Continued from page 1063

had the full support of the Kardomah directors, who control about 60 per cent of the ordinary and 29 per cent of the "A" shares; they are recommending other shareholders to follow their example in accepting the offer. There is an alternative cash offer, based on 28s. in cash for the Forte "A" shares, which values Kardomah shares at 62s. 6d. The bid puts these shares on an earnings yield of only 5¾ per cent (which is still, however, above that on Forte's shares). The bid clearly takes account of the strength of Kardomah's assets, for in July its net equity assets (allowing for the revaluation of properties) were equal to about 47s. a share and its quick assets of £666,000 to about 21s. 6d. a share. Thus on balance Forte has relatively little cash to find as the cash portion of the bid (excluding the cash alternative) will take about £850,000. Kardomah's pre-tax profits for the year to July last amounted to £154,000, about one-seventh of those forecast by Forte for the year to end January, 1963, and the bid on a full acceptance would add about 12½ per cent to Forte's ranking equity. Kardomah's trading record has been far from inspiring but it is now beginning to reap the benefits from its modernisation programme and its chain of 32 cafés and coffee houses should fit in well with Forte's expanding empire. Kardomah also blends and distributes tea and coffee.

Compagnie d'Outremer

THE Compagnie d'Outremer completely controls the Banque Lambert, the fourth Belgian bank in size but the one closest in its operations and ambitions to a British merchant bank. More of its bearer shares, currently priced at Fr 1,220 to yield about 3¼ per cent, are owned in this country than those of any other Belgian bank. The company wants to spread its wings internationally, as the growth it can secure within Belgium is limited. It has three strings to its bow—banking, portfolio investment and real estate. It is a *banque d'affaires*, participating in new issues, managing unit trusts, holding shares in other banks and the like; but it is also a commercial bank, with half of its deposits in Euro-currencies. As a holding company, it has invested money in the shares of leading Belgian concerns (such as Sofina and Petrofina) because as the managing director, M. Jacques Thierry, says "in Belgium a permanent shareholding in a company is generally the price to be paid for its faithfulness as a customer." About an eighth of Outremer's investment portfolio is still in Africa, including shareholdings in "Rhoanglo" and De Beers as well as interests in the Congo such as the participation with Heinekens in brewing. Outremer's third and newest interest is in real estate.

This side of the business will be more than doubled as a result of three new acquisitions. Belgika, a holding company in which Outremer has had a substantial shareholding for a number of years, was a commercial company in the Congo and it has suffered substantial losses; but these and the fact that about a quarter of the current value of its net assets is still invested in Africa have been taken into account in arriving at the take-over price. Its attractions to Outremer are its quick assets and buildings in Belgium and its accumulated tax losses. The latter will presumably be set against the tax liabilities of Imber and Siber, the two other acquisitions. These are Luxemburg companies but their main asset is the equity capital of Immobiliere Bernheim, which is believed to be the biggest real estate company in Belgium owning big areas of undeveloped land in Brussels and Liège. Here, in securing a firm base at home and in its willingness to participate in developments in other countries, Outremer is following British and American examples—as it does in its other ventures.

Dannimac

THE fall in Dannimac's trading profit from £504,000 to £401,000 in the year to April 10th came as a shock, for a year ago the chairman had forecast satisfactory results on the basis of higher sales in the first eight months of the year and a satisfactory order book for the 1962 spring season. Suggestions that the unusually dry and cold weather in the summer of 1961 and the spring of 1962 were responsible for this setback are not confirmed by the chairman, Lord Keyes, who says that sales of Dannimac rainwear showed a satisfactory increase. It seems that higher wages and overheads, coupled with the additional purchase tax on clothing not passed on to the customer, were responsible. Following the results the 1s. shares fell by 2s. 10½d. to 16s. 6d. but recovered to 18s. 3d. to offer one of the lowest dividend yields in the market—0.4 per cent. This stems from the board's ultra conservative dividend policy; for years the payment has been held at 7½ per cent although earnings have often topped 200 per cent. On the 1961-62 figures the payment is still covered over 22 times.

With the final repayment of a deferred liability in 1960-61 some loosening of the purse strings was expected despite the directors' firm statement that they intended to conserve Dannimac's resources for further expansion. Lord Keyes says again that this is still the directors' policy "with a view to profitable investment as and when opportunities arise." So far there is little sign of new investments, apart from the decision to increase the capacity of the Middlesbrough factory acquired in July, 1961, by two-thirds. This is hardly likely to absorb the cash flow, amounting to £210,000 in 1961-62, and thus net liquid assets amounting to £1,315,000 or about 6s. 6d. a share, are likely to remain intact. With forward orders for the next spring season again higher, Lord Keyes once more forecasts satisfactory results. Shareholders will hope that this will mean something different from the experience in 1961-62. But if it does, will better profits put more money in their pockets? Not every shareholder in Dannimac can be a surtax payer.

R. A. Lister

THE preliminary results of R. A. Lister, manufacturers of diesel engines and agricultural and dairy equipment, pleasantly surprised the stock market which is in no mood nowadays to be optimistic about the performance of the capital goods manufacturers, especially those having even a limited connection with shipbuilding. The dividend has been raised from 14 to 15 per cent following a rise in net equity earnings from £641,000 to £706,000 after a tax charge that appears to reflect bigger investment allowances. Before tax profits in the year to September 30th rose by just under 8 per cent from £1,295,000 to £1,398,000. The £1 shares were immediately marked up 6s. to a new peak of 57s. 6d., so that they now yield 5¼ per cent, covered 1¾ times.

Richard Costain

PROFITS of Richard Costain may be slightly higher and Sir Richard expects the dividend to be maintained at 16 per cent. The ending of the credit squeeze has not as yet given a boost to Costain's house building business and Sir Richard Costain believes that increased activity is unlikely unless there is an improvement in mortgage terms for buyers of smaller houses. The government's slum clearance drive should provide new work for Costain and further expansion both in construction and civil engineering work is expected in 1963. But increased competition for work overseas is resulting in low profit margins which are "often not in keeping with the work involved." There is to be a revaluation of certain of the group's fixed assets. The surplus will not be written into the accounts but will be kept in reserve against possible losses on the realisation of assets in countries subject to political or economic disturbances. At 18s. 7½d. the shares yield 4¼ per cent.

EXCHEQUER RETURNS

For the week ended December 1, 1962, there was an "above-line" deficit (after allowing for sinking funds) of £72,037,000 compared with a deficit of £4,724,000 in the previous week and a deficit of £31,586,000 in the corresponding period of last year. There was a net expenditure "below-line" of £25,073,000 leaving a total cumulative deficit to date of £661,357,000 compared with £795,676,000 in 1961–62.

THE MONEY MARKET

THREE or four discount houses were forced to borrow a small amount at the penal rate from the Bank of England on Tuesday. In the past two weeks the Treasury bill rate has fallen by nearly ⅛ per cent; the authorities seem to feel that the pace of the fall needs checking. The latest release of special deposits, however, will mean an increased demand for Treasury bills from the banks, which the discount houses will be obliged to satisfy. The downward pressure on the rate is likely to increase despite the mild official brake.

At the Treasury bill tender on Friday of last week the syndicate of discount houses raised its agreed bid for the 91-day bills on offer by 2d. to £99 1s. 6d. The outsiders topped the market's bid, however, and the bill rate fell 11.56d. to 73s. 9.47d. per cent, so that the market's quota fell to 39 per cent compared with 60 per cent in the previous week. The market received 74 per cent of its application for the 63-day bills on offer, and its average quota was 45 per cent.

Rates in the local authority loan market were firmer this week on a good demand to cover the difficult year-end period. The three months' Euro-dollar rate remains at 4⅛ per cent and continues to offer an attractive investment to holders of dollar deposits.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) In general males under 21 and females under 18 years of age. (5) Weekly earnings are surveyed in April and October. April figures are: Men, 1960: 282s. 1d.; 1961, 301s. 4d.; 1962; 312s. 10d. Women (full time), 1960: 145s. 0d.; 1961: 152s. 7d.; 1962: 157s. 2d. Youths (under 21), 1960: 123s. 1d.: 1961: 135s. 9d.; 1962: 141s. 3d. Girls (under 18), 1960: 93s. 1d.; 1961: 99s. 11d.; 1962: 104s. 6d. (6) 18,000 workers had a net decrease in wages over the year. (7) 25,000 workers had wage cuts in November, 1961, but over the whole of 1961 no worker had a net decrease. (8) Index of building costs. (9) Average for second quarter. (10) Using the revised retail price index based on January, 1962=100: October, 101·4. (11) Revised figures from 1961. (12) Average for third quarter. (13) Average for fourth quarter.

APPOINTMENTS

RESERVE BANK OF AUSTRALIA FIFTIETH ANNIVERSARY POSTGRADUATE SCHOLARSHIPS

Applications are sought for eleven Reserve Bank of Australia Fiftieth Anniversary Post-Graduate Scholarships, which are open to graduates of high intellectual promise willing to undertake post-graduate study at an Australian university for two years. Value £A1,250 plus generous travelling and other allowances. Applicants will be given the opportunity of specifying the department of study and subject of research for which the Scholarship is sought.

Details from the Association of Universities of the British Commonwealth, Marlborough House, Pall Mall, London, S.W.1. Closing date in Australia, May 31, 1963.

CARRERAS LIMITED

CIGARETTE MANUFACTURERS BASILDON NEW TOWN ESSEX

This Company which is associated with a world wide group of companies is expanding rapidly and, whilst calling for maximum efforts from Management and Staff, it offers unusual opportunities for advancement to able men. Applications are invited for the following appointments created by expansion and promotion.

Assistant Secretary (Ref. 62/34)

Applicants should be admitted Solicitors aged 25-35 with two or three years' experience in a firm having a substantial commercial practice. The person appointed will be responsible to the Company Secretary. He will be required to undertake the full range of secretarial duties and will not be confined to legal work.

Initial salary will be at least equal to current incomes in the profession for persons of comparable age and experience.

Economist/Statistician (Market Research) (Ref. 62/35)

Applicants should be aged 25-30 and be Graduates in Economics with Statistics with some experience in economic analysis and the techniques of Market Research.

The duties will include assisting in sales analyses and market surveys and initiating, progressing and reporting on consumer and advertising research projects.

Initial salary will depend on experience and qualifications but will be not less than £1,150.

Quality Controllers (Ref. 62/36)

Applicants should be aged 23-27 and be Graduates in Science or Technology, preferably with previous industrial experience and with a knowledge of and interest in the principles of quality control and the application of statistical method. The posts will entail a line responsibility for a team of inspectors and inspectresses.

Initial salaries will depend on experience and qualifications but will be not less than £1,150.

The Company operates a generous Superannuation Scheme and, if required, housing may be available in Basildon New Town.

Applications giving details of age, qualifications and previous experience and quoting the reference number shown should be addressed in confidence to:—

Personnel Director, Carreras Limited, Christopher Martin Road, Basildon, Essex.

MINISTRY OF HOUSING AND LOCAL GOVERNMENT

ARCHITECTS

The Civil Service Commissioners invite applications from men and women for the following posts:

	Salaries (Inner London)
ASSISTANT CHIEF ARCHITECT	£3,415
MAIN GRADE ARCHITECT	£1,579*— £2,093

*Starting salary may be above the minimum.

The Ministry is undertaking new work in the study and the promotion of industrialised building techniques in housing, for both flats and houses. This work will include liaison with manufacturers and contractors, with local authorities in England and Wales, and with other government departments. The Assistant Chief Architect will take charge of this work, under the direction of the Chief Architect, and will also be responsible for general supervision of the architectural and surveying staff of the Ministry's new Manchester office. The work of this office is to assist local authorities with big slum clearance problems in the North and Midlands, in the preparation and execution of large-scale programmes, in making full use of industrialised building methods, and in initiating and carrying through pilot schemes. The Assistant Chief Architect, assisted by a small staff in London, will work in close liaison with the Development Group, the Manchester office and the regional architectural staff based on London.

The Main Grade Architect will work under the direction of the new Assistant Chief Architect. He will be based on London but will be specially associated with the work of the Manchester team. The duties will entail some travelling.

Candidates should normally be at least 40 on December 1, 1962 (at least 35 for the Main Grade post) but younger applicants may be considered if exceptionally well qualified.

Candidates must be Registered Architects and hold professional qualifications in architecture. The post of Assistant Chief Architect calls for experience of new building techniques and contractual procedures, for organising capacity of a high order, good persuasive powers and the quality of leadership. The post of Main Grade Architect requires good design and practical building experience, preferably with some background of, and a strong interest in, industrialised building techniques.

The appointments will be for five years initially, but may be extended. They will not normally be pensionable, but, where possible, existing superannuation rights will be safeguarded.

Write Civil Service Commission, 17 North Audley Street, London, W.1, for application form, quoting S/5603/62. Closing date December 31, 1962. (3)

THE UNIVERSITY OF WARWICK

UNIVERSITY LIBRARIAN

Applications are invited for the post of University Librarian at the new University of Warwick which is to be established at Coventry. The salary will be based on qualifications and experience but will be not less than £2,600 per annum together with the usual superannuation and family allowance benefits.

Further particulars may be obtained from the Vice-Chancellor, c/o The Town Clerk, Council House, Coventry, to whom applications must be sent not later than January 12, 1963.

DORMAN LONG (STEEL) LIMITED

SYSTEMS ANALYSTS

Vacancies exist for Systems Analysts to investigate and plan clerical and administrative procedures including computer applications.

Some experience of this type of work would be an advantage and a university degree or a professional qualification is desirable. Brief written applications, in confidence, should be addressed to:

Chief Accountant,
Dorman Long & Co., Limited,
G.P.O. Box 2,
Dock Street,
Middlesbrough.

AAC

PRO OR AGENCY-TRAINED EXECUTIVE between the ages of 30 to 35, with a proven record of promotional experience, is required by a large organisation to undertake specialised promotional work in an unusually interesting field.

He should have a knowledge of production engineering, must be able to write clearly on technical subjects, and be equally at home with the staff of technical institutions and all levels of personnel in industry. He will be based in London but required to travel in the U.K. and the Continent.

The appointment, which is pensionable, is a senior one and commands an attractive salary. Applications, which will be treated in strict confidence, should give full particulars and be addressed to:

L. J. Burke, Esq.,
40 Holborn Viaduct,
London, E.C.1.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF CHINESE STUDIES

Applications are invited for two posts of Lecturer or Assistant Lecturer in the newly created Department of Chinese Studies. It is hoped that the Department will begin undergraduate teaching in October, 1963, and that students will be enrolled in courses in which the study of Chinese Language is combined with one of the Social Sciences. One of the posts will be reserved for a person qualified to teach Chinese language; for the second, ability to read and speak Chinese is essential, but the holder will be expected to work in the field of Chinese Economic, Social and Political Institutions. Salary for a Lecturer will be on the scale £1,150 x £50 — £1,500 x £75 — £1,950 (efficiency bar £1,650) and for an Assistant Lecturer within the range £900-£1,050. Applications (three copies), together with the names of three referees, should reach The Registrar, The University, Leeds, 2 (from whom further particulars can be obtained), not later than January 6, 1963.

For further appointments and other classified advertisements see pages 1070 and 1071

ODHAMS PRESS RESEARCH DIVISION

wishes to appoint another Senior Research Executive to the staff. Surveys undertaken by the Division cover virtually the whole range of consumer investigation — attitude, market, and readership studies, opinion polls — and occasional retailer and trade surveys.

Applications are invited from Research Executives who have had considerable experience in both overall and detailed design and control of field surveys, and in the preparation of the final report. The salary level envisaged will be commensurate with the responsibility of the post. Write with full particulars of qualifications, experience, age and present salary to — Personnel Manager, Odhams Press Ltd., 96 Long Acre, London, W.C.2.

A CAREER IN MARKETING

A MARKET RESEARCH OFFICER

A Market Research Officer with a good level of education and capable of clear thinking and concise expression is required by the manufacturers of Bird's Custard Powder and Maxwell House Coffee.

This position affords the opportunity of developing a rewarding career in the progressive Marketing Department of one of the leading manufacturers of branded foods. An attractive starting salary will be paid and there are good Employee Benefits.

The Company rates the Market Research function highly and previous experience of Market Research or a statistical background are desirable. The main duties will concern the initiation and interpretation of *ad hoc* surveys covering a broad area, the control and interpretation of standard research services and the collation and reporting of general marketing and economic data.

Please write, marking your letter "Ref: No. V.36" and detailing your age, education and experience, to:

THE PERSONNEL MANAGER,
ALFRED BIRD & SONS LIMITED,
DERITEND,
BIRMINGHAM 12.

BOARD OF TRADE require an ADVISORY OFFICER to be based on GLASGOW to visit firms who have applied for financial assistance under the Local Employment Act, 1960. Applicants should have a good general industrial background and their experience should have qualified them to inspect undertakings applying for assistance under the Act and to report on their organisation, management, production methods and equipment. This post is unestablished, and the successful candidate will be appointed, in the first place, for a period of two years. Starting pay will be assessed according to qualifications and experience within the range £1,834-£2,250. Applications, giving date of birth, education, qualifications and experience, to Manager (PE. 6661), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Only candidates selected for interview will be advised.

WORK STUDY

A major industrial group wishes to appoint a man to the existing section which is responsible for training Work Study practitioners and for maintaining in them a high, uniform and acceptable standard of professional competence. Courses are also mounted for all levels of management.

The position will involve the design an execution of courses in a wide field of associated subjects, from fundamentals to advanced techniques. Consequently, a broad background is necessary, which must include considerable non-academic experience. Indeed, actual teaching experience is not essential, but evidence of capability in this respect will be required. A degree would be a distinct advantage. There may later be opportunities for laboratory and development work. The section is based near London.

The age envisaged is about 30, and the starting salary will not be less than £1,500 per annum.

Candidates should send brief details, in complete confidence, to Box 1671.

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN MATHEMATICS

Applications are invited for an Assistantship in Mathematics. Salary scale: £900-£1,050 per annum. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than January 31, 1963, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON.
Secretary of University Court.

WANTED at the Headquarters of Economic Commission for Africa, Addis Ababa:

STATISTICIANS

in various fields, including assistance to African countries in national income, field surveys, trade or population statistics. University degree in economics and/or statistics. Range of actual professional experience five to ten years. Fluency in English or French, bilingual candidates will be preferred. Salary range including cost of living allowance: US$7,066-13,256 net per annum.

Apply to the Personnel Officer, ECA, P.O. Box 3001, Addis Ababa, Ethiopia.

BBC REQUIRES Assistant, Topical Talks Unit, African Service. Duties include writing short News Talks for translation and broadcasting in African Service and broadcasting News Talks for programmes in English to Africa. Opportunities for gaining interviewing and production experience. Good general knowledge of international and African affairs, proven ability to write clearly and succinctly and to think and work quickly essential. Special knowledge of East or West Africa, residence or travel in the area and previous experience of writing on affairs in this field desirable. Previous broadcasting experience not essential. Selected candidates will be required to submit a script of a 5 minute talk on one of several given topics and to deliver it at the microphone as part of a voice test. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a. Requests for application forms (enclosing addressed envelope and quoting reference 62.G.489 Ect) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

UNIVERSITY OF NOTTINGHAM

DEPARTMENT OF ECONOMICS

Applications are invited for ASSISTANT LECTURESHIP IN ECONOMICS. Initial salary within the scale £900 x £50 to £1,050 plus membership of the Universities Superannuation Scheme and children's allowance. Conditions of appointment and form of application, to be returned by Saturday, January 19, 1963, from the Registrar.

BRITISH NYLON SPINNERS LIMITED has vacancies in its Consumer Research Section for

WOMEN GRADUATES

under 24 years of age.

The work involves interviewing members of the public on Consumer Surveys, which are especially concerned with problems in the interesting and developing field of synthetic fibres and clothing. Retail and media surveys are also carried out. Investigators are based in London and about three quarters of their time is spent interviewing in London and the provinces.

After training, the successful applicants will be able to collaborate in all stages of the research, and there are good opportunities to progress. Working conditions are excellent and include first-class hotel accommodation when away from London.

Apply in writing to the
Personnel Officer,
BRITISH NYLON SPINNERS LTD.,
68 Knightsbridge, London, S.W.1.

UNIVERSITY OF ST. ANDREWS

Applications are invited for the SHELL TEACHING FELLOWSHIP IN ECONOMIC DEVELOPMENT in St. Salvator's College, St. Andrews. Appointment from April 1, 1963. Salary £1,850 x £75 to £2,150. F.S.S.U., family allowance; grant towards expenses of furniture removal. SIX copies of applications, with names of three referees, should be lodged by January 19, 1963, with the Secretary of the University, College Gate, St. Andrews, from whom further particulars may be obtained.

UNIVERSITY OF QUEENSLAND

LECTURER IN ECONOMIC STATISTICS

The University invites applications for the position of Lecturer in Economic Statistics. The successful applicant should have an honours degree in Economics with specialisation in Economic Statistics, or equivalent qualifications. Some training in Econometrics and Operations Research methods is also desirable. He will be required to lecture in introductory and advanced courses in Economic Statistics and in Econometrics and to conduct Honours seminars in these subjects.

The salary range for Lecturer is £A1,830 — 6 x £90, 1 x £80 — £A2,450.

The successful applicant will be entitled to F.S.S.U. type Superannuation, Housing Assistance, Study Leave and Travel Grants.

Additional information on the conditions of appointment, staffing and activities of the Department, together with application forms, will be supplied upon request to the Secretary, Association of Universities of the British Commonwealth, Marlborough House, Pall Mall, London, S.W.1. Applications close in London and Brisbane on *January 11, 1963*.

Export
Marketing Executive

- UNITED BISCUITS (comprising McVitie & Price Ltd., Macfarlane Lang & Co. Ltd. and William Crawford & Sons Ltd.) require a Manager to plan, execute and extend existing and develop substantial new overseas operations.
- EUROPE will be his initial prime target, but his scope will be world-wide and the appointment may bring him to the Board.
- COMMERCIAL experience concerned with manufacture and mass marketing of food products on the Continent is essential.
- NATIONALITY is immaterial provided English is fluent. Other relevant languages are desirable.
- PROSPECTS good: initial salary by individual negotiation through consultant.

Write in confidence to us as the group's advisers.
Nothing will be disclosed without permission.
Letters should be addressed to M. J. Graham-Jones.

JOHN TYZACK & PARTNERS LTD
10 HALLAM STREET · LONDON W1

MONASH UNIVERSITY

AUSTRALIA

CHAIR OF AGRICULTURAL ECONOMICS

The Council invites applications from suitably qualified persons for appointment to a Chair of Agricultural Economics. This will be a Second Chair in the Department of Economics. In the first instance the teaching commitments will involve teaching third year pass and fourth year honours students in the Faculty of Economics and the supervision of candidates for higher degrees. While the Faculty will be taking 200 students into first year in 1963 the third year numbers will only be about 30.

Salary: £A4,250 per annum. Superannuation on the F.S.S.U. basis.

Full information on application procedure, conditions of appointment, etc., is available from the Secretary, The Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1, or the Registrar of the University, P.O. Box 92, Clayton, Victoria, Australia.

Closing Date: Applications close in Australia and London on *4th February, 1963*.

The Council reserves the right to make no appointment or to appoint to the Chair by invitation at any stage.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for a post as Senior Research Officer in the Economics Research Division. Duties partly administrative and partly academic. The Officer would be in charge of the administrative arrangements for appointing research assistants and organising their work in consultation with staff in Economics. He would have time to develop his own research interests, and could if he wished do some teaching. Academic qualifications in the field of economic statistics important and a flair for efficient administration and handling junior research assistant staff essential. This is a non-appointment and is part of a general scheme to develop the Research Division in Economics. Salary scale £1,200 x £50 — £1,500 £75 — £1,800 a year, plus £60 a year London allowance. A higher maximum may be approved for a candidate with exceptional qualifications. Appointment in the first instance for five years. Applications, with the names of two referees, should be received by the Secretary, London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2, not later than January 7, 1963.

EDUCATION: BUSINESS AND PERSONAL

FINANCIAL NOTICES

Anglo-Transvaal Group of Companies

DECLARATION OF DIVIDENDS

NOTICE IS HEREBY GIVEN that dividends have been declared in the amounts of Republic of South Africa currency set out below and payable to holders of Preference and Ordinary (and Participating Preference) shares registered in the books of the undermentioned Companies at the close of business on the 19th December, 1962, and the 31st December, 1962, respectively. Preference dividends are in respect of the half-year ending 31st December, 1962.

In the case of those Companies which have a London Office, dividends will be paid to members on the London Register from the London Office in United Kingdom currency at the rate of £1 United Kingdom Sterling for R2 South African currency unless there is a difference regarded by the Boards as material in the rate of exchange between the United Kingdom and South African currencies. Should there be such a difference the London Office will pay in United Kingdom currency calculated at the rate of exchange ruling on the 31st December, 1962, in respect of Preference shares and on the 2nd January, 1963, in respect of Ordinary and Participating Preference shares, for conversion of South African currency into United Kingdom currency.

Warrants in payment of the Preference dividends will be posted on or about the 31st December, 1962 (unless a material difference in exchange rates occurs rendering a postponement necessary) and warrants for Ordinary and Participating Preference dividends will be posted on or about the 7th February, 1963, to members at their registered addresses or in accordance with their existing instructions, unless instructions to the contrary are received in writing on or before the respective books close, and the necessary Exchange Control authority is obtained.

Members with registered addresses in the continent of Africa south of the Equator, will be paid from the Head Office, Johannesburg, and members whose registered addresses are elsewhere will be paid from the London Office (in the case of those Companies which have a London Office). Any requests by members with addresses within the Republic for dividends to be paid to addresses outside the Republic will require the approval of the Exchange Control Authorities. South African non-resident shareholders' tax and United Kingdom income tax will be deducted from dividends where applicable.

The Transfer Books and Registers of Members will be closed as follows:—

Preference Shares—from 20th to 31st December, 1962 (both days inclusive);
Ordinary and Participating Preference Shares—from 1st to 7th January, 1963 (both days inclusive).

Name of Company (All incorporated in the Republic of South Africa)	Dividend Number	Amount of dividend in South African currency	Amount of dividend in UK currency calculated at the rate of £1 UK Sterling to R2 South African currency	Remarks
Anglo-Transvaal Consolidated Investment Company Limited — 6% Cumulative Preference	49	6c.	7·2d.	
do. — 5% Cumulative Redeemable Second Preference	30	5c.	6d.	
do. — Participating Preference	17	10c.	1/-	Interim, being 5 cents (6d.) in respect of the fixed rate of 5 per cent per annum and 5 cents (6d.) being 50 per cent participation in interim dividend declared on the Ordinary and "A" Ordinary shares.
do. — Ordinary and "A" Ordinary	34	10c.	1/-	Interim.
Anglo-Transvaal Collieries Limited — 6% Cumulative Preference	53	1½c.	1·8d.	
do. — Ordinary	45	6½c.	7·8d.	Interim.
Anglo-Transvaal Industries Limited — 5½% Cumulative Preference	37	5½c.	6·6d.	
Associated Manganese Mines of South Africa Limited, The — 7% Cumulative Preference	52	1¾c.	2·1d.	
do. — Ordinary	47	22½c.	2/3	Final, making 40 cents (4/-) for the year.
Consolidated Murchison (Transvaal) Goldfields & Development Company Limited — Ordinary	37	72½c.	7/3	Final, making 102½ cents (10/3) for the year.
Harteebeestfontein Gold Mining Company Limited — Ordinary	14	25c.	2/6	Interim.
Middle Witwatersrand (Western Areas) Limited — Ordinary	18	4c.	4·8d.	For the year ending 31st December, 1962.
Nail and Chain Limited — 5½% Cumulative Preference	30	5½c.	6·6d.	
National Bolts & Rivets Limited — 6% Cumulative Preference	35	6c.	7·2d.	
South Atlantic Corporation Limited — 6½% Redeemable Cumulative Preference	18	6½c.	7·8d.	
Wright Anderson (South Africa) Limited — 5½% Cumulative Preference	31	5½c.	6·6d.

RAND LEASES (VOGELSTRUIS-FONTEIN) GOLD MINING COMPANY LIMITED

(Incorporated in the Republic of South Africa)

NOTICE TO MEMBERS

REPAYMENT OF CAPITAL No. 8

NOTICE IS HEREBY GIVEN that Capital Repayment No. 8 of 5 cents (6d.) per share will be made in Republic of South Africa currency to members registered in the books of the Company at the close of business on 31st December, 1962.

Repayments to members on the London register will be made from the London Office in United Kingdom currency at the rate of £1 United Kingdom sterling for R2 South African currency unless there is a difference regarded by the Board as material in the rate of exchange between the United Kingdom and South African currencies. Should there be such a difference the London Office will pay in United Kingdom currency calculated at the rate of exchange ruling on 2nd January, 1963, for conversion of South African currency into United Kingdom currency.

Warrants in payment will be posted from the Head and London offices on or about 7th February, 1963, to members at their registered addresses or in accordance with their existing instructions, unless instructions to the contrary are received in writing on or before the date the books close, and the necessary Exchange Control authority is obtained.

Members with registered addresses in the continent of Africa south of the Equator will be paid from the Head Office, Johannesburg, and members whose registered addresses are elsewhere will be paid from the London Office. Any requests by members with addresses within the Republic for repayments to be made to addresses outside the Republic will require the approval of the Exchange Control authorities.

The Transfer Books and Registers of Members will be closed from 1st to 7th January, 1963, both days inclusive.

By Order of the Board,

DO YOU KNOW that this crane hook could land you in real trouble?

VULCAN KNOW The most simple things can cause a disaster to all kinds of industrial machinery. But simple or complex, every potential danger spot needs an expert eye to find and correct it. The expert who knows where to look, and what to look for, is the Vulcan Engineer Surveyor.

Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection and protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!

We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

Vulcan ARE SPECIALISTS

PROJECT 304

The Great **Shell Chemicals** Sculpture Competition

Was it worth it?

At the conclusion of our Great Shell Chemicals Sculpture Competition we were presented with two interesting results.

The first was that we actually received some sculpture entries — a pleasant surprise.

The second was the result of a survey carried out amongst company directors and professional men to discover the extent to which our advertising campaign had attracted their attention — this was also a pleasant surprise.

This survey showed a high proportion of recall and approval — gratifying in view of the short duration of the campaign. May we therefore thank you for your attention.

Since the campaign was concluded we have had a number of requests for the series in booklet form from such widely scattered points as Lagos, Stockholm, Calcutta, Essen, Houston (Texas) and Watford (England). If you would like a copy, please write on your company letterhead to the: Information Officer, Shell Chemical Company Limited, 29/30 Old Burlington Street, London, W.1.

BLOCKS

MIEUX SAUTER

The real moral of Mr Acheson's much publicised admonitions is that Britain's best way of trying to weave western Europe into an intimate relationship with North America, and a tolerably amicable one with eastern Europe, is to get weaving (p. 1085).

Britain's worries over the faltering American **Skybolt** missile should turn the Government's mind to sensible, conventional methods of defence (p. 1087).

Has anyone noticed Britain's H-bang? (p. 1093).

PIS ALLER

What will be a possible (and no doubt painful) second-best economic policy for Britain if the worst happens and the Brussels negotiations break down? (p. 1088).

The **French** negotiating position at Brussels does reflect French interests and built-in French attitudes, and does not just flow from General de Gaulle's lofty personal view (p. 1090).

The European Six claim that their **agricultural policy** can be reconciled with **Gatt**; other members of *Gatt* are certainly not happy about it (p. 1137).

Visiting the American Middle West, **Professor Hallstein** appealed more to the idealist than to the farmer (p. 1127).

In **Brussels** there was a not too discouraging note for the British this week, but a dramatic one for the press (p. 1114).

For an **American** view (from Paris) of *Britain's* misconceptions about the common market see p. 1106.

NATIONS

In the East

Of the twin evils of dogmatism and revisionism, **Mr Khrushchev** has dubbed dogmatism the worse. Whatever long-term hopes he may have for the present detente, 1963 will be a year of more armed coexistence (p. 1113).

A book reviewed on page 1107 looks at **communist economics** through *western* eyes.

While Mr Novotny has sallied forth with Mr Khrushchev against the Chinese, he has kept the **Czechoslovak** communist party on a dogmatic course at home (p. 1098).

Signor Togliatti has reason to be pleased with his **Italian** communist party's growth; but it will be a long time before Italy joins the East (p. 1118).

In the West

Dr Adenauer—under notice—has another Cabinet in harness, but it looks very much a horse of the same colour (p. 1115).

In the United States, businessmen, labour leaders, officials and experts are all now in favour of **tax reductions**—and therefore even Congress may join this united front (p. 1121).

Fear of **automation** is a factor in New York's present newspaper strike (p. 1122); and also in the impending strike in the docks (p. 1128).

President Kennedy has repayed Senator Kerr for supporting the Trade Expansion Bill by tightening restrictions on **imports of oil** (p. 1127).

For technical reasons, the United States might need to draw on the **International Monetary Fund** (p. 1137).

"Relay" is only one more of a whole series of communications satellites (p. 1128).

To the South

The six non-aligned countries discussing the **Sino-Indian dispute** in *Colombo* have found themselves in difficulties (p. 1093).

The rebellion in **Brunei** shows the local doubts about the coming Malaysia, but it has other sources, too (p. 1092).

Britain presses on, trying to subdue opposition to a federation around **Aden** (p. 1093).

Although **Northern Rhodesia's** elections have finished, political smog makes it hard to see *what lies ahead* (p. 1094).

King Hassan II has won a surprisingly sweeping victory in **Morocco's** constitutional referendum (p. 1097).

Morocco still looks to the West, and its difficulties with Spain may be settled (p. 1117)

AND IN BRITAIN

Producers

Newfangled **motor cars** need not be costly to develop; but worthwhile innovations are few and far between (p. 1135).

Stewarts and Lloyds' steely diplomacy might be faulted: but the logic of its merger approach to **Whiteheads** seems impeccable. **Steel output** in 1962 is the lowest for three years (p. 1138). *Slump in steel profits* (p. 1160).

Airlines hope to raise fares by 5 to 25 per cent next April (p. 1144).

The transport commission has allied itself with a score of property concerns (p. 1146).

Planners

The Tory **workers' charter,** after fifteen years' gestation, turns out to be a feeble mouse (p. 1092).

County **Durham's new towns** are facing difficulties from local clumsiness as much as *from* national inadequacies (p. 1101).

The parliamentary Labour party, with one honourable exception, criticised the **London government** bill for the wrong reasons (p. 1094).

Novel **homes for Londoners** are to rise from a Thames-side marsh (p. 1144).

The **National Incomes Commission** has a testing subject for its trial run (p. 1092).

Censorship and McCarthyism, those nasty reflexes, have turned up again in Britain (p. 1098 *and* p. 1094).

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail, UK and Canada £4 . 10 ; elsewhere overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class *airmail or in bulk* by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight
Australia	£12 5s.	—
Canada :—

It's a Morgans World

"When I awaked, the sun was travelling high in the sky. The sea had much quietened and before me lay a whole world of such marvellous complexity that I could make no computation of its whereabouts and was much amazed at its intricacies. But as I cast my eyes downward and looked with greater perception, I did see that near all its wondrous components were of the strange and black element known as carbon. All this, I thought and yet of its diverse and many applications so little generally known; what can there be that does not in some way employ this astonishing substance?

Then was I answered, but in the most obliging fashion, and told of Tri-Mor and Puros of Resistors, Ceramics and of Furnace Elements and all manner of things which hitherto had been but mysterious sounding words. And a voice so strong and yet so beautifully modulated, that I instantly recognised knowledge and authority, tempered with an unmistakable willingness to serve, said Puorg Elbicurc Nagrom (*which, as I afterwards learnt, meant*—IT'S A MORGANS WORLD)."

YOUR C.I. MAN KNOWS HIS BUSINESS... AND PROBABLY YOURS AS WELL

He is the man from C.Itoh, world-wide trading and investment company. There is one permanently stationed in most of the world's major capitals. His job: develop potentials into profits.

Your C.I. man is a trading expert. He is at the source and knows his market—trends, cost factors, customs, banking, market conditions—the know-how that is essential in a field as complex as international trade.

Talk to him about commodities, any commodity, and he'll tell you all you need to know to buy, ship or sell steel, cotton, rubber, wheat, oil, chemicals and you name it ... machines and equipment, too. C.Itoh handles thousands of commodities every day, all supervised by a practised team of experts.

Whatever your business, importing, exporting or cooperative ventures, contact your nearest C.I. man. He is a man who knows his business.

FLEXIBILITY

Is your engineering staff sufficiently flexible to undertake without undue strain the work load needed to execute a major plant expansion? A call to Kellogg will help you resolve any doubts. Kellogg International Corporation has reinforced the staffs of many companies in executing such diversified projects as pulp and paper mills, oil refineries, chemical plants, steel mills and other processing plants. Kellogg has, in addition, full capability of undertaking the complete project and applying their own particular method of coordinating and controlling all stages of design, engineering, procurement and construction in close cooperation with your own staff. Adding Kellogg means you have the entire technological and scientific knowledge of an international organization at your service.

Let the Kellogg International Corporation show you their approach to plant flexibility. Write for "On the Job with Kellogg International Corporation".

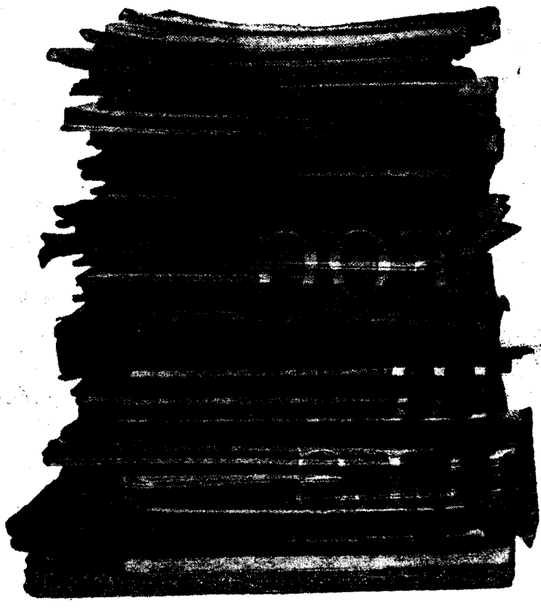
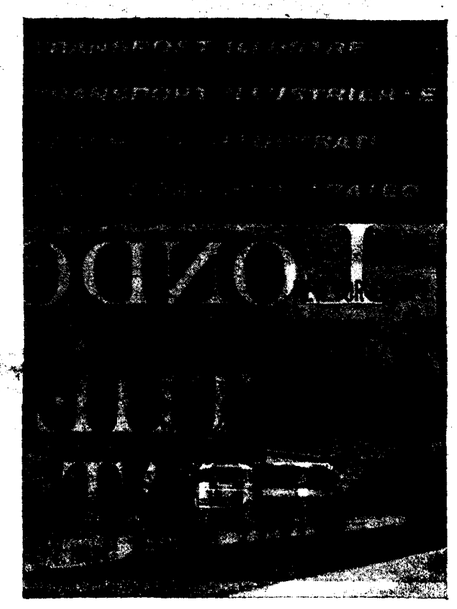
You can sell
36,000 European
transport men
in 17 countries
in 4 languages
in these
63 magazines...



or in this one
(First Issue March/April '63)



Your most important European customers for transport, mechanical handling and industrial packaging equipment need a source of world-wide information on new products, methods and services. TRANSPORT ILLUSTRATED fulfills that need by reporting world-wide transport-equipment developments and uses. Every item is printed equally in four languages: French, German, Italian and English.

TRANSPORT ILLUSTRATED has neither feature articles nor display advertising. Rather, equipment information is presented in a unique *new format* – The Product Unit – created for the technically well-informed reader in the multi-lingual European market. Each Product Unit purchased by the advertiser displays a photo of the new equipment, method, or service and describes it equally in French, German, Italian and English. Product Units are presented in twelve categories: Commercial Vehicles; Industrial Vehicles; Conveyors; Cranes and Hoists; Containers; Weighing Equipment; Industrial Packaging Machinery; Engines; Tires; Maintenance Tools; Replacement Parts; Fuels and Lubricants.

T/I is designed to produce sales leads. Every Product Unit carries a Key Number which the reader may check on the Reader Service Card to obtain more information.

The advertiser's production cost is nil. T/I will translate as required and set Product Unit copy in four languages, and will make a half-tone engraving from the advertiser's photograph.

T/I also provides another vital service: a complete and up-to-date summary and analysis of European transport regulations and trends. First issue of T/I will be March/April 1963. Bi-monthly thereafter. Circulation is 36,502 (controlled) in 20 industrial classifications where transport is vital. Send for full details including sample Product Unit pages, circulation analysis according to country and industry, and Product Unit rates.

Dark at mid-day; sound is muffled and a bustling city gropes to a standstill. A 'regular pea-souper' to the Londoner. 'Romantic, mysterious' to the visitor. The truth is — it's deadly.

Fog is a menace in all great cities. In London it is a killer. A quiet, grey killer whose chief victims are Bronchitis sufferers. In London a three-day fog can kill 3,500 to 4,000 people; thousands more become seriously ill.

Both air pollution and smoking make chronic Bronchitis a special problem in this country. Overcrowding encourages the spread of infection. In Great Britain alone, Bronchitis causes around 30,000 deaths a year. A rate 50 times higher than in Denmark, 45 times higher than in the U.S.A. Little wonder if Bronchitis has come to be known as the 'English Disease'.

But Bronchitis not only kills; it can dramatically reduce the country's productivity. Every year this disease alone wastes a total of 27,370,000 working days and places an enormous burden on our doctors and hard-pressed medical services.

Clean air is the only real solution. Until then, Bronchitis will [illegible] winter after winter. Until then, our doctors confidently rely on broad-spectrum antibiotics to help control the disease and save lives. The most important are the tetracyclines discovered and developed in our Lederle Laboratories. Today in Britain, Lederle tetracyclines are widely prescribed for the treatment of upper respiratory infections, Bronchitis and Pneumonia. Finding antibiotics that help doctors keep Bronchitis under control is just one problem Cyanamid has worked to solve. Research goes on. Cyanamid will invest over £11 million this year in research of all kinds; research to find drugs to conquer human ills; to find new and better ways to produce more food; to find better ways to make life happier and more abundant.

In this and in a thousand other ways

VOLUME CCV - NUMBER 6225

From the Urals to the Cascades

ONE sure way of telling whether a country knows the part it wants to play in tomorrow's world is to see how much of its time and attention it devotes to reminiscing about the part it played in yesterday's. On every count except perhaps one, which has to be discussed separately, what Mr Dean Acheson told the cadets at West Point on December 5th is plainly true. The strange and disturbing thing is not that this urbane and intelligent near-Englishman should point out that Britain's hope of performing "a separate power role, apart from Europe" is about played out. It is not even surprising that the *Daily Express* should have misquoted him as saying that Britain was down and out as an independent power.

What is really frightening is that even some of the people in Britain who have accepted the case for trying to join the European community should apparently not recognise in Mr Acheson's words the very reason that led them to take the decision. It is hard to tell which part of last week's Mutt-and-Jeff turn between the Institute of Directors and the Prime Minister was the odder: Lord Chandos's grave proffering of the cue, or Mr Macmillan's grave response, classing Mr Acheson with Hitler and Napoleon. Roll up that map, Mr Macmillan seemed on the brink of saying, it will not be wanted these ten years.

Very likely this underestimates the Prime Minister's grasp of reality, and his political reasons for not wanting to admit that he grasps it. But it is a bad mistake to encourage the already unhealthily strong tendency of the British to define the job they have to do in the future in terms of the job they did in 1940, or in 1805. The reply one would prefer to see made to Mr Acheson is not that Britain wants to go on playing its pre-1945 part in the world, which he perfectly rightly says it cannot; but that some serious thought is being given to the quite different tasks Britain will want to perform (and perhaps only it can perform) in the vastly altered circumstances in which it finds itself.

The trouble is that nations, unlike actors, tend to change their parts only when events force them to, and the feel of events moving under one's feet is not conducive to serious thought. Mr Acheson's speech has been followed in quick succession by two other unsettling experiences that may add to the urge to jump clean off the escalator. On Monday Mr Heath went back to Brussels, to resume the attempt to reconcile Britain's acceptance of the common market's agricultural policy with the desire to shield British farmers and housewives from the effects of that policy for a limited period. It immediately became clear that neither side had shifted, in a French delegate's phrase, a millimetre (for Britons, still on imperial weights and measures, not even a twentieth of an inch). This does not at all mean that the negotiations will yet break down on this issue; but it does mean that the warning coughs lately coming from British ministerial throats (Mr Erroll's last Saturday, Mr Maudling's on Monday) have not yet caused the intended paling of cheeks south of Dover.

On Tuesday this show of continental unflappability was followed by the arrival in London of the American Secretary of Defence, Mr McNamara, to talk about the Skybolt missile. Mr McNamara confirmed the reports that the pre-natal period of the expensive Skybolt is proving remarkably difficult. The implications of this for British policy are described in the next article. All that need be said here is that the miscarriage of Skybolt would confront Britain with exactly the same unpleasant choice as a possible miscarriage at Brussels.

The choice is between looking wildly around for some costly, makeshift and decidedly inferior alternative (the rational alternative to the common market is discussed on page 1088) and frankly owning up that the only way for Britain to go on wielding power and influence is through a combination with other countries.

The ability frankly to own up what is clearly the case would be the ideal gift for Britain this Christmas. Instead, alas, the Santa Claus in Admiralty House is handing out sepia illustrations of Great Moments in British History. The British will never wrench themselves away from the nostalgic contemplation of their past until someone sets out in plain language the equally challenging (and equally rewarding) job that awaits them if they enter the European community. This is the sense of purpose for which Lord Hailsham could be banging a drum. Given the British view of the world, and the circumstances within which this world view has to work, it is not difficult to describe the task in outline.

The next job for Britain is, from within Europe, to influence the design of the growing European structure so that it keeps a maximum of open doors to the rest of the world—and, in particular, to its great neighbour-relations to the immediate east and west. In other words, Britain's function is to keep on insisting that western Europe is part of something bigger. Its unity needs to be used to unite, not divide, the Atlantic world. It should also seek to diminish, not deepen, the rift that at present divides east from west within the historical community of European peoples. To modify General de Gaulle's phrase, pointedly, this divided European world stretches from the Urals on one side to the Cascade mountains in the western United States on the other.

SPELLING out the aim in these broad terms is not very hard. How to start putting it into practice in the difficult years just ahead is another matter. One way of seeing what it involves is to imitate Mr Acheson, and take a quick and realistic look at the dominant features of the European political scene right now.

The first dominant feature is the fact that the new coalition government unveiled in west Germany on Tuesday is virtually indistinguishable from its predecessor, save for the replacement of Herr Strauss by Herr von Hassell, and for a few changes in minor posts; our Bonn correspondent's account is on page 1115. Pretty clearly, so far as foreign policy is concerned, there has been no shift in the uneasy balance of power between what one must call (for want of better words) the Adenauer traditionalists and the Schröder modernisers. So long as this uneasy balance lasts—which is at least until Dr Adenauer retires—no new initiative can be expected from Bonn, and no reassessment of west Germany's position in Europe. But this means that, during the prolonged pause, Britain can continue to argue the case, remembering that the fort has to be held against foes, for a conciliatory German policy towards eastern Europe—in the hope that the modernisers, at least, in Bonn will see the argument's force.

It is in this context that a long, hard look has to be directed at the part of Mr Acheson's West Point speech which dealt with the question of German reunification. Calling for bigger allied conventional forces in Europe, which are no doubt needed, Mr Acheson said that these might make it "increasingly impracticable" for the Russians to intervene to support the east German government, and that "a solution of the German question by Germans" might then be possible. This could be read, and will be read in eastern Europe, as a proposal for American, French and British troops to hold the ring while the two German governments fight out their differences. Probably Mr Acheson did not mean anything quite so hair-raising. But, at the very least, his suggestion is a full-blooded return to the traditional Adenauer policy of glaring stonily across the Elbe until east Germany falls into west Germany's lap. In east-west matters Mr Acheson, it seems, is regarded in Washington as the beakiest of hard-nosed hawks. One wonders whether hawks are any longer the ideal birds for the central European air; more important, some of the younger men in Bonn seem to be wondering the same thing.

ANYONE who hopes that western Europe will open some more doors and windows towards the east will be obliged to argue against a return to outdated attitudes and policies in the middle of the continent. But the other half of Britain's aim in life is to keep open the doors that face westward; and here the dialogue is going to be primarily with General de Gaulle. The general, too, has just formed a new government, on December 6th, and this new government contains even fewer variations on the old one than Dr Adenauer's. But in France the ministerial *status quo* is not a sign of a delicate balance between different tendencies, as in west Germany; it is a token of the total victory of the gaullist force. This victory at least has the virtue of opening up some new possibilities within France; it will now be possible to see, for instance, whether General de Gaulle really wants to reform the party system in a democratic fashion, allowing for an opposition, or whether he is merely interested in keeping a tame parliament on a leash.

In terms of France's relations with the western world, however, the general's victory means a narrowing of the range of possibilities. For instance, although there is no reason to think that the French negotiators in Brussels will actually get orders to keep Britain out of the common market at all costs, the chance that a victorious parliament might have enforced a more accommodating attitude to the British application has now totally disappeared. (It never loomed very big.) And those other elements in General de Gaulle's cast of mind that make him think of France and Europe in inward-looking terms have presumably been reinforced by his triumph at the polls on November 25th. This inward-looking tendency already shows itself in his refusal to share control of nuclear weapons, and in his apparent preference for western European self-sufficiency in other matters. It will not be easy to check these tendencies; but checked they will have to be, unless the links that tie the European community to the other western nations are to slacken and, perhaps, fall away.

What is the lesson of all this? Plainly, for the British in general, that the best way of trying to weave western Europe into an intimate relationship with North America, and a tolerably amicable one with eastern Europe, is to get in there and argue for such a weaving; for Mr Macmillan in particular, that he cannot expect the British to see this as

Britain's chief purpose in life until he explains it to them. The aim of keeping the three great centres of production and power that lie between the Urals and the Cascades on decent terms with each other, in the hope that they may one day come to recognise a community of interest, is a sufficient challenge for a middle-aged, middle-sized country like Britain. It provides a better national occupation, at least, than boring everyone with recollections of the great, dead, past.

Skybolted

Defence is the art of the practicable

MR THORNEYCROFT and Mr McNamara left London for Paris on Wednesday agreeing only that the Skybolt discussions will continue. This means at least until the Prime Minister has seen President Kennedy next Wednesday. But what is the Government really prepared to argue for? Does it insist on having Skybolt itself, or on getting American assistance for the continuation of a British-manned nuclear striking force of some sort? Or does it really just want to save face in what has become an awkward political situation?

If the Government wants Skybolt, it is crystal clear that it is not going to get it either at the price or at the time expected under the original arrangement with the United States in 1960. These were Skybolt's two advantages: it was thought to be relatively cheap to buy, since the Americans would be making it for themselves, and it was the one missile which, if delivered by 1965, would keep the British V-bomber force relatively credible against the Russian defences until 1970. It is now quite sure that it is not going to be cheap; the Americans estimate that the cost of fulfilling the Skybolt project could now be around £1,000 million instead of the £175 million they originally hoped to get away with. There is also no hope of it appearing by 1965, since its first five trials have been failures; and if it cannot come quickly, it had better not come at all.

Even a workable Skybolt, as a second strike weapon travelling at eight times the speed of sound but carried for the first 1,000 miles towards central Russia by relatively slow and vulnerable British V-bombers, would be a distinctly diminishing asset by the later 1960s. It is a pity that this means that the expensive British V-bomber force will now become obsolescent more quickly; the V-bombers' hope of penetrating Russian defences in sufficient numbers with older stand-off bombs such as the American Hound Dog or a souped-up British Blue Steel (range 300-500 miles, against Skybolt's intended 1,000 miles) must decline sharply in two or so years' time. But to say that we must justify Britain's partly wasted expenditure on V-bombers by demanding that the Skybolt project must be continued is to demand that good money be thrown after bad; this is never a sensible excuse to suggest, even when the idea is that some of the good money should be thrown by somebody else. The most that can reasonably be said is that the Americans should recognise the costs that Britain has incurred when totting up who pays for what in the finance of the grand military alliance.

Since this bet has flopped, should Britain stay in the business of strategic nuclear deterrence at all? (With the contour-flying TSR-2, itself raising major technical problems, the RAF is likely to stay in the tactical business for some time yet.) Given American acquiescence, Mr Thorneycroft could have two options besides Skybolt. There is, first, the land-based, solid-fuelled Minuteman, a successful intercontinental rocket now being installed in "hardened" bases in the United States. But if Mr Thorneycroft is hankering after this he should quickly reflect on the ease with which the Russians could blanket this country (as opposed to continental North America) with their multiplicity of medium-range weapons. This is not a matter of national prestige but of national geography. Neither in a hardened base nor on mobile carriers has a second-strike missile any real credibility inside this island; this, after all, was the primary argument against Blue Streak.

The other option is Polaris. Mr Thorneycroft might put this missile relatively cheaply into surface ships, but its vulnerability to Russian attack would then be very high indeed by the later 1960s. If he were to put it into new British-built nuclear submarines, as the Royal Navy would like, the cost of a significant force would make a huge hole in Britain's annual defence budget. Very little of this force would actually exist before 1967-68 (the Admiralty's one existing nuclear submarine, the Dreadnought, is still a full year away from becoming operational—and would need to be pulled apart again to fit in a missile section). Even more important, the type of Polaris that the Americans have now, and could offer Britain, is only a pale imitation of the kind of weapons system that will be needed by 1970.

THERE need be no dilemma here. The present state of the nuclear competition between East and West simply does not justify an expensive British effort on the scale of a Polaris fleet. The present, and increasing, missile superiority that the United States possesses over the Russians makes another hundred Polaris (or Skybolt) weapons a wasteful duplication for the foreseeable future. In conventional forces the East-West balance is quite the reverse; there the Russians have the greater force, and Britain ought logically to be spending what extra money it can on men and conventional equipment. Within the alliance a new British deterrent starting from scratch is unnecessary; outside the alliance it would be an economic impossibility. And what counts is the alliance.

To those who argue on patriotic or diplomatic grounds that Britain should be able to afford to do what the French are doing, the answer is that President de Gaulle has not even reached the stage where he knows what the bill for a credible French force will be. The American, the British and (it seems, on present evidence) the Russian experience has been that nuclear weapons are cheap and easy to develop; but their delivery systems are difficult, horribly expensive, and quickly obsolescent. Britain's efforts will now be better directed to contributing to a total, balanced deterrent within the alliance in terms of the likely strategic needs of 1970—not on twisting the Americans' arms for face-savers, flag-wavers and evanescent expedients.

THE COMMON MARKET—I

The British Alternative

The negotiations in Brussels are not at the moment going too well, though our correspondent there does not take as gloomy a view as some other reporters (see page 1114); and two senior British ministers in charge of economic affairs this week referred publicly to the possibility that they might even have to be broken off. What alternative economic policy could Britain follow if the worst—and it should be clear that *The Economist* would regard it as the worst—happened?

ONE of the misfortunes of the Brussels negotiations at the moment is that the economic importance of most of the issues being bargained about is being steadily and indignantly overrated, while the economic changes that Britain would be wise to put into effect if the negotiations were to fail are almost certainly being undercalled. The big issue of the past week has been whether Britain should suffer the considerable administrative inconvenience of moving unreasonably quickly instead of reasonably slowly from its present pretty uneconomic (and eventually unworkable) system of agricultural support to the even more uneconomic (and in the long term perhaps more unworkable) European support system. Beside the historic possibility of British entry into Europe there is frankly a tang of fairly small beer even in this debate, and also in most of the debates about what should be the initial level of European tariffs on various items of Commonwealth produce. That is the first point that anybody who professes to hold a balanced view should keep constantly in his mind. What would happen later, after Britain became a member of the European Economic Community, would be of vastly greater importance to every single interest concerned.

Nevertheless, it is becoming increasingly necessary to consider what alternative economic policy Britain should follow if either side at Brussels slams the door shut. The usual alternative that is suggested is that Britain should strive to arrange freer trade areas with anybody else in or outside the Commonwealth who would listen to us, and the wider those areas the better. This would without any doubt be the ideal policy, in the same way as an ideal alternative to not having bread is to have cake. But it suffers from the usual defect of a Marie Antoinette alternative, in that it is unlikely to be available.

The Commonwealth countries would not readily agree to allow genuinely freer entry for our manufactured exports, because they are intent on building up and protecting their own infant industries. The United States and the European Six (even with Britain excluded) might move at a leisurely pace towards freer world trade in particular manufactures which do not especially matter to them, but the pace they seem likely to contemplate could not begin to provide the dynamic that Britain so urgently needs either to keep expanding its modern exports of sophisticated goods or to keep constantly increasing the efficiency of its whole national economic machine by the spur of competition from free imports. Essentially, therefore, those who talk vaguely of negotiations for "freer Atlantic trade" as an alternative to joining Europe are really assuming that Britain could slip simply back into its former mode of managing its economic affairs. But that mode did not put Britain in a very strong internal economic position in the 1950s, and Britons should bluntly realise that after a Brussels breakdown the prospects for a Britain governed by the old "orthodox" economic policies would be likely to become very much worse.

DURING the last eighteen months the one real spur to the most forward-looking parts of British industry has been the belief that Britain was about to enter Europe, and this belief has also been a major factor in the recent build-up of greater international confidence behind sterling. If early next year a puncture at Brussels were to cause both this internal buoyancy and this external optimism to disappear, and if Mr Maudling were to handle the consequent ebb tide of confidence and currency in the familiar restrictive manner, it would be singularly unlikely that he could restore national prosperity before the next general election.

If that election then produced a Labour government with a brand new and imaginative alternative economic policy, this awkwardness of the political timetable would not matter; but the prospect of a new Labour government producing any policy of the sort seems remote—even on the party's present form, let alone in the circumstances being envisaged here. For these circumstances, to repeat, would be of Labour coming to power, carrying with it its tendencies to temper winds to shorn lambs and to look like a scarecrow to international bankers, at a time when the mainspring of foreign economic policy that might otherwise have helped to drive Britain towards competitive efficiency had just been dismantled and when foreigners were already talking down the exchange rate of the pound. No very great confidence could be reposed in how any government would handle a situation of this sort; one's guess about a Labour government is that it would repeat the sad saga of 1945-51, with a retreat into national ossification and possibly a crippling economic crisis every other year.

If there should be a complete breakdown at Brussels early next year, one's preference would therefore be for a dramatic and immediate attempt to overhaul the whole structure of British financial and industrial policy, hugely difficult though such a change would be. There would be a strong case for saying that in these circumstances the Conservative government should not call a general election immediately; instead it might serve the nation better by the prompt implementation of alternative economic policies, designed to be sufficiently far-reaching to change the whole atmosphere of British economic decision-making before the eighteen months or so that would theoretically still be left to this Parliament were exhausted. Let it be reiterated here that the policies now to be discussed would, in *The Economist's* view, be very much a *pis aller* to entering Europe. It should also be said that there is not the slightest sign that the Government has even considered such policies; indeed some people will say that it is irresponsible to indulge in discussion of "wild" alternatives at this stage. But it is necessary to be realistic. The present Brussels negotiations could run on the rocks, and Britain would then need, not just a lifebelt (which is not a device with which one can make swift progress), but an alternative motor boat. It is time to risk the charge of irresponsibility by discussing what this alternative could possibly be.

THE economic advantages of securing free trade with Europe would have been the provision of:

(a) a stick against inefficiency, because British manufacturing industries which are so uncompetitive that they could not stand up to tariff-free imports into Britain would then be steadily cut down in size;

(b) a spur for efficiency, because the most competitive British exports ought to be able to expand rapidly once they could enter Europe duty free—instead of having to compete over a tariff barrier of, say, between 10 and 20 per cent.

Theoretically, advantage (a) could be even more fully secured by Britain cutting its tariffs unilaterally, on imports from all overseas countries as well as from Europe. Theoretically, advantage (b) could be very partially secured by devaluing the pound sterling by between 10 and 20 per cent; or, alternatively, by introducing tax remissions for all exports equal to between 10 and 20 per cent of those exports' price.

If the present round of Brussels negotiations did reach an irremediable break, there could be a strong case for giving prompt consideration to a move in both these directions: towards the unilateral cutting of British tariffs, and towards *either* setting the sterling exchange rate free to float *or* introducing direct tax subsidies for exports. The first course would be criticised on the grounds that it was unduly generous to foreigners; cuts in British tariffs, it would be said, should be used as bargaining counters and made only to those countries who reduce their tariffs to us. The second course would be criticised on the grounds that it would be unfair to foreigners and, sensibly enough, that it might lead to retaliatory action against us; competitive devaluation would be deplored by the International Monetary Fund and tax subsidies for exports from so large a trading nation as Britain would make a mockery of the General Agreement on Tariffs and Trade.

To some extent, these two arguments, for all their inherent force, cancel out. If the Europeans and Americans allowed them to cancel out, if in tariff negotiations with Britain they agreed to drop their tariffs against British goods as quickly as we were dropping our tariffs against theirs, then so much the better; in those circumstances Britain should certainly agree not to grant tax subsidies to its exporters and should strive to hold sterling at its present exchange rate. Britain would then be doing something more than merely seeking through diplomatic *démarches* to ask everybody to co-operate with us in moving towards free trade between all the developed countries of the free world; it would be operating a positive mechanism for hurrying the process along. In the more probable event that we could not reach such a formal agreement, our unilateral tariff cuts would give us the internal spur to greater efficiency, and action on exchange rates or through export subsidies would then seem likely to be needed to expand our exports in order to pay for the greater imports involved.

Moreover, any such policy of British advance towards free trade should quite frankly be applied (from our side, even if we got no reciprocation) to agricultural imports just as much as to industrial ones. We should in these circumstances positively encourage the import of cheap food from the Commonwealth and elsewhere, and British farmers should be told now that the alternative to joining Europe will not be more protection but the imposition of a strict upper limit to the amount of protection that they are getting through subsidies at present; they should be told that any Conservative-implemented change in the system of agricultural support in the next Parliament would then not be in the direction of restricting imports but of aiding less efficient British farmers to resettle in other jobs. And if Britain maintained free entry of food from the Commonwealth after a rebuff from Europe, it should no longer feel under any obligation to agree to help sponsor "world commodity agreements" or other cartel

The Economist

DECEMBER 13, 1862

REVENGE OR REFORM?

Several Grand Juries, at Sessions and Assizes, who ought to represent the collective information and good sense of their respective counties, have recently been distinguishing themselves by various "Presentments" on the subject of convicts, garotters, prison discipline, and the like—Presentments of which, to say the least, the agreement is more remarkable than the sagacity. With a unanimity which is not creditable, but which clearly indicates the common source whence they draw their inspiration, these documents echo the platitudes and prejudices of the public and the public press, and clamour for scantier prison diet, for the abolition of tickets-of-leave, and for the revival of transportation in language of which the *Times* and the *Morning Post*, and a few of the Assistant Judges have set a most unfortunate example. If something cannot be done, and done soon, to enlighten and warn the popular feeling on these subjects, we fear it may become too strong for a puzzled Parliament and a busy and unphilosophic Government to resist; and not only shall we be driven to some hasty decisions at once mischievous and dangerous, but we shall be diverted from seeking salvation and security in the only direction in which, as we have argued for years, they can alone be found. . . . The *present* system of tickets-of-leave as carried on in England under the management and advice of Sir Joshua Jebb, is, as we have often urged in these columns, the very worst conceivable. It operates, no doubt, to render the prisoner amenable to discipline while in gaol, but it does nothing more. It works no reformation. It induces no new habits. It facilitates no new career. It puts him under no additional supervision. . . . If the "ticket-of-leave" men had been habitually liberated in England on the same *actual* conditions, and with the same preliminary preparation and subsequent precautions as in Ireland, the present outcry against them would never have arisen. As it is even now, however, bad as our system of dealing with hardened and atrocious criminals in this country probably is, the one change by which it would be as indisputably altered for the worse, would be that which the Grand Juries have so consentaneously advised—viz., the abolition of the rule in virtue of which a convict can shorten his sentence if he will.

arrangements that might enable overseas farmers to put up their prices against us.

NOBODY but a madcap reformer would welcome such a programme with any glee: it would be, to repeat, a *pis aller* and hazardous. It is right to feel horrid doubts about how far Britain could really hope to coerce larger powers into freer trading policies by such disturbance tactics; but equally right to fear that a non-disturbing Britain locked out of Europe might otherwise be steadily coerced into an even gloomier economic posture by the pressure of events. There must be wide respect for the fears of central bankers and others about the upheaval in the world's monetary and trading system which any such a policy could cause; yet the experience of the 1950s suggested that the present world monetary system lays upon Britain, as the upholder of one of the two international key currencies, a burden which a slow-moving, small country fenced out of Europe would not be able to bear for long.

To say that something of the sort discussed above would seem the least bad alternative to entering Europe is therefore to say once again that ministers in charge of Britain's economic affairs should not contemplate too lightly what their tasks and problems would be if Brussels failed. There should be an end to ministerial speeches which suggest that Mr Heath's negotiations, while of the most fundamental importance, need make no major difference to anybody's economic policies if they do not succeed.

THE COMMON MARKET—2

A French View

Discussion in Brussels is burdened with misunderstanding. What follows here is the point of view of a French journalist troubled by the weight of this burden. It seems clearly to show a fact that, though obvious enough, is much overlooked: that the French view of Britain's application flows from French interests and built-in French attitudes, and not merely from idiosyncrasies of General de Gaulle.

IT is too late for regrets that you got on the wrong horse in 1950 when you were invited, with the Six, to the preliminary conference on the coal-steel community, and again in 1955 when the Brussels conference was outlining the common market. But there is still time to understand your reasons for refusing.

All the countries of the Six were defeated and occupied during the war. Most of them had to change their political regime. They had recognised their weakness and the impossibility of staying independent. You had worked hard during the war, suffered much and given much—but you won, and reasonably enough you did not find in that any cause for humility. You thought it possible to go on as before, with no essential changes in your politics, or in your pound sterling, or in the Commonwealth. All the ingredients of greatness in what de Gaulle might call *l'Angleterre de Papa* seemed to you bound to last. And one essential element in them was the balance of power in Europe—the British opposition to all European groupings, and the old game of playing one country off against another, based on a free hand and independent sovereignty for all.

But for us in the Six, this game was no longer on. Germany was divided in two, crushed and ripe for the rebirth of Hitlerism or the flowering of communism. The only hope was to integrate western Europe in a solid, strong and lasting system. You could have made a big contribution to this; you preferred not to do so. So it had to be done without you. You stayed neutral even if well-disposed—but, rightly or wrongly, we felt that you were waiting for the collapse of our childish house of cards.

When in 1956 it became clear that the European common market was a serious proposition, you could not bring yourself to acknowledge that a great new country was in the process of creation, and that it represented a decisive stage for the peace of the world, since it would bring France and Germany together and get rid of the cause of wars that had cost the world—and you—so dearly. Of course, you could cite any number of statements at that time in which you expressed your admiration of this emerging Europe. But you also added that there was no need for commercial "discrimination" in making the new Europe. That was the big word then. You wanted France and Germany to agree, but only if they kept no commercial privilege for themselves. You wanted a European union, but not one with practical consequences.

You did make a big effort to get back into Europe, at Mr Macmillan's behest, in the European free trade area. It was a new idea, yet you took it up with enthusiasm. But the Europe you were hoping for, with full sovereignty for each country, imperial preference in, and agriculture out, was turned down. Why? Because the French didn't want it, you say. That is true. But was it something that France could accept? France is a country that has a third of its people in agriculture and a quarter communists. So it cannot be governed without the support of farmers and communists, and that means protection for foodstuffs and so a higher level of wages. Of the British population, only 5 per cent are farmers. To open the market for industrial products only would give outlets in France for almost all British products, whereas a free opening to the British market would have been of advantage to only a part of French industry, handicapped by the heavy burden of support for a big farming industry. With the advantage at the same time of the European market and of the Commonwealth, Britain would have been much better placed than its partners for investment.

From the European viewpoint, a common external policy and a common tariff (with no big exceptions, which ruled out your plan) were the powerful cement. We were right not to want to give them up, to think that European union could create a great nation, that this could not come about without agriculture and industry taking equal part, without the same customs duties at Bordeaux and Hamburg, and without an external commercial policy effective equally for Normandy and Tuscany. All this you could not see; you clearly aimed at detaching Germany and Benelux to restrain France—which would have meant the death of Europe.

French objections were not simply a whim of the government. There were Frenchmen whose minds were open to a free trade area, but none prepared to fight for it. The trade unions were against it, and farmers and industrialists fiercely so. The project was an impossible political proposition. Without agriculture and without a common commercial policy, no Europe was possible for France.

NOW that you have "accepted the Treaty of Rome" officially on October 10, 1961, and Mr Heath with his smiling briskness and his remarkable team have been negotiating in Brussels, have the misunderstandings gone? You still seem to want, within the machinery of the Rome Treaty, just an arrangement to which you could accommodate yourselves comfortably. You were counting particularly on the extension to the Commonwealth of the famous protocol for Morocco and were disappointed to learn that this exceptional breach had been agreed to at the last minute because it involved only 5 per cent of French imports and one per cent of community imports. It was out of the question to stretch this to the powerful Commonwealth where the proportions are entirely different.

You were still counting on a liberal interpretation of the text of the Rome Treaty, like the Bible ("all possibilities are provided for"). You were disappointed to come up against the limited interpretation of the Brussels high priests. Admittedly, the treaty was just the foundation on which, since 1957, a strong house has been built; but there is no question of knocking it down and putting up one in a different style on the same foundation.

It all comes down, the British say to us, to a single political question: does General de Gaulle want us in the common market or not? On General de Gaulle's attitude, the last word has yet to be said; but there was an evening, some months ago, when he made it clear in a private conversation during a reception at the Elysée. "I prefer," he said, "Europe to Nato, and the Europe I prefer is the Europe of the Six. But if our partners are bent on Britain coming in, I shall not oppose them." Some time later in an official statement, M. Couve de Murville defined the French position. "Our tradition of friendship with Britain and the memory of what she did in the war," he said in effect, "lays upon us the duty of welcoming her in the European Economic Community if she wants to come in. But she will have to accept both the fact and the spirit of the common market. It cannot be distorted for her convenience. This, we know, will mean big sacrifices for her."

France knows that she would be alone if she opposed your entry illegitimately. She knows that if you really want to join in the European movement, it must serve the cause of peace. Neither General de Gaulle nor the foreign minister wants to (or indeed could) prevent Europe from growing as she can. If Britain will accept the full conditions required of a real member of the great nation that forms Europe, she is in.

France is not the only member of the community, and some other countries think, as you do, that certain conditions put by the French could be simplified and so help you to come in. But the secret of French influence is that she has all along maintained an irreproachably European position, and one so governed by a sense of common interest and the strengthening of the community that up to now France has often been the best ally of the European commission. Whatever encouragement you might have received in other capitals, the Six, when they are together, always find agreement pretty close to the French view. So it is that cautious France must play the European to maintain her influence; but then the other Europeans will follow.

It is not a matter of Europe only. The rest of the world, and in particular the United States, accepts more or less readily according to the circumstances that Europe is becoming a single nation; but it gets annoyed when the common market gives preferential conditions to associated countries because it reckons that this must be detrimental to it. And the political pressure of the rest of the world strengthens the opposition to preferential treatment for countries that are not members of the European community, even if they belong to the Commonwealth or to the European Free Trade Association.

BRITISH interests can be safeguarded, but only within a genuine European framework. Often enough, journalists have been disappointed to see the British take up positions that they must have known straight off could only be rejected, since they were never acceptable. The British always come back to the political argument that everything can be fixed up "if one is nice to them." They are like some rich man who wants a seat in the first airplane that has got off the ground and is angry because he cannot find enough room for his legs and his bags. The common market is a mechanism marvellous beyond hope, but working out entirely new techniques. One false move could destroy all its expectations. To bring Britain in is quite an adventure. But this cannot be allowed to upset the delicate mechanism before experience has shown whether it can function.

So what should be done? Look for practical solutions. One such has been found by the commission—to fix for India, Pakistan and Ceylon a level of foreign exchange earnings and if this is not achieved to find out why and take remedial measures, even if this means some bending of principle. One must work out other problems in the same way. For the Commonwealth, as you well know, imperial preference is a weakening bond, but there are a dozen others; it has often happened that one of them breaks and always you find others. If you come into the common market, your associates will have an intense need for you to the extent that you decide to co-operate with them strictly to solve problems as they present themselves. For it is increasingly clear that no single country can beat the problems of money, growth and aid to underdeveloped countries.

It is up to you. But please do not answer yet again that there is no problem except in French imagination, or that with a little kindness, gratitude or political good will, Paris and Brussels can arrange everything to suit you. If that is your answer, your misunderstanding will be profound and it will be the greatest of pities.

NOTES OF THE WEEK

WAGES

In the Nic

MR MAUDLING has chosen wisely in his first references to the National Incomes Commission. The Scottish building employers' concession of a 40-hour week to their 90,000 employees as from next November, and the Scottish plumbing workers' securing of a similar concession from last October, should provide Nic with splendid preliminary canters. First, these are concessions that are not what they seem, and that would not otherwise have been at all widely criticised in the national press: pretty plainly the reductions in hours are designed to increase pay rather than leisure. Secondly, these are union gains (won under threats of a strike, and giving building workers in Scotland more than their colleagues in England and Wales) that could all too quickly flow out into other fields. Thirdly, the building workers in question have already had a 15 per cent rise in hourly pay rates and a reduction in hours from 44 to 42 since October, 1961.

There are three reasons why building wages should be particularly closely examined in the public interest. Labour costs may form around 40 per cent of the cost of new building. There is no foreign competition in this industry—but its increased costs are passed on to customers who then have to face foreign competition. Third, such plans as may exist to promote new industrial development in Scotland are likely to be discouraged by an exorbitant rise in building costs there; and this is a case where the close connection between wage inflation and unemployment can be dramatically pointed up.

There are some arguments which can be made on the other side. First, a 40-hour week is quite certainly on its way in many industries. (Some top British trade unionists have this week been meeting at a conference in London an American union leader whose proudest boast is that he has won a 25-hour week for New York electrical workers in the construction industry.) One sometimes suspects, too, that higher labour costs in building could do something to push the employers towards labour-saving standardisation: and if a few of them went bankrupt, leading to greater concentration in the industry, few tears would be shed. The virtue of Nic, however, is that it is entitled to consider—and to inform the public about—these long-term prospects as well as about the obvious short-term dangers of this concession. Critics will say contemptuously that Nic can only issue reports; it has no power to take action to cancel or forbid awards. But the slow catharsis of hitherto unchallenged habits of thought which it might conceivably set in motion is not wholly to be underrated.

WORKERS' CHARTER

Mr Hare's Mouse

THE long-promised Workers' Charter, requiring employers to give written contracts of employment to their workers, looks like a rather old-fashioned mouse even at the moment of its birth, after seventeen years of gestation. Indeed it even seems likely to be widely criticised, quite unfairly, as an anti-trade-union measure. The main provision of the bill is that both employers and employees will have to give a fortnight's notice before an employment contract ends, provided the worker has been employed for two years; after five years' employment the period of notice will rise to four weeks. During the period of notice the man would be paid at his average rate of earnings over the preceding six months (which could actually encourage firms to keep on redundant workers on short time instead of releasing them for work elsewhere). Because the obligation to give two weeks' notice will lie on employees as well as employers, a man who walks out on lightning strike would theoretically forfeit the rights (including those to a period of notice before dismissal) in his written contract of employment.

This bill will do very little to help the two industries in which workers suffer most grievously from job insecurity—in shipbuilding and in construction far more than half the manual labour force is employed on a casual basis for far less than two years. Its provision that a worker's pay during the obligatory period of notice shall be reduced by the sum due to him under an existing severance pay agreement would tend to weaken existing redundancy pay schemes (which are already too few and too ungenerous). As for the provision about lightning strikes, it is entirely reasonable that a worker should stand to lose some contractual rights if he has broken a recent specific bargain from which he has gained some advantage—say, a promise not to strike except after a certain period of notice which has been tied to some recent wage rise. It is not so obviously right that, even when no such specific bargain has been recently agreed, penalties should be imposed on anybody who ever takes any prompt protest action—say, by walking out of some part of a factory because it is too cold; and it is a bit odd (trade unions will call it "disruptive") that penalties should be bigger in the case of long-service workers than of others. But, in any case, the matter is a fairly small one because unions will always bargain for "no victimisation" after a strike.

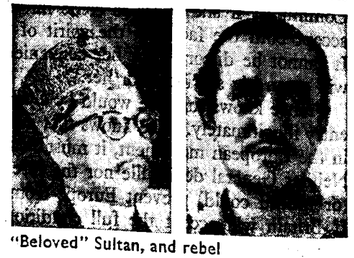
Paying Off

THERE is little hope of real benefits within the framework of thinking in this bill. The best way of helping those who became unemployed, while still encouraging workers to change jobs, would be by a new national unemployment insurance scheme—based upon broadly the same principles as the national insurance fund's graduated pensions scheme. Employers should be required to pay into this fund a sum equal to a certain percentage of each worker's earnings; benefits from this fund would then be graduated according to the worker's previous earnings too, and they would be paid from the fund itself (so that a differential penalty would not be laid on firms precisely at the moment when they are in financial difficulty). Firms that were willing to operate more generous redundancy schemes could then contract out of this national scheme, and the *extra* rights which their private schemes provided could be written into the new contracts of employment; it would be reasonable that these extra rights should be forfeitable when workers go on lightning strike in defiance of the terms of a recent wage or other bargain from which they have derived benefit. But Mr Hare's good-natured Contracts of Employment Bill does not make even the beginnings of a real advance in that direction.

BRUNEI

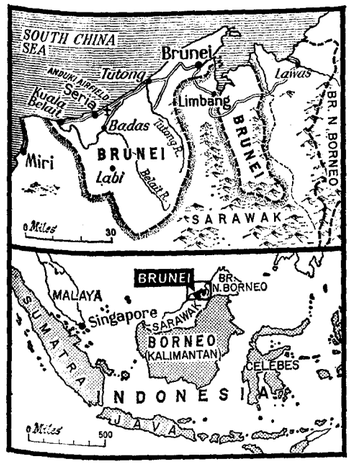
Food for Thought

LAST Saturday's rebellion in Brunei should give both the Sultan and Malaya's prime minister, Tunku Abdul Rahman, food for thought. Though Mr Azahari is not an inspiring leader and has spoilt his case by resorting to violence, one cannot blink the fact that his Ra'ayat party won all the elected seats in the August elections (they are outnumbered in the Legislative Council by the Sultan's nominees). Whatever its origins, there is clearly a good deal of discontent with the British and Malayan decision to create a Greater Malaysia federation, in which Brunei, North Borneo and Sarawak would be linked with Malaya and Singapore. Mr Azahari's admitted purpose was to frustrate this plan.



"Beloved" Sultan, and rebel

For the Sultan, the clear implication of the rising is that if he is going to join the new federation, he should make haste; hitherto, he has accepted only in principle



without formally committing himself, presumably in the hope of securing parity of status with the traditional rulers of Malaya. For the Tunku the lesson seems to be that he has a lot of patient work ahead of him convincing the peoples of North Borneo that they have nothing to lose once the federation is created.

There are bizarre overtones to the whole story. Mr Azahari is credited with communist sympathies, and his Indonesian connections certainly include the powerful Communist party there; but the programme he announced from Manila last weekend pledged him to establish a "neutral but anti-communist state." This has not deprived him of the support of communist radio stations and newspapers everywhere. The Philippine press quoted him as saying (perhaps jokingly, though this is not the impression conveyed) that he would confiscate the British oil installations in Brunei and hand them over to the Americans. It is hard to see how this would make them less "imperialist." More strangely still, the fourth clause in the programme calls on God to support "our beloved Sultan." The ruler of this small but valuable plot of land will know what to think of that one.

ADEN

Pressing on Regardless

ATTEMPTS to stick together contiguous pieces of a collapsed empire have not been among the happiest ventures in Britain's post-war colonial policy. A tale of past failure and present trouble is brought to mind by Britain's federal efforts in the West Indies, central Africa, Aden and Malaysia. Seemingly undeterred by such thoughts, the Government is resolutely pressing on with its attempt to subdue the Aden opposition into accepting the federation between colony and protectorates. On Wednesday, Mr Abdullah Asnag, the secretary-general of the Aden Trades Union Congress and the federation's most formidable opponent, was sentenced by Aden colony's chief magistrate to a year's imprisonment. Mr Asnag, and two other union officials, were found guilty of "sedition" for their part in publishing an Arabic pamphlet called "An Immortal Day," commemorating the anti-federation demonstrations on September 24th.

Left without a leader, the Aden TUC is objecting to an Aden government bill on the registration of societies. The congress, which prints its address as "Maalla, Aden (South Yemen)", claims that the bill, if enacted, will cripple the activities both of their own organisation and their political voice, the People's Socialist party. Another cause for discontent is the treatment of political prisoners. Compared with the major error of judgment of pushing ahead with a federation that shows every sign of not working, the caning of nine prisoners in Aden gaol last month was a minor but repulsive blunder. The men's offence sounds trivial and rather pathetic: they had refused a meal in order to show moral support for one of their colleagues who was being punished for having been too frightened to have a tooth out, as the doctor had ordered.

In Parliament on Tuesday, the Colonial Secretary, Mr Sandys, dismissed the incident as a "simple breach of the regulations." He was referring only to the fact that in the case of five of the nine prisoners the statutory interval of 24 hours between the sentence and its execution had not been observed. All the same the rules are being changed, and in future a closer watch will be kept on the prison superintendent. But there is nothing about the whole nasty incident, which has been thoroughly publicised in Aden, to endear the Adenis to British authority or to British plans.

INDIA AND CHINA

Colombo Doves

LIKE Britain, India is undergoing a period of uneasy relations with "the six"—in this case, the six other non-aligned Asian and African countries which, while a brooding lull overhangs the Sino-Indian border conflict, have got together to seek remedies for it. Their meeting at Colombo, which ended on Wednesday, has proved something less than the summit envisaged by the hostess, Mrs Bandaranaike. Presidents Nasser, Nkrumah and Sukarno did not appear in person, and General Ne Win of Burma did not stay long; only Prince Norodom Sihanouk of Cambodia stayed the three-day course. The Sino-Indian conflict is itself a grave embarrassment to non-aligned Afro-Asia, but any open involvement in it threatens to be still more embarrassing. The moan of doves in Colombo has, therefore, been low and coy.

General Ne Win, before leaving for a prearranged visit to non-non-aligned Siam, warned the Colombo group not to pronounce any judgment or even to "take any initiative," lest it jeopardise its "friendly relations" with China as well as India. The Burmese ruler seems to have felt a particular need not to annoy China; his country, alone among the Colombo six, has a common frontier with that well-armed power. In contrast, the Egyptians, who have just entertained in Cairo not only Mr R. K. Nehru but also the Jugoslav foreign minister, were quick to emphasise the need for a formula acceptable to India, and made some play with a proposal that virtually endorsed India's stated condition for negotiations—that the Chinese troops should first retire to their September positions.

The Colombo group's agreed (but unpublished) text, which Ceylon's prime minister is to present in Delhi and Peking, is unlikely to comprise anything so definite; its basic aim has been publicly defined as the salvaging of the concept of non-alignment and of "Afro-Asian solidarity" by coaxing India and China to come to terms, regardless of the merits of the case. This approach naturally gratified Peking, which has already rejected India's "brazen demand" for a withdrawal to the September line, and has not yet shown itself in any hurry to pull back to its own proposed cease-fire line either. Equally naturally, India remains suspicious of any pressure, from those whom it thought its friends, to bow to China's brute force. To alienate India in order to placate China is the surest way to destroy non-alignment. It was India's participation in last year's "non-aligned summit" at Belgrade that made it of real significance. "Lose India, lose all" is a maxim that Colombo's wiser doves might usefully adopt as their murmurous refrain.

BRITAIN'S BOMB

Pop!

ALTHOUGH many newspaper readers may have missed the fact, the expected test of a British low-yield nuclear device duly took place underground in Nevada on Friday last week. The sky did not fall. The Russians did not break off the Geneva negotiations. There was no sit-down in Trafalgar Square. No Labour MP (despite the noisy fuss a month ago) even tried to move the adjournment of the House in protest. Was anyone listening? Did anyone care?

There is a respectable case for arguing that Britain should now get out of the nuclear business, strategic and tactical, bag

and baggage. If one believes this, there is obviously no point in testing devices that this country can no longer afford to deliver against an enemy. If an Opposition believes this, it is right to say so. But only very silly people indeed throw themselves into a tizzy when (as happened in this case) a commentator on Moscow radio, basing his remarks on a newspaper forecast of what the Minister of Defence might (but in fact did not) say, sonorously threatens to bring down all hope of disarmament about everyone's ears. It all comes pat. The gambit is so appallingly hoary that even Moscow commentators must find it hard to believe that it still rouses a reaction in this country. Those MPs and others who fall for it every time are not necessarily neutralists ; they are innocents who jump obediently whenever anybody says "Boo." Does anyone still listen to them? Does anyone care?

LONDON BILL

Unredeemable?

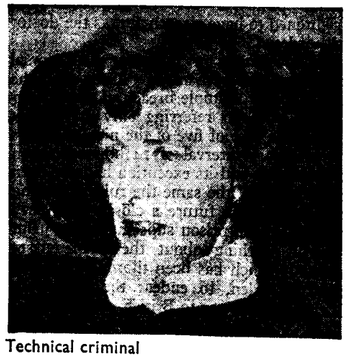
THE two-day debate in the Commons on the London Government Bill turned out to be a dismally repetitious affair in which Labour (with the partial exception of Mr Michael Stewart) slavishly toed the London County Council line, and four Tory MPs from outer suburbia voted against the Government for the most reactionary possible reasons. Although Sir Keith Joseph could rightly claim that his measure makes at least some improvement in a pattern of London government that has not altered radically since 1889, his departmental advocacy of the bill's details was a major disappointment. It looks increasingly as if the Government has simply allowed each ministry involved to write in the bits of legislation it wanted, without encouraging any co-ordinating hand or ministerial dynamic to ensure that the new Greater London Council can do the real job that is needed.

On transport, Mr Marples has grabbed as much as he could, including both traffic management and highway planning, for himself. On town planning and development, the general power has been dispersed among the boroughs, although with Sir Keith's Minstry of Housing and Local Government retaining the final say on specific points of conflict. Sir Keith may intend to intervene actively himself on the GLC's side ; but, if he does, why not write this centralised planning properly into the bill? The tone of the debate did not suggest that there is much hope of amending the bill in committee to give the GLC the greater powers it should have. But is it also too late to do anything in committee about the GLC's actual constitution? Ideally, the aldermen should be dropped (London has less need of their kind of experience and expertise than anywhere else) and the number of GLC councillors should be reduced from three per borough to one or at most two. If there were only one GLC councillor to each borough he could be paid to do a full-time job and would thereby have an incentive to see that the GLC became an effective concern. And what about the intelligence department which the Herbert commission envisaged for the GLC? It, too, could help to give the central power a much-needed boost in authority and know-how. Mr Stewart should press on with his ideas for regional planning in the south-east, but when Labour's LCC malignants see that he is in earnest they can be expected to put the stopper on that as well.

MISS FELL

Mercy Strained

MISS BARBARA FELL'S indiscretion, in showing some confidential papers to her Jugoslav lover, was transformed into a crime by the timing of its discovery. Those who have said that no harm could be done by the atmosphere that was created by some politicians and newspapers, after recent (and real) spy cases, should examine their consciences when they read what has happened to this lady. The exact contents of the papers circulating in the Central Office of Information, which came to Miss Fell in the course of her job there, and which she showed to the Jugoslav press attaché, are naturally not known ; but from the nature of the COI's work, and from what was said in



Technical criminal

court, one can guess that, although their revelation to a foreign power might cause some embarrassment to some diplomats, it could cause no danger to the country. After all, the papers had presumably been sent to the COI to aid it in background comment.

The existence of a leak having become known, Miss Fell admitted to being its source. It was then no doubt inevitable that she should be required to resign from her job. But, in the overheated atmosphere of the past two months, the departure of a public servant so well known to newspapermen would almost certainly have led to a wave of innuendo, speculation and curiosity from members both of the press and of parliament. There would have been accusations that the Government was covering something up ; when the truth was flushed out, especially as there was a sex affaire in the middle of it, newspaper articles would have been written claiming that the accusations had been amply justified. This fear, one may guess, led to the charging of Miss Fell on eight technical counts under the Official Secrets Act. To all of them she pleaded guilty.

It remained to sentence this technical criminal—to the maximum penalty of two years' imprisonment on each charge, although admittedly to run concurrently. Higher courts are always reluctant to reduce a sentence imposed by a puisne judge, unless it is quite grossly disproportionate to the offence: excessive as two years has seemed to almost everybody, it was not necessarily so grossly excessive as to have made an appeal likely to be successful. Once charges have been brought by the Attorney General, it is not for the judiciary to consider the political pressures that may, by pushing him to bring them, mitigate the gravity of the offence. Thus it is that an able—if once misguided—public servant has had unnecessary punishment added to humiliation and a lost career. When will Britain realise that even incipient McCarthyism is an immensely dangerous thing?

CENTRAL AFRICA

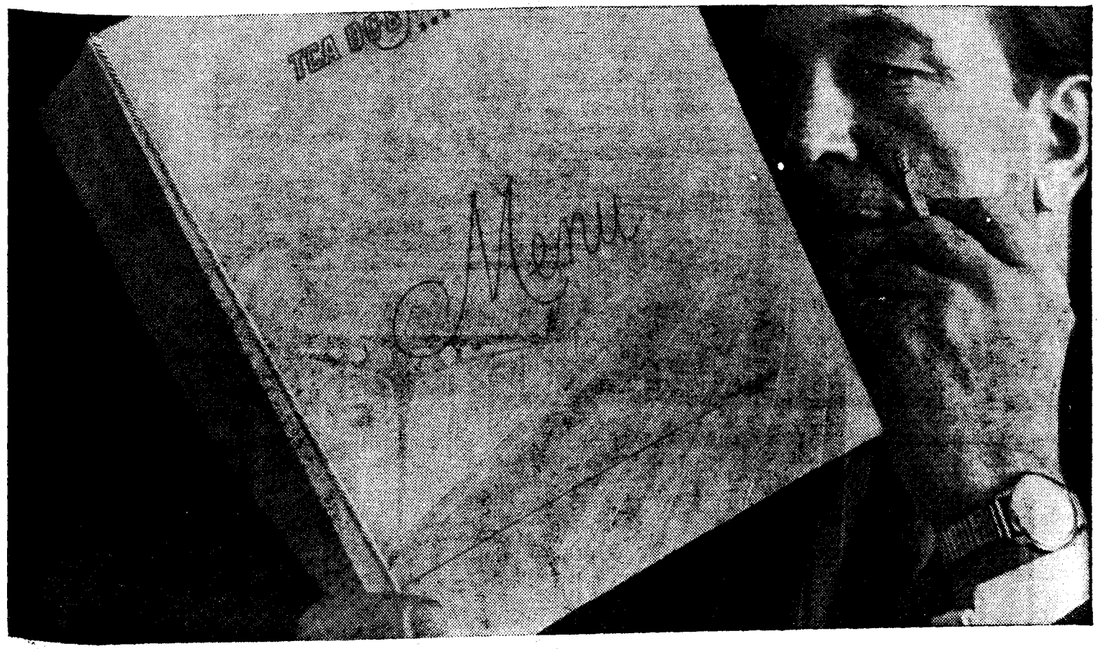
Black Smog

HELD up in London by smog, Mr Kenneth Kaunda and Mr Harry Nkumbula barely made it back to Lusaka in time for the second (and final) round of Northern Rhodesia's elections on Monday. Smog, the two African nationalist leaders have found, clings. By Thursday, with all the results declared, it was still hard to see what lay immediately ahead in Northern Rhodesia. The state of parties now is: Sir Roy Welensky's United Federal party, 16 seats ; Mr Kaunda's United National Independence party, 14 seats; Mr Nkumbula's African National Congress, 7 seats. According to popular vote, the clear victor is overwhelmingly Mr Kaunda's Unip ; this may or may not be reflected in the new government that leads the legislative council when it opens on January 8th.

There are two complicating factors. The first has been shrouded in the foggiest mystery of all: a series of talks beginning in London on Monday, between the British minister for central Africa, Mr Butler, and three ministers in the Rhodesian federal cabinet sent by Sir Roy Welensky. Such emissaries from Sir Roy have affected Northern Rhodesian events in the past ; the hope must be that this time they were designed merely to impress the Southern Rhodesian electorate (due to vote this Friday) and to bargain about the secession of Nyasaland from the federation.

The second factor is Mr Tshombe, of Katanga. The original Nkumbula-Kaunda rapprochement (on which hopes for a lasting Unip-ANC coalition are based) was

What Trans-Canada Air Lines offers you and your company



INVITATION

Next time you fly to Canada, compare TCA's First-Class food, wine and service with the best hotel you know

You will enjoy the easy informality of TCA First Class travel. It is something unusual, and very Canadian—but the standards behind it are international, those of a five-star hotel.

MENU

Coupe de Crevettes
Consommé au sherry
Poulet grand'mere
Escalope de veau Viennoise
Filet mignon bordelaise
Bouquetière de légumes
Pommes château
Salade d'asperges
Patisseries françaises
Fromages variés
Fruits de saison
Bon bons *Café*

Dinner is served in the First Class cabin of a TCA jet bound from Britain to Canada.

TCA's chefs learnt their skills in European kitchens. The world's great wines are on TCA wine lists (served with the dinner menu on the left were Charles Heidsieck '55, Moet & Chandon '55, Erbacher Kahlig '59, Clos de Vougeot '57).

The cabin staff come from every country in Europe which TCA serves, as well as from Canada.

If you are at home in a five-star hotel, you'll be at home in a TCA First Class cabin, as you fly to Montreal in about seven hours (or on to the six other Canadian cities served by TCA jets from Britain). You can fly TCA First Class all the way to any major city in Canada and to many cities in the USA too.

TCA's DC-8's operate in conjunction with BOAC 707 jets and turboprop Britannias to offer the most comprehensive service by far from Britain to Canada.

How to get Canadian sales up, and keep overheads down

When a personal visit is worth a dozen letters, it's worth remembering that you can send a representative from London to Montreal and back, jet Economy Class, for only £117. 10s. (TCA 17-day Excursion fare available until March 31st). You can even send a complete sales commando without playing havoc with your overheads. TCA can arrange payment over 12 or 24 months where capital outlay is a problem.

Economy Class service is available on all TCA routes—and Economy Class on a TCA route is very good service indeed!

TCA Freight service is also first class!

To Canada—on joint TCA-BOAC services including the DC-7F Freighter.

In Canada—to 39 cities served by TCA with DC-8's, Vanguards or Viscounts.

Travel and Freight enquiries to TCA at:-

THINGS ARE MOVING FAST ON THE LONDON MIDLAND RAILWAY.

encouraged by Mr Tshombe in the hope of winning African friends ; if he now assesses his strategic situation differently the Katangan leader might press Mr Nkumbula (who relies on Mr Tshombe for much of his funds) to switch sides yet again. New light on Mr Tshombe's strategic situation came on Monday, when Mr Robert Gardiner, the chief United Nations representative in the Congo, warned Mr Tshombe that the UN intends to carry out the resolutions that call for the removal of mercenaries from Katanga and for the reunification of the Congo. The signs were that this time the UN meant business ; more Swedish jets arrived to reinforce the UN in the Congo on December 11th. U Thant was reported this week to be writing to Britain, the United States, Belgium and west Germany, asking for co-operation in imposing economic sanctions on Katanga. Mr Adoula, the prime minister of the Congo, wrote on Wednesday asking 17 countries to put an immediate embargo on all copper and cobalt exports from Katanga. In contrast, a group of Tory MPs has tabled a motion in the Commons asking, in effect, that the government do its best to obstruct attempts to enforce the unification of the Congo ; and Sir Roy Welensky has said that, if the attempt is made, there will be war in Katanga.

MOROCCO

Himself Surprised

KING HASSAN II has emerged from Morocco's constitutional referendum on December 7th with a victory beyond his greatest expectations. In spite of the boycott declared by the opposition, the Union Nationale des Forces Populaires (UNFP), 85 per cent of the electorate went to the polls ; and, of these, 96 per cent approved the king's constitution. Even General de Gaulle never romped home as merrily.

In the countryside massive support for the royal constitution was expected. But how came it that in the towns, and above all in Casablanca, stronghold of the UNFP and its powerful ally, the Union Marocaine du Travail, the king also swept the board ? The UNFP's campaign for abstention was, admittedly, rather cramped when many of its agents were arrested for allegedly threatening the peace. But the hope that these arrests, duly publicised, would strengthen the boycott were totally dashed. The truth is that the government's propaganda was as brilliant as the UNFP's tame plea for abstention was psychologically inept. Yet the opposition's leaders had no real alternative. Against the foregone conclusion that the king would win a majority, they could not do battle with a "no" vote, because this would have meant self-ejection from their country's new constitutional life. As it is, the UNFP is now at liberty to decide whether or not to take part in the elections for parliament to be held in six months.

The king's huge constitutional victory has greatly enhanced his position and carried

him clear of the danger, predicted by Mr Ben Barka in a letter to *The Economist* last week, of appearing to support a "yes" party against a "no" party. The "no" vote in the referendum was too trifling to be considered. Yet Morocco's political life contains an unhealthy vacuum so long as the opposition is not welded into it. The UNFP publishes the newspapers that have most readers, and upholds the most purposeful trade unions. If it does not find honour in its own country it is liable to become the instrument of anti-monarchist sentiment in Algeria and Egypt. It may be significant that President Nasser has cancelled an expected visit to Rabat ; and arrangements for a meeting of the Casablanca powers at Marrakesh next week have collapsed.

DEPORTATIONS

Finnegan Innegan?

LORD Chief Justice Parker's quashing of two recommendations to the Home Secretary to deport Commonwealth citizens —one an Irishman sentenced to 18 months' imprisonment for larceny and breach of binding-over, the other a Jamaican gaoled for 12 months as an incorrigible rogue— draws fresh attention to what Lord Parker mildly called "teething troubles" in the implementation of the Immigrants Act. The second of these cases is of particular interest to those who suspect that magistrates and judges sometimes make insufficient effort to discover an offender's status when they see a crook has a black face: the Jamaican has lived continuously in Britain since June, 1957, and was therefore even at its inception outside the powers of the Act, under which only those offenders with less than five years' residence in Britain are subject to deportation. Yet the London sessions, without inviting evidence from the man on this point, recommended his deportation. The Irishman's case was at least equally disturbing. No reference appeared in the transcript of his trial to a recommendation to deport (and it must therefore be presumed that no reference was in fact made during the proceedings); but such a recommendation had been endorsed on the indictment. Quite apart from the fact that, according to the Lord Chief Justice, there was no case for deportation (the man had committed an offence only after he became temporarily unemployed), it should not need the Appeal Court to point out that such recommendations ought to be made, if made at all, in open court.

Of importance to immigrants (and their judges and prosecutors) is the ruling of the Lord Chief Justice during this hearing: recommendations should not be made, he said, as part of or in lieu of the sentence normally appropriate to the offence—they are quite separate from, and in addition to, what native Britons might expect in the same circumstances. This is less harsh than it sounds since it means that a rightfully convicted criminal who feels he has been unfairly treated by being recommended for deportation can appeal against the recommendation alone without reference to the rest of his sentence—possibly with more hope of success than his appeal against a sentence as a whole. It is to be hoped that this provision will become widely known among the vulnerable immigrants no less than among their judges, who will also no doubt remember in future to find out from the offender whether he qualifies at all for this penalty.

CHILDREN'S BILL

Age of Responsibility

BY one vote the Government was defeated in the House of Lords this week on a crucial issue in the Children's Bill. Lady Wootton proposed that the age of criminal responsibility should be raised from eight to twelve. In so doing she was accepting the age proposed by the Ingleby committee, on whose report much of the new bill is based. But there is an important difference between what she considers should happen to children under twelve who commit an offence and what the Ingleby committee proposed should happen. If the Government gracefully accepts the amendment, as it would be well advised to, it will still have to decide this question.

At present, there are three procedures under which a child may be brought before a juvenile court. At any age he may be brought as in need of "care or protection," which means that his parents are neglecting him and that he is consequently exposed to moral danger. Also at any age his parents may bring him to court as "beyond control." Or, if he is over eight, he may be charged with an offence. Under all three procedures, if the court is satisfied that the allegations are true, the ultimate sanction is removal of the child from parental care. The Ingleby committee recommended that, together with a higher age of criminal responsibility, the two non-criminal procedures should be amalgamated. Thus, under the age of twelve, children could be brought to court only as in need of "care or discipline," and the court would have additional methods, like training in an attendance centre, of dealing with them.

Lady Wootton, on the other hand, and a great many other people, would prefer to see all these "care or control" (as the new bill calls them) cases taken out of the courts' hands altogether and dealt with through the welfare services, particularly the education service. The argument is that appearance before a court positively harms a child, even if he is not charged with an offence ; middle-class children who steal—unlike many working class children—are mainly dealt with by their parents or their schools. On the other hand, there is a lot to be said for a non-expert body like a juvenile court having to be satisfied that allegations are true before such a drastic step as the removal of a child from his home is taken.

It is not easy to say which course would be better for the child, and one can sympathise with the Government's complaint that just to accept the Wootton amendment in principle leaves a whole lot wide open. But it has only itself to blame for not having raised the age of criminal responsibility itself, and decided what new machinery would consequently be needed for dealing with naughty ten-year-olds, before the bill was introduced.

ARGENTINA

Sick Man of America

SENOR ALSOGARAY, Argentina's high priest of austerity and financial restraint, has twice been called in to preach his message, and twice been thrown out for doing just that. The first time was in April, 1961, when President Frondizi bought time for himself by jettisoning a minister of economics even more unpopular than himself. When Dr Frondizi was deposed a year later, Sr Alsogaray was brought back by the army as the one man who might be able to scoop the country out of its economic mess. But no section of Argentine society could bring itself to believe that the self-sacrifice the minister was calling for should apply to it.

Preacher without honour

Labour, management and the farmers were united against him; their chance to throw him out came when Sr Alsogaray lost his reputation for political detachment by becoming involved in the perennial squabbles of the armed forces. On December 4th he was forced to resign, and a large chunk of the cabinet left with him.

The question now is whether the caretaker civilians, under President Guido, and their military overlords will be able to lead the country to the general election promised for June. A new electoral formula will effectively exclude the Peronistas and communists; on the other hand, the adoption of proportional representation means that no one party will be able to win unless it allies itself with another or, as in February, 1958, makes some kind of pact with the Peronistas. The division within the armed services over whether even the most antiseptic sort of election is desirable was underlined by the air force revolt on Tuesday. The military intrigues that shook the country in September resulted in the pro-election faction in the army coming out on top. But a powerful army group, and most of the air force and naval officers, are "democratic," which, in Argentina's looking-glass language, means that they favour military rule.

Another of Argentina's special words is "intransigent" which, as applied to Dr Frondizi's political party, the Intransigent Radicals, has come to mean particularly pliable. A succession of army games and political manœuvres has gone far to destroy any faith the Argentinians might have had in their leaders. Now, as the debts rise, it is every man for himself, and the call for self-sacrifice drops on deaf ears. The total lack of national self-confidence that paralyses Argentina is not a disease that could have been cured by Sr Alsogaray's stark arithmetic; the danger is that, with the preacher out of the way, it may be easier for Argentina's more ambitious generals to use their country's disillusion for their private and inglorious plans.

CZECHOSLOVAKIA

Mr Novotny Ploughs on

As with all other recent Communist party congresses, the Czechoslavak gathering, which ended on December 8th, tended to be dominated by the quarrel between Moscow and Peking. Mr Novotny emerged (rather inappropriately, one would think, for him) as frankly and unequivocally anti-Chinese; perhaps he was swept along by the increasing momentum of the Chinese-Soviet quarrel and thought it prudent not to resist.

In domestic policies, however, Mr Novotny showed pretty clearly that he will resist as much as he can any pressure to move in a more liberal direction. In contrast to Mr Kadar's frank acceptance of the fact that the Hungarian communists were in a minority and must make use of the talents of non-party people, Mr Novotny declared that "we must resolutely oppose a non-political attitude to the needs of society." In spite of the rumours current in the West last summer that his position was getting shaky, he has not found it necessary to make any significant changes in the predominantly stalinist top party leadership, although more may be heard later of the two new members of the praesidium.

There was a certain amount of ritual head-shaking over the excesses of the personality cult; and Mr Novotny announced that more than thirty persons had been rehabilitated. He added that all other political trials during the 1949-54 period would be reviewed and a report issued within four months. But any timid speculation that this might lead to the rehabilitation of Rudolf Slansky was firmly squashed by Mr Hendrych (who had himself been associated with Slansky) when he declared that "nothing needs to be changed with regard to the guilt of Slansky and certain others." Nothing either apparently needs to be changed with regard to the guilt of Mr Barak who last April was sentenced to fifteen years' imprisonment for alleged currency offences. Mr Barak, who was believed to be Mr Novotny's chief rival, is now accused by his enemy of protecting guilty persons, when he was chairman of the commission reviewing political trials between 1955 and 1957, in order to strengthen his own position. For Mr Novotny to use his fallen rival so freely as a scapegoat may prove wise, or foolish.

CENSORSHIP

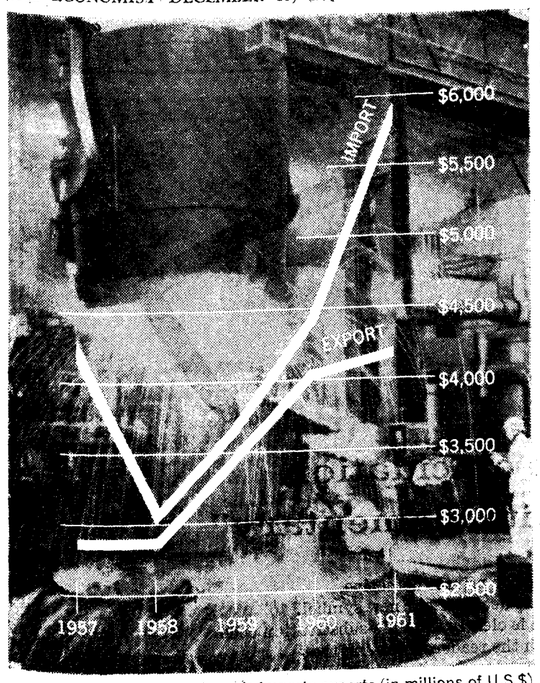
Roundheads and Squares?

THAT dreadful silliness in the British character which, masquerading as good taste and moral rectitude, attempts to reintroduce the regulation of our intake of literary, dramatic and artistic roughage is, apparently, rising hideously from the subconscious again. The Joint Censorship Committee of the poster advertising industry (made up of the British and London Poster Advertising Associations, the British Transport Commission, the Solus Outdoor Advertising Association and the Theatres National Committee) has just banned three posters from its sites. One of them advertised a vitriolic *Sunday Citizen* feature attacking Dr Adenauer's Germany; it was said that it would offend the susceptibilities of Germans. The other two were

Sunday symbol

Ministry of Health posters warning cigarette smokers of the risks of lung cancer; it was said that these "exaggerated" their claims. The answer to the second ban is that few people will believe that the Ministry's warning was any more exaggerated than the claims of tobacco manufacturers to satisfy (what?) or those of barbers to cure baldness, which the committee finds unobjectionable. The answer to the first ban is that in an adult democracy it should be axiomatic that, short of libel, obscenity, blasphemy and sedition, anyone may say and publish whatever political view he pleases, without regard to public space-sellers lacking even a commercial excuse for their excesses—nobody is going to stop using the underground or the roads because he doesn't like the advertisements.

Cromwellian stirrings have also been evident in some Conservative MPs' attitude to satirical attacks on the Government and its works by the BBC programme "That was the week that was," in the last edition of which the Prime Minister was lampooned, cardinals made affectionate fun of, the new censor of plays nearly physically assaulted, fly-buttons mentioned more than once, and many extremely sensible and humane things said about (among others) the unhappy Miss Barbara Fell. The Postmaster General portentously asked for the script. Fortunately, the BBC has a charter, and a director-general of independence.



Japan's imports-exports (in millions of U.S.$)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped 5,000 overseas firms do $1,100,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write:

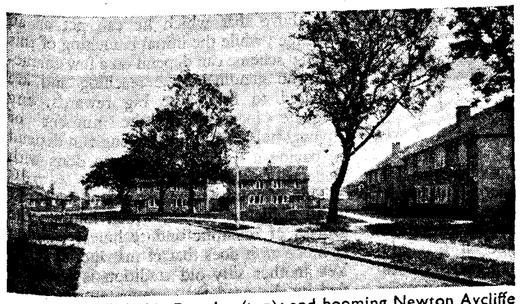
New Towns, New Troubles



Weakly Peterlee (top); and booming Newton Aycliffe

FROM A CORRESPONDENT IN DURHAM

COUNTY DURHAM, which has done relatively worse in the present employment slump than any other part of the kingdom, is fortunate in having within its boundaries two new towns. As this paper has not tired of repeating, the best method of regeneration for declining areas is to implant within them—or sufficiently near them to provide a regional stimulus—new points of purposeful economic growth. The ideal type of growth point, free from the backlog of decrepit housing and related social stagnation, is a new town. But Peterlee and Newton Aycliffe are now meeting obstacles to their own growth that spring as much from local ham-fistedness as from the inadequacies of the national policy for regional development.

The trouble about Peterlee is that the growing child has not been getting enough sustenance in the form of new industry. Some feel that instead of continuing to try to build it into an industrial town, it should become an Orpington of the north-east, a commuter town. The trouble about Newton Aycliffe, well supported by industry, is that this growing child is to continue to grow up well beyond the size some consider suitable for a newcomer. It is probably to become twice as big as originally planned, and other centres of population in south Durham, anxious to attract new industries for themselves, regard it as a cuckoo in the nest.

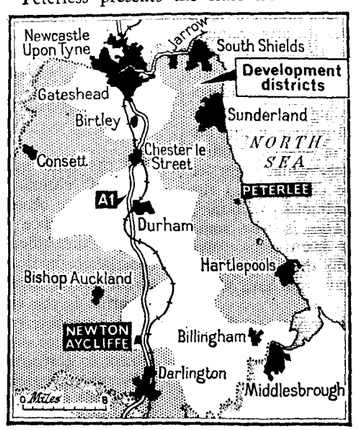
Peterlee (target population 30,000, current population 14,000) was originally intended to be primarily a miners' town, a bold alternative to the squalor of the pit villages. Built on a magnificent site near the sea, it was strategically placed for men to travel to work at nearby pits. While new industries would be needed—especially to employ women—mining was to be the town's basic supplier of employment. As it happens, the mining industry in Durham is contracting; Peterlee is in one of the areas affected. Now the aim is to step up efforts to get alternative employment and at the same time to make the town the social and commercial centre for the whole area. Critics of this policy, including Mr Roy Gazzard, formerly chief architect to the Development Corporation, point to the failure to attract enough new industries and say that the time has come to decide whether Peterlee should become a commuter town rather than an industrial town. If so, there would have to be a new town plan. Mr A. V. Williams, general manager of Peterlee Development Corporation, does not agree. He says that there is no need to make any fresh decision now, and the town should develop according to plan.

Newton Aycliffe, strategically placed just off the north-east's main traffic artery, the A1, has none of the problems of Peterlee in getting industry. Its trading estate is thriving and it is recognised as one of the most attractive sites to incoming industrialists in the whole region. Many firms now established there would not have moved to Durham at all had the Aycliffe industrial estate not been available. The town population is likely to reach 15,000 in 1964 and the target population was 20,000. Now Durham County Council has proposed a target of 40,000.

With the continued decline in south-west Durham of coal mining, the proposed closure of Darlington railway workshops, and a reduction likely in the labour required at Shildon railway workshops, the council felt that the proved attractiveness of the Aycliffe industrial estate should be put to good use, and this could only come about by increasing the size of the town. This would provide the essential local labour, and allow the creation of shopping and social facilities which would make the town more able to compete for industrial development with the south of England.

The immediate reaction from urban and rural councils in south-west Durham, the area from which the new town draws much of its population, was fierce. They alleged lack of consultation (which seems true), claimed that they had already been robbed of schools and other facilities which had been diverted to the new town, and that its increase in size would have a "devastating" effect on their trade. Most important in new-industry-conscious County Durham, they said it would also affect hopes of their winning new industry to bolster up the declining economy of their own areas. Despite hopes that their opposition had been smoothed down by a meeting with the county council, they remain hostile.

Peterless presents the least tractable of these two problems. The Gordian answer to its communications difficulties is to build a new road; this would necessarily be somewhat slow, and the funds needed—even now that the government has sensibly decided to discriminate financially in favour of the north-east's road programme — are perhaps required for even more urgent tasks, and notably for improving the Tyne crossings as quickly as possible.

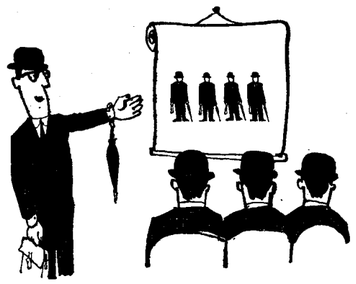


The important thing is to make sure that the original concept of a new town as a place where people both live and work does not become a rigid formula. People who have worked in pits are not used to commuting; transport services are not ideal. But the solution could well be to put new industries where industrialists think they can be run most efficiently—along the main road and railway axis up the centre of the county—and to subsidise (initially) buses for workers from Peterlee. It will remain a better place to live in than almost anywhere in the country.

Newton Aycliffe is simply facing the first penalty of success—jealousy. The county council is dead right to want to increase both its population and its industrial development. Experience in the south of England shows that even 40,000 may be too small a population to support all the services and entertainments that town-dwellers rightly demand now. The vested interests—and vain hopes—of smaller communities must not be allowed to obstruct the real chance of creating an economic growth point precisely where growth is most economic. By doing this within a new town the shortcomings of the Local Employment Act—which generally provides for subsidisation only where subsidisation is least likely to pay a dividend—are overcome, for the Board of Trade can do its best to help. And those who live in the outlying communities, whatever their initial difficulties as a result of increasing the attractions of Newton Aycliffe for industrialists, shoppers, entertainment seekers and all, could only benefit in the long run from the establishment of a new dynamo within an easy bus-ride.

Training the Boss

FROM OUR SPECIAL CORRESPONDENT



The Ministry of Education's stab at encouraging management training has got off to a useful start. Last year a new Diploma in Management Studies, for students with degree or equivalent qualifications, was introduced: now the advisory council of educationists and representatives of professional bodies that was set up to watch over management training courses, and particularly diploma courses, has issued its first annual report. In 1960-61, the last year of the old diploma scheme, there were about 900 management students at 62 colleges in the United Kingdom: by October this year there were 2,360 students, while the number of colleges offering courses had been reduced to 43. Both the increase in the number of students and the decrease in the number of places where they could study are thoroughly healthy—probably far too many of the courses offered under the old scheme were pretty wishy-washy affairs.

Quality is, of course, the whole point. These are not schemes for training foremen or junior managers (however worthy such courses may be), but post-graduate level education designed to give the arts graduate or, even more important, the scientist with a degree or a degree-level qualification, some theoretical grounding in the skills of management and the understanding of what makes business tick. The vital growth points are the universities—twelve of which are offering management courses, while eight of these give post-graduate courses—and the Colleges of Advanced Technology with their Scottish equivalents. This is why some former diploma-giving institutions have been weeded out, and why the present total of 43 establishments may well have to be reduced in the future.

The main trouble at present is that a mere 176 students were on full-time, sandwich or block-release courses, the rest attending part-time in the day or the evening. The committee rightly argues that the full-time courses are far more valuable (the diploma can be gained in six months by full-time study, and can take up to three years of part-time work); and it hints that the reluctance of many employers to let their potential managers take time off to study makes it necessary to keep up some courses scattered around the country where people can get to them in the evenings that are well below the necessary standard.

For as long as the sub-standard courses continue, and until it becomes possible really to limit entry to courses to people with a degree-level qualification, the suspicion with which management training is often regarded in this country will, sometimes rightly, continue. The council is fairly hopeful here, looking forward to the day when firms that do not offer proper opportunities for training will be unable to hire the best young men.

But the other bottleneck before this point is reached comes from the shortage of proper teachers. The man qualified to impart management skills probably has them himself, and can command in industry a salary well above that which he can get as an academic; while the initial launching of this national scheme can depend on a few characters who genuinely like teaching and are prepared to forgo the big rewards, any adequate increase in the number of diploma-holders will in the long run depend on paying a full market rate to dons with monetarily valuable skills.

This, of course, opens up one of the sorest of all academic taboos, which inhibits the growth of scientific and technical training as much as it does that of managerial skills. Yet another silly old tradition is exemplified by the need for commentators on this subject to keep on writing "degree-level qualifications" to describe diplomas that, in any sensible country, would be given at least equal status with arts degrees. Management training is not only valuable to the young men who benefit from it and to the firms who then employ them. It can also do its bit to close up the gap—feverishly held open by some reactionary dons—that yawns between the educational institutions and the real life of Britain.

Bristol Guinea Pig

FROM A CORRESPONDENT IN BRISTOL

If the dead man on the mortuary slab had chronic nephritis, which was probably the cause of his high blood pressure and thence of the cerebral haemorrhage which killed him, what is the doctor to write on the death certificate? According to the World Health Organisation, chronic nephritis is the right answer; and it will seem a sensible one, in this comparatively simple case, to most people. But it is not always so easy: medical methods differ in different countries, and it is quite possible for WHO to be presented with a different cause of death from each of several doctors concerned in identical deaths. It is not impossible that it is this diffusion of practice, and not only intolerable air pollution, which lies at the bottom of the appalling comparative figures for British deaths from bronchitis—about 30 times the level of most other countries—either because British doctors are too ready to ascribe deaths to this cause or because non-British ones are too reluctant.

Obviously, if any just assessment of worldwide killer diseases is to be arrived at (with a view to tackling them in the correct order of priority), some uniform system of arriving at the true cause of death must be devised. WHO already has a set of rules, and these have a long history. Every ten years the International Classification of Diseases, as it is called, is revised, the eighth revision being due in 1965. But to have a set of rules is one thing, to ensure uniformity in their application is another. In an attempt to assess just how satisfactory the rules prove in practice a special study is in process in North, South and Central America, and Europe—in the person of Bristol, which has the right population (½ million) of the right composition (the important age group, for WHO, is from 15 to 74) for comparison with the American cities in which WHO teams will be doing their work. The investigation has other objectives, at least equally important, such as comparing the incidence of the great killer diseases of the present day—cancer and heart disease in particular—in the several cities where the research is being conducted.

The Bristol team—two doctors, social worker and secretary—began work on November 1st with £12,000 from WHO's Pan-American Sanitary Bureau (although it is apparent that the National—American—Institutes of Health are really putting up the money); they will conduct detailed investigations into the real causes of about a third of the city's deaths during two years, which should keep them intensively occupied: there are about 16 a day. Each case will be taken up after the usual certificate has been passed to the Medical Officer of Health and the Registrar General, who classifies deaths according to WHO's rules; the full medical and social histories of all cases, together with the death certificates, will be collected and sent to assessors in Washington, who will decide on the correct classification according to WHO.

Bristol, apart from having a statistically manageable population, has another claim to this representation of its fellows: it is believed to comply accurately with WHO rules (which are interpreted independently by its MoH and the Registrar General); it is also a frequent user of autopsy as a means of checking its diagnosis of the causes of death in hospitals (just over half the total). Naturally it cannot epitomise the workings of innumerable doctors and medical authorities throughout Britain, let alone Europe; but its part is an important preliminary one in what promises to be a long and difficult project in which, to achieve any sort of result on an international scale, a tremendous amount of work will have to be done by local agencies of this kind.

Splitting Nato's Atoms

Sir—In your article of December 8th you state that "the total defence budgets of the six common market countries plus Britain add up to rather less than the $15 billion that the United States is spending this year on its nuclear armoury alone." But the Americans are trying to build up a second strike counterforce capability; they have on order 1,600 or 1,700 ICBMs. Western Europe will not want more than a minimum deterrent (or a catalytic trigger). The United Kingdom alone already owns enough nuclear bombs and warheads for this purpose, and means of delivery are certainly not beyond western Europe's technical or economic resources. Between 1954 and 1960 less than 1 per cent of the *increase* in the output of the six went on defence expenditure. If their combined national product rises only at about $10 billion a year—which is slower than it has been rising—the devotion of 20 per cent of this increase to defence would double defence spending in five years. Moreover, at present only 3 per cent of expenditure on armaments procurement in the alliance goes on items jointly produced. Any kind of common defence policy would allow very considerable saving in armaments expenditure.

Strategically, western European and American interests do not exactly coincide. Europeans know that ultimately, in the case of a war starting over, say, Berlin, it will be to the advantage of the Americans and the Russians to keep that war limited to Europe. American policy on this is spelled out clearly in Mr McNamara's Ann Arbor speech. Graduated deterrence in war could mean that after the devastation of, say, Warsaw and London and all places between, all-out war could still be considered "deterred": Moscow and Washington might still be spared and peace between the two great powers could be arranged across Europe's radio-active corpse. Therefore Europeans must have a finger on the trigger of a strategic weapons system so as to prevent Russia and the US calculating in terms that designate Warsaw and London as non-ultimate targets. They must have the capability of declaring the point beyond which war is all-out—and "deterring" that. Europe wishes the ladder of deterrence kept short and steep, with few rungs. The Americans wish to keep it long and low, with many.

A minimum deterrent or catalytic trigger is well within Europe's resources; and it is difficult to see what else can work in the predicament the alliance is in. Except of course disarmament. Foreign Office please note.—Yours faithfully,

WAYLAND YOUNG
London, W2 ELIZABETH YOUNG

Lords and Commons

Sir—You are quite wrong in saying "the return of Lord Hailsham to the Commons would be of no importance for succession to the leadership, since he would be unacceptable to the parliamentary party, however popular he is in the country." That simply is not true! There is no question at this moment of replacing Mr Macmillan as leader. No other person has the slightest chance of leading the party to victory; but when Mr Macmillan decides to retire, I am convinced the majority of the parliamentary party would gladly accept either Lord Hailsham or Lord Home as leader. There is no opposition to either. What is needed now and urgently is a new Chairman, and for this post Lord Hailsham would have the overwhelming support of both the parliamentary party and the country. He would also give added moral purpose to the party.—Yours faithfully,

CYRIL OSBORNE

Anatomy of Unemployment

Sir—You omit an important population factor in your analysis: "Healthy local societies" cannot continue to exist where one school-leaver out of three has to look for a job outside his area of origin, as is happening in Berwickshire, or when their population is dropping by ten per cent between censuses, as is the case in most of the lower Tweed valley. These facts mask a situation in which unemployment is statistically below the national average, and well below the figures for the two Ministry of Labour Regions concerned (Scotland and Northern England), and which seems, there-

fore, comparatively good. In fact, it is extremely serious. As important as a new look for the traditional industrial areas is the expansion of industry in suitable underdeveloped areas. Comparatively small enterprises can have a remarkable effect in halting the flow of young and middle-aged people into the already overburdened places. The flow might even be reversed.—Yours faithfully,

T. D. THOMSON,
Hon. Secretary,
The Eastern Border Development Association.

Coldingham, Berwickshire

SIR—One of the better methods of rapidly easing the hardship of unemployment would be to increase the amounts payable under Unemployment Benefit and National Assistance, thus increasing incomes in depressed areas rather than primarily in prosperous areas, as some more general relief—such as the reduction of the income tax rate—might do. Most of the increased benefit would be spent on food and clothing, and its multiplier effect would not extend to the demand for consumer durables, but be localised where it is most needed.—Yours faithfully,

Sutton, Surrey A. J. D. FERGUSON

Elizabetha

SIR—Every local community in the country is deprived of freedom of action by Whitehall over-centralisation. Is it really necessary for the Ministry of Transport to decide on every HALT and every SLOW sign on the country's roads? Or for the Ministry of Housing to act as a court of appeal for county councils' planning decisions? Or for cases of police roughness to be brought to the notice of Westminster MPs instead of local councillors? The time of both our central legislators and our Whitehall administrators is constantly wasted by this mass of pettifogging detail.

In building a brand new capital on Marston Moor, therefore, let us also imitate the USA, Canada, Australia, Brazil *et al* by making this national capital a *federal* capital, where only those government functions are centralised which need to be exercised on an insular level if they are to be exercised at all. Counties should be given full freedom of decision without Crown interference in local matters, while regional planning and considerable regional legislative powers in economic matters should be given to a new tier of "provinces" or "states" with capitals in London, Bristol, Cardiff, Birmingham, Manchester, York, Norwich and Edinburgh, complete with administrations and parliaments of their own.

Such a drastic slimming exercise for the central government before it moves to Marston Moor might appear to reduce the employment benefits that the North-East would hope to gain from this move. But Yorkshire's loss would be every other region's gain.—Yours faithfully,

Altrincham, Cheshire F. E. LAMOND

SIR—Chances are that your suggestion for the removal of state administration from London to Elizabetha will accelerate the drift of senior civil servants into private industry.—Yours faithfully,

London, W1 GEORGE A. FLORIS

SIR—Not a 350,000 population, but 350,003½. You forget Professor Parkinson and his family.—Yours faithfully,

London, N6 J. A. BARNETT

Britain and the Six

An American in Paris writes:

As a neutral observer of the common market talks, and an inveterate reader of the British press, I would like to make a few points that one feels, on the Continent, may be missed in Britain. There are, in particular, three fundamental errors that have dominated British thinking—innocently and understandably—from the very beginning.

The first is that this was a bargain among equals, or even a negotiation in the ordinary sense of the word. It never was and cannot be. It is, and history will see it as, an application by an outsider for membership in a club, which is a very different thing, indeed.

The hypnotic repetition in the British press of phrases like "when the real bargaining begins" betrays a deep misunderstanding. None of the Six, including those who most want British entry, have this misunderstanding. There is probably not going to be any final "package deal" in which each side makes concessions. It is not that kind of negotiation. It is not even a bargain.

The second error is the assumption that British membership must fundamentally change the common market and thus, obviously, that some of the rules (and certainly some of the tariffs) should be changed. It is disclosing no secret to say that Mr Heath hoped at the beginning for such wildly impractical and impossible things as association for India and Pakistan, to say nothing of such publicised follies as the (now abandoned) requests for "comparable outlets" for the farm products of Australia, New Zealand and Canada.

To Mr Heath's credit, he has consistently retreated from his initial follies. It might be a better world if these things should come to pass, but that is not the point—at least not the point in these "negotiations." The common market does not exist to create a better world, though it hopes that it can make some contribution in that direction. It exists like all clubs exist, for the betterment of its members. And like all clubs it is reluctant to change its rules for a new member, especially if the changes might upset the present members.

The third mistake is the obsessive concentration on the role of France. Some things are clear: France has by far the brightest negotiators, as a group, and the clearest perception of the principles and consequences of any issue; the French have no great enthusiasm for British entry (though they are resigned to it); and the French have an economic interest in preserving most of the rules unchanged.

But it is silly to overlook how much support the French have got. History will have to note that the Six, on issue after issue, presented a united front. Even such a pro-British, and brilliant, man as Signor Colombo of Italy has in most instances seen no alternative to sticking by the rules. The "Germans" (one puts it in inverted commas because there is no "German" policy) have been in the same position. And so have the Dutch and Belgians.

If it is true that British thinking has been on an unreal wavelength, it is also true that there is no eleventh commandment that says Britain must join the club. In any case, it might prevent needless bitterness if the applicant stopped deceiving itself about what was involved.

POINTS

MR GOODHART (November 24th) is slightly confusing about guarantees and the Moloney proposals. It is true that (depending on the wording and who gives it) a "guarantee" may be ineffective to deprive a purchaser of his Sale of Goods Act rights. But what matters is that he may be asked to give them up in his contract with the *seller* (and this will be effective: Sale of Goods Act S.55). This may happen and usually does in the *order form* he is given to sign when he orders a car: and he will be expected to believe that the "guarantee" from the manufacturers is all he can hope for. It is—he shouldn't have signed the form. KEITH WEDMORE, *West Byfleet, Surrey.*

BOOKS

Economics in the Red

The Political Economy of Communism
By P. J. D. Wiles.
Blackwell. 419 pages. 42s.

COMMUNIST discussions of economic problems are largely incomprehensible even to those Western economists who can read the right languages and know a little about Marxism, let alone to most people. How many people, for instance, can give a coherent account of the differences between Stalin and the Jugoslavs concerning the nature of full communism? How many, to take another example, understand what discussions of the role of "the law of value" under socialism are really about? Communists have their own terminology and their own blind spots, and we can only get at the essence of their arguments by understanding these and by considering them against a background of institutional knowledge of the communist countries.

A large part of Professor Wiles's new book is devoted to explaining communist discussions. He does not start from scratch, however, for the reader is explicitly required to know some Marxist theory and to have acquired a good deal of knowledge about the economic organisation and history of communist countries. Thus this is most definitely not a book for the general reader, except here and there, and even the sovietologist who has a go at it must know a good deal about welfare economics.

One very useful chapter, which comes near the beginning, is about "the peculiarities of Marxist economic thought." Its main point is that Marx developed his system before the marginalist revolution (so that it is devoid of the notion of scarcity) and that to this day Marx's successors have never really understood the problem of choice. Even the analytical aspects of communist economic discussion are therefore entirely macro-economic, concerned with the economy as a whole, and an efficient treatment of problems of resource allocation is therefore almost impossible.

Following this chapter, Professor Wiles launches into a 130 page part on planning and resource allocation. Here he is concerned to show why and how resource allocation in the Russian "command" economy is inefficient, and the intellectual focus shifts from an examination of communist thought to an application of simple welfare economics. Readers who do not understand this (misleadingly titled) branch of economic theory will not get much change out of the argument. Those readers who do, however, will find it fascinating. The chapter on "Pricing in practice" for example, which relates to a stalinist economy, shows how arbitrary prices distort some production decisions while in other sectors prices perform some of the same functions as in a market economy. Thus most consumer goods prices are set, without reference to costs, to clear the market, though in agriculture prices do have some influence on output and do determine the incomes of *kolkhozy*. But the main role of prices is regarded as a macro-economic one and this is a matter of fiscal convenience rather than of resource allocation.

Another extremely interesting chapter deals with the location of production. It is made clear that there is an appalling lack of sensible criteria here, and that Mr Khrushchev's shift from planning on a product basis to planning on a territorial basis is likely to make matters worse. Whatever the explanation of this shift given by Mr Khrushchev, Professor Wiles argues that its main real purpose was to preserve the power of the party against the growing strength of the technocrats.

In Part III of his book Professor Wiles turns to growth. Four of the chapters involve highly technical economics, namely the discussion of index numbers (measuring growth), of the distinction between heavy and light industry (Marxist doctrine), of first and second order investment (investment for further investment versus investment for consumption) and of capital intensity and growth (a popular subject among western economists who write about underdevelopment). The other two chapters in this part are of much wider interest. First comes a curiously unsatisfactory chapter on the clash between efficient allocation and growth. Since communist economies allocate resources badly but grow fast, it is natural to enquire whether or not these are competing ends. The trouble is that Professor Wiles seems to oscillate between the view that they are and the view that they are not. If he had started from the notion of maximising the present value of future consumption, discounted at a social rate of discount, as a "rational" aim he could have launched upon a systematic examination of the extent to which possible improvements in resource allocation of the type discussed in Part II would contribute to this aim. As it is, we are told on page 219 that growth and "the satisfaction of the welfare equations" are competing ends, while on page 327 it is asserted that "growth criteria are of identical type with welfare criteria." The remarks which follow hardly suffice to reconcile the two positions and one is left wishing that some friendly critic had done for Wiles what Wiles is doing for communist discussions.

The other less technical chapter in this part briskly lists nineteen reasons for the rapid growth of communist economies. The enormous amount of investment is one of them, perhaps the most important, and five rest upon the fact of political dictatorship. Others include the dedication of society to the aim of growth, "socialist morality" and the continuous interest of the government in the tiniest details of economic efficiency. To illustrate this last point Professor Wiles develops a charming fantasy of Mr Macmillan addressing the workers at Dagenham. After his introductory remarks, the Prime Minister gets down to

> the automation of engine assembly, the new sand they are putting in the moulds in the foundry, Brother X, the shop-steward who started the last unofficial strike, the standardisation of windscreen wipers . . . the peroration, reminding the audience that they have never had it so good, concludes with a repetition of the Party's pledge to double the standard of living in twenty-five years. He is warmly applauded, and next day *The Times* carries it verbatim. Moreover, windscreen wipers are instantly standardised, and there is not another unofficial strike for twelve months.

After all this, Part IV reverts to communist theology and discusses ideas about Full Communism in the proper Marxist sense. This is followed by an unnecessarily lengthy argument about its impossibility: everything can never be free. Lastly, there is an "impertinent attempt" to think about the economic side of non-communist national purpose. Like occasional remarks in other parts of the book, this is neither sovietology nor economic analysis but just Professor Wiles. In a book this long, however, no one can complain of such intrusions. What one can complain about without being unfair is that the book frequently reads like a first draft. After an author has listed things, he may save wear and tear on his typewriter by sentences such as "All models, then, except (iv) and (x) can be RM or FM" but this kind of brevity constitutes only a trivial economy to a publisher and is extremely irritating to all readers. Again, second thoughts ought to result in something rather more thorough than the addition of some extra final paragraphs to a chapter. But these are minor matters in a book that is as stimulating and erudite as this.

Political Warfare

Black Boomerang
By Sefton Delmer.
Secker & Warburg. 320 pages. 25s.

HARD on the heels of "Trail Sinister" comes the second volume of Mr Delmer's autobiography. The two volumes have been published as one in Germany under the engaging title *Die Deutschen und ich* ("The Germans and I" or—and perhaps more in accord with the author's expansive character—"Me and the Germans").

The Germans have worried Mr Delmer ever since he was a schoolboy among them, and in his turn Mr Delmer has worried the Germans. In "Black Boomerang" he tells

entertainingly of the "black" political warfare which he conducted, with high military patronage, from 1940 until April 1945, mainly from a secret headquarters near Woburn Abbey. His chief aim was simultaneously to inform, misinform, and undermine the morale of both the German armed forces and the German civilian public. One of his secondary targets was the army of foreign workers, whom he advised how to impede the German war effort and encouraged to believe in the day of liberation. Mr Delmer's principal weapon was the powerful *Atlantiksender*, which was later called *Soldatensender Calais*, and, after the allied landings in Normandy, *Soldatensender West*. The operators of this buccaneering station professed to be anti-Nazi German patriots serving with the *Wehrmacht* in occupied Europe. They were in fact mostly refugees from the Third Reich, along with German prisoners of war and deserters from all the major fronts, among them U-boat men, Luftwaffe officers, and even the adjutant of a Waffen-SS divisional commander. The authenticity of their voices and style was reinforced by the uncanny authenticity of the matter contained in the news and talks which they broadcast at regular intervals between a brisk flow of the best swing and jazz. Much of the matter was supplied on a remarkably generous scale by the intelligence services of the British armed forces, whose chiefs appreciated Delmer's imaginative thoroughness and the *Soldatensender's* strategic usefulness. The station informed listeners of the true course of the war, obliquely instructed service men how to malinger and desert, and sought to mislead enemy intelligence concerning matters such as the precise whereabouts of the V1 and V2 hits, and the pending allied landings of 1944. It was an ambitious operation, and Mr Delmer provides evidence of some undeniable successes. Yet he has an uneasy feeling that it has become something of a boomerang in that the *Soldatensender's* wartime projection of a patriotic opposition to Hitler is cited nowadays in dubious places to conceal incorrigibly Nazi hearts. But Mr Delmer has always had a melodramatic turn of mind.

The New Diplomacy

Diplomats in International Co-operation: *Stepchildren of the Foreign Service*

By Michael Cardozo.

Cornell University Press. London: *Oxford University Press.* 163 pages. 28s.

SINCE 1945 there has been a steady expansion in the subject matter of diplomacy, and men with new skills and interests never discussed by Sir Harold Nicolson have taken their place alongside the traditional diplomats. Mr Cardozo discusses two forms of international co-operation in Europe: the American assistance programme and the European Communities. In tracing the histories of the lend-lease missions, OEEC and Nato, Mr Cardozo stresses the contribution made by a new type of American representative, the expert in finance, agriculture or military affairs with little if any experience in diplomacy. He explains the past difficulties of fitting these men into the more traditional Foreign Service framework. At many embassies, after 1945, the professional diplomats found themselves outnumbered and with little influence on policy. The specialists for their part complained that they were treated as second-class citizens in matters of rank and privilege. It became increasingly difficult to co-ordinate policy either at the embassy level or in Washington.

Steps have been taken to improve this situation. A chain of command has been established. The State Department and Foreign Service were amalgamated in 1954 and a single career service created to include generalists and specialists. Mr Cardozo rightly reports that these reforms have not been an unqualified success. As many of the highest diplomatic posts are still reserved for the traditionally trained diplomat there has been little incentive for the specialist to join the service. Contrary to the hopes of the reformers, the professional diplomats have not been attracted to the newer fields of diplomacy, and few career men have been produced with the varied knowledge or administrative ability needed for senior departmental and embassy positions. Mr Cardozo states the case for the specialists and persuasively argues for the fuller recognition of the "development diplomat." In so brief a study, he can only touch on the more general questions which his arguments raise, and he underestimates the impact of the newer forms of co-operation on the traditional diplomat.

In a less satisfactory chapter, he examines the problems which the European supranational communities pose for their European members and for the Americans. He is right to urge that the Americans recognise the importance of picking first-rate people for liaison positions and that assignments to multinational organisations should be up-graded.

Apart from the descriptive material, the author concentrates on the American experience, but much of what he says has wider implications. His book is too short and he touches on too many complex problems that need more intensive study. But he does provide an almost unique introduction to what can rightly be termed the "new diplomacy."

Is Oil Unique?

Oil: *The Facts of Life*

By P. H. Frankel.

Weidenfeld and Nicolson. 38 pages. 7s. 6d.

The Supply and Price of Natural Gas

By M. A. Adelman.

Blackwell. 116 pages. 30s.*

THESE two short essays are linked by more than their titles might suggest. Dr Frankel's pamphlet is a characteristically trenchant analysis of the immediate circumstances of the world oil market, offering his own conclusions, again characteristic, as to what should be done about it. Most of Professor Adelman's monograph is devoted to natural gas; but the most notable section of it concerns the basic economics of petroleum development (oil as well as gas). And it is here, at a hinge of disagreement, that these two arguments, practical and theoretical, touch one another.

Dr Frankel's solution to the current, unsettling appearance of competition in world markets would be an agreement between consumer governments, companies and producer governments to shut it out again. He wants an "As Is" arrangement for the controlled exploitation of existing reserves and development of new ones. This implies rather than proposes a price stabilisation agreement too, with guarantees from governments at both ends—though Dr Frankel believes that the tactical working out of this arrangement could be left to the international oil companies. Many people in oil, though not all, might like this; but it follows upon several pages of demonstration by the author that all other schemes to control competition, in the past, have sooner or later come unstuck: "*chassez le naturel, il revient au galop.*"

This proposal does not come from any dislike of competition on Dr Frankel's part, but from his long-established conviction

that competition produces ruinous fluctuations, with no self-balancing restraints, in this industry. This is an industry, he feels, in which at any time some producers have an incentive to produce more whatever happens to the price: "the incremental barrel is the cheapest one."

This basic assumption collides with Professor Adelman's. The immediate vicissitudes of the world oil market are not the professor's concern; he would probably hold that these arise from the way that this market is organised and its prices administered, not from any special "natural economics" that are peculiar to oil. He does not believe that oil is a special case, of diminishing marginal cost, among extractive industries; he believes that except in the short run it is an industry of increasing costs like the rest.

Investment in finding and developing any oil field is high (partly because of the randomness of "return" in terms of reserves located for any given amount of drilling) and it is committed early; actual running costs of production are low. So up to a certain point, in the extraction of oil from any given well or reservoir, total unit costs per barrel diminish as production continues. But this, to Professor Adelman, seems a normal economy of capacity utilisation, up to the point where further investment is developing drilling or pressure maintenance is required. As extraction from the oilfield goes on, the point will arise where it will cost more to keep up the rate of flow from it than to bring in new production elsewhere. And this is the normal situation of diminishing return for most extractive industries.

This is the first blunt challenge from an academic economist to the doctrine that oil economics are in some ways unlike those of most other industries; and one would like to see a more direct debate between these two analysts. In terms of short-run policy, or remedies for current difficulties of the industry, there might not be much at odds between their opinions. But it would be of considerable importance to establish whether oil economics are unique, or are not.

Man and the World

Men and Nations

By Louis J. Halle.

Princeton University Press. London: *Oxford University Press.* 238 pages. 38s.

EVERYTHING that Professor Halle has to say on international affairs is worth reading, and few writers have so successfully matched the experience of the real world of the policy-makers with the discipline of the schools. Perhaps the problem of teaching international relations to the very mixed but highly literate and articulate student body of the Institut Universitaire des Hautes Études Internationales at Geneva rather than in a university in his own United States has emancipated Mr Halle from the portentous platitudinising that so often seems an inescapable accompaniment of American theorising on his subject. What one regrets is that this original and often moving essay may get a smaller audience than it deserves.

Partly this lies in a faulty presentation of the matter. Mr Halle wishes us to follow a definite line of argument without extraneous diversions, and for this reason he has cut out all but the most essential factual illustrations and references. On the other hand, it is an argument of direct and immediate relevance to our own problems, so the illustrations must be given. What he does is to provide a second part to the book, with sections numbered to correspond with those in the first part, into which this additional material can be fitted. In fact, however, it is hard to appreciate either the cogency of the argument or its limitations without reading both; and this makes for a constant going backwards and forwards between the two parts, which may prove too much for the non-conscientious.

But the substance also may not please everyone. For this is a work of philosophy; and by philosophy Mr Halle means the traditional view, which holds that man and the world have more than mere existence and are related to some outside set of general truths that we may not in our imperfection fully grasp, but whose reality we cannot deny without making critical thinking impossible or creative endeavour pointless. This is, of course, the opposite of the fashionable doctrines that pass for philosophy in much of the English-speaking world — "anti-philosophy" as Professor Halle would call it. It will thus be rejected by those who arrogate to themselves the proud title of philosophers while, for the ordinary labourer in the field, it may seem unnecessary.

And yet, as one follows Professor Halle through his argument, sometimes with unquestioned acceptance, sometimes with the feeling that there are further qualifications and amplifications that need to be made, one cannot help feeling that he does at least present some clues for solving some of the most mysterious and baffling problems of our time—the philosophical basis of genocide for instance. For the distinction between ideas of propriety and factual generalisations which he draws so clearly, and which is so often slurred in ordinary political parlance, is essential if we are to distinguish between the communities, which are the units in international relations, and the feeling and suffering and thinking individuals who are the reality behind them. It is because our thinking on community is so confused that we accept the prison-cage of the nation-state, and with it the inescapable illogicalities and occasional absurdities of the United Nations. The real handicaps on the conduct of foreign policy involved in the existence of more or less democratic institutions is illuminated when we read that "the ignorant live in a world of untested abstractions". And the thought is worth pondering by professors too.

To attempt to condense a book that has been long in condensation would serve no purpose; it deserves to be read by all those who are prepared to admit that our achievements in fashioning a more rational world order do not look very impressive.

Co-operative Federation

The American Partnership: *Intergovernmental Co-operation in the 19th Century United States.*

By Daniel J. Elazer.

University of Chicago Press. 374 pages. 52s.

THE question of the nature of federalism has received a new airing as a result of the current debate over Britain and Europe, and it is therefore always worth being reminded that a federal system is something much less simple than one would gather from some of the arguments in vogue. It has been a commonplace, at least since the 1930s, that American federalism, so far from being based upon a careful demarcation of the federal and the state spheres of action, is increasingly based upon a highly complex mechanism through which the two levels of government co-operate. This co-operative federalism is inevitable if the greater resources now available to the Federal Government are to be combined with the greater appreciation of local needs and ability to understand actual local circumstances that make up the practical reasons for the retention of a federal structure.

Professor Elazer, in his rather too long, and occasionally repetitive, book, has made out a convincing case for the argument that this co-operative federalism in the United States is not something new but existed even in the earlier periods of the country's history. He has not attempted to re-write the history of American federalism from this point of view, but rather, by sampling the records of four states—Virginia, New Hampshire, Minnesota and Colorado—to show that in both the first and the second halves of the nineteenth century it was clearly understood that the two levels would co-operate in most of the important fields of domestic government. In the early periods he deals with the two national banks and their relations with the state banks, incidentally throwing a new light on the famous decision in *McCulloch v. Maryland*, and also with the problem of internal improvements. Such treatment also puts into a new focus the contributions to American history of Albert Gallatin and John C. Calhoun. It also shows the importance attached in state politics to relations with Washington, since upon these might depend access to the resources which a state required for its own development.

In the post-1850 period, when both banking and internal improvements—railroads now rather than canals—were largely left to individual entrepreneurs, these aspects of the federal/state relationship became less important. But in such matters

as the grants for educational and other purposes Professor Elazer sees a perfectly valid precedent for the Federal subventions of the New Deal era.

Lastly, he shows that a system with little central administrative apparatus can nevertheless exercise some control on the expenditure by the states of federally derived funds through detailed acts of Congress subject to interpretation by the courts. In other words, at an early stage of co-operative federalism one has judicial rather than administrative sanctions. There is hardly any aspect, indeed, of the subject which would not be worth thinking about again in the light of Professor Elazer's suggestions, and one must hope that the somewhat awkward presentation of the theme will not deter potential readers.

From Edward to Henry

The Later Middle Ages, 1272-1485.

By George Holmes.

Nelson. 288 pages. 21s.

LIKE other writers in the new Nelson series on the history of England, Dr Holmes concentrates less on the outlines of political history than on the general background of the age he discusses. His book is in two parts, and he divides his period at the year 1361, when the first phase of the Hundred Years War with France came to a close. In both parts he adopts the same plan, beginning each with an examination of the conditions of society and its institutions. He then supplies an outline of the events of the period, to be set against this background, working as far as possible from domestic affairs outwards to relations with the Celtic lands beyond the English borders, and so on to relations with France and other continental powers.

In the first part of the book this plan works with remarkable success. Dr Holmes's account of life in the village and on the manor, and of the connections linking this humble world with the world of the lords and the knights who attended Edward I's parliaments, is vivid and freshly written; and in his chapter on "government" he relates the practice of the day to contemporary political theory in a manner both original and illuminating. His chapters on political history contain some striking character sketches; in particular, his grim, able and unscrupulous Edward I stands out as a much more convincing figure than the "constitutional monarch" many historians have portrayed.

The second half of the period does not lend itself so well to Dr Holmes's treatment. The events are too crowded. It saw at home three usurpations of the throne, the outbreak of the first major English proletarian rising in 1381, and the spread of the first English heretical sect, the Lollards. There is also the story of the long struggle with France, from Henry V's time onwards, to be retailed. In consequence the author has had to compress his discursive chapters somewhat in order to give an account of events that is adequately comprehensive, and this occasionally gives the impression of a sketch rather than a survey. On the whole, however, the mammoth task has been tackled with great success. The final chapter, where Dr Holmes brings out the speed at which conditions, both in methods of government and in the social structure, were changing at the end of the fifteenth century, is one of the best in the whole book.

Paperback Selection

The paperback selection given in our issue of December 1st is continued below:

Philosophy and Psychology:

SOCIAL LEARNING AND IMITATION. By N. E. Miller and J. Dollard. 355 pages. 15s. *Yale University Press.*

STATES AND MORALS. By T. D. Weldon. 317 pages. 7s. 6d. *John Murray.*

PROPOSITIONAL CALCULUS. By P. H. Nidditch. 83 pages. 7s. 6d. TRUTH-FUNCTIONAL LOGIC. By J. A. Faris. 122 pages. 9s. (Monographs in Modern Logic). THE PSYCHOLOGY OF C. G. JUNG. By Jolande Jacobi. (Translated by Ralph Manheim). 207 pages. 10s. 6d. *Routledge.*

MANAGERIAL PSYCHOLOGY. By H. J. Leavitt. 345 pages. 15s. (Phoenix). *University of Chicago Press.*

CHINESE THOUGHT. By H. G. Creel. 301 pages. 12s. 6d. THE GREEK VIEW OF LIFE. By G. L. Dickinson. 189 pages. 9s. 6d. (University). *Methuen.*

HOW CAME OUR FAITH. By W. A. L. Elmslie. 477 pages. 9s. 6d. THE PRINCIPLES OF HUMAN KNOWLEDGE: Three Dialogues between Hylas and Philonous. By George Berkeley. Edited with an introduction by G. J. Warnock. 288 pages. 6s. (The Fontana Library). *Collins.*

Politics, Political Theory and Current Affairs:

THE FIFTH FRENCH REPUBLIC. By D. Pickles. 271 pages. 12s. 6d. (Hardback at 21s.) (University). *Methuen.*

I SPEAK OF FREEDOM. By K. Nkrumah. 305 pages. 12s. 6d. (Mercury). *Heinemann.*

LAW AND PUBLIC OPINION IN ENGLAND. By A. V. Dicey. 600 pages. 18s. (Papermac). *Macmillan.*

ARISTOTLE: The Politics. Translated by J. A. Sinclair. 320 pages. 5s. *Penguin.*

THE FUTURE OF PUBLIC EDUCATION. By Myron Lieberman. 307 pages 10s. 6d. (Phoenix). *University of Chicago Press.*

THE HANDBOOK OF POLITICAL FALLACIES. By Jeremy Bentham. 286 pages. 12s. ENGLISH POLITICAL THOUGHT IN THE 19TH CENTURY. By Crane Brinton. 318 pages. 14s. Harper Torchbooks. *Harper and Row,* New York. London: *Hamish Hamilton.*

FROM HEGEL TO MARX: Studies in the Intellectual Development of Karl Marx. By Sidney Hook. 335 pages. 15s. WORLD COMMUNISM. By Franz Borkenau. New Introduction by Raymond Aron. 442 pages. 16s. A PREFACE TO POLITICS. By Walter Lippman. 238 pages. 15s. (Ann Arbor). *University of Michigan Press.* London: *Cresset Press.*

I BELIEVE. By W. H. Auden, Pearl Buck, etc. 189 pages. 7s. 6d. THE RISE OF EUROPEAN LIBERALISM. By H. J. Laski. 192 pages. 6s.

THE PRACTICE AND THEORY OF BOLSHEVISM. By Bertrand Russell. 96 pages. 5s. *Allen and Unwin.*

THE JEWS AND MODERN CAPITALISM. By W. Sombart. 412 pages. 11s. 6d. SOCIALISM. By E. Durkheim. 286 pages. 7s. 6d. (Collier Books NY). *Macmillan Co.,* New York.

THE PEOPLES AND POLICIES OF SOUTH AFRICA. 3rd edition. By L. Marquand 292 pages. 8s.6d. THE UNITED NATIONS—as a Political Institution. By H. G. Nicholas. 238 pages. 7s. 6d. *Oxford University Press.*

THE SECRETARIAT OF THE UNITED NATIONS. By S. D. Bailey. U.N. Study No. 11. Carnegie Endowment for International Peace. 119 pages. 25s. *Stevens.*

LEVIATHAN. By Thomas Hobbes. Edited and abridged by J. Plamenatz. 409 pages. 7s. 6d. (The Fontana Library). *Collins.*

Science and Mathematics:

THE GREAT MATHEMATICIANS. By H. W. Turnbull. 156 pages. 7s. 6d. (Hardback 12s. 6d.). (University). *Methuen.*

BRITISH SCIENTISTS OF THE 19TH CENTURY. By J. G. Crowther. 344 pages. 12s. 6d. *Routledge.*

INTRODUCTION TO SPACE. By Lee A. du Bridge. 110 pages. 10s. 6d. *Columbia University Press.*

SCIENCE SINCE BABYLON. By D. J. de S. Price. 161 pages. 10s. 6d. *Yale University Press.*

A SHORT HISTORY OF SCIENTIFIC IDEAS TO 1900. By C. Singer. 543 pages. 10s. *Oxford University Press.*

CLOUDS, RAIN AND RAINMAKING. By B. J. Mason. 145 pages. 13s. 6d. THE NATURE OF BIOCHEMISTRY. By Ernest Baldwin. 124 pages. 8s. 6d. *Cambridge University Press.*

PRINCIPLES OF NUCLEAR REACTOR ENGINEERING. By. S. Glasstone. 870 pages. 30s. BIOGRAPHY OF THE EARTH. By G. Gamow. 250 pages. 16s. (Papermac). *Macmillan.*

CLIMATE AND THE BRITISH SCENE. (*Illustrated*). By Gordon Manley. 382 pages. 9s. 6d. (The Fontana Library). *Collins.*

Miscellaneous:

JURISPRUDENCE AND LEGAL ESSAYS. By F. Pollock. 292 pages. 15s. (Papermac) *Macmillan.*

OUT OF OUR PAST: The Forces that Shaped Modern America. By C. N. Degler. 500 pages. 18s. 6d. *Harper and Row,* New York. London: *Hamish Hamilton.*

of fuel. With an expected oil production of 205 million tons, petroleum and natural gas should account for 48 per cent of the Soviet fuel balance next year, compared with less than 32 per cent in 1958.

The biggest question marks concerned food production and other branches affecting the consumer. The planners have managed to scrape the barrel and raise the budgetary allocation for agriculture by 18 per cent to 4.1 billion roubles. Higher procurement prices should also facilitate self-financing on the farms. Supplies of machinery and fertilisers to the countryside are to be stepped up considerably. Yet it is doubtful whether the effort will be sufficient to accomplish the breakthrough in agriculture that Mr Khrushchev needs, not only to keep up in his famous "race" with the United States, but also to provide a healthier basis for economic growth at home.

Doubts may be cast as well on other items of interest to the Russian consumer. The housing target of 91 million square metres of floor space sounds a lot, but is actually lower than for the last two years. On the other hand, in the last two years fulfilment has not kept up with promise. Next year's increase in investment in light industry, while not as high as this year's, will still be substantial. Some dividends of that growing investment are to be cashed in 1963. The most striking example is in the output of washing machines, scheduled to rise from 1.3 million units last year to more than 2.2 million next year. Such progress, however, is not typical either for durables or for consumer goods in general. If gross industrial production is to grow by 8 per cent next year, the output of producer goods is to rise by 8.5 per cent and that of light industry by 6.3 per cent. The general pattern thus remains, broadly, the same.

SOVIET BUDGETARY EXPENDITURE

(Estimates)

	1962		1963	
	Billion roubles	Per cent	Billion roubles	Per cent
Grants to national economy	32·5	40·3	34·5	40·1
Social and cultural services	28·7	35·7	31·0	36·0
Defence	13·4	16·7	13·9	16·1
Administration	1·1	1·4	1·1	1·3
Other	4·6	5·9	5·6	6·5
Total	80·3	100·0	86·1	100·0

These steady rather than spectacular changes should not cause any surprise. Mr Khrushchev's acrobatic performances in the foreign field have not as yet been rewarded with any prize which he could put to economic use at home. He has tried to make up for it by all sorts of managerial reforms. The latest involves the harnessing of the party membership for production purposes. But it was launched only at last month's session of the central committee. The Russians—for whom 1962 may go down as the year of higher meat and butter prices and of a broken pledge on income tax—will certainly be pleased with the new promises. These are not, however, attractive enough to silence communist critics of Mr Khrushchev's "appeasement" or to justify, in their view, a policy that seems to lead straight to a collision with China. But one should not prejudge the profit and loss account. The political and economic consequences of the Cuban peace have not yet been realised to the full within the communist block any more than within the western alliance.

The Play Goes On

FROM OUR SPECIAL CORRESPONDENT IN BRUSSELS

DESPITE the ominous warnings in the press and in political speeches, the two-day meetings between the ministers of the Six and Mr Heath ended on Tuesday on a more encouraging note. First came a general agreement on trade arrangements for Malta and (topically) Malaysia. Next Mr Heath managed to "finesse" the question of British relations with the European Free Trade Association, with the result that Efta will not be an issue until all other matters have been negotiated and Britain is ready to enter the European Community. Finally, after thirteen months of talks the ministers and the commission have acknowledged that their method of negotiation works against any kind of realistic or satisfactory discussion—let alone resolution—of the critical problems involved.

Not that this last point was put openly. But after two days of stating and restating their respective positions the ministers decided that a working group, including the ministers of agriculture, together with specialists from each country and officials from the commission, might be better equipped to analyse the facts and implications present for British agriculture in the proposals of both the Six and Britain. This new group is to be chaired by Dr Mansholt, of the commission, with an interim report to be prepared for the next meeting, from December 19th to 21st, and the final one completed for the meetings beginning on January 14th.

All of this is a step forward in the negotiations and a gain for Mr Heath. It is no secret that several of the ministers (and Mr Heath in particular) were unhappy with the negotiating procedure. They complained that it tended to lock the two opposing sides in fixed, and separate, positions; that it created a conference situation in which discussion among the ministers was impossible, and one in which there could be no possible compromise or reconciliation of differing views.

BY transferring the discussion to a closed working group chaired by a representative of the commission, there is now a possibility of actual negotiation. True, the working group is authorised only to analyse the facts and to examine the implications in both proposals; it cannot negotiate in the sense of getting any disputed points decided. But the presence of Dr Mansholt in the chair, and the participation of the ministers of agriculture, should lend weight to the final analyses that are presented to the council of ministers. Indeed, one might say that Britain can only benefit from the arrangement. For the two proposals that will be examined may be considered as the extreme possibilities. What is expected (one might say, hoped) is that some form of compromise will emerge from the working group and will eventually be adopted by the Six and Britain. For its part, the British delegation anticipates that the French may want some guarantees for cereals; but even the expression of such an interest is considered an advance, since previously there has been no discussion at all. Who engineered the scheme for a working group is still an unanswered question. But the guess is that the commission and the Dutch ministers, working behind the scenes over the past four weeks, were probably responsible for its adoption. Now what is wanted is good will, an extraordinary amount of effort on the part of the working group and some genuine negotiating.

Mr Heath's manœuvre with regard to Efta must also be considered a tactical gain for Britain. While repeating that Britain expected agreements between the community and all the Efta countries to come into effect at the same time, Mr Heath indicated that Britain would not raise article 234 (which covers specific agreements with other countries made before entry into the community) as an issue that affected its relations with Efta. In effect, he was saying that any discussion at this point would only complicate the proceedings, if it did not wreck them; and that the matter could be more easily resolved once all the other conflicts had been taken care of. By taking this line he scuttled any possible French plan to negotiate the matter here and now.

Surprisingly, the Six seemed willing to co-operate. They saw little reason why negotiations with Denmark and Norway could not be settled quickly, once the discussions with Britain were concluded. While they doubted whether agreements with the neutrals could be reached much before late 1964, the date was governed by the details and work involved, not by community policy. Still, all seemed to understand what was not stated: that the burden is Britain's and not the Six's. If all other obstacles to the negotiations are resolved, Britain and its Efta partners, not Britain and the Six, will have to conclude the final arrangements for British entry.

The drama—if it can be described as such—in all of these proceedings concerned the press. Throughout the sessions, over the past months, journalists have been briefed by spokesmen from the British and French delegations as well as by a spokesman from the community itself. The representations of the French point of view have been candid, vigorous and very suited to the exigencies of the moment: namely, that the hour is late, copy must be filed within the next hour and the presentation dramatised, if possible in terms of conflict. Added to which, the French spokesman is first-rate at his job. The result has been that the daily press—British, American and other—has been giving ample coverage to a strong version of the French view.

The meetings this past week suggested that this extreme view may be at variance with the facts. The first cause for suspicion occurred on Monday when the French spokesman dramatised at some length the conflict between the French and British positions, and quoted the French foreign minister, M. Couve de Murville, in some detail. The impression he created was that a deadlock had been reached, and that the Six were firmly opposed to any special consideration for British agriculture either by way of an extension of deficiency payments or special arrangements for particular commodities. That Mr Luns, the Dutch minister who had chaired the session, mentioned none of this when he addressed the press seemed a sign of tact, not a contradiction. But on the following day there could be no misunderstanding. The French spokesman claimed that the working group set up to examine questions of British agriculture would consider only the facts in the community's proposals, while both the British representative and Mr Luns, speaking as chairman, explained that the working group would analyse the proposals of both parties.

The conflicting stories were possibly clarified—after the first reports had gone out—when it became clear that during the restricted sessions of the ministers (which Mr Heath had proposed during the Monday meeting) the French spokesman to the press had not been present. He had, in fact, given a second-hand account of the proceedings minutes after they had occurred, and only after he in turn had been hastily briefed about what had taken place. The French minister had in fact not opposed the plan to establish a special working group to analyse the respective proposals, nor had he elaborated, during the first session, an ultimatum to the British on deficiency payments. This drama was played to the press only.

Indeed, it is difficult to dredge up much drama in these negotiations. The meetings are as regular as a television serial. The cast is always the same: the six ministers; Mr Heath and his associates; the ubiquitous commission, who are the catalysts for most of the action; and as audience-participants, and as the sounding-board and intelligence service of all the peoples concerned, the press. As for the citizens of Brussels, old TV hands that they are, they couldn't care less.

Adenauer Stagecoach

FROM OUR BONN CORRESPONDENT

FEELING the reins again securely in his hands, the venerable coachman resettled himself in the driver's seat at the beginning of this week, irritably cracked his whip and gave the order to trot before the grooms had assembled all the horses. The Chancellor was in a hurry to be off. He had the constitutional authority, he reminded the bickering bystanders, to harness a team without waiting for any other than the federal president's assent. And since Dr Adenauer is habitually occupied more by foreign than by domestic affairs, the reason he gave for post haste was the need to restore confidence abroad in the stability of the west German government. He did not admit, even if the thought occurred to him, that the need was just as great at home.

Yet it would be presuming too tough a skin to suppose that Dr Adenauer had not also felt the spur of fresh intimations of time's winged chariot hurrying near. For, in order to allay growing public and parliamentary disquiet at his continuing claim to indispensability, he had authorised Herr von Brentano, the Christian Democrats' leader in the Bundestag, to tell the flock on December 7th that the patriarch would retire definitely "next autumn." West German commentators have noted to a man that Dr Adenauer did not make the announcement himself, that he put nothing in writing and gave no precise date for his departure. But they are all assuming that Dr Adenauer has some eight to ten months left in which to put the finishing touches to his work. None has recommended that he should be given longer.

Next autumn, should we say?

The composition of Dr Adenauer's fifth and last cabinet, which was due to make its bow in the Bundestag on Friday, has disappointed virtually everybody except the Chancellor himself and the Social Democratic party militant. When the *Spiegel* affair had eventually precipitated a crisis of confidence in the government, Herr Josef Dufhues, junior co-chairman with Dr Adenauer of the Christian Democratic Union, advised the Chancellor to make the most of this unexpected opportunity to refurbish his cabinet. On November 18th Herr Dufhues publicly counselled Dr Adenauer "to act and govern . . . so to reorganise the government as to restore public confidence in its competence to lead." Herr Krone, the sage minister without portfolio who, since Herr Pferdmenges died, is probably the friend in the strongest position to give Dr Adenauer frank political advice, openly seconded Herr Dufhues. Throughout the country it was hoped that Dr Adenauer would assemble a team that would pull much more effectively and harmoniously together than its predecessor had done, not only until next autumn, but also under the new Chancellor, at least until the general election of 1964—that would offer, in short, the likelihood of a period of political stability after Dr Adenauer's retirement.

For the sake of stability, a majority of the Bundestag deputies of the Christian Democratic Union and the affiliated Bavarian Christian Social Union urged Dr Adenauer to make it clear that his successor would be Herr Erhard, the vice-chancellor and economics minister. And, for the sake of efficiency and harmony, they agreed that the number of cabinet portfolios, which had been allowed to increase over the years in order to deal with disparities more of party ambition than of fields of work, could be reduced from 21 to 16 or 15. The ministry for refugees could be amalga-

tractors out of this world

SPACE SHRINKS as man expands his explorations, and the ubiquitous tractor is readied for work on other planets. The problems that lie ahead are dramatically unknown, but you can be sure that the vast research and experimental resources of the David Brown Tractor Group are geared to meet them. Taking shape on their drawing boards are tractors that will be—literally—out of this world; tractors that, one day, will manoeuvre on alien surfaces as they set about the exploration and development of other worlds.

The power that converts the visions of David Brown into realities is British *Coal*. The ramifications of the group are enormous. It cannot be swayed by fashion or fancy in the choice of its vital fuel. David Brown chooses—and goes on choosing—coal. Coal, because coal gives the greatest heat for the lowest cost. Coal, because coal, burned the modern way, is smokeless. Coal, because coal is the British fuel and we have an almost inexhaustible supply of it within our own shores.

For the best of business reasons, David Brown—like so many other companies of vigour and vision—plans its future on coal.

DAVID BROWN PLANS ITS FUTURE ON COAL

ISSUED BY THE NATIONAL COAL BOARD

mated quite painlessly, it was reckoned, with the ministry for all-German questions; the ministry of federal property with the economics ministry; the ministry for family questions with the ministry of health (and both, perhaps, later with the ministry of the interior); the ministries for Federal Council affairs and for economic co-operation (foreign aid), it was being argued, never would be missed.

But by the middle of this week it was apparent that "coalition and confessional arithmetic," along with old personal antagonisms, had wrecked the prospect of a brave new dispensation. There would be seven new men in the cabinet, but it would be just as large as it was before. Instead of there being thirteen Protestant ministers to eight Catholics, there would now be nine Catholics to only twelve Protestants; the Christian Democrats would have twelve seats, the Christian Socialists four and the Free Democrats five. The average age of the ministers had been reduced from 54 to 51.

After thirteen consecutive years in office Dr Adenauer, who will be 87 next month, remains Chancellor under notice. He has still not given his blessing to the party's majority decision to consider Herr Erhard as his successor. One of the youngest and most vigorous members of the preceding cabinet, Herr Strauss, has gone; but he is generally expected to work his way back in due course. (Herr Erhard, it seems, played an important part in convincing his Bavarian colleague that it was in his own interest to resign, encouraging him to hope to be able to restore his political fortunes in the post-Adenauer cabinet.) The new defence minister is the capable and "European-minded" Herr Kai-Uwe von Hassel, hitherto chief minister in Schleswig-Holstein. Herr Höcherl, who was briefly considered for the defence ministry, remains minister of the interior; it was he who, as the Free Democrats quickly pointed out, admitted with composure in the Bundestag last month that the arrest in Spain of Herr Ahlers, *Der Spiegel's* military expert, had been "somewhat outside legality." ("Somewhat pregnant" one deputy, searching for a parallel, was heard to muse aloud.)

The new Free Democrats in the cabinet—Herr Bucher (justice), Herr Dahlgrün (finance) and Herr Hans Lenz (science and research)—are virtually unknown to the public. Three of national standing wait pointedly in the wings for Dr Adenauer's exit—Herr Mende (the party chairman), Herr Doering (vice-chairman) and Herr Dehler (a former party chairman)—and the party's long-strained relations with their coalition partners have been freshly burdened by Dr Adenauer's flirtation last week with the Social Democrats, which he conducted with a calculating eye on the possibility of introducing changes in the electoral law that would have been calculated to put an end to Free Democrat representation in Bonn altogether.

The talks between the Christian Democrats and the opposition were in the nature of things likely to prove fruitless. Yet there was a moment when they were being conducted seriously on both sides. The Social Democrats' largely self-appointed negotiator, Herr Wehner, insisted on Dr Adenauer's written authority for the furtive soundings made by Herr Lücke, the minister of housing, and Herr von Guttenberg, known as an admirer of English parliamentary ways. Both practising Catholics, these two men explained to the former communist that they were acting "in the national interest." But Herr Wehner was too secretive. He did not, for instance, tell such an important party colleague and man of cabinet calibre as Herr Fritz Erler what was afoot. When the time came for Herr Wehner to ask the party to ratify the coalition conditions that he was proposing to lay before Dr Adenauer he did not get unreserved support; and the reservations concerned the term of Dr Adenauer's chancellorship. Thus the negotiators are claiming a great moral victory. It has now been demonstrated for all the world to see, they are saying, that even Dr Adenauer considers them qualified for the responsibilities of government. And they are counting upon his makeshift fifth cabinet to stimulate further in the electorate a desire for radical change.

Hispano-Moorish Bargain?

FROM A CORRESPONDENT

THE more Mr Benbella in Algeria looks to the East, the more his constitutionally and territorially apprehensive neighbour King Hassan II in Morocco tends to look to the West. Last month's visits by Mr Balafrej, the Moroccan foreign minister, to Madrid and by General Muñoz Grande, the Spanish vice-president of state, to Morocco are part of this process.

Relations between Spain and Morocco have been poor ever since the Spaniards moved quickly and bloodlessly out of their northern Moroccan protectorate in 1956. They hoped to steal a march on the French for future Moroccan favours and to gain a moratorium on Moroccan claims to their other north African territories. In fact, they achieved neither. Instead, they have had to sit by and watch normal neutralist developments taking place in the newly independent kingdom; and, according to the system of political accounting in use in Spain, where two and two of anything left of centre make five, these added up to communist penetration. A Cuba, they say, a few miles from our southern doorstep.

The seed of a rapprochement between Spain and Morocco may have been sown during the recent exchange of visits. When they withdrew from Spanish Morocco the Spaniards kept the presidios, those ancient and integral parts of Spain, Ceuta (population 64,000), and Melilla (population 87,000), and also the three nearby fortified outposts of Alhucemas (population 336), Peñon de la Gomera (population 450) and the Chaffarinas (population 610). They also, of course, kept their colonies of Ifni, which is a coastal enclave in Morocco itself, and Spanish Sahara, an arid expanse of 125,000 square miles with a population of only 36,000.

The sort of plant that may one day emerge from the seed that was sown in October and November will probably have two leaves, Ceuta and Melilla, coloured more firmly red and yellow for Spain, and the rest coloured a new and rather thin red and green for Morocco. To the people on both sides, however, the plant will look good in the annual national culture exhibitions. In exchange for something they do not really want very much the Spaniards will get a firmer title to the two places they do want. In return for not actively pursuing a claim to two towns that have been Spanish for centuries the Moroccans will add another 220,000 square miles to their domains. There may be other tangible advantages, too, for both. The Moroccan government may relax the stranglehold it has been applying in recent years to Ceuta's transit trade, and ease the restrictions on Spaniards fishing in what are now claimed as Moroccan territorial waters. The Spanish government for its part may offer transit facilities at Melilla which would make it easier and cheaper for Morocco to use this, the only available port, for its imports and exports in this area.

Officially Ceuta and Melilla were not mentioned at all during these visits. They are part of Spain, the Spaniards say, the population is almost entirely Spanish, they have held Melilla since 1492 and Ceuta since the end of the sixteenth century. To this the Moroccans are apt to reply that they held half of Spain for nearly twice as long and that they still have the keys to the houses their families once owned in Granada and Cordoba. Then, say the Spaniards, switching the argument and thinking perhaps of Goa, we cannot possibly give up Ceuta or Melilla until the British leave Gibraltar. And there is no sign of that.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

All for Tax Cuts —and Cuts for All

NEW YORK

IT is rare for different groups to agree on any economic issue in the United States, but there is now as much unity over the need for cutting taxes as over the need for containing Cuba. The solid front began forming last summer when both the labour movement and the United States Chamber of Commerce came out for tax reductions; after President Kennedy promised to fight for a cut in 1963 the front broadened. The Federal Reserve Bank of New York, which has joined the parade itself, observed in its December review that "it is encouraging that growing support for a significant tax cut has in the past few weeks been expressed by a wide range of groups and individuals." Cuts have been called for by the President's Advisory Committee on Labour-Management Policy; by General Eisenhower, who had resisted tax reductions in 1958; by Mr Roger Blough of the United States Steel Corporation; and by Governor Rockefeller, who assumed the function of leader of the opposition by proposing his own tax plan.

Despite this impressive and clamorous groundswell, it cannot be taken for granted that there will in fact be a significant reduction in taxes. Representative Wilbur Mills, who as chairman of the House Ways and Means Committee had a big hand in thwarting the drive for tax cuts last August, declared this week that "there is little justification" for an immediate reduction, thereby serving notice that he, for one, remains unconvinced. Once the Administration's proposals are presented to Congress, other cracks may begin to show. Many businessmen, for example, agree with a resolution passed at last week's convention of the National Association of Manufacturers, which demanded that spending be cut along with taxes; at the very least, these people want a ceiling on government expenditures, a position adopted by the Committee for Economic Development which is a considerably more liberal spokesman for business than is the NAM. Mr Eisenhower also demanded that spending be held down, while Mr Rockefeller argues that tax reductions should go primarily to corporations.

The Administration is planning to increase spending and has let it be known that the bulk of the cuts will be for the benefit of consumers. Last summer fears of an imminent and sharp decline in economic activity were even more marked than they are now but congressional concern about the size of the probable deficit in the Budget and the absence of an actual decline in the economy dissuaded the White House from demanding a cut which it felt it would not get in any case. Congress remains a stronghold of fiscal orthodoxy and business conditions have improved since the summer. Yet the Administration thinks it can overcome the combination of fear and inertia which has proved a formidable barrier to tax changes so far. For the first time in almost a decade, the White House has committed itself to tax reductions and will be putting all of its prestige and power into the fight. Moreover, officials believe that they have convinced the public of the need for reducing taxes in order to stimulate growth even if this means enlarging the deficit in the Budget.

But there are obstacles in the path of the tax band-wagon, including Mr Kennedy's own reluctance to incur big deficits. While he is now proclaiming that a deficit caused by tax cuts will not be inflationary when there is also unemployment and unused industrial capacity, the President wants to avoid being linked with the biggest deficit there has ever been in peacetime; responsibility for this is now held by Mr Eisenhower with his $12.4 billion in red ink in 1959. There is little likelihood that this will be matched during the 1963 fiscal year, which ends next July, but many of Mr Kennedy's advisers are prepared to live dangerously and to court a large deficit in fiscal 1964, because they are convinced that this course will in time generate a new surge in activity and bring much higher revenue. They feel that the President must formulate an economic programme with the calculated boldness which he exhibited over Cuba. They want a substantial tax cut of $10 billion or better a year, plus increased spending, to make it certain that the pace of economic growth will be accelerated.

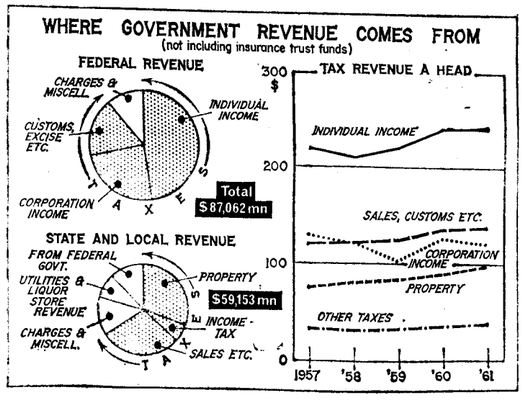
DR WALTER HELLER, chairman of the President's Council of Economic Advisers, has been the spokesman for the hyper-expansionists who are seeking to raise spending and cut taxes simultaneously. This group argues that there is little time to waste and is willing to postpone tax reforms if these threaten to delay tax reduction. The urgency which Dr Heller has attached to a "fiscal fitness" programme indicates that, unlike Mr Mills, he thinks an immediate tonic is needed, although he believes that tax cuts should also be designed to foster long-term growth. Mr Kennedy, however, has been more inclined to go along with Mr Dillon, his more cautious Secretary of the Treasury, who recognises that spending must increase but thinks that any rise should be limited. Mr Dillon also insists that tax reform should be coupled with tax reduction, on the grounds that without the sweetener provided by cuts there will be little hope of achieving reforms, whether in the interests of equity or to increase revenues or to encourage expansion.

These are differences of degree rather than of kind. Both Mr Dillon and Dr Heller want reductions to take effect in January and they agree that the cuts should benefit mainly consumers. This is disputed by Mr Rockefeller, who holds that the sluggishness of the economy is due to lags in business investment rather than in government spending or consumer purchasing power, both of which have been rising. Mr Rockefeller's plea that business should have priority in tax reductions is regarded as politically impractical and economically unsound by the Administration, which contends that the tax credits and the more liberal depreciation allowances already granted capital investment should stimulate business spending.

Washington's argument for concentrating on consumers is that, while admittedly personal incomes have increased, the rise has been held down by the tax structure so that demand has been insufficient to utilise productive capacity or to absorb the large pool of unemployed. The Administration's economists insist that tax cuts for individuals will have a more pronounced multiplier effect than any other kind, touching off a chain reaction of higher production and expanding investment. They point out that the current strength of consumer buying is partially in expectation of tax reductions and that failure to provide them might lead to a decline. There is no way of proving what is motivating consumers but it cannot be denied that hopes for tax reductions are widespread. They are evident in Wall Street (which reacted sharply to Mr Mills's dash of cold water) and there is even some danger that the public is

being oversold on the stimulating impact of such reductions. It is questionable, for instance, whether tax cuts can cure the sticky problem of unemployment which has not responded so far to increases in demand. Tax cuts will mean a rise in imports; this will aggravate the deficit in the balance of payments and may necessitate a much tighter monetary policy which might put a brake on expansion.

At the moment, though, the public is anxiously awaiting the details of the Administration's tax proposals. It is said to be mulling over a package in two or three parts, since this might appear to Congress to be more palatable and digestible than a single inclusive and involved measure. One plan which has been talked about consists of an initial across-the-board cut in individual taxes which would be effective this January, with the base declining from 20 per cent to 15 per cent and with those in higher income brackets getting an extra reduction. In all, this would release $5 billion on an annual basis, which is what the Administration's economists seem to regard as their minimum target. This first cut would be followed by a reduction in January, 1964, in taxes on corporate incomes from the present rate of 52 per cent to 47 per cent; this would account for another $2.5 billion but these reductions would be tied to reforms, such as lower depletion allowances for the oil and mining industries. Then the third part of the package would provide an additional $2.5 billion by bringing down the top rate on personal incomes to 60 or 65 per cent—it is now 91 per cent—along with other reforms, affecting estate taxes and capital gains, which would be designed to recover part of the loss.



Such a package, or some variation of it, may prove saleable because it does not bring with it a certain increase in the deficit on the Budget. It also means that the Administration would not be using up all of its ammunition in one volley; by saving some tax reductions for 1964 it would not only stand a better chance of achieving tax reforms but should also be able to benefit from continued anticipatory spending, which would help to stimulate economic activity and hold down the deficit. This would also permit the higher level of government outlays which the Administration considers essential, either as an insurance in the event that tax reductions are stalled or as a booster to hasten full employment.

But whatever the Administration proposes, it will face another and very thorough round of give-and-take in Congress. Those who favour a bold approach think that Congress is much more likely to give way to that than to a piecemeal package which can be pushed aside. Actually, Mr Kennedy's main hope, in the absence of an economic decline, is to keep more or less intact the solid front which supports tax reduction. Just as Mr Kennedy wants to escape being labelled extravagant, Congress will not want to be tagged as the spoilsport standing in the way of economic growth.

Republican Post-mortem

CAMPAIGNING seldom ceases for long in the United States. Although Governor Rockefeller of New York is wisely not encouraging any premature boom on his behalf, his speech last week to the National Association of Manufacturers was taken to be the first shot of his drive for the Republican presidential nomination in 1964. The biggest obstacle in his way is the impression, among orthodox Republicans, that he is too liberal. His condemnation of big deficit spending and his insistence that in New York he has combined economic growth with fiscal responsibility was designed to reassure the right wing of his party. At the moment, indeed, it is difficult to see another serious contender. With Mr Nixon out of the running, the Gallup poll found that over 40 per cent of the voters and over 50 per cent of the Republicans questioned favoured Mr Rockefeller as the Republican candidate for 1964. Competition is likely to be choked off by the reflection that, given Mr Kennedy's popularity and the tradition of a second term for an incumbent President, the Republican candidate may expect to win little but his party's gratitude.

The Republican National Committee, which met last week in Washington to lay plans for 1964, ascribed the party's disappointing failure to do better in last month's elections to the trumping of its Cuban ace by events and by President Kennedy; Republicans are still reluctant to think that they cannot profit by pressing an even harder Cuban policy than the Administration's. The exasperating fact remains that last month the Republicans with almost half the total vote outside the South added only two Congressmen to their minority in the House of Representatives and lost further ground in the Senate.

Mr Miller, the chairman, made much of the party's gubernatorial victories in three big northern states and its gains in the traditionally Democratic South. Unfortunately the extremely conservative and often racially segregationist policies which pay in the South—at least in the short run—hurt the Republicans in the northern cities with their big Negro populations. *Advance*, a magazine published by progressive young Republicans, has sent a letter to the committee arguing that support for segregation is morally indefensible and politically short-sighted. Senator Javits, a progressive Republican who actually carried New York City and won re-election by nearly a million votes, has proposed that official help should be withheld from segregationist candidates. But Mr Miller, having taken the precaution of holding the discussion behind closed doors, brushed aside any such "guilt feelings" which might stand in the way of the Republicans becoming, like the Democrats, a nation-wide party.

Six Against Nine

NEW YORK

THAT Christmas is a two-edged sword may be the conclusion forced upon Local Six of the International Typographical Union in the new year. For the publishers of New York City's nine major daily newspapers did not baulk at stopping their presses altogether during the rich Christmas advertising season rather than grant what were felt to be ruinous wage demands made by the printers' trade union against the four strongest papers. Now that the publishers are enduring a repetition of the strike—by another union—which lost them $25 million four Christmasses ago, the ITU may well be wondering what it can use for ammunition in its collective bargaining during the lean advertising month of January. In fact, the stoppage will not again face the publishers with similar losses until Easter. Sober rumours hold that the strike, which has deprived New Yorkers of 5.7 million newspapers daily since

Flight 207 leaves Idlewild for Frankfurt —

without Alcoa research! Modern jet aircraft are designed in aluminum. Fuselage, wings, engine nacelles, even seat belt buckles. Why? Many reasons. Light weight, strength, corrosion resistance are only a few. Without aluminum's unusual combination of qualities, no powered aircraft would fly. Many of these qualities are not inherent in the metal; they are the result of generations of research and development. Even before the first historic transatlantic flight, over a generation ago, Alcoa engineers, working with aircraft designers, were pioneering alloys and production techniques which laid the ground for today's high performance. Alcoa International with offices throughout the world, puts this research and development team to work for you on your product. If it is made of aluminum or could be made of aluminum, you will find no more reliable source

STATE EXPRESS—THE BEST CIGARETTES IN THE WORLD

Continued from page 1122

December 7th, and which has had them queuing in the cold to buy out-of-town papers at three times local prices, will be a matter of weeks, not days. Certainly Mr Wirtz, the new Secretary of Labour, was not cheerful when he left town on Monday after failing to repeat his success in ending the strike against the *New York Daily News* by the Newspaper Guild, the journalists' union.

The strength of the emotions underlying the refusal of the local branch of the ITU, or Big Six as it likes to be called, to accept the same terms as did the Guild—an increase of $8 a week over two years—makes the present situation look particularly grim. In the past the seven craft unions in the business, whose two-year contracts always end in November or December, have tended to copy the white-collar Guild, which negotiates with New York City publishers in October. Perhaps it was inevitable that now the strongest craft union should want to make itself heard over the wind of automation which is making a technologically belated entry into newspaper composing rooms. Yet the printers' initial demands for a rise of $18 over two years, making a weekly wage of $160, and a reduction of the working week from 37 to 30 hours, could well hasten the day of robots ; the publishers insist that they could not afford the $1 million a year which such increases would mean if granted to all the 20,000 workers engaged in New York's daily newspaper production. Like the members of the other craft unions, those of the Guild are honouring the ITU's picket lines—an expensive loyalty, for the strike pay offered by the Guild to a married journalist is a maximum of $80 weekly, while the richer ITU gives its strikers an average of $92. So far, the ITU has only threatened, without achieving, the reciprocal action by its members in Los Angeles and in Paris which would prevent editions of the *New York Times* appearing there as usual.

Because it chose to strike only against the four heavy-weights—the *Times*, the *Journal-American*, the *World-Telegram* and the *Daily News*—" Big Six " maintains that it is not responsible for the holiday black-out of news. It blames the publishers of the other papers—the *Herald-Tribune*, the *Mirror*, the *Post*, the *Long Island Press* and the *Long Island Star-Journal*—for " locking out " union members from their jobs. But the Publishers' Association is morally armed with the unanimous decision handed down on November 20th by the National Labour Relations Board when it declared that the Association was right in 1958 when it agreed to consider a strike against one paper a strike against all. Otherwise, there would be unfair pressure on the struck papers to accede to labour's demands. Yet within this display of professional solidarity there is cruel irony. A long strike could mean the death of the financially weak *Mirror* or *Post*. This would mean the loss of about one thousand permanent jobs for the union, while for the publishers, engaged in a bitter, unfraternal circulation war, this would be one instance in which less would indeed be more.

Protectionists Strike Oil

One of the surprises which facilitated the passage of the Trade Expansion Bill came when Senator Kerr of Oklahoma, normally the leading spokesman for the protectionist domestic oil producers, helped to kill an amendment which would have tightened controls on imports of oil. The shocked dismay of the amendment's sponsors was allayed by hints that the Senator's co-operation had been based on assurances from the White House that the oil producers would be taken care of by executive action. Last week the Administration did, indeed, announce that quotas for oil imports would be lowered.

First introduced in 1959, these quotas are designed primarily to curtail imports into that part of the country, east of the Rocky Mountains, where domestic oil producers have been plagued by serious over-capacity since the end of the Korean war. The original quotas limited imports into the area to an amount equal to 9 per cent of expected demand. Oil from Canada and Mexico was not restricted, however, since the justification for the quotas was the need to ensure that oil would be readily available during wartime and it was hardly likely that supplies from these adjacent countries would be cut off by hostilities. But the arrangements have not been of much help to America's ailing domestic producers. Oil prices have remained depressed and domestic output static. The annual growth in the market has been met almost entirely by imports, particularly from Canada.

Although the Administration resisted the pleas of domestic producers that oil imports be cut back drastically, the new regulations go far to meet the industry's criticisms of the old system. Coming into effect on January 1st, they will limit imports of petroleum and its products (excepting residual fuel oil) and liquefied natural gas products to 12.2 per cent of domestic output of crude oil and natural gas in the region east of the Rockies—the present ratio between imports and output. The linking of imports to domestic production instead of to demand will mean that they will grow much more slowly than would have been the case under the existing regulations. Moreover, while Canadian and Mexican oil will now count towards the permitted total of imports, there are no limitations on the proportion of these supplies which may be included in that total. This raises the possibility that increased imports from Canada could eventually cause a severe squeeze on imports from Venezuela and other foreign countries which are traditional suppliers of the United States. (The Mexicans have limited their exports voluntarily to 30,000 barrels a day, or about one-fourth of present Canadian shipments.) Not only has the Administration granted more effective protection to American producers, but in the process it has also risked imposing more severe discrimination on foreign suppliers.

Professor in the Mid West

FROM A CORRESPONDENT IN NEBRASKA

Dr Walter Hallstein, President of the Commission of the European Economic Community, every inch the Herr Professor but reminded at every turn by well-intentioned hosts that he was once an American prisoner-of-war, came to the heart of the American farm belt against the advice of some of his colleagues. Blank provincial boredom was, in their view, the best reaction that he could expect. His visits to Lincoln and Omaha must, however, be counted as successful ; firstly because his brilliant platform manner captivated the students, professors, businessmen and agricultural leaders to whom he spoke ; and secondly because, as he was very willing to concede, he came away with a better understanding of what the Middle West is thinking about the common market. " The German Professor," as Dr Hallstein really delights in being called, may be an opprobrious term in the Beaverbrook press ; in Nebraska it is a badge of honour and not only because the state has many citizens of German descent. His chief forums were universities but he also had many private talks, with Senator Curtis, a Republican, always close at hand.

In an atmosphere of respectful awe, very different from the contentious arena of Brussels, Dr Hallstein could, with justice and good conscience, engage in humorous professional asides, lecture in terms of patient simplicity and bask in praise for good works. He could say, as he did frequently, that he had come to learn and volley back difficult questions with the preamble that he was grateful that the point had been raised. Yet it would be wrong to make fun of the idealistic middle western impression that he came as one of the architects of world peace, a man of good

will, great mind and far vision. This is the key to the sentiment which has replaced traditional isolationism ; naïve as it may sound, it is precisely this quasi-religious faith in international understanding which provides a basis for the efforts of college professors, the League of Women Voters, the American Association of University Women and other similar groups to cultivate a better informed and more sophisticated public opinion in this region. The watchword of these endeavours is "education" and Dr Hallstein, the instrument of European peace, was a perfect image for these people to build around.

BUT "do gooders" were not the only people whom Dr Hallstein met and they are not the people who will be sent to Brussels by the Kennedy Administration to negotiate the new tariff reductions under the Trade Expansion Act. When recently the American Secretary of Agriculture threatened "retaliation" against European protection for farm products, he was following rather than leading another growing body of opinion in the agricultural middle west. Ever since Mr Herbert Hoover's Belgian relief organisation during the first world war it has been assumed there that Europeans are, by and large, hungry or at least willing to use American food, whether they buy it themselves or get it by way of foreign aid, that Europe is, in short, a permanent free market for midwestern farm products. Shocked to discover that this is no longer so, agricultural leaders who backed the Trade Expansion Bill now say bluntly that they will demand tariffs—high ones—on European manufactured goods if American wheat exports are jeopardised. Exporters of poultry, who developed rather than invaded a European market (especially in West Germany), are already up in arms over restrictions which, they told Dr Hallstein, make it almost impossible to sell to the common market countries.

It was ingenious of Dr Hallstein to suggest that the ultimate solution for everyone's surpluses lay in a "world-wide mutilateral trading system" which would grow out of Britain's entry into the Community. But such "pie-in-the-sky" is not on the Brussels menu just yet. Nor was it much comfort when Dr Hallstein stressed, at every opportunity, his thesis that the Community is "political" in essence and that, if agricultural policy is not political, "then the word political has no meaning." He went on to declare bluntly that the Community was ready for "friendly but fruitful combat" with the American economy and, in typical professorial fashion, he warned the Americans to do their homework for the negotiations. His candour was admired but the effect was jarring.

For the troubled wheat farmers he had only the consolation that the volume of their exports into the Community would depend upon a price yet to be fixed. For the outraged poultry industry, he offered the explanation that this was, after all, no more than a question of "fair shares" as between countries and that, in any event, poultry raising was an alternative means of income for farmers who were being made redundant everywhere by the march of technological change and gains in agricultural productivity. This was simply not good enough. Into the breach leapt the vice-president of the National Poultry, Butter and Egg Association, Mr Griffith of Omaha. His softest accusation was that Dr Hallstein was inconsistent when he talked about "keener competition" to the National Association of Manufacturers and "fair shares" to Nebraska farmers. Mr Griffith spoke of a "tremendous psychological reaction" and said that the American government should tell European consumers that the common market was guilty of creating "excessively high prices" for poultry products. The last has certainly not been heard from these agricultural interests and support for their complaints will grow if more Americans decide that the idealistic objective—"a unified Europe like the United States, sort of"—is becoming a protectionist monolith to further the selfish interests of European voting blocks.

Co-Stars in Orbit

NEW YORK

THE most significant comparison to be made between Telstar and Relay, the new communications satellite which was scheduled to be launched on Thursday, December 13th, by the National Aeronautics and Space Administration, concerns their similarities, not their differences. Both Relay and Telstar (now silent after four months because an accumulation of radiation on its transistors prevents its owners, the American Telephone & Telegraph Company, from switching it on) are purely experimental designs; their orbits will never carry them much over the comparatively meagre height of 4,000 miles above the earth—too low, almost certainly, for an operating system. Relay, however, differs from its predecessor sufficiently to be able to claim some of the "firsts" which are necessary for any satellite to command attention in today's crowded sky. Because it will send out a signal four times stronger than Telstar and at lower microwave frequencies, it will be considerably easier to keep in touch with Relay. This is essential if South America is, for the first time, to be linked to the United States and Europe by space communication.

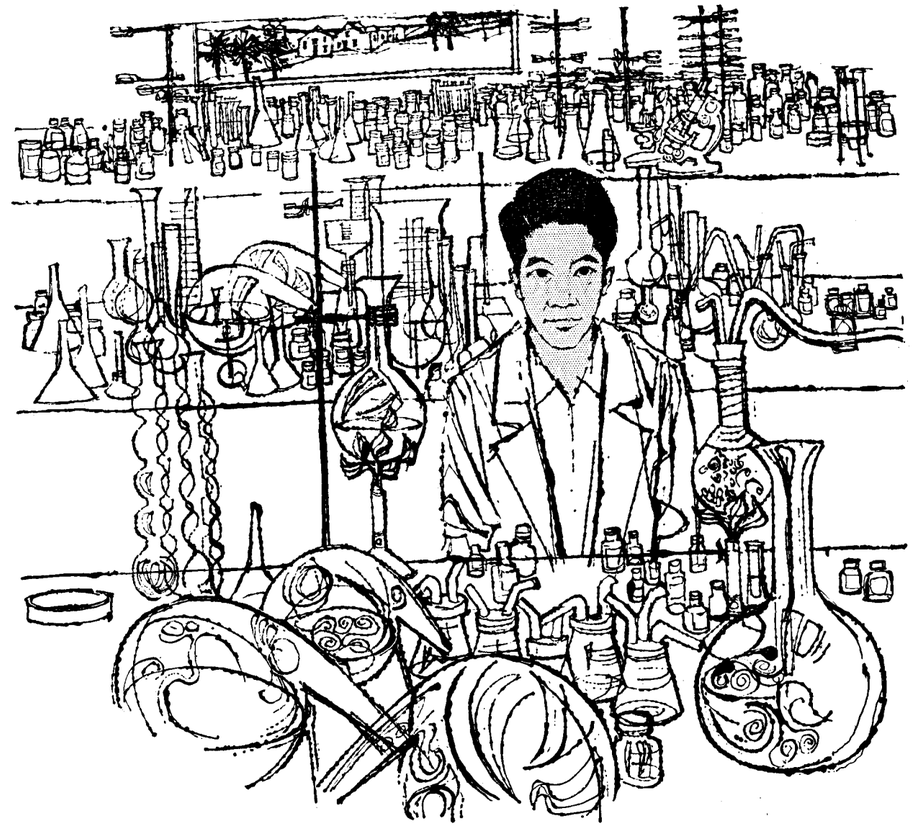
What Relay will not do is to make any easier the solemn task facing the new and controversial communications satellite corporation which is in the process of being created according to the rules which Congress laid down after a fierce row ; shares in it are to be divided equally between the private communications industry and members of the public. Its worst headache will be to decide how high to throw its money. Should the first operating network use 40 or 50 satellites circling at the so-called intermediate altitude of 6,000 to 12,000 miles? Or should it wait for the development of "Syncom" (sychronous orbit) satellites? These will seem to hover 22,300 miles above a fixed spot on the earth because they rotate at the same speed. Only three Syncoms would be needed in order to carry enough telephone channels but, to be commercially useful, they would have to weigh 600 pounds—and the delicate job of manœuvering them into position would sorely tax the powers of the Syncom launching rocket, the Atlas-Agena.

NASA'S first communications satellite will be followed quickly by more ambitious advances: the launching of three small Syncoms, three more Relays, another Echo (a passive, or merely reflecting) satellite. This quickening of pace is shown in the agency's budget for such purposes for the fiscal year 1963—$85.3 million compared with the $48.5 in 1962. Behind this intensive effort, there are military as well as scientific motives ; the armed services hope eventually to have their own communications network using Syncoms. This, of course, is small consolation to liberal Democratic Senators who are bitter because all the findings obtained through Relay and though the spending of the taxpayers' money will be made available without charge to the new corporation dominated by private industry. There is even less solace in store for television viewers. The first programme planned to reach Europe over Relay will contain platitudes like those that saddened Telstar's debut: ice skaters at Rockefeller Centre and possibly a choir from a Negro university singing on the steps of the Lincoln Memorial.

Unmanning the Ships

FROM A CORRESPONDENT IN NEW YORK

AT the beginning of next week some 75,000 dockers in ports on the Atlantic and Gulf coasts from Maine to Texas will vote on the "final" offer made by the shipping companies to the International Longshoremen's Association. This offer is the same as the one made before government mediators and a fact-finding board entered the dispute after the Taft-Hartley Act had



José Salvador helps to build a new world

The classroom is in Manila, in the Republic of the Philippines, and the subject is the chemistry of oil. The student's name is José Salvador and when his schooldays are over he wants to work in the new refinery which was recently built at Batangas, to the south.

But on a bigger scale, José is typical of all youth among the developing countries; his subject is industrialisation, and his post-graduate intention is to play an important and exciting part in raising the living standards of his people. The new subjects he is learning and the new skills he is acquiring will allow his generation to bring about a change which in Europe took centuries.

Shell may well play a part in training José Salvador. For Shell in the Philippines employs technicians, engineers and chemists: a whole host of people with special skills to process and transport the oil that meets 90% of the energy needs of the island nation.

The knowledge of these skills, and the training they require, comes from the experience of Shell companies working in over 100 different countries. All round the world, all round the clock, Shell companies are offering this international experience to thousands of young people.

been invoked early in October to delay a strike. Officials of the trade union have spurned the offer repeatedly and now the rank and file seem certain to vote against it. The dockers will then be free to stop work on December 23rd and are expected to do so. The government has no further authority to intervene and negotiations have broken down completely in the key talks between the ILA and the New York Shippers Association, which represents 145 companies. So the strike may be a lengthy one.

Dockers now work an eight-hour day at $3.02 an hour; the union is asking for a six-hour day with the same total pay of $24.16 and for increases in pensions and other "fringe" benefits. The shipping companies have proposed an increase of 27 cents an hour over a three-year period but they would offer more if only they could obtain promises of greater "productivity" from the union. What they want is freedom to handle their manpower more flexibly, power to reduce, for example, the size of the twenty-man "gang" which must now be used to load and unload the hold of a ship. The basic problem in the current dispute is the growing obsolescence of present methods of handling cargo. Other distributive industries have been able to step up their productivity by streamlining their operations, but in shipping productivity has been falling off, according to the employers; for this they blame the trade unions.

One major way to cut costs is to reduce the "port time" required to load and unload a cargo vessel. Under present circumstances this may take up to ten days, largely because of a maze of dock-side shuttling which benefits stevedores but few others; loading operations are also hampered by narrow, cluttered, "finger" piers such as those in New York. It has been fairly standard practice when exporting goods from a mid-west factory to send them to port by rail, transferring them to lorries which carry the merchandise to warehouses for temporary storage. From these warehouses, the goods are hauled to the piers, packed into units called "pallets," shifted once again, this time for storage on the pier,

New Frontier for Housing

AFTER almost two decades of rampageous activity in response to the rapid formation of families and the mushrooming of suburbia, house builders in the United States are facing a more challenging market. The backlog of demand for houses which characterised the early postwar years has been largely satisfied. Increasingly the industry is having to cater to the requirements of critical buyers who are looking only for replacements and to the special needs of newly-weds and older people. And this in turn is being reflected both in a general upgrading of the national stock of housing and in a shift in its composition. Flats are on the rise and the city, in the words of the Federal Housing Administrator, "is beginning to come back into its own as a significant part of the housing market."

The spurt in the construction of flat buildings has indeed been one of the more spectacular developments in recent years. The proportion of multiple-unit dwellings in the total number of private houses started has climbed from one-tenth in 1955 to about 30 per cent this year. In part, this resurgence in the demand for flats reflects simply second thoughts about the long daily journey into work from suburbia and about the chores and rising costs of home ownership. The vast sums being spent on urban renewal are also undoubtedly beginning to enhance the attractions of city living. More important, however, are the shifts in the age composition of the United States which favour the building of flats.

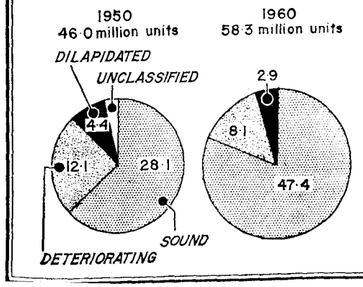
By far the fastest-growing sectors of the population are retired people and young adults recently out of school, who neither need nor, in many cases, can afford the one-family house. Also on the increase are couples in the 45-65 age bracket—the so-called "empty nesters," whose children have grown up and who have become bored with their large houses. Indeed, these couples, generally at the peak of their earning power, have been the mainstay of the promoters of luxury apartments. The outlook for the 25-45 age group—the principal buyers of new one-family houses—is anything but encouraging for the building industry. The number of people in the lower half of this age bracket will not begin to increase measurably until the mid-sixties, while those aged 35-45 will continue to decline throughout the decade.

Nor is this all. Any unsatisfied backlog of demand from this group has all but disappeared. A situation in which the number of new houses started each year had been lagging far behind the creation of new families—and in which young couples often had to double up with their parents or in larger converted houses—has been reversed. While the rate of new family formations fell away from a peak of 1.5 million in 1950 to less than half that amount in 1960, almost as many new houses were built during that period as during the preceding three decades.

From the public point of view, of course, this balancing out of total supply and demand in the housing market has been an unqualified blessing. It has been the major reason for the impressive improvement in housing standards since 1950. Prospective buyers of new houses have no longer felt compelled to jump at the first opportunity, attractive or not. Furthermore, the introduction of abundant new housing into the country's supply year by year has meant that older dwellings have tended to filter down through lower income levels, with some of the poorest units dropping out of the supply altogether at the end.

From the industry's point of view, on the other hand, all of these changes have meant a tougher future. The rising number of vacancies, the levelling-off of building costs and the increased incidence of delinquencies and foreclosures on mortgages have signalled the emergence of a buyers' market. It is not an inconsiderable market but to cultivate it requires more flexibility and imagination—and a harder look at the vast and previously by-passed demand for houses for people with low or moderate incomes.

BETTER HOUSING



HOW GOOD IS HOUSING NOW?
(1960 figures)

	Owner-occupied	Rented
Age and Plumbing:		
Occupied houses or flats (millions)	32·8	20·2
Constructed before 1940	16·3	17·3*
„ 1940–1949	5·2	3·5*
„ 1950–March, 1960	11·3	4·8*
With *full plumbing*†	29·1	15·5
Lacking some/all plumbing†	2·9	3·3
Average‡ Size and Value:		
Number of rooms	5·5	3·9
Number of occupants	3·4	3·1
Value	$11,900	—
Monthly gross rent	—	$71

* Including vacant units totalling, for all ages, 5·3 millions; these are not included elsewhere.
† *Excluding dilapidated units totalling 2·2 millions.*
‡ The median number or value, i.e., the middle measure above and below which there are an equal number of houses.

HOW WELL EQUIPPED?

Of the 53 million houses or flats occupied in 1960, the following number (in millions) had the equipment shown:—

Radio	48·5
Television	46·3
Telephone	41·6
Washing machine	39·1
Food freezer	9·8
Clothes dryer	9·1
Air conditioning	6·6

nd finally transferred by lift trucks to the ship's side, hoisted up by crane and stored by hand in the hold. Obviously all this means mountains of paper work and provides ample opportunity for the pilferage at which dockers, abetted by gangsters, are adept.

But this long-drawn-out operation is becoming increasingly unnecessary. Cargo can be packed into containers at the factory, carted "piggy-back" by rail or lorry to the port and run out on to the pier where a gantry crane grabs the container off the lorry and installs it into a ready-made bed in the ship. Once it docks, a lorry picks up the container and rushes it inland direct to the customer. "Containerisation" is still in its infancy and will probably always be inapplicable to some types of cargo. But already designers are developing wider, deeper holds which offer ingenious opportunities for loading and unloading containers, pallets and other goods, such as motor cars, simultaneously. Once freighters had only one hatch cover to a hold; now they often have three which open and close electronically.

But if these quick methods of loading are to enable ships to compete with aircraft, lorries and trains for premium cargoes, such as perishable commodities, then what are needed are not only rebuilt or new ships with capacious holds to accommodate differently packaged cargoes, but also larger vessels which can make faster trips. Some ingenious work has been done in reshaping old hulls into "containerships." An older vessel is sometimes literally sawn in half and a new, bigger mid-section is inserted. But ship owners are also seeking to replace their many old, slow vessels with the larger "Mariner" designs which have speeds of 20 knots or more. Research is also going on into the possibilities of submarine freighters and hydrofoil ships which skim the surface of the water at high speeds, although neither seems suitable for large amounts of ordinary cargo. Semi-submerged craft are another possibility and gas turbine engines are being tested in the hope that these may bring lower costs—essential if American shipping companies are to increase their share of world trade.

But labour is one of the biggest items of cost and to reduce this burden naval architects have been experimenting with automation over heavy opposition from the trade unions. It has been estimated that the 55-man crew which is generally specified for a Mariner costs an employer $551,000 in wages a year. Yet, from the standpoint of engineering and design, it is fairly simple to reduce this crew by at least half; this would mean not only lower wage costs but also less money for crew quarters and more room for cargo.

In comparison with land-based industries, shipping has lagged woefully behind in its use of mechanisation. Only recently have American vessels begun to carry data-logging equipment; this enables rigid checks to be kept and offers designers detailed information for the future. Considerable success in increasing efficiency and reducing the number of men needed has been achieved by simplifying and combining existing equipment in engine rooms. Steering and navigation can also be done semi-automatically. The ultimate object is to make it as simple to operate a freighter as a small power boat or a car. Once the fully-automated ship is out of port the master will programme a variety of computers in the wheel house. They will alter speeds and change course to meet adverse wind and weather conditions, and even to avoid collision, keeping the vessel in proper trim all the time. If something goes wrong in the engine room a standby system will begin functioning automatically.

This kind of navigation is still in the future, although the Japanese recently sailed a remote control freighter into New York harbour. But automated systems of this sort would certainly place an entirely different emphasis on ship operation. They would reduce maintenance costs on board and lengthen the intervals between major overhauls from 30 to perhaps 90 days. Conceivably the job of the chief engineer might be done on shore with repairs being carried out there and control systems being moved in and out of ships rather like tubes in a television set. In addition, more elaborate means of communication on land would regulate a ship's passage directly. The whole operation may develop into the same pattern as space flights, with ships being guided by some sort of remote Mercury Control.

Vigilantes on Main Street

FROM A CORRESPONDENT IN WASHINGTON, DC

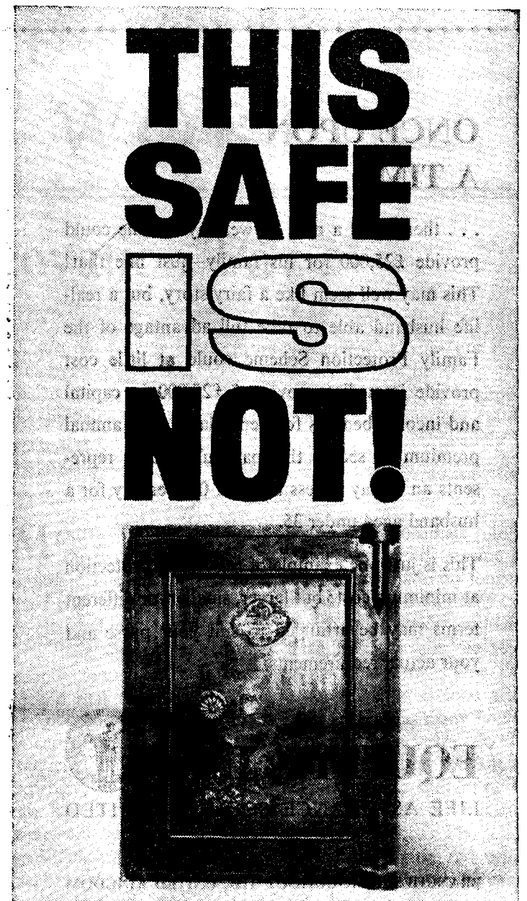
A DOCTOR in Miami, Florida, abetted by the John Birch Society, has found considerable support for a campaign to frighten businessmen out of selling goods made in eastern Europe. There is at least one "Committee to Warn of the Arrival of Communist Merchandise on the Local Business Scene" in each of the fifty states and Dr Harold maintains that these local vigilante efforts are receiving the support of various Parent-Teachers Associations, Chapters of the Daughters of the American Revolution and fraternal and ex-servicemen's organisations for their attempts to keep shops from stocking such things as Polish hams, Jugoslav furniture and toys, Czech dog baskets and Russian caviare. Often the groups need only to tell managers of shops that certain goods being sold are of eastern European origin. The managers quickly take them off the shelves. Sometimes everyone joins in burning them in the streets. In other cases managers resist and the committees organise "card parties." Cards are printed bearing the words "Always Buy Your Communist Slave Labor Products at . . ." Committee members sneak into the shops with these and insert them in every item they can find until the job is completed or they are tossed out.

This high-handed method has already won promises from large chain stores that they will remove the goods in question and will refuse to stock them in the future. The City Council of Billings, Montana, has gone so far as to impose a $1,000 licence on wholesale and retail businesses which offer for sale products made by communist labour and to require shops to display the sign "Licensed to Sell Communist Goods." The movement has focused recently on Washington itself and businessmen there have been taking Polish hams off the shelves. One man was arrested and fined $10 when a shop objected to his inserting cards in its merchandise. This is a galling development for the Administration, which has urged businessmen to stock these goods as part of its attempt to increase trade with countries such as Poland and Jugoslavia. The State Department is now urging shopkeepers to resist the threats and this week President Kennedy remarked that it did not seem to him "to be a great contribution in the fight against communism" to call a merchant unpatriotic because he carries Polish hams.

The committees have been particularly successful in Texas, Illinois and certain parts of the South. They argue that the boycott is depriving the communists of foreign exchange, relieving the American balance of international payments and helping to create more jobs for Americans. This is all nonsense, since last year the United States continued to enjoy a favourable trade balance with the eastern European block, exporting goods to it worth $133 million against imports from it of $81 million. There were far more jobs involved in these exports than could be made for Americans by weaving wicker dog baskets at home.

SHORTER NOTE

The new member of the President's Council of Economic Advisers, to replace Dr Gordon who is going to the Bureau of the Budget, will be Dr John P. Lewis, from the University of Indiana. He has liberal views on such matters as taxation and budgetary deficits and has experience of work in under-developed areas.



ONCE UPON A TIME...

... there lived a man so wealthy that he could provide £25,000 for his family—just like that! This may well seem like a fairy story, but a real-life husband able to take full advantage of the Family Protection Scheme could at little cost provide immediate cover of £25,000 in capital and income benefits for dependants. The annual premium to secure this particular cover represents an outlay of less than 5*s*. 0*d*. per day for a husband aged under 35.

This is just one example of maximum protection at minimum cost; but larger, smaller, or different terms may be arranged to suit your purse and your actual requirements.

We're thinking of setting up in Australia

Many expanding U.K. firms have already done so, helped more often than not by Australia and New Zealand Bank. And to other manufacturers contemplating the same development, the Bank will gladly give similar assistance. A valuable introduction to such a move is provided by the Bank's 70-page book *Establishment of Industry in Australia*, produced especially for industrialists who may be considering that country as a further base for their company's operations.

Subjects include company formation, market potential, taxation, labour, transport, power supplies, tariff protection and local regulations. We shall be pleased to send you a free copy if you write to

THE BUSINESS WORLD

Cars: Does Innovation Pay?

INNOVATION in car design is generally greeted by the people who write about motors as intrinsically good: but the decision to innovate is simply a commercial one. A manufacturer does it when he believes it will give his cars an extra sales appeal. It does give the copywriter more to get enthusiastic about, and the saloon-bar experts a better subject for argument. But if one looks at the biggest car market in the world, one finds that apart from devices to make driving easier and sometimes to make it cheaper, technical features play a subordinate role to fashion as a means of persuading American buyers to change their cars as regularly as that other essential but fashion-dictated purchase, their clothes. Europe is not sufficiently used to having cars to be able to regard them in quite the same way as the American does, or to change them for whims of fashion; so more genuine technical change may have more chance of succeeding.

"Innovation" in cars rather tends to be taken by many European motoring writers as the abandonment of the "conventional" arrangement of mechanical parts, where an engine at the front drives the rear wheels, which are mounted on a rigid axle; but this has really ceased to be "conventional." Where the designer puts the engine and how it drives the wheels are now mainly matters of personal preference. And this definition leaves out such changes as automatic transmission and improvements to engine designs—the sort of innovation, in fact, that American producers most often introduce. If Chrysler introduced a gas turbine engine, it would be the ultimate example of this sort of innovation. Despite the concentration on fashion to sell cars, American firms do innovate, and not only in this way; the Ford Taunus 12M with a V-4 engine and front-wheel drive was, after all, an American design. So innovation ought perhaps to be defined as any novel mechanical feature that is more than a simple gimmick.

The decision to innovate primarily depends on an assessment of the nature of the market. Is it the technical features of a car or its appearance that most influence buyers? And, if the buyer is interested in technique, is he attracted more by novelty or by the features he knows and has tried? Then the manufacturer has to decide whether his engineers have an idea with enough sales appeal. Some European firms like to divide the market into two sections: the first-time buyers and the business users, who are primarily interested in running costs and therefore tend to play for safety in their choice and go for the proved, conventional design; and people who have owned a car for some time, who drive for pleasure, and who therefore go for the novel design in search of a new experience. As cars get more familiar, on this argument, there should be more interest in innovation—which has not been American experience. The other reason for believing that the market will become more technically conscious is simply the prevalence of the mechanical among the modern child's toys, and the proclivity to tinker that seems increasingly to accompany many boys into later life.

MANUFACTURING economics play only a subordinate role in the decision to innovate, though they may determine its timing. The mechanical parts of a car are made on longer-lived and more expensive tools than the body, so that they can be changed less often—the dies used to form a body gradually lose their shape, faster if they have to draw out the steel deeply, more slowly if the pressing is shallow. One can reckon that some dies may have to be replaced soon after 250,000 bodies have been made; this is about as many bodies as can be made from a single set of dies in a year. So the frequent body changes of the American producer are not as expensive as they might seem; by the time a million or so cars have been made, most of the dies will be worn out and some will have been replaced more than once. The automatic machine tools used to produce an engine and other mechanical parts will generally be depreciated over ten years or so, and this limits a company's freedom to change the basic design; Ford's decision to make the Cortina with "conventional" mechanical parts and the Taunus 12M with "unconventional" ones was made simply because the production line for mechanical parts at Dagenham was three years old and of adequate capacity, while that for small engines in Germany was small and out of date.

Even if some of the mechanical parts at least are from existing models, the cost of tooling for a novel car like the Morris 1100 will roughly double that of putting a new body on existing components. But this does not make a substantial difference to the cost of production; it will add only £5 or £6 to the cost of each car over a model run of 500,000, which any big European manufacturer would nowadays expect to attain for a major new model in the lower-priced range. Ford has made more than 500,000 Anglias by now and BMC just 500,000 Minis. With such volumes makers are getting into the American position of needing to replace body dies, so the decision to keep the body styling unchanged over such long runs is primarily a marketing question.

Tooling costs in the motor industry are thus less significant than one might think. There seems to be more to be gained

by large volume production than from long runs on each model; as production techniques grow in complexity, the optimum production rate increases, until there are now considerable economies from rates of 250,000 a year or more. The innovator's main problem is to keep his direct costs down; where he is using many parts that are not made for any other manufacturer, he may well find that his production costs are higher than those of makers of conventional cars. BMC seems to have found this a problem with the Minis.

The position of the manufacturer who has produced a novel car design is very similar to that of one who is using some novel part in a conventional car—such as disc brakes or automatic transmission. Here the extra cost is most often the result of using something that is made in smaller numbers than its conventional counterpart, and only secondarily the consequence of any greater complexity of the mechanism involved. But the risk of developing and tooling for the new part will have been borne by its maker, and usually not by the car maker—unless he has decided to seek his own solution of such a problem. The cost of equipping a factory to make such a product may be comparable to that of the tooling cost of a new car: Westinghouse has spent £4 million on development and preparing to make the Hobbs automatic transmission.

The cost of engineering development is another thing that is relatively unimportant in the decision to innovate: as one managing director put it, the engineers have to do something. And it makes little difference to the cost of their activities whether they are seeking to make a car ride better on leaf springs or to develop a hydraulic suspension system, though the total cost of the engineering department will be high enough to make it an overhead that only a large firm can afford. In America, they will be much bigger than in Britain where research and development are still done on a more modest—but perhaps more efficient—scale. When something like the "hydrolastic" suspension of the Morris 1100 nears the production stage, more needs to be spent on getting it ready for production; but the sums are usually minute compared with those that the aircraft or chemical industries would spend on development, and are small again in relation to tooling costs.

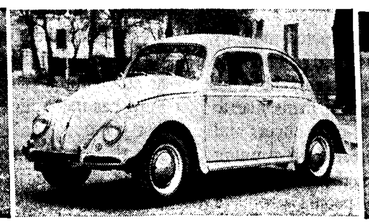
BMC reckons that it is safer to seek technical appeal than styling appeal: engineering may not be an exact science, but styling is only a sort of art—and one cannot have any precise idea of what is the right answer to a styling problem, while one can for an engineering problem. The risks of innovation, on this view, are minimal when some degree of novelty is almost essential to sell a car—so long as the engineers know their job. BMC believes it can maintain the appeal of the car by mechanical improvement to an already advanced but improvable design over a production run of perhaps ten years. It thinks that this will be cheaper than styling changes, and may make tooling costs lower in the long run than if a conventional design had been adopted to begin with. To give a design the ability to be improved is easier if it is novel to begin with.

The saving in cost from preserving the style is more for the buyer than the producer. As Volkswagen has shown, if a car remains outwardly unchanged—apart from being durable—its value falls more slowly than that of the American car which looks out of date after two years. Probably all the dies of the Volkswagen must have been changed many times in its life, often with changes in appearance—but always minor ones that will not alter the style of the car. And its mechanical features have been greatly improved since 1948. This seems much the policy that BMC is seeking to follow, and the Cortina appears similarly styled with long life in view. As depreciation is the biggest item in running costs, this is a way that design policy can reduce them. And if starting with a novel design will help give a longer life, innovation may prove to cut running costs. Apart from the classic example of the Volkswagen, British makers can see the way Citroen was raised from bankruptcy to prosperity in the 1930s by the introduction of its front-wheel drive 12 that grew into the Light 15, and the success with which this firm has continued a policy of technical innovation but styling stability with the 2cv and DS 19. One might say that they have taken a long time to learn; the dead hand of technical conservatism that made the British motor industry the most backward in the world now seems blown away—by the winds of competition, now that the industry is selling in the world market?

If technical innovation adds relatively little to the cost of a car and provides an extra selling point, why do not more manufacturers innovate? The answer seems to be that now cars are pretty highly developed, it is difficult to produce a design that is novel and significantly better than the conventional, without adding much to cost. The DS 19 may be the best-sprung car in the world, but it gains this position at the price of a complexity that cannot be afforded on small cars. Working to a price, the engineer has real difficulty in finding a new method that will offer improvement that the buyer can detect, unless he is abnormally ingenious. The prerequisite for innovation is invention; this becomes more difficult as an industry matures.

THREE SUCCESSFUL INNOVATORS

Morris Mini-Minor



Volkswagen 1200

Citroen DS19

Gatt and European Agriculture

CONTRARY to many people's anticipation, the upsurge of economic regionalism the world over has so far added to rather than reduced the importance of the trade code embodied in the General Agreement on Tariffs and Trade. Gatt sessions—the twentieth session was recently concluded in Geneva—have turned out to be the only forum where the trade policies of regional economic unions can be discussed and judged by other trading countries, not as a matter of courtesy but as a contractual right. For the various common markets around the world, generally consisting of members of Gatt, who are concerned to demonstrate that their exclusive arrangements are in line with its code.

The list of regional arrangements is becoming longer with each session. Gatt now has to consider Lafta (the Latin American Free Trade Association), the Central American Free Trade Area, the African Common Market (Algeria, Egypt, Ghana, Guinea, Mali and Morocco), the Ghana/Upper Volta Trade Agreement besides Finefta, EFTA and the European Economic Community. The last two, however, continue to play the leading roles, and EEC in particular underwent another detailed investigation at Gatt's last session. Working parties and committees were ready with their reports on the association of Greece with EEC and with an examination of the common market's agricultural policy. They were not satisfied that the Greek association was not a codified form of long-term discrimination, and informed EEC that they reserve their right to examine the evolution of this association regularly, which the EEC countries and Greece accepted. The importance of such examinations may lie in the effect they have on the formulation of further association agreements or, in the case of the agricultural policy examination, on the shape that the not-yet-fully-formulated regulations are likely to take.

In Gatt's discussion on agriculture, a representative of EEC stressed that in framing this new system, the member states had gone out of their way to choose policy instruments designed to be compatible with Gatt. Paradoxically enough, the higher protection offered by the new levy system is *de jure* probably within Gatt rules. The levy, so argues the community, is nothing but a variable tariff; and as long as the positions to which it applies are not "bound" under Gatt, its use is legitimate. This *deus ex machina* looks, however, to most agricultural exporters in Gatt to be pretty diabolical.

Not only does the EEC levy, as long as it equalises foreign prices to domestic prices, practically exclude all imports except to cover the gap between production and consumption within the community by the inclusion of its *montant forfaitaire*; the agricultural policy also gives community producers a preference within the community and a special advantage on the world market as exporters. The pivot of the new system is the "indicative price." For cereals, this is at present the highest price within each country. From this price, the intra-community levy during the transition period and the levy on third country imports are derived, after taking account of transport costs and handling charges, from the centre for which the basic indicative price is determined to the point of entry at the frontier. The frontier price, or so-called "threshold price" is however increased by a preferential addition (the *montant forfaitaire*) which in the case of intra-community trade is deducted to encourage such internal trade. The levy is set at the difference between the threshold price (including the *montant forfaitaire*) and the most advantageous world price.

IT is not surprising that agricultural exporting countries were critical of such a cunningly-shaped system of protection. But they saw the devil's very cloven hoof in the refund system. The refund is the corollary of the levy and is given to EEC exporters of cereals. It is logical, says the community, that if the levy is the difference between world prices and domestic prices, then each EEC exporter should be given a refund which is exactly the same size as the levy, so that he can sell on the world market. But the levy includes the *montant forfaitaire*, and the refund he gets will allow the community exporter to sell by this amount below world prices. While production within the community will depend on the level of the "indicative prices," the export subsidy and internal preference margin will be equal to this *montant forfaitaire*.

At the Gatt session, outside countries criticised this, on the grounds that such a system could make exporters out of former importers, particularly if the basic regulations contained no general provisions about quantitative limitations of production. What seemed particularly odious to most existing agricultural exporting countries was the possibility that in a buyers' market community exporters would have the advantage of the *montant forfaitaire*. Moreover, any price reduction by one world exporter would automatically result in an increase of the levy in respect of all other exporting countries (and with that an increase in the refund); so everybody would be forced to lower their prices. "The system," comments Gatt's working party, "thus might bring into world trade new elements, hitherto not existing, which might have an adverse effect both on prices as well as on access to the market." Outside countries provided figures showing that the present system provided higher protection than EEC countries previously enjoyed. France's threshold price for wheat in August, 1962, was 66 per cent above cif prices for imports, and Germany's was about 106 per cent above landed prices.

As these exporting countries saw it, the common agricultural policy gave domestic suppliers over-protection against external suppliers, and provided support arrangements extending to every ton of cereals that European producers might care to grow. It provided an assurance that every ton produced and not sold would be bought by an intervention agency. It gave producers inside Europe freedom from price competition from external suppliers; and with regard to surplus production, it gave them export subsidies that could only be regarded as most generous. Finally, the flour-milling industry within the community was protected to the extent of more than 100 per cent with respect to its milling cost. "Thus," these members suggested, "as a system of protection, disregarding for the moment the level of prices, this was

about as watertight a system as could have been devised."

This Gatt examination covered only cereals, pig meat, eggs, poultry, fruit and vegetables. Members outside the common market hope that it will have its effect on the formulation of the regulations for rice, dairy products, beef, vegetable oils, and sugar, etc., which are soon to be worked out by the community. At the session, the representative of the community assured Gatt members that the comments made by exporting members would be taken into account, and had already suggested a close supervision of the operation of the regulations. Moreover, he added, the regulations could be reviewed in the light of experience and be modified. In particular, it was hinted by both sides that the American Trade Expansion Act might be used as a tool to negotiate not only tariffs but price levels and subsidies on agricultural products.

Agricultural exporters may thus still find that Gatt can do for trade in agricultural products what it has done for trade in manufactured goods. Officials in the *Palais des Nations* are busy trying to find accommodation for the trade ministers' meeting in April or May, so that a timetable and details can be got down to. In the meantime Professor Hallstein has been to the Mid-West to try to moderate some of the mounting criticism that the EEC's agricultural policy has recently experienced in Geneva and in Paris.

BUSINESS NOTES

STEEL

Down to 70 per cent

Steel output in Britain this year will be about 20.5 million ingot tons, the lowest for three years. Production first exceeded this level in 1956, and reached 21.7 million tons in 1957: in 1958 and 1959, it dropped to first 19.6 and then 20.2 million tons. But capacity was lower then: this year it is about 28 million tons, and during 1962 as a whole the rate of utilisation will have been no more than 74 per cent. This may well be enough to make companies such as Stewarts and Lloyds cut back their expansion; but most of the British steel companies have the extra capacity already in. In November the industry was down to 70 per cent of capacity.

Though British steel exports have increased this year. Britain's share of world trade did not match the high proportions attained at times in 1959 and again early last year. Steel exports from the common market, also, rose less than the world total; Japan, now exporting almost as much steel as Britain, showed the only marked increase in its proportion of the total. In the second quarter of the year the E.C.S.C. exported 60.5 per cent of the 4,885,000 tons shipped by the main exporting countries, Britain 15.8 per cent, Japan 15.3 per cent, and the United States 8.4 per cent.

Last month's output of crude steel in Britain was down sharply: at 398,300 ingot tons a week, it was 5 per cent less than a year before and allowing for seasonal fluctuations, about 8½ per cent lower than in October this year. The latest figures for consumers' and merchants' stocks of steel in the third quarter show a continued decline, but allowing for the time of year the rate of rundown in stocks has slowed.

Takeover Number One?

The first proposals for any significant steel merger since the war must make people wonder whether this presages a wave of takeovers within the industry as a whole. Stewarts and Lloyds, which unceremoniously told the public this week that it was going to approach the board of Whitehead before actually doing so, produces considerably more steel from its works at Corby, Bilston and Clydesdale than it rolls there or in its tube-making and other subsidiaries: last year, it sold about 300,000 tons of semi-finished steel and hot rolled strip, plus considerable tonnages of ingots, to re-rollers, drop forgers and other steelmakers. Whitehead is the most important single re-roller in British steel, with a hot rolling capacity of about 300,000 tons a year and cold rolling capacity of about 100,000 tons a year.

Demand for these sales of crude and semi-finished steel, as well as of pig iron and spun iron pipe, have fallen away this year more than demand for steel tubes. Large tonnages of semis from the Commonwealth have been available in Britain below the home price—Whitehead has bought some—hitting demand for steelworks that sell billets, such as Corby. This has now forced Stewarts and Lloyds to postpone the blast furnace investment in its plan to increase iron and steel output from Corby by 450,000 tons a year each; the prototype LD-AC converter of an oxygen process that was planned to increase the plant's steel melting capacity is already in, but postponement of the ironmaking project will save the group nearly £19 million for the time being.

Corby, sited on the Northants orefields, is a plant that has always aroused the enthusiasm of enthusiasts for steel development on British ore; but the company has been less anxious to duplicate its capacity than some of the enthusiasts. Plans for new "green field site" steelworks in the Midlands, made more than once since the war, have come to nothing. The development that Stewarts and Lloyds has partly cut back was the latest of these: Corby, as the last Iron and Steel Board development report commented, is one of the country's most economic sites for billet production. Semis such as these, however, are the kind of steel that tends to be offered most widely on the world market when home demand drops away across the world; newcomers to steel production, for example in the Commonwealth, often have sizeable tonnages to unload at very low prices.

This particular bid may represent one way of acquiring finishing capacity of which Stewarts and Lloyds, specialists on pipes and tubes in a market where oil demand, in particular, is slack, is comparatively short. Whitehead's capacity has been modernised since the war but in recent years the company has not gone forward with any major schemes. Whether this bid to "integrate forward" more fully may be followed by other companies with bids for smaller re-rollers remains to be seen.

THE ECONOMY

Investment Down

It was only to be expected that manufacturing investment would be still declining in the third quarter but it may seem surprising that the fall was the sharpest since the turn a year ago. The Board of Trade provisionally estimates that expenditure in real terms fell by as much as 9 per cent after taking seasonal factors into account, making the total for the first nine months 10 per cent lower than in the same period last year.

In the summer, forecasts received by the Board from manufacturers had indicated that their investment this year would fall short of 1961 "probably by a little more than 5 per cent." It looks, now, as if the figure will turn out to be nearer 10 per cent. At the same time, these businessmen had suggested that their 1963 investment would be rather more than 10 per cent below the level then forecast for this year. In fact, this lower level they foresaw for 1963 seems to have been already reached in the third quarter. But, although manufacturers must be thinking more favourably about investment than they were in the summer, expenditure has probably dipped further.

Outside manufacturing, the Board reports a rise in the third quarter of about 3 per cent in the volume of spending by the distributive and service industries included in this inquiry. The indications are, therefore, that fixed private investment as a whole fell by about 4 per cent, back to the level it had been in the first quarter of the year.

The rise in industry's stocks in the third quarter was a little over half of one per cent, after allowing for seasonal factors. The increase was rather larger than in the second quarter, because, instead of running down, wholesalers' stocks went up very slightly and retailers' stocks remained unchanged. The volume of manufacturers' stocks rose by half of one per cent—or by much the same amount as in the second quarter. Most of this increase was in work in progress, although the seasonally adjusted change in stocks of finished goods was slightly upward; that in stocks of materials and fuel, however, was downward. Although still only at a provisional stage, the figures suggest that most of the increase in stocks and work in progress in the three months occurred in two groups of industries—"engineering, shipbuilding and vehicles" and "food, drink and tobacco."

BUILDING ORDERS

Government Boost

Public housing programmes and some big motorway contracts were the main causes of the unusually high level of new orders obtained by contractors in the third quarter of the year. These totalled £526 million, which (seasonally adjusted) was 6 per cent higher than the previous quarter and 11 per cent more than a year earlier. The increase in public investment, which made up nearly half the total, easily offset the continued decline in orders from private developers for industrial building, which at £63 million were £21 million below those of the same quarter last year and £29 million below the peak period of April-June, 1960.

Private housebuilding showed about as much activity as the year before but "miscellaneous" private development—mainly shops and offices—was busier than ever. New orders for this type of building were worth £97 million, representing the biggest increase of all in the seasonally adjusted index—a rise of 88 per cent since 1958.

INTERNATIONAL CREDIT

Plans in Pigeonholes

The Paris Club of ten western countries which stand ready to extend supplementary credits to the International Monetary Fund held a first annual reunion on Thursday in what has clearly become its home base, Paris. The business meeting lasted no more than an hour, and part of this was taken up by a detailed exposition by M. Jean Paul Sallé, the IMF representative in Paris, of tentative arrangements made by Dr Jacobsson with the Swiss authorities on their participation in Paris club credits. This is to be on a bilateral and non-membership basis, to a total of $200 million, as discussed in these columns a fortnight ago; Dr Jacobsson is to hold further talks in Switzerland in early January. At the end of the meeting Mr Dillon reassured his colleagues about the American balance of payments, maintaining that while the third quarter had not been too good there would be an improvement at the end of the year.

Any wider discussion about new plans for improving international liquidity arrangements were confined to informal conversations. The British authorities are still anxious to keep the Maudling plan alive but, wisely enough, are not pressing it at this unreceptive time. The other plan that has been talked around official circles in recent months, again rather casually, is the Posthuma plan under which countries would agree to maintain their reserves in uniform ratios of gold and credit, 60-40 or 70-30 to begin with, the credit to include holdings in continental currencies as well as dollars and sterling.

Dr Posthuma is on the board of the Netherlands Bank and a member of the monetary committee of the common market, but the plan has been put forward in his personal capacity. Dr Holtrop, president of the Netherlands Bank, is himself believed to have some reservations—he has certainly not been counted on the radical wing in the liquidity argument, and has recently spoken out against the proposals for swift monetary integration put forward by the European Commission in its action programme. But it is worth noting that Dr Holtrop himself mentioned the possibility of a fixed gold-key currency ratio in countries' reserves at the 1961 meeting of the IMF, as did Dr Blessing of Germany at this year's meeting. There is indeed a good deal of vague feeling on the continent that a move to common attitudes on composition of reserves may be on the way. But in the absence of firm arrangements for gold guarantees on the additional currency balances, such ideas can make little progress. And given the guarantees, the Maudling plan is eminently superior.

IMF

An American Drawing?

For an important but neglected technical reason, a drawing by the United States on the International Monetary Fund has become more urgent in recent months. This is because the United States has now all but run through the large cumulative credit position in the IMF that it had built up in the years when dollars were the predominant currency used for fund credits. In April, 1958, which was just about the time that the weakness of the dollar was first manifested in the foreign exchange markets, the fund had sold a net $2 billion of US dollars, reducing its holdings to 25 per cent of the United States quota. This provided an equivalent cushion for surplus dollars to be taken off the markets by way of repayments to the IMF. By October 31st this year, these repayments had wiped out all but $36 million of America's net credit in the fund, and had raised its holding of dollars to 74 per cent—exactly the same as its current proportionate holding of sterling. And the IMF articles provide that repayments may be made only in currencies that will not bring the fund's holdings above the 75 per cent line. This rule is inflexible, for the good reason that otherwise countries would in effect be making net drawings on the fund by the back door.

The upshot of this is that very soon neither sterling nor dollars will be eligible for repayments of drawings. This means that countries making repayments will first have to acquire Continental currencies, or gold; and if, as is likely, they acquire these against United States dollars, the effect will either be a strain on the gold reserve of the United States or a further embarrassing addition to the dollar reserves of Continental countries. It happens that outstanding drawings from the IMF are not very large at present—the main ones are $275 million for both Canada and India, $224 million for Argentina, $163 million for Brazil and $100 million for Egypt. But the

hard fact is that, for the first time for nearly five years, the IMF mechanism will no longer be providing automatic support for the dollar. A continuation of such support now demands formal action through application for a drawing—which thanks to the Paris club, as Dr Jacobsson recently stated specifically, could now be readily met up to the full quota of $4,125 million. Might the prudent move be to make the drawing soon, while the psychological climate for the dollar remains undisturbed?

IN THE MARKETS

Gilts on the Up-Blade

SINCE the early summer of this year the two main sections of the London stock market have been moving inversely; and the direction of these inverse movements has been guided fairly closely by current guesses about the chances of a setback in the world, and particularly the American, economy. The shock of the Wall Street collapse in May was reflected in Throgmorton Street not only in falling prices of equities but also in rising prices of bonds. Then the short-lived Cuba crisis, after its momentary disturbance, brought new confidence to the American economy. Wall Street rose sharply, pulling London and continental bourses in its wake; and the recovery in gilt-edged was halted and partly reversed. Now in the past week or so Wall Street has paused, partly perhaps to consider how solid the post-Cuba ebullience really is, and partly perhaps to digest the implications of that ebullience on congressional willingness to let through a tax cut—some ominous noises have been made this week by Mr Wilbur Mills, a key committee chairman. This in turn has been sufficient to bring a further small setback to equities in London, already affected by the widespread publicity about Britain's own unemployment. Once against the scissors movement has been in play: gilt-edged have enjoyed a strong week. On Thursday, however, the scissors began to move the other way.

This recovery cannot be attributed to the release of special deposits alone (spread over this week and next), or to the further edging down of the Treasury bill rate, to 3⅝ per cent. For the rise has spread to the long dated and irredeemable gilt-edged securities, and War Loan at 61½ came close to its pre-Cuba peak. The authorities have encountered a good demand for stock, which they have met, at rising prices, from supplies taken in both in the short phase in which they supported the market and in the earlier large switches made with investors when the gilt-edged market was roaring ahead.

BANK BULLETIN

Funding Fast

A CONTRIBUTORY encouragement for the market on Wednesday came from figures in the December bulletin of the Bank of England showing just how large official sales in this period were. In the quarter to mid-September net official sales of gilt-edged reached £207 million, bringing total sales since September 1961 to £657 million. In the latest quarter, moreover, the great bulk of these sales—£185 million—were taken up by investors other than banks and official institutions; and among these foreign purchases were believed to have been small. Official sales of medium and long dated stocks were moreover twice as large, at about £400 million, as the authorities took in about £200 million of bonds of less than five years' maturity in funding switches, reducing their net sales by this amount. Further large sales followed in the period not fully covered by these figures: the issue of £500 million of Treasury 2008-12s was sold in the astonishingly short period of six weeks to mid-October. The upshot of all this funding was that in the four months from mid-June the authorities managed to lengthen the average life of dated government debt in market hands by a full year, to rather over thirteen years.

The Bank bulletin also has some interesting comments on the strength of Britain's external finances in the autumn. Briefly, it finds it puzzling. The surplus in Britain's current account in the first half of the year was "probably replaced by a deficit" in the third quarter—the figures are due to be published next week, but the trade figures have already indicated a deterioration in the visible balance. At the same time, the Bank detects little evidence of any marked inflow on capital account. Security sterling continued at a discount, indicating a lack of interest in inward investment—and the rise in the premium on investment dollars has not suggested any falling off in outward investment, direct or portfolio, from Britain. In the money market meanwhile the arbitrage calculation has pointed in two directions at once—to a move out of London deposits with local authorities and into Euro-dollar deposits on the one hand, but into London from American to British Treasury bills on the other. The net movement is unlikely to have been large. Yet "balance of monetary movements"—the gold reserves against recorded sterling liabilities—was favourable. The explanation is taken to be an unidentified inflow of capital, of rather more than £50 million, perhaps through an increase in trade credit granted to Britain. Thus while export shipments paused in the third quarter export receipts may have risen, on account of the rise in shipments earlier in the year.

BANK LIQUIDITY

Time for 25 Per Cent?

A SPECIAL article in the bulletin traces the precise nature and the historical emergence of conventions on bank liquidity among British banks. The article makes a further and more specific revelation of the way in which a single minimum uniform ratio has become officially recognised, and required. In 1951 the governor of the Bank of England indicated that

> a ratio of from 32 to 28 per cent would be regarded as normal but that it would be undesirable for the ratio to be allowed to fall below 25 per cent as an extreme limit.

Since then some clearing bankers have expressed the view that 25 per cent is indeed nearer what they regard as commercially necessary in modern circumstances; but the Bank of England has made it clear that the minimum remains at 30 per cent. The Bank is almost certainly right in its feeling that an arbitrarily variable ratio would do more damage to bankers' sense of responsibility for their own affairs than does the device of special deposits (though that, one must add, is dangerous enough, and on finance for the government there is no serious difference between the two devices). But if, as is almost certainly the case, the 30 per cent ratio is itself above the ratio that bankers feel to be necessary to-day, then, by the Bank's own argument, it should surely be looked at again. Should the authorities not consider a once for all reduction to the appropriate commercial ratio—probably 25 per cent? Such a move could of course be contemplated only at a time that the authorities were willing to countenance the increased scope for bank lending that such a reduction would temporarily involve. But in the months ahead the authorities are in fact likely in any case to take action to boost liquidity in one way or another. Why not this way? Here may be the ideal opportunity to combine a temporary credit boost with a useful structural reform.

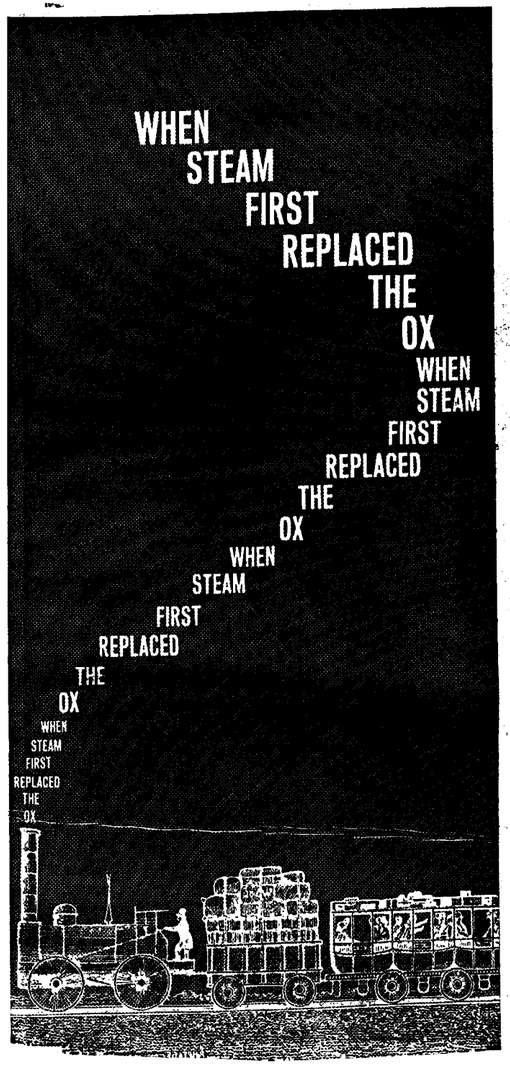
WALL STREET

A Pause

New York

WALL STREET'S remarkable rally finally showed signs of fatigue this week with a sharp tumble on Monday followed by the feeblest of recovery efforts which were accompanied by a dwindling of volume. A reaction has been overdue and New York's newspaper strike as well as doubts voiced by influential congressmen about the prospects for tax cuts contributed to the decline. It is just six months since the market hit its low point last June and some of those who bought in, at or near the bottom, are undoubtedly selling for long term tax gains. Brokers believe that the decline will be checked by the many investors who have been eager to return to the market and have been awaiting some relapse.

In fact the market seems to be marking time rather than undergoing a serious retreat, so the correction is still to come. Issues enjoying sharp rises have been sold for others that have lagged behind the market. Thus Chrysler, the third largest auto maker, has climbed sharply because of the industry's general improvement and is now being sold with some of the proceeds apparently going into American Motors, which has not participated in the



IN 1862, while the first South African railway was being built, the Standard Bank opened its first branch in Africa.
A century later the Bank has over 900 offices throughout South, Central and East Africa. Behind this network is a forward-looking organisation making full use of new business techniques, and able to provide accurate and comprehensive advice promptly on all aspects of trade in the areas which it serves.

?
THE POOR KNIGHTS!

What kind of fairy tale is **that?**

No fairy tale at all, but much more exciting. It's a group of islands off the Whangarei coast of New Zealand. And with their natural bridges, tunnels and large caves, these Poor Knights could provide more adventure than any fairy tale. We know about the place because New Zealand's our part of the world—and *that's* a place we know quite a lot about. Through the collective efforts of more than 160 branches and agencies covering the North and South Islands, we have amassed information on almost every subject of national interest—a great deal of which is often of interest to others, as well. So if you want all the answers concerning New Zealand, ask us—

The National Bank

Meet Mr. and Mrs. White of Palmers Green, London. He's a tool-maker; she works part time in a solicitor's office. We heard about the Whites from our City Editor. They had written to him for advice on investment . . . and now they're buying banks and breweries.

Last year our City Editor advised Mirror readers how to invest a total of over a million pounds!

How do they get that money? The Inland Revenue figures show you. There's been a phenomenal growth in the number of people earning between fifteen and twenty pounds a week. For the first time, these skilled workers have money to spare.

The Mirror has nearly fifteen million readers. Almost SEVEN MILLION are prosperous skilled workers and their families. Like Mr. and Mrs. White they have money to spare.

You reach them—at the lowest overall cost—when you advertise in *their* paper.

DAILY MIRROR

THE MIRROR GOES WHERE THE MONEY IS

rally of the auto stocks. American Telephone has been rising, confirming that the small investor is returning to the market. But some of the space issues, notably Douglas which is heavily involved in the disputed Skybolt programme, have been hard hit—Douglas shares have suffered a decline of almost 20 per cent before steadying.

EXPORTS TO CANADA

Trade Crusade

THE President of the Board of Trade has launched a brave attack on Canada's cheeseparing attitude towards imports, even if he picked home ground to say so. However, speaking after lunch with the Canadian Chamber of Commerce in Great Britain (composed of people with an interest in trade between the two countries), Mr Erroll was not sparing with the pepper, even though his audience included the High Commissioner for Canada and the Agent General for Ontario, a Province whose 1930 style of economics called forth his special condemnation. He expressed grief at Canada's resort to a tariff surcharge on imports in June to restore its balance of payments, but as recovery has now proceeded successfully he hoped the new impost would be "removed entirely in the near future."

With refreshing attention to detail at this level of discussion, Mr Erroll exposed the unfairness in Canada's application of customs duties ; he also took a crack at the vigour and the lack of decorum with which Canada wields its anti-dumping duties (though not a few interests in Britain would like to see Mr Erroll take his cue from Canada in this respect). Mr Erroll had no need to mince his words in slapping down Ontario's "trade crusade," which seeks to expand trade while persuading its citizens to reduce their purchases of imported manufactures. Prefacing his comments with a polite deference to the High Commissioner, who is a former premier of the offending province, Mr Erroll was rightly scathing.

Mr George Hees, the Canadian Minister of Trade and Commerce, addressing the Ontario Regional Industrial Expansion Conference on Wednesday, propounded another dangerous doctrine. Disavowing any thought that he was urging Canadians to buy Canadian at all costs, he suggested that manufacturers' procurement lists should be diligently combed to ensure that nothing was bought from outside sources which might equally well be supplied by Canadian firms. But that would be discrimination of sorts even if it proved possible to restrict it to this mild form.

HIRE PURCHASE

FHA in the Open

THE Finance Houses Association, through its director-secretary Mr G. H. Woolveridge writing in the association's quarterly review, has come out unequivocally against the Molony committee's recommendations on the reform of hire purchase law. The association's views were perhaps predictable, but it is important that the most influential section of the hire purchase industry is now ranged alongside independent observers already fighting the Government's apparent acquiescence in getting the Molony recommendations on to the statute book by private legislation.

Last week *The Economist* set out its objections to Lord Peddie's private bill. Mr Woolveridge's objections are much the same—namely that extending the present act to all hire purchase contracts would make nonsense of hire purchase as it stands. The consumer must be protected, but not at the expense of fair treatment for the finance companies. And although hire purchase companies have been guilty of bad treatment to hirers in the past, a system that limits a company to obtaining no more than half the hire purchase price in a case of default is obviously unfair and limits the security of the goods. Such a system, indeed, would force the companies to exert what rights they had left at every possible opportunity. Mr Woolveridge's answer is a new act incorporating the formula, which the more reasonable companies already use, of charging the hirer the balance owed, less the amount received for the re-sale of the repossessed goods. Once such a formula was legally binding the need for court orders to re-possess could be dispensed with and much valuable county court time might be saved. There would be no financial advantage in a "snatch back." Unfortunately Mr Woolveridge stops here.

There is everything to be said for such a formula, but at the same time the companies must be allowed, through exemption from the Moneylenders Act, to move into the field of personal lending. Many of the industry's problems have arisen from the dealers standing between borrower and lender. The sensible solution would be to allow companies and customers to use both systems and seek out for themselves which they prefer.

A CHANNEL LINK

Tunnellers Winning?

RUMOURS from Paris suggest that a Channel tunnel will be the choice of the Anglo-French Steering Committee of civil servants, set up a year ago to advise their governments which would be the best economic prospect—though the Committee has yet to finish its report, which will probably be handed to the governments around the end of this year. The optimism of the tunnellers may well be based on the obvious superiority of their project to the bridge where costs are concerned—a difference between £110 million for the tunnel and about £220 million for the bridge. There would be some difference in traffic carried, but the tunnel may have paid for itself long before the bridge would: and the tunnellers are now at least prepared to use only their own money, while the bridge lobby vaguely refers to "guarantees" while talking of raising all its capital in ordinary shares.

The British government is waiting for the Steering Committee's report before publicly committing itself, but it seems to be becoming more favourable to the idea—especially now that it is trying to get closer links with Europe. British Railways would be delighted with a rail tunnel that could bring more freight traffic on to its southern lines, but it may have to go through an embarrassing intermediate stage while a tunnel is being built and its ferries are becoming increasingly inadequate to carry the steady growth in traffic. It might even have to build a new ship anyway, only for this to become obsolete. The attitude of the French government is less clear ; where it was formerly believed that it had decided that a link was wanted and was only awaiting the Steering Committee's verdict to approve its choice of project, there are now signs that it is at present going slow on the issue. But the long birth-pangs of the project do seem to be reaching their end.

TYRES

Dunlop Charges More

PERHAPS to show that the skin of monopolistic practices has been well and truly sloughed off, the tyre makers have presented the unusual picture of discord on prices this week. Dunlop raised the prices of all its types by three per cent last Mon-

SPENDING ON PRESS ADVERTISING

The third quarter of the year, the most sensitive barometer for press advertising expenditure, registered a 4.76 per cent increase compared with the same quarter of 1961. The national mornings and Sundays skimmed nearly all the extra benefit, with increases of around 12 per cent ; magazines, London evening papers and provincial weeklies all did worse than in the previous summer. Over the whole first nine months of the year, a total of £99.5 million was spent, £3.7 million more than in the same period last year.

The tendency to fewer and larger advertisements continued. Some of the extra money left to cigarette advertisers from their self-imposed ban on peak-time TV advertising made its way to the press : expenditure here was £1,138,888 compared with £870,214 in the previous quarter and £897,892 a year before.

day, but its rivals are only beginning to follow its example. Dunlop gave as its reason for higher prices the fall in its profit margins mentioned by the directors when they announced the interim dividend in October: though the price of both natural and synthetic rubber has fallen this year, wages have risen more than enough to offset this. Labour probably accounts for a bigger proportion of costs in the tyre industry than in many others, for a tyre is still built up by hand.

Success in the replacement market—to which these increases apply—may be another reason for Dunlop's decision. The C41 tyre with a tread of "cling" rubber that it introduced early this year has raised its share of the replacement market by ten per cent—perhaps from 40 to 45 per cent. Where the low-priced Silver Seal seems to have had little effect, technical improvement and heavy advertising have worked. Dunlop may have reckoned that it could afford the risk of selling at higher prices than its rivals now that it has a popular tyre to reinforce the

strength it gains from its ownership of wholesalers and from the use of its tyres as original equipment on some 60 per cent of new cars sold in Britain. But the lure of higher margins seems to have been enough to secure eventual unanimity. For all, the position is confused by the growth of price-cutting by retailers and wholesalers, and the possibility that this will spread in the new year, if the agreement restricting tyre sales to approved traders should be declared contrary to the public interest by the Restrictive Practices Court. If price-cutting were to become general, manufacturers would not need to worry about charging more.

DOMESTIC AIR FARES

All Up!

IF the airlines get their way—as they almost certainly will—nearly all domestic air fares with the exception of British European Airways' three-guinea night flights from London to Scotland and Belfast, will go up next April by amounts varying from five per cent on the long routes to 25 per cent on the short. The airlines blame rising costs; they could also blame the pattern of traffic. Last year, British European Airways had the humiliating experience of increasing its domestic traffic by a fifth, and losing £2.7 million in the process, suggesting that the more it carried, the more it lost. Some of its troubles were due to the long and expensive running-in of the Vanguard—this has cost BEA £3 million to date—but the basic difficulty about encouraging internal air traffic is that it tends to be commuter traffic between North and South, with businessmen fuming at the difficulty of booking seats on early and late flights while the aircraft fly largely empty (1,000 empty seats daily on the BEA network) during the middle of the day. It will be interesting to see whether BEA's proposed 30 per cent discount for passengers prepared to take their chance with an unbooked seat will achieve its object of spreading the load more evenly.

The five per cent increase on long flights between, for example, London and Scotland is unlikely to have much effect on traffic. But how will those few passengers who now travel between London and Birmingham by air react when their fares are increased by 25 per cent to £5 return while the first class rail fare remains at £4 3s. 4d., and the second class at £2 15s. 6d.? It is not at all clear that even these proposed increases will keep the airlines out of the red unless traffic continues to increase quite substantially. The average rise in fares is 10 per cent; a ten per cent increase in domestic revenue last year would still have seen BEA showing a substantial loss.

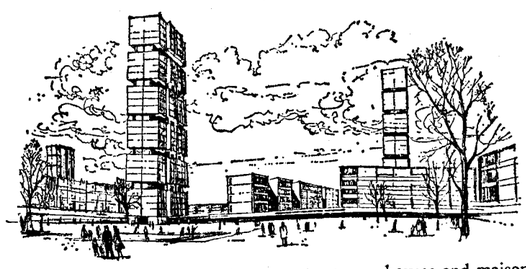
AIR TRAFFIC CONTROL

One Organisation

IN the pre-jet days of the 1950s, it was relatively simple to prevent military and civil aircraft from colliding in mid-air with each other; the military jets flew higher than the propellor aircraft of the airlines and all that was needed was to keep them at their own heights. Then civil aircraft could pass beneath undisturbed. But when the airlines began to re-equip with jets towards the beginning of the decade, civil aircraft started appearing for the first time at altitudes over which the military had up till then been in sole command. To order the airlines to stay out of this part of the sky would have put them at an economic disadvantage, because jets use least fuel at high altitudes. But to leave them loose among the darting fighters was to court the increasing risk of collision, because at those heights and speeds two aircraft have slight chance of seeing each other and even less of taking evasive action.

The solution of so-called "airways" for the exclusive use of civil aircraft depends on being able to regulate the movement of military as well as civil aircraft as closely as if they were trains on a track. The technical aids to do this exist, where the system

Suburb-in-the-Marsh



PEOPLE make Saturday afternoon trips to the LCC's Southern Outfall sewage works on the Thames Estuary near Erith, in Kent, where a £2 million improvement scheme has purged the air and beautified the scene; the Council now proposes that 25,000 of them should live there too. A bold Hook-style scheme has been drawn up by LCC architects for an unpromising 400 acres of marshland originally (and cheaply) bought simply as a barrier between the sewers and the Kentish suburbs. If London-tied industry and business can be persuaded into adjacent land, to the empty portions of the nearby Woolwich industrial estate and to the redeveloped centre of Erith itself, which goes hand-in-hand with the scheme, the new town will have a social and economic justification.

Its inhabitants will be platform dwellers, a mode of living favoured in this case by geography as well as by town planning theory. The whole of the site is below Thames-level, and in spite of strengthened defences still faces a rare chance of flooding such as that of 1952. All living quarters are therefore to be raised approximately 12 feet above ground level, with the space underneath for garages, storage and services, for which the small flood risk would not be disastrous. Though delivery ramps connect the platforms with the ground, the living level will be virtually a pedestrian precinct, with groups of platforms linked by footbridges. These will be straddled by 31 storey tower blocks of flats which will provide 30 per cent of the living space—the rest will be houses and maisonettes.

The proposed town would be expensive to build—first estimates are around £50 million or £2,000 per head of population—but the cost would be prohibitive if a ground level development were attempted. Horrible things like sliding peat underly the Erith marshlands, favouring the minimum possible excavation. Stability can best be obtained with few, massive, deeply driven foundations: enormous piles at the corners of the platforms and under the towers, will anchor the floating town.

Whether this will demand novel engineering techniques cannot be said at the present tentative stage. For the superstructure the LCC intends as much use as possible of industrialised building, which it hopes to make an economic proposition for a town of this size built to standardised patterns—even though industrialised systems can so far compete with conventional methods only for flats, not for houses. The building stage will not be reached for about two years and will take perhaps ten to complete—but before it begins at all the LCC, or its successor, will need to be sure that industry can be attracted to the spot, or lured there with Government help.

MARCONI'S 7,000 Mc/s radar data link system

* designed to make International Integrated Air Traffic Control a reality NOW

* Radar data links allow radar aerials to be sited remotely from control centres to take full advantage of ideal site conditions.

The U.K. airways system uses Marconi 7000 Mc/s radar data links.

sometimes falls down is on the human side, where military and civil traffic are controlled by separate organisations. The Ministry of Aviation has this week announced the setting up of a single National Air Traffic Control Service which will bring the whole tricky business of air traffic control (in simple terms, the avoidance of collisions) under a single headquarters that will gradually take over responsibility for every stage of the operation. The Ministry of Aviation has an enviable reputation in air traffic control matters; unfortunately its writ extends only to the air above this country. Conditions in Europe, in spite of attempts to introduce a European system of air traffic control, remain as chaotic as ever.

BMC ROLLS-ROYCE

No Merger

THE British Motor Corporation and Rolls-Royce announced at the end of last week that they have no plans to merge any of their interests, following the talks on technical collaboration that started a year ago. But they have found ways in which information and components can be usefully exchanged, and arrangements have been made accordingly.

What the components are that will be interchanged has not been revealed by the companies; but it is possible that BMC might like to use one of the Rolls-Royce range of industrial engines in its larger cars and lorries, for Rolls-Royce is probably better suited to production in small quantities than is BMC and such a move would provide it with a useful increase in work. But BMC is unlikely to want to use as expensive an engine as the V-8 Rolls-Royce now uses in its cars. And the concept of the Mini-Rolls, delectable though it would have been, has now been killed.

PILOTS' HOURS

3 British = 1 American?

SOME weeks ago, *The Economist* was sharply taken to task for claiming that the pilots of American airlines did three times the work of those employed by the British Overseas Airways Corporation. Inquiries since made among crews and managements (there is no other source for this kind of information) suggest that the comparison was by no means unfair. BOAC would agree that its pilots fly an average of 400 hours a year and sometimes less. By comparison, those employed by United Air Lines, which is the biggest operator in the world after the Soviet Aeroflot, fly 1,200 hours a year. Lest it be argued that only a giant like United, with a fleet of 300 aircraft, can achieve these levels, the crews of one of the most efficient local service airlines, Frontier, which flies into settlements in the Colorado peaks with second-hand Convairs and DC 3s, also average 1,200 hours flying a year. So, until recently, did TWA's pilots whose hours have now been reduced to 900 a year. Those of American Airlines, ranking second in size to United, average 850 to 900 hours a year.

The difficulty of scheduling jet aircraft explains the lower figures of TWA and American; United crews doubt whether it will be possible to sustain their own high totals much longer. But there will still be a marked difference between the amount of work put in by the average American pilot, without any obvious signs of overwork, and his counterpart in BOAC, suggesting that the corporation must have at least a temporary surplus of flight crews as well as of other staff. Is the same also true of British European Airways? According to the corporation's accounts, its pilots flew less than 550 hours each last year, a reduction of between eight and nine per cent on the previous twelve months.

RUGBY PORTLAND/CHINNOR

Cement Mixer

THE shares of Rugby Portland Cement have been strong this year and now yield less than 2 per cent, one of the lowest returns among cement shares. The high price of Rugby owes something to hopes of a profitable redeployment of its substantial liquid assets. These have been boosted by the £7 million paid by Redland Holdings in October for the non-cement interests of Eastwoods which Rugby acquired in the summer. Last month Rugby announced a £2½ million expansion scheme in New Zealand and now it is making a bid worth just under £4 million for the shares of Chinnor Industries. The offer of 32s. 6d. a share (ex the final dividend) compares with a pre bid price of 28s. 6d. and as holders of more than 50 per cent of the ordinary shares have agreed to accept it, success seems to be assured.

Rugby's bid seems to be well timed. Chinnor's results for the year to end September are already overdue and these may reveal that, as the replacement of an old kiln resulted in the loss of six months of its output, the rapid expansion of recent years has been temporarily checked. Between 1957 and 1961 Chinnor's pre-tax profits rose from £107,000 to £290,000 and its equity earnings by 50 per cent. The new and larger kiln will add about 20 per cent to its cement-making capacity and with further expenditure planned on road building Chinnor could well resume its expansion next year. Rugby, itself a rapidly expanding concern, seems to be buying growth at not too dear a price.

RAILWAY PROPERTY

Development Links

THE companies that will be associated with Railway Sites Limited in the development of railway land have now been named. The railway authorities will provide the land; the companies the finance and expertise. The forging of these links obviously means that much of the development will come their way, but the arrangements do not preclude Railway Sites from giving consideration to redevelopment proposals put up by others outside the consortium.

Southern Region:	**London & Midland:**
Charterbridge	*Southern*
City and Central	Capital & Counties
Trollope & Colls	Metropolitan & Provincial
Eastern Region:	Norwich Union Life
City of London Real	Taylor Woodrow
Edger Investments	
North-Eastern:	*Northern*
Hammerson Property	Hallmark Securities
Metropolitan Estate	London Assurance
Western:	Peachey
Allnatt London	Stock Conversion
Samuel Properties	United Real
George Wimpey	

Nor do the associations extend to building contracts, which will be let in the normal way. The arrangements, moreover, do not extend to London terminal stations, where the planning problems associated with the obligation placed on British Railways to preserve a proper balance between housing and commercial development are not yet resolved. The railwaymen are more keen on office development over the London termini than local planning authorities are.

In all, this will be the biggest development programme in this country. But it will take many years to complete and the progress of redevelopment will be slow. Even the most astute developer might find it difficult to find a profitable new use for a countryside station on some of the branch lines that Dr Beeching has closed down; and clearly the most important developments will be concentrated in busy urban centres. Here, inevitably, there will be planning and constructional snags. While, therefore, these associations may put a little more colour into the rather wan cheeks of the market in property shares, it is the long-term support the programme will give to the companies that is important for investors in these shares.

SHIPPING MERGER

Norness Gets a Quotation

EARLY next week the shares of Anglo Norness, the product of the merger between Norness Shipping and Anglo-American Shipping, will be quoted on the London Stock Exchange. Norness already owns 61 per cent of the shares of Anglo-American which are currently priced in London at 48s. In what is described as "primarily a reorganisation within an existing group of companies" Anglo-American, which is registered in Bermuda, will become the parent of virtually the whole of the Naess shipping group and Norness will be turned into a public company. Anglo Norness will make an offer for the 90 per cent of the shares of British Oil Shipping that are owned by the family settlement of Mr Charles Clore on a share exchange basis and will offer probably not more than 25s. in cash for the remaining shares held by the public. The latter offer is certainly more generous than the terms being offered to the Clore trustees.

The immediate effect for Anglo-American shareholders is that instead of the forecast dividend of 6 per cent they will receive a 2 per cent dividend and a 3 for 100 scrip issue. Short-term considerations such as these indicate that Anglo Norness will open around the current price on Anglo-American. But, while there will be some stock available to create a freer market in Anglo Norness than recently existed in Anglo-American, there is no reason to fear that big holders of Norness such as Mr Naess will start to sell large blocks of shares. Moreover, there is the prospect of some improvement in earnings until mid-1964 and, even if freight rates have not improved by then, satisfactory profits thereafter. Anglo Norness's fleet consists almost entirely of big, modern tankers and bulk carriers. At the moment 31 of the combined companies' fleet of 34 ships are on time charter; by the end of 1964, 20 out of the 44 ships—38 per cent of the total tonnage—will be on the open market and the acquisition of British Oil Shipping will add two more ships to this fleet. But the financing arrangements associated with the charters mean that even at the current depressed level of freight rates the ships out of charter should be able to earn a profit in open voyages. The directors, taking perhaps a more optimistic view than many about the chances of recovery in rates, believe that the present recession "is a temporary situation that is gradually being corrected" and that it will be possible to arrange satisfactory new charters for the ships. The Anglo Norness shares would be among the first to benefit from an improvement in freight rates but whether this and its past record of able management will overcome the current reluctance of investors to take a view in shipping equities is another matter.

CERTIFICATES OF DEPOSIT

Success at a Cost

A New York correspondent writes:

THERE are signs that the serious efforts of American bankers to lure back corporate funds that have been disappearing into the short-term money market, by offering negotiable certificates of deposits, have not brought the unqualified success that the figures might suggest. The outstanding total issued by the nine leading New York City banks reached a record $1,589 million at the end of November—an increase of 50 per cent since January. And while country-wide figures are not yet collected, informed estimates put the total at about $3 billion compared with a little over $2 billion at the beginning of the year. It appears, however, that the banks are in some cases now paying interest through these CDs on funds which they formally held interest free.

The introduction of the certificate of deposit by the New York banks nearly two years ago was in part prompted by the phenomenal growth of corporate investment in commercial paper. Company treasurers, the banks found, were becoming far more venturesome about investing idle funds in the short-term notes marketed directly by about a dozen major finance companies, and sold through dealers by about 400 industrial concerns and lesser finance companies. But the introduction of certificates of deposit seems to have done nothing to check the growth of commercial paper. Indeed this has accelerated this year, and by the end of October commercial paper outstanding totalled $6,970 million, about 50 per cent more than at the start of the year, more than double the amount five years ago, and more than seven times the total at the end of 1950.

The fact that sales of commercial paper have continued to rise in the past twenty months leads several money-market authorities to suggest that certificates of deposit are being acquired in many cases at the expense of Treasury bills and demand deposits by the more old-fashioned corporations, which would not have invested in commercial paper anyway. To the extent that the funds are attracted out of Treasury bills, the bank's deposits are increased; but any switching from demand deposits merely means that they pay more for the same deposits.

paper are not precisely comparable. Major finance companies issue their notes in amounts and at maturities exactly fitted to an investor's requirements. The maturities run from 72 hours to nine months, and although the paper is not ordinarily negotiable, issuers will often accommodate an important investor by allowing him to redeem notes before maturity. Certificates of deposit, on the other hand, are freely negotiable, but are issued only in round sums for round periods, normally three, six, nine or 12 months. Some country banks offer them for as little as $25,000. The New York banks issue them only in multiples of $1 million. Rates for both instruments tend to follow money-market patterns set by Treasury bills. Recently, six-months certificates of deposit have been quoted at 3¼ per cent on issue and 3.45 per cent in the resale market. Comparable maturities of directly-placed commercial paper have been quoted at 3⅛ per cent; and commercial paper marketed through dealers at 3¼ per cent to 3¾ per cent.

ARTIFICIAL FOOD

Refinery Kitchen

One of the more depressing scientific fantasies is the food plant which turns old boots, brooms and other debris into dressed turkeys and crêpes suzettes. The brave new reality is, as it so often is, drabber still: after all, crêpes suzettes are not nutritious. And what the world's undernourished populations need is a cheap source of nutritious proteins which can be exploited on a massive scale. A great deal of work has been carried out all over the world, mostly on increasing the yield of meat from livestock; but also on unconventional "industrial" methods such as cultivation of algae and extraction of proteins from vegetable matter. Now some chemists in British Petroleum who have been investigating micro-organisms for treating oil have turned up a bug, an organism—they do not specify—which feeds on oil, turning it into proteins and vitamins. A large pilot plant is to be run near Marseilles by the French BP company to provide enough protein food for testing. The Food and Agricultural Organisation of the UN, anticipating such developments, has already laid down rules which include testing 30 generations of rats, so that it will be some years before the discovery can be used.

Proteins are graded according to their usefulness to humans: animal proteins are mostly "first-class" and vegetable proteins "second-class." But conversion of the second-class into the first-class by grazing animals is a lengthy and inefficient business. It can be helped by supplementing the animals' diet with cheap proteins, which encourages growth—already the practice in raising broiler chickens—or it can be by-passed, theoretically, by making proteins directly. The methods that have been developed so far have not yet been widely enough used to evaluate them. But some encouraging reports have been received: for instance an improvement was noticed in the health of Venezuelan lepers when fed on algal soups. The BP discovery, producing a comparatively high-class protein rich in vitamin B's, is valuable, but plants would have to be sited near large refineries, which are not always in the worst-fed countries.

It is one thing to make protein supplements; it is another to persuade people, who may not fully appreciate their value, to eat them. The products are not appetising and even starving people may cling to atavistic prejudices in favour of less efficient processes. Scientists may be capable of "feeding" a hugely increased world population by these processes but it is to be hoped that such methods need only be stopgaps. Leaving aside the issue of population-control, the long-term solution to this problem is more likely to lie in more efficient use of traditional means—particularly the sea—to produce traditional foods.

SPAIN

Trust for the Patient

That Spain might one day be able to join the Europe's "economic miracle" club has been evident for some time. The ordinary investor, however, no matter how long he is prepared to wait, is bound to be deterred from investing directly in Spanish companies by the extreme sketchiness of the financial information they provide, and by the thinness of the Madrid stock exchange. In these circumstances investment trusts are bound to be popular. In about six weeks, J. Henry Schroder Wagg will start to place privately the shares of its new Anglo-Spanish Investment Trust. It is hoped that the trust will have an initial capital of around £1 million. The portfolio is now more or less fixed, though in some cases negotiations for the acquisition of blocks of shares are not yet complete. If the fund grows as expected a stock exchange quotation will be sought. This will be the second placing of shares by a London merchant bank in a Spanish investment trust this year. In April, Kleinwort, Benson placed privately part of the capital of "Inespa," a Spanish trust managed by the Banco Urquijo of Madrid. The other big trust in this field is "Espac," a unit trust run by the Union Bank of Switzerland.

SHORTER NOTES

The 2.8 per cent improvement in manufacturers' home deliveries of refrigerators which took place in October, compared with October, 1961, looked small beside the 31 per cent improvement reported for September. The 734 extra refrigerators sold could easily be the result of cutprice direct selling by Rolls-Prestcold, said to be currently running at 700 a week.

★

Trust Houses is to raise £3 million by a debenture issue in the near future. A revaluation of the group properties is being made and this is expected to reveal a substantial surplus over book values.

★

November was another good month for the unit trust movement. Total sales of units amounted to £5¾ million and repurchases to just over £1 million and the net investment of £4¾ million was the highest in any single month since January, 1960. Net investment so far this year of £30.9 million compares with £5.9 million in the first eleven months of 1961.

Production of the West Driefontein mine will be seriously affected by a subsidence that caused the collapse of part of the treatment plant and the death of 34 African workers. The shares of West Driefontein fell back from 88s. 9d. to 78s. 1½d. Earlier this week its dividend had been raised from 3s. 1.2d. to 3s. 3.6d. per share. The feature of the latest Kaffir dividends is a maiden dividend of 1s. on the £1 "A" shares of Western Deep Levels.

COMPANY MEETINGS

GLAXO GROUP

Increase in world trading

LOWER MARGINS AFFECT RESULTS

ONLY ONE SIXTH OF TURNOVER FROM N.H.S.

Sir Harry Jephcott on control of new drugs—"British Manufacturers' sense of responsibility"

The twenty-eighth Annual General Meeting of Glaxo Group Limited was held on December 10th in London, **Sir Harry Jephcott, Bt, DSc, FRIC, FPS,** *presiding. The following is an extract from his Statement circulated to members with the Report and Accounts for the year to June 30, 1962:*

Effect was given on January 1, 1962, to the new holding company structure, to which I referred at length in my statement last year. Our name was changed to Glaxo Group Ltd. and a new operating subsidiary, Glaxo Laboratories Ltd., was formed to carry on the business previously undertaken by us under that name. All the manufacturing and trading assets of the Group are now held by operating subsidiary companies.

The continued expansion of the Group's manufacturing and trading has necessitated further investment in fixed assets, whose value after depreciation has increased substantially during the past two years. As a result the issued capital no longer reflects even the fixed assets of the Group, and a further capitalisation of reserves with the issue of one unit of ordinary stock for every four held is deemed appropriate and timely. This will involve an increase in the Authorised Capital of the holding company.

TRADING CONDITIONS

There has been little change in general trading conditions during the year, either at home or overseas. Although we can once again, and with satisfaction, report an increase in world turnover of 5 per cent, keen competition and consequent reduced profit margins have resulted in this increase being inadequate to maintain the trading profit, which is 4 per cent less in total than that of the preceding year. During the second half of the year technical improvements in some processes resulted in lower production costs, but the full benefit from these will only accrue in the current year.

UNITED KINGDOM

Glaxo Laboratories Ltd. Turnover in both foods and pharmaceuticals has been well maintained. About the end of the year, too late to affect the past year's trading, two new products were marketed. One of these is the outcome of applying recent knowledge to one of the oldest sedative drugs.

In a different field, research has been in progress for some years with the object of developing a vaccine that would protect poultry against the devastating ravages of Newcastle disease, commonly known as fowl pest. Success in our endeavours coincided with the decision of the Ministry of Agriculture to recommend vaccination in place of the costly policy of destroying flocks affected by the disease. Our vaccine is already in considerable use by poultry breeders and will be issued by the Ministry of Agriculture under its subsidy scheme.

Glaxo Laboratories Ltd. now manufactures the Sabin (live virus) poliomyelitis vaccine to meet the requirements of the Ministry of Health, but production of the Salk (killed) vaccine has also been maintained; from it a quadruple vaccine has been developed and provides at one injection not only the initial dose of the poliomyelitis vaccine but also protection against diphtheria, whooping cough and tetanus.

Allen & Hanburys Ltd. Turnover in both home and export markets continues to increase. Although there was not a corresponding increase in net profit, the outlook is favourable and encouraging. Much of the increase in turnover came from the sale of products outside the National Health Service.

The expansion of hospital services, not only at home but especially in markets overseas, has resulted in a satisfactory increase in demand for the specialised hospital equipment manufactured by the Company. Indeed, increased and better facilities for manufacture have now become necessary. New and more convenient premises have been secured.

Evans Medical Ltd. A satisfactory expansion of the Company's business was reflected in increased net profit.

During the year the business of Lofthouse & Saltmer, wholesale distributors in Hull, was acquired, and a new distributing depot was opened at Heywood near Manchester.

Murphy Chemical Co. Ltd. The weather, which is always an important factor in horticultural business, was unfavourable for the sale of several important products in the home market, but nevertheless the results for the year have been satisfactory and considerable progress has been made in all the Company's divisions.

Glaxo Research Ltd. Our longer term research directed to new products and processes almost invariably involves more than one section of our research activities. The formal organisation of these within a Research Company has already demonstrated its value in securing greater co-ordination of effort and joint responsibility for research projects. The total research effort of the Group is at a new high level.

OVERSEAS

It is difficult in restricted space to do justice to our many-sided and geographically widespread activities. Certain salient facts are, however, worth reporting.

The business of our Indian Subsidiary Company increases steadily, and has made essential the further expansion of factories and warehouses. The new milk-drying factory at Aligarh was in operation throughout the year. The new chemical factory at Thana near Bombay is working at a high standard of efficiency.

In Pakistan, our business grows steadily. We have approximately £550,000 towards the cost of a milk-powder factory at Renala in West Pakistan and for further facilities at Lahore and Chittagong.

The business of our New Zealand Company continues to expand.

The continued manufacture of antibiotics in Australia is now accepted as of national importance, and at least for the time being protection by duty and import control has been given. These actions will remove serious handicaps under which our Australian Company has been operating.

In some South American countries our subsidiaries provide the exception to the general steady growth of our companies overseas. They have experienced difficulties, in spite of which our Argentine Company operated profitably, although less so than in the preceding year.

Brazil has been a serious disappointment to us. Inflation is unabated. It has become impossible to operate profitably in spite of substantially increased turnover.

THE COMMON MARKET

The Group is no stranger to the Common Market, for we have had a subsidiary in Italy since 1932. This company, Laboratori Glaxo S.p.A., has modern offices and a factory in Verona, the latter having been further extended recently. The Group also has companies in France and Belgium, concerned with sales promotion but not engaging in manufacture.

We do not expect that entry of Great Britain into the Common Market will immediately afford the Group greater scope for the sale of its proprietary pharmaceutical products. None the less we are confident that, with the advent of equal opportunity, we can compete successfully and increase our business.

CONTROL OF NEW DRUGS

British manufacturers have a full sense of responsibility, and not one of them would market a new drug until the fullest appraisal of its safety and efficacy had been made by all recognised established laboratory procedures. Moreover, before first sale, the results of these laboratory tests would be confirmed by clinical trials conducted by competent investigators. However, even when every care has been taken, there is still the possibility that some hitherto unsuspected side effect may be revealed by more extensive use. Even the safest of drugs can sometimes give rise to undesirable reactions, and to deny to many the benefit of a new drug because it is potentially harmful in some relatively rare circumstances could surely impede therapeutic advance.

We believe that nothing should be done to relieve the manufacturing pharmacist and the

medical practitioner of public responsibilty for their actions, but we should welcome the additional check upon safety that would be provided by the need to submit details of standards of purity, toxicity tests and clinical trials of a new drug to an independent body before marketing. It is, however, imperative that such a body should concern itself solely with safety and the justification of claims made. It should, in particular, not be dependent on any administrative preoccupation with the special needs of the Health Service in the United Kingdom.

THE OUTLOOK

It is a source of strength that the business of the Group is worldwide. We are not mainly or even substantially dependent upon the National Health Service of this country; indeed only one-sixth of our turnover is provided by prescriptions paid for by that Service. We believe that, with the support afforded by our research and development programme and by the excellence of our selling and distributing services in the many countries where we trade, the outlook for our Group is favourable. We may from time to time experience some reduction in profitability, as indeed the Group as a whole has done in a small way this year, but the general trend should be favourable.

We pay warm tribute to the work of our staff at all levels, who now embrace many nationalities both at home and overseas. With their continued loyal support we face the future with confidence.

The Report and Accounts were adopted and resolutions were passed increasing the authorised capital from £15,000,000 to £20,000,000 and sanctioning the one-for-four scrip issue.

LEETHEMS (TWILFIT)

The thirty-fourth annual general meeting of Leethems (Twilfit) Limited was held on December 6th at Portsmouth, Mr A. E. Downing, FCA (the chairman), presiding.

The following is an extract from his circulated review:

Although, in common with other businesses in the clothing trade, the year's net trading profits of the group were lower than last year's, it is gratifying to record that there was a small increase in sales. Increased wages and salary costs compelled us to review selling prices during the year but continued competition in the Corset trade restricted our profit margins.

Both in respect of sales in the Home and Export markets the latter half of the year 1961 proved to be the most difficult and, although our Export trade did not recover sufficiently to offset the early loss, the Home trade more than made good its loss. Sales of "Joycet" belts and "Cupid" brassieres have been well maintained and justified the optimistic forecast made last year.

The continued increasing demands made upon our working capital to finance higher wages and materials costs make it necessary to continue the policy of retaining in the business part of the year's earnings; it is also desirable to provide against the possibility of having to meet exceptional sales promotion expenditure. The Directors recommend the payment of a Final Dividend of 7 per cent on the Ordinary Shares making, with the Interim Dividend already paid, a total of 10 per cent (less tax) for the year.

The report was adopted.

BARCLAYS BANK D.C.O.

DEPOSITS AND PROFITS BOTH HIGHER

The thirty-seventh Annual General Meeting of Barclays Bank D.C.O. will be held on January 2nd in London.

The following is an extract from the circulated statement of the Chairman, Mr J. S. Crossley:

It is a measure of the pace of political change in these unstable times that a year which has seen the demise of the Caribbean Federation and the emergence of Tanganyika, Jamaica, Trinidad and Uganda as independent members of the Commonwealth should seem nothing out of the ordinary. Those parts of the world served by this bank have experienced in recent years the full forces of change.

LIGHT AND SHADE ON THE ECONOMIC FRONT

On the economic front, a glance at the areas in which the bank operates reveals both light and shade. In South Africa the serious strains to which the economy of the country was subjected in 1961 have been successfully withstood and the country's reserves have risen from a low point of £71 million in June, 1961 to £227 million on November 2, 1962, which is the highest figure for fifteen years. It can, I think, safely be said that there are comparatively few people outside South Africa, and perhaps not many within that country, who would have predicted such an outcome with any confidence. It represents by any standards a remarkable achievement.

Against the brighter economic situation in South Africa has to be set the gloomy prospect for many raw materials affecting the less industrialised countries of Africa and elsewhere which are still, in the main, producers of primary products. The fall in commodity prices threatens to inflict a catastrophic drop in their incomes, nullifying the scale of external aid at present available or in prospect. Unless some means can be found of increasing commodity earnings, import restrictions in such countries are likely to follow and the cycle of progress to be thereby retarded. Although commodity agreements on a world-wide scale are now coming under serious discussion it seems doubtful whether tangible results will materialise in the near future.

In my annual statement three years ago I referred to the contrast between the rich countries and the poor countries as providing potentially one of the most serious problems that has ever confronted the human race.

COMMON MARKET

It is against such a background that the possibility of the accession of the United Kingdom to the Common Market has to be viewed. Anyone claiming to know precisely what results would flow from this can safely be disbelieved. The equation contains too many "unknowns" and involves matters of such complexity that there is no man nor body of men in existence—and, be it said, no computer either—that could predict the consequences with any approach to accuracy. Even the flow of trade might well throw up some surprising results which would be unlikely to conform to any established formula. One point can, however, safely be made: by joining the E.E.C. Britain would not automatically be assured of a large share in a rapidly expanding market. This is not to throw doubts upon the opportunities that might be open to British export trade within the Market but to drive home the point that these would be subject to the ability first to put our own house in order, otherwise the resultant trade balance would be strongly adverse.

The real heart of the matter lies in the need to gain general acceptance for the view that it is sometimes necessary to sacrifice immediate advantages for the sake of long-term gains and that the interests of the E.E.C. and the Commonwealth are in the long-run not in conflict. They are only parts of the much greater whole which unless united must succumb to Communist domination.

What is needed is a willingness on the part of each to understand what are the real problems of the other. Such an outcome may take years to accomplish but the issues at stake transcend in importance the popularity of any Government or the prestige of any individual.

DEPOSITS UP BY £90 MILLION

On September 30, 1962, the date on which the bank's balance sheet was drawn up, Bank rate was 4½ per cent after five successive reductions from the figure of 7 per cent at which it stood one year earlier. This reduction is largely a reflection of the improved position of sterling and, taken together with the recent relaxation of credit restriction in the United Kingdom, represents a welcome change. Lower rates, when applied to loans and advances on the one hand, reduce the income from any given volume of lending, and this lower income starts to operate from the moment when rates are reduced. On the other hand, the interest paid out on fixed deposits continues to run at the old rates until each deposit matures. A period of falling rates, therefore, means that the bank will be working for a time on reduced margins.

But the lower interest rates now ruling have driven up the price of Government bonds. This has meant that the value of the bank's investments, for the first time for several years, now exceeds their cost price. As the directors' report states, our profit is struck . . . after deducting transfers to inner reserves out of which reserves provision has been made for diminution in value of assets I am glad to be able to say that, for this year, the pattern has changed and it has been possible to replenish our inner reserves by the amount which we had to provide for the depreciation of our investments in previous years.

It will be seen that our profits, at £1,721,805, are 7.78 per cent higher than last year. They are better than might have been expected having regard to the reduction in margins referred to above.

The balance sheet itself shows two major changes, on the one hand an increase of about £90 million in deposits and, on the other, increases of about £41 million in investments £24 million in advance and £23 million in cash money at call and Treasury Bills; the overal liquidity ratio of the bank thus shows little change.

Mr J. C. ROSCOE, JP, ACII

LEEDS PERMANENT BUILDING SOCIETY

Year of Remarkable Progress

The 114th Annual Meeting of the Leeds Permanent Building Society was held in Leeds on December 10, 1962. The President, Mr J. C. Roscoe, JP, ACII, in the course of his speech, said:

The Society has grown notably in size, and has further reinforced its traditional financial strength.

During the last twelve months new branches have been opened in Bolton, Bromley, Carlisle, Exeter, Kingston-upon-Thames, Portsmouth and Plymouth. We have also obtained sites for more new offices to be opened in the current year.

INCREASED INVESTMENT RECEIPTS

The year began with a new level of interest rates, adopted in pursuance of the recommendations by the Building Societies Association that rates should be increased to 6½ per cent on mortgages and 3½ per cent to share investors. It had been evident for some months that the previous share rate of 3½ per cent was uncompetitive with the yields from other forms of saving and investment.

The new share rate was introduced in October, 1961, but it was not until January of this year that we began to see some benefit from it. In the last nine months we have, indeed, seen a substantial increase in the flow of new investment monies to the Society. Gross receipts during the year from investors and depositors reached the record total of £36,964,585 (including £5,175,805 interest credited to accounts). Withdrawals of principal amounted to £22,499,377, and at the end of the financial year share and deposit balances had increased by £12,893,782.

RECORD MORTGAGE ADVANCES

We have lent the record sum of £25,001,178 in 12,684 mortgages on carefully selected freehold and leasehold securities. This vast amount represents an increase over the previous year's lending of £3,311,071. More than 98 per cent of our advances were made to individual owner-occupiers.

At the year-end we also had mortgage commitments amounting to some £7½ millions, in respect of advances offered but not yet completed. Thus we have deemed it proper to keep our liquidity at an appropriately high level. At £25,786,740 the Society's liquid assets, in the form of cash and trustee investments, represent 16 per cent of total assets.

The Society's total assets are now £160,888,608, an increase in the year of £14,128,884. Mortgage balances totalled £132,803,190 in respect of 104,348 separate mortgages, an increase of £11,162,306. And here I draw your attention to the infinitesimal amount of £315 attributable during the year to mortgage losses.

GREAT RESERVE STRENGTH

Total reserves, including the amount set aside for future taxation, have increased by £1,073,215, and have now reached the figure of £10,178,315, representing 6.33 per cent of total assets, and 7.66 per cent of mortgage assets. Your Society has always believed in the maintenance of strong reserves, and the figures I have just quoted will indicate to you our firm resolve to continue this tradition of equating strength with size.

In the accounts before you there are entries relating to the Midlands Building Society, a sound and old-established society based on Luton, of whose engagements we accepted a transfer on March 31, 1962. Their accounts have been incorporated with those of the Society and we welcome to the Leeds Permanent the 566 members and depositors of the Midlands Society.

DESIRE FOR HOME-OWNERSHIP

One might have supposed that, in making available such an increased amount of money for new mortgages, we might well have overtaken the demand for our services in the provision of finance for home-ownership. Certainly, so far as the Leeds Permanent is concerned, this is not so, for the demand upon us is still, in the aggregate, greater than we can satisfy.

The desire for home-ownership is very widespread in this country, and it is to the fulfilment of this wish that building societies should address themselves. It is their duty so to conduct their affairs that they do not undertake any course of action which might have the effect of drastically curtailing the supply of mortgage funds. This means that their interest rates to investors must at all times be competitive, and not regulated by extraneous pressures, engendered by ill-informed comment. Societies have a positive duty to defend and uphold an interest rates structure which can produce the money to house the people who want their own homes.

OUTLOOK

Looking to the immediate future we feel that the prospects of societies being able to attract adequate quantities of investment monies are reasonably good. There will, indeed, be plenty to do with the money so attracted in catering for home-ownership on the widest possible scale. It is an entirely admirable state of affairs that higher standards of living have led to a greater wish for improved housing standards, under conditions of independence and self-reliance.

My fellow directors have given me the greatest possible support during the last 12 months, and to them I express my sincere thanks.

It has been a successful year, and an extremely busy one for all our staff, both at Head Office and the branches. It is therefore proper that I should express to all concerned in a magnificent year's work, our most grateful thanks and appreciation.

To our many special agents throughout the country—still increasing in number—I would also like to express our gratitude for the loyalty and co-operation which they at all times display.

I have had the pleasure of reporting to you on one of the most successful years the Society has ever had, and I conclude by telling you that we are confident the Leeds Permanent will fully maintain, in the future, its present position as one of the soundest and most progressive societies in the country.

IRI

ISTITUTO PER LA RICOSTRUZIONE INDUSTRIALE

EXTRACT FROM

CONSOLIDATED BALANCE SHEET AS AT DECEMBER 31st, 1961

(Institute for Industrial Reconstruction)

(*) Unless otherwise stated, figures are given in £ thousands

At December 31st, 1961, the assets of the industrial and banking concerns under IRI control stood at £4,017,478*, breaking down into £1,864,463* for the industrial firms, £2,092,277* for the "banks of national interest," and £60,738* for other assets.

The endowment fund of £148,105* (which is the State's contribution to the Group's financial resources and has the same function as capital in joint-stock companies) at December 31st, 1961, represented 3.7 per cent of the Group's total assets and 7.9 per cent of the assets of industrial firms (against 3.4 per cent and 7.2 per cent respectively at December 31st, 1960).

Minority shareholders' equities amounted to £342,134* of which £338,804* related to industrial firms.

For every Lira which the State has supplied to IRI, the market supplied IRI's industrial firms with 11/12 Lire, 2/3 of them in the form of participation in their share capital.

* * * * *

IRI controls a number of manufacturing companies (in the steel, engineering, shipbuilding and ship-repairing sectors), and service companies (electric power, telephones, shipping, airlines, motorways, radio and television).

The companies' plant and other fixed assets amount to £1,312,326* (70 per cent of the total assets value of the industrial section). This amount represents the difference between the Balance Sheet gross value (£1,909,026*) and the depreciation fund (£596,703*). In the particular case of manufacturing companies, gross value of fixed assets is £510,752* and that of the depreciation fund £195,582*, or 38 per cent, whereas in the case of service companies, gross value is £1,398,274* and that of the depreciation fund £401,121* or approx. 29 per cent.

The increase in value of plant in 1961 as shown in the Consolidated Balance Sheet, is £158,175* representing the net amount. In this connection it is recalled that in 1961 the Group's investment in plant reached approx. £215,270* of which £70,609* was in the manufacturing and £144,661* in the service companies.

Manufacturing companies, whose plants account for little more than a quarter of the net total of the industrial section, employ two-thirds of total personnel. Service companies, however, which account for three-quarters of the total, employ 35.6 per cent of the personnel. Fixed net investment per employee at the close of the year was on average £5,200. In the manufacturing companies it was £2,100, in the service companies it averaged £10,800, and in the electricity sector, where plants account for 34 per cent of the total, the figure reached the level of £22,100.

The above figures show how large a share of capital must be invested to increase unit occupation in each of the sectors under IRI control, a share which is bound to increase further as steady technological progress calls for larger and more costly plants. Emphasis should be placed here on the fact that the larger the capital share required per employee, the greater the productivity; a reduction in unit costs of production follows. By concentrating its investment on the basic sectors of the economy, such as steel, electric power, etc., IRI would not be playing its proper part in the promotion of economic development unless it offered its products at competitive prices compared with those on the international market. In other words, IRI can fulfil the tasks assigned to it within the framework of the Italian Government's economic policy only by having the goods and the services produced by its companies (which constitute cost elements for other production activities, especially private, which employ 96 per cent of industrial labour) sold at prices equal to, if not lower than, those quoted by competitive industries on the world market, and in particular in the area of the European Economic Community.

The assets of the industrial section (£1,864,463*) were covered to 24 per cent with operating liabilities, to 10 per cent with short-term indebtedness, and to 26 per cent with bonds and loans.

Furthermore, minority shareholders have a participation in the companies' capital equal to 18 per cent of the total value of assets. Actually, the companies are able to cover up to 78 per cent of their capital requirements, thanks to the credit they enjoy on the market, while the balance is represented by the IRI contribution (participation in the industrial companies it controls) and by loans to the same companies.

* * * * *

The assets of the banking section at December 31st, 1961, amounting to £2,092,277* included the commercial lending operations of the three "banks of national interest" for £1,174,002* equal to 56.1 of the total. Investments in securities (mainly Government bonds) amounted to £358,778*.

Liabilities (£2,059,032*) consisted almost wholly (92 per cent) of deposits and current accounts.

The three banks' capital and reserves totalled £33,245*, £29,917* of which pertaining to IRI.

The industrial companies' liabilities include debts with the "banks of national interest" controlled by IRI. These debts amounted, at December 31st, 1961, to £60,103*, a figure representing only 5 per cent of the banks' total commercial lending and 4.2 per cent of the total assets of the firms. These figures show that the Group's industrial companies continue to be financed principally from sources other than the above banks.

As regards IRI indebtedness, a significant datum is provided by the amount of IRI bonds owned by the three banks. At the close of 1961, this amount was no higher than £348* and represented 0.12 per cent of the Institute's total bonds outstanding and 0.61 per cent of the three banks' security portfolio.

The purpose for which IRI was originally set up in 1933, can thus be considered as attained.

STRUCTURE OF THE IRI GROUP

INDUSTRIAL COMPANIES

(a) The six sector holding companies, and their subsidiaries: Fincantieri (Ansaldo, Cantieri Riuniti del l'Adriatico, Navalmeccanica, etc.); Finelettrica (SIP, SME, SENN, etc.); Finmare (Adriatica, Italia, Lloyd Triestino and Tirrenia); Finmeccanica (Alfa Romeo, Ansaldo San Giorgio, IMAM-Aerfer, Nuova San Giorgio Officine Meccaniche Pistoiesi, OTO-Melara, Stabilimenti S. Eustacchio, etc.); Finsider (Italsider, Dalmine, Terni, Cementir, etc.); STET (Stipel, Telve, Timo, Teti, Set, Telecomunicazioni Siemens, etc.).

(b) Operating companies, directly under IRI Control: Alitalia, Autostrade, Celdit, Circumvesuviana, Italstrade, Manifatture Cotoniere Meridionali, Monte Amiata, RAI, SAI Vetro Ottica and other minor companies.

AUSTRALIA AND NEW ZEALAND BANK

AUSTRALIAN RECOVERY GATHERS STRENGTH

The twelfth Annual General Meeting of Australia and New Zealand Bank Limited will be held on January 10th in London.

The following are extracts from the statement by the Chairman, **The Hon Sir Geoffrey C. Gibbs, KCMG :**

The reduced tempo of business activity during 1961 influenced the authorities to take steps to stimulate recovery and, in January, 1962, the Government had talks with a wide cross-section of commerce and industry, including very welcome discussions with the banks, with a view to assessing the situation of the economy and evolving suitable remedial measures. Following these deliberations, the Government in February announced relaxations which aimed to stimulate general spending in the community.

Banking Changes. The most important innovation enabled the trading banks to engage to a moderate extent in term lending for national development in both the domestic and the export fields. This change of policy permits term loans to be undertaken, not for consumption expenditure, but to help meet the demand for capital expenditure in primary and secondary industries, and to provide longer term finance for exports of capital goods.

Finance for these term loans was provided by transfers to term loan fund accounts at the Reserve Bank in the names of each of the trading banks. The funds involved amount to 3 per cent of each trading bank's deposits in March, 1962, and totalled £A57 million. The funds were provided as to 2 per cent by release from the statutory reserve deposits of the trading banks held at the Reserve Bank, and, as to 1 per cent, by transfer from the trading banks' holdings of liquid assets and government securities. In order to enable the necessary transfer to be met from statutory reserve deposits, the official ratio for these deposits was reduced from 12.5 per cent to 10.5 per cent of trading banks' deposits. Concurrently with this release from statutory reserve deposits, the trading banks agreed to an increase in the ratio of their conventional liquid assets and government securities to deposits from 16 per cent to 18 per cent.

In addition to the release of funds for the specific purpose of granting term loans, banking controls were modified by an important variation in the structure of interest rates. The maximum of 7 per cent was retained for overdraft interest rates, but the onerous averaging provision, which had hindered trading banks in exercising effective control over their lending, was abolished.

Balance of Payments. The value of Australia's exports reached a record level of £A1,080 million in the financial year 1961-62, a rise of £A102 million above the previous peak. The reduction in domestic demand was reflected in lower imports, which declined to £A893 million in 1961-62, a figure considerably below the high level of £A1,084 million in the preceding year and lower than the £A946 million of 1959-60.

Net capital inflow fell away sharply, and reached only £A96 million, compared with around £A400 million in the record year of 1960-61 and £A220 million in the preceding year. Australia's oversea currency resources were restored to £A561 million at June 30, 1962, the third highest level for the past decade.

The favourable balance of payments results of the last few years and the healthy state of Australia's oversea funds obscure the longer term outlook for oversea trading. The favourable balance of payments has been achieved in recent years only through a substantial capital inflow which has offset what would otherwise have been a fairly heavy adverse balance on account of imports and invisible items, such as oversea freights.

Banking Outlook. The banking situation reflects the slightly expansionary influences of the February policy and the budget. In conformity with the Government's policy of encouragement to business, the trading banks extended overdraft limits more liberally during 1962. However, while increases in limits were widely sought, business was slow to make use of the accommodation granted by the trading banks and actual overdrafts rose at a much slower rate than limits. This situation could cause some embarrassment, as the capacity for a much heavier rate of spending by business has been provided, in line with government policy but has been held in abeyance. It will be important for the monetary authorities to bear this aspect in mind when formulating policy later in the financial year, to ensure that the trading banks are provided with sufficient resources to meet their commitments legitimately entered into in accordance with official policy.

NEW ZEALAND'S NEED FOR EXPORT MARKETS

New Zealand has continued to be dependent on the sale of a limited range of primary products in oversea markets and balance of payments crises have unfortunately been all too common in recent years. A shortage of oversea reserves again dominated conditions in the year under review, and as a result of government action there was a sharp reduction in the volume of imports and severe restrictions were maintained upon the availability of bank credit.

Despite the difficult external position, the internal economy continued to operate at a high level. Gross national product increased by 3.1 per cent and although a substantial proportion was devoted to investment, the emphasis has been upon spending for housing and other forms of social capital.

External Position. The continued weakness of export receipts was due to the low prices received for primary products. The average wool price for the 1961-62 season was about 2 per cent lower than in the previous year and butter prices remained weak during early 1962. Following the United Kingdom Government's application of import quotas for butter, prices rose although it was late in 1962 before they reached the equivalent of the guaranteed return to producers in New Zealand.

Although export prices were low, the volume of exports rose, and export receipts remained relatively constant. Imports were reduced over the year to June from £NZ313 million to £NZ258 million by more severe licensing, but the deficit on current account was still £NZ19 million. There are severe difficulties in restraining import demand without affecting employment, as the greater part of imports comprises raw materials for New Zealand factories.

Banking. Severe restrictions on the availability of bank credit continued throughout the year, and banks were themselves forced to borrow heavily from the Reserve Bank in order to maintain their statutory deposits.

THE EUROPEAN COMMON MARKET

The application of the United Kingdom to join the E.E.C. raised many issues of fundamental importance for Australia, New Zealand and Fiji.

Reference has been made earlier to the balance of payments problems resulting from rapid development and adverse terms of trade, and this unsatisfactory relationship between export and import prices partly explains the Australian Government's efforts to preserve traditional export outlets. Australia's case has been strongly put in the capitals of Europe as well as in Britain and the United States, and has stressed the need to obtain assurances of satisfactory alternative outlets for exports of temperate zone foodstuffs, which will lose their preferred position in the United Kingdom market and also face intense competition in Europe if Britain joins the European Economic Community.

The protectionist agricultural policies followed by most industrial countries already present serious problems for New Zealand and, especially in the case of dairy products, have frustrated attempts to reduce the Dominion's reliance on the United Kingdom market. The serious nature of New Zealand's problems is acknowledged on all sides, and has been recognised in the Community's decision to regard New Zealand as a special case.

A.N.Z. SAVINGS BANK

In the year under review, the increase in savings bank deposits generally in Australia was substantial. It is encouraging to note that the total of A.N.Z. Savings Bank deposits passed the £A100 million mark in July last, and also that in the year under review our share of total savings bank deposits showed a further increase.

ACCOUNTS AND DIVIDENDS

We think that the Accounts of the Trading Bank and of the Savings Bank, grouped together in the Consolidated Accounts, show encouraging progress.

It is gratifying that profits, assisted by measures which are improving branch procedures and thus reducing costs, have, as well as balance sheet totals, reached new records in both the Trading Bank and the Savings Bank.

The remarkable growth of the Savings Bank over the last seven years is reflected not only in the deposits landmark but in the increase in the dividend paid to the Trading Bank from 5 to 7½ per cent, less U.K. income tax at 7s. 9d. in the £.

The Trading Bank's profit at £A1,181,893 shows an increase of 7 per cent on last year's figures. Your directors recommend a final dividend for the year of 8 per cent, less tax, which together with the interim dividend already paid, would maintain the distribution at 12 per cent, less tax; the total amount of this distribution is, of course, a little more than last year due to the increase in capital earlier this year.

Wolseley-Hughes Ltd

Mr. N. G. Lancaster, M.B.E. reports a year of progress

YEAR ENDED 31ST JULY		1959	1960	1961	1962
Issued Ordinary Capital at 31st July, shares of £1 each		£700,000	£705,000	£1,035,448	£1,553,172
Profit of the Group before taxation		£179,958	£273,336	£455,965	£488,194
Net Profit after tax accruing to Ordinary Shares		£92,003	£131,741	£213,369	£223,103
Ordinary Dividends:	Rate, gross	10%	12½%	15%	12%(*)
	Amount, net	£43,104	£53,976	£95,133	£98,303
	Times covered	2.14	2.44	2.24	2.27
Cash Flow:	Depreciation	£52,246	£59,941	£97,894	£94,410
	Profit retained	£48,899	£77,765	£118,236	£124,800

*NOTE: When a rights issue, on the bonus terms of 1 for 2 at par, was made in June, 1962 a total dividend of 12% was forecast.

Wolseley-Hughes Ltd. is a partnership of medium sized specialist engineering companies which, whilst independently managing their respective businesses, have gained much in strength by pooling their technical, financial and commercial resources.

THE FUTURE

On the assumption that trading conditions are not seriously disturbed by factors outside their control, the directors forecast an increase in both turnover and profits during the current year.

A full copy of the Directors' Report and Accounts will be sent on request to:-
THE SECRETARY, WOLSELEY-HUGHES LTD., WOLSELEY WORKS, ELECTRIC AVENUE, WITTON, BIRMINGHAM 6.

PRINCIPAL MEMBER COMPANIES

- **Wolseley Engineering Ltd.,** BIRMINGHAM 6
  makers of Merry Tiller cultivators, Swipe jungle busters, shearers, clippers and electric fencing.
- **Geo. H. Hughes Ltd.,** BIRMINGHAM 24

  precision engineers and makers of humane killers.

INTERNATIONAL FINANCIAL SOCIETY LIMITED

RECORD INCOME IN CENTENARY YEAR

MR H. C. DRAYTON REVIEWS COMPANY'S HISTORY

The one hundredth ordinary general meeting of the International Financial Society Limited was held on December 6th in London.

Mr H. C. Drayton (the chairman), who presided, said:

Gentlemen, this is a new experience for me—it is the first time I have presided at a meeting where the Company is 100 years old. We are not quite 100 years old, as a matter of fact, but we came to the conclusion that this was the year to celebrate our Centenary; actually we are 100 years old in May next.

Our gross revenue for the year amounted to £154,025. Of this our dividends and interest, which is the important thing, amounted to £148,600, which is a record for the company as it is in its present form. It is rather pleasing to find that we have got that record of revenue in our centenary year.

As you will see, the Directors are recommending a 12 per cent dividend, and also they are recommending a free capitalisation from their Revenue Reserve of one share for every twenty shares held to commemorate our centenary. This means, in effect, that we shall be taking £28,184 from that Revenue Reserve. If Shareholders endorse the dividend recommendation we shall be able to add £24,600 to our Revenue Account.

INVESTMENT APPRECIATION

If you turn to the Balance Sheet you will see, under the heading "Investments," that the cost of our investments is £1,506,800, and the valuation shows that they are worth £2,470,200. This is an appreciation of 63.94 per cent as against last year's appreciation of 60.47 per cent, so that although we have made a rights issue of one-in-ten to our Shareholders at par, we have been able to show that that money has been well used, and the appreciation overall is greater. This makes the break-up value of the Ordinary Shares 15s. per 5s. share.

It is interesting in this Company, as we are 100 years old, to know that we still have our original Annual General Meeting Minute Book, and we are still using it. In that book, of course, is recorded all the Minutes for 99 years and today's Minutes will make 100.

ORIGINAL PROSPECTUS

We also have the original prospectus when the Company was formed. It may interest you to know that the capital was originally £3,000,000 in 150,000 shares of £20 each. The prospectus says: "The Capital has been subscribed, with the exception of 40,000 Shares, which have been reserved for allotment to the Public."

The prospectus gives all the relevant information which it is necessary to give to Shareholders when subscribing, but of course compared with today's prospectus it perhaps stands out that it leaves out more than it reveals. Nevertheless, as I say, the essentials were there.

When we come to the original Board of Directors I think this will show the good auspices under which this Company started. The Board was composed of Robert Benson, Esq. (Messrs. Robert Benson & Co.), Bonamy Dobree, Junior Esq. (Messrs. Samuel Dobree & Sons) who were bankers; John Frederick Flemmich, Esq (Messrs Frederick Huth & Co.); Robert A. Heath, Esq. (Messrs Heath & Co.); J. S. Morgan, Esq. (Messrs George Peabody & Co.); W. E. Quentell, Esq. (Messrs Frühling & Göschen) and Herman Stern, Esq. (Messrs Stern Brothers). It is a rather imposing list.

Also they had a number of correspondents. I will not read those out to you, but they totalled 16 and they were composed of banks and banking houses throughout the Continent.

What is an interesting thing is the description of the objects of the Company; it is only one paragraph and in fact it might almost be lifted word for word and put in a number of prospectuses which have been appearing lately appealing for money for investment in the international world. It is rather amusing to read what the paragraph says—and it is the only thing in the prospectus excepting the Directors:

> The financial and industrial relations of this country, not only with the Continent of Europe, but with all parts of the world, have increased so largely during the last few years, that corresponding financial facilities have become indispensable. There is scarcely any undertaking of Foreign origin that does not seek the English Market. Governments requiring Loans; Contractors of public works guaranteed by the State; Concessionaires desiring to give effect to the privileges they have obtained; all apply, directly or indirectly, to England for financial support; and in all these cases the operations of the Society can be advantageously exercised.

As I say, we have been used to prospectuses of that sort lately—we have seen quite a lot of them.

Another interesting thing is that in those days Shareholders took an interest in their Company. At the first four Meetings 300 Shareholders turned up, and at the fifth Meeting 250 Shareholders turned up. There were various reasons for that. The first one or two Meetings they attended in hope, and the next two or three they attended to see why the hope had not materialised—but we need not go into that. (Laughter.)

A further interesting fact about the Company is that our first General Manager was William Hope, V.C. Now William Hope was a Lieutenant in The Royal Fusiliers (City of London Regiment). He won his V.C. in the Crimean War, and I would just like to read the citation out to you:

> "Lieutenant William Hope, 7th Regiment, The Royal Fusiliers (City of London Regiment). Date of Act of Bravery: 18th June, 1855. After the troops had retreated on the morning of the 18th June, 1855, Lieutenant W. Hope, being informed by the late Sergeant-Major William Bacon, who was himself wounded, that Lieutenant and Adjutant Hobson was lying outside the trenches badly wounded, went out to look for him and found him lying in the old agricultural ditch running towards the left flank of the Redan. He then returned and got four men to bring him in. Finding, however, that Lieutenant Hobson could not be removed without a stretcher, he then ran back across the open to Egerton's pit, where he procured one, and carried it to where Lieutenant Hobson was lying. All this was done under a very heavy fire from the Russian batteries.—London Gazette, 5th May, 1857."

He was the third man in that Regiment with the V.C. and he was the first Officer of that Regiment to win the V.C.

The interesting thing about that citation is that you will observe that the gallant deed took place in 1855 and the Victoria Cross was not inaugurated until 1857, so that although he got the award in 1857 the deed was actually accomplished earlier.

CURRENT DIVIDEND PROSPECTS

You will appreciate that since the end of the year we have made a rights issue to shareholders of one-in-ten at par, which in itself is a substantial bonus. Also, if you approve the resolution to issue free one share for every twenty held to commemorate the centenary, this will make our ordinary capital ranking for dividend for the current year £648,230, as against £563,678. Naturally, what you will want to know is what dividend you can expect for the current year. Our able Secretary and Manager has made an estimate for the current year, we have had a look at it, and having done so I think you can take it you need have no fear of our not being able to recommend a dividend at the rate of 12 per cent and there will be a comfortable margin over.

The report and accounts were adopted and the proposed scrip issue approved.

NORTH ATLANTIC SECURITIES CORPORATION

CONTINUED PROGRESS

The eighth annual general meeting of North Atlantic Securities Corporation Limited was held on December 10th in London, **The Rt Hon. Lord Latymer** (the chairman) presiding.

The following is an extract from his circulated statement:

Both our gross revenue and net revenue show a modest increase over last year. Your Directors are recommending a final dividend of 4 per cent to make with the interim dividend already paid a distribution for the year of 5½ per cent, which is the same as last year.

The value of the net assets of the company at September 30, 1962, was £3,918,824, or 8s. 2d. per share cum dividend, as compared with £4,249,662 or 8s. 10½d. per share cum dividend at September 30, 1961. This decline in value of some 7½ per cent has occurred in a period when falls in stock market prices were widespread and in some cases considerable. As a matter of interest, between these two Balance Sheet dates the Financial Times Industrial Share Index was down 9 per cent and the Dow Jones Indices of American Industrial Shares and American Utility Shares were down 17½ per cent and 4 per cent respectively.

Our usual estimate of income indicates that our revenue for the current year will be at least maintained.

The report was adopted.

KENNINGS LIMITED

EST. 1878

DISTRIBUTORS OF MOTOR VEHICLES, PETROLEUM PRODUCTS AND TYRES. SERVICE SPECIALISTS.

YEAR ENDED 30th JUNE 1962

	1962	1961	1960
Issued Capital	2,000,000	1,800,000	1,504,413
Group Net Assets	5,573,203	5,228,227	4,135,630
Group Net Profit before Tax	1,156,012	1,138,237	932,488

J. & F. STONE LIGHTING & RADIO LIMITED

	1962	*1961*
Profit of the Group	£908,417	*£890,969*
Taxation	£495,000	*£470,000*
Dividend (30% equivalent to 45% on old capital)	£330,750 30%	*£257,250 35%*
Issued Ordinary Capital	£1,800,000	*£1,200,000*
General Reserve and Unappropriated Profits	*£481,500	*£998,833*

* After providing £600,000 for share bonus in January, 1962.

Turnover in the year to 30th June, 1962, was in excess of the previous year, cash sales further increased and rental business expanded. Ten new branches were opened and 17 older branches extended and modernised.

Cash resources totalling £1,190,330 although in excess of trading requirements for the time being were steadily being utilised for the expansion of the Group. This development would continue by the opening of individual stores by the Company and by the acquisition of established businesses when appropriate opportunities were available.

UNITED CITY MERCHANTS LTD

Logical expansion of the Group

Points from the Statement of the Chairman, **Mr E. C. Sosnow**

At the 27th Annual General Meeting of United City Merchants Ltd. (formerly Whiteley Stevens [Holdings] Ltd.) held in London on December 7th.

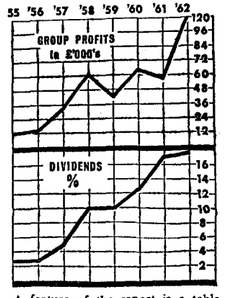
TRADING PROFITS after deducting all charges but before tax £119,080.

ORDINARY DIVIDEND 17½ per cent.

ADDITION OF GORDON, WOODROFFE GROUP. The Group has continued its logical expansion. Its import-export interests have been merged with those of the Gordon, Woodroffe Group, which has much widened U.C.M.'s international trading activities. Mr Robin Brook has joined the Board of United City Merchants Ltd. as Deputy Chairman.

The textile side of U.C.M. has been strengthened by the acquisition of the Kirkland Group.

PROSPECTS. Trading during the current year is satisfactory. Trade relations with Iron Curtain countries are still expanding, and the Group is working towards further expansion of its trade in Common Market countries.



A feature of the report is a table showing the development of the Company since 1955 when its present Chairman (Mr E. C. Sosnow) joined the Board.

BIRMID INDUSTRIES

SATISFACTORY RESULTS

The Annual General Meeting of Birmid Industries, Ltd., was held on December 11th at Birmingham, **The Most Hon. The Marquess of Exeter, KCMG,** the chairman, presiding.

The following is an extract from his circulated address:

For the year ended July 31, 1962, while Group earnings before taxation are lower than those for 1960-61, the amount of Net Profit remains approximately the same as a result of the favourable effect this year of certain taxation reliefs. The fall in Gross Profits continues the trend of narrower profit margins reported last year. The results of a full year's trading by Sterling Foundry Specialties Limited acquired in July, 1961, and a welcome initial contribution to Group profits by our Australian subsidiary have helped to offset this trend somewhat.

An adverse factor was the National wage increase agreed with the Engineering Unions, much of which has been absorbed by your companies, thus adding one more to the long list of wage advances not compensated by or related to increases in production. Having regard to all factors your Directors consider the results to be very satisfactory in the circumstances and recommend that a final dividend of 15 per cent should be paid, bringing the total to 20 per cent, the same as last year.

PRODUCTION AND SALES

Demand from the Automobile Industry has improved somewhat in recent months but, at the time of writing this address, there is some slight evidence of the beginning of the seasonal fall-off which we have come to regard as normal these last two or three years. At the same time there is considerable surplus capacity, certainly in the ancillary industries such as ours, with the effect of making competition extremely keen and buyers equally so.

The aircraft industry is in a very uncertain condition due to the great reduction in Services' demands. It would appear, however, that there is somewhat more optimism amongst manufacturers.

COMMON MARKET POSSIBILITIES

Your Directors now have to consider the possible effects on your Group Companies in the event of Great Britain joining the Common Market. Such an event could expose our domestic business to keen competition from the Continent but, on the other hand, could open up market possibilities in Europe which have hitherto been largely inaccessible for most of our manufactures which consist of basic engineering supplies.

Your several companies have been very active this last year in exploring Continental possibilities by market researches and programmes of direct personal sales approach in a number of countries. Without being unduly optimistic, I think I can say that prospects in some directions appear to be better than at one time was thought.

The overall taxation has varied in our favour this year but is still well in excess of 50 per cent of our total earnings. This is a burden too high for Industry to bear if it has to keep itself equipped with the facilities necessary for successful participation in the Common Market.

The report and accounts were adopted.

NEEPSEND STEEL & TOOL

The forty-second Annual General Meeting of Neepsend Steel & Tool Corporation Limited was held on December 6th at Sheffield, **Mr F. K. Gardiner, JP** (Chairman) in the chair. The following is an extract from the circulated Statement.

There has been a falling off in the activities of certain of our companies. It is gratifying, therefore, that the Trading Profit has declined by less than £120,000. The indications are that the present year's trading may show a further decine in profit, although I am hopeful this will not be too pronounced.

Earlier in the year I informed shareholders of the acquisition of the freehold factory Apex Works, Shiregreen, Sheffield, to enable us to develop still further the manufacture of small tools of various types. This factory has now been fully equipped and is in production.

The Trading Profits for the year before taxation have amounted to £1,355,552 as against a figure of £1,473,348 in the previous year.

The report and accounts were adopted.

At a subsequent extraordinary general meeting resolutions were passed capitalising £1,274,061 of undistributed profits for the purpose of distributing fully paid shares in the proportion of one for every 5s. unit of Ordinary Stock held; amending the Articles of Association so as to entitle Preference shareholders to a fixed cumulative Preference dividend of 10 per cent per annum in lieu of the present fixed rate of 6 per cent per annum with participating rights up to 10 per cent and reducing the capital by returning 1s. 8d. in respect of each 5s. share held.

LAKE VIEW AND STAR

The fifty-second Annual General Meeting of Lake View and Star Limited was held on December 6, 1962, in London.

Mr R. H. A. Neuschild (the Chairman) in the course of his Speech said: A final dividend of 1s. 6d. per share is again recommended which, together with the interim dividend of 1s. paid in June, makes a total of 2s. 6d. per share for the year ended June 30, 1962.

Mining surplus for the year at £432,451 was £5,502 higher than for the previous year.

Costs which show a decrease of 1s. 6d. per ton were helped by a reduction in the basic wage of 1s. 8d. Australian per week from October 30, 1961.

The ore reserve position has been maintained, there being a small increase of 11,100 tons despite the milling of 774,732 tons from the property.

The development footage at 27,673 feet is slightly in excess of last year and results were again satisfactory. Work carried out on the lowest level of the Chaffers Shaft disclosed better than average results.

Power costs per kWh have been reduced quite substantially by going over to the heavier grade of oil fuel and a further reduction in the yearly cost is expected during the current year.

As a final remark I would mention that for the first five operating periods of the current financial year estimated mining surplus was £161,778 which compares with £160,598 for the corresponding period of 1961.

The reports and accounts were adopted.

WILLOWS FRANCIS LIMITED

ASHLEY WORKS EPSOM, SURREY

Pharmaceutical Manufacturers Since 1751

Salient points from the Chairman's Statement and Accounts presented at the Annual General Meeting held on December 6, 1962.

	Year Ended 30th June	
	1962	1961
Group Profit before Taxation	£80,608	£64,808
Group Profit after Taxation	£40,237	£30,960
Ordinary Dividends for year (less tax)	22½%	17½%
Cover for Ordinary Dividend	2.85	2.74

Profits

The Group Profits before Taxation have increased from £64,808 to the record figure for the Group of £80,608. This is an increase of over 24 per cent.

Capitalisation

The proposals to increase the Authorised Share Capital by 600,000 Ordinary Shares of 2s. 6d. each and for a bonus issue of 150,400 2s. 6d. Ordinary Shares in the proportion of one for every five held on November 9, 1962, were approved.

Reserves

The Group's reserves have increased from £3,996 in 1950 to £191,026 in 1962. Even after this large increase the rate of profit on the equity capital employed is 26 per cent.

Products

The Company sells to the veterinary, dental, medical and pharmaceutical professions and exports to over 90 countries, with some 60 specialised products and many pharmaceutical formulations. Export sales now account for over a quarter of the Company's total sales.

Prospects

The results for the current year so far are good and it is hoped in the absence of unforeseen circumstances to maintain the dividend of 22½ per cent on the issued ordinary capital as increased by the bonus issue.

RANSOME & MARLES BEARING CO. LTD.

TRADING PROFIT INCREASED

The forty-sixth Annual General Meeting of Ransome & Marles Bearing Company Limited was held on December 6th at Newark, Notts, **Mr Edward W. Senior, CMG,** the chairman, presiding.

The following are extracts from his circulated statement for the year ended June 30, 1962:

Last year I expressed the hope that we should maintain a level of output to produce a satisfactory year's trading. In the light of the conditions which have obtained during the year I feel sure you will agree that hope has been fulfilled. The effect of the continuing credit squeeze was felt in varying degrees from different industries, whilst the one day strikes—which affected all engineering industries—and the more serious strikes in some customers' factories in the later part of the year naturally had their adverse effect on our turnover.

Pressure on profit margins continued but in spite of these circumstances the net trading profit, after higher depreciation, increased from £1,354,051 to £1,369,940. The net profit of the Group after tax is £766,455 compared with £759,419 in the previous year, the profit of the Holding Company being £721,368. Your Directors recommend a final dividend of 10 per cent making 14 per cent for the year.

It is gratifying to report that our exports again increased by 15 per cent. So far as our own subsidiaries are concerned, South Africa and Canada improved on last year's performance, but Australia showed a slight fall as a result of the difficult economic conditions in that country throughout the year. The total turnover, however, showed an increase.

MAINTENANCE OF COMPETITIVE POSITION

During the year the Holding Company spent £968,572 on Plant, Fixtures and Vehicles. This investment is designed to maintain our highly competitive position but to achieve this it is necessary for all employees to give of their best to ensure that the new plant and equipment is operated with maximum skill and efficiency. If this is so and labour does not make demands disproportionate to the increase in productivity, then they themselves will benefit by continuity of employment with improving conditions, shareholders will benefit, and so will customers in obtaining a quality product at a competitive price.

Sales for the first three months of the current year show a modest increase and the order book stands at a satisfactory level. It is difficult, however, to make an assessment of the prospects for the current year. Optimistic Government forecasts of expansion in the economy have not so far materialised. However, there are signs that at last the Government may, during the Autumn, take further steps to expand the economy.

We have the resources to take advantage of any expansion in demand, and whilst we live in a world of over capacity, keen competition, and lower profit margins, I am confident that every effort will continue to be made to maintain our fair share of what we hope will be an improving market.

The report and accounts were adopted.

HOLDERS INVESTMENT TRUST LIMITED

ABNORMAL RESULTS

MR LIONEL BARBER'S STATEMENT

The twenty-ninth annual general meeting of Holders Investment Trust Limited will be held on December 31st at Winchester House, Old Broad Street, London, E.C.

The following is the circulated statement of the chairman, **Mr Lionel Barber, FCA:**

The net earnings of the Group for the year ended July 31, 1962, were substantially lower at £453,761 before taxation, than those of the previous year. The reduction was envisaged when your Board gave consideration to the declaration of an interim dividend last June.

Unfortunately, William Hill (Football) Limited, the subsidiary which contributed £515,683 to net profit last year, incurred a loss of £80,049 in the year under review, and, whilst William Hill (Glasgow) Limited did not suffer to the same extent that Company's net profit showed a reduction of £124,608. Both these Companies operate Fixed Odds Football betting in which an abnormal run of results in favour of our customers was the cause of the disappointing results to Shareholders.

Likewise, the net profit of William Hill (Park Lane) Limited (which subsidiary was acquired on July 31, 1961) at £235,430 for the year ended July 31, 1962, is less than can normally be expected due in the main also to abnormal results in the Autumn of 1961.

BETTING SHOPS

"Here I think I might say that your Trust is not in any way concerned with the operation of Betting Shops and there is no intention of embarking into that field. On the other hand we are mindful of the support from Betting Shop proprietors in the distribution of our Fixed Odds Football Coupons, and to those Bookmakers who take advantage of the hedging facilities we provide in Horse-racing.

Our subsidiary in Northern Ireland, debretta limited, enjoyed another year of progress. Looking back there is every reason to be satisfied with this acquisition and although the current year has presented trading difficulties your Directors are confident as to the continued prosperity and inherent soundness of the business.

The new building is now in the occupation of William Hill (Park Lane) Limited and William Hill (Football) Limited and is operating smoothly with as much integration as is conveniently possible. Your Trust has not yet granted a lease to either of these two subsidiary Companies but will be doing so in due course.

The popularity of The William Hill Fixed Odds Football Coupon continues to grow in spite of increasing competition both local and national.

CURRENT SEASON'S PROSPECTS

As to the current season, both Football and Racing, your Directors are satisfied, without complacency, with the weekly turnovers achieved and although Saturday, October 13, 1962, resulted in the all-time record pay out in Fixed Odds Football betting of approximately £1.3 million the indications at present are that the net results on the season could be substantially better than those of last year.

Once again on your behalf and on behalf of all the Directors within the Group, I wish to place on record thanks for the loyal and efficient service of all employees [illegible]

THE CICELY RUBBER ESTATES COMPANY

MR F. S. PHYSICK ON IMPORTANCE OF RETAINING MARKETS

The fifty-seventh annual general meeting of The Cicely Rubber Estates Company, Limited, was held on December 5th in London, **Mr F. S. Physick** (the chairman) presiding.

The following is an extract from his circulated statement:

Due to certain adverse circumstances—excessive rainfall and early wintering together with loss from wind damaged areas—the year's crop fell short of the estimate by 22,042 lbs. This crop, however, at 1,894,508 lbs. shows a satisfactory increase of 206,748 lbs. over the previous year's output.

In last year's Review I recorded a decline in the average price realised (ex Malaya) for our rubber from 28.09d. to 24.78d. per lb. This year there has occurred a further decline to 21.41d. Although the result is a lower profit per lb. this development is not unhealthy. Derived from the planting of higher yielding trees, the objective is to produce more rubber at a lower cost per lb. thereby to face up to the ever increasing challenge coming from manufacturers of synthetic substitutes. Meantime the important point is to retain markets wherein the natural commodity is certainly not inferior to that of synthetics—remembering that markets once lost are not easy to recover.

To this end, improved marketing method is receiving close attention. The most encouraging feature is that world demand for rubber, which of course includes both natural and synthetic, is growing apace.

The report was adopted and a dividend of 20 per cent approved.

EDUCATION AND COURSES

EXPERT POSTAL TUITION for examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

At a Meeting of the Board of Directors held today a final dividend of Seventy-five cents per share on the Ordinary Capital Stock was declared in respect of the year 1962, payable in Canadian Funds on February 28, 1963, to shareholders of record at 3.30 p.m. on January 7, 1963. By order of the Board, T. F. TURNER, Secretary. Toronto, December 10, 1962.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability). DIVIDEND NOTICE. PREFERENCE STOCK. At a Meeting of the Board of Directors held today a final dividend of Two per cent on the Preference Stock was declared in respect of the year 1962 payable on February 1, 1963, to stockholders of record at 3.30 p.m. on December 31, 1962. By order of the Board. T. F. TURNER, Secretary. Toronto, December 10, 1962.

APPOINTMENTS

BBC requires Talks Producer in Manchester to work mainly on topical magazines in Sound Broadcasting. Opportunities may develop later for producing Sound talks and feature programmes of greater length and for work in Television. Applicants must have a good education and keen interest in people and current affairs. Knowledge of the North and experience of journalism or broadcasting desirable. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a. Requests for application forms (enclosing addressed envelope and quoting reference 62/G.198 [illegible]) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

MINISTRY OF POWER

PRINCIPAL SCIENTIFIC OFFICERS

Two pensionable posts in London for men or women for work in connexion with research and development in the field of fuel and power, interpreting information obtained, and making technical and economic assessments of trends and developments in this field and of research and development projects. Qualifications: normally 1st or 2nd class honours degree, or equivalent, in relevant branch of science or engineering. Experience in research, development, or operation in a branch of the fuel and power field desirable. Qualifications or experience in economics, statistics, or making technical and economic assessments of projects or developments an advantage. Salary scale (Inner London) £1,850—£2,580. Starting salary may be above minimum. Promotion prospects. Write, Civil Service Commission, 17, North Audley Street, London, W.1, for application form, quoting S/5505/63. Closing date January 16, 1963. (3)

THE UNIVERSITY OF SASKATCHEWAN, SASKATOON

Applications are invited for the positions of Assistant Professor and Associate Professor of Economics. Applicants should have the degree of doctor of philosophy preferably with specialization in economic theory. Salary will be $7,000 to $11,800 depending on qualifications. Pension and other benefits are available. Teaching duties commence in September, 1963.

Letters of application noting qualifications and experience and naming three referees, should be sent to the Head, Department of Economics and Political Science, The University of Saskatchewan, Saskatoon, Canada.

BRITISH TECHNICAL ASSISTANCE

BIOMETRICIAN FOR WESTERN NIGERIA

The Department of Technical Co-operation invites applications for a technical assistance appointment of Biometrician in Western Nigeria.

DUTIES: To assist in the design and subsequent analysis of field experiments carried out on a large range of crops.

QUALIFICATIONS: Candidates must have a good honours degree in mathematics with 2 years post-graduate experience in agricultural statistics.

TERMS: Appointment will be for two terms of 18 months each in the first instance, with salary in range £1,100-£1,500 and tax-free overseas allowance of £1,485 (married) and £935 (single). Additional allowances payable in respect of dependent children. Free passages for officer and family. Free furnished accommodation. Free medical and dental treatment.

Applicants should send their full name and brief particulars of their qualifications and experience to Director of Recruitment, Department of Technical Co-operation, Sanctuary Buildings, Great Smith Street, London, S.W.1, quoting RC.213/106/02.

For further appointments see page 1167

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN GOVERNMENT (with special reference to International politics). Salary scale £1,150 to £1,950 per annum, initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent, not later than January 15, 1963, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for one or more temporary posts at the grade of LECTURER or ASSISTANT LECTURER in ECONOMIC DEVELOPMENT in the Faculty of Economic and Social Studies. The tenure of the appointment will be for a period of not more than three years. Applicants should have field experience, preferably in South America, South-East Asia or Africa, or knowledge of China. Salary scales per annum as follows: Lecturer £1,150 to £1,950; Assistant Lecturer, £900 to £1,050. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than February 16, 1963, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

COMPANY AFFAIRS

The Christmas account on the London Stock Market began on a quiet note and equities failed to maintain their good showing of the previous week. The warning from Tube Investments and the surge of new issues were among factors depressing prices. But these took a better turn on Wednesday, with steel shares to the fore on the better than expected results. The bid for Whitehead seemed to offset the lower output figures for November and steel equities went farther ahead on Thursday. Oil shares have also been a good market. Over the week to Wednesday The Economist *indicator gained* 0.9 *point to* 348.9. *Gilt-edged have been firm, but the Republic of Iceland* 6½ *per cent loan went to* 1⅛ *discount.*

Steel Profits, Losses—and a Bid

THE surprise of this season of steel results, where the recovery in profits in the second half of the year to end-September has confounded the gloomiest fears expressed in the market, is this week's announcement by the directors of Stewarts and Lloyds that they have asked the board of Whitehead Iron and Steel to agree to a meeting of their respective financial advisers "with a view to agreeing terms" for a takeover of Whitehead. Whitehead cut its dividend this week, and this move came as a complete surprise to its board. Currently, Stewarts and Lloyds' own steel-making capacity is well in excess of the requirements of its own tubeworks and it has found it increasingly difficult to sell ingots, semi-finished steel and hot rolled strip to other concerns. It may therefore see the need to have such a re-roller as Whitehead under its own control. The acquisition of Whitehead, which has been buying billets from the Commonwealth, would produce only a modest degree of diversification for Stewarts and Lloyds; but it might look to be diversification in the right direction.

Stewarts and Lloyds.—At the same time as it is thinking of adding to its rolling capacity by taking Whitehead under its wing, Stewarts and Lloyds "having regard to the short-fall in the anticipated demand for iron and steel in comparison with previous estimates" is deferring "for a limited period" the construction of additional iron making capacity at Corby. This puts £18.5 million of outstanding capital developments of £38.8 million into suspense. Both this decision and the approach to Whitehead square with Stewarts and Lloyd's recent trading experience. Its production of steel ingots fell from 1.7 million tons to 1.5 million tons in 1961-62 and its output of steel tubes from 905,000 tons to 855,000 tons and of spun iron pipes from 493,000 tons to 431,000 tons. This is reflected in the fall in sales from £158 million to £147 million and in profits from £14 million to £10.8 million. The directors attribute the decline not only "to narrowing profit margins in home and export markets and to severe competition in the export trade of tubes and pipes" but also to "a substantial decline in the demand for pig iron and semi-finished steel." In these circumstances it is not surprising that it has deferred further investment in iron-making capacity and that it is seeking a more assured outlet for its semi-finished steel. As expected the dividend is maintained at 15 per cent and following the fall in net income from £7.4 million to £6.2 million it is now covered just under twice.

Whitehead Iron and Steel.—The price which Stewarts and Lloyds would be prepared to pay for Whitehead and the price at which Whitehead would be prepared to be taken over are still the companies' own secrets. But the difficulty in framing a price agreeable to both sides has not been made any easier by the odd mixture of good and bad which this week's preliminary statement from Whitehead contained. The good is that while trading profits fell by 17½ per cent there was a marked recovery in profits in the second half of the year. Then gross profits amounted to £535,000, against £321,000 in the six months to end-March and £456,000 in the six months to end-September, 1961. Yet, in the face of this improvement, the final dividend has been cut from 8¾ to 6 per cent, reducing the total payment from 15 to 10 per cent.

As net profits have hardly changed, the cover on the dividend has improved from just over twice to nearly three times. The fact that cash and securities amounted to 23s. 6d. per share at the end of September, 1961, only makes the dividend decision more mystifying. In January, in referring to the company's poor prospects, the chairman, Mr G. H. Latham, said it was wrong "to concentrate too much on the short term." In cutting the dividend, the directors may therefore have taken a longer—and gloomy—view. Now that a bid is in the offing, they may wonder whether such caution pays. The market, on the other hand, has rejoiced, putting the Whitehead shares up 3s. 9d. on the results and another 12s. 6d. on Stewarts and Lloyds' approach so that they now stand at 46s. 3d.

Steel Company of Wales.—Neither the results nor the maintained dividend of Steel of Wales came as a surprise. Profits were revealed when ISHRA offered the 5¾ per cent second debenture for sale last month and a maintained dividend of 10 per cent was forecast when the interim was cut from 5 to 3¾ per cent in June. This followed a disastrous six months when, largely as a result of the bricklayers' strike, profits before all charges fell from £12.3 million to £7.5 million. But the effects of February's price increases on sheet and tinplate and a bigger demand for sheet from the motor industry pushed profits up to £11 million in the second half of the financial year. Steel of Wales has been particularly dependent upon exports in the past and here margins have been shaved. This must be reflected at least in part in the fall in gross profit margins from 17.5 to 13.7 per cent in the face of a small increase in total sales in 1961-62. As sheet steel capacity expands both in this country and on the Continent, darker shadows creep across Steel of Wales's prospects and its shares offer one of the highest yields among steel equities.

John Summers.—The rise of 2s. 9d. to a 1962 peak of 37s. 6d. in the £1 shares of this company on Thursday shows how far hopes of a slight increase in profits and a maintained dividend have been exceeded. Profits have risen by 20 per cent and the final dividend has been set at 7½ per cent after the one for two scrip issue. This raises the payment for the year from the equivalent of 10 to 11½ per cent, covered 2.6 times after relief for investment allowances. For the first six months of the year profits before all charges were about 3 per cent lower but, as with Steel of Wales, profits made a strong recovery in the second half. They amounted to £8,767,000, against £7,050,000 in the October-March period and £5,925,000 in the corresponding period of 1961. These results reflect the strong demand for sheet from the motor industry and elsewhere and benefits from the major development programme which has now been completed at Shotton, where the major part of Summers' light steel production is concentrated.

South Durham Steel and Iron.—Having nitted the interim dividend, the directors ive now passed the final dividend, giving outh Durham the doubtful distinction of eing the first steel company since de-tionalisation not to pay a dividend. The iares lose their trustee status; but that the least of the company's worries for it is to grapple with a major financing prob-m. A year ago the directors announced eir intention of raising £10 million in e next eighteen months. This seems rdly feasible after a year in which a profit fore tax of £2,122,000 was turned into a ss of £1,949,000 and when substantial terest charges were only partially covered profits after a depreciation charge of 3 million (against £2,175,000). The sults reflect a substantial expansion in pacity at a time when there has been a arp fall in demand for plate and for other eavy steel components (including pipes r the oil industry). Demand for these eavy products seems unlikely to catch up ith capacity for some years and the heavy rden of depreciation and interest charges ggests that a resumption of ordinary divi-nds may be a long way off. Indeed the mpany's future seems to rest largely in e hands of the Finance Corporation for dustry and Barclays Bank which together ave loans outstanding of over £40 million. lore than half of these loans are due for payment between 1963 and 1967. FCI so has a holding of £1 ordinary shares hich bought at par now stand at 9s. 10½d.; the palmy days of 1959-60 the shares ood at over 60s.

International Computers

I·C·T

THE £1 shares of International Computers and Tabulators have not moved far from their 1962 low point of 2s. 6d. since October but the yield at 4s. 6d. is still only 2¾ per cent. The latest esults for the year to end-September do ot point to an early return to this year's eak of 122s. 6d. ICT's total revenue rose rom £28 million to £31 million and its rading profit by 15 per cent from 9,624,000 to £11,169,000; but as in 960-61 this probably does not reflect the ull increase in business as depreciation on lata processing equipment rose by over a uarter from £4,521,000 to £5,750,000 and nuch of this provision still presumably re-ates to machines on rental. There was nother sharp rise in the interest charge so hat profits before tax fell from £3,318,000 o £3,115,000. The large proportion of usiness out on rental means that profits as in the case of television rental com-anies) are deferred for the future. In the neantime shareholders receive, as in the ast two years a dividend of 11¼ per cent. his is covered 2½ times after allowing for he tax relief on investment allowances, or ½ times if no account of the relief is taken.

The rapid growth of the company's usiness continues to strain the group's finances and the sharp rise in the interest charge from £965,000 to £1,238,000 no doubt reflects the further use of short-term finance. The current yield still looks a long way ahead; even in electronics shares, investors may soon begin to wonder when the growth in business will be translated into bigger dividends.

Distillers

FOR the six months to September 30th the consolidated income before tax of Distillers was only £107,000 lower at £15,947,000. This was a better outcome than seemed likely in view of the increased duty on whisky and gin and the keen competition encountered by the chemicals and plastics interests. Sales of whisky and gin in the home market were slightly below those for the corresponding period in 1961 and while export sales were higher the additional profit was largely offset by advertising and other expenses. This suggests that Distillers is not finding it easy to maintain its share of exports to the United States in the face of the growing competition from other brands. On the industrial side the slight improvement in prices and demand noted by the chairman, Sir Graham Hayman, in August now seems to have assumed the "more tangible proportions" that he forecast it might. If this improvement is maintained the directors forecast that "overall earnings for the full year should be of the same order as the previous year." As expected the interim dividend has been left unchanged at 6 per cent and on a maintained 13½ per cent dividend the 10s. shares at 34s. yield 4 per cent.

Tailoring Profits

LAST month Mr R. E. Chadwick, the chairman of J. Hepworth and Son, in comparing that company with Montague Burton, said: "We are a very small puppy dog barking at the heels of a very big St Bernard." How lively a puppy dog can be is seen in the results of the two companies for the year to end-August. Hepworth's pre-tax profits rose by 6¾ per cent from £771,000 to £822,000 and those of Montague Burton fell by 20 per cent from £4,281,000 to £3,395,000. The trading period covers the bad spring weather and several months' trading after the increase in purchase tax, but for Hepworth these adverse factors were more than offset by the success of Mr Hardy Amies' venture into men's clothing. Shareholders have reaped the benefit, for the ordinary dividend has been raised from the equivalent of 10 to 15 per cent and the tax-free bonus is effectively maintained at 2½ per cent. On the combined payments the 10s. "B" shares at 56s. 6d. yield 3¼ per cent. The current year has also started off on a good note with a successful presentation of the latest collection of Hardy Amies styles and trading is now apparently a little better than in the spring.

Shareholders of Montague Burton will hope for similar news from their chairman, Mr L. Jacobson, but meanwhile they can find some consolation in the rounding up of the dividend from 6¾ to 7 per cent, covered about twice. The results moreover were a little better than seemed likely from the forecast made at the time of the debenture issue in August when pre-tax profits were estimated at about £3,060,000. Higher clothing and footwear sales in August may have helped. Sales were again good in September but they fell away in October and it remains to be seen whether the trading difficulties of the tailoring trade are really on the wane. Unless they are, the low yields of 3¼ per cent and 3¾ per cent on the ordinaries at 22s. 1½d. and the non-voting "A"s at 18s. 6d. in Montague Burton are not justified. Both shares have fallen by about a third from their 1962 peaks and investors have obviously noted the enterprise of Hepworth and the entry into men's tailoring of C & A.

Brewing Results

THE duty surcharge, the prolonged winter and the reduction in economic activity checked the rise in beer consumption in the brewers' year to end-September but brewing profits appear to have held up well.

Arthur Guinness.—Sales in the year to end September were slightly below the record level of 1960-61 but trading profits rose by £146,000 to £9,599,000. Higher capital expenditure however led to a sharp rise in the depreciation charge from £1,464,000 to £1,831,000 and left gross profits £221,000 lower at £7,768,000. Some of this expenditure relates to the new "Harp" lager plants and Guinness has struck its brewing profits after charging all expenses relating to the "Harp" lager venture. Even so, they were still slightly higher than in 1960-61, which suggests that profits from stout were higher. Draught container stout may have played its part and there are signs that Guinness is holding down its costs. On the other hand, non-brewing profits fell and, clearly, Guinness's confectionery interests felt the effect of the purchase tax introduced in the last budget. The dividend, maintained at 22 per cent, is still covered 1¾ times and the 10s. shares at 44s. yield 5 per cent.

Bass, Mitchells and Butlers.—An interim report from this brewery suggested that consolidated "disposable profits" would not be very different from those of 1960-61. This has proved to be slightly on the pessimistic side, for in the first full year of the merger the group's gross profits rose from £8,670,000 to £8,986,000 and, ignoring the previous year's exceptional profit arising from the duty surcharge, net equity earnings rose from £3,876,000 to £4,091,000. The dividend, held back by the request for restraint in 1960-61, has been raised from 11 to 12½ per cent and is still covered about twice by earnings. The results suggest that the group may have benefited from the

Handley Page

HE publication of the full report and
accounts of Handley Page led to
her fall in the price of its 5s. shares.
re is little in the statement of Mr
. D. Russell, the successor to the late
Frederick Handley Page as chair-
to suggest the fall is unjustified. Even
urrent price of 10s. 4½d. is sustained
by the possibility of a bid ; and on this
, Mr Russell says "there are no nego-
ns in hand at this time and I do not
of any likely proposals in the offing."
:over he discloses that Sir Frederick
many approaches to other companies
e past but with no success and that
gh one tentative offer was made over
years ago it was withdrawn almost
:ce.

mediately, therefore, the price of the
:s turns on the company's trading
prospects following a year in which a net profit of £190,000 was turned into a net loss of £828,000 and the ordinary dividend was cut from 15 to 5 per cent. Mr Russell says that the present high level of activity should continue for several years, with Government contracts accounting for 75-80 per cent of the work and apparently being more remunerative than in the past ; he expects profits in 1962 to be sufficient to "permit an improvement in the dividend rate," but this is subject to the important proviso that liquid balances will be strong enough to permit a higher payment. In view of this qualification it may be fortunate for shareholders that the company takes almost a year to prepare its accounts. Outstanding settlements on contracts with the Ministry of Aviation, the high level of activity and the need to finance work in progress on the Herald left stocks at over £8 million at the end of 1961, when bank overdrafts amounted to £4 million (against £3¼ million). And overdrafts are likely to have risen still more by the end of this year. Mr Russell expects some improvement in liquidity next year but this, in turn, depends on the speed with which price settlements and bigger progress payments can be negotiated.

The 1961 loss largely arose from the decision to write off all excess production costs (amounting to £1 million) on the first batch of Heralds. This decision appears to have been taken in the light of "the diminishing volume of Government work available to the industry generally." Mr Russell does not say how many Heralds have been sold ; but so far it is clear that the break even point, put at between 80 and 90, is still some way off. He simply says that some of the second batch have been sold and the remainder are under offer. If the whole of this batch were sold the total excess production cost of £1.2 million (£200,000 being written off in 1960 and £1 million in 1961) on the first batch would be more than recouped ; but shareholders need hardly be reminded by Mr Russell that "this second batch is not yet all sold." The 5s. shares yield 2.4 per cent and even on the very optimistic assumption that the dividend might ultimately be restored to 15 per cent the yield would be no more than adequate.

Tube Investments

THE shares of Tube Investments fell 3s. 3d. to 55s., to yield just over 5 per cent, following the forecast of lower profits made by Sir Ivan Stedeford at this week's annual meeting. His additional comments echoed the assessment of future prospects he made in the statement circulated with the full accounts but standing in isolation they gained in impact and had a depressing effect on equities in general.

Sir Ivan told shareholders that the measures so far taken by the Government to stimulate the economy were unlikely to bring about an appreciable revival in industrial activity before the spring and that as "the prolonged home market stagnation" has "checked confidence" as well as curbing spending and profits he thought it was unlikely that a revival in business confidence would push up demand before then. As TI's financial year ends in July the greater part of its trading year will then be over and Sir Ivan thought that profits for the first six months at least would suffer "some further setback." These comments bear out the view expressed in these columns last month that investors looking for recovery in TI should look toward the trading results of 1963-64 rather than those of 1962-63.

Westland Aircraft

THE results of Westland Aircraft, Britain's only manufacturer of helicopters, pleased the market and the 5s. shares rose by 1s. 3d. to 13s. 3d. to yield 6¼ per cent. Gross profits in the year to September 30th rose from £2,782,000 to £3,064,000 and the dividend has been raised from the equivalent of 14.7 per cent (9 per cent, tax free) to 16½ per cent. The bigger dividend is covered just under three times and the earnings yield is thus over 18 per cent. This reflects the market's assessment of the somewhat clouded future for British helicopters following the Government's decision to drop the Rotodyne project, on which some £11 million of public money had been spent. There is now no big helicopter-airliner under development in this country but Westland has licensing agreements with the American companies, Sikorsky and Boeing, for the Vertol 107 model. It remains to be seen, however, whether these companies can produce an economic helicopter of airliner size. This uncertainty underlines the importance of Westland's other interests including Normalair, which makes aircraft equipment, and Westland Engineering.

A £3 million debenture issue is proposed to "repay bank indebtedness and for general purposes." This suggests that stocks and work in progress (which rose by £2¼ million to £12½ million in 1960-61) may have risen still further in the past year and that bank overdrafts have risen above the end-September, 1961, level of £835,000.

Mercantile Credit

THE improvement in the results of Mercantile Credit is in line with the recovery in profits reported last month by Lloyds and Scottish and North Central Finance. Mercantile's profits before tax rose in the year to September 30th from £678,000 to £1,092,000 and profits after tax are £222,000 higher at £596,000. But minority interests absorb £101,000, against £29,000, so that net profits are up from £345,000 to £495,000. The final dividend is 6 per cent making 8 per cent for the year, compared with 7½ per cent. The improvement in profits has obviously occurred in the second half of the year since the interim was cut from 5 to 2 per cent in April.

The sharp rise in minority payments partly reflects the increased earnings of the equipment leasing subsidiary, but the bulk of the payments go to the Standard Bank which has a 40 per cent holding in Mercantile's African interests. Profits in South Africa have improved ; profits in Rhodesia have reached a record ; and the company has recovered an earlier loss in East Africa. This means that probably less than a third of the £222,000 improvement in profits after tax can be attributed to operations in Britain. This contrasts sharply with the results of other companies which have tended to show rising losses in their overseas operations which have offset higher domestic profits.

THE MONEY MARKET

THE main influence on the Treasury bill tender on Friday of last week was this Monday's release of £40 million of special deposits. A heavy demand for bills was expected from the banks and to get a good quota the syndicate of discount houses raised its bid for the £210 million 91-day bills on offer by 5d. (a reduction of 1s. 8d. per cent in the rate) to £99 1s. 11d. The average rate of discount fell by only 1s. 5.17d. to £3 12s. 4.30d. per cent, but applications for these bills were sharply up by £37 million to £392 million and the market's quota rose from 39 to 44 per cent.

The bill rate has now fallen by ¼ per cent in the past five weeks despite official attempts to check the fall. On Friday of last week the authorities followed the market's increase in its bid by forcing six or seven of the twelve houses to borrow a moderate amount from the Bank of England at Bank rate. And on Tuesday the market was again in the Bank. This latest fall in the bill rate now means that the market's profit margin on bills has once more disappeared.

The Public Works Loan Board has cut its rates for loans of over 15 years by ¼ per cent to 5⅞ per cent ; this is the sixth cut this year. Market rates for mortgages for over two years are now also at 5⅞ per cent.

APPOINTMENTS

MARKET RESEARCH EXECUTIVE — **RETAIL AUDIT RESEARCH**

Petfoods Limited have a vacancy in their Market Research Department for a Market Research Officer to take control of an existing large-scale retailer and wholesaler panel. The position involves, in addition to sample design and maintenance of the main Panel, responsibility for test market panels, and other "ad hoc" trade research.

The selected man will not be over 35 years of age and is likely to possess an Honours degree which embraces statistics, though academic achievement will be considered together with research experience and other personal qualities.

The starting salary will not be less than £2,250 per annum and the Company operates a Social Security scheme covering non-contributory pension, sickness benefit and life assurance cover.

Applications outlining qualifications should be addressed to:

The Chief Personnel Officer,
PETFOODS LIMITED
Melton Mowbray, Leics.

FEDERATION OF RHODESIA AND NYASALAND

TAX OFFICERS AND ASSESSORS: DEPARTMENT OF TAXES

Applicants with qualifications of either B. Com. or Final C.I.S., or C.C.S., or C.A., or A.S.A.A., or A.C.C.A. for appointment as Tax Officers.

GOOD STARTING SALARIES which depend on qualifications and experience, in the range of £860 to £1,220 p.a. (With effect from January 1, 1963).

GOOD PROMOTION PROSPECTS after serving at least one year on a salary of £980 p.a. in the Tax Officer grade, automatic promotion to Assessor Grade II with commencing salary of £1,320 p.a.

THREE-YEAR CONTRACT APPOINTMENTS. AS ASSESSORS GRADE II and higher salaries offered to Chartered, Incorporated or Certified Accountants with at least one year's post qualification experience, and applicants with B. Com. degrees or Final C.I.S. or C.C.S. with three or more years post qualifying accounting experience.

LOW INCOME TAX

ATTRACTIVE CLIMATE AND SPORTING FACILITIES

PASSAGES PAID TO FEDERATION FOR SELECTED APPLICANTS.

Application forms and further details from: The Secretary (R), Rhodesia House, Strand, London, W.C.2. Closing date December 31, 1962.

FINANCIAL TRANSLATOR
(French into English)

International organisation in Paris needs full-time competent translator from French into English. Familiarity with Stock Exchange matters essential, economics training desirable. Residence Paris. Accommodation may be arranged. Please reply with handwritten C.V. to Box 1675.

STATISTICIAN

A man aged 21/30 is required by HEINZ, manufacturers of the 57 Varieties, to take up an interesting appointment in which he will develop the use of statistical principles in our Head Offices and Factories with particular emphasis on the design and analysis of experiments.

Candidates should possess a University Degree or equivalent in mathematical statistics or a mathematical degree with post graduate statistical experience.

The conditions of employment attached to this appointment are excellent, the commencing salary will be appropriate to qualifications and experience and the right man will find plenty of room for development.

Full details will be discussed at interviews which will be arranged promptly.

Applications stating age and briefly outlining personal history to date should be addressed:

The Personnel Officer,
H. J. HEINZ CO. LTD.,
Wavelow Road,
Harlesden, N.W.10.

For further appointments and other classified advertisements see page 1159

ECONOMIST or *Statistician*; experienced handling travel statistics; interesting post involving overseas work.—Write Box 1674.

A leading company in the London area mass marketing a wide range of toilet and cosmetic preparations have a vacancy for an

ECONOMIC STATISTICIAN

The successful candidate will be responsible to the Market Research Officer for the direction of the market research activities, and in particular will be expected to initiate a statistical sales forecasting procedure.

Applications are invited from men under 28 years of age. They should be well qualified in statistics; for example with a statistics as a principal subject in an economics degree, or with A.I.S. membership, and have some experience of economic forecasting or consumer goods marketing.

Starting salary will be within the range £1,200-£1,500. If you are interested you should write to Box AL 4128, c/o Whites, 72, Fleet Street, London, E.C.4, giving details of qualification, age and job experience. All applications will be acknowledged and interviews will be arranged promptly; if an evening appointment is preferred please mention this.

R.T.Z.

The Economic Adviser to the **RIO TINTO-ZINC CORPORATION,** an Organisation with extensive Mining and Industrial interests, requires an Assistant Economist with statistical experience, primarily to carry out studies of the long-term demand for minerals in the free world by regression analysis and other methods. A promising appointment for the keen research student who should be between the ages of 25 and 30.—Write in confidence, also salary expected, to the Economic Adviser, 6, St. James's Square, S.W.1.

EXCEPTIONAL OPPORTUNITIES FOR OUTSTANDING MEN

The challenge of European and world markets is intensifying and the need for outstanding men in the British motor industry is insatiable: Ford of Britain intends to be at least as efficient as the best and offers exceptional management opportunities to men of real ability.

Able and ambitious men who can demonstrate that their record really is outstanding are invited to write personally to J. N. R. Barber, Director of Finance, Ford Motor Company Limited, Dagenham, Essex. Evidence of such ability may be unusually rapid progress in large scale industry, or may be a first class honours degree in any subject, or perhaps early promotion in Government service or the Forces. Genuine ability to achieve something is more important than particular experience. Initial salary will depend on the worth of the individual and progress both in status and remuneration will be based entirely on results.

The first assignment will probably be in the finance activity in the broadest sense but this is unimportant as, wherever a man begins his career in Ford, he can progress in a variety of directions to the top. Finance participates in policy making and major Company decisions and is a suitable starting point for men of any background.

Opportunities are available now to men within the age limits 28-38. Interviews with suitable applicants will be arranged promptly after receipt of replies and immediate offers will be made to selected candidates. Replies should be brief and factual.

Ford

UNIVERSITY OF ST. ANDREWS

Applications are invited for the following posts in Queen's College, Dundee, in the University of St. Andrews, commencing October 1, 1963:

Two Lectureships in Economics
One Lectureship in Geography
One Lectureship in Modern History
One Lectureship in Political Science
One Lectureship in Psychology

Salary scale: £1,150 x £50 to £1,500 x £75 to £1,950 (efficiency bar £1,500). Placing according to qualifications and experience. F.S.S.U.; family allowance; grant towards furniture removal expenses. Applications (6 copies) containing the names of three referees, to be lodged not later than 19th January, 1963, with the Secretary of the University at Queen's College, Dundee, from whom further particulars may be obtained.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for a post as Senior Research Officer in the Economics Research Division. Duties partly administrative and partly academic. The Officer would be in charge of the administrative arrangements for applied research work in consultation with staff in Economics. He would have time to develop his own research interests, and could if he wished do some teaching. Academic qualifications in the field of economic statistics important and a flair for efficient administration and handling junior research assistant staff essential. This is a new appointment and is part of a general scheme to develop the Research Division in Economics. Salary scale £1,200 x £50—£1,500 x £75—£1,800 a year, plus £60 a year London allowance. A higher maximum may be approved for a candidate with exceptional qualifications. Appointment in the first instance for five years. Applications, with the names of two referees, should be received by the Secretary, London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2, not later than January 7, 1963.

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y.
Published weekly every Saturday, fifty-two issues a year, in London, England

The Economist this Week December 22, 1962

AN UNFAILING BLUES CHASER

On December 3rd Mr John Crosby, pontificating in his own whimsical fashion from Paris, told readers of the New York *Herald Tribune* of the food for reflective and even melodramatic musing which he said he got from the digest of *The Economist's* contents which usually appears on this page. We feel that, at this season of the year, the readers of *The Economist*, for whose help the digest is solely intended, can fairly be given the chance of sharing Mr Crosby's peculiar pleasure.

When I'm blue I read the first page of *The Economist*. Never fails to cheer me. You think things are in awful shape. Then you read under "*The Economist* This Week" (which is a sort of table of contents): "The Anglo-Japanese trade treaty is likely to show firm resistance to the extreme demands of the wool industry."

So long as someone is resisting the extremists in the wool industry, I feel I can carry on. Actually, this is the first time I've known there were extremists in the wool industry. Most of the guys I know in the wool dodge are pretty temperate fellows. Go home to their wives every night. Vote straight Republican. The radicals among them have long since fled into something more dashing —like nylons, or rayon acetate. (Oh, that rayon acetate crowd! Wow!) "No woolly thinking in woollens" used to be the watchword in Providence which is the only place I got really close to the wool mob.

SHRINKING CYCLES

It's not so much what *The Economist* writes about—after all, our business pages can get pretty steamed up about the extremists in the wool caper, too—but it's how they write about it, the vigour and clarity of their style that gets me all choked up about problems I didn't think I could care about. "The shrinking cycle industry thought a better bicycle could not be built—but a new miniature may prove them wrong. (Page 601.)" One can't help caring when confronted by resolute prose like that.

"By George, they've turned the corner in the shrinking cycle industry," I exclaim, giving "Eli Yale" with three "shrinking-cycle-industrys" at the end, throwing my hat in the air, and turning to page 601—all of which can be done simultaneously with a little practice.

ACROSS THE WASHING MACHINES

Well, it was a mistake to turn to page 601. The shrinking cycle industry is not out of the woods by any means. I should have stayed on the table-of-contents page, which contains just the right mixture of hope and fantasy. For instance: "Mr Bloom and Sir Isaac Wolfson face each other across the washing machines. (Page 599.)"

I have learned not to go poking into page 599. Just leave it alone. The teaser on the table-of-contents page in *The Economist* is like those side-show posters for the half-man, half-woman. The stuff inside the tent doesn't live up to the promise. That teaser, for example, conjures up a mental image of Mr Bloom and Sir Isaac Wolfson glaring at one another across an automatic washer, pistols on their hips, hands at the ready: "Lay one finger on that machine and I'll draw." But it's not like that at all.

FRIGHTFULLY CASUAL

The secret of *The Economist* style is this way of being fearfully dramatic and sweeping about—well, the shrinking-cycle industry and the extremists in the wool business. On the other hand, when they go into high policy, *The Economist* gets frightfully casual. "The high risks of East European politics seem to have cost Bulgaria a Prime Minister. (Page 555.)" You can't get much cooler than that. Prime Minister gets sacked and *The Economist* headlines it: "No Room at the Top."

But it's when they're writing about money that my appreciation of *The Economist* is at its purest. I've never had any money and I know absolutely nothing about the stuff, so when I read about money, it's like looking at abstract painting. Pure aesthetic appreciation divorced from all worldly connotations. *The Economist* writes about money with classic balance, the sentences marching with the dignity of a frieze on the Parthenon. "A reasonably firm tone in the gilt-edged market, even if it is not accompanied by the sharp rises that characterised dealings in autumn, could be of some help to equi in the winter months."

EQUITIES, O EQUITIES

By Jove, that's a sentence. I don't kr what it means, but it has a cathedral gr deur about it. You could set it to or music, that sentence, a sort of hymn cal "Equities, O Equities, In the Wir Months."

After I get through reading about mo ("hitherto the liquidity in the banks been mainly regulated by selective rat than general measures") I like to taper with a few rips from the business no "Most things about the history of Gatw contain a streak of the irrational." ("Academic discussion about the energy pr lems in Germany took on a note of dra last week end."

It's best if you don't pursue these sto any farther than those opening sentences. like to think of a business firm [*sic*] wit streak of the irrational in it. I don't even kr what an energy problem is, but so long it has a "note of drama"—not a lot of dra just a note—I think we're all right.

This Hawker Siddeley locomotive, the first of a new class in the British Railways 2,000-2,750 h.p. (Type 4) power range, weighs 114 tons and is just over 63' long.

The thousands of British schoolboys who make a hobby of 'spotting' trains will have to open a new page in their notebooks! For British Railways are bringing a new 95 m.p.h. diesel locomotive into service. Developing 2,750 h.p., it is the most powerful single-engined diesel locomotive ever built for service in Britain. The new design is lighter and more versatile than current types, and is the first of a new class in the Type 4 power range for express passenger and high-speed freight services. This is a Hawker Siddeley locomotive, built at their Brush Electrical Engineering works, and was designed by Brush in conjunction with the British Transport Commission's Chief Mechanical and Chief Electrical Engineers. The BTC's Design Panel collaborated in the external design and colour scheme which is olive-green with a broad band of light green around the waist. Number D.1500, which has recently been handed over to B.R., is the first of a batch of 20. Others will be built in British Railways workshops, as well as by Brush, for the London Midland, North Eastern, and Western Regions.

VOLUME CCV - NUMBER 6226

Loofers, Arise!

A BURNING sense of injury can develop in a human group that suffers repression or discrimination only when it realises that it is a group. Intelligent oppressors take pains, therefore, to rob their victims of all sense of identity, to force them to think and speak in terms that perpetuate the oppressors' scale of values.

Today's world is acutely conscious of "the revolution of rising expectations." It sees dependent peoples emerging, and claims for equality asserted by religious minorities, racial groups subject to discrimination, outcasts and outcastes of all kinds, even women (*pace* the Saudi Arabian delegate who recently, in the United Nations Assembly's social committee, riled his female colleagues with some unashamedly traditionalist remarks about woman's place). We have reached the stage when a senator from the American South can find his junketing cut short by brusque rebuffs from African governments. (Why does a devoted segregationist seek African hospitality at all?) Something, at least, is being done to advance the claims of each of the great submerged groups—except for one, which, although it may represent anything up to half of the human race, has yet to find a voice.

All the other struggling groups have their international organisations, their banners and slogans, their word in the world's ear, their listing in the Universal Declaration of Human Rights. But that last word is itself the clue to the peculiar degradation of the last great mass of the still submerged: the left-handed.

Their physical status has, admittedly, begun to improve. Sinistral children are now less often made to undergo forcible dexterisation. But the left-handed are still trapped in a position of moral inferiority that has been dexterously imposed on them for many centuries. Most of those who have not lost all sense of group identity have been made so ashamed that they keep silent. The few who speak out find things so well rigged against them that they must even phrase their claims to fair play in the loaded words devised by their oppressors: they are forced to demand their Rights.

Language, indeed, is the most powerful instrument that has been used to cow and confuse them. Glance at the dictionary:

> **Left:** *primary sense, "weak, worthless," represented in Dutch dialect* **loof**. . . .
> **Gauche:** *tactless; without ease or grace*. . . .

The poor loofers are not merely identified with all that is feeble and inept. They are given a viler brand:

> **Sinister:** *left; of evil omen; ill-looking; wicked; flagitious*. . . .
> **Sinistral:** *left-handed; adverse; unlucky; darkly suspicious; heterodox; unsound*. . . .
> **Sinistrous:** *erroneous; perverse; malicious; unfair; dishonest; corrupt; underhand*. . . .

The dominant dexters who slanted the Shorter Oxford Dictionary with as much partisan zeal as the compilers of Soviet encyclopaedias were not satisfied until they had thrown in, innocently disguised as examples of usage, some blatantly false statistics and a frankly racist association of the loofers with another "lesser breed":

> *"Two per cent of mankind are naturally sinistral" (1904).*
> *"The typical Irish immigrant, with his sinister animal features" (1864).*

Note, furthermore, the ruthless way that (at least, in the old SOD) the word "left" is assigned the obscurest possible origins in low Dutch, whereas

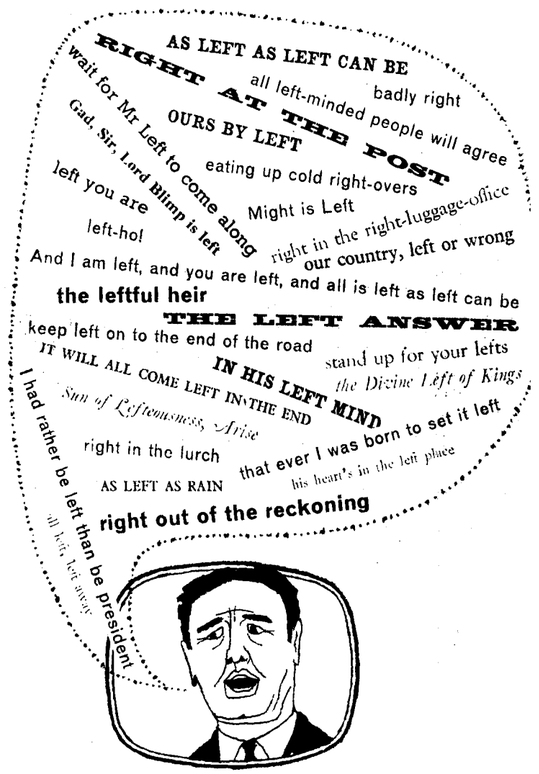
"dexterous" is awarded a noble pedigree, going back to the Sanskrit *daksha*.

The dexterous oppressors have, of course, identified their own side with all that is virtuous, efficient, and—ugh—right. They have sown the language thickly with right-minded words such as adroit and direct, correct, righteous and upright. And not content with scooping into their hand the meanings of accurate, straightforward, lawful, honest and proper, they have extended the use of "rights" to embrace the very elements of justice and equality which, in practice, they deny to the submerged southpaws.

Still more adroit (and, since we must use their terms, sinister) is the way they have associated their side with established authority and irresistible power. This is a much more profound phenomenon than the mere use of "right-wing" as a label for political conservatism. The political distinction between so-called Right and Left is no more than a surface shimmer (doubtless originally meant to blind gullible loofers), which conceals the unchanging bedrock of dexter domination. True, strong semantic links have been forged between the virtues claimed for the right hand and the conservative institutions of monarchy and militarism. The Latin *regere,* to rule or make straight, with its participle *rectus,* straight or right, has given us regal and reign, regiment, regular and regulations, as well as rectify and rectitude. But *dirigisme,* a political-economic doctrine associated with the "left" and abhorred by traditionalists, comes from the same stock. There are left-wing regimes as well as right-wing ones. There are directors in every Soviet industry as well as in Belgrave Square. And when communist China cracks down on heretics it does so in a "rectification campaign." Thus the so-called "left" also insists that might is right.

INDEED, it is by no means only the English-speaking world that has undergone this massive and sustained process of brain-washing. The poison has been injected wherever European tongues are used. In French, Italian and Spanish **droit, diritto** and **derecho** connote not only legal "rights" but also the very laws themselves. **Sinistre, sinistro** and **siniestro** carry the usual ugly echoes, indeed more of them ; the French use **sinistre** as a noun to mean a disaster, whose victims are termed **sinistrés.** The French **gauche** and **gaucherie** need no explanation. (Note how adroitly the *Rive Gauche* in Paris has been given a shady reputation, despite the presence there of such respectable elements as the Institut, the Panthéon, the Invalides and the Luxembourg ; while a conspiracy of silence surrounds the fact that in London the royal palaces, Parliament and the gilt-edged City itself are all on the Thames's left bank.)

The German **linkisch** matches *gauche* ; in Italian **manca** and **mancino** are loaded with pejorative meaning and surrounded by denigratory associates—**mancatore,** a defaulter, **mancanza,** neglect, **mancamento,** a swoon. On the other hand (to coin a phrase), the adroit but upright Italian **direttore** or **dirigente** can display either **destrezza** or **destreggiamento** without necessarily sacrificing his **drittura, dirittezza** or **dirizzamento.** The German, of course, can make reverent compounds with **recht** and **Recht** and **Rechts,** *ad nauseam.* Here again appears the association with authority, by way of **regieren** and **Regierung**—to **Reich,** indeed. Who has the **Regiment,** as they say, wears the trousers.



As they should be, the Russians are relatively kind to th Left, though they share with Germans and others the di couraging concept of "rising with the left foot" (getting o of bed on the wrong side). Surprisingly, however, the Rig is most shamelessly adored in the Soviet Union. Less su prising, on reflection, is the way the Russian language giv it not merely an oblique association with authority but a open identification with both orthodoxy and governmer Grouped around **pravy** (right-hand, rightful, upright, inn cent) and the familiar **pravda** (truth) are a great family derivatives that thunder like a massed Soviet choir praisi the Leadership and its holy Line:

pravdivost	veracity
pravdopodobie	verisimilitude
pravednost	righteousness, sinlessness
pravilo	principle, rule, regulation
pravilny	correct, sound, proper
pravilnost	accuracy
pravitel	ruler, governor
pravitelstvo	government
pravlenie	management, government
pravo	law, right
pravoporyadok	law and order
pravoslavny	orthodox
pravosudie	justice
pravota	legitimacy, integrity
pravovernost	orthodoxy
pravyashchy	ruling (as in "ruling circles")

Words of power, indeed, and as right as right can be. One might be tempted to see a concession to sinistrals in the word **pravolevatsky** (right-leftist) ; in fact, however, this is not even an ambidextrous gesture, but a term for a type of deviation that is very properly (**pravilno**) frowned upon.

MERCIFULLY, these essentially western concepts—traceable in many cases to Greek origins—have not altogether prevailed over the more fairly balanced pattern of the non-European cultures. At certain times and in certain places, outside Europe, it seems the loofers have actually been in the lead: for example, when the Arabic and Hebrew scripts were devised. The traditional method of Chinese writing, in vertical columns starting from the right, also suggests a mildly sinistral tendency. (The impact of the Western doctrines of Marx and Engels can be seen in the fact that China's newspapers are today printed horizontally, from left to right—a fresh triumph for the dexters, though perhaps their last.)

Before the age of European dominance, in fact, the world was a more balanced place in this respect as in some others. Balance being a basic Oriental concept, whether expressed in terms of *ying* and *yang* or otherwise, it was natural for the Chinese to honour the right hand in certain matters, but to seat a guest of honour on the host's left (Christian missionaries found it difficult to explain to them why Jesus was placed at God's right hand). Contending Hindu sects identified themselves as men of the right hand or of the left, neither wholly prevailing. And, of course, the incompatibility between the Hindu left-to-right scripts and the right-to-left Arabic script

COMMITMENT TO BE SHED

Trustees have seldom an agreeable duty. And it does not tend to increase the agreeable nature of that duty that the object held in trust should have a will, and a very active will, of its own, as well as the persons for whose benefit the trust is created. England has for nearly half a century been political trustee of the Ionian Islands—the protecting Power appointed by Europe to prevent their falling into dangerous hands. And the trust has certainly not been agreeable, nor is it easy to show that it has been very useful. We have had all the practical responsibility of ruling these restive islanders, and none of the Imperial advantage or credit. It has diminished our resources, and also diminished on the whole rather than increased our political influence. The military and naval advantage of Corfu may be something, but it is small. The political disadvantage of *appearing*—as we have appeared, though only appeared—to tyrannise over a most disaffected population, while recommending everywhere else principles of freedom which we despised ourselves, has been very great. . . . On the whole, the only thing perfectly certain is that England would be a vast gainer by washing her hands of the Ionian responsibility, if she can do so with dignity and honour. Whether she *can* do so with dignity and honour is a question which only negotiation can determine. But let us at least remember that the selfish side of the question for our politicians ought to be a very clear one. No solution of the Ionian question could be so bad as a development of our Protectorate into an absolute Imperial right. The Ionians have really as little substantial sympathy with English political principles as the Bengalis, but they are much more active minded, much more unmanageable, and much nearer to other great Powers with whom they might easily embroil us. . . . It would be far better for the Ionian Islands to suffer with Greece than to prosper commercially under the flag of Great Britain. Through the one condition they may pass at last into substantial elements of a great kingdom ; through the other they can only acquire a chronic tone of helpless dissatisfaction with themselves.

used for Urdu and Persian by Moslems lay at the bottom of the communal antagonisms that have marked India's history.

In the western world, meanwhile, the dexters were grimly consolidating their power. The strong right hand of Rome, as we have already seen, was brought down on the side of all that was rexist, regulatory and regimented. Medieval chivalry thrust the poor loofers deeper into the mire with its scornful usage of the bar sinister in heraldry. The Papacy played its part. As a recent correspondence in the *Daily Telegraph* has recalled, it was Boniface VIII who in 1300 AD established the "keep left" rule of the road—a rule which, of course, favours the dexterous. (If two men, passing each other on this rule, come to blows, the right hand is better placed for combat.)

Throughout these centuries of subjection the only recorded sinistral success in an essentially one-sided cold war was the introduction, by an unknown but obviously resentful loofer in the medical profession, of the term rectum for a little regarded part of the human anatomy. Not until the arrival of the age of revolution was a real advance scored with the European swing to the "keep right" rule of the road. The conversion of Britain to this sinister traffic system may now be envisaged as one of the loofers' more immediate goals. (Their attempt to convert Sweden to it a few years ago was most dexterously foiled ; their antagonists rushed through a relaxation in the liquor laws, and then adroitly argued that to make the two reforms simultaneously would mean a heavy loss of life. A second effort is to be launched in Sweden next year.)

The march of technology has certainly evened things up a bit. The dexters' advantage in hand-to-hand combat on the highway has already lost much of its value. Even before the advent of dual carriageways and one-way streets, the disappearance of the horse had destroyed the old ascendancy ; a traveller's dexterity with sword or whip no longer assured him the upper hand. The typewriter has come to the rescue of many forcibly rectified sinistrals whose handwriting had never regained legibility after their conversion in childhood. The military advantage enjoyed by the right-handed during the age of the bolt-mechanism rifle has passed away. In the nuclear age, when the button, unfortunately, can be pressed with great facility by either hand, or by a big toe if it comes to that, all's fairer in war than it was.

It is on the psychological front that the loofers have still to achieve their breakthrough. Language and thought must be purged of discriminatory elements, including such patronising terms as "ambidextrous." But the former oppressors need not fear that the right hand will now in turn be required to knuckle under.* Sinistrals do not seek to gain the upper hand ; they ask only the equality that is theirs by left. Whenever, as lately on the cricket field in Australia, a Dexter shows himself of outstanding ability, a very Parfitt gentle loofer will still be willing to accept his leadership. But the last and largest of the world's great submerged groups, now awakening from its long stupor, will not be content until an ambisinistrous world finally accepts a Universal Declaration of Human Lefts.

* Among loofers, as in other communities, there are both activists and moderates. A splinter faction which, in any other movement, would be called the Direct Action group, but here is necessarily known as Sinister Action, is planning to organise sub-editors to ensure that in future issues of British newspapers the word "left" will appear as "deft," while "right" becomes "blight," "direct" becomes "defect," and so on. For instance: "*The deft-hander Parfitt today scored another century*" ; or "*The strong stand taken by the Institute of Defectors will be supported by all blight-minded people.*"

Rhodesia Exploded

Sir Roy Welensky's Federation of Rhodesia and Nyasaland has been blown apart by the events of the past week. What next?

LAUNCHED from Whitehall, Mr Butler's skybolt burst over central Africa on Wednesday afternoon. "Her Majesty's Government," said the minister for central Africa, "accept in principle that Nyasaland shall be allowed to withdraw from the federation." Coming hard upon the formation of the first African nationalist government in Northern Rhodesia on December 14th, and the electoral victory of the Rhodesian Front, which led on Monday to the installation of a rough-and-ready white nationalist government in Southern Rhodesia, Mr Butler's statement in the Commons was of the epoch-making kind. The Federation of Rhodesia and Nyasaland, born in 1953, is now to all intents dead.

Standing up bravely in the debris in Salisbury, Sir Roy Welensky, whose federation it was, disappointed neither his critics nor his admirers. "Treachery," he thundered; "the British Government have ratted on us." To support him, his government issued a lengthy white paper to prove treachery; British officials in London began to deny the allegation before the print was dry. The argument may be long, but it is academic. The important fact is that Sir Roy's white charger has bolted from under him. No longer can he be the knight to rescue the Europeans of the Federation of Rhodesia and Nyasaland from horrid reality by leading them towards the will-of-the-wisp of a non-racial future of government-by-moderates under the banner of the United Federal Party. The UFP is out of office everywhere—except within the federal sphere, and its position there cannot be held much longer. Its philosophy—that the white establishment could be kept on top by selectively admitting the right sort of black "partners"—has been proved unworkable; and the whites themselves have lost faith in it.

Only a short time ago Sir Roy, as big and brave a man as any man of any colour in southern Africa, seemed to command a British central Africa that might, as many firmly believed, have become the non-racial answer to both African nationalism and apartheid; today his position has crumbled. He is prime minister in a federal parliament in which most members were returned unopposed and in which those members who did fight elections came in on derisory polls. Sir Roy's mandate rests upon ten thousand votes actually cast for his party (in the contested seats, that is) in April. The population of the federation is 8½ million; there are around 120,000 voters (110,000 white). "He has no territory"; that, it is said, was Mr Macmillan's own comment not many months ago on Sir Roy, comparing him in characteristic historical analogy with the medieval monarchs who were outfaced by territorial barons. Now the barons, black and white, have it: Sir Roy has not turned out to be a Tudor.

Mr Field: he has a territory

WHAT can now be expected to rise out of the federal ashes? There are several possibilities; Mr Butler is keeping his eye on all of them. His statement in the Commons on Wednesday hinted that he might like to see some links retained between Northern and Southern Rhodesia, but his mind is not made up. It was his blank refusal to promise that the two Rhodesias would be kept together that made Sir Roy so angry; the casting off of Nyasaland, which had long been expected, was less bitter.

Whatever happens, Mr Winston Field, new prime minister of Southern Rhodesia, may, oddly perhaps, get on better than did Sir Edgar Whitehead with the northern black leaders. Dr Banda has already said that he and Mr Field can talk straight to one another. Mr Kaunda has said the same; Mr Nkomo, however, has not shared their anticipation. Now that Dr Banda's Malawi state has won its right to secede, it might be as well to look at what he and Mr Field could patch up. Nyasaland's secession will take between nine months and a year to arrange. Demands will be made upon Nyasaland during all the technical wrangling to pay its share of the federal debts. Dr Banda will probably feel that he cannot afford this. Hence his very likely need to come to terms with Mr Field, who stands frankly but, himself, moderately for white supremacy in his own fief.

Northern Rhodesia's Africans are as determined as Nyasaland's were to break the federal chain. Yet here again economic self-interest might drive Mr Kaunda and Mr Field towards a bargain. Mr Butler must be hoping that something will be worked out by the time he visits the three territories again early in the New Year, when he will be asked to have a conference on Northern Rhodesia's next constitution.

The ramifications of the new set-up, or break-up, in central Africa spread across the border to Katanga. Perhaps the largest obstacle to Britain's putting economic pressure on Katanga to re-join itself to the Congo has until now been the opposition put up by the federal government led by Sir Roy Welensky. Now that government carries no more weight than it does power. There are good reasons for Northern Rhodesia as well as for the Congo why Britain should back the United States in trying by every means to keep Katanga in a peaceful and prosperous Congo. Mr Harry Nkumbula, Mr Kaunda's coalition partner, as he once was Sir Roy's ally, is Mr Tshombe's man in Northern Rhodesia. The Katanga leader will have a strong finger in making or breaking Northern Rhodesia's new government.

IN Southern Rhodesia, it is hard to see just what the new, still whiter than Whitehead, regime will be able to secure. Sir Edgar Whitehead's newly liberal but sadly overdue policy was to integrate Europeans and Africans in all spheres of life—except politics: he gave Africans 15 years to take over the country; the new men, moderates and extremists alike, refuse to face this ever happening. British policy before Sir Edgar's unexpected electoral defeat was to encourage his victory and then to persuade him into shortening the time-table for African advance. This policy has now crumbled, like so much else. Mr Field's new government is described on page 1207; his policy of dividing the country into black, white and multi-racial spheres of influence might be described as "tri-partheid." Mr Field does not seem to have expected victory; his policies are not yet clear in his own mind, and his virgin cabinet contains a mixed collection of men. This is not necessarily reason for optimism: the histories of South Africa and Algeria have shown that when Europeans have their backs to the wall—which is what Sir Edgar sought to avoid and what, much earlier, Sir Roy, especially, could have avoided—the worst usually happens at each twist of events.

For the British Government, anyhow, the worst may b ahead in Southern Rhodesia. The dilemma may be appalling On the one hand Southern Rhodesia will probably demand– and might just assert—full sovereign independence if this i given to Nyasaland and Northern Rhodesia. Logic gives this right: how can the southern electorate, self-governin since 1923, be denied what is given to the two politically les mature northern territories? There will be temptation her just to run away: if taking the blame for Sir Edgar White head's actions got Britain into such disfavour in the worl what may happen when Mr Field, and his worst friends, g started? Yet, on the other hand, it would be plainly immor and just a dereliction of duty to hand the country over no to permanent white control. This was the historic mistak that was made half-a-century ago when South Africa w given to the Boers. To stay on and face all the music coul open up frightening possibilities: even, at the worst, having to send British—or, failing them, United Nations —troops into Southern Rhodesia to face defiant whi southerners. A Mississippi or an Algiers for Britain is awf to contemplate. But things are by no means yet at such pass. The future is as uncertain for Mr Field, after h narrow success, as for the British Government; and M Butler seems in no mood now to talk about independence f Southern Rhodesia, and willing meanwhile to take the mec cine at the United Nations for as long as may be necessar In this case, the thing to do is not to throw bolts from t sky, but to move with the conventional weapons: cautio diplomacy and courage.

Two and a Half Choices

The Government has again failed to grasp what television can—and should be allowed to—do

THE Government's second bite at the television cherry (Cmnd 1893) is a timid and thoroughly unsatisfying performance. Everything, it seems, must be done in the new Television Bill to delay, obstruct and frankly prohibit the rapid expansion of so dangerous a medium. In sum, the Postmaster-General is proposing:

(1) That there will be no authorisation of a second commercial channel until after 1964 at the earliest (i.e. it cannot start transmitting until 1966-67 or later).

(2) That an "experimental arrangement" will be permitted to test the possibilities of pay-television; this experiment is "unlikely to start before 1964"—one reason being that the Government has already wasted six months since the Pilkington report in steeling itself to give the go-ahead to this modest and sensible venture.

(3) That the BBC will operate the third channel, starting in the south-east in April, 1964, on what, according to Mr Bevins, will be no more than the existing £4 licence fee.

To consider point (3) first. Even if the Government waives its present cut from the £4 licence (and there is no reas why it should, for this is a sensible form of entertainment tax), that will hardly be enough to stretch the new half-channel to the three hours of new material a night which is all the BBC intends to put on—plus "repeats." Or is Mr Bevins going to produce a third white paper in another six months' time announcing that, just possibly, the BBC will be given a direct subvention from the Treasury, which may, or may not, be related to the extra rents from the ITV companies? Any such direct subvention would mean the BBC putting its neck on the chopping block whenever a Chancellor of the Exchequer decided to wield the axe of general economic retrenchment.

TO consider point (1). Cmnd 1893 declares that "there is little evidence of a public demand" for a fourth channel. It would be intriguing to know just what this estimate is based on. Do ministers talk only to Pilkingtonians and existing programme contractors? The strong evidence of public demand for a fourth channel is that new contractors think that enough people would watch it to make their advertisements on it a paying proposition. They may be wrong, in which case they would lose their money and some of the existing commercial contractors (part of whose audiences would be drawn away by them) would make less money too;

but it should be no part of the function of government to hold back further forms of enjoyment from the people in order to protect too sanguine enterprisers from the financial consequences of their possible mistakes. Moreover, the Government does not really suppose that a new channel would certainly meet so little "public demand" as to make it unviable. What it is really doing is to shut the door tight on all advertising revenue as a means of promoting further expansion: the BBC establishment will not touch advertising and the limited experiment in pay-TV is (absurdly) not to be allowed it. Fear of television itself and fear of advertising and the profit motive apparently march hand in hand in the cabinet. It seems to be the Government's wish to do no more than settle down for ever with the present ITV monopolists, provided they can be milked directly into the Treasury by the medium of a new excess profits tax.

The white paper pays lip service to what it calls the combination of public and private elements in independent television; it goes as far as to admit that this principle has "great potentialities." Of course it has. All that is wanted from the Government is to have the courage of its convictions —to grasp the fact that the new television channels ought to be run in precisely this way, preferably on a mixture of both advertisement revenue and licence fees plus the experiment in pay-TV. It would then be right to impose special excess profits taxes on contractors who really were making a killing under this competitive system; and to divide the receipts from these taxes between the ITA (or, better, two ITAs) in order to sustain their public service and news output, and a new Educational Television Authority (a University of the Air) which would run adult education programmes in the spare hours of both the second BBC and second ITV channels.

The Government keeps on saying that adult education on television is potentially a "very valuable field." If it really believes what it says, it ought not to baulk at any method that would provide finance for it. Specifically included among those methods should be permission for a new educational service to show some advertisements itself (this is the basis, after all, on which even the "serious" and "responsible" press works and lives). The refusal to grasp the full potentiality of television as the chief expansionary influence in the worlds of entertainment and information has now ranged the Government almost as surely on the side of illiberalism and restrictionism as the Pilkingtonians themselves.

WITHIN the confines of the existing ITV network the Government has rejected (rightly, and as expected) the full-blown Pilkingtonian idea of creating a second Auntie specifically on the BBC model. There can be no objection in principle to strengthening the ITA's hand to restrain the near-monopoly that the four biggest companies exercise over networking—provided the alternative programmes that the smaller companies have to offer are up to the same standards. In order to try to achieve this, the ITA is to "chair a committee representing all the programme companies" in settling the details of networking.

But the practical difficulty here is that one doubts whether the very small companies (like Border, which has been one of the chief grumblers) possess the resources to put out consistently good programmes of more than regional appeal. The worst solution would be a kind of quota system (as the British film industry used to operate) in which Tyne-Tees, Grampian, Channel Islands and the rest got their compulsory time in London and the Midlands at, say, breakfast time or when the housewives were having their lunch. Anglia Television's success in winning network time shows what can be done when local sights are set high enough even under the present system; the failure of one rather larger contractor, with a lucrative enough franchise, to do more than place one short film programme on the network reinforces the point.

THE fact that some contractors have been much less enterprising than others may seem to some people to justify the Government's decision that after 1964 programme contracts should be renewable every three years, with the warning that unsuccessful contractors may have their franchises cut off. But in practice this is only too likely to persuade the new co-ordinating committee to allow weak companies to network some weak programmes so that they can claim to have been good enough to have "won" some network time. It is also liable to make all contractors markedly afraid of offending any of the powers-to-be by such daring innovations as political satire, as well as scaring away new capital from what ought to be a growth industry.

The most effective way of breaking up any network "ring" is not to cosset the minnows but to let loose other big fish in the major franchise areas, whose competition, on a second independent channel, would be designed to stop the present big four feeling comfortable enough to keep on taking in the indifferent parts of each other's washing. The second BBC channel, further increasing the corporation's revived competitiveness, will help to do this; one would be still more confident of its effect if the new channel could hope to transmit more than three hours' material a night. If the Government will not raise the licence fee, it is all the more imperative that it should be looking at the alternatives. If the BBC will not touch advertising, then let a less squeamish educational authority do so in the remaining transmitting time on that band space. To wait for pay-TV to spread serious competition or serious education among a substantial audience means a delay until at least 1970.

This caution, delay and lack of initiative are fundamental weaknesses permeating the Government's whole approach. Television is to be put under wraps again until its expansion is less bothersome and the supposed political need for "responsible" action (which means inaction) is regarded as less pressing. One's guess (and sincere hope for television's own sake) is that the inadequacies of the present policy will be abundantly demonstrated before the new act has had less than even five years' life. But what a depressing story of lost opportunity in the British people's main medium of information and entertainment Mr Bevins and Sir Harry Pilkington have now been responsible for writing in this supposedly forward-looking age.

Appointments, Business and Personal notices, and other Classified Advertisements: pages 1236 and 1243

The Bird at Rambouillet

The future of national nuclear forces and the future of the European community are two elements in the drama played at Rambouillet and Nassau, as viewed by our Paris correspondent

FRENCH eyes, too, were focused this week on Nassau; to them, the Anglo-American meeting there was a sequel to the traditional Paris pre-Christmas diplomatic jamboree. The December series of international meetings in Paris was, on this occasion, crowned by Mr Macmillan's weekend at Rambouillet, but the entire sequence produced little beyond communiqués. (Aspects of the subsequent Nassau meeting are discussed on page 1184.) The current feeling of satisfaction in Nato quarters here is due more to the Cuban success, and to the obvious signs of a division in the communist world, than to any concrete achievements in strengthening the western alliance. The reference in the declaration published on December 15th, at the close of the Nato ministerial council's meeting, to the need to strengthen conventional forces in Europe was merely a polite concession to American feelings. In practice, the French have shown no sign of a disposition to put any additional divisions at Nato's disposal, while Mr Thorneycroft's remarks the day before have been taken to mean that he wants the alliance to study ways of cutting down its requirements, instead of increasing members' contributions.

Progress was no greater in the nuclear field. The distaste of President Kennedy's Administration for the proliferation of national nuclear forces was well known before the Paris meeting. Some stir was caused by the suggestion of one American official that, should the Europeans agree on a multilateral deterrent, the President might ask Congress to waive its veto rights. Yet even this very conditional suggestion was immediately shot down by spokesmen of the American Defence Department. Besides, when the Americans contemplate a Nato multilateral deterrent they think of a sea-based force. The Germans, on the other hand, want it to be land-based; and the Germans are the only major ally deeply interested in a multilateral nuclear force at all. The end of Skybolt—taken for granted by American experts for both technical and financial reasons—does not mark the end of British ambitions to keep an independent deterrent. As to the French, they are more determined than ever to build one of their own.

Indeed, it may be said that nothing has happened in recent months to alter in any way General de Gaulle's well-known ideas about Europe and the Atlantic alliance. Quite the contrary. In such circumstances, it was idle to expect that Mr Macmillan would return with anything but shooting laurels from Rambouillet. In British quarters, it is held that the Prime Minister's visit was nevertheless wise and diplomatically tactful. On the eve of the trip to Nassau, it was apparently advisable to repeat to General de Gaulle that Britain remains determined to join the European community, and remind him that failure in Brussels would be a major setback for the whole western alliance. In private, French officials suggest that professions of British good faith have the opposite effect on the general from what one might expect. They confirm him in his view that he has no need to sacrifice French agricultural interests or modify his political attitudes. (The French view published in *The Economist* last week indicates the change in argument that has taken place over the last two years or so. Time was when a visitor asking highly placed Frenchmen what the response to a British bid for membership would be was assured that such a bid would prove irresistible, and that arrangements would have to be made to fit such an important newcomer. Now, the fashionable cliché is that the rules of a club are sacrosanct.)

In public, the French are taking pains to appear as the guardians of the Treaty of Rome, not the opponents of Britain's admission. This is quite understandable. The growing resentment in Britain caused by American strictures, and by the Six's apparent lack of enthusiasm in Brussels, has been amply reported in Paris and has made its impact. These signs of impatience are welcomed in some French quarters, where it is assumed that British electoral considerations will finally deprive the Six of the awkward problems involved in adding to their number. But the general view here still seems to be that the obvious blocking by General de Gaulle of a genuine British effort to join would shake the very foundations of the European community. A British Prime Minister might then go to Washington arguing that the French veto sprang from a conception of Europe that the United States had as much reason to dislike as Britain had. If this reasoning were accepted as valid, the American reaction would have immediate effects in Germany and other European countries. The whole equation would thus be altered. In other words, assuming for a moment that the Brussels negotiations fail, the consequences of the failure will depend on whether President Kennedy, and the Five, conclude that French intransigence or British caution (encouraged by electoral calculations) was responsible for the break.

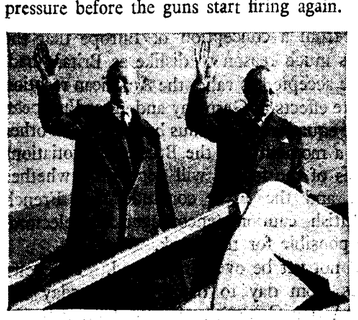
But events should not yet be over-dramatised. The news from Brussels varies from day to day. On Tuesday M. Monnet's influential Action Committee for the United States of Europe hailed the recent setting up in Brussels, under the auspices of the European Commission, of a committee grouping the ministers of agriculture of Britain and the Six as a most useful precedent, which might be imitated in other fields with the aim of speeding up negotiations. M. Monnet's group would also like to see the commission acting as the representative of the enlarged community in talks with the United States. The "Europeans" are far from frightened of closer ties with the United States and do not view Britain as an "Atlantic Trojan horse." When Mr Macmillan paid his previous visit to General de Gaulle in June, the so-called "spirit of Champs" went to the heads of many observers, who then expected miracles in Brussels and were disappointed. The spirit of Rambouillet is not so heady. Yet it is still from Brussels that the answer has to come—possibly next month—to the crucial question whether 1963 will see Britain's accession to the European community, or whether it will be the year of agonising reappraisals.

NOTES OF THE WEEK

NASSAU

Snookered

CANNONING off the ivory-smooth front of General de Gaulle at Rambouillet on Sunday, Mr Macmillan, with the Foreign Secretary, Lord Home, by his side, ran crack into an equally unyielding President Kennedy in Nassau on Wednesday. Where Mr Kennedy could help the Prime Minister by offering to go ahead with the work on Skybolt, he does not want to help. Where he does want to help, on Britain's application to join the common market, he cannot. It is not surprising that, rather than rattle about between these two unpromising topics, the President preferred to steer the conversation as far as possible to a matter in which, for once, the British can help the Americans —the Congo. The United States, which announced on Tuesday that it was sending more equipment to the United Nations force in the Congo and a military mission to the Congolese central government, wants Mr Macmillan to agree to join in pushing Katanga back into the Congo by economic pressure before the guns start firing again.



Off to see the Wizard

Just how agreeable Mr Macmillan is to any American proposition right now is another matter. Mr Kennedy, talking to the Americans on television on Monday night, made it pretty clear that he did not think Skybolt was worth the $2,500 million that would have to be spent on it. But even if Mr Macmillan were privately to accept the logic of the President's argument, as he surely ought to, he can hardly be expected publicly to renounce British hopes of keeping some nuclear independence, with his back-benchers baying against renunciation, until he knows whether or not Britain is joining Europe. If the British application fails, and at the same time the prospect has to be faced that a Skybolтless V-bomber force will lose its punch by 1965, Britain is going to feel very exposed indeed. It is not Mr Kennedy, however, who will determine the outcome at Brussels. It will be almost as bad a defeat for him as for Mr Macmillan if the common market negotiations fail because General de Gaulle patently wants them to fail, since this will be evidence of an inward-looking tendency on the part of the Six that will bode as ill for American influence in Europe as it will for Britain. But General de Gaulle does not have to be patently obstructive; if obstruction is his object (which nobody can prove) he is managing very well with the simple and respectable weapons of the text and institutions of the Treaty of Rome. Indeed, wherever Mr Macmillan looks, he finds the general's figure blocking his next move. Snookered, in fact.

DEFENCE

Tories in Arms

FROM the Nassau conference room the Prime Minister could still hear, 3,000 miles away, the loud baying of the Tory troops for their independent nuclear deterrent. Sir Arthur Vere Harvey's motion demanding it, tabled on Monday, was promptly signed by over a hundred Conservative backbenchers (including that consistent champion of Skybolt, Mr Harold Watkinson). It suggests once again that the only revolt a Tory government ever has to take seriously arises over emotion-laden, and anti-American, issues that affect what is thought to be Britain's historic status. Mr Thorneycroft's own statement on Skybolt said precious little for the earlier hullabaloo in the Ministry of Defence for its retention as the lynch-pin of Britain's security. He admitted that, at best, Skybolt would be costly, late and "possibly not as efficient and reliable" as had been hoped. But he still seems to want it. The point that needs to be grasped is that, for Britain, Skybolt was intended to fill the five-year gap between 1965 (when the existing Blue Steel stand-off bomb becomes obsolescent) and 1970 (when the V-bombers themselves will no longer be credible carriers of the deterrent anyway). Whether or not Skybolt ever flies in America, is Mr Thorneycroft seriously prepared to dig deeply into his pocket to buy it for three years' effective life here?

The new Tory champions of Polaris are perfectly right in declaring that it is now a better option than Skybolt: it exists, it works and the Russians have not yet developed the hunter-killer submarine capacity to cut short its invulnerability. But if the Admiralty were to start building Polaris submarines today, it would not have a credible force (six submarines, 96 missiles) in being much before 1968. The cost would be enormous: what needs to be totted up is not just the estimated minimum cost of £400 million of setting the first fleet in being, but the ever-widening cost of staying in the underwater Polaris business thereafter against the next generation of Russian defensive techniques. There may be diplomatic reasons why Mr Macmillan had to argue for a British deterrent at Nassau, but to tack this new effort on to the British defence budget would make nonsense of any pretension to produce the efficient, well-equipped conventional forces on which any real hope that the defence services may contribute to "Britain's continued greatness" and "Britain's special role" must depend. Does all this really need to be spelled out to Tory backbenchers?

UNEMPLOYMENT DEBATE

An Impression of Hopelessness

THE political importance of last Monday's unemployment debate was that Conservative backbenchers' morale showed some first definite signs of cracking. Labour was in a mood to shout constant interruptions in the middle of both Mr Maudling's and Mr Hare's speeches; in response, even Mr Maudling got very little vociferous support from his own side, while poor Mr Hare was so weakly supported that his confidence virtually disintegrated. The economic importance of the debate was that Mr Maudling's speech suggested that his short-term and his medium-term fears are now pulling him in opposite directions.

The Government now admits that "there is more slack in the economy than one would have thought six months ago" (a judgment to which critics of Mr Selwyn Lloyd's last budget could add some wry comment, and to which the 3 point fall in industrial output in October—discussed on page 1218—adds a shrill scream of emphasis). But the Treasury also calculates (probably rightly) that by the end of next year the effect of Mr Maudling's recent measures in restimulating demand may be substantial. Awkwardly, however, most of the new increases in demand which it is releasing or permitting seem likely to take effect in that probably already reflated medium term, not in the more recession-ridden short term. This will be true of the large rise in government expenditure estimates for 1963-64, which Mr Maudling now expects to be even bigger than the 8 per cent (or £420 million odd) increase in supply expenditure estimates in 1962-63. It will be true of any tax reliefs which Mr Maudling might feel able to make in his budget, especially if that

budget is orthodoxly delayed until April; and of any increases in pensions and other national insurance benefits, increases which the Government is at present "considering." And there are mounting signs that industrial investment is being held back until it is known whether Britain is going to join the common market, but might go forward with a whoosh if we do—which again would have its main impact some time in or after the second half of next year.

Mr Maudling's speech on Monday gave a disturbing impression of hopelessness about his ability to revitalise the short term prospect while keeping control over the medium term one. He must now be beginning to suspect that one October measure which was meant to be short term in its effect—the release of postwar credits —was ill-chosen, because most postwar creditors may be going to save their money instead of spending it. It would have been better to have dared to do something less conventional and more conducive to quick spending—such as giving a special £10 bonus in Christmas week, for this year only, to all old age pensioners. Those in the Treasury and elsewhere who are urging the Chancellor "not to be panicked" into further quick action by the latest output and unemployment figures should bear this difference between the short term and the medium term in mind. One fear for 1963 is that Mr Maudling, having possibly done too little early in the year, might find the economy still so apparently underemployed in April that he might then be tempted to do too much too late before the end of the year.

INDUSTRIAL TRAINING

Mr Hare and Hounds

POOR Mr Hare really does not have any luck. His speech at the end of Monday's debate on unemployment, which was greeted with such gales of laughter and barracking (a less good-hearted man could perhaps have silenced them), contained one small but quite important point which was completely missed in the confusion. This was his announcement that two new government training centres are to be started in Scotland, and one in the north-east, even though the trade unions have not yet agreed to them. These establishments, in areas of heavy unemployment, will certainly be small, and will start tiny; the Durham one will at first take only 20 men, a fact which made the House of Commons fall about with laughter. The point, however, is that the Ministry of Labour is not to rest content with having produced its recent unambitious white paper, in which it announced that industry-by-industry training boards will be set up some time. It is going to continue to tap on the admittedly far too narrow wedges that the existing retraining centres have thrust into industry's solid front of insistence that the training of workers is its own affair.

It is this insistence, particularly on the trade union side, that makes the intervention of the Trades Union Congress in this matter look nastily like hypocrisy. The TUC is now talking about the need for a large government contribution to the new training boards, and for the establishment of a central authority. But on the local level the unions have been far from helpful to Mr Hare in his attempts to set up training centres which will impart skills to men who need them outside the hallowed framework of the apprenticeship system. Until it gets its practice more nearly into line with its sermons, the TUC's potentially valuable urging on this subject will continue to ring false.

HOUSE OF LORDS

The New Commoners

THE main principle of the report of the joint committee on Lords reform is sensible enough: anyone who succeeds to a peerage, or who may have succeeded to a peerage before the law is changed, should be allowed to surrender that peerage for life, and so become eligible for the House of Commons if the electors want him. Most Labour members would doubtless prefer to see the complete extinction of a peerage under such circumstances; just as most Conservatives would prefer to see the actual title preserved in use even if the holder had renounced his right to sit in the Lords (the committee's recommendation that renouncing peers, their wives, and descendants, should not be entitled to any title or social precedence during the period of renunciation is one about which Tory members' wives are said to be especially up in arms). But these arguments cancel out.

There is rather more substance in the complaint that it is a bit silly that peers should have to decide whether they will renounce within a year of succeeding to their titles, or within a year of reaching the age of 21; it would seem more sensible to let them decide any time, or (at the very least) any time up to the age of 35. There are a few other hard cases, such as that of Lord Longford who accepted a peerage from Mr Attlee in the knowledge that he would eventually succeed to another one on inheritance, and who under the committee's recommendations would thus be denied the chance of standing for the Commons. All of these should be tidied up, on the general principle that it is an advantage to enable the public to elect whom they choose to the Commons. The proposals to allow all Scottish peers, and all peeresses in their own right, to sit in the Commons—but still to keep out Irish peers (because their admission would embarrass the Irish Republic)—have commended fairly universal assent.

What are the chances of legislation to implement the report? A few Conservative members are against it because they feel that the Lords will be weakened by losing some of its abler members. Some Conservative ministers may or may not secretly deplore the proposal that the right of renunciation should cover existing holders of titles (a proposal which was carried in the committee by the slender majority of one vote) because their chances of succession to the highest office in the party might be seriously threatened by the change, if Lords Home and Hailsham decide to come down. But they can hardly say so out loud. In general, the chances of this minor reform reaching the statute book seem to depend almost wholly on the parliamentary timetable; the room left for new legislation this session is very small, and the next session of Parliament may well be curtailed by a general election. There is little prospect of the matter being treated as one that brooks no delay.

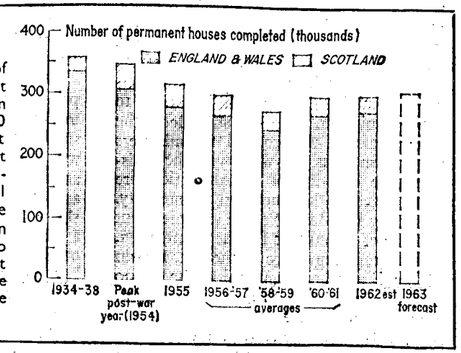
MIDDLE EAST

Soap Bubbles

EVEN Mr Ben-Gurion's bellicosity when he boasted at an army parade on December 11th of Israel's power of retaliation against Arab "insolence" has lost itself in the noisy free-for-all going on between the Arabs themselves. The Israeli prime minister was referring to the wrangle that has flared up again between the Syrians and the Israelis over what can and cannot be done in the demilitarised zone between the two countries. The Israelis claim that the Syrians fired at their tractors as they were ploughing the land prior to the winter sowing; the Syrians hint darkly that the

House Building

"I estimate," the Minister of Housing and Local Government told the House of Commons on December 13th, "that 300,000 houses will be built in Great Britain this year and that about 273,000 of these will be in England and Wales. Next year I would expect to see an increase of the order of 5,000 to 6,000 on these figures. I am unwilling to forecast as far ahead as 1964, but I am hopeful that a steady increase will be maintained. I am sure the output will remain high."



whole incident was provoked by the Israelis as a rehearsal for whatever may happen when the Jordan water scheme is completed. The other Arab governments rallied round Syria, but some of them did so grudgingly; Egypt, in particular, implied that the affair might be a put-up job by the Syrian government.

The situation in Yemen outranks all other problems. While Sana'a radio denounces the Imam's unholy alliance with Saudi Arabia, Jordan, Israel and Beihan, the Egyptian expeditionary force is being pushed back towards San'a after savage guerrilla fighting in east Yemen. Undeterred, President Sallal (now a field-marshal) told a rally of the "Union of the Sons of the Arabian Peninsula" on December 14th that the Saudi family would soon be swept away. The rally, opened by a Saudi Arabian speaker, was celebrating the formation of the "Command for the Liberation of the Arabian Peninsula."

Turning as deaf an ear as possible to this background bombast, the United States announced on Wednesday its recognition of the Yemeni republic. The day before, the Egyptian government had made a formal promise to withdraw its troops if the Yemenis asked them to, and if the Saudi Arabians and Jordanians stopped supporting the royalists. There is a fair chance that if the Saudis ceased giving them money, many of the Yemeni tribesmen now clustered threateningly on the hills would trickle back to their farms. Dr Baidani, the deputy prime minister, who knows how to suit his words to his audience, has pledged his country's respect for law and order. But there is nothing in President Sallal's own attitude to encourage King Saud to give up. At Egypt's "Knowledge Day" festival on December 15th, President Nasser remarked that the Arab battle against imperialism required action not "verbal soap bubbles." The Egyptians may regret that Field-Marshal Sallal has proved so apt a pupil in inflammatory speech.

COMMON MARKET

Doctors' Report

GUARDED optimism is the word for the meetings in Brussels of the new working group of economists and agricultural specialists. This group gave the seven ministers its interim report on Thursday. It was established at the ministerial meeting on December 11th in the hope that a fact-finding committee without the authority to negotiate might in some way shake loose the sterile situation the council of ministers found themselves in whenever they discussed the question of British agriculture and its place in the European Community. Chaired by Dr Mansholt, the vice-president in charge of agriculture for the commission, and with representatives of the Six, Britain and the European Community, the group seems to have got off to a promising start. There is still dispute about what ails the patient and which remedy might best be applied. But at least patient and physicians are discussing malady and possible cures.

Essentially the experts have sat down to examine the facts and figures of the case, and the future illnesses that might arise if Britain did indeed adopt the Six's agricultural proposals as they now stand. Clearly the biggest difficulty is the price level for cereals. The community's intended wheat price is £12 a ton higher than the British internal market price. A temporary system of consumer subsidies might alleviate the pain caused by increased food prices. But the British delegation has been explaining some of the difficulties—including the impact such a system would make on pork farmers who buy grain for animal foodstuff. Further, the pork farmers cannot for some time to come do without the Government deficiency payments. The British also argue that if cereal prices are raised, British farmers will probably expand their production, often at the cost of other commodities, and often in competition with French farmers. They suggest that the solution might be to lower the community price. It would not be an understatement to say that the French and German specialists disagree.

At least all this implies that the fact finders are searching for some solution and that they are discussing the merits of all proposals. The final report is due at the next ministerial meeting on January 14th, and one assumes the report will carry weight. It must be hoped so.

PENSIONS

Earnings Limit Raised

THE Government's decision to raise the earnings limit for pensioners is a nice Christmas surprise for them, although they will not actually benefit until the new regulations have been approved by both Houses of Parliament. At present, retirement pensioners and widow pensioners are allowed to keep the whole of their pension of £2 17s. 6d. a week provided they do not earn more than £3 10s. a week. Sixpence is then deducted for every shilling of the next pound earned, and a shilling for every shilling of earnings over £4 10s. In effect this means that the maximum pensioners can have as a combination of pension and earnings is £6 17s. 6d. a week. Under the proposed rule, which will raise the amount of earnings that can be disregarded to £4 5s., they will have £7 12s. 6d.

Widowed mothers are also to benefit. At present, the personal part of a widowed mother's pension—£2 17s. 6d. a week—is subject to an earnings limit of £5. This will be raised to £6 so that the maximum amount of her combined personal pension and earnings will be £9 7s. 6d. In addition she receives children's allowances of 25s. a week for the first child and 17s. for each other child, plus family allowances.

A higher earnings limit is certainly welcome, particularly for widowed mothers with young children. The next step should be to abolish it altogether. After all, the numbers are not large. Under the present earnings limit, which only affects retirement pensioners in the first five years of their retirement, about 35,000 elderly people have had their pension withdrawn completely because of their earnings, and 16,000 have had it reduced; of the 148,000 widowed mothers, 21,000 have had their personal allowance reduced. And all arguments about the "cost" of abolishing the earnings limit invariably miss the point that the total national income will gain much more from encouraging those who are able to go out to work, than the state's revenue will lose from still having to pay them their pensions.

But, as a still more urgent step, should not the earnings limit under national assistance now be immediately raised as well? For the elderly and disabled—in fact, for all who by circumstances or by nature cannot support themselves—the first 30s. of earnings are disregarded when the amount of assistance is calculated, and half the next 20s. Thus an elderly pensioner will receive no assistance at all to pay his rent of, say, £1 a week if he earns £3, which might mean total resources of only £5 17s. 6d a week. And because he or she is not in receipt of assistance he will not automatically have his health service charges refunded. There is a strong case for prompt reform here.

CHRISTMAS ROADS

Quick and Dead

THE high-speed English drunkard on the rolling English road has become the particular object of abhorrence of most sensible road-users as well as of Mr Marples, who, in an effort to mitigate the traditional annual sacrifice on the altar of festivity, has this year produced a handful of "shock"

measures. The chief of them has been the early coming into force (on December 21st) of those clauses in the new Road Traffic Act which should persuade drivers to submit to blood, urine or breath analyses when asked to do so (on pain of their refusal to do so being cited against them as evidence in court), and which lay down heavier penalties for transgressions. Mr Marples has also imposed a countrywide temporary speed-limit of 50 mph (except on motorways) over the Christmas holidays, run up a spattering of minatory posters about driving drinkers, and tried to instal a wrecked car in town squares up and down the country as a warning to supercharged egos to keep a light foot on the throttle.

It is difficult to feel optimistic about the effect these measures may have on the Christmas death rate. The speed-limit may be widely ignored—by sober drivers because there just are not enough police to enforce it in the big urban areas, let alone all over the country; and by drunken drivers because they will have few inhibitions about their speed, even if they realise what it is. Nor will the enforcement of the new Act be easy, particularly if the inadequate police forces are tied up in speed checks; there may be more convictions for drunken driving (and more disqualifications from future driving, which should be the automatic penalty) over Christmas, but that will probably be because there are more drunken drivers. The real trouble about the Christmas holiday season this year is its length. There is a clear correlation between daily road deaths and conviviality, the peak occurring on the last day of work before the holiday—that is, the day most office parties are given. Last year 55 of a five-day toll of 140 deaths were caused on this day. This year there will be two separate opportunities for carnage of this sort: Friday will probably be most people's office party day; but Monday is Christmas Eve, to be filled by non-workers in the pubs, leaving those who do have to work to diffuse their resentment in the leftovers of the office party. If the total on Thursday is provisionally less than 160 dead over the six days of Christmas, it will be a cause for relieved surprise—and even for some congratulations to Mr Marples.

COMMUNIST WORLD

Moscow-Belgrade Entente

WHEN Marshal Tito set out for home on Tuesday night, Mr Khrushchev courteously accompanied him on the first stage of his journey. This was not the only distinction accorded to the Jugoslav leader in Russia; on December 13th he had the singular honour of addressing the Supreme Soviet. Jugoslav-Soviet relations have come a long way since the bad old days of 1948.

No doubt the Cuban affair helped forward a rapprochement that was already well started. Marshal Tito's congratulations to Mr Khrushchev on his handling of the

At the Supreme Soviet

crisis in October would have been really warm and sincere; in his speech to the Supreme Soviet he referred delicately and disapprovingly to "certain odd appraisals of this courageous action." He also declared that Soviet and Jugoslav views on all important international questions "either coincide or are close to one another." This of course, it may be understood, does not affect Jugoslavia's non-aligned status.

But although relations between Moscow and Belgrade are closer now than they have ever been since before 1948, both Marshal Tito and Mr Khrushchev admitted that their concord was not quite complete. There are differences both about the past and about ideology. Mr Khrushchev told the Supreme Soviet that he could not accept the Jugoslav contention that Stalin was solely responsible for the 1948 quarrel. In his address next day Marshal Tito was content to remark that he would not talk about the past "because it is a long and complicated business." Both leaders openly admitted that there are "serious" (Mr Khrushchev's word) ideological differences between them. But Mr Khrushchev emphasised that Jugoslavia was undoubtedly a socialist country, and that it had eliminated many things that were "harmful and erroneous." Both leaders declared themselves willing to try to remove their differences. In the present context of serious discord within the world communist movement, one can safely assume that they meant what they said.

Battle of Isms

THIS discord is becoming increasingly blatant. On December 13th Peking responded to Mr Khrushchev's downright attack, two days previously, on dogmatism (which he said was becoming a "serious danger" to the world communist movement) by broadcasting the text of the Chinese letter proposing a world meeting of communist parties that had been read out at the end of the Czechoslovak party congress. Two days later the Peking *People's Daily* published a long and carefully argued exposition of the Chinese case. On December 16th *Pravda* published the text of a resolution adopted last week by the central committee of the French communist party which flatly attacked the Chinese for "adventurism" and for endangering communist unity. On Wednesday, at a rally in Peking, Mr Liao Cheng Chih scornfully criticised "certain gentlemen" who do not regard imperialism as a "paper tiger."

Neither the Russians nor the Chinese have yet reached the point of directly attacking each other by name. But on December 15th the *People's Daily* came as near to doing so as makes no difference when it stated that "the erroneous practice of using the congress of one party to attack another fraternal party" first occurred at the 22nd Soviet party congress (when Mr Khrushchev attacked the Albanians). Further on it accused those who first launched such an attack of being "splitters and sectarians." The Russians, implies the *People's Daily*, deserve these deleterious epithets (and for good measure that of big-nation chauvinists) because in openly attacking another communist party they have broken the principles of the 1960 Moscow Declaration.

Who but the Chinese (it goes on) are the true guardians of those principles? They are also the correct exponents of how to deal with the imperialists; and in a passage splendidly riddled with marxist jargon the *People's Daily* explains how to do this without falling into the sins of either adventurism or capitulationism. The article admits that the Chinese are in a minority, but takes comfort from the fact that Lenin and the Bolsheviks too were once in a minority, and with superb self-confidence repeats the demand for a world communist conference. One can see why the Russians are not too keen.

Herr 1963

CHRISTMAS is a time when feelings are liable to rise along the wall that divides Berlin: to mark the fact, some enterprising west Germans blew a mighty hole in the wall at the Jerusalemstrasse on Monday night. It would be a pity if such antics were to divert attention from what is going on behind the wall; for this may prove to be of more than usual interest. This year, the season is one of preparation for the sixth congress of the ruling Socialist Unity party, to open on January 15th. For all the massive tedium of these conferences when they come, they are preceded by a dogged process of appraisal and reappraisal that can be informative.

Just now the reappraisal seems to predominate. Herr Ulbricht and his senior colleagues have been stumping from one provincial party meeting to another, as is customary in these preparations. Herr Ulbricht's speeches at Cottbus and at Leipzig have attracted particular attention, first for the definite way in which he announced that economic improvement must now take precedence of political objectives, and secondly for the lengths to which he has at last gone in turning against Stalinism and identifying himself with Mr Khrushchev, latest model.

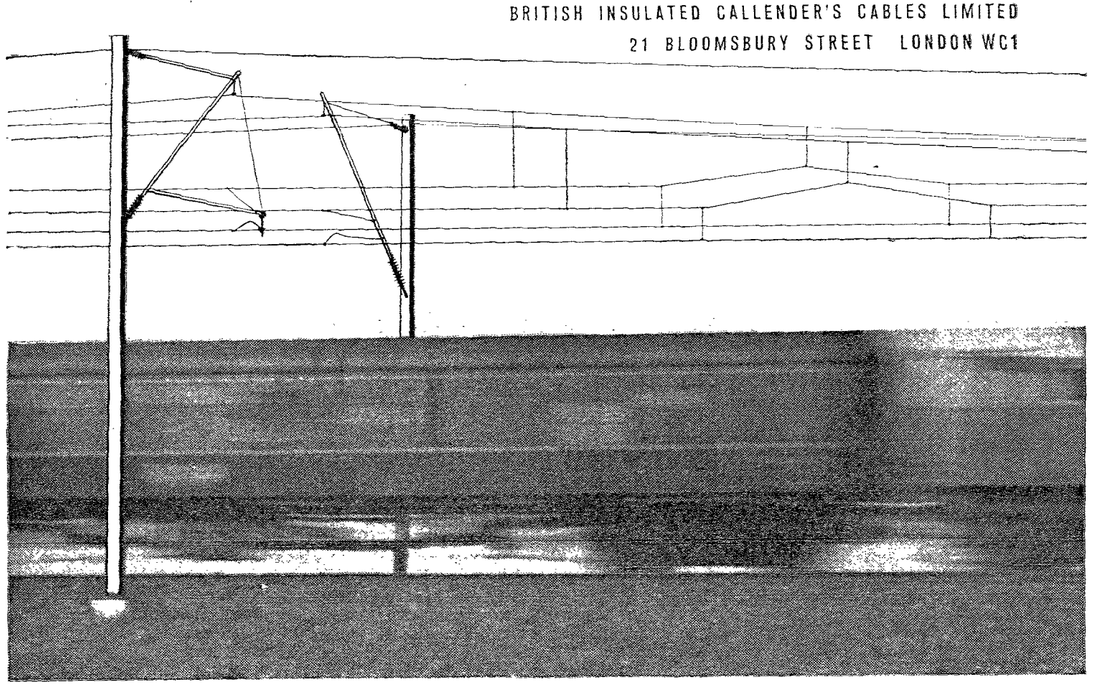
The first point means, in effect, that the active threat to west Berlin has been dropped; the "free city" project, though not abandoned, has to wait; the peace treaty

electrification of Euston-Manchester-Liverpool Route

The Euston-Crewe route of the London Midland Region is being electrified.
Services will be faster, cleaner, smoother and more frequent.
Electric locos need less maintenance, have faster acceleration and maintain higher sustained speeds than either steam or diesel types.
Overhead traction equipment for this £16,500,000 modernization scheme is being designed, manufactured and erected for British Railways by the BICC Group.

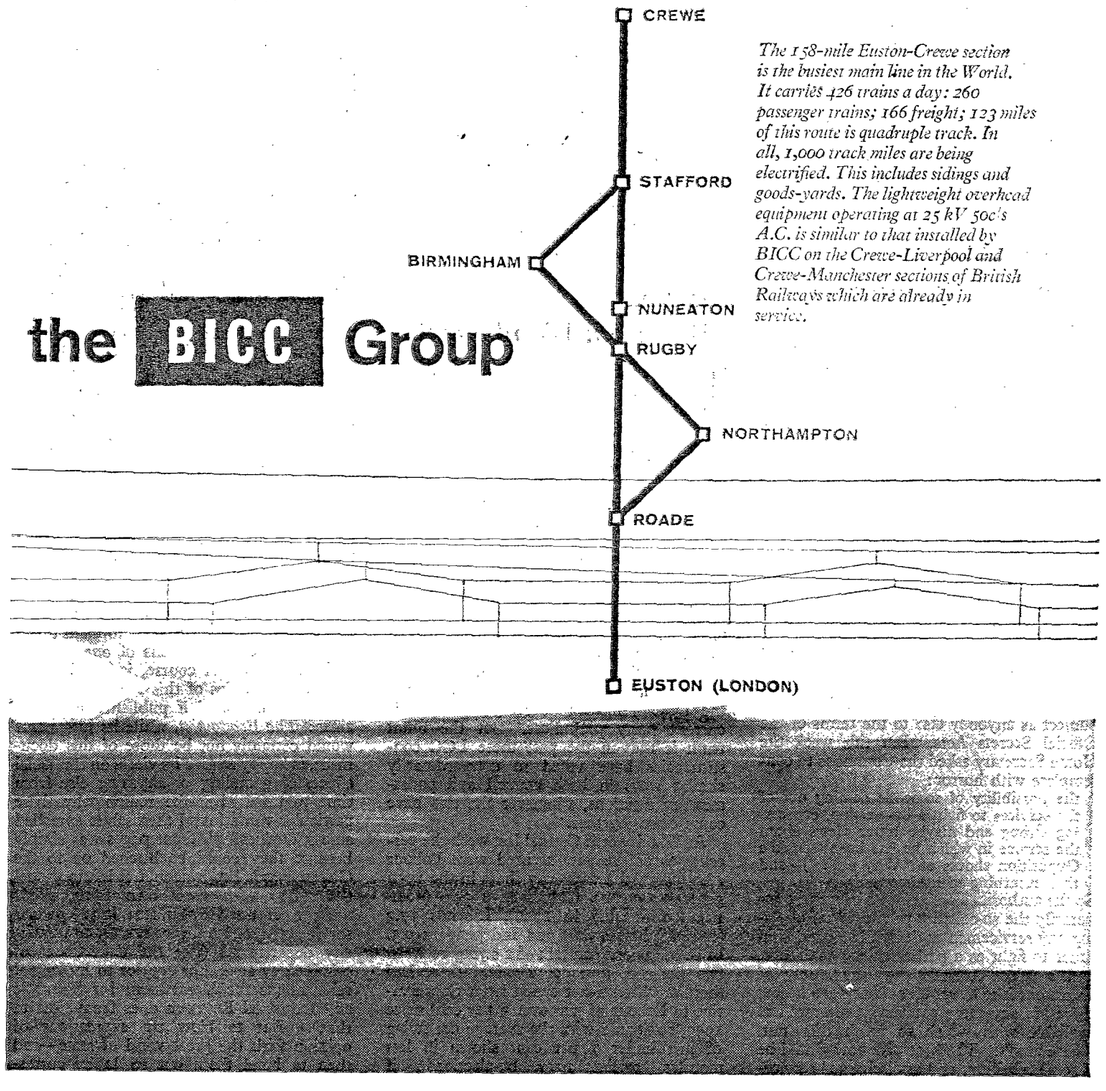
£16½ m. overhead equipment by

BRITISH INSULATED CALLENDER'S CABLES LIMITED
21 BLOOMSBURY STREET LONDON WC1



-the World's busiest Main Lines

the BICC Group



The 158-mile Euston-Crewe section is the busiest main line in the World. It carries 426 trains a day: 260 passenger trains; 166 freight; 123 miles of this route is quadruple track. In all, 1,000 track miles are being electrified. This includes sidings and goods-yards. The lightweight overhead equipment operating at 25 kV 50c/s A.C. is similar to that installed by BICC on the Crewe-Liverpool and Crewe-Manchester sections of British Railways which are already in service.

has to wait, too. The marked moderation of the new line is not a product of the Cuba crisis, but goes back before it; indeed, it was already to be found in Herr Ulbricht's speech to his central committee on October 3rd, and seems to follow from his visit to Mr Khrushchev last summer.

East Germany's economic plan has still not climbed out of the mess it had got into by last spring. As remedies, Herr Ulbricht seems to be offering not only the accustomed dosage of hard work, but also a new look at the principles of socialist economic management on something like the lines of the discussion now going on in Russia. Price policy is in; dogmatism is out; Herr Ulbricht has come close to admitting that east Germany had handicapped itself by breeding a form of dogmatism of its own. Nothing in the manner of these speeches suggests any crisis within the regime. Herr Ulbricht, modernised, open-minded, Khrushchevian, anti-Chinese, is still visibly on top.

DEMOBILISATION

Bubble Reputation

THE gayest of the explosions of the pre-Christmas season have been those of the myths that by-elections are serious affairs and that the army is loyal and contented. At the latest count over 500 candidates, most of them servicemen anxious to exploit this loophole in Queen's Regulations to escape from the New Model Army, were intending to fight for the honour of representing Rotherham and Colne Valley in their country's highest council. Unfortunately, however, another popular national belief—that some politicians and far too many senior brasshats are pompous asses—has not been exploded by this incident, but has now been confirmed. The obvious way to stop this column-dodging was to say that while a serviceman should still be as free as anybody else to fight a by-election, he would be returned to his unit if he were not elected. While on the hustings he would be as subject as anybody else to the terms of the Official Secrets Acts. But this week the Home Secretary asked the Commons to contemplate with horror:

> the possibility of someone coming out of the services to fight a by-election, expressing strong and maybe bitter views about the service in which he has been [sensible Opposition shouts of "Why not?"]—and then returning to it afterwards.

So the authorities are going to suspend temporarily the so-called "privilege" of allowing any serviceman to demobilise himself in order to fight as a parliamentary candidate, and a select committee of the House of Commons is to be set up to consider whether there are any more convenient steamrollers available with which to crush this nut. There aren't. The best joke now would be if some rebellious and undischarged serviceman turned up to fight at Rotherham in a new sort of Wedgwood Benn case (although, as a holder of office under the crown, he would be as ineligible to be eventually elected as Mr Wedgwood Benn was); if he was then arrested for being absent without leave and for breaking Queen's Regulations; and if he accordingly piled up a large sympathy vote because of this "infringement of his democratic rights."

Meanwhile, the original discoverer of this erstwhile escape route—who stood at one of the Middlesbrough by-elections earlier this year, and who may now justly claim to be the prince of barrack-room lawyers—has given some new advice to his sometime comrades in arms, from his now comfortable position in civilian life. "Tell them," he suggested in an interview to the *Daily Mail*, "to trying signing on as ministers of religion. It should work just as well." The churches, troubled as they are by lack of ordinands, would presumably not altogether welcome these recruits from the regular soldiery, among whom signs of godliness tend to be few; but it is to be hoped that they will handle any such prospective evangelical revival with a smaller degree of vacillating tizzy than the state has evinced about the political one.

ELECTIONS

Woe from Wandsworth

THE supposition that Labour would win a comfortable victory in any early general election received some additional confirmation last week, in a little-noticed by-election for the dying London County Council. It was in the LCC constituency of Wandsworth Central, whose boundaries are the same as for the marginally Tory-held parliamentary constituency of the same name.

Everybody can see the ostensible objections to taking this sort of council election as an accurate guide to what would happen in a parliamentary election: in the first place, only about a quarter as many people turn up to vote; secondly, romanticists like to believe that people in council elections vote worthily on local issues (such as "save the LCC") instead of according to their current party prejudices. But the blunt truth is that in the past these LCC constituencies have voted in extraordinarily similar ways in both council and parliamentary elections, whenever the two have come close together.

At Wandsworth Central last week the percentages of the vote secured were Labour 48.2 (compared with 43.7 there in the 1959 general election), Conservative 34.0 (compared with 47.7 in 1959), Liberals 17.3 (compared with 8.6) and Independent 0.5. In so far as one can talk of a swing between two different types of election, there had therefore been a net swing from Conservative to Labour of just over 9 per cent since 1959, compared with the average net swing of just under 7 per cent shown in last month's parliamentary by-elections; if repeated right across the country at a general election, a 9 per cent net swing to Labour would give Mr Gaitskell a majority of nearly 200 in the House of Commons. Tiny as the sample is, this is probably the sort of figure which the Conservatives should regard as somewhere near the current bogey score for the state of public opinion; it accords fairly well with recent public opinion polls, and it provides a pretty grisly thought for them for Christmas.

GOVERNMENT INFORMATION

Whose Views?

THE row over the Central Office of Information's cyclostyled article, "Social Changes in Britain," is a pretty silly one. What seems to have happened is this. The Government is interested in the possibility of setting up a social research council to keep a watch in the newly fashionable field of sociology; the COI was asked to prepare a general view of how things have changed in Britain in the past ten years. Like any other journalist or team of journalists, the COI's author(s) used such material as is available, much of it from their own published or shortly-to-be-published sources, eking this out with bits and pieces from more or less everywhere. Like any other document, produced by an individual or by a committee of individuals, the result had a somewhat idiosyncratic viewpoint (it would have been even duller if it had not). In this case the slant is, for instance, mildly poetic about some of the achievements of the affluent society, but definitely against gambling—where the main source of facts and figures seems to have been the Church of England, not entirely a dispassionate observer—and somewhat against hire-purchase. To juxtapose freely, Britain is called "a nation of debtors . . . grasping after unearned wealth."

Some people seem to be using this as an argument in favour of setting up an official sociological spokesman-body, to hand down *ex-cathedra* condemnations of our naughty society. Which, of course, is exactly what it is not. Articles of this kind may be interesting and useful if published in magazines: *The Economist*, while its judgments would certainly not be those of this document, is happy to give its views on the social effects of gambling or anything else from time to time. But the reason why these particular views found themselves sprawled across Wednesday's front pages was simply because they could be hitched on to the Government's bandwagon, not left to propel themselves with their own fairly slight energy. If the Government is to sponsor social research, let it give money to university departments (like the department of criminology at Cambridge) or to individual scholars (as the Department for Scientific and Industrial Research does from time to time). But to blow up expressions of opinion with the great wind of state—and then to hand them out to lobby correspondents, whose bread and butter comes from the maximum politicisation of everything—is perfectly absurd.

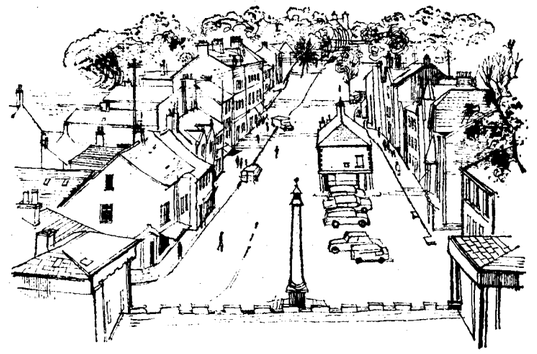
Never-Never North-West

FROM OUR SPECIAL CORRESPONDENT



A FMALL Market-Town, memorable for nothing but its Antiquity and Situation, otherwise little fuperior to a Village" 'ote the Rev. Thos. Cox in his guide to Westmorland; and it is not unfair description of this nominal county town two centuries er. It is a Peter Pan town, with a noble history out of which has never grown, a somewhat less grand present, and a probmatic future. It was sacked by the Scots in 1173 and 1388 ... and never afterwards recovered from that fatal overrow ...") ; nurtured one of Becket's murderers; elected William tt to Parliament, and Jack Robinson, too; and it was the seat id the object of constant attention of that hair-raisingly tough oman, Lady Anne Clifford. All of which is nothing much out the ordinary for British towns a thousand years old—except that Appleby, picturesque in an ox-bow of Wordsworth's Eden, it ight all have happened yesterday, or be going to happen tomorrow.

Westmorland is the second smallest of the counties of England, 'e times as large as embattled Rutland, but spread even thinner the ground with a population only three times as large (66,000). lost of this population is scattered over the countryside, but nearly third is in the principal town, Kendal, leaving the county town, ppleby, to do its best on a mere 1,750—just enough to epitomise le troubles of the far north-west and the decline towards which, nothing happens soon, much of the region is heading. Appleby as one serious industry, a milk pasteurisation and cheese factory, id some others which amount to little more than cottage crafts. s school-leavers give the lie to its boast of 100 per cent employ- ient by passing straight from the fine and ancient grammar school iot long since gone co-educational and comprehensive) to the great 'orld outside in their search for something to do. If the popu- ition has increased in absolute terms by 20 in the past decade, it as declined relatively as its young life-blood drains off to the south nd the retired brass-gatherers of Bradford and Liverpool take its lace. Of urban amenities (and it is, after all, a town) there are one but those which cater for the Lakeland tourist who, when he leaves begin to turn, leaves the town as if frozen by the winter—low, resigned, reactionary and apathetic, to be woken to sharp ries of rage only by the suggestion of its ultimate death.

And yet, is it alive? Traditionally its council (town, not county: hat one finds Kendal a better bet) is made up of advertised inde-)endents who are benevolently Tory in practice. Most of the council is in trade, its members the inheritors of small monopolies ounded by ancestors who served the Cliffords in their time, and he inheritors, too, of that suspicion of intruders which is the despair of manufacturers anxious to find somewhere to expand. (Recently a stocking-maker, pleased with the town, its girls, its services, was ient packing by a persuasive local figure who resented the "disruption of the employment situation"—that is, the competition for the school's bright girls—which would ensue on the manufacturer's move.) Some, admittedly, abstain from the chorused "We are content"; and a few sing revolutionary songs against it. But nothing happens.

That nothing much has happened, either, is apparent from a reading of the catalogue for the recent sale of all that Appleby holds most dear, the Castle estates, lately the property of the Tufton family. Of the 72 houses included in the sale some were without main water, more without main electricity, many without bathrooms and most in need of attention. Nearly every lot (the castle itself the main exception) was bought by its tenant, who by that time had such a stake in the improvements he had made and the habits he had built up that he could not have let it go. The building of council houses ended in 1957, and there seems little need for it to start again; sporadic private building caters for the retirement market; and there is nothing on offer for the young people who do not stay.

AT one time Appleby was an assize town to which the judges came whether there were cases to try or not: often they got the pair of white gloves which tradition hands out to the law relieved of its dreadful task. It is still an assize town, but the judges only come now when there is a case to try and, had the agitation gone the other way in 1936, the whole affair would have been transferred to Carlisle. At one time, too, it was an important railway town, on two lines to the north from London and Darlington: only the London line remains, and the trains on it are fewer than they were as well as harder to stop (let nobody ever attempt to travel from Manchester to Appleby). "Retain your loyalty, Preferve your rights" reads the inscription on the higher of the two crosses which terminate the main street; but the loyalty is to a relatively shrinking Appleby in an expanding England, and the rights have long since shifted to Kendal.

What is to be done for Appleby, and for Westmorland? If it is hateful to destroy the old-world charm and atmosphere, it is not less hateful to condone and encourage the precipitation of so many of their young and active people into the south. If it is hurtful to set up concrete street furniture in medieval alleys, it is not less hurtful to condemn the whole county to living in the past for lack of funds. The suggestion has been made that Westmorland, like Rutland, should disappear as an administrative unit, its northern half to be incorporated into the larger and more prosperous county of Cumberland, and the part below the dividing fells to be taken into the thriving county of Lancashire. If this dilutes the representation of the county's people (one member

every 1,500 at present) it will also provide
ore of those services, especially in planning
d development, which Westmorland either
nnot afford or cannot afford to do well.

Such a solution might also do something to
olve Appleby's problems, by bringing it in,
emoted from its anomalous county town
atus, to the more viable county to the north
whose interests it would be to promote a
hriving small town as the gateway to the Lakes
lternative to Penrith, which bursts its seams
ach summer. Tourists today are quite as in-
erested in specifically urban comforts as they
re in unspoilt country—and, in a summer like
962, they need them. There would also be
ome point in seriously trying to promote
ppleby as a place in which to set up those
leasant, clean light industries which suffer from the
hortage of space and skilled labour elsewhere, and which might
e expected to appreciate the supply of intelligent and

well-educated school-leavers turned out
service or emigration every year by Applel
Perhaps the new owner of the castle, wh
business is in Liverpool, could be p
suaded to help.

Nobody wants to destroy the sense of ti
stopped for which Appleby is justly fan
(mostly among people who wish that time l
stopped). But at a time when congestior
steadily overtaking the south it is sensible to
to retain viable populations in those parts of
north that are (given good housing) entir
agreeable to live in and capable of pursuin
good, if modest, existence in a technolog
world. The Applebys of the north are
cases of what might be done, given ini
tive. And if the town did grow larger,
more people moved in from Lancashire and from the surrou
ing dales, why should Appleby jib? After all, it contained 8,
people before the Scots got at it.

The Scottish Recipe

THE speech of the week on unemploy-
ment was delivered in Glasgow on
Monday afternoon, just as the Commons
was settling down to its own debate (see
page 1184). It came from Lord Polwarth,
he chairman of the Scottish Council
Development and Industry), in a preview
of what the council intends to say to Mr
Macmillan when it calls on him at Admiralty
House in February—by which time Scotland
s likely to have 110,000 unemployed.

Lord Polwarth made three criticisms of
he working of the Local Employment Act.
First, Scottish experience has shown the
need to define specifically, and from the out-
et, the help from grants and loans that a
nanufacturer setting up in a development
rea can expect under the act. Potential
ncomers, particularly from overseas, find
hemselves locked in lengthy negotiations
with government departments, lose interest
nd sheer off to wherever they can expect
o get a straight and quick answer. The
Board of Trade will reply that there is no
asy formula for this kind of calculation.
But most development areas provide their
wn bitter tales of lost chances through
heer departmental dilatoriness.

The second Scottish point is that the
resent inducements are too marginal to in-
uence firms other than those that had
lready made up their minds to settle there
nyway. Lord Polwarth spoke of firms that
ound they could get better loan rates
hrough ordinary commercial channels than
rom the Board of Trade itself. The real
nducement that government could reason-
ably provide is to give relief from loan
charges in the initial years of a new opera-
tion when incidental expenses are heaviest.
Adjustments could easily be made in the
later repayment period. The government
may not be prepared to commit itself to a
capital outlay of £150 million in
Scotland in the
next eight years
as Lord
Polwarth wants
(and as other
development
councils would
like to get for
their own
regions), but
relief on initial
expense is cal-
culated to make a minimum of aid go
considerably further than it does at present.

Chairman Polwarth

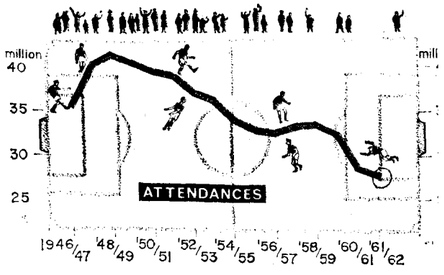
Thirdly, Lord Polwarth repeated one of
the basic recommendations of the Toothill
report a year ago on the location of new
industry at the potential growth points of
regional economies. Under the existing act
the Government deliberately channels its
aid into high unemployment areas or, if a
region is lucky (as central Scotland happens
to be) into new towns built for overspill.

What the framers of the act did not app
ciate is that its assistance would be requi
not simply for local patches of unemp
ment but for the regeneration of wide a
where the structural decline of Victo
industries has, particularly in the past
years, set quite a different problem.
fundamental need now is to define regi
development areas that really are cap
of developing—not decaying commun
with, almost invariably, their appalling sc
environment, and too often, their isola
from a modern communications networ

ONE other point of Lord Polwar
speech deserves attention.
decline neurosis that affects the north
west stems, in considerable part, from
exaggerated sense of inferiority: that n
ing can really be a success there unle
is directed to settle north of the Trent
subsidised up to the hilt thereafter.
post-war sector of Scottish industry
elsewhere in the north) is in process of
proving this. Lord Polwarth was abl
point out that in the years 1959-61 Scot
has had a greater proportionate increas
employment, compared with the countr

Fans Fade Away

After reaching a peak of 41,300,000 in 1948–49 football fans attending league matches dwindled to nearly 28,000,000 last season. However, so far this season gates show an increase of 896,376 on last, and if the trend continues the game may have regained a million lost supporters by the end of April.



a whole, in the manufacture of office machinery, radio and electronics, watches and clocks, and electrical machinery. In most of these fields it owes a great deal to the attraction of American industry after 1945. But in the wider field, 80 per cent of all new jobs and new investment has come from companies established in Scotland before then. This is a local success story that needs to be better known.

Scotland, in fact, has been producing 30,000 new industrial jobs a year—the rewards of expansion—against an annual contraction of 25,000 jobs in the decaying industries like mines and shipbuilding. In actual statistics last month's rising figure for unemployment 4.3 per cent (which set off so many alarm bells) was fractionally below the average for the whole year of 1959. The improvement is not as good as it might be, since it owes something to emigration—often of skilled workers. Scotland still needs a net average increase of 15,000 jobs a year up to 1970 to lick its problems. But a number of Scots feel that, at last, they are actually going up the escalator, that the shift into new industries can gather momentum. If this kind of atmosphere can be generated more widely, pump-priming will pay even quicker dividends.

The Scottish Council has, sometimes laboriously, contrived to present a common front with a local trade union movement that has been prone to see in the direction of industry (despite the Labour party's rejection) the answer to all Scotland's problems. Lord Polwarth on Monday had to genuflect in the direction of the mineworkers in backing Scottish coal for the next big power station development that Scotland needs. This looks like deliberate service to political non-partisanship. It will pay off only if the unions give their backing to the new realism, particularly the internal migration to viable growth points, on which the next stage of Scottish regeneration depends. The same need for initiative and adaptability, in taking advantage of existing government-backed industrial and research development, goes double for still too many Scottish managements.

Bodies in the Library

FROM OUR SPECIAL CORRESPONDENT

THE public libraries of Britain are the oldest-established, and by far the most widely used, public provision for everyman's desire to improve and entertain himself. They are certainly the most gratefully received—despite the criticisms of those, led by Sir Alan Herbert, who feel that by providing books free to the ratepayers local authorities are taking the bread from authors' mouths. The Minister of Education's working party on the library service, which has just reported*, does not risk its feet on this thin ice (and anyway, being composed of local authority people, it is unlikely to have had much truck with the authors' case). What it has usefully done is to lay down certain minimum standards that public libraries should live up to, and to make certain recommendations that should enable them to do so.

It is the very age of the library service that puts it in need of reviewing. Not only do many library authorities cover old local authority areas that themselves need doing away with; many are also housed in old buildings that prevent the efficient use of either space or staff. What is more, people are inclined to use the libraries for different purposes now. Perry Mason is someone you watch instead of reading about; Homer can be bought for a few shillings in Penguin, rather than borne, hard-covered, home from the library. Meanwhile an increasingly educated—and television-stimulated—public has an ever-growing appetite for education (say, learning Russian) and instruction (say, in amateur plumbing).

So what should be done? First, the committee says, a library should increase its stock of books: its minimum figure comes out to an annual addition of 7,200 volumes for lending purposes, spread over 300 reference and specialised works, 2,300 adult non-fiction books, 3,000 adult fiction (1,500 titles), 1,500 children's books (750 titles) and 100 volumes in foreign languages. Equally, the basic rate of provision of books should be 250 volumes per thousand population served by a library. These two requirements put out of court libraries serving fewer than 30,000 people. The working party's ideas, then, fit neatly into the general move in the country to do away with little old local government units; as the report rightly indicates, it is worth waiting to see what the Local Government Commission does in many areas before starting to do away with existing uneconomically small library services. But it also shows that few libraries serving under 60,000 people in fact came within a fair range of its standards—and 60,000 is not a bad local government unit in many other ways.

On the general reorganisation of the library service the working party is also sensible. Working down from the top, the recommendations go more or less as follows. The Minister of Education should have more fully qualified advisers on this subject, to help national standards upwards. There should also be a central research unit in the ministry, like the one on school building, to help libraries with their problems of physical organisation and new construction. Local authorities who leave library matters in the hands of their education committee should have a proper library committee. Perhaps most important of all, librarians themselves should be given a more adequately graduated career structure (at present it seems that promotion, and thus pay rises, for librarians depend largely on moving to a new authority), and libraries should both provide more jobs for trainees and release more of their staffs for training courses.

All this is sensible and level-headed: both on the sizes of population served, and on a reform of librarians' salary structures, similar recommendations hold good far outside the library service. There remain the economies that could be made by proper co-operation between libraries, dealt with more fully by another ministerial working party.* This recommends a reorganisation of the existing regional committees, to be supported obligatorily by public libraries (and perhaps afterwards by non-public—e.g. university—libraries that want to join in). Since many of the existing regions have not completed (Yorkshire has not even begun) a catalogue, this should be paid for by a once-for-all Treasury grant. A proper catalogue should also be compiled for the National Central Library, which would then be paid for under a Ministry of Education vote instead of by the Treasury: public libraries should pay 30 per cent of the cost of the central library. With Telex, and perhaps a central computer for tracking down books, the efficiency of the national service could thus be immensely increased. And these ideas would not need to cost all that much, either.

* Standards of Public Library Service in England and Wales. HMSO. 7s. Inter-Library Co-operation in England and Wales. HMSO. 3s.

EIU Quarterly Economic Reviews covering 57 countries or groups of countries

Out next week:

BELGIUM, LUXEMBURG, CONGO REPUBLIC, RWANDA, BURUNDI

The review analyses the Belgian Government's 1959-65 development programme, which should pay big dividends; the emphasis is heavily on investment in new industries and structural change. Current trends discussed: rising industrial output; booming foreign trade; easier internal finances; and a halt to the price rise. For the Congo, the review assesses prospects of ending Katanga's secession and the economic consequences of continued political instability.

LETTERS

Unless correspondents specify to the contrary, the Editor reserves the right to prune individual letters to fit the space available

Pilots' Hours

SIR—The note on the subject of work done by British and American air pilots (December 15th) falls short of the standard readers have come to expect of *The Economist*. The original comment (October 12th) sought to compare BOAC pilot utilisation specifically with Pan American. Now your correspondent has conveniently changed ground by dropping the important word "Pan" and quoting figures allegedly referring to work done by American pilots on domestic operations. Your correspondent has made the mistake of not comparing like with like, because there is a vast difference between the conditions of US domestic operations and the conditions of US or any other intercontinental operations—the former do not involve pilots in spending time on the ground at slip points overseas waiting for the next service.

In addition, your correspondent fails to define his terms: United Airlines' pilots are quoted as flying 1,200 hours in a year—but American legislation expressly forbids intercontinental or domestic air pilots from working for more than a total of 1,000 flying hours in any one year. The reference cannot, therefore, be to actual hours flown but to notional figures perhaps used for pay calculation. Flying hours, as used by US operators for pay purposes, include "dead heading" time and also a credit of notional flying hours in respect of some of the time spent on the ground at slip points; these figures are both useless and misleading for the purpose to which your correspondent has put them.

It is dangerous to make comparisons of flying hours worked by the pilots of different airlines without making due allowance for the route structure, the number of slip points required along each route, the density of services on a route, the extent of seasonal differences between summer and winter frequencies, the extent to which most American airlines put pilots on furlough during the winter, legislation in respect of flight time limitation, the timing of introduction into service of new aircraft types, and so on. Your correspondent has suggested that BOAC pilots fly only 400 hours a year, but the average for the last financial year, when substantial conversion training on to Boeing 707s was in progress, was 545 flying hours on revenue-earning flights. This is lower than it used to be before the latest aircraft types were introduced, and lower than we plan to achieve when the transition to full VC10 operation has been completed.—Yours faithfully,

D. I. PEACOCK,
Chief of Flight Operations,
British Overseas Airways Corporation
Hounslow, Middlesex

BRIEF BOOKLETS . . .

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

Brief 1 RHODESIA: BRITAIN'S DEEP SOUTH
by Joe Rogaly

2 MONEY FOR GROWTH
by Fred Hirsch

3 LABOUR IN BRITAIN AND THE SIX
by Val Schur

Each booklet costs 2/6d. (or U.S. $0.40) post free for remittance with order from:

Elizabetha

SIR—The deployment of the Throne, the Government, and the pomp and paraphernalia which go with them, to a site north of the Trent, is a far sighted and cogent plan, but relative to the unemployment on the North East Coast, one which has a time factor out of relation to the pressing problems presently being met. A deployment not necessarily as effective, but specifically important and attractive, is that of Government Research Centres. A Government Research Centre in one of the semi-exotic or exotic industries, located in Durham or Newcastle, Darlington or Stockton, would form a growing point for a new industry at a cost infinitely less than the man-size project you recommend, and would become effective much more quickly.—Yours faithfully,

ANGUS HUNKING
St Helen's Auckland, Co. Durham

★

SIR—To your most stimulating suggestion of Elizabetha there is an analogy which is not entirely irrelevant. When Ataturk sought to make Turkey modern, one of the most important steps he took was the establishment of Ankara as capital instead of Istanbul. This step made an enormous contribution to the modernisation of Turkey's outlook.—Yours faithfully,

Winchester GEORGE WANSBROUGH

SIR—The application of linear inductio motor and air-cushion techniques to mont rail make speeds up to 300 mph possib with safety in all weather conditions. Th brings the suggested site of Elizabeth within two hours of the centre of Londo Your scheme deserves a public inquiry not a royal commission.—Yours faithfull

London, SW2 J. W. DAR

★

SIR—The great drawback to your propos is that nobody wants to live in such towr No Swiss official would live in Berne if I could live in Zurich. Compare Canber with Sydney, Ankara with Istanbul, Th Hague with Amsterdam! Even Washingt is deadly dull.—Yours faithfully,

Geneva J. W. NIXO

★

SIR—If Elizabetha is to be built in t Yorkshire moors, then it will be vita necessary to convert Hyde Park to a grou moor so that the Cabinet may continue enjoy their necessary therapeutic exercis —Yours faithfully, F. R. WEL

Isleworth, Middlesex

New Towns

SIR—You suggest (December 15) that policy of building up Newton Aycliffe t size of 40,000 or more is an admirable o But what is the logic of building a town that size on the doorstep of one which already twice as big, admirably suited further expansion, and already a centre considerable regional significance? A big Darlington of, say, ¼ million people a major point of new growth for the nor east would be far better than a perpetua medium-large Darlington and a r medium-small Aycliffe competing with e other.—Yours faithfully, DAVID W. LL

Chichester, Sussex

The British Alternative

SIR—I congratulate you on having arri at last (December 15th) at the pre remedies, viz., unilateral free trade, ch food, sound money, floating exchange ra that I described as the "Cheap F Policy" in "The Abominable No-Men 1953. *The Economist* being *The Econor* I now know that the intelligentsia, alre bored with Europe and all that, will ac them with enthusiasm and will be follo by the proles within a year or so, part larly the unemployed and old-aged p sioners who will be hungry first.—Y faithfully, OLIVER SMEI

London, E.C.2 The Cheap Food Le

Big Numbers

SIR—You ask (November 3rd) for a more convenient energy unit for use in world fuel resource estimates. I suggest the adoption of 10^{15} kcal = one Carnot, named in honour of the early French thermodynamicist, to be abbreviated Cn. This unit is of the right order of magnitude in several fields. It is about the amount of energy released in a light earthquake, and the conversion of one metric ton of mass into energy would release 21.5 Cn.—Yours faithfully,

A. BONDI
Emeryville, California

★

SIR—You may care to know that in "*Charbon et Autres Sources d'Energie*," published by the Statistical Office of the European Communities, the following appear in the list of abbreviations:—

GWh gigawattheure = 10^6 kWh
TWh terawattheure = 10^9 kWh.

—Yours faithfully,

Orpington, Kent D. C. BEATTY

Catalytic Trigger

SIR—Those who respect the sanity of the President of the United States, as well as accepting his good faith, may agree—with less animus—with Wayland and Elizabeth Young (December 15th) that there are contingencies in which it would not be sane to intervene on behalf of a Europe without nuclear weapons: a massive, swift and successful invasion by conventional forces might make Russia master of Europe in the course of a weekend. Would the President hazard the survival of his own people by nuclear intervention, or accept the new status quo? A nuclear Europe would greatly simplify his choice.—Yours faithfully,

DESMOND R. FITZPATRICK
Richmond, Surrey

Wards into Workshops

SIR—Firms find it advantageous to give jobs to mental patients that outside workers object to or find boring. But is the mental patient a sub-species that should be made to be bored, or is it that he is no position to object? You say "It is the long-term patients, who have had their whole lives organised by the hospital for years . . . that benefit most from industrial therapy." But you are substituting one form of authoritarian organisation for another. The treatment of institutionalised patients needs a varied programme to encourage the expression of individuality. As an occupational therapist, I must make one protest—I do not wear a starched green overall—the laundry just could not cope!—Yours faithfully,

MYRTLE CAMPBELL
Bristol

India and China

SIR—In your issue of December 1st, your correspondent in India states that "New Delhi might declare boldly that the Chinese could not dictate victor's terms. But the fact remains . . . that they have won a smashing victory."

In other words, after China's "smashing victory" which merely dramatised the genuineness of India's faith in the doctrine of peaceful co-existence and demonstrated her strong moral sense, India has lost the right of talking to the enemy with freedom and frankness and on equal terms. Surely he does not mean that India ought to show a preparedness to give away what is hers to the burglar who, having made a surreptitious entry into her house, suddenly offers sophisticated terms of withdrawal.

Your correspondent then proceeds to report about a certain "wandering Brutus." Even an Indian who, according to your correspondent, "has not the faintest conception of what modern war means," feels that one is likely to come across such wandering Brutuses in any scene of modern combat. During the last world war, there were surely a few in the jungles of Japanese-occupied Burma, although Japan eventually had to surrender.—Yours faithfully,

BHUPENDRA NATH BASU
Calcutta

Alpine Farming

SIR—To say, as you do (October 27th), that "about half the population of Austria earns its living on 432,000 farms" is misleading. In 1961 only 16.4 per cent of the total population were counted as residential population in agriculture and forestry. People employed in agriculture and forestry (farmers, working members of the farmers' families and hired farm workers) represent 22.7 per cent of the total labour force.—Yours faithfully,

PHILIPP RIEGER
Vienna 17

POINTS

IF Mr R. Witschi's suggestion (November 24th) that the quarantine restrictions on dogs be removed were implemented it might well increase the number of continental visitors to our shores, but the effect on our foreign exchange would be disastrous for then thousands, who now take their holidays at home out of consideration for their dogs, would flock abroad to the delectable European countries listed in his letter.—ERIC BULLEY, *Hartlebury, Worcs.*

YOU write (November 24th) with the bland assumption that the population of London, and of all the south of England, will increase and go on increasing indefinitely, until presumably the whole country is one vast ghastly built-up district. Precisely: which is just why I, for one, got out on a single ticket. As for "six new Birminghams," don't be beastly to your readers, look at the one you have. LIONEL WILLS, *Trieste.*

BOOKS

Capitalism's Citadel

The Stock Exchange: *Its History and Functions*

By E. Victor Morgan and W. A. Thomas.

Elek. 293 pages. 63s. buckram, 50s. cloth.

On occasions the London Stock Exchange has been justly criticised, but, more often, it has been the object of envy, spite and misrepresentation. This has bred a defensive attitude in those who have tried to assess and establish its importance to a capitalist economy. They wear velvet gloves and often proffer excuses when these are unnecessary. Criticism, they seem to feel, gives away too much ammunition to those who, for political reasons, want to snipe at the stock exchange. But the lack of criticism has its own dangers; it may leave the stock exchange and its members too smugly content in their own conservative ways. A developing institution that must constantly adjust itself to the process of economic change needs the spice of an objective, critical appraisal. It is therefore regrettable that in the first modern full length study of the history of the London Stock Exchange Professor Morgan and Mr Thomas have dipped their pens in a tender, blue ink.

This is not an official study, but the council and other members of the stock exchange have actively co-operated in its production, and the chairman, Lord Ritchie, warmly welcomes the book, which he predicts will become a standard work. Even so, the inhibitions seem to be very much of the authors' own making. There is, for example, a sturdy defence of the role of speculation in creating an organised and orderly market that is both timely and appropriate. But the force of the argument is weakened by a string of earlier comments like the one that rounds off the chapter on the South Sea Bubble:

> As usual, "the infamous practice of stock jobbing" was blamed for things for which the corruption of politicians, the contrivance of unscrupulous promoters, and the avarice and gullibility of the public were really responsible.

The real point of this episode as it affected the stock exchange is that in their greed the dealers went along with the politicians, the promoters and the public.

Nevertheless, this is a valuable book, easily, pleasantly and occasionally humourously written. It is well constructed, analysing the various phases of investment and then relating the changes in organisation and techniques in the stock exchange to them. It shows, without becoming too technically boring, how in fact the stock exchange throughout its history has adapted itself to economic change. Some techniques, such as option dealings, are remarkably old; others, including the separation of the jobbing from the broking function, have developed only slowly and, indeed, are still in the course of evolution. After the South Sea Bubble, dealings in the Funds dominated the stock market throughout the eighteenth century, and the technique of dealing for the account in the gilt-edged market as well as for cash was then perfected and remained in force until the second world war; whether it could now be reintroduced and serve some useful purpose in conditions of greater monetary instability and a greater willingness by the authorities—the jobbers behind the jobbers—to make their wishes felt in the market is still perhaps worth some passing consideration in Threadneedle Street.

The industrial revolution then produced two great branches on the stock exchange tree: the first, now withered but not completely dead, was overseas investment, and the second, railway and industrial financing. It is the latter and the rise of the institutional investor that now dominate market thinking. The major evolution in technique associated with the emergence of equity financing was concerned with the handling of new issues. Today's highly wrought and flexible system of underwriting—and policing by the issuing houses and brokers as well as by the Share and Loan Department — was created only gradually from yesterday's pains and knaveries. It is not perfect yet. Nor is it likely to be in an institution which by its nature attracts all sorts and conditions of men. But what is striking in the history of the stock exchange is with what high standards of conduct by far the vast majority of its members have conducted themselves and their business. Once this is recognised, the rogues and dishonest dealers can be seen in perspective and the canvas is ready for the critical painter. And perhaps the greatest tribute that can be paid to this book is that when he takes up his brush he will have to take many of the colours from its palette.

Breakdown of a Marriage

Lord Byron's Wife

By Malcolm Elwin.

Macdonald. 556 pages. 45s.

Never can a scandal in any family have occasioned such endless reverberations as the breakdown of the marriage between Lord Byron and Annabella Milbanke. It lasted only one year, and in 1816 he left England for ever, the most talked-of man in London society. Speculations then abounded, and have persisted ever since, about why his young wife, after the birth of their daughter, should have insisted on a legal separation. His sanity was called in question, and allegations of incest and of homosexual practices were made, though of course not publicly. The element of mystery in the scandal was reinforced when, after his death in 1824, his widow, his publisher and his most trusted friend conspired to burn his memoirs, which presumably contained his version of the catastrophe.

Lady Byron spent the forty-four years of life that remained to her after Byron's departure into exile in justifying her own behaviour. To quote from Mr Elwin's introduction to this book,

> She preserved not only every letter addressed to her with any bearing upon the subject of her marriage, but copies—often attested by witnesses—of her own letters and of letters shown to her by others. She also kept journals at irregular intervals, and compiled many reminiscent statements, the most valuable of which were intended for possible legal use in the event of her being required to sue for custody of her child. No scrap of memoranda was too trivial for preservation.

And, as if all this were not enough, her grandson, the second Earl of Lovelace, accumulated many more documents from the descendants of her correspondents, and transcribed no less than 170 volumes of material bearing on Byron, his wife and his half-sister. These, the famous Lovelace Papers, have never been unrestrictedly available to any Byron scholar until their present owner, the Earl of Lytton, commissioned Mr Malcolm Elwin to catalogue them and use them to tell the truth about the Byron marriage and separation.

It cannot be said that his book contains any startling revelations. We can still speculate, if we want to, about the exact nature of the shock that determined Lady Byron to refuse even to consider reconciliation with her young husband, for Mr Elwin does not follow up clues put forward by Professor Wilson Knight in "Lord Byron's Marriage," nor indicate what his own conjectures are. But let us fervently hope that all the evidence relating to the marriage and its breakdown is now made public, and that the point of surfeit has been reached by readers of Byroniana.

Mr Elwin makes available a good deal of unpublished material, and enables us to see in great detail the character of the girl who thought it her mission to marry and reform Lord Byron. From letters written by her mother, and later from her own letters, we see the clever, wilful child developing into the self-important, humourless, well-intentioned young heiress; and the relentless streak, so marked at the time of the separation, is seen to be an intrinsic part of her make-up. Mr Elwin clearly dislikes Annabella heartily, and beyond question she was a prig. But Byron's touching attempts to get her to relent show that though he may have treated her abominably he was very far from hating her. It is perhaps poetic justice that her tireless attempts to justify her own conduct recoil upon herself, so that the person who emerges most attractively from this welter of correspondence is Augusta Leigh, whose generosity and capacity for laughter contrast so markedly with poor Annabella's self-righteousness.

Red Ghosts Talk

The Age of Revolution: *Europe from 1789 to 1848*

By E. J. Hobsbawm.

Weidenfeld and Nicolson ("History of Civilisation" series). 369 pages. 50s.

"The intelligent and educated citizen" to whom Mr Hobsbawm dedicates this book is warned in the preface that it is not a detailed narrative but an interpretation of the dual revolution, the French and the Industrial, whose influences spread far beyond Europe. It is a large book; it weighs heavily on the hand—and sometimes on the spirit too, for its author's style is no happier than the doctrine of economic fatalism which seems to possess him. It has been said that a historian is a "sort of talking ghost from out the past." Mr Hobsbawm, if not a ghost, seems to be under strong spectral influence.

The first half of this volume deals with the dual revolution's course from 1789 to 1848; the second somewhat repetitively with its results. Even the intelligent citizen will be well advised (as in the case of some whodunits) to read the last chapter first. For when he has done so he will at least know that his arduous journey's end is a meeting with Karl Marx and the "spectre of communism." The author's conclusions, however "inevitable," may not seem to some readers to follow logically from the three hundred pages that precede them; but they have the merit of being dogmatically clear. Mr Hobsbawm recognises the triumphs of material progress between 1789 and 1848—millions of tons of coal hewed; thousands of miles of rails laid; ships propelled over ocean routes by steam; gas-lit cities connected by telegraph; international trade quadrupled. But he insists that the price paid for these achievements was wage-slavery in field and factory throughout Europe; legal slavery in South America and the southern United States; and semi-slavery in many British colonies. He sees them as trophies of the victory of bourgeois capitalism entrenching itself in "liberal" representative institutions against that proletarian democracy which he regards as the rightful heir of the dual revolution—a bourgeois society "haunted" in Marx's words "by the spectre of communism" and waiting tremulously for the explosion of '48.

Nevertheless, "The Age of Revolution" is well worth serious study, even if the author's Hegel-ridden thesis is developed in a somewhat labyrinthic style. There is an exceptionally well-furnished picture gallery and some illuminating diagrammatic maps. Recent historical opinion is given full weight in the discussion of the French Revolution, and Napoleon is generously treated—possibly because he talked, when it suited him, like a determinist. But is it indisputable that the French monarchy could not have been constitutionalised in 1789-90? Or that the inventions of the industrial revolution were in no way beyond the scope of artisans experimenting in their own workshops? Or that by 1800 the financial techniques required to capitalise expanding manufacture and trade were in abundant supply? Or that "for every man who moved into the business classes a greater number necessarily moved down"?

Some recent reassessments of the industrial revolution and of its social consequences might temper the author's dogmatism; but they are given little space in this book. Indeed his indifference to opinions with which he disagrees lessens its value. His convictions, however, make him occasionally incautious. In one case at least he seems to have been badly misled by a Jacobin ghost, for he states that the *Marseillaise* was written as a marching song for the troops from Marseilles. In fact the wife of the Mayor of Strasbourg wrote in May, 1792, that Rouget de Lisle composed it for her husband's friends, who are shown enjoying it in the pleasant bourgeois family circle depicted on the wrapper of Mr Hobsbawm's book. It was popularised by the "patriots" from the south in August when they marched on Paris to play a prominent part in the storming of the Tuileries and the September massacres.

Local Material

Village Records

By John West.

Macmillan. 224 pages. 30s.

This is a sound and comprehensive survey of the materials from which the history of villages can be written. Mr West's method is a good one: to deal in some detail throughout the book with the history of one village, Chaddesley Corbett in Worcestershire, and then to extend his discussion of each class of records to the whole of England and Wales. His illustrations are all drawn from Worcestershire, and they form a complement to the text that is not merely decorative but also essential to it: they include examples of most of the types of documents dealt with, giving point to the discussion of the physical problems they present.

The book is particularly valuable for its treatment of some classes of material that have not often been discussed in surveys of this kind, such as probate records and the inventories attached to wills, the deposited plans of public undertakings, and printed local directories. Mr West interprets the word "records" in his title in a wide sense, to include monumental brasses, (though unfortunately he has almost nothing to say of other church monuments, which are of equal value to the historian) and the houses of the village, with the light that inventories may throw on their furnishing. The book is informed throughout by his experience as a teacher and his enthusiasm: yet it is an enthusiasm always under discipline, which leaves him room for some most necessary words of caution to amateur research workers about what they ought, and ought not, to expect by way of services from the archivists whose documents they consult.

Apart from a stodgy jacket, decorated with a blurred and useless reproduction of a map, the book is pleasantly produced. It is in every sense excellent value for thirty shillings.

One Norse War?

The Age of the Vikings

By P. H. Sawyer.

Arnold. 264 pages. 30s.

Throughout the ninth century and again towards the end of the tenth, Western Europe had to endure the attacks of the Danes and Norsemen while Russia saw their Swedish neighbours in search of lucrative trade-contacts with the Moslem East. An altogether convincing explanation of the causes and consequences of these movements has, Mr Sawyer thinks, hitherto eluded historians. Misled by the literary sources of the period—the annals written by prejudiced monks, the chief victims of the

Family Expenditure Survey

REPORT FOR 1960-1961

A two year analysis of the pattern of household expenditure based on a yearly sample of 5,000 private addresses. The report contains information of vital interest to manufacturers and those concerned with market research.
12s. 6d. (post 7d.)

National Income and Expenditure

Gives estimates of the National Product, income and expenditure of the United Kingdom for each of the years 1951 to 1961.
6s. (post 6d.)

Reference Pamphlets

Prepared by the Central Office of Information, each handbook gives a brief, yet comprehensive, account of one aspect of the British way of life, both at home and abroad. Additions are constantly being made to the series which has been widely acclaimed by the press. A complete list of titles is available from HMSO P6a (ECO), Room D42, Atlantic House, Holborn Viaduct, E.C.1.

HMSO

Government publications can be purchased from the Government Bookshops in London, Edinburgh, Manchester, Birmingham, Cardiff, Bristol and Belfast, or through any bookseller.

raids—they have vastly overestimated the numbers of the invaders and the havoc they wrought. Archaeology, the coin and place-name evidence must be allowed to speak for themselves and they have led Mr Sawyer to some striking and startling conclusions: the Norwegians and the Danes from the start raided because they wanted land. If they looted as well it was only to acquire the capital needed for permanent settlement. Very few Frankish and English coins of the ninth century can be found in Scandinavian hoards, and most of the currency which circulated in the north up to about 970 came from the Moslem world by the Volga route. However, when this source of supply failed, the Danes—not the Swedes who traded with the Middle East—resumed their attacks on Germany, where new silver-mines had been opened in the Harz Mountains, and on England.

There were peaceful settlers and immigrés amongst the Vikings, but they did not control the movements of the war-bands and ships' companies commanded by aristocratic leaders in search of rather more than a homestead and a plot. If their armies were very much smaller than historians have up to now believed, the same is true of the rural populace and the unreliable defence forces of the regions attacked. Mr Sawyer often overlooks the literary sources, which he distrusts as a species, but he offers his readers a masterly survey of archaeological, numismatic and place-name studies and he also opens up the work of Scandinavian experts in these fields, all of which would, without his book, remain inaccessible not only to the general reader but also to most scholars. If some of his views contain as much hypothesis as those he rejects, enthusiast and sceptic can learn from this alike.

Indian Panorama

India

By Jean Filliozat.
Harrap. 276 pages. 63s.

PROFESSOR FILLIOZAT is director of the Institut Français d'Indologie at Pondicherry. In this handsome book he achieves a remarkable blend of narrative and illustration, giving us a valuable dissertation and an excellent picture book about India in a single volume. In an appreciative foreword, Mr Nehru makes the fair comment that M. Filliozat does not deal very much with the industrial revolution in India, so dear to Mr Nehru's heart, and is more concerned with the past. A column for transport and less for power and industry are indeed short commons for the student of modern India. But in its description of modern Indian society, the rich variety of its peoples, languages and cultures, the first part of the book is perceptive and sympathetic. The second part offers some lengthy flash-backs into the Indias of the past—under British rule, under Hindu and Moslem rule, and in pre-Islamic times.

If one acknowledges Mr Nehru's point that one will look in vain here for discussion or pictures of fertiliser factories or of the Damodar Valley projects, the truth remains that this book admirably fills in the background of Indian history while evoking and illustrating a genuine atmosphere of Indian life and traditions. The 260 photographs are brilliant, and if there is only one dam among them the temples and statues are there in profusion from the seventh-century rock carvings at Mamallapuram (more familiar as Mahabalipuram) to the erotica of Khajurao. The book can be recommended as an important contribution to the understanding of India, scholarly in its foundations and popular in its appeal, attractively written and translated, and beautifully produced.

Wild Life in Africa

Between the Sunlight and the Thunder

By Noel Simon.
Collins. 384 pages. 30s.

Animals of East Africa

By C. A. Spinage.
Collins. 160 pages. 30s.

AFRICAN politics have distracted attention from African economics, particularly from key questions about the best use of central Africa's none-too-hospitable land. The emerging countries have to decide soon what system of farming they are going to adopt and, once made, the choice is irreversible. Shall they opt for a western style of farming, evolving breeds of domestic farm animals that can adapt themselves to African climate and the African terrain (probably a cow based on the Indian humpbacked beast)? If so, the land will have to be cleared of its wild game as Europe and North America have been cleared for centuries. Alternatively, shall they resist the temptation to copy western methods and farm instead the wild game that already breeds and thrives on the continent.

The latter course, it is argued, would give a heavier yield of meat per acre on natural pasture, since game thrives where cattle starve. Writing of the eland "a great cow-like, almost docile beast," Mr Spinage says that

> farmers and others have wondered how they are able to keep in condition during the dry season . . . one answer . . . is found in an examination of their stomachs, where all manner of tough, woody herbs can be found and large quantities of Sansevieria leaves . . . about two feet in length with a needle-sharp thorn at the tip. Domestic cattle will not touch them but the eland swallows the lot, thorn and all, and they can easily be found in the stomach with the undigested fibrous parts still attached, looking like pieces of binder twine.

Mr Spinage restricts himself to an unsentimental description of the animals and their inter-relation to each other including the maggots and other scavengers. His book, with photographs justly described by Sir Julian Huxley as "the best collection of wild life photographs I have ever seen," makes a pleasant Sunday-afternoon aperitif to the more serious Mr Simon, who tackles the controversial heart of the matter—the relationship between African native and African game in the historic past, the bloody present and the possible future with serious game farming by the tribes themselves. This is a work of scholarship. Probably only in England would one feel a twinge of surprise that any book about wild life could be so described.

Belated Renaissance

English Art 1553-1625

By Eric Mercer.
Oxford University Press. 332 pages and 96 plates. 55s.

ALOOF from the current fashion of lavishness in art books, the Oxford University Press soberly continues its story of the visual arts seen as part of the general history of England. This book is the seventh in a plan of eleven volumes (coming forward in unchronological order under the editorship of Mr T. S. R. Boase) and covers the Elizabethan and Jacobean periods. It makes interesting reading.

England was the only western country whose art was unaffected at the time by the Renaissance. It was over a hundred years before it received any welcome there. It did so then because the new men needed to run the much elaborated machinery of government were Renaissance men. Moreover, Italian craftsmen employed by Henry VIII had given England a glimpse of Renaissance design in the small ornamental plaques and scrolls with which they embellished buildings.

Elizabethan times brought a delight in living, and Mr Mercer describes how the Italian Renaissance had a definite influence on the design of large mansion houses, bringing a desire for symmetry in place of the traditional irregularity of Gothic architecture and the focusing of attention on exterior elevations. He considers in some detail the features of great courtyard houses such as Sutton Place and the progression through the 'H' plan style of Hatfield to Inigo Jones's Palladianism, of which the Queen's House at Greenwich is an outstanding example.

These were not great years for British painting or sculpture. Both were preoccupied with portraiture, but, after Holbein's death, England relied on the services of foreign visitors such as Hans Eworth. Some grand Jacobean portraits have survived, but mostly these are unsigned and in the mannerist style of the continental artists of the sixteenth century. It was only in portrait miniature that an independent national tradition was created: Nicholas Hilliard, although continuing Holbein's techniques, evolved an exquisite style of his own. Of the qualities of his art Mr Mercer writes in scholarly fashion. His text throughout is supported by black and white illustrations, which take up nearly a hundred pages.

Bonnie Lord George

Battles of the '45

By Katherine Tomasson and Francis Buist.
Batsford. 216 pages. 25s.

BATSFORD'S battle series has consistently retained a remarkably high standard, not simply in the writing and illustrations but in the encouragement given by the editors to their authors to dig up fresh evidence and to blend the intimate detail with the broader sweep of military affairs. This book on the Forty Five is no exception. It is detailed, fair in its arguments and moves forward at a good round trot and in a well ploughed field of study turns up some new coins of evidence. One suspects, for example, from the close examination given to the part played by the artillery that an ardent gunner lives in Mr Buist; the authors argue convincingly that the guns played an important role in the defeat of the Jacobites at Culloden and that the failure to use them at Prestonpans and Falkirk contributed to the defeat of the Crown's forces.

This campaign is so encrusted with local pride and myth that it is dangerous to pass judgment. But there was something essentially foolhardy in the adventure: the government retained command of the seas, which kept the French out and enabled the Crown to transfer its troops quite rapidly from Flanders. The initial successes of the Jacobites may therefore be attributed to the time it took the Crown to get a reasonably sized army in the field. This book does not avoid controversy. The authors suggest, for instance, that Cope has been more maligned than he should have been and that practically the only man with real military ability in the Jacobite ranks was Lord George Murray. There may, in fact, be a better case for talking of Bonnie Lord George than of Bonnie Prince Charlie.

Greek Buildings

How the Greeks Built Cities

By R. E. Wycherley.
Macmillan. 256 pages. 25s.

THIS is the second edition of a book first published in 1949. Since then Greek archaeology has flourished and much has been learned. The book has not been rewritten, but some notes have been added about recent work, and it is illustrated by more and better plans.

Professor Wycherley has written a non-technical and interesting book on a subject of which the ordinary man knows very little, though it lies at the roots of all our urban civilisation. To make sense of ruins is not a layman's job; and the man without technical training usually finds it difficult to take in any but the most monumental Greek remains, above all temples, which are clear in plan and (having more stone in them) are apt to be better preserved than the others. This book goes the other way about: it starts with town planning and deals in turn with all kinds of public buildings—fortifications, agora, stoa, gymnasium, stadium, theatre, city offices and fountain houses. Two sections are short in relation to their importance: the temple, because it is so fully covered elsewhere, and the private house, because so little is known about it. The book covers the classical period and only runs on into hellenistic times where the author needs to point a contrast.

The plans are clear and closely tied in to the text. The illustrations are mostly of models of reconstructed towns and buildings—ugly but useful.

The Maori Wars

The Strangest War

By Edgar Holt
Putnam. 280 pages. 30s.

THE settlers stole the natives' land, and when the natives rebelled the soldiers killed them. That, in a Marxist nutshell, is one way of looking at the Maori wars. And this gross over-simplification is false. Not all the settlers supported the land grab; many, notably Bishop Selwyn, sought a conciliation between white and brown. The colonial authorities and the military were reluctant to exert force on behalf of a cause for which they had little heart. Sir George Grey, one of the great Victorian proconsuls, sought peace rather than war while many of the Maori leaders recognised the futility of rebellion. Casualties were relatively light, not least because of the Maori's skill in guerrilla fighting, and far more Maoris died of diseases brought by the white settlers than by battle. And once settlement was reached it was a permanent one, leaving racial harmony and not bitterness behind it.

There are, in fact, no blacks or whites, only twilight greys. Fortunately, Mr Edgar Holt, a neat, intelligent and sensible writer, avoids the sensational and tells the story with unprejudiced vigour. This is an able piece of work, which is a pleasure to read; but so remote is the strange war in time and place that it is unlikely to command so wide an audience as it deserves.

Studying Abroad

Student's Guide to Europe

By Peter Latham.
Macgibbon and Kee. 267 pages. 25s.

MR LATHAM is a supporter of the common market in higher education; his guide attempts to assemble the basic information about the university possibilities in Europe for students who want to put in a period in a foreign country. Now that some British universities actually require their modern language students to put in a semester or two in the country of their study, the student can be faced with a bewildering field of choice and little to go on. Dignity may forbid him to let others choose for him, but, at the present average rate of progress, he will be middle-aged before he can know from his own experience how he should have chosen for himself. Many of these foreign semesters must turn out a disappointment; a pity, when the opportunity is not going to recur.

Mr Latham has had a good idea in setting out to fill the need for a reference book in this field. The universities of 15 European countries are enumerated and briefly described, with such details as admission requirements, fees, terminal dates and the addresses of colleges and hostels. It could have been better done; the supply of information is uneven, and aspiring students should beware of the spelling of many of the useful addresses. These things can be improved; with pains, this guide can have a future.

OTHER BOOKS

OIL COMPANIES AND GOVERNMENTS. By J. E. Hartshorn. *Faber.* 365 pages. 36s.

This book is a discussion of the relationship between the international oil industry and the governments of countries in which it does business, addressed to the non-specialist reader. It is in two parts: the first is a descriptive account of the economic pattern and behaviour of the oil industry, and the second considers examples of the industry's relations with governments in countries variously placed as regards oil supplies, from the relative self-sufficiency of the United States and Russia to the import dependence of Western Europe and the export dependence of the Middle East. It concludes with some discussion of potential change in these relations with governments.

As the author is a member of the staff of *The Economist*, it is not reviewed here.

PICK OF PUNCH. Edited by Bernard Hollowood. *Arthur Barker.* 192 pages. 21s.

This is not really the pick of *Punch* nowadays but the pick, conventionally, of *Punch's* fun. Good fun it is too, with some air of up-to-dateness, but next year Mr Hollowood must add to its wit and relevance by picking from *Punch's* other newer basket of documentary description, social commentary and all kinds of criticism.

THE BED POST. Edited by Kenneth Young. *Macdonald.* 244 pages. 15s.

A collection of diverse pieces from a year of *The Yorkshire Post.* If it has not the metropolitan sparkle of *The Guardian's* similar annual anthologies, there is a pleasing solidity and tenacity typical of the paper and its region.

VENICE. By Marcel Brion. Photographs by Edwin Smith. *Elek.* 223 pages. 63s.

An attractive and splendidly illustrated book about the history, life and art of Venice from the fifth century to the nineteenth, this is the third in a series devoted to famous cities and towns. Among many superb photographs, some of statues and bas-relief stand out as symbols of the extraordinary liveliness of Venetian creation.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

God Speed You Merry, Gentlemen

WASHINGTON, DC

THIS week in a televised interview President Kennedy spoke for an hour about his four-year term, now approaching the halfway mark. He discussed many of his problems with remarkable but typical forthrightness. But he did not say very much about what all America is discussing: the men about him and their relations with him and one another, as well as with the American press. Recent events involving them have produced a flood of speculation, all of it critical and much of it caustic. But one point that everyone, including the press, seems to have missed is that some of the men around Mr Kennedy have evolved a pattern of behaviour which resembles closely that in the big, up-to-date American business organisation.

The modern American *entrepreneur* is the spiritual descendant of the Yankee trader who stared the Indians out of countenance, and out of Manhattan. It has been said, purportedly on the very highest authority, that Mr Kennedy and Mr Khrushchev were eyeball to eyeball in October and that the Russian blinked first. President Kennedy and the White House staff are supposed to communicate in a sort of oral shorthand. This turns out on examination to be the same as is used by the big business organisations. Both along the New Frontier and along Madison Avenue there are thrusts and crunches. In the making of policy, considerations are said to grind against one another, with the losing ones being thrown right out of the ballpark. A rebellious Congressman who has been rendered repentant by being deprived of patronage is said to be "trying to get back on the reservation." So in the business world is a businessman who recants after being boycotted by his colleagues for taking too seriously economists' tales about free competition.

Mr Kennedy has been charged with letting his relatives enter politics. But many large American companies carry on their pay-rolls the boss's relatives, including his in-laws. The President's evident partiality for having around him men who can play touch football or enter a swimming-pool fully clothed is paralleled by the big company's accent on youth and physical fitness. The President has introduced into government service the sixty-five-hour, seven-day week which has become standard practice among top business executives in the United States. For two years New Frontiersmen have been leaving their Georgetown homes in Washington while it is still dark in order to attend early political breakfasts. They leave their offices long after sunset and lug home bulging briefcases. Some New Frontier wives complain that they need to make appointments to see their husbands. A member of Mr Kennedy's hard-driven team who finds himself with an idle half-hour on his hands gets a guilt-complex about cheating the country.

The President's young men, like the up-and-coming men of any large American business organisation, spend much of their day either "in conference" or dashing to and from conferences. But while being keen as mustard and sharp as knives, they are expected to appear completely casual and relaxed. This is in conformity with the Kennedy "style," which is also known as its *ton, panache* or even *ambience*. The Kennedy style consists of presenting a profile of courage and of displaying grace under stress; it derives from the modern image of an American big business chief, who is required at all times to show cool bonhomie and to be above all else a "clean desk" man.

President Kennedy himself is credited not only with reading an issue of *The Economist* in thirty-five minutes but also with keeping it all in his head. Like the modern busy businessman with not a moment to waste, he often shoots up from his own front lawn in a helicopter or else sends his wife. If poets and 'cellists have replaced the cowboy stories and cocktail-hour music with which President Eisenhower relaxed between rounds of golf, this is in line with the way in which modern American business patronises the arts. The White House has become the place which famous physicists picket by day, carrying placards condemning atomic tests, but where they dine with the President the same evening. This inevitably recalls the really up-to-date American businessman who invites Mr Khrushchev for weekends and wangles invitations to the Kremlin.

It has to be conceded that these attitudes are different from those of the previous Administration. Mr Eisenhower's staff were said to be kept busy all day trying to find things not to do. Critics of the New Frontier, including Mr Eisenhower, tend to regard President Kennedy as a quiz-kid surrounded by whiz-kids. Mr Kennedy's whiz-kids have penetrated the Department of Defence, the State Department, the Justice Department and the federal agencies and have been brusque with old-fashioned generals and admirals and rude to belligerent airmen and bumbling civil servants. They are apt, it is said, to look on Congress, the Cabinet and the government bureaucracy as lumbering relics of the outmoded past, like fossilised dinosaurs. The President said this week that he still gets on the telephone himself to the State Department because papers tend to stay on government desks too long.

According to the American press, the New Frontiersmen have tried but failed to reduce journalists to mere spear-bearers and stage props of the Administration. The press maintains that the Administration's tactics are to divide and rule and that it bribes with "scoops" or scalds with criticism couched in robust sailorly language. Perhaps in revenge the press reports that the three main arms of the Kennedy Administration are the Harvard clique, the Irish Mafia and Mr Robert Kennedy, the Attorney General. The head of the Harvard clique is said to be the President's Special Assistant for national security, Mr McGeorge Bundy, who keeps an eye on Russians, Arabs, Chinese, Cubans and the American espionage system from an office in the basement of the White House. Mr Bundy is possibly the only *eminence grise* in history to occupy such lowly quarters. The Irish Mafia keeps an eye on the politicians. Mr Robert Kennedy keeps an eye on everything.

THE "leak" in the National Security Council which involved Mr Adlai Stevenson and others in embarrassing charges and counter-charges plainly calls for the use by the National Security Council in future of a Harwald Group thinkometer with fifteen switches. It is described as an electric meter fed by remote control switches under the table. Members of a group indicate approval or disapproval by pressing the switches. The meter's needle shows only the reaction of the whole group, so that one member may veto a colleague's idea without his being the wiser. The Harwald company suggested that this would eliminate the personality factor almost entirely from business discussions. It could doubtless do the same for the National Security Council, as well as safeguarding from future attack those who dissent from group thinking.

In big politics as in big business, group thinking encourages personal empire-building by creating a need for allies and supporters. Those who are "in" rise and those who are "out" leave, sometimes assisted on their way by innuendo. The knife-work is so skilled that the victim often does not know his head is off until he shakes it. New Frontiersmen deny indignantly that there are power-seekers in the Administration who are playing musical chairs around the President. It is probably true that in most cases thinking is "permissive"—as it is in big American firms—and that the only penalty of thinking wrong is that a man finds himself left out of major responsibilities and suddenly able to spend more time with his family instead of in overwork—an appalling thought.

Mr Khrushchev seems to see the Kennedy Administration as a sort of Laöcoon frieze of armament makers, oil men, Wall Street brokers, generals, admirals and spies grouped about the White House and holding up the march of history towards communism. The New Frontiersmen, however, see themselves, not Mr Khrushchev, leading the march of history. But toward what? The answer would seem to be a tidied-up world. Pragmatists with but a touch of lunar romanticism, the Kennedy men appear to want a western Europe that will be tidier when it is united, a tropical world that will be less messy when it is more developed and a United States that will consent to think about finance and other matters more like a big firm and less like a corner grocery shop. Of the organisation men in big business, Mr William Whyte remarked that, even if they acted like precocious brats at times, they got a great deal done that outweighed the bloody noses along the way. As they approach their halfway mark, Mr Kennedy's young men deserve at least that much praise.

Bolt from the President

PRESIDENT KENNEDY has always been a ruthless young man and ever since he was a very young man indeed he has looked at Britain with clearer eyes than have many Britons. At the moment he is flushed with his Cuban success, probably somewhat hurt at the lack of confidence shown in him by the British press and public until that success was assured, and convinced that Britain can afford to increase its contribution to the defence of Europe. On top of this Mr Kennedy is anxious to hold down government spending next year, particularly the inevitable rise in the defence budget, in order to make more acceptable to Congress the tax cuts which, he feels, are essential to the future prosperity of the United States. Finally he is determined to prevent a dangerous proliferation of independent atomic forces.

Against this background the President was told by the Department of Defence that the Skybolt nuclear missile, to be carried into its thousand-mile range of its target under the wings of aircraft and a vital part of Britain's defence plans, was proving unexpectedly slow and expensive to develop; it would probably never become operational and even if it did it would be too late to take its place in America's arsenal. It is not therefore at all surprising that Mr Kennedy decided to drop Skybolt—or even very surprising that he dropped it on Mr Macmillan's toes. But both what Mr Kennedy did and the way he did it are being criticised at home nearly as much as abroad, by his candid friends as well as his political enemies.

They are saying that the President seems to have forgotten that there is more to an alliance than material contributions and that he should have shown sympathy for Britain's pride and Mr Macmillan's problems. They are saying also that Skybolt's technical difficulties have been exaggerated and that the decision to abandon it is unjustified and will leave the United States undesirably dependent on missiles which are fired on split-second decisions. This argument is naturally being put particularly vehemently by the Air Force, since without Skybolt manned bombers will be obsolete even sooner than expected, and by the Douglas Aircraft Company whose future largely depends on the project. But the view that work should not be stopped on Skybolt seems to have strong support both among the Joint Chiefs of Staff and in the Senate. Congress will certainly have something to say on the matter when it reconvenes, but Mr Macmillan should not count on vested interests to rescue him from his predicament.

Christmas Still Deductible

THE liberal good cheer traditionally dispensed among American businessmen in the form of lavish banquets, expensive gifts and weekends at the corporation's hunting lodge during the holiday season will have a decidedly nostalgic ring this year. For January 1st will bring a major crackdown on "expense account living." In the good old days such expenditures could be generously written off when paying taxes on the basis of approximate estimates of the money involved and loose interpretations of just where legitimate business spending ended and personal pampering began. With the rules of the game so permissive, "it's deductible" tended to become a catch-all phrase and abuses of expense accounts were disturbingly widespread. But buried away in the omnibus Tax Bill passed by the last Congress were new guide-lines stipulating that tax deductions should be allowed only for those expenditures that were reasonable in amount, clearly related to the active conduct of business and adequately documented.

If the full implications of the new policy escaped the business community at the time, they were brought rudely home last month by the publication of the first set of follow-up regulations by the Internal Revenue Service. These elaborated the documentation rule laid down by Congress. To claim deductions for travel or entertainment, a businessman would need to keep a detailed diary showing the amount of his expenses, the time and place of the outlays, the business purpose of the spending and the name and business relationship of persons entertained. Every ten-cent tele-

Christmas Spirits

NEW YORK

ALTHOUGH the American liquor trade does not claim to have invented Christmas, it feels that it might well have done, so great is the imagination lavished upon the holiday which brings in almost one-fifth of an annual $5.5 billion in sales. This season, expected to be the most bibulous in history, has been enlivened by $45 million worth of advertisements for holiday liquor. Old favourites have reappeared, suitable for framing—the Gilbey's Gin frosted bottle against a Park Avenue scene, for example, an advertisement said by its designers to have "captured so well the spirit people associate with the Yuletide season" that, after four consecutive years, "it has become a tradition." There have also been the Old Crow (bourbon) Punch Bowl, "a tradition in itself," and a new Four Roses (blended whiskey) Christmas Bell, "created in fully dimensional plastic, glistening with a life-like glaze of frost . . . a further refinement of the Christmas concept pioncered by Four Roses over the years."

At the heart of this Christmas concept, evolved by the four major giants of the industry, is the dogma that the container takes precedence over the thing contained. The annual headache—which container?—has been resolved this season in favour of the decanter, the elaborate stoppered bottle of cut glass offered at no extra cost. Schenley Industries have boldly put seventeen brands in decanters this year, thirteen more than last Christmas. The National Distillers Products Company is so honouring three of its best-selling brands of bourbon whiskey instead of the single decanter offered with Old Grand-Dad last year. Hiram Walker Ltd has put only its most luxurious holiday offering—8-year-old Walker's Deluxe blended whiskey—into cut glass, but for the rest has remained loyal to last year's container—the "pre-wrap" or gift package, with the drink reposing in its familiar bottle inside. Walker's is proud of its thirty-nine varieties of package; these consumed 11,000 miles of decorated foil and 1,600 miles of "sasheen" ribbon. (Tying of the bows is done by hand and was begun in July.) Although the aloof leader of the industry, the House of Seagram, itself inhabits the most elegate decanter on Park Avenue, it is bestowing holiday glass only on its three favourites, including the fantastically popular 7 Crown blended whiskey and upon a straggler, Wolfschmidt Vodka, whose suggestively Eastern European created decanter is said to "capture the art of vodka gift-giving."

Yet under the tinsel lie what the giants might call their "year-round" anxieties. Although they control two-thirds of the market, the four big firms are increasingly out of step with the country's changing drinking habits. All are whiskey houses and the trend has been not only away from blends of domestic whiskies and into "straights" such as bourbon (the whiskey made from maize), but also to Scotch whisky, gin and, more impressively, vodka. None of the major companies has a vodka able to catch up with the well-named Smirnoff, of which Heublein, Inc. sold two million cases last year. None owns any of the best-selling brands of Scotch; only National's Gilbey can compete with the two highest-selling gins in marketing more than the million cases a year needed to make a line of gin profitable. And the proud House of Seagram—built on blends—must stand alone in not having a well-known bourbon.

Christmas is a heaven-sent opportunity to redress such imbalances. Seagram has attempted to popularise its "Antique Bourbon," named according to that law which holds that bourbon, like Scotch, must appeal to nostalgia, while blended whiskies must tap desires for power and prestige (Seagram's Lord Calvert, a blend, has used as a Christmas gift slogan, "From one status seeker to another"). Perhaps Schenley has struck closest to the necessary *ante-bellum* chord for bourbon; its "Old Charter" appears in a decanter "adorned with the floral scrolls used 150 years ago by the craftsmen who built the fine homes of the Old South." National has tried to convert the growing market among women drinkers to its vodka by advertising in *Vogue* and *House & Garden*, even though the advertisements follow the convention of not portraying women actually in the act of drinking. Seagram has appealed cleverly to both aristocrats and democrats with the suggestion that Chivas Regal Scotch is for the "royalty on every gift list."

While it is not certain that even the unparalleled volume of Christmas advertising can solve the industry's problems, there is no undue pessimism. What with war babies, as well as women, acquiring a taste for liquor, the market is growing steadily. Prosperity, moreover, demands that the cocktail cabinet in any professedly affluent home contains a wide selection of spirits. Sales over the past year have shown a general "upgrading" of taste, with consumers turning to more expensive, older and imported brands. Christmas sales of liquor are widely expected to reach $1 billion and the total consumption of liquor in 1962 to achieve a new high of 250 million gallons. The only real fly in the trade's ointment is that one-tenth to one-fourth of America's liquor purchases are still made from the untaxed, unadvertised and thriving bootlegging industry.

phone call would have to be duly noted. Moreover, a receipt would be required for every expenditure of $10 or more. If these precious scraps of paper were lost, sworn statements would be the only acceptable substitute.

Not too surprisingly, there were loud protests. Hundreds of businessmen, tax consultants and owners of hotels and restaurants streamed into Washington for the two-day hearings on the new rules. (Expenses for the trip were tax-deductible.) Their main objection was to the costly and time-consuming amount of book-keeping demanded. Another favourite target was the $10 minimum for which a receipt had to be presented. It was argued that this requirement was so ridiculously low that it would be difficult to satisfy in practice. In general it was felt that the Internal Revenue Service had gone farther than Congress had intended—a contention seconded by Representative Keogh of New York, who had had a hand in drafting the Tax Bill. The Service was inclined to agree—up to a point—and indicated that the final version of the regulations would require less itemisation and probably a more generous minimum for receipts. Nevertheless, the regulations will retain their bite and the ones still to come are likely to be even more unpalatable to businessmen of the champagne-tastes, beer-pocket-book variety.

Communists in the Mill

ALTHOUGH it is twelve years since Congress passed the Internal Security (McCarran) Act, which requires Communist organisations to register themselves as agents of a foreign power, the Act was upheld finally by the Supreme Court only last year and it is only this week that the party was convicted of failure to comply; if its appeal fails it will be fined the maximum—$120,000. The party's argument that for it to disclose its officers and members would render them liable to prosecution under the earlier Smith Act was swept aside; the judge held that the Fifth Amendment applies only to individuals, not to organisations, and that the registration form does not require the signature of any party member or officer. In fact, so far the only man in prison under the clause in the Smith Act which makes it a crime simply to be a member of the Communist party is, ironically, Mr Junius Scales, who repudiated the party in 1957 after the invasion of Hungary. Many people feel that it is a travesty of justice that he should be serving a six-year prison sentence while so many admitted leaders of the party are at large.

They may not be so for long. Under the McCarran Act, if the party fails to register, the responsibility to do so passes to its officers and, if they fail, to the members. Mr Gus Hall and Mr Benjamin Davis, two Communist officials, face early trials. Other leaders of the party have also been ordered to register. The courts are full of Communist cases: Miss Flynn, the present chairman, is suing for the return of her passport, which was revoked nearly a year ago, the editor of the *Daily Worker* is appealing against a conviction for contempt of Congress and the Internal Revenue Service is claiming $326,000 from the party.

With the party's members reduced to under 10,000 ageing and all too familiar faces—and a sixth of these actually under-cover agents for the Federal Bureau of Investigation, according to one of its former employees—it was probably inevitable that the House Committee on Un-American Activities should loose its under-employed staff on the peace movements which are proliferating in the United States. Mr Doyle, the unlucky chairman of the sub-committee which hauled members of Women Strike for Peace before it last week, struggled vainly to maintain order as prams were parked outside the hearing, wailing babies accompanied their mothers inside, applause could not be silenced and bouquets were handed up to witnesses; at least one of them burst into tears on the stand. The country chuckled appreciatively. But the refusal of a number of witnesses to answer questions about past Communist affiliations may nevertheless have tarred the peace movement with the Communist brush even though Mr Doyle conceded magnanimously that everyone who agitates for peace is not necessarily a Communist.

Refugees from Castro

For Cuban refugees in Florida the best Christmas tidings would be the news that Dr Castro had released the 1,113 Cubans taken prisoner in the abortive invasion a year ago. The recent crisis interrupted negotiations with a private American committee to exchange them for badly needed food and medicines. It also halted temporarily the flight of middle-class Cubans which has already brought over 150,000 of them to the United States. A correspondent recently in Miami describes the success with which this great exodus has been handled.

GREY, in a city of sun-washed white, the stones of Miami's Freedom Tower match the unhappiness of the people who filter endlessly through its doors—Cuba's refugees. Freedom Tower houses the refugee reception centre of the Department of Health, Education and Welfare; since February, 1961, the staff has listed, examined and helped over 150,000 refugees. The department estimates that there are a further 175,000 who have battled successfully through Havana's red-tape and are now waiting to leave Cuba, even though all they can hope for in the United States, if they have no visas, is the status known as "Indefinite Voluntary Departure" under which they cannot apply for permanent residence or citizenship and can be deported at any time.

The Cuban is a modern refugee: he travels by jet aircraft. Before the crisis a Pan-American airliner from Havana landed at Miami's airport twice a day seven days a week and unloaded 110 Cubans. Each week Freedom Tower added a further 1,600 or so names to its books. The refugees who cast off from Cuba in open boats land in the newspaper headlines; but 98 per cent of the refugees have been coming in on the jets. On arrival they merge with Miami's arriving tourists; they bear none of the refugee's distinguishing marks. They are clean and appear well fed, their clothes are good and their luggage is stout. This is Cuba's middle class on the move.

Dr Castro is losing not his able-bodied but his able-minded. Mr Marshall Wise, a director of the refugee reception centre, estimates that 75 per cent of the inflow so far has consisted of professional people—doctors, lawyers, accountants, business executives—and their families. Dr Castro has placed no physical restraints on those who want to leave. But getting the necessary permits demanded persistence in dealing with the Havana civil service and many Cubans gave up in despair. The regulations were arbitrary and changed from day to day. For doctors of medicine the struggle through this barricade was recently reported to have become impossible. The island of six million people has already lost eight hundred doctors and Dr Castro has apparently called a halt to their exodus. But for many a greater obstacle has been the $25 which they have had to pay to the Ministry of Finance for their air fare to Miami. This has been one of Dr Castro's main sources of much-needed dollars—it has brought in nearly $4 million—and officials never asked where the dollars came from (usually they were from friends and relatives in America). The Ministry in turn paid Pan-American Airways, to its disgust, in Cuban pesos.

The refugee operations in Miami are financed by the federal government, although local authorities meet half the additional costs of education. In the 1961-62 fiscal year the operations absorbed $35 million; the budget for the present fiscal year until July, 1963, is $70 million. Some $50 million of this is for relief services for families and unaccompanied children and $9 million for schools. Refugees have to surrender all their property on leaving Cuba, so many adults send their children out and stay in themselves. Welfare payments are on the same scale as Florida's—the fourth lowest in the United States—$100 a month for a family unit, irrespective of size, and $60 a month for the unattached individual. Distributions of surplus food are made, amounting to about $26 worth a month a family. Thus there is every incentive to find work.

The aim of the Refugee Centre is to "help the Cubans help themselves." There are no refugee camps; after registering at the centre the refugee must find somewhere to live. Fortunately, Miami can accommodate a floating population of 400,000 and it has 76,000 holiday apartments and 17,000 rooming houses, apart from hotels and motels. The centre does not find work for the refugee in Miami which, in the off-season, already has an unemployment rate, excluding the Cubans, of 7.3 per cent of the labour force. The object is to teach them English and then resettle them elsewhere. The resettlement work is handled mainly by the many church welfare organisations; 51,000 Cubans have

Mink for the Masses

FROM A CORRESPONDENT IN FURS

TRADITIONALLY a falling thermometer and a rising stock market give the fur trade a boost but this year neither came in time to avert a slump. Nevertheless furriers and fur farmers can take satisfaction in the success of the man-made promotion programmes which have created a mass market for fur trimmings and fur accessories—and for fur coats as well, although with over-heated shops and warmed motor cars such coats are needed more nowadays to keep up with the Joneses than to keep out the cold. Furs are now stocked by supermarkets and mail-order houses. As a result the handful of women who actually set fashion seems to have decided that since fur is now for the masses it is not for them, except perhaps in such exotic forms as mink safety belts for cars, fur sheets for beds or chinchilla pullovers for $1,650, all of which appear in this year's Christmas catalogues. But the more ordinary women who are still filling their cupboards with furry bits and pieces are doing it with their eyes open; under the Fur Products Labelling Act, now ten years old, all finished fur must carry, in English, details of its country of origin and its common name, even if that be dog, cat or hamster.

Last year consumers spent $350,000,000 on fur. Congress has helped the trappers and fur farmers by retaining in the new Trade Expansion Act the embargo, in effect since 1951, against importing most furs from Russia and China. This protection is especially appreciated by over 6,500 farmers who rear mink in thirty-five states, with Wisconsin far ahead, followed by Minnesota, Utah, Washington and Illinois. Fur ranching, as it is usually called, began with fox farms in the early nineteen-twenties. When the over-productive foxes became a glut on the market, mink, chinchilla (reared by approximately 2,500 farmers) and, to a much lesser extent, nutria took their place.

Mink ranching mounted spectacularly and steadily during the last decade and in 1961 over 6,500,000 pelts, three times as many as ten years before, were produced. It takes about seventy-five to make a coat. Only 250,000 wild pelts were taken in 1961; though less popular they are cheaper in America than are the ones grown on ranches since mink are greedy animals, delicate and expensive to rear. In addition some 4,000,000 mink pelts were imported, mostly from Canada and Scandinavia. Almost a million mink skins were exported from the United States last year, a quarter of them going to the United Kingdom. Mink now accounts for at least 80 per cent of the total retail market value of furs, largely as a result of the discovery in the nineteen-forties that it was feasible to breed mink in different colours. Today there are six or seven popular mutations, including a white one called Jasmine, and they account for over half the entire fur business in the United States. It takes four years to produce a new mink mutation, a comforting thought for the women who are wearing Morning Light, one of the latest colours.

Four years ago the Fur Information and Fashion Council was established in New York to encourage the use of a number of other furs which had been suffering as a result of the popularity of mink. Among them are Persian lamb, of which a million skins are imported annually, and Alaska seal, which breed on the Pribilof Islands, where they have been increasing since 1911 when they were first put under international protection. The herd now contains something like a million and a half animals, more than 80 per cent of all fur seals in existence. Seal hunting at sea is prohibited by the North Pacific Fur Seal Convention, agreed between Russia, Japan, Canada and the United States, and the United States government is in charge of the sealing industry on the Pribilofs. The pelts are divided, with 70 per cent going to the United States, 15 per cent to Japan and 15 per cent to Canada; Russia has a small sealing industry of its own.

Seal skins must go through an elaborate process of unhairing, leathering, dyeing (black, brown and grey) and finishing before reaching the market. Only the male pelts have been used until recently, when it became necessary to kill thousands of females to control the size of the herd. Their skins are being sold under the name Lakoda, which is becoming a fairly popular fur. For forty years a single firm, the Fouke Fur Company, has had the contract for processing and selling at a semi-annual public auction the United States government's share of the seal crop. But the contract expires at the end of this year and it may not be renewed; other firms are interested and four besides Fouke have submitted proposals and samples of processing to demonstrate their qualifications for the new contract.

been resettled in this way to date. But it is a slow business. Apart from the 20,000 Cuban children at present attending school in greater Miami, there are 8,000 adults attending English classes. Once a job is found the refugee must take it, unless there is some genuine reason why he should not, or lose his assistance payments.

Although the Department of Welfare guarantees to return the refugee to Miami should he wish it, there is a reluctance to leave the area. The climate suits the Cuban, home is not too far away and he is among his own people. Many Cubans therefore look for work in Miami. It is over jobs that what friction there is between the Cubans and the local population has occurred. Trade unions are weak in Florida and many Cubans have got work in the hotels and bars by undercutting existing wage rates. The main sufferer has been the Negro, who regularly loses his job to the "snowbirds" from New York in the winter holiday season and has now lost it in the off-season as well. But the situation is little happier for many of the Cubans; in one hotel the waiter taking round the iced water used to be a doctor.

Nevertheless, the Cuban refugees, despite their enormous numbers, have merged into Miami's life with surprisingly little social upheaval. Fortunately the natives of Miami are very sympathetic to their cause and their plight and the Cubans, with their middle-class backgrounds, are intelligent enough not to misbehave. Last year Miami's crime figures were the lowest in its history. Admittedly, the job of handling this exodus is a lot easier than many others have been. There is no desperate shortage of money—Congress provided all that was asked for. The majority of the refugees are people who with a little initial help are well able to look after themselves and their families. Nonetheless, the centre is doing a first-class job with a minimum of fuss.

Voting on Wheat

TOWARDS the middle of next year two votes will be taken on the price of wheat and the United States Administration is already campaigning hard to influence both. One is to be taken in Brussels on the price of wheat in the common market; if this price is set high it will, it is thought, encourage increased production in Europe, especially in France, and will thus deprive American farmers of their main export market. So spokesmen for the Administration are making it clear that such a vote would confirm their fears that the European Economic Community is becoming protectionist and would make the negotiations with the United States for lower tariffs on manufactured goods difficult if not impossible. The other vote is to be taken among American farmers on the price of wheat in the United States. If farmers turn down the government's scheme, the present price supports and production controls will lapse and the result, according to Mr Freeman, the Secretary of Agriculture, will be "utter chaos." If either vote goes the wrong way, he claims, the world market in wheat will be completely disrupted.

Actually, as far as the American vote is concerned, Congress would almost certainly step in to save the farmers by amending the Act, which was approved at the end of the last session after so much controversy that the legislators hardly seem to have realised what they were doing. What they did was to agree that, starting with the 1964 crop, not only would the acreage planted to wheat be limited but also the amount each farmer could sell at high supported prices. It is quite likely, however, that wheat farmers may refuse to approve this plan; they have never rejected a price support scheme but this year the majority in favour of the present one was only barely above the necessary two-thirds. Moreover, the influential Farm Bureau Federation has just decided to fight as hard against the new proposals as the government is fighting for them.

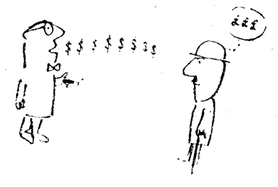
The Bureau, to which mainly the large, wealthy farmers belong and which wants—or claims that it wants—the government to get out of agriculture, contends that the wheat scheme is the first step in a government attempt to take over agriculture altogether. To Mr Freeman, who has begun already to explain to farmers exactly what the scheme involves, it is the first step in his "supply management" programme for solving the problem of farm surpluses. He has the support of the other two national farm organisations and of the wheat growers' association. Battle will be joined on the Great Plains in 1963.

Tardy Santa Claus

THIS year the Christmas shopper can invest in a pair of electric socks, run from a small battery on his belt, to protect himself from the all too seasonable weather. So equipped he can sally forth to buy gifts ranging from a $700 polar bear which rides a unicycle, or a white cowboy outfit for his girl friend for $2,000, down to a spaghetti twirler for $1.49, which twists the unmanageable stuff into a neat mouthful, or a leash for a turtle which is attached to its shell by a suction cap; 4,000 of these are said to have been sold. Another attraction—as unnecessary but much more expensive—is the Nothing Box, a conversation piece for the executive's desk with eight winking and meaningless eyes which cannot be turned off. But with only one week more of Christmas shopping to go, shopkeepers were becoming nervous about the season which brings in up to 40 per cent of their sales and up to half of their yearly profit.

Americans have more money than ever to spend: their total personal income in the first eleven months of the year was nearly $25 billion higher (at seasonally adjusted annual rates) than it was last year and in November it rose nearly $2 billion, on the same basis, above October. Almost half of this, however, reflected the increase in pay given federal employees by Congress—which may account for the renewed popularity of Father Christmas on this year's cards. And in general incomes are rising more slowly; in manufacturing wages and salaries have actually declined a trifle during the past seven months. On top of this, the weather has been subversive. At first it was too mild to awaken thoughts of Christmas stockings; then when it turned cold, it did so with a vengeance, keeping many shoppers indoors. To make matters worse, in Cleveland and New York City there are no newspapers to tempt people into the shops or even to the theatres or to create the proper seasonal psychology—though the Post Office has done its bit by issuing its first Christmas stamp.

In the first two weeks of Christmas trading sales at department stores fell slightly below those of last year and in New York shopkeepers shuddered as they remembered that the newspaper strike four years ago cut over 5 per cent from their Christmas takings. There is no sign so far of the strike ending. But even if the Christmas trade is no better than it was last year—or even slightly worse—the shops must have a good deal of fat in their bank balances. In November sales rose above $20 billion for the first time; durable goods, thanks largely to this banner year for motor cars, have recovered spectacularly from a two-year slump. In the year as a whole consumers are expected to have spent about $15 billion more than they did last year or in 1960.



THE WORLD OVERSEAS

Red Feathers in Brunei

FROM OUR SPECIAL CORRESPONDENT

"JOLLY good show, you fellows," the Brunei district officer cried heartily as a column of bored and perspiring correspondents wound into view on the jungle heights. "Everything is in battleship order now. I have sent the red feather up the river and the tribes know what that means. They are all sound at heart really."

The red feather carried in the bamboo is the traditional pukkah rallying symbol for the simple impassive Borneo natives to stand by their sovereign and flag. All last week's evidence, alas, indicates that the red feathers went out too little and too late and that it might have been smart not to have sent them out at all. The blunt fact is that, despite incompetence in direction and execution by both sides, the abortive Azahari coup in Brunei came within an inch of success. Had the blundering conspirators succeeded in whisking away the equivocating Sultan, Sir Omar Ali Saifuddin, orders given in his name could have prevented British intervention. For their part, the foiled rebels are now protesting in turn that the sultan's orders to mop up are being given under colonial duress. The sultan himself still equivocates on the Malaysian federation issue.

As this is written the planners of the new federation, officially jaunty but privately perturbed, are preparing in Kuala Lumpur to confirm next year's August deadline for their admirable if precipitate essay in state-making. Singapore's prime minister, Mr Lee Kuan-yew, and Malaya's prime minister, Tunku Abdul Rahman, are personally and politically impatient; spokesmen for North Borneo and Sarawak insist that opposition by the local Chinese minority has weakened and they unite in support of quick, ruthless federation; but while Sir Omar still hesitates, Brunei must be regarded as a captive and at best reluctant participant in Malaysia.

Passportless in Manila, the unhappy Malay horse-doctor, Sardar Azahari, may be a ludicrous figure, but if democracy continues to be invoked in this emergency there can be no dispute that he leads the only political party in Brunei, or that his anti-Malaysia followers made a clean sweep of all the sixteen elected seats in "parliament" from the strategic oil-rich territory. If the appearance of democratic processes is to be preserved, it will be necessary to exclude Brunei at least temporarily from Kuala Lumpur decisions, while the sultan remains sullenly on the fence. All things being equal—or assuming, to put it bluntly, that the Indonesian communist party will decide improbably to hold its hand—Brunei cannot afford indefinitely to stand outside a federation that incorporates its Borneo neighbours. It may be safely presumed that Sir Omar is now getting "the treatment" from Kuala Lumpur to quit the fence and lead his people, despite their recent overwhelming vote to the contrary, into the happy Moslem arms of Malaysia.

The cynics in Brunei and Singapore suggest, right or wrong, that Sardar Azahari and his boys were misled about the sincerity of the sultan's role and intentions after their coup. In the showdown he may perhaps have surprised and betrayed them by recognising the red feathers of the *status quo* rather than their red flag of North Borneo independence. In retrospect it is instructive to speculate upon the outstanding electoral success of the wild-eyed, Indonesian-educated horse-doctor in a community of tribesmen and

headhunters not distinguished for their democratic perception or political sophistication, but subject socially and spiritually to the semi-divine domination of the sultan. As the sultan goes, so goes Brunei. Did he change his mind as the red feathers went bravely out?

Whatever the hopeful words at Kuala Lumpur, few here believe that the redoubtable comrade Aidit of the Indonesian communist party will allow the Brunei revolt to sink without trace. In striking contrast to the leisureliness with which the bemused local authorities sent out their belated red feathers, the British and Malays have now appointed a tough guerrilla expert, General W. C. Walker, to seek out the hard core of the Indonesian-trained rebels who successfully ambushed Ghurkas and commandos and have now withdrawn to the Indonesian frontier areas. These are the dedicated operatives who do not care if Sardar Azahari remains in Manila so long as Comrade Aidit remains in Indonesia.

There is more than coincidence in the fact that in Malaya this week Tunku Abdul Rahman's special branch struck at the local Socialist Front and arrested fifty persons, including nine political leaders, as General Walker's commandos and dogs pursued the retreating guerrillas in the Brunei jungle. Concurrently, the prime minister of Singapore, Mr Harry Lee, is brooding over applications for a mass meeting of protest against British and Malayan intervention by his Communist-led opposition, the Barisan Socialis, in Singapore.

It is a little late in the day to rely on red feathers and loyal headhunters. There may be more wisdom in persuasion than in compulsion in Brunei. After all, the calculated dishonesty of the Singapore referendum on Malaysia was discovered in the outcome to have been unnecessary.

Open Field in Rhodesia

FROM OUR SPECIAL CORRESPONDENT IN SALISBURY

JUST how much has been lost by Sir Edgar Whitehead's defeat in the Southern Rhodesian elections on December 14th? There will now be no repeal of the Land Apportionment Act, which bars Africans from living or trading in the towns and allocates 44 million acres of good farmland exclusively to Europeans.

Racial discrimination in public places will not now be made a criminal offence, as Sir Edgar had promised. Mr Winston Field, the new premier, believes in "the freedom of choice of the individual" (by whom he means the café owner, not the customer). But in practical terms these reforms would not quickly have produced much change unless a new government had worked economic miracles to find money (as in Kenya) to settle African farmers on former European land, and had raised African wages generally, or promoted African civil servants spectacularly so that they could afford European suburban rents. There was no hint of this from Sir Edgar, who also promised his electorate several times that he would not widen the franchise, beyond correcting "a few anomalies," during the life of the next parliament. So instead of a few benefits to a small group of Africans which a United Federal Party victory would have brought, Mr Field's triumph has removed a good deal of dead wood.

Most portentous, it has hastened the dissolution of the federation. There are several other consoling thoughts to be offered to British officials who can see only disaster in the victory of a party which campaigned so openly on racial emotions. Britain had not only applied the brakes on federal changes because the Welensky roadblock, backed by Sir Edgar Whitehead in the South and Mr John Roberts in Northern Rhodesia, looked formidable. It had also slackened the pace in Southern Rhodesia to Sir Edgar's speed. It had surrendered the initiative on constitutional change, and could only have regained it when he came to demand full independence. Now Britain is quit of such obligations and can use the federal dissolution talks to press for changes in the Southern Rhodesian constitution. Mr Butler can remind Mr Field how he called the fifteen "B" roll seats "a bit of a failure" (as indeed they were; only about 2,000 African "B" roll voters went to the polls after a boycott call from the nationalist leaders). He can recall how Mr Field suggested a wide African franchise for 10 seats during last year's constitutional referendum. The constitution, Mr Butler can point out, makes it impossible to reduce the number to ten now, but it should not hinder a broadening of the franchise; any British loans might depend on this. Mr Butler can also take comfort from the thought that the new Constitutional Council, however mediocre its membership, should be reasonably effective in blocking discriminatory legislation.

ANOTHER part of the paradox that many Africans prefer Mr Field to the "liberal" Sir Edgar is that, if Mr Field is to provide a favourable atmosphere for the launching of his community development scheme, he will need to begin by placating African political opinion. Within a few hours of winning he gave a hint that he might release Mr George Nyandoro and Mr Robert Chikerema, the African nationalist leaders whom Sir Edgar has restricted without trial for nearly four years. He may well stop all implementation of the Land Husbandry Act which gave African nationalism its early strength by upsetting African farmers who lost their communal rights or had drastically to destock their cattle. Conceivably, he may repeal the Preventive Detention Act, for the other security laws give him powers to spare. More positively, this government of farmers is likely to try to correct the imbalance created by the UFP business men in development schemes. For too long the emphasis has been on the expansion of secondary industry, the grandiose Kariba hydroelectric dam to serve it, and extravagant roads running to centres of tourism rather than of production. Mr Field, a tobacco farmer, and the Duke of Montrose, the new agriculture minister, have indicated that they will turn the emphasis to agricultural development (particularly under irrigation) and to feeder roads which, in the end, should stimulate more manufacturing industry aimed at a widening range of Southern Rhodesian consumers. In this they agree with the Phillips Report, which recommended spending on irrigation a third of the £33 million they suggested for a five-year development plan.

All this the pessimists discount. There will be no international money for Mr Field's favourite irrigation scheme in the Sabi River valley, they suggest. Private investment will be further reduced. With the political dissolution of the federation, Southern Rhodesia's manufacturing industries may lose perhaps half of the 30 per cent of their markets which are in the northern territories, and Southern Rhodesia has very few bargaining cards to play when working out future trade links. For Dr Banda will not worry that 120,000 Nyasa labourers in Southern Rhodesia may be threatened with expulsion because he knows how much the Rhodesian Front farmers prize them for their energy. Mr Kaunda will not worry about Southern Rhodesia cutting its trade routes because he should soon be friends enough with Mr Tshombe to export his copper along the Benguela railway to the Atlantic. The pessimists go on to suggest that community development which may arouse African enthusiasm at the start will soon turn sour when no material help comes from the government to match local self-help. Any honeymoon with African nationalism will soon be over and the new cabinet (meaningly described here as "all ex-servicemen") is certain to be fiercely repressive. "We will deal once and for all with those gentry," the new minister of mines, Mr John Gaunt has said. For the pessimists, therefore, the prospect is one of economic depression and probably racial strife afflicting Southern Rhodesia to a far greater degree within eighteen months.

Much of this is probably accurate prediction, but optimists have their answers ready. Britain can use the opportunity of an economic crisis or a racial explosion to force constitutional changes in return for any aid. Another species of optimists suggest that the African nationalists, who are still feebly expecting Britain to do all the scene-shifting for them and to wheel on the final paradise of adult suffrage, will soon be forced to see they can get no further (and, indeed, would not have got much further under Sir Edgar) except by their own efforts. This stage of toughening up of the nationalists is necessary if they are ever to run their country. There are plenty of dangers ahead because of the new government and the support it has to look to from the white supremacist wing. It might, for instance (as Sir Edgar would probably not have done), turn to South Africa instead of to Britain when the economy is sick, and South Africa may think it worthwhile to become paymaster of a buffer state. Sir Roy Welensky may decide not to retire to a rose garden after all, but may risk more political thorns by appearing as a coalition leader of the white Rhodesians, defying Britain to destroy "the European heritage." But the future for Southern Rhodesia and its three million people, whoever had won this "white man's election," had never looked pretty; and it should not be said that only the irresponsible and the extremists are pleased that the log-jam is cleared and that the river will flow again, whatever course it chooses to take.

The Colombo Line

FROM OUR CORRESPONDENT IN CEYLON

ONE of the first lessons a Sinhalese child reads in his kindergarten primer is the story about the fight between the shark and the whale. A sprat, leaping into the fray, gave the giant combatants a homily on the value of peace and co-existence. The shark snarled, "Look, little fellow, I would rather become a meal for a whale than accept your footling advice." But Ceylon's prime minister, Mrs Sirimavo Bandaranaike, seems to have defied folk wisdom and got away with it.

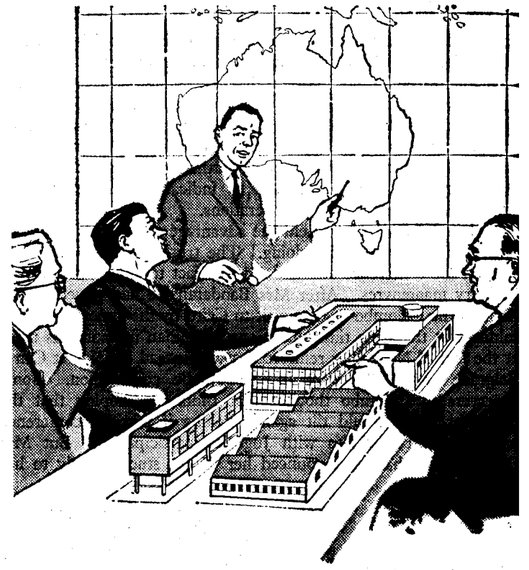
To judge by the cohort of officials, experts and cartographers, public relations men and left-wing line-shooters whom Delhi despatched to Colombo on the eve of the conference of six non-aligned states held there between December 10th and 12th, India was pretty anxious about the advice they might proffer on the Sino-Indian conflict. Mr Nehru could not hope for a clear verdict

Clearly, no one in his senses would use chewing gum at a time and place such as this.

However there are times and places where the use of chewing gum can be most beneficial; in fact its discreet use is a mark of tact and consideration for others as it is a definite aid to oral hygiene.

Doublemint chewing gum is especially made for such people. Its ingredients are carefully selected throughout, even its flavour has been double distilled; in fact, as its name implies, Doublemint is double good and gives you double benefits in many ways.

Try some at the right time and in the right place and see for yourself. E375/2



We're thinking of setting up in Australia

Many expanding U.K. firms have already done so, helped more often than not by Australia and New Zealand Bank. And to other manufacturers contemplating the same development, the Bank will gladly give similar assistance. A valuable introduction to such a move is provided by the Bank's 70-page book *Establishment of Industry in Australia*, produced especially for industrialists who may be considering that country as a further base for their company's operations.

Subjects include company formation, market potential, taxation, labour, transport, power supplies, tariff protection and local regulations. We shall be pleased to send you a free copy if you write to

AUSTRALIA AND NEW ZEALAND BANK LIMITED

OVER 900 BRANCHES AND AGENCIES

71, CORNHILL, LONDON EC3. TELEPHONE: AVENUE 1281

in his favour. General Ne Win of Burma and Prince Sihanouk of Cambodia, both sensitive to the reactions of Peking, could scarcely have permitted any strictures on China. India's only safe bet, in fact, was the United Arab Republic. The rest, Indonesia, Ghana and Ceylon, fell between these extremes. Thus Mr Nehru must have felt that the cards in Colombo were heavily stacked against him. Peking, on the other hand, took Colombo in its stride. The visible self-assurance with which the Chinese conducted their affairs in Colombo confirmed one's impression that their diplomatic manœuvres are as indicative of strength and resilience as are their military operations.

If, however, Mr Chou held the advantage when the conference opened, it was not all his doing. The truth is that Delhi never wanted the conference and allowed this fact to appear in the preliminary manœuvres. After Mrs Bandaranaike had issued invitations to the Colombo talks, a visit to Cairo by the Jugoslav foreign minister at the same time that a special Indian mission was there at the end of November reinforced a widespread belief that Cairo, Belgrade and Delhi were in sympathetic communion. Some observers in Colombo thought that India was hoping that the neutralist scales would tilt against Peking if a wider conference was convened in Cairo with Jugoslav participation. But Mrs Bandaranaike, having announced her début, stuck gamely to her

Colombo, December 10th to 12th

decision. The neutralist junior partners rallied round her. For the neutralist mind, however genuinely distressed by the present threat to fraternal solidarity and to the non-alignment policy, has an almost pathological aversion to being bossed. There is a feeling in some neutralist circles that Big Chiefs Nehru, Nasser *et al* have been running the show too long.

This may partly account for the total isolation of the Egyptians on the conference's final day. "Five against one," an Asian delegate confided to your correspondent. But the main reason for the UAR's failure to push through a pro-Indian line was that its proposal for a neutralised disengagement zone was based on Mr Ali Sabry's declared principle of "no territorial gains through military operations." In stating this principle, Egypt may have had Gaza on its mind; but it implied a charge of aggression against China. Others were not ready to make such concessions to India. General Ne Win insisted that any suggestion that the Colombo six had assumed the role of arbitrators would compromise their position as mediators. This is another aspect of neutralist thinking that has intrigued outsiders. The neutralists, who claim to represent a moral force which holds the nuclear titans in check, disclaimed all thought of moral judgments. Four chief spokesmen explicitly stated their unwillingness to define rights and wrongs.

Western observers watched the conference in a state of thrilled obfuscation as one Asian delegate summed up the meeting's problems in these terms: "If we restrict ourselves to a simple appeal, it would appear that we back Peking. However, we cannot support India unequivocally, because Peking would then reject our proposals outright, and Nehru needs our help more than China does. While we cannot get back for India through diplomacy what she lost on the battlefield, we can try to save Nehru's face by providing the basis for an honourable settlement which he can successfully sell to his people. Fortunately Peking does not want to throw India into the western camp. So we must exploit this advantage, and evolve a formula for compromise." Compromise was difficult because the United Arab Republic and Burma reportedly held fast to their respective positions. It was left to Dr Subandrio of Indonesia to find a middle way.

In his closing speech Prince Sihanouk said that he had placed the interests of Afro-Asian solidarity before his personal views. This really was the significance of the parley. The neutralist nations, which enjoy the influence and the material advantages that their common policy has brought them, hold that non-alignment is still a viable force and that more Asians, Africans and Latin Americans may see the attractions and add to their collective strength. India's present entanglement is regarded as an active danger to these aspirations.

Having won a chorus of tributes for her "undoubted statesmanship," Mrs Bandaranaike will hope that her new prestige can check the propaganda of her domestic opponents, who are successfully exploiting the latent emotional attachment of the Ceylonese to India. Ceylon's main opposition party, led by the former premier, Mr Dudley Senanayake, has lately scored an impressive run of victories at local elections, particularly in the rural areas, hitherto considered government strongholds. Ceylon's official view of the Sino-Indian dispute is conditioned by other factors. Nearly half its rice imports come under the advantageous Ceylon-China rubber-rice barter agreement. As a dramatic coda to the whole business, China announced last week that it would fulfil all its obligations and that a first shipment was already on its way to Colombo. Like a character in the Hindu epic, Mahabharata, Ceylon can say to India: "My heart is with you, but I have tasted your rival's rice and salt."

Through the Persian Looking Glass

FROM A CORRESPONDENT IN TEHERAN

PERSIA today presents a baffling set of contradictions. A country that has stubbornly refused to reform itself is carrying out a major and revolutionary land distribution programme. The usually cautious Shah is speaking with a radicalism sharp enough to make the most liberal member of the middle class shudder. A prime minister not known for his boldness has announced parliamentary elections—the Waterloo of all Persian governments—for the spring. On the other side of the coin, top officials pay lip service to democracy, but political freedom is carefully confined to the conservatives. And while the need to cut down the army, and to put the money that is saved into land reform and development projects, is everywhere accepted as the only effective formula for progress, the army goes on getting the money.

Powerful cross-currents are sweeping the country. Land reform and government promises have stirred up high expectations of a better life among the peasants and the urban working class. The government has come up with a profusion of bright ideas, whose effectiveness has still to be proved. Among these are the "literacy corps" which will conscript educated young men into the army and send them off to the villages to teach peasants to read and write;

1962

Perth after the Games

A CORRESPONDENT RECENTLY IN WESTERN AUSTRALIA

1870

ECHOES of the Commonwealth Games will linger long in Perth. In the columns of the daily *West Australian* a delighful correspondence goes on about what is called "the Duke's adjective." Australians, great swearers in all-male company, are shocked when their most overworked adjectives appear in cold print or are allowed to be heard in the company of women (who never swear).

Comment about the Duke of Edinburgh ranges from censure of his "profanity" to pleas that he must be allowed "one human frailty," and excuses for what are taken as his misguided efforts to be Australian among the Australians. All this is great fun. The Duke's ease, charm, humour and shrewdness matter more; they have done useful repair work on the now weakened link between Britain and Australia.

In the post-mortem that is now going on other small criticisms are heard. Some people had seats for a stand that inadvertently was never put up. The "victory ceremonials" were wearisome; it would have been better to present all the medals in one grand ceremony on the last day. Most people must have come away having had enough of "Advance Australia fair," played relentlessly for every Australian winner; and of "Land of Hope and Glory," for that matter. Another resentment concerned the hordes of officials, conspicuous in uniform white hats, dark blazers and flannels, who blocked the view and filled good seats. Australians love marching. These officials, it appeared, could go nowhere except in crocodile, proceeding solemnly across the ground like middle-aged schoolboys off to church.

Unlike the comedy, the injection of sentimentality was deliberate. The programme notes contained some soulful new words intended to be sung to the tune of "Waltzing Matilda"; optimism indeed. The Duke, having closed the games in a short crisp speech, must have been surprised to hear them closed all over again by the man at the loudspeaker at more length and with more emotion. Finally the weather let the hosts down. Perth usually reckons its climate as one of its chief attractions. It has a rainfall of 35 inches that is concentrated and predictable, an average of eight hours' sunshine a day, and a mean temperature of 64. During the games, however, it was at first bitterly cold and then touched 105.

Still it was a good party, and the 400,000 people of Perth have every reason to feel pleased with themselves—even those who did not gain directly from the games. The city has benefited by many pleasant permanent additions. The competitors were accommodated in comfortable houses, now to be sold off at £A5,000 or £A6,000 each. The city has gained a stadium, a swimming pool and new roads. Western Australia's development will be hastened by the spotlight that has been directed on Perth, and everyone has gone away saying that it is a delightful place.

Perth indeed, in your correspondent's view, is the most agreeable city in Australia. Not the least of its charms is its people, who seem gentler, kinder, less rich and less money-conscious than in the go-getting east of the country. Western Australia began as a British colony in 1829 when Captain James Stirling, RN, came as first governor and picked the site for the capital. The 1,003 people who came to settle on the banks of the Swan River had hardships enough through isolation, soil deficiencies and shortage of water, but at least their community was spared the harsh influences of convict transportation.

WEST Australians have long complained that they were denied the rapid development of the east. Yet it is this that has been responsible for the pleasant character not only of the people, but also of the capital itself. Perth's development was delayed until town planning had become regular practice, and Western Australia (which had the first town planning act in the country—1925) has used it firmly. The city has a master plan (the Stephenson plan). Starting with a site less beautiful than Sydney's, but profiting by Sydney's mistakes, Perth has emerged as the beauty queen of Australia.

The tall buildings near the waterfront are rising, not haphazardly as in Sydney, but in harmony with one another. Along the foreshore, land has been reclaimed for gardens and car parks. A new bridge of prefabricated sections brings the southern shore near to the centre of the city, and there is some fine traffic engineering of the clover-leaf type. The university, which will celebrate its jubilee next year, has great charm. There is a profusion of parks; King's Park, the finest, is a thousand acres of natural country carpeted in spring with Western Australia's famous wildflowers, on a height overlooking the blue river and the golden city.

There is, it is true, some controversy over the new city hall. It is a fine building, but from its upper floors the Lord Mayor and council, to the high indignation of the Governor, Sir Charles Gairdner, can look right into the gardens of Government House, a castellated brick building rather like the Tudor part of Hampton Court, which lies dwarfed at the feet of the giant municipal matchbox. Another grain of sand in the oyster is that the Swan brewery nestles shamelessly on the best part of the water front, unamenable to planning. Its price for removal is too high, and it is too powerful to be compulsorily purchased. But at least, at the nocturnal "Festival of the Swans" that served as epilogue to the games, the brewery was prepared to disguise itself as a ship by means of an ingenious arrangement of lights. Perth, to tell the truth, feels that the brewery is not out of place so near its heart.

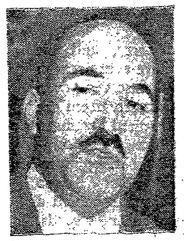
Western Australia is catching up with development. Since the war its secondary industries have expanded more rapidly than those of any other state. Its population, thin as it is (750,000 people to 976,000 square miles), has increased by more than 50 per cent in fifteen years. An immense storehouse of minerals has been found; in particular the discovery of vast deposits of iron ore will give a stimulus to the economy comparable to that of the discovery of gold in the eighties and nineties of the last century. Can Perth become rich and important without losing its compactness and charm? Everyone who saw it in 1962 will hope so.

Continued from page 1210

the " development battalions " which will employ soldiers to build the roads and schools for these villages ; and an unwieldy " economic congress " where representatives from all classes are to advise the government on economic policy. An excellent scheme for the election of town and provincial councils has been quietly put off until parliament convenes because the religious leaders, their theology somewhat confused, objected to the intention to allow women to vote.

Land reform is the one important change that is actually working. True to his word, the energetic minister of agriculture, Dr Hassan Arsanjani, is sweeping ahead with land distribution, and it looks as if he will hit his target—completion of the entire programme in two years. Under the present scheme, each landlord is allowed to keep one village (irrespective of size) to himself. Everything else he must sell to the government for distribution among the peasants. About half of the country's estimated 52,000 villages are believed to be liable to distribution.

The reform is slowly breaking the back of the powerful landlord class and jolting Persia's 15 million peasants out of an age-old sleep. A new social order is emerging. Except for the isolated instance when a land reform official was murdered near Shiraz in November, the landlords have not been putting up much open resistance. But, under cover, they have been doing all they can to undermine the programme and discredit the government. In this the landlords, certain urban interests and some religious leaders have joined forces.



Dr Arsanjani

The smaller landlords pose a particular problem. Peasants not entitled to receive land are naturally envious of their more fortunate fellow farmers on the great estates. They are growing restless ; they want land too. Already peasants in some areas are refusing the landlord his share of the crop. Although the government has gone out of its way to assure these smallholders it means them no harm, it will be difficult to prevent land reform from spreading to the other half of the nation's villages. These include the vast religious endowments which were not brought under the land reform law, and are risky for a politician to touch.

There is also concern about how the programme is to be paid for. Although the peasants are to pay for the land themselves, they will do so in instalments over 15 years, while the government has to pay the landlords over 10 years. Dr Arsanjani estimates it will cost close to $1,000 million to purchase all the land at present eligible for distribution. With land reform proceeding so rapidly, a heavy burden is imposed on the government. There has already been some falling behind. Dr Arsanjani asked for, and was promised, $27 million for land purchases this year ; he got less than a quarter of this sum.

Finance is, in fact, a problem everywhere. The third five-year plan, calling for a total investment of $1,900 million in the public sector, was officially inaugurated in September. The plan, as it now stands, has already been cut by 25 per cent ; the chances that even this sum can be raised appear slim. The government must provide $1,400 million of the total out of the oil revenues (now running at slightly more than $300 million annually) and the rest is to come from foreign loans. To meet its part of the bargain, the government assigned 55 per cent of the oil revenues to the plan this year, and is to add another 5 per cent each successive year—so that, by 1967, 80 per cent of the oil revenues is to go to the plan organisation. But this year only two-fifths of the oil revenues went into development, and further reductions in planned development expenditure are likely in the next three years. On top of all this, or rather because of it, private investment has remained sluggish, and foreign loans have been slow to come in.

In deciding to hold elections, the government evidently hopes to cash in on the undoubted good will it now enjoys among the villagers. The peasant vote, which in the past was controlled by the landlord, has been the traditional hunting ground for those with an eye on a parliamentary seat. Land reform, the government believes, has broken this hold. But no political organisation has come forward to fill the vacuum left by the landlords. The one person who might successfully form a peasants' party, Dr Arsanjani, has pointedly refused to do so, on the ground that he is against mixing peasants in politics—at this juncture. In the cities, the reactionaries on the one hand and the left-wing National Front on the other will make the going hard for a government now bent on a middle-of-the-road policy.

Spain's Worried Editors

FROM OUR CORRESPONDENT

CHIEF casualty in last summer's cabinet changes in Madrid was Don Gabriel Arias-Salgado, master for more than a decade of the Spanish press, cinema and radio. General Franco had no more loyal servant than his minister of information, but one had to keep up with the times. Sr Arias-Salgado despised liberalism and American-style capitalism ; he disliked—and was heartily disliked by—the European movement ; and he mistrusted Opus Dei. To console him, General Franco proposed him as ambassador to the Vatican, but fresh breezes were blowing through the Vatican, too, and Madrid was asked to nominate someone else. Sr Arias-Salgado had believed himself, all those years, to be serving the Church as loyally as he was serving Franco, and this double rejection was too much for him. Within three weeks he was dead.

The estate he left was perilously ramshackle. His censorship, severely battered by the spring gales in Asturias and in the Basque country, had succeeded only in recruiting a mass audience for the communist " Free Spain " radio ; the press was mistrusted or simply ignored by most of the nation.* His successor's assignment was to erect an edifice less offensive to the tastes of the men who would ultimately decide whether Spain might be admitted to the European Economic Community. But first, demolition was necessary and one eyesore that obviously had to go was the decree which had governed information media since 1938.

By contrast with Sr Arias-Salgado, the new minister of information, Don Manuel Fraga Iribarne, was bound to look something like a liberal. He was an intellectual and had at times expressed vaguely " European " sentiments. He was associated with Catholic Action, a sedate bourgeois body which some foreign commentators appear to have confused with HOAC, the Catholic Workers' Brotherhood which took an active part in the spring strikes. His admirers are divided between those who believe he will exert a liberalising influence on the regime, and those who fear that he may simply be a hostage taken into the government to assure it the continuing support of Catholic Action HOAC militants describe him as a clever young reactionary. To journalists from northern Europe or the United States, Sr Fraga extols the freedom of the press and other democratic ideals ; addressing Portuguese journalists, however, he echoes General Franco's subordination of liberty to " order," and associates " unrestricted freedom of the press " with " anarchist utopias."

Sr Fraga lost no time in promising a new press law (to come into effect, all being well, on January 1, 1963). The contents of the press law are to be discussed by the new National Press Council which was inaugurated on December 5th. But none of the council's members represents any non-official (that is non-government controlled) organisation. The minister also reduced considerably the number of governmental directives issued to editors. As an experiment, he suspended pre-censorship of the press for three months from the beginning of October. But the censors were kept on his ministry's payroll and were put to studying all papers minutely after their publication.

This development left Spanish journalists either unmoved or cynical. They knew that the risks Sr Fraga was running were slight. Only supporters of the regime may publish books, newspapers or periodicals in Spain, and all editorial appointments are subject to government approval. Leader-writers, sub-editors and reporters have been drilled in conformist attitudes in official (or ecclesiastical) schools of journalism and taught to despise Anglo-American " libertinage of the press." Any journalist may be removed from his post and deprived of his *carnet de periodista*—without which he cannot earn a living—at a few hours' notice if he displeases the government. For good measure, all news of political significance must be taken from the official newsagency EFE (so official that its stories are sometimes prefaced " Insertion obligatory "), though general news is also supplied by CIFRA, a government-controlled Catholic agency. With or without a formal censorship, the regime's safeguards are powerful.

BUT editorial brows creased when the full implications of Sr Fraga's " liberalisation " measures became clear—when it was realised that editors, rather than government officials, must henceforth take responsibility for deciding what to stress and what to suppress, and that they were to be held personally responsible for their decisions. One anxious provincial editor confesses that he cut his holiday short when he heard the news to return home and enquire of the civil governor of his province where the new demarcation lines lay. Another says:

> When the Russians launched their first sputnik I even asked the censor what page I should put the story on. That way, he would go to jail, not me, if we did the wrong thing. Now I'm on my own ; I feel like a Roman emperor whose food-taster has died.

Some editors have run into trouble already. One has been fined for publishing a headline on army coups in South America which was deemed derogatory to military dignity. Another has been fined for criticising his city's fire brigade. A third was called before the civil governor and admonished for reporting public criticism of a local monopoly owned by a wealthy falangist (" I want no controversy in my province," said the governor). A reporter returned from covering the floods in Catalonia to be told by a senior official: " I see you are working against the government " —and lived in some apprehension until his editor received a letter from a higher authority congratulating him on his articles. A Catalan editor has been reprimanded for publishing a report of a literary gathering addressed by the Catalan-nationalist Abbot of Montserrat. More than one editor has told his staff that anyone responsible for earning him a reprimand will be dismissed, and editorial taboo-lists are said by responsible journalists to have lengthened since " liberalisation " set in. As a further precaution, some provincial dailies have discontinued publishing editorials except on special occasions.

Pre-censorship of all radio and television scripts is still in force. Even taped commercials which are to be repeated daily for several weeks must be submitted to the censors every morning. But radiomen fear that Sr Fraga may have an embarrassing gift for them, in their turn, on New Year's Day. The director of one important commercial radio station has already approached a senior censorship official with a view to taking him on as " special adviser " to his news and features editors in the event of further " liberalisation."

* Only 56 daily newspapers are sold per thousand inhabitants in Spain, compared with 250 per thousand in France and 573 per thousand in Britain, although newspapers are cheap in Spain, even in terms of local purchasing power, and over 80 per cent of Spaniards are literate.

Belgians and Katanga

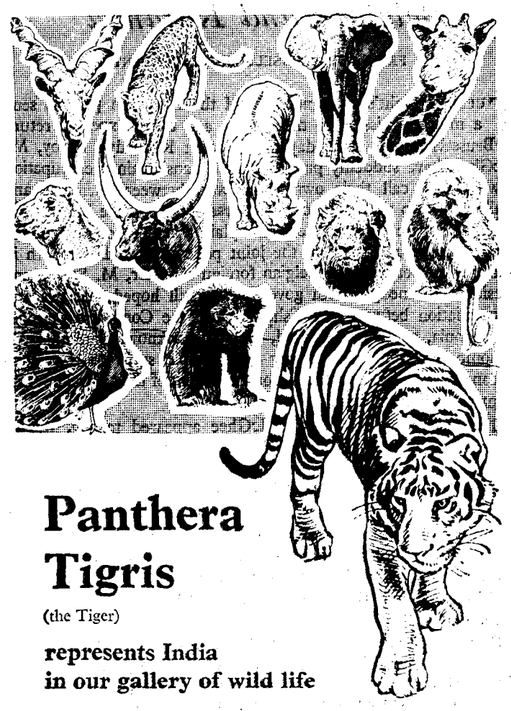
FROM OUR BRUSSELS CORRESPONDENT

TUESDAY night's announcement of the American plan to send a military mission to the Congo, and the unexpected return to Brussels on the same day of President Kennedy's envoy, Mr McGhee, have suddenly pushed the Belgians' main preoccupation —what they call their own tribal war, between Flemings and Walloons—into the background, at least for the time being. Mr McGhee apparently came here to explain that the American action implied no great change in the joint policy agreed last month in Washington between the Belgian foreign minister, M. Spaak, and President Kennedy. Both governments still hoped that peaceful reconciliation between Mr Tshombe and the Congolese premier, Mr Adoula, could be achieved, and both acknowledged that Mr Tshombe's recent offer to pay considerable sums to the international agency in Leopoldville for the benefit of the central government was a hopeful sign.

The American action, Mr McGhee appeared to say, was in response to U Thant's appeal for more material support of the United Nations troops in the Congo. M. Spaak was well aware of American concern at Mr Adoula's increasingly precarious hold over his left-wing extremists, and of American fears that increasing communist influence might some day make the Congo another Cuba. None the less, the news of the proposed American mission has been greeted with some public misgiving ; it is helping to feed long-standing Belgian suspicions of America's true intentions in the Congo.

Business circles here suspect that one of the Americans' unspoken aims is to dislodge established Belgian firms, even the mighty *Union Minière*, from the potentially rich Congo, and to develop the country themselves as a *quid pro quo* for the money it has so far cost the American taxpayer. They acknowledge bitterly that in these days trade follows aid, and that aid supplies to the Congo have come predominantly from the United States, with the result that Belgian firms find it increasingly hard to get import licences or any other encouragement for their non-dollar goods. What is more, they say, since the United Nations depends for its funds more on America than on any other contributor, UN policy itself has been moulded along lines that suit American interests.

M. Spaak was bitterly criticised at home when he agreed in late November with President Kennedy that their two countries would back U Thant's reunification plan to the extent of, if necessary, " severe economic measures " against Mr Tshombe. (This news, incidentally, led to a 600-strong demonstration by Belgians in Elisabethville outside their own consulate, complete with rotten tomatoes and an effigy of M. Spaak.) For in agreeing to boycott Katangan goods M. Spaak seemed, in the eyes of his critics, to play into American hands against the interests of his own country. Sanctions, they maintain, would harm Belgium more than any other importer, and might even cripple vulnerable sectors of the Belgian economy to the profit of American rivals ; Belgium is the world's biggest importer of Katanga's ores. The huge refinery at Olen, near Antwerp, they point out, takes 75 per cent of its copper ores from Katanga, and as much as 95 per cent of its cobalt ores, whereas American industry is infinitely less dependent on Katangese supplies. Nor, they add, would the successful economic asphyxiation of Mr Tshombe do the Leopoldville government any good. If there are no exports there will be no money. They are seriously worried, in short, at the evident wish of U Thant and of President Kennedy to force the final showdown with the Tshombe regime, but more worried by the possibility of military action than by that of economic sanctions. They remember the damage caused by last year's fighting. If only the guns keep silent, they feel, Mr Tshombe will surely breathe again.



Panthera Tigris

(the Tiger)

represents India in our gallery of wild life

But it is not only for their fauna that our parts of the world are remarkable. Their contribution to the trade of the world increases yearly—and our own capacity to serve them increases too. In the last ten years, the resources of National and Grindlays Bank Limited, which incorporate the Eastern Branches of Lloyds Bank Limited, have risen from £150 million to £250 million. The number of branches operating in countries overseas has increased from 50 to 150. Unrivalled banking facilities are therefore available for all who trade or travel in the countries served by the Bank.

NATIONAL AND GRINDLAYS BANK LIMITED

Amalgamating
NATIONAL BANK OF INDIA LIMITED, GRINDLAYS BANK LIMITED AND THE EASTERN BRANCHES OF LLOYDS BANK LIMITED

HEAD OFFICE: 26 BISHOPSGATE, LONDON, E.C.2

A comprehensive banking service is available in:
INDIA · PAKISTAN · CEYLON · BURMA · EAST AFRICA · ADEN SOMALIA AND THE RHODESIAS
Bankers to the Government in: ADEN · KENYA · UGANDA · ZANZIBAR

AMERICA TODAY

The outlook for U.K. exports to the United States is excellent. In a market which annually takes almost one-tenth of total U.K. exports, the prospects have been improved by a growing mood of confidence.

This is one conclusion reached by our Intelligence Department in a recent report on the United States economy. But many other important questions are considered in this report, questions of vital interest to all businessmen contemplating selling to the United States. Copies of the report, which is illustrated with diagrams, can be obtained from any of our branches. Alternatively, please get in touch with any of our specialised Foreign branches.

THE BUSINESS WORLD

The Groaning Board

LACKING (and anxious not to generate) John Bull's belly, once a year we return nostalgically and uncomfortably to his style of eating. Next Tuesday, seasonally surfeited on 5½ million turkeys (70 per cent of them quick-frozen and oven-ready) and plum puddings of which allegedly some 10,000 tons will have been prepared for us by manufacturers quite apart from mothers, it will be clear to anyone who is awake enough to think about it that our diligence as well as our appetite where food is concerned stand up poorly beside those of our stouter ancestors.

The change from a nation of a few overeaters and many undernourished to a population that is generally well and healthily fed has been a comparatively short process, marked by such landmarks as the beginning of cheap meat imports at the end of the nineteenth century and the classless distribution of milk in the last war. But the growth in preference for conveniently produced and presented food has been much swifter still and has been responsible far more than changes in the menu or increased prices of basic foodstuffs for the 34 per cent increase in actual spending on food between 1954 when controls ended, and last year. This increase compares with one of 44 per cent in total personal spending, but even now people devote about 30 per cent of their spending to food.

It is true that the end of rationing gradually reintroduced people to the pleasures of variety and seasonal sprees such as the nuts and crystallized fruit at present in their larders, strawberries and cream in the summer, chocolate eggs at Easter. These sorts of thing make their mark on the family budget, but in too small a way to have much effect on the growing total. The nearest thing to a seasonal spending guide, the quarterly breakdown published in the National Food Survey, shows that the average weekly food expenditure of households is in fact lower in the Christmas quarter (29s. 7d. per head in 1960) than in the April-June period (30s. 6d.) when fresh fruit and vegetables are dear, so that more is spent on them or preserved equivalents. Preserving, importing and marketing are all factors that tend to iron out seasonal differences: next year, if the turkey farmers have their way, we shall be eating 5-lb birds in place of the weekend joint. (Prices should fall since 11 million turkeys will probably be marketed next year, compared with 7 million in 1962—for the first time there will be no foul pest death subsidy to reduce the numbers slaughtered for profit.)

Gastronomic Beaverbrooks are no doubt already lamenting the commercial and technical skills that have gone far towards replacing roast beef with broiler chicken as the Englishmen's national dish (in spite of the over-optimism of the industry last year). But traditionalists must admit that cheap chicken has played its part in keeping prices of red meat at a more competitive level. Since milk supplies levelled off from their postwar peak, poultry has become the one dramatically increasing constituent in our diet. It is estimated that each of us ate on average over 14½ lb of poultry last year, compared with just over 5 lb before the war, when chicken was still an occasional treat. Consumption per head of beef, mutton and bacon has actually fallen: the 10 per cent increase in total meat consumption has been due not only to poultry but to other un-British things such as imported canned meat (much less than half of it from the Commonwealth), bloodless but tender veal, and pork.

On the whole, however, patriots can take heart from the evident reluctance of the English to let new-fangled foodstuffs make very much difference to their diet. In spite of the success of the frozen food industry, consumption of vegetables fluctuates at little above the prewar level and that of fish is declining. We eat only a little more cheese than we used to, a slightly increasing quantity of eggs, less butter and still a lot more margarine than before the war. Fruit eating varies greatly according to supplies and last year, at about 2¼ lb each a week, was below the prewar level. Sugar and starch are still favourite foods; affluence, however, does mean less bread and more cake.

Many more people, however, will eat alien food in restau-

rants that they would still not dream of cooking at home. Just as caterers often provide the most reliable market for prepared foods, such as ice-cream, and perhaps soon for accelerated freeze-dried products, so they also account for much of the consumption of the more exotic food which this country increasingly imports. But this is a process of acclimatisation: some of the greatly multiplied tonnages of Italian pasta, French cheeses and other delicatessen are by now well-established on the posher supermarket shelves. The success of fancy bread (and American experience) suggests that this kind of variety is what people spend on as they move into the upper income groups.

Where drink is concerned the effect of new tastes and the choice of luxury has been very much more marked. Englishmen last year drank twice as much wine (28 million gallons) than in 1951 and their taste now is for light wine rather than old-fashioned gouty port. Significantly, some self-service shops have a drink licence. This year, however, a more restrained mood is in evidence; only the British wines have sold in larger quantities, reflecting perhaps their lower price rather than an access of patriotism. (One should explain that British wines, which account for about 30 per cent of consumption, are made from concentrated grape juice imported from Spain, Cyprus and South Africa.) Surcharges on the duty may explain the fall in whisky and gin sales, and cold weather the flatness of beer; but the fall in wine drinking, after so many years in which it has increased, suggests that its consumption may be an index of prosperity. The firms that have managed to sell more are the bigger merchants, who advertise nationally and who seem to be eating into the sales of the old-fashioned firms that just sell wine.

But if demand had gone on increasing, it was bound to have produced a substantial increase in prices. With Americans too becoming œnophils, the pressure on European production has already made wine more expensive. The record vintage harvest in France this year will help to check the rise, but in the Médoc, where the crop is slightly above average in quantity, prices are still two-thirds higher than in 1955.

Processors, packagers and the advertising industry, together with the self-service retailers on whom they rely for mutual inspiration and stimulus, are the obvious beneficiaries of the boom in "convenience foods." These are defined by the National Food Survey as products largely or wholly prepared by a manufacturer for eating—canned foods, frozen vegetables (but not frozen fish), ice-cream, puddings, cereals and cakes. Expenditure on these went up 18.6 per cent between 1956 and 1960, compared with a 6.7 per cent growth in spending on other types of food. The quick frozen food industry as a whole (including imports) will have increased its sales to an estimated £80 million by the end of this year, compared with £58 million in 1960. Partly because of this competition the growth in consumption of canned foods is now very much slower: an increase in volume of about 6 per cent took place between 1959 and 1961.

Besides the cost of processing, packaging for supermarket sales appeal and protection, and distribution costs—all high, particularly in the case of frozen foods—contribute to the expense of prepared foods. Frozen sprouts, for example, may be 5s. a lb dearer than the market stall variety (though you can eat the lot). But wider distribution and increased competition, especially at the retail end, has helped to prevent expensive convenience foods getting much more expensive: their prices in fact rose only 1.7 per cent from 1956 to 1960, compared with 5.8 per cent for other foods, and lately there have been some hefty price cuts.

One of the most interesting effects of self-service retailing has been the spread of branding and packing of goods to which, apart from cleaning and grading, the packer has added little or nothing (15 per cent of fresh produce is now sold in self-service shops and 90 per cent of this is pre-packed). Claims that potatoes in a polythene bag or prunes in a pretty box are a guarantee of quality are partly justified; but the advantages to the provision merchant who has to reach the self-service market or the horticultural combines who want to establish themselves as entities with big retailers are also considerable. Nevertheless, the future growth of food preparation services lies perhaps with fresh more than pre-cooked foods. Ready-peeled potatoes would be the most welcome Christmas present that the food industries could offer the British housewife.

Where the Bowl Overflows

THE high cost of shipping what is essentially a mass of water overseas, whether in bulk tanks or fragile bottles, makes exporting beer an expensive business, though European brewers, whose exports can often move by land, are rather more successful at it than British brewers. The British brewing industry exports less than one per cent of its output—about 225,000 bulk barrels a year. Against this about 1,500,000 bulk barrels of beer are imported; but 80 per cent of this is Guinness from Dublin for sale in Britain or for re-export. Excluding the "black stuff" from Ireland, Britain still imports more beer than it exports—beer drinkers in this country being more willing to try lager (where for a long time the Danish brewers had the market practically to themselves) than overseas drinkers are to try pale ale.

Not many British brewers even bother with exports; they leave them to a handful that tackle the selling of beer in overseas markets, at prices inflated by the high transport costs, with vigour and enterprise. One may wonder whether the inertia of a tradition or the incentive of a profit keeps those brewers that do export interested in their tiny overseas markets. William Worthington was shipping pale ale to St. Petersburg in the eighteenth century. Bass has had importing agents in Belgium, Denmark and the United States for over a hundred years. Guinness developed "Foreign Extra Stout" for export nearly 150 years ago and claims that today it supplies 120 markets regularly (out of a total of about 200,000 bulk barrels a year). Whitbread keeps a foothold in over 60 countries for "possible development in the export trade" and Ind Coope exports to 65 countries, apart from the Naafi and ship store trades.

Much of this trade was built on emigration and imperial expansion. Beer followed the flag, as the number of IPA's—"India," not Indian, being the adjective for pale ale—on the British market proves. About 45 per cent of beer exports still go to Commonwealth territories, with the biggest quantities going to Gibraltar, West Africa, Aden, Bahrein and the West Indies. Practically all the re-exports of Guinness also go to the Commonwealth, with a half being exported to West Africa and another quarter to Malaya. The Continent, which supplies Britain with about 300,000 bulk barrels a year, buys only about 100,000 bulk barrels a year from here. Belgium, which alone in Europe shares the British taste for top-fermented beers, takes about 80 per cent of all the British beer exported to "foreign" countries. Germany is the next biggest importer, but the beer goes to the British armed forces.

Exporting brewers try to keep transport costs down in a variety of ways. Whitbread, Bass, and Courage Barclay and Simonds all ship beer in tankers to Belgium to be bottled locally. Bass is exporting draught beer to the United States in steel casks. Ind Coope is trying to promote the export of canned beer and has opened a special export canning plant at Alloa for "Skol" lager. At the same time, some of the brewers have in effect exported breweries. Courage Barclay and Simonds brews in Khartoum; Ind Coope in East Africa; Guinness is building a new brewery in Nigeria. Whitbread has linked itself with Heinekens, the most internationally-minded of the world's brewers, and in association they plan to build a Nigerian brewery.

With practically every country in the world drinking lager beers, the British exporters are forced to ask themselves whether they should try to sell their own lagers or their traditional brews. Those who have sunk a great deal of money in British lager naturally ask: "Why spend money trying to persuade people to drink something they don't know? Why not sell them a beer they are used to?" The Ind Coope group now has an agreement for brewing "Skol" lager in Spain and the consortium behind "Harp" lager, will begin exporting next year.

Other, less lager-minded brewers take a different view and argue there may be an expanding market, based largely on snob appeal, for the different-tasting British beers. Only recently, for instance, Charrington United Breweries reached agreement with the French brewery, Brasseries Nord-Europe, to brew and bottle an ale under licence at its Armentières plant. This high gravity beer is to be sold under the label "Le Royal Toby" as "England's luxury ale." But it is the development of keg draught beers, served under pressure, that may do most to facilitate the export of British type beers. In the summer Watney Mann reached agreement with the Pelican brewery in Lille to sell draught "Red Barrel" through about 200 outlets. The first draught Guinness to be served under pressure in Germany was sold in Berlin this summer. Bass has exported keg beer to the United States and is well placed to extend this experiment to Europe.

IF Britain joins the European common market, the argument about what to export may grow more heated. But one suspects that it would be easier for salesmen to persuade Continental beer drinkers that it is "smart" to buy British beer than to convince them that British lager is better than their own. If so, the principal effort ought to be in promoting the export of keg draught beers, which cost less to transport than bottled lagers and ales and last almost as long. Taste and transport form the principal obstacles to British beer exports; another is the difficulty in securing suitable retail outlets. Common market countries do not have a formal "tied house" system, but there are often direct financial links between local brewers and distributors, which can act as a barrier to newcomers; and new licences are as difficult to obtain on the Continent as they are in Britain.

Taste, transport and tied houses look perhaps even more formidable when they are viewed from the other side of the Channel and North Sea by Continental brewers. At the moment about 80 per cent of all the beer imported into Britain comes from Denmark, slightly more than 10 per cent from Holland and about 3 per cent each from Belgium and Germany. The promotion and sale of British lager has come as a direct threat to these importers who have to pay an import duty amounting to just under a penny a bottle over and above the internal excise. To secure and to hold their markets in this country they have been forced in some instances to reduce the strength of their beer to keep prices competitive, to export in bulk and bottle in this country, to sign trading agreements with British breweries, and to concentrate much of their selling effort in the free trade, particularly in clubs and restaurants.

If Britain enters the common market, life might become a little easier for them. Presumably the import duty would then have to go. The tied house system, which some brewers think may not in its present form be compatible with the Treaty of Rome, could be weakened. And the German, Danish and Dutch breweries in an atmosphere of freer trade might be prepared to offer financial help to clubs as the British brewers already do. Belgian brewers have been trying to secure outlets in other EEC countries, notably Holland, and—they and some German brewers have taken a hard look at the possibilities for expansion in Britain. Some of them may attempt to compete directly by buying their way into retail outlets or by concentrating even more of their effort on the free trade. But it seems more probable that the first effect if Britain joins the common market would be further links between European and British breweries on the pattern of the Whitbread-Heinekens association.

It is from the base of such associations and mutual trading agreements that, in their turn, the British brewers may plan the expansion of British beer exports to the Continent. Their size and their financial strength should enhance their bargaining power with the Continental brewers when the two sides start to negotiate. Like the equally powerful Heinekens group, the British brewers may consider the possibility of exporting breweries as well as beer to other European countries, particularly if the pilot experiments with continuous brewing processes show that small local breweries can be installed cheaply. So far, though representatives of the British brewing industry have had talks with their EFTA and EEC counterparts, in public at least they have tended to argue that Britain's entry into the common market would not make much difference to the pattern of the home and export trades. In private, they are more willing to admit that it could speed up the process of change. The growth in competition might be only marginal; but, particularly if the market for lager expands, it might bring sufficient pressure on the British brewers to huddle even more closely together.

BUSINESS NOTES

THE ECONOMY

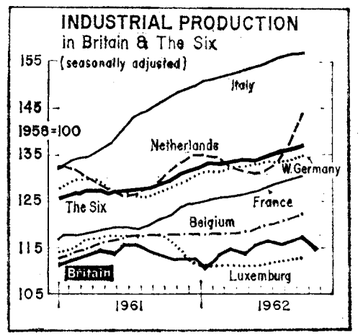
Illusions Punctured

Recent signs have been that after the third quarter the increase in exports has been flattening out, and possibly the same thing has been happening to production.—Mr Maudling, in the House on Monday.

No signs from any quarter of the economy prepared anyone for the three point fall in industrial production, and four point fall in manufacturing production, that was reported as having happened between September and October by the Central Statistical Office on Wednesday (after an extra day's frantic re-check of the figures ?). Businessmen, like most people on the outside, have been generally less optimistic throughout most of this year than the Treasury's economic analysts ; but in October, when the last Federation of British Industries survey was published, they were no more pessimistic than four months before, and so far as output was concerned they appeared on balance to expect some further rise. Steel output, after a poor September, jerked upwards in October ; motor output was significantly down, partly as a result of strikes, but this is a fairly small factor in the total index. October was a record month for exports.

Figures of engineering production in October, published only this week along with the production index, do more to explain its drop from 118, seasonally adjusted (1958=100) to 115. The index of electrical and mechanical engineering production dropped by six points ; figures of deliveries in engineering and a rather wider selection of other capital goods industries were also sharply down. It is clear that the fall in manufacturing investment was biting more deeply than had been assumed.

This drop in the "all industries" index is the biggest one recorded in the seasonally adjusted index since 1957 (in the same months) ; in manufacturing, which this October fell from 118 (1958=100) to 114, no four-point rise had occurred since the beginning of 1956. The index figures are unreliable as well as too rounded ; a journal that threw some doubt upon the figure of 118 recorded for September should perhaps also note that the October figure, in its turn, could be too bad to believe. This chastening week for Treasury statisticians, who seem to have been no better warned of the drop than outside observers, may at last push them into publishing the index to four figures (i.e. one decimal point) rather than rounded to whole numbers. This fall of three points rounded could be one of just over two points or one of nearer four: it might be useful to let the public know which.



There was nothing surprising about the latest unemployment figures, in contrast with production ; but the figures are depressing enough. Normally the number of people out of work in Britain can be expected to ease off very slightly, by about 1,000, between November and December. This year, however, it rose by 22,000 and the count on December 10th came to 566,196, which included 41,776 temporarily stopped. Even excluding the latter, the figure was over the half million mark, while the total was 177,000 more than at the same time last year. Regionally, the situation had deteriorated most in Scotland where the unemployment rate reached 4.7 per cent. This was exceeded, however, in the northern region of England where the rate among all workers was 5.0 per cent and among men was 5.7 per cent. London has still only 1.5 per cent unemployed ; but the national average is now 2.5 per cent.

TRADE AND PAYMENTS

Exports Halted

THIS week's balance of payments' figures showing a sharp swing back into current deficit in the third quarter should come as no surprise: even as the previous figures in this series were showing for the second quarter the best surplus for four years, it was apparent from the monthly trade returns that the account had already relapsed into deficit. The more worrying of this week's external indicators are the trade returns for November, which seem to confirm, *pace* the October recovery, that the notable rise in exports in the first half of the year may have been halted.

Imports, admittedly, fell back last month from their very high October level. But the downward movement on the exports blade of the scissors was unfortunately much bigger, with a drop from October's record of £336 million to £304 million—the poorest figure since January (all these figures are seasonally adjusted). The Board of Trade has not yet found any special reasons for this fall, except for the effect of the strike at Ford Motors ; but this can hardly have accounted for more than £2-3 million of the decline. In September-November as a whole, exports were virtually unchanged from their level in June-August. Imports also show no change from the summer months—but they were then already disappointingly high. The upshot is that, with a crude trade gap at £44 million and £56 million in October and November, the true visible trade balance was in considerable

deficit—the "parity" deficit in the trade returns which denotes bare balance on a payments basis is £35-40 million. In a quarter that sees the end-year interest payments, the current account as a whole may again have been in deficit.

Earning Less, Receiving More

FOR the third quarter, the Treasury's quarterly figures show a deficit in visible trade of £54 million for the whole three months, following the second quarter surplus of £17 million. Rather less than half the deterioration was seasonal—the tentative seasonally corrected estimates show a swing from a surplus of £7 million to a deficit of £33 million. Net invisible income shrank from the good second quarter figure of £59 million to only £9 million, though here seasonal influences

(especially tourist expenditure) predominate—seasonally adjusted, net receipts dropped from £30 million to £20 million. But at the least this suggests that the recovery in invisible earnings from the low levels to which they had fallen by 1961 has been checked at a disappointingly early stage.

The upshot in the third quarter was a current deficit of £45 million, following surpluses of £76 million in the second quarter and £20 million in the first. Seasonally adjusted, the third quarter deficit was £13 million following surpluses of £37 million and £9 million. On the capital account, the official statisticians detected no revival of inward portfolio investment after

the understandable check in the second quarter, which encompassed the Wall Street shock. And with an estimated deficit on long-term capital of £53 million in the third quarter the total deficit on current and long-term capital—the basic deficit—reached £98 million.

Yet the records of recorded movements in gold reserves and sterling balances show "monetary movements" of £30 million in a favourable direction, actually an improvement on the second quarter. So the balancing item, all but eliminated in the second quarter, comes back with a bang at a lusty £128 million—the largest figure in the whole balance. The Bank of England suggested last week that this might partly represent an extension of trade credit ; but one wonders also whether foreign participation in the strong gilt-edged buying of the third quarter may not have been larger than the Bank of England is estimating. Certainly the large size of the balancing item, for a period when there were no indications of strong inflows of short term funds, suggests that the basic balance had not deteriorated as much as the recorded figures themselves show.

STOCK MARKETS

No Donkey, No Cheer

THEY tried to get a donkey on to the floor of the stock exchange this week. It baulked at the steps. And so did investors at the terms of the Essex loan. Indeed, the seasonal cheer has been outside the market and not inside it, where disgruntlement and the knowledge that the Christmas bonuses will not be very fat this year helped to produce over 200 signatures for a silly, reactionary petition against the proposals to rebuild the stock exchange. When last week's unreasonable hope that Bank rate would be reduced was dashed the gilt-edged market turned dull and this spelt failure for the Essex loan, whose terms were finely drawn even for a firm gilt-edged market. The timing was unlucky ; but the authorities appear to have tried to press the market just a little too hard. Early in December the £3 million offer by Norfolk of a 5¼ per cent stock, 1971, at 98, offering a redemption yield of 5⅝ per cent, was a roaring success, and later the £1¾ million offer by Barbados of a 6¼ per cent stock, 1972-74, at 95, yielding a tempting 7⅛ per cent to redemption, was oversubscribed. But the coupon on the £10 million Essex stock, 1973-75, was set at 5¼ per cent and the price at 97, to give a redemption yield of 5⅝ per cent. As the gilt-edged market was further unsettled by the balance of payments and November trade figures, the issue was a resounding flop, with 98⅜ per cent of the stock being left with the underwriters. But, as gilt-edged prices rallied a little on Thursday, the stock opened at 13/16th discount instead of the full point discount that had been predicted and later improved to ⅝ discount.

This rally appeared to be in part the mirror image of gloom in the equity market, which along with Continental bourses was unsettled by the fall on Wall Street early in the week. After Wall Street rallied on Wednesday the British market was too upset by the steep fall in industrial production in October to follow its lead, and the fall in prices, which brought *The Economist* indicator down by 3.3 points to 345.6 in the week to Wednesday's close, continued on Thursday.

£6 Million for Martins

WITH the bank dividend season only a fortnight away Martins Bank has jumped the gun with the announcement of a one for three rights issue at 9s. a share, which will raise just under £6 million. The bank's existing shares fell by 1s. 7½d. to 24s. 10½d. and the rights were then worth about 3s. 11½d. a share ; on an unchanged dividend such an issue would have involved a substantial bonus element, but on the bigger capital the indicated dividend for 1963 is to be scaled down from 15 to 13 per cent. Thus the increase in income for shareholders is modest and for those who take up their rights the effective yield is raised only from 3.1 to 3.2 per cent.

The terms of the issue have disappointed those who have been buyers of the shares on hopes that Martins, like the District, would be taken over by one of the big five—the Westminster was the hot favourite. It is worth noting that the District made a rights issue only a few weeks before negotiations started with the National Provincial but this was on particularly favourable terms. And presumably if Martins were actually negotiating with another bank it would not have announced a rights issue in the midst of its discussions. For the moment the only sweetener for shareholders is the special tax free payment of one per cent to be made from capital profits "to mark the 400th anniversary of the traditional founding of Martins Bank by Sir Thomas Gresham."

BANK ADVANCES

In the Doldrums

THE unpleasant drop in industrial production in October is made even more worrying by the disappointing rise in bank advances in the three weeks to December 12th. In these three weeks net advances rose by £15 million of which £7 million was accounted for by advances to State boards ; in the five weeks to mid-November advances rose by £19 million, including £6 million to State boards. This means that over the past eight weeks bank advances to other borrowers have been rising at about £2½ million a week, with the pace of increase in the latest three week period only a fraction above the rate in the previous five weeks. There are no indications here of any marked industrial recovery since October. A good part of the modest increase in advances has in any case been accounted for by increased personal and professional borrowing—though even this has been smaller than might have been expected.

The clearing banks put their make-up day forward by a week in December to reduce the distortion of Christmas postal delays, but they are still not eliminated. In the latest statement gross deposits rose by £160 million and gross advances by £52 million, both swollen by the postal delays that tend to increase the size of overdrafts by holding up credits. On the Monday before the make-up day the authorities released £38.7 million of special deposits, which this time went into liquid assets rather than investments. Investments in the three weeks were only £7 million higher while liquid assets

rose by £95 million and the liquidity ratio rose to 33.96 per cent compared with 33.3 per cent in the previous period. Bankers like to face the tax drain of the new year with a liquidity ratio of around 34 per cent; this year they are spot on. In relation to their size the Scottish banks again beat the clearing banks with a rise in advances of £2.2 million in the three week period.

COMMERCIAL TELEVISION

Trial and Error

Some of the suggestions contained in the government's latest white paper on broadcasting may not look particularly exciting or imaginative, but they answer a good many of the questions that have been hanging over commercial television. The ITA, for example, has protested whenever it was criticised in the past for the programme companies' high profits that it had no legal power to charge higher rents than were needed to build and run its own network of transmitters. What, said the ITA plaintively, was it to do with profits over and above its requirements? The government has now told it, and while the programme companies may not like the idea of a special levy on profits over and above the flat rental, collected by the ITA but handed to the Exchequer, a levy that did not vary with profits might have been much worse. Nor may the existing companies grieve excessively over the absence of a second commercial channel, since this leaves the BBC to pioneer the lonely wastes of ultra-high-frequency transmission with all its technical pitfalls, and to discover how many people in this country want a third service badly enough to buy a new television set capable of receiving it. The existing companies remember the lean years when few people wanted a second service badly enough even to buy a cheap adapter to receive it—let alone a new set.

Alternatively, do people want a third choice for which they would pay hard cash? The government's coolness towards pay television is difficult to understand, since the companies are not bidding for a public utility like a slice of the radio spectrum, but offering to risk their own money in a strictly private way. At present, five groups have been formed, but the white paper suggests that for purposes of the experiment "they may be required to combine in one or more consortiums." Two essentials are necessary for Pay TV, a wire network for distributing the programmes and a coin box attached to the set for charging for them. British Telemeter Home Viewing, backed by film and newspaper interests, has a licence for the American-developed coin box reputed to be the most efficient design; Choiceview, formed by Rank and Rediffusion, has an alternative coin box design and the advantage of access to Rediffusion's wire relay network; British Relay Wireless and Television (in which Rank holds 11 per cent) also has a wire broadcasting network. These three appear to be the strongest candidates. The fourth, British Home Entertainment seems better placed to provide material than to distribute the programmes itself, and has never made any firm suggestions about the system that it would like to use while the fifth, Tolvision, is a latecomer and something of a dark horse among candidates.

Slimming Diet

UNDERSTANDABLY Sir Robert Renwick, the chairman of Associated Television, is angry that what Mr Roy Thomson has described as a licence to print money is to be severely taxed, and that a licence for the big networks to print still more money through a second commercial television channel is not to be granted at all. After 1964, the profits of the television contractors will be pared right down, and their fat dividends will have to be cut. Mr Reginald Bevins estimated that the TV companies now gross about £68 million, of which £34 million goes in costs and another £8 million in advertising duty. The rentals paid by the companies to ITA he described as "quite derisory" in relation to a gross surplus of £26 million and a net profit after tax of £12 million. They came last year to less than £5 million. The rentals, containing a new and substantial levy calculated on the companies' profits before tax, will therefore be increased—though by how much it is not possible to calculate before the government produces more details about the levy. Television advertising will thus be accorded the unique distinction of being mulcted four times—in the rent to ITA, in the advertising duty, in the new levy and in income and profits tax.

But while Sir Robert fumed, the stock market took the white paper calmly. The shares were close to their low points of the year and, at least, the companies were spared by the government from the full wrath of the Pilkington report. Relieved at this and assuming that the government would leave the companies some profit (calculated on what — returns on capital employed?), dealers left the shares largely unchanged. But, in doing so, they noted that the smaller concerns in being given a better chance to sell their own programmes to the network might suffer less than the giants and that the Pay TV trials might provide a crumb of comfort for some of the relay companies.

FRANCE

Moins Ça Change

Paris

POMPIDOU having succeeded Pompidou, that is to say de Gaulle succeeding de Gaulle, France's economic policy over the next few years is hardly likely to change significantly. This is clearly demonstrated by the two official documents recently published. The revision to the draft budget for 1963 brought in by the new government contains only adjustments of detail, entailing less than 1 per cent of additional expenditure, to the draft tabled in October by the same minister of finance. Two-thirds of the income needed to cover the NF 790 million of additional expenditure will come from higher revenue which, at the same level of taxation, may be expected to accrue from economic expansion; the remainder will come from economies which will affect nearly all ministries.

The same impression of continuity is evoked by M. Pompidou's speech on his investiture. Its economic section is arranged around three main planks of policy, all of them traditional:

(1) **Maintaining expansion.** The government undertakes to respect the growth rate laid down in the Fourth Plan (5.5 per cent annually) and even intends to set the 1963 target at 6 per cent. This may, however, be considered a purely academic undertaking at a moment when pessimistic warnings are heard in most other parts of the world. However that may be, the government is announcing the means for putting its policy into effect: support for investment (low at present in the private sector through lack of capital), massive public expenditure, search for new outlets abroad, encouragement to consumption in the home market. . . . All this, M. Pompidou adds, must be reconciled with the maintenance of monetary stability, which since 1958 is the *leitmotiv* of French policy.

(2) **Full employment.** The need to avoid a rise in unemployment in the coming year —either on account of the Algerian repatriates or of a slow-down in economic activity—is now agreed by all sections of opinion (except perhaps the *patronat*). So M. Pompidou is battering

ADDRESS .....

at an open door. He is however introducing one innovation: the creation, in the near future, of a National Employment Fund which will grant bonuses to workers accepting vocational retraining. But this is rather little for a legislative programme. . . .

(3) **Social policy.** The "harmonisation of social conditions" will entail a special effort in favour of the lower income groups, family allowances, the aged, regions at an economic disadvantage, and social investment on hospitals, roads, schools (the construction of which is to constitute a "primary task" for the government), and housing ("particularly for families with low incomes"). If higher revenue became necessary to finance these projects it would in the first place weigh on "the higher income groups."

The government programme may indeed be said to continue in line with the policy followed up to the present, even in its omissions. On the means of carrying out an "incomes policy," on the reforms of the economic structure, on the conditions for an extension of the financial market, the new government remains as discreet as its predecessor.

SWITZERLAND

Vote Oui for Jacobsson?

A correspondent writes:

MORE details are now available about the compromise reached last month in Berne on Swiss association with the Paris club. The International Monetary Fund wanted Switzerland to stand ready to grant help to all ten countries. But Switzerland rejected this proposition and agreed only that the United States and Britain should be mentioned in the general agreement as countries with which Switzerland was willing to conclude bilateral agreements. For the other eight countries of the club, Switzerland simply agreed to have "the problem in mind." Indeed for the countries of the common market Switzerland regards it as natural that it should bargain the help it may give them against better conditions of association. A concession on Switzerland's part has been to agree, subject to the standard qualification about the condition of its balance of payments, that its help through bilateral arrangements with the United States and Britain should be made automatically as soon as it has been decided to put the Paris club into action.

The Swiss National Bank has now to negotiate with the Federal Reserve Bank the first bilateral agreement, called an "implementing agreement"; the general agreement between Switzerland and the IMF will then be modified as necessary. Once the general agreement is ready to be concluded, the Government will prepare a bill to be submitted to the Swiss parliament. As the bill will in fact modify the statute of the National Bank, it must be submitted for the optional referendum of citizens after its adoption by Parliament. For three months after this date, 30,000 citizens can ask for the bill to be submitted to the nation for adoption. But there is little chance that the referendum will be asked on so technical a subject.

DEFENCE PRODUCTION

After Skybolt

THE public washing of Skybolt's dirty linen happens to coincide with the yearly wrangles over defence budgets between the services and the Ministry of Defence in preparation for the Defence white paper in February; and hence it calls for some quick thinking by the RAF. A sizeable number of Vulcan bombers are still on order from Hawker Siddeley to carry Skybolt; these are substitutes for Handley Page Victors that would have been used by the RAF but for the fact that the bomber stood too low on the ground to provide clearance for a rocket slung under the wings. Logically, these Vulcans should be cancelled if Skybolt dies, but the more likely choice will be to keep them in production and step up orders for Hawker Siddeley's Blue Steel (a poor man's Skybolt with one-fifth the proposed range) to arm them in place of the missing Skybolts. Hawker Siddeley will get a small windfall order; the RAF will certainly come under pressure to go further and resuscitate the Mark II Blue Steel with double the range. Development of this missile was halted when Skybolt was ordered, but it is open to the same criticisms that are killing Skybolt—high cost, late delivery and dubious efficiency.

The long-term effects of Skybolt's non-arrival are less easy to predict. More orders might be placed for the smaller strike aircraft, short-range bombers like the Navy's Buccaneer, also built by Hawker Siddeley (the RAF would be in a stronger position today if it had not turned this down), and the RAF's own, much more complicated, TSR 2 bomber built by the British Aircraft Corporation; the Buccaneer is already in service, but the TSR 2 has not yet flown. Neither falls into the "deterrent" category, but both carry nuclear weapons, and controversial though it is, the TSR 2 is probably a more worthwhile venture than France's supersonic Mirage 4 nuclear bomber, which is likely to be a sitting duck for the defences.

But when it comes to a strategic replacement for Skybolt itself, then the government is likely to think long and hard. The third nuclear submarine has just been ordered from Rolls-Royce and Vickers, but this is a hunter of other submarines, and one reason (apart from cost) why Britain might hesitate before embarking on a programme of submarines for Polaris-type missiles is their increasing vulnerability. Little is ever heard about the rapid growth of means for detecting submarines across long distances, for the sound reason that here lie the most important current military developments. The sea is a big place, but it is not unreasonable to think that towards the 1970s it will be possible to detect any submarine that approaches within missile-firing distance of any coast.

CHRISTMAS SPENDING

Surprise Packet

STOREKEEPERS like nothing better than to discover after Christmas that the urge to swap gifts has pushed their sales to a new record. To guard against disappointment, most storekeepers grumble before Christmas about dragging sales. The crush in the London stores seems, as always, worse than ever, but the rise in unemployment and savings could this year break the long run of Christmas records.

Hard guides to the pace of pre-Christmas buying are few. The fluctuation in the note issue is a partial guide, although the increasing use of cheques and credit accounts is whittling away its importance. Withdrawals from National Savings provide another, but here the fluctuations in interest rates can upset any calculations. For the first time since 1948 the total note issue this Christmas is below that of last Christmas—but this results from the withdrawal of the £1 and 10s. notes which brought back to the Bank of England notes which had found their way into mattresses and chimney pieces. Since the beginning of November the note issue has increased by £172 million, with four more shopping days to go. This is perceptibly larger than the £152 million increase recorded over the same period last year. Each year since 1950 the note issue has increased by between 6.2 and 8.2 per cent in the two months before Christmas.

However, the approach of Christmas this year has, exceptionally, left the National Savings figures unmarked. In the three weeks to December 16th, net new savings totalled over £8 million compared with net withdrawals last year of nearly £10 million over the same period. This must partly reflect a switch into National Savings from other investments, as other interest rates have fallen. In the five weeks before Christmas, 1959, when Bank rate was only 4 per cent, net withdrawals amounted to only £6 million, and receipts continued to exceed repayments until the second week before Christmas. Last Christmas, Bank rate was 6 per cent, and in the same five weeks the movement lost £36 million in withdrawals. This year, with Bank rate at 4½ per cent and only a week to go to Christmas, it seems possible that net withdrawals for Christmas from National Savings will be very small indeed.

The Post Office savings account is the least remunerative of the National Savings media, and in the past three weeks repayments have exceeded receipts by nearly £4 million. Last year net withdrawals were £8 million in the same period. As this medium of National Savings is the least affected by switches of interest sensitive funds, it does seem that withdrawals of small savers to meet Christmas bills have been slightly lower this year. Present rates offered by the building societies are equally attractive, and the societies are receiving an increasing flow of funds; but in the new year rates seem certain to fall to allow a ½ per cent cut in mortgage rates.

ICI

You, You and You

IN a New Year message to ICI employees, Mr Chambers, the chairman of the company, told them that the measures being taken to improve the company's efficiency have their root in the present condition of the chemical industry. He foresees that the overcapacity existing in many parts of the industry may continue "for some time." In these changed circumstances, ICI must make "radical changes" to meet the "new and harsher conditions of world trade." It must learn to adopt new processes without delay and to design plant primarily to achieve the cheapest possible production costs.

ICI is being shaken out and thoroughly aired, but its employees should not despair. Mr Chambers said that the board is interested only in long-term improvements and has no intention of making "ruthless and hasty economies" for short-term profit. The changes that will be made may involve "redundancies at all levels"—something that has deeply concerned the board. But, once completed, Mr Chambers sees staff requirements from the company's new activities "broadly balancing" the losses from other parts. These actions do not imply a loss of faith in the company's future. On the contrary, Mr Chambers said that he could already sense an improvement of morale in some parts of the company as a result of the new opportunities, and he is convinced that it will spread.

ICI is approaching the problem of increasing its efficiency from more than one angle. The "efficiency drive" started more than a year ago and is being conducted from within the company. Rumours of stern axe-wielding have already been heard from some of the manufacturing divisions—particularly those descended from ICI's founder-companies which have for many years enjoyed near-monopolies. The sales structure is being tightened up, and an American sales course has been brought in for the benefit of the company's representatives. At the same time the main board has called in a company of American management consultants, McKinsey, to survey the company's organisation. In a speech a month ago, Mr Chambers told ICI's staff organisation that Shell, which also employed McKinsey, had reported favourably on the

Red Sea Dollar

IF a Maria Theresa thaler comes your way this Christmas and is dated 1780, don't get excited; it was probably struck at the Royal Mint no earlier than last year or may even have begun its life in Birmingham. All the millions of Maria Theresa thalers (or dollars) struck since the Holy Roman Empire lost this particular Empress have carried the date of her death, 1780. It is a majestic coin; its weight, its size, its lustre, and its beauty suggest untold wealth. It changes hands in the Red Sea bazaars at around 6s. 5d. a coin. Now it has once more got itself mixed-up in Middle East politics. In the Suez canal one hundred and seventeen cases of thalers worth just under £100,000, ostensibly on their way from Aden to Genoa, have been seized by the Egyptians, who claim that the coins were in fact destined for Israel.

The Maria Theresa thaler is a coin without a country and without a fixed value. Yet it is still, after 300 years, the ubiquitous medium of exchange of a good deal of the Middle East and parts of Africa. Its price varies with the value of the silver content and the vagaries of supply and demand. First struck in Vienna in 1751, the thaler soon dominated international trade throughout the Levant; its decorative edge beat the clippers, its intricate design beat the counterfeiters, and its consistent weight and fineness was much appreciated by traders. The thaler moved with the tentacles of African trade and by 1762 the coin was already circulating in Arabia. Its only rival at this time, the Spanish piece of eight, lost its reputation after "scandalous falsification" of its fineness in the Peruvian mints.

The demands of trade ignore the passing of princes, and Maria Theresa's thaler continued to be minted without Maria Theresa. In the first twelve years of this century alone Vienna turned out 45 million—all dated 1780. The collapse of the Austro-Hungarian Empire in 1918 left the thaler homeless and unprotected by coinage laws. The wrangle that followed ended with the European powers agreeing to leave the monopoly of minting in Vienna. All other countries were free to send silver to Vienna for minting into thalers, and the arrangement worked well until Mussolini decided to go adventuring into Abyssinia. The Abyssinians, poor but shrewd, preferred Maria Theresa thalers to mere lire; and to finance invasion Mussolini, with Hitler's help, managed to persuade the Austrians to pass the master dies of the thaler over to Italy. The Italian claim to a monopoly was insupportable and in 1936, when the premium on the thaler over its silver content reached something like 25 per cent, the Royal Mint, on the request of certain London bullion dealers, prepared its own dies and started producing thalers. Other national mints followed this lead, but the British "copy" was considered the best of the bunch by the discerning Arabs. The Mint had acquired a profitable sideline.

After 1945, and especially after the Austrian peace treaty in 1955, this activity encountered increasing diplomatic opposition. Last year the Royal Mint, following approaches from the Austrian government, ceased to make the thaler, and Vienna is once more the only mint striking the coin. British dies were used to produce some 43 million thalers in all: 6 million were used to finance the campaign which drove the Italians out of Abyssinia in 1941, and nearly 20 million were struck on the dies in Bombay to finance British payments in India during the second world war.

TO-DAY, the thalers are fed into the Red Sea area through the port of Aden. The Egyptian seizures have effectively closed the international market there, but immediately beforehand the price per hundred thalers was 640s.—only a fraction above the value of the silver in the coin of 6s. 4d. When the margin between these two prices widens it pays to ship thalers into Aden. But recently the diminishing use of the thaler in the Red Sea area, as the coinage of the Arab states gains acceptance, has kept the market price very close to the silver price, so that in general shipments have been moving out of Aden and into Italy, to be melted down. This is a relatively cheap source of silver for the Italian silversmiths since the import duty on silver bars is 8 per cent, but on silver coin only 5 per cent. And since the silver content of the thaler is 833 parts per thousand the silversmith can reduce this to the continental silverware standard of 800 parts merely by adding a little copper. In Britain where sterling silver is 925 parts pure, the coins would have to undergo the expense of a second complete refining. A West End dealer will charge 12s. 6d. for a thaler in mint condition; one that smells of sand and camels can be got for about 7s. from one of the City's bullion dealers.

benefits from their investigation. Maybe the same will be said of ICI as of Shell, that the investigation provided the management with justification for doing what it knew it ought to do all the time.

HOUSE OF MORGAN

Paris Double

MANY of the City's merchant banks have been strengthening their links with Europe in the past few years, and the nature of these links seems to be growing progressively stronger. Last April N. M. Rothschild established a formal financial link with Rothschild Frères in Paris. In October Schroder Wagg opened a representative office in Paris, jointly with its New York subsidiary, J. Henry Schroder Banking Corporation. This week Morgan Grenfell announces its participation in the establishment in Paris of a full scale investment banking company. It too is co-operating with its New York associates, Morgan Guaranty Trust, through its subsidiary Morgan Guarantee International Finance Corporation, and also with a Dutch private banking group, Hope & Co. of Amsterdam and R. Mees & Zoonen of Rotterdam. The new *banque d'affaires* will be called Morgan & Cie, which already exists as a shell but became dormant after the war when its business was turned over to a branch office of Morgan Guaranty Trust. Under American law however this branch of a deposit bank is not allowed to transact new issue business, whereas a subsidiary of Morgan Guarantee International Finance Corporation and its subsidiaries can. So there are now two Morgan banking establishments in Paris, both at 14 Place Vendôme. The chairman of the new bank is M. Pierre Meynial, vice-president of Morgan Guaranty Trust in Paris; Lord Harcourt represents Morgan Grenfell on the board. The staff will be entirely French.

The new bank will begin slowly, concentrating on advisory services to businessmen wanting to raise money or establish themselves in France. But later it will raise money itself, and hopes to help widen the Paris new issue market. For the time being, the attitude of the French authorities may confine such issues to local rather than foreign use; but the Morgan group would clearly be in a good position to organise international issues with subscriptions from many countries, in the Wall Street manner: thus the move may be taken to have the blessing of Mr Dillon. Morgan Grenfell is still confident that London will in time emerge as the financial centre of the common market; but the intermediate stage before capital can flow freely may be an appreciable one—and anyway Britain is not in the common market yet.

GERMANY

Fewer Give Gold

Frankfurt

GOLD coins seem to be gradually becoming less fashionable in Germany. This Christmas they have enjoyed much less than their previous seasonal demand. The decline in interest reflects a lessening fear of inflation, on the one hand and the ebbing of speculation on an increase in the international price of gold on the other. At the same time, in response to the high premiums that gold coins have carried, the business has attracted the attention of enterprising imitators, whose activities have inevitably checked the rise and even brought the market into disrepute.

Since 1954, when most of the currency regulations limiting the trade in gold coins were lifted, many hundreds of thousands of such coins have disappeared into safes and under mattresses. At first, most of the supplies came from abroad, illegally until imports were legalised. The coinages of the former German Reich of pre-1914 days enjoyed especial popularity, particularly the ten and twenty mark pieces. But there is a great variety of foreign coins—including not a few sovereigns—to be found in Germany.

This persistent demand for gold coins called into being private firms coining ten and twenty mark pieces and selling them at a gold content equal to, but at prices slightly lower than, the originals. Established traders in gold coins, the banks in particular, have refrained from such practices; and the legality of the operation has been under consideration in the courts which, however, have not yet reached a final decision on the admissibility of these imitation coins.

But those who have bought gold coins during the past years need have no regrets, for until recently prices have been rising fairly steadily. Though their value increased less rapidly than the gains which could, for a time be, be achieved on the stock exchange, it has in the latest period fallen considerably less than the stock market. Many coins indeed have increased their value further: the ten mark piece, for instance, has risen by nearly 50 per cent since the beginning of the year.

JEWELLERY

Still a Girl's Best Friend

DIAMONDS are still a status symbol. A survey of the jewellery market carried by Mass Observation on behalf of De Beers shows a surprisingly wide social sprinkle of diamonds, though it also reveals that the growth in popularity of these "blue/white chips" has not been as great as the growth in the market for jewellery as a whole, which includes both women's watches and the booming but unpawnable costume jewellery.

Over two thousand men and women were interviewed, and 3 per cent of these said they had bought at least one item of jewellery worth over £15 in the past year. It scarcely needed this survey to point out

that the more expensive the jewel, the more likely to find a man rather than a woman buying it—though women were quite rightly counted as purchasers if they were present in the shop when a man was actually forking out on their behalf. Down in the "under £2" category, 27 per cent of women but only 8 per cent of men had made purchases in the past year.

Precious or semi-precious stones (pearls do not count) had been bought by over a third of the purchasers, and of these diamonds were easily the most popular. The lower middle classes appeared the most solidly in favour of buying diamonds, even though most people thought of them, in the abstract, as being flashy.

HIRE PURCHASE

Never-Never Land

THE decision this week of the Court of Appeal in the case of *Financings Ltd. v. Baldock* has driven one more nail into the hire purchase coffin, and has strengthened the case against reform on the lines suggested by the Molony committee. Mr Baldock paid a £100 deposit and bought a lorry on hire purchase. After he had failed to pay the first two instalments Financings terminated the agreement and repossessed the lorry. The lorry was sold eighteen months later for £140, a fraction of its original price, and the company then sued Mr Baldock for £538, the balance of the original price including credit charges.

A lower court had decided that Financings was entitled to only the first two instalments that Mr Baldock had failed to pay, plus a 10 per cent interest charge on this sum. The Court of Appeal upheld this decision and Lord Denning, Master of the Rolls, observed:

> When an agreement of hiring is terminated by virtue of a power contained in it, the owner can recover damages for any breach up to the date of the termination, but not for any breach thereafter, for the simple reason that, the agreement being terminated, there were no breaches thereafter.

Financings' contract carried a clause to the effect that on termination the hirer should pay a minimum of two-thirds of the total hiring costs. The court set this aside as a penalty and an attempt by the owner to get rentals when he had no right to them. Most finance companies dropped this type of clause some time ago, and now work on the fairer principle of the hirer being liable for the balance outstanding less the re-sale price of the vehicle. However, while the court agreed that this principle applied when the hirer himself terminated the agreement, since the company had the right to sue at common law for breach of contract, it has now implied that this right does not exist if the company terminates the agreement. The corollary is that before a company terminates an agreement it would be well advised to check the condition of the vehicle. If there is little hope of obtaining no more than a fraction of its original cost the company may, paradoxically, do better for itself by leaving the vehicle with the hirer and letting him continue to default, and eventually sue for all the unpaid instalments.

The government should take note of Lord Justice Diplock, who pointed out that the nature of the hire purchase contract was that of moneylending; and that if companies choose to conduct their business by entering into contracts for the hire of chattels, instead of entering into moneylending contracts secured by chattel mortgages, their legal rights must be governed by those contracts and the general principles of law applicable to contracts of that nature. Many hire purchase companies would like nothing better than to follow his advice. But have they this choice with the Board of Trade's regulations made under the Moneylenders Act standing in their way?

SHOP HOURS

Open Wide the Door

EVEN the glitter of Christmas trade induces few stores to make full use of the evening opening hours permitted to them by law. The Shops Act allows a maximum of four nights open until 8 p.m. and one until 9 p.m.; once a week shops must close for their half day at 1 p.m. Local authorities can fix earlier closing hours if they wish; the LCC for one does not.

In spite of this it seems that only the disastrous smog of a fortnight ago has inspired most West End stores to make more use of 8 o'clock closing this week, and some to stay open on the Saturday before Christmas as well. Staff get paid extra for this, and most of them this year are getting a three-day holiday over Christmas. In most cities a few main stores are beginning to make use of later hours at this time of year, but seldom to the permitted extent.

No one would grudge a long, long rest to the much-tried shop assistants who have dealt with the seasonal bedlam, but one does feel that with a little more determination, particularly in the use of shifts, their employers could give a better service to the public in the few weeks before Christmas. Their answer usually is that there is not enough demand, but anyone who has milled out of the swing doors at 8 o'clock will disagree. In the long run however this must probably depend on a change in the law which—perhaps in conjunction with a five-day shopping week such as Sainsbury's have already put into practice—would permit opening to at least 10 p.m. on some nights of the week. Staying open for a day and a half at a time would certainly make it worth while organising staff accordingly.

CHEMICALS

Aromatic Investments

ANOTHER principality is being filched from the domains of King Coal—or, at the least, a fifth column has been started. An aromatics plant, designed to produce 35,000 tons a year of ortho- and para-xylenes, is now in operation on the Isle of Grain, in Kent. The plant has been built by BP-California, a joint subsidiary of British Petroleum and California Chemicals, and will take its feedstock from the catalytic reformers at BP's nearby Kent refinery. Aromatics, a group of organic chemicals, are traditionally derived from coal as by-products of carbonisation processes. But they also occur in crude petroleums and are made in reforming processes, and oil companies are increasingly interested in exploiting this source of chemicals.

It has already been over-exploited in the USA, and surplus production is being shipped across the Atlantic. The massive imports (perhaps 300,000 tons of bulk aromatics last year) have seriously affected prices—and, indirectly, the economics of many of the coal-based operations. In Britain last year, nearly half a million tons of crude benzole was processed into motor benzole and purified aromatics. Most of this (about 70 per cent) came from coke ovens, for which extraction of the crude benzole and its purification is a relatively cheap business. For technical reasons it is more difficult in gas works. But, however made (as long as it is in Britain), the economics of the process are greatly helped by a subsidy of 1s. 3d. a gallon which will be removed by 1965, in accordance with the terms of Britain's membership of EFTA. As a result, it has been estimated that production will decline, leaving a shortfall between demand and production of 100,000 tons a year by 1965.

This situation can be paralleled on the Continent, and the market revealed has already attracted the attentions of several oil companies. By far the largest of these projects is Esso's: a plant at Rotterdam to produce nearly 300,000 tons a year of aromatics. Other plants are in operation, or scheduled for, Italy, Germany and France. But the enthusiasm with which new plants are being built is already causing fears of a repetition in Europe of the American glut.

WOOL

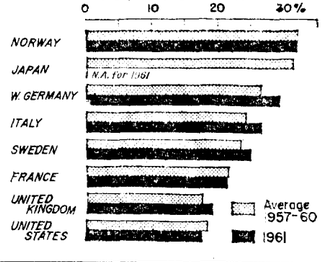
A Good Meeting That Was

BETWEEN the sixth and seventh meetings of the international wool study group, seven years elapsed in which world production of raw wool expanded by 15 per cent and consumption rose fast enough to absorb it all and to draw down producers' stocks

HOW MUCH INVESTMENT?

Most industrial countries put between a sixth and a third of their resources each year into fixed investment. The comparisons below are as far as possible on a consistent basis from returns made to the Organisation for Economic Co-operation and Development and to the United Nations.

Gross fixed investment as a percentage of gross national product at factor cost



and government stockpiles to about 100 million lb at the start of the current season, compared with some 300 million lb in 1955. Over the past four seasons, wool has been more stable than in earlier years though the price has declined. International trade in raw wool was up by a quarter in 1961, compared with 1955; exports of tops and fabrics expanded by about a third; and yarn exports increased by nearly a half.

Naturally, a strong body of producers and wool users were inclined to let well alone at last week's meeting of the international study group; the United States, which had exercised its right to propose the meeting, strained a point or two in order to justify its initiative. In its underemployed wool textile industry, the United States has a searing domestic problem which it was anxious to vent on some international forum. It argued that disruption of a domestic industry by imports could affect consumption and produce lower wool prices. But the communiqué records:

> Some important producing and consuming countries questioned the gravity of these problems; the relevance of these developments in trade in wool products to the prospects for raw wool; and the appropriateness of discussing these matters in the Wool Study Group.

The study group did, in fact, insist that GATT was the proper place to discuss international commercial policy. The GATT cotton textile agreement is limited specifically to cottons, and is far from being a ready-made formula applicable to wool. In this trade, European countries and Japan are the dominant exporters and the stock American case for ensuring orderly growth in outlets for underdeveloped countries misfired at last week's meeting. Britain is certain to resist further protection for the American wool industry, at which the United States delegation was delicately hinting. EEC countries stated their views forcibly. Producers also rubbed in the point that high American tariffs on raw wool and wool textiles hardly help wool consumption, so that whatever the real objectives of the United States in calling a wool study group meeting, it certainly served to clear the air. The United States has at least succeeded in reactivating the dormant wool study group; the management committee will now meet quarterly, and the technical committee will be expected to collect additional statistics. A further meeting of the full study group is tentatively fixed for the first half of 1964, though this can be brought forward—or postponed—if necessary.

GERMAN FILMS

No Blue Angels?

Düsseldorf

WALTER KOPPEL, one of Germany's most successful film producers and distributors, has recently run into financial difficulties. His two affiliated firms, Real-Film (production) and the Europa-Verleih (distribution), have liabilities of DM 14 million and he has had to ask for a legal "settlement." But Herr Koppel reckons that these liabilities will be covered by about DM 17 million of revenues from his distributing business in the course of next year. He will have little difficulty in arranging with his creditors, all the more as a third firm in which he has a share, the Europa Filming, has agreed to take over the film stocks of Europa-Verleih.

But his case is not an isolated one. It followed upon the disaster of the UFA combine, which relying on its big name from prewar days tried to stage a triumphant comeback on the German film market, but had to liquidate its main distributing firm, the Film Hausa, in the beginning of this year. There is no doubt that the German film business in general is sick; the question is only whether it is already on its death-bed, or whether there is hope of recovery. Production was restricted to only 79 feature films in 1961 and even less in 1962. But this restriction has proved no cure. In spite of the reduced supply, several of the more conspicuous films have been a financial failure, and fallen far short of "playing in" their ever-increasing costs. What was worse, the small number of features on offer made it difficult to maintain the old distribution practice of coupling good and bad films in the same block booking, to oblige the theatre owners to take weak as well as strong attractions into their programmes.

There are two obvious reasons for this decline. One is international: as elsewhere, competition from television has had disastrous effects on the cinema-going habits of the general public in Germany. The other reason is specifically German: the inroads made by foreign films since the war were so great that the German film has never been able to recover its old economic position. The invasion began with American and British films in the "re-education" period; later came Italian and French films. Certainly, German film-makers too have been able to produce some remarkable films, and even a few financial hits. But they have produced more failures, and the reputation won by foreign films is so great that a German film producer recently complained that even a good German film could not find an audience and that films must come from abroad to win general approval. That may be exaggerated; but the share of German films on the German film market has sunk to 27.4 per cent in the season 1961-62, and others in the film business as well as Herr Koppel are feeling the pinch.

SHORTER NOTES

France has made another advance repayment of debt to the United States of $117 million. This brings its total advance repayments this year to $590 million, reducing outstanding external debt to $1,022 million, one third of the total at the end of 1958. France's current payments surplus has risen to a peak of $1,300 million this year; there are some tentative signs of a small reduction in 1963.

★

United Dominions Trust is losing its pilot. Mr. J. Gibson Jarvie, its outspoken chairman for forty three years, is now in his eightieth year and has been advised by his doctors to retire. He will hand over to Mr Alexander Ross at the end of March.

★

Great Universal Stores is paying £1,325,000 to exercise an option for half the equity of S. Miller (Manchester). This brings GUS an important addition to its mail order business through Miller's subsidiary Chorlton Warehouse and a share in the coat manufacturers Baracuta, which accounts for a minor part of Miller's business.

★

The RIBA has criticized the draft national building regulations proposed by the Ministry of Housing and Local Government as being of inadequate standard, and hard to understand.

★

German commercial banks have been asked by the Bundesbank to refrain from window dressing this year, and thereby to avoid the huge inflow and outflow of foreign funds which produced violent fluctuations in the Bundesbank's external reserves a year ago. At the same time Dr Blessing, president of the Bundesbank, has forecast a doubling of Germany's payments deficit in 1963 from this year's figure of around DM 1,000 million—Germany's first current deficit since 1950.

COMPANY MEETINGS

JOSEPH LUCAS (INDUSTRIES) LIMITED

CHAIRMAN'S ANNUAL STATEMENT TO THE SHAREHOLDERS

Sir Bertram Waring presided at the sixty-fifth nnual General Meeting of the company held Birmingham on Monday, December 17th. In s statement to the shareholders he said:

"The Consolidated Profit and Loss Account the Company and its Subsidiaries for the year ided July 31st, 1962, shows a Surplus on Trad-g of £6,945,979 compared with £6,476,846 r 1961. After bringing into account Other ıcome and Exceptional Items and making pro-sion for Taxation the Net Profit is £2,610,673 hich compares with £2,526,350 last year.

The net total of the Dividends recommended r the year amounts to £1,193,448. It is rther recommended that £100,000 be allocated Employees' Funds, that £500,000 be allocated General Reserve and that £250,000 be allo-ted to the Reserve on Unquoted Investments. ter these allocations there remains £369,190 to carried forward.

FINANCE FOR NEW PROJECTS

During the year under review capital expendi-re of approximately £4½ million has been :urred on the expansion and re-equipment of r existing factories, and the development of w factories, both at home and overseas. :tensions to our United Kingdom manufactur-g facilities include the purchase of the Royal ·dnance factory at Fazakerley near Liverpool, d the further development of the disc brake :tory at Bromborough, Cheshire. Overseas, a w factory is being built at Coblenz. Invest-nts in Industrial Companies increased by a tle over £3½ million, mainly as a result of rticipation in Ducellier et Cie in France.

The financing of these and other activities has volved a substantial increase in Bank borrow-gs, which amounted to some £5 million at ly 31st and are currently in excess of that ure. Consideration is being given to an issue £10 million Debenture Stock in this country, d approximately £4 million of Bonds in /itzerland, in order to discharge our overdrafts d provide for the further expansion of ivities. Further information will be circulated shareholders in due course. Meanwhile it ould be mentioned that the resolutions sub-tted on September 24th at the class meetings shareholders, and at the Extraordinary General eeting of the Company, were duly passed and consequence the Company's borrowing wers were amended to provide for all foresee-le contingencies. Furthermore, the two small sses of Preference Shares were consolidated o a single class of new 6½ per cent First eference Shares.

MOTOR INDUSTRY DIFFICULTIES AND ACHIEVEMENTS

The outlook for the financial year which ened in August, 1961 had been dimmed fore the start by the Chancellor's "little dget" of July and additional setbacks arose m a series of unofficial strikes in the Industry, some of which were of a prolonged and serious nature. As things turned out, therefore, the early months in the home market were worse than had been expected, and the year as a whole was only a little better than 1960/61.

There were, however, many notable achievements. Exports of cars to the U.S.A. were substantially increased as compared with the previous year. Perhaps of even greater significance, shipments to the countries of the Common Market were doubled. This is a first result of the programme that the British manufacturers have undertaken to augment their sales and service facilities on the Continent in anticipation of the United Kingdom joining the European Community. It is a splendid rate of improvement in one year having in mind that, although quotas have been removed, tariff barriers still have to be crossed, and it promises well for the time when the British products can be offered on equal terms to those of the European competitors. It also demonstrates clearly that the British car is readily acceptable on the Continent from the point of view of technical specification and performance.

The year was also notable for the introduction of new models of British cars which are quite original in conception and which have pioneered important engineering features. These revolutionary new models have been applauded throughout the world as important developments in motor vehicle design. These achievements reflect once again the vitality and resource of the British vehicle manufacturers, who have the ability and energy to surmount misfortunes and, despite setbacks, have sufficient confidence in their own future to push forward with building and equipping new factories to provide extra capacity for the years ahead.

Without the gains in the export markets the year for the Motor Industry would have been a bleak one indeed. The aim of Government policy was to discourage home sales, and it certainly succeeded. But a policy of discouragement is a negative one, useful only for a short-term purpose. Long-term industrial growth and prosperity can only be founded on a positive policy of encouragement. Most certainly a vigorous export business can only be sustained by a healthy home market, and it is a matter for great satisfaction that the Chancellor has demonstrated his belief in this philosophy by his recent purchase tax revision.

Our factories engaged on the manufacture of motor car equipment have been striving to re-establish a satisfactory level of profitability in the face of higher material, wages and other costs. We have been compelled to adjust some of our selling prices to meet increasing costs, but any substantial increase in the prices of the equipment that we sold to our vehicle manufacturing customers would have added to the pressure forcing car prices upwards, a state of affairs which would have been no more in our long-term interests than in theirs. The improvement that has been made in the economy of our vehicle equipment business has been the result of a continuous pursuit of increased productivity, through better product designs, better manufacturing processes and technological progress generally. We have made considerable investment over the years, in both men and money, to enable us to maintain steady progress in these important directions. It is only by improved product designs and new methods of manufacture that significant increases in product costs and prices are avoided.

COMMERCIAL, DIESEL AND AIRCRAFT EQUIPMENT

The Commercial Vehicle Industry suffered a setback during the year, largely due to the general reduction in capital investment programmes at home, and similar restrictions imposed in Australia as a result of their own balance of payment difficulties. It seems likely that the Australian business will recover during the current year, and fresh opportunities will be opened at home as a result of the new encouragement that has been given to spending on capital equipment, of which heavy vehicles form a part. The manufacture of Agricultural Tractors was maintained at its previous high level; more than 80 per cent of the production of these machines is exported. The Motorcycle Industry has had a difficult time, faced as it has been by the credit restrictions at home and increasing competition in export markets from Japanese and Continental manufacturers. It has continued to do battle with these adverse forces in a most determined manner.

The United Kingdom is the world's largest manufacturer and exporter of diesel engines. In addition to supplying these for British trucks, tractors, boats and industrial power units, of which 60 per cent of the total are sold overseas, the manufacturers exported 100,000 engines in 1961/1962 for fitment to vehicles made in other countries. Over the last ten years United Kingdom diesel engine production has increased at an average rate of 12 per cent per annum, and for 1961 reached the impressive total of 550,000. As manufacturers of fuel injection equipment we have been closely associated with the growth of this important business. It is a mark of our confidence in the continued expansion of this industry that we have established, adjacent to the C.A.V. works at Acton, a new Engineering Centre which was opened by the President of the Board of Trade in January. This will enable us to redouble our research and development effort on fuel injection equipment, turbochargers, and other projects associated with diesel engines.

Our Aircraft business was on the whole well maintained during the year. The equipment we make falls mainly into three groups: electrical equipment for engines and aircraft, fuel supply and control equipment for gas turbine engines, and combustion equipment for gas turbine engines. The Aircraft Industry has been passing through a period of re-organisation which has as

its main objective the concentration of specific skills at a few highly specialised centres. Exactly the same process has been applied within our own aircraft equipment factories, and for the same reasons. Such consolidation is absolutely necessary in an Industry where production orders are few in number but where development is extremely costly and design is constantly changing. In a business such as ours more than one-sixth of total revenue is devoted to technical development. A current example of the kind of problem to be faced is the development of an electrical system for supersonic flight, where great extremes of temperature are to be encountered and as a result the need arises for radically new materials and processes. Prototype equipment is now in the test stage and will shortly be ready for further development in the air. We are creating a strong aircraft engineering liaison service on the Continent in preparation for any opportunity that may arise for exploitation of our special skills among the big European manufacturing groups.

NEW PRODUCTS

Special importance has continued to be placed on research and design, and the improvement of our products and our manufacturing techniques. Our past work on disc brakes is now yielding good results. More and more cars are adopting this system and our manufacturing facilities have been expanded to meet the increased demand. A variety of new types is under development to meet the specialised needs of our customers, including those in Europe. Additionally, a new range of drum brakes for commercial vehicles is being designed. A range of alternators is now available and supplies from production tools can be made as required for those cars which need the higher electrical output at lower speeds that this type of generator provides. The all-glass sealed beam headlamp units are now in full scale production, and are being supplied as initial equipment for most cars.

Arising from our gas turbine work we have developed the Lucas marine oil burning equipment, and this has recently been specified for two 40,000 ton Italian liners now on the stocks. It is also interesting to report that electronic equipment, designed and manufactured within the Organisation was used in Ariel, the first British space satellite.

EXPORTS AND OVERSEAS MANUFACTURING

Direct export business, based on our overseas service and distribution organisation, continues to grow. We now have over forty establishments to supply and service the 5,000,000 vehicles and tractors that are in use in overseas countries and fitted with various items of our electrical, diesel and mechanical equipment. In the most important countries we have our own distributive subsidiaries and in a hundred others we are represented by agents specially appointed for their technical qualifications and general ability. We are now in the process of setting up another distributing company in Argentina, and a similar course is proposed for France. The existing establishments in Cologne and Zurich have been enlarged.

We have continued to develop our overseas manufacturing activities. Last year it was reported that negotiations were proceeding for the acquisition of an interest in a company in France. Since then it has been announced that we have completed the purchase of a 40 per cent interest in Ducellier et Cie, the largest manufacturers of motor vehicle electrical equipment in France. The business is being managed on a partnership basis, with both parties carrying a full share of responsibility for the conduct of affairs. The arrangement came into effect on March 1st, 1962, and a harmonious and entirely satisfactory relationship has been established with our French colleagues. We believe that this association, which includes provision for a mutual exchange of technical information, will add greatly to the strength of both parties, and will in due course enable us both to offer better and cheaper equipment to our respective customers. Our other French manufacturing interest, the jointly-owned company Roto-Diesel S.A., making diesel pumps, is now well established but is not yet operating to an adequate capacity.

The new factory at Coblenz will be engaged on manufacture of both disc and drum type brakes. Initial orders for these have already been received from Continental customers who are being supplied temporarily from the home factories.

Our Partnership in Argentina with Siam Di Tella Limitada and with Martin, Amato y Cia has already made a start. Dynamos, starters, regulators, coils and brakes are now in production. Other products are being added. In India a joint enterprise has been set up with T. V. Sundram Iyengar & Sons Private Limited for the manufacture of electrical equipment and brakes. A factory is nearing completion at Madras, and production will start in the coming months.

The Australian Government has been able to relax some part of its credit restrictions and this has led to a revival of sales of motor cars there. As a result our manufacturing company at Melbourne has received renewed and increased orders, and at present is busier than at any time since the factory was established. The profitability of the Company is not yet satisfactory, and local competition is severe, but the position is improving and will be greatly helped if the Australian motor industry continues to expand as is forecast.

As a consequence of the decision of the Canadian Government to withdraw from local aircraft manufacture it has been necessary for us to curtail our own activities there. We are concentrating our aircraft business at our Montreal premises and vacating the larger Toronto factory, part of which will, however, continue to operate as the headquarters of the motor equipment Sales and Service Company.

Batteries are well suited for manufacture overseas and most large markets of the world are now producing their own or are proposing to do so. This affects our exports of batteries from the United Kingdom and our only recourse is to set up our own manufacture overseas. We have established battery factories in Australia, New Zealand, the Union of South Africa, the Central African Federation and Pakistan. In addition, Lucas batteries are made under licence in the United States, Canada, India, Switzerland, Brazil, Venezuela and Belgium. For smaller markets we are partners in a joint enterprise called British Batteries Overseas Limited, which has established factories now in production in Malaya and Ceylon and new ones under construction in Trinidad and Nigeria.

PROSPECTS FOR THE COMMON MARKET

There is the exciting prospect that this year will mark the entry of the United Kingdom into the Common Market. The principal countries of Europe will be added to our home market, and we shall cease to regard them as export territories, a philosophy that we have already adopted in the Lucas Organisation. So far as the British Motor Industry is concerned there will be swings as well as roundabouts, but it is confidently expected that on balance we shall stand to gain more than we lose. In any case it will open our fresh fields to conquer, and it is the kind of challenge to which the Industry will respond. What is most needed is an opportunity to make effective use of the manufacturing capacity available. To succeed in the competitive days which lie ahead, with the conditions created by the European Common Market, the Industry needs continuity of production free from interruptions from any cause, including those arising from strikes or from political interference or restrictions. This is a common concern for Government, employers and employees alike.

WAGES AND PRODUCTIVITY

In previous Annual Reports views have been expressed on the growing need for legislation to protect the public from inflation brought about by wage claims when these are imposed by unofficial strikes or by the threat of official strikes. Obviously wage increases are fully justified, and give a boost to the economy, when they are backed by increased productivity. However, in the last seven years national productivity has increased by an average of about 2 per cent p.a., whereas wages have increased by about 6½ per cent p.a. This difference has been the main cause of inflation in the past. Now that the wages pause has spent itself, and a new round of wage demands is being formulated or agreed, the inflationary spiral is again in clear prospect. Its progress will be witnessed as if it were utterly inevitable, and as if the competitive position of British Industry in overseas markets, as well as the hardships of old age pensioners and others living on fixed incomes, were of no account. What is called the "democratic process" in wages negotiations is fast falling into disrepute and is ceasing to justify the term "democratic." "Democracy" is government by the people and is supported by the civil and other Courts. The time may be approaching when the people will look to an industrial Court which will protect them from the evil of rapid inflation.

The Company has made plans to participate fully in the National Productivity Year inaugurated by H.R.H. the Duke of Edinburgh. A programme has been drawn up, and targets have been set, to ensure that each and every factory, office and department in the Organisation shall raise its sights in regard to the conduct of its own affairs, whether it be concerned with design, manufacture, buying, selling or administration. The dominating theme we have adopted is that the most certain way (among many) of raising our productivity throughout all channels of activity is by making an even better product. By so doing wastefulness will be cut out at every stage, before, during and after manufacture. We have, therefore, set ourselves ambitious targets in the field of product performance and reliability.

The Directors are glad to record their very sincere appreciation of the work done by all employees in the Company's factories and offices at home and overseas. Those who are overseas have special problems, and they are remote from close contact with the home community which can provide constant counsel and encouragement. We are especially mindful of the pioneering work that is being carried out by this growing band of our own people, who have gone out, with their wives and families, to start new enterprises in distant and unfamiliar surroundings."

The Accounts and Balance Sheet were adopted and the appropriations recommended by the Directors were confirmed.

GOLD FIELDS

PROFITS REACH NEW RECORD OF £7,029,829

Sir George Harvie-Watt, Bart., T.D., Q.C.

The Annual General Meeting of The Consolidated Gold Fields of South Africa, Limited was held in London on 13th December, 1962. Sir George Harvie-Watt, Bart., T.D., Q.C., the Chairman, presided, and in the course of his speech said:

In this year, during which we celebrated the 75th Anniversary of the Company, I am glad to report that profits before taxation amounted to £7,030,000 which is the highest figure the Group has yet achieved. Another satisfactory feature of the accounts is that dividends and interest exceeded £5 million for the first time. Your Directors recommend the payment of a final dividend of 3/9d. per Ordinary share less tax, thus maintaining the previous year's total of 5/- per share but on a capital enlarged by the rights issue of one for ten last January.

SOUTH AFRICA

While the prices of quoted shares of South African companies in recent years have reflected some fears regarding political developments in the Republic, the South African economy has none the less shown continued growth and stability. In the last decade its national income increased by something like 80%. In this process of growth, the companies of the Gold Fields Group in South Africa have played their full part. During this period output of gold rose from approximately 2.2 million fine ounces to over 4.6 million fine ounces per annum and working profits from over £8 million to nearly £27 million per annum. Payments to shareholders in the form of dividends and capital repayments rose from £3 million to over £8.8 million. This increased earning power is reflected in our own accounts.

A record working profit of £15¼ million having been made at West Driefontein, it was all the more unfortunate and disappointing to receive the news that there has been a subsidence of ground at the No. 2 Shaft surface installation, causing the collapse of the sorting and crushing plant. It is with deep regret that I have to report there has been some loss of life. Details of this disaster are not yet fully known to us; but it is apparent that production will be seriously affected. The full resources of our Johannesburg organisation will be made available to West Driefontein to help them make good the damage as speedily as possible.

AUSTRALIA

Last year I referred to the progress that had been made in acquiring new interests in Australia. That progress has been continuing. The majority holding we acquired in Commonwealth Mining Investments still represents our largest interest and the company has continued to pay dividends at the rate of 5%, which, considering the recent business set-back in that country, can be considered satisfactory.

The other major new investment to which I referred last year was that made in the rutile and zircon industry. This has subsequently been increased. The major part of our stake in this industry is represented by our holding in Associated Minerals Consolidated.

Our confidence in the future of rutile has been further increased by the events of the past year and there is every reason to hope that, with the improved efficiency of production and price stability, our investment in this industry will prove highly profitable.

CANADA AND U.S.A.

In Canada we have taken a distinct step forward this year. Since 1956 our Canadian organisation has been directed towards the acquisition of new mining business solely through the operations of a subsidiary exploration company—Newconex Canadian Exploration Ltd. In February of this year, in accordance with our policy of broadening our Group interests, we formed a second Canadian subsidiary, Newconex Holdings Ltd., 36% of the capital of which was offered for subscription to the Canadian public. The offer was successful and Newconex Holdings is now quoted on the Toronto Stock Exchange.

In the U.S.A. we are also moving forward. On January 1st this year, our new wholly-owned subsidiary, Gold Fields American Corporation, took over from the former New York management committee the responsibility for administering and promoting our interests in that country.

IMPORTANT NEW PROJECTS

Our industrial interests in the United Kingdom are now grouped under Gold Fields Industrial Holdings Limited, formerly The H.E. Proprietary Limited. Gold Fields Industrial Holdings is a wholly-owned subsidiary of Gold Fields Mining & Industrial.

The progress we have already made in expanding our activities in Australia, North America and the United Kingdom affords encouragement for the future. Our operational organisation is established, and we have important new projects, each with considerable promise, in all the territories in which we are active. Proposals for expanding many of our other interests, including those in the United Kingdom, are also in hand.

The significant feature of our present phase of expansion is that we are seeking not only to develop new mines covering a wider range of minerals than in the past, but also to extend our interests into industry. It must be recognised that it will be some time before we receive the full return on our new investments; but there is good reason to hope that by next year they will have started to make a growing contribution to the earnings of the Group.

THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED

Copies of the Report and Accounts and the full text of the Chairman's Speech may be obtained from the Company's Transfer Department, 49 Moorgate, London, E.C.2.

THE PLESSEY COMPANY LIMITED

The thirty-eighth Annual General Meeting of The Plessey Company Limited was held on December 20th. The following is the statement of the Chairman, Sir Harold A. Wernher, to shareholders in advance of the meeting:—

I did not think when I was invited to join your Board following the merger of Plessey, Automatic Telephone and Ericsson interests which took place just a year ago that it would fall to me in so short a time, or indeed at all, to succeed Sir Allen Clark as your Chairman and to review the activities of the Plessey Group for you.

Sir Allen Clark

Sir Allen died on 30th June and I with his other colleagues wish to take this opportunity to place on record our grief at this sad loss. All who were privileged to know him recognised at once his stature as a man, the warmth of his personality and the force of his character. Forty-two years ago Sir Allen with some half-dozen staff began to build what is now the great and thriving organisation of Plessey and I cannot do better than merely say that what he left behind him is a fitting tribute to the man.

The Board is fortunate in that even Sir Allen could never have achieved all this had it not been for the loyalty and hard work of those who worked in and for Plessey and who remain imbued with a determination to continue the ideals and policies which Sir Allen laid down.

The three Directors who form the top management team have worked with Sir Allen for a collective total of 39 years, and over those years have participated extensively and deeply in the formulation and execution of Plessey management policy. They are backed by senior managerial and technical staff whose prowess, skill, dedication and experience have played a very substantial part in Plessey's history of successful growth. Under the reorganisation scheme they will now be sharing more responsibility.

Changes in Company Structure

Owing to your Company's rapid growth and in particular to the acquisition in 1961 of Automatic Telephone & Electric Company Limited and of Ericsson Telephones Limited, we found ourselves carrying on a substantial part of our business through the media of subsidiary companies and conducting another substantial part, i.e. the pre-merger Plessey business itself, by direct trading. This proved inconvenient and your Board decided to reorganise so that they would be free to concentrate on forward policy, organisation and future development for the Plessey Group of Companies as a whole.

This decision was brought into effect at the close of business on 30th June, 1962, the last day of your Company's trading year. A new subsidiary has accordingly been carrying on the pre-merger Plessey business since then under the name of The Plessey Company (UK) Limited.

In order to rationalise the structure of the Company and effect the necessary co-ordination and standardisation your Directors decided that the Management should carry out its managerial functions through the medium of a subsidiary company formed expressly for the purpose and responsible to the Main Board for the day-to-day conduct of the Company. Plessey Group Management Limited was accordingly incorporated on 26th June, 1962, pursuant to a unanimous decision of the then Directors.

Plessey Group Management Limited . The Plessey Company (UK) Limited
Automatic Telephone & Electric Co. Ltd. . Ericsson Telephones Limited
The Garrard Engineering & Manufacturing Co. Ltd. . Semiconductors Limited
Plessey International Limited.

Directors of The Plessey Company Limited

Sir Harold A. Wernher, Bt., G.C.V.O., T.D. (Chairman); John A. Clark (Managing Director); Michael Clark, and A. E. Underwood (Deputy Managing Directors); The Rt. Hon. The Earl of Kilmuir, P.C., G.C.V.O.; Field Marshal The Rt. Hon. Lord Harding of Petherton, G.C.B., C.B.E., D.S.O., M.C.; The Rt. Hon. Harold Watkinson, C.H., M.P.

Directors of Plessey Group Management Limited

John A. Clark (Chairman & Managing Director); Michael Clark, and A. E. Underwood (Deputy Managing Directors); G. D. Christie; J. H. Reed, C.B.E.; W. J. Dalziel (Production Director).

Following this decision a wide range of promotions was made throughout the Company to give a broad measure of decentralisation and flexibility and to encourage managerial enterprise and initiative. The new organisation has been in operation for some months and is proving highly satisfactory.

The Board

Shortly after the death of Sir Allen Clark, it became clear that certain Directors were in favour of the appointment of one of their number as Deputy Chairman or Vice-Chairman with increased executive duties. This proposal was unacceptable to a majority of the Board as were the subsequent, and as it turned out minority, views of certain Directors on the implementation of the agreed decision to set up a new management structure which was in accordance with the wishes of the late Chairman. These differences of opinion led to the retirement from the Board of the three Directors concerned.

Since that occurrence Field Marshal Lord Harding of Petherton, the Rt Hon Harold Watkinson and the Rt Hon the Earl of Kilmuir have accepted invitations to join your Board, the last-named with a view to becoming Chairman of Directors when I retire from active business life at the end of this year. The new Directors have lost no time in making themselves familiar with our business in depth and make a formidable addition to our strength.

When I accepted the post of Deputy Chairman in May I made it clear to my colleagues that I was doing so only on a caretaker basis until a more permanent appointment could be made, and it gives me much pleasure that we have found such an outstandingly gifted Chairman Designate. I am confident that the resultant Board, with proven administrative and managerial experience and working together as a team, will enable the Company to continue its remarkable history of profitable growth.

Extraordinary General Meeting

The organisational changes discussed above have raised a consideration which your Board wishes to place before you, that of Directors' Fees.

At present a Director's Fees are £250 per annum with an extra £250 for the Chairman. These figures were not only laid down many years ago but were applicable originally to a concern of much smaller size and importance. It is proposed therefore, that from the current trading year onward the fees for each Director, including the Chairman, be increased to £2,000 per annum.

ACCOUNTS for 1961–1962

The Accounts presented to you for the year ended 30th June, 1962, show a Total Profit before Taxation of £6,532,173 after deducting £238,250 in respect of a half-year's Interest on the Convertible Loan Stock. The Profit after Taxation attributable to the Group is £2,566,237. After providing £1,589,313 for Dividends the Unappropriated Balance now carried forward on Profit and Loss Account is £3,470,376.

The merger with Automatic Telephone & Electric Co. Ltd., and Ericsson Telephones Limited took place at the end of October, 1961. The Trading Results now presented therefore, include only eight months' profits in respect of A.T. & E. and Ericsson. In September, 1961, we acquired the SPE Company Limited for cash and these accounts therefore include only approximately ten months' profits in respect of SPE. It will be recalled that we acquired The Garrard Engineering and Manufacturing Company Limited in November, 1960, and our accounts to June, 1961, included a loss of £30,000 for that Company. On the other hand Garrard have done well in the year to June, 1962.

Looking back on the profit expectations shown in the September, 1961, merger offers and adjusting to a comparable basis before minority interests and after charging all Research and Development Expenditure against revenue, the profits before tax of the pre-merger Plessey business for 1961-62 were expected to run at a rate of about £4,100,000 per annum and in respect of A.T. & E. and Ericsson at a combined annual rate of about £1,650,000 for 1961.

The Plessey profit estimate for the full year and eight-twelfths of the profit estimate of our new partners gave a figure of £5,200,000 which compares with the actual profit to June, 1962, before charging interest on the Convertible Loan Stock of £6,770,423.

I consider this result to be more than satisfactory since, although Ericsson lived up to their forecast for the year to 31st December, 1961, the A.T. & E. Group ran into heavy weather. The A.T. & E. Group Trading Results for the year to 31st December, 1961, showed a consolidated loss before taxation and before adjusting for minority interests of £76,151. This loss, all of which occurred prior to the merger, was after charging Research and Development expenditure and certain special provisions.

We are glad to report a considerable improvement in A.T. & E. profitability following the merger due entirely to the efforts of your Management and the co-operation of the staff of A.T. & E. Ericsson's results are also satisfactory. Inevitably when three major organisations merge together in partnership there are problems, not the least of which is how to integrate policies across the Group. Solution of these involves studying how each company operates, reviewing the facts behind the figures and determining how and where each company generates its profits and how profitability can best be stimulated. That we have made good progress in this direction is evidenced by the profit improvement to date. We fully expect the improved trend to continue as integration proceeds.

At this point I would like to emphasise that profits have been computed on the conservative financial principles which have always been applied in the Plessey Organisation and which will continue to be the accounting policy of the enlarged group of companies. No changes in that policy have been made or are contemplated. We now turn to the Balance Sheets. The Balance Sheet for The Plessey Company Limited reflects its position as the Holding Company of the Group after the reconstruction at 30th June, 1962. The 1961 figures are given but are hardly comparable since they refer to the old Plessey Company. The Consolidated Balance Sheet of the Group gives the better perspective of the new organisation showing total tangible assets of £71 million at 30th June, 1962, compared with £36 million at 30th June, 1961. Our total investment in overseas subsidiaries and associated companies is approximately £8½ million. Not all of this is as profitable as we would like and having regard to the political and economic conditions in some areas such provisions and reserves as seemed appropriate have been made. Vigorous efforts are being made to co-ordinate our overseas interests, to bring them up to a full state of efficiency, to use the facilities of the overseas factories for the development of the products of the Group as a whole and to expand our overseas sales which account for approximately 22 per cent of our turnover with customers. This is a vital contribution to the health of the national economy.

TRADING

The Plessey Company (UK) Limited

We have formed a new Board for this subsidiary and I am glad to say that the Directors are men of tried and proven ability promoted from either the Executive Board or from amongst our Group General Managers.

In spite of the unsettled trading conditions of last year the Company succeeded in increasing deliveries and in improving profits.

Plessey (UK) today is a very highly technical business and we are widely diversified. Our research and development capacity expands steadily and we now have over 2,000 people working in our Laboratories and Model Shops. As the result of careful and detailed market research we have entered and are well to the fore in such advanced fields as solid-state electronics, pneumatic servo systems, hydro-mechanical fuel control for jet lift engines, microminiaturisation, new methods of measurement, process control componentry, data processing, nuclear techniques and military electronics.

The purpose of all this work is to introduce new products to our factories and it is gratifying to note that each of our four Groups has introduced a good many in this last year. Just to mention a few at random: in the Electronics Group—high speed and very high speed digital memory systems and a new lightweight UHF airborne communications and navigation system; in the Components Group—new ferrite cores and ferrite memory stores for computers while solid tantalum capacitors and thin film ceramic capacitors have been introduced for transistorised equipment. At Swindon, licence arrangements were completed with Güldner of Germany and manufacture of their "Hydrostabil" transmission systems has commenced. In the Aircraft Group, the acquisition of SPE Company Limited has given us a comprehensive new range of booster pumps, recuperators and control valves. Continued work on electrical generation has resulted in the adoption of our equipment for the BAC 1-11 in combination with the new Plessey constant speed drive and engine starter system. Research and development cost a lot of money and in Plessey (UK) we spend more on it, as a percentage of turnover, than the great majority of firms in the light engineering industry.

Our vital need is to be 'out front' technically so that we continue to expand by steady generation of new products.

Plessey International Limited

The exports with which Plessey International is concerned include products of all divisions of The Plessey Company (UK) Limited.

During 1961/62 orders for telecommunications UHF and VHF equipment were completed and shipped to the Governments of Australia, Canada, India, Indonesia, Italy, Jordan, Kuwait, The Netherlands, New Zealand, Norway, Pakistan and Spain.

The current financial year has begun well and in July a 10-year agreement was concluded with the Government of India covering VHF equipment for the Indian Army.

For aircraft spares and accessories two large contracts were received from the Federal German Air Force and from Hindustan Air Lines. Prospects for our Aircraft Equipment Group appear very promising, particularly in Germany where our prototype equipment is employed on several new aircraft being developed for both civil and NATO requirements.

Exports of hydraulic pumps for tractors and earth-moving vehicles have again increased.

During the past few years our exports have been especially successful in Europe including the Common Market countries.

Automatic Telephone & Electric Company Limited

In the section dealing with the accounts I have referred to the disappointing results of A.T. & E. operations in the calendar year 1961 and the heartening improvement to a profit earning position which began to take place in 1962.

In the early part of 1962 product policy and production resources were extensively re-appraised as an approach to cost reduction, and while the application of this appraisal has not yet made its full impact on profitability, it is most encouraging to report that the accounts for the six months to 30th June, 1962, now show profit earnings to be again at an acceptable level. This is of course after charging all research and development expenditure directly against the profits of the period in which it was incurred. Determined efforts have improved production efficiency.

Sales turnover for the six months to June, 1962 was well up on the figure for the first half of 1961 by reason of increased orders. Debtors, stocks and work in progress have been reduced greatly and this is reflected in turn in a reduction at 30th June, 1962, of approximately £1,000,000 in bank overdraft and other borrowing, a trend which continues.

The Company has intensified its sales effort in important overseas markets and has successfully secured business for its recently developed 5005 Crossbar System in which considerable interest is being shown by overseas telephone users. In the first six months of 1962, approximately one third of the sales turnover was for export. A.T. & E. has a good order book and I have every confidence that the present rate of activity and profitability will continue.

Ericsson Telephones Limited

The progress reported in the last statement to Shareholders, made before the merger, has continued throughout the past year at a high level and several records have been established. This is reflected in the increase by over 1,000 in the number of our employees to a record total of 10,000.

Our export trade was well maintained, representing approximately one-third of the total. We look upon it as a public duty to expand our export business as much as possible since it is only by exporting that Britain can maintain its high living standard.

At home our most important customer is the British Post Office and consequently the development of the public telephone service here is of particular interest to us. The expansion rate averages about 4 per cent per annum and when the advantages of subscriber trunk dialling are more widely spread and appreciated this rate should be accelerated. Other important developments may be expected in the telecommunications field to which our Group is making its full contribution.

For some years past we have been working in collaboration with Research Engineers of the Post Office and the other main British contractors to the Post Office in connection with the application of electronic techniques to telephone switching. Although the expansion of the UK telephone service has been substantial since the last war, we are still relatively behind countries like USA, Sweden, Australia and Canada. The same is true of Europe which would require 140 million more telephones to reach the density of America. While not suggesting such a growth is possible for many years, I feel this does indicate how great are the possibilities. With regard to the prospects for 1962/63 we are encouraged by the volume on our order book to forecast a continuation of the present high rate of production throughout the year.

The Garrard Engineering & Manufacturing Company Limited

Garrard has had a successful year's trading. While turnover shows only a modest increase, business has been more profitable as a result of greater efficiency in a number of areas. These creditable results are reflected in the accounts now presented. New record players and changers introduced during the year have been very well received and these have enabled the Company to penetrate further the North American market, which for many years has been important to the Company and from which we obtain a considerable contribution to Britain's hard currency income. With the largest order book on record, I look forward to further progress being made both at home and abroad during the current year.

CONCLUSION

May I be permitted in closing to repeat and emphasise some of the main features outlined in this report.

1. The liquid resources of the Group represented by Government Securities, Treasury Bills and Cash decreased during the year by roughly £5¼ million to £10,400,000 at June, 1962.

Nearly £2½ million was used in connection with the merger and for the acquisition of interests in other subsidiaries. The balance of £2½ million is accounted for by additions to Fixed Assets and a higher level of trading activities at the year-end.

2. The Consolidated Profit & Loss Account shows total profit after tax of £2,588,552 as against £1,712,886 in 1960/61.

HEENAN GROUP

ANOTHER RECORD YEAR

The sixtieth annual general meeting of Heenan Group Limited was held on December 17th at Worcester, **Mr Charles L. Hill** (the chairman) presiding.

The following is a summary of his circulated statement:

The Group net profit, before taxation, of £710,854 again raises the record from last year's figure of £663,742. After providing for taxation of £370,853 against £365,347, the net profit of the Group is £340,001 compared with £298,395 last year.

Your Directors recommend a Final Dividend of 10 per cent on the Ordinary Share Capital making a total Dividend for the year of 15 per cent which compares with 13 per cent last year.

The Group ended the year with a balance of orders of £5,800,000 being some £200,000 up on the opening figure. This year has shown that the subsidiaries who are well established in the export markets have fared better than those whose trading is mainly in the home market which is, in itself, a clear indication that if we maintain the high quality of our products at the right price and with the right delivery date, your Group can look forward with confidence to entry into the Common Market.

REVIEW OF COMPANIES

For **Heenan and Froude Ltd.** it has been a year of all-round success, records being achieved in orders, production and profits.

In the Specialities Division all the main products have been in demand and shipments to foreign customers were up substantially on the previous year. During the year we have introduced the Heenan Rolling Road which is a high quality vehicle test equipment for measuring the power capabilities of both small and large cars and also avoiding the difficulties of testing motor cars on the public highway.

All departments operated at full pressure in supplying the standard range of dynamometers, industrial coolers, eddy-current couplings, automatic wire and strip forming machines, and other specialised equipment for an active home market as well as for the export content of the order book which is growing.

The value of contracts already in hand in the Municipal Engineering Division for refuse disposal, handling and incinerating plants is as high as it has ever been and likely to go higher.

At the beginning of the year under review **Fielding and Platt Ltd.** had an order book containing 24 per cent of export business and at the year end an increased order book of which 46 per cent was for export. Export business is with Australia, India, South Africa, Canada, France, Switzerland, Spain, Sweden, Denmark and Czechoslovakia. Steel works plant continues to make a substantial contribution to output. A sales/manufacturing licence has been concluded with Richards Shear Company in Seattle, USA, for the Iron Shark Scrap Shear. An agreement has been concluded with the foremost Swedish producer of pressed concrete, giving Fieldings access to modern automatic production techniques.

The value of deliveries of castings from **Court Works Ltd.,** was greater than in the previous year but keen competition reduced profit margins. **Morton Machine Co. Ltd.** had a successful trading year with increased export sales and orders received by **IWEL Engineering Ltd.,** constituted a record.

Despite the falling away of orders in the dropforging trade and the resultant extreme severity of competition **Armstrong, Stevens & Son, Ltd.,** achieved a reasonable profit.

The depression in the textile trades has had its effect on the trading of **Freeman, Taylor Machines, Ltd.** specialists in stainless steel plant for the dyeing industry. The order position improved, however, during the latter part of the year.

In its first year as a member of the Group, **The City Sheet Metal Works Ltd.** has been fully employed in supplying light sheet metal constructions to customers' requirements.

The contribution to Group profits by **Associated Locomotive Equipment Ltd.** has been negligible in recent years but efforts are being continued to develop a new line to replace valve gear for steam engines.

The report was adopted.

MINWORTH METALS LIMITED

A SUCCESSFUL YEAR'S TRADING

The twenty-second annual general meeting of Minworth Metals Limited was held on December 14th in London, **Sir John Fox, OBE** (the Chairman), presiding.

The following is his circulated statement:

Following the record profit of the year 1960-61, it is satisfactory to be able to report that the profit for the year under review was approximately the same. This is particularly gratifying in view of the conditions which prevailed generally in the Steel Industry.

On the subject of our two principal products, the downward trend of the previous year in the price of Ferro Tungsten continued. From an opening price of 10s. 3d. per lb. in August, 1961, the price had dropped to 6s. 11d. per lb. at the year end, equivalent to a reduction of £300 per ton. This downward trend has now eased and today's price is 7s. 6d. per lb. Owing to a rise in the cost of raw materials, the price of Molybdenum products was increased by 1s. 3d. per lb. during the year, offsetting in some degree the downward trend in the price of Ferro Tungsten.

It will be observed that the tax paid on the profits of the Group amounted to £101,725 which is £12,916 in excess of the amount of £88,809 left for the benefit of the shareholders.

Your Directors recommend a Dividend of 30 per cent, as in the year 1960-1961, requiring £50,376. This will leave £38,433 to be carried forward to next year's account.

During the year, technical development has continued, and the construction is now well in hand of a new factory building at our Stowmarket works. With this increased capacity at our disposal, we shall be in a position to meet demands for our products which may result from any increase there may be in the production of the Steel Industry.

Whilst trade for the current year to date is below peak level, results can be considered satisfactory.

Once again, I am sure the Shareholders will wish to join with the Board in thanks to the Management and Staff for their work throughout the year.

The report and accounts were adopted.

THE CENTRAL PROVINCES MANGANESE ORE COMPANY

MR W. A. HARDY'S SPEECH

The fifty-fourth Annual General Meeting of The Central Provinces Manganese Ore Company Limited was held on December 17th at Winchester House, Old Broad Street, London, E.C.2. **Mr W. A. Hardy,** the Chairman, presiding.

Mr Thomas Williams, ACIS, the Secretary, read the notice convening the Meeting and the report of the Auditors.

The Chairman said:

Ladies and Gentlemen—The Report and Accounts for the year ended December 31, 1961, have been in your hands for the requisite period and with your permission I will take them as read. (Agreed.)

In my statement attached to the Report and Accounts I gave Stockholders a concise review of the events that led up to the Agreement made with the Government of India on June 8, 1962.

THE ACCOUNTS

I stated that the Accounts for 1961 have been completed on the same basis as before, and still have to report that the final figures from the Valuation Committee have not yet been received though I do not anticipate there will be any great delay before they are agreed. The Accounts show that the profit after all charges including depreciation but before taxation was £455,807 as compared with £804,601 in the previous year. After taxation and sundry transfers there is a balance for 1961 of £96,584 compared with £245,522 in 1960.

The interim dividend paid together with the proposed final dividend exceeds the net profit by some £50,000 with the result that the carry forward will be reduced to the sum of £213,593.

The balance of £250,000 on Mines Development Reserve has been transferred to Contingencies Reserve against which was written off the sum of £143,153 in respect of a trading debt for ore sold in 1960, in the normal course of business, to an Indian maker of ferro-manganese. The deliveries, in accordance with the contract were made over a period of about three months during which time the customer had got into serious financial difficulties of which we were unaware for some time. We had detailed discussions with the debtor and his advisers concerning the means of recovery, but as yet no practical arrangements have been made. We are of course pursuing the question of tax relief in respect of the loss. The balance of £456,847 in the Contingencies Reserve is thought adequate to cover all our contingent liabilities including those for retrenchment compensation and gratuities to workmen.

I have indicated that there will be a small decrease in our trading profit for 1962, but that we are not able at this stage to estimate closely the changed incidence of depreciation and tax charges.

THE FUTURE

I do not think I can safely add much to my remarks on the future. The changed market situation makes any attempt to do so very risky, but it is clear that the disposal of all of the Company's stocks of ores will take much longer and will realise lower prices than those that were

anticipated at the time the negotiations with the Government of India were being conducted. Nevertheless at the present time I anticipate that the Company's stocks of ore will be sold at prices which will realise the value shown in the Balance Sheet.

It will be realised too that the earnings of Manganese Ore (India) Ltd. in the first years of operation will be at rates lower than for a normal year's working by reason of the fact that a certain proportion of our Company's ore must be included in sales that are made by them. I feel sure, however, that the Government of India will do all that it can to stimulate the export of manganese ore.

I will now move "That the Report of the Directors and Statement of Accounts as at December 31, 1961 be and are hereby approved and adopted, and that the profits be appropriated as recommended by the Directors." I will ask Mr Wellsted to second the motion and before putting it to the Meeting I will do my best to answer any questions which Stockholders may wish to ask.

Mr Wellsted seconded the resolution which was duly carried.

The retiring Directors, Sir Percival J. Griffiths, CIE, and Mr J. V. F. Crowther, FCA, were re-elected and the basis of the remuneration of the Auditors, Messrs Cooper Brothers & Co., having been fixed, the proceedings terminated.

THE BRITISH ELECTRIC RESISTANCE COMPANY

FAVOURABLE LONG-TERM PROSPECTS

The twenty-fifth annual ordinary general meeting of The British Electric Resistance Company, Limited was held on December 17th at Enfield, Middlesex, **Mr Henry Paul-Huhne** (the Chairman) presiding.

In the course of his circulated statement, the Chairman said that although turnover showed a slight increase, lower profit margins caused a fall in the net profit, before taxation, to £71,368 compared with £78,820. In the prevailing circumstances I consider the results to be satisfactory.

He continued: Your Board has, for some time, been aware of the downward trend of profit margins due to intense competition within our industry. In consequence our research policy has concentrated upon the development of a range of electronic voltage controls. These have been designed on new principles and manufacturing techniques, and the advantages offered open up a much wider field and we expect considerable additional business.

Reviewing the export trade, visits had been made during the year by the Sales Director to several of their most important Overseas markets, and information had been obtained and was being acted upon.

Commenting on the future outlook, the Chairman concluded: I am of the opinion that the phase through which the industry is now passing is but temporary, and I think the long-term prospects are greater.

The report was adopted and the total dividend of 16 per cent was approved.

THE INDUSTRIAL CREDIT COMPANY, LIMITED

At the twenty-ninth Ordinary General Meeting of the shareholders in Dublin on December 13, 1962, the Chairman, **Dr J. P. Beddy,** in the course of his statement said:

During the year ended October 31, 1962, total assets at £14.8 million—the highest figure in the Company's history—increased by £3.7 million which is substantially in excess of the increase in either of the two preceding years. The additional assets have been financed principally by an increase of £1.35 million in issued and paid-up share capital and by repayable Exchequer advances of £2.18 million, both amounts having been provided by the Minister for Finance. The main increase in assets is in secured loans, including loans to the Company's two wholly-owned subsidiaries, Irish Film Finance Corporation Limited and Shipping Finance Corporation Limited. The total at £9.1 million rose during the year by £2.6 million. Loans now represent 61.2 per cent of total assets. Investments at £4.5 million have increased by £0.77 million. Machinery, equipment and chattels under hire-purchase contracts have increased by £223,000. On the Liabilities side of the Balance Sheet it will be observed that Reserves and Profit and Loss Account balances are now approaching £1 million and are £161,000 greater than at October 31, 1961.

Gross Revenue at £463,000 is almost £25,000 greater than that of the previous year. There were additional receipts of £59,000 from interest on loans, dividends from investments and hire-purchase finance charges, but against this there was a reduction of £34,000 in underwriting commission and profit on sale of investments, as compared with the previous year. Income from underwriting activities is a fluctuating item and, whereas in the previous year we underwrote three capital issues, we received no income from this source in the latest year. We have, however, acted as underwriters for the recent Roadstone rights issue and the underwriting profit will appear in our next Accounts.

Administrative and general expenses are up by £10,000 because of additional staff and of increases in staff salaries. The profit before loan interest and taxation at £400,566 is the highest so far achieved. Deducting interest on loans and taxation, which account for just over 50 per cent of the profit, there remains £198,638. The addition of the balance brought forward from the previous year brings this figure to £206,619 and your Directors recommend that £200,000 of this be added to reserves, leaving the carry forward at £6,619 and bringing total reserves and carry forward to £957,971. In recommending continuance of the policy adopted in recent years of transferring profits to reserves rather than distributing them as dividends, your Board have in mind the need for a strong reserve position because of the rapid and substantial increase in assets; furthermore a proportion of total assets is non-earning because of the Company's function in providing finance for new industries.

DICTOGRAPH TELEPHONES

The twenty-sixth annual general meeting of Dictograph Telephones Limited was held on December 13th in London, Mr G. La Niece (the chairman) presiding.

The following is an extract from his circulated statement:

Although profit margins have been restricted, you will see that we have been able to maintain our figures. Our order book continues to be very full in the home trade. Export trade was not so good for the Parent Company; this however did not affect the final profit figure to any great extent.

The Consolidated Profits of the Group before Taxation amount to £337,661. (£326,322 last year). The provision for Taxation is £149,570. Consolidated Profits after Taxation are £188,091. A Final Dividend of 10 per cent less Income Tax is proposed, making a total for the year of 20 per cent.

There is no falling off in the popularity of the Dictograph Loudspeaking Intercommunicating System and there has been a considerable increase in the demand for the Dictomatic System for larger installations. The sale and rental of loudspeaker systems for staff location has increased still further during the year. Master Clock Systems, Time Recorders, Pocket Paging Systems, Fire Alarm and Watchmen's Patrol Systems, also provided their quota to the total turnover.

Grampian Reproducers Limited had a busy year in spite of difficulties, and continues to contribute to the general prosperity of the Group.

Given a little more expansion in business generally, and allowing for the natural buoyancy of the rental business, I think even better results should be possible next year.

The report was adopted.

NATIONAL MORTGAGE AND AGENCY COMPANY OF NEW ZEALAND

A MOST SATISFACTORY RESULT

The eighty-sixth annual general meeting of National Mortgage and Agency Company of New Zealand Limited was held on December 18th in London, **The Right Honourable Lord Glenconner** (the Chairman) presiding. The following is an extract from his circulated review to Shareholders:

Last year I referred to the rapid and satisfactory progress being made with the reorganisation and integration of the Group's interests. This has now been largely completed and our results in this first full year of trading have been most satisfactory.

This year our group accounts incorporate the figures of the new subsidiary companies, Levin & Co., Ltd. and Murray, Roberts & Co., Ltd. Group trading profit has, of course, increased considerably due largely to the inclusion of the new subsidiaries' figures for the first time and both these companies returned satisfactory profits. After making provision for taxation, the group profit of £548,295 must be considered most satisfactory.

Having reviewed the group's widespread interests, the chairman referred to the current improvement in New Zealand wool prices and concluded: There appear to be reasonable grounds for optimism that the slightly higher level in wool prices will continue. With these wool prospects, plus the fact that it is not anticipated that fat lamb prices will drop to the extent that they did last year, there is good reason to expect increased returns from both lamb and wool this coming season.

The report was adopted

TECALEMIT LIMITED

UNSATISFACTORY TRADING CONDITIONS AFFECT PROFITS

The twenty-eighth annual general meeting of Tecalemit Limited will be held on January 11th in London.

The following is an extract from the statement of the chairman, **Mr Sylvester G. Gates,** circulated with the report and accounts for the year ending July 31, 1962:

After the success we have had in improving the results of the group over recent years, I find it very disappointing to have to report a serious fall in profits. The trading surplus of the group before depreciation for the year ended July 31, 1962, was only £398,390 as compared with £815,961; and the net profit after taxation £139,709 as compared with £344,839.

Normally, we might not perhaps be disposed in these circumstances to maintain a distribution of dividend at the same level as last year; but in view of the hopes held out to shareholders at the time when the rights issue was made at the beginning of October, 1961, we have decided to make a recommendation for a final dividend of 12 per cent which, with the 6 per cent interim dividend already paid, will make 18 per cent for the year, i.e. the same rate as last year on the capital as increased by the rights issue. This of course will mean drawing on our Carry Forward of £401,182 to the extent of £40,979. I can, however, give no indication of dividend policy for the current year. We shall have to wait and see whether and to what extent trading conditions improve.

ORDERS CUT BACK

At the beginning of the financial year we saw no reason why the expansion of the company's business should not continue. We had a full order book, and results in the first two months were not unsatisfactory.

However, almost immediately thereafter orders began to fall, and manufacturers, particularly in the motor car industry, started to cut back their delivery schedules for components. This severely affected the trading of Tecalemit (Engineering) Ltd., which accounts for some 70 per cent of the group's business; and the position continued to deteriorate until just before the end of the financial year.

Meanwhile, some other companies in the group for various reasons did not come to our assistance as we had hoped. It was for this reason that I felt it necessary to sound a note of warning when we paid the interim dividend.

The striking fact about this year's results is that such a sharp fall in profits should have been brought about by a relatively small decrease in the total sales of the group. Various factors have contributed to this result, amongst them, of course, the persistent and inexorable rise in the cost of labour and materials, which cannot be recovered immediately either by price increases in our own products or by reduction of expenses, although every effort continues to be made throughout the group to lower costs and increase efficiency.

CAUSES OF FALL IN PROFITS

The unexpectedly severe fall in profits was due to a number of unfavourable factors operating simultaneously, some of them, as I have explained, peculiar to our company, others nation-wide, chief amongst which is the undulating and unpredictable policy of the Government. In the course of the same year, we have seen one Chancellor impose increased duties on motor cars at home with the idea of promoting their sale abroad; while his successor has removed these duties for exactly the same purpose. Not long ago we were officially exhorted—and indeed, offered financial inducements—to change from burning coal to burning oil. In reliance on these pronouncements, we not only changed over to oil-burning ourselves but entered, with some success, into the business of manufacturing oil-burning equipment.

Today we find ourselves enduring a special surcharge on fuel oil, which not only nullifies the advantages of conversion, but increases the cost of almost all exports. Is it surprising that in face of such contradictions and reversals of policy industrialists hesitate to commit themselves to any unavoidable outlay? It is too early to say what effect the Chancellor's recent concessions will have and I will not prophesy anything about the current year. I can only say that in our first three months we have seen a gradual improvement in orders, which I hope will continue.

Our associated company Tecalemit S.A. had an exceptional year in 1961, its profit after tax being N.F. 6,347,150. The dividend was raised by 10 per cent and a distribution of bonus shares is being made. The French company has an interest in companies in Germany, Italy, Sweden and Spain, which varies between 33 per cent and 76 per cent as well as a substantial minority holding in the profitable Ermeto Armaturen Company, manufacturers of the E-O coupling. Their combined worth is considerable. At the figure of N.F. 2,236,441, at which they appear in the French company's balance sheet they are certainly under-valued, as is our own 30 per cent interest in Tecalemit S.A. which has a book value of £107,784 compared with a market value of £430,000.

APPOINTMENTS

UNIVERSITY OF EAST ANGLIA

CHAIR OF POLITICS

Applications are invited for the Chair of Politics in the School of Social Studies. Salary not less than £2,600 per annum with family allowance and membership of F.S.S.U. A grant towards removal expenses will be made. Applications (six copies; one only from overseas candidates) must be received not later than March 30, 1963, by the Registrar, University of East Anglia, Earlham Hall, Norwich, NOR 05G, from whom further particulars may be obtained.

UNIVERSITY OF EAST ANGLIA

CHAIR OF SOCIOLOGY

Applications are invited for the Chair of Sociology in the School of Social Studies from applicants with interests in Sociology or Social Anthropology. Salary not less than £2,600 per annum with family allowance and membership of F.S.S.U. A grant towards removal expenses will be made. Applications (six copies: one only from overseas candidates) must be received not later than March 30, 1963, by the Registrar, University of East Anglia, Earlham Hall, Norwich, NOR 05G, from whom further particulars may be obtained.

UNIVERSITY OF HONG KONG

LECTURESHIP OR ASSISTANT LECTURESHIP IN ECONOMICS

Applications are invited for the post of Lecturer or Assistant Lecturer in Economics. Applicants should have suitable qualifications including appropriate experience, in either (a) Economic History and of Economic Thought, or (b) Business Administration, preferably with special reference to Eastern Asia. The successful candidate will be required to take up duties in September, 1963.

Annual salary (superannuable) are:
Lecturer: £1,350 x £75-£2,025 (man) or £1,000 x £60-£2,140 (woman)
Assistant Lecturer: £1,900 x £50-£2,100 (man) or £1,420 x £40-£1,580 (woman)

The equivalent of income tax in the colony is comparatively low.

Tourist air passages for first class sea passages of equivalent cost) are provided for expatriate staff on first appointment and leaves. Accommodation at reasonable rental is provided for appointees domiciled abroad.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Hong Kong and London on 31st January, 1963.

UNIVERSITY OF EAST ANGLIA

CHAIR OF ECONOMIC HISTORY

Applications are invited for the Chair of Economic History in the School of Social Studies. Salary not less than £2,600 per annum with family allowance and membership of F.S.S.U. A grant towards removal expenses will be made. Applications (six copies; one only from overseas candidates) must be received not later than March 30, 1963, by the Registrar, University of East Anglia, Earlham Hall, Norwich, NOR 05G, from whom further particulars may be obtained.

UNIVERSITY OF DURHAM

KING'S COLLEGE, NEWCASTLE UPON TYNE

The Council of King's College invite applications for the post of LECTURER in AGRICULTURAL ECONOMICS. Candidates must have an Honours degree in Economics or Agriculture with Economics. The main duty of the post will be to continue and develop a research project in livestock marketing which has already been instituted. There may also be some teaching duties.

The commencing salary will be determined at a suitable point on the Lecturers' scale (£1,150-£1,950), according to the qualifications and experience of the successful applicant. F.S.S.U. and Child Allowance.

Three copies of application, together with the names and addresses of three referees, should be submitted not later than 31st December, 1962, to the Registrar and Secretary of King's College, from whom further particulars may be obtained.

UNIVERSITY OF SYDNEY

LECTURESHIP IN ECONOMIC STATISTICS

Applications are invited for the position of Lecturer in Economic Statistics. Candidates should have interests in one or more of the fields, sample survey design, econometrics, operations research and demography.

The salary for a Lecturer is within the range £A1,730 x £105-£2,435 per annum. In each case cost of living adjustments (at present £A44 per annum) and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on 4th February, 1963.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for appointment to a Lectureship or Assistant Lectureship in Economic Statistics. The salary scale for Lecturers is £1,150 x £50-£1,500 x £75-£1,650 a year; thereafter £ £75-£1,950 a year, plus £60 a year London Allowance; and for Assistant Lecturers £900 x £50-£1,050 a year, plus £60 a year London Allowance; with superannuation benefits and Family Allowances in both cases. In assessing the starting salary, consideration will be given to age and experience.

Applications, with the names of three referees, should be received not later than January 15, 1963, by the Secretary, London School of Economics and Political Science, Houghton Street, Aldwych, London, W.C.2, from whom further particulars may be obtained.

UNIVERSITY OF ST. ANDREWS

Applications are invited for the SHELL TEACHING FELLOWSHIP IN ECONOMIC DEVELOPMENT in St. Salvator's College, St. Andrews. Appointment from April 1, 1963. Salary £1,850 x £75 to £2,150. F.S.S.U.; family allowance; grant towards expenses of furniture removal. SIX copies of applications, with names of three referees, should be lodged by January 19, 1963, with the Secretary of the University, College Gate, St. Andrews, from whom further particulars may be obtained.

For other appointments see page 1243

UNIVERSITY OF SYDNEY

LECTURESHIP/SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for the position of Lecturer/Senior Lecturer in Economics.

The salary for a Senior Lecturer is within the range £A2,850 x £95-£3,000 per annum; for a Lecturer within the range £A1,730 x £105-£2,435 per annum. In each case cost of living adjustments will be allowed (at present £A44 per annum). The salary is subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on 4th February, 1963.

THE UNIVERSITY OF MANCHESTER

Applications are invited for one or more temporary posts at the grade of LECTURER or ASSISTANT LECTURER in ECONOMIC DEVELOPMENT in the Faculty of Economic and Social Studies. The tenure of the appointment will be for a period of not more than three years. Applicants should have field experience, preferably in South America, South-East Asia or Africa, or knowledge of China. Salary scales per annum as follows: Lecturer £1,150 to £1,950; Assistant Lecturer, £900 to £1,050. Membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than February 16, 1963, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

SENIOR FELLOW IN ECONOMICS

Applications are invited for the position of Senior Fellow in Economics in the Department of Economics, Research School of Social Science. The Head of the Department is Professor T. W. Swan. The work of the Department has covered three major areas of economics, economic statistics and economic history. In the field of economics work has proceeded along the lines of capital theory, consumption behaviour and the theory of economic growth and applied studies have been pursued in the work force, housing, demography and problems of Australian economic development. It is desired to cover more effectively a number of applied fields, particularly those relating to Australian primary economics and agricultural economics generally, this is not a restrictive intention but, other things being equal, preference may be given to applicants in agricultural economics.

The salary and range of a Senior Fellow is determined within the limits of $A4,000-$A5,550 per annum. Appointment to age 65, with the option of retirement after age 60, is normally confirmed before expiry of the initial appointment which is for five years. Senior Fellows are entitled to one year's study leave on full pay, plus a contribution towards travel and other expenses, in every six years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance with housing is provided.

Further particulars should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on 8th January, 1963.

COMPANY AFFAIRS

This has been a quiet but a depressing week for the London Stock market which has had to contend with a good deal of discouraging news, particularly the fall in industrial production in October and the setback in the balance of payments and the November trade figures. Over the week to Wednesday The Economist *indicator fell by 3.3 points to 345.6; steel shares continued at first to attract a good deal of business, while TV shares on balance showed little change on the white paper. After being dull early in the week gilt-edged stocks were a little brighter on Thursday, but equities continued to fall.*

Last of the Steel Results

For steel shareholders 1962 ends on a happier note than seemed likely a few weeks ago; at least profits and dividends have not been quite so bad as had been feared. Helped by the prospect of a bid for Whitehead Iron and Steel, share prices have also been stirring; but it remains to be seen whether this slightly more optimistic tone will be maintained after the spokesmen of the industry have issued their statements early next year.

Colvilles.—The best part of this Scotch egg is that the dividend, reduced from 16 to 13 per cent, is better than had been expected in the market. As profits fell still further in the second half of the year and as the directors say that there is no sign of any improvement in the present level of demand for heavy steel products, shareholders may indeed feel thankful that the dividend was not cut even more ruthlessly. The outlook for Colvilles' strip mill products is apparently more favourable—which is just as well in view of the money that has been spent at Ravenscraig. In all, Colvilles' capital expenditure in 1961-62 amounted to £35.3 million and commissioning expenses, and initial trading losses of the new Gartcosh cold reduction mill, amounting to £540,000, have been charged directly against the 1961-62 profit. Another £1 million has been set aside to meet costs of a similar nature on the cold strip mill. Capital and initial working costs are heavy and shareholders may well be wondering whether demand can expand sufficiently quickly to absorb the increase in capacity. These doubts are reflected in the yield of over 10 per cent. They will also note that the net profit of £1.3 million is struck before charging interest on government loans. The ordinary dividend absorbed £1.6 million and presumably could not have been set as high as 13 per cent but for the big tax credit of £3.7 million net that resulted from a closer financial grouping within Colvilles.

Dorman Long.—The fall of 30 per cent in Dorman Long's trading profits was hardly surprising in view of the gloomy interim statement which revealed a fall of 26 per cent in output for the first six months of the year and contained a forecast that profits would fall in greater proportion than output. After the cut in the interim dividend from 3½ to 2½ per cent the final dividend has been cut by only one half of a point to 6 per cent to make the total 8½ per cent against 10 per cent. Depreciation and interest charges were both slightly lower and tax, reflecting the sharp increase in investment allowances, took £2½ million less at £1.1 million. Earnings of 20½ per cent after these allowances compare quite favourably with the 28¾ per cent of 1960-61. Since the company's production is mainly of heavy structural steels the results suggest that the group's bridge building, engineering and chemical interests (which accounted for almost a quarter of total profits in 1959-60 and almost a third in 1960-61) have again stood the group in good stead.

Lancashire Steel.—The group is primarily concerned with the manufacture of wire rods but its development programme, which is now nearly complete, has been designed to increase capacity for concrete reinforcing rods for which demand should rise over the next few years with the extended use of concrete in construction. But at the moment demand does not match the increase in capacity and in 1961-62 the group's profits fell by 28 per cent. The installation of the new Irlam rod and bar mill is reflected in the sharp increase in the depreciation charge and the fall of almost £1 million in the tax charge. The maintained dividend of 11 per cent is covered 2.7 times by earnings after investment allowances and 1.7 times before them. As with Colvilles, it seems likely that some of the fall in profits can be attributed to the cost of bringing new plant into production.

STEEL PROFITS AND DIVIDENDS

Year to September 30	Profits before depreciation		Net profit		Dividend per cent		Price 20.12.62	Yield %
	1961	1962	1961	1962	1961	1962		
Colvilles	12·8	7·4	2·6	1·3	16	13	25/3	10·4
Dorman Long	12·1	9·2	2·4	1·3	10	8½	18/-	9·4
Lancashire Steel	5·2	3·0	1·5	1·0	11	11	28/6	7·7

Turner and Newall

The fortunes of Turner and Newall turn largely on the level of economic activity in this country and its directors had already forecast that profits for the year to end-September would be at a "reduced level." This in fact has emerged as a fall from £14,779,000 to £11,045,000 in trading profits. The dividend has been maintained at 12 per cent. A feature of the preliminary statement is the substantial profit of £683,000 made on sales of investments, with £480,000 of it coming from the group's substantial gilt-edged holdings (which had a book value of £12.3 million at the end of September, 1961). As the group then held almost £10½ million in cash the sales seem to reflect a desire to take advantage of the rally in gilt-edged prices rather than any urgent need to generate more cash. Excluding theses profits, earnings fell from 25.4 to 23.5 per cent to cover the maintained dividend 1.9 times. The setback in profits stems from smaller sales and the continued pressure on profit margins; it looks as if the recovery in the motor industry (mentioned by the directors in the interim report) came too late to offset the earlier decline in Ferodo's sales. In the building field sales may have fallen from the peak levels of 1960-61; and it would be surprising if British Industrial Plastics increased its contribution to profits. On the mining side competitive conditions are expected to continue for some time ahead. The £1 shares at 52s. 9d. are about one third below their 1961 peak and the yield of 4.5 per cent though not presently exciting may eventually be more rewarding than that on some of the low yielding equities.

British Oxygen

The results of the steel companies form an apt prologue to those of British Oxygen, whose fortunes closely depend on the level of steel production in this country. Its sales in the year to end-September rose from £62.5 million to £68 million but this was due to the greater activity of its overseas companies. Gross profits, after a higher depreciation charge, were down from £8,610,000 to £8,368,000 and while profits at home fell from £3,941,000 to £3,138,000, those earned by the overseas companies rose from £4,669,000 to £5,230,000 (to account for 62½ per cent of the total). The directors say that some of these companies were "restricted by adverse political and economic conditions."

At home profits fell more sharply in the second half of the year and after depreciation mounted to £1,192,000 against £1,946,000 in the first half of the year and £1,611,000 in the corresponding period in 1961. Revenue from tonnage oxygen did not reach expectations because of the reduced requirements of the steelmakers; demand from the general engineering industries also fell; and costs continued to rise. It is not therefore surprising that the

Continued from page 1237

dividend has been left unchanged at 10¾ per cent but, following a further increase in investment allowances, earnings still cover the dividend just over twice. Without these allowances the cover falls to 1½ times. As in 1960-61 the net cash flow is about £8 million; but this does not appear to cover the group's capital requirements completely. At 12s. 9d. the 5s. shares yield 4¼ per cent; they stood at over 28s. in 1961. While any dramatic recovery in profits can be ruled out, the revised agreement with the Board of Trade on pricing and contracts and the possibility of at least some improvement in demand from the home market hold out the hope of a modest recovery, provided the overseas companies, which are mainly in the Commonwealth, maintain their encouraging progress.

Teacher (Distillers)

IN 1960-61 Teacher (Distillers) added 50 per cent to the sales of its "Highland Cream" and 24 per cent to its trading profits. For the year to September 30, 1962, profits fell by 12½ per cent from £739,000 to £647,000. Such a sharp reversal of fortunes came as a complete surprise to the market where a higher dividend had been expected. The 10s. shares, standing just below the year's peak, have fallen from 60s. 9d. to 52s. 6d., to yield 2.7 per cent on the maintained dividend of 14 per cent, the cover for which has shrunk from 2.7 to 2.2 times. Costs have been rising throughout the distilling industry; a full year of the 10 per cent surcharge has now been experienced (only two months of the previous year were affected); and the interim statement from Distillers has made it clear that the going has become tougher in both home and overseas markets. But the biggest problem for Teacher in recent years has been to keep pace with the growth in demand for its products, and it cannot be market conditions alone that account for the setback. In March it brought into operation a newly built distillery; this immediately adds to costs but cannot produce much revenue until the whisky matures and Teacher may therefore have had the expense of distilling and stocking more whisky at a time when competition may have held its sales in check.

Hallmark Wait

APART from its industrial banking subsidiary the two major interests of Hallmark Securities are housebuilding and property investment and development. In the past most of its profits have come from the sale of houses in London and the South, but its long-term prospects are largely tied up with its property development link with Sun Life Assurance. If there was any danger that Hallmark might fall between two stools in trying to build up both sides of the business, such fears should be removed by Hallmark's bid for A. J. Wait, the estate developers, house builders and builders' merchants. The offer is equivalent to four Hallmark 1s. shares for every 25 1s. shares in A. J. Wait and values Wait at 3s. 3d. against a pre-bid price of 2s. 9d. If they accept the offer in full Wait's shareholders will hold just over one-quarter of Hallmark's enlarged capital; this is closely in line with Wait's contribution to profits.

The merger aims at consolidating the housebuilding interests of both groups under Mr A. J. Wait, leaving Hallmark to concentrate on office, shop and other developments. On Hallmark's capital after the one-for-one scrip issue an effectively maintained dividend of 33¾ per cent was forecast in October, but with the shares yielding only 3.3 per cent at the current price of 20s. the market will be disappointed if this forecast is not surpassed. This is important for Wait shareholders as at the moment they stand to receive a slightly lower income on an exchange into Hallmark shares.

Peachey Property

THE accounts of Peachey Property for the year to June 24 reflect the benefits which accrued from the rise in residential property values during this period. Property at book values has risen by 12 per cent but rental income has increased by 8½ per cent from £1,889,000 to £2,048,000 and dealing and other income from £357,000 to £605,000. In all, pre-tax profits have risen from £1,015,000 to £1,264,000 and the ordinary dividend has been raised from the equivalent of 12 to 18 per cent.

The chairman, Mr G. F. Farrow, says that the group has entered the field of commercial property, with the objective of achieving parity with residential holdings within a few years; although purchases so far amount to some £350,000, "considerable time has been spent in investigation, organisation and finance" and presumably further acquisitions will soon be made. The group is also a member of one of the consortium working with British Railways on railway site development. According to Mr Farrow, there is still plenty of scope for adding to rental income as properties become de-controlled and this, together with the continuing (if less spectacular) rise in values and the slightly belated entry into the commercial property field, should assure good prospects for the group, which now relies on rents for the bulk of its income. The market, however, is still wary of property investment shares as is shown by the yield of 5.3 per cent at the current price of 16s. 10d.

Smith's Potato Crisps

WITH the maintained 55 per cent dividend for 1961-62 covered only 1¼ times and potato prices touching peak levels in the summer the ordinary dividend of Smith's Potato Crisps looked in jeopardy when its accounts were published in July. This is now confirmed, for while the directors are keeping the interim dividend at 15 per cent they warn shareholders that some cut may be necessary in the final dividend for the year to March 31st next. High potato prices at the peak period of potato crisp sales caused a "severe reduction" in profits in the first half of the year. Trading is now back to a "satisfactory level" and, despite greater competition, sales so far are well up on the figures for the previous year. But on balance it seems likely that profits will show some further fall for the year as a whole. The 5s. shares fell by 2s. 3d. to 46s. after this statement; earlier this year they stood at 68s. In the short term there seems little prospect that they will go much above the present level unless there is a bid—rumours of one in the offing have caused flurries in the shares in the past few months.

Montague Burton

WHEN its customers have less money to spend, Montague Burton's policy, according to the chairman, Mr Lionel Jacobson, is to try to maintain turnover and goodwill at the expense of profit margin and current earnings "in anticipation of the long-term upswing of the economic pendulum." Certainly this rationalises what happened to the group in the year to end-August when turnover was maintained but pre-tax profits fell from £4,281,000 to £3,395,000. Holding its selling prices down the group had to contend with many difficulties including the rise in purchase tax (affecting five months of the year) and an increase in retail expenses, notably wages. The return on assets employed in the group is now of the order of 6½ per cent, based on book values which take account of the 1961 property revaluation. Consumer spending on non-durables, although it might have been initially stimulated by the imposition of credit and hire-purchase controls and restrictions on durable consumer goods, has clearly been hit by the economic and psychological effects of the recession. When they have worn off, Montague Burton's profits should improve; but by how much? The market takes an optimistic view, for at 21s. on the ordinary and 17s. 7d. on the "A" non-voting ordinary, the shares yield 3.3 and 4.0 per cent respectively.

THE MONEY MARKET

THE discount market did well at the Treasury bill tender on Friday of last week. It left its bid for the 91-day bills unchanged at £99 1s. 11d., but with a big drop in total applications of £62 million to £330 million the market received a quota of 56 per cent compared to the previous week's 44 per cent. The average rate of discount rose by a bare 0.01d. to 7s. 4.31d. per cent. The market received 70 per cent of its application for the £40 million 63-day bills on offer.

This check on the falling bill rate has pacified the authorities and the market has not been forced to borrow from the Bank of England this week. Indeed credit has been generally easy, and on four days the authorities sold bills to absorb the surplus.

In the local authority loan market the year-end pressures are already at work. The seven-day rate this week rose by ½ per cent to 4⅝ per cent. Year-end influences have also been strong on the Continent. In Paris one month Euro-sterling deposits rose as high as 5-5¼ per cent this week, while the window dressing activities of the German banks, which seem to have ignored Herr Blessing's request, have made spot marks dearer and at the same time pushed forward marks to a discount.

(9) Average for second quarter. (10) October, 115. (11) November, 370·6. (12) November, 315·8. (13) November, 110. (14) October, 104.

APPOINTMENTS

MATHEMATICIAN/STATISTICIAN

Petfoods Limited require a Graduate in Mathematics or Statistics to fill a key post in their statistical department. The successful candidate will participate in sales forecasting, and production and stock scheduling, in addition to providing a specialist statistical advisory service to all divisions of the Company. This is an excellent opportunity to join a small team applying mathematical, statistical and economic techniques to a wide range of business problems. In addition to appropriate academic qualifications, some years' experience in industry would be an advantage.

The starting salary will not be less than £1,250 per annum, and the Company operates a Social Security Scheme covering non-contributory Pension, Life Assurance, etc.

Applications should be sent to the

Chief Personnel Officer

PETFOODS LIMITED

Melton Mowbray, Leicestershire

STAFFORDSHIRE COUNTY COUNCIL

COUNTY PLANNING AND DEVELOPMENT DEPARTMENT

Applications are invited for the appointment of an officer to be in charge of the administrative and clerical work of the County Planning and Development Department. The officer will be designated as Chief Clerk and the appointment will be on J.N.C. Scale A (£1,340-£1,620 per annum), the commencing salary to be according to qualifications and experience.

Applicants should have had extensive experience of administrative work and in the writing of reports and memoranda. They should have a degree in Administration, Economics, Law or Commerce, or a recognised secretarial qualification.

(Continued in next column)

The Council are prepared to grant lodging allowance of 35s. per week for a period of six months and second class railway travel home every two months during the initial six months to married applicants maintaining a home outside the geographical county. Consideration will also be given to the granting of financial assistance in appropriate cases towards removal expenses.

Applicants should give details of age, education and training, qualifications, present and previous appointments and experience, and the names of two persons to whom reference can be made. Applications, in which relationship to any member or senior officer of the County Council must be disclosed, should be sent to D. W. Riley, County Planning and Development Officer, 41a Eastgate Street, Stafford, not later than January 14, 1963.

Canvassing will disqualify.

T. H. EVANS,
Clerk of the County Council.

DEVELOPMENT ASSISTANT

required to carry out an investigation of certain accounting, costing and statistical services of British Railways, Eastern Region. Successful candidate will be required to recommend such changes and reorganisation as are desirable and if they are approved to implement them. Commencing salary between £1,600 and £1,750 per annum dependent upon age, experience and qualifications held. The post will be located in London but selected applicant will be required to travel, as necessary. The occupant of the post will be eligible for appointment to the permanent staff and to join the contributory superannuation scheme. Accounting qualification and experience of accounting and costing for a large undertaking preferable. Applications giving details of age, qualifications and experience should be sent to:—

Chief Accountant,
British Railways, Eastern Region,
21a John Street, London, W.C.1.

OFFICE MANAGERESS to be responsible for the reproduction and world-wide distribution of Westinform shipping publications and material. In addition to intelligent application to a more than routine task, we look for ability to supervise and inspire a small female staff and to co-operate happily in an organisation of limited size. Please write stating experience and salary to: W. G. Weston Ltd., 163 Queen Victoria Street, London, E.C.4.

For other appointments see page 1236

INTERESTING VACANCY

for a

YOUNG WOMAN GRADUATE

occurs as Information Executive in the Marketing Intelligence Unit of a large international advertising agency.

Essential qualifications: University degree, preferably in economics, lively mind combined with plenty of common sense, curiosity and persistence, flair for good English, news sense, ability to get on with people, good nerves, sense of humour and a well-developed inclination for hard work at speed. Languages (particularly French, German and Italian) will be an advantage and so will experience of information work, advertising, market research or public relations. Applicants aged under 30 will be preferred.

Initial selection will be made on the quality of letter of application, which should be typed, if possible, and should attempt to do more than list qualifications and ambitions. Applications should be marked confidential and addressed to Miss Christine Hull, McCann-Erickson Advertising Ltd., McCann-Erickson House, New Fetter Lane, E.C.4.

YOUNG EXECUTIVE

An opportunity occurs in a Nationwide Commercial Marketing Concern for a Young Executive. It is desirable but not essential that the successful applicant should have some business experience and preferably hold a University Degree. There are good prospects for promotion and advancement to senior positions and essentials are initiative with organising ability. The commencing salary would be paid according to past experience and suitability of the candidate for the position. There is a contributory Pension Scheme. Applicants should write in full confidence to Personnel Manager, F.M.C. (Meat) Ltd., Agriculture House, 25/31, Knightsbridge, S.W.1, stating age and experience.

TRADES UNION CONGRESS

The TUC has a vacancy for an Assistant in its Research and Economic Department, which deals with a wide range of current and long-term issues of economic and social policy. Starting salary is £760-£1,050 a year dependent on age rising to £1,365 a year. Further details before January 14th from Mr. George Woodcock, TUC, 23-28 Great Russell Street, London, W.C.1.

THE UNIVERSITY OF SASKATCHEWAN, SASKATOON

Applications are invited for the positions of Assistant Professor and Associate Professor of Economics. Applicants should have the degree of doctor of philosophy preferably with specialisation in economic theory. Salary will be $7,000 to $11,800 depending on qualifications. Pension and other benefits are available. Teaching duties commence in September, 1963.

Letters of application noting qualifications and experience and naming three referees, should be sent to the Head, Department of Economics and Political Science, The University of Saskatchewan, Saskatoon, Canada.

APPOINTMENTS REQUIRED

ADMINISTRATOR, 35, reading 1st part external B.Sc.(Econ.), finding London commuting intolerable, seeks Outer London/provincial post. Experienced in punched-card accountancy, O & M, clerical work study, some marketing and sales admin., office management. Political/economic interests. Box 1676.

In France:	at MM. Lazard Frères & Cie., Paris;
In Switzerland:	at Crédit Suisse, Zürich
In Belgium:	at Banque de la Société Générale de Belgique, Brussels, and Crédit Lyonnais, Brussels;
In Germany:	at Deutsche Bank AG. and Dresdner Bank AG., Frankfurt/Main, Düsseldorf, Hamburg and Munich; at Saarländische Kreditbank AG. and Dresdner Bank AG., Saarbrücken; at Berliner Disconto Bank AG. and Bank für Handel und Industrie AG., West Berlin;

and

(B) *Registered holders of registered* shares must make known to the Company in writing their desire to attend and address the Meeting and to exercise voting rights thereat by not later than Monday, 14th January, 1963: (1) with respect to shares of New York registry, at the office of The Chase Manhattan Bank, Special Service Department, 80 Pine Street, New York 15, New York; (2) with respect to shares of Amsterdam Registry, at Nederlandsche Handel-Maatschappij, N.V., Amsterdam; and (3) with respect to all other registered shares, at the office of the Company in The Hague or at any of the offices listed in Paragraph (A) above.

THE BOARD OF DIRECTORS.

21st December, 1962.

B Nylon S

ECONOMIST

BRITISH NYLON SPINNERS has a vacancy in its Economics Unit in London for a graduate under 36 years of age with a good honours degree in Economics or Commerce. Although the Unit is concerned with most aspects of the Company's activities, its main functions are the investigation, analysis and forward estimation (both short and long term) of the many markets for the Company's products and the assessment of developments in international trade, particularly within Europe, which are of importance to the Company's activities. Experience in industrial market research therefore would be an advantage, but the main qualities required for this work are (1) analytical ability, (2) sound judgment and (3) the ability to write clearly and succinctly. A person with these aptitudes should find the work both interesting and rewarding.

Applications should be sent to the Personnel Manager,

BRITISH NYLON SPINNERS LIMITED

Pontypool, Monmouthshire, quoting reference:—U/18.

POWER DRIVE

Well-known, successful sales company in North-Rhine-Westphalia with staff of engineers and a well established branch network intends to expand and round off its field of activity. It is interested in taking over the sale and possible manufacture of

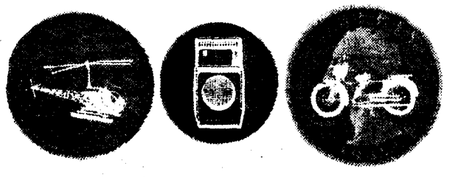
first-class machine elements

preferably in the power drive field (not condition) under general licence for the Federal Republic of Germany or for the European Continent.

Please write to:— **HORST SCHLICHTING**

4 DUSSELDORF, SCHILLERSTRASSE 11, GERMANY.

ink up with the bustling Japanese economy



e than 2000 firms in countries all over the world have made tech-gical, manufacturing, marketing, and other types of industrial ements with Japanese companies. With fewer restrictions nowadays he flow of capital and technical know-how across national bound-s, more and more companies are discovering the advantages of tie-ups. The Industrial Bank of Japan has been intimately asso-d with every major Japanese industry for 60 years and is well lified to act as go-between in arranging attractive contracts in all s of business. Inquiries are invited.

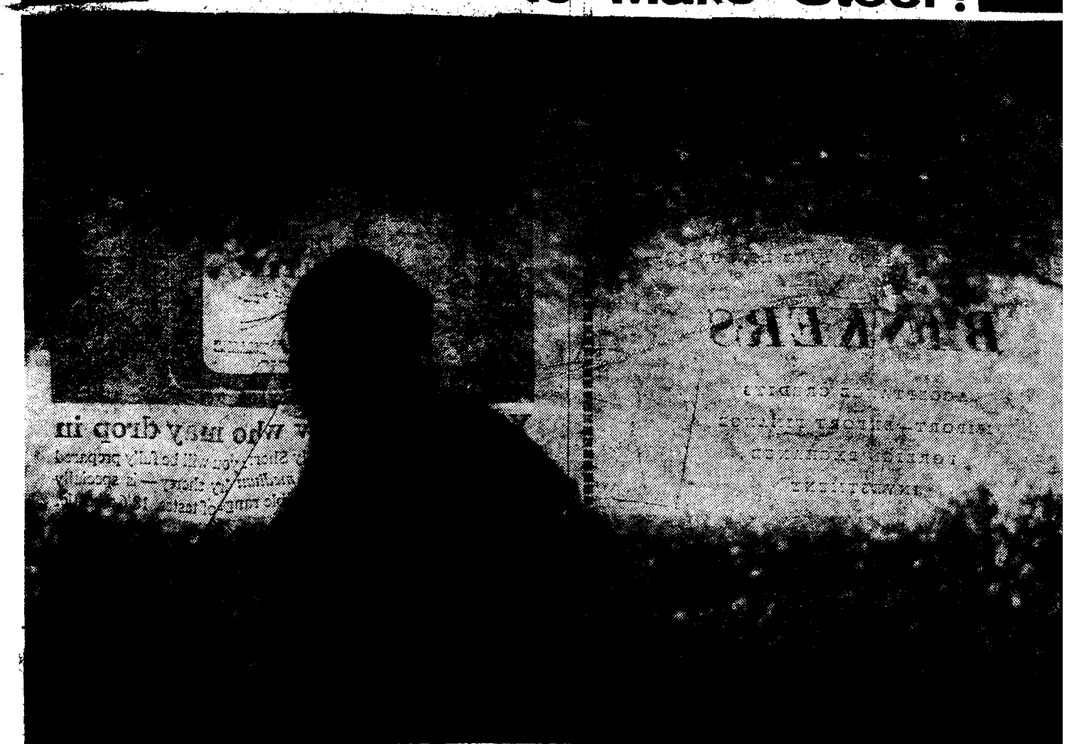
Know a Better Way to Make Steel?



IMPROVE the choice of raw materials; For instance 62% of our coking coal, 10% of suction ore and 75% of our steel scrap originates in the United States.

INVEST in the best machines—and men; The most advanced techniques, the latest facilities and modern plants are steps to superior products. Enlightened employee benefit, health, social, recreational and educational programmes have produced a loyal and dedicated labour force.

AIM for the highest standards; At all stages of manufacture our products have to pass rigorous inspections. Continuous quality control gives consistent and uniform results.

SEARCH for new and better products; Over 700 scientists and engineers are directly engaged in various research projects. Information is continually being exchanged with leading American and European institutes and companies in this field.

These policies have borne fruit. Yawata's 1961 steel production placed it fourth among the world's steel makers. Yawata's customers, both at home and overseas, share the benefits of superior steel at modest prices.

MAIN PRODUCTS: Rails & Accessories, Shapes & Beams, Sheet Piling, Bars, Wire Rods & Wire Products, Heavy & Medium Plates, Electrical Sheets, Hot Rolled Sheets & Strip, Cold Rolled Sheets & Strip, Galvanized Sheets, Tin Plates, Hot Extrusion Products, High Tensile Strength Steel, Stainless Steel, etc.

A scientist at the electron microscope in one of Yawata's laboratories.

José Salvador helps to build a new world

The classroom is in Manila, in the Republic of the Philippines, and the subject is the chemistry of oil. The student's name is José Salvador and when his schooldays are over he wants to work in the new refinery which was recently built at Batangas, to the south.

But on a bigger scale, José is typical of all youth among the developing countries; his subject is industrialisation, and his post-graduate intention is to play an important and exciting part in raising the living standards of his people. The new subjects he is learning and the new skills he is acquiring will allow his generation to bring about a change which in Europe took centuries.

Shell may well play a part in training José Salvador. For Shell in the Philippines employs technicians, engineers and chemists: a whole host of people with special skills to process and transport the oil that meets 90% of the energy needs of the island nation.

The knowledge of these skills, and the training they require, comes from the experience of Shell companies working in over 100 different countries. All round the world, all round the clock, Shell companies are offering this international experience to thousands of young people.

THE WORLD

AS BITTER AS ANY GAULLE

If the Tories clutch at the straw of nuclear independence to rescue them from that sinking feeling, it may float them away from the *European shore* (p. 1253).

The ***United States* Congress,** too, will not be very enthusiastic about the results of the meeting between President Kennedy and Mr Macmillan (p. 1275).

Bookmakers are still offering even money on ***Britain's entry into Europe***; but the tic-tac men signal that the Brussels (not the Paris) odds are shortening slightly in Britain's favour (p. 1280).

RISING OF THE SUN

Arms (but not atomic, one hopes) and Amity *will both be needed if western Europe* is still to be a reasonably civilised place to live in ten years' time (p. 1254).

An African pressure group is trying to sort out the Congo and Kenya before starting its **grand design for Africa** (p. 1262).

Poetry survives better in **Senegal** than philosophy (p. 1261).

The State of **Arizona,** which celebrated its fiftieth anniversary this year, is growing conservative as well as growing fast. A special survey explains why (pp. 1277-1279).

PLAYING OF THE MERRY ORGAN

Business methods might get the **Canadian administration** out of its mess; but not if politicians make them a mockery (p. 1282).

Japanese socialists seem resolved on *harakiri* (p. 1283).

Pakistan punctuality has kept the **United Nations** on time (p. 1259).

No tears for Mr Zorin (p. 1259).

SWEET SINGING OF THE CHOIR

How *well* ***President* Kennedy** gets on with next year's Congress may depend on what it does about its rules committee (p. 1274).

The Kaiser Steel Corporation and the ***steel workers*** *have reached* an imaginative agreement on sharing the benefits of increased productivity (p. 1276).

Pan American Airways and **Trans World Airlines** *may propose to merge*, but the Civil Aeronautics Board and President Kennedy will dispose (p. 1275). A jolt may be in store for some of their competitors (p. 1294).

WE THREE KINGS OF ORIENT

Yemeni princes have had surprising success in leading their tribes, armed with rifles and daggers, against the tanks and jets of Egypt (p. 1280).

The three **Laotian leaders** get on better together than their retinue do (p. 1265).

BRITAIN

RUNNING, JUMPING AND STANDING STILL

The reorganisation of **civil defence** has done little to make it less of a standing joke for the satirical establishment: but with a little more money it could be an invaluable insurance against total eclipse (p. 1258).

Amid the encircling gloom of declining and retarded "*development*" areas, **Caerphilly** is a bright example (p. 1266).

London's December ***smog*** was less smoky and less lethal than its predecessor of 1952: but there is little room for complacency over Britain's **clean air** policy (p. 1267).

Who reads The Economist? (p. 1265).

GOING ROUND THE BEND

The Government's **legislative programme** goes ahead fairly well: but more room may be needed later in the session for common market manoeuvres, when the Television Bill would be a welcome casualty (p. 1260).

The National Incomes Commission is to review **salaries in universities** and colleges of advanced technology: this is a good opportunity to apply the discriminations—and relieve the *vacuums*—which would make the academic life professionally rewarding (p. 1260).

Splitting the **British Transport Commission** into four independent boards has allowed its top management to be shunted about (p. 1298). Their salaries—as opposed to railwaymen's wages—have been rising in keeping with those in other nationalised industries—*which is more steeply than elsewhere* (p. 1294).

BOOKS FOR TOKENS (pp. 1268-1273).

OUTLOOK

SPYING OUT THE LAND

Mr Maudling's New Year resolutions about putting Britain's complicated house in order should include effective measures to stimulate demand in the short term; the setting of a target for expansion; and a determination not to meet unemployment by propping up dying industries (p. 1256).

Industrial growth may be more evenly spread in the coming year: slow-growing **Britain** and the **United States** should raise their pace a little, while higher wages and slacker home demand will be a drag on the industrial hares in **Europe**. But *Britain's* better performance may leave its regional pockets of unemployment untouched (p. 1287).

Commodity prices are recovering, and should strengthen further (p. 1289).

Uncertainties abound in **stock markets,** but cost economies and greater output should produce better profits—at least from companies at the lighter end of industry (p. 1289).

The prospects for Western industrial countries

Polaris for Christmas

PARLIAMENT went into recess last weekend with the Conservative party in its worst shape since Suez, and indeed in an atmosphere that was grimly reminiscent of that December six years ago (when it was Sir Anthony Eden, it may be remembered, who was in the West Indies). With a slow and ugly grinding of brakes, Tory backbenchers came in the week before Christmas to a sticking point; and, as usual in such emotional circumstances, they came to it at very much the wrong place. The Skybolt crisis broke at the end of a long series of other afflictions. In the preceding weeks and days Conservative MPs had borne the Brussels rebuffs with a brave front, absorbed the news of rising unemployment and stagnant output with only a small sinking of morale, steeled themselves to accept the secession of Nyasaland (even with the apparent concomitant breaking of a secret pledge to "our kith and kin" in Rhodesia) with resignation. Right up to the last three weeks before Christmas, they had also managed to contain their present pretty silly campaign of dissatisfaction against Mr Macleod from spreading into a threatened revolt against the Prime Minister.

But then, on December 5th, the absurd little incident of Mr Dean Acheson's speech at West Point sparked off what has always been the most disturbing feature of postwar Conservatism's inferiority complex: namely, the feeling that, when in travail, it is an appropriate reflex to turn anti-American. The crisis of Skybolt—or rather of the lack of it—erupted at the most awkward possible moment. By the beginning of last week the independent nuclear deterrent had become a symbol of Britain's greatness which the Conservative backbenches refused to do without. When Mr Macmillan went to Nassau, his personal position was very much at stake. He did not necessarily have to get Skybolt, but he did have to get something that could be called tangible, even if it was to be part of the most expensive face-saving bargain in military history. In the event President Kennedy, with ruthless good sense, has struck a bargain that could help to integrate America even more firmly into the defence of Europe (which accords with Britain's real national interest) and includes some verbal genuflection to the idea of Britain's continuing nuclear independence (which accords with the Tories' present obsession). Mr Macmillan should be grateful.

When matters in the Conservative party have reached such a pass as this, any political commentator who dares to essay forecasts is apt to make a very great fool of himself. It is never easy to analyse irrationality. But comment is a newspaper's job, even if these next few sentences may qualify as those that *The Economist* may least like to look back upon in a few months' time. First, then, one's guess is that, as backbenchers have the Christmas holidays to cool down in, the Conservative party will accept the Nassau compromise—Polaris with strings in place of Skybolt—as the best that the country could have got, so long as they insist that Britain must have an independent deterrent at all.

Secondly, the emotional Conservative crisis of the past three weeks should not now, after all, slow down the party's urge to secure Britain's entry into the common market. Indeed, in the strange march of great historical events, it should more logically spur it forward. The Prime Minister and his colleagues are at present passing through such a ghastly period that what they need now is a transforming event. They must know, and not merely on opportunist grounds, that there could be no greater event of transformation than the news that the

decision at Brussels is taken. On broader national grounds, the Cabinet must have had borne in upon it a new sense of how vital for Britain full interdependence with Europe is: all the old ideas of Britain as a great independent power, as the "essential independent bridge" between the two sides of the Atlantic, look about as inspiring this weekend as a cold Christmas pudding. And this cold psychological douche has come at a time when there is mounting pressure from Europe —and from industrialists who are holding off from new investment in Britain itself—that Mr Heath's vital meetings in Brussels in January should be the ones in which the essentials of the matter are settled, in one way or the other.

In one way or the other: on this question, and not on the increasingly infantile game of keeping up the appearances of thermonuclear self-sufficiency, the nation's attention ought to be concentrated between now and the spring. Mr Macmillan's failure with General de Gaulle at Rambouillet on December 16th, not his relative success with Mr Kennedy from the 18th to the 21st, looks likely to prove to have been December's fateful event. It is not that the two are not connected. In General de Gaulle's mind they certainly are. The Nassau arrangements for Polaris, with the same string of a Nato nuclear command attached, were offered to France within a few hours of the Nassau agreement's conclusion. General de Gaulle is plainly going to take his time about replying, and is not likely, meanwhile, to confide in his ministers or his parliament. But the most favourable estimate to be heard in Paris last weekend was that he would take a long time to answer and would, at the best, bargain further over the terms and conditions. The only plain French reaction was one of satisfaction that France and Britain had been offered identical terms, together with the complacent conclusion that the Anglo-American "special relationship" was therefore dead. As if a relationship depended only on the privileges offered by one partner, and not on the response made by the other.

If this spirit, which treats international relations as a kind of football league table, is going to govern French policy in the decisive phase of the common market negotiations, then it had better be faced that the Brussels talks are going to go through some brutal moments before they are over. Mr Macmillan and General de Gaulle, in their talks at Rambouillet, moved one step closer to a confrontation on the harsh question that is becoming inescapable: is the French aim at Brussels honestly to get the best for French interests out of the British application, or to block it in order to keep the field clear for a French hegemony in western Europe?

Such a hegemony might be a myth, but no more mythical than the new scholiasts' argument about the right of a country in Britain's position to unleash nuclear war in pursuit of a particular interest not shared by its allies. Britain is going to have to go carefully. Our Brussels correspondent describes on page 1220 how, with friendly European help, the talks there are going a little better. But friendly as they are, the Europeans have eyes and ears. If this country is to retain their sympathy against a possible French attempt to lead them by the nose for the sake of a national dream, then the British attitude to Europe has to be visibly based on an accurate self-assessment. Strategic fantasy, hankerings after the past, and the urge to cut a figure beyond one's means have no place in such an assessment.

Euroracle 1970

Some guesses about where western Europe will stand a few years hence

ASKED what it did in 1962, the world can reply curtly that it survived. It will be excused if, breathing hard, it declines to prophesy about 1963. What follows is a guess, not about the coming year, since that is too hard, but about the likely shape of one part of the world's affairs a few years hence; this more distant prospect being easier to pick out, like mountains across a fog-filled valley, than the immediate foreground. The guess is based on the assumption that the next few years will see the emergence of a common west European approach to the problems of foreign policy and defence. The western Europe in question may be either a coalition of sovereign states, or some kind of federation, and it may or may not include Britain; no attempt is made here to predict the outcome of the thickly befogged Brussels negotiations. But, if the general assumption is right (of course, it may not be) then there is a fairly safe forecast to be made. In both military and foreign policy, western Europe is going to be forced by circumstances to learn a number of lessons that the United States learned some time ago.

First, the military lessons. To begin with, the European delusion that nuclear independence can be achieved through a handful of manned aircraft loaded with free-falling bombs cannot now live much longer: the Skybolt row and the Nassau agreement herald its demise. By 1965, a year or so after General de Gaulle's 50 fast Mirage IVs have started to come into service, it will be apparent that they have little more chance of getting past Russia's nuclear-tipped anti-aircraft rockets than the 175 relatively lumbering British V-bombers have. The only way of making sure that enough of these high-flying aircraft could hit their targets was to equip them with a stand-off ballistic missile to carve a path through the Russian defences—in other words, with Skybolt. But Skybolt is now a dead duck. Without Skybolt, the European manned bombers simply will not provide a credible basis for an independent nuclear policy in face of the overwhelmingly superior armoury of the Soviet Union. It is as if the Russian nuclear threat to the United States consisted solely of the 200 communist bombers capable of crossing the Atlantic. If that were the case, one doubts whether Washington would lie sleepless of nights.

It can be argued that European bombers are not meant to be used in total isolation; that their job is to let fly a first nuclear blow, when the interests of Europe demand it, in the belief that the far bigger American forces will be bound to come out punching immediately afterwards. This is the theory of the "catalytic" deterrent. But it is a strikingly dangerous theory. It means telling the United States that it is liable to be drawn into a nuclear war on somebody else's *casus belli*, perhaps against its own best judgment. It is hard to think of a surer way of making the Americans retort that they have no intention of going bang when someone else pulls the trigger. If the effectiveness of a European nuclear arm depends on its ability to drag the Americans into the fray willy-nilly, it may well turn out to be wholly ineffective. Or rather, its effect may be to thrust the two halves of the alliance further apart.

Maybe, if the Europeans really are bent on nuclear independence, they will go ahead and build the fairly sizeable armoury necessary for true self-sufficiency. One's guess is that this would require at least a modest fleet of missile-carrying submarines—of the sort the French and (since Nassau) the British are now planning, though probably in larger numbers—and perhaps a force of contour-hopping, radar-dodging bombers, too (although both of these might be museum pieces by the nineteen-seventies). The Europeans would thus learn for themselves the first military lesson already grasped by the Americans—that real nuclear power, as distinct from the mere token display of it, is hideously expensive. And this first lesson would run headlong into the implications of the second lesson, which is that nuclear power alone is not enough. Sooner or later it is going to dawn on the Europeans, as it dawned on most American strategists some years ago, that there is simply no substitute for bigger conventional armies for warding off the kind of minor attack that plainly does not call for blowing the world up.

In theory, perhaps, the threat to blow the world up could be kept credible for a little longer by the related threat to use tactical nuclear weapons the moment any fighting broke out in Europe (and thus start the process of escalation). Herr Strauss, the outgoing west German minister of defence, continues to urge this, through his friends in the German press. But President Kennedy already realises, and in the end everybody else is going to realise, that those who make this threat do not really mean what they say. The western leaders know —and the Russians know they know—that nothing less than a major communist assault across the Elbe would justify setting the machinery of escalation into motion. Sooner or later, one can only repeat, the European members of the alliance will have to equip themselves to deal with the sub-Armageddon range of military dangers. Whether they can possibly afford to do this, while at the same time groping for nuclear independence, is just what the Americans have been pointedly asking for the last two years.

FROM these two military lessons there ought also to flow a political one. This is that a limited amount of rearmament, such as Europe is pretty well bound to undertake, is not necessarily incompatible with (and perhaps is even a useful preparation for) the business of keeping on civil terms with the Soviet Union. In his first two years in office President Kennedy has rearmed to the extent of several hundred additional missiles and an extra quarter of a million men in uniform. And yet he has simultaneously kept the flow of ideas and information moving briskly, between Moscow and Washington—far more briskly than Mr Eisenhower did—and even, in one or two matters, worked out a rough understanding with Mr Khrushchev. If the European allies now follow his example in furbishing their arms (but only the non-nuclear sort, one hopes) they should also follow his example in taking steps to lesson the chance that the arms will have to be used.

Western Europe's relations with the Soviet Union are more complicated than America's since it actually touches the communist world along a disputed border. There are two possible attitudes for the west Europeans to adopt towards their eastern neighbours. One is to maintain a hostile front towards the communist governments east of the Elbe, in the hope that sooner or later a surge of popular discontent (which might start, the theory goes, in east Germany, but might spread further east and south later) will unseat them, and replace them with western-style regimes. At bottom, this was the aim that lay behind the policies of Mr Dulles and Dr Adenauer in the nineteen-fifties, and to judge from his West Point speech on December 5th it is still the gleam in Mr Acheson's eye.

THE alternative is to treat the east European governments as a good many other regimes are necessarily treated—as regrettable but perhaps improvable. The improvement, however, will have to come from within, and will not be speeded by a nagging western hostility. Heroic this approach may not be; but it does hold out the sober hope that by 1970, say, much of eastern Europe may be as tolerable a place to live in as Jugoslavia is today. The difference, boiled down, is between trying to shove the iron curtain eastward, and trying to convert it into one of those bead curtains that get into one's hair without seriously getting in one's way.

Is it too much to hope that those people in western Europe who still hanker after the first of these alternatives are gradually being pushed by events into accepting the second? If one looks round the western alliance, it seems as if only the very old, or those whose minds became set ten or twenty years ago, are still hoping for things that ceased to be possible when Russia achieved nuclear parity. It is true that the hope of a reasonably civilised relationship with Russia and its allies does not depend on the west Europeans alone. Were the argument between Moscow and Peking about the proper foreign policy of the communist world to be won by that hawk Mr Mao Tse-tung, and lost by the relatively dove-like Mr Khrushchev, the western nations would have no choice but to man the barricades and settle down for a long siege. But if, as seems more likely, the inter-communist argument drags inconclusively on, a great deal will depend on the West's ability to preserve a delicate balance between being equipped for war, as indeed it must be, and being ready for co-existence, which is no less necessary.

A fortnight ago this paper expressed the hope that the related peoples who live between the Urals and San Francisco might one day come to recognise that a community of interest binds them together more than ideology divides them. Whether they do come to recognise this turns to a large extent on the western European pivot. The aim of the western alliance as a whole should be, on the one hand, to remain sufficiently well armed to make it continuously plain to Mr Khrushchev (and his successors) that the policies the Chinese advocate are unpractical as well as unacceptably dangerous; on the other, to behave in a sufficiently amicable manner to encourage Russia further along the path of moderation. President Kennedy has grasped this. Will the west Europeans follow?

Still Dawdling?

Articles on pages 1287 to 1292 discuss the general outlook for the British and world economies in 1963. This article suggests what internal economic policies Mr Maudling should follow in the New Year

MUCH of the advice being given to Mr Maudling at the opening of 1963 seems extremely odd, and it is to be hoped that the Chancellor of the Exchequer has noticed that it is. First, it seems to be generally expected that business conditions in Britain will continue to be very slack in the first part of the year, and will then perk up later; but it is also being assumed that the orthodox thing for him to do may be to take no further restimulatory action during these first three months, and then to give big tax reliefs in his budget. If he did this, those reliefs would make no impact during the months of real recession, but might begin to exert their main effect round about the time when they can less well be afforded.

That does not seem to be a very sensible programme for action. The Chancellor would be well advised to take a hard look at the current and prospective state of demand as soon as he has collected reasonable figures for what has actually happened in the Christmas trade and what is beginning to happen in the January sales. If that look should convince him that demand is on the brink of starting to rise quite adequately, then he should stand firm and take no further stimulatory action, either in April or before it. It is still just possible—in view of the volume of new demand already in the pipeline—that that will be the right decision. But if, as at present seems more likely, the state of trade (and not just of political pressure) suggests that more tax reliefs are advisable, then Mr Maudling should consider one of two alternative courses, in order to make the timetable of his actions somewhat less mad than the timetable which sober experts seem to be recommending to him.

The first possible course would be to advance the date of the budget. In 1962 it was advanced from April to early March; the expected difficulties of introducing a budget before the official end of the financial year proved at that time to be almost non-existent. To bring the budget further forward still, to some time in January or February, would mean that tax changes would be made before the full estimates for government expenditure in the new financial year were available. This would shock some traditionalists. But tax changes nowadays are related to the likely trend of total spending in the economy, not just to government spending; it is right that they should be made when they can most appropriately influence the former, even if estimates for the latter cannot then be presented with spurious pretended accuracy to the nearest £1 million. There would also be some psychological advantage in early 1963 if President Kennedy's intended tax reliefs in America and any tax reliefs which Mr Maudling makes were to be announced within a few days of each other.

The two main objections to an early budget would be if Mr Maudling felt that he needed until April or March to work out the detailed nature of this year's tax reforms (and he should be considering large-scale tax reforms, not just tax changes in 1963), or if he felt that by April (but not before) he should know whether Britain will be able to get into the European common market. The outcome at Brussels, one way or the other, will alter the entire situation which Mr Maudling will have to face with his budgetary and other economic policies in 1963. A final failure of the negotiations could have such a shattering effect on investment decisions in Britain that there might then be a real danger of a continuing slump; a final success at Brussels would make it desirable to use this year's budget to move Britain's tax system, desirably and constructively, more into line with the tax system on the continent.

IF these last two objections make it undesirable to advance the budget's date—and if it nevertheless seems apparent that some further short-term restimulation is needed—Mr Maudling should consider taking interim action. Ideally that interim action should not mortgage the budget; it should take the form of a temporary injection of purchasing power—which, he should stress, might have to be discontinued later. That somewhat weakens the case for immediately making the change that has been most generally urged: namely for reducing the purchase tax rate on goods still in the 45 per cent bracket (television and radio sets, gramophone records, cosmetics) to 25 per cent, as he has already reduced it for motor cars. If one is going to bump down the prices of particular goods by as large a margin as this, one cannot possibly pretend to hold oneself free to bump them up again to their old level three months later.

There would be less objection in these circumstances to the prompt use of Mr Selwyn Lloyd's famous regulator to trim down all indirect tax rates by 10 per cent. It may be a pity that the main consequence of using this would be to make big reductions in the price of drink and tobacco, but it would have the advantage of reducing a lot of other prices by relatively small amounts (for example, even the 45 per cent purchase tax rate would drop by 4½ per cent). Some people might even say that a small reduction of this order in certain wholesale prices now, with an implied threat that some of them might conceivably be put up again in April, could lead to some quick forestalling purchases this winter, which might be just what the economy needs. Possibly the best interim weapon of all, however—if short-term restimulation really is needed—would be the one that almost everybody has forgotten about. The 1946 National Insurance Act gave the Treasury power to make a statutory order in a recession to reduce "for such periods as may be specified" the weekly national insurance contributions paid by both employees and employers, "with a view to maintaining a stable level of employment." The mechanism proposed was clumsy (employees' and employers' contributions would have to be changed by equal amounts), and has never been used; but Mr Maudling should re-examine its possibilities now.

So much for the immediate posers before Mr Maudling concerning the probable level of demand in the next few months. It would be a mistake to exaggerate the importance

of these very short-term uncertainties. In its new year article twelve months ago, and then again at the time of the last budget, *The Economist* implored Mr Selwyn Lloyd, with singular lack of success, to pump more demand into the economy for the whole of 1962. This was because we believed that he had badly misunderstood how much slack had already been created. For 1963 our guess is that resources will still be pretty wastefully underused in the early months; but by the end of the year, unless a failure at Brussels has led to some quite ghastly breakdown in business confidence, it looks as if resources should be being more adequately utilised again. Despite the latest statistics of falling industrial output and growing unemployment, it is therefore logical to feel a bit less fearful than we were a year ago that the Government is going to reflate demand by too little. Instead, the biggest danger for 1963 may be of a longer-term and more complicated mistake than that: it is perfectly possible in modern conditions, while still reflating total demand by slightly too little, actually to reflate it by too much in some specific places. The danger arises because one part of the elbow room which already existed in the economy even by the beginning of 1962, although Mr Selwyn Lloyd failed to understand it, is now plain for all to see; and the Government may be tempted to throw it away with mistaken policies.

FOR many years British Chancellors have said that they cannot afford to expand demand too strenuously because of a grave shortage of available labour. But, in reality, the advance of labour-saving equipment since 1959 has left most British enterprises overstocked with labour; there is hardly a factory or sizeable office building in the country which could not sack one or two of its workers and still carry on with the same level of production as now, at least if some rudiments of work study were introduced. Experience in America in the last few years had made it seem likely that this would be the next breakthrough here: that the next spurt in production in Britain would take the form of an increase in productivity rather than a further overstocking of labour forces. To an economist this means that one of Mr Selwyn Lloyd's supposed bottlenecks has probably happily disappeared; to a politician, and, indeed, to anybody with a social conscience, it is apt to mean that an "unemployment problem" has appeared.

The wrong way to "cure" this unemployment problem would be by desperately trying to see that every man is re-employed in his present industry or area, and thus foolishly ensuring that the old shortage of labour for expanding industries returns—say, by deliberately re-employing workers in the shipyards with a crash programme of naval shipbuilding or by saying that any Afro-Asian state which will order a small ship to be built in The Hartlepools can have it free. As demand starts to rise again elsewhere in the economy, such measures would inhibit men from moving from the shipyards into other industries which will have much brighter prospects of continuing growth once any crash programme is ended.

The right policy must be (a) to use the elbow room provided by this small surplus of labour to push general expansion to a higher level than has been deemed possible before; and (b) to recognise that the unemployed workers—by providing this temporary elbow-room—are providing a genuine service to the economy, so that they deserve to be given much higher unemployment pay in the new order of society.

Basically, therefore, the internal economic policy that should be pressed upon Mr Maudling for 1963 falls under three heads. First, it will probably be right to proceed to some further short-term measures of restimulation, but with the proviso that while anything which adds to demand in early 1963 is good, anything which would have its main effect in adding still further to demand in late 1963 or early 1964 might well be mistaken. Secondly, as a general point, the Chancellor will be right to set his sights for expansion at a higher level than the Treasury will usually recommend to him. The Treasury has consistently underestimated the amount of elbow room for expansion that is available in the modern British economy, and also has not grasped a further point (which indeed to it will sound like heresy): namely, that if one is going to err at all, it is nowadays slightly safer—for the medium-term balance of payments, as well as for everything else—to err slightly on the side of driving too fast than of going too slowly. The usual analogy of a too fast car which is apt to turn over at corners is a mistaken one. An economy nowadays can better be compared to a bicycle, which can wobble badly if it is pedalled too slowly just as much as if it is driven too quickly. The reasons for this are that the new industries which go forward fast only in a time of domestic growth are the most vital export industries for Britain to encourage, and that foreign investors are nowadays more likely to plough equity funds into a go-ahead economy than into a stagnating one. This is an age when the businesslike country which prospers is the one that attracts boom-time equity investment from outside, not an age when one will become flusher with funds if one is constantly parading oneself as an ultra-respectable pauper before ultra-cautious bankers.

Thirdly, Mr Maudling's policy against unemployment should not take the form of deliberately re-employing redundant workers in dying industries, but of encouraging growth industries. Because this may have a rather slower effect in bringing unemployment figures down, he should introduce a new national redundancy insurance scheme which should enable unemployed men to draw benefit equal to a much larger proportion of their previous earnings while in work. As unemployment benefit for a single man in Britain is at present equal to only 19 per cent of average industrial earnings, compared with initial figures of over 50 per cent in some continental countries, it is extraordinary that the Government has not introduced such a scheme already.

EIU QUARTERLY ECONOMIC REVIEWS
COVERING 57 COUNTRIES OR GROUPS OF COUNTRIES

Out next week:

UNITED KINGDOM

Rising unemployment is analysed. Its origins are pinpointed in certain industries and regions; its connection with the streamlining of labour forces in growth industries—promising higher productivity is examined.
Mr. Maudling's expansionary measures are scrutinised; he scores with their longer-term implications, but he may have to go further to give the economy an initial lift.

How Much Shelter?

The reorganisation of the civil defence services has not yet been nearly drastic enough

BRITAIN spends about £20 million a year, from central government funds, on civil defence against nuclear attack; and it still maintains over 600,000 volunteer part-timers in the civil defence forces (including industrial civil defence, hospital and fire auxiliaries and the observer corps), in addition to the obligation to prepare for civil defence laid on various local authority services. This is a tiny premium to pay if the force is efficiently organised, and if it could really do any good were catastrophe to come to this small, crowded and (in nuclear terms) indefensible island. But is it, and could it? Even more than other defence arguments this one is almost impenetrably hedged with military uncertainties and political prejudices. This is why it almost never gets a serious airing.

The Cuban crisis two months ago set off a minor bombardment against the impassive walls of the Home Office, which spends more than half the money allotted to civil defence and accepts much the same proportion of responsibility for what happens to it. A lot of people—reportedly including many neutralists and nuclear disarmers—buzzed their local town halls and police stations in Cuba week to find out what arrangements had been made for their personal survival, and were chagrined to learn that the answer was precisely nothing: the Government had not declared an emergency. This inaction of the authorities, the complaint now runs, was dictated less by military sagacity than by the wish to protect CD from gleeful exposure by CND. But from civil defence's own ranks, after Cuba week, have also come private rumblings of the inadequacy of official preparations should the alarm ever be raised.

Zone and group controllers who would have had to set the civil defence machinery in motion last October boggled mentally at the thought of their partially-trained volunteers, patchily distributed on the ground and too often (where local authorities have obstructed regional co-operation) unused to working together, trying to cope not so much with an actual attack but with the much more probable preliminary phase of genuine public fear of an attack: not just with blast and fall-out if the blow actually fell but, before that, with a panicky population clamouring to be told what to do to help itself if a war scare had really got rolling. To some of these commanders the case for greater professionalisation within civil defence ranks, for giving the public a much clearer idea of existing plans, and for taking responsibility out of the hands of local authorities altogether has never seemed more forceful. What, then, should be done about civil defence?

The primary need is to tell everyone what the country's and their own region's plans would be if a nuclear attack ever did seem imminent. The popular notion is simply that this country will get four minutes' warning time (once Fylingdales is in operation) of a blanket missile strike which will knock every big city flat. This could certainly happen. But official civil defence planning is based on the assumption that the country would probably have "several days'" warning, from the state of international tension and intelligence reports, which would allow some reasonable precautions to be taken—provided the public knew enough in advance to give willing co-operation. The intensity of the attack when it came could vary considerably. It might be a spaced-out attack against every big city in Britain: if it were it would be appalling, but even so there would, on most calculations, still be corners from which local rescue operations could be mounted and in which civil defence would have a major humanitarian job to do for an indefinite time in conditions of maximum destruction and lethal radio-activity.

Or the attack might be more "sophisticated"; it might be directed only against offensive military targets, in which case damage to cities, although unavoidable, would be considerably less severe over the country as a whole. Or the attack might simply be intended to knock Britain out temporarily without destroying all its industrial potential: one grisly possibility would then be that the Russians might deliver extremely "dirty" nuclear warheads right down the west coast and rely on the prevailing wind to smother the rest of the country under heavy fall-out. These are all situations in which a public awareness of even the minimum civil defence precautions would pay substantially. But the realisation of what is practicable still needs to be driven home.

The official explanation is that, within the "several days'" warning period, civil defence forces could readily tell an eagerly listening public what it should do. The reasoning seems to be that interested people can always find out about blast and fall-out by buying official pamphlets (a new, general explanation of precautions to take is in the pipeline) or studying them in public libraries: the great mass of the resigned, indifferent and potentially alarmist is better not aroused until the crisis breaks. Some people would say that, once aroused, the public might become very aroused indeed against the Government's inaction. Official policy on shelters is still marking time. Deep shelters are ruled out largely because of the expense, and the simpler, family protection against fall-out has not been encouraged (as it has in America) chiefly, it seems, because of fears of starting a general scare.

The policy on dispersal is equally imprecise. Local authorities have been told whether they are in dispersal, reception or neutral areas, and they were reminded (as it happened in the week before Cuba) to start thinking about plans—if dispersal were ever ordered by the Government. The fact that the Americans are beginning to think twice about what would be involved even on their continent makes it less likely that this country will do anything very purposeful about preparing for mass migration into the rural areas.

THE second priority in civil defence is to overhaul the existing civil defence forces even more rigorously than the Government has been doing since it began its new recruiting and, more significant, weeding-out drives in the summer. The reorganisation announced in July laid down an obligatory minimum of 50 hours' training inside two years for all recruits. Those who fail, or are unwilling to take, a standard test after that time will be relegated to the civil defence reserve; those who pass, and go on to accept an active engagement including a minimum of 50 hours' advanced training, will enter Class A and receive an annual bounty of £10-£15 according to rank. This overdue shake-out of the inactive and inefficient is beginning to bring results. The latest figures show that the strength of the ordinary civil defence corps in England and Wales fell from 325,000 in September to 315,000 in October, despite the accretion of over 9,000 new recruits.

Civil defence commanders who suspect that only 20 per cent of their nominal strength is really up to scratch (Class A potential) should hasten this process on. They have nothing to lose by getting down to realistic figures, and the news that such and such a town of 75,000 population has only five effective wardens ought to be highly salutary. Once individual proficiency is improved, the argument for lifting civil defence out of local authority areas and into effective regional commands (as it would be in wartime) will be all the more compelling. It is in the nature of much of civil defence's work that its local forces should be tied down to small districts, but its flying columns ought to have the freedom and status that the Territorial Army has—and its specialist nucleus could then be given an extra inducement in the form of a sizeable financial retainer.

Since the defence white paper of 1961 the Government has been quietly building up the submerged seven-eighths of the civil defence iceberg: the basic supplies, services and communications of which the public hears very little. There is a case for releasing a little more money here, especially in view of experience of what can be done by civil defence forces after natural disasters like Sheffield's gale damage and the East Coast floods. The basic need is to win greater popular confidence in civil defence rescue operations of all kinds, and to take the population as a whole much more into the preparations that can be made against nuclear attack—or even stray nuclear mistakes. If this reveals civil defence deficiencies, so much the better.

Why not put a simple explanatory pamphlet into everyone's letter box? It might even turn voluntary training into something more effective than a casual social event at the rural institute. To say that one day a year of intensive civil defence propaganda and demonstrations would start a panic, or aggravate the cold war, is nonsense. Pick a date, say what will happen, and do it. To give the Home Office plenty of time (and the panic-stricken a chance to simmer down) what's wrong with next November 5th—and turn Guy Fawkes into a permanent nuclear defence day?

NOTES OF THE WEEK

UNITED NATIONS

Presidential Stopwatch

IN most recent years, the United Nations Assembly's hopes of finishing its regular session by Christmas have been as regularly abandoned. Each time, debate has slopped over into the New Year; the 1961 overspill was almost a deluge, spreading over two full months of 1962. This year's session has proved encouragingly different. The Cuba crisis had the delegates holding their breath for a week in October; but, breathless or not, they ploughed on through that week with committee sessions on half a dozen other topics, and the Cuba issue as such never got on to the Assembly agenda. (It quickly evaporated even in the Security Council after only three days, leaving not so much as a resolution behind.) No catastrophe such as Mr Hammarskjöld's death in 1961, no massive clogging-up of procedure such as Mr Khrushchev's performance in 1960, recurred this year. Even so, the fact that the 1962 Assembly could scramble to a finish on December 21st was largely due to its stern handling by this session's president, Muhammad Zafrulla Khan.

Unmoved by indignant mutterings from the floor, Pakistan's former foreign minister, who seems rejuvenated by a term of service as a judge of the International Court at The Hague, drove his colleagues forward at a pace to which they had become unaccustomed. His most spectacular innovation was the starting of each plenary meeting punctually at the advertised time, instead of forty or more minutes later as had been the custom. On several occasions this meant that the first speaker of the day found himself addressing a hall that was virtually empty, except for the punctilious president. One day, when the scheduled opening speaker withdrew his name at the last minute, the next in line, a late riser, had to rush to the rostrum in dishabille. Not even the presidential stopwatch, however, could save the Assembly from running into a pile-up of votes on resolutions in its last few crowded days.

The International Court's ruling that the Assembly has power to require member states to pay their due shares of the cost of special operations, such as the Congo, was endorsed by a vote of 76 to 17, with eight absentions and nine absentees. The defaulters—Russia and France conspicuous among them—remain unwilling to pay up; and, in another last-minute decision, the Assembly approved U Thant's request that it should meet again in the spring to tackle the financial troubles of the United Nations, which will by then have a virtually empty treasury.

Soviet Symbolism?

TACTFULLY, Moscow waited for the Assembly to finish before announcing the removal of Mr Valerian Zorin from his post as chief Soviet delegate at the United Nations. Students of UN form had looked for this change at least since October, when the deputy foreign minister's performance at more than one crucial moment during the Cuba crisis seemed to prejudice Russia's dealings with the United States as well as with the non-aligned nations. Mr Kuznetsov, who, as a *first* deputy foreign minister, outranks Mr Zorin, was then hastily sent to New York to take charge of the Cuba talks with the Americans. Mr Zorin's transfer to unspecified duties elsewhere will leave eyes dry. He had been closely identified with several unforgotten and unforgiven Soviet ventures: among them, the Prague coup of 1948, and the campaign of character assassination launched against Mr Hammarskjöld in 1960 (when his virulence helped to rally the Asians and Africans behind the secretary-general, and to produce an almost unanimous Assembly vote against Russia that shook Mr Khrushchev out of his doctrinaire belief that the "new nations" were bound to follow Moscow's lead). Since 1960, and up to last August, he had also been conspicuous in executing Russia's stonewalling tactics in the Geneva disarmament talks.

His successor at the UN is Mr Nikolai Fedorenko, a Sinologist and former ambassador to Japan. The selection of an expert

on China as Russia's chief UN representative at this particular stage in Sino-Soviet—and Sino-Indian—relations is of obvious interest; Mr Fedorenko's table-talk in New York will be carefully dissected by a variety of listeners. Even if he were not a Far Eastern specialist, his appearance as successor to a branded "hard line" man would have caused comment in present circumstances. The thermonuclear blasts with which Russia celebrated Christmas Day and its eve may have served as reminders that Moscow's quarrel with Peking does not necessarily mean even a limited rapprochement with the West. But the replacement of a Zorin by a Fedorenko is at least an interesting piece of Soviet symbolism; and it may open doors that Mr Zorin's retention in his post would have kept closed.

PARLIAMENT

Enough Elbow Room?

As Parliament departed for its Christmas recess last weekend ministers seemed satisfied that the Government's legislative programme had moved ahead fairly steadily, and that there should be plenty of scope for any common market legislation if the necessity for it arises next year. The two main niggers in the woodpile are the Contracts of Employment (i.e. workers' charter) Bill and the Television Bill, which have had only their first readings in the Commons. Both are controversial measures, and could cause a bigger hold-up than Mr Macleod at present seems to envisage. If they do, the obvious one to drop is Mr Bevins's ill-chosen attempt to put television under wraps again. There could be a positive advantage in holding it over, and rethinking the Government's whole approach yet again.

The other really controversial bill of the session, the London Government Bill, has had its second reading in the Commons. Clause I and the schedule setting up the boroughs will be considered by a committee of the whole House as soon as Parliament returns. The rest of the bill will be sent to committee in the ordinary way. The Weights and Measures Bill and the Shops and Offices Bill have both had their Commons second readings and are at the committee stage. The three Scottish Bills have made good headway. The Scottish Criminal Justice Bill is through the Lords and will be read for the first time in the Commons as soon as the House returns. Both the Scottish Local Government Bill and the Scottish Education Bill have had second readings in the Commons and are now in standing committee. So far, the absence of sufficient Scottish law officers in the Commons has not impeded progress.

Of the remaining measures, the bill extending the jurisdiction of county courts has had a Commons second reading and will go to committee in late January. The Children and Young Persons Bill is through virtually all stages in the Lords and will be sent on to the Commons without delay. Its passage through the Lords was distinguished by a Government defeat on an amendment which raised the age of criminal responsibility from 8 to 12. The Home Secretary appears convinced that a criminal age limit of 12 would be subversive, but might take a different view if the limit were 10. The only bill to have received the royal assent as yet is the one increasing public service pensions. Parliament will reassemble for what could be a historic Easter term on January 22nd.

ACADEMIC SALARIES

Nic Plus Ten

The Government has sensibly decided to back up the forthcoming recommendations of the Robbins committee on higher education with a full-scale review of the way in which teachers in universities and colleges of advanced technology are paid. The Treasury's announcement that this is to be the next job for the National Incomes Commission suggests that this should be a long-term operation, and leaves NIC commendably free to work out its own procedure and to hear evidence from whom it likes. Better still, the nettle of an immediate increase for university-level teachers has (after some sensible Tory backbench pressure) been grasped: ten per cent has been arbitrarily, but probably not unfairly, fixed as the total amount of the increase in the salaries bill (costing around £3½ million a year)—and the University Grants Committee is left free to decide how this should be shared out between the various grades of staff. These terms of reference ought to encourage the UGC, under its new chairman Sir John Wolfenden, to plump heavily for those sectors (unfashionable northern cities and undernourished but expanding new faculties) that are most in need of a boost. This kind of discrimination is a must for NIC to support, and expand on, in the future. For once the old, flat-rate increase idea that has vitiated so many interim rises in the past has been rejected.

The next important thing that NIC must work out—quite certainly in the teeth of tradition-minded academic bodies—is how to make academic life look much more like a career than it has done in the past. Dons do not do too badly at the start, nor perhaps at the very top of their professional existence. But there are long, dreary stretches, just at the age when other professional people are rising through the salary scales (and raising their families), when academics must either unnecessarily uproot themselves and seek promotion elsewhere, or continue on the same pay. Perhaps academic salaries can at last be made selective between subjects, between universities, and between those with different lengths of good service: professorial salaries (as argued in *The Economist* of December 8th) ought to be a wider award for merit—not for the luck of stepping into a dead man's shoes.

CUBA

Prisoners' Return

Prisoners who were captured after one of the most bungled exercises in recent history (the Anglo-French foray to Egypt in 1956 excluded) have been returned as part of a smoothly timed diplomatic manoeuvre. When Dr Castro first offered to exchange the Cuban prisoners caught after the 1961 Bay of Pigs expedition for cash or bulldozers the reaction, particularly in America, was one of outrage. Now the combination of Christmas spirit and Dr Castro's modified demand for such innocent goods as baby foods and medicines has enabled the deal to go through with general acclaim. The 1,113 Cubans were airlifted to Florida in time for Christmas; the Cuban government received the first instalment of goods which, in all, are to be worth $53 million. As a "Christmas bonus," Dr Castro is allowing 1,000 women and children to join their menfolk in Florida, and more may follow (although, judging from the number of Cuban exiles in America, the Cuban government has never put up much resistance to the flight of malcontents). There is even talk of a general amnesty for foreign prisoners in Cuba.

Throughout the year, a committee of Cuban exiles has been trying to raise some of the prisoners' ransom. The State Department has kept its own part in the negotiations very quiet indeed. But President Kennedy, who took full responsibility for the Bay of Pigs fiasco in April, 1961, has also given his official blessing to a deal which he described, on Christmas Day, as "in the interest of our national principles." Having swept Cuba clean of Russian missiles and

BRIEF BOOKLETS...

have been produced jointly by The Economist and The Economist Intelligence Unit to present the essential facts behind important current topics. Each takes about one hour to read. Here are the first three titles in this new series:

Brief 1 **RHODESIA: BRITAIN'S DEEP SOUTH**
by Joe Rogaly

2 **MONEY FOR GROWTH**
by Fred Hirsch

3 **LABOUR IN BRITAIN AND THE SIX**
by Val Schur

Each booklet costs 2/6d. (or U.S. $0.40) post free for remittance with order from:

PUBLICATIONS DEPT.,

LONDON S.W.I. WHI 1511

(Personal callers to 193 Regent Street, please)

bombers, the President is in a strong position to round off the edges of an earlier and far less competently managed adventure.

For Cuba, the edges remain jagged. Christmas spirit notwithstanding, the prisoners returned breathing fire and thunder, their leader calling his fellow-exiles to war against the Cuban government. Because Dr Castro has not allowed United Nations inspectors into his country, he has never received the promised American pledge not to invade Cuba. And conditions inside Cuba are worsening. In a burst of self-criticism, Major Ernesto Guevara, Cuba's economic boss, has predicted a shrinking sugar harvest and talked hard sense about the slowness of industrial expansion. The government's propaganda about the evils of over-dependence on sugar exports has, apparently, been taken too literally by the farmers; their bad or careless management has been compounded by severe droughts. A hopeful sign of good sense is that Major Guevara held the United States only partly responsible for these economic troubles.

SENEGAL

Poetic Justice

If African governments have an ideology it is that they should stay in power; apart from that, most Africans rule their countries on generally pragmatic lines. In Senegal, the overthrow of the prime minister, Mr Mamadou Dia, just before Christmas, was more the result of a clash of personalities between Mr Dia and the president, Mr Senghor, than anything else. Enthusiasts may, of course, search for philosophical quarrels. Mr Dia was a planner, a believer in co-operatives, in fact a socialist. At any rate, his terminology had a stronger socialist flavour than Mr Senghor's.

However, Mr Dia's attempt to avoid being voted out of office by surrounding Senegal's assembly with troops on December 17th, was based simply on a desire to stay in power. Quite properly, the president of the assembly, Mr Lamine Gueye, allowed the deputies to meet in his home to vote Mr Dia down; the former prime minister was then arrested (and is now to be put on trial) and Mr Senghor decided to introduce constitutional reforms giving the president (himself) more power. But this is as much a move towards authoritarianism as was Mr Dia's.

Mr Senghor's allegiance to his supporters among the property owners and *marabouts* is as tempered by pretensions to socialism as Mr Dia's socialism was watered down by liberal budgets and half-hearted attempts at austerity. The same absence of satisfying clarity befogs attempts to predict Senegal's attitude to foreign affairs now that Mr Dia is out of the picture. Mr Dia was more active than his president in attempting to bring about a rapprochement between Morocco and Mauretania; Mr Senghor outshone his prime minister in enthusiasm for bringing France and Guinea together again, and for getting Senegal itself back into a closer relationship with its separated Siamese twin, Mali. This last piece of the Francophonic African jigsaw puzzle may indeed be better fitted in now, since Mr Senghor is more acceptable to the Malians than Mr Dia was. The conservative poet, Senghor, is now more firmly in the saddle than ever he was; his economist other-half, Dia, is out. For France (whose ideology in Africa is to retain its influence) the news is fine.

DEMARCATION DISPUTES

Bricks Dropped

The stoppage at the Steel Company of Wales's vast works at Port Talbot was patched up in time to enable the men there to earn their last wage packet before Christmas. But it was only patched up, and it is highly likely to break out again unless the trade union movement will face the issues involved. It is offensive to common sense that 320 of these workers should be able to throw 8,000 other men out of their jobs for a clear week.

The men in question at Port Talbot are known as bricklayers, and belong to the Amalgamated Union of Building Trade Operatives; their job is to line the receptacles for molten metal with heat-resisting refractory blocks. This a dangerous and extremely unpleasant operation; because it is so the steel works have rightly paid the men very highly. They have also allowed them to work up a series of concessions on hours of work. The contentious point just before Christmas was the job-and-finish system under which a man working in a really hot place may go home after laying 25 "bricks," receiving full pay for that shift however few hours he may actually have worked. This particular dispute blew up over the definition of a "hot job," which is of course always difficult: the brickies walked out after one of their members had refused to lay any more bricks, claiming that he had been working in the heat.

The quarrel was one in which the men concerned may quite possibly have had a just grievance. But everybody knows that if they had belonged to the main union in the works a strike would not have occurred; the matter could have been cleared up between the employers and that union. It follows that one of two things should be done. Either, first, these men should move over from the bricklayers' union to the steelworkers' union, the Iron and Steel Trades Confederation, which could handle their affairs as it does those of their other mates in the works. This, no doubt, is what the Trades Union Congress would like to happen. The November dispute at Port Talbot was settled after arbitration, under the auspices of the TUC, in this way: the new job of relining Linz-Donawitz converters with a cement-like substance was taken from the bricklayers and given to the ISTC. Or, secondly, if the men (and not merely their present union officials) still want to belong to the bricklayers' union, the trade union movement should brace itself to grasp another nettle. It should say that, rather than let a strike by 320 men throw 8,000 out of their jobs, other men among the 8,000 will temporarily act as blacklegs—with full official TUC support. Some time or other, this sort of breakthrough in official trade union attitudes has got to occur. Port Talbot would be a good place to threaten to start to make it, at the time of the next strike.

CIGARETTE WORKERS

No Smoke Without...

Another sad story of industrial absurdity is provided by a dispute, recently half-settled by the Industrial Court, involving the unions and management of the Players branch of the Imperial Tobacco group. Briefly, Players discovered that output from its cigarette making machines, Mark 8, could be even further increased over that of an earlier model, Mark 6, by operating them in batteries of six, manned by a smaller number of workers than had previously been used to attend separate machines, each of which needed an operator, a mysterious catcher girl and one-twelfth of an examiner. The battery was to use an undefined small team, which was finally defined, after prolonged negotiation with the two unions involved—Tobacco Workers and General and Municipal Workers—as one leading mechanic (ex-examiners and some ex-operators), two ordinary mechanics (ex-operators), one patrol inspector and one station inspector (ex-catcher girls) and four tray girls (some of whom might have been catchers). This made 9 workers for six machines, against 12½ for six under the old, non-battery system. But the battery system could not begin until agreement had been reached on how those operating it should be paid.

The job rate, though carefully calculated with due and indeed excessive regard to the sacred principles of comparability and differential, did not satisfy the unions: they wanted a temporary, provisional payment made while the job rate was being calculated to be consolidated with their pay. The court decided in favour of Players, who seem to have behaved with some generosity to workers who already have one of the highest basic hourly rates in the country. The decision has been rejected as unacceptable by the unions; and apparently no battery-operation can take place until it is acceptable, not even if the management agrees to pay the operatives (regardless of proficiency) a weekly fixed sum to take the place of the incentive bonus later to be earned when a scheme has been evolved even though that fixed sum would make the whole wage more than the agreed wage (including a proficiency bonus) on which workers taking part in the system's development have been reasonably content. The batteries are still in abeyance.

Perhaps, however, as in the case of a tyrant freely elected by a democracy, the liberal should be in a quandary here: should he support the unions, so plainly, if fortuitously, on the side of cancer-free life, against a new upsurge in the output of cigarettes? Or should he be as sharply condemnatory of them and their restrictive practices as he would be if their work was on motor cars?

CHURCH OF ENGLAND

Greater Freedom?

THE Church of England will be presenting to Parliament over the next few years a series of measures designed to reform the canon law and the liturgy, and to allow greater freedom in the ordering of its services. Shortly before the recess, a parliamentary debate on a private member's motion allowed some of these ideas to be given a preliminary airing; the debate was encouraging for its moderate tone and general restraint, but there were signs that the passions which the controversy over the 1928 Prayer Book fanned into flame are still strangely smouldering.

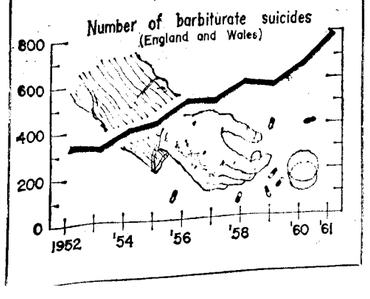
The position of the Church of England today is horrendously anomalous. Its claim to be the Church of the nation is in part borne out by its 27 million baptised members, but not by its 2,248,000 communicants, nor by its 2,887,000 members on the parochial rolls. Parliament retains its control over the Church, which is a Church established under the law; but the conditions which made this reasonable, an Anglican legislature for an Anglican nation, have passed away. In England today there are 3½ million Roman Catholics, over a million Methodists, thousands of Baptists and Congregationalists, as well as half a million Jews. Vague deism probably has the largest following of all. These divisions are reflected in the House of Commons and renders the position of Parliament as ultimate doctrinal arbiter for the Church of England theoretically absurd.

What then is the solution? Hardly anyone in Parliament wants disestablishment (although the Church of England could certainly survive it—17 of the 19 Anglican provinces across the world have no state connection). But most MPs feel that disestablishment in England might be interpreted as a national repudiation of religion, and that in any case it would cause a lot of trouble.

The most constructive approach will be to make full use of the Church Assembly Act of 1919. This allows the Church to work out its own legislation in co-operation with an ecclesiastical committee of both Houses of Parliament, so that any measure agreed on has a reasonable chance of a smooth passage in Parliament. The system broke down over the 1928 Prayer Book, which had been approved by the ecclesiastical committee. Such an impasse today can be avoided if Parliament has the sense to allow the two archbishops' proposal—of freedom to experiment with services for a period of fourteen years—to be put into effect. If after fourteen years new services have established themselves, then they would in all probability be approved by Parliament. This would be a preferable system to the present one where technical illegality is rife. Since no one is prepared to enforce the law on Church services, and since the present legal basis is undoubtedly too narrow for the actual religious life of the Church, the only reasonable solution is to create a greater freedom.

THE OVERDOSE

Although on the increase, an overdose of sleeping pills is by no means the most usual way of taking life, as is commonly supposed. One out of seven of the 5,200 people in England and Wales who committed suicide last year did so as a result of an overdose of barbiturates, compared with one out of two who gassed themselves. Hanging for men (1 out of 7) and drowning for women (1 out of 11) were the next most common methods.



capitals in an attempt to win unity for the Congo. Earlier this month Mr Koinange met the two Northern Rhodesian African leaders, Mr Kaunda and Mr Nkumbula, in London; representatives of Tanganyika and the Congo's central government were also present.

A "summit conference" of Pafmecsa leaders opens this weekend in Leopoldville. It is not mere coincidence that the conference comes after the talks held in London between Mr Thomas Kanza, head of the Congo-Leopoldville mission to Britain, and Lord Dundee, standing in for Lord Home at the Foreign Office. Pafmecsa leaders had hoped that Mr Kanza would persuade Lord Dundee (and that, at Nassau, President Kennedy would persuade Lord Home) that British obstruction of United Nations efforts to force Katanga back into the Congo was misguided.

PAFMECSA

Clearing the Air?

A NEW African pressure group is trying to bring about a reconciliation between Katanga province and the rest of the Congo; it faces several other tasks after that. The group is an amorphous association of the governments of the Congo, Tanganyika, Uganda, Somalia, and Ethiopia (all independent) and the main black nationalist parties of Kenya, Nyasaland, Mozambique, South Africa, Southern Rhodesia, Northern Rhodesia, South-West Africa, the three British protectorates in southern Africa, and Angola. Called the Pan-African Freedom Movement for East, Central and Southern Africa (Pafmecsa) this group is emerging as a powerful new African force with interests and aims quite separate from West African politics.

The interests of West Africa and Pafmecsa-Africa merge in the Congo, where everyone's pan-Africanist creed dictates unity. Mr Peter Mbiyu Koinange, the Kenyan secretary-general of Pafmecsa, has been to Elisabethville and several other African

Ground-clearing in Kenya

PAFMECSA is nearer to home in East Africa. Its declared aim is unity, and, in the view of Pafmecsa leaders, east African unity is being impeded by Kenya's slow progress towards self-government and independence. This is the reason why Mr Obote, the prime minister of Uganda, and Mr Kawawa, the vice-president of Tanganyika, asked for an early interview with Mr Macmillan, who replied that he was fully booked until after Christmas. Pafmecsa is also working, somewhat ineffectively, to bring about African unity within Kenya.

The magnitude of its task there can be partly gauged by two reports issued on December 20th*. The first divides Kenya into six regions under the new constitution; the second records opinion in the Northern Frontier District (the sparsely populated northern half of Kenya) about whether or not the district should join Somalia at Kenya's independence. The Nairobi politicians are dead against this; the commis-

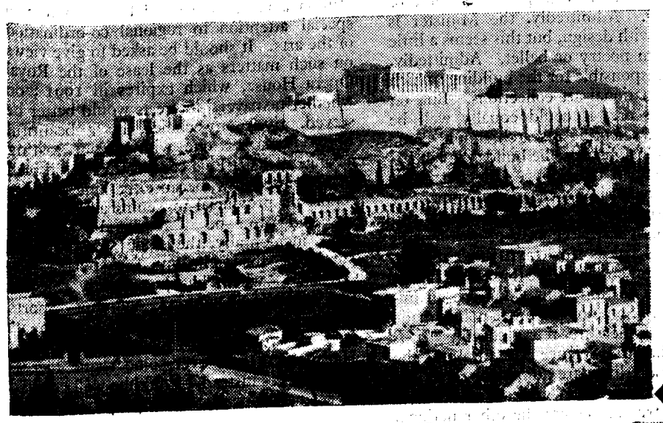
THE CITY OF STEEL SELLS TO GREECE



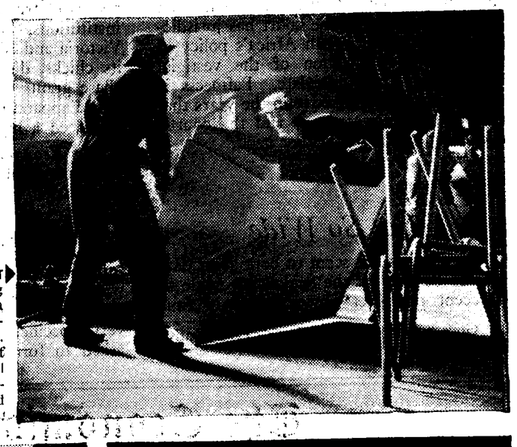
Ancient Greece cradled and nurtured modern civilization. The Parthenon, the great Periclean temple to the goddess Athena, built in the 5th century B.C., stands high on the Acropolis, dominating Athens. After centuries of Turkish rule Greece was liberated in 1833 and since then has been a sovereign state.

Today's population is 8,347,000. In November, 1962, Greece became an Associate Member of the Common Market. All sections of the economy are very active. In spite of unequal distribution of income, every important economic index has risen on the previous year and foreign investments are increasing. Tourism is a major factor in this recovery. Between 1958 and 1961 revenue rose 72%. The Greek government is encouraging new hotels and building better roads. By 1966 it is hoped annual income from tourism will have reached £50 million—twice the present level.

The Steel Company of Wales is active in this expanding market. In 1961 the total of *world* exports from 'The City of Steel'—the vast steelworks at Port Talbot on the South Wales coast, was over £34 million. This included 54.7% of Britain's sheet steel and 72.8% of her tinplate exports. Figures such as these were achieved in the face of heavy competition.

High over modern Athens stands the Parthenon, begun in 447 B.C.

SHOPPING GREEK This store is Vassilopoulos Bros. in Stadium Street, Athens. Around the walls is a great variety of food products, many of which are packed in cans made from Steel Company of Wales' tinplate. In this shop as in many others in modern Greece, the locally built Kelvinator refrigerators and cool cabinets incorporate Steel Company of Wales' sheet steel.



BIRTH OF A FILING CABINET At the busy, expanding factory of Tsaossoglou a new piece of office furniture nears completion. The Steel Company of Wales exports sheet steel to Greece for use in furniture made by this and other companies.

HAVE A FIX In the traditional way a waiter carries Fix Beer along a busy Athens street to three thirsty customers in a nearby office. The crown-corks are made by Aristos G. Coropoulis, a company responsible for approximately 80% of all crown corks used in Greece, and a notable user of tinplate from 'The City of Steel.'

Steel for the World from Wales

OIL IN CANS Mobiloil is one of the leading brands of motor oils in Greece packed in cans made by Elsa, Piraeus, the largest can manufacturer in the country. Elsa is a user of tinplate from The Steel Company of Wales.

THE STEEL COMPANY OF WALES LIMITED

sioners on the NFD report that only about half the NFD tribesmen are dead set for it. Luckily this half is roughly contained in the extreme east of Kenya, in about half of the new "Coast" region suggested by the first commission. Like Yum-Yum in "The Mikado" ("this—and this—and this—is a thing I'll never do"), the commissioners on regional boundaries say that suggesting a seventh region for the Somalis is outside their terms of reference, but if they were to suggest it, this—and this—and this is what they would suggest.

Pafmecsa might take the suggestion up in a possible future settlement between its brother members, Kenya and Somalia. After all, pride apart, what use is the top half of the future coast region to Kenya? As Pafmecsa leaders see it, effective action over the Congo and Kenya would strengthen the association for the final grand campaign that every African nationalist still visualises—the drive to bring Africans to power in the white-governed south. This drive was given encouragement with the decision taken by the International Court of Justice on December 20th that the court has jurisdiction over whether South Africa's policy of apartheid is a violation of the vestigial South-West Africa mandate. Pafmecsa is unlikely to remain inactive in the years that must elapse between now and the court's eventual decision on the case itself.

ARTS

Not So Wide

THERE does not seem to be a great deal to be said for the suggestion made in a recent pamphlet* by a group of four Conservative backbenchers: that the Minister of Public Building and Works should become responsible for state provision for the arts, although still retaining the Arts Council as a dispenser of some of the money. Admittedly, the Minister is concerned with design, but this seems a little remote from poetry or ballet. Admittedly, too, he is responsible for the buildings which house the national art collections. But, on the latter score, it could equally well be argued that scientific research should come under his cloak because he builds the laboratories in which it is done. In effect, this proposal would simply mean that somebody at the Ministry of Public Building and Works would have the task of sorting out the various pleas for taxpayers' money, instead of somebody at the Treasury. There is no reason to think this would be an improvement. Some of the other points made in the pamphlet are more cogent. It *is* illogical that the Science Museum and the Victoria and Albert are administered by the Minister of Education instead of through boards of trustees as are the other national institutions. It is also illogical that the Victoria and Albert, like a mother hen with its chicks, distributes the Exchequer purchase grants to provincial museums. The whole apparatus of state finance for the arts is indeed a higgledy-piggledy one.

The Economist, as it has argued before, is in favour of the appointment of a royal commission or some other once-for-all inquiry to review the whole situation of the arts in Britain. The big snag in that, these backbenchers believe, would be that its terms of reference would have to be "as wide as life itself." But this is just what they should not be. They should be made very specific. A commission should be asked to formulate how it considers taxpayers' money could best be used for the arts if it were available at different levels—if the Government were prepared to spend (a) £10 million; (b) £20 million; or (c) £30 million a year. It should be asked to pay special attention to regional co-ordination of the arts. It should be asked to give views on such matters as the lease of the Royal Opera House, which expires in 1991; on whether taxpayers' interests would better be served, given any choice, by a beautiful opera house or one with decent seating arrangements. This commission could well be appointed now, because the long-overdue report on provincial museums and galleries is said to be "expected shortly." And, incidentally, the same system would surely be the right one for sport. The Treasury—which has just rightly rejected the idea of having a standing Sports Council, consistently breathing down its neck for money, and which has asked Lord Hailsham to take over some vague recreational duties instead—would be well advised to set up a once-for-all inquiry.

CHINA

Where the Spiral Ends

AN illuminating controversy has arisen from the gloomy and provocative views about China which Mr Joseph Alsop, the American columnist, put forward in the September issue of the *China Quarterly*. Mr Alsop argued that since 1959 China had been caught in a "remorselessly descending spiral" of agricultural calamities brought on by misguided communist policies and bad weather. The death rate had risen through starvation; and, while admitting that economic development was easier with a smaller population, Mr Alsop pointed out that there was a limit to the privations people would endure. A peasant rebellion seemed on the cards.

In the current issue of the *China Quarterly*, Mr Alsop's diagnosis of China's malady, and therefore his speculation about the future, receive considerable criticism. Mr Alexander Eckstein says that, generally speaking, times were hardest in China in the spring of 1961. There were reports in the Chinese press then of "weed plagues," which suggested local breakdowns in cultivation. Since Mr Alsop wrote, the reports of this year's harvest suggest that life for the Chinese may have become marginally better. The "downward spiral" may have been halted—although it has yet to be seen whether it has been reversed. Much of Mr Alsop's argument was based on information gathered from refugees. The dangers of using such evidence, and then generalising on the basis of it, are considerable. The refugees entering Hongkong, Mr Frank Robertson points out, come almost entirely from the neighbouring province of Kwangtung, and their conditions are not necessarily representative of China as a whole. In any case, none of the 63,000 refugees seen by Hongkong doctors this year was found to show marked signs of malnutrition.

The Economist

DECEMBER 27, 1862

DISPOSAL OF SEWAGE

¶ There is not the least doubt that the arrangements of human society by which production and consumption are made to take place at a great distance from each other do entail very serious inconveniences. But, inasmuch as the development of commerce and the growth of towns appear to be the inevitable consequences of the multiplication of our species, and certainly are the indispensable conditions of our progress in civilisation, wealth, health, and comfort, our efforts must be directed not to check that necessary and beneficial progress, but to provide artificial remedies for evils inherent in a state of society which is, perhaps, rightly called artificial. The waste which is cast off in consumption has its value; a pure nuisance to the consumer, it is of service, it is often indispensable to the producer. And the last and perhaps most perplexing economical problem which the practical men of this generation are set to solve is how to rid the consumers of that enormous waste which we call sewage, and how to give it back to its proper use, the facilitation of production. The first half of the problem is far the most important; the mischief which is now done by the sewage of our towns is much greater than any good which it is ever likely to do to the land. But the latter question is by no means trifling; the mere sacrifice of so vast a quantity of matter which, in its proper place, would be so valuable, is no insignificant loss. . . . In one respect, no doubt, very rapid progress has been made and is still going on—we mean in the conversion into sewage of that which in other forms is far more noxious. But those who wish to know how much still remains to be done have only to take the case of Manchester, where it is estimated that above 120,000 people are provided only with middens of the old style, many of them in a state of disgusting filth, and all of them accumulating poisonous matter that infests the dwellings, oozes through the soil, and creates around and in the homes of the poor an atmosphere which can only be described as pestilential.

Looking to the future, Mr Geoffrey Hudson points out that in Russia the worst threat to Stalin's authority did not come in 1933, when famine was most serious, but a year later, when Stalin had much more to show for his attempts at industrialisation than Mr Mao Tse-tung is likely to have to show by 1964. Of course, Peking could stop criticising the Russian leadership, in order to get more economic aid. But is Mr Mao Tse-tung willing to leave Mr Khrushchev free to shape his policy without consideration for China? The Chinese still face the threat of a "descending spiral" under the pressure of the rise in population. There are signs that China's leaders are taking a new look at the possibility of birth control.

LAOS

Too Soon Forgotten?

AN international agreement can act like a local anaesthetic, tending to make the public, though not necessarily the governments concerned, forget that there ever was a problem in the affected area. Since agreement about Laos was reached at Geneva in July, Laos has vanished from the headlines. It still exists, however, and is still a problem. But the union of incompatibles described as a "government of national unity" which emerged under Prince Souvanna Phouma's neutral premiership has turned out no worse than was expected. Indeed, its supposedly most irreconcilable members—Prince Souphannouvong on the communist side and General Phoumi Nosavan on the right—seem to get on better than their followers do. A month ago, the three factions even agreed on how to merge their armies, though there is no sign of a rush to make the agreement actually work.

On the American side, the Geneva agreement was an exercise in disengagement. The United States aid programme has been drastically reduced, and the British have stepped in with an annual grant of £1 million for three years to finance commodity imports, and £1,350,000 in technical aid, to be spread over five years. There is some aid from the Chinese and the Russians as well. No amount of aid can disguise the fact that Laos cannot really afford to pay for the recognised (and expensive) symbols of statehood: an army, a bureaucracy, and a diplomatic service. But this has not deterred Prince Souphannouvong, as minister of development, from presenting (in September) a plan of economic and social development that seems conceived on a scale beyond Laotian resources; nor General Phoumi from drafting a correspondingly ambitious budget.

Recriminations persist about the alleged lingering of foreign troops in Laos. By the end of October, the Americans said they had withdrawn their troops, and north Vietnam said the same. But the Americans want to know what happened to the 10,000 north Vietnamese who were there not long ago, since only 40 have officially checked out; and the communists allege that there are still a thousand American and 8,000 allied troops in the country. These are reminders that it may be too soon to forget Laos altogether.

Dear Readers . . .

NOW and again *The Economist* likes to take a close look at its readers. See how they're getting on. How many cars they've got. How many went abroad last year. (And what they think of the paper.) That sort of thing. Nothing personal about it: just a chore that our subscribers undertake manfully in filling in the odd form, or answering the odd telephone call when they have been remiss enough to forget it. Well, now we can say how pleased we are that everyone seems to be in such good nick. Take real, hard money first. (Might as well see where we all stand.)

In the United States 16 per cent of *The Economist's* readers turned out to have a family income of $50,000 and over; and, really, everyone else looked quite comfortable except (possibly) for the 12 per cent who were either too rich or too hard-up to admit to anything. In west Germany 25 per cent took home DM 36,000 (£3,200) or over; and in France 22 per cent had NF 70,000 (£5,100) or over at their disposal—before tax, that is. What about Britain, outside the common market? Well, our pollsters don't actually press that kind of thing too far here, but 57 per cent of those of our readers who were polled paid surtax at the old scale (£2,000 a year or more) and 96 per cent were easily categorised into what the Registrar-General calls social classes I and II. Which makes you rather more of an exclusively toffee-nosed bunch than we would like.

Status symbols are in pretty general distribution. Naturally our pollsters didn't waste time asking about automobiles in America; they took them for granted. It's *The Economist's* car-crazy readers in France who top the list: 79 per cent own one car (and 16 per cent more than one). British subscribers go more for home-ownership: 74 per cent here own their own houses, compared with 67 in the States and only 43 per cent in France. It looks, alas, as if the rat-race has claimed most readers in some way: urban and suburban life predominates wherever you look. In America 31 per cent of subscribers are in New York state, and in France 81 per cent in the Paris region. (Although we must hope that we still get through to the *notables* at Colombey-les-deux-églises and a few other rural seats like that.) Even in Britain 37 per cent live in Greater London and 13 per cent in the Midlands; come to think of it, though, that isn't too much out of line with the north-south drift.

OF course (we really should have said this earlier on) 50 per cent of our circulation is now overseas, compared with 39 per cent six years ago. We're exporters, you see, just as we tell everyone else to be. The biggest single market for *The Economist* abroad is still the United States, but we can report at year's end, so to speak, sizeable advances in places like Southern Rhodesia (trebled), Northern Rhodesia and Nyasaland (trebled), Saudi Arabia, Australia, Mexico (doubled), Poland (doubled) and the Soviet Union. But communist China has shown what is said to be "significant reduced interest" and so have Hungary and South Africa. (What on earth can we have written to upset them so much?) In 1938 the weekly circulation of *The Economist* was only 10,500; in 1945, only 17,500; today it is just short of 70,000.

Ah, everyone says, but where have you flopped? Let's face it, we still don't seem to have that instant woman-appeal that we'd like. Here in Britain only 3 per cent of our subscribers are women; in the United States we have 8 per cent (although 79 per cent of our Americans own stocks and shares, and aren't women supposed to have that market under their thumbs?). It's in France that our feminine rating goes up—to 12 per cent. *Chères abonnées*, we salute you. Yet aren't you just a little bit bossy? In Britain there are at least 7 per cent of *The Economist's* male readers who don't claim to have other people working under them; but in France neither men nor women would admit to having no subordinates whatever.

The Economist's readers are a bit of a handful for pollsters and others to track: they all travel so much. Over four-fifths of the French and Germans were off on trips last year, two-fifths coming to Britain at one time or other. Our home crowd are only slightly more insular: 55 per cent went abroad—and 60 per cent said they thought they would next year. The Americans? Well, it seems that half of them just decided to stay home: must have been worried about Wall Street. As we expected (we're always going on about higher education) Britain doesn't show up at all well in our university graduate league. Despite all those social classes I and II, only 38 per cent of home subscribers have degrees, compared with 79 per cent in America and 92 per cent in France.

So there it is, except for what readers think of other readers of *The Economist*. Well, 40 per cent think other readers are businessmen, 29 per cent think they're directors and executives and 21 per cent think they're financiers. And, really, they've got it about right—except that we have slightly more civil servants and dons than people realise. To our great discredit, though, we have no readers (it seems) in the Registrar-General's occupational status XXV (stationary engine drivers, crane drivers, stokers, etc.). H'mm.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Caerphilly Says Cheese

FROM OUR SPECIAL CORRESPONDENT

NESTLING around a Norman castle, famous only for a white and softish cheese (now made mostly in far-off Wiltshire), and dominated from a hill-top by grey cones of colliery waste, the small south Wales town of Caerphilly hardly looks like an economic growth point. But for its strictly local enterprise it would indeed not be one; thanks to one of those quirks of local government law this sprawling urban district of 37,500 people is riding high, despite the apprehensions that beset the other south Welsh valleys.

It all began in 1952, when the Glamorgan County Council went to Parliament to acquire some minor powers: the resulting private act included, more or less by chance, a provision that local authorities within the county might buy land "for the benefit, improvement or development of their district"—and, what is more, lend money to buyers or lessees of such land to help with building on and improving it. In 1959 there were almost 1,000 unemployed in the urban district: coal stocking was spreading through the country and justifiably alarming the colliery areas (2,500 miners live in the urban district); and the council saw a frightening bulge coming up to school-leaving age.

Two objectives were set—to provide jobs, and to diversify. The available labour could be swelled both by bringing in workers from the genuinely depressed mining areas up the valleys, and by employing locally some of the 5,000 residents who make the 15-minute daily journey by rail through the mountain, or the half-hour journey over the hill, into Cardiff. In new light industry women could be employed; this is particularly important, since the coal mines immediately around the town have a sound future ahead of them, and since, as a local worthy put it, "if you keep the girls home you keep the men in the pits."

Because of a technicality in the drawing up of "development districts" under the 1960 Local Employment Act, Caerphilly could not qualify for Board of Trade help. So it decided to use its peculiar powers, and set aside an initial 17 acres of land—blighted by former army hutments, and already acquired for housing development by the council—for industrial development. A total of £30,000 was spent on installing services; a judicious programme of selective advertising was started; contact was made with various authorities in Newport, Monmouthshire, 12 miles down the road, where the building of the Richard Thomas and Baldwin steel plant and the development of the port have set all hearts on industrial expansion. The land went like hot cakes, at a bare economic rent of around 1d. a square foot. The seven companies now installed or building on the first 17 acres will employ just under 1,000 people, in jobs from paper-bag making to manufacturing hospital equipment to food distribution. Such has been the demand for factory sites that the council, before their initial 17 acres were officially opened, had bought (at £625 an acre) 24 more acres to add to their new industrial estate, which they hope to rent out at similar prices.

To incoming firms the council can lend not above 75 per cent of the value of their complete premises and land: they charge one half of one per cent above Public Works Loans Board rates, borrowing the money either from the board or on the open market, depending on interest rates. They will soon have lent very nearly £150,000 in this way. The loans have to be sanctioned by the Ministry of Housing in its guise as Ministry of Welsh Affairs; and down the road in Cardiff are sympathetic Cymric functionaries (how many enterprising local planners in England would give their eyes for access to a regional authority with no greater powers than the Welsh ministry?).

Of course all this has had to go along with parallel development in housing and services. The council has built 300 houses since 1960, and has bought 160 more acres for housing (on the Radburn plan, with segregation of pedestrians and traffic). Four hundred and fifty new houses are to be built for the National Coal Board, which hopes to move in miners from declining coal areas to the good local pits. The snag on the council housing front is the need to bring the account into balance: the council has recently decided to base all rents on the official rateable value of their houses, which, especially with prewar buildings, has meant some steepish rises for people from mining communities used to low rents (and no bathrooms). Recently one third of the council's tenants were behind with the rent, although a three-bedroomed house only costs 30s. a week.

IN each of the past five years 140 houses have been built in the urban district for sale by private developers: with an eye to the new prosperity which it is hoped industry will bring, the council has scheduled a zone for private building, and is hoping for 1,200 private homes over the next five years. There is a fine College of Further Education a short way up the valley, and the county provides ample chances for night school and continuation courses. At Cardiff there is both the university and a College of Advanced Technology, and a technical college is not too far off at Pontypridd. For the supply of skilled and clerical workers, the Caerphilly citizens who commute into Cardiff are only too happy to take a qualified job nearer home if one offers. At present the town is worried about the impending closure, in June, 1963, of the railway workshops that employ 400 men in six acres of buildings and eleven of sidings and level land. Instead of begging for this to be kept open, the council should be offering far and wide this splendid site for new industry, complete with craftsmen.

To add to its other virtues, Caerphilly has a sensibly expansionist approach to the arts. It gives grants to local choirs, brass bands and drama groups; last year it spent over £1,000 on a local arts festival, and another is planned for 1963. The town has

contributed £2,000 to the vastly expensive Ministry of Works project for restoring the ancient look of the castle: not only tourists but also the wives of the executives of incoming firms are attracted by the idea of so splendid a centre-piece for the town. And a 70-acre marshy site next to the industrial estate is being built up with rubble to provide a fit setting for the noble Welsh art of rugby football, and other sports. In its wide basin at the foot of the narrow Rhymney mining valley the town is not, like so much of south Wales, overshadowed by the colliery spoil-heaps; in collaboration with the coal board stern efforts are made by the planners to ensure against such defacement by the existing pits. And the final attraction to newcomers is a project by an American firm to set up a three-acre shopping plaza with twelve acres for parking.

Of course the town has every kind of advantage to add to its local enterprise. Industries there have access to the whole world by way of Newport docks; when the Severn bridge is built it will be included in the Bristol-south Wales industrial complex, and when the Heads-of-the-Valleys motorway is finished Birming and the Midlands will be within a very few hours by truck. coastal development of south Wales in recent years—the shi the balance of employment down out of the narrow mining va —has in many places, and notably at Cardiff, completely fille the narrow strip between the mountains and the sea, so that ir try must move back into the hinterland when such moveme possible.

But the point of the Caerphilly development is that it has pushed at precisely the point where development is opportu economically, geographically, even emotionally, for this tow sufficiently far inland to command the willing allegiance of the of the valleys. Eloquent locals will argue that this example sh the worth of allowing local people to get on with the job of dev ing the region they know, unfettered by the financial tramme the Treasury and the Board of Trade. It is, at least, a b thought for the New Year.

A Knowing Air

THE National Society for Clean Air who, of all people, might have been expected to throw up their hands in horror at the three-day smog which blanketed London early in December, have surprised some of their supporters by publishing, as a supplement to their paper *Smokeless Air*, a scathing attack on those newspapers and television commentators who thought the visitation evil enough to merit their attention, and dirty enough to merit attacks on the efficacy and operation of the provisions of the Clean Air Act. Without giving themselves the pleasure of claiming a victory for the act, the society has allowed its preliminary assessment to become infected with a complacency based on the number of deaths in the London county area during the week in which the smog lay so heavily on the city: 105 more people than usual died, 87 of them of bronchitis—compared with 1,539 and 751 respectively in the great smog of 1952.

But was the smog only one-fifteenth as bad as it was that year? Medical practitioners think not, and some of them have gone on record in *The Lancet* with an estimate of one-quarter, based on the number and type of cases in their practices. Most Londoners will trust their own subjective assessments and agree with the doctors, who treated far more wheezy chests than usual, far more heart attacks and cases of sudden breathlessness than the British winter normally produces. And the amount of misery, frustration, actual suffering and inconvenience, not to mention lost production, cannot be measured by the statistics of death alone.

The point of the society's attack is that smoke has been satisfactorily reduced in London's atmosphere as a result of the act and the efforts of local authorities to fulfil its recommendations; and that to concentrate (as newspapers did) on the increased incidence of sulphur dioxide in the smoggy air, and not on the reduction of smoke, is to give aid to the enemies of smoke control and to mask the real issues at stake. This point may be thought to be somewhat mitigated by the news that only 13.8 per cent of the premises in the nation's "black areas" were effectively smoke-controlled in 1962, six years after the inception of the legislation, and that even in London, which leads the country, the proportion is only 22.3 per cent. And it is not strengthened, to say the least, by a possible interpretation of the figures by which they have set such store: if this smog was really so innocuous, why was the proportion of bronchitis among the dead so high (87 out of 105, compared with 751 out of 1,539 in 1952)? Is it because the increased sulphur dioxide content of the latest fog is particularly hurtful to sufferers from this most common of English diseases?

THE Clean Air Act does not, in fact, take any account of sulphur dioxide (which, mixed with water, forms sulphurous acid, a mild but nevertheless corrosive substance); and as measurements during the smog showed, its level in the atmosphere has not been reduced by methods applied specifically against smoke—not surprisingly, since it is a constituent of almost all domestic and industrial combustion products, whether smokeless or not. It is not impossible to get rid of it (though it is expensive), and it may be thought that provision for its extraction from flue gases would be of some advantage in the new version of the Clean Air Act that the Government ought to be considering in the light of the depressing reception the old one has had in the country.

Of the 325 authorities with black areas, 83 have not yet come round to submitting any sort of programme for smoke control to the minister, who first asked for submissions in 1959; and of those who have taken the matter seriously, some have put the completion dates of their programmes as far ahead as 1989, and 39 envisage clean air in their areas only by 1977. Worse, many authorities in which smoke abounds done nothing because they do not thir themselves as black areas at all.

Nobody wants to impose such rigid trols that serious hardship results in p (which means just about everywhere) w a run on smokeless fuel would leave r people without anything to burn at al to unbalance marginally profitable burning industries by dictating their chase of more expensive fuel. But it w undoubtedly be a good thing to hav mercy with people, authorities and in tries who could well afford to go smok but are at present able to poison ever else for the sake of themselves and shareholders. And it would be quite a thing, too, if the National Society for C Air refused to be content with what i achieved, and lent more of its conside weight to a new effort to stop eva widen the act's scope and perhaps, in end, save even an insignificant 105 p in London from an untimely and unple end.

WHAT TOP PUBLIC SERVAN ARE PAID

Public Boards :—	
Chairman—	
British Transport Commission..	£24,0

* £4,000 allowance for the commission a whole. † £4,000 free of tax. ‡ Pl £1,000 allowance.

BOOKS FOR TOKENS

The Iron Duke

Wellington in the Peninsula
By Jac Weller.
Nicholas Vane. 395 pages. 63s.

NOSEY or Arty to the British troops, Douro to the Portuguese cacadores, Wellington gained their respect and confidence rather than their admiration and affection. Posterity, savouring the anecdotes of gruff common sense but remembering the long years of Tory politics and the iron shutters at Apsley House, has passed much the same verdict, finding the hauteur of an aristocrat not quite to its democratic taste. There is something forbidding in the adjective iron ; history prefers her heroes to be more sympathetic. Wellington was too consistently successful in war to be the subject of the softening legends of defeat and lost causes that have been accorded, say, to Moore and Napoleon. Less vain than Nelson but also less lovable, eulogy perhaps but not elegy has been his lot.

The injudicious, though honest, comment about " the infamous army . . . enlisted for drink " overshadows the long years of unremitting care for his troops, and the casualties at Ciudad Rodrigo and Badajoz obscure the tactical ability that produced a string of victories at low cost. As a result one of Britain's greatest military commanders has never perhaps been given his full deserts. Mr Weller tries to correct the balance. For him, Wellington can do no wrong. Commenting on Oman and Fortescue, who were not always prepared to judge Wellington as infallible, he says:

> Criticism of this type may obscure what actually happened, and lessen the worth of what is written. To fault Wellington on his strategy or tactics is ill-advised. To venture an opinion contrary to his concerning the British army appears to me to be ridiculous. How can a writer living a century later know more of the army from studying diaries and memoirs than Wellington knew from daily contact over many years?

To some, such sentences must appear to come perilously close to abdicating the historian's function and responsibility ; even so, Mr Weller has written one of the best and neatest of modern works upon Wellington.

His frank, unabashed admiration serves him in good stead, for it enables him to concentrate upon the essentials of Wellington's military talents. So does his spare style, which enables him to get a good deal of meat under a small cover and to gain the advantage of contrast when he seeks to heighten his effects. His book is based upon long-ranging, systematic research into secondary sources, and he handsomely acknowledges his debt to his distinguished predecessors, Napier, Oman and Fortescue. This is backed by personal research embodied, first, in long tramps across the Peninsular battlefields and, secondly, in the firing of a " Brown Bess " and other weapons of the time. The first enables Mr Weller not only to make the topography plain in his text but also to produce numerous, informative photographs and simplified but extraordinarily clear maps. The second enables him to assert with confidence that well-trained British infantry of the line could get off four rounds a minute. This may appear to be a small point and whether this rate, once the barrels were fouled, could be sustained for long is another matter ; but this practical calculation helps to make it clear why the French columns of attack shredded so quickly to pieces under the rolling fire of the British and Portuguese lines.

Mr Weller is careful not to insist that the line, in fact, had a " natural " advantage over the column, arguing instead that the success of this Wellingtonian tactic was due to well-disciplined firepower ; to the posting of the troops so as to afford them some cover against massed artillery fire ; to the ability of the British light infantry to out-skirmish the French skirmishers ; and to the use which Wellington made of the spade, not in throwing up entrenchments but in improving lateral communications, so as to preserve fluidity in defence. This is good sense, as is Mr Weller's insistence upon Wellington's ability in manoeuvre. His book should help to kill off the hard-dying myth that Wellington was simply a defensive general, though presumably the fame of Waterloo will always overshadow that of Salamanca and Vitoria.

Throughout the book, indeed, Mr Weller puts the emphasis in the right place : upon Wellington's administrative ability and his willingness to delegate, epitomised in the introduction of divisional formations and the brigading of Portuguese troops with their British allies ; upon his concern with transport and supplies, for he had not been a Sepoy general for nothing ; upon his eye for the country, apparent as much in the lines of Torres Vedras as, say, the battlefield of Busaco ; upon his uncanny ability, demonstrated in every battle he fought, to turn up at the point of crisis with the right, though often laconic, order ; upon his imaginative prescience in sensing what was happening on the other side of the hill, based on an assiduous sifting of intelligence ; and upon his patience, revealed in his clear sighted view of the strategy which he insisted should be pursued in the Peninsula and duly recognised by Napoleon in the unpleasant simile of the " running ulcer." It is always easier to credit Wellington with a commanding temper and a resolute will than with imagination and patience, and Mr Weller's success is founded on his recognition that there was more than one metal in the man.

Many Sided Pope

The Laurels and the Tiara
By R. J. Mitchell.
Harvill Press. 319 pages. 36s.

OF all the figures in the long rowdy line of Renaissance popes, that of Pius II (born 1405, pope 1458-1464) is the most sympathetic and accessible. From obscure birth in an obscure Tuscan village, Aeneas Silvius Piccolomini became secretary to a cardinal and an anti-pope, ambassador to James I of Scotland, poet-laureate, bishop, cardinal and pope. This career involved an apparently radical change of character, one that has been compared with the behaviour of Becket before and after becoming Archbishop of Canterbury. Aeneas put off taking deacon's and priest's orders until 1446. Before that he lived the life of a gay, extra-articulate humanist - about - town, writing belles-lettres on a variety of topics, from the care of horses to the misery of life at court, writing a conventionally immoral play, *Chrysis,* and a delightfully improper novella " The Tale of Two Lovers," and fathering two bastards with the frankest pleasure. Once in orders, a complete change ; the intelligence and charm remained, but were dominated now by an earnest sense of purpose. He, who had been the servant and spokesman of a General Council, became the pope who issued that scathing denunciation of them, the bull *Execrabilis ;* the luxurious dilettante became the passionate defender of Christian unity and wore himself out in an effort to cleanse Europe of the Turk, dying at Ancona in sight of the sorry token force that he had hoped to project against Mahomet II.

His writings are a copious and essential source of information about the Europe of his day and its values. He wrote an account of the Council of Basel, a description of Germany, a history of the Emperor Frederick III, and he began a history of Bohemia. He wrote lives of famous contemporaries and a treatise on education. He travelled widely and attentively, bringing back not merely anecdotes (his near rape by peasant girls in the north of England, for example) but also opinions that made him one of the pioneers of professional geography. Most attractive and revealing of all his writings, however, are his autobiographical " Commentaries," possibly the fullest and frankest personal document produced in Europe between St. Augustine and Benvenuto Cellini. There is no need to emphasise the importance or the fascination of this work ; it has recently been made accessible in an edition shortened from the translation by Professor Florence Gragg and called " Memoirs of a Renaissance Pope." The author of " The Laurels and the Tiara " uses an independent (and in this reviewer's eyes preferable) translation by Miss Flora Grierson, unpublished, but on deposit in the Bodleian Library.

Miss Mitchell's book is, above all, a sympathetic and easily written account of the author of the " Commentaries," a tribute to Pius's variety and charm rather than a scrutiny of his effectiveness as a diplomat and administrator. The definitive biography has yet to be written ; it is, perhaps, a task for a team rather than for an individual. Meanwhile it is a pleasure to have a life which, if it is neither fuller nor more scholarly than the previous English life (by C. M. Ady, 1913) is fully abreast of recent detailed study, and subordinates it to a straightforward and reliable account of an extraordinary man.

Advance in Joyce Criticism

Structure and Motif in Finnegans Wake
By Clive Hart.
Faber. 271 pages. 45s.

IT is notable that although the overwhelming mass of criticism of James Joyce's work so far has come from the United States, some of the very best is now appearing from British sources. In the particular case of " Finnegans Wake," the most difficult subject of all but in many ways the most rewarding, nothing that has come from America quite reaches the high standard of combined detailed analysis and broad literary grasp to be found in studies published here in recent years under the names of M. J. C. Hodgart, J. S. Atherton and now the author of the present work.

Mr Hart does in fact draw on American studies for some aspects of his work, and he is particularly polite in his acknowledgement to Campbell and Robinson's " Skeleton Key to Finnegans Wake," that early, hasty, faulty and often misleading book. But his examination of the formal devices used by Joyce in " Finnegans Wake," in particular its cyclic form, dream-structure, correspondences and *leitmotif,* goes beyond any critical study produced so far not only in thoroughness and keenness of perception but also in what all serious students of Joyce now regard as the most interesting and promising field of all—appraisal of " Finnegans Wake " as a whole, literarary criticism properly so-called.

It has taken more than twenty years, since the original publication of " Finnegans Wake " in 1939, to reach this point. It would probably have been reached sooner but for the multitude of false scents set up by American critics and the sheer mental confusion of many of the writings of Joyce's peculiar Parisian entourage. Mr Hart has shown the right way—by close analysis, deep knowledge of English literature, improved understanding of Joyce's peculiar personality and interests (towards which Mr Ellman's admirable biography is the main guide) and the growing critical confidence that comes with truly scholarly breadth of vision.

Music Corner

Richard Strauss : *A critical commentary on his life and works*
By Norman Del Mar.
Barrie and Rockliff. 477 pages. 65s.

Man and His Music
By A. Harman, with A. Milner and W. Mellers.
Barrie and Rockliff. 1220 pages. 50s.

The Outline of Music
Edited by Malcolm Sargent.
Newnes. 516 pages. 63s.

GOOD writing about music (of which Shaw three quarters of a century ago was one of the first practitioners) is today remarkable in its volume and range. Mr Del Mar's first volume of critical commentary on Strauss's life and works is the more remarkable because it offers the reader a professional conductor's intimate knowledge of the works in terms that other professionals will respect and amateurs can share with enjoyment. The subtitle, as the author admits, is not strictly accurate for there is far more of the works than of the man, for which we are asked to await the second volume. He does not spare the worst of Strauss—who could? Strauss called himself " a first-class second-rate composer " and often enough mere talent and bombast got the better of his genius, and reduced him to cheapness.

Mr Del Mar proceeds chronologically through the works, noting the success and promise of the first horn concerto (which hardly sounds eighty years old), relishing *Ein Heldenleben* and *Don Quixote,* analysing the motivations that led Strauss from the orchestral tone poem to the " stage tone poems " *Salome* and *Elektra,* and so to the " crowning success " of *Der Rosenkavalier.* Some may find the author's extensive cross-referencing of the profuse thematic material rather hard going, yet his musical citations are always perceptive and blend remarkably with his narrative. This book would be worth the money for the analysis of *Der Rosenkavalier* alone, even though one might offer the mild comment that the opening pages of the second act are rather rushed through and something of the tenderness of Sophie is missed. It is a book that distils great knowledge in an appealing way. Mr Del Mar's second volume will be eagerly awaited.

" Man and His Music " puts together in one volume the four separate volumes of an already esteemed work, with revision of the text and new features, and has been out for some months. It is encyclopedic in scope, but it is heavy in neither sense—three and a quarter pounds for 1200 pages is a publishing achievement. The four parts cover the medieval and early renaissance ; late renaissance and baroque ; the sonata principle ; and romanticism and the twentieth century. There is excellent writing here—one can, for example, read the eight main pages on Strauss against Mr Del Mar's first volume and see what a marvel of accurate compression has been achieved. The indexing and the arrangement of purely factual data are first-class. But the main purpose of the book is not to act as a work of reference but rather to relate the development of music to the expansion of man's cultural horizons down the centuries.

If " Man and His Music " is outstanding in its scope (and its value) the " Outline of Music " must be judged somewhat less so. The contributors are distinguished, but their contributions are not identifiable. The result is a rather uneven book with " bulges and concavities in unexpected places," to quote Sir Malcolm Sargent's introduction. Elgar, to take a single example, comes off very badly, and though Britten has more space, he gets little more than the " list of works " treatment. There are no musical examples.

The Romantic Egoist

Scott Fitzgerald
By Andrew Turnbull.
The Bodley Head. 320 pages. 30s.

BY 1922 Scott Fitzgerald had married the southern belle Zelda Sayre, published his first novel, " This Side of Paradise," won acclaim as a handsome, bright, successful new author, taken a fling at turning his life into one long collegiate party, and achieved some degree of success in converting New York into his own image or himself into the city's image—the distinction was unimportant, what mattered was the image. He was twenty-five. Years later he was to remember the glory of those days : " riding in a taxi one afternoon between very tall buildings under a mauve and rosy sky ; I began to bawl because I had everything I wanted and knew I would never be so happy again." It comes as no surprise that Hollywood wanted to film the novel, starring Scott and Zelda Fitzgerald in the leading roles. It would have been very much in character for them to accept, given their restiveness, their intense search for new experiences, their attempt to live as though they were the handsomest, most romantic, most youthful couple in America ; they were themselves projections of a Hollywood image ; friends, however, dissuaded them.

In the next fifteen years, Fitzgerald wrote two brilliant novels (" The Great Gatsby " and " Tender Is The Night "), and more than a dozen memorable stories ; he also witnessed and participated in his own and his wife's destruction: she went mad ; he became an alcoholic, a corrosive, self-pitying man whose small, insecure vanities had lost two essential props : money and

fame. The irony is that along the way he changed from a rather tiresome, impossible, collegiate bore into a man with character and insight, and into a writer of the first magnitude. Indeed, it was his commitment to writing as the only coin which had value, somehow outside and above society, that invested his life with dignity.

Mr Turnbull does not really offer much that is new to the Fitzgerald legend, and certainly it is little advance over the more thorough and superior biography, "The Far Side of Paradise," that Arthur Mizener wrote ten years ago. The special relationship that existed between the author and Fitzgerald dates back to the early nineteen thirties when Mr Turnbull was a boy of eleven and Fitzgerald was a tenant on his (Turnbull's) parents' estate. We are presented with some compelling tales of Fitzgerald at that time. But the book's interest, its sad, poignant appeal, rests less in its value as a distinguished biography than in the rather fatal attraction of its romantic hero's life. Fitzgerald's life was the base metal for his art. And we are deeply stirred by that art, by that accomplishment.

Tudor Portraits

Catherine, Duchess of Suffolk

By Evelyn Read.

Cape. 205 pages. 21s.

Lady Jane Grey

By Hester Chapman.

Cape. 224 pages. 25s.

CATHERINE OF SUFFOLK was one of those rare people who think and act for themselves and who are prepared to suffer for their actions. She was born in 1520 and died in 1580, thus living through the most dramatic years of the Tudor period. But though a great lady in her own right, she took no active part in politics; her importance lies rather in her ideas and in the way she reacted to the stresses of her time.

She was brought up a Catholic, and when only thirteen was married to Charles Brandon, Duke of Suffolk, the close friend of Henry VIII. As Suffolk's wife she came to court when the new "reforming" party was in the ascendant. Catherine and her second husband Richard Bertie were close friends of Latimer, and were kind to the Protestant scholar Bucer during his year at Cambridge. The duchess in fact became a sincere Protestant and as such was in great danger under Mary. She had made a personal enemy of Gardiner, the Catholic Bishop of London, and inquiries were soon begun into her beliefs and actions. In 1555 Catherine, Bertie and their baby daughter fled to Germany with little more than what they could carry. Like many refugees they were forced to move from town to town in continual danger of arrest. At last they found refuge in Poland, then largely Protestant, and Bertie was made governor of what is now Lithuania. On Elizabeth's accession the duchess and her family returned to England and lived quietly on her estates, writing occasional admonitory letters to the queen and Cecil to spur them forward in the task of reforming the Church. She was too extreme for Cecil, though he remained a close friend, and far too extreme for Elizabeth.

It is the years of exile that make her life unusual. Few of the wealthy were prepared to sacrifice so much, Cecil and many others conformed and waited their time, but Catherine showed herself more independent and more outspoken. This quality of individual judgment was shown on other occasions. In an age where marriages in her class were arranged by the parents, she refused a proposal that her son, the young Duke of Suffolk, should marry a daughter of the Protector Somerset in the following letter:

> And now they, marrying by our orders and without their consents, as they be yet without judgement to give such consent as ought to be given in matrimoney, I cannot tell . . . wherein we might work more wickedly than to bring our children into so miserable a state not to choose by their own liking. . . .

In short she was an interesting woman, and this is an interesting book. Mrs Read has worked with her husband Dr Conyers Read, and her knowledge of the period is extensive. Her style of writing is not, however, that of the academic historian. She feels so deeply for her subject that she has fallen into the trap of trying to create through her imagination feelings and sentiments for which there is no direct evidence. As a result her book, though scholarly, falls between two stools; it is neither a historical novel, nor a biography, but a mixture of the two.

In contrast, Miss Chapman avoids all attempts to imagine the feelings of Lady Jane Grey. Instead she has produced an excellent biography, clear, well-documented and unsentimental. In so doing she has rescued her subject from mythology and given her a new lease of life. Lady Jane's career was pitifully brief. Her claim to the throne, as the great grand-daughter of Henry VII, was used by her parents and her father-in-law in an attempt to prevent the accession of Mary Tudor that ended in Jane's execution in 1554 at the age of sixteen. In that short time she achieved a remarkable maturity, shown in her letters, the defence she composed for herself, and in the clarity with which she saw through her parents while accepting partial responsibility for their actions. "Father," she wrote in her final letter,

> Although it hath pleased God to hasten my death by you, by whom my life should rather have been lengthened. . . . And yet, though I must needs acknowledge that being constrained and (as you know well enough) continually assayed, yet in taking upon me the crown I seemed to consent, and therein grievously offended the Queen and her laws.

In Miss Chapman's opinion, she would have made a disastrous queen. She had been well educated in the humanist tradition, but her Protestantism, like that of Catherine of Suffolk, was narrow and intolerant; she was "self-examining, fanatical, bitterly courageous, and utterly incapable of that art of compromise in which the Tudors specialised. . . . Alternately abused and toadied, caring only for the things of the mind, she developed a capacity for self-isolation highly uncharacteristic of her day. . . ." In fact there was never any likelihood of her getting the throne. Although both the Spanish and French ambassadors gave Mary up for lost, Northumberland was too unpopular and Jane too unknown for the plot to have any real chance of success.

Miss Chapman handles her material well. Her book is rich in quotations from original sources, and she creates her portrait through these, rather than by drawing on her imagination.

Manet by Degas

Two sketches of artists by artists, which appear in two biographies published recently:

Manet

By Henri Perruchot.

Perpetua. 296 pages. 42s.

William Rothenstein

By Robert Speaight.

Eyre and Spottiswoode. 410 pages. 63s.

Rothenstein by Toulouse Lautrec

Babylon the Great

The Greatness that was Babylon

By H. W. F. Saggs.

Sidgwick and Jackson. 591 pages. 63s.

OF the two great ancient civilizations of the Levant, that of the Nile has always been more familiar than that of the Euphrates. This imbalance has lasted even into modern times: for a hundred people who know the story of the exploration of the Nile, hardly one could describe Chesney's expedition in his prefabricated steamship down the Euphrates and up the Tigris in 1836. Ancient Babylon, for the general reader, is either the Great Whore or a synonym for humbled pride. It was that indeed, even in the days of the emperor Trajan. As for Assyria, well just read Lord Byron.

Now Mr Saggs has given us this book. It is an encyclopaedia of Mesopotamian history and civilization, from before the second millennium BC down to the capture of Babylon by Cyrus the Persian in 540. The work is excellently arranged, in two parts: the first general and political history, the second social and cultural history. The illustrations are admirable; and there are a chronological table, indices of Biblical references, subjects, proper names, Akkadian, Hebrew and Greek words, and an ample bibliography. (Mr Saggs is a bit hard on his countrymen: Wolley rates a snub in a footnote on page 35, Creswell's name is mis-spelt in the bibliography, and Seton Lloyd, who has done as much as anyone to bring the culture of the Twin Rivers to the attention of the public, is not mentioned.)

The author is a scholar unrivalled in his own field, and he has given generously of his treasure. His book is embellished and authenticated by frequent citations of original documents. These give it a vivacity and freshness that seem to bring a great and complicated culture before our contemporary eyes. Two chapters out of fourteen are devoted to religion, which the author rightly claims as one of the outstanding contributions of this culture to man's development, though his observations on astronomy (pages 454 *et seq*) may evoke some discussion. It is a scholarly, most readable book, a valuable addition to a useful series.

People on the Fringes

Borderlands

By Delia and Ferdinand Kuhn.

Alfred Knopf—New York. 371 pages. $6.75.

THE peaceful Shans of Burma may not seem to have much in common with the Hairy Ainus of Japan or the proud Afghans on Russia's fringes; but all share the geographical idiosyncrasy of being neglected borderland peoples. So are the Sulu islanders of the Philippines, the Russophobe eastern Turks and the mountain races of Sikkim. Out of this tenuous strand of equality in neglect and pride of uniqueness, Mr and Mrs Kuhn have fashioned a generous, graceful and absorbing book.

Whether it will be useful and how useful it will be will depend on who reads it and why. It is easy enough to read individual sections and even the whole, as one reads a travel book in search of the vicarious pleasures of displacement; but it is, as these American authors reasonably claim, more than just a travel book, and to read it that way would be to miss the enduring for the sake of the ephemeral. Again, the specialist on this or that region might decide to skip the section that concerns him on the ground that he already knows what the authors have to say, and ignore the rest as of no interest. But this, too, would be wrong, for the principal value of this original work is that it places the problems of each of these remote, underpopulated and neglected regions in the perspective of the similar problems encountered elsewhere.

The neglect that is common to the borderlands is only partly deliberate. There are physical problems, such as the distance of Turkey's easternmost places from the centres of political power. There are differences of language, as in Burma where the dominant people speak Burmese and the minorities—Shans, Kachins and others—have their own tongue and are attached to it. There are ingrained habits of paternalism from the centre which, while they may bring fringe benefits to the borderlands, discourage local enterprise. Then again, in more than one case, good intentions at the centre are frustrated by the inexperience of a successor government after the departure of an imperial power.

In a postscript addressed primarily to American readers, Mr and Mrs Kuhn suggest that the United States has often been mistaken in trying to bridge the technological gap too fast in its aid to the countries in which the borderlands lie. Better by far, they argue, to export such American ideas as self-reliance, the dignity of toil even for the educated, and service by the officials to the people. This suggestion is, however, left undeveloped. To some extent, President Kennedy's peace corps is already working on these lines, and "Borderlands" might usefully be made required reading for its recruits, new and old.

Noble Buildings

Earls of Creation

By James Lees-Milne.

Hamish Hamilton. 285 pages. 35s.

Les Pavillons

By Cyril Connolly and Jerome Zerbe.

Hamish Hamilton. 211 pages. 73s. 6d

ARCHITECTURE was the supreme art of the eighteenth century; and in England, more than most countries, it was very precisely adapted to the need of the client. This is proved in the humbler sphere by the fact that most people, two centuries later, would rather live in an eighteenth century house if they could; for commodity and delight they are unbeatable. But Mr Lees-Milne's book deals with nobler needs: by a curious chance, which he does not wholly explain, a number of wealthy and powerful magnates in England took with passion to building: not merely to hiring architects to build for them, but also to designing their own buildings, in the noble style which suited them, for themselves, for their friends and even for public purposes, as Lord Burlington proved by designing dormitories for Westminster Bridge and assembly rooms for York. And, what is even more remarkable, they were fine architects.

Mr Lees-Milne gives an account of the four great architect-earls — Pembroke, Leicester, Burlington and Bathurst, with Oxford as an outrider who collected and built by proxy, but was not himself an architect. This interesting and admirably illustrated work falls slightly between two stools: it is mostly about the men, their friends, and how they came to build; the architectural descriptions are a little hard to follow without the plans which a more technical treatment would have furnished. The book is a study of a strange social phenomenon: the passion of these magnates for the arts, and their close friendship with the poets and architects who worked with them. The reference to poets is not irrelevant, since so much of their thought was based on literature; and Pope's name and influence come through at every point.

"Les Pavillons" is a picture-book, with a learned and delightful introduction by Mr Connolly. It illustrates the lovely school of pavilions and pavilion-like buildings which grew up round Paris in the eighteenth century—exquisite, wonderfully decorated and furnished, and, if one may judge from the illustrations, supremely uncomfortable to live in. The subject is charming, the photographs are undistinguished, and the reproduction is smudgy.

An Unfettered Mind

The Night Battle

By J. D. Cameron.

Burns Oates. 255 pages. 25s.

IN an age of fierce specialisation and even fiercer dogmatism, it is rewarding indeed to come upon a mind that is at once wide-ranging, intellectually rigorous and serenely tolerant. Such is the temper conveyed in every page of Professor Cameron's collection of essays now published together under the title of "The Night Battle"—in itself an indication of the book's quality, since it is drawn from a quotation from Newman in which the controversies of the

age are likened not to the clear fight between good and evil but to a dark, confused struggle "where each fights for himself and friend and foe stand together." Dogmatism is renounced in the very naming of the book.

The breadth of Professor Cameron's range can be gauged simply by a glance at the table of contents. The concern of the philosopher stretches far beyond his specialty—into acute analysis of modern political movements, into the keenest interest in literature and literary criticism, into moving religious speculation. Nor is it simply the amateur interest of a naturally lively mind. One is struck again and again by the force and discipline of the philosophical intelligence that is being applied outside the strict frontiers of philosophy. To give only the most striking instance, in the essay "Poetry and Dialectic," linguistic analysis—which is after all not always allied to aesthetic sensibility or metaphysical depth—is scrupulously employed to search out the sense in which poetic statements can be said to convey "truth," and the result is not only a scalpel-like cutting away of irrelevances but at the end a masterly affirmation of meaning in the profoundest sense.

This same preoccupation with accuracy and precision reveals itself in Professor Cameron's exploration of the perilous frontiers where religion and politics meet and overlap. He can as a Roman Catholic appreciate the moral significance of such movements as that of nuclear disarmament or the concern felt by modern radicals for the corruption inherent in the modern admass society. Equally he sees the fraud inherent in the attempts to line up religion behind the power struggles of the age and to turn secular adversaries into the incarnate anti-Christ. In short, in these essays, the spirit of discrimination, a testing intelligence and the scrupulous search for exact definition lead neither to sterility nor to rigidity. On the contrary, one has the impression of having encountered a mind which fidelity to truth has indeed made free.

Colonial Yesterday

The Governor Eyre Controversy

By Bernard Semmel.

MacGibbon and Kee. 189 pages. 25s.

THE name of Governor Eyre, like those of Warren Hastings and General Dyer, acted as a catalyst on the public opinion of his time. In this book Mr Bernard Semmel, an American historian, has produced an exceedingly interesting analysis of mid-Victorian attitudes to problems that are painfully relevant today. Can democratic values coexist with the arbitrary methods which a colonial governor must occasionally adopt in order to preserve order? What is the extent of martial law and what sort of means may the military employ when called in support of the civil power?

In the case of the Jamaica riots of 1865, the Governor was officially exculpated, though the means of repression were found excessive. In England, however, private individuals ("the rabid Nigger Philanthropists," as Carlyle called them) prosecuted Eyre for murder. Since the controversy coincided with Reform Bill agitation, the Negro and the British working man somehow got confused, and this study illuminates the consequent stratification of opinion when racial, religious and political prejudices got mixed up. Carlyle, of course, supported Eyre; so did, less predictably, Dickens, Tennyson, Ruskin, the Earl of Cardigan and Karl Marx. Against him was the middle class Nonconformist conscience and the liberalism of John Stuart Mill, who staked everything on the principle that the liberty of the subject was as vital an issue abroad as at home. In this, we are glad to see, *The Economist* ably supported him.

Half a Stone of Art

Joan Miró

By Jacques Dupin.

Thames & Hudson. 596 pages. £10 10s.

JOAN MIRÓ has not yet been given a place in art history, but he has surely shown one of the most creative artistic imaginations of this century. "A short, stocky man," we learn, "who moves and speaks with the slow deliberateness of a peasant". Excessively orderly in his working habits, he has produced inventive mixtures of wit and whimsy, delight and horror in drawings, paintings, sculpture and ceramics.

In 1921 Miró held his first Paris exhibition; not a single painting was sold. Four years later he enjoyed what M. Dupin describes as a *succès de scandale.* Miró was not, as is often supposed, one of the originators of surrealism, but when he joined its ranks he was looked upon as a recruit of the first magnitude. A few months after his own exhibition at the Galerie Pierre, he was represented in a group exhibition of surrealist painters at the same gallery, which also included works by Picasso and Klee. There is little doubt that Picasso was impressed at this time by the work of his ten-years younger fellow countryman. Other artists have acknowledged their debt to Miró, among them Alexander Calder and Jackson Pollock.

This study sets a new standard in art books, in lavishness, size and fullness. It contains over a thousand illustrations, forty-six in full colour. With its jacket, binding and title page designed by Miró himself, wide margins and art paper, catalogue and bibliography, text of part biography, part interpretation and analysis, and finally by its sheer weight of nearly half a stone, another landmark in art publishing has been reached. The international flavour of this enterprise is revealed by the fact that the printing was done in Germany, the text was translated from the French, and the captions to the black-and-white illustrations are in Italian as well as English.

Songs into Epic

The Songs of Homer

By G. S. Kirk.

Cambridge University Press. 438 pages. 40s.

STUDIES of Homer today are widely different from those of a generation ago. The evidence of the late Mycenaean age, about which Homer sang, has greatly increased—far more than the evidence about Homer's own age. Linear B has been more or less deciphered and proved to be Greek. But, as Mr Kirk points out in his thorough and reasonably conservative book, none of these discoveries greatly changes our ideas about Homer, least of all the Linear B texts. Far more important is the rephrasing of the main Homeric questions in the light of the brilliant analysis by Milman Parry and his successor, Mr Lord, of the process by which oral poetry is composed by illiterate bards, as shown by the last survivors of a dying tradition in Jugoslavia. The essence of Milman Parry's thesis is that the illiterate singer does not recite a piece by heart; he knits together an extemporised version of a previously known theme, using familiar formulae; each time he recites, it will be a different version, and the concept of an original and uncorrupt text disappears. Further, he showed that it was possible for a singer to extemporise a poem of roughly Homeric length.

Mr Kirk's book, which covers most of the known evidence for the origin of the two great Homeric poems, warns the reader against taking too literally the example of a fairly crude and decaying art in Jugoslavia (indeed, by relying on the texts of Milman Parry and Mr Lord he exaggerates the literary demerits of the genre; the classical cycles, though far below Homer and much shorter, have great beauty); but he accepts the main theme as the undoubted origin of the poems, and most of his book is an analysis of them in the light of this now widely accepted theory.

It is hard but rewarding reading. One's only doubt is whether, in the light of the theory, the analysis does not go too far. Is it useful, for example, to ask whether there was a Mycenaean epic? Doubtless much of the historical data was passed down in ballad form; but if one accepts the theory of change at every recitation, one cannot hope to trace any but the latest additions to the canon. The works themselves prove, as Mr Kirk stresses, that at some point either one or two poets of genius, for reasons which cannot be traced, composed two oral epics of unprecedented length. Two questions remain: how these poems were canonised and passed down with so little traceable corruption; and how they were committed to writing—an entirely different process. Mr Kirk has less to say about these crucial problems of the Milman Parry theory; but he is not alone in this.

Literary Discernment

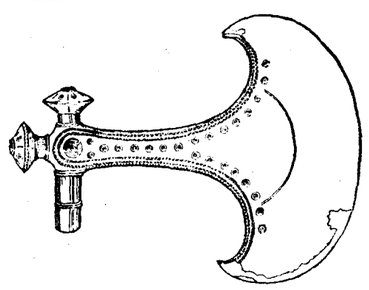
Afterthought

By Elizabeth Bowen.

Longmans. 220 pages. 30s.

WHETHER she is writing or broadcasting, Elizabeth Bowen has a sensitiveness of approach and a delicacy of style that justify the publication of this collection of prefaces, reviews, articles and talks. Most of them belong to the nineteen-fifties and are, in the strict sense of the word, "occasional" pieces. Always the tone is personal, civilised, beautifully free from didacticism. There is distinction in this voice, and sometimes it makes very penetrating observations. One of the best items in the miscellany is a vivid, impressionistic account of a motor trip to the deep South. Most are concerned with literature—critical considerations of books as dissimilar as Trollope's "Doctor Thorne" or her own "The Last September"—or reflections on the art of writing fiction or autobiography.

The actual production of the book is notably attractive, and it might prove a suitable Christmas present afterthought for people whose friends and relations enjoy discerning literary comment.



Bronze ceremonial axe, middle bronze age.

Sweden

By Mårten Stenberger, translated by Alan Binns.

Thames and Hudson 229 pages. 30s.

THIS volume, the thirtieth in the Ancient Peoples and Places series, and well up to standard of the others, deals with Swedish pre-history from the first emergence of Scandinavia from under the ice-cap until the Viking period. The author, who was Inspector of Antiquities for Gotland, an island rich in bronze-age relics, claims that the early bronze age in Scandinavia produced artistic work superior to anything produced in the same period north of the Mycenaean civilisation in the Aegean, with which it had trading links. The bronze-age flowering, which finally faded when the arrival of iron-working coincided with a sharp worsening of the climate about 500 BC, is one of the glories of early European culture: it is well illustrated here.

Kings and Queens

Monarchy

By Harold Nicolson.

Weidenfeld and Nicholson. 335 pages. 63s.

IT is plain that Sir Harold Nicolson has got a good deal of fun out of writing this book; most people therefore should get a good deal of fun out of reading it. This survey of the different conceptions of monarchy begins with primitive ideas of kingship and ends with an account of parliamentary kingship as it has developed in England, and an analytical description of the coronation of Queen Elizabeth II. The chapters in between are concerned, among other things, with sacerdotal (byzantine) kingship, feudal and elective monarchies, the divine right of kings, the caliphate and bonapartism. Carping critics may complain that Sir Harold's theories about primitive kingship are outdated, or that he has merely produced a series of historical summaries. But who among them would have even had the idea of writing a book about monarchy on this vast and vivid scale, or the skill, industry and knowledge to carry it out in such a way that it strays into all sorts of fascinating by-paths without ever losing sight of the main theme?

And what really makes this book such fun to browse through is the way in which the author's views, judgments and prejudices keep popping up on every page. "Popping up" is the wrong phrase, since there is nothing sudden, erratic or jerky in Sir Harold's measured, lapidary and often quietly damning comments. If they sometimes seem a trifle sweeping or provocative, that just stimulates one to think a little for oneself.

There is, as one might expect, a good deal of delightful disapproval in this book, of ideas, institutions and people. After attempting to define *La Gloire,* Sir Harold confesses that "I am not displeased that there should be no equivalent for this deleterious word in the English or American vocabulary." He records with sombre satisfaction that it brought Louis XIV's France to the verge of ruin "and himself to a penitent and gloomy old age." The age of chivalry is soundly debunked. It "has acquired a glamour which it assuredly did not merit. Most of the young knights were riotous, cruel, conceited and delinquent." Hadrian was "a man of high ability and ideals, but whatever Mr Perowne or Madame Yourcenar may say, he lacked charm." And as for Machiavelli, whose ideas on kingship are discussed at some length, with deep disapproval, Sir Harold, with placid ferocity, finally dismisses him with the remark, "I am glad he was tortured when imprisoned by the Medici."

All of which adds up to the suggestion that anyone fortunate enough to collect three guineas in book tokens at Christmas need look no further than this magnificently produced and illustrated book.

SOME ART BOOKS

RENOIR. By William Gaunt. *Phaidon.* 80 pages. 27s. 6d.

VELAZQUEZ. By Xavier de Salas. *Phaidon.* 76 pages. 27s. 6d.

These are welcome additions to a reasonably priced series. Each volume has 50 plates in full colour and an introductory text. Of the Spanish master of realism, Renoir, two and a half centuries later, is reported to have said "When you have seen Velazquez, you lose all desire to paint. You realise that everything has already been said." These two volumes make an interesting comparison.

BRITISH PAINTING. By John Woodward. *Vista.* 160 pages. 42s.

About a third of the illustrations in this excellent, unpretentious anthology of British painting are little known, being of works in country houses and private collections.

ITALIAN BAROQUE PAINTING. By Ellis Waterhouse. *Phaidon.* 245 pages. 36s.

At the beginning of the seventeenth century, Rome became the artistic centre of the world, a triumphant, astonishing city. Baroque conjures up the world of Bernini and Borromini; it is less easy to think of the paintings of this period in isolation from the works of sculptors and architects. Yet generation after generation of new painters did arise, taking up the conflict between the classical and the Baroque points of view. Professor Waterhouse describes not only the work of such masters of Baroque decoration as Pietro da Cortona but also that of, for example, Andrea Sacchi on the classical side. This is a scholarly survey of the development in painting in Rome and in other art centres of seventeenth-century Italy. There are some two hundred illustrations, including two full plates in colour.

TURNER WATERCOLOURS. By Martin Butlin. *Barrie and Rockliff.* 84 pages. 84s.

Some of Turner's watercolours and body-colour drawings in the British Museum are marvels of delicacy. Twenty-three of them are reproduced in colour in this elegant book, together with nine more in other ownership. Of outstanding quality are a watercolour painted in Venice in 1819, beautiful in its freshness, one of Whitby of the next decade, an almost abstract view of Venice in 1835, another of a landscape painted, it is thought, a few years later. This anthology, small though it is, demonstrates clearly Turner's advance into a world of his own creation. There is a short introduction by Mr Butlin, an assistant keeper at the Tate gallery, and authoritative notes on each of the plates.

WHO'S WHO IN GRAPHIC ART. Edited by Walter Amstutz. *Graphis Press,* Zürich. London: *Black.* 654 pages. £9 9s.

Four thousand, two hundred and eighty-three illustrations of work by graphic designers, typographers, illustrators and cartoonists, together with the artists' portraits and signatures, background and history, are presented in an imposing international work of reference, handsomely produced by Graphis Press. It will be an illuminating guide to the possibilities of the artist in a society where the applied arts play an increasingly important role in business and industry. As a reference book its use may be limited mainly to advertising agencies and publishers; but it is as amusing for the casual reader as it is useful to those actively engaged in graphic communication.

PRIMITIVE ART. By Douglas Fraser. *Thames & Hudson.* 320 pages. 35s.

This addition to the World of Art series provides an introduction to primitive art in every major area of the world, from the viewpoint of the art historian rather than the anthropologist. There are nearly two hundred well produced illustrations, fifty-nine of which are in colour.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect, all others are the work of the editorial staff in London.

1963 in Congress

WASHINGTON, DC

PRESIDENT KENNEDY was emphatic last week that the fate of much of the legislation which he will propose to Congress next month will turn on what the House of Representatives decides to do about its Rules Committee, which decides the order of business. The matter is so important that it is hoped that it will be tackled as soon as Congress convenes on January 9th. It would not be entirely fair to call the Rules Committee a sort of Berlin Wall and to say that measures are often machine-gunned on it before they can get to the floor of the House. But the committee might be compared to a dark, labyrinthine tunnel, full of roadblocks and pitfalls for progressive legislation.

In the last Congress the late Speaker of the House, Mr Rayburn, succeeded with the help of Republicans in having the tunnel enlarged. Three members were added to the committee, raising the total to fifteen and making it more sympathetic to the President's requests. Nevertheless, over 20 Bills were withheld from debate, though some legislation which might otherwise have died in captivity managed to crawl through the enlarged tunnel. But the enlargement was achieved by a narrow majority of only five votes in the whole House and the committee is destined to shrink to twelve members again unless the new Congress decides otherwise. The *New Republic*, a liberal weekly magazine, said recently that no one will know who really won the elections in 1962 until this is settled.

The managers of the Democratic party hope to be able to keep the committee at its present strength, which for them is obviously the large economy size. There are perhaps five extra liberal-minded Democrats in the new House. This is regarded as a net gain even though the Democrats lost four House seats, leaving them with 259 to the Republicans' 176. The Democrats are counting also on the spirit of freemasonry which usually prevails among Congressmen. If the committee is cut back to twelve, the three members who are dropped will lose the seniority which their years of service confer on them. On the other hand, Mr Howard Smith, the chairman of the committee and a conservative Southern Democrat, seems determined to revert to the smaller body, in defiance of what Mr Kennedy said last week. But the President's friends hope that Republicans who may be seeking to acquire a more progressive hue will not care to align themselves with this Democratic segregationist from Virginia.

The liberal-minded Democrats in the House of Representatives regard permanent enlargement of the Rules Committee as essential if Congress is to become more effective. But they would like to go further. They wish to put a time-limit of 21 days on the power of the committee to hold back legislation from the floor of the House and of seven days on the committee's ability to hold up a conference of the House and Senate on legislation which is in dispute between the two chambers. There is, however, little optimism that these further proposals will gain sufficient support and some of the advocates of an enlarged Rules Committee would prefer to keep them hidden until the immediate objective is won.

The President may also have an early fight on his hands in Congress over Skybolt. Senator Symington of Missouri has predicted grimly that the uproar will be much greater than in the case of the big bomber, the B-70, for which Congress insisted on appropriating funds even though the President did not want them. Mr Symington said that, if Skybolt is dropped on the ground of expense, Congress may refuse money for the President's far costlier space programme. The Senate Armed Services Committee was thought to be two to one against dropping Skybolt even before the weapon at last achieved a successful test. Mr Symington is a former Secretary of the Air Force and was plainly thinking of the blow to that service, rather than of the blow to Britain, if Skybolt goes.

NEXT month President Kennedy will once again put before Congress the cautiously limited programme of hospital and nursing-home care for persons aged 65 and over which is called Medicare for short. In the form in which it was presented to the last Congress the benefits of the plan were confined to persons eligible for social security and the social security tax on employers and workers would have been raised in order to help to pay for it. This proposal got bottled up last year in the Ways and Means Committee of the House and in the Senate it was defeated by four votes although two-thirds of the Senators were Democrats. But next year it is hoped that Medicare may do better. One additional supporting voice will be that of Senator Ribicoff, the former Secretary of Health, Education and Welfare, and so this year's adverse vote in the Senate may be reversed.

President Kennedy apparently intends to make yet another attempt to get Congress to allow the federal government to give more aid to education, which in the United States is the responsibility of state and local governments. The Administration still wants to provide subsidies for state-supported elementary and secondary schools; to help to pay for additional training for school-teachers; and to assist colleges in building new classrooms and offering scholarships and loans to students. Previously these proposals were swamped by a dispute over whether the private schools which give religious instruction were to be included in the scheme and also by professed fears that locally-controlled public education might succumb to "big government." But the President seems determined to risk the rough seas once again and also to go to the rescue of struggling teenagers, by throwing them a life-line in the form of a Youth Conservation Corps, perhaps as part of a domestic Peace Corps.

His earlier bid for a Youth Employment Opportunities Act was approved by the appropriations committees of both the House and the Senate, but was doomed by Mr Smith, the chairman of the Rules Committee. His reason for stifling the legislation is believed to have been that it would have admitted Negroes to unsegregated youth camps. As the schools which require aid most have a preponderance of Negroes and as Negroes who leave school too soon comprise most of America's fast growing group of unemployed teenagers, it seems impossible to separate education and the question of race. But Congress has hitherto seemed chary of both. It is by executive action and not through Congress that there has been some progress in the field of civil rights. This year Congress failed even to agree that six years of elementary education were proof of a sufficient degree of literacy for voting purposes.

The Administration may also try to extend the minimum wage law to cover hotel, motel, restaurant and laundry workers, even though the last of the human lift operators may give way to automatic lifts as a result; to extend unemployment benefits and to enlist the increased number of Congressmen from urban areas in support of revived proposals for improved public transport in cities and for a new Department of Urban Affairs, even though it might be headed by a Negro. The Drug Industry Act which Congress passed this year under the spur of the thalidomide scare could be improved by putting food, cosmetics and some habit-forming drugs under tighter controls, but this may have to await the spur of fresh catastrophes. Senator Douglas is still trying to get Congress to compel businesses to disclose in writing what their monthly instalment payments really cost people who buy on hire purchase. Last spring President Kennedy described the Senator's Bill as "essential": the Senate Banking and Currency Committee killed it in subcommittee. In the meantime, credit cards are being provided to teenagers, a practice which the head of one of the largest banks in the country compares to teaching youngsters to use narcotics.

The legislators will once again have to bring their machetes and pangas to bear on the matted vegetation of the farm programme. This year Congress did deal with wheat and livestock feed grains, although not as drastically as the Administration would have liked. Next year attempts will probably be made to reduce the flood of milk and to make cotton more competitive both at home and abroad. There will also be another attempt to conserve unspoiled at least some of the wilderness which still remains and at the same time to make national parks pay for themselves.

President Kennedy seems unlikely to try to build a fire under Congress, as they say, to get all this legislation passed. Most of his energies next year as far as Congress is concerned will probably be directed to the issue of tax cuts and tax reforms. Last session, according to the assessment of *Congressional Quarterly*, the Legislature gave the President (in its longest session since 1951) 44.3 per cent of what he had asked. This was regarded as about average for a President but Mr Kennedy tactfully expressed great gratification. He may have done so with his tongue in his cheek. But, considering the convoluted machinery of Congress, he may have been as sincere as Dr Johnson, who said that the remarkable thing about a woman preacher was not that she preached well but that she preached at all.

After Nassau

WASHINGTON, DC

SOME Americans are wondering if perhaps President Kennedy was not too rude to Mr Macmillan at Nassau. These are the Americans who think that the meeting laid bare Britain's second-class status and the crumbling of its special relationship with the United States. They feel sorry for Britain but they also find it hard to understand why the British still want shockingly expensive new weapons if they cannot afford them. Other Americans believe that Nassau administered a needed jolt to the Macmillan government and forced it—or its successor, if it is jolted out of office—to begin to think more realistically about defence. Americans themselves must also now think harder about defence. For after Nassau the United States is committed both to some kind of multinational nuclear force and to achieving it by 1970. This deadline means that Americans must share in the planning of that force instead of, as in the past, just inviting Europeans to offer ideas—and rather hoping that they will not.

Even the immediate future is misty. For example, how exactly will British and American bombers be put at the disposal of the North Atlantic Treaty Organisation? In Washington it is said that Mr Macmillan took away nothing specific about this from Nassau. What he has taken is a promise that Britain will share fully in all future improvements in Polaris missiles and not receive only models of today's or tomorrow's date. First-class rows are expected, however, in Congress not just over the abandonment of Skybolt but also over the exchange of information involved in the Polaris agreement. Already some people are asking why the United States should continue to keep over 400,000 men in Europe, and to pay about one-third of Nato's headquarters costs as well, if Europe is to have its own nuclear force and not to increase its conventional forces by more than a token amount. People are also asking if the whole purpose of the Atomic Energy Act will not be defeated if the United States encourages other countries to have independent nuclear forces.

In particular Congress is expected to show most anguish over the possibility that France may get American atomic secrets as the result of the Nassau agreement. After all Congress has not yet allowed President Kennedy to implement his gesture of offering a nuclear submarine to France. Yet Mr Kennedy obviously hopes to persuade France to participate in a multilateral nuclear force eventually or, if he cannot achieve this, at least to prevent President de Gaulle from convincing Frenchmen and other Europeans that the real meaning of Nassau is that the Anglo-Saxons have ganged up against them again.

Self-chosen Instrument

LAST week, after nearly a year of negotiation, Pan American World Airways and Trans World Airlines announced an agreement to merge which would create the largest and most formidable airline in the western world (also discussed on page 1294). But this step will require not only the approval of the shareholders but also that of the Civil Aeronautics Board and—because international considerations are involved—that of the President. They will have to decide whether the United States is to abandon the long-established principle that there should be at least two American airlines competing in each of the two main international markets, Europe and the Pacific. After the war Pan American tried, and failed, to become the country's "chosen instrument" abroad. Now it maintains, with TWA, that competition between them can be afforded no longer, in view of the fact that their share of the travellers on the North Atlantic route—two-thirds of them Americans—has been cut from 63 per cent in 1950 to 36 per cent today. The airlines also argue that a merger, by enabling them to compete more effectively against subsidised foreign airlines, would help to right the American balance of international payments.

It may be significant that just last week the chief of the CAB's planning staff suggested that it was urgent to reduce competition between the two American carriers. The CAB has also been pressing for consolidation of air services between the United States and Latin America. On the other hand, although mergers are being looked upon with more favour in the home market, to reduce over-capacity, in November an examiner for the CAB advised against a consolidation for two big domestic carriers, American and Eastern Air Lines; he would like to confine mergers to the smaller companies. The government will also have to take into account the objections of the other domestic lines, who have always opposed any entry of Pan Am into their preserve. The new firm would be able to pick up trans-Atlantic passengers on their doorsteps in the lucrative markets which TWA, the third largest domestic carrier, now serves at home.

TWA's heavy tax losses on its domestic services—only partly offset by its profits overseas—provide another attraction. To the many other domestic airlines with which TWA has discussed mergers, however, these charms have been over-ridden by one

great drawback—the fact that Mr Howard Hughes owns 78 per cent of TWA's shares and has played havoc with the airline. Under the agreement with Pan Am Mr Hughes's voting rights—now being exercised by trustees for a group of financial institutions—would be reduced to a manageable minority in the new company. But the trustees may hesitate to take a step of such magnitude if Mr Hughes objects—or he may even reclaim control of TWA by paying off the loan, which is being diminished steadily.

Revolt Against a Revolt

FROM A CORRESPONDENT IN IOWA

THE agrarian revolt in the Middle West, organised by the National Farmers' Organisation and based on the theory that farmers can raise the prices of their products by holding them off the market and bargaining with the processors, is at a cross-roads—or perhaps a roundabout might be a more accurate simile. Nobody, least of all its leader, the demagogic Mr Oren Lee Staley, knows exactly what turning it will take. An extrovert incapable of admitting defeat, even though last autumn's strike among farmers—mainly breeders of hogs—fell far short of its goals, Mr Staley's programme is simply "Forward!" against the "ruthless packers." He was re-elected in December at the annual convention of the NFO. But for the first time in seven years voices of dissent were heard in this militant organisation which speaks for the deeply disturbed younger farmers who are frustrated by the ever more complex government programmes of price support for agricultural commodities and who are often antagonistic toward the old-line farm organisations such as the Farm Bureau, the National Grange and the Farmers' Union.

The revolt against Mr Staley ("the super-chief") was led by Mr Robert Casper, a vice-president of the NFO and by Mr Harold Woodward, one of its staff organisers, both active farmers. Both were defeated roundly in the election but the NFO remains split by the bitter contest, which Mr Staley did nothing to sweeten, and there are warnings that its membership (secret but over 100,000) may fall off. Both of Mr Staley's opponents offered moderate alternatives to his "all-out" tactics. The scholarly Mr Casper urged that the idea of striking for written contracts should be dropped entirely; instead he suggested that minimum prices should be fixed, below which members of the NFO should not sell their goods. Even more significantly, he urged a broad programme of co-operation with any sympathetic element in American society, including rival farm groups, businessmen, religious leaders and anyone of good will.

The NFO is the first regional farm movement since the great depression of the nineteen-thirties to advocate use of the strike weapon; it represents a very real ferment in rural mid-America and may well be pioneering an alternative of some sort to the monstrosity which federal intervention has become. But it is dawning on even the most militant members of the NFO that the economic revolution in productivity on the farm has reduced the farmer to 8 per cent of the population. At the convention talk veered away from confident assertions that growing strength to bargain collectively would achieve the goal of fixing farm prices to the theme of "saving the family farm from integrated corporate agriculture." Obviously this is more than the NFO can do alone if, indeed, it can be done at all. Mr Staley has not heard the last from the moderate faction of his organisation which wants more lobbying in Washington and better relations with other farm organisations, not to speak of the bankers and tradesmen in many towns who share the farmers' fear that they are being made obsolete, not by the wicked processors, but by forces, visible and invisible, far beyond their control.

Progress Shared

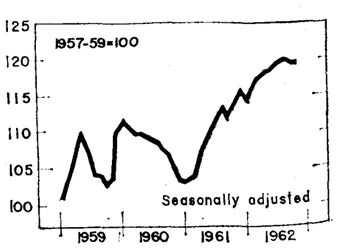
LAST week the 7,000 workers at the Fontana plant of the Kaiser Steel Corporation were briefed on a revolutionary scheme for sharing the fruits of improved productivity which they are expected to approve in a secret ballot next month. The plan, which is the result of three years of work by representatives of the public as well as those of the company and the steel workers' trade union, aims to reconcile the desire of labour for more security with the equally reasonable desire of management for a free hand in introducing cost-cutting techniques on the production line.

A major innovation of the scheme is a set formula for distributing the gains of productivity. Each month the workers will receive about one-third of any savings accruing to Kaiser from a reduction to below the 1961 level in the cost of producing a ton of steel, either in additions to their pay-packets or in the form of other benefits. The scheme is expected to supersede in time the present system of incentive payments to about half of the individual workers. If the employees' incomes plus benefits do not match what is received by other steel workers, Kaiser will make good the shortfall but this is not expected to be necessary. This is not a profit-sharing scheme; employees will receive their share of the gains in productivity whether or not the firm makes a profit. A second innovation, which should remove another main source of industrial disputes, is a plan to protect workers against technological, though not against ordinary, unemployment. A plant-wide job pool will provide a haven for workers who would normally be laid off due to technological changes; they will receive cash benefits, retraining if necessary, and the first chance of filling any new opening.

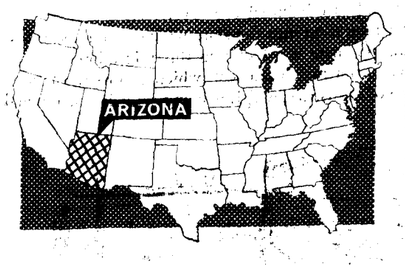
Since the Kaiser pact is still untried, the United Steelworkers are unlikely to insist on its extension to the rest of the industry in the round of negotiations expected to begin some time after April. Instead they will probably try to exorcise the threat of unemployment by falling back on an older gambit: spreading the available jobs by reducing the hours worked by those already employed. But here they may also strike a new note, temporarily shelving their long-standing campaign for a 35-hour week in favour of a three-month "sabbatical" every five years for senior employees. This academic amenity was introduced by the steel union into the tin-making industry less than a year ago. Trade union leaders argue that its application to the steel industry could "create" 10,000 jobs and that it would entail fewer technical difficulties and a lower cost for management than the 35-hour week. This last point may be crucial. Output in the steel industry is now rising in response to booming production of motor cars and—partly because there is fear of a strike by midyear—a reversal of the earlier destocking of steel. Nevertheless competition remains fierce and profit margins uncomfortably slim. The bargaining will be tough.

INDUSTRIAL OUTPUT

The index of industrial production, which has been put on a new base, remained practically unchanged in November at just below 120 per cent of 1957–1959 for the fourth consecutive month. Output of motor cars was running far ahead of other components at 141 per cent of the base years.



State in the Sun



Only at the end of the nineteen-fifties were there more people than steers in Arizona, the state which celebrated its golden jubilee this year. A million head of cattle have ranged over Arizona for generations, as every television viewer is aware; only recently have these been joined by a million people. But proportionately this is the fastest growing state in the Union, in population and employment. What this involves is described by a correspondent who visited Arizona recently.

It would have been inappropriate, to say the least, if Arizona had not returned its 85-year-old Democratic Senator, Mr Carl Hayden, to Washington last November for yet another six-year term. For throughout the fifty years that Arizona has been a state Mr Hayden has represented it, first in the House of Representatives and since 1927 in the Senate. As a result of this seniority he wields great power in Washington, both openly and behind the scenes. All over Arizona are dams, irrigation projects, highways and other amenities, financed by the federal government, which are a tribute to his influence in the national capital. It is possible to be conservative in outlook and Republican in politics, as are an increasing number of Arizonans, and still not wish to see such a respected institution as Senator Hayden defeated.

Nevertheless he had a smaller majority than usual this year and the Republican Governor of the state, Mr Paul Fannin, had no difficulty in securing re-election also. Moreover this is the state which sends Mr Barry Goldwater, the apostle of right-wing

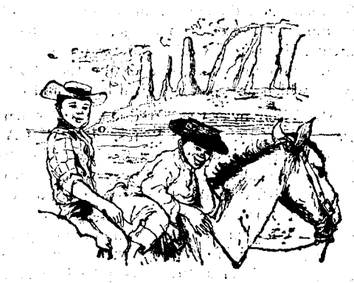
A Place to Play

All over the United States, in libraries, schools, clubs, but also on news stands and in many a private house, a magazine called *Arizon Highways* catches the eye with its striking coloured cover. Put out by the State Department of Highways it has a regular circulation of 400,000 (rising to 1 million for the all-colour Christmas number) in all the 50 states and in 71 foreign countries; about 95 per cent of the subscribers live outside Arizona. Devoted to displaying the scenic attractions of its subject, the magazine certainly owes a debt to nature. For Arizona is a travel agent's dream; bisected by the Mogollon Plateau, it has an upland region of forest, river and gorges, which is a natural paradise in summer, and a lowland area of desert which by human endeavour has become a luxuriously comfortable place to live during the winter months.

Thus tourists flock to Arizona at all seasons of the year from all over the country and particularly from the neighbouring state of California. In spring and Canyon, the main attraction is the Grand United States, where for "sight" in the see once in a lifetime; there are others to slightly less impressive wonders nearby. Winter holiday makers are found in the hotels, motels and guest ranches where by day they can relax beside a swimming pool or play golf; in the evening dine at a sophisticated restaurant; and afterwards find entertainment ranging from a performance by the Phoenix Symphony Orchestra to a night at the greyhounds. The entertainment of visitors has blossomed into one of the principal activities and sources of income in the state. In 1945, Arizona's revenue from tourism amounted to only $40 million; now it runs to about $300 million a year, more than is brought in by the raising of crops and not all that far short of the income from the mineral industries.

The biggest portion of this tourist revenue is contributed by the wealthy fugitives from winter in New York City, Chicago, Cleveland, St Louis, who arrive regularly to spend a few months in their houses at Scottsdale or at expensive and exclusive guest ranches, such as those in the Wickenburg area where the proprietors even provide schools staffed by accredited teachers. But by no means all the visitors to Arizona in winter reek with that kind of affluence. Wherever the wealthy congregate, the less well-to-do also like to be men, even sales... executives, professional ...nd secretaries nowadays fly out to spend two or three weeks of winter holiday in more moderately-priced hotels and motels. And in Arizona, as in Florida and California, widespread air conditioning is making it possible to develop a popularly-priced tourist trade during the summer months.

But in summer, the elevated and unsettled region to the north comes into its own. Here national parks and monuments are so numerous that they practically run into one another and the enthusiasm for these among Americans of all degrees of wealth has created a more democratic tourist pattern. Many of the visitors camp out; camping out tripled in Arizon's national parks during the decade of the nineteen-fifties, although the total number of visitors only doubled. Fishing, riding and other outdoor sports also appeal to summer visitors.



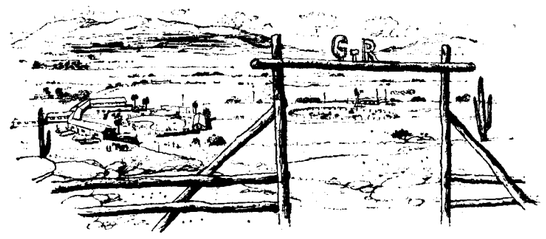
Republicanism, to Washington as its junior Senator. Democrats still outnumber Republicans on the state's electoral register, but at the end of its first half-century of statehood Arizona is becoming the leading conservative centre in the Union. This arises partly from the rugged individualism of the early settlers and miners and partly from the innate illiberalism of an essentially rural population, one among whom the Mormon church is very strong. But these grass-root tendencies are being fertilised by new and varied infusions.

The chief of these is the result of something entirely unconnected with politics: Arizona's attractive climate. In the winter, when snowstorms and bitter winds sweep the north, east and midwest and even Florida and California are apt to be capricious, Arizona can generally be relied on for dry, clear air and warm sun, especially in its southern and western portions, where are the principal cities of Phoenix, Tucson and Yuma. Jet aircraft have brought the region within easy reach of the country's great metropolitan centres and holiday-makers pour into the state every winter.

Most of them are comfortably off, many are well-to-do and quite a few of them end up by building permanent homes in Arizona, often before they reach retirement age. Scottsdale, a suburb of Phoenix, has become a millionaires' town as a result of this and many of the citizens which the state has acquired by this process are men of national prominence in business and industry. Even if not active in politics they tend to vote Republican. Their wives too play a part in moulding a new conservative profile for Arizona.

But the climate also makes Arizona a magnet for another group of conservatives, the "retirees," people of modest means drawn from all parts of the United States. Many of them live in special retirement communities, such as Sun City, Youngtown or At-Ease, which are restricted to "senior citizens" and provide them with modestly-priced housing surrounded by every type of facility to occupy their leisure. Together these migrations are vitally affecting the character of the state, offsetting what would normally be the influence of a high birth-rate and an influx of new families, coming in at the rate of 1,000 a month. Nearly 40 per cent of the new residents are over forty when they arrive and 20 per cent over fifty; such older people are habitual conservatives.

There is another migration into the state which also adds to the conservative trend. Climate is a factor in this migration also but it is business climate, not meteorological, which counts most here. This is a migration of industries, which is being actively encouraged



by the present Governor, himself a businessman. Newly established enterprises are offered generous depreciation allowances and tax arrangements; among other inducements is the so-called free port law, allowing goods to be stored without payment of taxes, provided that they are eventually shipped out of the state for sale.

Moreover Arizona is one of the states which has a "right-to-work" law, outlawing the union shop which requires all workers in a factory to join a trade union. This restriction on organised labour does not seem to upset the employees of the large firms which have come to Arizona. The kind of work they do, such as making transistors, computers and other electronic equipment, calls for above-average qualifications and ability and brings in above-average rewards. A work force of this type is likely to contain more conservative Republican voters than one in which organised labour is influential.

Already the largest facility in the world for extruding aluminium is on the outskirts of Phoenix; the Douglas and Hughes aircraft companies both have plants at Tucson, serving important military installations in the vicinity, and other famous companies have manufacturing or distributing operations in Arizona. The state has become one of the chief centres for electronics, both military and civilian, in the country. Today manufacturing is the largest single source of revenue, having passed livestock shortly after the end of the war and mining and field crops in the middle of the last decade. The value of factory output in 1960 was $700 million, an increase of 100 per cent since 1955.

At the same time there has been a proliferation and diversification of industries producing consumer goods and services in response to the expansion of population. There are now several sizeable banks in the state and the largest of these, the Valley National Bank of Phoenix, which accounts for nearly 50 per cent of all deposits in the area, is among the top fifty in the United States, improving its standing every year. In 1940 not a single insurance company had its headquarters in Arizona and only four were based there in 1951. Now there are 130 such enterprises and the state is second only to Texas in this respect; this reflects Arizona's low initial capital requirement (a minimum of $25,000) and the facilities available nowadays for reinsurance with larger companies [illegible] as the local increase in population and wealth bring a radical change, The economic pattern of urbanisation making their marks more and with urbanisa[illegible], but the traditional industries still remain important. Big ranches such as the 235,000-acre one, grazing 10,000 head of cattle, in the vicinity of Prescott still flourish though today the chuck wagon is drawn by a tractor instead of a team of mules, a kidney-shaped swimming pool opens off the patio and the owner travels by private aircraft. The livestock industry brings in about $150 million a year at present, double the amount in 1948. Still important also is mining. Arizona produces one-third of all the non-ferrous metals in the United States and over 50 per cent of all the copper, including that from the huge open-pit working established not long ago at Bisbee. Revenue from minerals has been running at some $400 million a year, more than three times the value immediately after the war.

Recently the state's reserves of minerals have been augmented by new discoveries: oil in the Four Corners region; coal, which has become the basis for a $62 million, 350,000-kilowatt electricity generating plant; long-fibre asbestos, which supplies all the raw material for a Swiss firm; high-grade magnetite iron which is to be converted into steel at a new mill. Arizona also has substantial lumber resources, including the largest stand of ponderosa pine in the United States, if not in the world; this has inspired a new newsprint and paper industry. Finally, though only some 1,000,000 acres out of a total acreage of 72 million are under cultivation, Arizona's agriculture is world-renowned for its long-staple Pima cotton. This brings in around $150 million a year and represents close to three-quarters of the gross value of all crops in the state.

Agriculture would become an even more valuable source of wealth if the Central Arizona Project could be implemented to provide for additional irrigation for the Salt River Valley, the main farming region near Phœnix. But the project has been held up for several years by the dispute between Arizona and neighbouring California on how to divide the waters of the Colorado River. More water is also required for another pressing reason—the steady multiplication of dwellings where it is needed not only for washing but also for air conditioning and to fill swimming pools (there are 8,000 private pools in the Phœnix area alone). Factories are also demanding ever vaster amounts of water.

This need will grow even more acute if the present rates of urban development and industrialisation continue—and there is every sign that they will. Between 1950 and 1960 the state's population expanded by 72 per cent; within the present decade it is expected to grow by another 56 per cent, so that by 1970 there should be 2,000,000 inhabitants. By then also it is predicted that manufacturing employment, now around 50,000, will have more than doubled, personal income will have just about doubled and retail sales will have nearly doubled. By that time nearly one-third of the state's population will be engaged in pursuits unconnected with the land; yet the industries dependent on natural resources are expected to go on growing. With the economy thus becoming more balanced and diversified the outlook for Arizona's diamond jubilee is certainly propitious, even if the more optimistic forecasts should fail to come true.

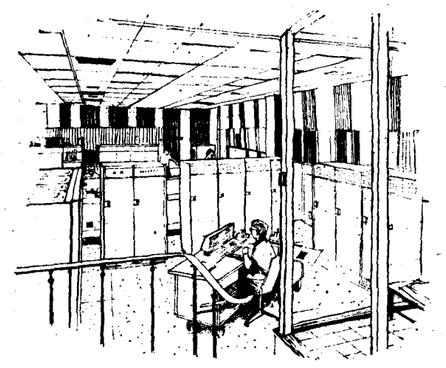
A Thin Time

"Our famous French chef is a wizard," enthuses the guide who takes the visitor round Miss Elizabeth Arden's residential establishment on the outskirts of Phoenix; "he takes low calorie ingredients and whips them into the semblance of rich confections." Practical weight reduction combined in this way with the illusion of enjoyment appeals to the well-to-do women who frequent the famous American beauty specialist's retreat in the West. For this and other amenities they are ready to pay from $450 to $700 a week, for an average stay of two weeks between November and April.

Of the 35 guests, the maximum at any one time, a few come to put on weight and a few more simply for the sake of relaxing. However, a good 70 per cent hope to lose weight and gain glamour under the guidance of Miss Arden's experts. Even when the chef has done his utmost they are on a strict diet for the duration, with alcohol absolutely forbidden. A card on the breakfast tray—black coffee and grapefruit juice—lists for each guest the appointments for the day, a continuous programme of exercises, massage, wax baths and beauty treatments, six days a week. All treatments are around and in a large swimming pool, one of the less stern amenities of the place which also has beautiful lawns and many flowers.

Mrs Eisenhower was a frequent guest when her husband was President of the United States. "But Miss Arden has no need of publicity for she always has a waiting list of well-known names from all over the country—and from other countries as well. Satisfied mothers now send their débutante daughters to a special course in grooming and the average age of guests has fallen somewhat recently. But obviously those best able to stand the financial strain are wealthy matrons, many of whom spend the winter at the near-by "millionaires' town."

A Place to Work



Why did the General Electric Company, that highly diversified and far-flung business enterprise, decide to establish its new Computer Department at, of all places, Phoenix, Arizona? The short answer is that the most exhaustive surveys, using a multitude of criteria, proved that this was the ideal spot in America for this particular operation. More than a hundred cities were examined in detail and each was measured against the various criteria considered important; business climate, taxes, transport facilities, accessibility to suppliers and markets—and a factor called "community desirability." In the final analysis, this last had quite a lot to do with the choice of Phoenix.

The distance of the site from the major industrial areas in the United States would have been an obstacle in earlier times, but this was no longer a problem. Jet aircraft have brought Phoenix within a few hours of any big city in the country; besides, the time and the cost of shipment are of giant[illegible] importance in connection with a [illegible] months to assemble which requires workers. But several other cities [illegible] equally well quali[illegible] in most ways and in the end it was the attractiveness of the capital city of Arizona as a place to live which tipped the scales. In recent years electronic engineers have become a brotherhood of the *élite*, able to sell their services more or less at will to the highest bidder. With such specialists, however, salary may not be decisive. They tend also to attach considerable importance to climate, living conditions, recreational opportunities, educational facilities and other fringe benefits. In respect of all these, Phoenix stands high in the United States and this influenced considerably the GE management in the final choice of the site for its computer plant.

So in December, 1956, the new department opened for business on the outskirts of the Arizona capital. Appropriately enough—and perhaps this was not without some bearing also on the choice—its [illegible]order was to design and build for the San Francisco, [illegible]merica, with headquarters in [illegible]paratively nearby, more than two dozen automated bank book-keeping systems, at a cost of about $40 million. Since then, one of the best customers has proved to be a neighbour, the First National Bank of Arizona, but large contracts for similar or related systems have come in from a distance, from, for example, the Merchandise National Bank of Chicago and the Marine Trust Company of Western New York.

Each year the output of the computer plant has doubled at least and employment has expanded with it. Operations started with 136 employees and within the first four years the work force swelled to about 2,300. The original floor space has also been expanded to some 400,000 square feet. The department has sent out satellites to all parts of the United States; among them are a dozen or more new information processing centres and as many sales offices, strategically scattered about the country, to service existing equipment and advertise to prospective customers the merits of the GE systems.

The visitor to the original plant gains the impression that both the GE management and its employees are well satisfied with the choice of location. The City of Phoenix and the State of Arizona also have reason for congratulation. The Computer Department pays out over $10 million in wages and salaries each year and its presence in the area is estimated to have led to annual increases of about $11 million in personal income, $7 million in retail sales, and $5 million in bank deposits. Indirect benefits extend far beyond this; GE reports that more than 200 suppliers of parts and services, most of them small businesses, now back up its computer operation outside Phoenix.

THE WORLD OVERSEAS

Tribesmen at Bay

FROM A CORRESPONDENT LATELY IN YEMEN

EGYPT'S expeditionary force of about 1,200 men is fighting a savage guerrilla war in the desolate Yemen mountains. Cautious estimates put the Egyptian losses since the start of operations in early October at more than a thousand. Some 70 vehicles have been destroyed or captured, and considerable amounts of war material have fallen into tribal hands. The most successful loyalist spearhead, led by Prince Abdullah bin Hassan, advanced to within 30 miles of Sana'a after defeating the Egyptians on December 11th-14th in the Al Arush and Saham areas in one of the biggest engagements of the war. Your correspondent saw many Egyptian corpses in abandoned foxholes amid the wrecks of their Soviet built trucks and armoured scout cars and all the ugly litter of war.

It is clear that the initial Egyptian aims of crushing the loyalist tribes and firmly establishing President Sallal's regime have not been achieved. The Egyptians do, however, retain two military advantages: undisputed air power and the control of a number of strongpoints in royalist held territory, such as Sirwah in the east and Sa'da in the north. Egyptian bombing—indiscriminate, inaccurate but relentless—has united traditionally feuding tribes against the republic as nothing else could have done. It also restricts the movements of royalist forces during daylight and has caused a mass flight of peasants to the mountains. The countryside is pitted with bomb craters, villages have been destroyed, wells have been abandoned and cattle are lying dead in the fields. But there have been few casualties from these air attacks and no damage to military targets. The tribesmen fight only with rifles and the traditional Yemeni dagger and melt away into the rocky landscape on the approach of tanks or aircraft. Since the middle of December, the ten Sana'a-based twin-engined Ilyushin transport planes, converted for bomber use, and the helicopters armed with machine guns have been reinforced by Ilyushin jet bombers—Badgers—from the Aswan base.

The failure to eject the Egyptians from Sirwah and Sa'da, commanding the main tracks to the capital from the north and the east, illustrates the weakness of tribal tactics against the well-fortified fixed positions of the republicans, and points to the difficulties that lie ahead if Sana'a itself is assaulted. The tribal forces have no field telephones or wireless, no medical supplies or technicians, and are only just beginning to fire their captured mortars, bazookas and light guns—but with little understanding of their tactical use. Mines are the only weapons, other than personal arms, that they have so far used effectively. The whole concept of co-ordination is foreign to tribes each of whom wants to attack the enemy undisturbed by rivals. But tribal morale is high, the quality of individual fighting is exceptional, and there is every evidence of passionate attachment to the princely leaders.

The ability of the young and inexperienced Hamid al Din princes to rally the tribes by their thousands and lead them successfully into battle is one of the most extraordinary phenomena of this war. Of the four main fronts, the south-eastern front of Prince Abdullah bin Hassan is the most active. He has the advantage of mountainous terrain right up to the gates of Sana'a and claims that with more ammunition and more mines he could take the capital inside a month.

In the north-east, another tribal group under the command of Prince Abdullah bin Husein is beseiging the Egyptians at Dhibin in the Jauf, about 70 miles from Sana'a. Further north, Prince Saif al Islam Hassan, the prime minister of the royalist government, commands the third tribal group, while in the west Imam Badr has sent three columns to threaten Hajja and to cut the Sa'da-Sana'a road north of Amran.

In Najran on the Saudi frontier sits another young prince, Mohammed bin Husein, who is deputy commander of the royal armies and the general co-ordinator of the war. He is one of the most impressive leaders on the royalist side and in the event of victory might well make a future imam. The co-ordinator of the eastern operations is Qadi Ahmad al Sayaghi, a shrewd statesman and administrator with a record of opposition to the late Imam Ahmad's authoritarian regime. The princes are generally agreed that if they win there will be no going back to the bad old days. Imam Badr will have little choice but to share his power with the more reform-minded princes who helped to recover his throne. "We must change the whole image of government in this country and put it on a more democratic basis," Prince Abdullah bin Hassan told your correspondent.

But can the royalists win? The question is whether the tribes would hold fast if their leaders were killed, if their money and ammunition ran out and if the momentum of their advance were broken. On the other hand, the cost to Egypt of the Yemen operation is very considerable and, as the dead are counted, domestic pressures in Egypt are building up against a cruel war.

Turn of the Year

FROM OUR BRUSSELS CORRESPONDENT

NEGOTIATORS here who a fortnight ago were giving odds of no more than fifty-fifty on Britain's eventually joining the common market are now a little more hopeful; publicly the betting was still even, but in private odds had shortened as faces grew less long.

There were three reasons for the slight decrease of gloom. One was the brisk agreement reached by Mr Heath on December 19th about the special problems of some small but significant Commonwealth territories. A second encouraging feature of the talks from December 19th to 21st was the statement made by Mr Heath on the institutional arrangements for the enlarged community. Some French hearts may have sunk a little at the prospect of including English as one of the official languages of the [illegible] quadrilingual, but in practice [illegible] francophone, community; but European-minded people of all six countries were delighted by the liberal character of Mr Heath's proposals on voting. In contrast to earlier statements in the House of Commons by Labour party

spokesmen, who had alarmed continental friends of Britain by stressing that in the enlarged community Britain and one small country (Denmark? Norway? Holland?) should have the veto, Mr Heath emphasised that the present principle of the two-thirds majority should be maintained, and that he was not interested in the veto, but in getting things done without minority obstruction.

The third ground for Christmas optimism is the setting-up of the so-called "breakfast" committee now discussing the problems of British agriculture—principally, at present, cereals, bacon and eggs. Agriculture, Commonwealth and domestic, presents the most difficult single issue in the negotiations. On the home front, the trouble revolves largely round the request of the Six that Britain, on entry, should switch to their transitional system. The British maintain with apparent justice that this would mean a sudden rise in some prices, and a sudden change in price ratios not at all in conformity with the Rome treaty's own principle of gradualness; moreover, the temporary subsidy system proposed by the Six to cushion the effect on the consumer would mean a return to the pre-1951 (Labour) policies, politically difficult for the present government to recommend.

A fortnight ago the talks had reached apparent deadlock on this question. Now they have begun to move again. The ministers of agriculture or their deputies have had several days of specialist debate about products and prices, and as one delegate put it, "the ice isn't melting yet, but you can hear it crack." This is partly because, in this so-called "fact-finding" committee, the Six no longer have to hold co-ordination meetings to reach a joint position before talking to the British: none of them is committed, so discussion is free. The committee is chaired by the tough, fairminded and skilful Dutch vice-president of the European Commission, Dr Mansholt; many feel that if anyone can melt the ice, it will be he.

Looking back over the past year, one wonders (with admitted hindsight) if it would not have been a wise move to adopt the "breakfast" committee method for the negotiations as a whole and thus to have helped keep them from either being bogged down in detail or from hardening into irreconcilable opposition. Chief

Pilar

FROM OUR SPECIAL CORRESPONDENT

SARAGOSSA

FEW Spaniards celebrate Christmas with anything like our pagan northern fervour. In Aragon, in particular, it is a pale festival, overshadowed by the glittering cult of *el Pilar*. Memories are still vivid of the religious pomp and secular exuberance of the great October fiestas in honour of the Lady of the Pillar; and, the solstice past, the day of thanksgiving is not so much December 25th as January 2nd, when thousands flock to the basilica beside the Ebro at Saragossa to kiss the famous column and recite a prayer to the brightly bedecked statue surmounting it.

The *Pilar* cult is claimed to be the oldest Marian devotion in Christendom. The Spanish Church teaches that on this spot, on January 2nd, a little over nineteen centuries ago, the Virgin Mary appeared in flesh and blood (*en carne mortal*) to encourage the apostle James who—also in flesh and blood—was having some difficulty in converting the stubborn Aragonese to Christianity. She gave him a pillar and ordered him to build a temple around it. Like the **Black Stone of Mecca**, the pillar was transported by angels from heaven (or, some authorities say, Ephesus); and, like the Black Stone, it has been smoothed and eroded by the kisses of the faithful.

The front of the pillar, which is six feet high and ten inches in diameter, is now encased in silver. Its upper third is sheathed in a cape of satin or brocade that is changed every day: the basilica possesses more than three hundred, many of them adorned with precious stones. The statue above it is a fourteenth- or fifteenth-century Hispano-Flemish sculpture in gilded wood, about sixteen inches tall. Venerated less than the actual pillar, it nevertheless holds the rank of captain-general in the Spanish army and is patroness of the grim *Guardia civil*. On feast-days the statue wears a crown and aureol containing 15,000 precious stones, "a gift from the Spanish nation" in 1905; for everyday wear it possesses six other crowns of jewel-studded gold. Pillar and statue are enclosed in a marble shrine adorned with 167 stars of gold and jewels.

The treasury of *el Pilar*—crowns, haloes, diadems, necklaces, brooches, bracelets, rings, fans, chalices, royal decorations and bullfighters' thank-offerings—is one of the richest in the world. The income of the basilica is incalculable. Its benefactors range from Hispano-American dictators (notably the Trujillo family and Batista) to peasants. A widow recently donated the equivalent of £300,000, to pay the bill for two new towers. Eleven capacious alms-boxes coax a continuous cascade of coin from 250,000 pilgrims and tourists a year (the basilica runs its own travel agency).

Concessions for, and commission on, the sale of souvenirs swell the flood. A syndicate of photographers pays £2,000 a year for the privilege of taking snapshots of the infants carried by altar-boys into the shrine to kiss the statue's mantle (the photos are sold at seven shillings each). Even so—thanks, in part, to the natural dignity of the Aragonese, but also to the fact that pilgrimages and tourism are only incidental to the economy of Saragossa, a flourishing industrial centre in its own right—visitors are spared the excesses of commercialism that have barnacled on to Lourdes and some other religious centres.

Not all historians are convinced that Mary—or, for that matter, James, who has a shrine of his own at Santiago de Compostela—really set foot in Spain. Some anthropologists suspect that *el Pilar* has simply succeeded an ancient phallic cult which—like many pre-Christian rites—the early Church found easier to modify than abolish. The present devotion became significant only in the seventeenth century, during the reign of Philip IV, who promoted it (guided by his *confidante*, the nun María Jesús of Agreda) in an effort to assuage the guilt complex engendered by his passion for fathering illegitimate children. In later centuries, advocates of Aragonese particularism, Spanish nationalism, *Hispanidad* and straight authoritarianism were to seek inspiration, endorsement or at least kudos in the vast basilica of *el Pilar* (ex-dictator Batista prayed there at the height of the recent Cuban crisis).

For many progressive Catholics in France and Italy, the "sacred pillar" of Saragossa stands as a symbol of the "marginal" sources of revelation they would have the Church soft-pedal. But the Spanish hierachy, on the side of the traditionalists during the recent Vatican debate on the subject, is overwhelmingly loyal to *el Pilar*. A Jesuit historian who cast doubt on the validity of the tradition is suspected by some Spanish ecclesiastics of heresy. "What would these progressive so-called Catholics have us do?" one Spanish priest asked your correspondent. "Divorce the Church completely from the people?"

The cult is undoubtedly popular—more popular than bare churchgoing statistics might indicate (only 15 per cent of Saragossa's workers go to mass). A dissenting voice heard in Saragossa last week was that of a local businessman who, yielding to family pressure, had just consented to name his baby daughter Pilar. "Already," he complained, "when anyone calls 'Pilar' in my house, four people reply: my mother, my wife, my sister and the maid. It's enough to drive a man to communism." The next day your correspondent was taken to see an Aragonese communist leader. He had a small girl on his knee. "Meet my daughter," he said. "Pilar. . . ."

among them, for the Six themselves, are the agricultural financial regulations. For all seven, there is the question of New Zealand, particularly difficult because of the community's likely surplus in dairy products (especially butter) and because of France's announced refusal to consider New Zealand a special case. There is the problem of the neutrals and Portugal ; to some among the Six, this is a self-made British straitjacket. There are important residual issues of tariffs on Indian exports, processed foodstuffs and requests for zero duties. Some of these—the tariff items in particular—may be suitable for some kind of package deal made in the small hours of a smoke-filled morning, rather as the List G protocols were settled by the Six themselves. Others are questions of principle on which the only hope is to soldier on.

From London, in the context of Skybolt surprises, investment hesitations and political insecurity, the Brussels talks must seem interminable and the Six frequently intolerable. But this is perhaps the moment to remember that the problems are genuinely difficult and the community itself young and insecure. All its big steps forward have been slow and painful: the Rome Treaty itself was two years in gestation and the community is now, very few years later, trying to include without losing its cohesion another major power which has what General de Gaulle calls its "enormous escort." This inevitably makes negotiations lengthy.

But there has been a growing awareness among the Six that some of their demands are not mere technical questions but have caused genuine and severe political difficulties for Britain ; moreover the Six are also beginning to ask themselves whether their own community might not be blighted from within if the British negotiations fail.

The Business of Governing

FROM OUR CORRESPONDENT IN CANADA

CANADA is going through an exercise which, at least at first sight, will arouse the jealousy of business men in every country who believe that the machinery of government is wasteful and inefficient and can only be put right by practical men, accustomed to "meeting a payroll." One of Mr Diefenbaker's promises before he gained power in 1957 was to appoint a royal commission, like the Hoover commissions in the United States, to investigate government operations and show how to save hundreds of millions of dollars.

This commission was eventually appointed late in 1960, with Mr J. Grant Glassco, a Toronto chartered accountant and vice-president of the Brazilian Traction Company, as chairman, assisted by a Montreal business man and a retired auditor-general of Canada. In the remarkably short period of two years it has turned in two volumes of its report, which run to more than 1,000 pages ; three more volumes are promised. Without waiting for any more of the horrifying details yet to come, Mr Glassco and his colleagues have fully established that the Canadian government is even more wasteful and inefficient than the most cynical believed. What they have not so clearly proved is that practical business men are the only, or necessarily the best, people to put it right. And what remains entirely questionable is whether the Diefenbaker government, or any other, can save even a couple of hundred million dollars by following the business men's recommendations.

After the publication in November of the Glassco Commission's second volume Mr Diefenbaker made a bold show of action, announcing promptly in the House of Commons that the government intended to implement the commission's recommendations in an impressive-seeming list of operations. The announcement was all the more impressive because the primary responsibility for cleaning up was laid on Mr M. Wallace McCutcheon, formerly vice-president and operating boss of Mr E. P. Taylor's mammoth Argus Corporation, who joined the cabinet in August as a senator and minister without portfolio. For this purpose Mr McCutcheon has been appointed to the Treasury Board, a statutory committee of the cabinet responsible for drawing up expenditure estimates and for controlling their disposition. He also heads a special cabinet committee charged with implementing selected recommendations of the Glassco commission. Nobody in Canada has taken over more business firms, reorganised more managements, or turned more business sow's ears into silk purses. If the reform of government organisation depends on the same skills and experience as the reform of business concerns, then Mr McCutcheon is the man.

Some of the deficiencies brought out in the Glassco reports are glaring enough. One of them is the accumulation of real estate in government hands because, with one department in possession of the title to land it cannot use, another department buys land next door ; another, the growth of inventories in the defence department, which has built up stocks of some items sufficient to clothe our children's children. Government purchasing, which runs to more than a billion dollars a year, is divided between departments employing their own purchasing officers at salaries which average $1.34 for every $100 of purchases ; in one department they run as high as $11 for every $100. Facilities proliferate for servicing government property and providing departmental communications ; this often could be done far more cheaply by contracting out to private industry, or by interdepartmental pooling.

Some at least of this formidable bill of indictment should certainly be corrected in fairly short order. Yet there is still ground for scepticism about how much may be achieved. Conspicuously absent from the list of recommendations which Mr McCutcheon has been charged to enforce are those which the Glassco commission presumably regarded as most basic and essential, since it put them at the top of its first report. Their aim was to free the departments of government from much of the control now exercised by the Treasury Board (a division of the Finance Department) and by the Civil Service Commission, an independent body originally established to eliminate political patronage and which still controls departmental appointments and promotions.

The Glassco commission recommended a reform similar to the one introduced at the BBC after the long regime of Lord Reith. Lord Reith's conception, which still prevails to a large extent in the government of Canada, was that departmental heads were "creative" people who could not be expected to have any sense of orderly administration. They had to be policed by an administrative branch, headed by an admiral, with parallel authority over pelf and personnel. In place of this dualism a departmental autonomy was substituted in the BBC which left each departmental head responsible for his own budget and his own staff appointments, but took good care to provide him with responsible and trained administrative and personnel officers.

This is just what the Glassco commission recommended that the Canadian government should do. But the basic soundness of the recommendation was vitiated by one of those blunders which business men so often make when they venture into the unfamiliar field of government. In order to achieve the highly desirable devolution of responsibility to deputy ministers (which is the Canadian translation of permanent under-secretary), the commission suggested that the staff of the Treasury Board and some of the functions of the Civil Service Commission (particularly in relation to senior staff) should be transferred to the Privy Council office under a new minister to be called "President of Treasury Board." His function, with his expert staff, would be to foster departmental responsibility by ensuring that each department was provided with specially trained administrative and personnel officers ; and maintain the necessary centralised control by rotating qualified people between departments.

Unfortunately, when it comes to equating the business of government with the government of business, the gap between theory and practice yawns wide. A government determined to be business-like could, by applying this proposal in a modified form, extract something of value from it. As it is, senior civil servants and politicians have combined to ridicule the proposal for the logical absurdity of putting one minister in charge of expenditure and another in charge of revenue (a practice which not a few governments find perfectly expedient).

Yet the Glassco commission put its proposals forward believing them to be a Canadian adaptation of the basic system operated under the British Treasury. Doubtless they need refinement by people expert in government rather than expert in business ; so treated, they might bring a vast improvement to the organisation of the government of Canada. What seems to be happening is something different—an acceptance for appearance's sake, without much serious intention.

We are the Socialists of Japan

FROM OUR SPECIAL CORRESPONDENT IN TOKYO

JAPAN'S wretched Socialist party seems resolved upon, and not merely reconciled to, a role of perpetual opposition in the Diet —perhaps "resistance" would be more precise, but for that word's connotations of unity, courage and fortitude. It is difficult to feel any sympathy for the enduring plight of a party dedicated in theory to the promotion of socialist ideals but so often guilty in practice of the sabotage of elementary parliamentary and social democratic principles. Sometimes this suicidal sabotage of the freedoms and

Swiss Wines Survive

FROM A CORRESPONDENT

AT about this time each year thousands of Britons and Americans take their first cautious sip of Swiss wine, at the Alpine winter resorts. If lucky they will soon learn that there is a good rosé called Malanser from the valley near Chur, that the best whites are perhaps Yvorne and Dézaley and the preferred reds come from the Valais and Neuchâtel cantons. They will be well advised to buy them in bottle, not in carafe ; some of the cheaper whites tend to be acid. They will find that Fendant served in tumblers in the lesser taverns can be quite sharp and unrewarding. But, by using discretion, one soon comes to like the better white wines of the country.

The reds are another matter. The Swiss themselves can often be seen drinking a Beaujolais or a Veltliner (their name for the Italian wine from northern Lombardy) instead of Dôle, the best-known red from their own upper Rhône valley. Yet much has been done in recent years to improve fullness and texture by growing more Pinot Noir grapes (the red Burgundy vine). A good Pinot Noir, so labelled, from the Valais or Vaud cantons, when five years old, can produce a fine bottle. The Cortaillod from near Neuchâtel can often be equally good. Production from this last district has been falling off in recent years, partly because of labour shortage ; but the wines of Neuchâtel are always well received in certain foreign markets. Though uncommon in England, a white Auvernier or a red Cortaillod is often found in American wine shops. Wines from Neuchâtel and from the Valais are now also sold in Canada. The Swiss Wine Export Bureau at Lausanne maintains a promotional office in North America.

To the average Swiss *vigneron*, however, exports are of minor interest, because of the paternalistic intervention of the federal government in the domestic wine trade. The Swiss are a wine-drinking people and consumption is high. But there is an overbalance of white as against red types in the vines planted. Moreover, grapes tend to be grown on certain steep or gravelled slopes not fit for other crops, and certain communities would become rapidly depopulated if the vineyards were not kept up.

So for some years now the state has set minimum prices for all varieties, and by controls and purchases has guaranteed these prices. As a result there was for a while an unwanted extension of grape growing to unsuitable soils as peasants in marginal areas sought to take advantage of the subsidy. These grapes were soon declared illegal for purchase ; all the same, on dark October nights they were mixed covertly into the crop from legitimate plots. This was a form of bootlegging in the best peasant tradition, comparable with the discovery not so long ago in a corner of the Jura mountains of a score of illicit stills making that forbidden liquor, absinthe.

The authorities finally decided in 1961 to make a disciplinary example of an area near the village of Saxon in the Valais, where illegal plantings persisted. Helicopters were sent and began to spray poison over these plots. But in between his yearly tour of duty in the army every Swiss keeps his rifle at home. Out came these rifles and the helicopters were fired upon. A rebellion, but one that was quickly crushed.

The import of wine is hedged about with regulations ; but the Swiss thirst is insatiable, and vast quantities, particularly from France and Italy, are brought in each year. Besides duties there are restrictions on import licences and a quota is attached to each licence. If a wholesaler's trade in foreign vintages begins to expand, he cannot obtain an increase in his quota : his only recourse is to buy wine from some laggard firm whose trade is slipping and whose quota is unfilled.

In principle, no Swiss wine when bought in Switzerland should ever cost as much as any imported French one, but quite a few do. These are well worth looking for ; one is Goût de Conseil, the best of the Johannisberg types from the Valais. As in all wine-producing countries, one should choose the region and type one prefers and then go on to learn more about individual growers. The wine called Dézaley, for instance, comes from several steep slopes between Lausanne and Vevey. Among its many vineyards is one called Chemin de Fer—appropriately, since the main line from Paris to Milan runs right past these carefully tended rows of grapes overlooking the lake. The government is now trying to plan a modern super-highway along these and adjoining slopes. At times this results in a legal battle. May the best of the vines win.

responsibilities of parliamentarianism, inside and outside the Diet, has been cynical and violent; sometimes it has been attributed to downright human stupidity and muzzy Oriental equivocation. But the result has been the same: a deterrent to democratic development in Japan and a spur to factious intrigue inside the smug Liberal-Democratic government oligarchy.

The Japanese Socialists achieved their latest masterly coup in self-mutilation on the eve of the end-of-the-year Diet and the bold plans of the prime minister, Mr Ikeda, for the 1963 Budget. On November 27th, the opening day of their annual congress, they censured and dismissed their secretary-general, Mr Saburo Eda, by 232 to 211 for his "vision of a new socialism"; next, by 323 to 233, they elected Mr Tomomi Narita, beholder of an identical vision, to succeed his discredited fellow-dreamer.

Eda-*san*, who represents the moderate elements in the Socialist party, had descended from the heights of Mount Fuji, bearing Mosaic tablets simplified from ten to four decrees, which promulgated, as an incongruous coach-and-four vehicle for Japanese socialism, "the high living standards of the United States, the welfare security of Soviet Russia, the parliamentary order of Britain and the peaceful ideals of the Japanese constitution." Eda-*san's* opponents of the extreme Left, who should logically belong to the Japanese Communist party, irresponsibly stoned him from office, condemning his "vision" as "excessively liberal." However, the left wing's candidate for the vacancy was then soundly beaten by Narita-*san*, who was known to have shared the hapless Eda-*san's* "vision" in everything but open personal exposition.

In accepting the post of secretary-general, Narita-*san*, a partly reformed Marxist, promised solemnly to "remember with deep sincerity" that the party convention had denounced the Eda "vision," but he added blandly that it was still necessary to translate that "*vision*" *into reality* in order to gain votes for the socialists against the conservatives.

All this was true to form. Japanese socialism, for ever bogged in confusion, contradiction, mistrust and stagnation, has been cursed since the Occupation by the absence of a strong pro-Japanese leader and by the conviction that the policy of Peking and Moscow is more honest, selfless and helpful than that of Washington. Mr Tetsu Katyama, the first and only socialist prime minister (1947-48), was a pious Christian and a moving hymn-singer, but these spiritual attributes were inadequate for contesting the rough Shinto horseplay in the Diet. The tragic Asanuma-*san*, stabbed to death at a public meeting by a rightist student, recklessly helped to provoke the university violence which, in counter-reaction, caused his death.

The twisted anti-American, pro-Marxist policies which the divided Socialists offered at election after election have never appealed to the solid conservative mass of the Japanese people. After 15 years of submergence, a mood of despair has slowly stifled, soured and embittered Socialist party workers. Japanese constitutional authorities have even brooded over the practicability of an arrangement under which the perpetual conservative government could offer two or three appropriate portfolios to the expiring Socialist opposition. It is doubtful, however, whether the Socialist command could afford to accept such patronage.

THE other unhappy by-product of the Socialist eclipse in Japan has been the proliferation of cynical cliques inside the swollen ranks of the Liberal-Democratic party. A large Diet majority is an embarrassment for any prime minister because it is a direct and immediate incitement to safe intrigue by his rival party conservatives. Mr Ikeda's enduring personal survival is based on Japan's economic miracle, which continues to raise living standards as markets, by herculean effort, are exploited on every front.

The habitual absurdities of Japanese Socialist policy are at present reflected in the party's blind opposition to attempts to heal the breach between Japan and Korea. The doctrinaire Marxist argument against this eminently desirable rapprochement is that it has been craftily designed by the Americans to involve Japan in war with China. The Socialists, believe it or not, also want to disband Japan's modest armed forces and simultaneously to scrap the American-Japanese security pact—both basic aspirations of the Japanese Communist party. Shigeru Yoshida, that wise old Japanese leader, who was never pro-West or anti-West but only pro-Japanese, marvelling with a shrug over the continuing and spectacular Japanese recovery after his retirement, once observed to your correspondent, "It just proves that the Japanese don't need a government so long as they can sell what they make." Certainly during the coming year of waxing national prosperity, Japan will continue to demonstrate that it can still nourish the empty forms of a "democratic" parliament, with a weak, faction-ridden government and a ridiculous opposition which, in its present form, has neither a future nor even a pathetic "vision" of a future.

When Saburo Eda surrendered that socialist vision or mirage to his fellow-dreamer, Narita-*san*, he is reported to have said to his son, Satsuki, "Now we can both go mountain-climbing together." His son, following in the father's doomed footsteps, has been dismissed from Tokyo University for inciting students to violent excess against authority. So does Japanese socialism in *Harakiri* fervour, renew itself suicidally from failure.

Lean Year in Poland

AGRICULTURAL difficulties have forced the Polish government to make serious changes in its economic plans. The revision, which was foreshadowed by Mr Gomulka in a speech on November 26th, has been confirmed in the draft budget and plan for 1963. Mr Gomulka did not mince words. A big drop in this year's agricultural output will force Poland to increase its imports of grain. This, in turn, will be an additional strain on the already sickly balance of payments with non-communist countries. Since, on top of this, investments have proved more costly than planned, drastic steps have had to be taken to redress the balance. Next year will see a relative pause. Gross industrial production is to increase by 5 per cent (compared with a rise of 8.7 per cent this year), but the output of light industry is to rise by only 2 per cent; and so are nominal wages. Over the next three years, the whole investment programme is to be revised so as to foster agriculture without hindering basic production.

Within the Soviet block, Poland is the only country where small-scale private farming still predominates. In 1961 it was also the only member of the block to enjoy a bumper harvest. This coincidence led to rash conclusions that Poland may be the only communist country close to solving its agricultural problem. This, however, is far from true. Not only did bad weather play havoc with this year's harvest, but over the last few years Poland has been compelled to import, on an average, more than two million tons of grain a year, chiefly for fodder. In a rapidly industrialising country where wage increases tend to be translated into a higher demand for food, agricultural supplies are crucial; hence the government's current efforts to increase investment in agriculture.

The trade problem is different. Nearly 40 per cent of Poland's foreign trade is with countries outside the Soviet block—a proportion that is much higher than the communist average. Yet in its trade with non-communist countries Poland, being an exporter of food and of such raw materials as coal, has been hard hit by the movement of the terms of trade. Polish planners suggest that one remedy must be to increase the share of equipment and manufactured goods in Polish exports to the West. But one passage in Mr Gomulka's speech shows that he regards Poland's present degree of dependence on western markets as excessive and "dangerous" and is considering how it can, relatively at least, be reduced.

Slow Coach?

SIR—Railway closures already carried out, you say (December 8th), have had slight effect upon the public consciousness and the Government's electoral fortunes. These piecemeal closures have taken place in widely separated parts of the country after being run down to vanishing point, and have not affected large numbers of people. The pruning which Dr Beeching will propose in the New Year, on the other hand, will be far more drastic and will be concentrated in one explicit programme. I have no doubt that opposition will be both widespread and emphatic.—Yours faithfully,

M. SLADEN
Branch Line Re-invigoration Society
London, W5

British Engineering Design

SIR—Design engineering in this country has generally been regarded as a Cinderella both by universities and by industry. But the average designer is an able draughtsman, often with a workshop background, but with little knowledge of physics or mechanical and production engineering. Higher salaries to designers might attract science and engineering graduates to design; but by the time a graduate has been through the average university course, which aims primarily at training research workers, he is only slightly better equipped to be a designer than he was to start with. Likewise, the present training of engineers is largely based on the need to grasp the fundamentals of physical science and to use these to analyse practical problems. But the inverse process of building up to a successful design requires this and a good deal more: it is also necessary to understand various methods, and the economics, of production, user requirements, and the properties of materials; to appreciate the potentialities of computers and the use of models as aids to technical synthesis and æsthetics; and above all to foster any natural bent towards creative design.

"Tacking on" a course of design to an existing syllabus is not enough. These studies should themselves form an honours degree course in engineering. Is this a job for a new university, say York?—Yours faithfully,

E. H. FROST-SMITH
Staveley Research Department

Steel Investment

SIR—Your article of November 3rd on the problems facing the French steel industry and the new Dunkirk plant—"this pistol . . . in a sense aimed at Dagenham"—poses two major problems which have concerned steelmakers for a long time. 1. How can capacity be increased and plants modernised while maintaining a competitive position without the threat of over-capitalisation? 2. How can the steel industry be made more flexible, with a less formal capital structure?

Since the war Britain's steel industry has spent £1,500 million on its capital investment programme but it now seems improbable that its hopes will be realised and instead excess capacity is likely to remain for some time. There is, however, the solution offered by continuously casting steel, a practice which has been in the news recently with the commissioning of Britain's first large scale production plants. The main attraction of this process to financiers lies in the very fact that equal, but more efficient, capacity is offered for a much lower initial capital outlay and with lower running costs. Increased yields of 8 to 10 per cent are possible over conventional plants.

From your article it is evident that the new French plants, their eyes on the rich markets in southern England, will be admirably placed to offer the lowest prices under the Coal and Steel Community's model rules, on which domestic producers will have to "align down" in order to get orders, thereby reducing profit margins and the means of self-financing. Continuous casting offers major economic advantages, one of which is the vital fact that the costs of writing off existing plant and replacing it with continuous casting can be recovered within a remarkably short space of time. Moreover, since it is ideally suited to modern oxygen and electric steelmaking techniques the same plant can appreciably increase or reduce production according to the dictates of the market.—Yours faithfully,

Workington, Cumberland A. M. WHITE

Aden

SIR—Your note (December 15th) suggests that your correspondent knows some people in the Aden Trades Union Congress. Does he know anyone else?—Yours faithfully,

Aden P. M. BOILEAU

Canada

SIR—Your correspondent is right in his contention (November 24th) that Canada can no longer live on the export of the fowl of the air, the fish of the sea, lumber and minerals, and that our future development must be based on stimulating the manufacturing industries. But he contradicts this conclusion with the advice that we stifle industrial production through removing the tariff safeguards and incentives on which so much of our production is dependent, owing to our higher cost structure and lack of full industrial maturity. Our tariffs are not high: they are only a fraction of those that were in force in such countries as Italy and Japan while they were achieving industrial maturity in the past decade and a half. The results for these countries of "protectionist" measures are observable to anyone who has been to them: they have prospered mightily. Equally wrong is the statement that Canada's policy has been the promotion of industrial development through responsible tariff measures. It should have been, but the Liberal government did not see it that way. They bent their efforts to turning Canada into an efficient exporter of raw materials at the expense of our secondary industry. Nor is the Kennedy trade programme our bright white hope. It is an invitation to economic suicide.

Your correspondent has correctly analysed the nature of the problem, but his prescription for the cure is far wide of the mark. Dogmatic adherence to traditional Liberal economics is not the way out. We need to duplicate the experience of Japan, Italy and France, rising living standards, governmental planning, industrialisation, and "protectionism" and all.—Yours faithfully,

Toronto EDWARD CARRIGAN

Shaw Alphabet

SIR—Instead of changing the spelling of English to conform to the pronunciation (November 24th), why not the other way around—change the pronunciation to conform to the spelling? With the assistance of TV and radio and all school systems, a programme of gradual reform should certainly be practicable, if agreement could be reached on the desirable changes. Ours is a rich language, simple in grammar—and we make it horribly difficult by having allowed the spelling and the pronunciation to drift so far apart. The tendency grows instead of diminishing, and that could ultimately let the language fall apart as Latin did. Should there not be established the strong academy you hint at, whose function would be to combat this destruction?—Yours faithfully,

JAMES G. LYNE
New York

What will happen if Britain disarms?

THE ECONOMIC EFFECTS OF DISARMAMENT

by The Economist Intelligence Unit
sponsored by the United World Trust

This book is the most comprehensive examination ever published of such questions as:

Which industries depend on defence spending? In which parts of the country is employment on defence work greatest? How could spending on defence be replaced? What effects could disarmament have on consumers' incomes, the social services, aid to developing countries, investment?

To be published on January 3rd. Price 30s (31/6 including postage). 240 pp. Obtainable from any bookseller or direct from the publisher—

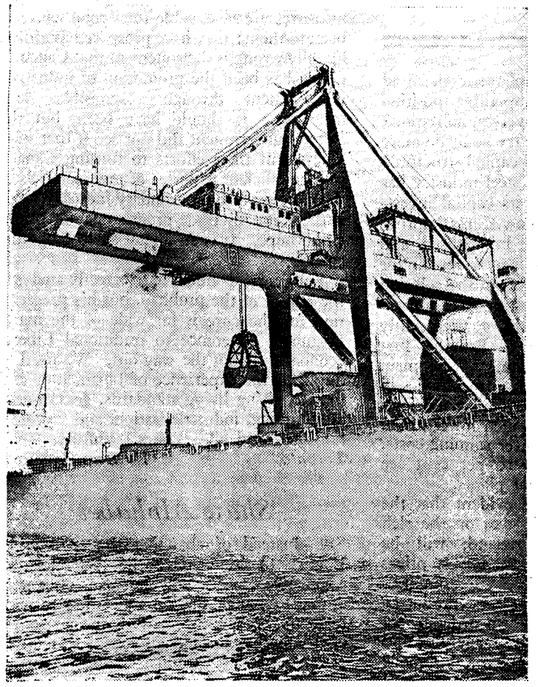
MATERIALS-HANDLING EQUIPMENT from IHI
where a century of integrity is your assurance of quality



IHI's many-sided activities include the manufacture of cranes of all sizes and descriptions. IHI's recent 1000 t/h unloader, the largest in Japan, is an outstanding example. For coal unloading the grab bucket has a capacity of 20 cubic metres, one of the world's largest. The quality of IHI's materials-handling equipment is guaranteed by a century of heavy-industrial experience and a long-standing policy of complete after-service.

Besides cranes, IHI builds ships and manufactures prime movers, boilers, and heavy machinery for use in the steel, chemical, construction, power generating, and mining industries. Brochures outlining IHI's capabilities and our informative "IHI Letter" will be sent on request.

THE BUSINESS WORLD

Economic Outlook for 1963

Year of the Tortoises?

BRITAIN does not, yet, publish an official "draft economic budget" for the coming year of the kind that common market governments are now prepared to hazard fairly early each autumn. If it did, now, what it could still hope for in 1963—and these draft budgets have a large dash of aspiration in with the cold-blooded national income forecasting—might in spite of the dip in October production and November exports compare a little better with the expected fortunes of the European Economic Community than British performance has over the last few years. The improvement we can expect would be undramatic: from near stagnation to still modest growth in one of the slowest-growing industrial economies of the western world, compared with some deceleration in one of the fastest-growing groups of economies in the West. In 1963, Britain's national income ought to rise nearly as much as Germany's and as much as the Benelux countries', though much less than France or Italy expect. A good deal of our hopes depend, however, on the United States, the other laggard in the growth stakes. There, the present mood of highly volatile forecasters is to hope for a higher rate of growth than most of Europe does, provided the promised tax cuts are sizeable and in time.

In both the United States and Britain, admittedly, the factor of "confidence"—that ponderous intangible which at once bedevils the forecaster and gives him a convenient hedge—looms even larger than usual at the turn of this year. This is not wholly confidence in government economic policy: Whitehall is committed firmly and Washington with resolute noises towards policies of stimulating demand. (In terms of political élan, Washington is now riding high, Whitehall soggy and punchdrunk.) In Britain, business confidence is also hinged to the uncertainties about Britain's joining the common market. In Europe, the moderation of growth rates has been accompanied by internal and external embarrassments, to some degree connected: a rapid rise in wages and salaries, no longer adequately offset by increases in productivity, and a cessation of growth in exports to "third countries" outside the common market.

This pressure for wage increases—which is certainly not absent in Britain either—does not arise simply from a general shortage of manpower in Europe, any more than in Britain or the United States. In Germany, certainly, there are statistically five jobs on offer for every man unemployed, and in the Netherlands four. But the labour market in Europe, as here, is patchy. Some restraint on building activity there is releasing manpower; the hoarding of labour is not quite so general. The real shortages, in all countries, are in skilled labour. But continuing habits of mind geared to a general shortage of manpower, plus the natural institutional pressure of the trade unions, combine to maintain the pressure for wage inflation into a period where no underlying inflation of demand continues almost anywhere.

Europe is emerging after Britain, as Britain followed the United States, out of a longish cycle of business investment. No country except the United States expects to maintain its rate of gross fixed capital formation; in several EEC countries, as here, private investment is drooping, with larger doses of public investment alone maintaining the momentum. On the Continent, however, official forecasters argue firmly that this may be a problem for 1964 and after, but not quite 1963.

Growth Rates and Guesstimates*

Percentage Increases over Previous Year

	Gross domestic product	Imports	Exports	Private consumption	Public consumption	Fixed capital formation
Germany:						
1962	3·6	9·5	3·5	4·4	6·5	5·5
1963	3·0	6·0	3·0	4·0	4·5	2·5

1963	2·7	2·8	2·5	2·3	3·5	0·5

Estimates: for Europe, by the European Economic Commission or national economic institutes: for Britain, by *The Economist*.

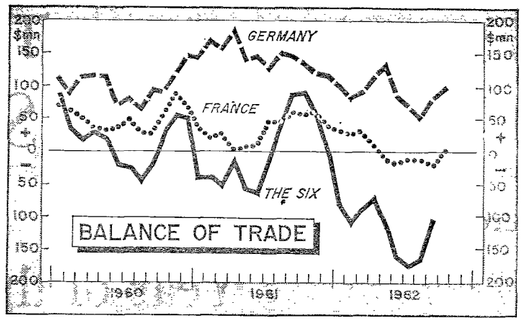
IN Britain, few people expect that the higher investment allowances and faster depreciation rates that the Government has now offered can do much to pick up manufacturing investment before late in 1963. Business uncertainties about the common market negotiations, the recovery of consumer demand, and even the electoral chances of the Conservatives, are understandably putting off decisions to invest in new plant and machinery; and it is hard to find firms who could not meet the increase in demand that they expect from the facilities they have now, or will soon have. The Government, however, is planning to increase public investment by some £200 million, on Mr Maudling's latest figure, in 1963-64; and as there is some buoyancy in commercial investment.

The other sector of demand in Britain, though not in Europe, that may be affected by lack of confidence is consumer spending. Personal incomes seem likely to be significantly higher in 1963 than in 1962; and the decline in outstanding hire purchase debt, plus freer credit, might seem to invite quite a sizeable upturn in consumer spending. But there are signs that the re-emergence of heavy unemployment in a number of areas, plus rationalisation and talk of redundancy in a somewhat wider sphere, has been somewhat inhibiting the free spending of middle incomes to which the British economy became accustomed in the fifties. It might be safest to assume that in 1963 consumer spending will rise more cautiously than disposable incomes, perhaps by 2½-3 per cent.

Optimists a month ago were forecasting a rise of 5 per cent in British exports during 1963; pessimists, a week ago, were fearing that they might actually fall. Both order books and the apparent improvement in British costs relative to those of Continental exports have suggested that the country ought to be able to hold on to its share of world trade in manufactures, which up to the autumn was rising at perhaps 4-4½ per cent a year. But continued trade growth at anything like that rate depends upon a considerable pickup occurring in United States demand. Unless the stimulus of tax cuts there makes itself felt fairly rapidly in final demand, the world could experience quite a slowdown in trade; and if so, reflation at home might make 1963 a year in which British exports rise less than in line with production. There seems no reason, on the other hand, why imports in the coming year need rise much more than production.

The current expenditure of central and local government has risen considerably during 1962, and Mr Maudling, singling this and public sector investment combined as the main expansionary force in the British economy, said last week that it would be going up as much if not more during 1963-64. Stockbuilding, which was checked by an actual fall in stocks at the end of 1961, was resumed this year but is likely to have been much lower than the 1961 total. The arithmetic of this growth forecasting assumes that during 1963 stocks would rise in line with production, that is by somewhat more than they are taken to have fallen in 1962. The rate of growth in gross domestic product to which the above reasoning would lead—taken as between yearly averages to compare with the Europeans' forecasts, rather than *during* the next twelve months in the figuring that British economists now generally use—would be a figure of 2½-2¾ per cent. (The rise assumed from end-62 to end-63, would be about 3½ per cent.)

There is little doubt that such a rise would be well within



the capacity of British industry and services—and fortunately or unfortunately, without much more than the increase in employment that one could expect to cover anyway by the growth of population of working age. The pattern of rising demand postulated above would do little to offset the disparity between prospering consumer goods industries and the capital goods suppliers who are short of orders; and it is in some of the consumer industries that production could be stepped up most easily without much extra manpower. The concentration of shipbuilding and heavy engineering in the north, again, might mean that this slightly quickened general growth may leave pockets of unemployment without much succour.

BUT, as Mr Maudling has again stressed, the pace of Britain's reflation is still checked in some degree by the limitations of the balance of payments. The outcome for 1962 as a whole now seems likely to be near balance on the current account, with perhaps a small deficit in the basic balance *ex* the balancing item but, more realistically, a clear surplus including these elusive errors and omissions. Such a result would still mark a further improvement, but a much smaller one than was achieved in 1961 over 1960—an improvement which Mr Lloyd last spring hoped would be matched this year, to give a current surplus of around £150 million. As it is, bare balance in the current account in a year of unevenly rising production and only modest stockbuilding is a below-par performance over the whole cycle.

In other countries, too, the balance of payments has moved closer to balance in 1962, though again by smaller degrees than was hoped a few months ago. In the United States the net monetary deficit—the current balance, it is worth remembering, is still in massive surplus—is expected to narrow from $2½ billion in 1961 to around $2 billion this year: in the summer American officials were optimistically talking of $1-$1½ billion. An elimination of the deficit by the end of 1963 remains the official target—though now it seems more of a hope than an expectation. The counterpart to the modest improvements in the payments balances of Britain and the United States has been a run-down in the Continental surplus. In the first three-quarters of 1962, as illustrated by the chart, the balance of visible trade of the six common market countries had deteriorated by $800 million at an annual rate compared with the 1961 out-turn, when these countries ran a current surplus of $2¼ billion and added to their reserves by $1,200 million. This year, up to end-September, these reserves had risen by only a further $400

million, entirely on account of France. Italy had succeeded in offsetting its current surplus, and Germany in losing it. The welcome improvement in the underlying balances of payments between the main industrial countries has certainly had a calming effect in the exchange markets: there is a blatant shortage of bull currencies to get into. Yet the markets still see the new conjuncture this negative way round, with fingers still crossed about sterling and the common market on the one hand and absorption of the continuing supply of surplus dollars on the other—which can fairly be taken as a point against the conservative school that has maintained that there is no problem of international liquidity but only one of balance. Another indication of the unsolved external financial problem is the continued inhibiting effect of external payments, even in better balance, on domestic economic policies in very many countries now.

Limited Promise in the Markets

IN the stock markets, 1962 has left a poor taste. Admittedly, as the year goes out, all the major markets show considerable recovery from the low points hit after Wall Street's collapse in May and from the immediate impact of the Cuban crisis. But the ensuing rallies, though considerable, have never been sustained. The Kennedy administration has not as yet transplanted into the 1960s steady growth on the early post-war pattern. The deterioration of business confidence after the President's fight with US Steel has goaded the administration and Congress into remedial action, so that nearly everybody is for a 1963 tax cut. And confidence has revived markedly with the President's Cuba victory. But at the opening of 1963, it remains a question whether the American authorities are ready and able to remedy the sustained deficiency of demand in their economy which the economists of OECD have themselves diagnosed. The forecasts about the American economy in 1963 that are now going the rounds are promising enough; but it may indeed be an illusion to suppose that the inhibitions on American growth will be quickly removed, or that Wall Street is not already discounting a good part of next year's improvement. For investors, that could mean that some factors in the jerky conditions of 1962 could be at work next year too.

Investors in Britain have more than Wall Street to contend with in 1963. They also have British politics, the common market and the balance of payments. Politics are likely to continue to worry the City, which in the past eleven years has come to take a friendly government for granted. The common market, if Britain manages to get in, will yield long term benefits—some of them already anticipated—but also important short term shocks. If Britain fails to get in the adverse impact on the stock market will be considerable, and sustained.

Much the same kind of impact may be felt on the balance of payments. Entry will involve some new strains, from dearer imports of food and freer exports of capital, though these strains will be spread out and are not in the reckoning for 1963. A collapse of the Brussels talks, on the other hand, would involve an immediate psychological blow to sterling, and some big uncertainties for future policy. Britain's current balance of payments in 1963 could itself be adversely affected if output in Britain were to grow much faster than of late, though that would imply some significant gains in earnings by some industries. But the scope for a further reduction in interest rates in Britain may be smaller, because of the payments risk, than some people have supposed. If so, the scissors movement between equities and gilt-edged that has prevailed in the London market since the spring of 1962 may not continue; even if the climate for equities remains unexciting or slightly improved, gilt-edged may no longer go up.

One can suppose that on a level output next year, industrial profits would show some improvement, on cost cutting considerations. But gains are likely to be limited to the lighter end of industry and 1963 hardly looks likely to become a year of good harvest for shareholders. Domestic politics will cast plenty of shadows. Institutions with, say, 50 per cent of their portfolios in equities at market values, will not be pushing that percentage radically higher, but expanding their ordinary share holdings selectively and cheaply through rights issues.

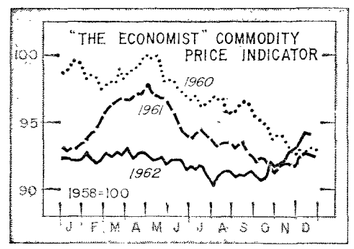
Commodities on an Upward Trend?

THE sharp turn upwards in commodity markets that occurred this autumn has not yet transformed the balances of payments of primary producing countries. Nor would one expect the rise in world industrial production that seems on the cards to bring about any very massive growth in commodity prices—unless the American acceleration is sharper than one guesses. Nevertheless the outlook for commodities in 1963 is somewhat more cheerful than it was at the beginning of 1962, and there is more talk of world commodity schemes.

By the beginning of August this year *The Economist* commodity price indicator had slipped to 90.4 (1958=100); from July to September prices remained about 2 per cent below their level of a year earlier. The depression was general. Surpluses bore down every commodity of importance, and in contrast with earlier slumps scarcely any primary product was sheltered.

Difficulties which swept aside the International Sugar Agreement and crippled international regulation of tin and lead, moreover, shook people's vestigial confidence in the power of such bodies to sustain commodity prices in the face of a serious imbalance between supplies of foodstuffs and raw materials and the demand for them.

This depression, however, was in fact the prelude to a powerful upsurge in prices, which lifted *The Economist* indicator no



less than 4 per cent between the start of August and the end of December. Such pointed recoveries have occurred on frequent occasions in the past. But the latest fight back by commodities seems backed by positive shifts in the underlying balance between production and demand. The ease with which consumption can rise to overhaul production has come as a jolt.

The recent recovery may appear to have arrived with improbable speed. But it is the essence of commodity markets to react hard and fast to comparatively minor changes in circumstance. Imperceptibly, the low level of prices has been building a solid platform for the recovery, both by purging markets and reacting on demand and supply. It might not be coincidence that lead, which had been left largely to fend for itself, appears to have turned the corner ahead of copper, producers of which have supported the market.

For raw materials the presumed growth in industrial expansion in 1963 should be at least sufficient to consolidate this year's late gains, though the fear persists that further unwanted increments in supplies might be in store. More lead, zinc and wolfram might be pressed on Western markets by the communist block, and the American stockpile is now an ever-present threat. But the pressure of stocks of cotton need not create any problems while the United States holds tightly the key to its store. Fibres like wool, jute and sisal are already in balance and can look forward to an upward tug of demand.

For foodstuffs, which have been hit hardest by surpluses because demand for food is so limited in elasticity, the transformation of 1962-63 could be the most encouraging. There could be a powerful reinforcement for these products from refurbished international support schemes such as for sugar, coffee and cocoa. But each of these commodities seems better able to fend for itself in the coming year.

How Soon Will America Turn?

New York

UNCERTAINTY about the tax cuts is making the American economic outlook for the next twelve months even hazier than usual. Unquestionably, the Administration is going to recommend a substantial reduction in rates and reform of the tax structure. But it is impossible to predict Congress's reaction, and the size, nature and timing of any reductions remain in doubt. This complicates life for harassed business forecasters, who were shaken by Wall Street's crash last spring but recovered some of their aplomb after the economy managed to put on an effective show of resistance.

Most forecasters now think that activity would continue to advance during 1963, although moderately, even without the benefit of tax reductions. Failure to obtain any tax relief would have a dampening effect, in view of the expectations that have been built up; by the same token, substantial across-the-board reductions might turn the present pedestrian expansion into a trot and just possibly a gallop.

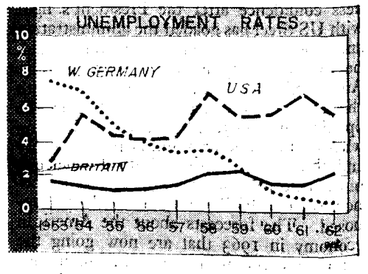
Gross national product at the end of 1962 is estimated to be running at about $560 billion; the forecasts for GNP in 1963 range from about $575 to $610 billion. Given the economy's ability to weather shocks, from the steel crisis to the debacle on Wall Street, a rise to $580 billion might be guessed. This might not make much difference to the unemployment problem, but it will stifle a good deal of worry about the squeeze on profits and the existence of unutilised plant capacity.

Fears of a serious decline, which were once so widespread, have all but vanished during the upsurge of confidence following the Cuban crisis. The first quarter of 1963 may see some softening, although even this is disputable, but no real slide. The economy is not suffering from any of the excesses that normally crop up before a recession strikes and, though there are many sluggish sectors, particularly unemployment and capital investment, there is an absence of extreme weaknesses and strengths. Government spending, which helped to sustain activity during the summer doldrums, will continue to rise; personal incomes also will increase; and though business fixed investment has lagged behind expectations through all of 1962, it has been climbing slowly and should continue to do so. This spending may indeed accelerate, for business has the funds to invest, and the desire to improve profit margins should lead to increased outlays for modernisation. Inventories are now at very low levels, and stocks are likely to be rebuilt as demand steps up.

This is happening already. The lull after the stock market break has been succeeded by a revival of momentum in most industries, accompanied by firmer prices as well as increasing production. Hard goods manufacturers, led by the automobile makers, have been expanding output, and should continue to produce at a healthy rate, both for sales and stocks. The pickup in Detroit is giving a boost to the depressed steel industry, which can now count on a fairly substantial level of output in the first half of 1963, helped by new wage negotiations—which might lead to higher prices if the automobile industry can, in Detroit's phrase, put two good years back to back. Other industries suffering from competitive problems and slack demand are raising their sights, including chemicals, textiles, aluminium and machine tools. Retail trade should continue to do well, although competition between department stores and discounters is bitter. There is some question about the construction industries, which come closest to being a potential weak spot, but most of the danger lies in real estate speculation and speculative building. Even in this area, the chances are that dollar volume will rise somewhat.

All in all, then, industrial production seems poised for a rise of five per cent or better, and corporate profits, which in spite of everything reached a record level in 1962, will undoubtedly hit a new peak. Wall Street, where sentiment runs to extremes, is obviously expecting a good year. But there too disappointment on the tax front would serve to chill hopes perhaps more than the situation warrants. There is no shortage of money, and with the Federal Reserve pursuing a mildly reflationary policy interest rates continue low. This could change if tax cuts are voted or should the deficit in the balance of payments show a sizeable increase, but as either of these would indicate rising demand, tighter money would be a symptom of the strength of internal demand rather than of weakness.

A moderate increase in general business activity is not the most exciting of prospects. But it is a good deal better than a recession, which was considered the most likely possibility only a few short months ago. The mood of the business community is fairly sober still; even on Wall Street there is a feeling that the economy may be in for some unpleasant surprises, particularly on taxes. Over the past three years, hopes of a strong rise have been dashed in various fashions, but almost always unexpectedly. Now that this sobriety reigns, the surprises, for once, may be pleasant ones.



Germany in Two Minds

Düsseldorf

FEW people in Germany, looking forward into 1963, are quite sure which of two overlapping uneasinesses to put uppermost. The continued rise in wages, following upon the arrival of brim-full employment in a country accustomed to a comfortable reservoir of manpower, worries many people. Dr Hermann Abs, of the Deutsche Bank, has commented that a rise in production costs approaching 30 per cent in the last two-and-a-half years (counting in revaluation of the D-Mark) could not but seriously hamper Germany's competitive situation in the world markets. And there is no doubt that it has: the growth of German exports has failed to match the momentum of its partners in the common market—or even of the British.

But these traditional fears of inflation and its effects are now paralleled by anxiety of another kind—that declining momentum internally as well as externally may soon require stimulus, rather than the restraint which so far the Government is applying for its respectable reasons. Herr Fritz Berg, chairman of the Federation of German Industries, voiced this growing feeling when he told the Chamber of Industry recently that the Government should intervene and make use of fiscal and other measures to bolster up a fading prosperity.

In this Keynesian approach, Herr Berg is not for the present backed up by German professional economists. The six economic research institutes in Germany, which in the past have often pronounced divergent views among themselves, are for once agreed on a common analysis of Germany's economic prospect. They see no reason for pessimism. Economic growth should continue in 1963, at a rate of about 3 per cent annually, which if not up to earlier years is nothing to worry about. Moreover, they reckon that any slackness in private demand will be offset by what they consider the normal "expansive tendencies" of public budgets, without any need for further government intervention to stimulate the economy. Last week, indeed, the Government raised its own sights for 1963 to a 4 per cent growth rate.

Not all industrialists are as ready as Herr Berg to say what ought to be done about the economy as a whole, but there are plenty bemoaning the depressed state of their own industries. Shipbuilding, which was unable to stand the effects of revaluation, seems now to have been joined in its mood of black pessimism by the textile business, which has lost business to lower-wage countries such as Italy, Greece, and Japan. Coal remains unable to stand up to the competition of oil. Steel too, the backbone of German industry, is reporting disquieting figures. Its orders in the third quarter of 1962 were about 10 per cent below the level of current deliveries.

A general survey of investments in German industry showed that 11 per cent of all firms reduced their capital investments during 1962, as compared with 1961; in earlier years this proportion had not exceeded 2-5 per cent. On the other side of the medal, the boom in nearly all sectors of consumer goods industries seems undiminished; and the building industry, which also profits from the high level of wages and personal incomes, is prospering. This German building industry however can easily weather the abolition of the special incentive given until now in the income tax law.

Herr Blessing, president of the Bundesbank, said this month that Germany's (current) balance of payments deficit might rise from DM 1,000 million in 1962 to about twice as much next year; but added that he did not consider this, and the further drain on the reserves, "an acute danger to the country's economy." Some of the more conservative private bankers have been inveighing against the "riotous living" such as foreign travel (up to 36 per cent in 1961, with estimated outgoings totalling spending abroad about DM 4,000 million) which is one of the invisibles that turn Germany's visible trade surplus into this sizeable deficit.

Problems of French Success

Paris

FIVE problems dominate the French economic and financial sector in 1963, and on the solution found to each of them depends the fulfilment of M. Giscard d'Estaing's optimistic predictions of continued rapid growth in the economy.

The first concerns *employment*. The repatriation of 250,000 potential workers from Algeria and the release of an equal number of servicemen have abruptly reversed the trend on the labour market. Already pockets of unemployment have formed. Some of these are in areas where economic activity is lagging behind the increase in population, such as the West, the Centre, South-West and South-East; others are in the less skilled grades of work, unacceptable to the Algerian repatriates. If the world-wide slackening in economic activity came to affect France, these "pockets" might well grow; in that event the new Employment Fund for the retraining of the unemployed may be put to a severe test.

Another danger is the *rise in prices*. At present this affects only retail prices, which have risen by 5 per cent in one year; but pressure does not appear to be slackening and increases are now expected in foodstuffs, in public and private utilities, and in certain industrial products. The current extensive increases in wages and social benefits will accentuate this trend, with the production of consumer goods lagging behind the increase in incomes.

Conversely, *private investment* will grow more slowly as a result of the shortage of funds experienced by a number of undertakings where wages are increasing more rapidly than selling prices or productivity. The resulting fall in the demand for capital equipment is likely to be intensified by a slackening in export expansion. In time this might set off a cumulative process of slowdown, or create a number of bottlenecks that would hamper the production of consumer goods and accelerate the rise in their prices.

The attempt to tap further sources of finance for investment will therefore constitute a major preoccupation for government and business in the coming year. The government is at present hesitating between several possible ways of dealing with the situation: to encourage businesses to augment their capital, as the Fourth Plan recommends; to encourage the issue of debentures convertible into shares and the taking out of with-profit life insurance policies; or to facilitate the creation of investment trusts, which are permitted since 1957 but of which only a few have actually been set up. To conserve the limited resources of the French capital market for the use of French enterprises, access to the market by foreign investors under favourable conditions continues to be ruled out.

Finally there is the problem—admittedly strictly a fiscal one, not a problem of real resources—of the load on the *budget* of possible further social reforms that might be decided on during the year. This year, although considerable savings were effected through the termination of the Algerian war, the budget had to be increased by NF 3,800 million; this additional expenditure was compensated through increased revenue from economic expansion. But can this be expected to hold good next year? The Gaullist majority affirms its intention to build more schools and housing, to increase family and old-age benefits, to support backward agriculture, and to retrain the unemployed.

Will all this be possible—without giving up the nuclear striking force—if the government is still worried by a larger deficit? New taxes would be a strange way of countering recession, but the possibility was mentioned by M. Pompidou in his recent investiture speech. Yet after all "the worst may never happen", and a 6 per cent increase in production is now forecast for France in 1963, compared with one of only 5.6 per cent in 1962. Moreover it may be that social policy will remain a subject for discussion rather than decision.

Italy Turns to Planning

Milan

GENERAL elections are expected in Italy next spring, and this is a country where the relation between elections and the trend of economic activity can be quite close. Public spending has a tendency to rise as elections approach, especially public works that stimulate national demand. This year political events may exert an even deeper influence than usual. Italian business circles look with caution upon the centre-left Government's tendency towards economic programming. Yet rationalisation of public economic policies on a long-term basis, which could follow from some form of planning, would help to maintain a high rate of growth as Italy's "economic miracle" of the fifties tends to run down.

First estimates of the economic results of 1962 show a slight decrease in the rate of growth of Italian GNP as compared with the quite exceptional results of 1961. The 1962 advance, however, will still be sizeable—5-6 per cent. The decrease in rate of growth of capital investment has been less significant: here, too, in 1962 the annual increase passed from over 10 per cent to less than 6 per cent.

Prospects for 1963 in Italy are thus partly bound to a "wait-and-see" situation. A general contraction of profit margins in the industrial sector has been the consequence of widespread wage increases. However, productivity has risen sharply; in the years 1961-62 the value added per man is claimed to have risen by 5.2 per cent yearly. In the meantime, the more highly industrialised areas of the country have entered a full employment stage and growing scarcities in labour are now experienced. However, financial markets seem to be regaining confidence: moreover, some recent credit and financial measures (with regard to Government bonds, for instance) are helping to increase the liquidity of firms.

Owing to the constant increase in Italian consumers' purchasing power, one can expect a continued growth in private consumption. A slackening in private investment may be offset by a governmental policy increasing investments in the public industrial sector. Italian exports have already reached record levels.

In conclusion, Italian economic prospects for 1963 appear to be good, indeed generally better than those of most other Western European countries: this notwithstanding some uncertainty connected with the political situation as seen through business eyes. Besides, Italy is confronting a series of problems deriving from the rapid economic development of the past years and from the "European" standard of living attained by its most "mature" sectors.

Slower Growth in Scandinavia

Stockholm

ECONOMIC development in the Nordic countries last year was not uniform, but prospects for 1963 suggest that they now share many common characteristics and problems. All four countries—Sweden, Norway, Denmark and Finland—show a high level of economic activity, particularly Norway and Denmark. In these two countries, however, export conditions have not been propitious, while high employment and increasing wages have been reflected in a rapid increase of imports, primarily of capital goods. Danish exports of agricultural products have been affected by a falling demand in their most important markets. Norway's traditional exports of wood products and fats have declined severely. Yet in both countries, total exports have achieved a fairly satisfactory level, in Norway thanks primarily to the engineering industry and in Denmark to industry as a whole. But considerable losses of foreign exchange have been recorded, estimated to reach 400-500 million crowns for both countries for 1962. In Norway, weak shipping freights have also strongly contributed to the deteriorations in foreign exchange earnings.

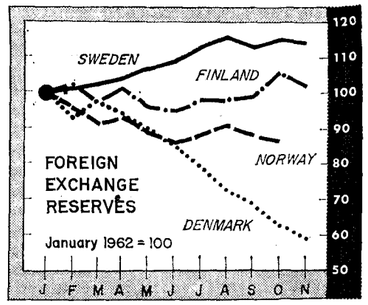
Difficulties in exporting wood products have affected Sweden and Finland, though in these countries too the effects have to some extent been offset by expanding exports from the engineering industries. Employment in Sweden and Finland has shown signs of weakening and this factor among others has caused the Swedish government to release the tax-favoured investment funds that companies build up, thus helping to sustain employment.

Industrial production in Sweden in 1962 is expected to rise by 3-4 per cent and in Denmark and Norway by more than 5 per cent. Finland showed rather slower growth in production of between 2 and 3 per cent, against rises of 9 and 7 per cent in the previous two years, and may not expand any faster this year. In both Sweden and Finland, special emphasis is now being put on public investment. Swedish capital formation this year should be up by nearly 5 per cent, mainly as a result of new building programmes. But in Finland, less active construction business may result in a rise of 1 to 1½ per cent in unemployment, involving up to 35,000 persons.

Despite the problems in certain export markets and the growth of imports, Sweden's foreign exchange reserves have risen considerably, largely as a result of a substantial short-term capital inflow. The situation in Finland is not quite so satisfactory (though better than in Norway and Denmark) but the reserves have been kept intact, aided by large loans from abroad.

Despite differences in their economic situations the Nordic countries generally display a certain optimism about the future. The most important factor hitherto, investment in new construction, may gradually be replaced by growing consumption, if recent inquiries about future plans are a good indicator.

Norway and Denmark have the most strained credit conditions. In Denmark the discount rate of 6½ per cent is relatively high and Norway is operating under restrictions. The Finnish market is also rather strained but Sweden, which has enjoyed two reductions in the discount rate this year, is enjoying relaxed credit conditions. Security prices were affected by Wall Street's troubles in May and October, but not to the same extent as the continental and British markets. The recent



recovery has not been sufficient to restore the levels of a year ago. But both economic and financial prospects in all these countries are characterised by "cautious optimism."

Japan Restrains Its Boom

Tokyo

THE Japanese Government is looking to 1963 as a time of further economic readjustment and "cooling off" from the overheated position in 1961 and early 1962. Economic growth in the current fiscal year, which ends on March 1, 1963, is expected to have been about 4½ to 5 per cent in gross domestic product. Since the growth rate hit almost 15 per cent in 1961—the first year of Prime Minister Hayato Ikeda's plan to double the national income in 10 years—it can be seen why the current rate is looked on as approaching a recession in Japan's economy. During 1963, however, this growth rate is expected to continue and probably increase somewhat.

High consumer incomes are expected to maintain the high demand for consumer goods, but the demand for capital goods is not expected to pick up very sharply from the decline in 1962. Inventories have been abnormally large as a result of the investment surge in 1961, which expanded capacity in many industries at a much higher rate than demand justified. Because of excess capacity and bulging inventories, some Japanese industries were forced to curtail production in 1962, most notably the steel industry. There was, moreover, a softening of domestic demand; but cuts in price managed to increase export sales.

Demand for capital and producer goods is expected to continue to show the effects of tight money on investment planning. The consumer durables market which held up well early in 1962, has begun to weaken noticeably, led by declines in television sales toward the end of the year.

The Japanese business community remains understandably cautious in its future expectations. Industry's fixed investment plans for the September 1962-March 1963 period (according to the Economic Planning Agency of the Japanese Government) were down 0.2 per cent from actual investments during the preceding six months, and 7.2 per cent down on the corresponding period of the previous year. This trend has been promoted by recent monetary policies, and the government was becoming somewhat alarmed lest it continue too far.

Considering prospects for next year, Prime Minister Ikeda said in mid-December that "a survey of the future trends of the economy reveals that while individual consumption and Government outlays tend to increase, private investment zeal is waning in certain sectors. Hence, I believe that this is a good opportunity for making up the lag in public investments that has long been the cause of apprehension, and for eliminating the various crinkles in the fabric of our national economy." He added that it was the intention of the Government to institute "vigorous measures" relating to export promotion, to the electrical industry, ocean transportation, city traffic, roads, housing, and medium and small industries, and "thereby achieve a normal economic growth."

Japan's stock market seems unlikely to show any major gains until the spring, when the effects of relaxation in the tight money situation would be felt. A Japanese securities firm, Yamaichi Securities Co., in a recent survey, said that capital increases by means of stock issues would decline by 30 per cent next year. This might ease the pressure on investors brought about by frequent capital issues—which some market commentators in Tokyo believe was largely responsible for the recent slump in stock prices.

After that slump in October, the Dow-Jones average of Japanese stocks showed a 200 point gain in the first two weeks of November, which was the most impressive market recovery in the postwar period.

The Japanese economy in the latter part of this 1962-63 fiscal year does not look favourable for a stock market boom. But many businessmen here believe the price of stocks will begin to rise steadily, despite occasional fluctuations, when the nation enters "Fiscal 1963."

BUSINESS NOTES

RATES

Revaluation Revealed

ON the Friday before Christmas the local authorities in England and Wales received the results of three years' work of the valuation officers of the Inland Revenue—the new valuation lists which become effective on April 1, 1963. From that date, and for the first time since the war, all kinds of property will be fully valued for rating purposes on the basis of current rents. Last March the Ministry of Housing and Local Government published in a white paper its estimates of the probable effects of the revaluation on the rate burden of different types of property. Now that the actual figures are available the Ministry remains strangely quiet. So far the only official figure available is that the total rateable value of property in England Wales has gone up from £737 million to £2,013 million—an increase of 2.73 times. Fortunately the Rating and Valuation Association has stepped into the breach and published a break-down of the new valuation lists based on a sample survey of three hundred and fifty local authorities.

The Association's sample covers 25 per cent of the local authorities and includes all types of authorities; it ought not therefore to be far from the actual figures for all authorities. The association's multiplier for all property however works out at 2.95, which is slightly higher than the official multiplier of 2.73. This is a warning against expecting too much of the sample; at the same time, it reinforces the need for the publication of the breakdown of the total figures by the Government—especially as the multipliers for the different types of property published by the association are a good deal different from the multipliers that the Ministry suggested to *The Economist* in April, following criticism that the Government was throwing the burden of revaluation on to industry.

In fact this criticism still seems to stand. Last April the ministry reckoned that the total rateable value of industrial property would rise 3.88 times because of the revaluation; the average rise recorded by the actual figures collected in the sample of the Rating and Valuation Association is 5.06 times. Half of this increase results from withdrawal of the 50 per cent derating privilege. The multiplier for domestic property is 2.74 compared with the 2.66 estimated by the Ministry. Therefore on the basis of this sample the increase in net annual value of domestic property since 1939 is 2.74 times compared to an increase of 2.53 times in industrial property over the last seven years since 1956. In its white paper the Ministry estimated the redistribution of the rate burden as a result of revaluation and expected the share of the total burden carried by domestic property to fall by 1.6 per cent. For commercial property it expected a fall of 13.1 per cent, and for industrial property a rise of 43.3 per cent. The association's figures now suggest that the share of domestic property may fall by as much as 7 per cent from 41.35 to 39 per cent, that commercial property will remain more or less unchanged at around 22 per cent, and that industry will find its share increased by as much as 70 per cent from 9.57 per cent to 16½ per cent.

GOLD POOL'S FIRST YEAR

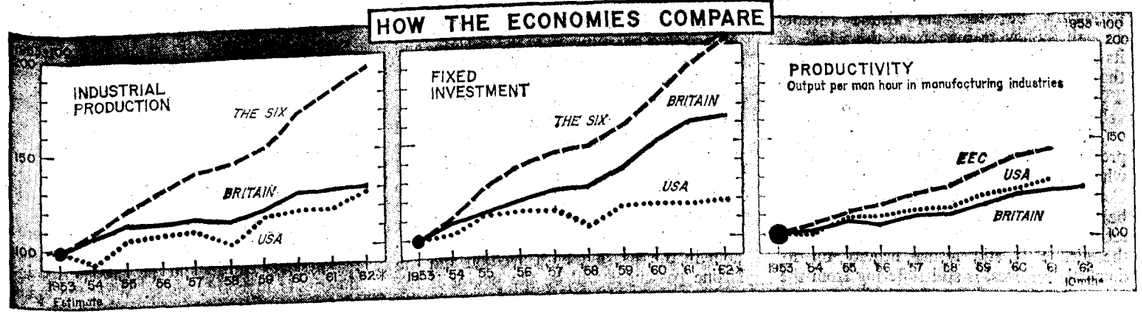
Account Balanced

A continental correspondent writes:

THE gold pool has finished its first year in a strong position. At the end of October, as reported in *The Economist* of November 17th and 24th, the pool had a cumulative deficit of $82 million. By the end of November this deficit had been reduced to $12 million. The gold market was quiet all through the month and the pool, administered by the Bank of England on behalf of the eight member countries, made purchases estimated at about $70 million. So far as is known no sale of gold was made by the pool during the month. Thus the surplus for November is also about $70 million. In the first ten days of the month the Russians are believed to have sold another $50 million of gold, thus enabling the pool to recoup more than the whole of its losses in two days of the Cuba crisis; in the crisis week itself, as noted earlier in this correspondence, the Russians had obligingly come to President Kennedy's help by selling 20 tons (around $20 million) on the London market.

In accordance with the (unwritten) statutes of the pool, the surplus for November was distributed among the eight member countries—that is, sold to them by the Bank of England against dollars in proportion to their quotas. As the American quota, at $135 million, is half of the total, the United States got $35 million; at the same time the United States made special gold purchases of $50 million in Switzerland, partly in connection with multilateral swap operations with the Bank for International Settlements, so that the total special addition to the US gold reserves in November was $85 million. Other receipts from the gold pool were $7.8 million for Germany, $6.5 million for Britain, France and Italy and $2.6 million for Belgium, Holland and Switzerland. These transactions are not distinguished in the formal published weekly or monthly statements of gold reserves, and consequently give these still less significance. Thus if a central bank announces that its gold reserve did not vary for a period in which the surplus of the pool was reimbursed, this implies an equivalent loss of gold in other operations.

The pool has clearly worked well in its first year. It passed through the dollar pressure of June and July, and the Cuban crisis of October, with deficits well short of



the present maximum commitment of $270 million, and these deficits themselves were quickly reversed. The efficacy of the pool might indeed have been still more spectacular if its activity had not been kept secret, at the request of the Bank of England. Even so, private buyers of gold are well aware that the central banks are not willing to let the gold price go above $35.20 and they are consequently less ready to risk their funds in gold speculation. So the pool appears to have established itself as an important part of the mechanism set up to protect and stabilize the Western currencies—partly with Russian help.

PAN AMERICAN—TWA

Merger of Giants

WHEN two aviation giants decide to combine, as the managements of Pan American and Trans World Airlines have agreed to do (the difficulties that the merger still faces are discussed on page 1275), other airlines must ask themselves apprehensively what these two are cooking up. It would be naive in the extreme to think they are taking this major step merely to strengthen their position *vis-a-vis* the other airlines, domestic and international. Both are flourishing in the international market like the proverbial bay tree and both showing handsome profits (by airline standards) on the operation. Pan American might argue that foreign competition will make it difficult to sustain the same rate of growth as in the past unless the airline can draw on a larger catchment area for its traffic, as it could if given access to TWA's sizeable domestic network, while the economies to it of a joint international service are obvious—although not necessarily so obvious that alone they would prompt such a major step.

For TWA the merger has immediate advantages. This airline has been bedevilled by many of the same ills that beset the British Overseas Airways Corporation in this country (although BOAC has never had to deal with any capricious equivalent of Mr Howard Hughes). It has had three changes of management in bewilderingly rapid succession; it has lost traffic to competitors, because of inferior equipment, at a rate that brought the airline to its knees. Re-equipment has put it back on its feet internationally, but left the airline without enough money to modernise the whole of its domestic fleet; it was lack of cash rather than lack of enthusiasm that prevented TWA from buying its planned fleet of Caravelles.

This is the situation that TWA's current president, Mr Charles Tillinghast, inherited when he was brought in from the Bendix Corporation last year, after the airline had been leaderless for eight months. TWA's recovery since then has been striking—but the airline is still losing heavily on its domestic services, is still suffering from the lack of modern aircraft on these routes, and is still unable to do much about it. Mr Tillinghast is openly and seriously worried at the turn taken by competition within the United States, which is to run more flights with fewer passengers, but his competitors appear to be taking little notice of his pleas for a voluntary reduction in frequencies. It would be surprising if he were not also worried by the possibility, still open to Mr Hughes, that he might regain control of the airline simply by paying off the steadily diminishing debt on the airline's jet fleet. A partnership with Pan American in which Pan American's Mr Trippe would be chairman, Mr Tillinghast would be president, and Pan American would be the largest shareholder, must look an ideal way out.

The Pay-off

THESE might be decisive arguments for airlines smaller or weaker or more in need of mutual support than either Pan American or TWA. But it required a deeper motive to clinch this deal; the clue lies in the joint statement announcing the details of the merger before Christmas. "The merger" the statement ran, "will enable the United States to regain a substantial portion of the trans-Atlantic passenger and cargo traffic now diverted to foreign-flag airlines." The idea that each airline has a divine right to a fixed percentage of the traffic is immensely popular among airlines. It is also nonsense, as Pan American well knows. Any airline that takes it seriously is liable, like BOAC, to find itself buying an excessive amount of equipment. To suggest seriously that "x" per cent of traffic must go always to airline "A" and "y" per cent to airline "B" could be the beginning of a threat to traveller's choice.

The idea would be silly if it were not also dangerous. When an airline feels it is not getting its predestined share (and who, pray, decides what that share "ought" to be?) then it asks its government to put curbs on the competition that is depriving it of its "rights." When airline managements as sophisticated as those of TWA and Pan American put their joint signature to statements of this kind, then the presumption is that they are manoeuvring to pay foreign airlines back in their own coin. There is no question but that both have been sorely tried by checks and curbs imposed by foreign governments, including the British, on their operations in order to protect national airlines from the rigours of American competition. It is no secret that Pan American is heartily sick of the business and has decided to take a leaf from the opposition's note-book and start a restriction-minded lobby of its own. A move is already on foot to vote the Civil Aeronautics Board powers to limit the number of flights that foreign airlines may make into the United States, in addition to its present power to limit the places where they can fly. But the United States has up till now been almost the sole defender of the principle of freedom in the air, and both aviation and the airline passenger will be the poorer if the merger is used as an excuse for abdicating from this proud and lonely post. Competition from a single, big American international airline could do nothing but good in a market increasingly dominated by pooling agreements and "you-scratch-my-back . . ." arrangements—provided that it really is competition.

BANK ADVANCES

Industry Pays Back

FIRM evidence of industry's disinclination to borrow is provided in this week's detailed classification of advances made by all members of the British Bankers' Association. In the three months to mid-November total advances rose by the modest amount of £30 million; nearly the whole increase was at the clearing banks. And the figures show that the increase was much more than accounted for by two categories of non-industrial borrowers that had previously been restrained by the official request. Personal and professional borrowers took a further £27 million, making a rise of £84 million on the year to £749 million. A still larger increase in the latest quarter, of

BRITISH BANKERS' ASSOCIATION

Changes in Advances

(£ million)

Group	3 mths. to Nov., 1961	3 mths. to Nov., 1962	12 mths. to Nov., 1962	Total to Nov., 1962
Personal and professional	− 40	+27	+ 84	749
Hire purchase	− 42	− 3	− 12	104
Retail trade	− 12	+12	+ 45	400
Industry and other trades	− 75	−30	+177	2,219
"Other financial"	− 15	+29	+ 50	385
Other groups	− 42	− 4	Nil	179
Change in total	−226	+30	+345	4,036

£27 million to £385 million, was registered by the "other financial" group, which includes property developers who had borrowing propositions waiting ready for the official go ahead. Hire purchase houses, however, took a little less from the banks—evidently because of the slackness in their business. And the same was true, with few exceptions, of industrial borrowers. Excluding retail trade, which increased its advances by £12 million, the other industrial and trading groups reduced their advances by £30 million. This was admittedly smaller than the reduction of £75 million twelve months before—but that was at the height of the intensified credit squeeze. In the November quarter of 1960 the industrial group increased its advances by £72 million. By any reading, industry is holding back.

SALARIES

Public Pay

JUST how Dr Beeching's £24,000 figures in the Ministry of Labour's new index of salary earnings in the nationalised industries is anybody's guess. What the index suggests, however, is that the state concerns have been more liberal in handing out pay rises over the last six years than most employers, although it may be a rather unrealistic exercise to average the junior office boy's pay packet with the chairman's cheque. The Ministry itself is anxious to point out that because the type of salary-

earners and the distribution of pay differ considerably between the various nationalised industries "the average," it says, "is not representative of any one of them." But this only suggests that some of the boards must have stepped up their pay very sharply.

This new analysis of salaries also suggests that civil servants and local government officers have also been doing not at all badly. These public employees will doubtless say that they are doing no more than catching up lost ground. But may not the tail now be wagging the dog?

GOLD SHARES

Good Year for Kaffirs

FROM a low point of 54.3 at the end of January the *Financial Times* index of gold shares had moved up to around 70 by mid-June, but it has not moved very far either way since then. A little of the gilt has rubbed off since the second quarter when a good deal of buying was generated in part on hopes of a higher price for gold. These have dwindled, but the steadiness of the index suggests that gold shares have something more to offer than the possibility of $70 an ounce (or whatever figure the gold enthusiasts have in mind). The attraction, a firm of London brokers has recently suggested in a study of the mining houses and investment companies, is: "a unique combination of an expanding industry plus a guaranteed market free from price fluctuations plus a 'bonanza' if international financial developments should result in an upward adjustment in the price of gold."

Eighteen months or so ago few investors outside South Africa wanted anything to do with South African gold shares, and massive sales by overseas investors were only brought to an end when South Africa imposed controls on capital movements in June 1961. Since then, however, the Republic's foreign exchange reserves have risen steadily and this has been accompanied by some relaxation of the controls, particularly on arbitrage dealings. But the discount between Johannesburg and London prices still remains at around 10 per cent. For the moment at least, as the brokers point out, "the stability of the present government is a fact, even if overseas opinion does not approve."

But South African mining has other, non-political hazards as the recent disaster at

Espresso Expresses

COATED in the gravy of tradition, the catering services of British Railways are nevertheless making their concessions to the hamburger age—concessions which are playing an urgently needed part in reducing the size of the deficit on which restaurant cars run. Last year, out of gross receipts from its hotels, refreshment rooms and restaurant cars (excluding Pullmans) totalling £24,289,527, British Railways made a net profit of £752,773; but the provision of food and drink on trains, which accounted for nearly one-fifth of receipts, made a net loss of £264,423. This, however, was the smallest loss since 1948.

Service or solvency are alternatives the railways are used to facing; the catering department is at least fortunate in having an extremely wide range to offer its customers, from full-scale kichen/dining cars to factory-made sandwiches. Making fuller use of this range has been the main method of reducing losses on train meals, for though passengers spend much less per head on beer and pork pies than on 12s. 6d. luncheons (even without that separate little bit of fish) savings on wages and overheads are large enough to increase profitability in more or less directly opposite ratio to the scale of service offered.

Dining car meals can be excellent value for money or an appalling waste of it, but unfortunately timetables have an even greater effect on the profitability of individual services. Good or bad, a restaurant car must have its chef, conductor and waiters who have to be paid a full day's wage (often with overtime) even if they happen to be serving only one meal; their accommodation must also be paid for if they spend the night at some distant junction. Breakfast on commuter trains, for instance, is as popular as the trains themselves, but this does little to compensate for the mid-day reaches of idleness. The opportunities for crew-switching are limited: British Railways says it cannot avoid the expenses such as that of sending a dining-car with staff up to Leeds from London at 7.50 a.m., arriving 11.32 a.m., and keeping them there until the return journey at 7.30 the following morning. On this run the crew cost equals 63 per cent of receipts, compared with an average figure of under one-third.

Kitchen cars cost £24,000 to build and equip; counters serving cold food and a few simple hot dishes are far cheaper to instal as well as to run. Some 68 per cent of all regular train services now have a form of buffet, the most profitable of all being the one man bar serving snacks and drinks—the more whisky it can put down its passengers the happier British Railways is. The latest idea is the "griddle car"—a more adventurous form of counter service, with a "chef-conductor" grilling steaks and poaching eggs to order. But caution in experiment and the slowness of replacement opportunities hamper streamlining—griddle cars are much spoken of but only three are in use.

Cheaper ways of providing hot meals must eventually replace under-used dining cars, and even some of the well-used ones. Would passengers object so much to helping themselves to breakfast? Imaginative use of pre-cooked casserole dishes might make it possible to serve a meal every bit as good as the traditional dinner with far less staff and no kitchen. A quicker write-off of ageing kitchen cars might pay in the long run. Railway caterers are thinking on the right lines, but until they can make a cleaner sweep the boast that our trains provide more eating facilities than all those of Western Europe put together simply invites the question "what for?".

West Driefontein showed. This will halt for at least a couple of years the growth of a mine—there are not many of them—earning over £1 million a month. Now its working profit from gold is likely to be reduced from a level of £1.3 million to about £600,000 for December, £459,000 for January. Profits are expected to rise to £750,000 within two or three months but it is likely to take two years and about £5 million to restore the mine to its recent rate of profit. West Driefontein is in the Consolidated Gold Fields group which acted promptly in letting shareholders know the effect of this subsidence and the collapse of part of the treatment plant on profits. The implications for dividends in the immediate future are all too clear. Only the day before the disaster the December dividend had been raised from 3s. 1.2d. to 3s. 3.6d., and the obvious inference was that the June payment would also be raised. Now it seems clear that it will be cut sharply and the shares fell back by 16s. 3d. to 72s. 6d., but have since recovered to 78s. 9d. The big surprise of the December dividend season came from a neighbour of West Driefontein on the Far West Rand, Western Deep Levels, the new deep level mine of the Anglo-American group which declared a maiden dividend of 1s. per "A" share earlier than had been expected. Rapid progress has been made at this mine since milling began on March 1st.

One other notable feature of the gold mining industry brought out by the brokers is the steady rise in profit margins, coming in part from the bringing of new mines into operation and in part from greater mechanisation. The newer mines are not likely to be much disturbed by the wage increases secured recently by the European miners in the industry and by the prospect that the wages of African miners will be raised before long. But it is a very different story for the older mines, about 25 in number working on slender profit margins. Even a slight addition to working costs is a serious threat to some of them, and only an increase in the gold price will save them from being closed down shortly. Theirs are the most speculative of all gold shares, just as the finance houses are the safest.

HOLLAND

A Smaller Surplus

Amsterdam

HOLLAND'S current account surplus this year has not lived up to the expectations of the Dutch authorities, and although there have been signs that the improvement of the third quarter has continued, the authorities have now revised their original estimate made last February of a current account surplus for 1962 of fl.710 million (£70 million). The new estimate is fl.400 million. The out-turn in the first six months gave the authorities a nasty shock. The trade figures showed a slight improvement, but the current account as a whole, because of higher invisible payments for shipping, interest, and especially for dividends on foreign-held Dutch shares, resulted in a deficit of fl.325 million, compared with a surplus of fl.52 million in the same period of 1961.

The third quarter showed a sharp improvement, however, and the current account surplus at fl.425 million was back in line with the surplus of fl.428 million recorded in the third quarter of 1961. To reach the new estimate Holland needs a surplus of fl.300 million in the current quarter. The chances of this being achieved seem reasonably good, by the sign of the latest trade returns. Nonetheless a surplus of fl.400 million for 1962 will still be only half of the 2 per cent of net national income considered to be a minimum to safeguard sufficient growth in Holland and finance exports of capital. However, taking the years 1959 to 1962 together, the surplus would still be above this minimum.

The deficit on capital account in the first nine months of the year was down to fl.165 million, compared with fl.1,130 million in the same period of 1961. The reduction in the number of foreign bond issues on the Amsterdam market and the Philips rights issue produced a surplus on security transactions of fl.385 million, against a deficit of fl.85 million in 1961. For 1963, the Dutch authorities have left their earlier estimate of a current account surplus unchanged at fl.650 million. This apparent optimism is based on an expected increase in exports of 7 per cent, against an increase in imports of 6 per cent, and a rise in total domestic expenditure of no more than 3½ per cent (1962: 3 per cent). Whether or not these expectations materialise will depend to a great extent on the pace of economic activity in the rest of the common market, which takes 50 per cent of Holland's exports, and in the present EFTA countries, which take another 23 per cent. Even more important will be Holland's own labour costs. The Social and Economic Council recently concluded that a rise of 2.7 per cent in direct labour costs in 1963 would be justified even though the rise in productivity is not expected to equal this figure. Quite a number of collective wage contracts are up for renewal in 1963 and this piece of advice from the Council will weigh heavily on industry. The Council has justified its stand by referring to the pace of wage increases in other industrial countries—a rather cavalier approach.

AMERICAN BANKING

No Raid on Euro-dollars

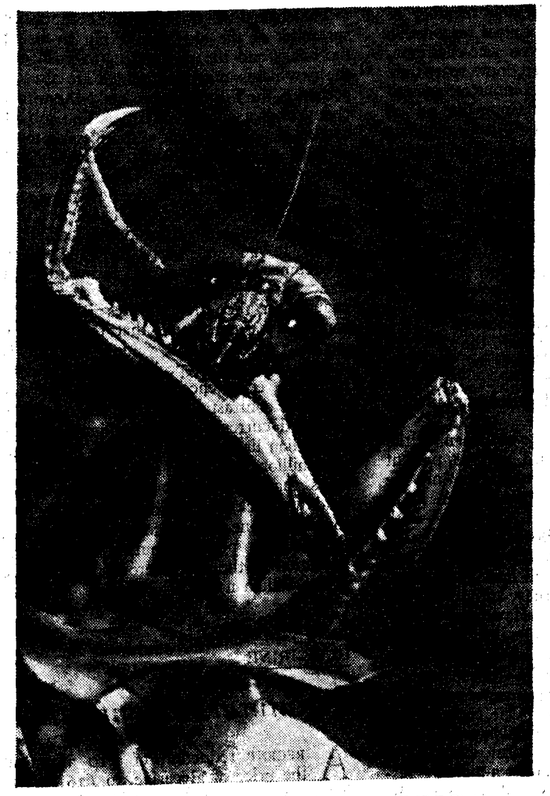
New York

TIME deposits of foreign official agencies and international organisations at major New York City banks rose by more than $200 million in the first six weeks following an amendment of Regulation Q which removed interest restrictions on most of such deposits. On December 5th they totalled $1,677 million, the highest since official figures were first kept in April last year. In the following two weeks however there was a small decline, of $19 million. New York bankers are cautious about attributing the recent flow of funds exclusively or even mainly to the higher interest now being paid. A very large part of the foreign official balances presently held in New York is said to consist of minimum deposits that must be maintained as part of normal banking relationships, regardless of rates. Some American bankers believe it may take many foreign official agencies some time to respond to the new rates. But at least one major bank thinks there could soon be a much larger flow of foreign official deposits coming in at a rate of "multiples of $50 million."

So far there has been no noticeable switch by official foreign holders into time deposits from Treasury bills, the main source from which American banks expect these extra deposits to be attracted. Treasury bills held by the Federal Reserve System for foreign official account totalled $7,375 million at December 19th, which is very little short of a record, and $1,389 million more than a year ago.

Rates being offered foreign official lenders remain subject to individual negotiation in most cases. But one major bank quotes as a guide 2¾ per cent on 30-day money, 2⅞ per cent on 60 days, 3 per cent on 90 days, 3¼ per cent on 180 days, and 3⅜ per cent on 270 days. These rates are still noticeably below those generally offered in Europe, such as the 4⅛ per cent currently available on three-months Euro-dollar deposits in London. The differentials, it is claimed in New York, tend to be offset by the advantages of keeping funds in the United States. But the general view here, as in Europe, is that a flow of foreign official funds into New York is unlikely to have a significant impact on the Euro-dollar market, partly because few European central banks now play a large part in that market. Moreover the Euro-dollar market is believed to have expanded greatly in the past two years and could therefore withstand a modest drain.

In the New York market itself, the rates do compare favourably with Treasury bill yields, which have recently hovered around 2¾ per cent on three-month issues. Indeed, at the rates quoted above, American banks are offering foreign official lenders ½ to ¾ per cent more on three to six-months deposits than they may legally pay on comparable domestic deposits. Presumably if an unmanageable flow of foreign funds develops, the banks can stem it by cutting their rates. But for the moment, the general indication is that they welcome the money, even though they have in the past year had the costly experience domestically of accumulating time deposits and losing demand deposits.



DO YOUR BUGWATCHING
WITH AN
ASAHI PENTAX

Watching a praying mantis through the razor-sharp lens of an Asahi Pentax camera may be so absorbing that you'll forget to release the shutter! For with an Asahi Pentax, you see exactly what the film will see—in sharp focus, with exact composition and completely controlled depth of field.

Mantes, praying or otherwise, and most other insects, like to pose for Asahi Pentax pictures. (Birds, animals, and flowers do, too.) For any type of photography, you'll find a world of pleasure in the versatility and dependability of an Asahi Pentax.

SPEED LIMITS

40 mph for Lorries

RAISING the speed limit for commercial vehicles has been discussed for so long that Parliament's approval of a 40 mph limit for lorries not pulling a trailer and for cars pulling a caravan or light trailer comes almost as a surprise. The prolonged talks on the subject with the unions have failed to get their agreement to the move, despite the fondness for such high speeds shown by many union members: they are not reconciled to the prospect of tighter schedules—though many operators seem already to have adopted timings that forced their drivers to break the law. To this extent, the change will only make practice legal, and reduce the opportunities for the police to prosecute drivers for doing something that they all did—which could only reduce respect for the law.

Fears for the effect on road safety have been expressed; but making the law more realistic may not mean that lorries go any faster—if they do, the police should make a genuine effort to enforce the law. But it is a pity that the Government should have given operators even this rather nominal permission to run their vehicles faster without any matching step to impose higher safety standards on them. Most operators may keep their vehicles in the good condition that their intensive operation requires, but there are some who do not. If regular tests will improve safety standards for cars, why does the Ministry believe that they will not for commercial vehicles? Related to poor maintenance comes the question of overloading, another all-too-common practice, but one that is more difficult to check. Only an increase in the police force on such duties could make the regulations enforceable.

NATIONALISED TRANSPORT

All Change

ON January 1st the Transport Act will come into force, and the structure of nationalised transport will lose its now-familiar look. Instead of the British Transport Commission, there will be four independent boards—the British Railways Board, the London Transport Board, the British Transport Docks Board and the British Waterways Board, which will in effect take over the work of the executive parts of the BTC. There will also be a Transport Holding Company, to take over the BTC's shareholdings in a miscellany of transport undertakings—mostly bus companies.

The re-organisation has provided the opportunity for some changes in the top personnel. The British Railways Board, much the most important of the set, will have Dr Richard Beeching as its chairman; but Sir Steuart Mitchell, now member of the British Railways Committee responsible for workshops, will become vice-chairman, while Sir Philip Warter, now part-time deputy chairman of the Committee, goes to the Transport Holding Company as its chairman. Sir Reginald Wilson, another member of the Committee and chairman of the London Midland Area Board, also goes to the holding company, as its full-time director. The full-time members of the Railways Board are Mr A. R. Dunbar, manpower adviser to the BTC; Mr F. C. Margetts, former general manager of the North-Eastern Region; Mr J. Ratter, a member of the BTC since 1958 and responsible for technical matters; Major-General G. N. Russell, now chairman of the Eastern Region board; Mr P. H. Shirley, formerly chairman of Batchelors Foods; and Mr. L. H. Williams, formerly managing director of Shell Chemicals.

The chairman and vice-chairman of the London Transport Board are the present chairman and deputy chairman of the London Transport Executive, Mr A. B. B. Valentine and Mr A. H. Grainger—both full-time. The Docks Board will be headed by a full-time chairman, Sir Arthur Kirby; the Waterways Board will have a part-time chairman, Mr F. D. Arney, and a full-time vice-chairman, Sir John Hawton.

More important than these organisational changes is the commercial freedom that the railways will formally gain—only passenger fares in the London area are now subject to the Transport Tribunal. One consequence will be plans to trim the railways to a possibly profitable size and form, expected to appear in February; another a more aggressive commercial policy, taking only the traffic that will pay. In going out to get new freight traffic, the railways will be after the big customer who can fill complete trains which can be arranged to his convenience. The fewer customers it has to deal with, the lower its selling costs will be. And though much of the selling is best done by the regions, some of the biggest deals may be handled by the central board itself.

SIMPLER MONEY

Two Noughts Off

FINLAND has decided to use surgery on its currency. Like France in 1958, it has decided that its present currency unit is too unwieldy. It is therefore moving the decimal point forward two places—that is, knocking two noughts off the end. From next Tuesday, a new currency unit, the new mark, will be introduced equal to one hundred of the present marks, and one new Finnish penny will equal one old mark. Unlike the French at end-1958, and the Russians two years later (knocking one nought off the rouble), the Finns are not incorporating a devaluation into the change. The international quotation of the Finnish mark will change from 322 to the US dollar, to 3.22, and from 900 to the pound to 9.

The change will not entail the compulsory surrender of the old money, but by using the banks and the post offices to push out the new notes and coins, which are already prepared, the Finns hope to make the whole changeover a speedy affair. The job of making these coins went to the Russian mint—much to the chagrin of the Royal Mint which had also tendered for the contract.

In France the old franc notes are still around, four years after the changeover was begun and although the old franc officially comes to an end early in 1963 many Frenchmen still think in terms of old francs. It is possible that a gradual change on the French lines is the only way to reassure people that the currency has lost nothing in value; but it is highly confusing, especially to the tourist. Finland's experience will provide an interesting contrast. Now the outstandingly awkward currency remaining in Europe is the Italian lira, with its 1,750 to the pound and million lire motor cars. There are no signs that the Italian authorities are yet ready to tackle the problem—which is a formidable one when it comes to convincing the Sicilian peasant—but at least some reduction in the preposterous physical size of the Italian notes is in the air.

GLYCERINE

Natural vs. Synthetic

A RECENT reduction of £10 a ton in the price of glycerine, to £161 a ton, belatedly reflects falls in price all over the world. In the last two years prices have fallen by a third, and the British price has fallen with it, although is still one of the highest in Europe. "Natural" glycerine dominates the British market (about 30,000 tons a year)—mainly from Glycerine Ltd., a Unilever subsidiary. On the continent the two synthetic producers, Shell and Solvay, must fight for the crumbs that drop from the natural producers' tables, and their presence has an enlivening effect. Imports into Britain are effectively discouraged by production that just about balances with demand—and a 10 per cent tariff.

A ton of glycerine is made, unavoidably, with every 8 or 9 tons of soap. This "natural" glycerine is therefore a by-product, and while good prices help the economics of soap-making the floor to glycerine prices is fixed only by the costs of purification and transport. Prices have been very good in the past—as high as £250 a ton—and would be even better now that world production of natural glycerine (200,000 tons a year) falls short of demand by 75,000 tons, but for competition from synthetic production.

Methods of synthesising glycerine from petroleum feedstocks were patented thirty years ago but production did not start until the war. Synthetic capacity is now in the region of 150,000 tons a year and according to current plans will grow to 180,000 tons a year by 1965. Demand may only reach 300,000 tons a year, leaving surplus synthetic capacity of 80,000 tons a year.

The only ways in which the synthetic producers' plight could be eased are by increased demand for glycerine or reduced natural production. The second seemed likely after the end of the war, when detergents began to affect the market for soap, but this petered out as sales of toilet soap, unaffected, continued to rise. And, without some new application being found for it, there is not much hope of a dramatic increase in demand. Glycerine is used in cellophane, paint resins, pharmaceutical products and explosives: but only in the last two is it immune from competition from the newer petrochemicals—and even the demand for explosives has been suffering from years of mechanisation in mines and comparative peace. It is difficult to see what can happen to help synthetic producers, but this does not seem to be putting off the companies in Italy and Japan which are planning to join their number.

BUILDING IN RUSSIA

Two Million Flats a Year

RUSSIA, with easily the heaviest housing programme in the world, exceeding those of Britain, France and the United States put together, is one obvious place to learn the lessons of mass production. A delegation from the Eastern Federation of Building Trades Employers which recently visited the USSR for this very purpose came away impressed with the organisation and speed of results of Russian building, but critical of the lack of technical skill in factories and on sites which reduced the quality and value of the "sound engineering approach."

Half of Moscow's 100,000 new flats and factories are being built with prefabricated large panel construction, saving 10 per cent of brick or block building costs, and by 1965 half the housebuilding in the whole country will be by this method. Central planning and buying is naturally developed to a high degree, aided by the fact that standardisation is carried to extremes. No use however is made of a module; housing components simply come in a few large stock sizes, with depressingly monotonous results. This naturally speeds work in the large, highly mechanised factories, some of which produce as many as 3 million square feet of concrete components in a year. Speed of construction is such that a block of 60 flats went from foundations to finishing touches in 47 days.

Some new Moscow flats have highly developed communal services, such as district-heated water and central heating, and gas (natural, piped 500 miles) included in the rent. But living standards are low—the living room is for instance still counted as a room for sleeping in—finishes poor, colours drab. How many future generations of Russians will be content with the utility housing which is coping with the emergency facing the present one?

TIN

Still in Suspense

KNOWLEDGE of what the American authorities intended to do about their stockpile next year would relieve the tin market; it might not be welcomed by producers who are said to have pressed hard for the suspension of stockpile sales below £965 a ton at the recent meeting between representatives of the International Tin Council and stockpile officials. But even the satisfaction of knowing what is in store has been postponed because a revised scheme of disposals will not now be drawn up until some time in January. The current series of 200-ton offerings will be extended until new arrangements are prepared. It has apparently not even been decided yet what period the new disposal programme will cover, but the ITC is to be given a preview of the scheme and its comments will be sought. Meanwhile cash tin has fallen back almost to the ITC's upper support price of £850 a ton.

COMPANY AFFAIRS

In view of the recent dullness of the London stock market it was hardly surprising that business over the Christmas holiday became even slacker and bargains on Christmas eve were at their lowest level for almost five years. But a trickle of buying orders gave a firmer tone to prices with shipbuilding shares, headed by Vickers, attracting attention on the prospect of nuclear submarine orders following the Polaris agreement. After the holiday the bad weather again kept markets quiet but equities remained bright helped by a good performance on Wall Street. There has been little sign of activity in the foreign exchange market, for the usual window dressing covering orders had been met before the holiday. An unchanged bid from the discount houses kept the Treasury bill rate steady at £3 12s. 4.66d. last Friday. On Christmas eve the houses found money tight but patchy; the authorities gave them a large amount of help.

Guinness Spends for the Future

IN 1961-62, Arthur Guinness spent nearly £6½ million on capital account since its retained cash flow amounted to just over £3½ million, it again had to call upon its substantial liquid resources. The money was spent on improvements and renovations of the Dublin and Park Royal breweries, on the transport fleets, on metal casks, on the new Nigerian brewery and on the two lager breweries at Dundalk and Alton. As the Nigerian, Dundalk and Alton breweries will be completed next year, capital expenditure will fall. But the inevitable consequence of such new investment in 1961-62 was that returns on capital employed again fell—from 21 to 18½ per cent gross and from 11 to 10 per cent net. The aim of the managers of a brewery whose capital is locked up in productive capacity and not public houses must be to reverse this trend.

The Nigerian brewery will help, for this has always been one of Guinness's important export markets. But while sales of "Harp" lager have, according to the chairman, Viscount Elveden, exceeded the "most optimistic estimates" in Ireland and while "Harp" has already achieved a "commanding position" in this country, one must still wonder when this venture will contribute to profits. Immediately, therefore, Guinness still depends upon its stout and, to a lesser degree, upon confectionery. In 1961-62, stout sales fell slightly from their record level as they were affected by the increase in duty, first imposed in July, 1961; there has been some recovery in the South of England but the impact on sales has been more marked and the recovery slower in Scotland and the North of England. Sales in Ireland have also been affected by higher duties, but Viscount Elveden hopes that this will be "only a temporary recession." But there is a bright side to this coin: despite the fall in sales, brewing profits were slightly higher even though costs and depreciation went up and the expenses of launching "Harp" had to be absorbed. Guinness evidently remains technically one of the most efficient brewers in the world. Sales of confectionery, now subject to purchase tax, were higher, but as manufacturing and selling costs rose, profits fell.

In confectionery, Guinness is faced with growing competition. In bitter-tasting stou it has had the market very much to itself though here Mr E. P. Taylor, after hi acquisition of Beamish and Crawford' brewery in Cork, with the tied outlets o Charrington-United, may now brandish new threat. To answer it, Guinness ma concentrate even more of its efforts o

draught stout, for which there is still a "large unsatisfied demand," but here its major outlets are in the free trade, and it will not find it easy to persuade other brewers to sell draught as well as bottled stout in their own tied public houses. Immediately, therefore, no great increase in profits (down from £7,989,000 to £7,768,000 gross and from £4,240,000 to £4,226,000 net in 1961-62) is in prospect and the dividend of 22 per cent, covered 1¾ times, is not likely to show much growth. This is simply a safe stock, priced at 42s. 6d., with a safe yield of just over 5 per cent.

Lancashire Cotton

SHAREHOLDERS of Lancashire Cotton will be thankful that the cut in the ordinary dividend has been no greater than from 25 per cent to 17½ per cent (the rate ruling from 1955 to 1959). In other poor years in the cotton textile industry in the past decade Lancashire Cotton has been able to maintain its dividend in the face of sharp falls in profits. But this clearly was impossible in view of the slump in profits in the year to end-October when total income fell from £3,822,000 to £1,488,000 and net profits at £580,000 were only about a third of the £1,691,000 earned in 1960-61. Earnings amount to no more than 10.8 per cent and the directors' decision to pay a dividend of almost twice as much no doubt reflects the group's strong liquid balances. Another factor may be the signs of some patchy improvement in the outlook for the industry, but the results show no halt in the decline in earnings in the second half of the year for profits before depreciation at £701,000 compare with £741,000 in the first six months and with £1,653,000 in the corresponding period in 1961. The dismal past and the uncertain future are acknowledged in the yield of almost 9 per cent offered by the £1 shares at 38s. 10½d.

Granada

DESPITE the one for one scrip issue and the fact that the previous year's dividend was held down in response to the Chancellor's request, Granada has effectively left its dividend unchanged at 45 per cent. This disappointed the market where the 5s. "A" shares lost 3s. 7½d. to 21s. 4½d. to yield 10½ per cent, covered 2¼ times. Net profits rose from £2,879,000 to £3,310,000 after much heavier depreciation and tax charges. How much of this increase has been due to the inclusion of 17 months' profits of Granada T.V. Network is not clear. The directors say that in leaving the dividend unchanged they have been influenced by the uncertain future of independent television. This uncertainty has been dispelled to some extent by the white paper, which is certainly not as fierce on the big networks as the Pilkington report but which promises a levy on their gross profits. Until the details of this levy are known, the market cannot really take a view of commercial television shares. But it is the policy of the Granada group to diversify its activities and a useful fund of management experience is being acquired in the process of redeveloping cinema sites. When the details of the levy are published, investors should know the worst and given the high quality of Granada's management, they may then be able to take a more optimistic view than they have since the Pilkington report was published.

Consett Iron

THE depressing results from South Durham Steel held out little hope for shareholders of Consett Iron, a fellow North East coast producer and the odd man out among the steel companies as it ends its financial year at the end of March. They will not therefore be surprised by the passing of the interim dividend for the second year. For the previous full year the group made a net loss of £925,000 but paid a token dividend of 2 per cent so as to preserve trustee status. For the six months to end September trading profits fell from £1,681,000 to £887,000 and though there was a sharp drop in depreciation (which at £869,000 still accounted for virtually all the trading surplus) the group's interest charges amounted to £503,000 so there was a pre-tax loss of £485,000 against a profit of £188,000 in the same period of 1961. Perhaps one consolation for shareholders is that Consett seems to have done less badly in these past six months than in the second half of 1961-62 when trading profits amounted to £541,000 and the pre-tax loss amounted to £1,113,000. But current reports point to a worsening in the outlook for the steel producers in the North East and in the new year Consett will be bringing its new plant into production. This will add to the group's efficiency but it is hardly likely to cover its running costs at the current levels of demand. Whether Consett will again be able to pay 2 per cent (on which the £1 shares at 10s. yield 4 per cent) is very much in the balance. As with South Durham, both the FCI and Barclays Bank have made substantial advances to Consett—and so has Lloyds Bank.

Ranks Hovis McDougall

THE first results to emerge since Ranks the miller became an even bigger miller when it acquired Hovis McDougall a year ago are coupled with those of a number of smaller acquisitions; comparison with earlier profits has limited meaning. But the preliminary statement does give some help, for pre-tax profits at £12.2 million are said to be £1½ million more than the aggregate of the 1960-61 profits of Ranks and Hovis McDougall and net profits at £5.8 million, £569,000 higher. It is too early for economies in distribution and production resulting from the merger to have contributed much to this encouraging result; but some of the improvement may stem from rationalisation in flour milling and the modernisation and strengthening of the bakery division (which may also have benefited from higher bread prices). The dividend of 14 per cent is as forecast both at the time of the acquisition and of the one-for-twenty rights issue made in the summer. At 36s. the 10s. shares yield 3.9 per cent, covered nearly twice.

ARTHUR GUINNESS
Son & Co. Ltd

"Quality DOES count" ..... Lord Elveden

The Annual General Meeting of Arthur Guinness Son & Company Ltd. will be held on January 17th 1963, at Park Royal Brewery, London, N.W.10.

The following are the salient features of the circulated Review of the Chairman, Viscount Elveden.

Sales of Guinness in Great Britain were affected throughout the financial year as a consequence of the price increase forced upon us in July 1961 when the Chancellor applied his Economic Regulator to beer. The extra taxation then imposed, which was consolidated into the Customs and Excise duties in the 1962 Budget, has had a noticeably adverse effect on the sales of bottled beers, including our own. Although this effect was initially severe, it has shown signs of diminution in the case of Guinness, and the upward trend of sales has been resumed.

In Great Britain sales of Draught Guinness have shown a very satisfactory increase and it is clear that there is a large unsatisfied demand for Draught Guinness, which we are endeavouring to supply.

Financial Results: Despite slightly lower sales brewing profits were a little higher than in 1961, after charging all expenses relating to the initial launching of Harp lager, increased depreciation and higher manufacturing and trading expenses. Non-brewing profits fell short of the previous year due to higher manufacturing and selling expenses.

Capital Expenditure: During 1962 outlay on capital account totalled just short of £6½ million. Of this over half relates to three major projects—the new Nigerian Brewery which will open early in 1963, the Dundalk lager brewery, and the Dublin cask metallisation programme now virtually completed. We have also spent further large sums on improvements and renovations at the Dublin and Park Royal Breweries and on our transport fleets.

Dividend: We have already paid an interim dividend of 8%, and the Directors now recommend a final dividend of 14%, making a total distribution on the Ordinary Capital of 22%, as last year.

Overseas Trade: A year ago Lord Iveagh referred to the increasing difficulties lying in the way of further expansion of direct exports. This has certainly proved to be the case. However, a number of our smaller markets have shown surprising resilience.

Harp Lager: The past year has been one of great importance in the development of the market for Harp lager—our newest product offered to the public under the Guinness trade mark. It has already achieved a commanding position among the leading brands of lager. It is hoped that exports of Harp will begin by the middle of 1963. The new Brewery at Alton, jointly owned by ourselves with Courage, Barclay & Simonds and Mitchells & Butlers will be in production to meet the spring and summer demand for Harp in 1963.

Joint Activities in Ireland: In its first year Irish Ale Breweries, formed in conjunction with Ind Coope, has proved a very happy and most profitable undertaking. Our joint enterprise with Messrs. Showerings, The Irish Cider and Perry Company, is able to report the successful expansion of its business in Ireland.

Nuttall Group: Sales increased further both in the home market and abroad during the year to 31st March, 1962. Despite the introduction of purchase tax and somewhat less buoyant conditions, sales to date show an increase over last year, but costs have also risen. The acquisition of the Rolls business from J. Lyons in July 1961 has enabled us to enter new fields, and the lines produced have been very well received.

After reviewing the other activities of the Group, the Chairman concluded: In a rapidly changing world we are always striving to ensure that one thing remains unchanged—the quality of the beverages we brew. It is very gratifying that throughout 1962 there has been continued praise from our home and overseas markets for the consistently high quality of Guinness. We are more than ever convinced that quality DOES count.

HECHT, LEVIS & KAHN
(Merchants in Raw Rubber and other Commodities)

CHAIRMAN'S STATEMENT

The thirty-seventh annual general meeting of Hecht, Levis & Kahn, Ltd., was held on December 21st in London, **Sir James Helmore, KCB, KCMG** (the chairman), presiding.

In his circulated statement the chairman referred to the capital reorganisation which had been sanctioned by the Court and which was put into effect on July 31, 1962, and he also commented on matters arising from the Scheme of Arrangement.

Sir James continued: The profit and loss account shows that group profit before taxation and deduction of minority interests declined by about 7½ per cent compared with the period ended March 31, 1961 (£525,705 against £567,828). The amount available for appropriation is £153,368 as against £168,460, and your Directors have recommended, as forecast in their circular of May 15, 1962, a dividend of 10 per cent (less income tax). Due to the increase in the amount of the issued ordinary capital this dividend is effectively the same as the 15 per cent paid last year.

As regards the subsidiary companies' results, the profits of S.A.F.I.C. showed a drop of about 20 per cent from the exceptionally high level reached in the year 1960. This drop in profits in 1961 was due to trading conditions in the natural rubber market, offset to some extent by continued good results in synthetics and in ancillary lines. Whereas in 1960 marked variations in price presented a climate favourable to dealing, since that time the effect of synthetic rubber sales at fixed prices has been to stabilise natural rubber prices.

As regards the current year, the trading results of S.A.F.I.C. show a tendency to increase again despite the continuing problem of trading profitably in natural rubber; the improvement in the first eight months of the year gives some reason for hoping that in the absence of a serious setback before December the trading results of S.A.F.I.C. for 1962 will return to a higher level, although they do not seem likely to reach that of 1960.

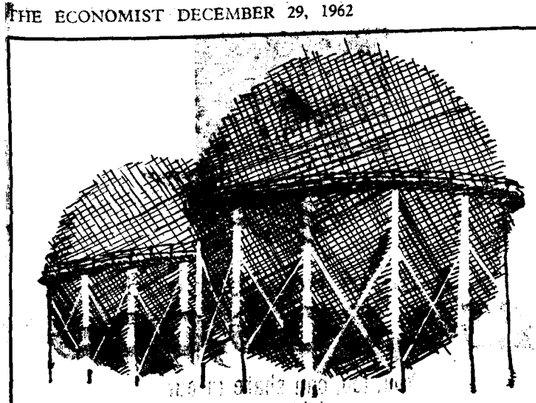
The profit of Société d'Exploitation de Produits pour les Industries Chimiques also declined in 1961 as compared with 1960, but *here again results for the current year show a* worthwhile improvement.

For the second year in succession the London trading company, Hecht, Heyworth & Alcan Ltd., showed increased earnings; during the current year, however, profits have been on a lower level.

There is nothing special to report about our other remaining subsidiaries, satisfactory progress having been made by all of those engaged in active trading. Such results can only be achieved by the efforts of managements directly responsible for the trading. It is perhaps worth mentioning that sales by our group now account for as much as 9 per cent of the total world consumption of natural rubber.

Shareholders will remember that on April 17th this year it was announced that as a result of certain rearrangements in shareholdings your Company had become a subsidiary of Minerals Separation Ltd. Minerals Separation's year ends on December 31st, and in accordance with the normal practice it is proposed to change the year-end of your company to conform with this date.

The report was adopted.



We are the Financial Backbone of Japanese Industries.

Our Bank specializes in supplying leading industries with long-term capital and is authorized to issue bank debentures for this purpose in accordance with the Long-Term Credit Bank Law. In addition, we operate various kinds of business facilitating long-term financing—such as guaranteeing loans from domestic and foreign banks and acting as trustee in connection with secured bonds. Through such activities our Bank plays a vital role in the development of Japanese industries.

NOMURA

IT'S YOUR MOVE

What are your ideas about investing in Japan? The right time? It seems right to us. The Japanese stock market has been improving over the past few weeks, and future prospects look even better. There is a surplus of international balance of payments, and the government has implemented its policy of easy credit.

The right place? Restrictions on foreign investors have been substantially eased. Investing in Japan is easier now than it has ever been.

The right way? There are quite a few details concerning the recent changes in investment laws for foreigners and we would like you to know about these before you begin ... or expand in ... an investment programme in Japan. Our booklet, "How to Invest in Japanese Securities", gives information about taxes, dividends, sales and other transactions which you will want to have. To receive your free copy of this valuable pamphlet, send us your name and address. There is no obligation, of course.

Like the idea? It's your move.

number eight of a series

HOW A NATION GROWS

New speedway will link four major cities

Construction of the Meishin Highway, connecting four of Japan's six largest cities, is now in full swing. Scheduled for completion in 1964, the 190-kilometer thruway will serve as a major artery between Kobe, Osaka, Kyoto, and Nagoya. It is only one of many civil engineering projects that will speed the flow of goods and people between population centres and contribute to Japan's industrial growth.

The growth rate of Japan's economy has attracted astute investors throughout the world. Despite the present business slow-down, the long-term outlook is favourable and many lea[d]ing buying range. B[ut] you need accurate da[ta] expert advice Yamaic[hi] to give. More than 1[00] search specialists are i[n] domestic and overseas Japan's economy. Our se[r]vices, publications on investing individual and institutional investors on request, without obligation.
