ought to be protected.

There are certainly signs that imports are affecting the new petrochemical plants. British Hydrocarbon Chemicals new petrochemicals complex at Baglan Bay includes a styrene monomer plant which should be completed this Autumn. When it is finished it will probably be "mothballed" after testing until the price of styrene recovers enough to make its operation economical. (An application for an anti-dumping duty on styrene monomer from Canada and the USA was lodged with the Board of Trade in March this year and is being considered.) Thus, there can be no doubt that the chemical industry is suffering from these, as it considers them, "unfair" practices. But they are characteristic of the industry throughout the world—do British producers sell abroad at home prices?—and rigid protection of one section of it would be, at best, a short-term palliative.

FRANCE

Monetary Policy Now

FRANCE'S Finance Minister, M. Giscard d'Estaing, has outlined to the Chamber important details of France's monetary policy. His ideas seem to be cast in the same mould as those of his predecessor, M. Wilfrid Baumgarter. There is now, he said, a possibility of an American drawing on the IMF. The Fund possesses sufficient assets, but European currencies are low. The "Paris Club" offered a better solution than the strengthening of quotas, which would have embarrassed the Fund with amounts of useless currencies, and would also have entailed the use of common market currencies by a body in which the common market countries have very little say in terms of voting power.

M. Giscard d'Estaing recalled complaints made to France by certain countries whose currencies were disturbed by her balance of payments surpluses. His answer was: France has set the franc free; reduced its customs duties, not only as a result of the Rome Treaty, but voluntarily; has raised foreign travel allowances; and has authorised the purchase of foreign shares by the French public. Dollar debt repayments were $213 million in 1959, $316 million in 1960, $320 million in 1961, and $116 million at the beginning of 1962. France's exchange reserves are running below those of Germany and Italy, and are sufficient to cover only six months imports as well as serving as cover for imports in the whole of the franc area. The Minister concluded, however, "We must hold ourselves in readiness to place considerable sums at the disposal of the Fund."

HAMBROS BANK

Euro-dollar's Future

THE directors of Hambros Bank have this year decided to separate sterling and foreign currency transactions in the bank's annual accounts. Sir Charles Hambro, chairman of the bank and a director of the Bank of England, tells shareholders that this division has been made because "for the most part" the foreign transactions arise from business in Euro-dollars which, in Sir Charles's view, "are likely to be a temporary phenomenon in the European economy."

The market is temporary, Sir Charles argues, since it exists only because the American banks are limited as to the rates of interest they may pay on foreign deposits. This indeed is one of the reasons for the market's rapid growth and if the Americans abandoned regulation Q the market would probably be weakened. But any one of London's main foreign exchange dealers will tell Sir Charles that regulation Q is now only a subsidiary reason for the market's continued existence, and that the market is likely to flourish as long as the American payments deficit pumps dollars into foreign hands. If the American banks were permitted to increase the rates paid on foreign-owned deposits and took advantage of that freedom, then London would merely pay a slightly higher rate to keep the deposits in Europe. The Euro-dollar is the most convenient source of international credit for the borrower and provides an international money market for the lender. It serves a need, and the dollar is its medium only because of all currencies it is the most readily available and most readily acceptable.

Temporary or not, however, the growth of the bank's business in 1961-62 stemmed largely from the increase in advances in foreign currencies (mostly Euro-dollars) from £2 million to £24½ million which exceeded the total of almost £20 million for sterling advances. Total deposits in foreign currencies at March 31st amounted to over £28 million, acceptances were £3 million higher at £32 million while total assets rose by £31 million to £149 million. The increased volume of business explains the proposed rights issue which will raise in all about £3½ million. Following a split of the present £1 units into 5s. shares the offer will effectively be four 5s. shares at 35s. each for every 25 held. At the current price of 21s. 3d. for the £1 units the rights are worth about 10s., and on the present dividend of 22½ per cent the yield improves to 2¼ per cent. Last year net profits rose from £655,000 to £751,000 with some £28,000 of the increase relating to net profits retained by subsidiaries, largely by the newly acquired banking firm of Laidlaw & Co., New York. Among its other interests the bullion firm of Mocatta & Goldsmid enjoyed a busy year which brought an increase from £3¾ million to £6½ million in bullion held at March 31st. No doubt a good deal of this increased activity is a reflection of the silver boom at the end of 1961.

DOMESTIC APPLIANCES

Winter Still

SUMMER has so far been as chilling for the domestic appliance makers as for everyone else. The refrigerator manufacturers have the coldest feelings, needing a good heat wave to cheer up their business. Their sales in the first quarter were four per cent lower than in 1961 and there was a more noticeable drop in April—despite all their efforts to make their products more tempting by cutting prices, which by now has probably gone as far as it can if profits are still to be earned. Drastic cuts in production in the winter allowed the makers to get their stocks below last year's level by the end of March, however (they had started the winter with 110,000 more in stock than a year before). Retailers, slightly battered by recent experience and aware that they can get delivery whenever they want, have allowed their stocks to fall. They have continued to find that their best business comes with the obsolete models that manufacturers want to get rid of, probably at a loss. The public is now bargain-

conscious enough to seize the opportunities such sales offer, but they rather spoil the impact of the price cuts made on the new models.

Washing machine makers continue to find their market pretty static at home, though the switch to more elaborate machines helps their turnover. Hoover's decision to return to a full working week at its Merthyr Tydfil factory seems mostly the result of improving export sales. The whole industry's exports in the first four months of this year amounted to 92,000, about 16 per cent higher than a year before, and Hoover claims to account for about three-quarters of foreign sales. As before, the best business is being done in the smaller and cheaper appliances, where the need to put down a 20 per cent deposit does not entail parting with more than many people are likely to carry in their wallets. So the industry continues to agitate for a ten per cent deposit on all appliances, to bring its bigger products within reach of these impulsive buyers.

UNIT TRUSTS

Steady Growth

In each of the past twelve months sales of units by unit trusts have exceeded repurchases. Helped by twenty block offers, amounting in all to about £10 million, total sales rose to £30,884,000 in the year to end-April and net sales of £18,494,000 were ten times bigger than the previous year's figure of £1,839,000. The value of funds rose from £244,966,000 to £264,164,000 so that allowing for net sales capital appreciation was no more than ¼ per cent. Over the same period *The Economist* indicator fell by 15 per cent so that even after allowing for the holdings of unit trusts in American and Continental stocks, the trusts had clearly done well.

Other figures confirm the growth in popularity of unit trusts over the past year; the number of unit holdings, for example, has risen from 646,000 to almost 710,000. Savings plans are bringing in an increasing number of small regular savers; over the year their number grew from under 30,000 to about 40,000. Although each investor's contribution is small, averaging no more than £4 a month, and the cost of administering the thrift plans is high they are becoming increasingly important to the trusts; annual savings under these plans now amount to £2 million, against £1.2 million a year ago. They are thus responsible for about 7 per cent of the total inflow of funds to the movement. There is some evidence too of growth in the number of big buying orders and this is reflected in the rise in the average holding from £322 last July to £372 at the end of April. It seems that some investors having experienced the difficulties of direct equity investment have seen the advantage of spreading their risks through a unit trust. Essentially, however, this is a medium of investment for the small saver and until the management groups are allowed to use more aggressive selling techniques (as a result, for example, of higher loading charges) nothing more than steady growth can be expected. Nevertheless their performance in a period of volatile markets must be regarded as creditable.

PETROL

Murco One

Murco Petroleum, a British subsidiary of the Murphy Corporation of Arkansas, this week opened the first of its owned and managed petrol stations in Britain, at Bournemouth. While not a price-cutter, Murphy is using multi-grade pumps to offer seven different grades of gasoline rather than the regular, premium and super grades that the established marketing companies here generally offer (with or without a "mixture"). This means that some of its grades are at different prices from those of the major companies. The company which introduced this kind of pump and grades in America, Sun Oil, has vigorously denied accusations that this amounts to a form of price cutting, and BP uses multi-grade pumps in somewhat the same way on the Continent. From the outside, one would not have guessed that Murco's pattern of interests in oil would exactly drive it into fairly heavy investment in breaking into the British market. But this thrusting and successful company presumably knows its own business, and it deserves a friendly, if puzzled, welcome from the British consumer.

RAILWAY ELECTRIFICATION

Buying Experience

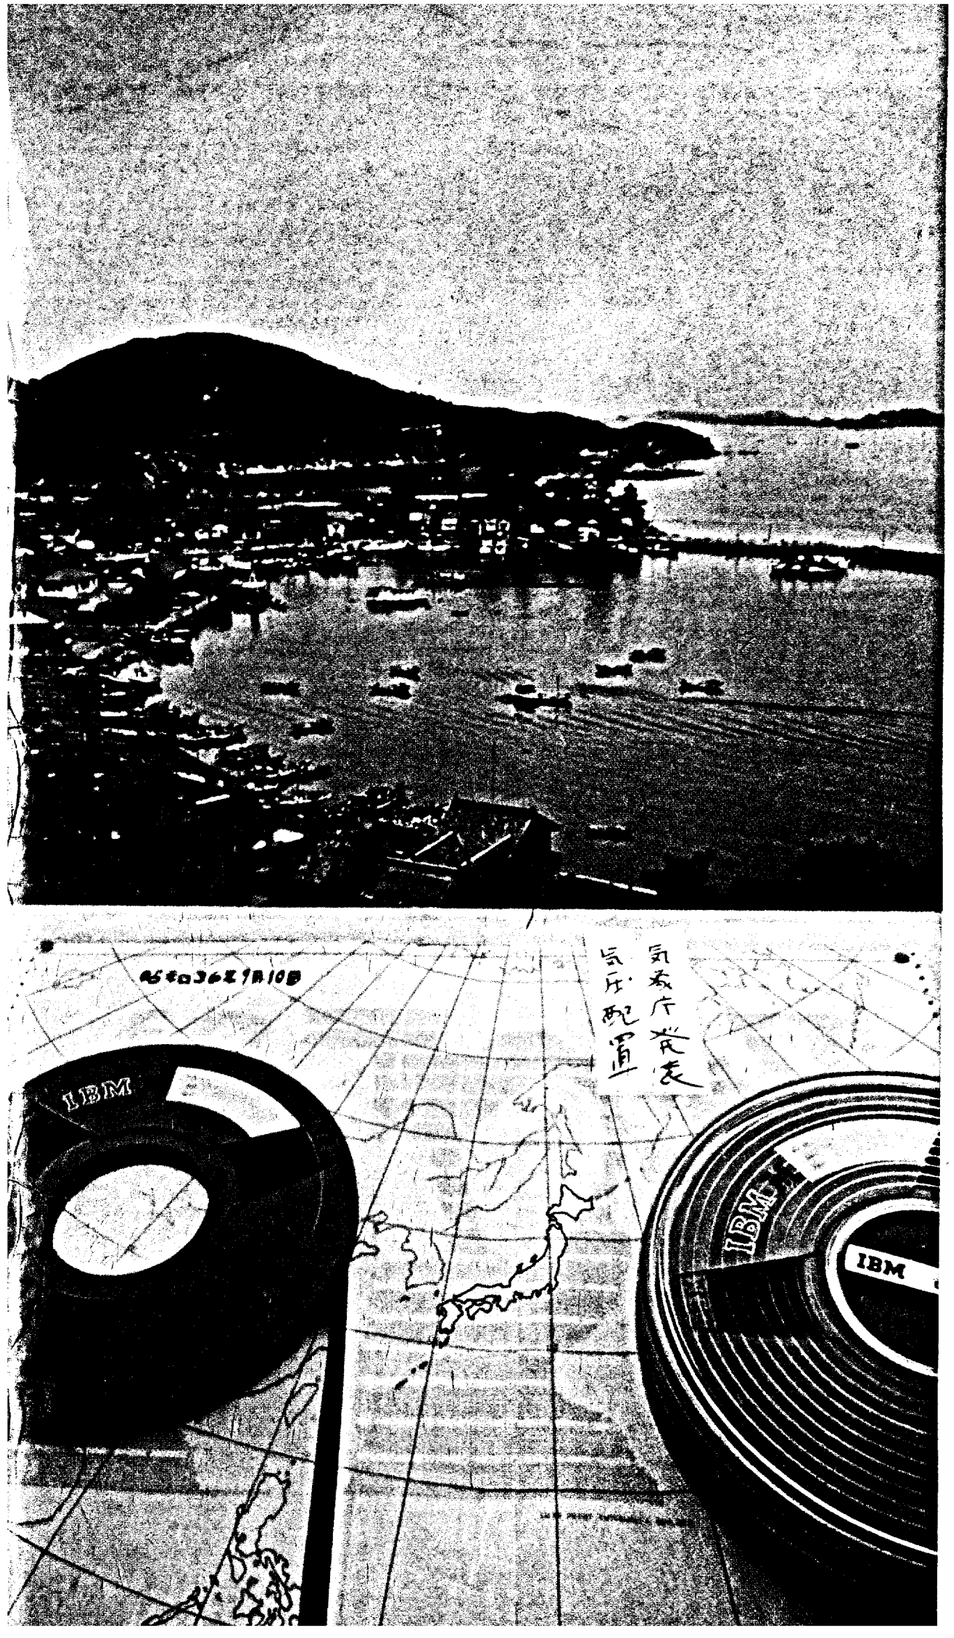
In his final report on the 1960 failures of electric trains on British Railways* Brigadier C. A. Langley concludes that the decision to use the 25 kV system was correct, and that the troubles resulted from lack of experience in designing this novel type of equipment—for British companies—and then from inadequate testing before it was put into service. To have tested prototypes thoroughly enough to discover and then rectify the faults, he says, would have delayed the introduction of the suburban electric services by two years, so he considers that British Railways was taking a justifiable risk. One wonders, however, what the cost of the failures, withdrawal of services and modifications has been to the railways and the contractors—in damaged reputations as well as cash—and whether delay might not have proved the cheaper. Even within the timetable that was followed, too, there surely might have been more testing of the one novel feature of the British system, the combination of 6.25 kV and 25 kV working. This caused many of the troubles experienced, but little test running was done on the lower voltage—or, more important, through the change-over points between the two.

Brigadier Langley has concluded that the main causes of the troubles were failures of the mercury-arc rectifiers (which change the alternating current supplied by the overhead wire into the direct current that the motors use). These failures over-stressed the transformers on both the Glasgow and north-east London units. Other causes were the faulty operation of the automatic power control equipment that automatically switches the transformer from the 25 kV to the 6.25 kV setting, and of the circuit breakers: the former over-stressed the transformers and the latter the motors. On the Glasgow trains, which were built by Associated Electrical Industries, the troubles were overcome by modifying the transformer to allow to stand up to higher voltages and by minor changes to the automatic power control equipment, circuit breakers and rectifiers. The modified trains are now running smoothly.

The trains on the Eastern region, made by the General Electric Company, have proved a more difficult problem. Though the transformers have proved rather tougher than those on the AEI stock, the rectifiers have given constant trouble, in spite of many modifications made by GEC. The high maintenance costs of this equipment have led British Railways to ask GEC to replace it by silicon semi-conductor rectifiers, used successfully on some AEI equipment and by English Electric.

* Final Report on the Accidents and Failures that occurred in Multiple-unit Electric Trains in the Scottish Region and Eastern Region, British Railways. HMSO.

SHORTER NOTES



In the three months to April 30th the assets of the Halifax Building Society rose by £16.1 million to £559.7 million. Net receipts amounted to £14.7 million and new mortages are being granted at the rate of £2 million per week.

*

The chairman of Gallaher, Mr C. W. Mason, said at the annual general meeting that there had been a partial recovery in sales from the low level of consumption after the Royal College of Physicians' report on smoking. There was an increasing trend towards tipped brands, but Mr Mason said it was still premature to give a more definite picture.

*

The directors of S. Smith and Sons, the motor and aviation instrument makers, say that profits to date have been materially less than forecast and it is clear at this stage that profits for the year to August 4th will be materially lower than in 1960-61; however they are maintaining the interim dividend of 7½ per cent and hope to declare an unchanged final dividend of 12½ per cent.

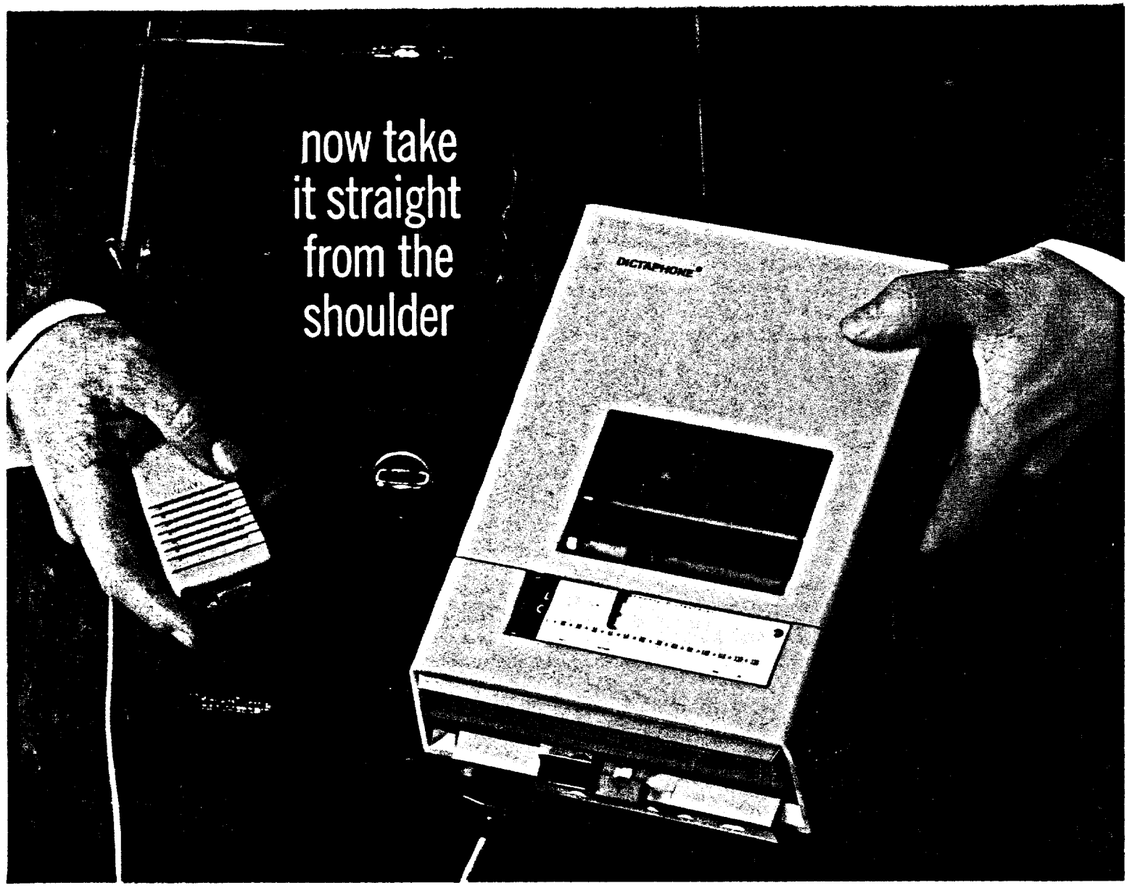
JAPANESE SCRIPT INDICATES THAT MAP SHOWN IS WEATHER CHART AUTOMATICALLY PRINTED BY AN IBM COMPUTER AT JAPAN METEOROLOGICAL AGENCY IN TOKYO. THE COMPUTER CONSULTS LATEST ATMOSPHERIC CONDITIONS ON MAGNETIC TAPE REELS, COMPILES WEATHER PREDICTIONS DAYS IN ADVANCE.

Drawing the fangs of the Tai-Fu dragon

This is Tomo, a fishing village that sleeps more soundly these days because of an IBM computer.

Since time began, Tomo and a thousand other Japanese towns have trembled under the attack of the dread Tai-Fu, the Great Wind. Pouncing without warning, boiling the sea up over the shores, typhoons rip across the islands a dozen times a year.

But today Tai-Fu has lost one of its deadliest weapons—surprise. Typhoons move so fast they often strike before their course can be plotted by hand. Now Japan's weather experts have found something faster—an IBM computer.



Applying Numerical Weather Forecasting techniques, the computer digests huge masses of data to predict a storm's path so quickly that even Tai-Fu can't keep ahead. The Tomos of Japan can be warned in time to batten down, board up, take to high ground.

Twice each day hundreds of ships and weather stations from India to the Arctic radio their local winds, temperature, barometric pressure to the Japan Meteorological Agency in Tokyo. There, the IBM computer needs little more than an hour to run this data through complex equations and produce a weather forecast for the next two to three days—a task that would take 180 years working 40 hours a week with a desk calculator.

The computer even prints out its own weather maps, like the one shown, predicting conditions over thousands of square miles. Numerical Weather Forecasting is improving all the time; already meteorologists talk of weather predictions a month ahead. When that day comes, some of the chief forecasters will probably be weather-wise IBM computers, just as they are now.

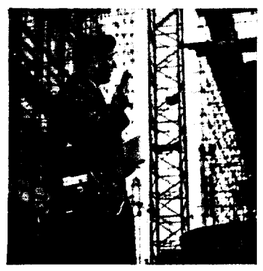
1962—Dictaphone introduce Travel-Master portable



The new Dictaphone Travel-Master

The very latest addition to the Dictaphone range—this book-sized recorder weighs only 5 lb. and gives the man in the field all the advantages of a standard Time-Master dictating machine. The fully transistorised, battery powered Travel-Master will work anywhere.

Travel light with the sound you can see

Even in a car you can use it. The Travel-Master needs no tapes or wires for recording, but only the unique Dictabelt. This records permanently and visibly so that you can find your place and play back in a second. It brings an end to the muddle of the unmarked tape.

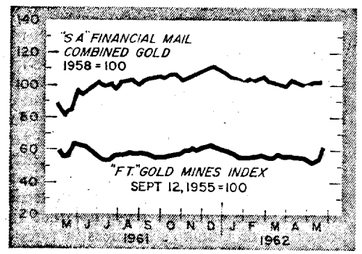
On site say it - then just post it

Once you've recorded progress, just slip the Dictabelt into an envelope and post it to your office. On arrival, your secretary can then immediately transcribe it on a standard Time-Master transcriber. The Dictabelt is an exclusive feature of every Dictaphone model.

Don't take notes, take Dictabelts

No need for notebook and pencil. The Dictaphone Travel-Master is ideal for recording on-the-spot impressions—and for anything from interviewing to stocktaking. Its nickel-cadmium batteries run for four hours and can be recharged overnight. It costs only £105.

DICTAPHONE
REGD. TRADE MARK



Dictaphone Company Ltd., 17-19 Stratford Place, London W.1. Tel: HYDe Park 9461
The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.
The Dictaphone Time-Master has been accepted for the Design Index of the Council of Industrial Design.

COMPANY AFFAIRS

In the London stock market the past week has been one of almost unrelieved gloom. Disappointing company news from Dunlop, Fisons and others, the sharp fall on Wall Street and the Chancellor's threat to reimpose economic curbs if his wage restraint policy was not heeded were all factors behind the sharp fall in the price of equities which left The Economist *indicator 15.5 points down at 340.2, its lowest level since the general election. By contrast gilt-edged stocks remained firm and the new Birmingham 6¼ per cent loan opened on Thursday at ½ premium. The one bright spot among equities was Ready Mixed Concrete which touched 42s. against the offer price of 24s. and closed on Thursday at 35s. 1½d. But almost all the honours this week have been taken by gold shares.*

Anglo American and Gold Shares

WHEN the Anglo American Corporation report was issued at this time last year South Africa was close to the proposed stay at home strike by non-Europeans. A show of force by the authorities made it of little effect but this did nothing to halt the flight of foreign money from the new republic and it was soon followed by exchange controls. This split the two main markets in gold shares, Johannesburg and London, and resulted in a sizeable discount for prices in London on those quoted in Johannesburg. But now with equity markets both in London and New York depressed and nervous, gold shares are once again attracting buyers—American and European as well as British investors. There are two elements in the latest boom in Kaffir prices—speculation, based on renewed doubts about the ability of the United States to maintain the dollar price of gold at $35 an ounce, and more genuine investment buying, based on the improvement in the economic outlook in South Africa.

Speculation about the dollar price of gold may die as quickly as it was born but hopes for some further relaxation in South Africa's exchange controls may be more soundly based. From a low point of about R140 million last June South Africa's foreign exchange reserves have risen to over R370 million. Only this week, for example, substantial increases in foreign currency allowances to South African tourists were announced. The first chinks in the currency control curtain appeared in March when Dr Donges, the finance minister, introduced two measures which appeared to be aimed at reducing the substantial discount in prices between London and Johannesburg. One permitted the South African Reserve Bank to buy gold shares in London for resale in Johannesburg; so far this scheme does not appear to have got off the ground and there are some doubts in South Africa whether the scheme is workable. The other proposal is for an issue of up to R20 million of 5 per cent bonds for subscription in blocked rands but repayable in freely convertible currencies in five annual instalments. The prospectus for these bonds was issued this week and it will be interesting to see how many outside investors are prepared to take a five-year view of South Africa's prospects.

The current activity in gold shares in London succeeded in reducing the average discount on a representative list of gold shares from over 19 per cent to about 14 per cent. The earlier gains were most marked in individual mining shares but by the middle of the week the emphasis had swung back to the mining finance shares, with Anglo American Corporation again to the fore. On Thursday, however, prices generally looked easier.

At 157s. 3d. the 10s. shares in Anglo American are now over 40 per cent above their low for 1961 and offer a yield of 5¾ per cent on the maintained dividend of 90 per cent. In Johannesburg the shares stand at around 185s. so there is some prospect of further capital appreciation if controls were completely lifted. But investors may still wonder whether the rise has been overdone and whether a yield of only one quarter of one per cent above that offered by a representative group of leading equities in this country is justified. The political risk may be less acute than it was a year ago but the government's latest legislation against sabotage hardly suggests that it can be ignored.

But there is no denying the strength of the company as revealed by the figures in the accounts; this however is also true of De Beers, whose shares still yield nearly 8¼ per cent. As the table shows, there was little change in Anglo American's investment income last year and there was a further increase in loan interest; the rise in gross profits in fact reflects a sharp jump in income from interest and royalties and a smaller net loss on the realisation of investments. The increase in the market value of Anglo's quoted investments reflects prices in Johannesburg and not in London.

On the gold mining side the report draws attention to the rise in costs and the heavy burden of taxation. The present tax-free margin of 6 per cent on mining revenue was formulated in 1946 when interest rates in South Africa were well below what they are today. And because of the number of new mines which have recently become tax payers the amount of tax paid under the formula doubled from R32.3 million in 1959 to an estimated R65 million in 1961. Copper profits were affected by the voluntary cutback in sales although production was maintained; as stocks were built up profits are unlikely to be affected by the recent strike of African mineworkers. The demand for diamonds remains strong except for certain qualities of small gems. Profits of the collieries will be helped by the increase in prices granted early this year though the benefit will be offset to some extent by continually rising costs. The rise in costs throughout the group suggests that investors have yet another factor to take into account into their calculations about South African shares and one which should add to their caution.

Philips NV

THE one-for-five rights issue by Philips NV at Fl. 118.75 per Fl. 25 share sets a puzzle for investors throughout the western world. Should they add to their stake in one of Europe's leading "growth" stocks (but one where immediate growth prospects may be less sturdy than before)? Or should they, recalling the effect of the mammoth rights issue by Royal Dutch/Shell, conclude that enough is enough? The issue, designed to raise over £70 million, is

a big one. As about 30 per cent of the Philips equity is owned in the United States, American investors, who will be allowed to subscribe at a fixed rate of exchange, are invited to put up about £25 million. Will they be prepared to do so with Wall Street so weak and electronic stocks so much out of favour? Electronics indeed form only a small part of the Philips business and primarily its expansion will come from the sale of television sets in Europe; but it has had the magic label "electronics" pinned on it, and may now suffer from some disenchantment.

Economic growth in Europe has temporarily slowed down and Philips will not escape. Results for the first quarter are better than had been expected; sales, compared with the first quarter of 1961, are up by 12 per cent and profits by 2½ per cent. The increase in sales compares with 4 per cent over the whole of 1961 and is, the directors say, better than they had expected for 1962 as a whole; profit margins were lower than in the first quarter of 1961 but they were higher than in the two last quarters. But those who wonder whether the answer to Philips' problem was a convertible loan stock (so as to carry the equity over a temporary period of slower growth into a period when the rapid rate of expansion achieved in the 1950's would be resumed) may regard the rights issue as something of a second best.

About 5 per cent of the Philips equity is owned in this country, so that British investors are being asked to put up about £3½ million. In earlier issues they had no other option but to sell their rights. The Treasury has now permitted them to take up their rights by using investment dollars, which have to be bought at a premium of about 3 per cent; this slightly reduces the value of the rights to British investors. The shares are quoted in Fl. 10 units in this country and at £7⅞ are well below their 1961 peak. Allowing for the investment dollar premium the rights are worth about 10s. per share. The ex-rights dividend yield is no more than 2.1 per cent and the ex-rights earnings yield not much more than 5 per cent. Like their American cousins, British investors are concerned about low-yielding stocks and Philips is not one of those European companies with big hidden reserves and concealed profits.

The greater part of the new money will be raised on the Continent. There was some fear among the European mutual trusts that the Philips equity might be diluted by an offer of the rights on substantial bonus terms. The company has avoided this trap and this may encourage the European mutual funds to add to their holdings. On the other hand, are the terms generous enough to attract private investors? In the past, they have come to expect a big bonus element in rights issues. No investor would decry the excellent management at Philips nor deny its excellent long term prospect. But he must be wondering whether the shares will hold their price with so much more stock available and whether to sell the rights and to hope for a lower price later.

No Thrust in Vickers

THE new Vickers House on Millbank has become a dominating feature of London's skyline; there is not so much in the latest Vickers report to suggest that its shares may become a dominating feature of London's stock exchange. The shares are included in most of the leading stock market indices and as they yield 8 per cent at 25s. 3d. they have a big influence on the average yields these indicators show. The group has a big stake in three industries in difficulties—aircraft, steel and shipbuilding—which accounted for about 70 per cent of its total sales in 1961. But this proportion is likely to decline, for in time sales of aircraft will cease to be included in the group's accounts and will be reflected only by investment income received from British Aircraft Corporation. Aircraft that the Vickers group had in production or under design (such as the VC10) before the merger were not passed over to BAC and last year Vickers' aircraft sales rose from £24 million to £44 million. This included the delivery of 32 Vanguards but they produced little by way of profit. In the previous five years some £15 million had been written off Vanguards' development expenditure; this expenditure has now "received more favourable treatment from the Inland Revenue," which explains the low tax charge of under £2 million on profits of £9.4 million.

Dividend yield: 7·92%. equal to 5·3 years' earnings.
* Including investment income but after provisions and depreciation.

A tax credit in respect of earlier years related largely to aircraft development expenditure and amounted to £1.6 million and there were investment allowances of £1.3 million. The tax charge is likely to remain unusually low in 1962, for while the tax credit in respect of earlier years may be smaller the group should continue to enjoy the benefit of substantial investment allowances, particularly on English Steel's £26 million programme at Tinsley Park. This programme accounts for nearly all of the group's total capital commitments of £26¼ million; but Vickers itself will have to provide only a small part of the total sum of about £30 million (including additional working capital) required by English Steel, since the latter is financing the development largely by bank loans and a debenture. Not surprisingly, while English Steel's sales fell only slightly its profits fell sharply from almost £5 million to £3¾ million. The outlook is not encouraging: Lord Knollys, the chairman of both Vickers and English Steel, says that English Steel's profits are unlikely to be better unless there is a marked improvement in demand.

In shipbuilding the short-term prospects are slightly more encouraging as orders on hand will entail full working nearly to the end of 1963. Last year this side of the business achieved "an almost record profit" even though the division's sales fell from £47 million to £35 million. Sales of the engineering division were maintained and the swing away from armaments has continued. A number of its new projects, such as Hovercraft and accelerated freeze drying plant, are still in the experimental stage.

For an account of future prospects shareholders of Vickers will have to await the valedictory statement of Lord Knollys at the annual meeting. It seems unlikely that he will be able to look forward to anything better than maintained profits this year. But the £1 shares discount any troubles ahead fairly fully.

Dunlop Rubber

HAVING risen to their peak for the year of 39s. following the publication of the annual report, the 10s. shares of Dunlop Rubber fell to 36s. in generally weak markets in the three weeks preceding the annual meeting. But the real knock came after Sir Edward Beharrell's remarks at Tuesday's meeting, on which the shares dropped 4s. 7½d. to 31s. 4½d.:—

> This year the problem is more than usually difficult due to the long winter, which has affected our business both in the United Kingdom and elsewhere, and to labour problems, which have been a disturbing and costly factor. The trading results for the early months of the year have therefore fallen short of our expectations and were lower than in the same period of last year.

Sir Edward hoped that the 1961 level of profit will be maintained but said this would not be easy. The wide territorial spread of Dunlop's activities offers some protection against difficult trading conditions in any one market, such as those experienced in Britain last year. The aim now is to obtain a comparable spread of industrial interests; the directors recognise that the proportion of Dunlop's business in tyres—about 70 per cent—is high and that it is becoming increasingly competitive.

The current high rate of capital expenditure is unlikely to fall but Sir Edward said that the proceeds of the £12 million debenture issue would put Dunlop's finances "on a sound basis for some little time to come." The current yield of 5 per cent represents a more realistic assessment of the group's prospects in highly competitive markets than the stock market was making only a month ago.

Marks and Spencer

WHILE the growth in sales and profits of Marks and Spencer in the year to March 31st last was much more modest than in earlier years, there was little slackening in capital expansion. The balance sheet shows that net fixed assets rose last year by £6 million to £64½ million, in extensions to existing stores rather than in new stores. Stocks, too, increased by £1½ million, but liquid assets fell by only £1½ million to £10¾ million, for besides a further issue of £2½ million of debenture stock, the group's cash flow (including provisions for repairs) amounted to nearly £6½ million.

For an account of the past year's trading results and prospects and plans for the future shareholders must await the statement of Lord Marks at next month's meeting. They will hope that, as last year, he will give separate turnover figures for the expanding food section, which with sales of £28½ million accounted for over one sixth of the group's total sales in 1960-61. But margins on this side of the business are generally smaller than on clothing where Marks and Spencer appears to be intent on raising the quality of the goods it sells. The continued success of this policy would help to justify the current yield of 2.6 per cent offered by the 5s. "A" shares at 91s.

General Motors

THE recession in the United States last year led to a fall of ten per cent in the sales of General Motors, but its net profits fell by only seven per cent with the result that the margin on sales rose from 7.5 per cent in 1960 to 7.8 per cent. This unexpected improvement seems to have resulted in part from a fall in taxes and in part from a reduction of 42,000 in the number of GM's employees—to 553,000, of whom 253,000 worked outside the United States; this saved $249 million on the wage bill. There was also a fall of $1.52 in the average weekly pay of hourly-paid employees. All of this points to a flexibility and a power of control over costs that no British car manufacturer is likely to be able to achieve.

About 90 per cent of GM's sales on the civil market are accounted for by "automotive products"; only three per cent of sales come from defence contracts. Outside the motor field, GM has hardly been able to retain the same golden touch; its venture into the aero engine industry with Allison has never been a great success; and now it has to face the consequences of pinning its hopes for the commercial market on the turbo-prop engine rather than the jet. But the rise in sales of cars in the United States this year is being accompanied by an increase in GM's share of the market—from 46.5 per cent last year to 52 per cent in the first quarter of this year. The volume of GM's sales in the first quarter rose by 38 per cent over the corresponding period in 1961 when sales were depressed; the increase for the full year will undoubtedly be smaller. New models, such as the Chevy II compact, account for some of the increase, but the popularity of the standard model Chevrolet remains the backbone of GM's prosperity. Better profits should be earned, and this appears to be confirmed by the decision to raise the dividend to $2.50 per share despite the fall in earnings in 1961. On the bigger dividend the shares at $93½ (London) yield 4¾ per cent.

Castrol

CASTROL has the biggest single share of the market in lubricating oils in this country but competition is fierce and margins are narrow. Sales of lubricating oil in this country rose by 5 per cent last year but the stock market did not expect any appreciable rise in Castrol's profits as the increase in prices came too late to benefit earnings in 1961. The rise of almost 8 per cent in Castrol's gross profits from £3,311,000 to £3,576,000 therefore came as a pleasant surprise and it makes good the setback suffered in 1960. But a bigger tax charge left net profits only fractionally higher at £1,717,000, to cover the unchanged dividend of 20 per cent 2½ times. The 10s. ordinary shares at 48s. yield 4¼ per cent.

The results suggest that Castrol at least maintained its domestic sales last year and probably also did well in overseas markets, which accounted for over half its sales in 1960. Though the current year should produce some benefit from higher prices competition from the big oil companies, notably through "tied garages," is unlikely to diminish.

Averys

LAST July the chairman of Averys referred to the rising costs of labour and raw materials but he did not expect the results for the year to March 31st last to be substantially different from those in 1960-61, as order books were fuller than they had been a year before. It now seems, however, that the pressure became more acute as the year wore on, for Averys' gross profits fell by 7½ per cent to £2,416,000 and net profits by 15 per cent to £1,176,000. The fall in profits was clearly bigger than the stock market expected and the £1 shares lost 8s. 9d. to 89s., to yield 3.4 per cent on the maintained dividend of 15 per cent covered just over twice.

One subsidiary, at least, made a loss, for while the profit attributable to minority interests amounted to £16,000 in 1960-61 it was replaced by a loss of £47,000 in 1961-62. No doubt the statement with the full accounts will make it clear where the losses occurred and where the pressure on margins was most intense—at home, where the group's interests include shop fittings as well as its well-known weighing and testing machines, or overseas, where profits in Australia and South Africa fell in 1960-61.

Rolls Razor

SINCE Mr John Bloom acquired an interest in Rolls Razor two years ago its name has become something of a misnomer, as 95 per cent of its output now consists of washing machines. A policy of direct selling to the public backed by aggressive advertising has won the company about 10 per cent of the washing machine market in this country. There have been lively unofficial dealings in the ordinary shares since the suspension of their quotation just over two years ago. This is an unusual background to the company's offer for sale of 500,000 1s. ordinary shares, which takes the form of a tender, a method used in the past only by water companies and more recently by one or two property companies. The minimum tender price was 20s. but the shares have been changing hands at about 25s. However, the issue price is to be 23s., to offer a yield of almost 3½ per cent.

At this price the shares still discount a good deal of future growth in a market which is unlikely to expand as rapidly in this country as had been expected and in which competition is intense. However Rolls' policy of high deposits on credit sales appears to have insulated it from the worst vagaries of the credit cycle. Gross profits in 1961 amounted to £269,000 and the minimum forecast for the current year is £650.000. This would produce earnings of 176 per cent to cover the proposed dividend of 80 per cent about 2.2 times. The Rolls-Colston dishwashers and other activities such as discount stores are not expected to contribute much to profits in the current year; but they add to the speculative possibilities of the shares.

THE MONEY MARKET

ALTHOUGH the authorities had forced the discount market to borrow at Bank rate on two occasions last week, it again raised its bid by 8d., to £99 0s. 9d., at last Friday's Treasury bill tender. The average rate of discount fell by 2s. 7.67d. to £3 17s. 1.04d. per cent, which means that the outsiders raised their bids fractionally less than the market, and with a fall in total applications of £29 million to £384 million, the market's allotment at 61 per cent was even better than the previous week's 57 per cent. These two good allotments contrast sharply with the very poor allotments in earlier weeks, and now that the market has replenished its portfolios it will probably fall-in with the authorities' wishes and slow-down the pace at which the bill rate has been falling.

Credit was in good supply on Thursday and Friday of last week, but became tight on Saturday. On Monday and Tuesday credit continued short; on Monday three or four houses were forced into the Bank for a small amount and on Tuesday four or five houses borrowed a large amount from the Bank despite the large amount of help supplied through the open market. On Wednesday credit turned easy when the Ready Mixed Concrete money flowed back to the banks.

COMPANY MEETINGS

GALLAHER LIMITED

(Incorporated in Northern Ireland)

INCREASED GROUP PROFITS
TURNOVER REACHES RECORD FIGURE
SMOKING AND HEALTH
"WHOLE PROBLEM OUT OF PERSPECTIVE"
MR CECIL W. MASON ON THE OUTLOOK

The sixty-sixth Annual General Meeting of Gallaher Limited, was held on May 23rd at Granite House, Cannon Street, London, EC, **Mr Cecil W. Mason,** Chairman, presiding.

The Secretary, Mr George Iliff, ACA, read the notice convening the meeting and the report of the auditors.

The following is the Chairman's Statement circulated with the report and accounts for the year ended December 31, 1961:

In my Statement last year I said that your Directors hoped to be able to present satisfactory results for the year 1961, but this must be coloured by the uncertainty as to whether and when the Chancellor of the Exchequer would use the powers to impose by Order a surcharge on duties, including tobacco duty. The Chancellor did, in fact use these powers in July, 1961, when tobacco duty was increased by 10 per cent. In these circumstances your directors hope that you will consider the Group's trading results for 1961 to be satisfactory.

TRADING RESULTS

The Group profits, before tax, for the year 1961 amounted to £13,661,427, an increase of £1,918,150 over the 1960 profits. The proportion of the Company's 1961 profits absorbed by taxation is considerably higher than in 1960 by reason of the increase in the rate of Profits Tax from 12½ per cent to 15 per cent. The Group net profit, after tax, for 1961 is a record at £6,350,881 as compared with £5,834,300 in 1960 —an increase of £516,581: thus, the effect of the higher rate of taxation imposed on all of our profits for 1961 has been that the increase in profits of £1,918,150 before taxation becomes an increase of £516,581 after taxation.

The Directors have transferred to General Reserve Account the sum of £4,000,000 which increases the balance on the Group's General Reserve to £14,000,000. An interim dividend of 5 per cent, less tax, was paid in 1961 on the Ordinary Capital of £24,300,000, and your Directors recommend a final dividend of 15 per cent less tax. The appropriation to General Reserve exceeds the net profits available after dividends, so that, after taking credit for taxation provisions for previous years no longer required, the Carry Forward in the Consolidated Profit & Loss Account at £3,299,895 is £654,149 less than the Carry Forward from last year.

Arising out of the 10 per cent surcharge on tobacco duty imposed in July, 1961, the Group has made an exceptional profit, after all relevant taxation, of £618,193, which has been transferred to the credit of Reserve for Contingencies.

CURRENT ASSETS

In the Consolidated Balance Sheet at December 31, 1961, the total current assets amount to £102,490,272, an increase over the figure in the 1960 Balance Sheet of £4,798,144.

Stocks of work-in-progress and finished goods at the end of 1961 were fractionally higher in quantity than at the end of 1960, but the 10 per cent surcharge on tobacco duty, which the Group has to pay immediately, on the withdrawal of tobacco from bond, has brought about an increase in the value of those stocks. The amount due by trade customers was higher for the same reason.

The quantity of leaf tobacco which we held in stock at the end of 1961 was marginally lower than at the end of 1960, but the average cost of those stocks was higher.

LEAF SUPPLIES

In my statement last year I told you that we were able to improve our stock position and had bought more than twelve months' replacement of leaf tobacco. It is fortunate that we did increase our stocks when the opportunity presented itself, because 1961 was a difficult buying year in which we were unable to purchase enough tobacco of the types we required to cover a full twelve months' usage.

Despite the downward trend of commodity prices in general, the price of leaf tobacco shows a continued rising trend. The average cost of our purchases again increased and I regret to say that there are signs that prices may rise further this year.

The 1961 USA crop contained limited supplies of quality tobacco required by United Kingdom manufacturers and strong competition for these types resulted in the higher average cost of our purchases.

The 1961 Rhodesian crop, which it had been hoped would be more suitable to our requirements, again proved to be disappointing.

The current crop which is now being sold in Rhodesia is estimated to be of record weight at 250 million lbs., but the effect of drought conditions experienced over large areas of the country during the growth of the crop will again result in a difficult buying season.

In Canada the quality of the crop has been more suitable to our requirements and I am pleased to record the improvements which have been effected in the grading and handling of this tobacco.

In India, while prices were higher than in the previous year the quality of the crop was satisfactory and we were able to purchase our requirements.

SALES

During 1961 the Group's turnover increased to a record figure of £349,000,000 compared with £320,000,000 in 1960. This was due partly to the increase in the price of some of our cigarette brands in June 1961 and the increase in duty arising from the Government Surcharge applied at the end of July 1961, and partly to an increase in our quantity sales which resulted in an improvement in our share of the market. This increase in our sales was achieved in spite of the very intense competition which continued throughout the year and the depressing effect on consumption which occurred as a result of the July duty increase. The latter had an immediate effect on sales, in particular of the higher priced cigarettes and tobaccos which had not recovered by the end of the year.

During the latter part of the year the Company introduced Benson & Hedges King Size Filter cigarettes and a small sized cigar—Harlequin—both of which are making satisfactory progress.

Your Company is continually reviewing the competitive position of the Group and will continue to introduce new brands from time to time.

GENERAL MATTERS

Last year I referred to the additions to our manufacturing capacity and informed you that our new factory in the Manchester area commenced production in 1960. Considerable progress has been made since that date and it is now producing at approximately 65 per cent capacity.

Despite the steps we have taken in the past few years to add to our manufacturing capacity, some of our factories are still congested. During 1961 an opportunity presented itself to resolve these production problems and the Company arranged to purchase a large modern factory building adjacent to the Company's principal factory in Belfast. Completion of this purchase will take place at the end of June, 1962. Although this building was designed for use as a textile mill, a considerable sum of money will have to be spent in adapting it to our use, and it should prove itself to be a fine modern factory for our purpose.

The new cigar factory at Cardiff for J. R. Freeman & Son Limited, which was nearing completion at the time of the Annual General Meeting last year, has been in production since October 1961. This single-storey factory is proving to be highly satisfactory in every respect

and economical in operation. It has also provided the Group with reserve capacity for cigar manufacture. The old cigar factory at Cardiff has been sold.

In the middle of 1961 the company acquired the old and well-established name "Abdullah" and the United Kingdom and Eire trade marks associated with it. These brands are now being sold through the Group's selling organisation. Early this year we purchased the business and the world trade mark rights, except in New Zealand, of John Cotton Limited, which was established in Edinburgh 192 years ago.

J. WIX & SONS LIMITED

As you have already been informed, the Company acquired from The American Tobacco Company in early January, 1962, the whole of the issued share capital of J. Wix & Sons Limited in exchange for £3,600,000 of Ordinary Stock in Gallaher Limited, equivalent to 7,200,000 10s. Ordinary Stock Units. The profits of Wix from the beginning of January, 1962, will form part of the profits of the Gallaher Group, but as Gallaher did not own the Wix shares at December 31, 1961, no account is taken of Wix in the Accounts of Gallaher Limited at that date.

For your information the Balance Sheet and Profit and Loss Account of Wix at December 31, 1961, are shown at the end of the Statement of Accounts.

ENGINEERING SUBSIDIARY

Our engineering subsidiary had a satisfactory year. Its main product, the Mono Pump, is sold in many countries of the world.

These results again reflect credit on management, staff and workers and we thank them for their achievement.

EXPORT

In January this year Gallaher International Limited was formed and at the time the following Press statement was issued:

"Gallaher Limited announces the incorporation of a new subsidiary company—Gallaher International Limited—with an authorised capital of £250,000.

It is the intention of Gallaher Limited to extend through this new company its interests in world markets outside the United Kingdom and Eire. Heretofore its overseas interests have been negligible in comparison with its business in the United Kingdom.

This company will deal with the brands of Gallaher Limited, Cope & Lloyd (Overseas) Limited, J. R. Freeman & Son Limited and J. Wix & Sons Limited."

Since 1932 we had arrangements which precluded your Company from trading abroad, and our overseas trade was handled by British-American Tobacco Company Limited. An agreement has now been reached whereby Gallaher is able to trade in world markets, with the exception of New Zealand where Gallaher trade marks have been sold outright to B.A.T.

B.A.T. acquired many years ago the export rights of J. A. Pattreiouex Limited, the makers of "Senior Service" and "Nelson" cigarettes. The export rights of Benson & Hedges Limited and of Peter Jackson Limited have never been owned by your Company.

It is now the intention of Gallaher to enter world markets whenever suitable opportunities arise, either by developing its own trade marks or by acquiring established businesses, and it is for this purpose that Gallaher International Limited has been formed.

SMOKING AND HEALTH

All shareholders will have seen references to the Report of the Royal College of Physicians on Smoking and Health. It seems to me that the recent publicity has put the whole problem out of perspective. Excess in most habits is harmful, but the great majority of smokers exercise moderation in this habit, from which they derive pleasure and comfort without injury to their health.

It is certainly not our wish to encourage children under 16 to smoke, and, in conjunction with the Trade, certain steps have already been taken, as announced in the Press, and the Trade is consulting with the Government to see what further steps can be taken.

As has so often been stated, there is no scientific evidence as to the cause of cancer. It is to be hoped that with all the research going on in the world today science will soon discover the cause. Your Company will continue to play its part in this research.

OUTLOOK

This is, of course, a particularly difficult year on which to make a realistic forecast of our trading. Apart from the continuing high rate of duty, which in itself will have an effect on the level of consumption, the recent smoking and health controversy has had a material effect on sales and it is still too soon to be able to judge long-term reaction. I can say, however, that competitively the goodwill of your Company's brands, because of their high quality, is second to none and I have every confidence that your Company will maintain its share of the trade.

DIRECTORS AND EMPLOYEES

Immediately following the completion of the purchase of the Wix business your Directors appointed to the Board of Gallaher, Mr F. H. Wright, the Managing Director of J. Wix & Sons Limited, who has been associated with the tobacco industry for 40 years. It gives us great pleasure to welcome Mr Wright to the Board, not only for his personal qualities but because his experience and knowledge of the Trade are of great value to us in our deliberations. I am happy to welcome the Wix employees to our Group and would like to place on record our appreciation of the co-operation we have received from the Wix Management, which has been and is proving most helpful.

In the course of the next year two of your Directors, Mr J. D. Hopkins and Mr J. Young, will be retiring.

Last year I told you of the formation of a Board of Management, and we have recently appointed as Directors three of its senior members, Mr R. S. L. Berkeley, Mr H. B. Glyn and Mr A. W. H. Stewart-Moore. These three new Directors have spent their working lives in the service of the Company. We have also appointed as Director, Mr A. W. S. Pollock, who is Managing Director of Gallaher International Limited. Although he has not had long service with the Company he has gained his experience in the tobacco trade in world markets. I and my colleagues are confident that these four new Directors will be an added strength to the Board.

During the year we have appointed to the Board of Management, Mr J. C. L. Boyes, FCA, who succeeded Mr R. G. Knight as Chief Accountant of the Company on the latter's retirement in May last year.

To all employees of the Group I give my best thanks for their support and enthusiasm, which has enabled us to present to you the results of another successful year.

The report and accounts were unanimously adopted and the retiring directors, Sir Walter A. Edmenson, CBE, DL, and Mr J. D. Hopkins, who retired by rotation, and Mr R. S. L. Berkeley, Mr H. B. Glyn, Mr A. W. S. Pollock, FCA, Mr A. W. H. Stewart-Moore, and Mr F. H. Wright, FCA, who had been appointed during the year, were re-elected.

NORWICH UNION INSURANCE SOCIETIES

ANNUAL MEETINGS

LIFE SOCIETY

Speaking at the one hundred and fifty-fourth annual meeting of the Norwich Union Life Insurance Society held in Norwich on May 22nd the President (**Sir Robert Bignold**) said the Society had had another record year. New life insurances for sums insured of over £162 millions were an increase of over £22 millions, whilst the capital value of new deferred annuities in connection with pension schemes exceeded £86 millions, an increase of 42 per cent over 1960.

New annual premium income was nearly £5 millions, an increase of 23 per cent whilst considerations for immediate annuities amounted to £4 millions, bringing total premium income to £34½ millions.

Interest income, after deduction of tax, was £11¼ millions, the rate of interest earned at £6 0s. 2d. per cent gross (£5 5s. 2d. per cent net) being the highest recorded in the Society's history. Total payments to policyholders amounted to over £15 millions; total funds increased by £24 millions to £234 millions.

Nearly £4,400,000 was distributed as bonuses to with-profit policyholders, the rates in the United Kingdom being 5s. per cent higher than those for the quinquennium ended December 1960.

FIRE SOCIETY

At the 164th annual meeting of the Norwich Union Fire Insurance Society Ltd, Sir Robert Bignold said that in spite of determined effort in a difficult year, overall results were disappointing, though not without encouraging features. Total Group premium income had increased by £2,346,180 to the record figure of £40,256,468 and total assets were up by £4¼ millions to £85,967,331.

Though premiums in the Fire Account at £14,318,267 showed a satisfactory increase, underwriting profit of £103,097 was a considerable reduction on the 1960 figure of £356,309.

Premiums in the Accident and General Account showed a healthy increase of nearly £2 millions to £18,515,692, but the account showed an underwriting loss of £399,236 against a loss of £232,557 in 1960.

Marine premium income advanced by £45,643 to £3,425,684. The transfer to profit and loss was £35,000 against £105,000 the previous year, leaving a Group Marine fund of £3,840,505.

Net profit amounted to £314,955 and the total amount available for appropriation was £1,122,017. After payment of dividend and a transfer to Pension Reserve, £562,642 was carried forward.

further steady progress by DUNLOP

SIR G. EDWARD BEHARRELL, the Chairman, in the course of his speech at the 63rd Annual General Meeting of the Company, held on May 21st in London, said:

RESULTS FOR 1961

SALES: The year 1961 was not without its difficulties with a much lower level of activity in the vehicle and some other industries, particularly in the United Kingdom, resulting in over capacity. There were also problems in some overseas countries where we operate. In consequence intensely competitive conditions prevailed throughout the year and in these circumstances we were fortunate to be able to increase our sales volume.

COSTS: We were also fortunate that during the year there was much greater stability, and a generally lower level, of natural rubber prices than in 1960. We were able still further to increase the proportion of synthetic rubber used from 44 per cent to 47 per cent, and together these two factors gave us a considerable cost benefit. Inevitably much of the benefit was absorbed by lower selling prices and increased labour costs again amounted to a considerable figure. Nevertheless, we were able to improve our margin of profit from 5.1 per cent to 5.6 per cent and the whole organisation is exerting every effort to maintain this. It must, however, be recognised that as tariffs fall pressure from customers for lower prices as well as the pressure from labour for higher wages together constitute a major problem facing industry. As a Group we are doing everything possible to achieve economies in other directions, particularly by the modernisation of plant and equipment and by a continual review of our activities and organisational structure.

EARNINGS: We did well overseas, with profits about 12 per cent higher than in 1960. These results were helped by record exports from the United Kingdom which were 13 per cent higher than in the previous year.

It is interesting to note that at this time last year the Directors reported that for 1960 United Kingdom profits were 15 per cent higher than in the previous year and that overseas profits were 10 per cent down. For 1961 the position was reversed although for the United Kingdom the reduction was quite small. But the significance of these movements lies in the fact that territorially the Group's activities are well spread so that the effect of temporarily difficult trading conditions in some countries is cushioned, as it was in the United Kingdom last year.

We are endeavouring to achieve a similar position as regards our range of activities because we recognise that the proportion of our business in tyres —about 70 per cent—is high, and this business is becoming more and more competitive. I want stockholders to know that the Board is giving much attention to the expansion of our other interests and the development of new activities.

The establishment of a rubber reclaiming plant, in association with the U.S. Rubber Reclaim Company, and the manufacture of synthetic gutta percha for golf balls by a new Dunlop process, are examples of what we are doing. Yet another can be seen in the announcement at the end of last month that Dunlop disc brakes are to be adopted by the Studebaker Corporation in the United States for their new "Avanti" model. The work involved in developing a product of this kind takes time to mature; but the news is particularly encouraging for us because it is the first instance of this type of disc brake, pioneered by Dunlop, being fitted on a production car by a manufacturer in that country.

You will have noted that the provision for depreciation showed a further increase in 1961 and that our capital expenditure totalled some £13¾ million. Against this total cash flow of the Group amounted to £12 million. Capital expenditure must continue at a high rate if our existing plants are to be kept at the highest state of efficiency quite apart from expansion, both in countries where we are already established and for our new ventures in Malaya and Nigeria. For these reasons, and because our temporary borrowings are high, the Board decided in the middle of 1961 that further long term finance should be obtained in the United Kingdom. Shortly after this decision had been taken, however, the Chancellor introduced his "Little Budget" and our financing operation had to be postponed until conditions became more favourable. This, as you already know, was not until March of this year when we issued £12 million of Debenture Stock. We were most gratified by the way the issue was received. The proceeds of this issue will put our finances on to a sound basis for some little time to come.

NATURAL AND SYNTHETIC: The emergence of new synthetic rubbers is a regular occurrence. Perhaps one of the more remarkable at present in the chemist's mortar is cis-polyisoprene. In its chemical composition it is the equivalent of natural rubber, but, in the way that theory and practice have of not coinciding, it is not the technical equivalent. There is a technological gap to be filled. However, we do know that in certain important respects, especially in tensile strength, resistance to wear and stickiness or "tack," it behaves in a similar, if somewhat inferior, manner to natural rubber. On the other hand, it probably has some advantages over natural rubber.

Another polyisoprene, trans-polyisoprene, is synthetic gutta percha. Gutta percha, which is mainly used in golf ball covers, has been in short supply; indeed, it has tended to disappear from the market. In a pilot plant we have solved the manufacturing problems associated with the synthetic product, and we are now building a plant to make it.

Your Company's attitude towards natural rubber is best summed up in the decision to establish another plantation in Nigeria, and to re-plant steadily in Malaya. At the same time we are planting oil palm in Malaya, in a number of small trial plots where the soil appears suitable before deciding whether to follow the example of the Malayan Government by having a tropical agricultural unit not necessarily confined to rubber.

THE PRESENT YEAR

At this stage it is too early to know what our results are likely to be for the year as a whole; I hope that we can maintain our 1961 figures although, with the influences to which I have referred earlier, this will not be easy; but I can say that all possible efforts are being made by the managements of our Divisions and Companies to improve the efficiency and competitive attack of all parts of the Group.

The report was adopted.

ASEA

ALLMÄNNA SVENSKA ELEKTRISKA AKTIEBOLAGET
Sweden

BUSINESS TURNOVER FOR 1961 SET A NEW HIGH RECORD

LARGEST EXPORT ORDER IN COMPANY'S HISTORY RECEIVED FROM NEW ZEALAND

EIGHT 102,500 KVA GENERATORS ORDERED FOR THE SNOWY MOUNTAIN SCHEME

SHARE CAPITAL INCREASED BY BONUS ISSUE

The following is an excerpt from the Annual Report for 1961, the Company's seventy-ninth year of business.

SUMMARY

Characteristic features of the activities of the Asea Group during 1961 were high demand and increased production. The turnover of the Group amounted to 1,612 Mkr. (1,353 Mkr. in 1960), and of the Parent Company to 919 Mkr. (735 Mkr.). (Mkr. = million kr. = £69.000 approximately).

The net profit of the Parent Company for 1961 amounted to 37.6 Mkr. (29.9 Mkr.) after allowing 33 Mkr. (14 Mkr.) for taxes and 19.8 Mkr. (23.2 Mkr.) for the Asea Pension Funds.

It is proposed that the share capital of the company be increased by means of a bonus issue to Kr. 379,687,500, by issuing 759,375 new 100 Kr. shares, one for every four older shares held. Further, an unchanged dividend of 8 Kr. per share is proposed, applying also, in effect, to the bonus issue.

THE ASEA GROUP

Turnover increased by 19 per cent to the record level of 1,612 Mkr. (1,353 Mkr. in 1960). At the end of 1961, the Asea Group employed 30,928 persons in Sweden (30,681 in 1960) and about 2,900 elsewhere.

There has been a high rate of activity within the Group and, on the whole, the means of production were fully utilised; the volume of production was greater than in any previous year, further increase being limited by the shortage of labour.

THE PARENT COMPANY

The average number of persons employed by the Parent Company was 19,564 (18,511 the previous year), of whom 8,604 were salaried staff (8,202) and 10,960 were wage-earners (10,309).

Export orders amounted to 37 per cent of the total orders received and increased more than domestic ones. The increase was most marked in the case of the company's products for the generation and distribution of power. The sales of standard products also increased considerably. A feature of both the home and export markets was high sales volume combined with keen price competition. However, because of a greater volume of production and keener cost control, profitability has increased.

MARKET CONDITIONS

The falling trend in Europe and the rising one in the U.S.A. mean harder competition for Asea both in Sweden and on the export market. A contributory factor is the surplus capacity, mainly in the field of heavy equipment of certain competitors outside Sweden. In this situation, Asea has the advantage of a large order-book ensuring full production during 1962. The wide diversity of products and the spreading of sales over many categories of customers and markets diminish the effects of a falling market on the company, and many orders received by Asea are based on long-term investment programmes which are relatively independent of temporary fluctuations in trade.

ORDERS AND DELIVERIES

The Power Department obtained the largest export order in the history of Asea when the New Zealand Electricity Department ordered 600,000 kW, 500,000 V high-voltage d.c. equipment for a link between South Island and North Island. The Snowy Mountains Hydro-electric Authority in Australia has ordered eight 102,500 kVA hydro-electric generators. Orders for hydro-electric and steam-turbine-driven generators have been received from the Swedish State Power Board and from power companies in Sweden and elsewhere.

Export orders for large transformers include three 47,000 kVA three-phase units for the Bureau of Reclamation in the U.S.A. and a 160,000 kVA three-phase transformer for Denmark. The Swedish State Power Board has ordered fifteen 145,000 V high-voltage circuit-breakers and CEMIG in Brazil have ordered five 345,000 V air-blast circuit-breakers. Sales of capacitors have been good, the export orders which dominate in the field include one for a 42,000 kVAr, 132,000 V shunt capacitor for the C.E.G.B. Equipment was supplied for the 160,000 kW, 200,000 V, high-voltage d.c. power transmission system between England and France which was commissioned on December 8, 1961.

The Industrial Department has received many orders for electrical equipment for rolling mills. A feature is that almost all the installations are fed by rectifiers instead of by rotary converters. Sales of press-ductors for rolling mills have continued to increase. Major orders have been received for electrical equipment for furnaces. Ten induction stirrers have been sold, eight being exported. Large low-frequency induction furnaces have proved to be suitable for pig iron foundries and many have been ordered. An Australian customer has ordered a large complete mine hoist plant which will consist of three hoists, the largest, which is rated at 6,000 h.p., for a net load of 24 tons. This is the first order for an entire installation of this kind to be received from Australia. Important orders have been received for completely automatic sugar centrifugals from Denmark, Britain, France, Belgium, Italy, the Argentine, Australia and Mauritius.

The Traction Department received orders for fifteen 6,000 h.p. double locomotives for the ore line in the far north of Sweden. Eight 3,600 h.p. express locomotives with a maximum speed of 94 m.p.h. and seven motor coach sets were among the items supplied to the Swedish State Railways.

PRODUCTION

The factories of the Parent Company turned out 17 per cent more goods by volume than in 1960. The raw materials situation improved considerably as compared with the previous year, but prices rose a little during 1961. As a step in the rationalisation of production, the manufacture of rotating machines is being concentrated to Västerås and the manufacture of transformers to Ludvika, production of these items being discontinued at the Hälsingborg Works. This latter plant has now taken over from the Västerås factories the manufacture of such electro-mechanical products as cranes, hoists and gears.

TECHNICAL DEVELOPMENTS

The development work on high-voltage d.c. transmission schemes has been concentrated on a prototype valve for the system now ordered for New Zealand. Converters equipped with thyristors, i.e. controlled semi-conductor rectifiers, have been developed for the feeding and controlling of motors and generator fields. The first deliveries of active-gap lightning arresters (surge protection) have been completed with good results. Equipment for carrying out special tests on circuit-breakers in the High-power Laboratory at Ludvika has extended the testing range to 4,500,000 kVA.

NUCLEAR POWER

The comprehensive work on the Ägesta reactor continues and the reactor tank, the main heat-exchanger, the main cooling pumps, etc., have been set up in the underground rock chamber. An investigation has been carried out concerning the modification of the Marviken reactor so that a direct cycle, heavy-water steam turbine can be added to the plant thus converting the system into a boiling-water dual-cycle one. During the year, 3 tons of uranium dioxide slugs have been sintered for the first charge at Ägesta and about 3 tons of aluminium-clad fuel have been supplied to AB Atomenergi.

ACTIVITIES OF THE MAJOR SUBSIDIARY COMPANIES

SURAHAMMARS BRUKS AB

(Steelworks)

Ore was mined in the company's own mines on a larger scale than in the previous year. The level of manufacture of pig iron and chills at Spännarhyttan has been more or less unchanged. Production and sales at the steelworks at Surahammar increased. Production in the strip mill increased. The furnace hall in the strip mill has been extended and two electric pit furnaces were installed and commissioned during the year.

AB ELEKTROHELIOS

(Domestic appliances, industrial heaters, etc.)

The turnover of the company increased during 1961 by 7.8 per cent from 104.3 Mkr. to 122.9 Mkr. The new series of electric stoves introduced during the first quarter of the year was well received. Competition continues keen and there is still excessive production capacity in Sweden. Sales of combined sink and cooker units and of the company's other electrical heating appliances have increased. The export of freezing equipment continued although not as well as had been expected. Promising developments in Denmark and Norway were hampered by the retention of import restrictions and, in Britain, credit restrictions combined with the 25 per cent purchase tax on freezers with a volume of less than 12 cu. ft. had an unfavourable influence on sales. The demand for the company's industrial kitchen equipment and other industrial equipment continued to increase both in Sweden and on the export market.

AB LILJEHOLMENS KABELFABRIK

(Cables, etc.)

As a result of brisk demand during the year, the turnover increased to 112.5 Mkr. (102.7 Mkr. the previous year). There were many orders in hand at the end of the year, particularly for high-voltage cables.

The company has played its part in the creation of the high-voltage d.c. transmission scheme across the English Channel by supplying large numbers of capacitors and, in the case of the New Zealand transmission scheme has received considerable orders for capacitors for filter circuits and phase compensation. As in previous years, the greater part of capacitor production has been exported.

HISS AB ASEA-GRAHAM

(Lifts, escalators)

Major orders include 44 escalators and 6 funicular lifts for the Stockholm Underground Railway, 12 lifts for the editorial offices of a Stockholm newspaper (Dagens Nyheter), 11 lifts for a new office building in Stockholm, and 53 lifts for blocks of flats in Gothenburg and Malmö. At the beginning of 1962, Asea took over the company's Static Converter and Lighting Control Departments.

AB ASEA SVETSMASKINER (Aseaweld)

(Electric welding equipment, electrodes)

Sales of the company's products increased considerably on all markets during the year. Major orders included a complete plant for tube manufacture.

SUBSIDIARY COMPANIES OUTSIDE SWEDEN

During 1961, sales by these companies continued to increase, both as far as products from Sweden and products manufactured locally were concerned. Production at all the manufacturing companies was greater than in any previous year. In Brazil, the extension of the transformer factory has been concluded. Branch offices have been opened in Recife, Belo Horizonte, Rio de Janeiro and Porto Alegre. In Finland, a warehouse and factory building outside Helsingfors has been completed. The production of certain commutator motors for the entire group at the French company has developed satisfactorily. Offices, stores and a factory are being built in Mexico. Production at the Norwegian company has developed very satisfactorily. Transformer manufacture, measured in MVA produced, has increased by almost 40 per cent. In South Africa, the manufacture of transformers has increased considerably and preparations for the extension of the factory are continuing.

CONDENSED STATEMENT OF CONSOLIDATED ACCOUNTS AT 31st DECEMBER, 1961

CURRENT ASSETS:	£
Cash (including £1,921,000 on blocked account in Bank of Sweden)	21,084,000
Securities	456,000
Debtors	21,674,000
Inventories	22,747,000
(In the case of Group companies in Sweden, these are generally valued at 40% of cost or market value, whichever is the lower.)	
	£65,961,000
Less: Current Liabilities	39,230,000
Net Current Assets	26,731,000
Trade Investments and Loans	5,585,000
Fixed Assets	41,188,000
	£73,504,000

Financed by:	£
Share Capital	26,131,000
Statutory and Capital Reserves	12,778,000
Debentures and Mortgages	13,748,000
Long-term liabilities	10,166,000
Revenue Reserves, and Profits undistributed at 31st December, 1961	8,163,000
Minority Shareholders	2,518,000
	£73,504,000

Group Turnover, 1961	£110,943,000
Net Profit before tax	£7,614,000
Net Profit after tax	£3,486,000

Proposed Dividend for Asea for year to 31/12/1961 is 8% on share capital of £26,131,000 and requires £2,090,500.

MONTECATINI

Società Generale per l'Industria Mineraria e Chimica

MILANO, ITALY

AN OUTSTANDING YEAR

STATEMENT AND ANNUAL ACCOUNTS FOR 1961

The projects, achievements and successes of an industry whose vigorous activity reflects the scientific, technical and economic progress of the nation as a whole. Capital raised to 225 thousand million lire.

Ordinary and extraordinary general meetings of Montecatini stockholders were held in Milan on April 18th, under the chairmanship of **Dr Carlo Faina,** Chairman and Managing Director of the Company. 703 shareholders attended, representing 90,081,317 shares directly or by proxy.

Before starting business, Count Faina paid a tribute to the distinguished memory of Ing. Giuseppe Mazzini, who was Chairman of Montecatini from 1948 to 1955 and served as a Director from 1940 until his death in November of last year.

EXTRAORDINARY GENERAL MEETING

The extraordinary general meeting discussed a series of three financial resolutions. The first provided for a free issue of 30 million new 1000-lire shares, with benefit of dividend from January 1, 1962, increasing the Company's capital from 150 to 180 thousand million lire, to be allocated in the ratio of one for every five shares already held, on payment of 25 lire per share in respect of charges. The second resolution submitted to the general meeting proposed (1) the issue of a 50 thousand million lire 5½ per cent debenture loan, for 18 years, by June 30th next and (2) an increase of the Company's capital from 180 to 225 thousand million lire, by the issue, during the current year, of 45 million additional 1000-lire shares, to be offered preferentially to existing shareholders at par, on payment of 25 lire per share in respect of charges, in the ratio of one new share for every four shares already held. Dr Faina explained that the last two operations were necessary to provide the funds required for the vast programme which the Group now had in hand.

The extraordinary general meeting was also asked to approve the complete merger with Montecatini of a number of companies of which Montecatini was already sole shareholder. These mergers were recommended on technical, economic and organisational grounds as a means of improving co-ordination of productive resources.

The firms concerned were:

Società Chimica Lombarda A.E. Bianchi & C. S.p.A.
Società Idroelettrica Atesina S.p.A.
Società Italiana del Litopone Anonima.
Marengo S.p.A.
Metallurgica Feltrina S.p.A., and
Graniti d'Italia S.p.A.

After hearing the Auditors' statement, a number of shareholders spoke on these resolutions. The Chairman replied, stressing the untiring combined efforts of all members of the Montecatini Group to develop and exploit new and up-to-date sources of wealth and employment for Italy.

All resolutions were approved, with only one dissentient, representing 500 shares out of 90,081,317.

ORDINARY GENERAL MEETING

Dr Faina introduced the Board's report on the activities of the Montecatini Group during 1961.

The Chairman began by observing that the past year, which had opened with some not-unjustified fears of an economic pause in the highest circles, had subsequently proved excellent in all respects. He attributed this favourable trend to the programme launched in 1950 for developing the depressed areas of Southern Italy; this policy had permanently increased overall demand within the existing economic system, and had considerably raised living standards in the South of Italy.

Dr Faina went on to speak of the flexibility of the capitalist system, referring to two events of the preceding months which were of the greatest importance for Italian mercantile interests. The first was the decision to follow a more co-ordinated economic policy in Italy, on the basis of a wide-ranging overall programme; the second was the current emergence of large economically integrated areas, covering the territory of several States.

Within the vast economic areas in process of formation, competition was becoming increasingly fierce, to the benefit of the consumer, and the normal standard of living was rising rapidly in consequence. There was an urgent need for larger undertakings capable of introducing technical and structural innovations and putting them into practice, and for new plant, particularly in the chemicals industry, which could supply competitive products on a much larger scale than that to which many Italian and European manufacturers were accustomed. As a concrete example of new achievements, Dr Faina quoted the huge Montecatini petrochemical plant at Brindisi, for which total capital investment would exceed a hundred thousand million lire. This plant would be able to process two million tons of oil annually into an impressive range of intermediate and finished products.

After recalling the work of Montecatini in Southern Italy over the past 40 years and emphasising the great new tasks which the Group was now called upon to face, under the remorseless impact of technological progress and revolutionary new social needs, the Chairman outlined the Company's principal results in the various branches of production during 1961.

The Group's mining branch produced 1.4 million tons of pyrites, while bauxite production remained virtually unchanged. Having regard to the trend of the sulphur market, the exploitation of Marremma pyrites as a source of high-grade iron ore was particularly important. The pyrites would be treated, by new patented processes, in a large plant at Follonica in Tuscany, where production would start during the second half of 1962. The associated firm of Monteponi and Montevecchio, formed by the merger of the two companies in 1961, produced 117,447 tons of lead and zinc ores and had plans for development to meet European competition in the Common Market.

There was a further increase in marble production and sales were higher, 35 per cent being exported to a total of more than 60 countries. In the hydrocarbons sector, intensive prospecting was continued and identified deposits of natural gas were vigorously exploited. Montecatini had pioneered the working of Sicilian potassium and the San Cataldo mine had produced over 641 thousand tons. During 1961, preparatory work was started for the mining of the Palo deposit, adjacent to that at San Cataldo, which would provide two thousand tons daily. The fluor-spar mine at Prestavel (Trento) would come into operation this year.

The performance of the Group's chemical industry was equally promising. In the case of sulphuric acid, the trend towards production of concentrated acid continued during 1961; 240,949 tons of nitrogen were produced and plants were substantially modified and integrated so that the rate of progress achieved from the start through the efforts of Ing. Giacomo Fauser could be maintained in this important branch of the industry.

Turning to the fertiliser sector, in which Montecatini occupied a dominant position, as it did in the case of fungicides and insecticides, the Chairman referred particularly to potash and compound fertilisers, saying that here the economic situation was precarious and offered little incentive for further development, because phosphate raw material costs were rigid and earnings had been cut by the stabilising action of the C.I.P. (Interdepartmental Committee on Prices).

Derivatives of sulphur, phosphorus, nitrogen chlorine, fluorine and so on were steadily gaining in importance, in accordance with Montecatini's established policy of selecting products offering the combined advantages of cheapness and technical novelty. All research establishments had therefore further intensified their efforts and had provided production units with valuable suggestions for new lines and means of reducing existing operating costs. As examples, the Chairman quoted the new titanium dioxide plant which came into production last year at Spinetta Marengo and the Group's new activities in the field of special metals.

In the plastics sector, the Montecatini Group was now unquestionably one of the leading suppliers in Europe and overseas; Count Faina referred particularly to the growing success, both in Italy and throughout the world, of the polypropylene resin "Moplen." A further large plant had started production at Ferrara in 1961 and another would be following shortly at Brindisi. Under the heading of synthetic fibres, the Chairman mentioned production of the polypropylene fibre "Meraklon" by the associated company Polymer, stressing its steady advance and the wide possibilities available in very many applications.

Continuing his statement, Dr Faina said there had been a substantial increase in production and sales of paints and intermediates. This applied particularly to "Ducotone" which was now marketed in a completely new bactericidal and insecticidal formulation. The completion of a big paint research and development laboratory at the Codogno plant, was further evidence of Montecatini's determination to concentrate increasingly on pioneering new products in this field.

Activity was satisfactory as regards coal by-products, intermediates and dyes, but a number of factors militated against progress in the pharmaceutical products sector during 1961. These included failure to take the expected measures to bring legislation on drugs and medical products up to date, to allow the patenting of pharmaceutical manufacturing processes and to regulate the registration of branded medical products.

After noting that Vetrocoke was planning to build an up-to-date plate-glass factory at Trieste in conjunction with the Belgian firm Glaverbel the Chairman briefly reviewed the activity of Montecatini's associated companies in other countries.

Plant for the production of "Moplen" had been built at Neal, West Virginia (USA) and at Schwechat (near Vienna) by Danubia Petrochemie AG; a third factory was being built by Rotterdamse Polyolefinen Maatschappig at Pernis (Netherlands). Agreements had been concluded with the Madras Aluminium Co., for the construction of an alumina plant (to produce 20,000 tons annually) and an aluminium plant (to produce 10,000 tons annually) in the Mettur area of Madras State.

In Spain, the Societa Cromo SA had been formed, with equal holdings by Montecatini and the Spanish firm Cros SA, to manufacture paints. In the hydrocarbons sector, the association comprising the French firm PREPA, Montecatini, Fiat and Snia Viscosa, which was formed to prospect the Algerian Sahara, continued exploration of the concessions obtained. Finally, during 1961, Montecatini processes continued to gain ground throughout the world, with a total of 16 new plants in 7 countries. The Group submitted 300 patent applications in Italy, and a large number in other countries, these figures being clear evidence of the high technical and organisational level attained by the Company.

Turning to Montecatini's other activities, Dr Faina noted that output of electric power had reached 3,500 thousand million kWh in 1961, an increase of 2.2 per cent over the previous year. 51 thousand tons of aluminium were produced and modernisation and expansion were in progress at Bolzano and Mori. Plans were being prepared for the construction of a new plant to produce 100,000 tons of metal annually. Its final location in Sardinia was the subject of detailed negotiations, in order to ensure optimum efficiency and thus, maximum competitive power on the European market.

The associated firms "Lavorazione Leghe Leggere" and "Metallurgica Feltrina" both increased their output; the former planned to build a hot rolling mill for large sheets, which would be capable of handling present and future home demand for aluminium, and aluminium alloy sheeting.

The Chairman also mentioned study and research associated with productive activities, referring particularly to the work of the Research Centre maintained at Saluggia (Vercelli) by the associated firm SORIN, which had extended its nuclear reactor and thus doubled output of nuclear radiation for research and the production of isotopes.

Dr Faina concluded his statement, which was vigorously applauded at several points, with a reference to building activity, which was almost doubled as compared with 1960, and to the various welfare facilities provided for Montecatini employees. Finally he thanked all concerned—managements, office staffs and workers—for their active contribution to the success of the Company.

DECISIONS OF THE ORDINARY GENERAL MEETING

The General Meeting unanimously approved the Board's report and resolutions, reappointed the retiring Directors and elected Prof. Alberto Ferrari to the Board.

A dividend of 115 lire per share was declared, payable from April 26, 1962.

THE EAST ASIATIC COMPANY LIMITED

(Aktieselskabet Det Østasiatiske Kompagni)

COPENHAGEN, DENMARK

The following is a summary of the Annual Report for the financial year 1961, presented by the Board of The East Asiatic Company Limited at the Company's Annual General Meeting in Copenhagen on April 9, 1962:

The international situation continued to be characterised by the conflicting political interests of the world powers, but the industrial countries of Western Europe are advancing on a wave of prosperity, which is likely to be accelerated by the growth of the Common Market. This is in contrast to the economic conditions prevailing in those parts of the world producing raw materials, at a time when the achievement of independence by new states is already attended with friction.

Up till now, international trade and shipping have not derived appreciable benefit from the West-European prosperity, and as the activities of the Company are subject to the conditions imposed by the world economy, the overall result reflects this state of affairs.

Shipping Department: The depression prevailing for several years in international shipping continued without perceptible improvement.

A total of 1,166,000 tons of cargo was carried by the Company's vessels on 85 voyages on the established routes during the past year. The tanker trade was characterised by unduly low freight rates, but the Company's tankers were employed on time charters, the proceeds of which were reasonable under the circumstances.

Trading Departments: The world trade in raw materials, in which the Company engages, has undergone changes in the post-war years; this has caused some of the traditional lines of business to disappear, but at the same time new articles have been taken up, including also imports to Denmark.

The Company's Overseas Branches and Associated Companies: It is natural that working conditions in the various parts of the world should vary but as far as the Company is concerned they were characterised during the past year by various difficulties, although the total financial result was comparable to that of the preceding year.

Participation in Other Companies: Investments have risen by Kr. 8,596,278.83 to a total of Kr. 95,131,765.70, to which should be added the investment totalling Kr. 25,040,551.01, made in Nordic Tankships I/S (Partnership).

RESULTS AND DIVIDEND

		Kr.
From Shipping		41,042,590.90
From Trade		13,312,045.70
Overseas Branches		64,062,133.34
Dividends from Investments in other Companies including profits from participation in Nordic Tankships I/S (Partnership)		8,785,208.36
		127,201,978.30
Less Interest and Financing Expenses		4,306,239.55
		122,895,738.75
From which are to be deducted: Administration Expenses at Head Office and Overseas Branches	Kr. 64,922,116.79	
Allocation for Taxes	6,742,269.00	71,664,385.79
		51,231,352.96
Depreciation		27,850,187.73
		23,381,165.23
Balance brought forward from last year		8,835,391.40
At disposal		Kr. 32,216,556.63

which it is proposed to apply in accordance with the accounts as follows: to pay to the shareholders a dividend of 15 per cent; to distribute an amount of Kr. 4,318,856.34 to the Board, Managing Directors, and employees as a bonus; to allocate Kr. 3,000,000.00 to the Extra Reserve Fund, Kr. 3,000,000.00 to the Pension Fund, Kr. 1,000,000.00 to the Insurance Fund, and Kr. 1,000,000.00 to the Extra Depreciation Fund for Buildings and Furniture, leaving Kr. 8,647,700.29 to be carried forward to next year.

LONDON BRICK COMPANY LIMITED

NEW RECORDS IN PRODUCTION AND DELIVERIES

GROWING BENEFITS FROM INCREASED OUTPUT AND GREATER EFFICIENCY

MR A. T. WORBOYS ON RISING COSTS AND PRICE STABILITY FACTOR

The Sixty-second Annual General Meeting of London Brick Company Limited was held on May 22nd in London.

Mr A. T. Worboys, CBE (the Chairman), presided and, in the course of his speech, said:

The profit on trading and sundry income for the year is £3,721,714, an increase of £731,908. The net profit before taxation is £3,645,961. Taxation, amounting to £1,699,923, is up by £479,310 due partly to the increase in the rate of Profits Tax, but mainly to the increase in profits for the year.

The net profit after taxation is £1,946,038 and, after adding the unappropriated profits at the beginning of the year and a taxation adjustment in respect of the previous year, there remains a balance of £2,391,203. A sum of £1,000,000 has been transferred to General Reserve. After deducting the net dividends on the 8 per cent Cumulative Preference Stock and the net interim dividends of 17½ per cent on the Ordinary Stock, there is a balance carried forward of £174,884. Bearing in mind the Chancellor's request for restraint, the interim dividends declared are the same as for the previous year and the Directors do not recommend any further dividend for the year.

CAPITAL PROPOSALS

In their Report the Directors have stated that they consider a wider market in the Company's Ordinary Stock is desirable and, with this in mind, they have decided that Ordinary Stock shall be transferable in units of 5s. each. This will give small investors a greater opportunity of acquiring an interest in the Company.

The Directors have also stated that they are of the opinion that it is necessary and desirable to bring the Company's Issued Capital more into line with the book value of its assets. Proposals will be submitted at an Extraordinary General Meeting, to be held immediately following this Annual General Meeting, to increase the Authorised Capital of the Company by £2,000,000 to £10,000,000, and to capitalise the sum of £1,625,000 of the General Reserve and to make a bonus issue to Ordinary Stockholders raising the Issued Capital of the Company to £8,525,000, comprising £400,000 8 per cent Cumulative Preference Stock and £8,125,000 Ordinary Stock. At the same Extraordinary General Meeting a proposal is being submitted to alter the Articles of Association to simplify the sealing of Share and Stock Certificates.

SUBSIDIARY COMPANIES' ACTIVITIES

Dealing now with our two Subsidiary Companies, Stewartby Housing Association Limited continued in full operation.

With regard to Transformers (Watford) Limited, our manufacturing subsidiary, orders received during the year were again at a record high level, but severe competition has resulted in selling prices not keeping in step with increases in manufacturing costs. I am pleased to report that the increase in the order book applies to contracts received from both home and export markets and the increased capacity of the new shops is well covered for some months ahead.

During the year the sale of the Clay Electric Cable Covers manufactured by the Parent Company has continued to increase and the number sold during the year was the highest since the direct marketing of these covers to the electricity supply industry.

NEW RECORDS ACHIEVED

Returning to the Parent Company, once again new records in production and deliveries were achieved during the year. The demand for all our products continued to exceed our productive capacity—this in spite of the fact that we were receiving the cumulative benefits from the extensions and many improvements which had been made during the previous two years.

It must not be inferred, however, because we have completed these extensions, that we shall rest content. We cannot regard the high level of demand upon us with equanimity, but rather as a spur to still further productive capacity and, after a full appraisal of our existing resources and the higher level of production resulting from them, we have decided to extend still further at our Calvert Works. Our objective is another new kiln to yield approximately 50 million bricks a year. Work on this kiln was started in January this year and should be completed by about the middle of the year. Our Calvert Works will then be established as the second largest brick-making unit in the country, the largest being our own Stewartby Works, which, incidentally, is the largest in the world.

LABOUR RELATIONS

On the general labour position, our relationship with the various Trades Unions with which we negotiate wages and conditions of service, continue to be most friendly and we shall do our best to keep them so. In May last year the basic hourly wage rate was raised by 2½d. an hour and many differential rates were also increased. When this settlement was negotiated, the Trades Unions agreed not to make another application as regards the basic rate, except in exceptional circumstances, before April, 1962. We therefore arranged our own "pay pause" somewhat ahead of the Chancellor of the Exchequer.

DELIVERY DELAYS REDUCED

At the beginning of 1961 few members of the industry envisaged encountering a check in the tide of building activity which had been rising steadily since 1958.

As I have already stated, the demand for all our products exceeded our capacity to supply in spite of the fact that, as a result of our extensions and greater efficiency, we had more bricks available for distribution in 1961 than ever before. Therefore, while still retaining a strong order position, the slowing down in the pace of building during the last months of the year enabled us to reduce delivery delays and improve our service which, of course, was welcomed by our customers. By the year's end we were able to supply all their requirements within a few weeks of orders being placed and, as each of our District Sales Offices benefited directly from the increased production, it followed that all areas of the British Isles shared equally in the higher deliveries.

PRICE STABILITY—COMPANY'S FINE RECORD

I now come to yet another very significant advantage gained from the benefits accruing from our increased production and greater efficiency. During the last ten years it has enabled us to pursue long periods of price stability in the face of constantly rising wages and other costs. We have thus sought to pass on to the building industry some of the benefits gained from our general programme of increased and more efficient production, and the fact that advances in the price of our bricks during the last ten years have been much lower than those for other materials, testifies to our fine record in this respect.

Last year we were perhaps fortunate in that the benefits of increased production enabled us, in spite of a substantial wage advance, to maintain and, in the case of Common bricks reduce, the price of our products. This year our position is more difficult, we have already had to concede further increases in wages and we are threatened with substantial rises in other directions. How long we can bear these additional burdens without recouping in any way part of the increased costs remains to be seen.

In these days when a great variety of building materials is available to the architect and builder, it is interesting to record that brick construction is as popular as ever and that the demand for our facing bricks continues to be very strong.

During 1961 the tonnage of Hollow Clay Blocks which we produced was greater than ever before—we are the principal suppliers of this material in the country.

Our Field Drain Pipes continue to play a major part in the drainage of farmland throughout England and Wales.

CURRENT PROSPECTS

A word on the prospects for the current year. We are working to full capacity and our order book is strong. Nevertheless, we have suffered from the effects of bad weather during the early months of the year. These have affected our production and costs and, up to date, our trading results are below those of last year.

I have already mentioned additional charges we have to face and, under present circumstances and conditions, it is very difficult to anticipate the final results for 1962. However, I am sure that Stockholders will regard the results as satisfactory, provided that no unforeseen difficulties arise during the remainder of the year.

The report and accounts were unanimously adopted.

At a subsequent Extraordinary General Meeting the proposed increase of capital, the issue of one new fully paid 5s. Ordinary Share for each £1 of Ordinary Stock held, and the proposed alteration to the Articles of Association were approved.

THE YORKSHIRE INSURANCE CO., LTD.

LORD MIDDLETON'S REVIEW

The Annual General Meeting of The Yorkshire Insurance Co., Ltd., was held on May 23rd at York.

The Right Honourable Lord Middleton, KG, MC, LL.D, the chairman, in the course of his speech said:

Life Department: New business production in 1961 again constituted a record. At £71 million there was an increase of £21 million on the previous year.

Last year it was announced that in future valuations would take place every two years, and the next will be due on the 31st December, 1962. In the meantime, the interim fixed rate of bonus on claims arising before the valuation date is at the record figure of 60s. per cent which was declared last year.

Fire Department: Over-all results in 1961 were much improved. Premium income amounted to £4,301,212, an increase of £142,438 in the year.

Accident and General Account: The Accident and General Account with a total premium income of £9,924,185 has again shown a satisfactory rate of growth.

Marine Account: The total premiums in the account at £2,199,040 show a slight reduction.

Profit and Loss Account: The net interest amounts to £457,480, an increase of about £16,000 on the previous year. After crediting the departmental transfers and other items the total income is £1,142,483.

The report was adopted.

SEAFIELD AMALGAMATED RUBBER COMPANY LIMITED

EXPANSION OF FACILITIES TO MEET STEADILY INCREASING CROPS

MR A. H. MARSHALL REVIEWS A SATISFACTORY YEAR

The Third Annual General Meeting of Seafield Amalgamated Rubber Company Limited was held on May 22nd in London, **Mr A. H. Marshall, MA, FCA** (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement.

The Report and Accounts cover the year to 30th September, 1961. It has been a year of solid, if unspectacular, progress. Crops have increased satisfactorily, costs of production have been reduced, and our replanting and oil palm conversion programmes are proceeding rapidly. During the year 677 acres were replanted in rubber, and 2,392 acres were prepared for oil palms.

The adverse factor affecting the year's results has been the price of rubber, over which we have no control. For the year under review, the average London spot price of R.S.S. No. 1 was 25½d. per lb., compared with 34½d. per lb. in the previous year. This fall in the price has more than outweighed increases in crops and reductions in costs, and the Group Net Profit for the year is down to approximately two-thirds of that shown in last year's Accounts. In comparing the results with those in last year's Accounts it must be remembered that last year had the benefit of several extra months' crops from five of the subsidiaries.

ACCOUNTS

The Group Net Profit of the year, after charging Depreciation and Amortisation of £201,345, was £954,244. The fall would have been heavier if we had not received refunds of Anti-Inflationary Cess of £112,824.

The Malayan Government has since passed legislation under which, if this Cess again becomes payable, it will no longer be refundable when the price of rubber falls again. Bearing in mind the fall in our net average sale price of rubber from 25d. per lb. to 20d. per lb., the results are satisfactory.

Of the Group Net Profit of £954,244, Provision for Taxation takes £396,290. £100,000 has been appropriated to Development Reserve to assist in financing the development of the oil palm areas and our commitments in Nigeria.

An Interim Dividend of 12½ per cent. was paid on 31st October, 1961, and your Board recommend a Final Dividend of 17½ per cent.

CROPS:

The crops harvested during the year were:

Rubber	27,787,266 lb.
Palm Oil	2,598 tons
Palm Kernels	733 tons

Rubber Crops exceeded estimates by 299,066 lb., but Palm Oil fell short of estimate by 107 tons. Kernels, however, exceeded estimate by 29 tons.

ESTATES

The general standard of upkeep and maintenance of all the Group Estates is constantly improving, and agriculturally they are in first-class condition. The steady rise in crops requires increasing factory capacity. A new factory was built on Bukit Rajah Estate during the year covered by the Accounts, and another one is being built on Seafield Estate during the current year. A further one is planned for Ulu Yam Estate next year. After this we expect to have to turn our attention to our palm oil factories, and in due course we are planning to erect in three or four years' time an additional factory to process the fruit which will be beginning to be harvested in substantial quantities from our new oil palm areas largely in the coastal districts.

Rubber: The average yield throughout the Group was 934 lb. per mature acre, an increase of 58 lb. over the previous year. Six Estates now yield over 1,000 lb. per acre and several others are approaching that figure. With nearly 10,000 acres out of 40,000 immature and planted with modern pedigree material, a steady increase in average yield over the next ten years as these young areas reach full maturity may be expected.

Oil Palms: Our oil palm areas cover 2,999 acres mature and 2,820 acres immature. During the year they produced 2,598 tons of oil and 733 tons of kernels, representing average yields per mature acre of .87 tons of oil per annum and .25 tons of kernels per annum. You will be aware that palms start to yield fruit in useful quantities after about four years, whereas the period of immaturity of the rubber tree is about seven years.

In view of the promising outlook for this crop, your Board has decided to extend the area to be converted to palms. An additional 3,770 acres are being converted in the five years to 1966, and a further 2,950 acres are planned for the following five years.

Tin Ore: The high price of tin has given rise to increased prospecting activity by miners, and ore is being mined on Batu Caves Estate. Prospecting is also proceeding elsewhere. Income from this source will be modest, but none the less welcome, and will be first received during the current year, but it is not expected to make a significant contribution to our profits.

PROSPECTS FOR THE CURRENT YEAR

Estimated crops for the current year to September 30, 1962 and actual crops for the six months to March 31, 1962, are as follows:

Estimated Crop for year to 30.9.62	
Rubber	29,020,000 lb.
Palm Oil	2,656 tons
Kernels	720 tons
Actual Crop for 6 months to 31.3.62	
Rubber	14,723,500 lb.
Palm Oil	1,318¼ tons
Kernels	380¼ tons

The price of rubber has remained around 25d. per lb. (spot R.S.S. No. 1), and the prices of Palm Oil and Kernels have remained around £80 and £48 per ton c.i.f. London respectively.

If these levels of crops and prices continue for the second half of the year, then the trading results should be similar to the year now under review. There will, however, be no repetition of the exceptional receipt in the form of the refund of Anti-inflationary Cess.

Our planting programme for the current year covers 643 acres to be planted or replanted in rubber and 1,556 acres in oil palm.

By the end of 1971, your Company plans to have 32,610 acres planted in rubber, and 12,950 acres planted in palms.

Nigeria: Ilushin Estates Limited in which the Company has a six per cent interest is progressing well. Some 3,641 acres are now planted, and a further 900 acres are being planted in 1962. Tapping of the 1957 planting is expected to start in 1964 or 1965.

The report and accounts were adopted.

Dresdner Bank's Business Expansion

Capital and Reserves DM 560 million - Over DM 8 billion of Deposits
352 Offices in Western Germany

In the year 1961, the Dresdner Bank AG. achieved further substantial progress. The deposits maintained with it rose by 16.2% to DM 8.1 billion*; its total credit extended, including that in the form of guarantees, grew by 16.9% to DM 6.6 billion. The Bank's assets and liabilities contain altogether some DM 1.8 billion of foreigners' liabilities and assets respectively. In the Balance Sheet as at December 31, 1961, quick assets amount to DM 4.2 billion, or roughly 46% of the Balance Sheet total; the cash reserve alone is shown at DM 1.1 billion.

The number of the Dresdner Bank's customers rose in the course of 1961 to 1.1 million. In the Bank's offices, numbering over 350 and located at more than 200 places in the Federal Republic of Germany, 14,700 persons are employed; in order to cope with the expanded volume of business approximately 1,500 had to be newly engaged in the course of 1961. At Berlin, the Bank is represented by its subsidiary, the Bank für Handel und Industrie AG., with 40 branches.

Out of the 1961 earnings, after strengthening the undisclosed reserves, a further DM 27 million were allocated to the free reserves; these now equal the capital and amount to DM 245 million. With the addition of the legal reserve which exceeds DM 70 million, the Bank thus has published capital and reserves totalling DM 560 million, which corresponds to 6.1% of the total Balance Sheet. In pursuance of a resolution adopted by the General Meeting, held at Düsseldorf on May 16, 1962, a dividend at the unchanged rate of 16% has been paid to the shareholders on the capital as increased last year. Payment of this dividend took a sum of DM 39.2 million as compared with DM 35.2 million a year previously.

The Bank's traditional activity in securities has been more and more extended during recent years to include international capital markets. In the course of the year under report, a number of further leading shares were introduced by the Dresdner Bank to official quotation on German stock exchanges. The work of the departments concerned with property administration and investment has been found increasingly valuable by its clientèle both at home and abroad.

In conformity with the expansion of German external trade, the volume of international payments channelled through the Dresdner Bank also greatly increased. To handle the letter of credit business, the Bank, which has no branches of its own abroad, once again placed substantial credit facilities at the disposal of its correspondent banks. The amount of guarantees which the Bank was asked to provide in respect of tenders, deliveries and payments on account showed a large increase. In initiating new business relations between importers and exporters the Bank, co-operating with its correspondent banks numbering more than 3,300 in all parts of the world, rendered its usual assistance. In that connection it also employed the services of its Representative Offices at Cairo, Istanbul, Madrid and Paris. In nearly all important Latin American cities the Bank maintains joint Representative Offices together with its associate, the Deutsch-Südamerikanische Bank.

* 1 billion = 1,000,000,000.

Chairman of the Board of Directors: Carl Goetz, Margarethenhöhe über Königswinter.

RECKITT & COLMAN HOLDINGS LIMITED

ANOTHER YEAR OF EXPANSION

LARGER SALES AND TRADING PROFIT

MR J. B. UPTON'S REVIEW OF OPERATIONS

The ninth Annual General Meeting of Reckitt & Colman Holdings Limited will be held in the Connaught Rooms, 15, Great Queen Street, London, W.C.2, on Thursday, June 7, 1962, at 11.30 a.m.

The following is an extract from the Chairman's Statement in respect of the year ended December 31, 1961:

After rationalising and reorganising our trading operations along the lines mentioned in my Statement on the 1956 Accounts, your Board subsequently completed the task of concentrating in the "central treasury" the surplus funds available within the Group. Much of this money was then invested in gilt-edged and other fixed interest securities until your Directors could employ it more effectively in the Shareholders' interests by financing new trading activities. In the subsequent years we set out to acquire certain new businesses both at home and abroad but tried not to diversify our activities too much. Our aim was to acquire businesses, capable of expansion, which would fit into the patterns of trade which had been developed by the various members of our Group.

After the acquisition of a new company it is usually necessary to embark on a phase of development which costs money, and consequently its profitability does not immediately reach that of our established business. The overall effect on our results tends to be more marked at a time such as the present when, as a matter of policy, we have been more than usually active in this field. In almost every case our recent acquisitions are progressing well and I expect to see further improvements in the future.

THE CONSOLIDATED PROFIT AND LOSS ACCOUNT

The Trading Profit of £10,040,000 compares with £9,921,000 for the previous year, after absorbing foreign exchange losses which were £322,000 greater than in 1960. This increase in profit of £119,000, or just over 1 per cent, is barely satisfactory even at a time when many companies have been unable to maintain their profits, but since the improvement results from sales higher by 10 per cent it is clear that competition is keeping our margins under pressure. While this is true up to a point, it does not tell the whole story, for more than their share of this modest increase in profits came from our overseas activities where profit margins in local currency were, on average, held at the previous levels. Business in the home market in the latter part of 1961 was affected by the events leading up to and by the Chancellor's "little budget" of July, and our higher expenses here fell more heavily on a turnover which did not quite come up to earlier expectations.

Overseas profits would have been better except that a persistent enemy returned to plague us in the shape of the exchange losses, to which I have already referred. We have had to write off £397,000 on this account as against only £75,000 in 1960. South America is the usual trouble spot and for much of last year the situation was reasonably hopeful. The unexpected resignation of the President of Brazil in August, 1961, precipitated a crisis in that country's economy and is the main reason for the exchange losses being considerably heavier than they were in 1960. The present situation in Argentina does not encourage hopes of stable South American exchange rates in 1962.

Higher wages both at home and abroad have had to be faced. Increases in productivity have in the past been able to minimise their effect but there is a limit to the extent to which efficiency can be improved and during 1961 it became necessary for these extra costs to be passed on to our customers, where this was possible, in the form of slightly higher prices in many parts of the world. This is an unsatisfactory solution to the problem of rising costs in a competitive world market except in so far as the decreased purchasing power of money makes the process universal.

DIVIDEND

The Consolidated Profit for the year, after taxation, is £4,866,000 against £5,083,000 in 1960, a drop of £217,000 for which the higher rate of Profits Tax in the United Kingdom is primarily responsible. Our Company earns more than half its profits overseas, excluding exports from the United Kingdom. It would therefore be misleading to attempt a comparison between total Company earnings on the one hand and claims for higher spending power at home on the other. Your Directors, however, feel that a measure of restraint is still necessary all round and accordingly recommend the payment of the same final dividend (7 per cent) as was paid last year, making a total of 12 per cent for the year, adequately covered by earnings.

A year ago our expectations were that sales would increase—which they did—and that our trading profit for 1961 would be better than it has turned out to be; this latter expectation would have been realised but for exchange losses overseas and the slight slowing down of business in the home market in the latter part of the year. 1962 has started steadily and once again in the absence of major political or economic setbacks across the world, we can foresee prospects of higher sales and higher profits in 1962.

CONSOLIDATED BALANCE SHEET

The further expansion of the business is indicated by an increase from £52,741,000 to £56,061,000 in the book value of the total net assets, while the equity interest attributable to the ordinary shares has grown from £45,771,000 to £49,195,000.

Reckitt & Sons Ltd. and its subsidiaries increased their sales more than their profits. D. R. Collins Ltd., who made a satisfactory advance, is launching in 1962 a new Goya perfume called "Entice." Westminster Laboratories Ltd., whose Senokot is universally recognised, also did well.

J. & J. Colman Ltd. and its subsidiaries, which operate mainly in the condiment and specialty food trade, again returned improved figures for both sales and profits.

Chiswick Products Ltd. and its subsidiaries had an interesting year. The satisfactory increase in sales to which I referred last year was repeated in every large section of the business though between individual lines there were fluctuations, due chiefly to the changes in shoe fashions which I have mentioned before as a factor affecting the trade. Competition is still intense in both the floor and shoe polish markets.

Sissons Brothers & Company Ltd., with its subsidiaries, again had a difficult year: sales increased slightly but profits did not. The household paint business suffered from lack of buoyancy in the whole retail paint market and competition continued to be intense. However, I think that the future is more promising.

In the industrial field Porter Paints Ltd. made good progress and Portafleck, the multi-colour paint about which I wrote last year, has been well received.

The R. T. French Co. of Rochester, USA, like J. & J. Colman Ltd., is engaged chiefly in the condiments and food specialties trade. In 1961 French achieved a sales record and maintained its profit. Trading conditions improved in the United States as the year progressed in accordance with our expectations.

Reckitt, Colman, Chiswick (Overseas) Ltd., the company which looks after the great overseas trade of our Group outside the USA, reports a substantial increase in sales but, because of the currency depreciation to which I have already referred, a less substantial increase in profits.

EXPORTS

Exports from the United Kingdom increased slightly and profits from them were satisfactory.

At the time of writing it cannot be said with certainty that the United Kingdom will join the European Economic Community but, whatever the outcome of the negotiations, we are organised to deal with the future situation and we expect the progress of our European trade to continue. I may add that I believe that it will be good for our Company that Britain should join the Common Market—on the right terms.

DEUTSCHE BANK

AKTIENGESELLSCHAFT

DÜSSELDORF · FRANKFURT (MAIN) · HAMBURG

1961: A Year of Active Business

The balance sheet total of DM 12,600 million is 12.1 % above that of 1960. Transactions with our non-banking customers rose by 8 % and amounted to DM 436,100 million.

Deposits increased to DM 11,100 million of which savings deposits accounted for DM 2,400 million.

Cash balances amounted to about DM 1,200 million; overall liquidity reached 45 %.

At the end of 1961 outstanding loans totalled DM 8,000 million. This represents an increase of 1,000 million as compared to 1960.

The foreign business of the Deutsche Bank continued to expand in 1961. The Bank acted as adviser in many and diverse ways with respect to problems involving the financing of investment projects abroad.

The Annual Meeting on May 3, 1962 has resolved

- **to transfer an additional DM 40 million to the open reserves and**
- **to distribute a dividend of 16 %.**

The Bank's capital and reserves amount to DM 640 million.

47 new offices were opened in 1961. At the end of 1961 a staff of 20,823 worked in 457 offices of the Deutsche Bank.

We are represented in Berlin by the Berliner Disconto Bank, in Kiel by the Bankhaus Wilh. Ahlmann, in the Saar by the Saarländische Kreditbank. An extended network of correspondents and representative offices abroad connects the Deutsche Bank with all important places of the world.

Balance Sheet as of 31st December, 1961 with comparative figures (abridged)

GENERAL MEETING OF FIAT SHAREHOLDERS

Chairman Valletta's Report points to the continual development of Fiat activities within the framework of the national and international situation: "New times are ripening, and the horizon is widening" — Sales at 641,000 million lire — 632,000 motor vehicles and 30,468 tractors produced — 163,000 million lire worth of exports—Fiat's employees now number 112,000.

The General Meeting of Fiat Shareholders was held on April 27th in the Great Hall of the Fiat Central Training School. **Professor Valletta,** the Chairman and Managing Director, presided over the meeting attended by the whole Board of Directors and by the Auditing Committee.

FIAT'S PROGRESS

Fiat is steadily increasing its operating forces and results. Increments for 1961 were greater than those for 1960. Here are the highlights:

Total sales (including "OM"): 641,000 million lire; 96,000 million more than in 1960, of which:

Exports totalled 163,000 million lire, exceeding the 1960 total by 13,000 million lire.

631,992 motor vehicles produced and sold of which 230,201 were exported, against 530,665 vehicles built in 1960.

30,468 tractors produced and sold, including 12,917 exported, in contrast to the 1960 production of 26,908 tractors.

Iron and steel products equivalent to 1,400,000 ingot tons (100,000 tons more than in 1960).

Number of Fiat employees (including "OM") as at December 31, 1961: 107,671, against 92,891 at the end of 1960. Since December last to date the payroll has increased to 112,000 of which no less than 90,000 are manual workers. Despite technological progress, Fiat has been able to give employment to 15,000 new workers.

THE ITALIAN SCENE

In giving these figures of Fiat expansion, Professor Valletta points out that they must (as indeed figures, no less remarkable, of other major concerns) be measured by Italian standards, bearing in mind the size and scope of our country.

Professor Valletta's Report states that the excellent business trends in Italy are an incentive for the Government and the country to seek a solution to the basic problem of existing disparity between North and South, between town and country, and between all classes of the population throughout Italy, in order to attain an effective participation of the whole nation in the increasing prosperity which is the outcome of combined endeavour.

THE MOTOR CAR—A VITAL PRODUCTION

What Professor Valletta says in his Report on the national and international situation and on the automobile industry in particular, is of general significance.

Of the 641,000 million lire of Fiat total sales in 1961, no less than 491,000 million lire resulted from the 631,992 motor vehicles the company produced and sold in that year; an increase of 101,327 units over 1960. This expanding automobile market is a reflection of improved Italian living standards. Automobile production is a veritable "pilot industry" in the country's progress, and one of the principal contributors to its prosperity. It provides continually increasing employment and extends the market not only in relation to motorisation alone, but also in relation to the many ancillary activities it creates (including tax revenue raising). Italy's automobile and motorisation policy in general can only be one of development in the interest of the whole country, towards technical, cost and operating improvements. Automobiles must be made accessible to ever more people, by becoming more economical, safe and comfortable, just as Fiat is constantly striving to make them. Therefore, vehicle taxation should be reduced, commencing with the petrol tax, to lower the running costs of motor vehicles and tractors. Also, the tax equalisation contemplated by the Treaty of Rome should be finally implemented. More and better roads should be provided to ensure safer traffic conditions.

Italian automobile production has increased five-fold in 10 years, with an output of 760,000 units in 1961. The capacity of the Italian domestic market is still remarkable, particularly in the light of the development of the South. Yet the country still has only one motor car to every 25 inhabitants, against one to every 10 in France, England, Germany, and one to every 6 in Sweden (not forgetting the USA with one to every 3).

There remains a marketing potential in Italy for millions of cars, especially when the problem of adequate roads and parking space is solved.

Fiat motor vehicle production is developing on the basis of a planned daily average of 3,000 units. Passenger car production continues on models 500, 600, 1100, 1300/1500, 1800 and 2300, all of which are selling extremely well at home and abroad.

While the new models 1300 and 2300 brought out in 1961 won high-rating European acceptance, the 500, 600 and 1100 are in ever wider demand, and their steady success testifies to Fiat's sound policy in giving pre-eminence to small and medium utility cars.

The Report affirms that Fiat will not present any new models in 1962, although research and experiments on new prototypes are continuing, even though not all of them will reach production.

EXPORT AND IMPORT

Fiat is extending export activities in all directions including Eastern European countries, principally Russia and Poland. Next May Fiat will participate for the first time in an Italian Industrial Exhibition in Moscow. It will be chiefly an engineering display.

Professor Valletta stressed that competition is intensifying in international markets. "This demands greater manufacturing and marketing efficiency. The more we import the more we must export; but never beyond the absorption capacity of each country. The import-export ratio is becoming a more critical problem as liberalisation of trade proceeds under the Common Market."

The problem is especially important to the automobile industry. Italian automobile prices have always been on equality with, or lower than, those of foreign cars. Prices, however, are related not only to the quality of the product but also to the magnitude of operations. The Fiat manufacturing and sales organisation as a whole calls for continual growth in structure, methods, investment funds (these are constantly ensured by Fiat share and bond owners) as well as for a spirit of initiative.

NEW PLANTS

The Report tells of the continual expansion of Fiat's facilities; from those for primary processing (iron and steel products) to those for finished products, particularly the Mirafiori automobile plant. The new foundry at Carmagnola will commence operations this year. The extraordinary plant investment programme of 190,000 million lire will be virtually completed within 1962 with some expansion, however, within the limits imposed by available resources.

Sales and servicing activities are being consolidated. "To build first-class cars is not enough; they must be serviced at the customer level." The Fiat sales and servicing organisation is today one of the most closely knit in the automobile industry throughout the country and the world. In Italy it comprises 25 Branches, 400 Dealers, 500 authorised and specialised Repair Shops. Abroad, Fiat is active in all continents and in over 150 countries; with some twenty manufacturing and assembly plants for motor vehicles and other Fiat products.

Fiat operations in Southern Italy are likewise being extended not only as the outcome of business handled by its Dealers there, but also through new manufacturing activities. Particularly important are Fiat's occupational training programmes, designed to build up skilled industrial labour in those Southern areas. The output of the Fiat plant in Naples is rising steadily. Small commercial versions of Fiat's basic passenger car designs are being manufactured in that plant, and others are planned. The O.ME.CA plant now under construction at Reggio Calabria for the manufacture of rolling stock will provide considerable employment for the local population. Developed jointly with Finmeccanica, the O.ME.CA plant is a further example of the way in which Fiat is co-operating with the IRI group of companies. A Fiat training school for young men is being built at Bari; and there are also similar schemes for Sicily.

In the field of *public works,* Fiat's Construction Division is increasingly active in Italy and abroad, individually or jointly with other organisations. In Italy, the doubling of the Turin-Milan motorway has just been completed, and work is to start on the extension of the Savona Ceva highway as far as Fossano. The tunnel under the Great St. Bernard Pass will be virtually completed before the end of this year. Abroad, Impresit (Imprese Italiane all'Estero), has undertaken besides other important new projects, the construction of dams just as colossal as the Kariba in South Rhodesia; namely the Volta Dam in Ghana, the Blue Nile Dam in the Sudan, and the Dez Dam in Iran. Italconsult—in which Fiat has an interest—is engaged in contracts in Argentina, Tunisia, Morocco, Lebanon and Greece. Fiat is associated with Electroconsult in project activities in Paraguay, East Pakistan, Brazil, Mexico and Iran.

In 1963 the Great St. Bernard and the Mont Blanc tunnels will be opened to traffic. Attained through man's daring and imagination, they are symbols which will open new avenues to the endeavours of Italy and Europe towards the new frontiers of the free world's ideals.

1961 closed with a net profit of 26,403,551,876 lire after statutory depreciations, and the Meeting approved a dividend of 95 lire per share.

WEST RIDING AUTOMOBILE COMPANY LIMITED

SIR RONALD G. LEON'S STATEMENT

The Fifty-seventh Ordinary Annual General Meeting of the West Riding Automobile Company Limited was held on May 17th in London.

The Chairman, **Sir Ronald G. Leon, Bart,** presided and the following is a precis of his Statement:

Very satisfactory results have again been achieved during the year under review with Net Revenue showing an increase of £10,030 over the previous year.

On the other hand Income Tax and Profits Tax are up by £7,050.

The Directors recommend the payment of a final Dividend of 6 per cent on the Ordinary Stock, maintaining 10 per cent for the year, and the carrying forward of £102,198.

As anticipated, there was another substantial increase in wages during the year, which, being implemented over a period from May to July, was followed towards the end of August by an increase in passenger fares; the revised scale was introduced a year, almost to the day, after the previous rise.

This inflationary cycle which has continued for the past ten years, is aggravated by penal taxation of the industry and the attitude of successive Chancellors of the Exchequer in disregarding the reiterated appeals made by our Associations for the abolition of, or a substantial reduction in the Tax on Fuel Oil, now over 275 per cent, is difficult to understand and greatly to be deplored.

Little or no benefit has been derived from the "Pay Pause" and, successful claims for higher wages and improved conditions put forward by the Unions on behalf of the provincial busmen, must, in the absence of any compensatory tax relief in the recent Budget, inevitably result in further widespread demands upon the travelling public. It will be our aim to minimise such demands by ever increasing efficiency of operation.

I am happy to report that the Wulfrunian omnibuses introduced last year are fulfilling expectations. Fifty-one such vehicles are now in service, twenty-six more will shortly be delivered and an order for a further twenty has been placed.

We have also successfully introduced a number of one-man operated vehicles and their use will be extended so far as may be practicable.

Traffic receipts are currently maintaining a satisfactory level and it may well be that not a few of the many passengers lost to the industry some years ago have been regained during the past two years. The outlook in this respect at least is not discouraging.

The provision of adequate and reliable services with comfortable modern vehicles contributes greatly to the preservation of public goodwill and I would ask you to join me in a sincere expression of thanks to our entire staff for their untiring efforts to that end during yet another year.

The report and Accounts were adopted and the retiring Director, Mr J. H. P. Lough was re-elected.

HARLAND AND WOLFF, LIMITED

CONTINUING DIFFICULTIES FACING SHIPPING INDUSTRY

PROGRESS OF IMPROVEMENT SCHEME TO COMBAT BUILDING COSTS

MR J. S. BAILLIE ON NEED FOR ADEQUATE CREDIT FACILITIES

The seventy-seventh Annual General Meeting of Harland and Wolff, Limited, was held on May 17, 1962, at the Registered Office of the Company, Queen's Island, Belfast. **Mr J. S. Baillie,** Chairman, presided.

The Secretary read the notice convening the meeting and the Report of the Auditors.

Mr Baillie said: As the Report of the Directors and Statement of Accounts for the year ended December 31, 1961, have been in your hands for some time, I propose with your permission to take them as read. (Agreed.)

In March this year Sir Frederick Rebbeck, acting on medical advice, resigned from the offices of Chairman and Managing Director, and from the Board, after more than fifty years of exceptional service with the Company. Elected to the Chair in 1930 during times of great crisis he directed the Company's affairs through the succeeding period of depression, and since, with courage and resource, and his services merit the highest tributes we can pay him.

Almost exactly fifty years ago, in February 1912, the first ocean-going Diesel engined vessel, the SELANDIA, set out on her inaugural voyage. Built and engined by Burmeister & Wain, Copenhagen, this vessel was described by Sir Winston Churchill, then First Lord of the Admiralty, as "the most perfect maritime masterpiece of the century." Shortly afterwards Harland and Wolff concluded an agreement with Burmeister & Wain for building B & W engines under licence. F. E. Rebbeck was put in charge of this development, and the co-operation with Copenhagen then begun has continued unbroken throughout the years. Today the initials H & W—B & W are well known all over the world, and it is fitting that the great work Sir Frederick Rebbeck has done in the development of this prime mover for the British mercantile marine should be put on record.

THE ACCOUNTS

Turning to the Accounts, I would draw your attention to the Notes on the Consolidated Profit and Loss Account. You will see that it has been necessary to provide £729,676 for Depreciation and £184,300 for specific contingencies against the Group profit on trading. As regards your own Company, you will see from the Report of the Directors that the balance available for payment of dividend on the Ordinary Stock after payment of the Preference dividend amounts to £68,839. As you will also see from the Report, taking into consideration the uncertainty of any improvement in trading results for the current year, the Directors are of the opinion that the payment of the dividend on the Ordinary Stock must be related to the net profit for the year, and they recommend accordingly.

The profits on trading for 1960 and 1961 reflect the financial consequences of the conditions under which the Company has been operating, since it has been necessary in each of these two years to make substantial provisions for ascertained and expected losses on work done.

TRADING CONDITIONS

So much has appeared in the press recently regarding the state of the shipbuilding industry that everyone must be aware of the continuing difficulties of shipbuilders and of the shipowners on whom we depend. Passenger liners are meeting with ever increasing competition from the air, and also, as one shipowner after another points out, with ever increasing costs of operation. The depressive effect of these factors is clearly becoming increasingly evident. The tonnage of vessels being built in United Kingdom shipyards has reached its lowest level for seventeen years; and for the first time since the War the industry is without a passenger liner on the stocks.

The President of the Chamber of Shipping in a recent address emphasised two matters of vital interest to the shipbuilding industry in the United Kingdom. Firstly, that builders here traditionally looked to British owners for 80 per cent or thereabouts of their orders; and secondly, that although the volume of orders placed by British Shipowners in the United Kingdom for the past year has been well below the normal ship replacement programme, other owners, particularly in Norway and Japan, are steadily augmenting their fleets, and have ordered a considerable number of new ships in the course of the past year. Only a very few of the vessels from Norwegian owners have been secured for yards in the United Kingdom. Accordingly the problem for the British shipbuilder today is, firstly, to match his costs with fiercely competitive current world prices and, secondly, to be able to offer credit facilities comparable with those available elsewhere.

IMPROVEMENT SCHEME

Faced with the prospect of continuing adverse conditions and with ever advancing labour costs, plans were made by the Board over three years ago to effect a reduction in building costs by re-craning a number of enlarged slipways in the Musgrave Shipyard at Belfast, and the construction of an additional large fabrication shop. We have referred to this work in the Directors' Report, and I am glad to say that we shall shortly commence the construction of two new vessels in the re-equipped section of this Yard—the first a large methane carrier for Methane Tanker Finance Limited: the second an 80,000-ton tanker for the Sigval Bergesen group of companies. Work has commenced on the second phase of this improvement scheme, to which I referred in my speech at last year's Annual Meeting, and we hope to bring these further new facilities into partial operation at an earlier date than originally planned. The new fabrication shop to serve these slipways is almost completed. In addition, efforts to reduce costs are under constant and critical examination throughout the whole organisation.

As well as the vessels to which I have already referred, we have still to lay down an assault ship for the Admiralty and three vessels for Messrs Andrew Weir & Co. Ltd. Other vessels are under construction or fitting out both at Belfast and Glasgow.

INCREASE OF BORROWING POWERS

If the Company is to compete successfully with British and foreign shipbuilders it is essential that we should be in the same position as our major competitors to undertake the financing of contracts, wholly or in part, during their performance. The availability of credit is frequently the determining factor now in the placing of orders. The present borrowing powers of the Company are limited to the amount of the issued capital, which today represents rather less than the cost of two large tankers. It is therefore proposed to alter Article 85 with the purpose of increasing the limit of the Company's borrowing powers to three times the issued capital. Your Board in commending this change for your approval is satisfied that it represents an essential step to put the Company in a position to carry out existing contracts and to compete for new work.

In the matter of credit the recent financial stringency brought about by the general state of the country's external trade has been an added difficulty, and in these circumstances it is all the more satisfactory to record the willing and substantial support of the Company's bankers, which made possible the conclusion of the contracts for the two large vessels to which I have already referred.

We are pleased to welcome to the Board Mr A. O. Milne and Mr T. E. Murphy, executive officers of the Company, who were appointed Directors in July, 1961 and in March, 1962, respectively.

In conclusion, I take this opportunity to thank all members of our organisation for their loyal co-operation and service throughout the year.

The Report and Accounts were adopted; the proposed dividend was approved; the retiring Directors, namely, Mr A. O. Milne, Mr T. E. Murphy, Mr J. H. Crossey, Sir Andrew McCance and Mr W. T. Underwood were re-elected. The remuneration of the Company's Auditors, Messrs Price Waterhouse & Company was fixed.

The meeting passed unanimously a Special Resolution increasing the borrowing powers of the Company to three times the issued capital.

GILL & DUFFUS LIMITED

Statement by the Chairman, Mr. J. I. Murray, circulated with the Report and Accounts for the year ended 31st December, 1961.

During the past year trading conditions both at home and abroad were generally favourable and the group as a whole earned satisfactory profits. Not all the subsidiaries, however, increased their profits as compared with 1960 and of the total increase much the greatest contribution came from the parent company and Gill & Duffus Inc. The latter company had a particularly good year and it is, I am happy to say, continuing to build up its position in the American market. The group turnover on a tonnage basis showed a further increase, but on a value basis owing to lower prices it showed a reduction of £2 million at approximately £40 million.

Although the consolidated profit before tax showed an increase as compared with 1960 of £75,966, the consolidated net profit applicable to members fell by £11,953 to £351,737 as compared with £363,690 a year ago. In a company such as this where it has been the practice from time to time to write substantial sums off fixed assets and development expenditure the tax charge must vary somewhat from year to year. The charge for the past year looks high and it has, of course, been increased by the extra liability for profits tax and by the incidence of balancing charges and allowances. Some part of the latter increase should be recovered in future years.

DIVIDEND POLICY

In my statement last year I said we hoped that a more liberal dividend policy would be justified in the future and by recommending a dividend of 30% on the capital as increased a year ago, we have been able to give practical expression to this hope. Of the consolidated net profit applicable to members amounting to £351,737, the dividend on the preference shares and ordinary stock will take £197,210, leaving as surplus for the year £154,527. Deducting the amounts retained in and capitalised by subsidiary companies there remains to be carried forward to next year a balance of £1,232,291, of which £673,563 is retained by the parent company and £558,728 by subsidiaries. In spite of the increased dividend the company's cash flow is still substantial since retained earnings and depreciation for the past year amounted to £257,339. In addition development expenditure on the cashew nut plant at Hull was written down further.

The consolidated balance sheet shows the effect of the capitalisation issue made last year. Issued capital is increased by £206,250 and there is a corresponding decrease in the balance standing at the credit of share premium account. The company's financial position has once again been strengthened. The surplus of current assets over current liabilities was £3,112,926 as compared with £2,878,605 a year ago, an increase of £234,321 and bank advances at £861,513 show a reduction on the year of £793,601.

I am sorry to say serious engineering difficulties have been encountered—as so often happens with such projects—in connection with the plant for shelling cashew nuts. We are hopeful that these difficulties are now being overcome, but our plans have received a set-back. Up to date the operation has been a disappointment and from a financial angle has been substantially written off. The development of an entirely new automatic plant for such a process is always an extremely difficult business. However, a great deal has been learned from this project and despite the delay we have good hopes for its future.

The Ghana Government's policy in connection with a long-term agreement for the supply of cocoa beans to West African Mills Limited in Takoradi is once again under review. It is understandable in the light of constantly changing circumstances that the Government should at this stage be unable to commit itself for long to an agreement without reconsidering from a political angle its side of the bargain. The present position is that we have entered into contracts for the supply of cocoa beans sufficient to keep the mill in Takoradi working up to January 1963, so that the results for 1962 should show a reasonable profit as compared with a small loss for 1961. Meantime negotiations are again proceeding and given goodwill on both sides and a proper understanding of each other's problems we see no reason why a mutually satisfactory arrangement beyond this date should not be concluded. For our part we shall do everything we can to meet with respect the reasonable desires and aspirations of the Ghana Government.

PLANTATION AND COLONIAL PRODUCTS LTD.

As has already been announced the company has offered to buy for cash the whole of the issued capital of Plantation & Colonial Products Limited amounting to 350,000 shares of £1 each at a price of 67s. per share. This involves an investment of £1,172,500 in this highly successful private company, which it is intended to finance by the issue of £1,031,250 Convertible Unsecured Loan Stock 1980/85 to be offered as of right to our ordinary stockholders. Dealing internationally as it does mainly in cocoa, but also in other products such as rubber and coffee, Plantation and Colonial Products Limited fits naturally into our business. It also brings with it some relatively young yet highly skilled and proven management. We welcome this company and all its employees to our group and look forward to co-operating with them in every way. It will be our earnest endeavour to ensure that all the members of its staff continue to enjoy the same happy and secure working conditions as they have had in the past. It is intended that both companies will continue to operate independently but in order to assist in the co-ordination of administration, Sir Eric Tansley will be appointed Chairman of Plantation and Colonial Products Limited and Mr. R. G. McFall, a Director of that company, will be invited to become a Director of the parent company; both appointments to take effect when the arrangements are completed. Mr. Arnold Golodetz, of Plantation and Colonial Products Limited, has been asked to remain on the Board of that company. Our aim is to give all our customers still better service and at the same time we are confident that these arrangements will strengthen our organisation. They also constitute an important step in our policy of planned development and growth.

PROSPECTS PROMISING

Although it is too early to be definite the prospects for the current year are promising. The full effect of the purchase tax on confectionery cannot yet be gauged but, subject to some reservations regarding this tax and its effect on our trade in the United Kingdom, the prospects are still that 1962 will be another satisfactory year. A further statement will be made in November when the payment of an interim dividend is considered.

In conclusion I would like to express on behalf of all stockholders grateful thanks to the Directors and Staff both at home and abroad for their services in 1961 and for the great contribution which they have once again made to the company's progress and prosperity. This is not, I feel, a mere formality and I am sure that few bodies of stockholders and for that matter Chairmen can have been better or more loyally served.

BRITISH ISLES AND GENERAL INVESTMENT TRUST LIMITED

SIR DENYS LOWSON ON THE ECONOMIC OUTLOOK

In the course of his address, which has been circulated to shareholders, **Sir Denys Lowson, Bt,** says:

The revenue account shows that dividends and interest for the year ended January 31, 1962, amounted to £151,744, an increase of £12,639. We have prepared a revenue estimate for the ensuing year and barring unforeseen circumstances, we anticipate that the revenue will be well maintained.

Your Directors propose a final dividend of 8 per cent on the capital as increased by the Rights Issue last year, which, with the Interim dividend of 6 per cent makes 14 per cent for the year. This will leave surplus revenue of £14,629, which will thus allow the carry forward to be increased to £87,407.

Our investments with a book value of £1,437,886 have a market valuation of £2,612,370; thus showing an appreciation of 81.7 per cent. Your Company's portfolio of investments is widely distributed. Based on the valuation at January 31, 1962, 84.70 per cent of the investments are in Companies operating in Great Britain and the Commonwealth, 13.94 per cent in the United States of America and Canada, and 1.36 per cent in Central and South America and miscellaneous countries. Whilst as regards categories, 6.80 per cent is in bonds, debenture stocks and notes, 4.78 per cent in preference and preferred ordinary stocks and shares, and 88.42 per cent in ordinary and deferred ordinary stocks and shares.

During the year under review this country found itself in Balance of Payments difficulties. Since then there has been a substantial improvement, exports in fact rising by 4½ per cent and with imports falling by 2½ per cent the visible trade gap at the end of the year was reduced considerably.

At the present time approximately 50 per cent of our total exports go to the Commonwealth and the United States of America, and therefore are extremely vulnerable to changes of commodity prices and the economic climate of the United States. If, therefore, we are to have a sustained growth in the volume of our exports it is essential that we should find further new markets for our products. In addition we must bear in mind that the primary producing countries, with the development of their secondary industries will tend to rely less on the import of consumer goods, and will require goods more of a capital and scientific nature.

As regards the current year the outlook is encouraging; there has been a rise in exports for five consecutive months and the latest figures, seasonally adjusted, show that exports and re-exports rose by £5 million to £328 million, whilst imports increased by only £1 million to £359 million, reducing the visible trade gap to £31 million, which is the lowest for eight months. Furthermore, during 1961 increases in wages and costs were contained within a reasonable limit. Provided these can be prevented from moving ahead faster than increases in production the outlook would appear to be reasonably favourable which in turn should be reflected in company results and dividends.

REICHHOLD CHEMICALS LIMITED

TRADING CONDITIONS AFFECT PROFIT MARGINS

MR G. S. BACHE ON CURRENT YEAR'S PROSPECTS

The Tenth Annual General Meeting of Reichhold Chemicals Limited will be held on June 19th at the Abercom Rooms, Bishopsgate, London, E.C.2.

The following is the statement by the chairman, **Mr George Samuel Bache,** circulated with the report and accounts for the year ended December 31, 1961:

As many will recall we suffered a sad loss in the tragic death of our late Chairman, Mr W. H. Breuer, who was killed in a motor-car accident on April 26, 1961.

The Annual Accounts for the Tenth year are presented in established form and reflect the year's operation of our Group.

The pattern that obtained in the Chemical Industry during the second half of the year is well known and some sections of our Group were similarly affected, this having an unsatisfactory impact on Profit margins.

An Interim Dividend of 7½ per cent less Income Tax on the Ordinary Share Capital of the Company has been paid. A Final Dividend in respect of the year to December 31, 1961 of 15 per cent less Income Tax at the Standard Rate ruling on the date of payment is now recommended thus maintaining the 22½ per cent overall Dividend.

The Capital Expenditure programme of the operating Companies still requires us to "plough back" money each year, in addition to the provision we make for depreciation.

In view of the increased capacity in the allied chemical field and the competition now evident from Europe, the Directors have again decided to defer plans for the development of the Brockhampton site.

Our available facilities are adequate to take care of the present programme and it is proposed to place a further £75,000 to General Reserve.

THE SUBSIDIARIES

BECK, KOLLER & CO. (ENGLAND) LTD. In the last quarter keen competition mainly from the Continent developed, the result of the Credit Squeeze became more apparent (resulting in an increase in bad debts) and it became necessary to re-catalyse and also replace some part of the Phthalic Anhydride plant which resulted in an appreciably lower tonnage of Phthalic Anhydride being produced during the last quarter.

Unless anything unforeseen should occur the yield from the plant is anticipated to increase substantially in 1962.

Due to the inclement weather and delays in delivery of some essential parts of the Plant, plus teething troubles, the new modern Alkyd Resin Plant at Speke did not come on stream until early October. The enlarged capacity should enable us to cut production costs and materially assist in increasing the efficiency and economic working of the Factory.

The new extensions include specialised semi-production units which will facilitate the more rapid production of improved and newer resinous products.

In order to relieve congestion on the South Site a new Block of buildings was erected on the North Site named "Frodsham House."

This addition provided accommodation for the enlarged Despatch Department, a Beck, Koller Board Room and new offices for James Beadel & Co., Ltd.

VINYL PRODUCTS LTD. In spite of increased competition, sales were maintained and showed a slight increase over 1960.

A period of consolidation in the Carshalton Works has resulted in higher productive efficiency with a satisfactory impact on the profit level.

The Company derives increasing benefit from Royalties received from some twenty Licensees throughout the World although higher export sales would still be obtained if the Board of Trade decide to remove the Import duty on Vinyl Acetate Monomer.

The development of new products is vital to the future of the Company and in this connection a new type of acrylic copolymer emulsion has been developed which enables improved and economic water paints to be manufactured by the Paint Industry replacing Linseed Oil in the old type oil bound distemper paints.

VINATEX LTD. The move from Carshalton to Havant has been completed and the new Plant after an unparalleled series of delays and teething troubles is now operating satisfactorily. The heavy costs of transferring machinery and its installation, together with new Plant, coincided with a recession in the Consumer Industries and these, coupled with the development of fierce competition with drastic reductions in selling prices, resulted in a trading loss.

Vigorous steps have been taken to reduce expenditure without affecting efficiency and the situation is under constant review.

In order to broaden the scope of the Company's activities it was deemed expedient to take advantage of the existing sales coverage and technical service facilities by concluding an arrangement with the well-known North American Resin Manufacturers THE REXALL DRUG AND CHEMICAL CORPORATION of the U.S.A. for the distribution in the United Kingdom of their resinous Polymers which include Polystyrene, Polyethylene and at a later date Polypropylene.

GENERAL

During the year all Companies were obliged to absorb substantial increases in Direct Labour and Salary costs and repetitive demands for increases must inevitably militate against the Companies' ability to counter the competition arising from the privileged position enjoyed by importers of resinous products.

In this connection I would point out that imported resins attract import duty either on an Ad Valorem basis or by incurring Excise Duty for hydrocarbon oils and pay whichever may be the higher.

In the majority of cases the hydrocarbon oil duty (being higher) is paid but the domestic manufacturer is also obliged to pay the same hydrocarbon oil duty so that in effect the imported synthetic resins in the main are admitted "Duty free."

The Chancellor of the Exchequer has a strong case for the rectification of this anomaly under consideration and it is hoped that at long last some action will result in an amelioration of the difficulties arising from the U.K. Manufacturers being penalised in the Industrial usage of hydrocarbon oils.

Investment Allowances and Scientific Research afford a welcome relief particularly where a Company is engaged in a progressive development programme, such as your Group.

THE CURRENT YEAR

It is felt that the competition to which I have referred has now shown signs of levelling out and on a note of caution I would expect a progressive improvement during the current year. You will appreciate that it is extremely difficult to give any accurate forecast since during the year under review, in the first half the Beck, Koller Company was progressing extremely well but toward the end of the second half there was a marked decline for reasons explained. In the case of Vinyl Products Ltd., however, although in the first half of the year progress was slow there was a marked improvement during the second half which resulted in a satisfactory result at the end of the year.

We continue to enjoy full interchange of technical information with Reichhold Chemicals Inc., and their affiliate Companies throughout the World and the new products under license from Spencer Kellog & Sons, Inc., are now providing a welcome addition to the sales range of the Beck, Koller Company.

On March 10th a new suite of Offices was leased at Hillgate House, 26, Old Bailey, E.C.4, and provides excellent accommodation for Reichhold Chemicals Ltd., Beck Koller & Co. (England) Ltd., and James Beadel & Co. Ltd., London Offices.

Once again I am sure you would wish to associate yourselves with the tribute I am happy to pay on behalf of the Directors, to all Factory Employees, Technical and Administrative Staffs and Directors of Operating Companies for their loyalty and support during the very difficult period under review.

ZANDPAN GOLD MINING COMPANY LIMITED

(Incorporated in the Republic of South Africa)

CHAIRMAN'S SPEECH

The seventh annual general meeting of Zandpan Gold Mining Company Limited was held on May 21st in Johannesburg.

Mr B. L. Bernstein (the chairman), who presided, said:

Satisfactory progress is being made with the initial development programme which commenced at the end of March, 1962. Up to May 18th a total of 7,248 ft., all in country rock, had been accomplished and development is now proceeding at a rate of about 4,000 ft. per month. It is planned to increase this rate to about 7,000 ft. per month by the end of June 1962.

Work has so far been concentrated mainly on the provision of ore-pass, travelling-way and return airway facilities in the vicinity of the shaft on all levels between the 6,600 ft. and 7,250 ft. elevations. This work is nearing completion and a start has now been made with the advancement of exploratory development. Three main headings are planned, each equipped with twin airway facilities. One is being advanced south-west parallel with the strike of the reef in the general direction of borehole TL 29 on the 6,600 ft. horizon where reef is expected at about 600 ft. from the shaft. Another is being advanced eastwards on a line passing to the south of borehole Z 6 on the 7,100 ft. level where a reef intersection is expected at about 2,500 ft. from the shaft.

The third main heading is being advanced north-west on the 7,250 ft. level towards borehole TL 40 where it is expected to intersect reef at about 2,000 ft. from the shaft. Development in other directions will depend on the results obtained in these headings.

Some reef development is anticipated on the 6,600 ft. level during the current quarter and on the 7,100 and 7,250 ft. levels during the quarter ending September 1962.

It is hoped by the end of this year to have achieved about 60,000 ft. of development of which approximately 20,000 ft. could be on reef.

The only reef exposures to date are intersections which have been obtained during the course of the development of ore-passes and travelling-ways in close proximity to the shaft. The values obtained were of the same order as those obtained in the shaft intersection.

OPERATING COSTS

The cost of running the mine on the basis of the development programme to which I have referred will be about R330,000 per month. At the end of April we had about R4,000,000 of capital funds available and these funds will, therefore, last until about April 1963.

I would like to refer particularly to the haulage being advanced in an easterly direction on the 7,100 ft. level. The object of this haulage is not only to explore the south-eastern area of the mine, but to comply with the Mines and Works Regulations which require the provision of a second outlet to the Mine. As we are obviously not yet in a position to site, finance and commence sinking another shaft in order to comply with these regulations this requirement is being met by advancing this haulage eastwards with the object of connecting up, in due course, with a haulage from the No. 4 shaft of the Hartebeestfontein Gold Mining Company Limited. The Hartebeestfontein Company has agreed in principle to this proposal and details are being worked out at present. The distance between our shaft and the Hartebeestfontein No. 4 shaft is 15,000 ft. and the distance from our shaft to the boundary is 10,000 ft. Indications are that this haulage having intersected the Vaal reef about 2,500 ft. from the shaft, will continue in the footwall of the reef, and it will be possible to prospect the reef further to the east by means of underground drilling. Indications are that this holing could be completed by about June 1963.

PRODUCTION AND FINANCE

The decision to raise the additional capital which will be required to bring the mine to production must wait until adequate development has been carried out and we have more information as to values and conditions underground. Shareholders are aware that to bring the mine to production at 100,000 tons per month it will be necessary to provide additional capital to finance both the Reduction Works and a second shaft, estimated at approximately R15,000,000. The mine could be brought to production before the second shaft is completed by utilising the holing into the Hartebeestfontein workings as a second outlet should circumstances justify such a course, in which event the milling rate would then be limited to 70,000 tons per month until the second shaft was brought into use. At this stage I can give you no further indication as to the future programme. The Board's decision on these matters will be dependent on results of underground development and the condition of the capital market.

The motion for adoption of the Directors' Report and Accounts was seconded by Mr S. G. Menell, put to the Meeting and carried unanimously.

The retiring Directors were re-elected, the remuneration of the Auditors was fixed, and payment of their expenses was confirmed.

The Resolution for the adoption of new Articles of Association was passed as a Special Resolution.

G. D. PETERS & CO. LIMITED

SUBSTANTIALLY IMPROVED RESULTS

The fifty-third annual general meeting of G. D. Peters & Co. Limited was held on May 21st in London, **The Lord Inverforth** (the chairman) presiding.

The following is an extract from his circulated statement:

The Accounts for the fifty-two weeks ended 30th December last show Group profits of £216,507 against £119,735 for the previous year. After various adjustments there is left a Group Profit before taxation of £150,571 against £60,781. Your Directors recommend a Final Dividend, less Income Tax, of 5 per cent, making a total Dividend for the year of 7½ per cent.

The decided improvement shown in the profitability of your Company has been achieved notwithstanding the small export demand for vacuum brake cylinders and the cancellation by the British Transport Commission of its substantial vacuum brake contract with the Company.

This curtailment of demand for one of the Company's main products, and the consequent obsolescence of specialised plant has been a burden on our other activities and is the subject of a claim for compensation lodged with the British Transport Commission.

Having reviewed the satisfactory progress of the Group's interests at home and abroad, the chairman concluded:

The reorganisation announced last year has proved beneficial in administering the wide diverse activities of the Group, and I feel hopeful, provided there are no unforeseen circumstances, political or otherwise, that the results for 1962 will continue to show an improvement.

The report was adopted.

MAPLE & COMPANY LIMITED

GROUP'S STRENGTH AND BUOYANCY DEMONSTRATED

The seventy-second annual general meeting of Maple & Co. Limited was held on May 23rd in London, **Mr G. R. Holman,** President of the Company, presided.

The following is an extract from his circulated statement:

The Balance Sheet and Accounts reflect in figures the results of a rather difficult year. As you know, for a considerable part of 1961 we have had a severe Credit Squeeze, a Surcharge on Purchase Tax, and a Pay Pause. The fact that, despite these measures, our turnover and gross profits have shown modest increases and have exceeded all previous equivalent figures, demonstrates the buoyancy and strength of your Company, especially as during the period under review no additions have been made to the Group. Our wage bill and fixed overheads have perforce increased, and it is principally for this reason that our trading profits are somewhat lower than those achieved twelve months ago.

Your Company now has a wide geographical spread, and this has undoubtedly helped considerably to maintain turnover, for the reason that retail trade varies to a notable extent in different parts of the country.

The London departmental sales showed an increase once again, but these additional sales were not great enough in volume to counteract the unavoidably heavy extra operating expenses which we have experienced in so many directions.

Last year I mentioned your Company's reputation for quality, and it is worthy of note to record that whereas there has been a decrease in the sales of the less expensive merchandise and in the hire-purchase section, there has been an appreciable upward trend in nearly all our departments for the better and best quality goods.

Exports: These have constituted a "best-ever" and once again have been world wide.

Contracts: A further expansion in this section has taken place and indeed has been an important factor in our general increase in turnover.

Real Estate: Your Directors are always seeking opportunities for further expansion of the Company's activities, but they are very conscious of the necessity of obtaining only the right business at the right price.

The past year has on the whole been a disappointing one for the furniture and allied trades in general, and the various Government measures to which I have already referred have of necessity weighed particularly heavily on the line of business in which we are engaged. However, our equivalent net trading profits before tax were only £39,023 less on this occasion than the all-time record of last year, or just under 6 per cent, and over £100,000 greater than in 1960.

I can assure you that your business is in good shape and very much alive to obtain all possible orders. Furthermore, it is equipped and ready to take advantage of any easement in the current stringent situation.

The report was adopted and a total distribution of 17 per cent (same) approved.

E. POLLARD & CO. LIMITED

MARKED TRADING IMPROVEMENT

The 50th annual general meeting of E. Pollard & Co. Limited was held on May 23rd in London.

Mr H. Edward Pollard (Chairman and Managing Director) presided and, in the course of his speech, said:

The Consolidated Accounts for the year ended December 31, 1961, show that the Trading Profit for the year was £312,000 as compared with £183,000 for the previous year. The net Profit is £291,700 against £174,600. Income Tax and Profits Tax remove a further £148,600. It was £73,600 last year and after reflecting on the general business situation and in view of our increasing commitments the directors are proposing to repeat last year's rate of dividend and pay 12½ per cent again on the ordinary Shares of the Company.

The recovery in earnings is encouraging and particularly in the Shopfitting and Display sections of the business, which as I mentioned last year, was then depressing and difficult.

As regards Engineering, orders and production increased for all types of lift and shutters.

As regards the future, prospects are really much the same: we are faced with continually increasing overhead expenses, but we have a good start with our Work in Progress at over a million and a quarter pounds. Shopfitting and Display enquiries are steadier and in fact the demand for all our products is good, so that I feel that 1962 should be a satisfactory year.

The report was adopted.

ABERDARE HOLDINGS LIMITED

The 26th ordinary general meeting of Aberdare Holdings Limited was held on May 22nd in London, **Sir John Pascoe, BA** (the chairman), presiding. The following is an extract from his circulated review:

The consolidated Profit and Loss Account shows trading profits for the year of £743,534 as against £636,517 for the previous year. After an increased taxation charge of £394,196—the increase being £97,221—and writing off capitalisation expenses and other items of £8,142, the net profits of the Company amount to £352,489 as against £331,544.

We are recommending a final dividend of 8 per cent on the £2,252,757 capital now issued, which, with the 7½ per cent paid on the old capital, is equivalent to a total distribution for the year of 12.326 per cent on the enlarged capital.

Since the close of the financial year, the authorised capital of the Company has been increased to £3,000,000 and we have issued one share in three free and two new shares for five at 5s. per share. The proceeds of the issue amounting to £519,876 are being utilised in providing additional facilities at Aberdare Cables, an extension to one of the plants and the completing of equipment in the new research building at Blackwood, Monmouthshire.

With all our factories having satisfactory order books, we have every reason to expect—barring any events over which we have no control—that the results for the coming year will be at least equal to those of the year under review.

The report was adopted.

BRITISH ROPES

The World's largest manufacturers of wire, rope and cordage

Extracts from the Report and Accounts for 1961 and from Mr. Harry Smith's statement to the Stockholders.

TRADING CONDITIONS generally deteriorated. We also had to face non-recurring costs in establishing overseas factories and in reorganising certain subsidiary companies at home. Predicted demand was upset by sudden changes in Government policy.

PROSPECTS. In 1962 we would be sensitive to any further decline in volume or margins: on the other hand we should certainly feel some of the benefits of our overseas investments and reorganisation at home, although not the full benefits. Any general increase in world trade, coupled with our own programme of cost reduction, should bring a substantial improvement in our results.

	1961	1960	1959
		£ thousands	
Total Group Sales	26,465	27,010	23,877
Issued Capital	11,061	11,061	5,455

NORTH BRITISH & MERCANTILE INSURANCE

RECORD VOLUME OF NEW LIFE BUSINESS

MR CYRIL H. KLEINWORT'S STATEMENT

The 152nd Annual General Meeting of North British & Mercantile Insurance Company Limited was held on May 17th in Edinburgh.

The following are extracts from the statement issued to the shareholders by **Mr Cyril H. Kleinwort,** Chairman of the General Court of Directors, in connection with the accounts for the year ended December 31, 1961:

I am sorry to say that two of our colleagues, The Honourable Arthur Q. Crichton and The Right Honourable The Earl of Selborne, PC, CH, who are both due to retire by rotation this year, have decided not to offer themselves for re-election. Mr R. G. Harman, who became General Manager in July, 1954, is retiring at the end of May and he has accepted our invitation to join the General Court on his retirement.

Turning now to our Accounts for the past year, there has been some rearrangement of the Fire and Accident business of the "Commercial Union"/"North British" Group in the United States of America which is now pooled amongst all our various Companies there. This has resulted in a decrease in the "North British" Group share of the Fire income and an increase in the share of the Casualty premiums.

FIRE DEPARTMENT

The total Fire premiums at £16,975,500 show a reduction of £2,103,539 during the year following the readjustment in the United States and losses at £10,081,743 are down by £694,763.

After adjustment of the Provision for Unexpired Risks on the usual 50 per cent basis, the loss on the year's working amounts to £989,067, 5.83 per cent of premiums.

CASUALTY DEPARTMENT

Total Casualty premiums were £16,744,572, an increase of £4,065,661 over the 1960 figure of £12,678,911, which is, of course, principally accounted for by the alteration in the United States. Total claims incurred were £10,829,543, an increase of £3,622,396, the percentage of claims to premiums being 64 per cent compared with 56.8 per cent for 1960.

After adjusting the Provision for Unexpired Risks on the usual basis there is an underwriting loss of £130,570, .78 per cent of premiums compared with an underwriting loss of £54,527, .43 per cent of premiums for 1960.

MARINE DEPARMENT

Our premium income shows a small decrease of £79,688, compared with 1960. It has been affected by a number of factors such as a fall in ship values, breaking-up of old tonnage, and lower rates for international business as a result of intense competition.

The Marine Account has continued to be satisfactory partly owing to the 1959 underwriting year having been extraordinarily free of major casualties. We have transferred a profit of £309,009 to Profit and Loss Account.

LIFE DEPARTMENT

Once again the Life Department wrote new business for a record volume of sums assured, the amount retained at our own risk in 1961 being £26,259,613—an increase of 15 per cent over 1960.

The gross rate of interest earned on the Life Fund in 1961 was £6 1s. 3d. per cent compared with £5 16s. 6d. per cent in 1960. The level of our Life expenses remains virtually unchanged, although—as a consequence of the adjustment already referred to—the ratio of expenses to premium income has the appearance of having altered considerably.

Our rates of premium have been kept under review and a number of downward adjustments have been made.

INVESTMENTS

The year 1961 again witnessed high interest rates on long term fixed interest securities. Whilst opportunity was taken to obtain the maximum advantage of these rates we were at the same time faced with further substantial falls in market prices of fixed interest securities during the course of the year. However, thanks to the substantial Equity holdings which we had acquired in earlier times—and these were added to during the year whenever we could do so on favourable terms—the market value of our investments remains substantially above the book value at December 31st last.

PROFIT AND LOSS ACCOUNT

The results of our operations for the year 1961 are summarised in this Account. Interest, Dividends and Rents amounting to £2,703,244 show an increase during the past year of £256,612. The operations in the Fire, Accident and Marine Departments resulted in a net loss of £810,628. After taking credit for an amount of £108,598 representing one-fourth of the shareholders' profit from the Life Branch 1959 valuation, charging taxation amounting in all to £965,770 and making provision for the usual transfers to the Staff and Widows' Pension Funds, the balance available is £724,719.

It is proposed to maintain the dividend at 2s. 6d. per share of which 1s. 3d. is being paid as an interim dividend. The total dividend of 2s. 6d. per share with the dividend on the Preference Stock, will absorb £885,062 and leave a balance on Profit and Loss Account to be carried forward of £13,414,182.

The report and accounts were adopted.

APPOINTMENTS

CITY OF OXFORD EDUCATION COMMITTEE

COLLEGE OF TECHNOLOGY

Required in September next:
SENIOR LECTURER IN ECONOMICS and related subjects for established full-time and part-time courses for B.Sc. (Econ.).
LECTURER in MANAGEMENT STUDIES with good qualifications in the field of Applied Economics and industrial relations and with some industrial experience.
Facilities for research available.
Salaries: Burnham Technical Scale—Senior Lecturer, £1,500 to £2,000; Lecturer, £1,000 to £1,800 per annum.
Further particulars and application form which should be returned by June 9th, can be obtained from the Principal, College of Technology, Headington, Oxford. Stamped addressed envelope required.

UNIVERSITY OF CAMBRIDGE

The Faculty of Economics and Politics wish to appoint an Assistant in Statistical Research to assist the teaching staff of the Faculty. Applicants should possess either an honours degree in Economics with some statistical training or appropriate statistical experience. The stipend will be in the range £750-£1,000 per year. Further details may be obtained from the Secretary, Faculty of Economics, Sidgwick Avenue, Cambridge, to whom applications should be sent by 20th June, 1962.

THE DURHAM COLLEGES

IN THE UNIVERSITY OF DURHAM

The Department of Social Studies is to undertake a study of services for old people in the North East. Applications are invited from graduates for two research posts. Salaries will be within the range £700-£1,850. The appointments will be for one year, renewable for periods of up to three years.
Applications (three copies), together with the names of three referees, should be sent not later than June 18, 1962, to the Registrar and Secretary, 38 North Bailey, Durham, from whom further particulars may be obtained.

UNIVERSITY OF LONDON

CHAIR OF PUBLIC ADMINISTRATION AT THE LONDON SCHOOL OF ECONOMICS

The Senate invite applications for the Chair of Public Administration tenable at the London School of Economics and Political Science (salary not less than £2,600 a year plus £100 London Allowance). Applications (10 copies) must be received not later than June 22, 1962, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for Lectureships or Assistant Lectureships in the following subjects: ACCOUNTANCY, GOVERNMENT, ECONOMICS, SOCIAL ANTHROPOLOGY
Salary scales: Lecturer, Grade I, £1,880 x £80—£2,200 per annum; Grade II, £1,480 x £70—£1,800 per annum. Assistant Lecturer, £1,200 x £50—£1,350 per annum. Passages to Salisbury for appointee, wife and dependent children on appointment, with allowance for transport of effects. Installation grant of £100 in addition for persons recruited from outside Africa. Superannuation and Medical Aid schemes. Unfurnished accommodation at rent of 15 per cent of salary. Assistance given for triennial visits overseas. Detailed applications (6 copies) naming 3 referees by June 30, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

OXFORD UNIVERSITY

INSTITUTE OF STATISTICS

Applications are invited for junior research posts in applied economics. Candidates should have a good degree in economics or statistics. The salary will be according to age and qualifications in the range £750-£1,250 per annum. Posts are superannuable and an allowance of £50 per child is paid.—Application forms may be obtained from the Secretary of the Institute, St. Cross Road, Oxford. Closing date 9th June, 1962.

THE UNIVERSITY OF SOUTHAMPTON

Faculty of Social Sciences. Applications are invited for the post of Lecturer or Assistant Lecturer in Politics. Candidates should have a special interest in political theory or the history of political ideas. Salary scales: Lecturer £1,050 x £50—£1,400 x £75—£1,850 with an efficiency bar at £1,475. Assistant Lecturer £800 x £50—£950. These scales are expected to be revised shortly. The initial salary will depend on qualifications and experience.—Further particulars should be obtained from the Secretary and Registrar, The University, Southampton, to whom applications (7 copies from United Kingdom applicants) should be sent not later than June 15, 1962.

UNIVERSITY OF ABERDEEN

DEPARTMENT OF STATISTICS

Applications are invited for the post of LECTURER or ASSISTANT with special interest in economic statistics and econometrics. Salary on Lecturers' scale £1,150-£1,900; on Assistants' scale £900-£1,050 with F.S.S.U., child allowance and removal allowance. Placing according to qualifications and experience.
Further particulars from the Secretary, The University, Aberdeen, with whom applications (8 copies; Lecturer; 6 copies, Assistant) should be lodged not later than June 16, 1962.

THE DURHAM COLLEGES

IN THE UNIVERSITY OF DURHAM

The Department of Social Studies is to undertake a study of social and economic conditions and planning problems in County Durham. Applications are invited from graduates in economics, sociology, geography, town and country planning and related fields for two research posts. Salaries will be within the range £700-£1,850. The appointments will be for one year renewable for periods of up to three to five years.
Applications (three copies) together with the names of three referees, should be sent not later than June 18, 1962, to the Registrar and Secretary, 38 North Bailey, Durham, from whom further particulars may be obtained.

DERBY AND DISTRICT COLLEGE OF TECHNOLOGY

Principal: T. Heap, Ph.D., M.Sc., F.R.I.C., A.M.I.E.M.

Applications are invited for the post of LECTURER IN MANAGEMENT STUDIES AND INDUSTRIAL ADMINISTRATION. Duties to commence in September, 1962, or as soon as possible thereafter.
Applicants should have a degree or equivalent professional qualifications and industrial and teaching experience.
Salary in accordance with the 1961 Burnham Scale for Lecturers, viz. £1,600 x £40—£1,800.
Application form, returnable by June 6th, and further particulars may be obtained from the Registrar, Derby and District College of Technology, Kedleston Road, Derby.

For further appointments and other classified advertisements see pages 850, 851 & 852

UNIVERSITY OF SYDNEY

LECTURESHIP AND LECTURESHIP/SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for the positions of Lecturer and Lecturer/Senior Lecturer in Economics.
The salary for a Senior Lecturer is within the range £A2,550 x £95—£3,000 per annum; for a Lecturer within the range £A1,730 x £105—£2,435 per annum. In each case cost of living adjustments will be allowed (at present £A24 per annum). The salary is subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.
Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.
Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.
Applications close in Australia and London on *July 6, 1962.*

APPOINTMENTS

ASSISTANT FINANCIAL COMPTROLLER

BRITISH OVERSEAS AIRWAYS CORPORATION

are seeking a Chartered Accountant with good industrial experience for the above senior staff post which is at their London Airport headquarters.

He will assist the Financial Comptroller in all aspects of his responsibility to the Managing Director for the financial and economic management of B.O.A.C. and for the provision of efficient accounting services throughout the Corporation.

He must be aged 35 to 45 and should preferably hold a University degree in the economics field. He must possess ability to express financial and economic facts in simple language for management purposes and have had considerable practical experience of management accounting and costing.

The salary will depend on qualifications and experience but about £4,000 per annum is envisaged.

Applications should be addressed to the Secretary, B.O.A.C. Headquarters, London Airport, Hounslow, Middlesex, and all envelopes should be marked Private—STD.

SOCIAL SURVEY IN ADEN

The Government of Aden require an experienced sociologist with a knowledge of Arabic to undertake a social survey of Aden. The primary purpose would be to obtain basic information on movements of population, labour conditions, wages, housing, etc. The study, which would take about fifteen months, would involve mainly field work, and the officer appointed would be given the close co-operation of Government field staff.—Further particulars from the Department of Technical Co-operation, Sanctuary Buildings, Great Smith Street, S.W.1. Reference RF 24/2101.

ASSISTANT INVESTMENT MANAGER required for expanding Pension Fund of leading industrial company in London. Considerable ability in investment research looked for including company analysis and knowledge of institutional investment requirements. Age 28-40. Preference will be given to candidates with a professional qualification together with experience gained from previous employment in a Pension Fund, Merchant Bank or Stockbrokers' Office. Pension scheme and wide range of employee benefits.—Applications, quoting IM 4468, with full details, to Box 1626.

INTERNATIONAL PUBLICATION. City—Vacancy occurs for young economics graduate with proved writing ability. Languages. Five-day week, pension fund.—Write, Box 1628.

MARKET RESEARCH MANAGER

of an international food manufacturer requires an

ASSISTANT

who will be capable of taking responsibility for research into a number of the Company's existing products and development lines.

Applications from men or women age 24-30 preferably with at least two years' Market Research experience are invited. Salary in range £800-£1,100 plus substantial bonus. Pension Life Assurance benefits.—Replies to Box 1622.

THE WOOL TEXTILE INDUSTRY

The Wool Textile Delegation and Wool (& Allied) Textile Employers' Council, jointly based in Bradford, desire to fill the vacancy of Secretary General. This is an important post covering Internal Administration, Public Relations and Government Department Contacts. The successful applicant will be expected to carry great responsibility for which the salary with pension, will be commensurate.

Apply:

The Chairman,
Wool Textile Delegation,
Lloyds Bank Chambers,
Hustlergate,
BRADFORD, 1.
Yorkshire.

KINGSTON UPON HULL EDUCATION COMMITTEE

COLLEGE OF COMMERCE
Principal: P. Barber, M.A.

Required for September, 1962, LECTURER IN FACTORY MANAGEMENT in the Department of Management Studies, to lecture in Factory Management, Work Study and allied subjects in the courses leading to the Post Graduate Diploma in Management and H.N.C. and H.N.D. in Business Studies.

Candidates should possess a University Degree in Economics, Commerce or Administration and/or be a corporate member of an appropriate professional institution and have had practical industrial management experience. Familiarity with current methods in management education would be an added attraction.

Salary: Burnham Technical Scale, £1,600 by £40 (5) to £1,800 per annum.

Further particulars and application forms, to be returned as soon as possible, may be obtained from the Chief Education Officer, Guildhall, Kingston upon Hull.

UNIVERSITY OF KHARTOUM

FACULTY OF ECONOMIC AND SOCIAL STUDIES

Applications are invited for the post of Professor of Economics in the Department of Economics.

Salary: Professor—£S.2,760.

Cost of living allowance approximately £S.180 per annum at present. Outfit allowance £S.50. Family allowances: Wife: £S.60 per annum; first child, £S.90 per annum; second and third child, £S.30 per annum each (£S.1=£1 0s. 6d. sterling). Passages for appointee and family on appointment, termination and annual leave. There is a superannuation scheme, and arrangements can be made to maintain F.S.S.U. policies. Direct appointment on contract normally for five years with possibility of renewal (secondment welcomed if possible). Unfurnished accommodation provided at rent (excluding rates) up to 7½ per cent. of salary.

Applications (10 copies), detailing qualifications and experience, and naming three referees, by June 15, 1962, to Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

GENERAL MANAGER

LIVINGSTON DEVELOPMENT CORPORATION

APPOINTMENT OF GENERAL MANAGER

Applications are invited for the post of GENERAL MANAGER to the LIVINGSTON DEVELOPMENT CORPORATION. The General Manager will be in complete charge of the Development Corporation's organisation and the qualifications necessary are considerable administrative experience, outstanding initiative and proved organising ability. Technical qualifications of a specialised nature are not essential, but administrative experience of the technical problems associated with the planning and development of a project of this character would be a considerable advantage.

The salary range for the post will be £3,900-£4,500 per annum and the initial salary payable will depend upon qualifications and experience of the successful applicant.

The post will be superannuable either under the Local Government Superannuation (Scotland) Act, 1937, and the Local Government Superannuation Act, 1953, or under the New Towns Pensions Scheme.

Canvassing, directly or indirectly, of the members of the Development Corporation will constitute an absolute disqualification.

Applications, containing full details of the candidate's age, qualifications and experience, together with the names and addresses of referees, should be submitted in twelve copies to the undersigned not later than June 5, 1962. Envelopes should be marked "General Manager."

There is no prescribed form of application.

THE CHAIRMAN,
LIVINGSTON DEVELOPMENT CORPORATION,
YORK BUILDINGS,
QUEEN STREET,
EDINBURGH

BOARD OF TRADE

BANKRUPTCY EXAMINERS

The Bankruptcy and Companies (Official Receivers) Service has vacancies for 50 Examiners (men or women). The work involves investigating the affairs of companies in compulsory liquidation and of partnerships and individuals in bankruptcy, and should appeal to those with an insight into human nature and a liking for an active life in the world of affairs. An accurate appreciation of words and legal connotations, and the ability to grasp the significance of a balance sheet and account books, are essential.

Applicants must be at least 20 on 1st June, 1962, and must have passed *either* (i) the Intermediate Examination of the Institute of Chartered Accountants (England and Wales, Scotland, or Ireland), the Association of Certified and Corporate Accountants, or the Society of Incorporated Accountants; *or* (ii) the Final Examination of the Chartered Institute of Secretaries or the Corporation of Secretaries.

Starting salary in Inner London for successful candidates aged 20-24 ranges from £936 to £1,293 according to age; for those aged 25 or over it ranges from £820 to £1,090, depending on qualifications and experience. The maximum of the scale (Inner London) is £1,490, but there are prospects of promotion to posts carrying salaries well above £2,000. All posts are pensionable.

For further information and an application form, write to Civil Service Commission, Burlington Gardens, London, W.1, quoting 24/1162/13A. Closing date 15th June, 1962.

MIDLANDS ELECTRICITY BOARD

PRINCIPAL ASSISTANT (ORGANISATION AND METHODS)

Applications are invited from suitably qualified persons for the above appointment in the Chief Accountant's Department at Headquarters.

Applicants should have experience in office organisation and methods and some knowledge of mechanised accounting, including punched card machines.

Salary within the range of £1,530/£1,650 per annum (N.J.C. Grade 9). Superannuable.

Applications, giving full details of qualifications, age, experience and present salary, should be forwarded, within 14 days, to the Secretary, Midlands Electricity Board, Mucklow Hill, Halesowen, Nr. Birmingham.

F. W. CATER,
Secretary.

UNIVERSITY OF CAMBRIDGE

DEPARTMENT OF APPLIED ECONOMICS

Applications are invited for an appointment which it is hoped to make, from October 1, 1962, in connection with research into the Growth of Public Quoted Companies and its Finance. The appointment, which will be for two years in the first instance, will be in the Junior Research Officer grade, and will carry a pensionable stipend related to age and experience ranging from £750 by £50 to £1,000 a year. Applicants should have at least a good second-class honours degree in economics or statistics. A non-pensionable allowance of £50 a year is payable for each dependent child under sixteen years of age or receiving full-time education. A limited contribution may be made towards removal and travelling expenses. Applications, giving details of academical qualifications and experience, together with names of two referees, should reach the Director, Department of Applied Economics, Sidgwick Avenue, Cambridge, by June 20, 1962.

RTB

OPERATIONAL RESEARCH DEPARTMENT

MATHEMATICAL STATISTICIAN

We now need a man, aged up to about 25, who has either a good Honours degree in Statistics, or a first degree in Maths, and a postgraduate qualification in Statistics.

The Company is one of the largest steel producers in the country and has works in Lincolnshire, Monmouthshire, the Midlands and West Wales, and will shortly commission Europe's most advanced strip mill at Newport, Mon. The Operational Research Department was formed in 1956 and now has a project staff of more than 20 graduates representing mathematics, statistics, economics, physics, chemistry and engineering. We have adequate library and electronic computing facilities.

The department is tackling some challenging projects in the field of optimisation and control, both of individual processes and integrated production systems. There are also studies of a "strategic" nature. The work combines intellectual interest with the stimulus of practical application, and the atmosphere is congenial. The present vacancy is for a man to help study and develop *adaptive* methods of control. This will call for application of the latest statistical techniques and may require the development of new ones. In view of this, we have in mind that the man appointed would probably specialise in this field for his first 18 months, with the opportunity to move into general operational research work after that.

The department is based mainly in Monmouthshire amid a unique combination of the Welsh mountains, the Usk and Wye valleys and the Bristol Channel. Cardiff and Bristol are within easy reach and London is only 2½ hours away by train. Salaries are competitive.

For further information on the Company, the department and on operational research as a career, please write, giving brief details of your age, qualifications and experience, to:

The Manager, Operational Research Department,
RICHARD THOMAS & BALDWINS LIMITED,
33/34 Commercial Street, Newport, Mon.

THE DISTILLERS COMPANY LIMITED

ECONOMISTS

Vacancies for experienced economists exist at various levels in the London headquarters of the Industrial Group of The Distillers Company Limited.

Successful applicants will join a small team of economists whose main duties are to advise senior management on current economic trends, both at home and overseas, and on the future expansion of the chemical and related industries and of such other industries as may be specified from time to time. These posts carry attractive prospects for progress both within the headquarters of the Industrial Group and in the operating Divisions of the Company.

Candidates for these appointments, aged between 27 and 40, must hold good honours degrees in economics. A working knowledge of either statistics or of the principles of management accounting would be an advantage, as would a sound knowledge of one or two European languages. An appreciation of present-day economic affairs is essential; although several years of practical experience of this type of work in the chemical or allied industries is desirable, applications will also be welcomed from those with appropriate experience of other industrial or commercial activities.

Write: STAFF MANAGER,
THE DISTILLERS COMPANY LIMITED,
21/22 BOLTON STREET, LONDON, W.1.

Quote Reference: 256 EC.

UNIVERSITY OF READING

Applications are invited for a lectureship and an Assistant Lectureship in Economics in the Department of Political Economy.

Further particulars may be obtained from the Registrar (Room 22, O.R.B.), The University, Reading, by whom applications should be received by June 16, 1962.

CHIEF FINANCE OFFICER

LIVINGSTON DEVELOPMENT CORPORATION

APPOINTMENT OF CHIEF FINANCE OFFICER

Applications are invited for the post of CHIEF FINANCE OFFICER to the LIVINGSTON DEVELOPMENT CORPORATION.

The salary range for the post will be £2,700-£3,400 per annum and the initial salary payable will depend upon qualifications and experience of the successful applicant.

The post will be superannuable either under the Local Government Superannuation (Scotland) Act, 1937, and the Local Government Superannuation Act, 1953, or under the New Towns Pensions Scheme.

Canvassing, directly or indirectly, of the members of the Development Corporation will constitute an absolute disqualification.

Applications, containing full details of the candidate's age, qualifications and experience, together with the names and addresses of referees, should be submitted in twelve copies to the undersigned not later than June 15, 1962. Envelopes should be marked "Chief Finance Officer."

There is no prescribed form of application.

THE CHAIRMAN,
LIVINGSTON DEVELOPMENT CORPORATION,
YORK BUILDINGS,
QUEEN STREET,
EDINBURGH.

For further appointments and other classified advertisements see pages 849 and 852.

ABBOTSHOLME SCHOOL

Applications are invited for the post of Bursar which comes vacant towards the end of 1962. Salary according to experience aged qualifications. Married accommodation available. Experience in administration, accountancy, property management desirable.—For further particulars, apply Headmaster, Abbotsholme School, Rocester, Uttoxeter, Staffordshire.

STATISTICIANS

especially if they have recently graduated, or are about to graduate this year, are offered an opportunity of joining the Statistical Studies section at the National Coal Board's London Headquarters. The successful candidate will assist in analysing and interpreting a wide range of statistics for the guidance of management. The work calls for application of all the main statistical techniques, and at the same time affords an insight into some of the major problems of a major industry. Candidates should have a degree in statistics, or in an associated field with statistics as a major subject, or other appropriate statistical qualifications. Pay and prospects of promotion are good. Please write for application form to Headquarters Staff Manager (X.2578C), N.C.B., Hobart House, Grosvenor Place, S.W.1.

THE ECONOMIST AND THE ECONOMIST INTELLIGENCE UNIT

Group Chief Accountant

A Chartered Accountant is required for appointment as Group Chief Accountant to the Group of Companies including The Economist and the Economist Intelligence Unit.

He will be responsible for all accounting functions of the Group. The Accounts Department, which is centralised, has recently been completely reorganised.

He must have a good educational background, good commercial experience, a knowledge of modern office procedures and equipment, and a knowledge of Management Accounting.

His age should be between 30 and 45. Salary will depend on experience but applicants will not be considered unless they are earning £2,000 now. There is a good contributory pension scheme, canteen, provident and bonus schemes and four weeks holiday.

This is an attractive post in a lively and expanding organisation. Good prospects exist for development and financial advancement; therefore it will be essential for the person appointed to develop a real interest in the business.

Write in confidence to the Secretary,
The Economist Newspaper Ltd., 22 Ryder Street, London, S.W.1.

THE ROYAL COLLEGE OF SCIENCE AND TECHNOLOGY, GLASGOW

(Affiliated to the University of Glasgow)

CHAIR OF INDUSTRIAL ADMINISTRATION

The Governors invite applications for the Chair of Industrial Administration. The salary attached to the Chair is within the range £2,700-£3,100. Particulars of the appointment and forms of application may be obtained from the Secretary, George Street, Glasgow, C.1.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE invites applications from graduates for an appointment to an Assistantship in the Bursar's Department. The successful candidate will be required to assist the Bursar in some part of his duties, which include responsibility for the work of the Building Committee, the planning and control of building operations, and the purchase of furniture and equipment. The starting salary will be not less than £900 nor more than £1,400 a year, plus £60 a year London Allowance, with F.S.S.U. benefits and family allowance.

Further particulars should be obtained from the Assistant Secretary, The London School of Economics, Houghton Street, Aldwych, London, W.C.2.

FORD OF BRITAIN

COST ANALYSTS

Ford of Britain is in the middle of a major expansion programme designed to place the Company in a position to meet the challenge of world markets. In 1962 alone capital expenditure is planned at over £40 million. This massive programme will be successful only if operating costs are controlled to a competitive level and, to ensure this, the various control systems employed in the Company are being strengthened. As a consequence there are now a number of exceptional opportunities for experienced cost analysts.

Applications are invited from men aged 25-35 who have had several years' experience in an engineering industry on cost control or related work. An accounting or engineering background is probably the most suitable but graduates and others with relevant experience will be considered. The work is constructive and there is unlimited scope for individual initiative. Prospects will not be limited to the finance field as the Company management development policy ensures that men of high general ability are detected and advanced as rapidly as their capacity can sustain. Salary and promotion therefore depend entirely on ability.

Applicants are invited to send personal details, including age, qualifications, experience and approximate salary required (marking envelopes "Ref. A6A") to:

Mr. P. G. Slip, Recruitment and Placement,
Ford Motor Company Limited, Dagenham, Essex.

APPOINTMENTS SELECTION LIMITED

have been retained to advise on the following appointment:

CAREER OVERSEAS

for

Chartered Secretary

A large Tin Mining Group with Head Office in London requires a Secretary for the Group's companies in Malaya. Applications for this appointment are invited from Chartered Secretaries in the middle thirties.

It is essential that candidates should have had experience in company secretarial, management and administrative functions.

The starting salary for a three-year contract, with a substantial annual increment, will be about £2,500 p.a. plus generous marriage, leave and passage allowances, a provident fund and pension scheme.

Will prospective candidates please apply, giving a detailed curriculum vitae and quoting Reference CS/OT.4, to

APPOINTMENTS SELECTION LIMITED
PEMBERTON HOUSE, PEMBERTON ROW, LONDON, E.C.4

NOMURA

INVESTING— THE MOST IMPORTANT PART IS FREE

When you buy a house or a car, you look at it carefully. You check the price and compare it with like sizes and styles. And you look into the trade-in value. Stocks and other investments are the same. You have to see every side of the investment picture to buy wisely. But, whether you are a beginner or an expert, to study every element of the market is a difficult task without help. Our research department has facts and figures about investing in the Japanese market which we would like to make available to you. We want to be sure that you have as much information as possible before you begin . . . or expand . . . in the investment field in Japan. And, the best thing is that the research facilities at Nomura Securities are free, whether you are a client or not. May we help you invest wisely in the Japanese stock market?

NEW REFINERY IN PAKISTAN... BY KELLOGG

OWNERS
Pakistan Refinery Limited.

SHAREHOLDERS
Burmah Oil Co.; Caltex; Shell; Stanvac; and Pakistani shareholders.

CO-ORDINATOR
Bataafse Internationale Petroleum Maatschappij. NV.

LOCATION
West Pakistan, about 8 miles S.E. of Karachi, in the Korangi area.

SCHEDULE
Construction is under way and the refinery will go into operation in late 1962.

CAPACITY
Initially 35,000 barrels per operating day with provision for expansion.

PRODUCTS
Motor petrol, aviation jet fuel, kerosene, diesel fuels, fuel oil.

Pakistan is building its first major oil refinery processing imported crude oil and Kellogg has been assigned the responsibility for this important project. Kellogg International Corporation has the major task of carrying out the engineering design, the procurement of equipment on a world-wide basis and the actual construction of the project. This new Pakistani refinery is being constructed for a fixed price which provides a sound understanding to all concerned for economic planning and financial control.

Essential features of this integrated, grass roots refinery will be efficiency in operation and maintenance, provision for future expansion and an optimum capital cost consistent with a high standard of refinery design and maximum safety. The refinery, which is situated near Korangi, will consist of a crude distillation unit, a hydrotreater, and a catalytic reforming unit together with the necessary ancillary facilities. The receiving and distribution terminal for the refinery, complete with tankage and pumping equipment, will be located at the port of Kiamari and will be connected to the refinery by an 8 mile pipeline system.

This project in Pakistan is an impressive example of the petroleum industry's leadership in providing capital investments to the developing nations of the world. The Kellogg organization takes pride in being the medium through which this undertaking is being executed. Kellogg is experienced in handling projects of this type and welcomes the opportunity to explain in detail how such a project is executed.

The Economist this Week — June 2, 1962

HOME

Beggar-My-Neighbour

The stock markets that followed Wall Street through the ups and downs of last week's heavy seas can take small comfort from its present mood; shareholders may be confronted with a future of "profitless prosperity" (p. 869).

If **Wall Street** is to regain faith in itself the American Administration may have to intervene (p. 891).

Downs and ups in London; in Frankfurt; in Paris and in Zurich (pages 910, 911).

Grandmother's Footsteps

Next week's two **by-elections** will show how far the Opposition parties have crept up on the Tories: but it still looks as though only Wall Street can keep Mr Macmillan from another term in office (p. 872).

The **Conservatives** may be going to lose the best party chairman they have got (p. 875).

An all-party revolt in the Commons has convinced everyone that many **ex-servants of the Crown** are badly treated: but justice now could upset the Government's economic plans (p. 877).

Cops and Robbers

The Royal Commission on the Police has made some sound recommendations for remodelling **Britain's police forces;** but it has not taken the final, right step of recommending the establishment of a few, large police areas (p. 873).

A new report from the Ministry of Labour shows how little industry is doing to train its **supervisors** (p. 884).

In the **motor industry** the trade union cowboys may at last be in a strong position to challenge the power of the (red) Indians (p. 875).

Mr Marples must not be deflected from his intention of slapping down **bad drivers** by spuriously scrupulous arguments (p. 876).

King of the Castle

The **National Coal Board** is often regarded in its homeland as a somewhat ludicrous pachyderm; in Europe it is seen as something more formidable, especially by its potential partners in the Coal and Steel Community (p. 907).

The Dutch show how **State Coal** can be made to pay (p. 919).

The Eurodollar: a new kind of international currency, unfettered child of the market and the bankers' practical answer to restrictions (p. 908).

Scrabble

The **Family Planning Association** is looking for a place in the modern world of state medicine and scientific progress (p. 878).

Weston-Super-Mare is finding itself a twentieth-century notch, and relieving Birmingham of some of its excess population (p. 885).

A quiet English visitor tries to unscramble **Hongkong's banking system** (p. 914).

Oxford looks for a place for its graduate students (p. 885).

INTERNATIONAL

RESPONSIBILITIES

The Americans, the British and the European Community have each to face the implications of the ties that are binding them closer together, whether they like it or not. New frontier zeal must not lead the United States to seem to try to impose its views on the proper form of the common market on Europe (p. 870).

Britain has now got one foot in **Europe's Brussels door;** but the other will not follow until the problem of Canadian and Australian produce has been solved (p. 899).

The Treasury ought now to be reviewing the ceiling it imposes on loans to the **Colonial Development Corporation,** which must also get rid of its obsolete name (p. 878); the **Department of Technical Co-operation** badly needs encouraging in its quite essential task (p. 877).

Mr **Khrushchev** has apparently decided that the European community is a Bad Thing (p. 875). A new **Liberal Party** pamphlet offers some new reasons for believing the contrary (p. 882).

RESPITES

The **Ceylon** press has had another breath-taking reprieve; but the government still means it no good at all (p. 904).

King Saud of Arabia is trying to revive **Islam** as a political weapon, for use against President Nasser's pan-Arabic socialism (p. 903); President Kudsi of **Syria** is trying to patch up a government shaken by resignations (p. 903). The outlook for neither is bright.

The general belief that **Dr Adenauer** is not going to retire until next year leaves his opponents and dauphins with plenty of time to manœuvre (p. 876).

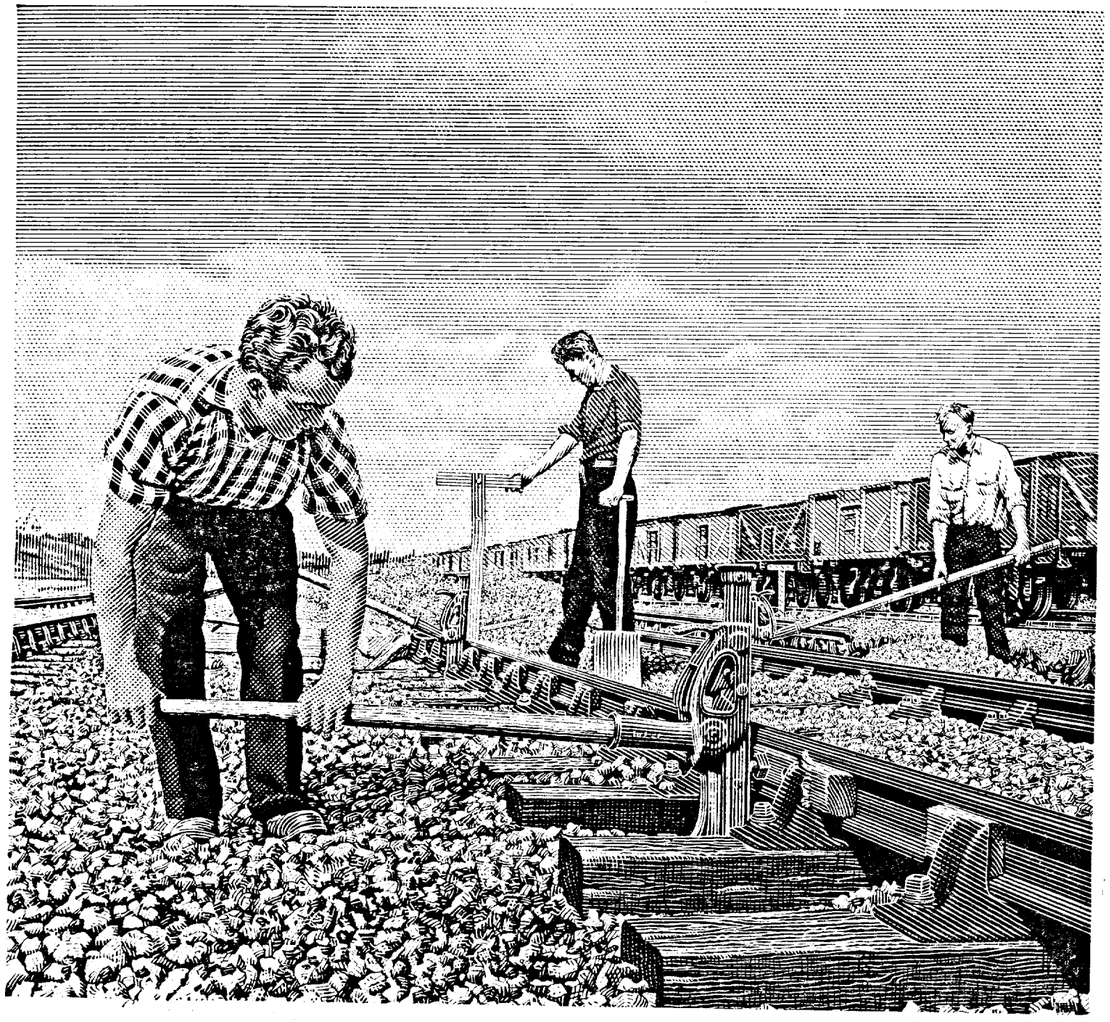
Dr Verwoerd has gained valuable time as a result of a UN tour of South-West Africa; his next step will depend on what the International Court does, and on what the Russians do afterwards (p. 882).

RESPONSES

Once more the Russians have calculatedly sabotaged an agreement at **Geneva,** after seeming to accept it (p. 876).

Czechoslovakia has still not conformed to the new line laid down by the 22nd communist congress (p. 900).

President Kennedy's **tax bill** might be doing better in the American Congress if his proposals had been more ambitious (p. 892).



It is up to Dr Eric Williams to rise to the occasion of the **Trinidad** constitutional conference (p. 881).

American teaching machines do not mean mechanical education (p. 896).

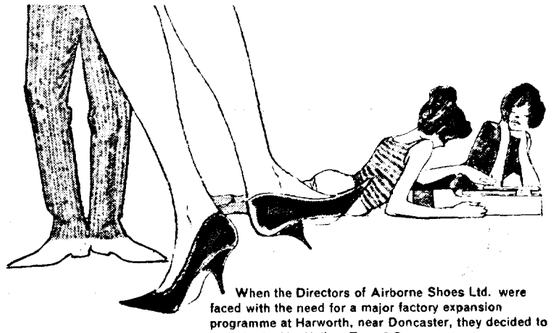
SIDINGS are one of Wards' main lines



There's a whole department of the Ward organisation devoted to the designing, laying-down, and maintenance of factory railway sidings. One of the reasons for the pre-eminence of Wards in this field is the fact that the trackwork and railway 'furniture' is produced by companies within the Ward group. Further evidence of the comprehensive nature of Wards' service to industry!

When the Directors of Airborne Shoes Ltd. were faced with the need for a major factory expansion programme at Harworth, near Doncaster, they decided to build in the Vic Hallam Type 6 System.

The 16,000 square ft. building, which enabled production capacity to be doubled, was productive within three months of the site-start.

Thus another progressive manufacturer turned to Vic Hallam Ltd., to meet the need for quick erection, modern appearance and competitive cost.

VIC HALLAM BUILD A FACTORY

FOR AIRBORNE

The cost of the superstructure of a Factory in Type 6 is usually between 19 6d., and 24 - per sq. ft. Write to Timber Buildings Division, Vic Hallam Ltd., for the Type 6 Brochure.

ASAHI PENTAX

There are many satisfactions to owning an Asahi Pentax.
The smallest and lightest of all single lens reflexes, it is admired by professional, and amateur alike for its handling ease, mechanical perfection, and most important, the new quality it gives to their 35mm photography.
When you invest in a Pentax—for yourself or for a really fine gift—you do so with the confidence that this camera will not only perform magnificently in almost every picture situation, but will also grow in value as other Pentax equipment is added to your system.
The Pentax camera system will lead you all the way from the intimate world of the micro-photograph to the wide-open adventures of imagination-inspiring tele-photography. In the meantime, you know you have the finest camera in the world at its price, with automatic diaphragm, Pentax-invented instant-return mirror, positive, brilliant focusing, smooth shutter release, and a host of other features designed to help you take better pictures.
Choose a Pentax S1 or S3 according to your individual preference. Each one is a fine product of precision manufacturing—each has an individual personality.

"I've an urge to surge, dad"

"Suppress it, Son"
"Dad, Old Squirt says that OHM'S law . . ."
"Son, listen. O.H.M.S. reminds me of little buff envelopes"
"So you're definitely non-ohmic, Dad?"
"Call it that if you like, Son"
"I could call it non-linear, too, Dad"
"And a lot of good that would be, Son. I'd think you were accusing me of not toeing the party line"
"Dad, I'd never accuse a classical economist like yourself of deviationist tendencies"
"Then you'd better elucidate, Son"
"Certainly, Dad. Non-linearity is a characteristic of one of the many types of resistors made by Morganite Resistors. It means that they don't obey Ohm's law, which, as you know, says . . ."
"I know, I know, Son. Mr. Ohm and I were old friends"
"And they're used in surge suppression, contact protection, voltage stabilisation . . ."
"Son, those are real twenty dollar words. Explain yourself simply"
"Certainly, Dad. In the formula on the blackboard—you might call it non-Ohm's law—n 1 to 6 according to the application. Now R equals . . ."
"Son, I think you'd better switch to some of the other things made by these erudite Morganites"
"Switch is the word, Dad. They make rocker, toggle and rotary switches, alone or in combination with carbon track potentiometers, edge-operated and preset potentiometers . . ."
"Son, spare us, please"
"And docile little devices, Dad, that do obey Ohm's law, called Insulated Resistors"
"Well that's a relief, Son. Such obedience must indeed bring pleasure to Mr. Ohm"
"Yes, Dad—and lots of other people too. Transistor radios, television sets, and computers are crammed full of them"
"I said 'Pleasure', Son"
"I heard you, Dad. Of course, we all take our pleasures differently, you know"
"Agreed, Son; and mine, as you will remember from some of our previous conversations in this series, is a Napoleon brandy; and I need one badly now to revive me".

SERVICEABILITY

Close teamwork in all operations at home and abroad, and with client staffs, is an integral part of the Kellogg service.

All the technological and scientific knowledge of the engineers and scientists at Kellogg House and at the Kellogg laboratories in America is applied to the design and construction of your plant. This knowledge has been used successfully on many varied projects such as Chemical Plants, Steel and Paper Mills, Copper and Oil Refineries, and other processing plants in all parts of the world.

The Kellogg method has improved process and plant engineering. It has saved money in procuring materials and equipment, expedited erection, achieved the earliest possible on-stream dates and stayed within pre-determined costs. The result is a plant which gives you the best possible service obtainable.

Let Kellogg show you how their coordinated engineering-procurement-construction service can work for you.

Write for the booklet "On The Job With Kellogg International Corporation".

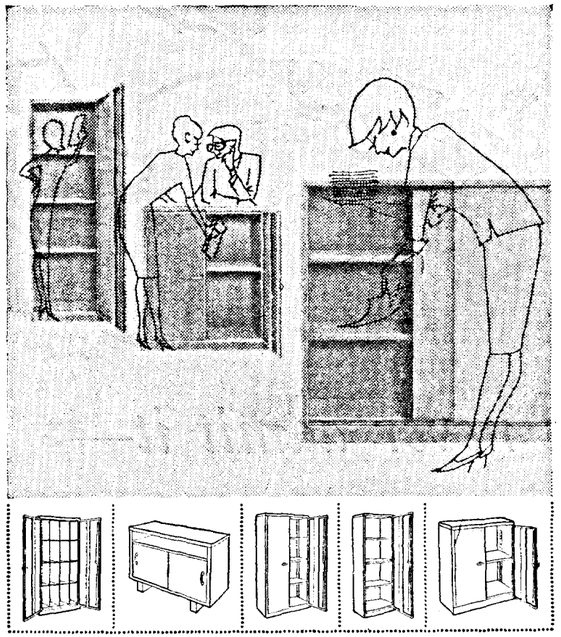
BRITAIN TO-DAY. NO. 1 OF A SERIES : ARTIST JOHN BRATBY **The British Breakfast**



There's a feeling of time suspended at breakfast—an eight-thirty limbo between the night's sleep and the day's work... filled with the chink of crockery and the salty tang of frying bacon. Soon the children will be at school and there'll be time for a second cup of tea. The hearty, heartening British breakfast.

USI *in Britain*

US Industries, Inc., is one of the 300 largest companies in the United States with fourteen divisions in Great Britain, the United States, Western Europe, Latin America and the Far East. The company specialises in the manufacture and distribution of advanced equipment for a wide range of modern industries including industrial automation; metal fabrication; transmission of oil, water and gas; petroleum production; electronics, aircraft and missiles; educational science; dairy refrigeration. In all these fields, and by direct contribution to the economic expansion of Great Britain, USI seeks to meet tomorrow's needs as well as today's demands.

ARE YOU AN INVESTOR -WITHOUT KNOWING?

You probably are... because two people out of three are INDIRECT investors on the Stock Exchange

You may never have bought a share in your life. But do you pay into a pension fund or a friendly society? Are you insured—life, fire, car, anything? Do you belong to a trade union? Have you some money in a bank, savings bank, building society?

If so, you are, like two adults out of three in Britain, an indirect investor. Organizations like these invest their funds (which means *your* money) through the Stock Exchange.

So *you* benefit. Without the dividends and profits from sound investment, these institutions would either have to charge you more—by higher contributions and premiums—or give you less in return for your money.

And Britain benefits, too. Millions of pounds from millions of people, which might otherwise not be invested, are thus put to work through the Stock Exchange—helping to finance and expand industry and commerce, to create employment and prosperity, to produce more goods both for home use and for export.

How the Stock Exchange serves us all

The Stock Exchange makes investment possible, by providing the essential free market in securities. Because of this market, industry and commerce, Government and public authorities, are able to raise hundreds of millions of pounds every year on the best terms, by the issue of shares and loans; while investors (private people or institutions) can put their money to work, buying or selling securities at fair, competitive prices. The skill and experience of Members of the Stock Exchange is at the service of all investors.

Publicly financed companies, whose shares are dealt in on the Stock Exchange, *not* only do most of our trade and employ millions of people; they make many of the goods we use every day, from toothbrushes to cars and TV sets. Large-scale, low-cost production has brought these things within the reach of more people than ever before. Thus investment leads to *shared* prosperity, a higher standard of living.

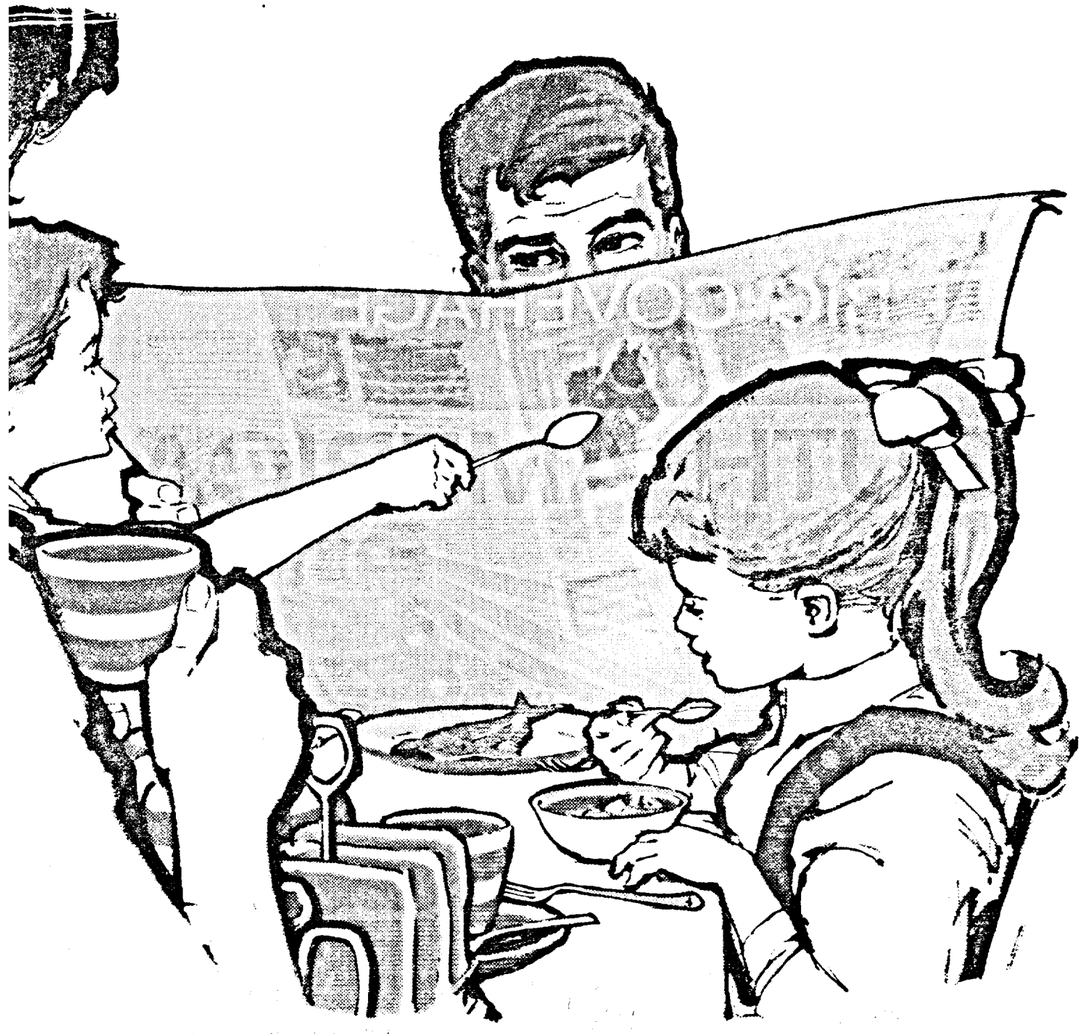
Such companies, again, carry on most of our export trade, enabling us to pay for the food and raw materials we must import to live.

The Stock Exchange, too, attracts much overseas business to London. As a great *world* market, it plays an important part in maintaining Britain's financial position.

THE STOCK EXCHANGE LONDON

"My word is my bond"

LIKE TO KNOW MORE? For more information, or a list of stockbrokers, please write to The Secretary, Room C13, The Stock Exchange, London, E.C.2. Or you can watch the Exchange at work from the Visitors' Gallery and see a film about it. Open from 10.30 to 3.0, Monday to Friday, entrance at 8 Throgmorton Street.



In addition to but independent of the London Stock Exchange are the Council of Associated Stock Exchanges, with separate exchanges in 21 of the larger cities and towns, and the Provincial Brokers Stock Exchange, with members in about 110 other centres throughout the British Isles.

Naturally I would never admit it—

but I am often thankful for that wall of newspaper at breakfast, when even the most beautiful of women may doubt her attractions and sometimes her ability to reach a man's heart through his stomach, even though his breakfast kipper, née herring, is cooked to perfection and he obviously never gives a thought to the fishermen of England who risked their lives to catch it, and probably doesn't even know who made the ship's machinery that hauled in the catch, let alone that his wife would appreciate an occasional word or smile.

ROTARY PRINTING PRESSES · DOCK & HARBOUR MACHINERY · POWER PRESSES · CEMENT MAKING MACHINERY · HIGH PRESSURE VESSELS

In so many instances it is Vickers who make the machinery used to procure your breakfast, or even print your breakfast newspapers. Ships' hydraulic or electric capstans and other deck machinery for instance, or rotary newspaper presses. In other cases Vickers even make the machines that make the machines that make the products you use. For in a whole world of engineering, Vickers are Engineers to Industry.

Intimations of Instability

TO say again, and again, that 1962 is not 1929 is perhaps, after the convulsive behaviour of stock markets this week, an unavoidable bromide. But nobody should pretend that this sedative reassurance amounts to any sort of prognosis of what the convulsions have portended. Certainly ghosts still walk on Wall Street. The burst of cheering that greeted the closing bell in the market on Tuesday, after the last hour that had nearly wiped out the losses of the day before, was an expression of spontaneous relief; but it also testified to the weight of the fears that had—for the moment—been lifted and to the underlying instability of stock markets today. Men live, today, in less confidence on all accounts than in the twenties; and simply to record that Wall Street fell more sharply on Monday than on any day since October, 1929, cannot but evoke one of the spectral reasons why we still walk so warily. These fears nag not on Wall Street alone but on the Continental bourses, where prices have tumbled from the heights of euphoria, and in London, where in turn on Tuesday the stock exchange suffered its worst setback since 1929, only to rally as strongly as Wall Street a day later. Once again, Wall Street has reasserted its dominant influence on the world's stock exchanges. And the reasonable reassurances that "the authorities" must offer—that the American economy is in sound shape and that small investors should not panic—inevitably conjure up the old disquieting atavistic precedents of a generation ago.

This does not make the reassurances less reasonable. The short run pointers for the American economy this year are still tilted firmly upwards. It is still possible, even after the rally, that the break in prices on Wall Street may jar the confidence of business and cause some significant trimming of forward capital investment plans, or may whittle down purchases of cars or houses or other goods. But to assume that, in this day and age, governments would not have the time, or the nerve, to apply counter cyclical policies if the economy plunged downward towards an old-style depression is to confess that nothing was really learnt by the capitalist countries from the thirties—that Keynes might never have been born. This is capitalism's outstanding question.

At the heart of the current turmoil, the American stock markets are, admittedly, in much better shape than they were thirty-three years ago. Proportionately, the falls in prices have been smaller and the quick rally was nearly as sharp as the preceding decline. The stock markets are nowadays more closely regulated (though indeed their present degree of regulation is under further scrutiny); they are far less vulnerable to margin selling now, and there has been no pyramiding this time of holding companies. The danger spot in Wall Street is elsewhere; it resides in the decisions that small investors in the mutual funds—the American form of unit trusts—will take. If, having been persuaded by high pressure salesmanship to put their faith and savings in the capital appreciation of equities, they become disenchanted and begin to sell their holdings, the fall in the market could swiftly gather pace—and with it the repercussions on business confidence. As far as possible, the managers of the mutual funds in America have stayed out of the equity market in the last few months; while the savings have continued to flow in they have been building up their liquid balances. These could now provide the longstop in the markets—provided that the mutual fund investors themselves stand fast.

This is to ask a lot of investors who bought for prosperity and are now

told that the prosperity may be "profitless." They have seen the glamorous "growth" stocks—electronics, bowling alley and "leisure" issues—tumble. They once bought equities as a hedge against inflation; they have now seen, not least in President Kennedy's brusque stand on steel prices, outright efforts by the Administration to prevent renewed inflation. They were encouraged to buy equities to share in the fruits of economic growth; they are now by no means sure how much long-term growth the American economy can count upon or how much this will be reflected in profits and in dividends. Once the concepts of "equities for inflation" and "equities for growth" are questioned, what is left in the cult?

In these terms, it is possible to argue that the latest bout of selling in Wall Street simply represents the latest phase (perhaps even the culminating one) in the process of disenchantment and that the fall is no more than a necessary correction to the excessive exuberance of the past. This is a comforting doctrine: it implies an early levelling off in market prices; all's well, it says, that ends well. It may, immediately, be right as well as comforting; but how far does the readjustment in dividend and earnings yields have to go before investors recover their confidence? It is not only in Wall Street that investors have to ask whether they have not discounted future profits much too far ahead. London prides itself on sober assessments and does, in fact, enjoy the steadying influence of institutional investors who can be more flexible in their attitude towards equities and fixed interest stocks than, say, an American mutual fund. But here, too, in some equities expectations have looked overbought for some months. This is true not only of London and New York; it is true also of the continental bourses, where American and other investors have blithely bought earnings which cannot be calculated in the present with any accuracy, let alone in the future. This week's melodramatic shake-up, however irrational in its ups and downs, does reflect a reappraisal of the rising expectations of these free countries. It is a straight challenge to the makers of western policies; can they, in stamping on inflation, not maim growth itself?

ALL investment is anticipatory; and because the stock exchange is the market where the predictions, guesses and hunches are translated into hard cash bargains it reflects an economy's past, present and future and acts as a magnifying mirror of the state of confidence. There can be no doubt that confidence in the economic future has taken a hard rap from the fall in equity prices in practically all markets in the western world. Thoughts have to be jerked out of a contemplation of what happened in 1929 and in the thirties into an appraisal of what may in fact happen in the sixties. This is the sobering exercise to which these events invite us.

It may indeed be the exercise that the stock markets are in their way engaged upon at present. In Britain, investors have to adjust their ideas to an economy hobbled by the balance of payments and by the push of costs; on the European continent, to a slowdown in the roaring rate of growth. In the United States, looking past the still favourable indicators for this year, investors have to ponder the special problems of an economy given lately to rather more severe fluctuations across a rather slower trend of growth than has been common on this side of the Atlantic: special problems that include a growth of labour productivity outstripping the growth of production, so that the employed labour force is hardly rising and unemployment does not fall much; and which may include, as the speculator seeking new shares to back will not fail to notice, an ominous dearth of civilian growth industries, just when the defence-based industries that provided the lion's share of growth and innovation during the fifties have settled into steadier orbit.

All these may indeed be the new, and formidable, special problems of advanced industrial economies. The United States naturally meets them first; it also, habitually, recognises them earlier than other economies might. To confuse them with the problems of 1929 merely fogs the new challenge with old fear. One should not underrate the stock market's nose for detecting uncertainties in the economic climate; but the uncertainties of 1962—and beyond—will not go away with a Wall Street rally. This week we have got perhaps, in these intimations of instability, a whiff of the future—and just a glimpse of the test in competitive progress that the free countries have to face.

What Happened
In Wall Street and the World's Markets | pages 891, 910

Yankees at King Charles's Court

The earnest American interest in European union has great value and some tactical drawbacks

AMERICAN statesmen, tackling the organisation of Europe, sometimes appear as innocents abroad. Their zeal for European and Atlantic unity is marked by native boldness, generosity and imagination, and by an endearing sense that what was good for America is good for Europe too. But the disposition to oversimplify, to slip from the idealistic to the doctrinaire, can be irksome to natives whose attachment to their ancient customs goes deep.

In hard fact, Europe has every cause to be thankful for the generosity of the American approach to its affairs. For ten years whole-hearted American support for the communities of the Six has been an essential, perhaps a decisive, factor in their success. Now, despite the fear that an enlargement of the common market will hit American exports, warm American support for British membership is smoothing Mr Macmillan's way, while President Kennedy's trade programme is opening up a wider prospect for the whole western world. Yet at times the very ardour of the American approach can

be self-defeating, as it was eight years ago with the European Defence Community. The impatience and vision of the men on the new frontier could bring dangers now.

Both the vision and the over-simplifications owe much to individual men. Just as the success and shape of the European communities are due in large measure to the foresight and zeal of the band round M. Jean Monnet, so the support in Washington, first for the communities of the Six, then for British membership and now for a grander Atlantic design, owes much to the close personal relationship between the Monnet group and men like Mr Dillon and Mr George Ball, the American Under-Secretary of State. Most of the ideas floated by these men in the past eighteen months—a new drive to cut down Atlantic tariffs, a new world deal for agriculture, a much closer integration of western economic policies generally—are admirable. But no coterie of men, however wise, has a monopoly of sound ideas, and sometimes the grand new designs have been incomplete. There is a problem of applying ideas to realities which the men on the new frontier have not yet fully solved.

The American picture of the new Europe, a mighty unitary pillar which is to be one pier of a new Atlantic bridge, leaves no place for excrescences like the European neutrals, who do not share in carrying the central military load. Here there are arguments on both sides. But Dr Adenauer did put his finger on a flaw when he quipped in Berlin that the United States was trying at one and the same time to keep the neutrals out of the common market and to persuade them to help in a new international authority to control access to the city. Has American policy for east-west relations, which now seems bent on keeping down the temperature in central Europe, been fully reconciled with the clearcut objective of a tightly integrated—and committed—West?

Visiting Australia and New Zealand early in May, Mr Rusk, the American Secretary of State, fell into another difficulty. His trip—for a meeting of the Anzus pact—was designed in part to boost the morale of the outlying members and to persuade Australia and New Zealand to share America's military burdens in south-east Asia. Yet he found himself infuriating opinion in the two countries when he declared that the United States opposed any permanent preferential arrangements for Australian exports in the European market.

True, some of these limitations of the American approach to integration are little more than faults of style. After all, Australian wheat—the main bone of contention with the Australians—gets no preference in the British market today. There is sound sense in the contention—heard in both Washington and Brussels—that in the end the problems of temperate agriculture will be solved only by world-wide agreements under which all the main producers and consumers combine to stabilise prices, open up markets gradually, and organise the disposal of surpluses systematically. But is it really necessary to proclaim the funeral of imperial preference in advance?

The defects of style also reflect subtle but significant misunderstandings of the nature of the Commonwealth problem. It is true, as Mr Rusk pointed out in Australia (and as *The Economist* and the "Europeans" on both sides of the Channel have pointed out many times before) that the Commonwealth does not depend for its existence on the relics of the Ottawa system, the rapidly eroding tariff preferences which some Commonwealth countries allow on some of the produce of some others. It would be a poor lookout for the Commonwealth if it did. The Commonwealth is held together by more subtle and flexible bonds—common values, a pattern of consultation, a "capacity to adapt" (Mr Rusk's phrase)—which can, or should, survive changes in the mechanics of trade.

BUT these ties "light as air but strong as links of iron" have to be handled delicately. Mr Menzies will be pointing out while he is in London that there are Commonwealth communities—say, his fruit-growers—who are so highly dependent on the existing trade pattern that they need some kind of effective preference (perhaps a tariff quota) if they are to survive. They cannot be comfortably fitted into the grand, unpreferential and logical design which surely should in time unfold for the basic agricultural products. The invisible Commonwealth bonds would be damaged, too, if the British did not fight, and appear to fight, to guarantee all kinds of specific Commonwealth trade interests—even though by the time the guarantees are effective, many of the special interests may have been taken care of by bolder solutions embracing the whole West.

Mr Menzies' hotfoot trip to London is, in short, not wholly a by-product of Australian domestic political ephemera. Britain's bid to enter into the common market presents the Commonwealth system with a major test. For the health and well-being of the system it is desirable that Britain should join the common market. But whether the Commonwealth, with all its potentialities as a multi-racial community, survives the change intact depends very much on the skill with which it is grafted on to Britain's new European source of energy and wealth. That is why, though preferences may have no future, the ideas the British negotiators have been putting forward in Brussels for some kind of permanent system of consultation between the Commonwealth and Europe have great value. Plans for a more effective joint European aid effort—perhaps for the participation of the European community in the Colombo plan—would be valuable too. Groupings like the Commonwealth and the French community—even, one day, the United States itself—may be increasingly subsumed in a new western system of collaboration, but they remain in themselves sinews of political strength.

It would be altogether wrong to blame M. Monnet and Mr Ball for their near-monopoly of big ideas about the future of the West. The British have been so slow themselves to grasp the full potentialities of the common market in and outside Europe that it is not surprising that its shaping has fallen to others. But one omission could be remedied quite soon. In the recent tariff negotiations in the General Agreement on Tariffs and Trade (the 20 per cent "Dillon round") the British government was slow to sew up its side of the triangular bargain between Europe and America. Yet Britain has an immense interest in rapid and massive bargaining to get tariffs down on both sides of the Atlantic. Once President Kennedy gets his new trade powers, Britain should assume its proper, leading position in the tariff bargaining between Europe and America. Hard bargaining with America ought to be extended to agriculture too. So far, when Americans have talked of world-wide agricultural agreements, they have seemed to mean the opening of European doors to American

and Commonwealth exports. But why not get something back from the United States if the Commonwealth reduces preferential margins on British goods? Dutch, Danish and New Zealand farmers have an interest in reducing American barriers to their own exports of butter and cheese. Not everyone in Washington is blind to such possibilities. But a mighty shove will be needed from both Europe and the Commonwealth if the United States is to be made to bring its agricultural support system into the bargaining—as it should.

The Six have lately begun to wake up to the potential strength of Europe's bargaining position. They have answered American duties on glass and carpets (necessary in terms of the domestic politics of President Kennedy's trade legislation, but still painful for European exporters) with the threat of duties on American exports of some chemicals. The move is a healthy one. One of the strongest arguments used in Washington to support the new ideas for Atlantic partnership has been that the common market will otherwise soon tread on American toes. The sooner it does, and the common interest in hard bargaining becomes apparent, the firmer the eventual partnership will be.

SUCH thoughts could—surprisingly—perhaps lead Mr Macmillan this weekend to a position not wholly opposed to that of General de Gaulle, whom he is visiting near Paris. The general has always seen unity as a means of enabling Europe to stand up to America. And there is this much in it: the Atlantic community which the Americans are beginning to conceive will be sound only if both the two pillars on which it is built are strong and of comparable height.

With characteristic magnanimity and farsightednesss the grand designers in Washington have appreciated this; their wish for a strong, united Europe could even lead them to accept some kind of Franco-British pooling of nuclear weapons, if this proved a decisive condition. But they have not always appreciated some other implications: that if Europeans are to form their own community they must be allowed to shape it in their own way. The thought is relevant to Britain's application to join the common market. American persuasions may still be effective in Bonn, but in Paris there are indications that the very earnestness of the American anxiety for British membership could actually stiffen the French terms.

If the zeal of the men in Washington who see the success of a common market, including Britain, as the key to the West's future has to be properly harnessed, there is the more reason for Europeans to look outward to the opening prospects of the widening and still indispensable partnership with America. The kind of archaic egocentricity that colours General de Gaulle's attitudes is no French monopoly. If America has much to discover about Europe and the Commonwealth, Europe has as much to discover about its own new world-wide responsibilities, until lately the prerogative and burden of America alone.

Tory Spectres

To each of the parties next week's by-elections present a major, and perhaps crucial, test for the future

THE Conservatives, too, have been talking this week about 1929 and about 1923. Mr Macleod, speaking on Monday, at Matlock in the Derbyshire West constituency, gave an awful warning to absconding Tories who might have forgotten the behaviour of Asquith and Lloyd George in putting in the two minority Labour governments of the 1920s. So did Lord Hailsham at Middlesbrough on Wednesday. But the more immediate scare that Tory candidates are trying to play up is that the present swing to the Liberals could at last present Labour with its first outright by-election gain in this Parliament. If this were to happen either at Derbyshire West or at Middlesbrough West—both of which poll next Wednesday—it might be the one thing, some Conservatives have been saying, that would bring the rebellious electorate to its senses. According to this thesis, the Liberal vote might then be expected to fade, particularly at a general election, as doubtful Tories reinsured against another 1945.

If, however, the Liberals were actually able to repeat their Orpington success and take enough votes from both the other parties to win a semi-suburban seat like Middlesbrough West, then they might go on to become a really serious prospect in a substantial number of Conservative-held seats, and perhaps —if the general election were held at a singularly unpropitious time for the Government—install themselves in some of them. There are thus two Tory nightmares that could develop next week. The first is of a Rochdale situation (i.e. the Liberals letting Labour into a seat, which Labour might then hold at the general election). The second is of an Orpington-plus situation (i.e. the Liberal revival displaying such sufficiently powerful momentum in all parts of the country that a numerically significant third party—with, say, 25 parliamentary seats—might determine the government of the country at the start of the next Parliament).

In advance of the public opinion polls, the Tories seem to have assumed that in rural Derbyshire West, which the Liberals did not fight in 1959, the Liberal has relatively little chance of getting in himself—although some reports from the spot do not speak highly of Tory morale. In Middlesbrough West, however, although the Liberal did badly in 1959 (getting 9.7 per cent of the poll—far below the party's national average), a greater possibility exists of a real take-off. In the two other Tees-side by-elections this year, both in Labour-held seats, the Liberals, starting from nothing, took 23 per cent of the poll in Middlesbrough East in March and 27 per cent at Stockton in April. From the outset, this has seemed to give the Liberal, Mr Scott, fighting his second Middlesbrough constituency within three months, a good prospect of being there, or thereabouts, next Wednesday night. Middlesbrough West is not a particularly easy seat for the Liberals, despite its large suburban segment, since it lies in a heavy industrial area, and is one which Labour, with 35.4 per cent of the poll in 1959, has serious hopes of winning itself this time. The Labour vote is not likely, therefore, to disappear—to the Liberals' advantage—in the extravagant proportions that it did at Orpington. Even if Mr Scott failed to carry the seat, anything above 27 per cent of the poll would be a result to rejoice Mr Grimond's heart. In Derbyshire West anything like the East Fife result—26 per cent of the poll—would be encouraging for a first attempt.

FOR Labour to win in either Derbyshire West or Middlesbrough West would mean that the party had at last broken out of the straitjacket in which, despite Mr Gaitskell's and Mr Brown's prophecies of a general election victory, it has been pretty strictly confined throughout this year's by-election series. Labour has still to show either that it can take a significant number of votes directly from the Conservatives or that, where a Liberal stands, it does not also lose one vote for every two that the Tories lose. Thus, if Labour loses no more than 4-5 per cent of its 1959 poll in either seat, it will be doing well. But wherever the Liberals have made a serious push outside a traditional working-class stronghold in the present by-election series, Labour has seen much of its remaining white-collar and under-30s vote swept from its grasp. In farming or semi-suburban seats, like next Wednesday's two, Labour must still feel itself vulnerable to a Liberal attack—although, in general election terms, a wound at Derbyshire West this time would in no sense be mortal. In this kind of calculation, the Stockton result is a peculiarly bad augury for Labour's chances in Middlesbrough West, for at Stockton the Liberal took 18.5 per cent of the poll from the Tory and 8.5 per cent from Labour. A repetition of this would actually mean a neck-and-neck Liberal and Tory race in Middlesbrough, with Labour trailing sadly, and the issue conceivably depending on the very small number of casual votes that drift the way of the two Independents.

Obviously Labour cannot afford to find itself shut out in third place in either seat or falling below one-third of the total votes cast. One suspects that when the public opinion polls pronounce on the local prospects at the beginning of next week Mr Brown will heave a sigh of relief if Labour enters the home stretch with hopes of over 30 per cent of the vote in both constituencies. In Derbyshire West this alone would be a moral victory in a difficult area for Labour; in Middlesbrough West it could be enough to persuade Labour supporters to come out in force both to oust the Tory and stop the advancing Liberals in their tracks.

For the Labour nightmare at this stage is that, while the Tories are still expected, at a general election, to reclaim a substantial proportion of those party dissidents now plumping for the Liberals, past experience suggests that most Labour votes captured by the Liberals at by-elections stay Liberal at general elections. The latest National Opinion Poll in the *Daily Mail* gives Labour a lead of 3.3 per cent over the Tories in the country as a whole; making the normal assumptions about "wasted" Labour votes running up vast majorities in the party's strongholds, this margin certainly does not justify the party's expectations of forming the next government independently. It is therefore the size of the Labour vote that should attract most attention next week If it does not show a distinct improvement on recent performances, the odds will still remain on Mr Macmillan winning his second general election—other things being equal.

But will other things be equal, in the sense that the Tories can still reasonably look forward to an upturn in the economy this autumn? It is, after all, on this phenomenon that the party relies to reclaim the middle-class, white-collar votes—dependent on an expanding economy—that are now swinging Liberal. It is doubtful whether Wall Street's chilly message will really influence voting behaviour in a seat like Middlesbrough West next week; probably it will have no more importance than the local row over whether or not Mr Gaitskell means to nationalise ICI. But Mr Macleod, for one, has good reason to look over his shoulder at the real spectre for Tory prospects—and restrictionist policies—that 1929 conjures up.

New Model Police

The Willink report sets out the necessary first steps for the organisation of a modern, and efficient, police service

IT is frankly disappointing that the Royal Commission on the Police has—with one dissentient—set its face against the radical reorganisation of the existing 158 local forces in Britain into 18 or so large regional divisions. The arguments for this scale of rationalisation are twofold. First, the future development of local government groupings in this country must increasingly favour the regional unit for a wide range of services that naturally demand the breaking down of local autonomy. This has been done already with the hospital services. It must eventually come in a purposeful way with town and country planning. And the emergence of concepts like the Greater London Council and the continuous county on Tyneside, which recognise the cohesion of large conurbations for all local government functions that call for a high degree of co-operation between the constituent boroughs, shows in which direction the tide is going to flow in the 1960s and 1970s. Secondly, the needs of the police themselves in the age of the motorised and technically-expert criminal inevitably call for the practical integration of local forces whatever their responsibility to a precise unit of local government.

The Willink commission is rightly concerned to raise the standard of recruitment to the top and specialist jobs in the police service. It remarks that the police are "failing to attract a sufficient number of recruits of the quality required to make future leaders." It has discovered "no recent instance of a university graduate entering the service." It must surely be apparent that the wider the scope of professional responsibility, the less the chance of parochial interference by some watch committee or other (e.g., in questions like promotion) and even the greater the financial reward for running a large unit, then the more likelihood there is of recruiting the standard of entrant that the commission wants. Arguments of this kind were put forcefully to the commission by the Inns of Court Conservatives in their evidence; only the sensible Dr Goodhart seems to have agreed wholeheartedly with them.

Plainly the Willink commission has kept two dangers very much in mind. It must have been impressed, even against its better judgment, with the popular feeling against a national

police force—although this has not prevented it from recommending the appointment of a chief inspector of constabulary for Great Britain who would be the senior professional adviser of the Home Secretary and the Secretary of State for Scotland. It may also have considered that to establish regional police forces in advance of the development of local government authorities covering a similar area would, in effect, be to set up a national police force. These hesitations can be respected, although the existing status of the Metropolitan Police, who are directly responsible to the Home Secretary, suggests that the large unit is really more acceptable than some constitutionalists would make out. It is certainly desirable that where bigger local authorities do come into being in the major conurbations—as they should, for example, on Tyneside and Tees-side—they are given full responsibility for the administration of the police service throughout their area.

The commission's actual recommendations for amalgamations are undoubtedly useful in themselves; they should help to clear away a good deal of inefficiency and obstructionism. The commission believes that forces with a strength of under 200 (there are 58 of them at present) suffer considerable handicaps; and that the retention of forces under 350 in strength (there are another 39 of these) is justifiable only in special circumstances. The smaller the force, particularly in boroughs, the more chance there is of inflexibility in calling in outside assistance, the less scope there is for the employment of specialists, and the greater the difficulty in settling promotion and disciplinary issues with visible impartiality. The commission calls for an expert working party to put forward proposals for compulsory amalgamations; it makes no precise recommendations itself beyond suggesting that in Scotland only Glasgow, Edinburgh, Aberdeen and Dundee should retain independent burgh forces. This would suggest that in England and Wales no borough of under 180,000 population would have any right to its own force, although the qualifying figure might profitably be set much higher.

IN several ways the claims of centralisation are openly admitted. The chief inspector of constabulary is one; the recommendation that secretaries of state should be statutorily responsible for the efficiency of the police service, and have power to call for reports from chief constables is another (with implications of greater opportunities for parliamentary questioning). The commission wants a new central unit for planning and research. It would give secretaries of state the right to compile the short lists for the appointment of chief constables, thus removing some of the difficulties that cropped up in the recent Kilmarnock case. All this is a sensible recognition of modern needs. In contrast, the commission rejects the idea of a national CID, at least until "the resources of the present system have been fully developed and exploited"—although three members enter the warning that much more needs to be done to improve the rate and speed of detection.

The commission wants to see an injection of non-political membership in all local police authorities in England and Wales (it is already true of the counties). It would like two-thirds of the membership to come from elected councillors and one-third from co-opted justices. This will raise some eyebrows—and some hackles among rating authorities. It rejects as "theoretical rather than real" the obvious criticism that magistrates should not be directly identified with their local police. This is a doubtful thesis; if it has validity it is only in the context of very much larger police regions than the average run of county boroughs.

The commission states firmly that relations between the police and the public are good; it finds no evidence that in recent times they have ever been otherwise. The only sense of antagonism is said to be among motorists and young people. To improve relations with car drivers the commission suggests that uniform policies should be formulated for the enforcement of traffic laws. It sensibly does not want the creation of a separate corps of traffic police. Although this idea has its attractions it would lead inevitably to the establishment of some kind of sub-police force which, because of its inferior status in the public eye, might merely invite complaints and easy disrespect. No ideas are offered on how to raise the estimation of the police among young people. It may be remarked that chief constables who seem to resent the realistic, but invariably sympathetic, treatment of police life in popular television programmes do nothing to advance the police claims for understanding.

By and large the commission seems satisfied that complaints against the police are both small in number and reasonably dealt with by internal investigation. This approval extends to the investigation carried out after the demonstration in Trafalgar Square last September by the Committee of 100. Even so, there are ways in which existing practice could be improved. The commission wants the decision on whether or not to institute criminal proceedings against police officers after complaint by a member of the public, to be taken by the Director of Public Prosecutions. It wants a tightening up in the recording of complaints at divisional headquarters, and the complaints books to be examined by inspectors of constabulary and members of the local police authority.

A minority of the commission calls for the appointment of a commissioner of rights both to review the decisions of chief officers in dealing with complaints and to review police conduct in disputed incidents. This ombudsman-like innovation is worth support; it should not be resented by chief constables if it helps to satisfy public opinion that incidents like the handling of the crowds late at night in the Trafalgar Square demonstration are thoroughly looked into by an impartial authority. Cases of this kind might be better dealt with *in camera* before a commissioner, allowing for the full presentation of the police version of events, than in public argument in the House of Commons.

The Willink commission has done a thoroughly useful job, both in its emergency recommendations on police pay eighteen months ago and in its airing of the needs and problems that beset a modern police force. Its plans for reorganisation probably go further than most local authorities—or chief constables—would like to see, although appreciably less far than the future evolution of local government may eventually require. Its major conclusions should be accepted by the Government and implemented with the least delay.

NOTES OF THE WEEK

SOVIET UNION

Mortal Combat?

MR KHRUSHCHEV challenged the common market on Wednesday to something like mortal combat. It was not news, of course, that the Russians do not like the European movement; nor was the substance of his arguments fresh. What was new was that he, and not some obscure party theoretician, was using them. His counter-proposals were odd. He suggested an international conference to consider setting up a world trade organisation "to embrace all regions and countries of the world without any discrimination." Since this phrase roughly defines the purpose of Gatt, of which Russia is not a member, the Soviet leader's proposal might seem superfluous, but it should, of course, be seen in context.

Mr Khrushchev was talking, however, to the underdeveloped (and mostly uncommitted) countries, and only incidentally to the Europeans themselves. The common market, he argued, was an imperialist device to undermine the independence of the emerging countries and to prevent them from industrialising themselves. The occasion was a Soviet-Mali friendship meeting, with President Modibo Keita present; the Soviet host peppered his speech with references to "neo-colonialism" and said the socialist states were ready to help the new countries defeat it.

The Soviet prime minister's speech was the culmination of what begins to appear as a carefully orchestrated campaign launched by the external services of Moscow radio early this year. The targets are widespread and the treatment selective. There have been anti-common market talks in Danish, for instance, and in English and French for the African countries. In Russia itself, until quite recently, analytical commentaries on the common market were confined to specialised journals, while the popular press limited itself to occasional warnings and anathemas. But the coverage is now being extended. On May 23rd, *Pravda* devoted a full page to "The Common Market—weapon of monopolies," half of which was taken up by an article on the new phase in European integration by the academician A. Arzumanian. Four days previously, *Ekonomicheskaya Gazeta* devoted five of its pages to a summary of a discussion on the same subject held by its debating club.

Professor Lyubimov recently compared the EEC to a Maginot line and recalled the fate of that military monument. The Russians claim that no common market can solve the conflicts and contradictions of capitalism; and no defensive earthworks, they add, can prevent Russia's economic expansion.

MOTOR INDUSTRY

Strikes at a Standstill

VERY firmly the workers of the British Motor Corporation and of Ford Motors have told their less responsible shop stewards to get lost. Having tried the soft approach in their talks with the top union officials at the Ministry of Labour last year, the employers are seeing that perhaps toughness pays: the 55 British Motor Corporation electricians who caused the trouble have gone back to work with no more than they had been offered when the strike began, while the Ford men have started work again, refusing even a one-day token strike, despite the management's refusal to talk turkey over their wage claim. The left-wing shop stewards, in the Midlands and in London, are learning that the refusal by the Confederation of Shipbuilding and Engineering Unions to vote for a strike applies to their realms too: Mr George Woodcock, general secretary of the TUC, was by coincidence carrying the argument for responsible trade unionism into the annual conference of the Boilermakers' Society, that fortress of old-fashioned militancy.

The real drama of the week took place at Fords. The company has recently given responsibility for labour relations to a member of the board, who has seen the Dagenham plant's shocking record prolong itself in the past months (69 unofficial stoppages in 32 weeks). It claims that, because of the men's intransigence, it has made "no profit at all on passenger or commercial vehicles this year," and it has refused to grant any pay increase until the disruption stops. The official unions, while covering themselves against the militants by making threats of a strong future reaction, have swallowed this refusal. And, best of all, a highly influential union leader has made a very sensible suggestion for improving the firm's labour relations.

Mr Jack Cooper (whose predecessor as general secretary of the National Union of General and Municipal Workers, the former Sir Tom Williamson, took his seat in the Lords this week) has proposed that Ford's Dagenham plant, in which 21 different and often rival unions are represented, should be split up into a dozen sectors, for each of which a permanent full-time senior shop steward should be appointed, to be responsible to all the unions concerned. These officials, whose appointment would conflict with all the outworn traditional dogmas of union autonomy, would have the job of forestalling trouble before it reaches the point of a walk-out. In exchange, all workers at Fords would be subject to one month's notice of termination of contract, binding for both employer and employees.

If the employers want their tough stand to have long-term results they would do well to adopt this suggestion as their own: it was not discussed by the unions when they met on Wednesday. A root cause of the trouble at Fords is that, though the men

Where BMC stopped

earn high wages, there is always a risk of their losing money or job through circumstances beyond their control. By all accounts too, Ford's supervisors are not above criticism in their dealings with the admittedly awkward men's representatives. If the management does nothing to reduce the element of job insecurity, there will be no lack of angry militants seeking revenge for this revolutionary week.

CONSERVATIVE PARTY

Change for Macleod?

TWO reports—one from the chief whip and the other from a group of backbenchers—will have briefed the Prime Minister for his meeting with the Tory 1922 committee, which is taking place as *The Economist* goes to press. They show that while party morale has not collapsed it is distinctly low and nervous in front of the Derby day by-election double. The actual loss of both Middlesbrough West and Derbyshire West may not greatly surprise

the party chairman, Mr Macleod, who all along has maintained that the anti-government storm would not blow itself out until mid-summer. The Tory recovery plan that seems to be shaping up is for the terms of entry to the common market and the cabinet reconstruction to be announced together in July, whereupon the party will go over to the offensive, preaching the cause of Europe with missionary fervour and trying to rob the Liberals of every stitch of their more respectable clothes. As their contribution to protecting the consumer 50 Tory MPs have tabled a motion urging the Government to take a more purposeful stand against monopolies.

No blinding flash of light is likely to illuminate Mr Macmillan's mind as he goes through the other lucubrations of his self-appointed advisers from the backbenches. They have made the usual complaints about lack of effective public relations, failure of ministerial grasp, the need for an immediate cabinet reshuffle. They have also demanded a full-time party chairman. This request should be distinguished from the personal campaign against Mr Macleod conducted in the *Express* group of newspapers. It is, indeed, slowly dawning on backbenchers that he is a good party chairman, getting on well with the permanent officials and making speeches which for style and content might even get a grudging alpha minus from Lord Hailsham himself.

What really is exercising most Tories is not that there is too much Mr Macleod but that there is not enough of him. There is no question of the Prime Minister actually sacking Mr Macleod to please the few voluble critics, but in the cabinet reconstruction he is likely to be given the choice of remaining as full-time party chairman or taking on a Government department. Since the post of party chairman is a highly exposed one and as no previous holder has ever gone on to really high office, there seems little doubt of the course Mr Macleod would like to follow. But whether a change—except to very high office—could now be presented as anything but a personal reverse is another matter.

DISARMAMENT

Keeping it Dark

ASSEMBLING hopefully on Tuesday to confirm, as they thought, the one agreed text to emerge from ten weeks of negotiation, delegates at the Geneva disarmament conference found the rug brusquely snatched from under their feet by Mr Valerian Zorin, the Soviet delegate. The shock was the greater because this text had been jointly tabled only four days before by Mr Zorin and the American delegate, Mr Arthur Dean, who had thrashed it out at a whole series of meetings. Moreover, it was the Russians who had insisted on, and secured, top priority in discussion for this particular item—a declaration condemning propaganda that might lead to war.

Mr Zorin's explanation why what he had offered to the conference on the Friday was no good on the Tuesday was transparently artificial. He cited the "provocative" sending of American troops to Thailand (on May 17th), and the alleged threats of preventive war contained in a book by Dr Edward Teller and an article by Herr Franz Josef Strauss (both published months ago). These "recent events," he said, had forced the Soviet government to insist on revising the declaration.

Although his *volte-face* was apparently designed for maximum dramatic impact, it cannot have come as a complete surprise to the other delegates—except, perhaps, to those of the east European countries, whose spokesmen had duly fallen into line in welcoming the agreed text, and who have now had to perform the usual simultaneous somersault. Among the western, and at least some of the non-aligned, delegations, there had been growing up throughout May a belief that Mr Zorin was under orders to disrupt the conference by injecting "cold war" bitterness even into discussion of items on which it might have seemed possible to achieve harmony. Tuesday's affair merely confirmed this belief further. If, as is increasingly evident, the Russians are set on avoiding any real down-to-earth discussion of practical aspects of disarmament, the question that remains is whether this is a careful build-up towards a breaking off of the talks as in 1957 and 1960, or a stone-walling operation intended to show once again that no agreement can be hoped for in negotiation with Russia at any level below the summit.

GERMANY

Next Year's Chickens

NOT surprisingly, the German Social Democrats in congress this week have been much preoccupied with the future government of west Germany when and if Dr Adenauer leaves office. With more show of sorrow than of anger the Social Democrat leaders, Herr Ollenhauer and Herr Brandt, spoke of the need for a change at the helm and declared themselves willing to participate in a broadly based government once Dr Adenauer was gone. As after the last elections, Herr Brandt clearly sees a "large coalition" with the Christian Democrats as a means of finally exorcising the remaining social prejudices against a Social Democratic government which still exist in Germany. The party's moderate approach to the task of opposition is not to the taste of all its members. But at this week's party gathering the left-wing heretics were, as usual, firmly put down.

Social Democrats are not the only people speculating busily about the post-Adenauer era. Among the Christian Democrats too the Chancellor's authority has appeared to be in decline since his Berlin sortie on May 7th. Arguments about foreign policy, and speculation about the succession, have been rife. At the moment, however, it is generally accepted that the Chancellor will not leave office until next year. And Dr Erhard, hitherto the accepted heir-apparent, has lost a good deal of credit through his bungling of the Volkswagen affair. If there is any star in the ascendent it is that of Dr Schröder, the foreign minister.

Herr Lübke, the federal President, whom Herr Brandt met for a discussion on foreign policy on Monday, shares his leaning towards a broadly based coalition. Some clues to the mood of the Christian Democrats may be given by their party congress this weekend. It may be that, as usual, the doubts will be swept under the red carpet on this ceremonial occasion. But an important step to prepare the party's organisation for the post-Adenauer era will be taken on June 5th, when Herr Dufhues, the new party organisation chief, takes office.

ROAD TRAFFIC BILL

Special Pleading

MR MARPLES has come under heavy pressure from backbenchers on both sides of the House who think that clause 3 of the Road Traffic Bill, now before a standing committee, is too hard on offending motorists. The clause provides for the automatic disqualification from driving of anybody convicted three times in three years of certain offences such as speeding, ignoring traffic lights or pedestrians on zebra crossings, driving while uninsured or without due care. Disqualification would not invariably be compulsory. "Special reasons" may be adduced by the offender in mitigation of his offence—and it is on the definition of these special reasons that the minister may be impelled to give way.

On the face of it, there appears to be a good case for arguing (as a powerful motorists' lobby has argued) that the past record of the driver involved, the extent to which he depends on his driving licence for his livelihood, and the "bad luck" of being caught where so many go free should be special reasons for avoiding disqualification. But this case does not really bear closer examination. The past record of the driver (his two previous offences) will by definition be taken into account; the dependence of a driver on his licence has nothing to do with his disregard of clear regulations; nor can the random nature of prosecutions be called a matter of luck (they would be a good deal less random if there were more policemen to enforce the law).

Clearly the precedent established by a ruling of the Lord Chief Justice in 1946 is the right one: special reasons in mitigation must relate to the offence, not the offender—that is, where some overriding reason exists for the commission of the offence, or where, but for the contribution of some other person, it would not have been committed at all. Just as clearly, the purposes of the whole bill would be vitiated if special categories of people immune from the normal penalties were created, if taxi-drivers, for example, were allowed to drive consistently badly with impunity. That would not only be inequitable; it would defeat the intention which the bill ought to be proclaiming—to bring about a radical change in road habits. Mr Marples should stand firm.

SERVICE PENSIONS

Pauper, Capt. (retd.)

LAST week, on a motion by Mr William Deedes, the House of Commons once again addressed its attention to the matter of past servants, armed or otherwise, of the Crown and its late possessions. Many of these people retired, before the reforms of the 1950s, under a system which had been modern after the Crimea, and as a result they are considerably worse off than the Government (judged by its own increases) thinks its servants ought to be. What was a generous reward for services rendered in 1919 has become, through circumstances outside the control of the pensioners (and, for that matter, of the Government), pretty mean. Members on both sides of the house demanded that equity be restored, and that civil servants retired from ex-colonial territories which were not fulfilling their obligations should receive as adequate a handshake as those from territories which were careful to keep their pensions in line with British practice. They thought the Government might be the best source of this "topping-up" money.

Sir Edward Boyle gave a soft answer, but failed to turn away the wrath of the 21 members who spoke for the motion. It was the Government's policy, he said, to rely on the ex-colonial employers to keep in step with home pensions: departure from that would breed difficulties, even though the amount involved was less than £300,000 a year. As for armed service pensions, the house ought to remember that pensions were rewards of service, and were related to working salary and the length of that service, not to the needs and subsistence of the pensioner. The Government was nevertheless sympathetic to the plight of these people who suffered particularly from the effects of the rise in the cost of living, and would give its attention to the idea of setting up a loan fund from which to top-up colonial pensions.

Nothing, however, is likely to be done; not so much because of the Treasury's well-known doctrine of immutability, but because of the spiral of irrefutably fair claims which would arise from such a topping-up. The military would be followed by police, firemen and fisheries inspectors, and the colonial servants by home civil servants and a great many others whose pensions were awarded on the old code. The amount involved might yet not be wholly crippling, but the Government believes this expenditure would, at this time, be contrary to its economic policies—and it is on them that those pensioners who now receive adequate pensions are going to have to depend if they are not to suffer the same fate as their predecessors.

SERVICE OVERSEAS

Twilight and Dawn

RECRUITMENT on permanent and pensionable terms for service in British dependencies is soon likely to stop altogether. Already it is a mere trickle; contracts for a limited term of years now prevail over offers of a full career. In the twilight of empire, one thing is clearly seen. For British specialists as for administrators, there is no prospect of passing into the service of a newly independent government and remaining there, with normal chances of promotion, until retiring age. The 1960 report of the Select Committee on Estimates envisaged a new advisory and technical service, absorbing former servants of the Colonial Office as well as new recruits, which would enable Britain to meet some of the needs of Commonwealth and other "new" countries for expert staff by providing a pool of personnel available for periods of secondment on demand; their security—in the form of pensions, pay while unemployed, and promotion rates—would be guaranteed, wherever they might roam, by their own government at home. This concept, although described as "attractive," is firmly demolished in the white paper* which the Secretary for Technical Co-operation, Mr Vosper, presented on Tuesday.

Such a service, it is forcefully argued, would not be a practical proposition, because the numbers, duration, and types of vacancies could not be accurately forecast; and because there would be little to attract good candidates in a career studded with spells of unemployment (albeit paid unemployment) and possibly fading away into a kind of sinecure; without prospects of rising to a senior post, and involving constant switches not only from country to country but also from the service of one government to that of another.

The Department of Technical Co-operation therefore proposes to base most future recruitment on the principle of service overseas "for limited periods which form part of a career based primarily in Britain."

On present showing, the white paper may seem unduly sanguine about the prospects of prising more teachers, doctors and other specialists away from a home country that wants many more of them for itself anyway. It recognises, at least, that example is better than exhortation, and promises that "all Government departments will make a special new effort" to release staff for service

The Economist

MAY 31, 1862

COLONIAL OBLIGATIONS

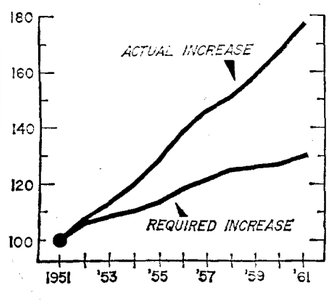
"Since, then, our colonial empire costs us five millions a year in calculable outlay, and as much again, perhaps, in ways that we cannot estimate; since our commerce with it would be just as great and just as profitable if we were traders merely, and not owners; and since its political value is simply and undeniably a delusion, why should we insist on retaining it? The answer—the only and sufficing answer—lies in one word. It is our DUTY. We owe to those we govern obligations which we cannot shake off, and must not neglect. Our relations with our countrymen and our subjects cannot be cast aside the moment they cease to *pay*. Of course, as soon as a colony really made and peopled by Englishmen is in a position to stand alone,—as soon as it can govern itself and defend itself,—as soon as it no longer *needs* us,—there can be no reason why we should retain its unwilling allegiance a single hour. Nor should we dream of doing so. If Canada or Australia wished for independence, we should gladly let them go, and wish them Godspeed. But they do not, nor is there any likelihood that they will. The connection costs them little, and profits them much. Canada, indeed, is likely to be dragged into our disputes with the United States, but she can count upon our vigorous defence. Australia has fewer external dangers, but greater internal deficiencies and wants. Neither colony could gain anything by shaking off a dependence which, though recognised, is never felt. . . . But our other colonies are differently situated. They have not yet risen to the full growth and stature of nations. They are not exclusively British. They are not homogeneous. There we have special duties to perform: civilisation to spread among inferior tribes; justice to administer to heterogeneous and unfriendly populations, all equally committed to our charge. In New Zealand and at the Cape there are aborigines whom we are bound to protect, and whom we must improve and educate if we can. If we were to cast off these colonies, it would probably go hard with the *native* races. It *might* even go hard with the European settlers. . . . To all Englishmen settled among savages we owe protection. To all uncivilised races among whom we have encouraged or permitted Englishmen to settle, we owe guidance, guardianship, and teaching.

overseas ; this presumably implies that due inducement will be offered. Devoluted Britain cannot in this respect match a country such as France in which the central government is the direct employer of a much wider range of professional people, and can shuttle them more easily between posts at home and abroad, with guarantees against loss of seniority. The DTC will have to use a lot of vigorous persuasion on both public and private employers if the present sadly inadequate supply of volunteers is to be enlarged to anything like the scale needed. In its task of encouragement, it deserves to be encouraged.

DEVELOPMENT

Not Yet Contemporary

THE attention of the British Government might well be respectfully drawn to the fact that the number of colonial territories is shrinking. Fourteen months ago Mr Macleod, then colonial secretary, acknowledged this in the Commons and concluded that the functions and title of the Colonial Development Corporation would have to be reviewed. The review, according to the corporation's 1961 report and accounts, is now " proceeding." It had better proceed smartly: since Mr Macleod's revelation three more territories have become ex-colonial ; and Uganda goes in October, with the Caribbean hot on its heels. Another fourteen months and the CDC might be almost restricted to Fiji and the western Pacific islands, for under its present constitution it cannot establish new projects except in colonies.



Projects begun in colonies may be carried on after independence, however. As a result, the CDC is a plantation owner in the federal Republic of Cameroun (independent, non-Commonwealth) which, last September, took the formerly British southern Cameroons under its wing. This may set a fortunate precedent and help the British Government in good time to stretch its imagination beyond, say, " Commonwealth Development Corporation " to, say, " Contemporary Development Corporation." Then money could be put into other people's former colonies besides Britain's—a counterpart, perhaps, for an increased flow of European money into English-speaking Africa.

The case is strengthened by the CDC's latest report. Not only is the corporation now paying its way ; it is making a profit and, albeit slowly, paying off its debt to the Treasury for earlier losses. Its operating surplus for 1961 was £3½ million, about £1 million up on 1960. Its credit-worthiness is now good (in contrast to the early years) and it is hopeful of borrowing increasing amounts from lenders other than the British Government. This is as it should be, but the Treasury ought now to be reviewing the ceiling of £130 million for long-term Treasury loans to the CDC.

I'M ALL RIGHT JACK

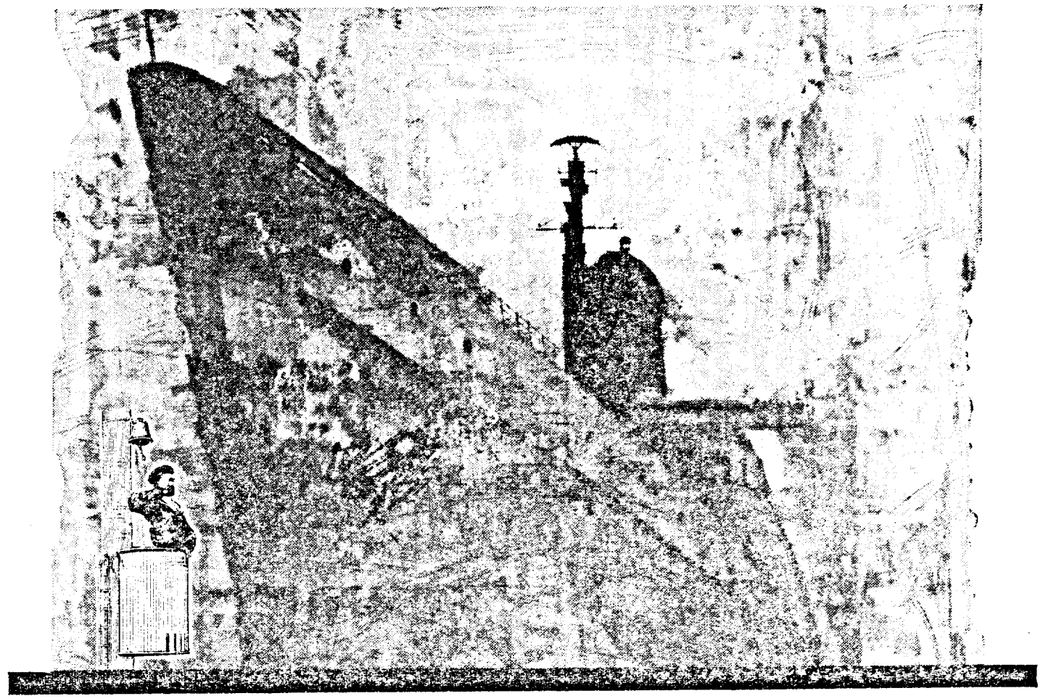
The lower line in the chart shows the increase in average wages and salaries per head, taking 1951 equal to 100, which would have been required to meet the rise in the cost of living, as measured by the consumers' price index. The upper line shows the increase which actually occurred.

The figures were given by the Financial Secretary to the Treasury in a parliamentary answer this week.

FAMILY PLANNING

Voluntary Reappraisal

TO every voluntary movement sooner or later there comes a time for detached, critical self-appraisal: a time for assessing whether its organisation is best fitted for its purposes ; whether they are being equally well fulfilled by any other body ; whether, indeed, they still exist. The Family Planning Association has had the courage to undertake just such an appraisal through the medium of a working party of detached but friendly observers, under the chairmanship of Professor Lafitte, and this week, at its annual conference, it has been digesting and discussing the sections of the report that have been completed.



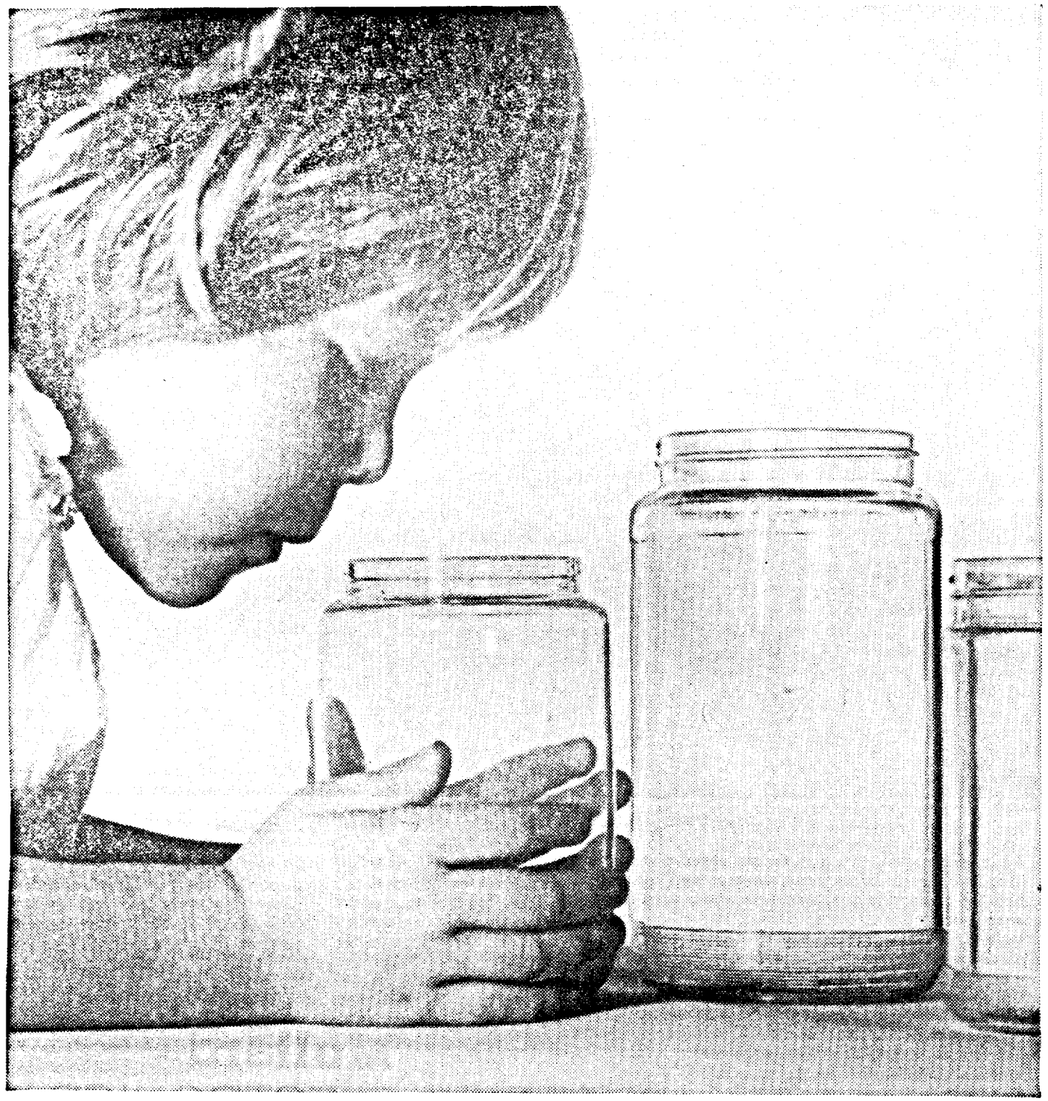
When the working party was beginning its own survey, the marriage survey sponsored by the Population Investigation Committee was just being completed. The results of this survey, which was discussed in *The Economist* of September 16, 1961 (page 1053), show that the actual practice of birth control in Britain diverges widely from the aims and methods of the clinics run by the Family Planning Association. The association's first object is " to advocate and promote the provision of facilities for scientific contraception." The marriage survey showed that about seven out of ten of couples who married in the 1950s fully approve of birth control in principle, and of those who practise it, whether avowedly or with reservations, about two-thirds began when they married. But for the FPA clinics the scientific method of contraception is *par excellence* the cap worn by the woman, whereas only a minority, less than 15 per cent, of avowed birth controllers prefer this method; the sheath is chosen by a half of them, whether they were married in the 1930s or 1950s, and though withdrawal (*coitus interruptus*) is less popular now than it used to be, it still takes second place and is the method used initially by one in five of the recently married couples. In other words, the British people, to a much greater extent than Americans, still prefer contraceptive methods that are undertaken by the husband.

Planner, Plan Thyself

THE Family Planning Association, on the other hand, is a woman's organisation, staffed for women by women. Out of the 7,761 new clients who came to the association's clinics in November, 1960, only 15 were men, and there are only 6 male doctors known to be working in them out of about 450 altogether. The family planning movement began, the Lafitte report points out, at a time when ignorance of birth control was widespread and when doctors and leaders of society were hostile, and took on the nature of a crusade to protect wives from their husbands' " selfishness " and the lower classes from their own ignorance and the prejudice of their betters. Today, however, the atmosphere is completely different, although the unskilled manual workers still lag well behind the rest of the community in their attitude and practice. Birth control is respectable, even in the eyes of the Church of England—bishops' wives can be found among the professional men's wives who tend to run the branches—and though there is an increasing tendency among newly-weds to seek expert advice about the means of achieving family planning, the advice is just as likely to be sought from doctors privately as from the FPA clinics, and a good many couples get along without professional advice at all.

If, therefore, the last big barrier is removed, and the health authorities can give birth control advice and instruction to any couple desiring it, and not just for reasons of the woman's health, has the Family Planning Association a future as an independent voluntary organisation ? Many local health authorities, and a few hospitals, already lend premises for use as FPA clinics, free or at a nominal rent, thereby giving the association a concealed subsidy. Furthermore, as the Lafitte report emphasises, the association is unlike other voluntary organisations in not having to rely on donations and subscriptions to carry out its work. It pays its way mainly by the discounts it receives from the manufacturers of the contraceptives it supplies to its

in a changing world



An invisible beam, sweeping the sea ahead, gives instantaneous warning of hazards obscured by darkness, storm or fog. This is Radar. A far cry, indeed, from the man in the crow's nest on whose eyes alone the safety of a ship once depended.
Mullard have been privileged to make important contributions to the progress of marine radar, and their microwave valves, cathode ray display tubes and other specialized electronic devices can be found in the equipment of leading British radar manufacturers.
As important as the products themselves, are the technical and engineering applications and advisory services which accompany them. These facilities, based on extensive research and development laboratories, are freely available to users of Mullard products.
If you manufacture electronic equipment—no matter what—and are interested in such services, please write to us at the address below.

Mullard products in typical general purpose marine navigation radar sets include :

Glass means purity

& to manufacturers many other things besides: it's versatile – glass containers can be made in all sorts of sizes, shapes and colours.

It's sturdy and good looking – it shows off products most attractively, and helps to sell them faster.

Glass from United Glass is backed by unequalled research, design and service facilities.

UNITED GLASS

UNITED GLASS LTD., LEICESTER HOUSE, LEICESTER SQUARE, W.C.2

clients—much more generous discounts than are given to chemists or doctors. This subsidy tends to put blinkers on the workers in many of the association's branches, who tend to think exclusively in terms of supplying the cap.

Sooner or later an oral contraceptive that is both safe and reliable will surely be developed. Already the "pill" is available both from the health service, if birth control is medically justifiable, and from the FPA clinics. When it has become the recognised method, the association, as it is today, will become out of date. There could still be work for a voluntary organisation in this field, but it may be concerned more with general advice on matters of sex and parenthood than with birth control, and this implies much closer co-operation with other voluntary bodies like the Marriage Guidance Council.

NIGERIA

Theory Half Proved

LIKE nearly every black African country, Nigeria is not a nation but a collection of tribes living within boundaries drawn by a former colonial power. The question about it, as about others, has been: will it disintegrate? The theory of Nigeria, comfortably held in Britain, is that the three regions, each with a dominant tribe and party, are so finely balanced one against the other that not only unity but democracy will prevail. In the event, the northern and eastern parties together run the central government; the western region provides the federal opposition. On Tuesday, however, the government of the western region was suspended under a bill passed by the federal parliament: a federally-appointed administrator will run the region until December.

The bill was introduced by the federal prime minister, Alhaji Sir Abubakar Tafawa Balewa, who said that his government was motivated solely by a desire to keep the peace. On the face of it, this seems justifiable. The Action Group, ruling party in the west, had broken into two factions, each with a different idea of who should lead the party and who should be prime minister of the western region. Neither side showed itself willing to accept defeat; the danger has been a possible growth of secessionist ideas within the region. But Sir Abubakar will now need to exercise great restraint if he is to resist the temptation to destroy the Action Group and its authority within the western region altogether. By doing this he would, of course, remove the federal opposition. For this reason, the democracy part of the British theory of Nigeria may now be proved wrong. But the federal government's firm action at least suggests that the country remains strongly enough governed to hold together. A crisis like the present one had to come. If Sir Abubakar keeps Nigeria in one piece now, the chances of it staying that way will be immeasurably strengthened—and, in the long run, so will the confidence of potential investors.

TRINIDAD

Clash of Colours

ORPHANED by the collapse of the West Indies Federation, the separate islands, or groups of islands, are now intent on seeking their early independence. Following close on the heels of the delegates from Barbados and the Leeward and Windward islands (the "little eight" who have agreed, provisionally, on some loose form of federation), a delegation from Trinidad and Tobago is at present in London. The problems for Trinidad, compact and relatively well-endowed, seem infinitely simpler than for its small, scattered and impoverished neighbours. But over its constitutional conference, which opened on Monday, hang the shadows of racial suspicion.

If Trinidad is treated reasonably generously by the outside world, its economic future holds promise. Its troubles are social, arising from its mixed population of African and Indian descent. About a third of its million people are Indians who, till now, have done rather better economically than the African majority. Frightened of losing

Dr Williams (left) and adviser

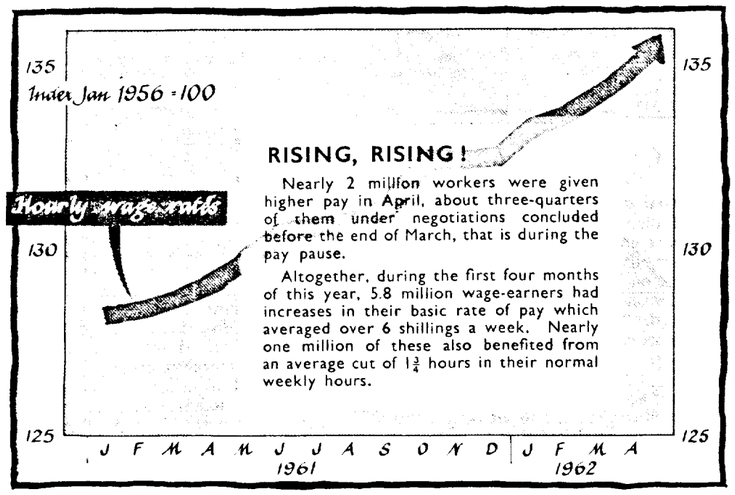
their grip, the Indians, in the name of the opposition Democratic Labour party, have been trying to entrench various checks and balances into the constitution. In particular, they are anxious to find a way of ensuring that the judiciary should be independent of government grace and favour—a hard thing to guarantee in a community as tiny as Trinidad's.

In the end, all arguments about Trinidad revolve round the personality of the prime minister, Dr Eric Williams. A clever, touchy man, he is suspected by his enemies, and by some of his friends, of harbouring authoritarian designs. In December, his People's National Movement won 20 of the 30 seats in parliament; tempers were not improved by the opposition's charge that his party had fiddled the voting machines which Trinidadians use instead of ballot boxes. Now, uneasily, Dr Williams and the opposition leader, Dr Capildeo, are arguing things out at Marlborough House. Dr Williams has suffered himself in the past because of colour prejudice abroad; the best lesson to draw would be to show tolerance at home.

ULSTER ELECTION

Who's Second?

NORTHERN IRELAND went to the polls in its general election on Thursday but the actual result had already been decided when nominations closed on May 21st. With 20 Unionists, including Lord Brookeborough and five other members of his cabinet, all returned unopposed Ulster is assured of another term of Unionist government. Three Nationalists and one Independent Labour candidate were also returned without a contest. The results in the remaining 28 seats will be announced by the time this issue of *The Economist* is in readers' hands. The real interest here is in the performance of the Northern Ireland Labour Party.



The entire weight of the election campaign was concentrated in Belfast where Labour was defending the four seats it won in 1958 and attacking the Unionists in seven other constituencies. In the Unionist stronghold of Ballynafeigh Labour will also test Ulster's Liberal revival in the competition for who comes second. It would be a bad result for Labour if it were to lose any of its four seats, particularly as no third candidates appeared there to split the anti-Unionist vote; it would be a very good result for the party if it were to win, or make a really close fight of it in three other city seats: Willowfield, Cromac and Duncairn. Elsewhere, and particularly outside Belfast where the party was breaking new ground, its prospects have not seemed too rosy. There were 12 Nationalist-Anti-Partitionist members in the last parliament, and the group had some hopes of gaining one more seat. The prospect is that Labour will still remain the third party, and it could even lose its uncomfortable title as the official Opposition if the Nationalists, as some signs indicate, choose to accept this role as their rightful due, and thus, by im-

EIU Quarterly Economic Reviews
covering 57 countries or groups of countries

out next week

U.S.A. The Review discusses the phenomenon of a business upswing without inflation, the nervous tensions it is generating, and the problems it poses for the administration. The Herculean clash over prices between the President and the steel industry, and the recent collapse of share prices, are assessed as both symptoms of business unease and fresh contributors to it. Yet current economic trends analysed in the Review suggest that doubt and despondency are premature.

plication, recognise—for the first time—the Northern Ireland constitution.

SOUTH WEST AFRICA

Red to Move

DR VERWOERD has done well out of inviting two members of the United Nations special committee on South West Africa to tour both South Africa and the South West. He has convinced the United Nations men (but not yet the General Assembly) that there is no threat to international peace and security in South West Africa, that there are no signs of militarisation in the territory, and that genocide is not being practised. He will not have won their approval of apartheid: the judgment will be found in the committee's report, due to be presented in September. Meanwhile Dr Verwoerd's Minister of Justice, Mr J. Vorster, said in parliament on Monday night that Ghana and certain other black African states were preparing to liberate the Republic by 1963; it is not known whether or not the attack would come through South West Africa, thus creating the threat which the General Assembly is worried about. Mr Vorster was justifying his "Sabotage" Bill, which places the presumption of proof of innocence on the accused—and whose harshness has aroused protests from thousands of South Africans, black and white.

Future relations between South Africa, South West Africa, and the United Nations will largely be affected by two rulings due to come from the International Court this year. The first case concerns payments for extraordinary United Nations operations (like the one in the Congo). If the court says—as it probably will—that these payments should be regarded in the same way as normal contributions to the UN, then South Africa—and the communist countries—will be called upon to pay up. At this point African and Asian governments anxious to support the UN and attack South Africa should watch what the Russians, self-advertised friends of the anti-colonialists, decide to do.

By ignoring such a World Court decision, the Russians would weaken the UN (which they want) and weaken its capacity for putting pressure on Dr Verwoerd (which they do not want to be caught doing). All this would determine the effect of the second impending judgment: on whether, legally speaking, South West Africa is, or is not, a United Nations responsibility, inherited from the League of Nations. If the Russians ignored an International Court ruling against them, Dr Verwoerd would feel better able to do the same. His gains of the past week might then be consolidated.

EUROPE

After the Plunge

A NEW twist has been given to the pamphlet war about the common market by a new Liberal party publication.* It steps off the well-trodden ground of for and against on to the new terrain of the opportunities that may open up once Britain is inside the community. Most of the nine contributors are not Liberal party men; they include M. Pierre Uri, one of the drafters of the Rome treaty, and M. Hirsch, president of Euratom until he fell foul of General de Gaulle last year. (*The Economist* must also declare an interest; a member of its staff is a contributor.)

The intriguing thing about the pamphlet is the way a good many common assumptions about the common market are turned upside down. Mr Robert Neild, for example, who firmly declares himself a socialist, is evidently not alarmed by the prospect for sterling if Britain joins. On the contrary he sees a pooling of reserves, a Triffin plan for Europe, as offering a new opportunity to solve the sterling problem. Politics, where the fears of British anti-common marketeers are most acute, are seen by several contributors as the area where Britain can make its biggest contribution. Instead of discussing the dangers for the Commonwealth and other outside countries if Britain joins, the contributors talk of a future Atlantic community and of joint western policies to help the undeveloped world. One can almost hear sceptical voices protesting that this pie in the sky is all very well—but that what matters is the tough and exceedingly difficult negotiations in Brussels. Yet how much simpler Britain's European problems would be today if a few more people, in the past, had thought beyond the next fence.

In a speech on May 25th, M. Marjolin, vice-president of the European Commission, elaborated some ideas of his own about the need for a European plan. Such venturesome thoughts are naturally not touched on in a new Treasury pamphlet, "Background to the Negotiations" (HMSO, 3s.). But this is easily the most intelligent and forward-looking government publication on the subject so far. A chapter "If Britain Joins" gets to grips with some of the likely consequences of British membership. It foresees an invigorated economy and, for the Commonwealth, a changed but not diminished position in the world.

Foremen at School

FROM OUR SPECIAL CORRESPONDENT

Two ministries have just revealed their present state of thought about the training of factory supervisors. The Ministry of Labour has published the report* of a committee set up last year by Mr Hare, while the Minister of Education, Sir David Eccles, has put his name to some departmental views on the matter. Both ministries agree that things are pretty bad; the independent observer might add that both the poor performance of many British manufacturers, and the number of strikes that arise from the failure of communication between workers and managements, must in part be due to the poor quality of the most junior (as well, sometimes, as of the most senior) links in the management chain.

There are about half a million supervisors and foremen in British industry. Last year only 10,000 students went through courses for supervisors in the 140 technical and commercial colleges that offer such training. Almost half of these attended evening courses only. Some 2,000 firms use the facilities of the Ministry of Labour's excellent Training Within Industry scheme; 1,100 others systematically provide more comprehensive training courses for their supervisory personnel. But there are 6,000 firms in Britain each employing more than 250 workers, and 8,750 more employing over 100 apiece. Evidently only a tiny proportion of supervisors and foremen are trained at all—which is all very well for the born leaders, but leaves a terrible gap among the others. What is encouraging about the Ministry of Labour report is that the committee unanimously—including the representatives of the employers' organisations—proclaimed its extreme discontent with the inadequacy of the present amount of training given to supervisors.

Quite clearly there is a demand for this training: quite clearly, too, there is no lack of people ready and willing to supply it. Apart from the Ministry of Labour, the Department of Scientific and Industrial Research, the universities and the technical colleges, at least 14 separate bodies (from the Workers' Educational Association to the City and Guilds Institute to the National Institute of Industrial Psychology) are concerned either with the training of supervisors or with the training of people to train supervisors. Many large firms, and the nationalised industries, have their own training schemes. Seven of the voluntary bodies concerned with training were represented on Mr Hare's committee—which is perhaps why, although condemning the results of the present uncoordinated arrangements, it recommended that they should not be changed. Pointing out, quite rightly, that the activities of the exising bodies rarely overlap, and that there is plenty of room for all of them, the committee went on to argue the case against the setting up of some central body; it will itself meet again at the end of the year to review progress, and the Minister's National Joint Advisory Council of bosses and trade unionists will be kept regularly in touch with developments.

* The Selection and Training of Supervisors. HMSO. 3s.

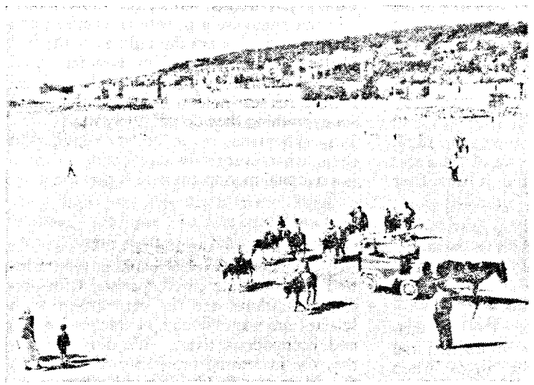
This is quite certainly inadequate. The committee does not have the pull to get things done (the last committee on this subject, in 1954, reported that the employers' organisations were "taking an interest," but this is about all that could be said eight years later). The NJAC is composed of men too senior in their own organisations, and too busy with other subjects, to do very much in so detailed, yet so vital, a field. The committee contented itself with recommending that the employers' organisations should be more active in setting up training courses and publicising them among their members; but the employers' organisations of this country have remarkably little influence on their backward members and hardly enjoy the lively respect of their most go-ahead ones.

In fact the training of supervisors is two separate problems. First, there is the question of how to train men who are not expected to rise very high within their firm, or to exercise very great responsibility. For them, training within the firm is the first need: they must fully understand the firm's attitude to trade unions, the negotiating procedures, elementary principles of instruction for new entrants, safety rules, and so on. There is no need to send such people away on courses. But if misunderstandings, and perhaps strikes or—worse—accidents are to be avoided, it is vital that they should not simply be given an extra thirty bob a week and left to muddle through. But before some employers will take the necessary trouble to see that these men are properly told what to do, they must be stimulated by the prospect of some immediate advantage. (The committee seems to have argued that everyone agrees that training is a good thing: so they do, in general terms, but many less bright employers fail to see where the profit lies for themselves.) The effective means of persuasion here could well lie in an unfair and discriminating bribe, perhaps in the form of a tax concession, for those employers who really do see that their foremen are properly instructed.

The second, and rapidly growing, class of supervisors consists of white-coated technicians whose job inevitably involves them in a certain amount of order-giving. For them, supervisory skills should be built into their technical training; any refresher course should (as some already do) include instruction in modern techniques of labour relations. This is precisely where co-ordination, with official backing, is needed between all the admirable bodies specialising in one particular field of training; and it is the point at which training in supervisory skills falls most nearly within the purlieu of education as such. The universities and technical colleges need to be brought into this field through the Ministry of Education itself; just as they are helping the motor industry (thanks to the Minister of Labour) to improve its industrial relations by training shop stewards and foremen, they can play their part in other industries. It is a pity that the committee, which put forward all the arguments for a really swingeing reform in official attitudes here, failed to follow them through to their conclusion.

Birmingham-on-Sea

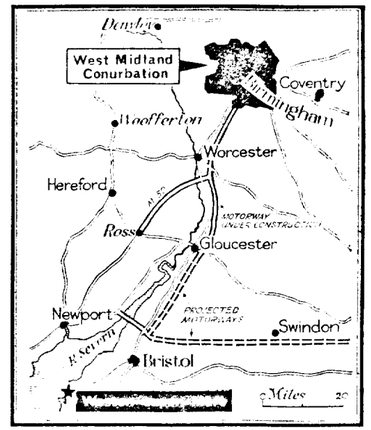
FROM A CORRESPONDENT IN BRISTOL



The Minister of Housing and Local Government, Dr Hill, announced this week that he intends to designate a site for a new town at Dawley, Shropshire, to take part of the West Midland overspill population. But more modest efforts under the Town Development Act still have a part to play.

Weston-super-mare, the Somerset seaside resort with a fear of old age, has opened an outlet for Birmingham's overspill. What Birmingham (population 1 million) needs to lose in industrial weight, Weston (population 42,000) aims to gain. For years people concerned with the future of the resort have feared that it might become a gigantic old folks' home. It relies almost exclusively on the seasonal holiday trade, and has steadily lost many of its young people. Amusement arcades offer few employment prospects for qualified school leavers.

More than 1,300 children will leave school in Weston this summer, and many of them will eventually feel compelled to move out unless more varied employment can be found for them. This means more light industry and, in particular, immigrant firms that will bring in a nucleus of skilled workers with them.



The link with Birmingham looks a natural one. Birmingham is to Weston as Brighton is to London. A third of the resort's holidaymakers come from the Midlands. Many Midlanders retire to Weston, and several Birmingham firms run convalescent homes there.

Four years ago Weston borough council gave the overspill scheme the go-ahead, with government blessing under the Town Development Act. A 125-acre corporation-owned site at Oldmixon, not far from the town centre and near the sea, was set aside for industrial and housing development. The council will lease sites on it or sell freehold, and in some cases, subject to Whitehall approval, will build and lease factories.

But nothing for school leavers

The chief drawing factors for Birmingham firms are the cheaper land and good communications. Oldmixon has a railway link; the Bristol port system is only 20 miles away; and a new motorway route, planned to run through Somerset from Bristol, will be close at hand.

Of the 44 acres set aside for industrial development on the site, 13 have already been taken up, including 1¾ acres occupied by the first settlers from Birmingham—a firm that had been in the city for nearly 150 years. Work starts soon on a factory for another Birmingham firm, which should be engaged in full production at Oldmixon by the end of the year. A start is also set this year for a third factory, also for a Birmingham firm, and negotiations for others are now continuing.

The remainder of the site is for housing, shops and a school. Work has started on 160 houses, and another 800 houses or flats will be built when required. Weston officials hope that eventually 20 firms may be accommodated at Oldmixon. It is a purposeful effort to save their own town from economic imbalance. For Birmingham something on a more impressive scale—like the new town project at Dawley, which is to take over 80,000 people, and possibly another new town at a place like Woofferton—is urgently needed.

Postgraduate Pains

FROM A CORRESPONDENT IN OXFORD

At present Oxford has just over 1,500 resident graduate students reading for research degrees or diplomas. Undergraduates in residence number about 7,350. While the undergraduate sector has grown by only 70 per cent since before the war, the sector of resident graduates has increased by nearly 300 per cent and a report by the university's committee on postgraduate studies suggested last week that severer methods of selection would have to be imposed. Graduate studies at Oxford are less weighted in favour of science than at Cambridge (48 per cent compared with 72 per cent) but, even so, contrast with the still massive predominance of arts subjects among undergraduates, only 28 per cent of whom read science.

The growth of this graduate sector raises important and difficult problems for a university traditionally oriented towards the teaching of arts undergraduates.

POSTGRADUATE STUDENTS AT BRITISH UNIVERSITIES
(excluding one-year courses in education)

	1938–39	1956–57	1960–61
Number	3,094	9,940	14,285
Per cent of student body	6·2	11·1	13·3

Source: Cmnd. 1691

The science graduate, whose increasing numbers have been an important cause of the development of the graduate sector as a whole, has a focus for his working life in the department. This is not to say that all is well with the organisation of scientific graduate studies. To judge by inquiries here, and by a survey undertaken at Cambridge last year, provision of graduate seminars and lectures, and of enthusiastic and competent supervision by a generally overworked staff, is far from ideal. Further, the graduate belongs to the world neither of dons nor of undergraduates, and thus fits into neither of Oxford's traditional niches.

On the arts side the problems involved have not, even yet, been seriously thought out. The candidate for a B.Phil. or a D.Phil. has no centre for his studies equivalent to the science department, and thus works largely in isolation. The idea of an arts centre is now recommended—and so is the establishment of a remodelled inter-faculty board to look after postgraduate needs. At present supervision can all too easily be limited to hasty coffee or tea sessions fitted in by a harassed college tutor between his work of teaching undergraduates.

Graduates have a spectrum of personal and financial problems in addition to those raised by the organisation of their studies.

These are particularly pressing for the married students, estimated last year to form about a quarter of the whole. Here financial difficulties can be really acute, particularly if there are children. Ministry of Education grants for graduates, averaging £333 a year, do not err on the side of generosity, and though there is clearly some force in the argument that endowing the wrong researchers is worse than endowing none, to screen candidates by making research financially unattractive, rather than by limiting admission to the really able, seems a doubtful approach.

OXFORD'S graduate policy is taking a number of lines and is still evolving. For the select few there are two excellent postgraduate colleges, Nuffield and St Antony's. An argument has recently been put forward for a third, though so far without attracting much support. This October the existing buildings of St Catherine's Society will become a graduate centre, Linacre House. Boards of faculties have been tightening up standards of admission for research candidates, and trying—though still with scanty success—to organise postgraduate studies more rigorously. Some frank American comments on their postgraduate schools have exposed several risks to be watched out for here. A plan for building graduate flats in North Oxford has currently run into opposition from the Ministry of Housing but some colleges, like New College, are putting up blocks for unmarried graduates.

Marginal Seats

EVER since the Festival Hall opened its plate-glass doors, the Royal Albert Hall has been in the sort of financial predicament which puts the silver into its management's hair. While it is not losing money, it is not making any, either ; and one of the things which keeps the situation from getting any better is precisely the system which keeps it from getting any worse—namely, the holding of seats by people with a financial stake in the hall. They can come in at just about any function, public or private, and sit down and watch. But even if they do not come in, their seats must not be sold to the public. This is continually giving the Festival Hall the edge in securing bookings of all kinds.

The Albert Hall was meant to be built with the profits of the 1851 exhibition, but after buying up stretches of South Kensington (for the plethora of museums) the money ran out. Fresh funds were therefore raised from individuals, in £100 units, each of which entitled the donor to free entry to his Albert Hall seat for 999 years. The Queen has 50 of these seats ; the commissioners of the estate took 500, which they afterwards returned, as did the contractors the 300 they had taken in consideration of a little price-lopping. But what was left over was still not enough to make ends meet: in 1876, the seat-holders imposed a rate of £2 a seat annually on themselves, and it was later raised to £3 for each of the 1,287 seats held by the 370 people who have inherited or bought or been given the right by the original investors. Nevertheless, the spectacle of 1,000 or more empty seats in the best part of the house continued to haunt the management. A special act of Parliament was needed before the holders could be excluded on 10 occasions each year ; another, in 1951 (when the competition from the subsidised upstart across the river was being badly felt), raised to 18 the functions from which seat-holders could be barred—and permitted the holders to levy a further £7 a seat annually on themselves for 14 years.

But neither that, nor the annual appeal to relinquish seats not going to be used in the following year, has been enough. The hall's financial worries continue. Wages have doubled ; seat prices are much the same as they were 50 years ago ; the orchestras and organisations which use the hall say they cannot pay higher rents ; the Government will not subsidise a private enterprise ; and those 1,300 seats are the only asset the hall has over its competitor. Now another appeal has been made by the President, Lord Pender, for seat-holders to give up their seats for everything they do not really want to see. It is either that or go under, taking with them what everybody else seems to think is a national monument paid for by the state.

LETTERS

Deficits Pay

SIR—Your correspondent (May 19th) attributes the greater economic progress of Western Europe compared to the United States in the last decade to a greater willingness to "spend itself rich." His case is not convincing, since deficits have been common in the United States, too. Whatever the Eisenhower Administration may have intended, it achieved a budget surplus in only three years out of eight, and only a small surplus at that. The true reason for the lagging American performance is to be found in another Keynesian tenet, namely that a country cannot simultaneously have full employment, equilibrium in the balance of payments and fixed exchange rates.

There have been several studies of purchasing power parities in recent years, though none of them have been published in the United States. They all come to the same conclusion: the dollar is strongly overvalued. For instance, official German figures for January 1962, based on a detailed comparison of individual prices, suggest an overvaluation of about 22 per cent compared to the German mark ; the mark itself is now somewhat overvalued in relation to most other European currencies. The devaluations of 1949 had lost most of their initial justification by the middle 1950s when European and Japanese production had recovered. This overvaluation not only inhibits American exports (especially through its effect on wages), and stimulates overseas investment by US firms. More importantly, it prevents the government from pursuing a truly expansionary domestic policy.

We all know that devaluation or depreciation of the dollar would raise tremendous problems. But as long as the balance of payments remains a constraint on fiscal or monetary policy, the prospects for full employment in the United States do not appear bright.—Yours faithfully,

H. S. HOUTHAKKER
Professor of Economics
Harvard University

Brothers at the Bank

SIR—We strongly challenge the various imputations made in the article in *The Economist* last week. The article calls our present pay claim "ludicrous." We must point out that no claim which the union has ever lodged can justifiably be called ludicrous—the claim is both just and fair. We consider that the present level of banking remuneration is far too low in comparison with pre-war conditions and in comparison with salaries and wages in comparable professions and occupations today. We also consider that the increasing prosperity of the banks should be matched by increasing remuneration for those who have helped to bring this about—namely the bank employees. There is abundant evidence to justify this point of view but we are sorry that no attempt was made in the article to refer to it.

Contrary to the impression given by the article, the union is not claiming a flat 30 per cent increase at all levels of banking remuneration. Our pay policy provides for a new salary structure for all grades, which means *in some cases, increases of up to* 30 *per cent.*

The article goes on to say that the staff associations can take some pride in their success in taking individual banks to arbitration and in the resultant salary increases. May we point out that the total increases granted by the banks in the last six months amount to some 5 per cent for the clerical staff, with slightly higher percentages for senior grades—but the non-clerical staff in some banks being ignored altogether. This is the first major salary increase since July 1960 and yet, since that date, the cost of living has risen by over 7 per cent. These increases have not therefore alleviated in any way the continued decline in real living standards of bank staffs. The staff associations are responsible for this decline, but it is difficult to see how they can "take pride" in it. There is only one solution for an equitable salary and wages structure in banking: for the banks nationally to negotiate with the only national and independent union in British banking—the National Union of Bank Employees.

Finally, we must point out that our complaint to the International Labour Office is being heard by the Freedom of Association Committee of the ILO on the question of a denial of elementary trade union rights. This complaint is being reviewed at this moment in Geneva. We are not specifically claiming a contravention of ILO Convention 98 (as stated in the article) because the review of this particular Convention does not come up until next year.—Yours faithfully,

J. L. HORNBY
General Secretary,
National Union of Bank Employees
London, SW1

Liberal Ethos

SIR—Neither M. Briand nor Mr Arthur Henderson would travel by train at night if they could help it. When they had to attend for some League of Nations business, they took the day train from Paris to Geneva. At the appropriate hour M. Briand's *chef de cabinet* used to come along the train to Mr Henderson's compartment and invite him and me to lunch with M. Briand in his saloon. M. Briand spoke no English and Mr Henderson no French. In consequence, after a few civil exchanges through an interpreter, Mr Henderson tended for the rest of the meal to talk English to M. Briand's *chef de cabinet*, while I talked to M. Briand in French.

One hot afternoon an imp possessed me and I let a bee out of my bonnet at M. Briand. I ventured to ask him whether he did not agree with me that in an ideal democratic state there should be only two parties, one collectivist and the other individualist. Neither would ever be wholly right, but the interplay between the two should produce the nearest one could hope for in the way of good government. I had warmed to my subject when I perceived that the great man was asleep. There is a superstition that, if one stops talking in such a conjuncture, the other will wake. Who was I, it seemed to me, to do the weary statesman out of a well-earned nap ? And I went on developing my thought. Mercifully Mr Henderson very soon decided to return to his compartment. M. Briand thereupon roused himself and bade us a civil farewell.

A few months after this M. Briand died. Meeting his *chef de cabinet* about that time I offered condolences, as I knew that the two had been on affectionate terms. He surprised me by telling me that M. Briand had been interested in what I had said in the train: he had not been asleep at all and had repeated much of it to his secretary after we had gone.

I wonder whether the point taken by M. Briand could not with advantage also be taken by our national phoenix, the resurgent Liberal party ? Can it be that they should look for their main support from those electors who do not want a vamped-up, Butlerised version of collectivism, but a full-bodied individualist creed, appealing to the present-day heirs of the philosophic radicals of 150 years ago ?—Yours faithfully,

Broadwindsor, Dorset N. RONALD

US Steel

SIR—In your issue of May 5th you reviewed (page 442) "Pricing Power And The Public Interest" by G. C. Means. The review failed to mention the following matters, among many others:

(1) To "prove" that profit margins had increased—and hence could be "blamed" for steel price increases—Dr Means resorted to self-serving selection of nontypical data. He compared the data for the year 1953 with those for what he called "fiscal 1959." For part of 1953 steel prices were subject to wartime price ceilings. If the years of the great depression and those when wartime price controls were in effect are left out, there were only three years in US Steel's entire history when its income as a per cent of sales was as *little* as it was in 1953. As for his "fiscal 1959"—the twelve months ending June 30, 1959—this was the period when steel customers were rebuilding inventories from the 1958 recession and frantically enlarging them against the long steel industry strike that occurred in the latter half of 1959. By this device Dr Means gathered into a selected twelve months' period about three-quarters of the profits earned for the full two years involved. He thus got a *big* figure to compare with his selected *little* figure ;

(2) Dr Means ignored the really relevant and readily available data (as regularly published by the American Iron and Steel Institute) to show what the increases in steel prices went to cover. In 1940 the steel industry's receipts per ton of steel shipped were $73. In 1960 they were $207, an increase of $134. The profits per ton in 1940 were $6, or about 8 per cent of sales ; in 1960 they were $12, or a little less than 6 per cent of sales. The increase in receipts (price) per ton was $134 ; the increase in profits per ton was $6. The difference, or $128, went to cover cost increases which were $55 for employment costs, $56 for purchases including interest, $6 for depreciation, and $11 for taxes. It would appear difficult to most people to "blame" the steel price increase over the period on the *shrinking* profit margin ;

(3) Dr Means contends that the employment cost inflation—a big part of the increased prices being taken to cover it—was partly due to company efforts to enlarge profit margins because it stimulated labour unions to demand and secure bigger wage increases than would otherwise have occurred. It is interesting reasoning, but for it to have any validity one must suppose that price increases preceded wage increases, whereas the fact is that the wage increases preceded the price increases.—Yours sincerely,

BRADFORD B. SMITH
Economist,
United States Steel Corporation
New York

The New London

SIR—I have never been a member of the Banstead witenagemot (your issue of May 5th) but as I have lived in Banstead and worked in London for close on 60 years, it may not be presumption on my part to state what I believe may be the objection of the ordinary resident of this district to the proposal that we should become part of the Greater London Council.

You invite the answer by your statement that Banstead relies on Central London for its daily bread. Sir: Man does not live by bread alone. Stand on Banstead Downs when the wind is from the north and you will inhale all the smoke and fumes of London. Face south-west, into the prevailing wind, and you can almost believe it is possible to smell the good air of the Channel.

The urban-minded developers who have, through the years, made a mess of our once not unattractive High Street, may wish to see the whole area urbanised, but even they forget that London ends where the Banstead Downs begin and that our large area of Green Belt (in spite of your remarks) and the commons and heaths will long keep this district rural.—Yours faithfully,

Banstead, Surrey HENRY RUTHERFORD

★

SIR—Why *Greater* London Council ? What, under the new arrangements, will London be if it is not the whole of the area of the new upper tier authority ? A principal theme of the royal commission report was that London is not a conurbation, or growing together of separate towns, in the Manchester or Birmingham sense, but the natural growth of the same great wen. How then Greater ? Let us not baptise the new authority with a name meaningless from the day it is born.—Yours faithfully,

Manchester EDMUND DELL

[There is, of course, the City of London, which will retain its identity—with a population of under 5,000—under the GLC.]

BOOKS

When the Lights Went Out

August 1914

By Barbara W. Tuchman.
Constable. 499 pages. 45s.

It will soon be the fiftieth anniversary of the outbreak of the first world war, and its commanders and its battles, their names once household words for half of us alive today but meaning nothing to the other half, are likely to be recalled in many books. Indeed, the commemorating and reconstructing process has begun already. The last year or two have seen more than one fresh account of the Flanders fighting and the horrors of trench warfare ; and now Mrs Tuchman has taken for her subject the course of the war to the eve of the battle of the Marne.

In deciding to stop there she has exceeded the limits of her title. In the search for strategic unity or for a significant turning point she could not stop before the eve of Marne. But it was on September 4, 1914, that Joffre, pushed by Gallieni's insistence even more than he was deterred by Sir John French's reluctance to co-operate, halted the French retreat and ordered general action to begin on September 6th ; and it was on September 5th that the German High Command persuaded Kluck to begin a withdrawal on September 6th in an attempt to retrieve his mistake in wheeling north and east of Paris. This was certainly a turning point ; but from the point of view of strategic unity Mrs Tuchman would have been wiser to take a more extended title and continue her account through the incomplete victory of the Marne, the German retreat to the Aisne, the race for the possession of the Channel ports and the battle of Ypres, which marked the onset both of winter and of the stalemate of trench warfare.

This opinion is supported by another consideration. Mrs Tuchman exceeds her title limits at the beginning as well as at the end, devoting her first hundred pages to a survey of prewar planning and of the diplomatic outbreak of the war, which goes as far back as to include a long description of the funeral of Edward VII in May 1910 —her chosen symbol of that unity of Europe and that level of civilised international dealings which were soon to be submerged. In itself this further departure from the title would be unimportant. It is more regrettable that her analysis of the prewar situation and of the causes of the war does not quite reach the high level upheld throughout her subsequent analysis of the warfare. It is not that it is factually at fault or that the emphasis on the facts is anywhere misplaced. Least of all need we dissent from her conclusion that the aims and actions of the German Government were the chief cause of the war when German historians are themselves now recognising that this was so. It is rather that when interpreting international politics, and especially on the eve of wars, the historian has to place the aims, the actions and the mistakes of men and governments in a more complex setting than when he is interpreting even the strategic conduct of wars. Factual analysis and narration are not in themselves enough. But factual analysis and narration are the directions in which Mrs Tuchman excels. Her book would have gained in unity if she had avoided so much preliminary material, in a field in which she is not so thoroughly at home, and used the space saved in this way to extend her analysis of the war to the point suggested.

How excellent she is at her best is revealed throughout the book from the point at which it embarks upon the military operations. Her reconstruction of these—of the escape of the *Goeben* to Constantinople, of the battle of the Frontiers and the German breakthrough in Belgium, of Tannenberg, of the German advance to Paris and Kluck's wheel—is one that it would be difficult to improve on. It makes compulsive reading on account of its clarity and its wit, its sharp delineation of the characters of the men involved, and the sound judgment, which extends beyond its set pieces and its individual portraits to convey a firm understanding of the ways in which the fighting on the different fronts was strategically interlocked. The sources quoted at the end of the book confirm the impression that it is a work of scholarship no less than a piece of writing of the highest quality. The accompanying maps and photographs are worthy of the text.

Canadian Miscellany

Northern Approaches : *Canada and the Search for Peace*

By James Eayrs.
Macmillan. 104 pages. 30s.

There is no end to the making of speeches and the writing of papers about Canadian-American relations, and there have always been more Canadian dons ready to write about external affairs than about the more controversial domestic matters to which they might have directed their critical faculties with greater benefit to the country. But things are gradually improving with a new generation of young dons, who are far better paid, and probably feel more secure, than their predecessors ever hoped to be. One of the most prolific of this new generation is James Eayrs, associate professor in the Department of Political Science at the University of Toronto, who teaches a subject called "international politics," and contributes generously to the prevailing passion for seminars on Canadian-American relations, Canada-and-this, Canada-and-that.

So much effort goes into these well-intentioned efforts that one can easily sympathise with Mr Eayrs's desire to get wider circulation for papers delivered to small groups of earnest intellectuals. But it really does not make a very satisfactory book.

The most original chapter is a memorandum not previously published about Canada's early dealings with Soviet Russia in the 1920s, for which Mr Eayrs has been able to draw upon the Mackenzie King papers. It is interesting, but tiresomely incomplete without the earlier story of Canadian policy towards Russia from 1917 to 1919 under Borden. Most of the papers, lectures and articles reprinted in the book deal with more recent events. Mr Eayrs has said many of the proper things about Canadian relations with the United States and some perceptive things about relations with the Commonwealth. He waffles about Cuba ; and the papers on defence are ephemera, which probably got all the attention they deserved on their first appearance. Their reappearance only shows that the author shares the confusion of the political parties' current arguments on defence.

It is a relief, in the penultimate chapter on China, to find one subject on which Mr Eayrs has a definite opinion. He thinks Canada should have recognised China long ago, and he suggests that 1955 might have been a good time. But he unfortunately relapses into fuzzy generalities when it comes to suggesting how Canada should act in 1962 and 1963.

Mr Eayrs is a diligent researcher and tireless filer of both historical and current documents. He recently published a volume on "Government and Foreign Policy in Canada," which was reviewed in *The Economist* on March 17th. His judgments are lively and generally sensible, though he has a curious blind spot on the monarchy. The greatest present value of his work should be to first-year students whose outlook is being enlarged by a course in history or philosophy. But Mr Eayrs needs a wider audience and the relatively thin ranks of "opinion-leaders" in Canada need him. He displays a lively intelligence and an unusually well-organised comprehension of available sources. All this gives promise of far more useful and mature work in the future, provided Mr Eayrs can resist the superficial success of the facile.

Great Expectations

Plainville, Fifteen Years Later

By Art Gallaher, Jr.
Columbia University Press. 317 pages. 49s.

In the United States, unlike this country, sociology is booming, and the problem there is to find some new aspect of American life to investigate. When this proves impossible, all that remains is to go back to some previously studied scene and see how it has changed. This is precisely what Professor Gallaher has done. Plainville, the subject of this book, is a small American farming community, which fifteen years ago was in its outlook predominantly rural. At the same time, it was experiencing the very first stages of the process of urbanisation that has spread in all directions across the American continent. Today Plainville has been quite engulfed by urban America, both economically and culturally.

The particular changes that Professor Gallaher discusses are quite illuminating. His chief point is that there has been a shift in values among the farmers and their families, a revolution of rising expectations. Plainvillers, today, like all Americans, expect things to get better all the time. Economically, this has meant the abandonment of subsistence farming, a rush into cash crops, and the adoption of mechanised techniques designed to make of farming just another means of earning money. Farming is no longer a way of life, but a job like any other. The result of this has been both over-mechanisation and over-production. (This helps to explain the thousand million dollars a year that the American government spends on storing farm produce.)

For those interested in the processes making for change rather than its consequences, the author makes the interesting point that while fifteen years ago the forces making for change in Plainville were developing naturally from within the community, today changes are being forced on it from outside, whether they come through the directives of Government agencies for agricultural reform, or along the major highway that now bisects the town.

What, in effect, this study demonstrates is not so novel: that the new industrial revolution is transforming the lives of such communities with no less rapidity than the original one, though decidedly less brutally. Since, however, these changes have their source in the United States, Britain can be certain to experience them too ; Professor Gallaher provides us with a great deal of information for understanding what may be happening in our countryside tomorrow, if not today.

Indian Textbook

India : *A Modern History*

By Percival Spear
Michigan University Press. London: *Cresset Press.* 520 pages. 63s.

No history of India can ever be satisfactory. The ancient facts are too uncertain, the modern prejudices too strong. Dr Spear, however, achieves his limited aim ; he has written a good textbook for undergraduates. His style is admirable, he is our leading authority on India, and he escapes the pitfall of giving undue weight to those subjects and periods on which he is personally expert. He is up to date on Mohenjo-Daro, to which modern scholarship is inclined to attribute more and more of the special quality of Hindu civilisation. He is summary about the period between Alexander and the coming of the Muslims ; the millennium and a half which made Indian society as we know it, but of which we know incredibly little. He is balanced and conservative on the British period.

But even Dr Spear has his bias. Had the Moghuls moulded India as much as he implies India would not be very different from Persia or Egypt or Iraq ; rather is it the south, the custodian of Indian tradition, and British influence, that have made India the very special country it now is. Enamoured of Delhi, Dr Spear sees Shivaji as a scourge instead of seeing him as the first redeemer of Hindu self-respect. It was Shivaji who made the Maharashtrians India's most upstanding, honest and fearless people. Had Akbar been as great a ruler as Dr Spear would like us to believe, nobody would have applied to his court the Persian proverb:

> If the monarch says that the day is night
> reply—the moon and the stars shine bright.

The undergraduate who reads Dr Spear needs someone oriented to Hinduism and the south to provide the other side, Sardar Panikkar perhaps ; certainly Panikkar and Spear together provide all the answers we know.

Rhodes and Mozambique

Anglo-Portuguese Relations in South-Central Africa, 1890-1900

By P. R. Warhurst.
Longmans. 183 pages. 30s.

Most of the frontiers dividing the Portuguese colonies of Angola and Mozambique from adjoining British territories were settled in 1891. Before that, however, Rhodes had embraced the ambition of seizing those parts of Mozambique which could assure him of access to the sea from Matabeleland and Mashonaland. The reasons why he failed in his various forays into Mozambique are set forth in the twenty-third volume of the Imperial Studies Series, which is published for the Royal Commonwealth Society under the general editorship of Professor Graham. Mr P. R. Warhurst, a graduate of Witwatersrand and now a schoolmaster in Southern Rhodesia, has written a diligent though humdrum account of the whole squalid affair. One aspect of his book that is particularly useful at the moment is its illustration of Britain's deep involvement with and commitment to the defence of the Portuguese position in Africa. As the blurb rightly points out and the book develops, "Britain finally agreed to confirm her long-standing obligations"—dating, indeed from 1661—"and guarantee all Portuguese territory. This guarantee is still incumbent on Britain and was the most positive outcome of a decade of tension."

No doubt as imperial historiography demands, this is a record of events in Africa without, or almost without, the Africans concerned. Mr Warhurst's heroes are Salisbury and Rhodes, who between them, as he sees it, caused civilisation to "trundle along the dusty roads into the interior." African armies generally appear as "hordes," and there is even the surprising statement on page 78 that Chaka was the liquidator of "millions of Africans in Natal." How large, one wonders, was the population of Natal at the beginning of the nineteenth century ? It would surely have given helpful depth to Mr Warhurst's treatment of the records if he had paused to consider how things looked from the point of view of men like Mzila and later leaders on the African side.

As it is, however, he is concerned only with the progress of imperial expansion. Within these limits he has tidily filled a gap in the known sequence of events, and here and there where the events were particularly lurid—as when Willoughby "invaded" Beira—the book really comes to life. It is a pity that the title is misleading. Although Mr Warhurst briefly notes the terms of the Anglo-German Convention of 1898, which provided for the eventual partition of Angola as well as of Mozambique, he deals only with the south-eastern side of the story. There are some well chosen photographs.

Old-fashioned Criticism

Ibsen and Strindberg

By F. L. Lucas.
Cassell. 494 pages. 50s.

A reading of this book is almost bound to provoke the question: "What is the worth of destructive criticism ?" His unflagging, lifelong interest in dramatic literature has led Mr F. L. Lucas to devote a good deal of attention to a writer whom he finds quite repulsive—August Strindberg. About one-third of this large and highly priced volume is taken up by a hostile account of the life and works of "this maniac misogynist," to use the author's own epithets. It is not, of course, unreasoned prejudice that drives Mr Lucas to castigate Strindberg for morbidity, cruelty, hysteria. He prides himself on his esteem for moderation and rationality, and he makes his critical position explicit—though in terms that are curiously vehement for one who sets up as the defender of balanced sanity. "I have always loathed Dionysus," he says, "both in Euripides and in real life —the blind emotionalism that still yawps and yelps fanatically across the world."

There is nothing frenzied about Ibsen, though much that is gloomy and even tortured. Mr Lucas admires him greatly, and examines his plays at length ; but why it should be necessary to summarise the plots is by no means obvious, even though a personal slant is often given to the summary. But his strong distaste for abnormality does disqualify him as a critic of Strindberg. Presumably he would dismiss the whole of surrealist art as a dangerous aberration, and the exploration of experi-

ence by a mind on the verge of madness seems to him valueless. He gives a derisive account of *The Ghost Sonata,* a play that can easily be made to sound ludicrous ; yet a powerful production conveys the seriousness of its theme—the destruction of illusions. He makes heavy fun of the slaughter of the caged canary in *Fröken Julie,* but on the stage this has a devastating significance. And the terms in which he admits to finding this play slightly less nauseating than *The Father* betray something worse than a total lack of sympathy—they show a kind of spitefulness. "For hero and heroine [*Fröken Julie*] has a lout and a trollop instead of a halfwit and a hag." In what sense can Julie, highly bred, highly sexed but virginal, be called a trollop ? And if it is fair to call the Captain a half-wit, what about another tragic hero notoriously lacking in common sense, and finally goaded to madness—Lear ?

Mr Lucas's tone when he deals with Strindberg is often reminiscent of Rymer's criticism of *Othello,* which he found "a bloody farce without salt or cavour." The erecting and bombardment of Aunt Sallies is an exercise that nowadays appeals strongly to inexperienced young literary critics, but it is peculiar that someone of Mr Lucas's standing should indulge in this sport. "Let criticism be clear-headed and hard-headed," he says, "but not hard-hearted." Yet the gibing tone betrays a lack of the patience and imaginative sympathy that characterise good interpretative criticism. The debunking is of course sometimes quite funny. Mr Lucas can write mordantly, and he enjoys thrusting in the personal reminiscence or the sardonic aside ; he does this even when writing perceptively and appreciatively about Ibsen. The whole method of this book shows him to be an unrepentantly old-fashioned critic ; but nobody could accuse him of not putting all his cards on the table.

Integration and Identity

American Capital and Canadian Resources

By Hugh G. J. Aitken.
Harvard University Press. London: *Oxford University Press* (1961). 229 pages. 40s.

THIS book has a much wider significance and more general interest than its title suggests. It is a penetrating and lucid study of the problems presented by regionalism in conflict with internationalism and with the preservation of national identity as these are exemplified in North America. The author brings insight begotten of long study of economic history to his analysis of American investment in Canada, along with the whole complex of entrepreneurship, skilled labour, organisational methods and advanced technology that goes with it. The dynamic part played by "command centres" in the United States in directing the advance of the Canadian resource frontier not only accelerates Canada's economic progress ; it is moulding the Canadian economy to the pattern of North American continental needs.
